PROBLEMS OF URBANISATION IN ASIA

THE FLIGHT FROM THE VILLAGES: A U.N.E.S.C.O. STUDY

OF industrialisation, Asia in her present mood cannot, apparently, have too much. The only limit, it seems, is the sky—and that set by the lack of ampler resources Nobody need quarrel with the industrial aims of a continent beginning to find its feet after centuries of stagnation. As a matter of fact, nobody does: help from both Europe and north America comes to Asia in a more or less steady flow and, given peace, the volume of external assistance may be expected to increase in the years to come. Asian leaders are right in asserting that industrialisation will change the face of Asia beyond recognition. What receives less attention than it deserves is the nature of the change to come. The facile assumption is held too widely that *all* the changes will be of a kind people will like, and the illusion feeds on the erroneous notion that a machine is a machine and no more. To count what are called the social costs of economic progress is not to discourage or "decelerate" industrialisation, but only to pay anticipatory attention to some inescapable sociological consequences of rapid economic development. It may be dangerous to replace the old fallacy that India could indefinitely enjoy the fruits of the Industrial Revolution without going through one by the other that India can have an Industrial Revolution without paying for it in more than the monetary way.

As long ago as 1926, Aldous Huxley saw the effects of industrialisation in India with his lay but observant perception. In *Jesting Pilate* he then wrote: "Indian industrial workers are recruited from the villages. . . . . When. . . . they find themselves enjoying an unfamiliar freedom in the slums of the great cities, these industrialised countrymen tend to go, morally, to pieces. . . . . e honest, domestic, and temperate countryman too often transformed by contact with the town into a thievish and fornicating drunkard." As is a novelist's wont, Huxley put it a trifle too strongly. But he did draw the attention of those who might heed to a problem which has been taken up by U.N.E.S.C.O. for closer study. A recent issue of the *Unesco Chronicle* tells us of a seminar in Bangkok last year which discussed the problems caused by the rapid growth of cities in Asia and the Far East. The report of the Research Centre on the social implications of industrialisation is summarised in the *Chronicle*, and discussion need not be postponed until the publication of the full text : there are enough points in the summary to initiate a hundred useful debates on some of the less publicised aspects of industrial planning in Asia, India in particular.

*

The first important point made by the U.N.E.S.C.O. researchers is that urbanisation in Asia owes more to what they call the "push" factor than to the "pull" factor, meaning that it is not the growing of the cities that pulled villagers out. It is rather the increasing inability of the villages to sustain all the people they produced which pushed the latter out to the cities—where streets are still believed to be paved with gold. This makes the most significant difference to the problems of urbanisation in Asia, for the idyllic and romantic picture of villages is at once shown up as utterly false. All the denigration of cities, therefore, that they are the hell into which rustic angels fall because of the seduction of high wages in industry is just so much nonsense. Secondly, the correct appreciation of life in the villages enables us to throw out the other argument that the miserable proletariat of the cities has something better to (re)turn to. The fact is, it has not. Whether the newly born cities are perfect or not—and there is no reason to claim their perfection—the fact remains that the villages are, if anything, worse.

The problem has already been placed in its true perspective. Urbanisation has produced its own evils, but evil by evil, it is not an obviously more dreadful curse than what the villages had to offer when the move to the cities began. If life in the cities has disorganised the rural pattern, it is only another kind of disorganisation for the rural society itself had disintegrated earlier. "Urban misery and rural poverty" says the report, "are two sides of the same coin." This may well be an understatement. Torn from his roots, the peasant turned factory worker may well be unhappy in many respects, in many more, his new life is certainly an improvement on his previous existence. Nor is the new happiness ascribable only to cinemas, grog shops and brothels near the establishment he works for. In spite of its deficiencies, which need not be played down the new life has many compensating rewards. The freedom from the chains of the family may send him off the rails for a while: the fact remains that men, even rustics, do enjoy being off the rails now and then. In their new environment they are no longer slaves to their old morality. To say this is not to concede that urban life has no morality of its own. It has not yet been proved conclusively that one morality is always better than the other.

*

It is not to be denied, however, that industrialisation, especially when it is rapid, calls for difficult adjustments. Lord Clive found Murshidabad a more advanced city than the London of his days, but the difference—in kind—between life in the cities and that in the villages is quite probably a product of the later methods of production. It should also be noted that, at least in India, there have sprung up a number of well-planned industrial townships to be set against the shocking slums in the older cities The city slum, every politician's pet aversion, is not for every villager a come-down from his dilapidated hamlet under the tree that ceased to give shade many years ago. The obsession with slums, itself perhaps an attitude borrowed from European sentimentalists, has, however tended to draw away attention from some of the graver consequences of speedy urbanisation. (This is the place to add that urbanisation is not always the result of industrialisation. New Delhi and Calcutta, for instance, increased their numbers in recent years chiefly as the result of an unsatisfactory political settlement.)

These other consequences are in part physical and hence relatively easier to mitigate. It will not be long before newcomers have acquainted themselves with the rules of city traffic. Rules of public health are not, after all, so very difficult to master. In the externals of urban life, initiation takes very little time. Mahatma Gandhi, who at times viewed industrialisation with something akin to distaste, was too much of a realist to take his stand either because of a romantic nostalgia for rural existence (which we have already seen to be unjustified) or because of the superficial vulgarities of urban life. He knew that industrialisation wrought deeper changes in the human mind, to many of which he was averse. Sincere respect for the dead leader has not prevented a rejection of some of his ideas on industrialisation; it has led the present-day leaders, partially unconsciously, to pretend that industrialisation is being carried through without the accompaniment of the evils the Mahatma dreaded. This in its turn has two practical consequences: (a) industrialisation may have been slowed down by the latent ambivalence, and (b) the problems of urbanisation are not tackled boldly enough because they are not openly admitted to exist.

The U.N.E.S.C.O. then turns to two important questions, both of relevance to India One is where to locate industries, and the other how to solve the problems created by the adoption of labour-intensive techniques? On the former, the report says more than it knows when it refers to the need for taking "both economic and non-economic considerations" into account. The continuing rancour over the location of an oil refinery in eastern India—Assam, Bihar or West Bengal?—would appear to suggest that non-economic considerations are being taken into account only a little too seriously, almost to the exclusion of economic considerations. There is no evidence at all that sociological considerations, the ones really meant by the report, have even begun to be thought of.

Cottage and small industries receive so much political attention in this country and rationalisation is accepted only in a form unknown in human experience that one comes to this part of the report rather nervously. It says: "Emphasis on labour-intensive techniques is frequently necessary but should not be carried to the point where it adversely affects the growth of society's net aggregate product" The latter must be difficult to calculate even in more organised economies than India's. In the circumstances obtaining in India, where inhibiting factors are already too many, introducing these additional checks may be only putting a premium on timidity.

*

In India, at any rate, many of the consequences of industrialisation may not manifest themselves for a long time to come, and even the social costs of rapid economic progress will probably be less than those of deferred industrialisation—because decay in the villages is too far advanced and remedial action on this front is likely to be slower in pace and less sure of results. The problem here is not to make the people love their villages but to break it down to some extent so that industrialisation can go ahead. The social costs we have been speaking of are real enough and paid they must be, but there is a danger in over-emphasising them because immediately there may begin an inordinate glorification of villages. The U.N.E.S.C.O. report does well to remind us: "It is in the city that the great intellectual and artistic achievements identified with civilisation have originated, including the development of science, literature, music and arts." It is an unsubstantiated piece of romanticism that the origins of Indian civilisation were, are or will be different.

In the final analysis, it may be found that the dichotomy between city and village and the conflict between the development of cities and villages are to a great extent grossly exaggerated. Let it not be forgotten that the most beautiful villages are to be found precisely in those countries which are highly industrialised, which have the largest cities. Not every "primate" is a parasite living on the villages; many villages would die out without drawing life from the primate. Calcutta, for instance is much maligned for sucking West Bengal dry; it does not appear to occur to critics that West Bengal without Calcutta would be inconceivable. Let avoidable disturbances to the Indian pattern of life be avoided by all means. Every effort should also be made to minimise the inescapable costs. The point it is sought to make here is that not every disturbance to the rhythm of life in Asia will be necessarily undesirable in the long run, however ugly some of the upsets may look in the [illegible]

SHRINKING IMPORTS FOR AN EXPANDING ECONOMY

LIKELY EFFECTS ON PRICES OF CONSUMER GOODS

THE import policy announced last week for the period July-September 1957 is, like taxation and inflation, a reminder of the high cost of the second five year plan. So much has been heard recently about the dwindling foreign exchange reserves that a further drastic curtailment of imports was considered inevitable. From Press reports on the new policy, it is difficult to estimate the magnitude of the cuts now imposed or the saving of foreign exchange which will be effected thereby. But the decision not to renew the O.G.Ls which expired at the end of June, except for poultry, fish, fresh vegetables and eggs imported from Pakistan, shows that the Government means business and will not be satisfied with half measures. Imports of finished goods will thus be almost entirely shut off for the next three months, except to the extent that licences issued during the previous half-year remain unutilised wholly or in part. In such cases, holders may apply for extension of the period of validity of the licences or for their conversion to more important items.

Import restriction, along with export promotion, is the fashionable response to a balance of payments deficit. When the foreign exchange earned through exports is required to pay for capital goods, even if current expenditure is reduced by arrangements for deferred payment, very little is left for consumer goods imports. Abstinence and sacrifice are then unavoidable. It is important that the intensity of such hardship and the area over which it extends should not be under-estimated. For many people, and not only the wealthy, imported consumer goods constitute an element of normal life, and their scarcity will be keenly felt. The prospect of growing shortages and high prices will be viewed with general dismay, even if the resulting situation gives protectionist encouragement to domestic industries producing alternative goods.

* * * *

The sacrifices and hardships resulting from import restrictions are likely to find the people psychologically unprepared for them. In such circumstances, there is a danger that the enforced austerity may strengthen the belief that the Government is making a fetish of an over-ambitious plan which it is beyond the capacity of the country to implement in the allotted span of five years. It is evident that the main impact of the import cuts will fall on finished goods. To maintain an even flow of essential raw materials, *ad hoc* licences are to be issued after scrutiny for such items as zinc, lead, tin, copper, nickel, ferro-chrome, certain kinds of scrap and alloys, aluminium, electrodes, tanning substances, hides and skins, sulphur, rock phosphate, wood pulp, raw wool, raw asbestos and books. Anxiety to ensure that industries do not run short of essential raw materials is commendable, though there may be reservations about whether the bureaucratic machine will prove capable of working the system of *ad hoc* licences so speedily as to ensure a regular supply of imported materials to industry. Producers are informed that where similar commodities are available at home or are required solely for improving quality, imports will not be permitted; and they are requested to co-operate with the authorities by trying to ensure maximum economy and by improvisation wherever possible. For capital goods, licences will continue to be issued on deferred payment terms. Licences for machine tools are to be given to established importers on an *ad hoc* basis. The import requirements of export industries are to be given special consideration.

* * * *

The scarcity created by import restrictions provides scope for hoarders and profiteers to exercise their talents. Appeals to traders to ensure the equitable distribution of available stocks at reasonable prices have been backed up by what the Government hopes will be more effective measures. Under the Essential Commodities Act of 1955, orders have been issued declaring non-ferrous metals, organic heavy chemicals, inorganic heavy chemicals and raw cinematograph film to be essential commodities. All firms and individuals engaged in the supply and distribution of aluminium, copper, lead, mercury, nickel, zinc, sulphur and unexposed cinematograph film have been asked to declare their stocks as on 30th June, 1957, and submit monthly stock-cum-sales returns thereafter.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co. Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

U.K. FINANCE IN EUROPEAN FREE TRADE AREA

WHILE the plans for the European free trade area have been studied mostly from the commercial viewpoint, their implications for London's financial institutions have not been overlooked. Indeed, the potential benefits to these institutions, and to sterling, are a strong enticement to people in high quarters who are not entirely happy about the commercial implications of the scheme. The essential fact is that free trade would allow business to expand over the whole territory concerned. This business would need finance; which London is well situated to provide. British banking is more international than any other, for British banks have more branches abroad than have any other nation's (as many, indeed, as all American and European banks combined), and foreign banks have more branches in London than in any other centre of finance. This advantage applies not only to the world in general but also to the free trade area in particular, for in that area the foreign branches of British banks outnumber the foreign branches of all other European banks combined.

* * * *

British financial institutions can benefit also from the likely expansion of the business of the commodity markets. Since these commodity markets (where commodities originating in the dollar area can be bought for sterling and where sterling is, therefore, in effect convertible) transact already a large part of the relevant European trade, it is assumed that when European trade in general is freer, the markets' foreign turnover will increase automatically. And such services as finance, insurance and freight are closely associated with this business in commodities. These commercial and financial services, an "invisible export" valued already in hundreds of millions of pounds a year, are an important consideration in the whole free trade scheme, as viewed from Britain. But it is possible that British views on this matter are too complacent. These services have been rehabilitated since the war more successfully than most observers expected, but it does not necessarily follow that in different circumstances Britain's commercial and financial supremacy in Europe will continue unchallenged. The free trade plan is a great experiment, and, as in most experiments, its outcome is not exactly predictable. It is certain that if the plan is allowed to work, many industries will shift their weight, and the industrial structure of western and northern Europe will be extensively reorganised. Commercial and financial services are broadly spread, not confined to particular trades or particular areas. They could still be focussed on London while these changes were taking place in Europe. But it is equally possible that profound financial changes will result from the changes in industry and trade, which may release in various European centres potentialities hitherto little developed.

Already Amsterdam and Zürich, as well as London, have important international capital markets, and the capital market in Paris, though not similarly international, has continued to function with surprising efficiency in most unpropitious circumstances. It would not be surprising if Western Germany, whose financial institutions are in some respects surprisingly undeveloped, became an important factor in international short-term financing in an expanded European economy. London must heed the warnings already coming from other centres of the Commonwealth. Those centres, though closely linked with London by tradition and (excepting Montreal) by direct association with sterling, are developing their own independent money markets (already highly developed in Canada), and they are obviously capable of making local resources available for local financing of trade on an increasing scale. European centres, with ancient traditions of their own and large and growing resources, will doubtless challenge London more strongly in the coming years. There are, however, various conditions for the fulfilment of Europe's potentialities in financing. One is reasonable freedom of capital movement across frontiers (such as exists in the sterling area). Another is stability of currencies, which cannot be assured until the currencies are realistically valued.

* * * *

The problem of realignment of currencies becomes more urgent with every desperate effort of the French authorities to support the franc when it is being undermined by a costly war, and as the stresses caused by the undervaluation of the West German deutschemark accumulate. Freer trading in Europe would certainly aggravate financial stresses at first, and the progress of the plan may be seriously impeded by physical controls on imports (of which France's temporary measures are a warning) unless the currencies are made more flexible. A growing body of opinion in London favours flexible exchange rates (for the franc and the deutschemark, if not for sterling), because no discussions in the conference room can assess the respective values of currencies as accurately as they can emerge from the interaction of supply and demand in the market. Instability of currencies may delay the development of Europe's capital markets for some years, but even in the meantime, the foundations will be laid for a big increase in financing, of both short-term and long-term character. In due course, Europe should be providing capital for other parts of the world in much larger quantities than are available from this source at present. It should be recognised, however, that development of the under-developed regions of Europe (such as southern Italy), and expansion of industries in developed regions as demand for their products grows, will make heavy demands on Europe's supplies of capital. The European Monetary Fund, envisaged for the period when the major European currencies are convertible, will help to ease the strains on European payments, and the Investment Bank, envisaged in the Common Market Treaty, will help to put capital where needed. But capital officially directed is diverted from the free capital markets and cannot assist their development.

CURRENT COIN

General Insurance Code.—The revised Code of Conduct for general insurers has been criticised in certain quarters, but has received strong support from Mr. Ambalal Sarabhai, chairman of the New India Assurance Company Ltd. (a short version of the speech appears on a later page). Speaking at the latest annual general meeting of the company, Mr. Sarabhai has said that in order to explore and utilise the vast potential which exists for general insurance in India—New India's premium income went up by Rs. 66 lakhs to Rs. 5.64 crores in 1956 compared with 1955—it is absolutely imperative to have a well-organised and integrated general insurance market, "composed of strong indigenous units, having high administrative standards and capable of rendering efficient service." The cost of procuring business has to be brought down so that premium rates can be made more attractive. Explaining the background to the revision of the Code, Mr. Sarabhai says that the industry has made vigorous efforts, "through self-discipline and self-denial," to eliminate wasteful competition. Until recently reliance was placed mainly on publicity and fear of public criticism, but the results were not satisfactory. The Executive Committee of the General Insurance Council, therefore, introduced a revised Code of Conduct, earlier this year. If the Code is properly supported by the members and enforced by the Executive Committee, it should put the general insurance industry on a sound and healthy basis. The basic idea of the Code is that rebates should stop, and administrative and procurement costs should be reasonable, he says.

* * * *

Interest on Foreign Loans.—Under the Income Tax Act, as it stands at present, interest paid to non-residents on loans advanced by them and brought into India (in cash or kind) is subject to Indian income tax. The only exception is in the case of interest on bonds issued by any industrial undertaking in India under a loan agreement with the World Bank which is guaranteed by the Central Government. There are, however, certain other financial institutions in foreign countries which grant loans in circumstances and conditions somewhat similar to those of the World Bank. It is proposed, therefore, to exempt from Indian income tax interest on loans granted by those financial institutions as are approved by the Central Government for this purpose. Import licences for obtaining plant and machinery of substantial value are now granted on the condition that payment is spread over a number of years or against fresh foreign loans. In some of these cases, interest has to be paid to foreign banks and other lenders, and such interest is now subject to Indian income tax. It is proposed hereafter to exempt from Indian income tax the interest which may be payable for sufficiently large credits spread over a period ordinarily of not less than five years, as may in each case be approved by the Central Government. Such approval will be given by the Government along with the grant of the import licence and, where necessary, the acceptance of deferred payment terms. The exemption will be available only in those cases in which the terms of the loan are specifically approved by the Government for the purpose of the exemption. Legislation will be introduced in Parliament shortly to provide that such exemptions are available on interest payable on loans approved hereafter.

* * * *

Sources of Rural Credit.—The Reserve Bank has just published the second part of the first volume of the report submitted by the Committee of Direction of the All-India Rural Credit Survey. The Committee has made a detailed study of the structure and operation of various credit agencies, based mainly on information relating to the year 1950-51. The survey shows that the total amount borrowed by cultivators from the Government, co-operatives and commercial banks is insignificant. Landlords and traders also are not important as credit agencies; by far the most important sources of finance are agriculturists and professional moneylenders. It is stated that "Government finance is not available in a large measure to the rural population in most districts; and its availability varies greatly from district to district." Furthermore, the distribution of this finance is heavily weighted in favour of bigger cultivators. The Government has played an important rôle as far as long-term agricultural credit is concerned, but the funds advanced for short-term agricultural purposes are insignificant. Case studies have shown that the average size of sanctioned loans for the purchase of seed and manure is small, though the average amount offered for the purchase of livestock is comparatively large. The largest proportion of loans advanced by the Government in most districts was against the security of immovable property. "Only in a very few districts were loans against movable property reported. Loans against personal security were reported in about two-thirds of the total number of selected districts; generally, these loans accounted for a very small proportion of both the total number of loans and the total amount disbursed." Referring to the rate of interest charged on loans, the report says that the highest figure of 7½ percent a year was in Madhya Pradesh. The rate was 6¼ percent in West Bengal, 5¼ percent in Bombay and 4½ percent in Madras. The rate charged by moneylenders exceeded 18 percent for more than 60 percent of the borrowings in Bihar-Bengal, eastern and western Uttar Pradesh, Orissa and east Madhya Pradesh. "In some of the selected districts of Rajasthan and in Quilon, Malabar and Sorath, the rôle of indigenous bankers in financing trade in agricultural commodities appeared to be particularly significant," the report says.

* * * *

Employment in Andhra.—The employment situation in Andhra Pradesh deteriorated slightly during May, according to an official release. But the fall in placements is attributed to normal fluctuations and does not indicate a slump in employment prospects. The public sector provided most of the jobs. The statistics show that during May, 6,173 persons were registered and 658 placed, as against 7,027 registrations and 754 placements in the previous month. Eighteen people got jobs on the railways, 59 in Central Government establishments, 554 in State Government Departments and 12 in local bodies. Only six persons were taken on by private employers. While the shortages were reported to be mostly of technical and mechanical workers, there were surpluses of clerks (matriculates) *daftaries*, attenders and unskilled labour.

* * * *

Automation in India.—A recent session of the International Labour Organisation discussed automation in relation to employment and other social problems. The discussion arose from the Director-General's report which was devoted largely to this question. According to Mr. N. H. Tata, an Indian employers' delegate, the question whether automation should be introduced in a semi-developed economy such as India's cannot be answered categorically. India is not a developed country such as the United States or the U.K.; she is overpopulated and faces chronic under-employment. In the circumstances, the introduction of automation might have tragic repercussions "involving acute unemployment in the initial stages." But such a possibility does not justify a complete and "blindfolded instinctive 'no'". India is not exclusively agricultural, and she has a fairly sizeable export trade. To shut the door to automation could be unimaginative, because it would put her at a disadvantage in promoting exports in competition with the more industrially advanced countries. The capital cost of automation is "inordinately high" and this will deter poor countries from going in for it on any significant scale, yet it would be "suicidal for India to keep completely out of the picture by over-empnasising its dangers and underestimating its benefits." According to Mr. Tata, the best policy would be to "embark on an experiment by establishing an industry *ab initio* well suited to the adoption of progressive methods of automation, and to study, in a practical manner, the merits and demerits of automation under Indian conditions, rather than condemn the system untried." He is, however, against converting an existing industrial unit and adapting it for such an experiment, because it would not give the same result. A bold experiment with a completely new unit would provide "the best available data to the Government and the industry concerned of the benefits of automation in order to evaluate its importance and utility." Then alone can a country like India decide how far and to what extent she should regard automation "as an inevitable development and unavoidable in the ultimate interests and the future well-being of the country".

* * * *

Economic Changes in Middle East.—Trade in the Middle East during 1955 and the first half of 1956 increased appreciably, with a small shift in its direction from western Europe to Russia and eastern Europe. This is reported in *Economic Developments in the Middle East, 1955-56*, issued by the United Nations Department of Economic and Social Affairs. The report says that the impact of the Suez crisis on the region's economy was strong but local and of "very limited duration." By the end of the first quarter of the current year, much of the impact had spent its force. The military operations in Egypt resulted in the destruction of buildings and mining installations and caused unemployment in the Canal region; but agricultural production "does not seem to have been affected by the hostilities," which took place outside the cultivated areas. Industrial and mining output declined in the last two months of 1956, bringing down the indices for the year to the level of 1955. The Sinai campaign also affected Israel's economy, for the cost of conducting it strained her budget and balance of payments. "Industrial output was somewhat reduced by mobilisation, but agricultural production remained unaffected." The petroleum producing countries were all affected in different degrees by the blockade of the Canal, the damage to pipelines carrying Iraqi oil through Syria, the measures taken by certain Governments, such as the embargo on the shipment of crude petroleum from Saudi Arabia to the Bahrain refinery, and the shortage of tankers. The report says that almost all the Governments of the region are undertaking a number of development projects. In Egypt, Iraq, Israel, Lebanon and Syria, agriculture and irrigation play an important rôle in Government investment programmes, while in Iran and Turkey the development of transport and communications has received greater attention. Within the Middle East as a whole, the sharpest fluctuations in output took place in agriculture which still employs the bulk of the population and accounts for a large percentage of national incomes. Referring to industrial production, the survey says that the indices showed a sharp increase in 1955, but it is due to the disruption caused by the Suez crisis that the overall increase achieved in 1956 was "probably less." Foreign capital, the survey notes, continues to play a minor rôle in industrial development, except in the petroleum industry.

A NEW LOAN

WE understand that Sir James Westland will be in Calcutta today and tomorrow, and that he will devote some of his time to interviewing financial and banking authorities so as to make himself acquainted with their opinion on the desirability of issuing a fresh rupee loan. However people may differ in opinion about a sterling or rupee loan, there can, we think, be no doubt about the general unanimity condemning a 3 percent loan, for it is felt that such a loan would not go down in India, and so far the London market has left it severely alone. It may have been, though we are somewhat inclined to doubt it, a stroke of financial genius to convert 3½ percent paper into 3 percent, but there is no doubt whatever that it was a political mistake. It has utterly disgusted such of the public in India as have been afflicted with it; it is severely left alone by dealers in this class of securities. We think that Sir James Westland would do a great deal to restore confidence if he were to make some arrangement with the holders of the 3 percent loans, and allow them to convert them into a 3½ percent loan. He might take them over on the basis of, say, 97, and issue the new loan at, say, 102; in other words charge the 3 percent holders a commission of 5 percent for conversion. The effect of this would be at once to make these loans a marketable security, and several banks that have large holdings would be relieved of a heavy incubus. As regards borrowing in sterling those people who are advocates of what is known as the Indian Currency Scheme, and who think that the closure of the Indian mints was a grand feat of statesmanship and not a financial crime, naturally advocate a loan in London in sterling, because the rate of interest would be lower; and as they imagine that exchange will rise when the time for payment arrived, the principal sum would work out less in rupees. Of course, if exchange can be depended on to go to 1s 4d, there is no reason on earth why the Government should not borrow in sterling, but as has often been said, there is much virtue in "if". There is, on the other hand, a section of the community who believe that the Government should incur no larger sterling obligations than they are absolutely compelled to, who accept Lord Cromer's dictum that the Government has nothing to do with anything but rupees. But it must also be borne in mind that the Government require the money and with contracted currency the sum required is not so easily obtainable.

Current Deposit Accounts.—Opened on favourable terms.

Fixed, Short and Savings Bank Deposits received. Rates on application.

Foreign Exchange Business Transacted and Letters of Credit opened for approved customers.

The Bank acts as Executor and Trustee under Wills and Settlements and undertakes Trusts [illegible] generally.

Every Description of Banking Business Undertaken.

S. S. THOM, Secretary.

Without Prejudice

THE SIGNIFICANCE OF THE BLACK CAP

UNCERTAIN ORIGINS OF TRADITION

(FROM OUR LEGAL CORRESPONDENT)

CONTINUING this short series of comments on matters legal in England reported in the past six months, we come to that most sinister and macabre of all headgear, the black cap worn by British judges before passing the death sentence, with special reference historically to the concluding words of it in England "And may the Lord have mercy on your soul", and in Scotland, much more balefully and as though consigning the unhappy wretch to everlasting perdition, the grim words "And this for Doom" Now you might have thought, and any foreigner would almost certainly have thought, that a Parliament which on grounds of humanity to murderers was occupying itself in classifying different modes and methods of murder with the idea that certain practitioners in the art should be hanged by the neck until they are dead and that other, more meritorious assassins should not, would not have jibbed at a motion that the gruesome practice of the donning of the black cap should be abolished in any case Far from it. Members of all parties, quite willing, in large measure, to abolish the death penalty itself, would by no means consent, in cases where it is to be retained, to do away with the black cap. While the House of Commons was engaged in discussing in committee the new Homicide Bill, an unwary and daredevil member—probably a new one—suggested that the use of the black cap, at any rate and in any event, be discontinued for the future.

That member forgot that whereas the British Parliament and people are possibly the most genuinely democratic in the world, they are also, for good or ill, the most in-eradicably and incurably attached to traditional forms, ceremonies and symbols. When St. Pancras conferred the Freedom of the Borough on Mr. Krishna Menon, it gave him with it a formidable parchment sealed with the Borough Seal and flanked by the Borough Arms, all enclosed in a silver casket. The freedom of the borough conferred no legal rights on the new honorary burgess whatever. All that the citizens wanted to do was to show their affection for their former Mayor and this was the only way it could be officially and fully done, and that at a meeting of the Corporation specially convened for the purpose. Meaningless, outmoded and undemocratic pomp and circumstance, some may say. But we may be sure that Mr Menon did not think so. Nor, putting it in reverse, did Sir Winston when he refused the honour of the Freedom of a great Scottish city because the invitation to accept it was not unanimous. The fact is that whether they should be retained or not, these symbolic ceremonies, acts and physical things have more often than not a definite, ascertainable historical meaning and are meant to emphasise, and do emphasise, some constitutional principle of real importance.

Take the case of Black Rod, for instance, which we came across in trying to find out the origin of the black cap. Black Rod is not, as some think, the venerable retired general or admiral styled Gentleman Usher of the Black Rod, who is the equivalent in the Lords to the serjeant-at-arms in the Commons. Black Rod is what its name indicates it to be, a stick : an ebony stick surmounted with a gold lion. But it is constitutionally much more than that. It is a living, sentient being. The old general or admiral dies, but Black Rod, born in the year 1350, lives on. Now consider this apparently ridiculous and undignified ceremony, which nevertheless is of great historical significance. The Commons and their Speaker are periodically summoned to the Upper House to hear a Speech from the Throne and on a few other occasions when the sovereign is present in person. The Commons are summoned by the Gentleman Usher carrying the Black Rod, without which he cannot officially speak or hear or have his being. The attendants of the House of Commons are on the look-out for his approach. As soon as they see him approaching the doors, they close and bar them in his face. The Gentleman Usher, as one indignant, then knocks three times with Black Rod. "Who is there?" says an apparently surprised serjeant-at-arms. "Black Rod" is the answer ; and the doors having been solemnly unbarred, the Gentleman Usher advances to the bar of the House, makes three obeisances and says : "Mr. Speaker, the Queen commands this Honourable House to attend Her Majesty immediately in the House of Lords."

All very absurd, even comic no doubt. The look-out: a shaky old gentleman approaching with a formidable ebony stick : the seemingly shocked attendants hurriedly shutting and barring the door and from within asking as to the identity of the well-known figure. But the point is the Queen's representative has been deliberately locked out; and the formality relates back to an event which happened more than 300 years ago, which the Commons then determined and is still determined shall never happen again. That was in 1642, when Charles I, with the Black Rod, the Gentleman Usher and an armed guard, strode into the House and tried to arrest the five members, Hampden, Pym, Holles, Hasilrigg and Strode, and when the brave Speaker, respectfully on his knees withal, made his famous reply to the King's demand that he identify them : "Sir, I have neither eyes to see, nor lips to speak, save as this House directs me." The King, baffled, withdrew, and not one of his successors has entered the Commons since, the one and only person in the kingdom not allowed to do so being the monarch. Hence the ceremony enacted to this day.

* * * *

To return to the black cap, our search as to its origin has completely failed ; its use seems to go back to the "time whereof the memory of man runneth not to the contrary." And when the its use should be discontinued was suggested in the Commons, though several antiquarian members advanced theories about its initiation, nothing definite was discovered. One learned pundit, Dr. Stross, member for Stoke-on-Trent, was of opinion that the use of the cap originated in a practice of the early Church of covering the head when the name of God was invoked. But, to the writer, that theory does not seem to hold water since the name of God is invoked every time a witness is sworn and it has never been the practice either for the witness or the officer administering the oath to cover the head when the oath is taken.

The writer's guess would be unlearned, but quite simple Down the ages, black has been the customary sign of mourning. The sentenced man, in those days before courts of criminal appeal, was hanged generally the next day. He was as good as dead when he was sentenced. He had lost all civil rights. He was outside the law and it may have been the law's and the State's formal, and not disrespectful, farewell to him as a human being ; black crepe such as in those days mutes at a funeral wore round their headgear. A Master of the High Court (Master Dennis Clarke) in a letter to *The Times* suggests : "It is a relic of the times when the judges of the King's Bench were invariably bishops and abbots", and that its purpose "was to hide the tonsure and symbolised the fact that sentence was being pronounced by the judge not in his clerical capacity but in his secular capacity as the mouthpiece of the King." Another member, Mr. H. G. Richardson, questioned what he called this "common error" that judges of the King's Bench were invariably ecclesiastics, and a British catholic priest, a professor of history whom the writer consulted, denies the whole theory, saying that the judges were not invariably, and except as regards the Lord Chancellor were never, bishops or abbots. He added that if a bishop or an abbot did sentence anyone to death, he would have to hide not only his tonsure but himself if he wanted to escape dire ecclesiastical punishment. The writer mentioned the Inquisition, but was told that the Church tribunals only tried the offender for the ecclesiastical offence of heresy, but could not award the death sentence which was imposed or withheld by the civil power in its discretion. So our enquiry led us nowhere, and *Law Notes*, which made its own investigations, says ruefully : "Our researches into the origin of the black cap—which led us incidentally into black beer, black game, black gown, blacklist, Black Rod, blackleg, blackmail and black-out—yielded no other result : indeed we were astonished at the apparent lack of authority both as to the origin and use of the cap. Can any reader enlighten us?" No reader could or did. But the cap remains.

AN ENCYCLOPAEDIA OF INVESTMENT

CALCUTTA

STOCK EXCHANGE

OFFICIAL YEAR BOOK

1957

MORE COMPREHENSIVE THAN OTHERS

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.

The information given about each company relates to its date of registration, nature of business carried on, managing agents and their remuneration, Directors and their share qualification, details of capital and shares, capital history, share registration fee, name of Auditors, period to which accounts close, date of meetings, summary balance sheet, and progress statement containing provisions for taxation, depreciation, allocation to Reserves, net profit, amount carried forward, dividends, and highest and lowest prices, etc. for ten periods. Also contains information of general interest to investors and particulars relating to Government and Public Bodies Loans.

Price Rs. 12.50. Postage Rs. 2.75. Add 50 Naye Paise to outstation cheques.

The Secretary, Calcutta Stock Exchange Association Ltd.,
7, Lyons Range, Calcutta.

ONE has little difficulty in appreciating Mr. Gulzarilal Nanda's concern that labour agitation is hindering the progress of the second five year plan ; one might have a little more difficulty in appreciating whether there is much the Labour Minister proposes to do about it, apart from issuing verbal exhortations to an audience which may not be entirely familiar with the language he has newly chosen to speak. Demonstrations such as the Finance Minister had to suffer at the hands of income-tax employees during his recent visit to Bombay, and the go-slow movement among Calcutta's dock labour which has won the port a new reputation for inefficiency, are hardly behaviour which one would regard highly, however much one may sympathise with the proletarian struggles of our times. These actions have, quite rightly I think, attracted strong official condemnation ; but what I have been waiting for patiently, perhaps in vain, is a condemnation of the rather more reprehensible practice of murdering a colliery or tea garden manager who workers venture to believe is not their idea of a nice fellow. The silence which prevails on these latter occasions is disquieting. And it is disquieting even if one allows that, for the five year plan, the life of a colliery manager is less important than the fate of the lakhs of rupees worth of imported equipment which, because of the indolence of our transport workers, may shortly be left to rot and rust on the Alipore airstrip. Mr. Nanda makes the touching plea that workers should not, by their demands, create a situation where the operation of an industrial unit becomes uneconomic. Not having inspected the acoustics of the building in which he was speaking, it is hard to say whether many of these words were echoed back in the direction from which they came. The recent closure of a number of jute and cotton textile mills can be traced directly to the activities of the Labour Ministry ; but it is still not too late, perhaps, to press home the idea, shyly put forward by Mr. Nanda at the convention, that higher wages and better amenities for labour have to follow, not precede, industrial prosperity.

* * * *

If my telephone is tapped I at any rate know nothing about it. I can only be sorry for the person who has to overhear my instructions to the printer or my reminders to the telephone department that my neighbour's receiver has been dead for three days past. The Labour Party, however, is constantly vigilant over individual liberty, especially when out of office, and I have no quarrel at all with Mr. Shinwell for speaking on the subject with a horror which others would probably have reserved for fuller occasions. Without considering it a very serious threat to personal freedom, at least in England, I have always been under the impression that a certain amount of tapping goes on all the time. I do not know enough about the case of Mr. Patrick Marrinan, the barrister now facing a tribunal of benchers at Lincoln's Inn, but it seems to me quite probable that it was not his telephone which was being tapped—but the criminal's whom he is supposed to have advised. Would it not be well-nigh impossible to track some criminal gangs without occasional recourse to wire-tapping? It must be conceded, however, that the telephone can well be an instrument of tyranny, not necessarily by the police always. Automatisation, of which Calcutta has just had another welcome instalment, has reduced delays and the incidence of wrong numbers to a great extent. But the transference of the manual operation from reluctant operators (who continue to flourish in the trunk section) to over-zealous subscribers is no guarantee that errors will not be made. A friend has the misfortune of having a number in some ways similar to that of the Indian Airlines Corporation in Calcutta, and many times a day—and night—he receives requests for air bookings to such exotic places as Agartala, Gauhati and Mohanbari. The friend is too good to disoblige; he confirms every reservation and, when there is not a scheduled flight, readily offers to charter a plane for the gentleman in a hurry to go places. As Thurber might say, the lesson of the fable is : It is better to be cocksure about the telephone, or you will be hendubious about your journeys—if you ring my friend instead of the I.A.C.

* * * *

For all I know, the Government may be right in saying that, in spite of the foreign exchange restrictions imposed earlier this year, people are still going abroad unnecessarily. But among the less wholesome implications of the remark, it seems to me, is one that the Reserve Bank, which is supposed to have been scrutinising foreign exchange releases, has not been doing its job properly. This is perhaps not a particularly warm compliment to an institution which, whatever contempt it may have suffered earlier, is now being legally elevated to the position of the Government's chief adviser on monetary policy. While not unaware of the seriousness of the foreign exchange shortage, I am not among those who consider the abolition of the basic travel quota six months ago as justified. The move has been too drastic, and smacks of the restrictions which authoritarian countries employ in preventing the movement of their peopple. However, among the latest series of restrictions on the release of foreign exchange for going abroad, there are two that interest me particularly. One is that people wishing to visit a foreign country for medical treatment "will be permitted only where the persons concerned are suffering from diseases for which there is no satisfactory treatment in India" : this presumably implies that the Finance Ministry or the Reserve Bank will now become the supreme arbiters of medical need. The other feature is that "exchange will not be released to.....persons wishing to take up courses of no special importance." Among the pursuits listed under this description are "..... accountancy,.. ...music, tailoring, drawing, painting, fashion designing and such other courses." I do not know if many of the accountants who a few days ago were treated to a homily from Mr. Morarji Desai on the importance of their work will be flattered by the comparison : but it does seem a pity that the Government, on the excuse of a foreign exchange shortage, should openly and unashamedly plunge into a private feud between accountants' organisations.

* * * *

The shock and regret with which the news of the death of George Macfarlane last Sunday was received will not abate for a long while yet. Few bank managers in my experience can have earned the devotion of their staff and the respect of their friends as he had done. Behind the soft-spoken manner and the modesty of his ways, there was to be found an acuteness of intelligence and agility of mind which made him one of the most valued members of the banking profession in this city. The death, which came as the consummation to a brief attack of poliomyelitis, was sudden ; as one looks back in sorrow, it is hard to conceive of this unexpected end in relation to the memory of our last meeting a bare fortnight ago—a memory of him enthusiastically and hopefully discussing the prospects of the proposed merger between the Eastern Bank and the Chartered Bank, which latter's Calcutta branch he had managed with great diligence for about a year. George Macfarlane was only 51 ; and nobody who met him before his last illness would have doubted that many long years of valuable service lay ahead of him in the East to which he had already given the three best decades of his life. A keen sportsman, he was a familiar figure on the golf course and at the races : his passing will be deeply mourned by the many friends he leaves behind, among whom *Capital* counts itself as one of the warmest.

* * * *

Frequent talks between heads of Governments at what is called the summit and the continuing advances in communication systems have done not a little to reduce the importance of diplomatists—without, as Sir Harold Nicolson has cogently argued, bringing about any noticeable improvement in international amity. It has been suggested that ambassadors these days are no more than postboxes, which is doubtless an insulting over-simplification. Their reports can still be of greater value than those of the so-called roving ambassadors, also poachers on the diplomatist's preserves. With some functions taken away by mobile Foreign Ministers, and others added—commerce, for instance, is a relatively recent but unthrilling addition—it may be found that, on balance, a diplomatist's life today is duller, even in less cheerless capitals than Moscow or Peking. Most decisions must now be taken in the home country rather than in the chancellery he presides over amidst dwindling grandeur. Treaties may still be signed over bottles of port wine, but their contents are drafted and revised by a body of interlopers called experts. Good phrases are probably still invented and inserted in the periodical reports, but without the assurance that they will be read with the care they undoubtedly deserve at the highest levels in the Foreign Ministry ; perhaps the Foreign Minister thinks he knows all there is to know about the country concerned, for he had had a chat with his opposite number three years ago in the corridors of the United Nations. Receptions are still held on what are now called national days, but nobody can pretend that they retain a tithe of their previous elegance; not a few of the guests will be in unbrushed lounge suits in fading brown. The adventure of taking momentous decisions, it must be admitted, is gone. Perhaps, then, it is not wholly surprising that some members of the now-dull diplomatic service should be seeking adventure in ways hitherto considered unorthodox.

* * * *

Two of the by-products of a mixed economy—mixed-up thinking and mixed metaphors—may not have been counted in the costs totted up by our indefatigable planners. The former is exposed in the columns of this journal week after week, with no amusement at all. Of mixed metaphors, a local daily presented an excellent example on Wednesday morning in its leading article which said : "Instead of chasing the inflationary snowball after it has acquired momentum, we should nip it in the bud, or at least hold it in chains." It will do the Government of India no good at all to argue that snowballs do not grow on bushes or that snowballs themselves kill off buds without waiting for anybody to nip them. Nor is it much use pleading that snowballs are awfully hard to chain. If, as urged by the daily, Mr. H. V. R. Iengar makes the effort, he may find that he soon has nothing to lose but his chains, although they may not be quite the sort Karl Marx had in mind when he drafted the Manifesto.

BEWARE OF THE MONSOON MENACE

THE NEW INDIA ASSURANCE CO., LTD.

MR. AMBALAL SARABHAI'S REVIEW

Addressing the Shareholders at the Thirty-eighth nual General Meeting of The New India Assurance mpany Limited, on 26th June, 1957, Mr. Ambalal rabhai said that 1956 had been a very difficult year the Indian General Insurance business.

Nationalisation of Life Assurance gave a rude to the base of every composite company leading a severe dislocation of the entire organisational -up. A complete reshuffle of the organisation and lignment of the administrative patterns was an ıill task for all the units, but particularly so for se with a large Life portfolio—like the New India.

Mr. Ambalal Sarabhai observed that in order to ıore and utilise the vast potential which existed in field of General Insurance in India, it was abso-ely imperative to have a well-organised and inte-ted General Insurance Market, composed of strong genous units, having high administrative standards l capable of rendering efficient service. The pro-ation cost had also to be brought down so that mium rates could be made more attractive. The ıstry had made vigorous efforts, through self-cipline and self-denial, to eliminate wasteful com-ition. Till now, reliance was mainly placed on olicity and fear of public criticism but without isfactory results.

The Executive Committee of the General Insurance ıncil, therefore, introduced a revised Code of Con-t, earlier this year. Mr Ambalal Sarabhai thought t if the Code were properly supported by the mem-s and enforced by the Executive Committee, it uld put the General Insurance Industry in India a sound and healthy basis.

The basic idea behind the Code is that rebates uld stop, and procuration and administrative costs uld be reasonable and within legal limits.

Working Results

Reviewing the working of the Company, . Ambalal Sarabhai expressed his satisfaction that Premium income of the Company touched a new h at Rs. 5.64 crores in 1956, representing a marked improvement of about Rs 66 lacs over the previous year. This he felt, was particularly commendable in view of the fact that operations of the Company were adversely affected by the nationalisation of Life business, which completely disrupted its organisational set-up, and other factors like the reduction in premium rates for two consecutive years, and loss of more and more business to the Pool and Syndicates. The Miscellaneous Department played an outstanding part in stepping up the Premium income of the Company in 1956. Its Premium income, at Rs. 1.44 crores, showed a marked rise of Rs 35 lacs, as compared to a rise of about Rs. 15 lacs recorded by both the Fire and Marine Departments.

On the disbursement side, claims increased by 1.7 per cent to 50.6 per cent, while Commission, Expenses and Tax Ratio remained constant at 38.0 per cent. The profits inclusive of interest earnings of the Departmental Funds, amounted to Rs. 43.9 lacs, maintaining the level reached in 1955. As a result of the year's operations, the Departmental Funds stood at Rs. 4.45 crores as against Rs. 4.11 crores in the preceding year

The overall result of the operations in 1956 led to a further strengthening of the financial resources by Rs. 52.9 lacs. The Capital and Reserves stood at Rs. 7.60 crores.

Referring to the compensation available to the Company under the Life Insurance Corporation Act Rs. 48.72,443 and under the Life Insurance (Emergency Provisions) Act. Rs. 1,50,983, Mr. Ambalal Sarabhai said that the Company had referred the compensation under the Life Insurance Corporation Act to the Tribunal constituted under the said Act. He felt that the Company was also entitled to higher compensation under the Life Insurance (Emergency Provisions) Act. Regarding the issue of one fully paid-up bonus share of Rs 15/- for every three shares held, he informed the Shareholders that the Directors were pursuing the matter with Government.

Note :—This does not purport to be a record of the proceeding of the annual general meeting.

My life *by Adipocere*

Pronounced 'adi-po-saire'

What a life I have had. To add to my troubles, I keep being attacked by little microscopic things which you call bacteria, but which I call a curse. Little do they know that I am immortal, as in spite of this terrific onslaught I continue to live, albeit in different forms.

When the bacteria attack me, my body releases hydrocarbons—light, medium and heavy. The corresponding physical states of these are gas, liquid petroleum and wax. The petroleum part of me is squeezed into any contiguous porous material, usually sand or limestone, where it remains until some crazy geologist from an oil company decides to look for me.

STANVAC — *the name that stands for progress*

RULES ON COMPANY PROFIT DEPOSITS

EXEMPTION FOR MORE ENTERPRISES

THE Income-tax Allowances (Current Profits Deposit) Rules, 1957, framed by the Central Government in exercise of its powers under sub-section (2C) of Section 10 of the Income-tax Act have been finalised and published in the *Gazette of India* dated 29th June. A draft of the Rules had been published earlier for eliciting public opinion. It will be recalled that under an amendment to the Income-tax Act in December 1956, all companies are required to deposit a certain portion of their undistributed profits and development rebate and depreciation allowances with the Government. In the case of companies other than those specifically exempted, the prescribed percentage for making the deposit is 50.

Under an earlier notification, however, the following classes of companies had been exempted from the obligation of making deposits under sub-section (2B) of Section 10 of the Income-tax Act: (1) Government companies; (2) statutory corporations; (3) banking companies; (4) insurance companies and electricity supply companies. Similar exemption has now been granted to the following classes of companies: (1) financial corporations; (2) companies engaged exclusively in financing on the hire-purchase system; and (3) air and shipping companies (both Indian and foreign).

Board of Referees

According to the rules, the final authority for deciding requests for grant of exemption from deposit or refunds of deposits already made is a board of referees. The board, which has now been appointed, will consist of Mr. P. C. Bhattacharya, chairman of the State Bank of India, Bombay, who will also be chairman of the board: and Dr. B. K. Madan, Principal Adviser, Department of Research and Statistics, Reserve Bank of India. A memorandum of instructions has also been issued for the guidance of the commissioners of income-tax and the Board of Referees for the operation of these Rules. Under the procedure envisaged, it will be the responsibility of the company itself to determine the amount due to be deposited under law, on the basis of its own computation, and to pay it before the prescribed date. If, however, a company desires to withhold a part or the whole of the amount required to be deposited on the ground that such amount has been utilised or is required for being utilised on approved purposes, it has to apply well in advance to the Commissioner of Income-tax for exemption, in the first instance. The Commissioner of Income-tax shall either grant the request of the company in full, or forward it to the Board of Referees with his views. The decision of the Board will be final. For the refund of deposits, the application has to be made direct to the Board of Referees, who will exercise the necessary discretion in the matter.

Approved Purposes

The approved purposes for which deposits may be withheld or refunds obtained have been defined in the rules themselves. The two purposes which are definitely regarded as "approved purposes" are capital expenditure in connection with the existing business of a company or repayment of loans obtained on the security of fixed assets of the company. In a third category will be included all those purposes, the application of the financial resources of a company on which, in the opinion of the Commissioner of Income-tax or the Board of Referees, having regard to the nature of the company's business and other relevant circumstances, is justified. In deciding whether a particular purpose should be regarded as an "approved purpose" under this category, the main consideration will be whether the funds are utilised or are required for purposes conducive to the industrial development of the country consistent with the objects of the plan, and are not frittered away in other ways.

For example, the following purposes would, *prima facie* qualify for approval: (a) reasonable requirements of working capital. ("Over-stocking" of raw materials, stores, or finished goods would not be a reasonable requirement); (b) requirements for the internal rehabilitation or expansion of the existing business appproved by a competent authority; (c) investments to a reasonable extent in the industrial undertakings falling within the purview of the Industries (Development and Regulation) Act, 1951; (d) reasonable amount of investment in subsidiary companies whose lines of activity are intimately connected with or ancillary to the business of the parent company.

Disqualifying for Approval

The following are examples of purposes which would not qualify for approval: (a) utilisation of funds for spepculative ventures, bullion or commodities; (b) "cornering" of shares of existing companies to secure control over them; (c) utilisation of funds for creating monopolies or for grouping of interests which tend to restrict the even distribution of goods or create artificial demand for them; (d) investments in schemes for the manufacture of non-essential goods or in activities which put undue pressure on foreign exchange.

Under the Rules, deposits remaining with the Government are entitled to simple interest at a rate to be prescribed. This has been fixed at 3½ percent for the year 1957-58. The office of the Board of Referees will be located at Ayakar Bhavan, Queens Road, Bombay, and all correspondence intended for the Board of Referees should be sent to the Secretary of the Board.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

SLIGHT DECREASE IN ADVANCES

Wednesday, 3rd July.

THE level of advances in the Calcutta money market has fallen only very slightly during the past week. Cotton and sugar credit has contracted while accommodation against jute and grains and seeds has increased. But the variations in every case have been small. Conditions in the interbank market are almost unchanged and the call rate remains at 3½ percent.

There have been fewer bills in the exchange market, mostly on account of tea and gunny shipments. Demand for forward remittance has been keen, while in the spot section it is normal. Sterling is steady against the U.S. dollar but has weakened in relation to Continental currencies.

* * * *

Bullion was quietly steady in restricted turnover. Silver advanced from the previous week's level of Rs. 179.75 to Rs. 180.50, quoted today. The rate for forward delivery was Rs. 180. The price in London and New York showed little change.

Gold was steady in sympathy with silver and the price rose from Rs. 106.75 to 107. The rate for the sovereign showed little change.

* * * *

During the week ended 28th June, Government of India Treasury bills for Rs. 109.16,75,000 were sold in favour of the Reserve Bank.

* * * *

Declines of Rs. 17.07 crores to Rs. 1,542.17 crores in active notes and of Rs. 13.98 crores to Rs. 1.581.67 crores in the total note issue were the notable features of the return of the Reserve Bank of India for the week ended 28th June, 1957. The currency contraction was covered by reducing rupee securities by Rs. 15 crores to Rs. 924.81 crores. Investments in the Banking Department increased by Rs. 29.34 crores to Rs. 216.81 crores, to which a transfer from the Issue Department contributed. Deposits of the Government of India declined by Rs. 1.65 crores to Rs. 51.80 crores, while other Government accounts rose by Rs. 5.95 crores to Rs. 8.25 crores Balances of commercial banks, at Rs. 82.15. crores showed an increase of Rs. 10.64 crores, but balances held abroad dropped by Rs. 11.04 crores to Rs. 40.82 crores. Other loans and advances declined from Rs. 93.46 crores to Rs. 91.46 crores, of which advances to scheduled banks against usance bills amounted to Rs. 50.21 crores against Rs 52.08 crores. Ways and means advances stood at Rs. 23.88 crores (Rs. 23.95 crores).

* * * *

The return of the State Bank of India for the week ended 21st June, 1957, shows a rise of Rs. 1.11 crores in total deposits to Rs. 307.64 crores. Investments in Government securities are down by Rs. 1 lakh to Rs. 94.09 crores, while other authorised investments remain unchanged at Rs. 11.42 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 2.59 crores to Rs. 183.80 crores. Cash and balances are, in consequence, shown at Rs. 31.13 crores, or Rs. 5.84 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 21st June, 1957, shows Demand and Time liabilities at Rs. 711.26 crores (Rs. 10.17 crores on account of borrowings from banks) and Rs. 551.01 crores (Rs. 4.16 crores), compared with Rs. 712.67 crores (Rs. 9.88 crores) and Rs. 544.13 crores (Rs. 3.44 crores), respectively, in the previous week. Cash has declined by Rs. 13 lakhs to Rs. 40.80 crores, while balances with the Reserve Bank have increased by Rs. 8.32 crores to Rs. 68.10 crores. There is a drop of Rs. 1.92 crores in investments to Rs. 332.96 crores. Advances and bills discounted, at Rs. 920.55 crores, show a fall of Rs. 9.80 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.6 percent and 72.9 percent, against 8.3 percent and 74.0 percent.

* * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land Customs revenue collected in the Indian Union during the month of April 1957, amounted to Rs. 1.590 lakhs compared with Rs. 1.209 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total Customs revenue collections, import duties accounted for Rs. 1.439 lakhs against 1.043 lakhs, export duties for Rs. 120 lakhs against Rs 154 lakhs and land Customs and miscellaneous for Rs. 31 lakhs against Rs. 12 lakhs. The total gross collection of Union excise duties amounted to Rs. 1.666 lakhs compared with Rs. 1.209 lakhs. The grand total of gross Customs and Union excise revenue realised was Rs. 3.256 lakhs compared with Rs. 2.418 lakhs during the corresponding month of the preceding year.

COMPTOMETER — the world's fastest adding-calculating machine — does the work of more than four people!

Speed!— floating touch for quick and easy operation. Accuracy—Three-way control! Through sight, sound and touch.

GROWING ORGANISATIONS NEED COMPTOMETERS

for fast, accurate, efficient accounting

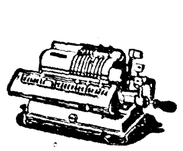
TODAY, every business organisation is growing. Fast, accurate, low-cost accounting is *essential to make your business move faster.* Experience of progressive establishments throughout the world has proved that Comptometer is the world's fastest, most accurate, lowest-cost accounting machine. Let us prove this in your office, FREE!

P.N. Ganesan & Sons

Sole concessionnaires in India for world famous Comptometer, Comptograph, Walther Calculator and Comptometer Dictation Machines hitherto marketed in India by Felt & Tarrant (India) Company

COMPLETE COMPTOMETER SERVICE

P. N. Ganesan & Sons who have taken over the Felt & Tarrant Offices in India are equipped to offer you the same quick efficient repair and maintenance service as before. You'll get a spare machine when yours is taken for repairs. They'll train your staff free of charge to become skilled Comptometer operators. Every Comptometer you buy carries with it a guarantee, against any manufacturing defect, for one year.
Write today to any of our following offices for demonstration:



MADRAS: No. 12/13 Angappa Naick St., P. O. Box No. 1257
BOMBAY: Kitab Mahal, Hornby Road P. O. Box No. 356
NEW DELHI: Lala Sriram Building, Connaught Place, P.O. Box No. 49
CALCUTTA: P-35, Royal Exchange Place Extension. P. O. Box No. 2372
KANPUR: 11/209, Sm. Parbati Bagla Road P. O. Box No. 78
SECUNDERABAD: 8062 A, Kingsway P. O. Box No. 27

COMPTOGRAPH
It records as it calculates. It's the fastest machine in its class, and yet so moderately priced. Anybody can work it.

COMPTOMETER DICTATION MACHINE
Dictate, listen, transcribe, erase and reuse...it enables you to get through your correspondence in half the time.

WALTHER CALCULATOR
Multi-purpose calculator that can calculate anything ... ... percentages, cubic contents, sizes, volumes!

COMPLEXITIES IN CENTRAL SALES TAX ACT

NEED FOR CLARIFICATION OF PROVISIONS

(By G. P. Agrawal)

IN an article on the Central Sales Tax Act, 1956, in *Capital* of 30th May, 1957, some of the difficulties which a dealer may face after the coming into force of the Act, were pointed out. The Act is being brought into force from 1st July, 1957, and the provisions of Section 3 which were enacted to simplify matters, have actually added to the difficulties of a dealer. After the amendment of Article 286 of the Constitution it was left to Parliament to formulate provisions to determine when a sale or purchase of goods takes place outside the State, or in the course of import of goods into or export of goods out of the territory of India. Parliament therefore enacted Sections 4 and 5 of the Central Act to determine sales or purchases of goods taking place in any of the ways mentioned above.

As there was no enactment whereby it could be said that a particular sale or purchase has taken place in the course of inter-State trade or commerce, Parliament in its anxiety to define such a sale or purchase has enacted Section 3. This has laid down that a sale or purchase of goods shall be deemed to have taken place in the course of inter-State trade or commerce if the sale or purchase (a) occasions the movement of goods from one State to another or (b) is effected by the transfer of documents of title of the goods during their movement from one State to another. Section 4, on the other hand, says that a sale or purchase of goods shall be deemed to have taken place inside a State if the goods are within the State (a) in the case of specific or ascertained goods at the time the contract of sale is made and (b) in the case of unascertained or future goods at the time of their appropriation to the contract of sale. Further, when a sale or purchase is determined in accordance with the above principles to take place inside a State, such sale or purchase shall be deemed to have taken place outside all other States. Section 4 is subject to the provisions contained in Section 3. Therefore, what is stressed in Section 4 is the time factor, namely, if the goods contracted for are specific or ascertained and are within the State, the sale or purchase of such goods shall be deemed to have taken place inside the State *at the time the contract of sale is made.*

Inter-State Sales

The confusion created by the definitions of inter-State sales and outside sales can be appreciated better by an example of a dealer in the State of Bombay wishing to purchase goods from a dealer in Bihar. Supposing the goods that are contracted for purchase are lying in the godown of the dealer and are specific or ascertained goods within the meaning of the clause, and according to the contract of purchase the goods are to be delivered, say, after a month. Applying Section 4 to such a deal, it will definitely become a sale in the State of Bihar and Bihar sales tax will be demanded from the purchasing dealer. When the goods have been delivered to, say, the railways as bailee, for the purpose of delivery to the purchaser in the State of Bombay, according to Section 3, this sale shall be deemed to have taken place in the course of inter-State trade or commerce and the Bombay dealer will be liable to pay the Central sales tax.

There is yet another aspect of this case. It is interesting to note that a sale has not been defined under Section 2 of the Act. The State of Bihar, like other States, has made rules known as the Central Sales Tax (Bihar) Rules 1957, and Rule 12 says that the provisions of the Bihar Sales Tax Act, 1957 and the rules framed thereunder shall *mutatis mutandis* apply in all matters incidental to the carrying out of the purpose of the Act for which no provision is made in these rules or in the Central Sales Tax Rules, 1957. It is, therefore, necessary to look to the definition of the words "sale" given in the Bihar Sales Tax Act which defines it as a transfer of property in goods for cash or deferred payment. The Central Sales Tax Act has also left in doubt the conditions when a sale shall be deemed to be a completed sale.

Some Complexities

Looking to the Sale of Goods Act, it would appear that when a selling dealer has booked the goods as self and sent the documents to a banker for collection of the price, provisions of Section 23 clause (ii) and Section 25 of the Sale of Goods Act are attracted and the sale will not be complete until the payment is made. In such a case the selling dealer shall be deemed to have reserved the right of disposal and the sale in question will be deemed to have taken place in the State of Bombay where the payment of the bill is made by the buyer. This is only one of the instances, though very vital in nature, which points out the complexity which has been created by the Central Sales Tax Act, 1956. Unless efforts are made to clarify these provisions by suitable amendments, dealers in general will be put to a lot of difficulty and harassment, and the sales tax authorities will also face handicaps in making regular assessments.

Stocks and Shares

SHARES EASE ON PROFIT-TAKING AFTER SMART RECOVERY

BRISK ACTIVITY IN TEAS: MILD ENQUIRY FOR JUTES

Wednesday Evening.

PRICES in the stock market have been rising for the greater part of the past week, although towards the close the best levels have not been maintained because of profit-taking. The Government's decision to reject a large number of the Plantation Enquiry Commission's recommendations for the tea industry has been welcomed, tea shares, as a result, have responded smartly. The reported out-of-court settlement of the dispute between colliery employers and workers over the question of wages and other amenities has been bullishly interpreted. It is hoped that labour troubles will not now hamper the working of this industry. Encouragement has been derived from the Government's announcement of an increase in steel retention prices; but the point has perhaps been missed that the increase does not represent much more than a routine adjustment.

Teas have produced the most notable features. Engineerings generally have improved in sympathy with Indian Irons, although they are shaded towards the close on heavy speculative profit-taking. Jute shares have attracted a little more attention on the hope that the industry's raw material worries might decrease. Moderate investment support has been forthcoming for selected miscellaneous issues. Gilt-edged have been quietly steady.

Details of the week's trading follow.

* * * *

On the whole, Government securities ruled quiet, but the price fall, it appeared, had been arrested and there was some enquiry for medium and long-dated loans at the lower levels. The 3% Conversion Loan recovered to Rs. 73 buyers, while 3% Non-Terminable Paper was nominally quoted at the same rate. The enquiry for short-dated loans continued unabated, with 3% 1957 moving to Rs. 9.78 and 3% 1958 better at Rs. 99.70; 3% 1959-61 hardened to Rs. 97.80 and 3½% 1961 was better around Rs. 99.35. The 2½% 1961 was asked for at the higher rate of Rs. 93.55 and 2¾% 1960 was fully steady at Rs. 96.50. Among medium-dated issues, 2¾% 1962 had buyers over at Rs. 93.84 while 3% 1963-65 was traded around Rs. 93.65; 3½% 1964 was fractionally easier at Rs. 97.65 and 3½% 1965 was marked back from Rs. 97.80 to Rs. 97.65 after the payment of the half-yearly interest. Long-dated loans remained on offer, with 3% 1966-68 quoted at around Rs. 91 while 3% 1970-75 was slightly easier at Rs. 85.50; 3½% 1974 was marked around Rs. 98.35. State loans were dull and neglected and sellers continued to predominate in the market, but there were no price changes.

Interest dwindled further in preference shares and business was on a very small scale. The only transaction reported in jutes was in Northbrook at Rs. 70. Among miscellaneous issues, there were buyers of Alkali and Chemical at Rs. 97, with few declared sellers. Calcutta Electric were crossed at Rs. 9.25 and Indian Iron changed hands freely at around Rs. 98. Richardson and Cruddas were reported at Rs. 64 and New Victoria were done around Rs. 4.62. National Tobacco 1st Preference came to hand at Rs. 69.50 and James Wright, after a long interval, were transacted at Rs. 31.75.

In the banking section, Punjab National and United Commercial improved to Rs. 55.50 and Rs. 54.25. While United Bank of India were shaded at Rs. 4.06, Hind were better at Rs. 32.50.

The only transaction reported in railways was in Dehri-Rohtas, which were crossed at Rs. 10.

In cotton textiles, the outstanding feature was Elgin which spurted from Rs. 17 to Rs. 20 on interested buying. Bowreah improved from Rs. 108 to Rs. 115 and Dunbar from Rs. 150 to Rs. 165. Kesoram met with investment support at the higher rate of about Rs. 13.75.

The features in the coal section were Bengal, which rose from Rs. 228 to Rs. 240, East Indian from Rs. 24.75 to Rs. 25 and Equitable from Rs. 22.50 to Rs. 24.50. The recent special enquiry for Union Coal, it appeared, had dried up, with sellers at the close at Rs. 19 but no declared buyers. Burrakur fluctuated narrowly around Rs. 21.87. New Beerbhoom were higher at Rs. 14.30, as were South Karanpura at Rs. 8.62. Among the smaller fry, Bharat were better at Rs. 6.50, Central India at Rs. 6.56, Talcher at Rs. 1.62 and Western Bengal at Rs. 5.50. Raneegunge were steady at Rs. 10.87.

After several months, there was a small revival of interest in the jute section and prices recovered on a wide front, as will be seen from the following table:

	Opening 27th June Rs.	Closing 3rd July Rs.
Agarpara	7	7.62
Alliance	65	70
Anglo-india	126	135
Barnagore	75	84
Belvedere	72	80
Delta	115	125
Fort Gloster	260	298
Howrah	15	16.56
Megna	68	78
National	19.60	19.40
Reliance	6.25	7.25

In electrics, Calcutta were slightly better at Rs. 12.12, while other issues in this section were unchanged, though steady.

Except for a few isolated scrip, sugar shares did not participate in the general recovery. Shares which were slightly better included Dyer Meakin Breweries at Rs. 6, Ramnugger Cane at Rs. 21.62 and S.K.G. at Rs. 10.12. Belsund met with some enquiry and recovered from Rs. 10.62 to Rs. 10.87. Carew were marked at their previous rate of Rs. 7.30.

Engineering issues, under the leadership of Indian Iron and Steel, recorded several gains. Indian Iron, after opening at Rs. 20.09, improved at one time to Rs. 21.25 (in unofficial trading), to close slightly easier on profit-taking, particularly on Bombay account at Rs. 20.30. Braithwaite were taken at the higher rate of Rs. 26.06, as were Burn at Rs. 7.18 and Guest, Keen, Williams at Rs. 27.75. Indian Standard Wagon were higher at Rs. 184, as were Indian Steel and Wire Products fully paid ordinary at Rs. 58. Jessops were quietly steady at Rs. 24.50 and Richardson and Cruddas, on the announcement of an interim dividend of 75nP a share, rose from Rs. 14.37 to Rs. 15.75. Textile Machinery, which were at one stage taken to Rs. 18.10 against the opening quotation of Rs. 17.30, closed easier in sympathy with Indian Iron at Rs. 17.65.

In paper, India Paper Pulp recovered to Rs. 20.62 and Sirpur on good enquiry improved further to Rs. 9.12 but closed easier on profit-taking at Rs. 8.75. Orient were at one time done up to Rs. 26.25 but also closed lower at Rs. 25.25. Titaghur met with investment support at about the previous rate of Rs. 32.62.

In cement, Dalmia were marked at Rs. 11.37 and Jaipur Udyog were better at Rs. 12.25. Orissa Cement changed hands at the higher rate of Rs.

How banking helps the MINING INDUSTRY

AN important part of India's mineral wealth is found in the South. From mines in South India come gold, magnesite, bauxite, iron, manganese and many other vital minerals.

The mining industry in South India employs about a lakh of people, and has an annual output worth Rs. 10 crores.

Banking has greatly helped the growth of the mining industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the mining industry.

We at Palai are proud that important firms in every field of business and industry in South India employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans and Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi, and we have correspondents in all important Indian cities. We offer a comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

South Indian miners working on a vein of crude magnesite

PALAI CENTRAL BANK LTD.

Head Office: PALAI, TRAVANCORE-COCHIN
Branches at: Madras, Madurai, Cochin, Quilon, Trivandrum, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi

A LEADING BANK IN SOUTH INDIA

13.25 and Sone Valley improved from Rs. 6.12 to Rs 6.50.

In insurance, a small lot of Rubby General changed hands at Rs. 5, against the market quotation of Rs. 5.50 for regular lots.

The announcement that shipping companies would be exempted from the obligation to deposit part of their current profits with the Reserve Bank, caused an improvement in the price of India Steamship from Rs. 10.12 to Rs. 10.85: tonight's closing quotation is Rs. 10.65. Another good feature was India General Navigation which spurted from Rs. 68 to Rs. 76. Port Shipping were marked at Rs. 15.87 x.d.

Gains in miscellaneous industrials were widespread, as will be seen from the following table:

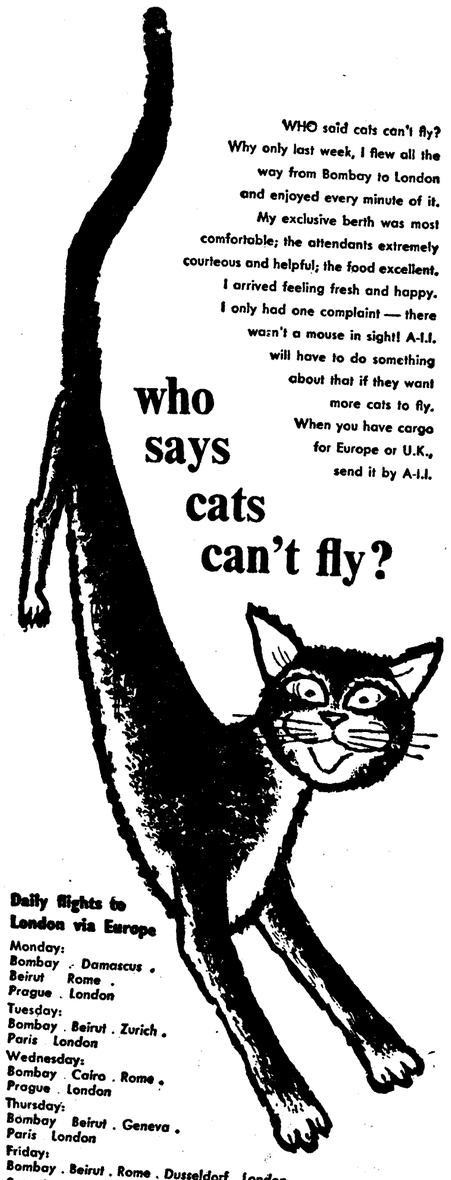
	Opening 27th June	Closing 3rd July
	Rs.	Rs.
Balmer Lawrie	142	145
British India Corporation	6.65	6.70.
Clive Row	9.81	10.19
Dunlop Rubber	20.62	20.75
Imperial Tobacco	14.25	14.37
Indo-Burma Petroleum	25.25	26.25
India Wood Products	38.25	39
Jardine Henderson	73	74
Martin Burn	23.50	24
National Carbon	24.81	25
National Tobacco	10.19	10.62
Rohtas Industries	17.62	18

In the mining group, offerings of Burma Mines and Western Stockholders caused a slight reaction in the prices of these shares to Rs. 2.30 and 92nP, against the opening quotations of Rs. 2.37 and 94nP, respectively. Similarly, Consolidated Tin receded from Rs. 1.56 to Rs. 1.44, as did Karanpura Development from Rs. 12.12 to Rs. 12.75. Indian Copper after being taken up from Rs. 3.42 to Rs. 3.55 yielded on profit-taking to close at Rs. 3.45. Metal Corporation rallied from Rs. 6.87 to Rs. 7.94 while Orissa Minerals were unchanged at Rs. 19.87.

The firm trend in tea shares was accentuated, contributory factors being the Government of India's decision on the Plantation Enquiry Commission's report and good prices realised for the commodity at the auctions. Attention was mostly confined to shares of Assam gardens; prices advanced very sharply and turnover was large. The following table of selected shares illustrates price trends:

	Opening 27th June	Closing 3rd July
	Rs.	Rs.
Banarhat	305	330
Basmatia	27.50	28
Betjan	26	29
Brooke Bond	19	20.25
Dufflaghur	31.50	33.50
Grob "A"	26.75	28.50
Gungaram	170	180
Hasimara	21.50	22.87
Hattikhira	13.75	14.50
Huldibari	20.50	24.50
New Dooars	270	350
Tezpore	22.25	22.75

* * * *



LARSEN AND TOUBRO LTD. has increased its profit from Rs. 14.61 lakhs to Rs. 17.04 lakhs for the year ended last March. Bringing in Rs. 28,740 and making other adjustments, the available balance amounts to Rs. 8,71,841. The ordinary dividend has been maintained at 10 percent. Dividend equalisation reserve is allocated Rs. 1 lakh. The taxation provision is Rs. 9.40 lakhs (Rs. 6.63 lakhs). The carry-forward is Rs. 27,120.

* * * *

Providing Rs. 9.99 lakhs (Rs. 7.31 lakhs) for taxation, the profit of the INDIAN WOOD PRODUCTS COMPANY has amounted to Rs. 14.68 lakhs for the year ended last September, against Rs. 17.28 lakhs. Bringing in Rs. 2,76,619, there is Rs. 7,44,843. The dividend has been maintained at 30 percent, including an interim of 10 percent. The carry-forward is Rs. 1,44,843.

* * * *

The gross profit of the TEXTILE MACHINERY CORPORATION has amounted to Rs. 72.16 lakhs. Depreciation absorbs Rs. 21.21 lakhs. Development reserve is allocated Rs. 11 lakhs and taxation provision receives Rs. 20 lakhs. Bringing in Rs. 1,23,476 and making other adjustments, there is an available balance of Rs. 21,41,757. An ordinary dividend of Rs. 1-4 a share (Re. 1) has been declared, leaving a carry-forward of Rs. 98,732. The directors say that in the cotton textile machinery division, production and sales showed a distinct improvement. Better results are expected during the current year provided the Government of India permits expansion in the cotton textile industry on a liberal scale. Carding engine production in collaboration with Howa Machinery Ltd. of Japan has progressed satisfactorily. In the boiler and heavy engineering division, the production of locomotive boilers showed good progress. Production is being maintained at the rate of one boiler a month. As for the manufacture of water tube boilers in collaboration with Combustion Engineering Inc. of the U.S.A., and of sugar mill machinery in collaboration with Stork-Werkspoor of Holland, planning is proceeding. The shop extensions are under way, the plant and equipment having been ordered. Though the jute machinery division started work during the year, the factory could not work to the full installed capacity due to a lack of orders. The directors hope that the position will improve shortly.

Bombay Market

STRONG DEMAND FOR STEEL SHARES

MIXED REACTION TO NEW IMPORT POLICY

Wednesday Evening.

NEAR-boom conditions prevailed in the Bombay stock market during the past week, although profit-taking reduced prices at the close. Steel shares met with keen demand and Tata Ordinaries touched a new high. Although the increase in steel retention prices, announced on Monday, was merely an adjustment, it assisted bullish sentiment substantially. The drastic cuts in imports during the current quarter, it was believed, would help many domestic industries. But some thought that the shortage of foreign exchange might hamper expansion programmes in the private sector. The official rejection of many of the recommendations made by the Plantation Enquiry Commission was interpreted bullishly. The shortage of floating stock combined with lower carry-forward charges, was a stimulating factor.

Tata Steels ended at Rs. 173.75 after touching Rs 181, and Indian Irons were maintained at Rs. 20.30 on sustained support from Lyons Range. Alcock Ashdown improved to Rs. 285 on replacement buying and Premier Construction were bought at Rs. 182. Automobile shares gained in sympathy with the general trend. Premier Automobiles came to hand at Rs. 93 and Hindustan Motors were higher at Rs. 7 40. Tata Locomotive improved to Rs. 150 on the prospect of an early dividend announcement.

The mill group was featured by a number of useful gains. Investment support lifted Bombay Dyeing to Rs. 560 and Century gained at Rs. 428 on short-covering. Simplex were transacted at Rs. 165 and Svadeshi were taken at Rs. 183.50 Kohinoors rose to Rs. 277 on buying by knowledgeable quarters and India United Ordinary were dealt in at Rs. 10.60.

Cement shares were prominent in the miscellaneous group, and Associated Cement gained at

Rs. 161 on investment account. Digvijay Cement improved to Rs. 148.50. The agricultural income tax in the Bombay State Government Budget not having been raised, this increased the support for sugar shares. Belapur gained at Rs. 239.50 and Phalon Sugar were higher at Rs. 143. Bombay-Burmah recovered to Rs. 633 and National Rayon met with demand at Rs. 231 on the belief that the price of the commodity would increase because of import restrictions. Tata Chemicals were done at Rs. 7.90 and Wimco realised Rs. 156.50. Among steamship shares, Scindia rallied to Rs. 19.90 and Great Eastern Shipping met with steady support at Rs. 20. Mining shares were better and Indian Copper recovered to Rs. 3.45 as domestic supplies were considered inadequate to meet requirements.

Banking shares were quietly steady, and Central Bank were transacted at Rs. 54. Insurance shares gained on balance, and New India were a shade higher at Rs. 41.75.

Electricity supply shares were quietly absorbed on investment account and fractional gains were recorded. Tata Hydro were taken at Rs. 122 and Ahmedabad Electric came to hand at Rs. 94.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last-named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise].

CENTRAL BOARD OF STATE BANK OF INDIA

The Central Board of the State Bank of India which has been reconstituted since 1st July, has 20 members with Mr. P. C. Bhattacharyya as chairman and Mr. N. V. Gadgil as vice-chairman. Mr. B. P. Patel and Mr. T. S. Raghavachary are the two managing directors. Six directors elected to the Board by the shareholders, other than the Reserve Bank of India, are: Mr. J. D. Choksi, Mr. Pratapsinh Mathuradas, Mr. D. P. Goenka, Mr. O. T. Jenkins, Mr. K. Ramunni Menon and Mr. Maddi Sudarsanam. Eight directors have been nominated by the Central Government in consultation with the Reserve Bank to represent territorial and economic interests. They are Mr. H. M. Hasham Premji, Mr. Ramnath A. Poddar, Professor D. R. Gadgil, Mr. Sachindra Chaudhuri, Dr. Triguna Sen. Mr. Satya Paul Virmani, Mr. G. L. Bansal, and Mr. V. S. Tyagaraja Mudaliar. Mr. H. M. Patel, I.C.S., has been nominated director by the Central Government and Mr. B. Venkatappiah, has been nominated director by the Reserve Bank. The members of the three local boards of the State Bank have also been announced. Bombay: Mr. J. D. Choksi, Mr. Pratapsinh Mathuradas. Mr. H. M. Hasham Premji, Mr. Ramnath A. Poddar, Professor D. R. Gadgil, Professor D G. Karve, Mr S. L Kirloskar and Mr. Purushottam Kanji. Calcutta: Mr. D. P. Goenka, Mr. O. T. Jenkins, Mr. Sachindra Chaudhuri, Dr. Triguna Sen, Mr. Satya Paul Virmani, Mr. G. L. Bansal, Sir Dhirendra Nath Mitra. Mr. Dhirendra Nath Sen, Mr. K. S. Birla and Mr. Suresh Chandra Roy. Madras: Mr. K. Ramunni Menon, Mr. Maddi Sudarsanam, Mr. V. S. Tyagaraja Mudaliar, Mr. Kasturi Srinivasan, Mr. R. E. Castell. Mr. M. A. Chidambaram Chettiar and Mr T. M. Chinnaiya Pillai. The chairman of the State Bank of India will be ex-officio member of the local boards.

FIRM UNDERTONE IN STOCK MARKETS

INTEREST MAINLY IN EQUITIES

London, 3rd July.

IN SPITE of the holiday influences, the volume of business transacted during the last week in the stock markets was at a satisfactory level, and with buyers predominating, the firm undertone was maintained. Interest was centred mainly on equity shares, while fixed interest securities were neglected. There was a better trend in gilt-edged, although the demand was small. In the foreign market, Peruvian issues fell sharply, but there was support for Greek issues, and certain Japanese bonds improved. Rails were quiet and without a definite trend. The decline of Wall Street was halted, and dollar stocks made some headway, particularly Canadian issues. The feature of the industrial market was the activity in store shares on takeover bids or talks. However, profit-taking caused prices finally to react. Tobacco shares were overshadowed by the statement from the Government on the dangers of smoking and following the announcement, prices lost ground, but they improved later. Shipbuilding shares hardened on the news of the vast tanker building programme from the British Petroleum Company. Imperial Chemical Industries moved narrowly following the £100 million chemical project statement. Among aircrafts, Hawker Siddeley were firm after the overseas order for their aircraft. Oils were subdued, although Ultramar were an outstandingly firm feature. Rubber shares were quietly firm without much change in prices. Teas were quiet. Kaffirs met with selective demand in anticipation of the quarterly reports, and prices advanced. Diamond shares improved on support. Following a further decline in the price of the metal, copper shares fell.

The Money Market

The preparations for the making up of the half-yearly bank balance sheets as usual brought very difficult conditions to the money market. The first part of the week was very comfortable with money in surplus supply, but as the date of the half-year drew near, conditions tightened. The market experienced very heavy calling and in its anxiety to obtain accommodation, it paid up to as high as 4 percent for day-to-day loans. But with the shortage of credit acute, the market was forced into the Bank of England for three days running in spite of considerable help given by the authorities. The money position restricted bill business, and the market had to concede the firm rate 3 25/32 percent for sales of September and hot maturities. The average rate at the week's tender for Treasury bills was a little altered at £3 17s 1.07d percent.

Activity on Wall Street

Long-term U.S. Government bonds finished mostly higher last week. Small daily gains were made, although there were some late declines. Investment grade corporates were fairly active and higher. The municipal market also experienced a better tone with the volume ahead of the small totals recorded in the past few weeks. New issues generally went well. Convertibles followed the action in the stock market which started lower and then turned higher. Foreign bonds were quiet and mostly mixed. German Nationals were mix ed, while Norwegians were about unchanged and neglected. In an easier Japanese section, Japan 5½ percent at $75 were off about 3½ points in light turnover. In South Americans, Chile 3 percent added about a point over the week, while Brazils were higher by fractions in slow dealings.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 26th June shows that the gold stock was unchanged at $22,622,000. Foreign deposits rose by $40 million to $410 million, while foreign investments rose by $7 million to $3,754 million. The Federal Reserve bought $40 million worth of bills. Total discounts and advances fell by $220 million to $824 million, while the aggregate excess reserves of member banks fell by $268 million to $92 million. Daily average excess reserves of member banks fell by $32 million to $560 million, while their daily average borrowings fell by $86 million to $1,003 million. Business loans of the New York city banks rose by $29 million to $12.11 million, compared with a fall of $14 million to $10,195 million in the corresponding week last year.

U.S. Bank Credit Increases

A further rise of $29 million in loans to business by leading New York city banks in the week ended 27th June brought the total to a new peak of $12,110 million, the New York Federal Reserve Bank reports. A year ago their commercial, industrial and agricultural loans totalled $10,196 million. So far this year, these borrowings have increased by a net $639 million compared with a rise of $989 million in the same period last year. The New York city banks' free reserves—the excess of their reserves over their borrowings from the Federal Reserve in the week—showed a daily average deficiency of $218 million compared with $261 million in the preceding week.

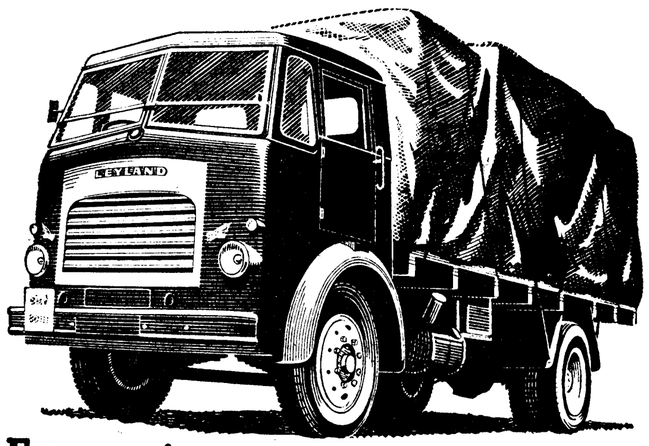
Oilseeds Steady

Most oilseed markets last week held steady to even firm in spite of the fact that business was not unduly active. In some markets covering operations brought strength, but in the main, consumer interest was restrained. In linseed a feature was the announcement that Canada had rescinded the concessions afforded to U.S. exporters to ship linseed through Montreal later than 31st August, after the concession had been a fortnight in operation. Groundnuts remained a dealer's market, with shippers of British African well above the current trading levels. Near positions of castor-seed were principally concerned with covering activity, and prices were limited, and latterly, an increasing interest was shown for early August delivery, while buyers for other positions were almost within the contacting distance most of the time. Castor oil was easier again, and a fair amount of bulk oil was taken up. Groundnut oil barely maintained its recently firmer conditions.

Fall in World Price for Copper

World copper prices have reached such a low level that they are barely sufficient to cover production costs, according to Mr. Clyde E. Weed, president of the Anaconda Company, New York, who said this at a recent meeting of copper industrialists in Dusseldorf. He described long-term sales prospects for copper as "not unfavourable." The low copper consumption in under-developed countries would necessarily rise, while the steady extension of electric power networks offered inexhaustible sales opportunities. The present quiet tendency on the copper market was the result of an unusual reluctance of the copper processing industries to buy, he said. Stocks held by the processer had now reached a dangerously low level. A reverse trend on the market might easily lead to excessive prices. U.S. copper producers were highly interested in the stabilisation of the market, Mr. Weed said. Strong fluctuations in London—largely due to speculative reasons—produced an additional nervousness and uncertainty on the market. Mr. Weed stressed the necessity for close contact between producers and processers. Direct business relations between them also had financial advantages and this could be measured by the fact that German buyers saved about Dm 15 million last year by buying direct from Anaconda.

Restricted Activity in Rubber



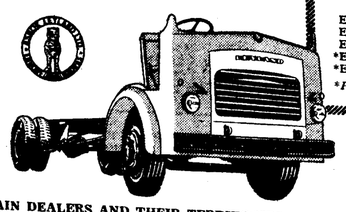
Rubber futures last week fluctuated modestly with the net loss slight. Dealings were limited. Traders said that the market was relatively steady aided by steadiness in London and Singapore. Factory buying was moderate with offerings from the Far East early in the week moderate. Latterly, offerings from Indonesia increased and created a slight pressure on the market. The U.S. Rubber Company reported that its plant in Detroit was still being affected by a strike. This plant produces about one-third of its total tyre production. The strike is in its fourth week.

U.S. Automobile Output

U.S. auto output increased last week to 124,276 units against 118,805 units in the previous week. General Motors' share of the total industry output so far this year totals 45.8 percent compared with 54 percent this time last year. Ford and Chrysler have raised their production this year with Chrysler up to 21.3 percent of the total from 14 percent last year, and Ford up to 30.1 percent from 28 percent.

Assam Frontier Tea Dividend

The Assam Frontier Tea Company has announced a dividend of 20 percent less tax on ordinary stock for the year ended 31st December, 1956. The previous year's dividend was 15 percent. Profit for the year after taxation of £176,500, totalled £211,801. The comparative figures in the previous year were £240,000 and £228,018 respectively.



For maximum payload—

The LEYLAND 'COMET'

It's the only 7½-ton payload chassis made in India!

FAMOUS throughout the world for rugged service over all types of road surface, the Leyland 'Comet' chassis offers exceptional strength, easy handling, low fuel and maintenance costs.

New Delhi

BACKGROUND TO THE DRASTIC CUTS IN IMPORTS

LARGE BALANCE OF PAYMENTS DEFICIT DURING PAST HALF-YEAR

(FROM A NEW DELHI CORRESPONDENT)

THE decline in India's sterling balances from Rs 530 crores to Rs. 467 crores over the past six months does not show the full extent of the deficit in external payments. The deficit is of more serious proportions and has dictated the import policy for the current quarter, which is even more severely restrictive than that for the first half of this year. A total credit of $200 million has been drawn from the International Monetary Fund in two instalments during this period. The decline in foreign reserves has, therefore, amounted to about Rs. 158 crores from January to June, which works out to an average monthly rate of more than Rs. 26 crores. The payments position reflects an adverse balance of trade, the size of which has increased steadily over the past two years as shown below (figures in Rs. crores):

	1955 July-Dec.	1956 Jan.-June	1956 July-Dec.	1957 Jan.-March
Imports	340	395	420	230
Exports	313	300	314	161
Balance of trade	—27	—95	—106	—69

In the light of these facts, the senior officials of the Commerce and Industry Ministry, who explained the new import policy to the Press in the capital last Saturday, had no difficulty in establishing the need for further curtailment of imports. But the official spokesmen were not equally convincing when they advanced the claim, qualified though that was by various conditions about the behaviour of trade, industry and consumers, that the cancellation of virtually all open general licences and the denial of fresh licences to established importers for the next three months would have no appreciable effect on supplies and prices. Their optimism was based on the Government's estimates of the size of available stocks and of outstanding licences, the period of validity of which will be extended by three months on application. They also seem to bank on the fact that licences will still be granted for the import of industrial raw materials and other essential items in such quantities as might be deemed necessary for the maintenance of production and employment, and for the promotion of exports.

Capital Goods Imports

So far as outstanding licences are concerned, their value is the largest—at about Rs. 300 crores—in the case of capital goods, the import of which will have no immediate effect on the price level. The value of licences for capital goods imports rose from Rs. 49 crores in the second half of 1955 to Rs. 166 crores during January-June 1956 (when actual imports were of the value of Rs. 67 crores), remained steady at Rs. 161 crores in the second half of 1956 (when actual imports rose to Rs. 74 crores), and fell slightly to Rs. 149 crores during the first half of this year following the enforcement of the deferred payments scheme. A total trade credit of Rs. 20 crores has been secured so far under this scheme for the import of machinery and equipment in the private sector. The size of the credits negotiated by the Government in connection with the new steel plants and other projects in the public sector, before and since the formulation of the deferred payments scheme, is much larger. The interest rates vary from 2½ percent in the case of credit extended by Russia at governmental level to 8.5 percent demanded by West German interests, depending on the internal borrowing rate in various countries. The Government's intention is to continue the existing policy of licensing the import of capital goods, on the basis of deferred payments, for industries which will save or earn foreign exchange.

In the case of industrial raw materials, the fact that shortages are feared by the Government itself is evident from the orders issued under the Essential Commodities Act of 1955. Non-ferrous metals, heavy chemicals (organic and inorganic) and cinema films (raw) have been added to the list of "essential" commodities, the prices and distribution of which can be controlled by notification. Dealers in aluminium, copper, lead, mercury, nickel, zinc, sulphur and raw cinematographic films have been required to declare their stocks as on 30th June and to submit monthly returns of stocks and sales after that. About particular items, such as raw films for instance, the Central Ministry of Commerce and Industry is convinced that the stocks now held in the country and the supplies already shipped and on their way to India will be sufficient to meet all reasonable requirements for the next four months. But there can be no similar certainty about all items, so the licensing authorities have been authorised to issue *ad hoc* or actual users' licences for a wide range of industrial raw materials, after due scrutiny of available local supplies and legitimate demand. Everything will, therefore, turn on the quality and speed of such scrutiny.

Restriction on Consumer Goods

Fresh licensing will be nil or negligible in the case of consumer goods such as razor blades, pens, watches, radio sets, drugs and medicines. Here, the official view is a mixture of reassurance and warning to the consumer. On the one hand, it is claimed that well-filled shops and newspaper advertisements indicate an abundance of imported stocks which should ensure reasonable prices unless consumers themselves resort to panicky hoarding. On the other hand, it is claimed that the ban on the import of articles the like of which are locally available, or are required merely for securing better quality, will act as a fillip to indigenous industries which have found it difficult in the past to expand production in the teeth of "consumers' prejudice" and competition. Even in the case of drugs and medicines it is argued that present supplies should suffice if they are conservatively prescribed by doctors or used by patients themselves, and if imported antibiotics and other new drugs are not resorted to for trivial complaints.

No estimate is available of the likely saving in imports as the result of the new policy over the next quarter. But the broad size of the saving can be inferred from the fact that the value of unutilised licences (other than for capital goods), which can be readily revalidated, is estimated at between Rs. 120 crores and Rs. 130 crores, including Rs. 35 crores to Rs. 40 crores for finished goods. This is comparable with the actual imports of Rs. 346 crores, exclusive of plant and machinery, during the second half of 1956 (industrial goods accounting for Rs. 251 crores and consumer goods for Rs. 95 crores), and of Rs. 327 crores during the first half of 1956 (industrial goods Rs. 229 crores, and consumer goods Rs. 98 crores). Even if the value of outstanding licences is taken at Rs. 130 crores, the cut—ignoring the value of imports that might materialise during the period under fresh licences—works out to Rs. 43 crores in three months compared with the second half of 1956, against the estimated cut of Rs. 30 crores which was effected by restrictions on imports during the first half of this year. The actual size of the cut will, of course depend on the volume of imports that are effected in the coming three months under the fresh licences which will be granted, howsoever sparingly, on an *ad hoc* basis.

New Import Policy

The new import policy has been limited to a period of three months in accordance with the Government's decision to relate import control to the financial year, so that the licensing periods will in future run from April to September and from October to March. The detailed licensing policy for the half year from 1st October will, therefore, be announced towards the close of September. "By then," says the Government's Press note, "a clearer picture about the foreign exchange resources likely to be available for imports during the new licensing period will be before us." But assuming that the search for long-term credit from the World Bank, foreign Governments and other sources yields fresh results in the next few months, the needs of industrial projects and of transport under the second five year plan are so heavy that it would be rash to expect any quick relaxation of the import restrictions. Indeed, there is more than a hint of the removal of most items from the O.G.L. even during the next full licensing period, in the advice given to importers to establish their past performance in the basic period 1952-53 to 1955-56 for items which were included in the current O.G.L.s. Competent observers do not expect that the corner will be turned for another two years. Any significant liberalisation of import policy will be possible only after an adequate increase in the internal production of presently high-priority imports such as steel: also, when the machinery and equipment which are being imported on the same priority basis go into production.

Committee on Food Prices

The long interval of 40 days between the announcement of the Government's intention to set up a committee to enquire into the food situation in the country, and the actual constitution of the committee last week, is attributed to the search for a chairman. Originally, it appears, the Food Ministry tried to persuade the Home Minister, Mr. Govind Ballabh Pant, to head the committee. Had Mr. Pant agreed, there might have been some justification for the term "high-powered" which the Food Minister, Mr. A. P. Jain, used for the committee in the course of his statement in the Lok Sabha on 14th May. But the Home Minister declined, so the choice fell ultimately on Mr. Asoka Mehta. The invitation to an Opposition leader, particularly to Mr Mehta, has evoked appreciative comment in the capital. The Praja Socialist leader made a mark in last Parliament as a discriminating and responsible critic of the Government's policies, and his failure to be returned to the Lok Sabha has been among the vagaries of election fortunes which have been widely

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

regretted. His choice is a welcome sign of the Government's respect for responsible criticism. But the fact remains that the Food Ministry has taken an unduly long time to arrange for an objective study and advice on the urgent problem of food prices.

Even more remarkable is the ambiguity of the terms of reference which the Central Food Ministry has framed for the committee. Mr. Jain stated on 14th May that the Government had decided "to set up a high-powered committee to investigate fully into the causes for rise in prices despite higher production, and to suggest immediately from time to time remedial measures which would prevent speculative hoarding and arrest undue rise in prices." That was in the context of a rise in the wholesale price index for cereals from 447 on 19th May, 1956, to 550 on 11th May, 1957, and for pulses from 367 to 420. During the five weeks between Mr. Jain's statement and the announcement of the personnel and the terms of reference, the prices of cereals had risen more steeply than during the same lean period last year. During the week ended 8th June, 1957, the wholesale price index for cereals stood at 564 compared with 468 during the week ended 9th June, 1956. While the figure for pulses was at 350 during the week ended 9th June last year, it remained stationary at 401 during the week ended 8th June this year. These developments and the earlier statement of purpose notwithstanding, the terms of reference of the Asoka Mehta committee do not include any explicit mention of the need to bring down food prices. Further, even though the Central Government came to the conclusion earlier last month that it was pointless during a period of high prices to fix minimum rates for foodgrains as an incentive to the producer, the Central Food Ministry has given pride of place in the terms of reference for the Asoka Mehta committee to "recommendations to ensure a level of prices which would provide the necessary incentive to the producer"—happily qualified by "due regard to the interest of the consumer and the maintenance of a reasonable cost structure in the economy".

Wholesale Price Indices

All this is of a piece with the Food Ministry's constant anxiety to couple every grudging admission of the fact of high food prices, as compared with last year, with the argument that prices were abnormally low last year. The Ministry claims that the proper comparison of present prices is not with the low levels which prevailed from the bumper harvests of 1954 till the middle of last year, but with 1952-53 which has been accepted as the base year for the Economic Adviser's index of wholesale prices (revised series). With the prices which prevailed during 1952-53 (as the base equals 100), the index for cereals stood at 90, during the week ended 26th May, 1956, and at 104 during the week ended 25th May, 1957, while the corresponding figures for pulses were 75 and 85. It would appear, then, that there is no cause for worrying about the recent trend of food prices. It could even be argued (and has, in fact, been discreetly suggested by Food Ministry spokesmen) that food prices should be allowed to rise further in order to compensate for the rise in the prices of some important articles of rural consumption relative to 1952-53. For instance, the index number during the week ended 25th May was 116 for cotton manufactures, 132 for factory matches, 129 for cement, 135 for galvanised corrugated iron sheets, and 126 for tools and implements.

It is obvious that the principal task of the Asoka Menta committee will be to face squarely and try to answer the problem of a reasonable parity between agricultural and industrial prices. The problem has vexed many countries, and three months would appear to be altogether too short a period for the committee to find the right answer for India. But it can at least make the beginning in attacking a problem which has scarcely been faced so far, with the result that the Government has tended to speak in two voices: that of the planner, who is by and large for low food prices with controls if necessary; and that of the politician, who is anxious to safeguard the farmer's interest even if he is often unable to distinguish it from that of the trader.

Steel Retention Prices Increased

In its Resolution dated 1st February, 1956, the Government of India had stated that if as a result of changes in the railway freight, changes in statutory prices of coal and other fuel, raw materials, stores or machinery and changes in labour costs caused by labour legislation or adjudication or conciliation awards, the manufacturing costs of Tata Iron and Steel Company and the Indian Iron and Steel Company alter from the 1954-55 level, the companies might represent in the matter and the Government would consider it on merits. The two companies having represented in the matter in August 1956, the Tariff Commission was requested to enquire and recommend the increase in prices to be allowed to the two companies.

The Tariff Commission has submitted its report, the main recommendations of which are: (i) that the average retention price payable to Tatas and I.I.S.CO for the period 1955-56 to 1959-60 and for all categories of steel taken together should be increased by Rs. 12 a ton; (ii) that the 1954-55 retention price for I.I.S.C.O. should be increased by the same amount and consequently, the average amount to be credited by that company to its development fund during the period 1955-56 to 1959-60 will remain unchanged; and (iii) that the 1954-55 retention price for Tatas should be increased by Rs. 14 a ton and consequently the average amount to be credited by them to their development fund during the period 1955-56 to 1959-60 should be reduced by Rs. 2 a ton. The Government of India has accepted these recommendations.

London

CAPITAL NEEDS OF THE COMMONWEALTH

PROPOSAL FOR TRADE CONFERENCE

(FROM OUR LONDON CORRESPONDENT)

THE Commonwealth Prime Ministers have discussed the political and defence developments in various parts of the world which are of particular importance to the members, and especially the Middle East as a result of Suez Canal developments and the Far East. Attention has also been focussed on economic matters, with particular reference to the Commonwealth's need for capital for economic development, with India at the head of the queue; Britain's anxiety to be associated in a free trade area with the common market countries of western Europe; and Canada's wish for a Commonwealth trade conference next April following a Finance Ministers' conference in Ottawa later this year after the conclusion of the meetings in America of the International Monetary Fund. There is a close relationship between these three topics, for Britain hopes to increase her already heavy burden of Commonwealth investment out of the increased earnings she expects from the European scheme, and Canada fears additional handicaps in the marketing of her wheat and other agricultural products unless these items are definitely excluded from the European scheme.

Some clearing of the air generally will be of undoubted value. There is no denying that the sterling area concept has been threatened by errors and omissions on all sides. Financial co-ordination in the Commonwealth has in recent years fallen far short of what is required to enable the sterling area to function smoothly. When some members of the sterling family have been behaving well, others have gone on a spending spree and jeopardised the stability of the family as a whole. As soon as corrective measures have been agreed and applied in one direction, fresh disorders have been apt to break out in others. The sterling area is thus subject to recurrent stresses and strains which are inevitably reflected in the foreign exchange markets in impaired confidence in the pound. The U.K. Government has laid itself open to criticism for its failure to fight inflation, and this looks like being carried further by proposed increases in the prices of coal, gas, electricity and transport now contemplated. Closer co-ordination in policy matters and a stricter enforcement of agreements in carrying it out are urgently needed if confidence in the pound and in the sterling area is to be restored.

May Trade Figures

The detailed figures of overseas trade in May, especially in their breakdown of the large import total, show that this was attributable to the continued high level of oil imports coupled with partly seasonal increases in purchases of fruit, vegetable, timber, pulp, paper and steel-making materials. The quantity of crude oil landed was 10 percent more than in April, and refined products were up by 2½ percent. There was a fall in imports from the United States and a sharp rise from Middle East sources. Taking April-May together, arrivals of crude oil were 4 percent heavier than the average for January-October, 1956, and refined products were 5 percent greater. In value, however, the rise was much sharper. Higher prices of raw wool and sugar were also reflected in the May import bill. Unrefined sugar arrivals were up by 74 percent to nearly £17 million a month in April-May, although the quantity rose by only 18 percent. May's record exports of £302.9 million may have been augmented by deliveries of goods delayed by the engineering strike in March. For April and May together, the monthly rate of exports was 7 percent higher than a year earlier, thus almost exactly maintaining the rate of advance shown in the first quarter of the year. Shipments of engineering products rose sharply in the last two months and the rapid improvement in car exports and a resumed advance in aircraft exports have been notable. There was also a marked advance in the important general machinery group.

Terms of Trade Better

The terms of trade—the ratio of import to export prices—moved in Britain's favour in May. While the export price index remained at 110 (1954 = 100) for the fourth consecutive month, the import index declined from 111 to 110. Consequently, the terms of trade returned from 101 to 100, the March figure. The fall in the import index was due to a 7 point drop from 145 to 138 in imported fuels. This is largely accounted for by a fall in the average price of crude petroleum imports, partly due to lower freight rates and partly to a return towards the normal pattern of supply with a consequent fall in expensive imports from the western hemisphere.

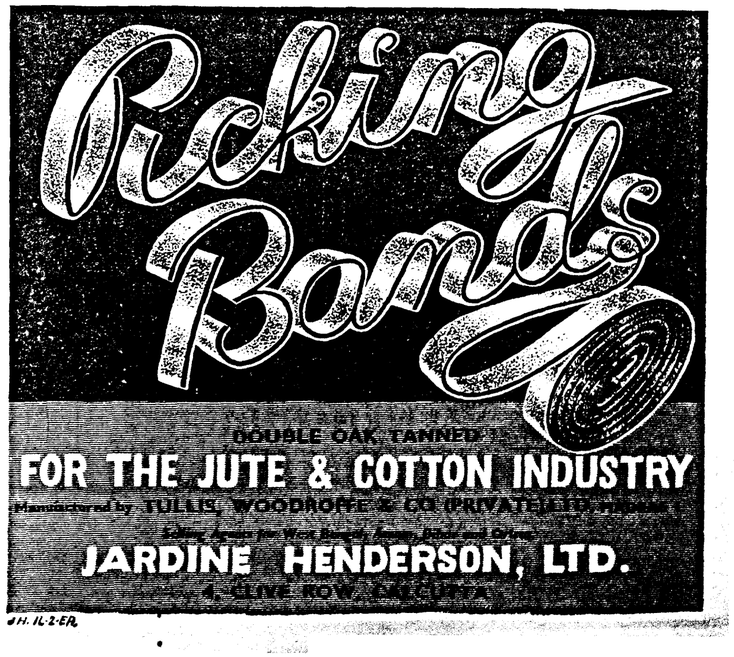
Unit Trusts for Pension Funds

Small companies starting pension funds, unlike the larger organisations, are not in a position to appoint special staff with adequate experience to handle the investments to the best advantage. To overcome this difficulty, a new body has been formed called Pension Fund Investment Managers, comprising three leading actuaries and two directors of Municipal and General Securities, leaders in the unit trust field, which firm will administer the organisation. Funds entrusted to the new body will be put into unit trust that are to be formed for the purpose. There will be two unit trusts, one in gilt-edged and one which may, at the discretion of the managers, be wholly in equities. These will be the means of providing a wide spread of investments to underlie individual companies' pension schemes. The securities to be included in the portfolios will be chosen with a special eye to the net tax needs of industrial pension funds. The balance to be maintained between fixed interest and equity investment will, of course, be a matter for consultation between Pension Fund Managers, who subsequently will direct the portfolio and the companies concerned. The experience of Municipal and General Securities over the years suggests that the new trusts should give a further fillip to equity investment by pension funds. In the past, smaller schemes, while recognising the need for an increasing equity component as an inflation hedge, have undoubtedly been inhibited by the size of the funds available and by the problems of day-to-day management. The unit trust basis could usefully resolve these difficulties.

Carpet Imports

It was in April 1956 that the Government raised the hopes of the carpet industry by undertaking to consider its requests for an increase in the import duty on certain types which were meeting severe competition. These hopes are now not likely to be realised, the Government apparently feeling that the Budget reduction of purchase tax to 15 percent has altered the position on which the industry's case was based. The facts and figures are not without interest. In the three years ended 1956, British imports of hand-made woollen carpets showed little change in volume, and in the last of those years they totalled 1,565,140 square yards. Those of other woollen carpets, after rising from 394,631 square yards in 1954 to 423,290 square yards in 1955, fell back to 313,014 square yards last year. On the other hand, the carpets against which additional tariff protection was applied for—those faced wholly with cotton—have been imported on a much larger scale, the imports rising from 4,825,030 square yards in 1954 to 5,249,937 square yards in 1955, and to 6,726,755 square yards in 1956. In the five months ended May this year, the imports were 2,553,370 square yards, against 2,757,687 square yards in the corresponding period of last year and 2,022,193 square yards in that of 1955.

On machine-made carpets of these and other ordinary types, the import duty is 1s a square yard or 20 percent *ad valorem*, whichever is higher. The duty is not payable on carpets imported from India, which charges a high rate of duty on its own imports of British carpets, although it is the leading supplier of carpets of these types to this country. Supplies also come from Belgium and other western European countries. Cotton-faced carpets and also the new tufted types, in whose manufacture much man-made staple fibre is used, have brought increased competition for the makers of the ordinary woollen types of carpets. It was widely suggested last year, when the application for an increased duty was made, that woollen carpets were under a severe handicap because of the purchase tax of 30 percent. This applied to all types of carpets, both home produced and imported, but it was no doubt a severer hindrance to sales of the more expensive woollen carpets than to those of the cheaper types, especially those which entered the country duty-free from India.



Back-door Nationalisation

The next Labour Government will try to acquire, probably through the Stock Exchange, controlling interests in all private companies whose activities are held to be important to the national economy. Labour will also review and revise the operations of existing nationalised industries. Policy statements to this effect, already approved by representatives of all shades of opinion within the Labour movement, have just been endorsed by the party Executive. These will be made public later in July and probably be accepted by the annual conference in the autumn. It is something that the Labour movement envisages the continued existence of a private industry at all. It is evident, however, that as a result of what the Liberals call "back-door nationalisation", important parts of it will become the joint property of the nation, represented by the next Labour Government, and of existing stockholders. The Executive has apparently decided to reserve for the time being any precise decision about which private companies are important and prosperous enough to deserve to be acquired by the State.

Research workers at Transport House are reported to have prepared a list of 600 companies but, for fear of reactions on the stock markets, the party does not wish to show its hand yet. It is true that two companies—I.C.I. and Courtaulds—were mentioned at the recent meeting of the National Executive Committee, but only as examples. Another decision which has been deferred could be equally important for the economy under the next Labour Government. The Executive has yet to decide whether to acquire private companies' shares compulsorily—as President Nasser acquired the Suez Canal—or whether to buy shares on the Stock Exchanges. It is probable, as things stand at present, that the latter course would be adopted, but no final decision has been reached. The proposal that a Government should buy controlling interests in private firms is not new. Disraeli started it when he bought Britain's share in the Suez Canal Company. Subsequent Governments have acquired important interests in the Anglo-Iranian Oil Company and in most large private bus companies. These purchases have been dictated, however, by definite national needs. It is that aspect of Labour's latest proposal which gives rise to doubt and suspicion.

Future of Cinema Industry

Conflicting views are held about the future of the British cinema industry, which has undoubtedly been adversely affected by the rapid expansion of television. The spokesman of the film producers' organisation was optimistic when questioned on the disclosures made by the Board of Trade's annual review of the industry, mainly because there has apparently been some revival of interest in the first half of this year. The Board of Trade figures show that cinema attendances in this country were 7 percent lower in 1956 than in 1955 and gross box-office taking fell 1.5 percent, in spite of rise in the price of seats. The total receipts were the lowest since 1950, when these statistics were first collected. The only region not to show a fall in taking was Wales. Entertainment tax, 1.5 percent higher than in 1955, took a slightly higher proportion of the total. Fees paid in cinema rentals for films amounted to £23.3 million, 3 percent less than in 1955. British films accounted for £7.6 million or 32 percent of the total, an increase of 5 percent. Foreign films showed a drop of 7 percent. The producers' optimism is largely based on the fact that new British feature films over 6,500 feet in length numbered 81 in 1956-57, compared with 73 in the pervious year, which implies confidence in the future, and they take heart in the recent revival of the live theatre which both the cinema and television were expected to kill.

Bombay

STATE BUDGET DEFICIT LEFT UNCOVERED

AGRICULTURAL PROGRESS DURING FIRST PLAN

(FROM OUR BOMBAY CORRESPONDENT)

THE Bombay State Budget for 1957-58 shows a deficit of Rs. 3.17 crores. But in presenting his proposals, Dr. Jivraj Mehta, the State Finance Minister, said: "The overall deficit for 1957-58, taking both revenue and capital accounts together, cannot be fully estimated at present due to several uncertain factors, but it will be met without difficulty from our resources, though we have to face many transitional difficult problems involving large financial commitments on account of the formation of the new State. I have no doubt, however, that we shall be able to solve them with our past tradition of sound financial management." He added: "We are straining every nerve to increase our present tax collection by proper enforcement measures and increase in efficiency." Dr. Mehta said that he did not propose to bridge the gap at this stage. "I propose to leave the gap of Rs. 3.17 crores in revenue account uncovered for the present. The deficit will go down if the Government of India agrees to give further grants for our plan schemes as urged by us. We may also expect some relief as a result of the final recommendations of the Finance Commission. As I mentioned in my Budget speech in March last, we have made certain suggestions to the Finance Commission on the distribution of 'Taxes on Income', 'Central Excise Duties' and 'Estate Duty.' We have also asked for an annual grant of Rs. 3.25 crores to meet the deficit of some of the component units of the State, the growing plan expenditure of all the areas of the new State and the increased expenditure arising out of problems of integration such as uniform pay scales. In addition, we have pressed the Commission for some just concessions regrading debt service charges on Central loans. The Government, would, therefore, prefer to await the final recommendations of the Finance Commission before taking steps to cover the revenue gap by means of additional taxation." Referring to the complex problems arising out of the formation of the new Bombay State, the Finance Minister said he did not propose to take measures for uniformity throughout the State in the rates of sales tax, land revenue, stamp duties and court fees.

Reviewing the progress made under the first five year plan in agriculture, the Finance Minister said that against an annual food production target of 5.6 million tons, actual output amounted to 5.75 million tons in 1953-54; 6.14 million tons in 1954-55; and 5.25 million tons in 1955-56. This represents an annual average of about 5.7 million tons for the last three years of the first plan. Cotton production had more than doubled from 548,000 bales in 1951-52 to 1,195,000 bales in 1955-56. Among the measures taken to step up the State's food production were schemes for the multiplication and distribution of improved seeds, distribution of manures and fertilisers, land improvement through mechanised cultivation, soil conservation and minor irrigation projects.

Raising Food Production

In keeping with the Government of India's policy of increasing food production, stress will continue to be laid on agricultural schemes. Nearly one half of the plan outlay of Rs. 73.42 crores during the current financial year will be spent on agricultural, irrigation and allied schemes. "The agricultural programme has been so revised that schemes having a direct bearing on increased food production may be completed within a period of three years instead of five years. Accordingly, it is proposed to intensify well irrigation and soil conservation programmes and to establish 400 *taluka* seed farms and *taluka* godowns so as to achieve additional production of foodgrains of the order of 1.5 million tons by the end of the second plan period," the Finance Minister said.

The Government was fully aware of the problem of food prices. There was a steady fall in foodgrain prices during 1953-54 and in the earlier part of the following year. The Government of India, therefore, decided to operate a price support policy. Food prices touched their lowest ebb in April-June 1955, but since then there has been a steady rise. "In order to meet the situation, the Government has introduced the system of distribution of overseas rice and wheat through fair price shops. In the State as a whole, about 5,900 fair price shops are now selling such rice and wheat. It has also been decided to open a few godowns in each district where stocks released by the Government of India could be stored and then supplied to fair price shops in the districts. Parts of Ratnagiri district and a few other areas become inaccessible during the monsoon. Arrangements have, therefore, been made to supply some stocks of rice and wheat to such areas in advance for distribution during the monsoon." Bombay city is being supplied with imported wheat and its movement into or out of Greater Bombay has been prohibited except under a special permit. The object of this move is to relieve pressure on indigenous production. It was stated that adequate supplies of foreign wheat are being released by the Government of India for the needs of the city.

Acquisition of Food Stocks

The Finance Minister said: "The Essential Commodities Act has been recently amended by the inclusion of a provision enabling the Government to take over rice and paddy stocks held by dealers by paying the average price of the previous three months. This provision has been applied to Bombay State. These measures are expected to be effective in checking the rise of prices and already a trend towards a fall in prices is noticeable. The Government is closely following the food situation and though there is no cause for any immediate anxiety, there is no room for complacency either. All that I would say is that both the Government of India and the State Government are fully seized of the situation and will take such remedial measures as may be neecssary from time to time."

Outlook for Next Cotton Crop

The Jarilla March Cotton contract opened at Rs. 690, and after an initial decline to Rs. 688, closed at Rs. 695 a candy last week. This recovery was due to the fear that cotton may tend to be in short supply towards the end of the year. Sowing has been delayed in a number of areas because of the late monsoon. Cultivators in Madhya Pradesh and Andhra are awaiting further rainfall before they begin sowing operations. So far, only half the sowing work has been completed in Gujerat, Khandesh and Vidarbha. It is only in the irrigated areas of Punjab, Rajasthan and Uttar Pradesh that sowing operations have been completed. It would, therefore, seem that the marketing season will be delayed for about a month or so. This assumes that weather conditions will remain satisfactory. Meanwhile, it is expected that the total crop will amount to around 5 million bales. The carry-over with the mills as on 1st September, it is estimated will be at about 1.63 million bales. Since mill consumption is now running at a level of 400,000 bales a month and the new crop may not be available during the first two months of the season, the supply position may well be tight. In other respects, the crop promises to be a good one. Although it is not believed that the actual area under cotton will be more, a promising factor is that the irrigated area in various States is likely to increase by about 50,000 acres, following the completion of some development projects. The quality is also expected to improve with the distribution of better quality seeds through Government agencies. This may well result in the production of higher staple varieties.

Interest in imported varieties has been at a low ebb. The Government of India announced the import policy for 160,000 bales of American cotton. Of this, 100,000 bales will be imported under the development assistance programme and the remainder under Public Law 480. Purchases of 1⅛ in. staple cotton and above will have to be completed by 31st May, 1958 for shipment up to 30th June, 1958. Payment for these imports will be made at a fixed rate of exchange of Rs. 580.25 for $100. Although the trade had been anxiously awaiting the announcement of this policy, it has reacted somewhat listlessly. Business amounting to a mere 10,000 bales has been booked so far.

Interest in Egyptian growths has also slackened, although Alexandria prices have declined to 53d a lb., some 2d below the price the mills themselves asked for some time ago. Of the contracted quantity of 20,000 bales, only about 15,000 bales have been actually bought by the industry. Tight money conditions and a slackness in the textile market possibly account for this lack of interest.

Meanwhile, moves are afoot for expediting the installation of automatic looms for the manufacture of cloth for export purposes. Industry and Government representatives have been discussing this question and it is believed that manufacturers have explained their difficulties to the authorities. It is hoped that appropriate steps will soon be taken which will enable mills to proceed with their modernisation plans.

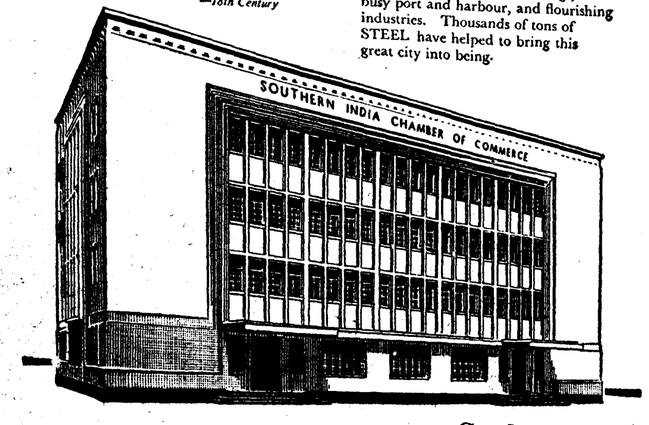
Yarn Market Up

The Government of India's announcement that no import licences will be issued during the July-September period stimulated the yarn market. Although little business was done, the August delivery 120 Dull cones contract rose to Rs. 832 and the 2/40 staple fibre contract was quoted at Rs. 598. The spot market also increased slightly. The cotton yarn market continued to be sluggish and there was hardly any demand, either internal or for export purposes.

Oilseeds Bearish

Future markets in oilseeds were somewhat bearish following reports of satisfactory weather conditions in growing areas. The September castor contract opened at Rs. 167.25 and after mild fluctuations closed at Rs. 163. The same tendency was seen in the spot market. Castorseeds dropped by Rs. 1.50 a cwt. to Rs. 31.75 while oil was cheaper by 50 nP a quarter. Apart from the selling pressure, a lack of overseas demand helped depress the market. American importers showed no interest in Indian castor oil and were reported to be unwilling to pay more than 17.75 cents a lb. Only scattered enquiries were received for commercial castor oil from the U.K. and the Continent. Weather conditions also adversely affected the groundnut market. The August delivery contract opened at Rs. 176.25, but in spite of gains early in the week, the market closed at Rs. 173 following heavy selling pressure. The spot prices of groundnuts and oil declined in sympathy. A similar weakness was evident in linseed. The September contract opened at Rs. 30.50 and rose to Rs. 30.75 early in the week, and after mild fluctuations, closed at Rs. 29.62. The spot market ruled quiet in sympathy, and linseed lost a little over Rs. 1.00 while linseed oil was cheaper at Rs. 14.50.

" Where now the city stands,



there was once naught but the city's site." OVID

Madras street scene —18th Century

Madras

February 1640. Sailing along the Eastern coast of India Francis Day reached a tiny village of a few scattered huts. In a short time human hands raised a small town of palm-thatched mud houses. In the course of the centuries on this very site has arisen a modern city with well laid-out roads, palatial buildings, a busy port and harbour, and flourishing industries. Thousands of tons of STEEL have helped to bring this great city into being.

RETRENCHMENT OF SURPLUS JUTE MILL WORKERS

ATTITUDE OF WEST BENGAL GOVERNMENT MAY HAMPER MODERNISATION

IT is reported that the Government of West Bengal has again written to the I.J.M.A. on the subject of retrenchment of workers as a result of the modernisation of mills. It is not known why the Government has taken this step so soon after its previous letter on the subject. Conditions have not changed since then and, as the letter has not been made public, it is not known whether the Government has changed its views in any way or wishes merely to emphasise them. It must be clear to the Government that if the industry is to be competitive (indeed, if it is to survive) it must modernise. Modernisation means the installation of labour-saving machinery, which means that part of the labour force must become redundant. Redundancy implies retrenchment but provision is made for compensation for retrenched workers. If the five year plan is a success, they will be absorbed elsewhere and it is doubtful if many of the workers retrenched so far have been long out of employment. In fact, it is known that many have immediately got other jobs and have benefited by being retrenched. This attitude of the Government of West Bengal is the negation of progress. Follow it to its logical conclusions, and we shall have to abolish typewriters in our offices. The building of new electric plants must be stopped because the makers of hurricane lanterns will be unemployed. New steel works will reduce the demand for timber for building purposes, and so on. In fact, the Government is displaying the Luddite mentality of a century and a half ago.

Proposed Conference in Dacca

According to information received from East Pakistan, the Government there has decided to invite representatives of foreign jute manufacturers to meet in conference in Dacca in August. The idea is said to be to familiarise them with the conditions under which jute is produced and marketed. In announcing this proposal, the Minister in charge of jute took the opportunity to criticise foreign merchants whom he accused of depressing prices. Either the Minister is very ignorant of the true state of affairs or he is deliberately misrepresenting the position. Take last year for example. Prices fell to very low levels—even below the Pakistani minimum prices—early in the season. But that was not due to any action by foreign merchants; it was due to bear selling by Pakistani merchants. Much of the jute then sold has not yet been delivered and some of it probably never will be. It is suspected that the real motive for the proposed conference is to endeavour to get foreign manufacturers to agree to deal directly with the Marketing Board instead of through the merchants who have built up the business. Whether foreign manufacturers will agree to this remains to be seen, but, after the experience of the I.J.M.A.'s deal with the Pakistani Jute Board some years ago, they should beware. Large sums are still due by the Pakistani Jute Board for short weights and quality and moisture claims; there seems to be little chance of their ever being paid.

THE JUTE MARKETS

During the past week, the dominant influence has been speculation in the ginny fatka market. Rates have inclined towards lower levels but there has been resistance to the lowering of prices in raw jute.

Manufactured Goods: In the absence of substantial foreign demand, speculators have had it all their own way. The bears have, on the whole, had the advantage. Apart from short selling, it was reported that bulls were unloading. B Twills were at one time down to Rs. 113.50 but from this point there was a recovery, said to be due to some small overseas enquiry for heavy goods. On Tuesday, the quotation was taken up to Rs. 115 and on Wednesday morning it was Rs. 114.80. Mills are not showing any keenness to sell at current prices. Shipments in June, it is reported, were below expectations because of slow handling at the docks.

On Wednesday morning, quotations were as follows:

	Ready	July	July-Sept.	Oct.-Dec.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	34.85	34.85	34.85	34.55
40in. 10oz.	43.15	43.35	43.45	43.15
B Twills	115.10	115.95	116.05	115.80
Heavy Cees (Plain)	116.25	117.30	117.30	116.50
A Twills	139	140	140.50	140.50
Liverpools	127	128.50	129	129.50
Cornsacks	117	118	118	117

Raw Jute: Early in the past week, the market was easier in sympathy with manufactured goods, but sellers were unwilling to cut prices to any great extent, so mills took up whatever was offered at reduced prices. With a fair amount of business passing, rates soon recovered to the previous quotation of Rs. 31.50 basis Bottoms for Northern and Assam jute. On Thursday, business was done in Northern and Assam at Rs. 30.75 basis Bottoms, in Assam mesta at Rs. 29.50 and in Daissee mesta at Rs. 29. On Friday and Saturday, business was done in Assam and Northern at Rs. 31 to Rs. 31.25 basis Bottoms, and in mesta at Rs. 28 for jungli, Rs. 28.50 for Bihar and Rs. 30 for Assam. On Monday, little business was reported. But on Tuesday, mills again took some interest and new crop was sold at Rs. 31.31 basis Bottoms for Assam for half August-half September shipment and at Rs. 31.50 basis Bottoms for half July-half August. Pakistani N.C. Cuttings were bought at various prices from Rs. 111 to Rs. 114, according to the mark.

On Wednesday morning, sellers were steady and though they did not have many sales of the new crop on their books and would have liked to do more business, they were unwilling to discount current quotations.

Quotations were as follows:

	Landed at Mills Rs. a md. basis Bottoms		Shipment
Indian Jute:			
Assam	31.50		July-August
Northern	31.50		"
Purnea Desal	31		"
Purnea Jungli	29		"
Daissee	33		One month
Assam Tossa	33		July-August
Murshidabad Tossa	32.50		"
Jungli Tossa	31		"
Northern ex Calcutta	31.50		One month
Local Packing	29.50		"
Mesta:			
Assam	30.50		July-August
Northern	30.50		"
Desal	30		"
Daissee	29.50		"
Murshidabad	29		"
Jungli	28		"
Bimli	29	F.A.Q.	"
Pakistani Cuttings N.C.'s	112	a bale	"

Quotations for old and new crop were the same.

In Cossipore, mill demand continued and good prices were being paid for the higher qualities and for selected Bottoms. On the other hand, low district Bottoms were neglected and their prices had fallen. Wagon arrivals dropped to 406 against 466 in the previous week and 297 in the corresponding week of last year.

Mofussil: Imports of old crop in Assam are said to be more than usual for the time of year, though rain has been interfering with the movement of jute. New crop is also coming in, but the quantities are small and the jute is short and very wet. In Bihar, imports of old crop are good. Elsewhere they are very meagre.

Some sowing is still being done in Bihar but in other districts it has been completed and reports say that the area is about the same as that of last year.

MR. GEORGE MORGAN AND MR. NORMAN LUKE

Recently, there have passed away two men who were formerly prominent in the jute trade in Calcutta and East Bengal—Mr. George Morgan and Mr. Norman R. Luke. Both of them had reached a ripe old age. Mr. Luke was 77, and Mr. Morgan would have been 90 next October.

Norman Luke's father, James Luke, was the founder of Jas. Luke and Sons and was for a number of years the editor of *Capital*. Norman came to Calcutta in 1911 as an engineer with Jessop and Co. Ltd, but left later to join one of his father's concerns, Luke Stonebridge and Co., electrical engineers. He was chiefly known, however, in jute circles in connection with the Baliaghatta Jute Mill, of which Jas. Luke and Sons were managing agents, and Watt Bros. Ltd. in Narayanganj. In social circles, he was very popular and was regularly called on to sing at Burns Club and New Club concerts. He served on the New Club committee for a number of years finishing as its president. In soccer, golf and tennis circles, he was well known. He was also a prominent Freemason. Some of his chief activities were connected with St. Andrew's Church, of which he was an Elder for more than 25 years and Session Clerk for 17 years. Between the two wars, he was active in political circles and was a member of the old Bengal Legislative Council and the Calcutta Corporation where his sound commonsense and pawky humour made him popular with all parties. Norman was a genial and affable character. There was genuine regret among his many friends when he had to retire on account of ill-health. Mrs. Luke had died a few years ago.

George Morgan came to India in 1889 to Geo. Henderson and Co. and was for a long time in its jute business in Narayanganj. Afterwards, he joined the Sonakunda Co. Ltd. He was for 11 years chairman of the Narayanganj municipality and during that period, Narayanganj was frequently held up by Lieutenant-Governors and others as the best administered municipality in Bengal. He was also a member of the East Bengal and Assam Legislative Council. He came to Calcutta in 1912 and, in partnership with Mr. George Walker of H. D. Cartwright and Co., founded the jute broking firm of Morgan Walker and Co. In 1916, he was mainly responsible for the foundation of the Calcutta Jute Dealers Association. Always interested in public affairs, it was not long before he became a member of the Calcutta Corporation and the Bengal Legislative Council in both of which he was leader of the European Group. Later, he represented the Bengal Chamber of Commerce constituency in the Legislative Assembly in Delhi. He was also President of the European Association and his advice was sought on many matters during the troublous times in the 'twenties and 'thirties. As a member of the Calcutta Improvement Trust, he had much to do with planning the development of Calcutta. George Morgan's interests were not confined to politics. He was a keen gardener, was president of the Agri-Horticultural Society, was in charge of the trees on the *maidan* and laid out the Victoria Memorial Gardens. His love for trees and flowers was shared by his wife and, after his retirement, they built a house in Kalimpong and turned the bare hillside into a beautiful garden which is the showpiece of Kalimpong today. In 1906 he was awarded the Kaisar-i-Hind Gold Medal and in 1928 the C.I.E. George Morgan came from Fife and one of his ancestors was an antagonist in the last duel fought in Scotland. Later the descendants of both duellists came to Calcutta and founded the firm of Landale and Morgan. George Morgan had a keen sense of humour and, though there was often sarcasm in his wit, it was never hurtful. He was popular with all communities in a generation that is rapidly passing away and there are probably more Indians than Europeans who now remember him in public life.

THE PAKISTANI JUTE MARKETS

LARGE FIBRE ARRIVALS IN JUNE

(FROM A NARAYANGANJ CORRESPONDENT)

DURING the jute season that has just ended, there was a period when many people firmly believed that the crop was small. The poor arrivals during the latter part of April and early May were taken to indicate that the crop had been exhausted and that "the bottom of the pan" was being scraped by the stockists. But during June, jute arrived at a rate which was unexpectedly large for the end of the season. Although new crop jute is appearing in increasing quantities, prices for the old crop remain more or less unchanged at Rs. 34-8 for B Bottoms and Rs. 32-4 for C Bottoms and Rs. 30 for X Bottoms. Loose jute is now about Rs. 2 a maund less, but it still contains a fair proportion of weedings. All jute arriving is being fully taken up. Although overseas prices show a tendency to come down, it is still profitable to buy and sell simultaneously.

The position for new crop jute is very confused. Indications of prices from overseas vary considerably from day to day; balers' offers seem invariably to be too high, so very little business has been done. This may be partly due to the fact that buyers expect lower prices, but there is no doubt that they are short of jute and are picking up at a premium any afloat parcels offering. Pucca bales in the local market remain unchanged with an easier undertone, and Export Hearts for which there is no demand are quoted about Rs. 6 lower. Cuttings went down to Rs. 85 when the Calcutta gunny market fell, but they have now recovered slightly and stand at Rs. 88.

The growth of the new crop is satisfactory with ample rain. Although the river levels so far have been rather low, they have now risen and harvesting of the lowland crop is progressing well. The retting of the early *chur* land jute has not been very satisfactory due to lack of water, but this is mostly weedings, so it does not matter very much. Judging from the way in which the river levels are rising and considering the time of the year, there is little danger of floods. The condition of the plants should not deteriorate at all. Reports indicate that a crop slightly smaller than last year's is likely, but it will probably be better in quality.

THE FOREIGN JUTE MARKETS

FIBRE MOVES DOWNWARDS

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market has weakened further. There is no doubt that business would be stimulated if fibre prices came back to minimum levels. The Pakistani Jute Board has not yet declared its licensing policy for the new season, but this should not now be long delayed. It is believed that all Pakistani raw jute shippers will receive their licences, but some non-Pakistanis may not. Spinners in the U.K. and on the Continent cannot be sure which firm they can deal with until the list of shippers is published. Reports of the new crop's progress are now very good, and that should cause a change in sellers' ideas. There is no excuse now for jute prices being too high, as there is no lack of rain. Sellers of the new crop are still very scarce, but any prices mentioned are much too high for spinners, although they are very irregular. Some shippers are offering for July-August shipment, buyers' option old or new crop, at £122 for Mill Firsts, £117 for Mill Lightnings, £113 for Mill Hearts and £106 for grade Hearts, but there are other sellers who quote £1 less for the old crop alone, same shipment. For the new crop, the lowest prices mentioned are £110 for Mill Lightnings and £105 for Mill Hearts August-September, c.i.f., U.K. Spinners are expecting to purchase at lower rates. Good [illegible] of Daissee-2/3 are quoted now at £116 and [illegible] at £114, grade Tossa-2/3 at from £121 and [illegible] Tossa-4 at £116, July-August, c.i.f.

On July 6

the Airline of Switzerland

SWISSAIR

inaugurates regular flights across the Indian Skies through CALCUTTA

EASTBOUND to Bangkok, Hongkong and Tokyo
WESTBOUND to the Middle East, Switzerland, all of Europe, the U.S.A. and South America.

The Swiss Cross – the traditional symbol of peaceful Switzerland, a country of world-wide precision industry fame, is now cruising Far Eastern skies.
With more than 35 years of experience in air service, Swissair is world famous for its expertly trained crews, its traditional Swiss courtesy, its thoroughness and for the utmost comfort offered on its luxury four-engined Douglas DC6B airliners.
Swiss precision and hospitality is now available in India for your world travels.

Eastbound from Calcutta every Saturday evening, arriving in Tokyo Sunday evening, via Bangkok and Hongkong. Additional departure from Bombay every Wednesday evening, arriving in Tokyo Thursday evening, via Bangkok and Manila.

Westbound from Calcutta every Tuesday afternoon, arriving in Geneva and Zurich Wednesday morning. Additional departure from Bombay every Saturday evening arriving in Geneva and Zurich Sunday morning.

THE FARES ARE ALL THE SAME –IT'S THE SERVICE THAT'S DIFFERENT

The most modern equipment and the experience of a generation in international air travel guarantee that your Swissair flight will be an unforgettable experience.
For your added comfort all planes are equipped with RCA airborne radar.

Full length sleeper-seats at no extra charge in First Class, large reclining seats in Tourist Class. Pressurized cabins, air-conditioned for travel through all weather conditions and climates.

The famous hospitality of Swiss hotels is reflected in Swissair's service. Delicious meals free of charge, free drinks in First Class–all served by cabin attendants whose only concern is to make your flight as agreeable as possible.

Consult your Travel Agency for further details, or
Swiss Air Transport Co. Ltd.

Engineering and Transport

OUTLOOK FOR PUMP INDUSTRY

IMPORTANCE OF BUILDING EXPORT MARKETS

THE Union Minister for Industry, Mr. Manubhai Shah, has called upon manufacturers and technicians to strive to build export markets for diesel engines and power-driven pumps in neighbouring countries. The Minister was addressing the first meeting of the reconstituted Development Council for internal combustion engines, power-driven pumps, compressors, blowers and exhaust fans. Mr. Shah said that these industries were now fairly established in India. Their position had to be consolidated and the scope of manufacture had to be expanded. "We should be able to establish a ready export market for our pumps and diesel engines with little difficulty", he said. The industry should make a close study of the requirements of export markets so that internal demand could be integrated with export requirements and production could be reorientated to suit the needs of both. Any suggestion from the Council for promoting the export drive would receive due consideration from the Government. For promoting exports, the Council should examine measures like the selection of indigenous engines and pumps suitable for the export market, quality control, well-directed publicity, a system of guarantee for a limited period to overseas customers and adequate servicing facilities and the supply of spare parts. Referring to the progress made by these industries in 1956, Mr. Shah said that their production had increased by 33 percent over the level of 1955.

New Schemes

He said that one of the manufacturers had developed a water-cooled diesel engine of 3 horse-power, the production of which would start shortly. Two other schemes were under consideration. As against three firms producing diesel engines in the range of 3 to 7 horse-power, there were now four the latest addition being in collaboration with a wellknown foreign manufacturer. Negotiations were going on for the manufacture of two types of vertical high speed engines in the range of 25 to 40 horse-power, suitable for a variety of industrial purposes. Satisfactory as these development were, Mr. Shah said that there was scope for development of more capacity for engines of all ranges, particularly in the lower horse-power range. He suggested that the manufacturers should set up separate departments in their factories to give proper guidance in adapting vehicular type of engines for industrial purposes.

Capital Investment

The Minister informed the Council that negotiations were going on with foreign firms for the manufacture of marine propulsion engines in the public sector. The scheme was likely to be finalised in the near future. The capital investment on the scheme was likely to be of the order of Rs. 3 to 4 crores a year. Referring to the pump industry, the Minister said that near self-sufficiency had been achieved in deep-well turbine pumps and centrifugal pumps (up to 12 in. diameter) used for agricultural purposes. The production of special duty pumps used in the cement and paper industries had also started. A few sizes and types of pumps used in chemical industries were also being manufactured against specific orders. A scheme to manufacture petrol distribution pumps had been approved and three more were under consideration. He advised the Council to pay attention to the production of those pumps which were not yet being manufactured indigenously and for which there was likely to be a demand in the near future. Referring to the air compressor industry, Mr. Shah said that two additional schemes have been licensed this year for the manufacture of these items while a third one was under consideration. The Government would welcome schemes for the manufacture of compressors of the lower range. He welcomed the move to form a hydro-mechanical research association which would offer advice and assistance on technical problems, suggest designs of hydraulic machinery with particular reference to power-driven pumps and disseminate information on research work in India and abroad. This was a step in the right direction, he said.

Import Restrictions

The Minister said that in view of the present foreign exchange position, it was possible that the import of items which could be procured indigenously would be restricted further. It was for the Development Council to advise the manufacturers how best to fill this gap by expanding production and lowering prices. Conditions detrimental to the interests of the public should not be created. The Government could not view with equanimity such conditions if they arose, Mr. Shah said.

U.K. PLANS FOR NUCLEAR POWER DEVELOPMENT

The time was not far distant when Britain would be thinking of atomic power stations with a capacity of 1,000 megawatts, the British Minister of Power, Lord Mills, declared in London recently. He was addressing the members of the Commonwealth Press Union. Explaining the U.K.'s plans for nuclear power development, Lord Mills said that Calder Hall had had surprisingly few teething troubles—fewer, in fact, than a conventional-type power station. "By the end of 1965 we hope that electricity produced from nuclear power stations will be the equivalent of that which would, otherwise, have been produced by 18 million tons of coal", he said. "Within ten years of the commissioning of Calder Hall we hope to be producing as much electricity from nuclear power as was produced from conventional fuels over 60 years after the first power stations for public supply were built in the early 'eighties of the last century". It was thought in March that it would be necessary to construct 19 nuclear power stations. "It may well be, however, that the number of stations required will be considerably less. The capacity of the first two stations, in Bradwell and Berkeley, will be about 300 megawatts, but the third station, in Hinkley Point on the Somerset coast, will be of 500 megawatts—seven times that of Calder Hall —and it is quite probable that a station of 1,000 megawatts is not far off".

Much work was being done in the United Kingdom. Lord Mills continued, on the possibility of using nuclear fission reaction for peaceful purposes. "Many problems remain to be solved, but if they can be solved it should be possible, ultimately, to achieve abundant supplies of cheap power, as the light elements which form the basis of a fission reaction are available in abundant quantities in, for example, ordinary water". Britain was also working on building a reactor to drive a merchant ship as cheaply as, or more cheaply than, by conventional means.

Nuclear Energy in Farming

There were "some very promising applications" for nuclear energy in farming, by way of techniques for sterilisation and pasteurisation and better methods of fertilising crops. The latter had already resulted in improved crop strains and better breeding stocks. Lord Mills said that there was already much co-operation between the United Kingdom and the rest of the Commonwealth in nuclear power. "The first and most obvious point is that the Commonwealth has a very large share of the world's reserves of raw materials for the production of nuclear energy. Canada, South Africa, Australia and India have got large deposits of uranium and thorium. These reserves have already been rapidly developed and further vast development is already anticipated". The Atomic Energy Authority was helping Commonwealth scientists and engineers, through training facilities in Britain, to establish a thriving atomic energy industry in their own countries. British scientists were being lent to help in design and development work, and the United Kingdom was providing equipment and nuclear material.

PROTECTION TO WOOD SCREW INDUSTRY EXTENDED

The Government of India's resolution on the Tariff Commission's Report (1957) on continuing protection to the wood screw industry was published last week in a *Gazette of India Extraordinary*. The Government has accepted the Tariff Commission's main recommendation that protection to this industry should be continued for a further period of three years, that is, till 31st December, 1960. Protection will be continued accordingly at the existing rates which have recently been rounded off to 35 percent *ad valorem* or 35 nP a gross, whichever is higher, under the Finance (No. 2) Bill, 1957. The Government has also taken note of other ancillary recommendations made by the Commission for assistance to the industry and will take suitable steps to implement them as far as possible. The attention of the industry has also been drawn, in the resolution, to certain other recommendations made by the Commission about the need to use tested steel wire as far as possible, the desirability of adopting certain common specifications for steel wire, etcetera.

SWISSAIR SERVICE THROUGH CALCUTTA

On 6th July, a new major air route will be opened, linking the heart of Europe with the Near East, Pakistan, India, Thailand, Hongkong and Japan. It is being opened by Swissair, the airline of Switzerland, which has a network circling the globe from north and south America, across Europe and the Levant to the Far East. The new route extends from Zurich and Geneva in Switzerland to Tokyo, with stops in Athens, Beirut, Karachi, Calcutta, Bangkok and Hongkong. In Zurich and Geneva flights will connect with Swissair's European network and with all long-distance services. Fast, pressurised and air-conditioned Douglas DC-6Bs will be used, with accommodation for first and tourist class passengers. The setting up of the Far Eastern route is the largest single network extension ever undertaken by the Swiss company.

UNPAINTED ALUMINIUM COACHES ON LONDON UNDERGROUND RAILWAY

The experimental use of unpainted aluminium coaches on London's Underground railway has proved a success, and future replacement rolling stock will not be painted. Although the initial cost is slightly greater than that of the usual red-painted steel coaches, railway engineers estimate that it will be offset by the saving on paint and maintenance, and lower current consumption because of decreased weight and technical improvements. Capital saving by not painting a standard seven-coach train is about £800, and the consequent drop in maintenance, painting and cleaning is about £100 a year, so that, with a life of 30 years, there is an overall saving of some £3,800 for each train.

BRITISH MISSION TO ADVISE ON NEW INDIAN SHIPYARD

As a result of recent discussions with the Government of India, a mission will visit India this autumn under the joint auspices of the Colombo Plan and the United Kingdom Shipbuilding Conference. The mission will advise on the site and lay-out of a new shipyard and the equipment which would be required to establish it. It will also provide estimates of the capital costs of the shipyard. The mission will include representatives of the branches of British industry concerned. An advance party will leave for India on 9th July for a visit of approximately two week's duration to carry out a preliminary survey. The advance party will consist of Mr. J. Milne of Lithgows Ltd., shipbuilders, and Dr. F. W. Blythe of Costain-John Brown Ltd., contracting engineers, with Mr. R. M. C. English of Deloitte Plender Griffiths and Co., chartered accountants, as secretary. The composition of the main mission has not yet been finally decided.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

SOUTH EASTERN RAILWAY
TENDERS

The Controller of Stores invites tender for supply of the following items :—

Tender No. CS/3/2429R/G(b) 1 (57) for supply of (1) Nuts M.S. Hex black ⅜"=2 Tons, (2) Nuts M.S. Hex black ¾"=2 Tons, (3) Washer M.S. round ¾"=4 Tons.

Tender forms are obtainable from the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 (P.A. Section) on remittance of Rs. 2 per copy per tender (not refundable) by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23, by local firms. Earnest money against the tender is Rs. 200. Closing date of the tender is 15-7-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest money receipt with the Tender.

Plantation Topics

GOVERNMENT DECISIONS ON TEA ENQUIRY REPORT

MANY RECOMMENDATIONS REJECTED

IN a resolution published this week in a *Gazette of India Extraordinary*, the conclusions and decisions reached by the Government of India on the Plantation Enquiry Commission's report on the tea industry have been announced. The Commission was asked to make a comprehensive enquiry into the economic conditions and problems of the tea, coffee and rubber plantation industries in India. The two other reports, dealing with coffee and rubber plantation industries, are still under consideration. In reaching these conclusions and decisions, the Government has given due consideration to the views expressed by the various interests concerned.

The Commission had made a number of recommendations on the marketing of tea. The Government has decided that the chairman, Tea Board, should study the price structure of retail packets of tea from time to time and adopt appropriate methods or make recommendations to the Government when prices are disproportionately high. It has also accepted the recommendation that a special investigation of the difficulties of the small packaging firms should be undertaken. The Tea Board will be asked to take up this investigation so that the small packers can overcome their difficulties and enhance the standard of their services to the consumer.

The Government is unable to accept the recommendation that a ceiling on the annual turnover of packing firms should be imposed. In its opinion, the interests of the internal consumer will not be served by such a step. For the administration of public warehouses in Calcutta, it agrees that the Tea Board should assume responsibility for their management. Similar action in Cochin will be deferred until circumstances require such a step. The suggestion for an investigation of warehousing charges has not been accepted because there is no urgent necessity for it. But specific complaints made to the Government or the Tea Board will be fully looked into.

Export Quota System

The Government considers that the abolition of the export quota system for tea will not be conducive to the best interests of the industry or trade. It intends to make such changes in the allotment and transfer of quota as will eliminate or reduce abuses. The Commission's suggestion that the Tea Board should regulate sales of tea at the Cochin and Calcutta auctions has not been accepted. The Government, however, desires to establish closer liaison between the Board and the bodies set up by the trade. The Government does not consider that the retail distribution of tea is a suitable field of operation for the Tea Board. The Commission had recommended that the Board should make arrangements for packing and distribution of 50 percent of the packaged tea consumed in India.

Finance and Management

On the recommendations on finance and taxation, the Government is unable to accept the view of the Commission that the managing agency system should be abolished in so far as Indian-owned gardens are concerned. In its view, the facts elicited by the Commission do not justify the singling out of the tea industry for being treated in a way different from that applicable to all industries in general. On the same ground, it does not accept the recommendation that withdrawals from reserve funds (other than dividend equalisation reserve) for dividends should cease. The Government agrees in principle that finance should be made available in an adequate measure to the tea industry. It has also accepted the recommendation that the facilities of the State Finance Corporation of Assam or West Bengal should be extended to Tripura and has requested the Tripura Administra- finance corporation with either of these States. The Government has agreed with the suggestion that a study of heavily indebted estates should be made by the Tea Board. It will be asked to undertake a study of economically weak gardens, at the estates' request, through a suitable agency and make suggestions for improvement. The Government agrees that a study of the circumstances in which Indian-owned companies have from time to time been wound up would be useful. It has asked the Tea Board to undertake a study of this nature.

Export Duty

The Commission recommended that the prices of tea for fixing the rate of export duty should be based on the previous six months' weighted average price of Indian tea at London auctions. Under the present method, the price is determined with reference to the weighted average price of the preceding month's auctions in London. The Government is unable to accept this recommendation because the basic issue is not so much the method by which the rate is worked out, as the precise figure of export duty. Under the present system, in a falling market the export duty could be lowered in the immediately following month, whereas a price based on six months' average would make the export duty less flexible. On matters such as development and research, the problems of small growers and industrial relations, the Government's decisions on some of the recommendations of the Commission are as follows: The Tea Board is being advised to provide research stations, which will necessarily require an attached plantation area, at places where they are likely to be useful to the tea industry, particularly to the small growers. A scheme will be prepared by the Board, in consultation with different interests, for assisting the tea industry, in Kangra district in the Punjab.

Extension of Acreage

The Government is not in favour of absolutely prohibiting the extension of acreage of individual gardens. The rules already promulgated provide that for estates having more than 500 acres under tea, no extension permit can be granted by the Tea Board without the Government's prior approval. The Government does not consider it practicable to prescribe a rigid target of replanting, as an annual figure or over a period of years. It is however, in favour of every step being taken to ensure adequate renovation of the assets represented by tea bushes.

The Government has accepted in principle the recommendations on the promotion of co-operative efforts among small growers, that is, the formation of primary agricultural credit societies of small growers with assistance from the Tea Board. It thinks that action on these lines should be taken by the Board wherever there appear to be reasonable prospects of success for co-operative organisations. Every encouragement and assistance will be given where *bona fide* small producers join together in a co-operative society. The Government has accepted the recommendation that voluntary amalgamation of small gardens should be encouraged. The dissenting member's suggestion for the consolidation of land holdings will be examined in consultation with the Governments of the States in which similar measures have been adopted on agricultural holdings.

Industrial Relations

The Government has agreed with the Commission that differences between employers and employees should be settled by voluntary negotiations wherever possible, before any proceedings under the Industrial Disputes Act are instituted. The present method of conducting such negotiations should continue. It is broadly in agreement with the Commission that excessive use of tribunals should be avoided. The Commission's observations are being communicated to the State Governments for such action as may be feasible.

A number of suggestions on industrial relations will be examined in the appropriate Ministry as general issues affecting the organisation of labour in all industries. These include an independent conciliation service, an independent tribunal service, elected works committees, measures for reducing tension and the discharge of liabilities to workers while an estate changes hands.

Progress of Indianisation

The Commission's view on the desirability of increasing the number of Indians in the managerial cadres of companies owned or managed by non-Indians is in line with the Government's own wishes. The Government hopes that the substantial progress that has been made in this direction in the last three years will be maintained. It is of the view that matters such as dividend limitation, statutory reserves and profit sharing cannot properly be taken up for one industry in isolation from the rest. Bonus schemes have to be decided by discussions and negotiations, and if necessary, by adjudication. Referring to the remuneration paid to managerial and senior staff in tea companies, the Government desires to see a reduction in disparities in incomes by voluntary action by employers and by taxation measures. This has been made public more than once. It is not considered justifiable or expedient to impose further specific restrictions upon persons employed in the tea industry alone when similar restrictions are not in operation elsewhere.

The Government will take a decision on the Commission's recommendation on structural changes in the Tea Board after the nature and degree of expansion of the Board's activities become assessable.

The Government has agreeed with the Commission on the importance of permanent and round-the-year maintenance of the railway line connecting Dhubri with the Central Dooars. The recommendations in this connection have been brought to the notice of the Committee set up by the Central Ministry of Railways to investigate the question of stabilising the Assam rail link. Action will be taken to the extent possible on the provision of suitable accommodation for storage of tea at rail heads, as well as the provision of adequate number of wagons for transporting tea in south India. Instructions have already been issued to ensure the supply of leak-proof wagons.

A number of recommendations, particularly relating to State taxation laws affecting the tea industry and conditions of workmen have been brought to the notice of the State Governments concerned. A number of suggestions have been brought to the notice of the industry.

Replanting Fund

Some recommendations are still to be examined by the Government of India. These include the recommendation for creating a "tea replanting fund" to finance the replanting of tea estates.

INCREASE IN TOBACCO AREA

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India second estimate of tobacco, 1956-57, puts the current year's area at 900,000 acres against the adjusted second estimate of 847,000 acres for 1955-56. This shows an increase of 53,000 acres or 6.3 percent in area during the current year compared with last. The increase in area during the current year has been shared by Andhra Pradesh, Bombay, Bihar, Madras, Uttar Pradesh and Rajasthan, and has been attributed generally to favourable climatic conditions at the time of sowing. The information given in this estimate generally relates to the period up to the end of February 1957. Till then, the condition of the crop, it was reported, was generally satisfactory. This estimate does not cover the entire area sown to tobacco crop during 1956-57. Past experience has shown that the area at the second estimate stage forms roughly 95 percent of the area under the crop finally reported.

COCHIN TEA SALES

At Dust Sale M, 750,000 lbs of tea were on offer. There was a good general demand. Commonest teas were fully firm. Low Mediums and Mediums were 5 to 10 nP easier, and Best Liquoring grades dearer.

At Sale No. 17, 900,000 lbs of tea were on offer. There was a strong general demand and prices advanced irregularly for everything 5 to 10 nP except for Whole Leaf grades which were slightly easier. Best Liquoring types were considerably dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association :

	Closing prices on 21-6-57 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet :		
No. 1	1.16	1.18
No. 2	1.13	1.15
No. 3	1.10	1.12
No. 4	.86	.88
No. 5	.81	.83
	Sheet Cuttings 1	.93
	Sheet Cuttings 2	.88
Crepe :		
Water White	—	—
R.M.A. No. 1X	1.14/15	1 14½
R.M.A. No. 1	1.10/13	1.10½
	Crepe No. 2	1.05½
	Crepe No. 3	1.04
Scrap Crepe :		
Sc. Crepe No. 1	.98 — 1.00	.99
Sc. Crepe No 2	.93 — .97	.95½
Sc. Crepe No. 3	.87 — .92	.89½
Flat Bark	.80 — .85	.83
	Sc. Crepe 3X	.92½

To arrive at f.o.b. Colombo prices, add 53.53 cents a lb for crepe other than scrap crepe and 31.53 cents for scrap crepe to the above market prices.

RUBBER PRODUCTION AND CONSUMPTION IN MAY

Indian rubber output in May was 1,645 tons, according to the Rubber Board of India. Exports were nil while imports were 1,499 tons. Consumption by manufacturers was 2,573 tons. Stocks with estates and dealers on the last day of May were 3,878 tons, including 743 tons in transit. Stocks with manufacturers at the end of the month amounted to 2,882 tons. Manufacturers also consumed 265 tons of reclaimed rubber, of which they held a month-end stock of 579 tons, and used 206 tons of synthetic rubber, their month-end stock of which was 1,324 tons.

METRIC SYSTEM FOR THE TEA INDUSTRY

Problems connected with the adoption of metric weights and measures in the tea industry were discussed recently at a conference of the representatives of different sections of the tea trade and the Government of India in the office of the Tea Board. Mr. U. K. Ghosal, Chairman of the Tea Board, presided. The Government of India was represented by Mr K. V. Venkatachalam, Joint Secretary, Ministry of Commerce and Industry, and Mr. P. N. Nayar, Secretary, Standing Metric Committee. It was agreed that the metric system should be adopted with as little delay as possible consistent with practical considerations such as the need for educative propaganda. The decision was that the Tea Board's records would adopt the new system from 1st April, 1959, from which date figures relating to the area of plantations would be represented in hectares (10,000 square metres) in place of acres. Corresponding changes would be made in the licences and permits. On weight, it was the general opinion that the half kilo (equal to 1.1 lb) should be the unit in place of the pound avoirdupois. The change will take effect from 1st April, 1960. Tea chests will, for a limited period, show the weight according to both systems, and Government and semi-Government agencies will make appropriate adjustments in the matter of duty, licences, etcetera. Conversion to new units will be necessary in fixing tasks and payment for plucked leaf by weight. It was agreed that this conversion might also be made with effect from 1st April, 1960. Since these items form the basis for payments to workers, during the intervening period weights will be expressed in terms of both the kilo and the seer, so as to familiarise the workers with the new system and the relationship between the new and old weights. This will not, however, change the rate of amount to be paid to workers.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended August 1939=100) declined by 0.5 percent to 437.6 during the week ended 15th June, compared with 439.8 (revised) for the earlier week. The index was higher by 0.7 percent and 9.0 percent respectively when compared with the corresponding week of the previous month and that of a year ago.

The index for Food Articles declined further by 2.2 percent to 426.3 as a result of a fall in the prices of tea for internal consumption when compared with its price a fortnight back (−10%), jowar (−7%), gur (−3%), rice (−2%), wheat and gram in Hapur (−1%), gram in Patna (+3%) and sugar (+1%). Higher prices of mica (+5%), groundnuts in Cuddalore, and Cottonseed (+2% each), raw jute and linseed and castorseed in Bombay (+1% each) raised the index for Industrial Raw Materials by 0.7 percent to 543.7, although the prices of lac (−4%), raw hides (−2%), groundnuts in Bombay, gingellyseed and copra (−1% each) exhibited a fall. The index for Semi-Manufactures went down by 0.1 percent to 414.1. Items which showed noticeable changes were: kerosene oil (−5%), zinc (−4%), copper in Calcutta (−2%), groundnut cake in Calcutta (+6%) and coconut oil (+2%). A rise of 0.2 percent to 393.1 against 392.3 (revised) for the earlier week in the index for Manufactures was brought about by an increase in the prices of jute manufactures (+2%). The Miscellaneous group declined by 0.2 percent to 569.7 (estimated) due to a decrease in the prices of black pepper (−4%). The price of chillies, however, moved up by 1 percent.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

CONCESSIONS AND MODIFICATIONS IN MANGANESE ORE EXPORT POLICY

In the Press note of 29th May, the Central Ministry of Commerce and Industry announced the policy for the export of manganese ore during the period July 1957 to June 1958. This policy has been reviewed in the light of the several constructive comments and reasonable representations that have been received from some quarters. It has been represented that due to diverse reasons such as the closure of the Suez Canal, the outbreak of the 'flu epidemic and the consequent dislocation at the ports, it has not been possible for quotaholders to utilise fully their quotas for shipment of manganese ore in 1956-57. The difficulties faced by the small mineowners have also been brought to the notice of the Government. Further, it has been represented that the stipulation that a minimum of 60 percent of the manganese ore exported against the quota for 1957-58 should consist of ore containing 42 percent and below manganese is rather onerous and is likely to result in some hardship to the exporters, particularly to small exporters. As a result of this review, the following concessions and modifications have been made. (1) Manganese ore moved to the ports against current quotas up to 30th June, 1957, will be permitted to be shipped up to 31st August, 1957, on an *ad hoc* basis, provided that it is proved to the satisfaction of the Export Trade Controller concerned that shipment is to be made against contracts entered into before 31st March, 1957. (2) The minimum percentage of low grade ore (42 percent and below manganese content) will be reduced from 60 percent to 40 percent. This condition will not be insisted upon in the case of small exporters whose quota for the period July 1957—June 1958, works out to 1,500 tons or below. (3) Mineowners, whose quota during the period July 1956—June 1957, was 3,000 tons and below, will be given the choice to claim their quota for 1957-58 on the basis of 60 percent of their actual exports in 1955 or 1956 or 75 percent of their quota during the period July 1956—June 1957.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 4, held on 1st and 2nd July, offerings at the Export auction consisted of 15,091 packages for which there was a strong and general demand. Bright liquoring C.T.C. teas were keenly competed for and the best sorts sold at attractive prices, while the other teas in this category also showed a dearer tendency. Clean Commons and Medium Brokens were 5 to 10 nP dearer, while there was more support for plain Fannings which were often 10 nP dearer. Whole leaf grades met with a good demand at slightly dearer rates, while flavoury second flush Darjeelings sold at very high prices. The demand for the increased tippy offerings was strong, the tippiest sorts selling at high rates.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.50 to 2.60	1 12 0 to 1 14 0
Plain B.P.	1.65	1 7 6 to 1 8 6
Plain Fannings	1.75	
Medium B.P.	2.20	2 4 0 2 6 0
Medium Fannings	2.20 to 2.30	
Best Assam C.T.C. B.P.	3.50 to 4.00	3 8 0 to 4 0 0
Best Assam C.T.C. Fgs.	4.00 to 4.20	

At the Internal Sale, Dust on offer amounted to 5,119 chests, of which the great majority were of the new season's manufacture. Quality from all districts showed an improvement, and there was keen competition for all descriptions with prices appreciating considerably. The strongest features of the Sale were the C.T.C. Assams and non-wither Dooars and black leafed grades suitable for export. The orthodox Assams with improved liquors were strongly supported with the smaller powdery descriptions being the more popular.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.60 to 1.70	1 8 0
Medium Assam Grainy Dust	1.70 to 1.80	1 12 0 to 1 13 0
Medium Assam C.T.C. Dust	2.30 to 2.70	
Best Assam C.T.C. Dust	2.90 to 3.15	3 0 0

There was a strong demand for the 286 chests of Leaf on offer.

FREIGHT MARKETS UNCHANGED

THERE was little change in the general character of the freight markets last week, and the American-Continent coal rate remained unchanged at 47s for sing.e voyages. There was considerable activity in local rice and coal chartering with Bangkok-East Pakistan taking five ships at rates between 66s 9d f.i.o. and 67s 6d. Burma-Colombo took a number of vessels at 64s f.i.o., and Calcutta-Colombo coal was done at 60s. Ore from Vizagapatam to U.S.N.H. was fixed at $(U.S.)12.50 for September and Bombay-Northern Range at $(U.S.)12.25 for August. The time charter section was quiet with a *Liberty* accepting $(U.S.)3.75 for 12 to 14 months' trading.

SUGAR RISES

During the week ended 2nd July, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 2,000 bags and stocks totalled 50,000 bags. Rates for ready sugar, ex-Kantapukur delivery, were Rs. 36-14 for ordinary grain and Rs. 37-10 for big grain. The market rose.

LINSEED QUIETER

Somewhat quieter conditions have prevailed during the past week. Crushers were pausing due to a poor offtake of linseed oil. Very little activity has been noted, as both buyers and sellers have been reserved. The oil market was dull in spite of lower offerings from sellers. Latest quotations were as follows: Ready Rs. 22 a maund; July-August Rs. 22-8 a maund and August-September Rs. 22-12 a maund.

HIDES AND SKINS DULL

The market in skins was dull. Stocks were less than in the previous week.

Bazaar Sales

(Between 25th June and 1st July, 1957)

Cowhides : Wet salted (Ord.) 51,000 pcs. on the basis of Rs. 7.50 and Rs. 9.25; Wet salted (Slaughtered) 14,500 pcs. on the basis of Rs. 12 and Rs. 22.

Goatskins : Wet salted (Daissee, Killed) 74,700 pcs. on the basis of Rs. 280 to Rs. 315, Rs. 325 to Rs. 355 and Rs. 380 to Rs. 385; Assam-Dinajpur 10,000 pcs. on the basis of Rs. 285 to Rs. 325; Pakur-Patna 11,300 pcs. on the basis of Rs. 300 to Rs. 310; Muzafferpore 14,000 pcs. on the basis of Rs. 230; Muzafferpore-Patna 12,000 pcs. on the basis of Rs. 312.50.

Bazaar Stocks

(1st July, 1957)

Cowhides : Wet salted 2,02,000 pcs.

Goatskins : Wet salted (Daissee, Killed) 19,000 pcs.; Assam-Dinajpur-Murshidabad 34,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kisenganj 41,500 pcs.

THE STERLING GENERAL INSURANCE COMPANY LTD.,
NEW DELHI.

A year of outstanding progress
Remarkable increase in Premium and Reserve.

The following is an extract from the Report of the Directors and Accounts of the Company for the year ended 31st December, 1956, which were placed before the thirteenth Annual General Meeting of the Company held on 28th June, 1957.

Gross Premium booked exceeds Rs. 88 lakhs.

The gross premium booked during the year amounted to Rs. 88.22.136 (Rs. 65.09.028 in 1955) and the net premium amounted to Rs. 47.64.124 (Rs. 35.46.119 in 1955) registering an increase of about 35% in both cases.

Reserve increased by over 50%

The reserve for unexpired risks at the end of the year amounted to Rs. 21,47.916. showing an increase of 51.4% over the figures at the end of the previous year, viz. Rs. 14.18,450.

Expense ratio decreased from 27.8% to 26.7%. After increasing the various reserves and providing Rs. 5,000 for staff gratuity fund and Rs. 14,475 on account of bonus to the staff. the working of the year resulted in a net profit of Rs. 1.04.267. Adding to this Rs. 2.012 brought forward from the previous year, the total profit came to Rs. 1,06,279, which has been appropriated as follows: Rs. 55.000 as provision for income-tax and Rs. 49.690 as provision for dividend to shareholders. The balance of Rs. 1,589 has been carried forward to next year.

The working of the Company during the year under report resulted in all-round progress in business development and financial strength of the Company. The gross premium increased by over Rs. 23 lakhs and the net premium by over Rs. 12 lakhs over the figures of the previous year. The reserves have increased by over 7 lakhs and the Company has been able to declare a dividend to the shareholders at 4% free of income-tax. The total assets of the Company amounted to Rs. 69.91 726 at the end of the year.

The Accounts and Report were adopted.

RAJGARH TEA CO. LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of Shareholders, a dividend of Rs. 4/- per share in respect of the year ended 31st December, 1956, without any deduction in respect of taxation payable by the Company.

By Order of the Board.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PROSPECTS FOR PRIVATE AND PUBLIC INVESTMENT

INADEQUACIES OF THE NEW TAXATION STRUCTURE

THERE has been a modest recovery in the stock markets over the past month or so. Equity prices fell after the Central Finance Minister, Mr. T. T. Krishnamachari, announced his drastic Budget taxation proposals in the middle of May, but the losses have been fully made up since. The volume of personal, as distinct from institutional, investment support which is forthcoming remains small—and highly selective. This has been interpreted, correctly, as an indication that although sentiment in the markets has improved, the dominant mood is still one of caution. Parliament is due to assemble early next week, and the Budget taxation proposals will be among the most important items on the agenda, so the hesitancy is not entirely inappropriate to the circumstances. Such improvement in sentiment as has taken place is based on hopes rather than on facts—hopes springing primarily from official assurances about the importance of private enterprise and from the possibility that the proposals for the new taxes on wealth and expenditure might be amended. Encouragement has been derived, in addition, from the Finance Minister's statement that the Government will adopt a liberal attitude in implementing the compulsory deposit scheme for company profits and reserves; that it hopes the necessity for the scheme will be only temporary; and that the dividend supertax might be abolished in years to come. However, the consolation to be gained from such indications, welcome though they are, is not immediate; after a year and a half of sudden and inexplicable shifts in official policy, investors would not be unjustified in remembering that oases on the horizon too often turn out to be a mirage.

*

The fundamental point which Parliament and the Government will need to bear in mind as they meet to discuss the Budget proposals in coming weeks is the acute shortage of investible capital the country is facing today. That Government revenues have to be increased, if even a portion of the vast investment programme outlined in the second five year plan is to be fulfilled, few people deny. The problem is to evolve methods which, while enabling the Central and State exchequers to finance the more important of their projects, will at the same time enable private industry to meet a goodly proportion of its obligations as well. The new taxation structure which the Finance Minister has, with boldness and imagination, seeking to evolve does not, to our mind, offer a solution to this problem. It does not do so for two main reasons. One is that it undermines the incentive as well as the ability to work, save and invest; the other is that it increases sharply the Government's claim on precisely that pool of resources—voluntary saving—which is the mainspring of expansion in private industry. While taking the stock markets as the barometer of investment trends, it would be wrong to infer from the recent recovery in equity prices that the investment climate is now healthy. To a large extent, the recovery represents a corrective adjustment to the fall which took many share prices well below their intrinsic worth. Having seen the value of their holdings drop sharply over the past year and a half, investors have become resigned and reluctant to book their losses. As a result, the improvement in prices considerably exaggerates the (in fact only small) volume of investment support which has been given. It is true that, as part of the new and more optimistic mood, thoughts are turning increasingly to the satisfactory level of industrial operations, with turnover and profits reasonably well maintained. But even this source of cheerfulness may tend to diminish in importance in months to come if, as seems likely, the foreign exchange shortage slows down rehabilitation and expansion plans. Investors cannot, in any case, afford to ignore the effect heavier corporate taxation, particularly the dividend supertax and the bonus issue tax, will have on the returns they receive.

The main anxiety affecting the stock markets remains the shortage of capital—both short-term and long-term. The monetary stringency is still acute although the country is in the midst of what used to be its traditional slack season. The selective credit controls which have so far been applied have done little to ease shortages in other areas of the monetary system; and the extent to which banking resources are stretched is indicated by the fact that the scheduled banks' advance-deposit ratio remains above 70 percent. It is fortunate, in the light of this stringency that targets for Government borrowing programmes are relatively modest. The Rs. 100 crore Central loan, which is likely to be announced towards the end of this month or early in August, should not prove too great a strain on the available resources; Rs. 32 crores will come in the form of conversions, and of the remaining Rs. 68 crores a substantial proportion may be expected from institutions, including the Life Insurance Corporation, which normally hold large quantities of fixed-interest stock in their portfolios. It is not certain how many State Governments have been dissuaded from raising separate loans of their own. But it seems likely that the majority, if not all, of them will be so dissuaded. That would be no unwelcome achievement, considering the wholly unwarranted pressures which have been used in recent years to thrust State Government securities on an openly reluctant market. The alternative which the States have been offered—that if they do not raise loans, they will get a much larger proportion of the small savings collections—is an excellent one. With the wider diffusion of wealth and earnings, increasing emphasis will have to be placed on small savings as a source of Government finance. In the collection of such savings, States have a major responsibility, and it is important that they be made to accept that responsibility positively as early as possible. However, one implication of this change remains to be worked out: the Central Budget for the current year takes credit for Rs 80 crores in the form of small savings, but if the basis of allocating the savings between the Centre and the States is revised on the lines proposed, the target will be more difficult to achieve.

*

The recent activities of the Life Insurance Corporation have been a helpful factor for shares, in that they have pumped in funds and helped move away a large proportion of the floating stock which lay like an incubus on the markets. While these activities have provided welcome evidence that insurance funds even after the nationalisation of life offices are being used to support equities, they bring a disturbing reminder of the extraordinary extent to which the health of the stock market has come to depend on the operations of a single, Government-owned, institution. The implications of this development are not entirely reassuring. It has been officially stated that the purchase of shares by the Life Insurance Corporation does not imply that it will interfere increasingly in the affairs of the companies concerned. Yet, recent Government measures to regulate corporate working, as well as the trend in company law reform towards giving shareholders more power, are understandably raising doubts whether the assurance can be taken at its face value. These doubts are unlikely to be assuaged even when a statutory investment board is set up to guide the Corporation's activities in the stock markets. Recent trends in the thinking of the British Labour Party, as indicated by the proposals to invest funds raised under its hotly-debated superannuation scheme and by ideas of "back-door nationalisation" through the purchase of equities in the open market, may be an unhappy forewarning of socialist manoeuvres elsewhere.

The dominating rôle the Life Insurance Corporation has played in bringing about the recovery in share values serves to underline once again the importance of restoring the vitality of the smaller, and more genuinely private, investors. In recent months, these investors have been made to suffer badly. The sharp drop in the value of their holdings, caused by official policies, has inflicted capital losses which will not be recovered for a long while yet. Any scope there might have been to accumulate new savings has been seriously undermined by the rises in taxation and in the cost of living. It is not surprising that such savings as have been made have gone largely into bullion and commodities, especially foodgrains. The inflationary forces which have thus been let loose have brought little compensation to equity-holders, who would in less abnormal times expect to be among the chief beneficiaries of an expanding economy and a depreciating currency. In fact, as investors are rapidly realising, inflation probably now holds the biggest single threat to industrial prosperity. This is not only because raw material costs have increased; the rise in the cost of basic necessities, especially food, promises to unleash a series of wage demands which would put a stop to all economic progress, planned or unplanned. Even the Labour Ministry, hitherto seemingly immune to realism, is now apparently moving towards acceptance of this fact.

*

As the debate on fiscal and general economic policies proceeds in coming weeks, it is important, therefore, that the priorities in the situation be arranged in the right order. It is, perhaps, idle to debate here whether a cut in the plan should or should not be formally announced; events have a way of overtaking men as well as their words, so there may not be much harm in worshipping the plan in its totality while restricting the sacrificial offerings only to its "hard core"—steel, coal, transport and power. The problem of raising resources which then remains will need to be tackled by a bold and vigorous drive to broaden the base of taxation without killing incentives and to borrow more. A firm stop will have to be put to the fashionable pastime of deficit financing—at least until the stage where the increase in currency can be matched by an increase in production, especially agricultural. Latter-day inventions such as the wealth tax and the expenditure tax will have to be modified, even scrapped, if the nominal reliefs in income tax are to have any meaning. A reduction in the load of corporate taxation will be necessary so that companies may accumulate the resources they require for expansion. Finally, India will need all the foreign assistance she can get—and more: but she will have to realise that she cannot get it purely on the strength of verbal exhortations.

CHANGES IN HARD CURRENCY RESERVES

PREFERENCE FOR U.S. DOLLARS

A SUBTLE change is going on in the field of international finance and it is shown in recent estimates published by the U.S. Treasury and the Federal Reserve System. Hard currency reserves are moving from gold into U.S. dollars to an increasing extent. Over the last ten years, the world's gold and dollar reserves (including commercial balances) have nearly doubled, having risen from $15.000 million at the end of 1947 to $28,000 million at the end of 1956. But the proportion in dollars as against gold has risen from a mere 17 percent in 1947 to no less than 50 percent at the end of last year. This is no doubt very profitable for New York, but the shift also brings some problems, as Mr. Klopstock, of the New York Federal Reserve Bank, points out in a recent study published by Princeton University. This includes the following table of the gold and dollar holdings of the major countries:

GOLD AND DOLLAR HOLDINGS

(Millions of dollars)

	Official gold holdings (Dec. 31, 1956)	Total dollar holdings (Dec. 31, 1956)	Gold (Increases between Dec. 1947 and Dec. 1956)	Dollars (Increases between Dec. 1947 and Dec. 1956)
Argentina	214	146	°108	90
Belgium	928	113	331	12
Canada	1,113	1,502	819	1,096
France	861	626	313	459
Germany	1,494	1,833	1,494	1,744
Italy	362	928	304	775
Japan	128	1,039	126	1,008
Netherlands	844	134	613	9
Switzerland	1,676	836	320	391
United Kingdom	1,800	983	220	690
All others	5,330	5,292	432	2,575
Total	14,750	13,432	4,424	8,627

° Decreases.

One point about these figures should be noted: the gold holdings are only the official reserves in each case, while the dollar holdings include short-term commercial balances. But the latter balances will in most cases be only a small part of the total, so that the distortion is not great. Of the countries shown, only the Netherlands and Belgium have stuck to gold completely; Japan is the other extreme, with a very small increase in gold. Most other countries, such as the United Kingdom, have switched a part of their reserves into dollars (in the case of the United Kingdom this may have been partly because of the sales of gold made necessary in 1956 by the severe Suez drain). What are the reasons for this preference for dollars? In the first place, they earn interest while gold does not, and with interest rates in New York in the region of 3 percent, this is an important consideration. Secondly, dollars are more convenient for making payments, as gold is costly to move. But most significant of all, the central banks of the world clearly no longer believe that the price of gold is going to be revalued upwards. If they did, they would hold it.

Mr. Klopstock goes on to point out that the United States is now in the position where its short-term liabilities are no longer covered by its freely available gold. At the end of 1956, the U.S. gold stock amounted to $22,000 million, but $12,000 million was tied up as currency cover. The remaining $10.000 million was set against $13.400 million in short-term liabilities. What would happen if a rumour arose that gold was to be revalued? There might be a sudden flight from the dollar which would at least cause an upset in the New York money market. But if this is considered too remote to be likely, there is still the problem of coping with the management of all these foreign funds. New York is not an international market in the way that London is, and the continual flow of foreign controlled money, from Treasury bills to bank deposits and back into acceptances and so forth, is carving out new and unexplored channels. New York must learn the old tricks of nineteenth-century London if it is to become the world's money centre.

CREDIT INSURERS MEET

CREDIT insurers of 15 countries, mostly European but including also Canada and Australia, have been meeting in Edinburgh recently. These are the members of the Berne Union, which was formed as long ago as 1934, but has recently become much more active in response to the clamour for credit from the under-developed countries. One of the functions of the Union is to compare notes and to limit competition among its members. On this occasion, they have agreed to take a strong line against countries which stipulate in their import regulations that licences for certain goods will be granted only if credit of a minimum duration is given by the supplier. India has recently stipulated a seven years' minimum credit for imports of capital goods, and Argentina asks for four years. It was the unanimous decision of the members of the Union that they "should not be influenced by this form of pressure." To understand this decision, which at first sight appears somewhat harsh, it is necessary to look back a few years. In the early fifties some importing countries had developed a skilful technique for playing off one European exporter against another —usually Britain and Germany—by airy stories of the credits that were being offered for capital goods. In self-protection, the exporting countries began comparing notes through the Berne Union on the credit terms that could be insured, and it was found that most of the reports were gross exaggerations. Now there is an accepted technique for dealing with such matters. There is a frequent exchange of information and credit insurance underwriters are able to insure particular transactions with a much clearer idea of what their competitors may be offering. The close collaboration within the Berne Union, it is claimed, has had positive advantages for all the countries concerned. Exporters say that the stabilisation of credit terms has brought general benefit, and has protected them from the embarrassment of having to finance terms which are unnecessarily favourable to the buyer.

The unanimous decision to oppose the practice of some Governments of stipulating a minimum period of credit for imports is an interesting example of the function of the Union, and of the implications of its function. Since its members are responsible for insuring such long-term credits as certain Governments have been demanding, and since Union members will not compete with each other to do business which they have agreed is contrary to policy, the Union may find itself in open conflict with governmental policies—and in a strong position to influence those policies. Its position is the stronger because the demand for credit from the less developed countries in recent years has much broadened the activities of credit insurers, and unless the shortage of capital in these countries can be made good in other ways this tendency is likely to continue.

CURRENT COIN

Growing Business of Metal Box.—In his review of the activities of the Metal Box Company of India Ltd. during 1956, Mr. H. Chiswell Jones, chairman, reports that sales rose to a record of Rs. 567 lakhs from Rs. 495 lakhs in 1955. (A fuller version of the review appears elsewhere in this week's *Capital*). With the current restrictions on consumer goods imports, a gap has been created "in the internal supply of packed goods which must be bridged by local production." The challenge can be met by the company and its customers, provided sufficient raw materials particularly tinplate, are available. In spite of the steel strike lasting two months in the U.S.A. and the delay in shipping schedules due to the Suez Canal closure, Mr. Chiswell Jones says that for most of the past financial year, the company "has been free from major anxieties in the supply of raw materials", and the stocks "safely saw us through the 1956 crisis". Its later performance will, however, be determined by the Government's import policy. Indigenous capacity for tinplate production was expanded but it made little difference to the supply position due to labour troubles. The company secured about 60 percent of its raw materials locally, the balance coming as imports. Mr. Chiswell Jones says that it is now obtaining locally the maximum possible proportion of its raw material requirements, and imports have been brought down very near to the irreducible minimum. In the circumstances, he hopes that the policy of import restrictions on raw materials for the company will not be pressed to the point where quality and efficiency suffer, "as well they may, if consumers are forced to accept local substitutes without regard to quality or performance." Discussing export possibilities, he says that markets have recently been explored in south-east Asia, as a result of which initial orders worth about Rs. 2.5 lakhs have been secured. Substantial exports to these markets, in the face of keen competition from the U.S.A., Japan, Hongkong and Europe, could be made with the help of intensive sales promotion, provided a special allocation of tinplate for export goods is available. Mr. Chiswell Jones gives an encouraging account of the development schemes of the company. The industrial component section has been improved with the opening of a new self-contained manufacturing department. Equipment has been installed in Calcutta for the manufacture of aluminium tubes, and the extrusion of aluminium components for the radio industry has recently commenced. A new three-colour printing machine has been installed to meet the demand for quality printed polythene bags. An expert from the U.K. has been engaged in "pursuance of the efforts to foster the canning industry". The services of this expert will also be available to those organisations of the Government which are interested in "processed foodstuffs development." The company has presented to the Central Food Technological Research Institute a mobile demonstration van "in connection with a pilot scheme aimed at educating the urban population on the wholesomeness and the use of canned foods". The Government has been examining a proposal to subsidise the cost of cans for the processed food industry, to the extent of one-third of the cost of the tinplate used. This scheme, explains Mr. Chiswell Jones, aims at saving a considerable proportion of the present wastage of fruits and vegetables, estimated at between 15 percent and 20 percent of the total crop, and at "stimulating horticultural production and providing the public with a round-the-year supply of fruits and vegetables at reasonable prices."

* * * *

Forward Foreign Exchange Deals.—The Reserve Bank of India has granted permission for transactions in foreign exchange up to as far as one year forward. Hitherto, the limit for forward purchases or sales was six months. This move is regarded mainly as an attempt to assist importers who are trying to obtain goods on a deferred payments basis. Considering the drastic restrictions proposed under the new import policy for the quarterly period July to September, it is uncertain how much use will be made of the new facility. But the move has nevertheless been welcomed by importers who are getting goods with longer delivery dates and by those wishing to cover a larger proportion of their commitments under deferred payments schemes.

* * * *

Controlling Foodgrains.—The Central Finance Minister, Mr. T. T. Krishnamachari, has indicated that the Government might have to impose some sort of control on the prices, storage and zonal movements of foodgrains. It is felt that this may be necessary because foodgrain production, even in the best of seasons, gives only a marginal surplus. The Finance Minister recognises that the rise in food prices has raised the cost of living of the working class and the lower middle class, but he thinks that the increase has not been phenomenal since September last year. Many will disagree. Mr. Krishnamachari says that it will be difficult for the Government to introduce food controls unless the lower and middle income groups support the idea. The middle class, he feels, is in favour of controlling prices; but instead of complaining against the excise duties and inflation, if it urges the Government to initiate measures to control prices, it will meet with a better response. Control does not mean price control alone; it may even mean "zonal control of movement and monopoly control." The Finance Minister thinks that if the working class and the middle class are afraid of controls, the ghost of rising prices will never be laid. "At some time or the other they must debunk the ghost." But he omits to mention that India's experience of food controls in the postwar years was far from happy, for artificial shortages continued while black-marketeers and profiteers flourished. Cultivators were reluctant to increase food production thinking that the Government's procurement agencies would requisition stocks at prices far below the levels prevailing in the open market. This was one of the reasons why the grow-more-food campaign was not much of a success. Furthermore, the introduction of controls will necessitate the creation of a large administrative machinery which will inevitably increase the Government's expenditure at a time when it is ostensibly eager to economise. Inflation may be "open" or "suppressed"; if controls merely bring about a change in the nature of inflation, their value would be doubtful.

* * * *

Pakistan-U.S. Double Tax Convention.—Pakistan and the United States have signed a convention on the double taxation of income. It follows in general the pattern of conventions now in force between the United States and numerous other countries for the avoidance of double taxation. Designed to eliminate obstacles to the international flow of trade and investment, it contains provisions relating to business, investment and personal service income, official salaries, pensions and annuities, remuneration of teachers, remittances to students and apprentices, and interest received by the State Bank of Pakistan and the Federal Reserve Bank of the United States. It also contains, as is customary, provisions on administrative procedures, including exchange of information, for giving effect to the convention. The convention will be brought into force by an exchange of instruments of ratification and will be effective in the United States for taxable years beginning on or after 1st January of the year in which such exchange takes place. It will be effective in Pakistan for "previous years" or "chargeable accounting periods", as defined in Pakistani law, beginning on or after 1st January of the year in which the exchange takes place.

* * * *

U.S. Business Activity.—Business reports continue to show a good deal of spottiness, although in the aggregate they add up to high activity, according to the latest monthly newsletter of the First National City Bank of New York on U.S. business and economic conditions. Any summary of the situation at midyear would stress such elements as sustained business investment plans, continued heavy outlays by Federal, State and local Governments, and record-breaking employment and money incomes which are translated into sustained consumer buying. In overall terms, the economy is fully employed. By all signs, the total output of goods and services in the April-June quarter has shown a further mild gain, certainly as measured in dollars and perhaps in real terms also. On the other hand, some sections of industry find it necessary to adjust to changing inventory policies and to a moderately reduced flow of new orders. In May, the Federal Reserve index of industrial production (1947-49=100) eased another point to 143, which is four points below the December 1956 record. The June figure is expected to be about the same. With plant-wide vacations now the rule, and the summer lull more pronounced than it was some years ago, July and August are not likely to bring improvement. The five months' dip in industrial production parallels last year's experience. In both years also, the early months have brought increased caution in purchasing. New orders received by manufacturers declined irregularly during the first four months of each year. But whereas in 1956 new orders, though declining, exceeded shipments and order backlogs were on the rise, this year factory shipments have exceeded new orders by $2.4 billion. Nevertheless, the backlog, at $60.8 billion on 30th April, was over $2.8 billion greater than a year earlier. By historical standards, unfilled orders are high and in many lines a basis for continued confidence. This contrast between a sluggish production index and stable or rising final consumption has been the principal feature of the first half-year's business news. In late 1956, the economy produced more than it consumed, and added to stocks. This year, business has been dipping into stocks and the economy is consuming more than it is producing. Prospects for the second half hinge on whether sustained final demand will bring production back up to current consumption levels or whether lagging output will set off a downturn in demand generally. So far the gap between output and consumption has been a narrow one, amounting in the first quarter of 1957 to only about $1 billion out of a gross national product of $427 billion (seasonally adjusted annual rate). This implies the now familiar pattern of offsetting individual adjustments rather than general liquidation. Doubtless the chief influence has been a turn from scarcity to more abundant supplies of various materials that were tight in 1956, and a gradual shortening of delivery dates as production has been increased.

* * * *

Progress in Patents.—The larger number of applications for patents and designs in 1955 is evidence of the interest shown in inventions. The annual report of the Patent Office for 1955, which has recently been released by the Controller of Patents and Designs, says that the number of applications for patents increased to 2,736 in 1955 from 2,497 in 1954. There was also an appreciable increase in the number of applications for the registration of designs. "About 99 percent of the applications originated in India and most of the balance came from the U.K. Many of the Indian applications were in respect of textile designs." The inventions for which patents were sought related to many fields of industry and technology. The report says that about 39 percent of the total number concerned the chemical industries. Interest was shown in the hydro-forming of naphthas for the manufacture of gasoline-like products. Both foreign and Indian applicants showed keen interest in the field of related alkaloids and derivatives. A number of inventions in the sphere of civil and mechanical engineering related to prestressed and reinforced concrete constructions, metal framework and structural components. In electric power engineering, interest was shown in electric circuit breakers and switches, generators, arc welding equipment and insulating material. A fair number of applications in the sphere of textile technology were submitted, dealing with drafting, carding, spinning and feeding fibres, winding yarns and the recovery of cotton waste. Inventors also showed interest in handlooms and circular looms. The report says that the Patent Office had an income of slightly over Rs 8.17 lakhs and an expenditure of Rs. 4.42 lakhs in 1955. This compares with an income of Rs. 7.56 lakhs and an expenditure of Rs. 4.78 lakhs in 1954.

* * * *

Quality Control in Industries.—The introduction of statistical quality control is necessary in many industries if one is to ensure that the products are satisfactory. Although the technique is new, it has gained increasing popularity among manufacturers. Modern industrial organisations try to improve the quality of the products and generally initiate measures to achieve maximum production at the minimum cost. Quality control measures, therefore, cover the different departments of any organisation such as marketing, research, production, design, processing, engineering, sales and finance. Speaking at the annual session of the Indian Society for Quality Control last Friday, Mr. B. K. Rohatgi, president, said that the application of statistical quality control in an industry might present many problems. Each chart and plan must be tailored to fit the particular problem in hand and the results will be manifest in the form of increased manufacturing efficiency and a reduction in production costs. "The manufactured product calls for not only the operator's pride in workmanship but also the employer's reputation. The main factor affecting the success of any manufacturing concern is the effort directed by it in achieving a balance between the value of quality attained and the cost of achieving it." The techniques of statistical quality control were introduced after the first world war by Dr. W. A. Shewhart of the Bell Telephone Laboratories in the United States. He visited India in 1947-48 on the invitation of the Government, when the Indian Society for Quality Control was founded. The Government later agreed on the recommendations of a committee to set up a whole-time unit. It was also decided that the work in connection with the statistical quality control measures should be co-ordinated and that the Society should be developed as an organisation of technicians and the statistical quality control unit, referred to above, "should do actual installation work in the factory." Efforts were made to change the constitution of the Society, and although a number of suggestions have already been made, further progress in this direction seems to have stopped.

* * * *

Cargo Diversion Risks.—Those who ship goods overseas do not always realise the risk of loss through diversion. Dock strikes have become frequent, and shipowners may respond to them by diverting to some alternative port. There they may land cargo, although it is not the port specified in the bill of lading. They accept no responsibility for the extra cost of forwarding or of storage. Owners of cargo may thus find themselves suffering both loss and embarrassment. To help reduce this, the British Liner Committee, which represents certain shipowning interests, has prepared a form of agreement for cargo-owners to sign in the event of the cargo being discharged short of its true destination. This appoints the shipowner agent for the cargo-owner to make arrangements for further transport. The cargo-owner must indemnify the shipowner against all the expenses he might incur under the agreement, but it is understood that a limited form of insurance against such expenses can be arranged in the marine insurance market.

ECONOMY DRIVE

WE understand that orders have been issued from the headquarters of Government calling upon all local Governments to curtail expenditure as much as possible and to postpone for the present the commencement of any new works. That this should have been found necessary is hardly a matter for surprise. The position of a Finance Minister is at all time an anxious one, but is doubly so in a country like India, where experience has taught us that the revenue and expenditure of any year are from one cause or another liable to differ very materially from the Budget estimate framed at the commencement of the year. The curtailment of expenditure in the erection of Government buildings, or in the construction of roads, much needed though they be, can no doubt in most cases be carried out without much actual loss; but when it is sought to replenish the Treasury by the temporary curtailment of expenditure on large undertakings, such as a line of railway under construction, the matter wears a very different complexion. The temporary stoppage of work naturally adds very considerably to the ultimate cost of such undertakings. Establishments cannot be dismissed at a moment's notice, and consequently have to be maintained at little below their normal strength, though work is more or less at a standstill. The work of construction has frequently to be left in an unfinished state, and is subject on such occasions to great deterioration. Interest charges on capital outlay during construction are greatly augmented. The natural result of this state of affairs is that the capital cost of the undertaking works out to a much higher figure than would have been the case had the work of construction been allowed to proceed at full speed from start to finish; and its reproductive character is, therefore, permanently crippled by the amount of this unnecessary enhancement of capital cost. Further, the date from which it will pay its own way and return a profit to the State, is unnecessarily delayed.

Without Prejudice

DRIVING MOTOR-CAR UNDER INFLUENCE OF DRUG

LIABILITY UNDER THE LAW

(FROM OUR LEGAL CORRESPONDENT)

SOME years ago, a friend of the writer's, a driver of long experience who had never been involved either through his own negligence or from any other cause in any accident, was driving his car in broad daylight along a straight stretch of road on a 60-mile run to Ranchi. He was completely sober, being in fact a total abstainer. There was no question of his being fatigued: he had been driving less than an hour. His age, somewhere between 50 and 60. Suddenly he fell asleep at the wheel. He had no reason to anticipate such a happening, no premonitory feeling of sleepiness: and five minutes after the event was as alert and wide awake as ever. But in that interval of sleep his car swerved across the road and bumped into an oncoming lorry causing, fortunately, only slight damage to it and no personal injuries to anyone. The subsequent moderate claim for compensation was paid, so there was no litigation. But what we would like you, and especially the insurance reader, to consider is whether there would be any legal liability, civil or criminal, on the driver of that car if the matter had gone to law.

Suppose, for example, the driver of the lorry had been killed, as he well might have been. What then? We pointed out the really simple principle involved a couple of weeks ago. It is this: "Every person using the highway owes a duty to take care as regards the persons and property of others at all events if such others are within the range of foreseeable impact." "Duty to take care". Yes: but take care of what? Surely a normally healthy man setting out on a morning drive cannot reasonably be expected to set his mind on not falling asleep on a couple of hours' run. Sleep can steal on one unawares. You can fall asleep through sheer boredom, through hearing a continuous monotonous voice uttering unintelligent platitudes; and the writer knew an extremely alert and sharp-witted judge who simply could not keep awake when compelled to pretend to listen to an argument, prosy and wrong, which he had grasped in two minutes and which he could have torn to pieces in the like time and intended so to do in his judgment. The boring speech acted as a soporific, a drug and that is what we are getting at in this note, in the light of the latest—and indeed, so far as the writer is aware, the only—English decision on the subject.

On the facts, as stated above, we do not think the driver would be liable either on criminal or on civil account. Writing subject to correction, one would say that there was no criminal liability because there was no *mens rea* no guilty mind directed to the performance of a guilty act: and no civil liability because there was no negligence, no failure to take proper and reasonable care. But with the idea of getting first at the general principle we have misled the reader by suppressing one material fact. The driver on that trip to Ranchi was indeed asleep. But it was not an ordinary natural sleep. It was a stupor. For though he did not know it, this was the first appearance of the most ominous symptom of the disease from which he knew he had long been suffering: diabetic coma which, at a later stage in the disease is, we are told, "almost invariably the precursor of death."

* * * *

And that brings us to our *main* point, which is the diabetic driver, and the question whether he should be allowed on the road as such, at all, or be ordered off it as a potential public danger, in view of the possibility of sudden, complete collapse and coma while at the wheel. We do not know the statistics in India or England, but that the danger from the diabetic driver is a serious one is evident from the fact that in the United States the disease is said to affect one percent of the population and as to England, *Law Notes* tells us that there are "hundreds of thousands of diabetics in this country and thousands of them are car drivers."[1] And the percentage cannot be less and is probably much higher in India where, glancing at one's own friends and acquaintances the disease is remarkably widespread.

There seems little doubt that every diabetic *qua* motorist is a potential public danger. And, paradoxical though it may sound, he may be an even greater danger when he is undergoing proper medical treatment than when, perhaps unaware that he is suffering from the disease, he is undergoing no treatment at all. For, as we shall see from the latest case on the subject, insulin *itself* may overact and its injection may bring about the very collapse and coma which it is designed to cure. The onset of diabetic coma *may be quite* sudden. It is very insidious in its approach and beyond loss of appetite, either constipation or diarrhœa *and some* urinary trouble which *to the* ordinary man would be *indicative of nothing* serious, the diabetic driver gets little or no warning of his *impending* sudden collapse. Therefore, unless it is the case that a diabetic *motorist, knowing himself* to be diabetic is *ipso facto negligent* by driving at all at *any time and responsible for* the consequences of a collapse which *might* not happen once in 10 years or at all, it is difficult to see where the element of *negligence*, which is the *sine qua non* of legal responsibility for an accident, comes in

* * * *

The latest English decision on diabetic drivers was therefore an eye-opener to the writer. The facts were shortly these: The accused was a diabetic and had suffered from the complaint for the past 12 years. He was under regular medical treatment. One day in August 1956, he took by injection his usual and prescribed quantity of insulin, then consumed a meal as regulated by his physician, and then drove to a cinema two miles away. Some hours later, he was discovered sitting rigidly at the wheel of his car in a comatose state. He was later medically examined and found to be in a hypoglycæmic coma due to overaction of the insulin injection. There was no accident, no injury to anyone and the man, before his stupor became unconsciousness, had apparently just time in a matter of a second or so to stop his car and then collapsed. So, unless it was, as it *seems* to have been, the deliberate intention of the authorities to make the case an example and a warning to all diabetic drivers as to what their responsibilities are in the eyes of the law, you *may* think it hard that a man who had taken every medical precaution which his doctor had ordered should be criminally prosecuted because the prescribed injection itself had overacted and had operated as a boomerang and knocked him out.

The offence charged against him was that of "unlawfully driving a motor-car on a road under the influence of a drug to such an extent as to be incapable of having proper control of the vehicle contrary to Section 15(1) of the Road Traffic Act, 1930." Now, it is submitted that in India the police, much, and often unjustly, maligned as they are, would not dream of bringing a criminal charge against a man in such circumstances. Ethically, one might as fairly charge a man of being incapable of having proper control of his car after he had been struck by lightning at the wheel. But there was the Act and the man was prosecuted under it.

The justices refused to convict, holding that insulin, being hormones extracted from the pancreas of animals, is not a "drug" within the meaning of Section 15 of the Act: and that it was not a narcotic or poisonous substance. The magistrates, advised by their learned clerk, came to this decision on the law and based their decision on the ordinary, colloquial, everyday meaning of the word "drug". When we talk of a man being "under the influence of a drug", we mean that he has been stupefied or poisoned by some narcotic, cocaine, morphia, opium, Indian hemp, bhang, *hashish* and the like. That is true certainly. But the word "drug" also applies to any organic and inorganic substance used in the preparation of medicines. The magistrates appear to have overlooked that fact. The prosecution appealed to the High Court and the appeal was allowed.[2] It was held by a Divisional Court (Lord Goddard, C.J., Cassels and Lynskey JJ.) that insulin is a drug within the meaning of Section 15 of the Road Traffic Act, "Any substance used as a medicine is a drug," was the Court's opinion. This is a serious matter for diabetic drivers and in England, in consequence of the decision, the British Diabetic Association has taken the matter up. The Association advises drivers who cannot recognise the symptoms of an oncoming reaction to take medical advice before applying for a driving licence; and also advises all drivers on insulin treatment to keep a supply of sugar or glucose in their cars as a means of quickly overcoming the insulin reaction.

The secret of Popular Poplin — Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*

Look for 'SANFORIZED' shrunk to less than 1% on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information, 'Sanforized' Service, 98, Marine Drive, Bombay 2.

ACP. 4361 (Rev.)

WESTERN political ideas are justly popular in the East, and representative government may well have come hither to stay. Oriental variations on the theme, however, appear to me to receive too little recognition, even in the East, where Westernised critics treat them, unimaginatively I think, as so many departures from the Western practice. "Improvements" on democracy, Western-style, can be seen nearer home every day. What I have been watching with especial interest is the Chinese contribution to Russian Communism. Bluff and crude, Khrushchev can speak of the pernicious personality cult; it requires a Mao, part-time poet, to sing of a hundred flowers blossoming, of a hundred schools of thought striving for the truth. The Rubashov method and all, confession in Soviet Russia remains a blunt instrument of tyranny; in the People's Republic of China, it has already acquired a subtler form. The former Communications Minister, Mr. Chang Po Chun, did indeed appear before his audience as "a man having committed a serious sin in politics." It is also true that he admitted to being "an ambitious man of the bourgeois Rightists," whatever that may mean, and that he had denied the revolutionary strength of Soviet Russia and the merits of Stalin, especially *since the 20th Party Congress*, although it is not obvious how a denial of the merits of Stalin is incompatible with the 20th Congress. *The pièce de résistance* of the confession was the following: "In criticising the Soviet Union I made a wrong evaluation, such as saying that though she possessed heavy industry, she was short on ancient culture." Now, a tradition is a wonderful thing to have; but, surely, it cannot be held against Ghana or Pakistan that it has not got a history going back to antiquity. If you still insist on a glorious past you land yourself in faintly ridiculous situations such as that of an American university rector who issued an order and solemnly added: "This great tradition shall take effect as of next Thursday." Judging by the way things are going in the Communist world, I should not be surprised if Mr. Chang has to confess again that he was wrong in his evaluation of China, in implying that Russia was long on heavy industry and China short on modern culture. Meanwhile, of course, Russia goes on claiming the invention of everything. And inventive the Russians certainly are.

* * * *

Whoever once described Calcutta as a city of palaces must now be turning in his grave. While the Central Government maintains its tender concern over the clearance of local slums, the rest of the metropolis continues its slow and steady decline into a condition where it might become difficult to distinguish areas which are slums from those which are not. Each year the monsoon brings a reminder of the extreme state of disrepair into which an extraordinarily large proportion of buildings have fallen. However, the structures which have collapsed during the past few days, endangering human lives in overcrowded localities, have so far produced little more than the usual crop of complaints and excuses from the local authorities. Not being familiar with Calcutta's municipal laws—for the very good reason that I do not normally spend my time rummaging about the waste-paper basket—it is hard to appreciate how the city architect's discerning verdicts on the state of various buildings *come to be coolly disregarded* for years at a stretch. But it seems to me that in this practice there lies an excellent case, firstly, for amending the laws, and, secondly, for giving the authorities greater effective power to see that they are implemented. Having taken these two measures, there would then be a very good case

A DITCHER'S DIARY

for a third step—providing a large quota of benzedrine for our city fathers and their staff to help them *over the somnolence* which every reminder of their responsibilities regularly induces. However, the *real solution* to Calcutta's housing problems lies, in fear, not in *ad hoc* palliatives but in a more fundamental reform. The rent control laws, which too often give landlords an inadequate return for their investment, discourage new building at the same time as they reinforce the tendency to cut down expenditure on repairs drastically. The result is that the area of habitable accommodation is steadily decreasing, except for the not wholly merciful activities of those who continue to build profitably by extorting *salamis* and violating the law. A few years hence, the lesson may perhaps be learnt that housing, like any other facility, must yield to builders an economic return if there is to be enough of it.

* * * *

It may be true that several vacancies in the Corporation of Calcutta cannot be filled because of I haven't found out what. But it is unlikely that there are many such vacancies in the Government of West Bengal, in the Ministerial ranks at any rate. In the past week alone, six parliamentary secretaries have been appointed to relieve the burden of the presumably over-worked West Bengal Cabinet, which itself has increased its strength by one in the same short period. Incidentally, the Chief Minister said recently that if it were necessary to do so for "psychological reasons," his Government would reduce the Ministers' salaries. The psychological return from the subsequent reduction is perhaps difficult to measure—although I think I could do it for a very small consideration; or, since even barristers-at-law are to work for a measly 10 mohurs, here is the calculation, *gratis*: nil. But let us grant it that it did lead to some economy. It will now be interesting to know whether the later additions will not eat up all of it and more. At the other extreme of the new austerity move, we have the dismissal of 400 peons from the External Affairs Ministry. Reminders for the recovery of dues from Pakistan and Burma may now go out a bit faster, but otherwise there is unlikely to be either a solution of the Kashmir problem or a worsening of it in consequence of the departure of four times hundred peons. Like sulpha drugs, however, economy drives produce their own immunity in due course. I remember the head of a Central directorate telling me some years ago that he had it all taped. "Right at the beginning of the financial year," he told me, "I get the Finance Ministry's sanction for at least a dozen extra posts which I know I will never be in a hurry to fill. Then comes the directive on economy, and I am the first to economise, to sacrifice. I 'surrender' six unfilled posts immediately, and keep the rest in hand for future bargaining. It never fails." I wonder whether my friend is the only official to economise thus.

* * * *

Dandakaranya is certainly a very ambitious scheme, and the Government of West Bengal was as right in extending support to it as the Opposition was justified in declining to add enthusiasm to its initial welcome before knowing more about it. It has taken more than two hundred years to make of West Bengal what it is today: a larger area than that may perhaps be developed more quickly with planning (usually a delayer—"governor"—rather than an accelerator) and modern equipment, but so desperate is the refugee resettlement problem that nothing short of a very bold scheme may do. As I see it, the first thing to do is to take the qualification off the Opposition's approval by telling the refugees in greater detail just what the scheme is going to mean to them. Hard work, first. Somebody has raised the question of what the effect of deforestation may be on the pattern of rainfall in this part of the country; it should be considered at the highest technical level. An equally important question is whether the space vacated by trees and tigers will be occupied and cultivated by refugees from East Bengal. Many and expensive were the schemes that went awry in the past in settling them outside West Bengal. There is no conflict at all between the wish to settle refugees and that to increase food production by developing Dandakaranya. Indeed, there are good reasons for co-ordinating the two; but early clarification as to which comes first may avert frustration later. With the next general elections five years away, there is now a fair chance of refugees being treated as refugees and not as potential voters; and just as refugees will do well to remember that they do themselves no good by remaining permanent liabilities to the Government, the latter has always to bear in *mind* that it is not dealing with so many pieces of luggage. The refugees are men, women and children, and in Dandakaranya it will be for the men to prove that they *are* men.

* * * *

Few people can have expected spectacular announcements to emerge from the Commonwealth Prime Ministers conference which ended last week. Few ever do. Yet the worldwide notice these conferences attract, although they bring little in the way of "hot" news to the wider public outside, is a measure of their ultimate importance. By providing a platform for what the Commonwealth Premiers in their final communiqué describe as "a full and candid exchange of views", they serve a vital purpose; and this year's conference has been especially valuable coming, as it did, after a period during which the bonds uniting the Commonwealth *countries* have been subject to exceptional political and economic strain. If the list of absentees and substitutes among the membership was somewhat longer than usual, that does not detract from the large measure of agreement which has been secured. The true significance of such conferences springs always from their implicit affirmation of the identity of ideals, even though the methods chosen in striving for those ideals often vary. There is evidence that differences of opinion, over the Suez affair for instance, have been frankly discussed and as a result are now better appreciated. Mr. Nehru has had a welcome chance of explaining, at some length, his still often misunderstood views on the Russian butchery in Hungary, although many will regret that on his reported initiative the reference to the affair in the final communiqué has been made relatively innocuous. More valuable, from this country's point of view, however, has been the opportunity to consider the impact of the second five year plan on the sterling area, and to emphasise the need for foreign investment and assistance in India's financial crisis. It would be idle to pretend that the sympathy which, it is reported, has been shown for India's development efforts will, by itself, bring about a substantial increase in the foreign aid she is getting. But the existence of sympathy will at least strengthen the case for India revising those of her policies which are inhibiting foreign lending and investment and that itself would be no inconsiderable achievement.

THE METAL BOX COMPANY OF INDIA LIMITED

REVIEW BY THE CHAIRMAN— H. CHISWELL JONES, O.B.E.

The Twenty-fourth Annual General Meeting of The Metal Box Company of India Limited will be held on Thursday, 18th July, at 59C, Chowringhee Road, Calcutta.

The following is a copy of the Review by the Chairman, Mr. H. Chiswell Jones, O.B.E., which has already been circulated to members.

SALES

Sales for the year were a record at Rs. 567 lakhs compared with Rs. 495 lakhs last year. All Branches showed commendable initiative in attracting and meeting the increased volume. Government spending continued at a high level and not unnaturally as the economy expanded considerable strains appeared; the prices of consumer goods advanced over a wide front and the foreign exchange situation deteriorated sharply. In fact, the last quarter of the year was dominated by foreign exchange considerations affecting the fortunes of our customers as well as our own raw material supply. Restrictions were imposed in January on the import of a variety of consumer goods calculated to save many crores of rupees in foreign exchange, creating a gap in the internal supply of packed consumer goods which must be bridged by increased local production. This is a challenge which your Company and its customers can readily meet provided sufficient raw materials particularly tinplate, are available.

We recently explored the more promising of the South East Asia markets and secured initial orders worth some Rs. 2½ lakhs. Substantial exports to these markets in the face of keen competition from U.S.A., Japan, Hong Kong and Europe could be realised through intensive sales promotion provided that a special allocation of tinplate for export was made available.

Also on the export front, goods packed in our containers are making an impressive showing. In the year to March, 1957, goods to the value of Rs. 4 crores were exported in containers of our manufacture, the quality of which was, in every case, an important selling point. Prepared spices, cashews, edible oils, paint, pharmaceuticals, foodstuffs and toilet goods went to all five continents and there is still scope for a considerable expansion of these exports. Additionally there is the opportunity to increase the value of exports of products which at present are exported mainly in bulk. India is well equipped to supply consumer-packed goods of the highest quality and it is the export of these that should be officially encouraged so that this potential can be fully exploited with benefit to the foreign exchange position.

PROFIT

In my last Review, I said that despite rising costs we hoped to maintain profits by increasing sales. Our efforts were successful and profits were held at the level of the previous year on a turnover increased by Rs. 72 lakhs. We began this financial year with a record order book and if we are not deprived of raw materials we should earn satisfactory profits.

RAW MATERIALS

For most of the past financial year we were free from major anxieties in the supply of raw materials, though steadily rising costs and the necessity to keep an adequate stock level have produced their own financing problems. The value of our stock policy in these days of international anxiety and crisis may be judged against the American Steel Mill strike of two months last year—the Suez Canal closure with consequent disorganisation and delay in shipping schedules—and now import cuts here. Our stocks saw us safely through the 1956 crises. Our later performance will be determined by Government's import policy.

The production capacity of indigenous tinplate was expanded towards the end of the year by one additional rolling mill. Output unfortunately restricted by labour trouble, was almost unchanged from the previous year and provided us with about 60% of our total needs—the balance came from imports. Further success has attended our efforts to achieve local production of other raw materials hitherto imported, and our dependence on imports is now near the irreducible minimum. Desirable as it is to conserve foreign exchange and support local enterprise, it is to be hoped that the policy will not be pressed to a point where quality and efficiency will suffer, as well they may, if consumers are forced to accept local substitutes without regard to quality or performance.

The past year has seen further substantial price advances in almost every raw material we use, either on account of higher manufacturing costs or increased freight charges following the Canal closure. Enhanced customs duties, and price increases through shortage of supplies resulting from import restrictions, have also contributed to raising our cost of production.

EMPLOYEE RELATIONS

The clamour during the reorganisation of the States and more recently, the General Elections, had an unsettling effect upon labour. Despite this, we have had another year of industrial peace at all factories. There was a steady increase in the consumer price index throughout the year, and adjustments were made in the emoluments of our employees.

Training in all its aspects, and at every level, continues to receive a great deal of our attention. Qualified T.W.I. instructors are working at our two largest factories, and the continuous training classes there will shortly be extended to the other factories. Members of our staff have taken courses in scientific management at local Universities and the Company is working closely with Management Associations in four States. Our U.K. consultants, The Metal Box Company Limited, afford unique training facilities for our young Indian managerial, technical and scientific staff. More than thirty have now received training in this way, and many more are planned for the next few years. We have special apprenticeship schemes covering all skilled operations in our factories, and we have recently offered to train a number of skilled artisans for the Government Steel Plants.

All this adds up to an expression of our belief and faith, that, given education, training and opportunity, workers will through their own efforts and initiative demonstrate their fitness to play an increasing part in management. All our full-time Directors, and the majority of our senior executives and technicians began their careers with us in junior positions. We are proud of their success and we believe it is a major factor in our good employee relations, and in the high level of production in our factories.

Last year we introduced a Long Service Award for employees who have completed twenty years continuous service with the Company. On the occasion of the first presentation no less than thirty-two employees received a Rolex watch and certificate. To all employees whatever their length of service, I send my thanks for another year of sustained effort.

DEVELOPMENT AND NEW PROJECTS

We made progress with our development items during the year. Our industrial component section was improved with the opening of a new self-contained manufacturing department. In Calcutta equipment was installed for the manufacture of aluminium tubes and we have recently commenced the extrusion of aluminium components for the radio industry.

To meet the demand for quality printed polyethylene bags a new three colour printing machine was installed and further equipment for producing pouches from laminated materials is due to arrive shortly.

The R.S. or Roll Seal Pilferproof and Non-pilferproof Closures continue to gain popularity and are now generally accepted as attractive, easily-applied and, in the case of the former, effectively tamper-proof seals. Our Technical Development Section have designed and produced two new closing machines with rotating heads which keep the bottle or can stationary to avoid spilling during the sealing operation. They are already popular with customers and in considerable demand.

In pursuance of our efforts to foster the canning industry we have engaged an expert from the U.K. who will assist in the solution of the problems of the industry. His services will also be available to those government organisations pursuing processed foodstuffs development. We have presented to the Central Food Technological Research Institute a mobile demonstration van in connection with a pilot scheme aimed at educating the urban population on the wholesomeness and use of canned foods. Government have been examining a proposal to subsidise the cost of cans for the processed food industry, to the extent of one-third of the cost of the tinplate used. This scheme aims at saving a considerable proportion of the present wastage of fruits and vegetables, estimated at between 15% and 20% of the total crop, stimulating horticultural production and providing the public with a round-the-year supply of fruits and vegetables at reasonable prices.

Our Research Division has made good progress in the task of improving finishes and developing indigenous materials to replace products hitherto imported.

CONSULTANTS

During the last year our consultants, The Metal Box Company Limited, London, have made available to us the services of a number of their Directors and senior staff in connection with revaluation of assets, training of staff in the U.K., research and the overhauling and recalibrating of all our printing ovens. I take this opportunity to express to them our appreciation of their continued valuable services.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

CONDITIONS EASE FURTHER

Wednesday, 10th July.

CONDITIONS have been easier in the Calcutta money market during the past week and funds have been returning to the banks. The main declines have been in cotton and sugar advances, the latter being presumably influenced partly by seasonal factors and partly by the Reserve Bank's recent directive relating to sugar loans. Accommodation against jute has increased, but that against grains and seeds is virtually unchanged. The interbank market has been more active but the call rate remains at 3½ percent.

Moderate business has been done in export bills, there being a substantial number on account of gunny shipments and a few on account of tea. Remittance has continued on a substantial scale, and the new facility allowing foreign exchange transactions for up to 12 months forward has been well utilised. Sterling remains steady against the dollar.

* * * *

Bullion was quiet in the absence of support. Rumours about the arrival of Tibetan coins helped the downward trend. Silver declined from the previous week's level of Rs. 180.50 to Rs. 176.25, quoted today. The rate for forward delivery was Rs. 176. It was 90¼ cents in New York and the London price was 78d.

In sympathy with silver, gold was quiet and the price declined from Rs. 107 to Rs. 106.25. The sovereign fell from Rs. 72 to Rs. 71.50.

* * * *

During the week ended 5th July, Government of India Treasury bills for Rs. 90,32,50,000 were sold in favour of the Reserve Bank.

* * * *

An increase of Rs. 9.32 crores to Rs. 1,551.49 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 5th July, 1957. The total note issue was Rs. 91 lakhs lower at Rs. 1,580.76 crores. Notes held in the Banking Department consequently fell by Rs. 10.23 crores to Rs. 29.27 crores. Deposits of the Government of India declined by Rs. 1.38 crores to Rs. 51.30 crores and other Government accounts were Rs. 3.78 crores lower at Rs. 4.47 crores. Balances of commercial banks declined by Rs. 6.26 crores to Rs. 75.89 crores. Other notable increases in the liabilities of the Banking Department included: reserve fund Rs. 75 crores, non-agricultural credit fund Rs. 5 crores and national agricultural credit fund Rs. 1 crore. Balances held abroad declined further by Rs. 3.41 crores to Rs. 37.41 crores. Investments, at Rs. 218.52 crores, showed a rise of Rs. 1.71 crores. Other loans and advances declined from Rs. 91.46 crores to Rs. 84.67 crores, of which advances to scheduled banks against usance bills totalled Rs. 46.70 crores (Rs. 50.21 crores). Ways and means advances rose from Rs. 23.88 crores to Rs. 26.40 crores.

* * * *

The return of the State Bank of India for the week ended 28th June, 1957, shows a rise of Rs. 8.43 crores in total deposits to Rs. 316.07 crores. Investments in Government securities and other authorised investments remain unchanged at Rs. 94.09 crores and Rs. 11.42 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 1.06 crores to Rs. 182.74 crores. Cash and balances are, in consequence, shown at Rs. 42.21 crores or Rs. 11.08 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 28th June, 1957, shows Demand and Time liabilities at Rs. 723.39 crores (Rs. 11.25 crores on account of borrowings from banks) and Rs. 553.02 crores (Rs. 4.12 crores), compared with Rs. 711.26 crores (Rs. 10.17 crores) and Rs. 551.01 crores (Rs. 4.16 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have risen by Rs 1.58 crores and Rs. 10.62 crores to Rs. 42.38 crores and Rs. 78.72 crores. There is a drop of Rs. 25 lakhs in investments to Rs. 332.71 crores. Advances and bills discounted, at Rs. 919.07 crores, show a fall of Rs. 1.48 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.5 percent and 72.0 percent, against 8.6 percent and 72.9 percent.

NO DECISION YET ON SETTING UP PRODUCTIVITY COUNCIL

A Press note says that a report has appeared in a section of the Press stating that the Union Ministry of Commerce and Industry proposes to set up shortly a national productivity council as recommended by the Productivity Delegation which visited Japan in October last year. The report is incorrect. The Government has not yet formulated its views on the recommendations of the Delegation. Its report has been circulated for eliciting comments to various chambers of commerce and industry, industrial associations, labour organisations, federation of industrial co-operatives and others interested in productivity. The recommendations will also come up for discussion before the Central Advisory Council of Industries which will meet in New Delhi on 13th July, 1957. The Government will take into account the views of all concerned before reaching final decisions on the Delegation's recommendations.

RESOURCES FOR THE SECOND PLAN

THE AIMS OF FISCAL POLICY

By R. M. Mitra

THE latest Central Budget has enlivened the controversy about the adequacy of resources for the second five year plan. These resources have to be raised partly at home and partly abroad. The internal resources can be directly secured through a compulsory levy or through ownership of the factors of production; or money may be used as an intermediate agency. Although India is aiming at a socialist pattern of society, she will continue to use money as a medium of exchange and a store of value. Even in the Russian economy, where the factors of production belong mostly to the State, money is retained as an instrument in paying remuneration to labour on the one hand, and in paying for the purchase of consumer goods on the other hand. The success of India's second five year plan, in so far as it depends on internal resources, will be mainly conditioned by the behaviour of money.

Behaviour of Money

Taking external resources, the planners calculated that the gap in the balance of payments would amount to about Rs. 1,120 crores. It was thought that utilisation of Rs. 200 crores of the Reserve Bank's sterling funds, together with foreign credits of Rs. 100 crores for the private sector and Rs. 800 crores for the public sector, would serve to fill this gap. It is becoming increasingly evident that the assumptions underlying these calculations are likely to prove wrong. Apart from doubts as to whether exports will total Rs. 2,965 crores, there are reasons for anxiety that the phasing of foreign credit may not correspond to the phasing of the gap in external resources. Strenuous efforts are therefore being made to arrange deferred or instalment payment terms for purchases of foreign machinery, and to explore the possibilities of getting increased loans from international financial agencies. But the fact is that the amount of foreign help, whether in the form of finance or of trade credit, will be determined by confidence in the value of the rupee.

It is necessary for the success of the plan, therefore, that money should help internal production and distribution, and enjoy confidence abroad by maintaining a reasonably stable value. The plan report contains detailed estimates of the resources which are expected to be available for the public sector. According to these estimates, taxation should provide Rs. 800 crores, borrowings through public loans and small savings programmes Rs. 1,200 crores (of which Rs. 200 crores represent the drawing down of the sterling reserves) and foreign credits Rs. 800 crores. These estimates show a gap of Rs. 400 crores to be covered by increased resort to taxation and intensified borrowing efforts.

Taxation and Borrowing

But the estimates are already being revised. It is reported that, on the one hand, the level of deficit financing may be reduced and, on the other, the plan estimates of Rs. 4,800 crores may rise by Rs. 400 crores. There is also an increasing tendency for using taxation to fill the original gap of Rs. 400 crores and to cut down on deficit financing. The plan provided for an increase in the aggregate taxation receipts of the Central and State Governments for the period 1956-61, from Rs. 5,000 crores at the 1955-56 rates of taxation to Rs. 5,450 crores. With the revised ideas about the scope for taxation, these receipts may be stepped up to Rs. 6,650 crores. If the annual average of national income is taken at Rs 12,140 crores over the five year period of the plan, the ratio of taxation to national income will work out to about 11 percent. It has been maintained that development expenditure of the order of Rs. 5,200 crores in the public sector is necessary to bring about a rise in the national product from Rs. 10,800 crores in 1955-56 to Rs. 13,480 crores in 1960-61. It is, therefore, possible to argue theoretically that though the rate of taxation may be increased from about 9.3 percent to 11 percent of national income, the amount available for consumption expenditure will not suffer, the only difference will be that a part of the savings in the private sector will be transferred to the public sector, while the allocation of currently usable resources between the two sectors will remain unaltered. But even if the force of this argument is admitted, the relative merits of borrowing and taxation call for further examination. The psychological effect of taxation on business enterprise and its effect on the distribution of purchasing power may tend to disrupt the mechanism of production and distribution. Loss of the right to future enjoyment of loan money and present enjoyment of interest earnings makes taxation a positive deterrent. It might, therefore, seem a sound economic proposition to depend on borrowing at least to the extent that development expenditure is expected to produce income-yielding assets.

The sluggishness of the share markets and the over-extended nature of the banks' loan position might, however, suggest that borrowing programmes will not succeed, and that taxation measures are therefore unavoidable. The inadequacy of loan money has forced the State to arrange credit supply for industry in the private sector through the organisation of specialised institutions (of which the Re-Finance Corporation may prove a new type) and through the evolution of direct methods of central bank credit like the bill market scheme. It may thus seem inevitable that the State will acquire larger resources through the compulsory method of taxation rather than depend on the uncertain results of voluntary loans, so that it is assured of funds both for activities in the public sector and for financing institutions extending credit in the private sector. Yet, this perhaps merely begs the question. The incidence of taxation may depress the already low standard of living. Business uncertainties arising from consumer resistance may lead to greater evasion of taxes in order to keep prices lower, and the urge to evade the expenditure tax could lead to the devising of newer methods of evading income tax and the wealth tax.

Our new Analytical Laboratory offers its services to the trade for the competent analysis of

Acids and Alkalies. Oils. Fats. Waxes. Shellacs. Oil Seeds. Heavy & Fine Chemicals. Ores. Minerals. Soils. Drugs. Coals. Pharmaceuticals. Vitamins. Alkaloids. Water. Salts. Metals and Alloys, etc., etc.

Prompt service and moderate terms.

CALCUTTA-14.

Needs of the Private Sector

It is true that planners should not fight shy of bold measures, and may often have to take steps the results of which are uncertain. But it is also the task of the planners to decide between the available alternatives. Fiscal measures have to be so devised that the cost of living does not rise for the underfed and underclothed masses and so that the redistribution of income does not dry the known channels of savings, especially in a country where institutional financing facilities are still poor.

The Planning Commission has recognised that the public sector and the private sector are "parts of a single mechanism". It follows, therefore, that the process of gathering resources for the public sector should not lead to the starvation of the private sector. The plan report does not present a detailed survey of the various sources of finance for the private sector, whose requirements are estimated at Rs. 2,400 crores. A representative assessment to the extent of Rs. 720 crores (including new investment of Rs. 570 crores and replacements and modernisation of Rs. 150 crores) has, however, been made for industries other than mining, electric power generation and distribution, plantation and small-scale industries. It has been calculated that loans from the Industrial Finance Corporation, State Financial Corporations and the Industrial Credit and Investment Corporation will provide Rs. 40 crores. State loans and participation Rs. 20 crores, foreign capital and credit Rs. 100 crores, new issues Rs. 80 crores, internal resources Rs. 300 crores and other sources such as managing agents, E.P.T. refunds, etcetera. Rs. 80 crores. It is proposed to cover the gap of Rs. 100 crores partly by assistance from the National Industrial Development Corporation to the extent of Rs. 55 crores. No arrangement has been made for the balance of Rs. 45 crores.

It is obvious that foreign credits, and contributions from the State and specialised financial agencies, will form a relatively small percentage of the total finance for the new investment of Rs. 2,400 crores: the former will be concentrated in the limited sector covering Rs. 570 crores described above. Self-financing and various forms of credit may, therefore, be required to provide about Rs. 2,000 crores. Business profits have to be sufficiently large and taxation measures realistic to permit the retention of profits so that investment in shares and debentures may not be discouraged. Again, the machinery of institutional finance should be efficient and resourceful to ensure the success of new issues and the supply of other forms of credit.

It appears that while new social objectives have been introducing significant changes in various economic relations, purely fiscal measures should not be allowed to disturb the economy further and disrupt the institutional methods of finance, poorly developed as they are. There is no statistical information on the distribution of money between different economic groups. Nor is there any dependable study of the influences of the marginal efficiency of capital, propensity to consume and liquidity preferences. Social forces are in operation changing the relative significance of these psycho-economic factors and impulses. In the circumstances, it may be dangerous to regulate, control and direct the supply of financial resources by employing newly fashioned budgetary tools. Subject to the requirements of social objectives, the best method of mobilising resources for financing income-yielding assets would, therefore, be borrowing for the public sector, and shares, debentures, loans and retained profits for the private sector.

Organised Credit

It is necessary that there should be properly organised credit and financial institutions to bring money under discipline so that money may perform its proper internal function and also maintain its international value. The importance of properly organised credit institutions receives additional emphasis from the fact that besides Rs. 2,400 crores of investment finance, current business assets (e.g. receivables) which may not enter into the composition of the national product but are still an essential part of capital formation from the point of view of individual industrial units, will call for considerable finance. It seems unfortunate, therefore, that the question of planning the credit structure of the country as an integral part of the larger five year plan has not received proper attention.

Problems of Credit

The report on the second five year plan contains a brief reference to the problems of credit in the private sector. The short discussion ends with the observation that the increasing strength of the capital market should ensure an adequate supply of resources for fixed investment, at least so far as the organised industries are concerned, and that there should be even less difficulty in getting working capital, especially in view of the deficit financing proposed. As a matter of fact, the report thought that the problem, if any, would not arise from an inadequate supply of monetary resources, but might involve the necessity to check "an expansion of bank credit and diversion of resources to speculative purposes".

In the light of recent developments, this belief may seem somewhat naive. The new monetary policy introduced in 1952 recognised the dual character of the problem of credit. Bank rate was increased and the importance of selective credit control was emphasised, as part of the measures necessary to deal with inflationary or speculative use of bank credit. At the same time it was felt that the availability of total credit might prove inadequate for the *bona fide* needs of trade and industry in the developing economy of India. The so-called bill market scheme was accordingly devised to pump money in the banking system to provide productive finance. It appears, therefore, that the monetary policy formulated as early as 1952 foresaw the growing contradictions of the monetary system. It seems incomprehensible that this aspect of the problem failed to receive proper consideration in the deliberations of the Planning Commission. A regrettable result of the Planning Commission's casual approach to the problem of credit has been an almost complete neglect of the need to consider the proper expansion of the banking system.

It is true that segments of the banking system have been included in the plan. The Imperial Bank of India has been converted into the State Bank, and the reorganised bank is expected to promote "rural-minded" credit. The co-operative system is being reorientated on the basis of partnership with the State. Co-ordinated programmes of finance are being drawn up for providing credit to small industries. The State Bank, co-operative banks and other State-sponsored financial agencies are expected to participate in these programmes, and it is reported that pilot schemes have already been brought into operation. If the problem were simply that of guiding and controlling the supply of credit as proposed in the plan report, these efforts to reorganise sections of the credit structure, combined with the Reserve Bank's powers of selective credit control, might truly represent an effective planning of the banking system as part of the larger five year national plan.

Unfortunately, however, the problem lies in the volatile character of the credit supply. Socio-economic changes have served to direct money to persons unacquainted with institutional finance, on the one hand, and to anti-social elements like tax-dodgers and profiteers, on the other. While, therefore, money may be spasmodically available for "speculative purposes", it has not yet played any important part in bringing about "an expansion of bank credit". Bank credit has undoubtedly expanded. But this expansion has not taken place in the easy course of employment of surplus cash resources, a process which not unoften encourages ill-considered uses of credit. The plan report has rightly called attention to the dangers in the expansion of bank credit. But it seems to have failed in correctly interpreting the behaviour of money in the prevailing economic conditions. It has not considered the situation that may arise if money does not come into the banking system in sufficient quantities to support essential credit needs of trade and industry in consonance with the requirements of the plan.

The problem of credit, and for that matter, of resources for the execution of economic programmes in both the public and private sectors, essentially relates to the unpredictability of the behaviour of money. A largely non-monetised economy is undergoing a process of monetisation. But no planned effort is being made to direct the flow of money into organised channels. It is submitted that the occasion for using unconventional methods of taxation may arise only after money is brought under competent observation, and its reaction to various fiscal measures can be studied on the basis of statistics available in the banking system. Meanwhile, taxation may be used only for financing non-productive expenditure, and reliance should be placed on the machinery of borrowing for financing productive expenditure. A properly organised banking system will help in making the Governments' borrowing programmes successful, in providing credit for the private sector, even in preparing the ground for unconventional taxation if it is considered necessary for economic or social reasons—and last, but not least, in maintaining international confidence in the rupee.

Stocks and Shares

SPECULATIVE ISSUES EASE ON SETTLEMENT CONSIDERATIONS

UNDERTONE FAIRLY STEADY: SMALL PURCHASES BY LIFE INSURANCE CORPORATION

Wednesday Evening.

THE trend in the stock market has been fairly steady during the past week, although towards the close prices are shaded on profit-taking ahead of the settlement. Activity has been on a smaller scale, the general tendency being to digest the recent gains. The reminder issued by the Central Finance Minister, Mr. T. T. Krishnamachari, that the wealth tax is here to stay, has dampened spirits. Small purchases by the Life Insurance Corporation, of preference shares as well as equities, are reported.

There has been less activity in teas, although share prices are well maintained because of the good auction results this week. Coals have not reacted to the second interim increase of Rs. 1-8 a ton in the price of the commodity: the increase was expected and the only surprise is over the delay in announcing it. Engineering and miscellaneous issues have met with selective support, with Dunlop Rubber a notable feature. Gilt-edged remain quiet.

Details of the week's trading follow.

* * * *

The Government securities market remained quiet, and except in short-dated loans, prices fell further. The 3% Conversion Loan changed hands around Rs. 73 and 3% Non-terminable Paper was quoted nominally at the same rate. In short-dateds, 3% 1957 was slightly easier at Rs. 99.75 but 3% 1958 had strong buyers at Rs. 99.68, while 3% 1959-61 was taken higher at Rs. 97.84 and 3½% 1961 was fully steady at Rs. 99.35. The 2½% 1961 was better at Rs. 93.60 and 2¾% 1960 was asked for at Rs. 96.50. In the medium-dated group, 2¾% 1962 improved to Rs. 93.90 but 3% 1963-65 was easier at Rs. 93.50 as was 3% 1964 at Rs. 93.70; 3½% 1964 was quoted lower at Rs. 97.62 and 3½% 1965 was easier at Rs. 97.60. The 3½% 1967 had sellers at Rs. 98.12. Long-dated loans remained weak, with 3% 1966-68 on offer at Rs. 91. and 3% 1970-75 was marked back 20nP to Rs. 85.30; 3½% 1974 had sellers at Rs. 98.35. Trading in State loans was restricted and very little business was reported: 4% Madras 1968 was marked lower at Rs. 95.40 and 4% West Bengal 1968 changed hands at Rs. 99.

Business in preference shares was once again on a reduced scale. In jute, a small lot of Agarpara changed hands at Rs. 97 and Caledonian at Rs. 96. Howrah 7% were crossed at Rs. 99. In the miscellaneous group, a parcel of Dimakusi Tea changed hands at Rs. 11.50 and Bathgate were done at Rs. 41. Cawnpore Sugar were offered at Rs. 112 and Dunlop Rubber 2nd were placed at Rs. 87. Elgin Mills "B" preference shares were done at Rs. 7.25 and there were buyers of Indian Iron and Steel at Rs. 99. Indian Aluminium were crossed at Rs. 65.37. A small lot of Rallis India was sold at Rs. 62 and Richardson and Cruddas were taken at Rs. 64. Shaw Wallace were marked at Rs. 66 ex-dividend and Swadeshi Cotton at Rs. 86.

In the banking section, United Commercial met with investment support and improved sharply from Rs. 54.45 to Rs. 57.50 while Hind Bank were shaded at Rs. 32.75. United Bank of India "D" shares were slightly better at Rs. 4.19, but Punjab National were unchanged at Rs. 55.50.

A solitary transaction was reported in the railway section in Dehri-Rohtas, at Rs. 10.06.

Among cottons, Bowreah were easier at Rs. 108 as were Dunbar at Rs. 160 Elgin Mills at Rs. 22.50 and Kesoram at Rs. 13.62. Jayshree Textiles changed hands freely around Rs. 6.25. Business was reported in Swadeshi Cotton preferred Ordinary at Rs. 11.

The announcement on Monday of an increase in the selling price of coal by Rs. 1-8 a ton had little or no effect on coal shares. In fact, prices tended to soften. Bengal met with profit-taking and reacted from Rs. 235 to Rs. 230. Burrakur were better at Rs. 22 but East Indian were easier at Rs. 24.50. New Manbhoom changed hands at Rs. 9 and Union had sellers at the lower rate of Rs. 17. Central India and Western Bengal were lower at Rs. 6.44 and Rs. 5.44 respectively. Equitable and Katras Jherriah were better at Rs. 25.12 and Rs. 55.

Among sugars, Carew were steady at Rs. 7.31, as were Dyer Meakin Breweries at the higher rate of Rs. 6.25. Champaran were offered at Rs. 22.50 while Cawnpore were better at Rs. 15.31.

In the engineering section, Indian Iron and Steel flucuated between Rs. 20.66 and Rs. 20.09 to close at the latter rate. Bhartia advanced to Rs. 14.81, as did Braithwaite to Rs. 26.31. Indian Standard Wagon were steady at Rs. 180, as were Indian Steel and Wire Products at Rs. 58. Jessop and Richardson and Cruddas fluctuated narrowly around Rs. 24.25 and Rs. 15.25 ex-dividend. Kumardhubi Engineering were better at Rs. 9.12. Guest, Keen, Williams were steady at Rs. 27.75 but Textile Machinery closed easier at around Rs. 17.55.

In paper, India Paper Pulp were easier at Rs. 20.50 as were Orient at Rs. 25. Shree Gopal were shaded at Rs. 16.62 but Sirpur were steady around Rs. 9. Titaghur changed hands at Rs. 32.50.

In cement, Assam Bengal were unchanged at Rs. 5.12 while Dalmia were easier at Rs. 11.25. Sone Valley were fairly steady at Rs. 6.37. Orissa were taken at Rs. 13.50 and Jaipur Udyog were marked around Rs. 12.12.

In insurance, a solitary transaction was reported in New Asiatic at Rs. 4.06.

In shipping Bengal Assam Steamship had sellers at Rs. 103 ex-dividend, while India General Navigation were better at Rs. 78. India Steamship were easier at Rs. 10.50 but Port Shipping were steady at Rs. 16 ex-dividend.

Among miscellaneous industrials, Alkali and Chemical were slightly lower at Rs. 13.75 while Aluminium Corporation were better at Rs. 9.50. Angelo Brothers were steady at Rs. 19.25 and Balmer Lawrie were better at Rs. 148. Britannia Biscuits met with investment support at Rs. 13.12

In the electric supply section, Calcutta changed hands freely around Rs. 12.12 and a small lot of Tata was done at Rs. 10.25.

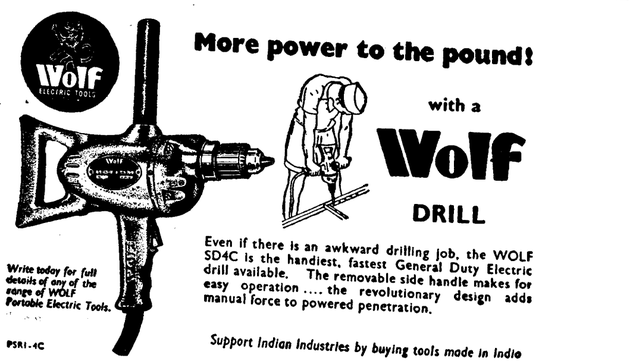
and British Burma Petroleum were active at Rs 2.72. British India Corporation were lower at Rs. 6.55, as were Clive Row at Rs. 10.25. Dunlop Rubber were well supported around Rs. 20.50. Today was the last date for applying for the "rights" which closed on Monday at Rs. 5.12. Eastern Investments were steady at Rs. 110 and Imperial Tobacco were better at Rs. 14.44. Indian Aluminium were taken at Rs. 13.81 while Indian Cables were lower at Rs. 24. Indian Rubber Manufacturers recovered from Rs 23 to Rs. 23.25 and Indo-Burma were steady at Rs. 26.25. Martin Burn were taken at Rs. 23.50 and Metal Box improved further to Rs. 25.25. National Carbon were steady at Rs 24 87 as were Shaw Wallace at Rs. 11.

In the mining group, Indian Copper fluctuated narrowly around Rs. 3.42 and Burma Mines improved from Rs. 2.35 to Rs. 2.50. Other mining issues were more or less unchanged.

Tea shares remained active but there was some reduction in the volume of business. Baradighi improved from Rs. 22 50 to Rs. 23.12 while Bhatkawa moved up further from Rs. 23.25 to Rs. 24.75. Banarhat had buyers up to Rs. 340 and a fair amount of business was written in Bishnauth from Rs 21.87 to Rs. 23. Betjan were crossed at Rs. 30 and Brahmapootra improved by almost a rupee to Rs. 6.62. Brooke Bond had buyers at Rs. 20 and Dessai and Parbuttia were crossed at Rs. 300. Dhelakhat were marked up by a rupee to Rs. 23.62 and Dibrugarh had buyers at Rs. 26.25. Gohpur changed hands at Rs. 24 and Grob "A" advanced by Rs. 2 to Rs. 29. Hantapara fluctuated around Rs. 195 and Huldibari were traded around Rs. 24. Hasimara were in keen demand and improved from Rs. 21.50 to Rs. 23.87. with buyers over. Killcott changed hands up to Rs. 19.56. Methoni improved to Rs 23 and Nagaisuree were crossed at Rs. 162. Patrakola advanced to Rs. 177 and Ranicherra improved sharply to Rs. 18.75. Roopacherra were crossed at Rs 15.25 and Rydak moved up sharply by Rs 2 to Rs. 35.50. Sapoi were placed around Rs 29.50 and Sungma were wanted up to Rs 10.94. Teliapara came to hand at Rs. 170 and Tezpore moved up to Rs. 23.25.

* * * *



The RAMPOORIA COTTON MILLS LTD. has made a net profit of Rs. 7.08 lakhs for the year ended June 1956. against Rs. 5 29 lakhs. Bringing in Rs. 1.094. there is Rs. 7,08,711. The ordinary dividend is the same at 10 percent. Taxation reserve absorbs Rs. 2½ lakhs (Rs. 20,000) and general reserve is allocated Rs 1.30 lakhs (Rs. 1.70 lakhs). The carry-forward is Rs. 3,936.

* * * *

Before providing for depreciation, the profit of the BOWREAH COTTON MILLS has amounted to Rs. 2.26 lakhs for the year ended last December. Transferring Rs 21 22 lakhs from reserve and making other adjustments. there is a credit balance of Rs. 742-10-10 which is carried forward. There is again no dividend.

Bombay Market

NARROW FLUCTUATIONS IN SHARES

CAUTION INDUCED BY APPROACH OF BUDGET DEBATE

Wednesday Evening.

NARROW fluctuations took place in the Bombay stock market during the past week. Prices moved up and down on speculative manipulations. Operators were cautious as the Central Budget will be debated in the Lok Sabha next week. The prospect of further credit controls tended to restrain activity. There was a general inclination to await the results of efforts to obtain external assistance in order to tide over the foreign exchange shortage.

Steel shares softened on long liquidation. The lower output of the steel companies during the quarter ended last June was an unhelpful factor. Tata Steel declined to Rs 174.50 and Indian Iron were lower at Rs 20.20 on substantial selling from Calcutta interests. Tata Locomotive closed at Rs 151 and Premier Construction were bought at Rs 162. Alcock Ashdown were transacted at Rs 282.50. Routine turnover was seen in automobile shares. Premier Automobile came to hand at Rs 89 and Hindustan Motor were freely available at Rs. 7.35. Larsen and Toubro were dealt in at Rs 15.25 on maintaining the ordinary distribution of 10 percent.

The highest levels in the mill group were not maintained at the close. Bombay Dyeing were, however, an exception, and the price improved to Rs. 598 on rumours of a bonus issue in the ratio of one share for every five held. Svadeshi were taken at Rs. 180 and Kohinoors attracted support at Rs. 271.50. Simplex realised Rs. 165 and Century reacted to Rs. 426 on profit-taking. India United Ordinary were offered at Rs. 11 and Apollo came to hand at Rs. 2.54.

Miscellaneous industrials showed minor changes. Associated Cement were done at Rs 159 and Digvijay Cement were transacted at Rs. 150. Steamship company shares were fairly steady. Scindia Steam Navigation were bought at Rs. 19.60 and Great Eastern Shipping were maintained at Rs. 19.20 on investment buying. Mining shares showed little variation. Shivrajpur Syndicate were done at Rs 83.25 and Indian Copper were maintained at Rs. 3.40. Talk of an interim dividend helped lift Bombay-Burmah to Rs. 591. National Rayon recovered to Rs 231 and Tata Chemicals were transacted at Rs. 17.90. Wimco made Rs 155 50.

Banking shares were steady on the belief that the earnings of banks had improved by 10 or 15 percent during the half-year ended last June. United Commercial Bank improved to Rs 56 and Bank of India were better at Rs 141. There was little change in insurance shares and New India Assurance were transacted at Rs. 42 75.

Electricity supply undertakings met with scattered interest and some activity was seen in the Tata Hydro group as dividends were maintained. Tata Power were taken at Rs 1 222.50 and Ahmedabad Electric were done at Rs. 95.

THE WEEK'S TRANSACTIONS

In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations Highest for the week, Lowest for the week Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last-named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise).

MIXED TREND IN STOCK MARKETS

DEMAND FOR INDUSTRIALS PERSISTS

London, 10th July.

THE outstanding event in the stock markets during the past week was the surprise move by the British Treasury to curtail the purchase of dollar and other foreign securities by U.K. residents. After considerable confusion, the implications of the move were later fully appreciated and there was a rapid advance in the dollar premium and a similar rise in dollar securities. Elsewhere, fixed-interest securities remained out of favour and reached new low levels. Dominion and colonial stocks moved sympathetically lower and South African Government stocks were particularly depressed on account of that country's ban on the transfer of London domiciled stocks to the Union register. In the foreign market, Greek bonds improved on hopes of a settlement of the Cyprus situation and in rails Canadian Pacific advanced with other trans-atlantic stocks. The demand for industrial equities persisted on increased talk of inflation as a result of rising coal prices and rail freight rates. Store shares lost a good deal of their recent buovancy; but there were good features elsewhere. With gramophone record sales at a peak, the shares were in demand. Engineering and electrical equipment shares were supported and textiles were somewhat brighter. Motor shares went ahead while tobaccos tended to improve on reports that there was now no sign of any diminution in smoking. South African gold shares failed to hold their recent improvement with prices tending to be easier due to a lack of further support. Copper shares, however, were firmer, helped by favourable Press comments, and other base metals showed a hardening tendency. The feature of oil shares was the wide fluctuations in Canadian Eagle following the Government's restriction on the purchase of foreign securities; but the market generally remained firm, assisted by the advance on Wall Street. Ultramar made a good recovery from the earlier dullness following a favourable annual statement by the chairman. There was less talk of bids in the rubber share market but prices improved on selective buying. Tea shares ruled quiet, with some irregular price movements.

The Money Market

Very easy conditions prevailed in the money market during the early part of the past week following the turn of the half-year. The return of funds withdrawn during the previous week was more than the market could absorb at first; but subsequently the surplus was reduced in the course of operations on account of the revenue department and of loan repayments to the Bank of England. By the week-end, the market had returned to more normal conditions, with money moving on the short side. The Treasury bill rate was slightly lower at £3 16s 11.66d percent.

Activity on Wall Street

In the foreign bonds section, Greeks were in the forefront with gains of nearly two points on a fairly good volume of business. German, Italian and Japanese issues displayed a mixed appearance. Chile 3 percents were soft with a loss of nearly two points. High quality corporates featured a firm bond market with prices moving ahead on good activity. Increased investment-buying interest was centred on recently marketed and high-yielding issues where prices moved up a couple of points or more above their original offering levels. Older low coupon issues also joined the upturn on an improved volume. Long-term U.S Government bonds pushed ahead with many traders attributing the upturn to a lack of offerings. Rails advanced on a light volume of dealings with corporate convertibles strong in sympathy with the forward movement in the security market.

U.S. Federal Reserve Return

According to the U.S Federal Reserve return for the week ended 4th July, the gold stock rose by $1 million to $22,623 million. Foreign deposits rose by $4 million to $414 million, while foreign investments rose by $4 million to $3,758 million. Total discounts and advances increased by $282 million to $1,106 million, while the aggregate excess reserves of the member banks rose by $424 million to $516 million. The daily average excess reserves of member banks fell $214 million to $346 million, while their daily average borrowings rose by $64 million to $1,057 million. Business loans of the New York city banks declined by $153 million to $11 958 million, compared with a rise of $31 million to $10.226 million in the corresponding week of last year.

Rally in Hongkong Gold

The chief feature of the Hongkong bullion market was last Saturday's overnight decline of more than $ (H) 5 following the British Government's control of foreign security buying. After this decline, however, the market rallied somewhat. Prior to the British Government's announcement the market had been irregular. Bullion dealers thought that the market would closely follow movements of sterling but some doubted whether sterling would be able to maintain the current levels. Carry-over charges totalled 89 cents a ten taels in sellers' favour. The official offtake was 1.250 ounces and unofficial 12.950 ounces. Forward contracts were at $(U.S.)37.78 an ounce, c.i.f.

Moderate Rise in Paris Gold

The Paris gold market was initially unsettled last week, but after a lower trend, it rallied during the last two sessions. Influential quarters, it was reported, entered the market. The statement of the French Finance Minister on his anti-inflation plans failed to reassure certain financial quarters, the bullion dealers said. The question of rising prices and wages and its impact on France's financial position as well as her increased E.P.U. deficit were the underlying factors in the rise of gold prices. This rise, however, remained moderate without attracting great demand, as investors continued to prefer the purchase of stocks to that of gold.

Rubber Trading Restricted

Rubber prices continued to move within narrow limits last week and finally showed little net change. Trading interest was very limited with the majority of traders still apparently lacking the incentive. Overseas advices gave little encouragement, and factory interest continued on a strictly hand-to-mouth basis in view of holiday shutdowns. Dealers said that the export maket was still under technical influences with a small short-covering enquiry for offgrade sheets continuing to find offers very scarce. Although differentials tended to narrow considerably, any general price increase however tended to be checked by the steady flow of Indonesian top-grade offers for early shipment which were only slowly absorbed. A fair enquiry continued to prevail for sole crepe with the Continent showing most of the interest. A small business was arranged on a slightly cheaper basis of around 38d a lb for No. 1 ade 4 inch smooth on the spot.

DETERMINING WAGES FOR INDUSTRIAL WORKERS

POINTS TO BE CONSIDERED BY INDIAN LABOUR CONFERENCE

(FROM A NEW DELHI CORRESPONDENT)

WAGE policy during the second plan period is among the items on the agenda of the session of the Indian Labour Conference. While considering the subject, the Conference will have before it the notes that have been prepared by the official study group which was appointed by the Planning Commission last year to examine the various problems of wage determination, pending the undertaking of a wage census and the subsequent appointment of a wage commission. In the note on "some general principles in the determination of industrial wages", the study group says: "It has been urged on behalf of labour that real wages continue to remain around the prewar level, which was just a subsistence level. It is further pointed out that productivity a worker has gone up, and that there has been a large increase in industrial production, compared with the corresponding increase in industrial employment. Again, it is stated that the volume of profits has gone up with the consequence that the acceleration in economic activity has only benefited the 'non-wage-earning' class. This is the line of argument advanced by the workers' union in asking for a wage increase.

"The argument that productivity increases may result as much from a greater or more effective use of materials and equipment as from increased efficiency of the workers does not carry conviction with them, because workers all over the world consider that they have a claim on sharing the benefits of increased productivity, whatever be the cause thereof. This being the case, it is necessary that the benefits of all productivity increases should be shared in fair proportion between employers, workers and the community. This would mean that wherever the workers' claim on productivity increases without corresponding wage rises is borne out by the facts of the case there would be a *prima facie* case for considering a wage increase.

Need for Capital Accumulation

"Even assuming that the workers' claim for a wage increase is justified to some extent, it is difficult to see how they could be fully compensated for every rise in productivity. In a country where the demands for capital formation are heavy, and will continue to be so for quite some time to come, the workers will have to be content with a wage increase smaller than is warranted by the increase in productivity. At a time when all-round austerity is called for, it is fair to expect the workers to contribute their share to the sacrifice. The argument for capital formation cannot, however, be carried so far as to prevent any wage increase whatsoever. The proposition that wage increases will transfer funds from the entrepreneur class to the working class, thereby curtailing investment and capital formation, and increasing consumer spending, is not always well founded. It must be recognised that increased wages would lead to increased production and productivity and thus to increased profits, both by raising the efficiency of workers and by giving an incentive to the employers to organise production more economically. Productivity increases are as much the result of wage increases as they are the cause thereof."

The difficulty in estimating the movement of workers' earnings, relative to production and profits, is shown by the study group's own attempt to compute the share of wages (including bonus) in factory output. Regular estimates of India's national income are available only from 1948, and the data relating to social security benefits are incomplete in their coverage. The study group could not carry forward the estimates beyond 1953. In spite of these limitations, the findings of the study group (tabulated below) are interesting:

	1948	1949	1950	1951	1952	1953
			(In crores of rupees)			
1. Net domestic product of factory establishments at current prices:	528.9	519 2	528.6	612.7	612.1	731.1
2. Earnings of factory workers:						
Estimate I*	208.9	250 8	259.3	281.2	273 6	331 2
Estimate II**	189.5	235.8	236.4	245.1	249.6	292.4
3. Share of wages in factory output (percentage of 2 to 1):						
Estimate I	39 5	48.3	49 1	45.9	44.7	45 3
Estimate II	35.8	45.4	44 7	40 1	40.8	40.0

* Obtained by multiplying the working force by average annual earnings.
** Obtained by adding up actual wages paid in different States.

Share of Workers

Since estimate I utilises only the average annual earnings, and estimate II takes into account the actual wages paid, though certain assumptions have had to be made in both cases, the results yielded by the latter approach might be regarded as more realistic. The figures show that while the factory wage bill has been steadily increasing in absolute terms, the increase has not always been proportionate to the increase in net factory product. The share of wages in factory output shows a significant rise till 1950, and a slight decline in the subsequent three years. "On an average," the study group says "factory labour gets about 40 percent of the net income generated by large-scale enterprises in India. This stands favourable comparison with the corresponding figures for other countries. At the same time, it needs closer investigation to determine whether this percentage can be improved even under existing circumstances. The statistics themselves would have to be interpreted with a great deal of caution.

"For instance there may be a number of factors responsible for the rise in the share of wages between 1948 and 1949 50, and a decline thereafter. It may be that the trend would be different if allowance is made for income-tax payments made by the factories, and if bonus payments are distributed evenly over the years. It may also be that the major factor responsible for the change in the share of labour is fluctuations in agricultural prices. On the whole, prices of manufactured products are more stable than those of the raw material required for manufacturing. The result is that an increase in raw material prices is often associated with a decline in profit margins, whereas a fall in agricultural prices reduces the share of labour in the net product of factories. Raw material prices increased during 1948-51 and declined in subsequent years when there was a decline in agricultural prices. It may also be that the remuneration of workers, which is linked to the cost of living in many industries, moves up and down together with agricultural prices, and thus accentuates the trend. It is significant that the All-India Consumer Price Index (1949=100) increased from 97 in 1948 to 105 in 1951, and declined thereafter. If the explanation given above is correct, it would follow that year to year variations in the share of labour in factory output would be unavoidable as long as agricultural prices fluctuate widely, and as long as the prices of manufactured articles do not fully reflect the variations in raw material prices.

"Consequently, there would always be a considerable degree of doubt as to whether any particular change in the share of labour does or does not justify a change in money wages. If the object is to find out whether workers get a fair share or not, the situation in each unit will have to be analysed separately. Overall calculations about the share of workers in different industries and in different regions might give us an idea of the sectors or regions where wages are unduly low. Allowance however, will have to be made for differences in capital structure, in cost of living, cost of materials and a number of other specific factors pertaining to the region or the industry. It is hardly possible to do this without getting back to a study of the situation in each individual unit. It would thus appear that, for determining wages a consideration of workers' percentage share in net factory product has very little utility unless perhaps wages have to be determined at the level of the undertaking. Sharp judgments based on overall data about particular industries or regions —data which are by no means perfect and which in any case have to be modified in a number of ways—are likely to be misleading rather than helpful."

Variations in Wages

Subject to these qualifications concerning interpretation, the data compiled by the study group show that, during the six years under review, the share of workers' earnings in the value of output never exceeded 30 percent in the case of the sugar and cement industries, while in cotton textiles it was more than 60 percent during four years and never less than 46 percent throughout. The share has also been quite high in the jute industry (59 47 percent in 1953), while in electrical and general engineering it was steady at about 50 percent. The inter-industry variations might be due to two factors. One is that in an industry where capital investment is large in relation to the number of workers employed, wages would normally represent a smaller proportion of the factory's net product than in industries in which capital investment is relatively small. Secondly, workers in some industries have to be more highly skilled than in others and have, therefore, to be paid more.

Inter-State variations within the same industry are illustrated by the fact that, during 1953, the share of workers' earnings varied from 14.17 percent in Bombay to 33.29 percent in Uttar Pradesh in the sugar industry; from 32.7 percent in West Bengal to 61.95 percent in Bombay in the paper and paper products industry; from 24.14 percent in Madras to 58.76 percent in West Bengal in the jute industry; from 33.03 percent in Bihar and 39.64 percent in West Bengal to 73.59 percent in Punjab in the iron and steel industry; from 48.03 percent in Bombay to 110.94 percent in Assam in the general and electrical engineering industry (the excess in the last case over the net output being due either to the declaration of bonus out of the previous years' profits or to actual losses incurred by companies); and from 44.72 percent in Orissa to 83.19 percent in Madhya Pradesh in the cotton textile industry. These inter-State variations are attributable not only to differences in the cost of materials and the cost of living, but also to the fact that units in some States might be more modernised and costly than in others.

Minimum Wages

It is only in the determination of minimum wages that the study group considers it permissible to disregard the unit-wise analysis of costs and profits, since the minimum wage is based on need and not on the capacity of the industry to pay. The study group has recommended that, in determining the minimum wage, the formula of three consumption units an earner (one unit for the worker, 0.8 for his wife and 1.2 for two children) should be adopted uniformly, and no deduction should be made on account of the earnings of the worker's wife and/or children. In some foreign countries, the law provides for the calculation of the basic wage for a family without taking into account the earnings of the worker's wife and children. In India, however, there is no law to that effect. Consequently, wages have sometimes been fixed, as in the case of plantation workers, after taking into account the earnings of the wife and children. Thus the Minimum Wages Committee for Plantations Madras (1951), worked on the basis of a standard family of three consumption units and 2 25 earners on the assumption that earners included, besides the worker, his wife and a child. The Special Industrial Tribunal for Plantations, Coimbatore, subsequently revised this to 1.75 earners a family on the ground that a child was also found to work only in exceptional cases. In deprecating such calculations, the study group has cited the argument that if a woman goes to work it is generally only because the husband does not earn enough for the maintenance of the family. Under such circumstances, if she is counted as an earner for calculating the minimum wage required to support a family, it might thwart the very purpose. On the other hand, the study group is not in favour of increasing the number of consumption units an earner beyond three, though the Minimum Wages Committee for the Kolar Gold Fields based its calculations on 3 43 consumption units a family. Commending the generally followed procedure of allowing for the maintenance of two children only, the study group says that it may be neither feasible nor desirable to substitute this by a system of family allowances "because it will encourage workers to build larger families, which will go directly against all family planning programmes. The danger is particularly real when it is realised that, even without any kind of monetary or other inducement, many workers consider children as an asset in that they can be used to supplement family income".

Just as the study group is not in favour of taking the earnings of the wife and/or children into account in determining the minimum wage for a male worker, it is equally against any reduction in the minimum wage for a woman worker for the reason merely that her family is likely to include a male earner. "It is one thing," says the study group's note on minimum wages, "to pay younger persons, children and women less because they are inexperienced or turn out less work or do a simpler job which requires less exertion. It is quite another to do so on the count that they are unlikely to carry heavy family responsibilities and may themselves be partially supported by somebody else." In this connection the study group has cited the case of coal mine workers, in which the Appellate Tribunal set aside the Coal Tribunal's award of only 2.25 consumption units a female worker.

The Tribunal based its decision on the following reasons: "(1) that the female worker generally belongs to a family group with at least one male earner as its head; (2) that in the case of the majority of female workers the basic wage at present fixed is about 75 percent of what is fixed for the male workers; and (3) that special amenities enjoyed by women, such as maternity benefits and provision of crèches should make up for the deficiency." The Appellate Tribunal expressed its inability to accept these reasons, stating that the last argument would be valid only on the assumption that women workers are in a permanent state of maternity and their children are always in crèches.

The study group has, in addition, dealt with the norms of a family's requirement of food, clothing, housing and miscellaneous needs which should be allowed for in determining minimum wages. On food, Dr. Aykroyd's definition of "adequate" food under Indian conditions has been commended. This works out to a net daily intake of 2,700 calories for an average adult of moderate activity.

clothing, the study group has suggested that ards might be regarded as the *per capita* al requirement. Though this is the estimate e Planning Commission for cotton textiles , it has been suggested that the figure might ken to include woollen and silk textiles as for each member of a working class family. e matter of housing, the standards laid down he industrial housing sub-committee of the ling Labour Committee hold the field, while iscellaneous needs (including fuel and lightsome measure of education for the worker's ren, medical requirements and other amenithe study group has recommended a provision out 20 percent in the total wage.

Fair Wages

the recommendations concerning "fair es", the floor to which is set by the minimum and the ceiling by the capacity of the inry to pay, the study group has emphasised the for wage differentials which will provide an ative to workers for advancing their skills. team of productivity experts who visited India ehalf of the International Labour Organisation ng 1952-53 expressed the view that 40 percent ie pay roll in Indian factories had been estabed by awards of industrial courts without the of work measurement or job evaluation. The). team held that this resulted in anomalies ch blurred the relationship between earnings work performed, and thus had an adverse t on incentives. In the context of wage differals, the study group has urged the widest pose substitution of time rates by piece rates, the em of payment by results being supported by quate safeguards for workers in the form of inimum fall-back wage and protection against fatigue and undue speed-up through a limit on earnings or by fixing "disincentive" piece rates after the safe maximum output is crossed.

On the bearing of the socialist objective on wage policy, the study group says: "While wage policy has to be directed towards a lessening of the gap between the top wage and the lowest wage, this has to be brought about by raising wages at the lowest level, and not by reduction of higher wages." Likewise, on the question whether the working class should gain by way of more of them finding employment, rather than by an increase in the earnings of those already employed, the study group says: "To assume that there is always such an antithesis would be to take too narrow a view. While employment has no doubt to be expanded, it cannot be argued that every wage increase would react adversely on employment. Nor is there any real gain in increasing the number of discontented employees. Each employed worker should be assured and paid a fair wage. A reasonable increase in the present level of wage rates can act in a number of ways. It will enable the worker, both physically and psychologically, to put in greater effort and raise production. The employer, for his part, may be expected to organise production more efficiently in order to make up for the increased wage cost. In fact, if the experience of industrially advanced countries is any guide, pressure of the unions for wage rises has always been a powerful factor in bringing about improvements in technological efficiency."

Guide to Rationalisation

In addition to problems of wage policy, this year's session of the Indian Labour Conference will consider a model agreement to guide employers on rationalisation. This has in the past evoked the bitter opposition of organised labour and threatened to undermine the productive effort that it was sought to increase through rationalisation. The provisions of the model agreement are as follows:

"The...(name of the Union)...and the employers in relation to...(name of the industrial establishment)...do hereby enter into the following agreement.

"1. The company shall have the right to make such technological changes in operations as it deems necessary for efficient operation of machinery and rational use of labour and material, subject to the terms of this agreement and without prejudice to the provisions of any law for the time being in force.

"2. A technological change will mean any change in plant or equipment, or a change in the process or method of operation, resulting in the diminution of the total number of employees required to operate the department or plant. The term shall not include conditions of lay-off caused by the state of business or variations in demand and shut-down for plant repairs or other temporary or seasonal interruptions of work.

"3. Before any 'technological change' is effected, the company shall give reasonable notice, ranging from three weeks to three months, to the union of its intention to effect such change. The notice shall be in a form mutually agreed upon, and shall contain full information about the nature of the proposed change, approximate date of such change, proposed duties for workers concerned and their job assignment and the expected earnings.

"4. Wherever possible, the employer will also furnish information about the change and the reduction in the number of jobs and also the effect of the change on the number of jobs in other departments affected by the same change.

"5 Steps should be taken to expand, if possible, the activities of the plant or the unit of production so as to absorb persons that are likely to be rendered surplus as a result of the introduction of the technological change. No employees shall be retrenched if other jobs are available in the same plant or under the same employer carrying rates of pay comparable to the previous rates of the employees concerned, subject to their fitness for the alternative jobs. Steps should also be taken by the employer to train such employees for making them suitable for the alternative job.

"6. The parties shall meet and discuss the proposal as soon as possible after the notice has been given under para 3 above. The employer will furnish all information which is necessary for a complete understanding of the proposed change, and will explain the contemplated change to the union.

"7. The union shall, within a week after the discussion with the employer, submit its views or proposals to the employer. If there is agreement between the parties, the employer may introduce the change on the due date in accordance with the agreement.

"8. The order of retrenchment, if any, shall ordinarily be as provided for in Section 25-G of the Industrial Disputes Act, 1947. The employer may depart from the principle of juniority only in exceptional cases and for reasons to be recorded in writing. Retrenched employees shall have preference for employment under the same employer.

"9. Notice shall be posted in the department affected by impending retrenchment, inviting volunteers for retrenchment on payment of the retrenchment compensation due under the Industrial Disputes Act, 1947.

"10. Regardless of seniority, 'protected workmen' as defined in Section 33 (3) of the Industrial Disputes Act, 1947, shall be retained despite retrenchment resulting from the change, provided such members are of average knowledge, skill, efficiency and physical fitness and are considered suitable for the jobs to be entrusted to them.

"11. The union shall be given adequate opportunity to study the new change so as to enable it to gauge the work loads and earnings of the employees engaged in the new operations.

"12. If there are differences between the parties on any matter covered by this agreement, the matters in dispute shall be referred for arbitration. A panel of arbitrators acceptable to both parties should be maintained by the employer.

"13. This agreement shall come into force with immediate effect and shall continue to remain in operation for a period of...years."

Discipline Among Workers

On the subject of workers' discipline, the Labour Ministry has prepared a memorandum which expresses concern at the fact that as against an average of 3.5 million man-days lost due to industrial disputes during the four years 1951-54, the figure rose to 5.6 million in 1955 and to 7 million in 1956. The memorandum says: "While a socialist order is meant to ensure fair shares for all, and measures are being taken to ensure a more equitable distribution of what is produced, such an order of society can best be built up on the secure base of a developed economy...At the present critical stage of its development the country can hardly afford to countenance any action that results in loss or slow-down of production. What is needed at the moment is a sense of purposeful discipline leading to ever-increasing production. The leaders of the working class can assist in the drive for higher production by taking a more active interest in the promotion of discipline among the ranks...The behaviour of management, in their day-to-day dealings with labour has also a direct influence in determining their attitude and hel[p]

MEASURES TO CURB INFLATION

PROPOSAL FOR APPOINTING ADVISORY BODY

(FROM OUR LONDON CORRESPONDENT)

THE Government apparently intends to go on seeking the agreement of both sides of industry to the establishment of an independent advisory body on wages, prices, profits and dividends. It hopes, no doubt, that by some means this body will find an answer to the problem of halting inflation. Although earlier it was doubtful whether co-operation from the T.U.C. might be expected, Sir Thomas Williamson's suggestion, that if there was any evidence that the Government intended to tackle rising prices seriously the T.U.C. would co-operate, is now being regarded as at least a promising augury for the meeting between the Chancellor of the Exchequer and the Minister of Labour with the T.U.C. representatives on 17th July, and the later meetings with the employers. It is understood that the Government is proposing that the independent body should survey a wide field—covering profits and dividends as well as wages and prices—and that it should be independent enough to be free to comment on the effects of Government policies. Members on both sides of the House of Commons are beginning to regard the inflationary danger as a matter of great urgency.

The latest increase in the price of coal with all its consequences in the economic field—not least the 10 percent rise in railway freights on 1st August—and the prevailing lack of confidence in Government securities, are regarded as menacing features. There is, in fact a suggestion on the Labour side that the House should debate the economic and financial situation of the country, with as much detachment as it can muster, before Parliament rises for the summer recess. Whether the necessary objectivity can be achieved is open to doubt, for apart from the £400 000 increase which Mr Macmillan has made in Parliamentary earnings, the general tendency is for higher wages all round, further increases in prices, labour agitation for shorter hours and other benefits, increasing pressure on the available finance and, perhaps the most disquieting development of all, a sudden falling-off in coal output with increased absenteeism following on the miners being granted the former attendance bonus on the sixth day's work a week as a part of each day's wages. It should be mentioned that the miners' leaders are as worried about this as the National Coal Board.

View of the Treasury

The Treasury does not see eye to eye with the City on the outlook for the economy. The stock market, obviously, thinks there will be still more inflation. The Treasury view is available in the latest *Bulletin for Industry*. As far as inflation is concerned, it points out that retail prices were almost the same in May as in January but that in the same period the wage rate index had risen by 4 percent. "Part at least of the higher income that have been generated . . . will work through to prices." But it is hoped that higher production will enable industry to absorb part of its extra wage bill. Exports, consumption and investment have increased since the Budget as the Chancellor thought they would. There should be a definite rise in production. There is danger in an over-rapid rise in imports, but world markets offer good opportunities for exports, and if these rise further, production can rise safely. "If it does so, to the extent that it can offset the higher wages now being agreed upon, it could help to counteract the inflationary effect of these on prices." The only trouble is that there are too many "ifs" in the Treasury view.

The possibility of a rise in production is better based. The quickening pace of industrial expansion is reflected by a new rise in industrial building plans. The provisional Board of Trade figures show that in the second quarter of this year industrial development certificates were issued for 654 schemes totalling 18.8 million square feet. This compares with 13.7 million square feet approved in the first quarter, and 14.4 million square feet approved in the second quarter of last year. The total area approved in the first six months of 1957, however, was still 10 percent below last year's corresponding figure. The Board of Trade figures relate to schemes for new industrial buildings or extensions over 5,000 square feet for manufacturing industry.

Rising Industrial Production

Since the beginning of this year, it has been evident that industrial production, after a long period of stagnation, was again moving upwards gradually. It has taken five months, however, for this to make any impact on the official index. The provisional index for April has been revised upwards and is now put at 138, seasonally adjusted, or one point higher than that for March. The preliminary index for May is 139-140, which is one or two points higher than in April and is also higher than the figures for May 1956 and May 1955. It is possible that when full information has been received from all the reporting industries, the figure for May will even equal the highest on record, which was 141 in December 1955.

Unadjusted figures, available for particular industries, show some striking increases compared with May of last year, but that month included Whitsun. Coal output was 11 percent up and electricity output 14 percent higher. There were rises of 20 percent in passenger car production, 13 percent in cotton spinning output and 15 percent in the production of man-made fibres. Steel production was 8 percent higher and the output of sulphuric acid rose 5 percent. The striking interest in equities on the Stock Exchange has been in anticipation of this development.

Trends in Gold Reserves

It is difficult to avoid the conclusion that one of the conditions laid down for the assistance which the sterling area received from the United States last December in the form of dollar drafts to support the gold and dollar reserves was that further steps should be taken to relax control and liberalise the dollar trade. Simultaneously with the announcement of the May gold and dollar figures came the granting of a £100 dollar allowance for travel to the United States and Canada and more liberal treatment for business visitors; the June figures are accompanied by the announcement of import liberalisations for dollar goods especially commodities used in industry. The actual figures hardly justify either of these concessions so it cannot be aimed at creating confidence by linking good news with bad. On the other hand it could, of course, well pay dividends in the long run, for the difficult part of the year for the reserves lies just ahead and U.S. goodwill might prove valuable.

The gold and dollar figures for June, like those for May, show what appears to be a trend mildly adverse to the sterling area. Although they record a rise of $36 million to make the total $2 381 million this improvement was wholly attributable to drawings amounting to $72½ million made by India on the International Monetary Fund. If allowance is made for this special accretion of dollars and for $7 million U.S. defence aid, on the one hand, and for $16 million paid to the E.P.U. in settlement of the May deficit and $16 million as other special outgoings on the other, there was a residual deficit last month of about $11½ million. This compares with a deficit of £7 million for May and a residual surplus in April of $14 million. The end of June total is only about $4 million less than it was a year ago—so that British drawings from the I.M.F. and the interest saved on the U S loan repayments represent the heavy drain which has taken place. It is unfortunate that there was another deficit with the European Payments Union in June of £10 million against May's £7 million. Three-quarters of this will have to be settled in gold or dollars this month, representing a bad start for the usually difficult third quarter. It is probably fortunate that the technical position of sterling is strong, that the flow of capital into dollar securities has eased off and that transferable sterling has been showing some signs of strength.

Easier Dollar Imports

Any real improvement in the dollar payments position can only be assessed when the position of the sterling balances is also known. There must have been some, however, to prompt the welcome steps towards relaxing controls on dollar imports. Although the net cost of the latest relaxations is not expected to exceed £3 million, the changes, especially those in the field of dollar commodities, should prove helpful to many sections of British industry and, in the words of the President of the Board of Trade in making the announcement, "bring some modest direct and indirect benefits to the economy." The broad effect of the decision is that, except in the case of leather for which the dollar quota will be substantially increased, the remaining import controls on the basic raw materials of industry and on metal semi-manufactures will be removed on 1st August. The controls will also be removed from certain agricultural products mainly used in manufacture and from certain chemicals. In most of these cases the main benefit to importers will be that they will be relieved of paper work, but in others they will gain from increased competition among suppliers and easier access to the sources of supply which suit them best. Some switching to dollar supplies is likely, but it should not be large.

In the case of leather, the existing complicated quota arrangements for imports from the United States will be greatly simplified from 1st August. There will be a global quota covering all dollar countries of £2 million a year, an increase of about £1,250,000. A Board of Trade list shows that among the classes of goods which will be affected are food, drink, animal feeding stuffs and seeds; mineral products and metals; oils, waxes, gums and resins; chemicals, drugs, dyes and fertilisers; textiles and yarns; apparel, footwear and haberdashery; machinery and plant; and glassware and pottery. Toys are excluded, but books, fancy goods, perfumery and hardware are on the list.

National Finances

As is usual, national revenue substantially exceeded expenditure during the first quarter of the financial year, which ended on 30th June. Treasury returns show that while revenue was £120 million more than expenditure, it was £38 million less than at the same time last year, when the deficit was £158 million. Ordinary revenue increased from £911.8 million to £1.014 million, and expenditure from £1 070 million to £1.134 million. The "below the line" position, where expenditure covers expenditure largely of a capital nature, shows an increase in the deficit from £49.3 million a year ago to £52 million. Thus the overall deficit is reduced from £207 million to £172 million.

Index of Wage Rates

Nearly 5½ million workpeople received pay rises in May, amounting to an estimated aggregate increase of about £2.090.000 in weekly full-time wages according to the latest issue of the Ministry of Labour *Gazette*. Of the total of about 5 453.000 people who benefited, the principal increases affected those in engineering, building and civil engineering coal mining, local authority manual workers, distributive workers in the retail food furnishing and drapery trades and ancillary workers in the health services. In the first five months of 1957 about 8.233 000 workpeople received pay rises amounting to £3 160.700 a week. In the corresponding period of 1956 there was a net increase of £5 580.000 in the weekly full-time wages of 11.033 000 workers. The index of wage rates in May (January 1956=100) was 110, compared with 108 at the end of April. The April figure was revised from 107 after taking account of certain retrospective increases. In May 1956, the index was 105.

Unemployment fell by 29,000 during the four weeks ended 13th May. There were 313.000 persons registered as unemployed on 13th May, of whom 294,000 were wholly unemployed. Expressed as a proportion of the estimated number of employees, May unemployment was 1.5 percent compared with 1.6 percent in April, and 1.1 percent in May 1956. About half of the total unemployed had been out of work for more than eight weeks.

Machine Tool Orders Down

Home orders for metal-working machine tools totalled £4.196.000 in April against £5.554.000 in March. Orders for export in April were valued at £2.349.000, only £11.000 below March. Here is a confirmation of the declining trend which has persisted over the past year. Nevertheless, the industry is fully occupied. With outstanding orders for export totalling £23.497.000 and for the home market totalling £69.731.000, the problem is still overlong delivery dates and not lack of demand. Another significant development is the subsidence in the home order book since the peak of about a year ago, when it totalled more than £80 million. The export order book, on the other hand, is actually bigger now than it was then.

REPHASING OF SECOND PLAN URGED

EFFORT TO AVERT STRIKE AT BOMBAY PORT

(FROM OUR BOMBAY CORRESPONDENT)

A PLEA to review the implementation of the second five year plan was made by Mr. Naval Tata in his presidential address to the Indian Merchants Chamber here. Referring to the foreign exchange position, he said: "The effect of the rising tempo of developmental activities has been felt most adversely on our balance of payments position. With imports increasing sharply and exports showing a comparative decline, the resultant adverse balance has led to a rapid depletion of our accumulated foreign reserves. The sterling balances built up at great sacrifice during the war and preserved with great care and prudence in subsequent years were disbursed at the rate of Rs. 300 crores in a single year, 1956-57. The latest position, as disclosed by the Planning Commission, reveals that the foreign holdings of the Reserve Bank are being depleted today at the rate of Rs. 9 crores a week. The present level of our foreign exchange reserves has been reduced to Rs. 470 crores, leaving a negligible balance, after making due allowance for the statutory minimum of Rs. 400 crores as currency reserve. The credits obtained from the International Monetary Fund may provide a temporary respite, but, by and large, the prospects of bridging the foreign exchange gap do not show hopeful signs unless exports are stepped up and other remedial measures are resorted to."

Discussing the Budget proposals and the problem of deficit financing, Mr. Tata observed: "In the resources budget of the plan, it was proposed to provide Rs. 1,200 crores by way of deficit financing. The Finance Minister, however, has realised that the economy of the country cannot sustain deficit financing of this magnitude without causing widespread inflation. He has consequently scaled down the amount by Rs 400 crores. About borrowing, by way of loans and small savings there has already been a gap of Rs. 158 crores during the first two years of the plan. Even if he resorted to borrowing annually a sum of Rs. 240 crores for the next three years, it is doubtful whether he can reach the original target without leaving a wide gap. In the form of foreign aid, the Government expects to get in all about Rs. 1,000 crores. On the Finance Minister's estimate, the new taxation proposals are likely to yield about Rs. 800 to Rs. 900 crores during the plan period, provided the States fulfil their expected contribution. There will yet remain a gap of over Rs 525 crores, according to official estimates.

"This estimate is likely to go up substantially if the above expectations remain unfulfilled. On a realistic approach the gap is estimated at about Rs. 858 crores. Again, if our defence expenditure for purposes of national security were to increase on a mounting scale, as it has done in recent years I am afraid the cumulative burden on the community will be colossal and no matter how widely the Finance Minister may choose to distribute the tax burden, the country will not have the capacity to bear a tax burden of this magnitude. It must be remembered that in an underdeveloped economy, consisting of a large section of the population with an extremely low rate of savings to offer against a pent-up demand for a large margin of unsatisfied needs, it is too much to expect to raise resources of such magnitude to meet the requirements of the plan. There is a crucial limit beyond which it is impossible to expect people to restrain consumption, to tighten up their belts and practise austerity. In our enthusiasm to bring about rapid industrialisation of the country we cannot afford to ignore the sad experience of unimaginative and unrealistic planning in countries like Poland and Hungary. The Finance Minister has already indirectly accepted the necessity for such rephasing of the plan when he stated 'even if the plan did not encounter difficulties in certain sectors—which it does—a rephasing of it might be necessary in certain parts.' Such a course would go a long way in spreading, if not reducing, the financial burden on the community."

Congestion at the Port

An attempt is being made to avert the threatened dock strike on 12th July. Mr. P. S. Ishwaran, Chief Labour Commissioner to the Government of India, has arrived here from New Delhi to hold talks with the representatives of the Port Trust, the Bombay Dock Labour Board and other employers and with the unions concerned. It was stated here that while every effort would be made to meet the reasonable demands of the workers, they could not be allowed to hold the port to ransom. Meanwhile, about 4,000 steavedore workers went on strike last week in protest against the action of the Stevedores Association in turning down their demand that they should be paid their last month's wages before 7th July. Pool workers are usually paid on the 10th of each month while the monthly rated workers are paid on the 7th. The pool workers had demanded a similar privilege on the ground that the Id festival fell on 9th July and they needed funds for celebrations. The Stevedores Association refused to accede to this demand but stated that pool workers would receive their advance. This sparked off a lightning strike which threatens to merge into the main strike on 12th July if efforts to reach an agreement fail.

The congestion at the port seems to be worsening, and it is believed that ships carrying around 100,000 tons of foodgrains have been in midstream for the past two weeks awaiting berths. One of these ships is said to have arrived as far back as 13th June. A new system of priorities was introduced recently under which only three food ships would be allowed berthing facilities at a time and a fourth berth would be made available at the discretion of the Port Trust provided that the balance of foodgrains in port sheds did not exceed 5,000 tons. This means that only three or at the maximum four food ships could discharge their cargo at a time against six to eight ships under a system in force prior to 25th June this year. The new system was intended to relieve congestion in so far as it concerned ships carrying cargoes other than food. It is believed that the Port Trust has turned down a recent request by the Central Ministry of Food to permit the berthing of food ships in stream in their own right of arrival priority, in addition to the three berths reserved already.

Cotton Futures Better

Renewed support from mills and other interests last week had a healthy effect on the Jarilla March contract. It opened at Rs. 700, but shot up to Rs. 722 a candy in the early part of the week following strong support from cotton interests. There was a slight reaction at this level and the price dropped to Rs 712 before recovering to Rs. 718-12 at the close. The strength of the futures market is based on the fear that there will be a scramble for good quality cottons towards the end of the year. Sowing operations began late this year because of the late monsoon and it is believed that the actual marketing of the new crop will be delayed by at least three weeks. The carry-over stock is not expected to exceed 1.5 million bales. Meanwhile, the Textile Commissioner estimates that the average monthly consumption of the better staple cottons including Vijay, Surti, G6 and G12, Jaydhar Laxmi, MA 5, Punjab and Buri American, is running at a level of 177,000 bales. Stocks of these qualities with mills as on 30th June are estimated at 350,000 bales or at a level barely sufficient for a few months' consumption. The new crop is estimated at around 5 million bales, only 300,000 bales in excess of the current season's output. On the other hand, it is believed that the consumption will increase to 400 000 bales a month. The supply position towards the end of the year may, therefore, be even tighter than expected now.

This has compelled some mills to enter the spot market, but sellers are reluctant to part with their stocks of good quality cottons at the present price level. Although there have been many enquiries, the volume of business actually transacted has been disappointing. The proposal to frame by-laws to regulate delivery contracts in the spot market has not yet fructified. On the other hand, an assurance given by the Forward Markets Commission that there will be no official interference in the working of the futures market has been welcomed by the trade. Interest now centres on reports from growing areas which indicate that sowing operations have been completed in Broach, Surat and Khandesh. It is also believed that sowing will soon be completed in the Khandwa area of Madhya Pradesh and in the Moglai area of Bombay State. Weather conditions have been most satisfactory in the Punjab where the height of plants now ranges from 3 to 4 in. to 2½ in.

Bombay mills have shown a marked interest in American cottons for shipment in October and November. Substantial business has already been placed. Meanwhile, shipments of Indian raw cotton amounted to 242,000 bales during the period 1st September to 4th July against 414,000 bales during the corresponding period of the previous season. Sales to Japan declined from 197,000 bales to 156 000 bales, and those to the U.K. and the Continent from 128,000 bales to 46,553 bales.

Gains in Oilseeds

Oilseeds recorded gains on renewed buying support. Insufficient rains in the growing areas induced substantial bear covering. The spot market was also affected because following the dry spell, stockholders and growers were reluctant to dispose of their supplies. On the other hand, crushers were constantly in the market in order to fulfil their commitments of vegetable oils. These factors tended to support both the spot and the futures markets. The September delivery castorseed contract opened at Rs. 162.50 and touched Rs. 172.50. Operators, however, were unable to maintain this level and the contract closed at Rs. 167.25. The spot market increased from Rs. 32.12 to Rs. 32.81. The fluctuations in castor oil were negligible, and on balance, the price rose by 75 nP a quarter. Russia purchased 500 tons of Commercial castor oil at £148 a ton f.o.b. There were no enquiries from the U.K., while U.S. importers showed no interest in offers ranging from 17¾ cents to 18 cents a lb. The groundnut August delivery contract opened at Rs. 174.37, and after touching Rs. 181.12 during the middle of the week, closed at Rs. 177.37. Sustained demand for groundnut oil pushed the July delivery contract from Rs. 20.37 to Rs. 20.62, but the market reacted to the opening level at the close. In the spot market, groundnuts increased from Rs. 36.50 to Rs. 36.75. Linseed was quiet following limited arrivals and a lack of interest. The September contract opened at Rs. 28.87 and after rising to Rs. 29.50, returned to the opening level at the close.

Madras

DEFICIT IN MADRAS BUDGET

AGRICULTURAL INCOME TAX RAISED

(FROM OUR MADRAS CORRESPONDENT)

THE State Budget shows a deficit which has been covered only partially by new taxation. The figures relating to expenditure are higher. The enhancement of agricultural income tax from 35 nP to 45 nP in the rupee on companies earning a profit of over Rs. 25,000 a year is in line with the Kerala measures. The budget did not produce tremors in the stock market. Since 5th July the minimum prices fixed by the Stock Exchange in order to prevent a slump last month have been removed. Last Friday's business showed something like a recovery, after the usual profit-taking, and many hope that the decisions on the Plantations enquiry report will lead to a better state in the industry.

The discussion in the Assembly on the Budget led to no queries about the rising public debt of Madras. The disclosures by Mr. Gopala Reddi in the Andhra Pradesh Budget about the ways and means position and the impossibility of raising loans at present apparently did not disturb Madras. In ten years, the State's revenue reserves have vanished and the public debt has doubled. The capital outlay in the 1957-58 Budget is limited: the only major item of new expenditure is electricity. The irrigation schemes in hand now will be complete in October. Help through the Finance Commission's recommendations is expected, and the State is hoping for a share in the proposed Central wealth and expenditure taxes as well as that imposed on railway fares this year. The Cabinet has asked a member of the Board of Revenue to review the Government's expenditure with a view to introducing economies. In the Budget debate last week, general policy rather than financial issues figured prominently, in the course of which one thing was made plain. The Madras Government is in no hurry to replace land revenue by an agricultural income tax. It is not merely because the State draws Rs. 6 crores a year from this source but because the limit of cultivation has been reached in old and fertile areas. There are only 10,000 assessees paying over Rs. 100 as land revenue, and the vast majority of landowners pay Rs. 10 on their holdings. The official figures, based on a special census, cut across the theory that ceilings on land are needed and that the redistribution of any surplus available is a feasible proposition. The application of the Fair Rent Act has led to a redistribution of incomes, so land as an investment is considered of little value.

Industries for Andhra

Mr. Sanjeeva Reddi during his recent visit to Madras told the Andhra Chamber of Commerce that a new fertiliser factory in Andhra Pradesh offered good prospects. In spite of new finds there had been little progress in recent years in the minerals industry and the industries set up by the Nizam's Trust Fund had not been working properly. Mr. Sanjeeva Reddi also admitted that the paper mill in Rajahmundry (bought for Rs. 25 lakhs) and the ceramic factory in Gudur were not working well. Both are State-owned. The sugar mills and cement factories are prosperous, and there are plans to start three new sugar mills in Andhra. The development of the Singareni collieries in which the State Government is the chief shareholder is to be undertaken for ensuring an ample supply of thermal power. Referring to the proposal for a newsprint factory utilising bagasse, Mr. Reddy said that the Nizam sugar factory's large reserves would be used for this purpose instead of being deposited with the Government.

Proposal for Municipal Loan

The Madras Corporation held discussions recently about floating a tap loan for Rs. 65.24 lakhs to meet its own long-term needs. Prospects are regarded as rather favourable, for the Corporation has not so far reached the maximum level of debt permitted under the City Municipal Act. The City Council has not been as enthusiastic as the officials concerned, for it regards continuous borrowing as a potential source of waste. The discussions held two weeks ago were concerned with the procedure rather than the purposes of the loan, the promise of amenities for the areas added to the city and slum clearance had merely passing references. The fact that the State is not going to raise a loan this year, it is held, is an advantage. So institutional support on an adequate scale is expected by Mr. M. A. Chidambaram, who feels that a tap loan is required as the unspent loan balances have come down to a minimum. The old procedure of inviting loans by tender has been given up and the Corporation is now clearly trying to get long-term deposits by way of a loan. The tap loan idea copied from the Treasury bill method of borrowing is regarded as a risk, for in any busy season, the municipal loan may have to be offered much below the issue price. The credit status of the Corporation may suffer. The traditional of relying on the State Government for both grants and loans is regarded as a sound one and some members of the Council argued against the proposal on the ground that the elected body had not approved the scheme for independent borrowing, and had not formally authorised the Commissioner to examine the proposal.

Engineering and Transport

GHANDY REPORT ON HEAVY ENGINEERING PROJECT

REASONS FOR SUPPORTING BRITISH RECOMMENDATIONS

(FROM A NEW DELHI CORRESPONDENT)

THE Government of India has not so far stated the technical or economic grounds for setting aside the recommendations of the Heavy Engineering Committee which was set up early this year under the chairmanship of Sir Jehangir Ghandy, and for accepting the heavy machine building project of the large size and cost recommended by the Russian experts in preference to the proposals of the Coates mission from Britain. But though no public elucidation has been offered, the explanation which has been informally given by official circles, and which has gained wide currency, is that the Heavy Engineering Committee conducted its comparative assessment of the merits of the two reports under the assumption of a severe financial limitation, the subsequent removal of which completely altered the picture. It has been stated specifically that the Ghandy Committee proceeded on the assumption that only Rs. 35 crores will be available under the second five year plan for the heavy engineering industries as a whole, and that it could not therefore think in terms of the larger outlay required even for the first stage of the integrated machine-building plant and foundry-forge (let alone other heavy engineering capacity) recommended by the Russians. The report of the Committee shows that this explanation is inadequate.

In the first place, the Committee at its first meeting in New Delhi on 4th March was invited on behalf of the then Ministry of Heavy Industry to advise the Government on how best to utilise the amount of Rs. 40 crores available in the remaining four years of the second plan period in setting up facilities for the production of heavy plant and machinery. The Ministry's spokesman made it clear that the amount of Rs. 40 crores was exclusive of the funds that would be found for working capital, housing colonies, and the cost of land for the factory sites. He also said that it would be reasonable to expect more funds to be made available for the continuation of the schemes after the second plan, and that the Government would consider the possibility of increasing even the second plan provision by Rs. 5 crores or more. The Committee was therefore free to indicate a higher allocation if necessary, and the Government did not want to tie it to any rigid terms of reference.

Machine-building Project

Secondly, the Ghandy Committee's report reveals that the first stage of the Russian machine-building project (costing Rs. 18.61 crores and with an output of 40,000 tons of equipment), and the two machine-building shops at a total cost of Rs. 6.62 crores proposed by the British team, were not the only alternatives between which the Committee had to choose. There was a third choice which the Committee found attractive, in the form of a report prepared by the Russian experts, at the request of the Government of India, on the possibility of beginning with a more modest first stage of the heavy machine-building plant. The revised Russian scheme, which was submitted to the Government of India on 20th February, would have entailed a cost of only Rs. 7 crores and would have yielded an output of 22,000 tons of equipment a year, as follows (the comparable figures for the costlier first stage of larger capacity, which has been finally accepted by the Government, are given alongside):

Nature of equipment	Weight in tons Interim Stage	Weight in tons First Stage
Coke oven and by-product	5,000	6,000
Blast furnace	4,000	4,000
Steel melting	5,000	5,000
Crushing and grinding	2,000	2,100
Cranes	4,000	4,400
Assemblies of rolling mill	2,000	20,000
Spare parts for metallurgical equipment		1,500
Miscellaneous machine parts and assemblies for branches of industry other than iron and steel	...	2,000
Total	22,000	45,000
Cost of the machine-building plant (Rs. crores)	7.0	18.61

Revised Russian Scheme

The Ghandy Committee preferred the revised Russian scheme to the two heavy machine shops recommended by the Coates mission for the reason, among others, that the British report, while estimating the capital outlay on the two shops at Rs. 6.62 crores and the value of their output at Rs. 6.6 crores a year, gave no indication of the tonnage or precise range of the equipment which would be manufactured. (The report stated that while the recommended heavy machine shop would have as its primary object the manufacture of the rolling mill and auxiliary equipment required by steel plants in the post-ingot stage of production, it would nevertheless be a general purpose heavy jobbing shop capable of machining to the finished state any castings and forgings of up to 50 tons which would be produced in the N.I.D.C. foundry-forge. The shop would be equipped for the cutting of simple gears, and could also manufacture parts of winding engines and other surface coal-mining machinery.) The Ghandy Committee, therefore, said: "As the capital investment indicated is approximately the same (at about Rs. 7 crores for the revised scheme prepared by the Russians at the request of the Government of India for the two machinebuilding shops proposed by the British team), and, as we were given to understand, the Russians would offer satisfactory credit terms, the Committee is of the opinion that the Russian project for the heavy machine shop may be accepted." It was made known to the Committee that even if the foundry-forge should be excluded from the Russian project, they would still be inclined to set up a heavy machinebuilding shop with an initial capacity of 22,000 tons of output at a cost of Rs. 7 crores. The foundry-forge project itself was outside the terms of reference of the Committee, since a special committee was already dealing with the foundry-forge capacity to be established under the auspices of the National Industrial Development Corporation.

Coal-mining Equipment

So far as the project for the manufacture of coal-mining equipment was concerned, the Ghandy Committee had before it the recommendations of the British team, but knew only the bare outlines of the Russian recommended project, since the separate Russian report on the manufacture of coal-mining equipment had just been received by the Government. Noting that the project recommended by the British team, at an outlay of about Rs. 3 crores, did not provide for a grey iron foundry and the requisite forge which it was desirable to attach to the coal-mining equipment factory, the Committee recommended that the British team should be asked to re-examine the matter and submit a revised project for the production of between 8,000 and 10,000 tons of coal-mining equipment, at a capital outlay not exceeding Rs. 4.5 crores inclusive of a grey iron foundry and forge. Likewise the Russians, who had recommended a Rs. 13-crore project for the manufacture of 30,000 tons of equipment, should be asked to submit a revised project within the same limits of capacity and cost.

The Committee recommended the acceptance of the British team's proposals for establishing the remaining capacity for heavy engineering by setting up a heavy structural fabricating works, a heavy plate-and-vessel works, and a medium heavy machine tool works. The overall programme recommended by the Committee was therefore as follows:

Unit	Cost (Rs crore)	Remarks
1. Machine-building plant	7.00	On the pattern outlined in the revised Russian report
2. Foundry-forge	20.00	Cost as estimated for the N.I.D.C. project
3 Structural works	1.09	British report
4. Plate-and-vessel works	5.16	British report
5. Machine tool works	4.70	British report
6. Coal-mining equipment plant	4.50	(inclusive of integrated foundry-forge)
Total	42.45	
Allowance at 15 percent for contingencies	6.37	
Gross total investment	48.82,	say Rs. 49 crores*

*Excluding cost of land, township, housing and other cultural facilities.

The Committee considered it essential to make a minimum provision of 15 percent on estimated investment cost for contingencies, since the prices of machinery and equipment were on the increase.

Cost of the Programme

It is obvious that the Ghandy Committee did not suffer from the limitation of a monetary ceiling at Rs. 35 crores for the programme. Whereas the pattern of development proposed by the Committee would have cost Rs. 49 crores, the cost of the programme which has been finally adopted by the Government, as announced by Mr. Manubhai Shah, Minister for Industry, in the Lok Sabha in the last week of May amounts to Rs. 64.3 crores. Apart from the fact that the difference of Rs. 16 crores is not staggeringly large, it has to be borne in mind that the actual outlay on the programme during the second plan period adopted by the Government, is not expected to exceed Rs. 45 crores.

The crucial difference between the programme recommended by the Ghandy Committee and that which has been adopted by the Government is not in terms of cost but of the approach to the problem. The Committee favoured the approach recommended by the British team, among other reasons because capacity could be established on a unit basis, according to need, for the manufacture of equipment for a number of industries besides iron and steel. Under the Russian scheme, on the other hand the machine-building plant at the end of the first stage costing nearly Rs. 19 crores will turn out only 2,000 tons of equipment (out of a total of 45,000 tons) for branches of industry other than iron and steel. It is only on the completion of the second stage at a further cost of nearly Rs. 27 crores that it will produce 14,500 tons of mining equipment, excavators, heavy drills, etcetera for other branches of industry out of a total output of 80,000 tons of equipment.

U.K. Report Favoured

In the words of Sir Jehangir Ghandy and his colleagues: "After considering the British and Russian reports, the Heavy Engineering Committee was of the unanimous opinion that, for the reasons stated below, the proposals contained in the report of the U.K heavy engineering mission were preferable to those submitted by the Russian team of heavy machinery experts. These reasons are:

"1. While the Russian report recommends the establishment of an integrated heavy machine-building plant as a homogeneous unit, the British report recommends the establishment of different shops on unit basis. The U.K. report has, however, correctly pointed out that the heavy machine shop should be located in close proximity to the foundry-forge project. With the exception of the medium-heavy machine tool plant, which could be located near the same site, the other units, namely the plate-and-vessel works, the heavy structural works and the mining machinery factory could be located at independent sites.

"2. The recommendations made by the U.K. mission will permit a greater scope for ultimate development of the heavy engineering industry than units of a composite plant sited at one location.

"3. The British report covers a wider scope for, in addition to equipment for the iron and steel works, they have envisaged production for other industries such as chemical and fertiliser industries in a plate-and-vessel works. The British report also recommends the production of medium-heavy machine tools and of mining machinery in separate factories. These aspects have not been covered in the report of the Russians, who however submitted a later report on mining machinery production.

"4. The establishment of the heavy engineering industry on unit basis will enable return on investment to be earned earlier as it would be possible to obtain production from separate units earlier than in the case of an integrated plant at one site.

"5. Dispersal of some of the units is advisable for strategic considerations and also for reasons of transport facilities.

"6. Concentration of heavy engineering industry at one site as recommended in the Russian report may make it difficult to obtain highly skilled labour which is essential for this project. Dispersal of units on the other hand, as recommended in the U.K. report, will enable generating of skilled labour to be developed more effectively."

The report was signed by Sir Jehangir Ghandy, Mr. S. Moolgaokar, Mr. S. K. Nanavati, Mr. P. Mueller (all four from Tata Industries Ltd. and Tata Iron and Steel), and Mr. P. Bhattacharji (Burn and Co.). The other three members, Mr. F. C. Badhwar (Bird and Co.) Dr. M. D. Parekh (National Rayon) and Mr. P. R. Ramakrishna (Ramakrishna Industries Ltd.) were unable to attend the meetings of the Committee because of illness or other preoccupations. Mr. Badhwar, however, sent a letter to the chairman expressing himself in favour of the approach recommended by the U.K. mission.

Czech Collaboration

The puzzling discrepancy between the Russian estimate of Rs. 24.67 crores as the capital outlay required for establishing a foundry-forge of the capacity recommended in the report of the Russian team on heavy engineering, and the Government's assumption of Rs. 20 crores only as the cost of the foundry-forge of the same capacity which it has been decided to establish, has now been explained. It appears that the Czechs, with whom negotiations for collaboration in this project have been proceeding alongside talks with the Russians and with British and German interests, have cited a cost figure which is very considerably below the Russian estimate and is the lowest of all the four quotations. It is therefore believed that Czech collaboration in the foundry-forge project, on the basis of deferred payments, is virtually certain. The figure of Rs. 20 crores as the cost of establishing the foundry-forge is inclusive of a 10 percent allowance for contingencies and a possible expansion of capacity for cast rolls. Likewise, the identical figure of Rs. 20 crores as the cost of the heavy machine building plant to be erected by the Russians, which was given recently in Parliament by Mr. Manubhai Shah, Minister for Industry, is explained by an addition of 10 percent to the Russian estimate of Rs. 18.61 crores. It is further learnt that the foundry-forge will be established alongside the heavy machine-building plant, so that they will form an integrated establishment as recommended in the Russian report. The site for both near Ranchi, which was highly recommended by the Russian experts and is likely to be accepted by the Government was surveyed recently by Mr. Morarji Desai, Minister for Commerce and Industry, and Mr. Manubhai Shah.

CEMENT FROM BLAST FURNACE SLAG

Manufacture of cement from blast furnace slag is to begin next year in Chaibasa, 40 miles from Jamshedpur—the first such project in India. When iron ore is melted down in a blast furnace, slag is separated from iron and floats in a layer on the surface of molten pig iron. Although rich in lime content, slag has hitherto been put to no use, and enormous quantities have collected over the years at dump sites in the Tata steel works. A plant is now being set up by Associated Cement Company in Jamshedpur to granulate liquid slag as it pours out of the blast furnaces. Eighty thousand tons of granulated slag a year will be transported to the Associated Cement Company's works in Chaibasa for converting into cement. It is hoped to step up production as the new product gains acceptance.

Even the North Pole is getting warmer!

The comforts of life are spreading. And that is good news for everyone. Rising standards of living are finding their way into the back of beyond and are coming within the reach of people with quite modest means. Playing a big part in this welcome development is *kerosine*, a product from petroleum. Thanks to *kerosine*, light and power have come to the humblest home in the remotest Indian village. Thanks to *kerosine*, people with slender purses can enjoy good light, good warmth and good cooking, wherever they may live. *Kerosine* is one of the cheapest, most convenient and most readily available fuels of which the modern appliance manufacturer is taking full advantage. Well-designed cookers, stoves and heaters are being produced which are completely self-contained and ready for instant use anywhere. Even when alternative fuels are available, *kerosine* is a valuable supplement. The population of the world increases rapidly. People must be fed, housed and—in colder climates—kept warm. They must all be able to enjoy the good things of life. *Kerosine*, marketed by Burmah-Shell, is one of the many products helping the good work along in this country.

BURMAH-SHELL... *in India's life and part of it*

Commodity Markets

SLIGHT FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended August 1939=100) worked out to 437.3 during the week ended 22nd June, 1957, compared with 437.5 (revised) for the earlier week. The index was lower by 0.2 percent when compared with the corresponding week of the previous month but was higher by 8.8 percent than that of last year. The index for Food Articles rose by 1.0 percent to 430.5 as a result of an increase in the prices of tea for internal consumption (+5%), gur (+4%), rice in Vijayawada and jowar (+2% each) and wheat in Hapur (+1%) although rice in Calcutta and dal arhar (−1% each) exhibited a fall. The index for Industrial Raw Materials declined by 0.6 percent to 540.4 compared with 543.9 (revised) for the previous week on account of a decrease in the prices of raw jute and castorseed in Bombay (−3% each) and lower average export price of manganese ore during the week compared with that of a fortnight back. prices of raw silk in Malda (+9%), lac (+3%), rapeseed (+2%), and linseed in Calcutta and groundnuts (+1% each) were, however, marked up. The index for Semi-Manufactures also moved down by 0.7 percent to 410.5 compared with 413.3 (revised) in the previous week. Items which witnessed significant variations during the week were: gingelly cake (−11%), zinc spelter (−9%), buffalo hides (−6%), cow hides (−4%), sheep skins and goat skins (−2% each) and groundnut cake and copra cake (+3% each). The index for Manufactures receded by 0.2 percent from 393.1 to 392.5 during the week due to a fall in the prices of rayon silk manufactures (−4%). The price of jute manufactures (+1%), however, moved up. Lower prices of turmeric (−10%), betelnuts in Calcutta (−4%) and black pepper in Cochin (−1%) were responsible for a decline of 1.6 percent to 561.9 (estimated) in the index for the Miscellaneous group compared with 571.1 (revised) for the earlier week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: year ended August 1939=100)

CEMENT PACKING CHARGES FOR CURRENT QUARTER

On 27th March, 1957, the Government of India announced that packing charges for cement would be fixed every quarter on the basis of the average of the maximum and minimum market price for packing materials, during each week of the immediately preceding nine months, plus Rs. 1.25 a ton to cover incidental charges. On this basis, packing charges for last quarter were fixed at Rs. 13.44 a ton. The packing charges for the quarter commencing from July work out to Rs. 13.72 a ton. The Government of India has informed all the State Governments of the revised packing charges. The above packing charges are applicable to cement packed in new bags only. Packing charges for cement packed in old bags will be matter for settlement between the buyer and the seller subject to the maximum indicated above. There will, however, be no change in the equalised f.o.r. destination price of cement announced in the Cement Control Order, dated 26th June, 1956, on account of the quarterly revision in the rate of packing charges for cement. Such changes in the rate of packing charges will apply only to supplies of loose cement.

SUGAR PRODUCTION AND DESPATCHES

The production and despatches of indigenous sugar amounted to 2,002,000 tons and 1,323,000 tons up to 15th June, in the current season, against 1,825,000 tons and 1,018,000 tons respectively, in the corresponding period of last year. The stocks with the factories on 15th June stood at 1,201,000 tons, compared with 1,216,000 tons last year.

Jute

INCREASING THE YIELD OF FIBRE PER PLANT

REORIENTATION OF JUTE PROMOTION PROGRAMMES NECESSARY

RUMMAGING about among old papers recently, the writer found copies of two letters, one addressed to the Director of Agriculture, Bengal, and the other to a newspaper, advocating the breeding of jute plants which would produce more fibre per plant. These letters were written in 1931. The occasion was the issue of the annual report of the jute experimental section of the Dacca farm in which it was reported that the yield of one type of plant grown that year was 7½ percent of fibre per plant against an average of just over 5 percent. It was urged that this new strain should be developed so that more jute could be produced on the same amount of land, or the same quantity of jute on a smaller acreage. The latter course was advocated because, at that time, there were ample supplies of the raw material and the objects in view were to make jute-growing more profitable for the growers, to produce better qualities and to set land free for the growing of rice. There is nothing on record to show whether any effort was made to develop this strain but, as nothing more was heard of it, either the proposal was ignored or the experiments did not succeed. It is on record, however, that a strain was developed after the establishment of the Indian Central Jute Committee which gave a similar yield but, in spite of pressure to develop it, nothing was done. All the research which is going on at present is concerned with the growing of bigger plants and, consequently, increasing the production of waste material.

Admittedly, the development of strains yielding more fibre per plant is a long-term policy, whereas the growing of bigger plants is largely concerned with methods of cultivation and the greater use of suitable fertilisers, which can be done in a shorter period. In fact, it looks as if India nearly achieved self-sufficiency last year. That has, of course, involved the use of more land and more labour, whereas the production of more fibre per plant would save land for rice cultivation, which is a vital matter in these days of shortages. Besides, there is no reason why the two methods of increasing the output of jute should not be used simultaneously so that India may achieve not only sufficiency but also efficiency of production. Moreover, even admitting that the development of plants giving more fibre per plant is a long-term policy, if it had been started in 1931 what might the position be now? British and American plant experts who have been consulted agree that it can be done.

The 1956-57 crop, it seems, exceeded all estimates and expectations and fibre is still coming forward in greater quantities than at this time last year. Figures of arrivals at mills are not yet available but arrivals in Cossipore continue on a higher scale than last year. For the week ended 8th July, they were 519 wagons, compared with 420 in the corresponding period of last year. It has to be borne in mind that last year there was more new crop coming forward, whereas, because of late sowing, very little new crop has come forward so far this year. Some of the rise in arrivals is, of course, undoubtedly due to the anxiety of stockists to get their jute into West Bengal before the enforcement of the new Central sales tax. But, leaving that out, it is certain that there has been more jute in the mofussil than we were led to believe.

THE JUTE MARKETS

Calcutta mills kept interest alive in the raw jute markets during the past week by small daily business, but little or no support came from gunnies, which went through a particularly quiet period following last week's speculative activity. Operators were quiet in the fatka market, and real goods interest was small. Reports of favourable weather conditions in the jute growing areas had a weakening influence on fibre towards the close, but sellers of old crop jute were still inclined to hold out for higher prices.

Manufactured Goods: The market last Thursday morning did not sustain the earlier optimism, and opening quotations recorded a substantial fall. One of the main reasons given for this was the congestion of shipping in the Calcutta docks caused by the "go slow" policy of dock labour. It is reported that the average turn-round time for ships is not less than six weeks. In former times, it was very nearly as many days. This has naturally had a depressing influence on the market, and even speculators appear to have paused in their activities. At one stage, strong fatka selling pressure developed, but it was temporary. Opening quotations were based on July B Twills at Rs. 115.60, but after this initial decline there was very little movement until Saturday morning when rates dropped an average of 85nP. Hessian was quiet throughout this period, and 40in. 10oz. from an opening of Rs. 43.10 for July, dropped only 5 nP. up to the week-end. Shipping statistics exerted their influence on Saturday and a general decline followed, but by Monday morning the losses were made up. Overseas interest was negligible and the genuine goods market was inactive. Mills showed no interest as prices fell and reports of business were few and far between. Tuesday was a holiday and all the markets were officially closed.

On Wednesday morning, opening quotations were as follows:

	July	August	September	Oct.-Dec.
40in. 8oz.	34.40	34.40	34.35	34.10
40in. 10oz.	42.50	42.55	42.55	42.30
B Twills	114.05	114.05	114	114
Heavy Cees (Plain)	115.50	115.75	115.75	114.50
A Twills	139	139.50	139.75	140
Liverpools	127	127.50	127.75	128
Cornsacks	116	116.20	116	115.50

Raw Jute: A fair amount of business was concluded during the past week, mainly in new crop jute, and buyers generally succeeded in lowering the price of each transaction. Old crop sellers were inclined to resist any price cuts on account of the genuine shortage of good Northern and Assam fibre, but as the week progressed and they saw the ease with which new crop prices were reduced they fell in line with the general trend and offered at lower prices. It was confidently expected that arrivals of new crop jute would not be delayed as long as was at first predicted. This was entirely due to the continuing favourable weather conditions in the jute-growing areas, which nullified the retarding of the growth brought about by the recent drought. As a result, raw jute prices showed a gradual decline, and from an opening of Rs. 31.50 for new crop jute, they fell to Rs. 30.50 before the close. Old crop quotations were steady at the beginning at Rs. 31.50 basis Bottoms, but they fell 50 nP during the week.

The main business was confined to Dhubri-Northern-Assam new crop jute; prices paid varied from Rs. 31.50 basis Bottoms for half July half August shipment and also July-August shipment, through Rs. 31.25 to Rs. 31 for July-15th August to Rs. 30.75 for July-August and August-September. Business was done at Rs. 30.50 for half August-half September shipment. In the old crop category Northern and Assam jute changed hands at Rs. 31.50 for July shipment, and Rs. 32.50 for Assam Tossa for the same shipment. Western District jute was done at Rs. 28.75 for July shipment and Daissee mesta at Rs. 29 basis Bottoms. In pucca bales Pakistan N.C.T.C.'s were bought at Rs. 109 to Rs. 113 a bale for one month's shipment.

The market was closed on Tuesday on account of the Id festival. On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	30.50	July-August
Northern	30.50	"
Purnea Desal	30	"
Purnea Jungli	28	"
Daissee	32	"
Assam Tossa	32	"
Murshidabad Tossa	31.50	"
Jungli Tossa	30	"
Northern ex Calcutta	30.50	"
Local Packing	28.50	"
Mesta:		
Assam	29.50	"
Northern	29.50	"
Desal	29.50	"
Daissee	29	"
Murshidabad	28	"
Jungli	27.50	"
Bimli F.A.Q.	27.50	"
Pakistan Cuttings N.C.'s 110	a bale	"

New Crop Dhubri-Northern-Assam jute is quoted at Rs. 30.50 for July-August shipment.

Wagon arrivals in Cossipore rose to 479 last week, against 406 in the previous week. The current average is well above that of last year. Mill representatives are still very active but are paying high prices for their old crop requirements, as and when they are available. Stocks of fibre from Murshidabad Bihar and Orissa and the jungli agencies are reported to be very high, but there is no demand, while jute from Assam and Northern Bengal is in very short supply.

Mofussil: Many upcountry agencies in India have closed down for the time being, as there is practically no movement of old crop jute. Small lots of new crop arrivals have been reported, but these are mainly sample lots and are immature. Weather conditions have again been favourable for the standing crop, and weeding and cutting is proceeding according to plan. In Pakistan, new crop reports are the most optimistic for several years, and many agencies and receiving centres are already reporting fairly heavy imports. The quality is good, but the moisture content is exceedingly high. Here also the weather has been favourable and the standing crop is in a very good condition.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	C'oth (Tons)	Total (Tons)
1st to 30th June 1957	1,811.0	30,708.8	32,519.8
1st to 31st May 1957	6,263.5	20,415.6	26,679.1
1st to 30th April 1957	2,603.3	22,844.0	25,447.3
	Sacking		
1st to 30th June 1957	25,392.0	1,533.1	26,925.1
1st to 31st May 1957	28,217.0	1,963.5	30,280.5
1st to 30th April 1957	26,176.6	1,401.3	27,577.9

THE PAKISTANI JUTE MARKETS

ISSUE OF TRADING LICENCES

(FROM A NARAYANGANJ CORRESPONDENT)

LIKE an old soldier the last season has not died, but is gradually fading away. It is some time since one season overlapped another as much as now. It is true that at present probably more old crop jute is available than new. There will be many changes in the new season. Some of the biggest operators are, to all intents and purposes out of business; some of the Indian speculators have been so circumscribed that they will have to change their method of operating. It is even probable that the chief market in Narayanganj will no longer be in Sitalakhya but higher up the river where there is a group of balers situated very close to one another. They have not been affected by the bad season or the shortage of money.

Licences are being haltingly issued. Most Europeans have received their licences except for one large baler of Indian origin who, due to past misunderstandings and an unfortunate set of present-day circumstances, has been subjected to undue harassment. Some of the Pakistani balers will not receive licences because of the malpractices they indulged in, not against the Government but against overseas and local buyers. This is a wise move which should discourage mushroom firms with nothing to recommend them other than the fact that they are of East Pakistani origin. Among the Marwaris, a large proportion, including those who own press-houses, have still not got their licences. There is danger that some of them may be further harassed because they are partnership concerns and not companies and accordingly are not provided for in the Jute Dealers' Registration Act.

Prices for old crop jute are vaguely quoted at Rs. 34 for B Bottoms. The new crop is down to Rs. 31, but is still wet, short and not very readily available. The quality of the earlier arrivals has been poor due to lack of retting water, but this difficulty has been overcome by the heavy rains and the attendant rise of the rivers which are now practically at normal levels. A considerable increase in arrivals may well be expected in the next few days, that is to say from 15th July onwards. This should bring prices down, but the bearish factor may be counteracted by the fact that by that time more licences will have been issued, and there will be more buying interest. Overseas buyers are still short of stocks, but reluctant to buy at sellers' prices for any position further forward than July-August. Both buyers and sellers are slowly reducing their quotations for August-September-October delivery, and very little actual business has been reported for these positions.

In the pucca bale market business has naturally been restricted since it is the end of the season, and what little is offering is at reduced prices. Cuttings have retained their position after a slight recession to Rs. 87. Export Firsts

I.J.M.A. STOCK FIGURES FOR JUNE

The Indian Jute Mills Association reports the total stocks of jute goods at the end of June, as follows:

Description	30th June 1957. Lakh Yds	000 Tons	31st May 1957 Lakh Yds.	000 Tons	Increase over (+) or decrease from (−) last month Lakh Yds.	000 Tons	30th June 1956. Lakh Yds	000 Tons
Hessian Cloth and Bag	15.60	42.6	14.86	40.4	+74	+2.2	14.02	37.5
Sacking Cloth and Bag	15,68	64.5	13,86	58.0	+1,82	+6.5	19.79	68.0
Others		8.8		11.0		−2.2		6.5
Grand Total (000 Tons only)		115.9		109.4		+6.5		127.0

N.B. These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

are quoted at Rs 215 and Export Lightnings at Rs. 206. Mill Firsts are nominally at Rs 222 but not in demand since the new crop is now in hand, and of course, such qualities are readily available. There is no change in the gunny market and even those jute mills which have not sold their sacking to the Government are not offering overseas because they feel that since the biggest mill is almost fully sold up to September, they will be able to reap better profits in the Karachi market.

Both the jute and gunny trades are being severely hampered by new forms issued by the Customs. They are highly complicated and have to be filled in for every export. Their use can do no good to the authorities either in the way of revenue or control, and can very effectively harass the trade, which is already overburdened with unnecessary contro's.

In spite of the fact that this is now the slack season, the transport problem remains acute not only for rail but also inland water transport. This may be attributed partly to the still large imports of foodgrains, cement, etcetera.

THE FOREIGN JUTE MARKETS

FALLING TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

NOW that raw jute prices are going downwards, the industry is wondering whether the fall will continue further. If the crop is as good as it promises to be according to the latest reports, there is no reason why the quotations of shippers should not come back, if not to the minima, to very near those levels. There has been a reduction in values over the past week, mainly through the switchover from the old crop to the new. The former is now more or less nominal for both white and dark jute as spinners here are not interested. On the Continent however, a good deal of buying is still being done of afloat jute, for which the prices ruling recently are being paid. New crop Mill Firsts are offered at £118, Mill Lightnings at £112. Mill Hearts at £108, July-August £115 c.i.f. and £115 for August-September, and at 20s less than these rates for September-October all c.i.f., U.K. Some little business has been done here, probably with spinners who are anxious to see something on their books for the new season. By this time last year, they had bought a lot of new crop jute at around the minimum prices. Old crop Daisee 2/3 is quoted at £115 for good marks and £113 for grade, with grade Tossa 2/3 from £100 and fours from £115, all July-August, c.i.f., U.K. New crop Tossa 4 is quoted at £110 for September-October, c.i.f.

Jute yarns are extremely quiet and consumers continue to work off their stocks rather than buy. In fact this is the case with all jute goods here at the moment in the continued absence of any notification from the Board of Trade as to what plans are being made to alter prices for Dundee goods or imported goods so as to obviate such a wide margin between them. While the trade is awaiting some announcement, the industry is being brought almost to a standstill so far as new business is concerned. Spinners and manufacturers will welcome the holiday break at the end of this month. One or two works intimate that they will be closed for three instead of two weeks because of a lack of orders.

Calcutta goods are steadier for heavies at 176s for B Twills July, 176s 3d August and 177s 3d September with 40in. 10oz. 65s 3d 65s 6d and 65s 9d respectively and 7½oz. 49s 6d July-August-September, all f.o.b., Calcutta.

PAKISTANI ORDINANCES ON JUTE AND COTTON EXPORT CONTRACTS

The Pakistani Jute Ordinance, 1957 and the Cotton Ordinance, 1957 which replace the Jute Act, 1957, and the Cotton Act, 1957, contain some important provisions not provided for in the Acts. Explaining these provisions, an official spokesman of the Pakistani Ministry of Commerce has recently said that the special feature of the Jute Ordinance is the provision that if the Central Government considers it expedient or necessary for the purpose of securing fulfilment of any contract on which an exporter has defaulted, it may utilise for the contract any jute the defaulter may have in his own stock, or it may buy jute elsewhere for this purpose, and the defaulter will be liable for any loss which the Central Government may sustain on this account. Profits will, however, go to the Government, he added. The Jute Ordinance provides for the constitution of a jute board for the regulation and promotion of international trade in jute; for the fixation of minimum and maximum prices of jute for export and for the registration of export contracts. The Ordinance lays down that to secure the fulfilment of a contract on which an exporter has defaulted, the Central Government may buy jute elsewhere at the exporter's risk and appropriate it to the contract. It may also regulate the use, sale or the transport of jute by exporters, direct the maintenance of accounts and the submission of returns in special forms, call for books or documents for inspection and for information on the fulfilment of any contract. The Cotton Ordinance similarly provides for the constitution of a cotton board for the regulation and promotion of international trade in cotton, the registration of export contracts and the fulfilment of contracts on which exporters have defaulted.

Plantation Topics

SEASONAL SLUMP IN THE COIR MARKET

PROSPECT OF SMALLER PEPPER CROP

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Central Government will shortly have to make fresh nominations to the Coir Board as the term of the present members expired on 7th July. The last sitting of the Board was held in Tanjore last Friday. The present secretary is also leaving the Board; he is returning to the Kerala Secretariat. Shippers in Cochin are confident that the present slump in the coir market will not last beyond August-September since it is basically a seasonal one. In previous years also, the market used to experience dull trading conditions at this time of year. The only difference this year is that it has been aggravated by the Suez crisis during which dealers abroad have built stockpiles. Some accumulation of stocks is reported by the producing centres in Kerala. It is suggested that if the State Government, which has expressed its determination to take all possible measures to combat the crisis, spends a few lakhs of rupees for absorbing a proportion of these accumulated stocks of coir manufactures, particularly mats and mattings, this will provide relief. The stocks thus purchased can be used in Government offices and public places.

Unfavourable Outlook for Pepper

India's pepper crop next season may show a decline. On account of the absence of satisfactory follow-up rains a good share of the pepper blossom that came up with the April showers fell off in central Travancore—the main producing centre. Growers in that area are very pessimistic about the next crop. This season's crop is estimated by the trade at 22 000 tons, almost 75 percent of which has been marketed already.

Production of Lemongrass Oil

Lemongrass oil production this year is estimated by the trade sources at about 1,500 tons. It will be more or less equal to last year's output. The lemongrass oil trade is passing through a depression with prices ruling at Rs 76 a dozen bottles on the Cochin market compared with Rs. 105 a dozen bottles at this time last year. This is the lowest for the past four years. The basic reason for the slump is a plentiful supply of the oil. Within the last four years, production has doubled to 1,400 tons. It does not appear that the demand has developed correspondingly. A synthetic substitute for lemongrass oil has been invented in the U.S.A. which can be used more profitably in the synthesis of vitamin A according to a report. Lemongrass oil being a commodity which depends entirely on demand from abroad, any large-scale use of this synthetic material will be detrimental to the industry in India. This report is viewed with great concern by the shippers in this country. They are becoming less confident about the future.

Proposal for Aromatic Factory

Processing lemongrass oil in India itself and developing a market for the perfumes and medicines manufactured from this oil has long been suggested. India exports lemongrass oil in crude form and imports those products developed from it at exorbitant prices. So, many representations have been made to the Government to set up an aromatic factory in Kerala where the bulk of the oil is produced. Such a proposal was included in the draft of the second five year plan of the former Travancore-Cochin State. The Central Government has been showing some interest in this scheme. It conducted negotiations with certain pharmaceutical firms in Switzerland and elsewhere. It is understood that these negotiations have not succeeded so far and the scheme itself is being kept in abeyance. If the Government fails to do something in time, the industry which provides employment for a large number of cultivators on the west coast and earns foreign exchange to the value of over Rs. 1 crore might not survive.

There is a demand from the growers that the Government should help them tide over the present crisis by purchasing a fairly large share of the accumulated stocks in the market. This is not a practicable proposition for two reasons: Lemongrass oil is a perishable commodity and, therefore, it cannot be stored for long. When the Government starts releasing its stocks, market prices will fall again. The real solution lies either in the curtailment of production or in the enhancement of demand. The second reason is that it is very doubtful whether the Government can afford to set apart any substantial amount at this time for a comparatively unimportant purpose like buying the market, and thereby raise its price to an economic level.

Tax on Plantations

The Finance Minister of Madras has not spared the planters. In his new budget he has proposed an enhancement of the existing rates of agricultural income tax on plantations. Against the existing levy ranging from 5 percent to 35 percent on plantations with an annual income of Rs 1 500 to Rs. 5,000 and above, the increased levy will vary from 5 percent to 45 percent. This is expected to give an additional revenue of Rs. 1½ crores. But unlike his counterpart in Kerala, he has not proposed any new taxes on the planting community so planters in Madras are still at an advantage over the planters in Kerala.

Calcutta Markets

STRONG AND GENERAL DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 5, held on 8th July, 20,158 packages were on offer at the Export auction. There was a strong and general demand. C.T.C. Assams were again well supported and the brighter liquoring kinds sold at dearer rates. There was again keen interest paid in the whole leaf grades which were fully firm and sometimes dearer. Tippy teas continued to meet with good enquiry and flavoury Darjeelings also sold well. Brokens and Fannings of all descriptions sold well at firm to dearer prices and the brighter liquoring teas were 5 to 10 nP dearer and sometimes more.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2 60	1 14 0 to 1 15 0
Plain B.P	1.98	1 9 0
Plain Fannings	1.80	
Medium B.P	2.25 to 2.30	2 4 0 to 2 6 0
Medium Fannings	2.20 to 2.40	
Best Assam C.T.C. B.P.	4.00 (nominal)	4 0 0 to 5 0 0
Best Assam C.T.C. Fannings	4.50 to 5.00	(nominal)

At the Internal Sale 5,064 chests of Dust were on offer. There was a good general demand for most descriptions, but leafy types with green and first flush liquors were frequently easier, and there was little demand for black clean exportable types. C.T.C. Assams and all bright liquoring sorts met with a keen competition and prices rose considerably. Small powdery types were also in strong demand. There was but little interest paid in Darjeeling teas and prices were frequently well below valuations.

Quotations

	1957 Rs.	1956 Rs.
Medium Dooars Dust	1.60 to 1.70	1 6 0 to 1 7 0
Medium Assam Grainy Dust	1.70 to 1.80	1 12 0
Medium Assam C.T.C. Dust	2.50 to 2.60	
Best Assam C.T.C. Dust	3.10 to 3.20	3 4 0 to 3 8 0

Only 215 chests of Leaf were offered for sale.

LINSEED WEAKER

A generally weaker undertone was noted last week, and prices were gradually marked down due to a scarcity of buyers. They are unwilling to crush further quantities of seeds until their current stocks of oil are sold. In spite of small arrivals, the supply was in excess of demand, and the volume of trading was very small. The oil section was inactive, and buyers were reserved in spite of lower indications from sellers. Latest quotations were as follows: Ready Rs 21-14 a maund; July-August Rs. 22-4 a maund and August-September Rs. 22-6 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 2nd July and 6th July, 1957)

Cowhides: Wet salted (Ord.) 12 600 pcs. on the basis of Rs 7 and Rs. 9.50; Wet salted (Slaughtered) 14,400 pcs. on the basis of Rs. 12.50 to Rs. 22.

T—Dividend Taxable.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

LABOUR POLICY FOR AN EXPANDING ECONOMY

SOOTHING ADJECTIVES FROM THE DELHI CONFERENCE

FEW problems connected with the second five year plan have been given as haphazard attention in recent years as the Government's need to evolve a consistent labour policy. While targets for industries have been fixed with a precision which excites the admiration of statisticians provided they do not care to examine them too closely, labour policy has hitherto consisted of little more than stumbling from one expedient to the next. Some of the consequences of this practice have come sharply to notice during recent weeks: the dock labour troubles and the Central Government employees' claim for higher wages are symptoms of a trend which has been pervasive for years. The discussions at the two-day Indian Labour Conference in New Delhi last week have served to highlight many of the contradictions and dilemmas which have inevitably arisen in the attempt to reconcile the aims of a welfare State with those of an expanding economy. The value of an exchange of views such as has taken place at the conference cannot be denied, but it is hard to agree with the verdict that the deliberations have been "successful". On the contrary, the most striking achievement of the conference is that it has highlighted the wide divergence of opinion between various participants, at the same time as it has provided a platform for the airing of irrationality and misguided idealism concerning the rights and obligations of workers in a planned economy. Among trade unionists as well as Government spokesmen, the tendency has been evident to regard industry as a cornucopia of inexhaustible wealth: except in a limited number of speeches, it seems that few of the lessons which might in sobriety have been drawn from the closure of many mills recently, due to the rigidity of their cost structures, have in fact been drawn.

There is no single aspect of the problem, perhaps, on which the confusion has been more dangerous than rationalisation. The first speech made by the Labour Minister, Mr. Gulzarilal Nanda, provides some remarkable example of the extent of this confusion. No one listening to, or reading, his remarks would tend to suspect that there might be great merit in the real aims of rationalisation—a lowering of production costs, an increase in efficiency, an improvement of quality, and ultimately an expansion of markets. Mr. Nanda's preoccupation on the contrary, is mainly with one short-term result, and that too not a general one—a tendency towards shrinkage in employment. The country has, therefore, been treated to the spectacle of a Minister openly declaring that he has hampered rationalisation, a confession which may be commendable for its truthfulness but can hardly be a source of pride for a Government which claims to be progressive.

*

The fundamental defect of the Government's labour policy has lain in its short-sightedness. It has been concerned primarily with increasing the wages and amenities of those who already have jobs, and only secondarily with expanding the general scope for productive employment. In the second aspect, a further regrettable feature is that obsolete methods of production, notable neither for their economy nor for their efficiency, have been created and bolstered in an attempt to increase employment at the cost of the consumer. The inspiration for such a policy has come from political expediency. Workers possessing jobs are an organised, restless and vocal political force, whose leaders may or may not have much knowledge of industrial operation but nevertheless contrive to adorn legislatures and the central committees of various Parties. The consumers and the unemployed—excluding the urban unemployed—are neither organised nor particularly vocal, which directly qualifies them for neglect. Yet it has long been clear that urgent rethinking on this problem is necessary. Some evidence of rethinking has been forthcoming in Mr. Nanda's recent pronouncements, such as the one that workers are ill-advised to press their demands to the point where an enterprise becomes uneconomic and is compelled to shut down. But, in the Labour Ministry, the gap between words and action is usually wide, and signs of these pronouncements being translated into practical policy are keenly awaited.

*

The point which is still inadequately realised is that India's employment problems will not be solved for many years, probably decades, as long as progress is hampered by political short-sightedness. Mr. Nanda has pointed out that the labour force is growing at a net rate of 1.8 million to 2 million persons every year because of the steady increase in population. Since it is open to strong doubt whether new jobs are being created at the same rate, greater attention to questions of population control would not be wholly out of place. But more important, from the point of view of the deliberations at the Labour Conference, is the need for policies which improve the climate for industrial expansion, by ensuring that productive enterprise is allowed freely to rise to a new level of economy and efficiency. Much of last week's debate on freezing wages, prices and profits has been conducted in an atmosphere of unreality. It can hardly have been expected that workers' representatives in their prevailing mood would accept proposals to peg all wages at the current levels: and one reason why they would not have done so is that the Government is in no position to inspire confidence in its ability to hold down prices. As for profits, there is strong evidence that rising taxation and production costs have already squeezed them in real terms to a point where expansion is suffering; with the market for fresh capital more than half dead, there would be danger in restricting the scope for auto-financing which is directly linked with the profitability of concerns.

The reasons for Mr Nanda's pleasure at the achievements of the Labour Conference are hard to appreciate. On almost every subject which has been discussed, it is clear that there has been an evasion of the real issues involved. Behind a galaxy of soothing adjectives, such as "fair", "equitable", "useful" and "proper", there lies concealed a measure of disagreement which in practice will be hard to resolve. The fact is, in demanding a fair wage or a minimum wage, workers have still not appreciated that what they get must be related primarily to the capacity of an enterprise to pay it. On rationalisation, an excellent idea at all times, Mr Nanda has given the impression that there has been a considerable measure of agreement; but what, may one ask, is the purpose of rationalisation if, after a concern has spent money on it, labour costs remain unchanged? Yet this is what the conference is supposed to have agreed upon. And what, may one ask further, is the meaning of "equitable" in the reported opinion of the conference that "there should be an equitable sharing of the benefits of rationalisation among the community, the employer and the workers"? Satisfaction has been displayed that a number of principles have been framed to ensure discipline among workers. But, as Mr. Nanda well knows, implicitly or explicitly most of these principles have been in existence for years, if only on paper. While tea garden and colliery managers are murdered by their workers, the Labour Conference has only verbal reinforcement to provide for the law of the land: "No resort to acts of violence, intimidation and coercion." Trade union leaders might well, as has been agreed, soon start to pass an admirable series of resolutions against go-slow movements, but what measures can be expected to enforce those resolutions is far from clear. Finally, without blushing for shame, the Labour Ministry is to be seen proudly joining in the declaration that "awards and agreements should be speedily implemented."

The results of the Labour Conference, in sum, are to be judged not on the basis of verbal output, which has been considerable if not entirely reassuring; but on the practical consequences flowing therefrom. In spite of Mr. Nanda, for whom the conference has "created confidence in the future of industrial relations in the country", cynicism will remain and be nourished by the experience of recent years. Meanwhile, the penalty for not being able to agree on a rational labour policy will continue to be paid by the country. As more and more units become uneconomic, exports suffer and industrialisation is hampered, the realisation might dawn that material well-being in a competitive world cannot be secured with rising labour costs, growing indiscipline and a bullock-cart economy.

INFLATION AND ITS ANTIDOTES

THAT inflation is reasserting itself in Britain is a generally accepted fact. The supply of money is increasing, the circulation of money is accelerating, prices are rising and incomes are rising more. For some months, production did not respond to these movements, but it is now firmly on an upward trend. Industrialists feel a new sense of urgency in their plans for expansion and demand for factory building and industrial equipment is expanding. The nationalised industries are undertaking major plans for development. All over the economy, with the merciful exception of military expenditure, claims on the nation's resources are increasing. These developments, in full swing at the time of the Commonwealth Prime Ministers' conference, blighted any hope that enough resources could be found to satisfy the immediate requirements of the other Commonwealth countries. But it has been said in London that refusing their requests for finance does not solve the problem; what is needed is to curtail the domestic claims on resources. It is, however, easy to exaggerate the inflationary movement. It does not appear to be stronger than that which is taking place in, for instance, America and Western Germany—at least, as far as wages are concerned. And there are some factors restraining the rise in prices. The values of imported food and materials have been generally steady this year—some rising, some falling. The increase in demand for manufactured goods has brought into use a good deal of unused productive capacity, so that some industries have been able to offset the rising tendency of costs by expanding the scale of their production.

*

Developments will be watched apprehensively, however, over the next few months. American production, in spite of inflationary financial pressures, has been curiously reluctant to advance; if it took an upward turn, commodity prices would almost certainly rise, and one of the restraining factors in Britain's inflation would be removed. How much unused industrial capacity there is still available no one knows: anyway, it must be small. When the recent increases in the price of coal, the railways' freight rates and in wages, take full effect a few months hence, the economy will

ably be already fully employed. New productive capacity installed in the past year or two is still coming into use, and it will ease the tension between supply and demand. But its operation will also involve more imports of materials, and there is no assurance that exports of manufactures can be increased correspondingly. It is widely felt in London that the British Government should take more active measures against inflation if another crisis in the balance of payments is to be averted next year. The Treasury's experts make useful analyses of the dangers, which are duly published and studied; but the Cabinet seems to be in no hurry to act on them. As to the action that would be most appropriate in the circumstances, discussion is lively, but conclusions are still tentative.

The *World Economic Survey for 1956*, published in mid-1957, presented some interesting ideas worked out by the United Nations' experts of the Bureau of Economic Affairs. It pointed out that all countries were relying more on monetary policy to counteract inflation, whereas in the first few years after the war they relied on fiscal policy and direct controls. The survey did not favour either policy used exclusively; fiscal and monetary policies, it said, should "complement each other". It did not support the more extreme advocates of high interest rates and other forms of monetary control. It questioned, for instance, whether this kind of control could make economic resources move more freely, or expand the capacity of industries that were impeding the economy by producing too little; and it was quite sure that monetary policy could not be "a substitute for appropriate wage-price policies". About the same time appeared the results of an investigation undertaken by the International Institute of Banking Studies, which had distributed a questionnaire to find out the results of the flexible monetary policies applied by leading countries in recent years. The replies, which were an unconscious commentary on the situation outlined in the *World Economic Survey*, tended broadly to the same conclusion as the *Survey's*, that monetary policy was no panacea. Partly, this investigation concerned the purely monetary aspect of policy—whether a high Bank rate would attract foreign funds, for instance. But it concerned also the general economic effects of monetary policies—whether a high Bank rate would check business activity, for instance. The study showed that as a restraining influence on activity, flexible monetary policies had had a perceptible effect, but that it was restriction of the credit base rather than high interest rates that was effective.

* * * *

An animated discussion of interest rates and related matters was included in the Annual Commonwealth Survey published recently by the *Investors' Chronicle*. The contestants were two distinguished economists, Mr. Roy Harrod and Sir Oscar Hobson, and the width of divergence between their opinions showed how varied were British ideas on the subject. Mr. Harrod was contemptuous of "vague and woolly ideas about some ill-defined 'inflation'" and asserted that the forces of expansion had been cramped too long. If investment is active, he argued, the needed resources will arise; if we hold back development until the current balance of payments is favourable, we shall wait for ever. Interest rates, therefore, should be "brought back to their proper level around 3 percent throughout the range". Sir Oscar, on the other hand, was utterly opposed to the idea that (as in the 'thirties) productive investment should be stimulated. "Let us convince ourselves that it is saving that needs to be stimulated....The key to the provision of capital for expansion is a sufficiency of savings." These discussions are necessary and can be fruitful. But while the experts disagree and the authorities remain aloof or hesitate, the economy develops symptoms which (pace Mr. Harrod) are clearly inflationary. Orthodox opinion in the City of London believes that it is time to take some action.

THE DECIMAL COINAGE IN ACTION

PREPARING FOR METRIC SYSTEM OF WEIGHTS AND MEASURES

THE decimal coinage has been in use for less than four months. During this brief period, it may be said that experience with it has been reasonably good. When the new currency was introduced, it was widely believed that conversion from annas, pice and pies into naye paise would create complications. The reason for this belief was that fractions would arise in the ordinary process of exchange. For example, by arithmetic one anna should be equal to 6¼ naye paise, but the official conversion table decided that it should be treated as equivalent to 6 naye paise only. Consumers, therefore, thought that there would be a widespread marking up of prices to safeguard against losses, and that this would accentuate inflation. In spite of these misgivings, no major upsets have resulted so far. No doubt some traders still decline to accept decimal currency, but their number is steadily decreasing. Most people have tried to get over the conversion problem by getting only four or eight annas exchanged at a time, which yields them complete units of 25 naye paise or 50 naye paise, respectively. As for the fear that the change-over to the new currency would accentuate inflationary pressures, it has proved justified. But it is difficult to say precisely how much the new currency has contributed to the rise in prices. A variety of other factors are combining to keep them high, so a worthwhile assessment of the inflationary impact of the new currency is not possible. But it is interesting to note that the Government, in adjusting postal rates and excise duties, has invariably chosen to fix them at rates more favourable to itself. Sometimes this has been done in violation of its own conversion tables.

* * * *

While the fair success of the currency changeover might induce complacency, few deny that the biggest problems still lie ahead. The introduction of a decimal coinage is only a part of the general scheme to adopt a metric system of weights and measures. Legal and administrative problems preceding the introduction of the latter system will be discussed at a conference in New Delhi opening on Saturday. The Central Minister for Commerce and Industry, Mr. Morarji Desai, will inaugurate the conference which will be attended by representatives of State Governments and various Ministries of the Union Government of India. The Standards of Weights and Measures Act, 1956, relating to the metric system in India, requires all the units of length, area, volume and weight to be replaced by metric units gradually within a maximum period of ten years. This reform, preceded by the decimalisation of the coinage, will have repercussions in all fields of activity. The conference meeting in Delhi will draw up a programme for the speedy implementation of the law, ensuring co-ordination among the States and between the Centre and the State Governments.

Under the Constitution, enforcement of weights and measures comes within the jurisdiction of the State legislature, while establishing standards of weights and measures is the exclusive responsibility of the Centre. For the purpose of uniformity and to avoid delay, it has been recommended by the Standing Metric Committee that the Constitution be amended giving Parliament the power to make laws for the enforcement of standards. This will help in having a single law applicable to the whole country. The question of setting up administrative machinery for the enforcement of weights and measures will be one of the major subjects for discussion. The weights and measures law is being enforced now only in five States, *viz.*, Bombay, Bihar, Punjab, Mysore and Andhra; in the other States, there is no machinery for enforcement. It is recognised that without adequate machinery for enforcement, the adoption of the metric system for the country as a whole will be defeated. The conference is expected to decide on the organisation that is to be set up in each State for the enforcement of weights and measures during the first stage of the transition. Experience in some States, such as Bombay, has shown that a weights and measures enforcement organisation can be self-supporting, the revenue being derived from the fee charged for certifying and stamping weights and measures. The type of organisation, the strength of the staff required and the rates of stamping charges will be discussed at the conference.

* * * *

One of the main problems of enforcement is the speedy and adequate supply of new weights and measures and scales. The requirements of the State Governments will be discussed and the question of getting the new weights manufactured by the ordnance factories and recognised manufacturers of weights in India, will also be considered. The country's requirement is likely to extend to millions of pieces under different categories—commercial weights, bullion weights, liquid capacity measures, measures of length, etcetera. To familiarise the public with the metric system of weights, it is proposed that in the regulated markets, market committees should quote prices in the metric system side by side with the price-quotation in the existing units, standard sets of metric weights and measures will also be displayed in all the regulated markets. A programme will be drawn for the marking of road distances in kilometres; this work, it is expected, will be spread over a period of five years. The revision of school textbooks and changes in the teaching of arithmetic with a view to preparing the younger generation for dealing in the metric system, the facilities for the training of weights and measures enforcement staff, the use of the metric system exclusively in all scientific literature, and the prohibition of the use of dry measures in trade will be among the various other subjects to be considered by the conference, which is expected to last three days.

CURRENT COIN

Congestion in Ports.—At the meeting of the Central Advisory Council of Industries in New Delhi last Sunday, Mr. W. H. S. Michelmore, President of the Associated Chambers of Commerce, drew pointed attention to the serious congestion in the major Indian ports. At the beginning of July, there were no less than 81 loaded vessels waiting for berths either inside or outside the ports of Calcutta, Madras, Bombay and Visakhapatnam, as compared with 14 two months ago. Serious delays occurred before ships got berths, the waiting period for ships carrying steel imports to Visakhapatnam being, for instance, of the order of 30 or 40 days. Mr. Michelmore said that there was little hope of any relief from the revised import licensing policy, as imports of foodgrains were still arriving steadily and much plant and equipment had to be imported for the steel expansion programmes. He understood that for Rourkela alone some 338,000 tons had to be imported, which would perhaps amount to as much as 60 or 70 cargoes. The export drive could not be successful unless port facilities were adequate. If the congestion was not relieved, freight rates would inevitably rise and the loss of foreign exchange would be even greater. Mr. Michelmore expressed the opinion that long-term schemes for port improvement were not the answer to the problem. In his opinion, imagination and improvisation were needed in the use of available facilities and greater use should be made of the minor ports; also, that port operation as a whole should be placed on a quasi-war footing, it being insisted that those responsible should get things done instead of finding reasons why they could not be done.

* * * *

Swadeshi Cotton Mills.—The profit of the Swadeshi Cotton Mills Co Ltd. during the year ended 31st December, 1956, after making the usual provisions and adjustments and meeting all expenses, amounted to Rs. 64,22,720 (fuller details appear on a later page). The figure was satisfactory, as in the previous year the profit was Rs. 53,71,838. The results would have been better except for an increase in the excise duty on cloth, particularly from 1st September, 1956, which reduced the offtake of textiles and the earnings of the company. The provision for taxation amounted to Rs. 25 lakhs and for depreciation to Rs. 11,43,537. An amount of Rs. 5 lakhs was transferred to the general reserve, while a sum of Rs. 8,35,712 was carried forward. The reserves of the company, including capital reserves of Rs. 1.75 crores as at the end of the year, stood at Rs. 2,43,63,793. The total provision for depreciation had amounted to Rs. 1,81,83,923. During the year under report, the company acquired a textile mill in Pondicherry which formerly belonged to a French company and was known as "Savana" mills. The mill is equipped with 22,968 spindles and 675 looms; of the latter, 428 are automatic looms. The company is putting up a spinning mill in Naini (Allahabad); it is being constructed and is expected to go into production before the end of this year. A dividend of 7½ percent has been declared on the ordinary shares, and of 11½ percent on the preferred ordinary shares. Both dividends are free of income tax.

* * * *

World Bank Loan for Railways.—The World Bank has announced that it is making four loans to India, in different currencies totalling the equivalent of $90 million, for the improvement of India's railway system. The four loans include 8,640 million Japanese Yen (equivalent to $24 million); 6,825,000 pounds sterling ($19.1 million); 7,000 million Italian lire ($11.2 million); and U.S. dollars and various European currencies equivalent to $35.7 million. The World Bank has now made 15 loans to India, totalling about $234 million. This is the second time it has lent funds for the Indian railways. A previous loan of $34 million, given in August 1949, was used to purchase 418 locomotives, boilers and spare parts and helped remedy a serious shortage of motive power. Other Bank loans to India have been for the development of electric power, agriculture, iron and steel production, for the purchase of jet passenger aircraft, and to provide funds to a development corporation for investment in private enterprise. The loans will pay about half the cost of purchasing from abroad goods and equipment on which payment falls due in 1957 and 1958. These purchases include more than 500 locomotives, 10,000 freight cars, 100,000 wheel sets, 1,500 underframes, rails and other equipment. These items have been ordered on the basis of international bids in various countries. Mr. Eugene R. Black, President of the World Bank, has stated that the Bank has other Indian projects under study. "We expect to lend again for steel production. We are considering additional projects for electric power development, and we will arrange shortly to send a group of experts to India to see what the Bank might do to help enlarge the capacity of India's ports. The World Bank, in short, will have a continuing interest in the progress and the success of the second five year plan."

* * * *

Wholesale Price Index.—For some time, the Economic Adviser to the Central Ministry of Commerce and Industry has been issuing two series of index numbers of wholesale prices: the old series with the year ended August 1939 as base, and the revised series with 1952-53 as base. The publication of the revised series was started from April 1956. It covers the prices of 112 commodities, as against 78 in the old series, and 555 individual quotations, as against 215 quotations in the old series. Apart from the wider coverage of both commodities and markets, two important features of the revised series are: (a) it follows the recommendations of the Agricultural Prices Enquiry Committee on the selection of 99 centres for cereal prices, and (b) the base year 1952-53 is in accordance with the recommendation of the Working Party set up by the Standing Committee of Departmental Statisticians to recommend a common base period for all official index numbers. According to an official Press note, there is a general feeling that wider publicity should be given to the revised series. It has, therefore, been decided that Press notes reviewing the weekly, monthly and annual price trends, which have so far been based on the old series, will henceforth be based on the revised series with 1952-53 as base. The weekly bulletin relating to the index number of wholesale prices (old series) will, however, continue to be available for a limited period from the Manager of Publications, Civil Lines, Delhi 8.

* * * *

Outlook for North Indian Tea.—In their annual review of the north Indian tea markets, the broking firm of Messrs. A. W. Figgis and Co. Private Ltd. stress the need for an international tea agreement. They suggest that steps should be taken to find a basis of agreement between the producing countries for a period of five years at least. Simultaneously, a discussion should immediately be undertaken with Ceylon for a temporary restriction of exports this year. Few will agree with the recommendation that legislation should be introduced forthwith to make it compulsory for each estate to destroy a percentage of its crop annually. On increasing the consumption of tea within India, Messrs. Figgis suggest that the Tea Board should undertake propaganda measures so that the Indian public may "spend on tea only 1 nP more a head a week than they do at present. That is only 50 nP a head a year but it is another 45 million lbs of tea to the producer. In succeeding years, further targets of an additional 1 nP a head a week could be aimed at until the internal consumption is doubled." The task is not easy but it can be done. Referring to labour troubles, Messrs. Figgis say that the Government should appreciate the urgent need to subdue the excesses of the labour unions. "Half our crop is produced in less than 90 working days and any disruption during this period could be disastrous. If a sense of responsibility could be engendered, it is possible that the unions could do a lot of good." Producers, according to Messrs. Figgis, should not be "be blinded by the high prices" which will be offered for quality teas and the second flush. "There is a hard core of medium and common tea producers, representing some three-fifths of the whole, who will depend on the demand for ordinary teas being more in relation to supply than it appears likely to be later in the season."

* * * *

Deficit in Andhra Budget.—The complete Budget of the reorganised Andhra Pradesh for 1957-58, which Mr. B. Gopala Reddy, the State Finance Minister, presented to the Legislative Assembly recently, shows a revenue deficit of Rs. 5¼ crores. The total public debt is Rs. 165½ crores; besides the State has borrowed Rs. 12 crores from the Reserve Bank. The Finance Minister said that in spite of all the efforts to increase revenue by new taxes in the past (this year no new taxes have been proposed), expenditure had been exceeding income. Debts were growing and economic troubles had increased. In the first year of its formation, Andhra's revenue was Rs. 19.82 crores. This year's estimate places it at Rs. 32.22 crores, showing a rise of 63 percent in three years. Yet this has been more than offset by expenditure. The Telengana region, which has come to Andhra from the former Hyderabad State, had a revenue in 1954-55 of Rs. 16.50 crores. According to the current year's estimate, it is Rs. 20.93 crores. This means that, in three years, the income in Telengana has risen by Rs. 3½ crores. For the whole of Andhra Pradesh, revenue in 1954-55 was Rs. 36.55 crores: this year it is Rs. 53.14 crores. For the combined area of Andhra-Telengana, the expenditure three years ago on revenue account was Rs. 42.02 crores: now it is Rs. 58.62 crores. Expenditure on capital account has also increased in three years from Rs. 16½ crores to Rs. 25.04 crores. The debt was under Rs. 100 crores three years ago; today it has risen to Rs. 165.48 crores. There was a cash balance of Rs. 4.32 crores then; now it is a negative balance of Rs. 13.61 crores. Discussing possible economies, Mr. Reddy said there was little scope in that direction. A few lakhs of rupees could be saved at the most. Most of the rise in expenditure was on account of development. The Government of India was bearing a share of the cost of development, but the State still did not have enough money to execute all its projects, so some were being given up. The conditions for raising new loans were not favourable, Mr. Reddy said. This was also the opinion indicated in the directive of the Central Government. This year, Andhra would spend Rs. 35 crores on the State plan. Most of this would come from the Centre in the shape of loans and grants. To bear its share, the State has to raise Rs. 8 crores or Rs. 9 crores through small savings.

* * * *

Yarn Taxes and Transport.—The presidential speech of Mr Hari Krishna Jhajharia at the recent annual general meeting of the Calcutta Yarn Merchants Association discusses many of the problems confronting the trade. The Association asked the Finance Minister to exempt cotton yarn from the purview of the Central Sales Tax Act, since although it is not altogether a new levy, its incidence is heavy. It also stressed that "West Bengal, being most sympathetic to the poor handloom weavers a considerable proportion of whom are refugees, has not imposed any sales tax on cotton yarn due to the fact that the State did not produce sufficient yarn to meet the demand of the handloom industry." The Government has not accepted the suggestion, and a Press note issued recently states that Section 15 of the Central Sales Tax Act will cover coal, cotton, hides and skins, iron and steel, jute and oilseeds, since these are important in inter-State trade or commerce. Mr. Jhajharia refers to the inadequate berthing arrangements in coastal ports, an example of which was the complete cessation of sailings between Tuticorin and Calcutta throughout February. In the absence of rail movements between the two centres, such failures to maintain regular sailings have an adverse effect on the yarn market in this city. In fact, the irregular movement of yarn in recent months has created an acute shortage and brought serious difficulties to handloom weavers as well as hosiery factories in West Bengal. Commenting on the problem of railway transport, Mr. Jhajharia says: "The current proposal of the Railway Budget will raise the surcharge on goods and parcel freight to 12½ percent. It is doubtful whether during the plan period the financial burden piled on the railway users could have been made lighter. But the railways also must ensure that the quality of service which they render to the public must also correspondingly improve." The Railway Board has introduced an express goods train service from Calcutta to Madras. As most yarns are obtained from south India, the Association has suggested that a return express service should be introduced from Madras to Calcutta. This arrangement will help Calcutta merchants in selling yarns at competitive prices.

KING STORK AND KING LOG

MANY disadvantages result from the system by which a Lieutenant-Governor is allowed to take six months' leave during his five years' tenure of office. So much has been written about them that there is scarcely anything left to write. Here it is proposed to write rather of the compensating advantages of the system. The chief advantage is in the education which may be given to the Lieutenant-Governor on leave. A Lieutenant-Governor in power is a "kittle" creature to deal with, and even criticism can only be allotted with very great discrimination. But the case of a Lieutenant-Governor in the temporary obscuration of leave is different, and his administration may be criticised more freely in the hope that such criticism may tend to his future improvement. People nowadays have grown so wise that they are able to take their doses of philosophy pure from Mr. Herbert Spencer and others without having them disguised in the jam of fable. Hence fables have come to be discredited and yet they contain for those who have read or remember them much practical wisdom. The fable of King Log and King Stork was perhaps in its inception a topical tale, having reference to two particular rulers. But like all immortal works of art, it owes its survival to its universal application. The moral is that people are never satisfied with their rulers. Those who have read the fable will remember that the frogs in a certain pond had a very respectable old Log for a King. As his policy was not sufficiently progressive, they petitioned Jupiter for another King and he sent them another King, a Stork, whose bill was, so to speak, in everybody's pot, and who consumed a vast number of them. They then were glad enough to petition Jupiter to have their old King Log back again. Had Jupiter granted the prayer of the frogs the state of the pond would have resembled the state of Bengal at the present time. There has been no strong Government in Bengal since the retirement of Sir Ashley Eden.

Without Prejudice

COMPLICATIONS IN THE SALE OF MOTOR-CARS

BREACH OF CONDITION OF CONTRACT

(FROM OUR LEGAL CORRESPONDENT)

CONTINUING this short review of recent English decisions, we come to a couple of interesting ones relating to motor-car sales. The first relates to the question whether a representation by the seller of a car as to the year of manufacture is to be regarded as a warranty or not. The facts were that in June 1955 the defendant sold to the plaintiffs, who were motor dealers, a second-hand Morris car for £290, which the defendant had obtained in 1954 and which was shown in the registration book as first registered in 1948. There had been five changes of ownership between 1948 and 1954. The defendant, who *bona fide* believed it to be a 1948 model, described it as such to the plaintiffs and showed them the registration book. The plaintiffs, who had seen the car, calculated the price on the assumption of the defendant's statement that the car was a 1948 model was true. Eight months afterwards, the plaintiffs learned that the car was not a 1948 but a 1939 model and claimed the difference in value on the ground that either it was a condition of the contract that the car was a 1948 model or that there was a collateral warranty to the effect. Was the defendant liable to pay damages?

Here is one of those cases in which the ordinary reader is likely to go wrong; and in which, in fact, the learned Lord Justices of Appeal disagreed. Well, we are all, as to each one of us, entitled to our own opinion and one advantage of being an anonymous scribe is that he can cheerfully disagree with the highest tribunals without impudence but with impunity. Moreover, the writer expects that at least seven readers out of ten will agree with his conclusion, which is this: True it is that the seller honestly believed the car which he sold was a 1948 model and that he would not have sold it as such if he had not been convinced that it was so. But he did make to the purchaser the representation that the car was a 1948 model and the purchaser would not have bought the car at the price he paid had he not relied on the representation being true. It was not true. It was false. And when you have two innocent parties, one of whom is guilty of negligence, he is the one who must suffer. The seller was negligent in that before he risked representing that that car was a 1948 model he could, by making full proper enquiry, have ascertained whether it was so or not. He did not do so. Therefore he would have to pay damages. That seems commonsense. But it is bad law. The Court of Appeal held that the seller defendant was not liable to pay damages for breach of a condition of the contract or of a collateral warranty. Having regard to all the circumstances and in particular to the fact that the defendant had no personal knowledge of the date of manufacture, the defendant made only an innocent misrepresentation. Both parties were under a mistake of fact;[1] although fundamental, this did not make the contract void *ab initio* but merely entitled the plaintiffs to have the contract set aside in equity. However, they were now too late to apply for this relief. Thus Denning and Hodson L.JJ., and it is the decision of the Court of Appeal. But Morris L.J. dissented. And it may be, especially if the British Motor Trade Association is behind the claim, as it often is in test cases, that the case will proceed by way of further appeal to the House of Lords. Personally, as a matter of interest, one hopes it will.

* * * *

Here is another rather tricky case of interest to motor-car dealers and sellers in general. Mr. Charter was a motor-car dealer; and he claimed damages from Mr. Sullivan for non-acceptance of a Hillman Minx car which he had in stock and which Mr Sullivan had agreed to buy from him. The retail price of these cars was fixed by the manufacturers and about a week after Mr. Sullivan had repudiated the contract and refused to accept delivery, Mr. Charter sold the car to another customer at the same fixed retail price as Mr. Sullivan had agreed to pay. The state of the trade was such that Mr. Charter could always find a purchaser for every Hillman Minx car he could get from the manufacturers. The County Court judge awarded Mr. Charter £97 15s being his loss of profit on the repudiated sale. Mr. Sullivan appealed to the Court of Appeal (Jenkins, Hodson and Sellers L.JJ.).[2]

So here you have a plain simple case of wrongful repudiation of contract. No suggestion by the defendant that there was anything wrong with the car or that he was misled in any way; no fraud or misrepresentation. Just a simple case of The Buyer Bilks. So the County Court judge awarded substantial damages against him. Why, then, the appeal? Well, the plaintiff relied on a High Court decision of 1955. In that case—it lasted for five days and the British Motor Trade Association was behind the claim—a firm of motor dealers had agreed to sell a Standard Vanguard motor-car to the defendants who, the very next day after the deal had been made, had informed the sellers that they were not prepared to accept delivery. The plaintiffs sued for £61, the full profit which they would have made on the sale, and you may think that in view of the fact that £61 would in a five days' High Court hearing be much more than completely swamped by court fees and solicitors' and counsels' costs, it would have paid the sellers not to sue, or alternatively the bilking buyer to pay up, if they did. However, the British Motor Trade Association regarded it as a test case and took the matter up on behalf of the sellers. The latter were able to and did indemnify the defendants against their costs of the suit. The defendants in the Standard Vanguard case were ordered to pay the full profit claimed, £61. So, relying on this decision, the County Court judge ordered Mr. Sullivan to pay £97 15s that being, the learned judge held, Mr. Charter's loss of profit on the repudiated deal.

But there was an important distinction between the two cases. In the Standard Vanguard case there was no shortage in the particular district of those cars to meet all immediate demands for them, and the disappointed sellers mitigated their loss by rescinding their contract with their own suppliers who took the car back without making any claim. The result was that the sellers had sold one less Vanguard than they would otherwise have done. Therefore they were entitled as damages to the loss of profit of £61 on the sale. The sellers had suffered a loss of profit which could not be mitigated.

But in the Hillman Minx case the evidence was that the seller could sell all of those cars that he could get. And, in fact, he did resell the particular car for which the buyer defaulted within a week or so. Thus Mr. Sullivan's default involved Mr. Charter in no loss. He sold the same number of cars anyhow, namely, as many as he could get from the manufacturers. Therefore the Court of Appeal set aside the County Court judge's award of substantial damages, holding that since the plaintiff had suffered no "loss directly and naturally arising in the ordinary course of events" (*vide* Sale of Goods Act, England and India) from the defendant's breach of contract he was enttiled to nominal damages only. The Court of Appeal substituted 40 shillings nominal damages for the £97 decreed by the trial court.

Cutting a long story short, it amounts to this. If the demand exceeds the supply, nominal damages only. But if the supply exceeds demand, full loss of profit by way of damages.[4]

* * * *

This is a case worth noting by newspaper editors in India. Most of the great British dailies and virtually all the London ones employ a legal staff to check up on everything which has been published or it is proposed to publish with an eye on the law of libel and contempt of court. Not that these precautions are always effective. Far from it. The writer remembers only a few months ago reading with really shocked amazement comments in a famous periodical on rumours—and in the end that was all they turned out to be—purporting to connect a prominent and much respected citizen with a series of deaths with the hint that these deaths might be murders of the most wicked and callous nature. The individual was not named. But to any adult residents in the town and district—all potential jurymen and jurywomen in which the deaths occurred, the identity of the individual would have been perfectly clear. One, at least, of the articles appeared even before any charge of any kind had been officially brought against him; and the writer remembers saying to himself when he read the articles: "Well, whoever he is, it is impossible now for this man to have a fair trial." And it might have been, if Dr. J. B. Adams had any real case against him to answer. But there was none; and he was honourably acquitted without even having to go into the witness box. But the doctor had been tried by a section of the Press in Britain and America. The sale in Britain of a great American journal had to be prohibited, so damaging were the comments while the case was pending. Well, "after the day, there's the price to pay", and a goodly number of editors must be now sitting ruefully estimating the possibility of enormous damages for libel against their papers and themselves as individuals.

The *Daily Mail* in the present case slipped up in a different way—a civil suit—and for a different kind of offence. In June 1956, the mortgagees of a dwelling house issued an originating summons claiming possession of it. The defendants were the mortgagors, and a married couple, the latter being in occupation. In January 1957, after the evidence had been taken but before the summons was adjourned into open court an article appeared in the *Daily Mail* inaccurately stating the relevant facts. Was the editor liable for contempt of court? "Yes," said Harman J., accepting the editor's apology and disclaimer but fining him for contempt, "as the article was an account of matters proceeding in chambers. Even though the publication would not influence the trial judge, a defendant was entitled to complain of the unwarranted intrusion of a stranger into matters pending in chambers.[5]

Moral for editors in general: (1) Do not report chamber applications and summonses. (2) Remember your reporters have no more right to be present at them than ordinary members of the public, i.e., no right at all.

THE Russians have always been famous for their circus and, judging by reports, the recent performance by the Khrushchev-Bulganin team in Prague appears to have lived fully up to that reputation. The Panama hat has been waved to large crowds and, as long as M Khrushchev has a head to put it on, nobody need grudge him his moment of joy. He never addressed himself only to his immediate audience. He probably knew how it had been got together: and some of the things he said were at least amusing. I liked his analogy of married couples who live not indeed with love but with understanding, if international relations were susceptible of so simple a solution, Marie Stopes would probably not mind at all that the Russian leader was sometimes poaching on her preserves. Having earlier prophesied that the grandchildren of the present generation of Americans will live under socialism, he now says that he is not a prophet and that he dislikes all prophets. Just as well, for many would otherwise have been reminded of Haroun al Raschid's court astrologer—the man whose head was chopped off to prove that while he might know everything about everybody else's future he did not know much about his own. Threats and blandishments were so equally divided in M. Khrushchev's speeches that in the end it is difficult to make out just what he means. The truth about the Hungarian uprising, however, has come out. He now admits that Budapest had been turned into a slaughterhouse, although Rakosi is blamed for it and not Rakosi's masters. But it may be a long time before M. Khrushchev learns the truth about the rest of the world. School books in Russia were rewritten recently: it is a pity that the revision came too late for him to benefit from it. According to the books he read, "the only freedom the capitalist can give us is the freedom to die." M. Khrushchev is too generous; the compliment belongs to him. It is a horrifying thought that such frightful powers of destruction as Russia now possesses should be at the disposal of a buffoon. A man who is irresponsible in speech is very likely to be irresponsible in action too.

* * * *

"Business in Delhi at a Standstill," said a headline in the *Statesman* on Tuesday morning—a day after Mr. Nehru had returned to the capital on completing a highly successful trip abroad. Since in my mind the only business associated with Delhi is government, I first thought it might be a story about conditions in the secretariat during the Prime Minister's absence. (It turned out to be only about the traders' *hartal* in protest against the levy of sales tax.) The notion persists that nothing much is done by way of taking decisions when Mr. Nehru is away, although I am inclined to think that it is less true now than previously. Several important decisions have been taken in the past month; on the tea industry, for instance. And it is only proper that certain decisions should wait when the Prime Minister is away—on important business, let us remind ourselves. Business apart, these visits do the Prime Minister's health a lot of good, in spite of the strain they entail, and while his party keeps cutting his salary, it seems to pay no attention at all to his other working conditions, chiefly leave. His return now, however, has been especially opportune. Unless reason prevails, many strikes of national magnitude impend; and the very fact that Mr Nehru is in New Delhi may give reason a better chance to prevail than would be the case with him away. He has a way with the masses that few others have, and it is masses of employees that the Government will have to deal with in the next few weeks. Mr. Nehru will have to tell them quite plainly that the postman who declines to deliver a letter or the pointsman who refuses to do his part in keeping the railways going does nothing short of scuttling the second plan. That the same is true of those employed in the private sector is a point Labour Ministers will probably have to learn first before they can be expected to explain it to workers.

* * * *

Of corruption there is now so much talk that I am beginning to wonder whether it has suddenly visited us like the Singapore 'flu. A State Cabinet recently announced its discovery that there were corruption and malpractices in almost all its Ministries, and hardly a half-year passes without the Home Ministry at the Centre proclaiming the appointment of yet another anti-corruption department—presumably to root out corruption from the anti-corruption departments created earlier. Those who read a recent article in the *Economist* called "Towards a Grammar of Graft" will remember the pervasiveness of corruption, and we might do well to keep in mind that the phenomenon is by no means peculiar to India or the East. In this country there has always been a measure of petty corruption in the lower levels; nobody ever got anything done in the small causes courts without paying a couple of annas to the liveried *chaprassi*, and no stationery supplier ever got his bill paid before paying his "respects" to the cashier's peon. (Fancy the effrontery of the peon in the income-tax department who approached an acquaintance of mine for *bakhsheesh* immediately after he had been mauled by the income-tax officer!) Fight corruption by all means, but do not imagine that you will ever see the end of it. It is also better to remember that as the activities of the State expand, so will the extent of corruption. With more and more patronage to distribute, there will be more and more opportunities for graft, and some of them will be seized by the fixed-income bureaucrat. There is no getting away from it. What may be relatively easier to remove is inefficiency, which itself breeds not a little corruption. With a little more grease to the elbow of officials, their palms will know less of the viscous stuff. With a little more expedition in the disposal of p.u.d. (paper under disposal) you will eliminate much corruption. Another little noticed point about graft is that it not only buys what one is not entitled to, but that, in many Government offices, it has to be paid for what is due to one. The second is perhaps wider in its incidence and not a lesser form of corruption.

* * * *

Strange as it may seem, writes a London correspondent, there are B.B.C. programmes completely unknown to British listeners at home which have a surprisingly large listening public in other countries. One such is "English by Radio", broadcast in the Overseas Services of the Corporation, which goes out on more than a hundred transmissions each week in no fewer than 36 languages. This is a long-term experiment, for the full course of lessons covers a period of five years. Nevertheless, its listening audience is estimated to number several million in more than sixty different countries. Three of these listeners are shortly to visit Britain as a reward for submitting the winning slogans in a contest organised by the B.B.C. The winner of the first prize was Mr. Sven Hugo Borg, aged 32, a clerical worker, of Storfors in central Sweden, whose successful slogan was "Learn English by radio—let the world's first language become your second." The two runners-up were Mr. Virginio de Castro, aged 28, a Portuguese bank cashier, and Mr Aldo Gasparini, aged 32, a Venetian teacher, whose respective entries were: "Listen to English and the world will listen to you" and "English by radio for easy learning in your easy chair." All three have been invited to London in August to spend a fortnight at the summer school in Hampstead which is organised by the B. B. C. in connection with the programme. There will be lectures and demonstrations of teaching methods, as well as organised trips throughout southern England. The other prize-winners include a listener in Alexandria who was apparently able to continue taking the course in spite of recent events. The list of consolation prizes starts with Angola and ends with Yugoslavia, and comprises some fifty listeners in two dozen countries.

Not many men in our time have had more diverse claims to fame than the Aga Khan who died at the age of 80 last Thursday. A religious leader and the husband of beauty queens, a man whose foresight was exceptional in politics as well as in horse-racing, perhaps the best token of his success is the status which the Ismaili community enjoys today. His fabulous wealth was matched only by the devotion of his followers. In philanthropy and in politics, he displayed a sympathy and generosity of spirit that seemed far removed from the jealousies of his time. His precise contribution to India's political growth may not be easy to assess; but the history of the earlier decades of this century indicates that it was considerable. His influence pervaded and his counsel was sought not in India alone, nor merely in the other lands of Asia and Africa where the Ismailis were concentrated: he was a trusted friend of European statesmen and men of letters, having played a useful rôle during the 'thirties at the League of Nations Assembly and the World Disarmament Conference. In his later years, the Aga Khan's interest in politics became less active, but not his concern for the welfare of his community. It is said that a candle is extinguished in one's heart when a friend dies; for those who know him, the departure of so colourful a personality suggests the imagery of a large and glittering chandelier being put out.

* * * *

Geoffrey Gardner, who passed away in Ireland a few days ago, spent nearly four decades of his life in the service of Indian industry, especially the jute mills. The sad consummation to years of failing health was brought about by pneumonia; but in fact he had never fully regained his strength since the serious operation he had to undergo in November 1955. Mr. Gardner first arrived in India thirty-seven years ago to join Kettlewell Bullens, of which firm he became chairman in 1946. His services to the I.J.M.A. will be long remembered; he was on its committee between 1947 and 1955, during two of which years he was vice-chairman and for two years chairman. His many contacts throughout the world, and the keen interest he took in the problems of jute technology, proved invaluable to the industry in its troubled post-partition days. His departure for New York just under two years ago as the I.J.M.A.'s north American representative marked the continuation of an old connection in newer climes: much of the renewed popularity which Indian burlap enjoys today in that continent can be related directly to his conscientious and diligent efforts in a highly competitive market. The I.J.M.A. has lost in him a trusted counsellor and an old friend; to the many others he has left behind, scattered in all parts of the globe, he also brought a warmth and sympathy they will sorely miss.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

EASIER CONDITIONS PREVAIL

Wednesday, 17th July.

CONDITIONS have been easier in the Calcutta money market during the past week. Funds have been returning, advances against grains and seeds in particular being down considerably. Sugar credit has recorded a fall which is normal for this time of year, while jute accommodation has also decreased. Cotton funds are about maintained. The interbank market has been a little more active, but the call rate remains at 3¾ percent.

In the exchange market, there have been a fair number of tea bills but few on account of gunny shipments. Remittance has been on an average scale. Sterling has partially recovered the fall it suffered in relation to the dollar and other Continental currencies.

* * * *

Bullion was steady on bear-covering coupled with good spot demand. Silver rose from the previous week's level of Rs. 176.25 to Rs. 178, quoted today. The rate for forward delivery was Rs. 177.75. The London price was the same at 78d. and the New York quotation at 90¼ cents showed no change.

Gold was steady in sympathy with silver and the price advanced from Rs. 106.25 to Rs. 108.50. The sovereign improved from Rs. 71.50 to Rs. 71.75.

* * * *

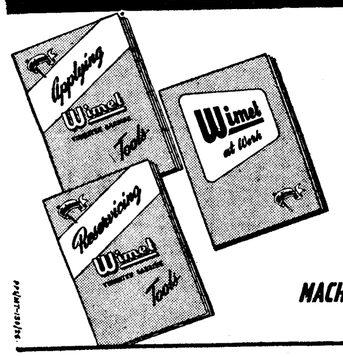
During the week ended 12th July, Government of India Treasury bills for Rs. 81,77,50,000 were sold in favour of the Reserve Bank.

* * * *

A decline of Rs 8.57 crores to Rs. 1,551.49 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 12th July, 1957. The total note issue was Rs. 57 lakhs higher at Rs. 1,581.33 crores. Notes held in the Banking Department consequently rose by Rs. 9.13 crores to Rs. 38.40 crores. Deposits of the Government of India increased by Rs. 27 crores to Rs 53.45 crores, but other Government accounts were Rs. 3.06 crores lower at Rs. 1.41 crores. Balances of commercial banks, at Rs. 78.71 crores, showed a rise of Rs. 2.82 crores. Balances held abroad fell further by Rs. 3.86 crores to Rs. 28.55 crores. Other loans and advances declined from Rs. 84.67 crores to Rs. 81.34 crores, of which advances to scheduled banks against usance bills amounted to Rs. 45.39 crores against Rs. 46.70 crores. Ways and means advances stood at Rs 27.50 crores (Rs. 26.40 crores). Other features showed little change.

* * * *

The return of the State Bank of India for the week ended 5th July, 1957, shows a drop of Rs. 3.03 crores in total deposits to Rs. 313.04 crores. Investments in Government securities and other authorised investments are up by Rs. 1 crore each to Rs. 94.10 crores and Rs. 11.43 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have dropped by Rs. 67 lakhs to Rs. 182.07 crores Cash and balances are, in consequence, shown at Rs. 35.01 crores, or Rs. 7.20 crores less.



* * * *

The statement of the position of scheduled banks for the week ended 5th July, 1957, shows Demand and Time liabilities at Rs. 713.14 crores (Rs. 14.46 crores on account of borrowings from banks) and Rs. 563.76 crores (Rs. 4.12 crores), compared with Rs. 723.39 crores (Rs. 11.25 crores) and Rs. 553.02 crores (Rs. 4.12 crores), respectively, in the previous week Cash and balances with the Reserve Bank have declined by Rs. 1.08 crores and Rs. 5.21 crores to Rs. 41.30 crores and Rs. 73.51 crores, respectively. There is a drop of Rs. 7 lakhs in investments to Rs. 332.64 crores. Advances and bills discounted, at Rs. 914.97 crores, show a fall of Rs 4.10 crores. The ratio to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 9.0 percent and 71.7 percent, against 9.5 percent and 72.0 percent.

* * * *

The directors of the HONKONG AND SHANGHAI BANKING CORPORATION announce that they have decided to pay an interim dividend of £2 a share for the year ended 31st December, 1957. They have also decided to transfer a sum of $(H.K.)25 million (£1,562,500) to the published reserve fund by a transfer of $ (H.K.) 9 million from the balance carried forward in the profit and loss account at 31st December, 1556, and $ (H.K.) 16 million from inner reserves. Arrangements have now been completed with the Government of Hongkong to introduce the necessary legislation to abolish the contingent liability of shareholders. Subject to the consent of the Government of Hongkong to the relative increase in capital, it is proposed to recommend to shareholders at an extraordinary general meeting to be held on 9th August, 1957, that a bonus issue be made in the proportion of one share for each share then held by the capitalisation of $ (H.K.) 25 million of the reserve fund. Such new shares will not rank for the present interim dividend but will be entitled to all subsequent dividends. The proposed capitalisation is being made in connection with the cancellation of the reserve liability of shareholders and should not be construed as an indication of an intention to increase the total amount to be distributed by way of dividend in the future.

3 HANDY POCKET-SIZE BOOKS that will help you to get the best out of CARBIDE TOOLING

These three books are packed full of useful information on all aspects of carbide tooling:—

APPLYING WIMET deals with the basic principles of carbide tool design; choice of angles; use of chip breakers, tool setting, etc.

RESERVICING WIMET discusses the simple technique necessary for efficient reservicing, selection of grinding and lapping wheels, etc.

WIMET AT WORK gives full details of a number of examples showing the current diverse nature of Wimet applications in a variety of industries.

Write on your Company's letter heading, for copies of these helpful books.

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (Base: 1939) has now been brought up to May 1957. Compared with April, the May indices for Government securities and preference shares show falls of 0.3 point and 0.7 point.

There were decreases in cottons 9.9 points, minings and oils 2.5 points, cements 4.1 points, engineerings 8.7 points, teas 5.9 points, papers 91.5 points, sugars 5.6 points and miscellaneous 8.2 points, while increases occurred in banks 3.2 points, coals 1.5 points and jutes 0.4 point.

Combining all the factors, the *Capital* variable yield securities index shows that the index for stock prices in these classes of shares declined by 8.7 points during May 1957.

Stocks and Shares

PRICES FLUCTUATE NARROWLY IN DULL TRADING

CLOSING UNDERTONE STEADIER ON PROPOSED AMENDMENT OF WEALTH TAX BILL

Wednesday Evening.

DULL conditions have prevailed in the stock market during the past week and prices have been fluctuating narrowly. But the closing undertone is steadier because of the amendments to the Wealth Tax Bill which the Finance Minister proposes to put before the select committee. The general feeling is that although these amendments are welcome, they do not go far enough, and the injustice of applying the wealth tax to companies at all has not been removed.

Engineering shares have met with small and selective support. Teas have reacted moderately to the disappointing auction results this week. Jutes remain depressed because operators are anxious that the port congestion will delay gunny shipments, and also because raw jute prices are fairly maintained. Coal shares have been neglected, while the more popular investment counters in the miscellaneous section have attracted a certain amount of interest. Gilt-edged are fairly steady.

Details of the week's trading follow.

* * * *

The gilt-edged market was quiet and trading was of a mixed nature. The enquiry for short-dated issues was maintained and prices were marked up fractionally. Medium and long-dated issues, however, evoked little interest. The 3% Conversion Loan 1986 met with small enquiry and improved slightly to Rs. 73.05 but 3% Non-terminable Paper was unchanged at Rs. 73. In short-dateds, 3% 1957 was better at Rs. 99.80 and 3% 1958 had buyers over at Rs. 99.68; 3% 1959-61 hardened to Rs. 97.87 but 3½% 1961 turned sellers at Rs. 99.35. The 2½% 1961 continued in demand at Rs. 93.60 without attracting sellers, and 2¾% 1960 was marked lower at Rs. 96.45 after payment of the half-yearly interest. In the medium-dated group, 2¾% 1960 was steady at Rs. 93.90 but 3% 1963-65 eased further to Rs. 93.45; 3½% 1964 was quoted lower at Rs. 97.60, as was 3½% 1965 at Rs. 97.55. The 3½% 1967 had sellers at Rs. 98.10 cum-voucher and was later offered at Rs. 97.90 ex-voucher. Long-dated loans ruled quiet, 3% 1970-75 being marked back from Rs. 85.30 to Rs. 85.20, but it closed with buyers at the latter rate; 3% 1966-68 was on offer at Rs. 90.88 and 3½% 1974 was marked lower at Rs. 98.25 ex-voucher. State loans remained dull and neglected with little business passing.

Business in preference shares was once again on a disappointing scale with sellers rather than buyers. In jute, a solitary transaction was reported in Hukumchand at Rs. 96. Among miscellaneous issues, Associated Hotels were done at Rs. 56, Bathgate at Rs. 40 and Dunlop Rubber Second at Rs. 86. India General Navigation changed hands at Rs. 68.25 and Indian Iron were turned over freely at Rs. 99. New Victoria Cotton were marked at Rs. 4.62 and Richardson and Cruddas were crossed at Rs. 58.87.

The feature in the banking section was United Commercial, which had buyers at Rs. 58 but no declared sellers. Punjab National were steady at Rs. 56.25 and United Bank of India "D" shares were sold at Rs. 4.12.

The only share transacted in railways was Dehri-Rohtas at Rs. 10.12.

In the cotton section, Dunbar receded to Rs. 145 while Kesoram were better at Rs. 13.69. Cawnpore Textile were strong today with buyers at Rs. 7. There were buyers of Jayshree Textile at Rs. 6.25.

Coal shares spent a very dull week, with Bengal receding to Rs. 228 on profit-taking. Burrakur were a nominal market at around Rs. 21.75 as were Union at Rs. 17. Central India were easier at Rs. 6.25 while Equitable were unchanged at Rs. 25 and Katras Jherriah at Rs. 57. Dhemo Main were reported at Rs. 5.69 and New Beerbhoom at Rs. 14. South Karanpura were slightly better at Rs. 8.87.

The recent enquiry for jute shares appears to have petered out and selling orders were once again difficult to execute. The only steady feature was Megna which advanced further to Rs. 88. Bally were marked back from Rs. 143 to Rs. 138 and Cheviot from Rs. 130 to Rs. 125. Delta were fairly steady at Rs. 132 and Fort William closed higher at Rs. 18, against the opening price of Rs. 16. Howrah were slightly easier at Rs. 16.37 while National were shaded at Rs. 18.50.

Electric supply shares were dull and neglected. Calcutta were offered at the lower rate of Rs 12 and Patna were sold at Rs. 10.50. A small lot of United Provinces changed hands at Rs. 120.

Little interest was shown in sugar shares, except Carew which met with some enquiry and improved from Rs. 7.25 to Rs. 7.75. Ramnugger Cane were slightly better at Rs. 21.81, and S.K.G. changed hands at their previous rate of Rs. 10.

In the engineering section, Indian Iron fluctuated narrowly around Rs. 20.20 after being sold down at one time to Rs. 20.09; tonight's closing quotation was Rs. 20.33. Bhartia Electric Steel receded to Rs. 5, but Braithwaite were better at Rs. 26.75. Ishapore at Rs. 114, while Guest, Keen, Williams were better at Rs. 27.75. Kumardhubi Engineering were shaded at Rs. 9 as were Jessop at Rs. 24.12 and Richardson and Cruddas at Rs. 14.50. Textile Machinery moved narrowly around Rs. 17.60.

In paper, Orient were slightly better at Rs. 25.15, while Titaghur and India Paper Pulp were unchanged around Rs. 32.21 and Rs. 20, respectively. Star Paper met with some enquiry and rose from Rs. 9 to Rs. 10.12.

In cement, Orissa were steady at Rs. 14, while Sone Valley were dull at Rs. 6.31. Ashoka were marked at Rs. 9.44 and Dalmia were shaded at Rs. 11.12. Jaipur Udyog changed hands freely around Rs. 12.25. The outstanding feature in this section was Assam Bengal Cement, which moved up from Rs. 5.12 to Rs. 5.75.

In insurance, Hercules were crossed at Rs. 19 and Ruby General were slightly better at Rs. 5.62.

In shipping, India Steamship recovered from Rs. 10.45 to Rs. 10.55 and Port Shipping from Rs. 16 to Rs. 16.12. India General Navigation were steady at Rs. 78, without any business being reported.

Among miscellaneous industrials, Alkali and Chemical met with selling pressure and closed lower at Rs. 13.44. Angelo Brothers were slightly lower at Rs. 19.25, while British Burma Petroleum, British India Corporation, and Balmer Lawrie were steady at Rs. 2.70, Rs. 6.70, and Rs. 152, respectively. Dunlop Rubber met with good investment enquiry and were steady at Rs. 20.87 (the recent "Rights"

issue was a notable success). Hindustan Lever were better at Rs. 19.37 and Imperial Tobacco were steady around Rs. 14.37. Indian Aluminium were shaded at Rs. 13.62 while Indian Cable were slightly better at Rs. 24.25. Indo-Burma Petroleum were higher at Rs. 26.37 and Indian Wood Products were marked at Rs. 36.75 ex-dividend. Martin Burn improved to Rs. 23.81 and Metal Box to Rs. 26. National Insulated Cable were higher at Rs. 21.44, while National Carbon closed slightly easier at Rs. 24.44. National Tobacco were in demand at the higher rate of Rs. 100.87 while Rallis were easier at Rs. 32.37. Shaw Wallace, on the announcement of a 10 percent dividend (same as last year) met with investment enquiry at Rs. 11. Rohtas Industries were steady at Rs. 18.19.

In the mining group, Indian Copper were steady around Rs. 3.35, as were Orissa Minerals at Rs. 19.69. Burma Mines were lower at Rs. 2.43, as were Metal Corporation at Rs. 7.44. Karanpura Development were unchanged at Rs. 12.50.

Tea shares were maintained around their previous levels although profit-taking continued. Anandabaug were traded at Rs. 23. while Baghmari were taken at Rs. 23.75. Bishnauth were easier at Rs. 22.25 as were Brahmapootra at Rs. 6.19 and Brooke Bond at Rs. 19.56. Dhelakhat improved by 50nP to Rs. 24.25 and Dhunseri were quoted at Rs. 14. Grob "B" came to business at Rs. 16, as did Methoni at Rs. 22, Murphulani at Rs. 32, Rajgarh at Rs. 44.75 and Tezpore at Rs. 22. Tyroon improved to Rs. 45. Banarhat came to business at Rs. 342 and Baradighi, Bhatkawa and Birpara were done at Rs. 23.25, Rs. 24.50 and Rs. 135, respectively. Hasimara were marked at Rs. 23.62, as were Huldibari at Rs. 24.50, Nagaisuree at Rs. 162 and Rajabhat at Rs. 19.50. Killcott were crossed at Rs. 20. Nagri Farm were fractionally better at Rs. 20 and Sungma and Tukvar changed hands at Rs. 11 and Rs. 11.75, respectively. Dauracherra were marked at Rs. 10 and Kaliti improved to Rs. 7.27. New Samanbagh were wanted at Rs. 17 as were Patrakola at Rs. 175 and Teliapara at Rs. 172. Jayshree were traded at Rs. 10.

* * * *

The profit of the TATA OIL MILLS COMPANY has declined by Rs. 10.05 lakhs to Rs. 19.99 lakhs for the year ended last March. Providing Rs. 10.30 lakhs (Rs. 11.75 lakhs) for depreciation, Rs. 9.10 lakhs (Rs. 14.86 lakhs) for taxation, bringing in Rs. 11,453 and making other adjustments, there is Rs. 8.10,245. The ordinary dividend has been cut from Rs. 3 to Rs. 2.50 a share to absorb Rs. 7,00,746, leaving a carry-forward of Rs. 10,307. The directors say that the company asked the Government of India for permission to issue 56,086 new ordinary shares of Rs. 25 each by capitalising a sum of Rs. 14 lakhs from the share premium account, and to allot to existing shareholders one fully paid-up ordinary share as bonus for every five ordinary shares held by them. The Government refused to agree to this issue on the ground that the free reserves of the company, after capitalisation, would be less than 20 percent of the increased paid-up capital.

* * * *

The results of the Tata hydro-electric companies for the nine months ended last March are published below. The directors state that under the Indian Electricity Rules, 1956, the financial year for all electricity undertakings has to end on 31st March. The companies' financial years used to end on 30th June, but in accordance with the new move, the year 1956-57 has been closed on 31st March, 1957. The profit of the TATA HYDRO-ELECTRIC POWER SUPPLY COMPANY has amounted to Rs. 27.94 lakhs. The ordinary dividend has been declared at Rs. 5.62 a share. Notable allocations include taxation reserve Rs. 2.55 lakhs, general reserve Rs. 3.25 lakhs and wealth tax Rs. 1.88 lakhs. The carry-forward is Rs. 36,412.

The TATA POWER COMPANY has made a profit of Rs. 61.86 lakhs. The ordinary dividend is Rs. 56.25 a share. Important allocations include taxation reserve Rs. 3.70 lakhs, wealth tax Rs. 3.78 lakhs and general reserve Rs. 5 lakhs. The carry-forward is Rs. 30,178.

There is a profit of Rs. 34.75 lakhs for the ANDHRA VALLEY POWER SUPPLY COMPANY. The ordinary dividend has been declared at Rs. 56.25 a share. General reserve is allocated Rs. 6 lakhs. Taxation reserve absorbs Rs. 3.95 lakhs and wealth tax Rs. 1.97 lakhs. The carry-forward is Rs. 41,046.

Bombay Market

SHARE VALUES STEADY

TALK OF SATISFACTORY T.I.S.C.O. DIVIDEND

Wednesday Evening.

THE Bombay stock market closed on a steady tone during the past week, and share prices were maintained in spite of intermittent spells of profit-taking. Lower carry-forward charges helped improve the technical position. The announcement of a higher dividend by Tata Locomotive was interpreted bullishly. Considering the expansion in the activities of the company, it was expected that current working would show improved results. Steel shares were prominent and fresh support raised prices. Talk of a satisfactory dividend from Tata Iron tended to encourage bull operators. The prospects of a further loan to the company by the World Bank induced support. Hopes of modifications in the Wealth Tax Bill at the select committee stage were a helpful factor. The report of a $90 million loan to the Indian railways from the World Bank assisted sentiment.

Tata Steels soared to Rs. 176 on fresh support, coupled with short-covering, while Indian Iron closed steady at Rs. 20.30 towards the close, although substantial selling was reported from Calcutta interests. Tata Locomotive improved to Rs. 157 on a higher distribution and Premier Construction were supported at Rs. 183 by knowledgeable quarters. Larsen and Toubro were taken at Rs. 15.30 on expectations of an increase in activity. Routine turnover was seen in automobile shares, and Premier Automobiles came to hand at Rs. 89. Hindustan Motors were freely offered at Rs. 7.30.

Replacement buying lifted prices in the mill group, and Bombay Dyeing improved to Rs. 586. Rumours that increased prices had been realised for its rayon products were responsible for an improvement in Century, which rose to Rs. 443 on hectic bear-covering. Svadeshi were taken at Rs. 187.50 on interested support. Kohinoor were transacted at Rs. 279.50 and Simplex realised Rs. 171. Influential support lifted India United Ordinary to Rs. 11.50.

Steady conditions prevailed in the miscellaneous group. Sugar shares were selectively wanted. Belapur made Rs. 238 while Phalton Sugar were fractionally higher at Rs. 143.25. In the cement group, Associated Cement were taken at Rs. 160 and Digvijay Cement were maintained at Rs. 141.50. Steamship shares were about steady and interest was taken in Great Eastern Shipping at Rs. 20.25. Scindia Steam were done at Rs. 20.05. Short-covering raised Bombay-Burmah to Rs. 608 and National Rayon were absorbed at Rs. 236. Tata Chemicals were transacted at Rs. 18.20 and Wimco were taken at Rs. 154. In the mining group, Indian Coppers were steady at Rs. 3.34 and Shivrajpur Syndicate made Rs. 82.50.

Banking shares were steady, and some interest was taken in United Commercial Bank at the higher price of Rs. 59. Bank of India were done at Rs. 139.50. Insurance shares were freely offered, with New India Assurance slipping back to Rs. 42.75.

Satisfactory dividend announcements by the Tata hydro-electric group helped maintain sentiment in electricity supply shares. Ahmedabad Electric were taken at Rs. 95.50 and Tata Power changed hands at Rs. 1,227.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last-named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise].

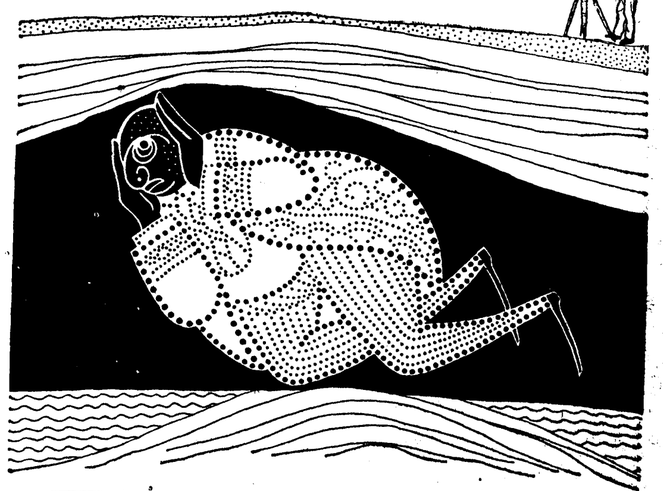
The search is on...



by Adipocere

(Pronounced 'adi-po-saire')

I am all over the world, but hidden well inside the earth's crust. They keep on looking for my various forms, particularly petroleum...and in fact, at this very moment, a search is going on in India. In West Bengal, STANVAC are trying to pin-point me in an area of 10,000 square miles. They have been at it for 3 years and their top geologists and scientists have brought along a whole stream of complicated instruments and equipment and are spending enormous sums of money (I overheard, way above me, some talk of their having spent fifteen crores of rupees already). They think they'll find me!

I never went to College, but years and years of experience with these tough oilmen crawling all over has taught me the methods they use to trap me. Broadly speaking, surveys are geological and geophysical. The first is like X-raying the earth below, and the second is an instrumental and scientific method of locating my actual hide-out. Such terms as Seismic, Gravimetric, Magnometric and other jaw-breaking words cover this process and mean a whole lot of highly complex and specialised instruments.

But I am still in hiding and all I say is "Come and get me, if you can!"

STANVAC – *the name that stands for progress*

STANDARD-VACUUM OIL COMPANY—Incorporated in the U.S.A. with limited liability

LIFE INSURANCE SINCE NATIONALISATION

DENIAL OF INITIATIVE

(BY AN INSURANCE CORRESPONDENT)

TO Mr Nehru, the Life Insurance Corporation seems to represent an experiment in the socialisation of an important community service; it is born of his deep-rooted ideological concepts. To the Government of India, it is an experiment in the nationalisation of a private industry: its operation is the chief problem and fiscal gain the main aim. To the civil service, it is one more acquisition, one more lever added to its wheel of power. To the common man, the Corporation is one more Government department associated traditionally with delay and confusion. His only consolation is security, his main dissatisfaction its impersonal nature. He has been accustomed for years to the tradition of a personalised service, which he feels he will no longer receive.

While Mr Nehru viewed insurance nationalisation as promoting the "socialist pattern" of society, Mr Deshmukh viewed it primarily as a fiscal weapon. That made him take over life offices suddenly without giving any thought to initial preparations, or how best to run an industry where about 200 companies were competing with one another on varying terms, conditions and standards. Having frozen the funds in the manner he did, he left the work of running the Corporation to the civil service. While the civil service was endeavouring to establish some semblance of order, Mr. Deshmukh suddenly left the Government on a wholly local issue. Viewing it mechanically, the civil service produced a constitution which, as usual, gave it all power. The business aspect of life insurance was based on high-sounding theories, but the structure was on a system that made all authority rest with the centre. The divisions and zones that have been created for procuring the required quantum of business have no authority to set up the machinery for obtaining new business. The widespread discontent, dislocation and apathy of the field force, including the agents, are the result of a faulty mechanism, and of a lack of imagination and experience among those in charge of the Corporation. They have, of course, an amazing capacity to draft circulars, sometimes running into pages quite a large number of which are reversed very soon. But that has only confused the harassed executives. To escape the ordeal of memorising and interpreting the circulars the executives have developed the habit of avoiding direct responsibility for anything.

Fall of Business

This has resulted in an alarming fall in new business. Such facile phrases as "teething troubles" and "inevitable dislocation in any changeover" cannot wholly explain the fall. A large part of it was avoidable. The recent apologia of Mr. Bhagat, Deputy Finance Minister, in Parliament has failed to impress. The fall in business by Rs. 68 crores from the figure of Rs. 268 crores in 1955 is a serious matter.

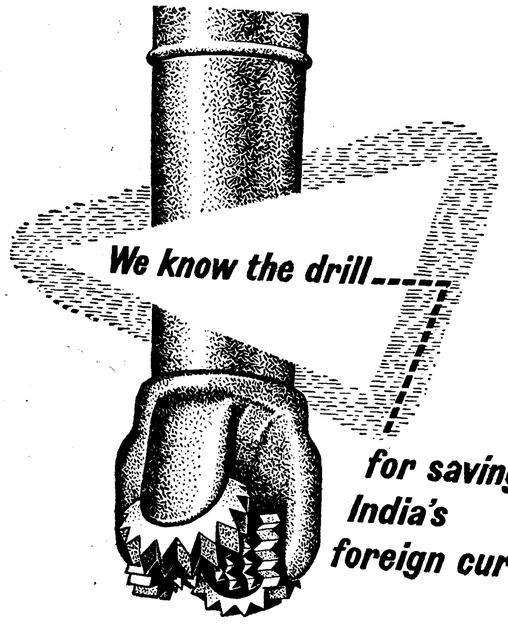
On an objective appraisal, Mr. T. T. Krishnamachari, has made the candid pronouncement in the Lok Sabha that the present set-up is wrong. He characterised the Corporation as a hierarchy without the division of responsibility. Such forthright condemnation of the department over which he presides and for the working of which he is finally responsible shows that his conclusions are born of convictions based on his own study. He is concerned with the practical aspects and to that his mind has been applied. Business and bureaucracy go ill together. Mr Krishnamachari should take the initiative and introduce a scheme of radical reform.

Life insurance is a personalised community service. It is also a business. In it, therefore, business ethics and principles must play an important part. A hierarchy where all authority rests with the centre is ill suited to it. Therefore the first approach of reform should be directed towards devising a scheme for a proper division of responsibility, real and practicable. This, carried to its logical end, leads to the view that a number of independent corporations, and not one, should be set up. Mr. Asoka Mehta, the P.S.P. leader, was the first to moot this idea in the Lok Sabha during the debate on the Life Insurance Corporation Bill. To Mr Deshmukh's recital of alleged gross mismanagement and embezzlement of funds in the private sector in insurance, his answer was that nationalisation for "escapist reasons" was undesirable. Against Mr Deshmukh's advocacy of a monolithic corporation, Mr Mehta entered the plea that five corporations should be created. His view received scant support then. Today it seems that he was right, and the Government wrong.

Need for Independent Corporations

Corresponding to the current zones, there should be five independent corporations. The corporations should be autonomous with independent boards, their own rates, terms and conditions of business and their own methods of organisation suited to local conditions. They must have the authority to open branches in the regions of other corporations. The idea is to break the monopoly and introduce competition. Competition stimulates service and service will stimulate new business. It does not follow that nationalisation means monopoly. In a country like India, a community service like life insurance can prosper only under the stimulus of competition. This may appear as a reversal of policy of the Government. But it is not. By merely increasing the number of corporations the character of nationalisation will not be altered. Merely the organisation will be modified, so as to make nationalisation a success.

Mutual Companies



Nationalisation, for a community service like life insurance, is a new instrument. While socially necessary utilities may be produced and controlled by the State, it does not necessarily follow that, in fact, they should be so produced and controlled. If, therefore, a social utility like life insurance should not be a source of private profit, it is not necessary to nationalise the service either. The companies could have been easily mutualised with every policyholder a participant in the gain or loss of a common venture. The world's largest insurance companies are mutual companies. In a scheme of this nature, the community is the shareholder. The community participates in profits. It also shares the losses. A few mutual companies, formed with the merger and alliance of private insurance companies, could have functioned in India. If fiscal considerations were the motive behind nationalisation, it was a comparatively easy matter to take control of the life fund without making such violent and radical changes.

Even to Mr Nehru, for whom nationalisation of life insurance is more a social necessity than a fiscal weapon, mutualisation would have provided the answer. There is no particular magic in the word "socialisation." The measuring rod should be the good of the community. "Social good" would have been as much ensured by mutual companies, if necessary the Government could have had its own directors on them.

Wasteful Experiment

The conclusion is inescapable that nationalisation of a service like life insurance may do more harm than good. No wealth has been created for the effort has been to do the same thing in a different form. In the process, the waste of man-hours has been colossal, and the waste of effort incalculable. No rational explanation for such an experiment can be found.

The Gaitskellian school of economists have discarded nationalisation as a social weapon. Workers' participation in a common venture is of greater social consequence than mere absorption of profits of, say, 6 percent. The State is to be viewed as a federation of units where the employer and employee work on equal terms for the realisation of a common objective. Such a system eliminates the despotism of the bureaucracy and creates the dynamism which ensures economic as well as social progress.

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

THE RISING TREND IN INDUSTRIAL PRODUCTION

FOREIGN EXCHANGE FOR EXPANSION PROGRAMMES

(FROM A NEW DELHI CORRESPONDENT)

THERE were two reasons for the general mood of optimism which prevailed at the meeting of the Central Advisory Council of Industries last Saturday, in spite of the critical foreign exchange shortage which the country is now facing. One was the striking rate of growth in industrial production which has been actually achieved or capacity for which has been licensed since the Council last met a year ago. The second was the call for further expansion by Mr. Morarji Desai, Central Minister for Commerce and Industry.

The growth in industrial production which has recently been achieved is shown by the increase of the index figure (base year 1951 = 100) from 132.8 during 1956 to about 140 during the first three months of the current year. As the following statement shows, existing and licensed capacity has attained or even surpassed the second plan targets in 16 out of 38 important industries, almost wholly in the private sector, which are governed by the Industries (Development and Regulation) Act.

Industry	Unit	Annual capacity target in second plan.	Existing and licensed capacity as in February 1957.
ENGINEERING			
1. Abrasive (coated)	'000 reams	255	180
2. Aluminium	'000 tons	30	16.5
3. Asbestos cement sheets	'000 tons	300	141.6
4. Bicycles	'000 tons	895*	1,465.6
5. Cement	Lakh tons	160	154.99
6. Complete ring spinning frames	Nos.	2,810	1,896
7. Diesel engines	'000 h.p.	220	N.A. (actual production in 1956: 22,169 in number)
8. Dry Batteries	Lakh nos.	2,250	2,244
9. Electric Fans	'000 nos.	600	672.2
10. Electric Motors	'000 h.p.	600*	783.32
11. Electric lamps	Lakh nos.	500	276.24**
12. Grinding wheels	'000 h.p.	4,726.4	2,804.75
13. Hurricane lanterns	'000 nos.	5,500	4,926
14. Machine tools (production target)	Lakh rupees	1,000	390
15. Power-driven pumps	'000 nos.	86	64.8
16. Power transformers	'000 kVa	1,500*	964.4
17. Radio Receivers	'000 nos.	213*	296
18. Refractories	'000 tons	1,000*	1,021 15
19. Sewing Machines	'000 nos.	85*	135.93**
20. Storage batteries	'000 nos.	350*	316.8
NON-ENGINEERING			
1. Art Silk Yarn	Million lbs.	68.3*	78.3
2. Caustic soda	'000 tons	150*	95.98
3. Matches	'000 cases	706	705.6
4. Paints and Varnishes	'000 tons	65	64.8
5. Paper and paper board	'000 tons	450	413.84
6. Plywood	Lakh square feet	1.675	1,907.55
7. Power Alcohol	Lakh gallons	360	440.39
8. Salt (production target)	Lakh maunds	1,000	869.48**
9. Soap	'000 tons	357	253.27
10. Soda Ash	'000 tons	253	444.6
11. Sugar	'000 tons	2.500	2,500**
12. Sulphuric acid	'000 tons	500	276.88
13. Super phosphates	'000 tons	720	444.3
14. Textiles:	Million lbs.		
(a) Cotton yarn	Million yds.	2,080	1,718.95**
(b) Cotton Cloth	'000 tons	4,950	5,220.97**
(c) Jute	'000 tons	1,200	962.4**
15. Tyres (automobile)	'000 nos.	1,460*	1,269.6
16. Tubes (automobile)	'000 nos.	1,460*	1,310.4
17. Tyres (bicycle)	'000 nos.	11,800*	7,076
18. Tubes (bicycle)	'000 nos.	11,800	8,470

* These targets have since been revised upwards.

** Annual rate based on actual production in February 1957.

New and Existing Capacity

A note prepared by the Central Commerce and Industry Ministry points out that there is always a difference between licensed capacity and the capacity which may be actually set up. Given the difficulties of foreign exchange, it will not be safe to assume that the capacity licensed will in all cases materialise fully. Every step should, therefore, be taken to see that the plan targets are actually fulfilled. "One of the methods of overcoming the difficulty in the way of creating extra capacity," the note says, "may be to make fuller use of installed capacity by extra shifts and Sunday working. The policy of the Government has been to encourage the working of extra shifts wherever practicable. In fact, expansion of existing units is licensed only in such cases where the multiple shift working of the existing capacity has been adopted already. As a rule, it is not necessary for an industry to seek permission under the Industries Act to increase its output by making fuller use of installed capacity. Where, however, the industry is dependent on imported raw materials or components, an increase in its output does raise a question of foreign exchange expenditure, which must be scrutinised with due regard to the essentiality of the product. Increasing use of indigenous raw materials and components will enable industries to raise their output without depending on import licences. To help industries increase the proportion of indigenous components in their product, the Government has been relatively liberal on the import of plant and machinery needed to produce marginal and component items to complete the manufacturing programmes already in progress. For example, the automobile and bicycle industries have been given import licences to install new capital equipment to eliminate their dependence on imported components.

"However, extra shift working and the supply of items of balancing equipment, to complete manufacturing programmes already in progress, will not suffice to meet our needs. There must continue to be a good deal of new capacity set up with fresh capital goods and equipment if the economy is to continue to progress. The import of capital goods worth Rs 154 crores was licensed to private parties during 1956, and, despite the prevailing foreign exchange situation, approvals by the Government during 1957 up to June amount to about Rs. 50 crores. While capital goods imports will continue to be licensed, special attention has to be paid to the following possibilities in view of the tight foreign exchange position: (a) fabrication of machinery in India to a much larger extent than in the past, implying a larger priority to machine-building industries as a whole; (b) encouragement of schemes in which foreign capital comes in as a partner of Indian capital; and (c) import of capital goods on terms of deferred payment. The Government has decided as a matter of policy that when new productive capacity is to be created with wholly or substantially indigenous machinery, permission should, as a rule, not be refused. Further, with a view to helping negotiations relating to deferred payment terms, the Government has decided to exempt from income-tax the interest payments involved in approved cases. Further steps at facilitating this procedure are under consideration."

Response from Industry

Against the background of the Government's policy as thus stated, the industrialists who constitute the bulk of the Advisory Council's membership readily responded to the Minister's call for "an introspective and constructive approach". Mr. Babubhai Chinai, president of the Federation of Indian Chambers of Commerce and Industry, pledged his organisation's full co-operation with the Government in conserving and earning foreign exchange. Sir Sri Ram, who expressed concern at the fact that Indian exports were being priced out of world markets, combined an appeal to the Government for various concessions and incentives to exporters with a call to manufacturers not to add overheads to export prices, and to accept only a small margin of profit or even a loss in the interests of assisting the export drive. A point which almost all speakers made was that the Government should take steps to prevent an undue rise in the prices of food and of agricultural raw materials for industry. The need for greater attention to the expansion of shipping and the improvement of port facilities was also stressed by many members. Mr. S. N. Haji said that the foreign exchange cost of a ship could be recovered within two or three years by the saving on freight, and the investment would thereafter result in a net improvement of the foreign exchange position for many years.

Like Mr. Morarji Desai, who denied that there was anything new in the Government's attitude to the private sector and to foreign capital, the trade union members of the Council claimed that their attitude was never other than co-operative. They also said that industrial peace was conditional on the discharge of their respective obligations, not only by the workers, but also by employers and the Government. But the fact remained that Mr. Vasavada did not renew the I.N.T.U.C.'s call for a general 25 percent increase in wages. Mr. Dange, the Communist leader, was willing to concede "normal" profits to industry if workers were provided with a normal standard of living.

Dr V. K. R. V. Rao Differs

Dr. V. K. R. V. Rao, the economist who is to be Vice-Chancellor of Delhi University, was the only member of the Council to strike a pessimistic note. He doubted whether the Labour Conference had yielded anything more than vague sentiments of goodwill, and asked how workers could be expected to agree to a wage freeze without a simultaneous freezing of prices and profits through the application of the requisite controls. Dr. Rao was also critical of what he regarded as the indiscriminate encouragement of expansion in the private sector. Claiming that excessive investment was being allowed in the machine-using consumer industries, Dr. Rao said that this ran counter to the second plan strategy of concentrating resources on the development of capital goods industries and relying on small-scale and cottage industries mainly to meet the additional demand for consumer goods. But he cited no instances to establish the charge that large-scale consumer industries are being allowed to expand otherwise than for increasing exports.

Mr. Gulzarilal Nanda, Minister for Labour, replied in a mild and conciliatory way to Dr. Rao's remarks on the results of the Labour Conference. The Minister pointed out that he had not asked trade unions to accept a wage freeze, precisely because of the absence of the conditions mentioned by Dr Rao. But the achievement of the Labour Conference was very considerable, as the workers' leaders had abandoned the cry for a general wage rise, disowned methods of violence and go-slow tactics, accepted the need for increasing productivity, and agreed to rationalisation on the basis of certain agreed principles. Employers for their part, Mr. Nanda said, had agreed to an industry-wise examination of the scope for the improvement of wages, and to the association of workers with management on a voluntary basis.

Extra Excise Duties

A Bill for the levy of additional excise duties on sugar, textiles and tobacco, to replace the State sales taxes on these commodities, may be introduced by the Central Government during the present session of Parliament. This is only part of the effort which the Centre is making to rationalise the sales tax structure and, in the process, to secure a net increase in the revenue derived by the States from this source. Two other measures are now being discussed with the State Governments. One is for the levy of uniform—and high—rates of sales tax on luxury goods, and the other is designed to give the Centre control over the levy of sales tax on foodgrains, fertilisers and edible oils.

The first measure is in pursuance of the decision taken by the National Development Council last December that the sales taxes levied in the States on mill-made textiles, tobacco (including manufactured tobacco), and sugar should be replaced by a surcharge on the Central excise duties on these articles, the income derived from it being distributed among the States on the basis of consumption, subject to the present income derived by the States being assured. Since then, it has been decided that all varieties of textiles, and not only mill-made cloth, should be exempted from sales tax. Otherwise, it is felt, there will be scope for evasion and consequent administrative difficulties. The States have been informed that they cannot participate in the scheme without completely removing all levies, whether on sales or purchase or by whatever name they might be called. The yield from the additional excise duties will be assigned wholly to the States, subject only to the cost of collection, and will ensure the revenue presently derived by a State from sales tax on the items which it would be exempting. The Finance Commission was asked to recommend the basis for distribution of the proceeds, subject to the above guarantee, since the Centre's own effort to ascertain the States' present revenue from sales tax on the three commodities proved unsuccessful.

JUST OUT

INVESTORS' ENCYCLOPAEDIA

1956-57 EDITION

An all India Directory, giving details about various public limited concerns in about 25 sections, marked by thumb index and arranged alphabetically.

Details about Port Trust, Improvement Trust, Municipal and Government Loans, Income Tax, Super Tax, Estate Duty, Securities Control Act, State Enterprises, Control of Capital Issues, Industries (Development and Regulation) Act, Stock Exchange Rules, Maps showing the location of various industries in various states as also a map showing the various states.

Details about the progress made by industries in the First Five Year Plan and expected turn-over in the Second Five Year Plan.

A reference book for all those connected with Trade, Industry and Finance.

The States, which do not maintain commodity-wise figures of the yield from sales tax, informed the Centre on the basis of *ad hoc* calculations that half of their total sales tax revenue of Rs. 72 crores was derived from these three articles alone. Finding this incredible, the Centre asked the Finance Commission to investigate.

Luxury Goods

The second measure is also in pursuance of a decision taken by the National Development Council last December. It was then agreed that automobiles, radio sets and similar articles should be taxed at a uniform rate. But the scope it is now sought to extend to not only luxury articles but also "goods of small bulk but of considerable value". In a communication to the State Governments, the Union Finance Ministry has cited the Taxation Enquiry Commission's recommendation that sales tax on luxury goods should be levied at distinct and higher rates than on ordinary goods. The Commission recommended the levy at a single point, ordinarily the last stage. Commending a uniform rate in all the States in order to check evasion the Central Finance Ministry has said that the rates, for the same reason, should not be linked with the price, but with the nature of the article. The rates suggested by the Ministry are as follows: (1) 9 percent on motor vehicles including scooters; refrigerators, wireless reception instruments, radios and radiograms; gramophones and records, musical instruments, cinematographic equipment including cameras, domestic electrical appliances other than torches and cells, all clocks, time pieces and watches, upholstered furniture, sofa sets and dressing tables, all arms, jewellery, cigarette cases and lighters, dictaphones, telephones and loudspeakers, pile carpets, furs, binoculars, foreign liquor, domestic articles made of stainless steel; silk and woollen fabrics, ivory products, and leather manufactures other than footwear. (2) 6 percent on a smaller list of items including bicycles and toilet articles. (3) 1 percent on bullion and gold and silver articles.

The comments received by the Central Finance Ministry on these proposals from sister Ministries at the Centre and from State Governments are varied and interesting. The Railway Ministry pointed out that, so far as the railways are concerned, motor vehicles, wireless reception instruments and such things are not "luxuries" at all. Sales tax at 9 percent on these items would seriously affect railway revenues. The Transport Ministry likewise expressed itself strongly about the likely effect of the proposed rate of sales tax on motor vehicles, and said that the maximum it could approve of was 6 percent. Many State Governments held that a rate of 6 percent for bicycles was too high, while each asked for the exemption of particular items or a lower rate of levy. For example, Uttar Pradesh wanted ivory to be exempted, and argued that since the profit margin in bullion and specie was low, there was no case for increasing the exemption fee of 1 percent which was already being levied by the State Government. Some States, on the other hand, suggested additions to the list of luxury goods. The exchange of views is continuing.

Tax on Foodgrains

The third proposed measure, for the inclusion of foodgrains, fertilisers and edible oils in the list of "declared" goods under the Central Sales Tax Act, is meeting with strong resistance from State Governments. Besides the three commodities named above, the Central Ministry of Food and Agriculture started by seeking the inclusion of cattle feed, vegetables, potato seeds and milk as articles of special importance in inter-State trade. But even the smaller list has been strongly opposed by the States, which argue in the same breath that they cannot afford the loss of revenue and that, being responsive to popular sentiment, they will not be so rash as to impose high taxes on food articles. Though the State Chief Ministers reiterated their opposition at the last meeting of the N.D.C. in June, the Centre has not given up its effort to secure the three additions to the list of "declared" commodities.

World Bank Loan

Though the World Bank loan of $90 million for the railways for the current year is far short of the average annual requirement of foreign exchange for India's railway development programme under the second plan, there is no disposition in official circles to express any disappointment. It is pointed out that, together with the two loans sanctioned already during 1957 for the Trombay power project ($9.8 million) and towards the purchase of three *Boeing* jet aircraft by Air-India International, World Bank assistance during the year stands at $105.4 million. This is more than a quarter of the Bank's present annual rate of disbursements. More projects are due to be considered by the World Bank, not only for the development of port facilities as indicated already by its President, Mr. Eugene Black, but also for steel expansion. It is reported that the Bank might be willing to provide half of the $35 million required additionally for the expansion of Tatas' steel plant in Jamshedpur. (The hint dropped the other day by the Finance Minister, Mr. T. T. Krishnamachari, of possible market borrowing by Tatas in New York to the tune of Rs. 8 to Rs. 9 crores, is believed to refer to the other half of the sum.) Altogether, therefore, the scale of assistance from the World Bank is likely to be substantial. Attention is now centred on the prospects of a loan from the U.K., in the absence of which the Government might be compelled regretfully to draw down the sterling reserve further.

London

COMMONWEALTH CONFERENCE IN RETROSPECT

MISGIVINGS ABOUT FREE TRADE PLAN UNJUSTIFIED

(FROM OUR LONDON CORRESPONDENT)

THE official communiqué issued at the conclusion of the Commonwealth Prime Ministers' Conference indicated, as was in fact anticipated, little more than an exchange of views on a fairly high level on the two principal economic subjects of general concern—the capital needs of the Commonwealth and, secondly, the impact on Commonwealth trade of Britain's participation in the proposed European free trade area. In the case of the former, the only practical proposal before the representatives was the suggestion for a Commonwealth development bank and it was agreed even before the formal discussions began that it was of small value at the moment, and that was that. Thereafter, having listed their various needs on the one hand, assessed the capacity of their own resources, the help to be secured from other Commonwealth countries, the probable extent of Britain's contribution (which has averaged about £150 million a year over the past three years, a level it is hoped to maintain), it was almost inevitably decided that plans would have to be trimmed to the resources available while the Commonwealth Economic Committee devised ways and means of attracting the support of private investors all over the world.

The proposed free trade area for Europe was neither approved nor disapproved, but the effects of British participation on Comonwealth trade has, as an outcome of the Ministers' discussions, come in for detailed examination by some 25 financial experts drawn from Commonwealth offices in London or from the countries themselves under the guidance of Sir Roger Makins. The exclusion of agricultural produce has been accepted, but other policy changes will have to await the experts' report after examining the possible repercussions in detail. Meantime, Mr. Macmillian has reaffirmed the case for participating in the European free trade area and given assurances that Commonwealth misgivings are understood and are unjustified and that the interests of the members will be fully safeguarded. Indeed, he sees in the possible development of trade, which is expected to result, perhaps the only hope of increasing funds for overseas investment.

Inflation Warnings

The Government has been well aware of the danger to all these hopes of allowing inflation to get the upper hand. On the whole its general economic policy has been well conceived and has produced certain beneficial results—the improvement in the balance of payments and a slowing down of the rise in the cost of living in spite of developments adverse to both. Nor has it avoided adopting unpopular measures when these were necessary, though not always perhaps as soon as they should have been adopted. Nevertheless, inflation has not been averted. Last year's "price plateau" appeal by Mr. Macmillan when he was Chancellor of the Exchequer, postponed the full impact of the basic deterioration in the situation. That "plateau" has now apparently gone. The refusal of the shipbuilding and engineering employers to go beyond a 3 percent wage increase to maintain the balance foundered on the granting of a larger rise to the railwaymen, which has spread throughout industry with disastrous consequences. Coal, transport, postage, engineering products, port dues and a host of other things are now rapidly rising in price. The next round of inflation is under way, as rapidly that simultaneously proceeding in the United States and Germany—so on balance we cannot draw advantage.

Mr. Graham Hutton, the well-known economist, has summarised the outlook in a frank letter to the Press. The situation, as he sees it, is that the country's total output has not increased at all for nearly two years, but wages and salaries have gone up 7 percent and the cost of living nearly 4 percent. More efficiency has "absorbed" the other 3 percent rise in money costs. Wage-earners have gained more than salary-earners, and both of them more than fixed-income receivers. The Government, however, has allowed the nationalised industries, independent of any Governmental control, to raise wages, claim priorities for capital programmes, and run up other claims on every other citizen's (or company's) incomes. To meet these claims, the Government has "borrowed short" (inflation) to the detriment of long-term Government bonds and therefore found itself unable to "fund". In these circumstances the weakness of sterling is an inevitable development.

Official Policy

That the Government is alive to the danger is evident from a long Cabinet discussion on the question of inflation on Thursday last, Mr. Thorneycroft's speech at a City function the day before that, and his speech to the National Production Advisory Committee last Friday. Mr. Thorneycroft made a significant disclosure of what is in the official mind when he affirmed his intention "that the borrowing of money should be made as difficult as the real shortage of resources demonstrates to be necessary." Obviously, there is to be no letting up on the credit squeeze and presumably, if need be, money rates would be allowed to rise. The Chancellor removed any lingering doubts that the Government now sees inflation rather than deflation as the real danger. It is to be hoped that appropriate remedies will be found.

Ministers' hopes of practical action seem to be pinned on the setting up of the new independent body, dubbed by union leaders a "Supreme Court on wages", to throw light on all the different aspects of price stability. Mr. Thorneycroft and Mr. Macleod, Minister of Labour, will shortly begin another round of talks on this subject. The views so far expressed by trade union leaders are far from encouraging, especially those made by Mr. Cousins, General Secretary of the Transport and General Workers' Union, but the Ministers still hope to overcome this opposition, which they feel is due to misunderstanding.

Economic Outlook

The official view, while admitting that inflation is the chief danger, still regards the general economic outlook as being far from critical. There are certainly some encouraging factors. The June trade gap has been narrowed to just over £33 million, for although the Whitsun holidays occasioned a drop of almost £29 million in exports, imports were cut by over £50 million. Steel production is also being well maintained so that the United Kingdom is now a net exporter instead of being an importer to the extent of covering the cost of imported raw materials for steel-making. The prices of basic materials used in industry, and especially of base metals, fell sharply in June after the decline in May and are now 3.6 percent below the peak reached last December.

On the other hand, Britain has once again resumed the position when industry offers more vacancies than there are workless to fill them which, thought it is reassuring to labour, does not seem to produce any greater co-operation from them. The working population is now almost 23 million. On 17th June there were about 265,000 registered unemployed (a drop of 49,000 from the previous month) and 309,000 unfilled vacancies. This fact, allied to the recent wage increases, has increased the volume of spending power with the result that the active note circulation recorded a new record at £2,013.7 million, with three weeks to go before the August holiday peak is reached. It is already more than £91 million higher than at the same time last year. Finally, the hire-purchase boom has gathered further momentum and, at the end of May, new credit issued was 54 percent greater than at the same time in 1956, the figure for May alone in 1957 being double what it was in 1956.

Stopping a Dollar Leak

The Chancellor of the Exchequer has taken steps to limit the accumulation in private hands of portfolios of foreign securities—a loophole in the exchange control mechanism of which full advantage has been taken, especially by speculative elements through the "free" markets in such overseas centres as Kuwait, Hongkong, Aden, Bahrein and Singapore, to impose an unduly heavy drain on the gold and dollar reserves and be at least one of the contributory factors to the recent pressure on sterling. The announcement caused consternation in the City, even though it is realised that a drain estimated to be in the region of about $450 million a year could not be allowed to continue for long merely to preserve the freedom of movement of capital within the sterling area—however much this may be prized—if the privilege is to be abused.

The main effect of the move is that the dollar pool of U. S. and Canadian securities will no longer be enlarged by the special switching operations through the free markets in the sterling area. Through these markets hitherto it has been possible to obtain dollars against sterling at a premium. These dollars could then be sold in London, and if the London dollar premium was bigger—as it usually has been because of the demand for dollar securities—the transaction was profitable. The Treasury control will break this link between the dollar premium and security sterling and stop the switching operations which were augmenting long-term foreign assets in private hands, rather than liquid assets in official hands, which really strengthens the reserves. It is emphasised that direct investment in Canada will still be encouraged, but not by this process of share purchases *via* the free markets.

Capital Changes by Overseas Banks

The Hongkong and Shanghai Banking Corporation is to make a one-for-one scrip issue. The new shares will not rank for the unchanged interim dividend of £2 a share now announced. The directors have decided to transfer $(H.K.) 25 million to the published reserve fund by a transfer of $(H.K.) 9 million from the balance carried forward and $(H.K.) 16 million from the inner reserves. Arrangements have been completed with the Hongkong Government to introduce the necessary legislation to abolish the contingent liability of shareholders. The proposed capitalisation is linked with the cancellation of the reserve liability of shareholders and should not be construed as an indication of an intention to increase the total amount distributed by way of dividend in the future.

As forecast in the chairman's statement last month, the directors of the British Bank of the Middle East have decided to issue 500,000 shares, ranking equally with the other shares of the bank, and to offer them at 24s a share, payable in full on or before 9th August. Subject to unforeseen circumstances, the directors expect to maintain the present rate of dividend of 10 percent a year on the increased capital.

Resident Field Engineer

The unique HOLLERITH SERVICE

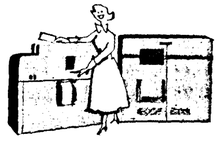
The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service*."

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend



The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

DECLINE IN WORLD TEXTILE TRADE CONTINUES

PROSPECTS FOR INDIAN EXPORTS

(FROM OUR BOMBAY CORRESPONDENT)

LATEST figures now available show that the world export trade in cotton textiles is continuing to decline. Global exports last year are estimated at 4,400 million yards against 4,556 million yards in 1955 and 5,170 million yards in 1954. India's cotton piecegoods export trade has also declined and amounted to 744 million yards last year compared with 815.5 million yards in the previous year and 898 million yards in 1954. Although there has been some improvement in overseas sales since the beginning of this year, it is too early to say whether the final figure for 1957 will reach the 1,000 million yard target set by the Planning Commission. In any event, it seems clear that in view of the overall shrinkage in the cotton piecegoods trade, the Indian industry will have to face some difficulties in the future. There are several reasons for the shrinkage in world trade. A factor common to the national textile industries of the world is the emergence of synthetic fibre fabrics which offer strong competition to cotton piecegoods. The British Man-Made Fibres Federation recently announced that the output of synthetic fibres in the U. K. touched a new monthly record of 48.9 million lbs in May this year. This record beats the previous peak, achieved in March last year, by 12½ percent. The present record figures were reached in both the continuous filament yarn and staple fibre sections. Yarn production totalled 23 million lbs and beat the previous peak, reached in March last year, by 1.2 million lbs. Staple fibre output came to 25.9 million lbs beating the previous record, established in March this year, by 1.5 million lbs. During the first five months of 1957, the British output of staple fibre came to 120.2 million lbs beating the corresponding period of 1956 by 5.1 million lbs. On the other hand, the output and export of cotton textiles by U. K manufacturers declined. The same trend is seen in the other producing countries, and it seems evident that synthetic fibre fabrics pose a threat to the cotton textile industry.

A second factor is the growth of the textile industry in some of the importing centres. Iran and Iraq, which form part of the traditional Indian export market, are now engaged in developing their own textile industries. As a result, they have imposed heavy import tariffs on coarse and medium cloth, the qualities in which India is competitive, as a protective measure. It would be reasonable to assume that Indian exports to this area will dwindle over a period of time. The same developments are taking place in other countries. Burma, for instance, has concluded agreements with Japanese interests for the setting up of cotton textile mills. When these are erected, yet another lucrative market will have been lost. In addition, these new countries will tend to emerge as competitors in the export field. An outstanding example of this is Pakistan which increased its exports from 89,000 yards in 1955 to 16 million yards last year.

Coarse Cloth Exports

As far as India is concerned, a disquieting feature is that coarse grey goods are the main characteristic of her export trade. While exports of coarse cloth increased by 10 percent last year, overseas sales of medium goods declined from 618 million yards to 543 million yards. There was also a fall in fine and superfine qualities. Addressing the Cotton Textiles Export Promotion Council, Mr. Neville Wadia, the chairman, said: "Our competitive power lies only in the fact that we grow our own cotton and that its price is the main factor which helps us to export at all. The coarser we go, the more competitive we become. In fact, we are hardly competitive at all in fine and superfine. Even our processing is comparatively uneconomical, otherwise there would not have been such a marked decline in the export of finished goods. These facts must be faced, and our policies and actions must be guided by them. Firstly, we must do all in our power to improve our production techniques, both from the point of view of quality, and of becoming more economical. All possible steps should, therefore, be taken to install as quickly as possible the 18,000 automatic looms sanctioned for expansion for export. Unfortunately, little progress, if any, has been made since the announcement over a year ago, and I would like to suggest that the Textile Commissioner should sit down with those who have been given licences and settle all the outstanding points without further delay. As far as finished goods are concerned, it is equally important that we improve our competitive capacity, for up to 25 percent on an average extra foreign exchange can be earned by exporting dyed and printed goods as compared with grey cloth."

It is indeed disappointing, as Mr. Wadia points out, that no action has yet been taken to install the entire 18,000 new looms which would produce on an average 350 million yards reserved for export. Unless this is done, India will continue to lose business and the foreign exchange she so urgently needs. But the projected 350 million yards is only a drop in the ocean and it must be recognised that the installation of the first 18,000 automatic looms is only an initial step towards the rationalisation of the entire industry.

Recovery in Cotton Futures

Satisfactory weather reports depressed the Jarilla March delivery cotton contract to Rs. 707 a candy, but fresh support from Ahmedabad and Delhi raised the quotation to Rs. 720 at the close. Reports from Madhya Pradesh indicate that sowing operations in that area will be completed in about a week's time. Satisfactory conditions also prevail in Broach and Surat. Sowings have been completed in Berar and Khandesh but rain is urgently needed in these areas. News from the Punjab is somewhat disturbing. The plants are in a flowering stage in the early sown fields, but it is feared that the present dry and hot climate may cause the bails to burst before they reach maturity. Immediate rains are needed in this area in spite of the regular supply of canal water.

The spot market ruled firm with interest confined to good varieties. Jaydhar, Laxmi, Jarillas and Dholeras were in particular demand. Although some interest was also shown in Punjab and Khandesh growths, business in these qualities was negligible. But the main interest was in foreign cottons following fears of a tight supply position of domestic growths towards the end of the year. Sizable business was put through for American cottons for November-December shipment. Top quality Sudans on "guaranteed licences" have been purchased by some Ahmedabad mills, while the 20,000 bale import quota for Egyptian cottons has now been exhausted. Meanwhile, it is reported that the Lint Marketing Board in Kampala has decided to sell forward 110,000 bales of the 1957-58 A.R. Uganda crop next month by auction. Normally, sales of East African cottons begin in November. It is believed that the Lint Marketing Board decided to hold early sales following the possibility of the U.S.A. liquidating its C.C.C. unsold stocks in September. Trade circles are anxiously awaiting to know if import licences will be issued to take advantage of the East African auctions. At present, it seems that the Government of India is mainly interested in American cottons because of the long-term loan facilities and in Egyptian growths which are of a higher staple and the payment for which can be made in rupees.

Business in Spot Cotton

Substantial business was reported in imported spot lots in the spot section of the cotton market. Meanwhile, the Indian Central Cotton Committee is scheduled to meet here this week. Schemes relating to the improvement of the long staple American cottons grown in the Punjab, Mysore and Madras will be discussed. The breeding of superior indigenous cottons in Bombay, Madhya Pradesh and Uttar Pradesh will also be under review. Attention will be given to the newly started scheme for the extension, development and improvement of Sea Island "Andrews" cotton in Kerala, Mysore and Assam. Another important point to be discussed will be the question of initiating research on the evolution of suitable agricultural implements for reducing the cost of cutlivation.

Rising Cloth and Yarn Output

The textile market remained steady with wholesale dealers reporting a revival of enquiries from upcountry centres. But actual transactions are being delayed because the formalities under the Central Sales Tax Act have still to be completed. Mills continue to receive forward delivery orders for superfine and fine qualities. There have been hardly any export enquiries. It has been officially announced that cloth and yarn output continues to rise. During the first six months of this year, the mill industry produced 2,703 million yards of cloth and 892 million lbs of yarn against 2,583 million yards and 802 million los in the corresponding period of last year.

Mixed Trend in Yarn

In the yarn market, August delivery 120 Dull cones contract moved between Rs. 822 and Rs. 825. The Yarn Merchants Association and Exchange permitted trading in the October delivery contract, but prescribed minimum and maximum prices at Rs. 775 and Rs. 875 a case, respectively. In the spot market, 75 and 100 denier gained about 2 annas. Bamberg yarn increased by about 4 annas, but nylon yarn was easier following arrivals against earlier bookings. The staple fibre and cotton yarn market was dull with prices maintaining earlier levels.

Oils and Oilseeds

The castor futures market opened at Rs. 166.75 and after dropping to Rs. 160.25 closed the week at Rs. 168.00. The spot market was somewhat firm following export orders received for castor oil. It was reported that Russia bought 500 tons of B.S.S. oil at £150 a ton, cost and freight, in bulk. Some orders were also received from the U.K. at £154 a ton, cost and freight, in drums. Groundnut prices fluctuated between narrow limits. The August delivery contract opened at Rs. 177.75 and rose to Rs. 178.25, but substantial selling by Saurashtra operators depressed the quotation to 175.12. The strength of the spot market helped towards an improvement in the futures contract which closed at Rs. 180.50. Dealers in the spot section reported a sustained demand for groundnuts and groundnut oil. Arrivals of both were small, and there would appear to be a shortage of supplies. The linseed September contract opened at Rs. 28.87, and after moving within narrow limits, closed at Rs. 29.42.

We do business with the nicest people...

And we are deeply interested in these nice people: in *you*! That's why we have a special Market Research Department that devotes itself to finding out what you like and don't like, why you buy—or don't buy.

Our teams of interviewers travel all over the country, calling on families in city, town and village, and noting your growing needs and changing preferences. This fact-finding process enables us to introduce new products like Rinso, or change a familiar one in some way—the perfume of Lux Toilet Soap, for instance.

Many of our products are, perhaps, already your household friends, and you appear on the charts and reports compiled by our interviewers. But you are more, much more, to us than facts and figures ... you are the very people we do business with.
We spare no trouble in trying to meet your needs, in offering you the very best value for your money.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

IMPLICATIONS OF EUROPEAN COMMON MARKET SCHEME

(BY A SPECIAL CORRESPONDENT)

MOST of the industrial conferences are over until the autumn: indeed, the few remaining to be held during the next two months are nearly all of the combined conference and summer school type. These, as the name indicates, partake of something of the vacation spirit, and are more broadly conceived in the subjects selected for discussion and study. One of the most interesting of this type of gathering is that organised by the British Man-Made Fibres Federation for the third week in July. The picturesque setting of the conference, which is to be held in Christ Church, Oxford, of itself ensures a maximum attendance. Attention is not to be confined to technical subjects alone, but there are to be addresses on the British economy and the European common market and free trade area. The first of these is to be given by the distinguished economist Mr. Roy Harrod. Although the summer school style of the conference naturally tends towards wider horizons for survey, introduction of the papers mentioned is also influenced by the fact, now conceded, that large-scale conferences which are strictly technical throughout seldom meet with the success anticipated.

It is difficult to maintain a keen interest on a whole range of technical subjects, in spite of the aid of intermissions for films, luncheons and teas. Too frequent practice of absenteeism for the purpose of enjoying the amenities of the neighbourhood is not welcomed by the organisers. The fact has also to be taken into account that the majority of attenders are mainly interested in a few specialities falling within their workaday experience. Further, much of the technical matters presented at the conferences is largely familiar, as a result of it having already been presented elsewhere by lecturers on behalf of companies. Yet another consideration which continues to be given weight is that the technician, actual or budding, if he is to make a truly vital contribution to the industry in which he is engaged, must be delivered from working within too narrow an orbit. The demand that the technologist should be a man well informed upon a variety of themes shows no signs of diminishing: not excluding art and philosophy say the heads of some technical colleges; not forgetting the prosaic background of trade and politics (impartially considered) declare others. It can be agreed as a gain, if a vigorous opinion upon the aims of economic idealism could be created away from a conventional party or business atmosphere.

Plastics Exhibition

The British Plastics Exhibition and Convention, which is to be held during the latter part of July, is the largest so far, measured by the area and the number of exhibitors. Exhibitors from Continental Europe and the United States will be represented. A direction in which the consumption of plastics has been substantially helped is through the adoption by the British gas industry of plastics for tubing instead of rubber. Another is through the entry of plastic material into the manufacture of hose pipes of all sizes, ranging from those for domestic or garden use to others having to meet the requirements of heavy industries. The connection of plastics with aircraft manufacture is long dated, and transparent acrylic plastic sheeting is much used for canopies in military aircraft. So far, however, the material has had a tendency to develop fissures or to shatter under sharp impact. It is claimed, as a result of researches in the United States, that these drawbacks have been removed, and to such an extent that the material is now used in the manufacture of all-weather supersonic jet aircraft. Moreover, acrylic plastic is being substituted in aircraft where other materials have been used in the structure. The method used in the production of the new acrylic plastic is essentially that of pre-stretching, which, of course, gives a greater ability to meet strain without the occurrence of cracks.

New Company

The formation of a new company which is described as "a member of the gas purification and chemical group" has aroused interest by reason that one half of the capital is to be held by the well-known Amphenol Electronics Corporation of Chicago. This concern makes electronic components for all industries that need them, but it has latterly come into prominence for its electronic contributions to aircraft and guided missiles. The British company will at first import components from the United States, but the ultimate intention is to manufacture in Britain all the components that are required. The British company will work under an exclusive licence covering the United Kingdom and a number of other European countries.

Development of Enant

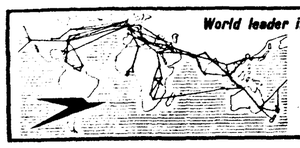
News of the rapid development of a new nylon by Russia is hardly a surprise, since nylon belongs to a family of fibres of which many kinds can be produced—hence the spelling or nylon with a small, n, against a capital first letter for Terylene, Orlon and various other man-made fibres. It does not follow that every nylon produced will be of commercial importance. However, the Russian nylon 7 has also been given the name of *Enant*, also in order to ensure distinction. The new fibre appears to have a proven value. Although, in a sense, the appearance of Enant is not a surprise, many people were sceptical of Russia's ability to enter into the man-made fibre field as yet.

Artificial Leather

While on the subject of nylon, it should be remarked that the U.S. du Pont Company has registered in Britain a patent for the manufacture of artificial leather from that product. Patents for a similar purpose, relying largely on resins, are not uncommon, and a few of a plastic nature have attained a fair degree of success and have been backed by powerful undertakings. But all of these artificial leathers are deficient in porosity. This is not so with the du Pont artificial leather. Other ingredients besides nylon enter into its manufacture, but the required virtue of permeability has been largely brought about by pre-stretching of the nylon element. Since reference has already been made to the use of stretching treatments for plastic materials, it may be said that the use of these techniques is playing a great part in extending uses for both plastics and man-made fibres. By this means special qualities are being conferred, as in the case now suggested, and in general there is a considerable addition to utility strength.

Investment in the Continent

The increasing tendency of British firms to invest capital in Continental Europe bespeaks a confidence that might seem rather strange in view of various political activities and utterances; but certainly the participation has more than a mild official approval. The Ever Ready Company, one of the most important of British concerns manufacturing the smaller kinds of electrical equipment, has expanded its investment in the Daimon Company of Cologne, and now owns 90 percent of the capital of this West German enterprise. The Daimon Company caters not for German needs only, but it is an effective competitor in a number of European countries. It will be interesting to see whether the movement towards the European free trade area further stimulates the interest of British companies in Continental concerns. Theoretically, the establishment of this area would seem to remove this financial necessity, whatever may have been the desirability before. On the other hand, highly progressive European industrial companies are known to be in want of capital. It is only natural that Britain should resume her traditional rôle of an exporter of capital, although the resumption be through new channels and in fresh directions. It may seem curious to some, in view of the tone of many of the speeches of Chancellors of the Exchequer in recent years, that Britain has even a modest amount of money available for this purpose. But the secret of acquiring fundamental knowledge of the contemporary world is not to read the headlines, but to read between them—a far more skilful mental exercise.



FLY B.O.A.C. BY THE NEWEST, FASTEST AIRLINERS IN THE WORLD

Fly B.O.A.C. and you fly by the world's finest airliners. Superb jet-prop *Britannias* are now operating from Calcutta to the Far East. There are also frequent *Britannia* services to the U.K. and Australia.

STOCK MARKETS UNCERTAIN

INDUSTRIALS AND GILT-EDGED DECLINE

London, 17th July.

UNCERTAIN conditions prevailed in the stock markets during the past week. Prices moved down sharply prior to the week-end following the Chancellor of the Exchequer's warning on inflation. The later speech by the Chancellor brought somewhat steadier conditions generally, in view of the absence of any reference to further anti-inflationary measures Gilt-edged securities, however, in many instances fell to all-time low levels under inflation influences. The increase in local loan rates was an adverse factor. Foreign bonds were subdued, although Far Eastern issues tended easier. Peruvian Transport debentures were dull. Greek issues showed some irregular fluctuations due to the Cyprus situation. Dollar stocks became more settled in spite of the initial confusion over the U.K Treasury ban on the purchase by U.K. residents of foreign securities in the sterling area. Substantial gains in dollar stocks were maintained and the dollar premium fluctuated around 15 percent. While industrial equities staged a partial recovery on Monday prices for the most part were lower on balance. The Monday rally was attributed to bear-covering ahead of the end-of-the-account on the following Tuesday. Store shares reacted sharply on fears of further hire-purchase restrictions, but rallied when the Chancellor made no reference to these Engineering, electrical and shipping shares attracted a selective demand. South African gold shares gave a disappointing display, and generally drifted lower, although there were one or two exceptions. Among these Johannesburg Consolidated Investment improved on an increased dividend. Coppers tended higher and tins were quietly firm Oil shares recorded very little change on balance. Yield considerations, overseas tax concessions and bid prospects produced some sharp gains in rubber shares, although there was some reaction from the best levels before the end-of-the-account. Tea shares generally tended higher, and recorded numerous gains.

The Money Market

It was rather a varied experience with the ebb and flow of funds in the money market last week. The easy conditions of the previous week gave way to the more normal basis of a narrow supply margin. The week in money opened up short, but the release of Ministry of Health payments subsequently made the supply position comfortable. More difficult conditions were encountered on Thursday as a result of the main weekly tax transfers to the Revenue Department, but this phase soon passed, and the end of the week saw a return of more comfortable conditions. The rate for day-to-day loans consequently fluctuated erratically with money at one time being down to 3 percent and up to a high of 3⅞ percent at another, the overall average rate being just under 3½ percent. There was a reasonable demand for Treasury bills, with October changing hands at 3 25/32 percent and September at 3⅞ percent.

Activity on Wall Street

High quality corporate issues continued to hold the spotlight in bond dealings last week. Prices moved ahead after an early minor setback, with renewed investment demand stimulated by the good reception given to new issues reaching the market. The Secretary of the Treasury, Mr. Humphrey's opposition to any increase in the discount rate at this time was an additional stimulant. Long-term U.S. Government obligations fell. Rails generally displayed a steady undertone on small turnover. In the foreign bonds section, German Nationals showed only minor changes, while among the Municipal issues, Berlin City 6½ percents of 1950 gave up 3 points under small offerings. Italians were unchanged to a shade higher Among the Japanese issues, the Government 6½ percents of 1964 added one point, while Tokyo Electric 6 percents declined by one point. Chile 3 percents moved down to $41⅞ which was a new 1957 low.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 10th July shows that the gold stocks rose by $1 million to $22,624 million. Foreign deposits fell by $69 million to $345 million, while foreign investments rose by $107 million to $3,865 million. The Federal Reserve bought $121 million worth of bills and $1 million worth of notes, but sold $196 million worth of securities held under repurchase agreements. Total discounts and advances fell by $198 million to $908 million, while the aggregate excess reserves of member banks fell by $359 million to $157 million. The daily average excess reserves of member banks rose by $235 million to $581 million, while their daily average borrowings rose by $146 million to $1,213 million. Business loans of the New York city banks fell by $111 million to $11,847 million, compared with a fall of $154 million to $10,072 million in the corresponding week of last year.

Light Trading in Hongkong Gold

The Hongkong gold market was steady, but the undertone was nervous with trading light. Prices fluctuated with the movements of sterling in New York. Following the U.K. Chancellor of the Exchequer's warning against inflation in that country, most traders turned bullish. This was accompanied by nervousness over the question of sterling devaluation. Early in the week, values dipped, but rallied sharply at midweek. Profit-taking then appeared which caused the market to recede. Thereafter the market firmed up as switch-sterling continued to decline. Carry-over charges were 101 cents a ten taels in favour of sellers. The official offtake declined to 470 taels, while the unofficial offtake totalled 15,000 taels. The forward contract was done at $(U.S.)37.73 an ounce, c.i.f. Arrivals from Macao were 40,000 ounces.

Vegetable Oils Firm

Firm conditions obtained in the main sections of the oils and oilseeds market with a strong undercurrent of buying enquiries. Linseed oil remained strong, though buyers were inclined to hesitate at the present high level, while further rises in Canadian linseed made offers too dear compared with oil. Nigerian groundnut oil retained lively support from the U.K. and north Continental buyers, with the former paying £122½ and the latter £122 a ton, c.i.f. for July-August shipments, or approximately £2 a ton higher. Goundnuts were also in good demand with British East African new crop worth £67 c.i.f. to north Continental ports and slightly more with Italian discharge options. Nigerian groundnuts were raised by £1 a ton by the Board, while Nyasaland encountered more enquiries at £77 c.i.f., for August-October shipments. Indian castor oil showed a rallying tendency with U.K. enquiries expanding and British standard specification drummed oil rarely offered under £160, cost and freight at the finish. Indian trade reports spoke of production difficulties for B.S.S. oil due to the current shortage of processing chemicals. Coconut oil held fully steady, although European buyers remained quiet, while copra hardened slightly on greater selling reserve. Palm oil was in better request and slightly dearer with bids of £91 c.i.f. accepted for August shipments of Malayan crude a ton. U.S. edible oils turned substantially dearer on week-end origin advices.

This may shrink

This will not shrink

That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized' — knowing they bear this assurance: *This garment will not shrink out of fit — even after many, many washings!*

It adds value and prestige to your own label — enables you to sell with confidence — and assures the public that you take trouble to give them value.

People rely on you to serve them well — so serve them cloth labelled 'Sanforized'.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements

Jute

THE CHANGING PATTERN OF JUTE-BUYING

OPENING OF UPCOUNTRY AGENCIES BY MILLS

IN *Capital*'s Annual Review last year, comment was made on the changing pattern of jute-buying by mills. It was pointed out that, in the past two or three years, mills had been reverting to the practice of buying in the local bazars and at the mill jetties and gates—a system which had been largely discarded decades ago because of the opportunities it offered for malpractices. Further developments appear to be in progress with the start of the new raw jute season. During the past few months, there has been a marked increase in the quantity bought by mills in the local bazars, which has occasioned some criticism because nearly all the jute arriving there has been of the jungli class. Mills have answered that most of the jute offered to them "over the counter" on contract has had a higher percentage of middles than they require and that they have had to resort to bazar buying to secure low grades. They also claim that, by buying in the bazar, they can pick out the lots which suit their purpose which, even if they have to pay a somewhat higher price, is more satisfactory than buying on contract and having to take a higher percentage of middles than is necessary. As for jetty purchases, it is generally believed that there will be less in the coming season. Some mills, it is reported, have run into difficulties and suffered considerable losses. The same is said to apply to those who had adopted the system of sending their own purchasers into the districts with lorries to buy jute in the village *hats*.

Another development that is taking place is the opening by mills of their own buying agencies in the jute districts or the appointment of agents to buy on their behalf. The establishment by mills of agencies of their own to buy jute in the districts is not, of course, new, but mill companies have never been very successful in that business in the past as may be seen from the examination of the accounts of public companies when the system was in vogue before. That is not to say, however, that it could not be made a success and, with an assured turnover such as these mill agencies will have, it ought to be a sound proposition.

Disparity in Prices

All these developments have come about because of the disparity which has developed since Partition between raw jute prices and those of jute manufactures. From 1914, with the exception of two short periods, mills were always able to buy jute and sell their manufactures simultaneously and make a profit. An astute man, by judging the markets correctly and buying jute when the market was low and selling manufactures when the market was higher, could make bigger profits, but there was always a profit to be made. Since the disparity between jute and gunny prices developed, mills have been trying to cut down the price of the raw material. Formerly, they used to encourage reputable balers by paying them workable prices to ensure that they got good and reliable deliveries. In their efforts to obtain jute at lower prices, mills have withdrawn their support from balers of repute and most of them have had to close down. The market has thus been left largely to less scrupulous dealers who are prepared to sell at any price, relying on chance or underhand means of making up the difference between sale price and cost. Hence the prevalence of claims for excessive moisture and low quality, and the malpractices which have been seen in the past few years. Whether the buying methods which mills are now developing will get them out of their difficulties remains to be seen.

Arrivals of Jute

During June, 355,100 bales of raw jute and mesta arrived in Calcutta and at the mills. Of these, 308,000 bales were Indian and 47,100 bales were imported from Pakistan. Although total arrivals dropped by 58,200 bales, those from Pakistan showed an increase of 20,100 bales over the preceding month; imports of Indian jute dropped by 78,300 bales. The latter is a seasonal fall, but it is surprising for imports from Pakistan to show such an increase. The reason probably is that many Pakistani sellers were not sure of obtaining licences for the new season, so they tried to ship as much jute as possible under their old licences which expired in June. In June 1956, total arrivals amounted to 300,100 bales, of which 45,600 bales came from Pakistan and 254,500 bales from Indian sources. The June 1957 figures show an increase over the corresponding month last year of 55,000 bales, and are indeed the highest total arrivals for the month of June for four years. It is now possible to assess the arrivals from all sources for the season June 1956 to July 1957. These stand at 6,253,900 bales, comprising 634,000 bales from Pakistan and 5,619,900 bales from India. This total falls short of last year's by 101,800 bales, *mainly* because of a drop of 833,200 bales in arrivals from Pakistan. Imports from India showed another welcome rise of 731,400 bales.

Consumption of Raw Material

During June 1957, the estimated consumption of jute and mesta by mills reporting to the I.J.M.A. was 467,000 bales bringing the total consumption for the season 1956-57 to 5,977,600 bales. During the previous season, mills consumed 6,380,140 bales of raw jute.

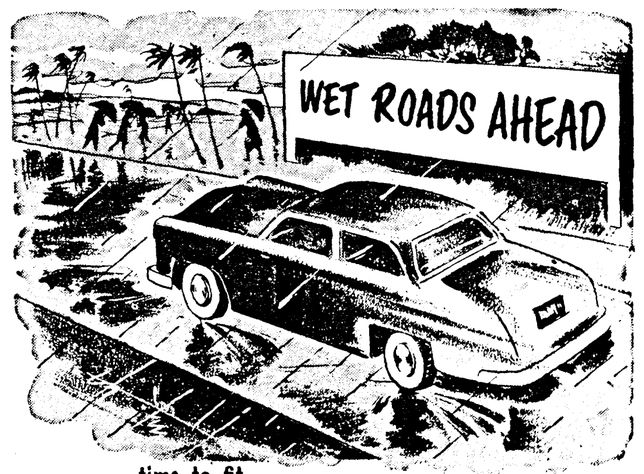
I.J.M.A. Production Figures

The total output of mills during June 1957 amounted to 80,100 tons for a 197½-hour working month, which was a drop of 7,200 tons compared with the preceding month, which had 209 working hours. The total production for the entire 1956-57 season was 1,025,200 tons, made up of 428,300 tons of hessian (constituting 41.8 percent); 526,800 tons of sacking (51.4 percent) and 70,100 tons of other goods (6.8 percent). These figures fall short of last year's production by 69,800 tons but this can be accounted for by the fact that the operating loomage last year was greater, and that a larger percentage of sacking was in production, yielding a greater tonnage Last season's distribution between hessian, sacking and other goods was 36.8 percent, 56.9 percent and 6.3 percent.

THE JUTE MARKETS

Conditions in the jute and gunny markets were quiet during the past week. Manufactured goods in particular went through one of the dullest sessions on record for a considerable time. Towards the close, however, prices began to improve on speculative activity but there was no support for the rise from the real goods market. Raw jute continued to interest mills at falling prices, but the volume of business recorded was well below that in previous weeks.

Manufactured Goods: The market opened last Thursday on a confident note. Prices rose because of fatka buying, and also because of the news that the mills' production of jute goods showed a sharp decline of 7,200 tons during June to 80,100 tons. The rise was short-lived, however. In the absence of overseas support, dull trading conditions prevailed, with only minor day-to-day variations in price. Towards the close, bull operators began heavy buying and fatka rates responded promptly. B Twill fatka prices soared, but real goods were slower, and in the absence of support ruled unchanged. Hessian hardened slightly in sympathy with heavy goods but no business was reported. Opening prices last Thursday showed an advance of 50 nP in ready B Twills at Rs. 114.50 a 100 bags. Hessian was quiet and opened at a small discount for 40in. 10oz. to be quoted at Rs. 42.40 a 100 yards. There was very little activity in the market, but, in spite of this, small price increases were recorded over the next few days. By Monday morning B Twills stood at Rs. 115.30, but all quotations could be regarded as nominal in the absence of support from shippers, overseas interests or mills. Late on Tuesday, as a result of heavy speculative activity the market firmed up, but real goods prices showed little change and the object of speculators' efforts was defeated.



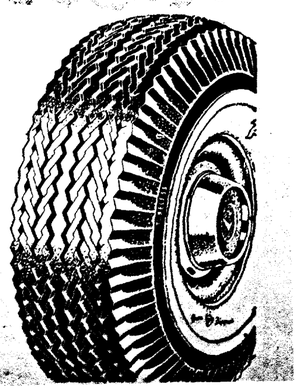
On Wednesday morning, the market was a little steadier and opening quotations were as follows:

	July	August	September	Oct.-Dec.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	34.55	34.50	34.50	34.35
40in. 10oz.	42.65	42.85	42.85	42.75
B Twills	115.75	115.25	115	114.50
Heavy Cees				
(Plain)	115.25	116.50	116.50	115.25
A Twills	140	140	140	140
Liverpools	128.50	129	129	129.25
Cornsacks	117.75	117.75	117.75	116.75

Raw Jute: Business in the fibre markets was not as large as in previous weeks, and consisted of about half old crop and half new crop. Old crop sellers continued to hold bullish ideas, and only small lots were put up for sale. The present situation, however, does not appear to give them very much support, as the stocks in Cossipore show. At this time last year, stocks of jute and mesta stored in the Cossipore area amounted to 65,000 bales. This year, the total is over 100,000 bales, although it must be admitted that a large percentage of this total is low quality jute and jungli mesta. This is mainly due to the fact that large shipments of jute were made to Cossipore before the end of last month by sellers in Bihar, Orissa and Assam in an attempt to escape payment of the Central sales tax on jute in inter-State trade which came into effect on 1st July. Originally, the sellers' attitude was based on the prospect of a very late, and perhaps short new crop, but recent events have turned that optimism into rather a forlorn hope. New crop reports now indicate that there will be very little delay before the crop comes forward, and unless local operators change their ideas, they may find themselves with large quantities of unwanted jute on their hands in which their money is tied up.

Opening quotations at the beginning of the past week were slightly easier and new crop Assam jute was on offer at Rs. 30.50 a maund basis Bottoms. This rose to Rs. 31 by the week-end and remained at this level until Tuesday.

Business was evenly split between old crop and new crop jute. Old crop Dhubri-Northern Assam



time to fit

Firestone

NEW DeLuxe Champion

TUBELESS TYRES

The Firestone New DeLuxe Champion tubeless tyre gives you and your family protection never before provided in any tyre at any price. On wet and greasy roads, it has outstanding non-skid qualities, ends fear of blowouts, and gives longer, safer mileage. It is truly the only tyre with built-in peace of mind.

the first and only tyre with "BUILT-IN PEACE OF MIND"

was done at Rs. 30.75 for July shipment, while new crop from the same districts fetched Rs. 30.75 to Rs. 31 for July-August shipment, Rs. 30.25 for half August-half September and Rs. 30 for August-September shipment. Other old crop purchases consisted of Northern Tossa at Rs. 31, Daissee and Desal mesta at Rs. 29 and jungli mesta at Rs. 26 to Rs. 26.75 a maund basis Bottoms, all for July shipment. In pucca bales, a fair quantity of Pakistan cuttings were sold at Rs. 108 to Rs 109 for Narayanganj N.C.'s and Rs. 109 to Rs. 110 for Narayanganj T.C.'s.

On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md basis Bottoms	Shipment
Assam	31	July-August
Northern	31	"
Purnea Desal	30.50	"
Purnea Jungli	28.50	"
Daissee	32	"
Assam Tossa	32	"
Murshidabad Tossa	31.50	"
Jungli Tossa	30	"
Northern Ex Calcutta	31	"
Local Packing	29	Ready
Mesta:		
Assam	29.50	July-August
Northern	29.50	"
Desal	29	"
Daissee	29	"
Murshidabad	28	"
Jungli	27.50	"
Bimli F.A.Q.	27.50	"
Pakistan Cuttings N.C.'s 108		"

New crop Dhubri-Northern-Assam jute is quoted at Rs. 31 for July-August shipment.

Imports in the Cossipore area amounted to 436 wagons, which, although about 40 less than in the previous week, is well up to the average of other years at this time. Prices were maintained by daily buying by mill representatives, who found it increasingly difficult to obtain jute of the required standard.

I.J.M.A. PRODUCTION FIGURES FOR JUNE

The Indian Jute Mills Association reports the total production of jute goods for the month of June as follows:

Description	Quantity	
1 Gunny Bags		
(a) Hessian	2,929	tons
	1,04,5	lakh yds.
(b) Sacking	52.9	lakh Nos.
	40,800	tons.
	9,76.0	lakh yds.
2. Gunny Cloth	4,21.5	lakh Nos.
(a) Hessian	29,395	tons.
	11,29.2	lakh yds.
(b) Sacking	1,538	tons.
3. Other Manufactures	36.8	lakh yds.
4 Total production (above figures combined)	5,481	tons.
(a) All kinds	80,143	tons.
(b) Hessian (both bags and cloth)	12,33.7	lakh yds.
(c) Sacking (both bags and cloth)	10,12.8	lakh yds.

Summary

	(00,000 Yds.) June 1957	May 1957	June 1956	(000 Tons) June 1957	May 1957	June 1956
Hessian	12.34	13.74	13.79	32.3	35.6	35.0
Sacking	10.13	10.78	13.69	42.3	45.0	57.3
Others				5.5	6.7	6.6
Grand Total				80.1	87.3	98.9
Hours Worked				197.5	209.0	206.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THE PAKISTANI JUTE MARKETS

NO INCREASE IN NEW CROP ARRIVALS

(FROM A NARAYANGANJ CORRESPONDENT)

In spite of the fact that poor rainfall has delayed this year's crop, there were indications during June that the fibre might come in within a reasonable time. This false impression was caused by the fact that some of the new crop jute was sown very early. Besides, some cultivators with a short-term policy cut their crop early, and in spite of insufficient retting water, they sold it in the Narayanganj market soon enough to make a good profit. These early arrivals led people to expect that they would gradually increase, but for the past three weeks, the quantities coming have almost been the same. Although the jute is growing well, it has not been possible everywhere to harvest it to the full extent, partly due to the fact that river levels are still below normal, and in some places it is not economic to carry jute to distant retting pools. River levels, however, are rising slowly, and there has been a daily increase in the quantities on sale. Weedings are disappearing, and the quality of the jute, although not up to the standards that one would expect for this time of year, is not too bad. The main fault appears to be the croppy ends.

It is fairly certain that the northern district has suffered badly from the lack of rains. The drought has been equally disastrous for rice as for jute in that area. A certain proportion of the Jat Tossa marketed comes from the north, and this will probably be adversely affected. The loss, however, may be made up by the many Jat Tossa growing areas in the Mymensingh, Tippera and Dacca districts which show every sign of producing an excellent crop in quantity and quality. The western and southern parts of the province have also suffered somewhat from the scantiness of rainfall, though to a lesser extent than the north. The eastern Jat area, and particularly Tippera, shows every sign of producing a first-class crop. The only result of the drought might be some delay in arrivals, partly due to late rains and partly due to low river levels. Rumours of possible floods continue, but it is thought that this is not probable. It also seems that there is no danger of river levels rising and then falling, so there might be no hard centred jute to speak of.

The policy on the issue of licences even at this late date, has not been announced, and there are still many balers, mostly Marwaris, who have not received their licences. They are uncertain of the prospects of their getting it. This has restricted trading. Another restricting factor is the acute shortage of finance. The larger banks have had seriously to curtail their advances to balers and one bank is, in effect, making no advances against jute this year.

Export by Government

The Export Corporation appears to have died a natural death, but some of its functions are being continued by the Jute Marketing Corporation. The latter has come into being ostensibly only to buy jute in the border areas. Of the 300,000 bales to be bought in the border, a certain proportion will be sold to Indian mills in kutcha bales if the Indian mills accept the Jute Marketing Corporation's terms, the most revolutionary of which is that weight and quality are final at the loading port in Pakistan. It is improbable that this will be accepted. Another use to which this jute will be put will be for controlling the East Pakistan market. The fibre will be sent to three main baling centres. After pucca baling, stocks will be used in market operations to maintain prices at reasonable levels. A further aim however, it appears, is to export jute. The J.M.C. marks have been registered and the first sale to Italy of Export Firsts at £111 c.i.f. Genoa, has already been concluded for August shipment. Since the Jute Marketing Corporation is a Government organisation, its exporting activities are meant to carry on the work of the Export Corporation. If the export effort is successful this year, it will no doubt expand considerably. The question, of course, is whether it will make a profit. As far as possible, the Jute Marketing Corporation is trying to sell direct to the consuming countries. It is also reported that it will be selling through D. Pierrie to Dundee, and through Frindon to other Continental destinations, presumably including France. Since the present General Manager of the Jute Marketing Corporation used to bale a large proportion of France's requirements and thus knows well the firm of Messrs. Frindon, it is quite possible that a fair proportion of the J.M.C. jute will go to France.

Local prices of loose jute remain at Rs. 31 for B Bottoms, Rs. 29 for C Bottoms and Rs. 27 for X Bottoms, in spite of the quieter undertone. In pucca bales of old crop, there is little or no demand and so far no ready business has been reported in new crop pucca blaes. Cuttings stand at a nominal Rs. 83 with no buyers. The mills continue to be small but regular buyers of new crop in kutcha bales at premiums ranging from 8 annas to Re. 1 a maund over loose jute. The overseas prices are gradually coming down, and very little business is reported. The present position is rather strange. There is every indication that local prices will fall, mainly due to new crop arrivals. Yet overseas, there is a definite shortage of ready jute.

There is little to report in the Pakistani gunny market which has quietened somewhat, and a lack of interest both overseas and locally, as well as from South Africa, is forcing prices down.

THE FOREIGN JUTE MARKETS

POOR OUTLOOK FOR GOODS

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices are moving in the right direction, but they have a long way to go yet before they are down to what might be considered reasonable levels. High prices are doing the industry a good deal of harm, as they are paving the way for competition from substitutes. Paper is the most formidable of these. Its price has increased by only 50 percent compared with prewar days, whereas values of raw jute are up by 500 to 600 percent. Even so, a reduction of £20 a ton, down to, say, the minimum levels fixed by the Pakistan Jute Board, would make a big difference to the rates for jute cloth and bags. Producers have done much to reduce the actual costs in spinning and weaving by modernising machinery and, especially in Dundee and the districts, they have granted good wages to employees.

The outlook for the Dundee jute trade at the moment is anything but bright, and the talk of the U.K. entering the European free trade area has made it worse lately. A statement by the chairman of the T.U.C. paints a pretty gloomy picture, and it is suggested that Dundee jute spinners and manufacturers should engage in some other trade. This might help India and Pakistan as the Continent could not compete with them for the very large supplies of jute goods required in the U.K. But Dundee will continue to make jute cloth and bags for many years to come yet, as it has spent £10 million on its mills and factories. Most offers of raw jute are now for the new crop, and down to £110 is mentioned for Mill Firsts, £105 for Mill Lightnings and £101 for Mill Hearts, July-August, and £108, £103 and £99 for August-September, with September-October at £1 less, all c.i.f., U.K. Old crop Daissee-2/3 is quoted at £112 and grade at £110, and grade Tossa-2/3 from £118 and grade £115, c.i.f., U.K., July-August.

Calcutta goods are firmer at 64s 6d for 40in. 10oz. and 49s for 7¼oz., July and August and 64s 9d and 49s September, with B Twills at 175s 9d, 176s 3d and 177s 6d for the respective months of shipment, all f.o.b., Calcutta.

Business in Dundee continues very quiet in both yarns and cloth, but the volume of enquiry indicates that stocks in the hands of consumers have low levels. Any business being done is for delivery. Prices continue unchanged.

Engineering and Transport

PROGRESS OF MACHINE SCREW INDUSTRY

ENQUIRY ON CONTINUING PROTECTION

OPENING the public enquiry into the question of continuing protection to the machine screw industry, Mr. K. R. Damle, chairman, Tariff Commission, said that the claim of the machine screw industry to protection was first examined by the Tariff Board in 1951. Protection was accordingly granted to the industry on its recommendation up to 31st December, 1954, by converting the revenue duty into a protective duty at 31½ percent *ad valorem* inclusive of surcharge. Subsquently, in consultation with the Tariff Commission, protection to the industry was extended up to 31st December, 1955. The second tariff enquiry into the industry was undertaken by the Commission in 1954. The Commission in its report to the Government made in February 1955 recommended to continue protection to the industry up to 31st December, 1957, by levying a protective duty of 50 percent *ad valorem* or 9 annas a gross whichever was higher. The Government accepted the Commission's recommendation and extended the period of protection to the industry up to 31st December, 1957, by the Indian Tariff (Second Amendment) Act, 1955, and levied duty at rates recommended by the Commission. Under the provisions of the Finance Bill, 1957, the rate of specific duty has been converted into naye paise and the rates of duty now read as "50 percent *ad valorem* or 60nP a gross whichever is higher." Protection granted to the industry is due to expire on 31st December, 1957.

The scope of the enquiry covers machine screws made from iron or steel (i) with head, the shank being fully or partly threaded within two pitches from the head and (ii) without head, the shank being fully or partly threaded.

In its report of 1955, the Commission estimated the then annual domestic demand for iron or steel machine screws of all types at 600,000 gross and stated that the demand may be expected to increase by about 10 percent every year. On this basis, the current demand in 1957 may be estimated at 780,000 gross. In connection with the present enquiry, the Commission has received various estimates of demand ranging from 1 million gross to 2 million gross for the current year and from 1.30 million gross to 5 million gross for 1960-61. On the basis of the present trend of consumption, the current demand according to the Development Wing should be about 2 million gross a year.

Future Demand

As regards the future demand—considering the pace of development of engineering industries—the Development Wing expects the demand to increase to 4 to 5 million gross a year by 1960-61. The quantity available for consumption based on internal production and imports during 1956 came to 1.40 million gross. Making some allowance for production by small units, the current demand for machine screws would appear to be about 1.55 million gross a year. At the time of the last enquiry in 1954, there were seven units engaged in the production of machine screws. Out of these, one unit namely, Vanaz Engineering Ltd., Bombay, is reported to have discontinued production of machine screws. Besides the seven units, there were at that time two units namely, Guest, Keen, Williams Ltd., Bombay, and Indian Steel and Wire Products Ltd., Indranagar, which had capacity for manufacturing machine screws but were only producing fully threaded bolts and roofing bolts. Guest, Keen, Williams Ltd. has later started production of machine screws. The Commission has been informed that six new units have been licensed for the manufacture of machine screws under the Industries (Development and Regulation) Act, 1951. Out of these six, Bengal Screw Manufacturing Co. Ltd., Calcutta, and the Indian Telephone Industries, Bangalore have commenced production of machine screws from 1956. Thus, there are at present nine units engaged in the production of machine screws.

Installed Capacity

The machine screw industry has made considerable progress under the shelter of protection. The total installed capacity on single shift basis increased from 379,000 gross in 1954 to 1,383,000 gross in 1956, and the production increased from 224,000 gross in 1954 to 1,036,000 gross in 1956. With the completion of new projects already approved and of the expansion of the Universal Screw Factory, Chheharta, the total annual installed capacity of the industry on single shift basis is expected to increase to 2,461,000 gross a year. The principal raw material required for the manufacture of machine screws is mild steel annealed wire from 14 S.W.G. to 5 S.W.G. The Commission has been informed that the domestic supply of mild steel wire of required quality continues to be difficult. It has been urged that the Indian Steel and Wire Products Ltd. has not been able to make prompt deliveries and adequate supply of steel wire to machine screw manufacturers as the allocation of steel billets by the Iron and Steel Controller and the deliveries by the main producers of steel to that factory have fallen far short of the required quantity. The manufacturers of machine screws have also complained that the quality of the indigenous steel wire supplied to them is not as satisfactory as that of the imported wire, particularly chemical composition. The Commission would know from the manufacturers of wire what proposes to take to make wires with the chemical composition required by the machine screw industry.

Improved Quality

On the quality of manufactures, the Commission in its report of 1955 noted that considerable improvement took place since its last enquiry in 1950 and that the larger units were producing machine screws of satisfactory quality. It observed that the standard of quality varied with different manufacturers and felt that there was scope for further improvement. The manufacturers have informed the Commission that they have taken steps to improve the quality of their products by introducing quality control and by installing better and additional machinery. There appears to be general satisfaction with the quality of the domestic products. One important consumer has stated that the quality leaves much to be desired. He is not sure whether the right type of raw material is used. He has pointed out that in one recent supply, the rejections were as high as 75 percent due to the diameter of the screw being different from what was intended. The Indian Standards Institution has, however, not yet been able to finalise standard specifications for screw threads above 6 m.m. partly because the matter is under active consideration of the I.S.O. and partly because of the change over from the inch to the metric system. It is understood that this subject will receive attention of the Institution's Screw Thread Sectional Committee which is scheduled to meet in the near future.

Import Control Policy

Iron and steel machine screws are at present assessed to duty at 50 percent *ad valorem* or 60nP a gross, whichever is higher, under item No. 63(33)(b) of the First Schedule of the Indian Customs Tariff. The import control policy on machine screws since the last enquiry has been to allow imports from soft currency areas on the basis of 12½ percent quota of half of their best year's imports up to January-June, 1957. During the current licensing period, the quota to established importers has been further reduced to 10 percent and with a further restriction on quantity as well as value. Licences issued for machine screws could also be used for the import of set screws. The following figures give the quantity and value of imports since 1953-54:

Year	Quantity Tons	Value Rs.
1953-54	180	3,81,029
1954-55	173	3,86,364
1955-56	220	5,69,503
1956-57 (April-Dec.)	190	5,16,289

The machine screw industry has been enjoying protection for about five years. It has prayed for continuing protection in order to enable it to stabilise itself and to improve the quality of its products further. A leading manufacturer has even suggested that there should be a total ban on imports of all varieties of machine screws. The chairman stressed that quality is of prime importance and manufacturers should strive hard to achieve high quality for their products.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced by 0.9 percent to 441.2 during the week ended 29th June, compared with 437.3 for the previous week. The index was higher by 0.2 percent when compared with the corresponding week of a month ago and by 9.7 percent than that of a year ago. The average for June 1957, stood at 439.2 against 431.2 (revised) for May 1957, and 398.0 for June 1956. The index for Food Articles rose by 1.8 percent to 438.1 due to the reappearance of the price quotation for bajra at a higher level supported by an increase in the prices of tea (+8%), coffee plantation P.B. (+4%), jowar (+2%) and rice (+1%), in spite of declines in the prices of coffee—native flat (−3%), and wheat in Hapur, gram, dal arhar and gur (+1% each). An advance in the prices of manganese ore (average export price) (+25%), raw silk (+9%) and raw wool, groundnuts, rapeseed and copra (+1% each) caused an increase of 0.2 percent to 540.9 in the index for Industrial Raw Materials compared with 539.9 (revised) for the previous week, although the prices of castorseed (−3%), linseed and raw jute (−2% each), recorded declines. Higher prices of gingellycake (+16%), copracake (+8%), zinc (+4%), coconut oil and groundnutcake (+3% each) and gingelly oil and cotton yarn (+1% each) raised the index for Semi-Manufactures by 0.6 percent to 413.0 compared with 410.6 (revised) for the previous week: prices of linseed oil (−2%) and groundnut oil, mustard oil and castor oil (−1% each), however, went down. A fall of 0.2 percent to 391.6 compared with 392.4 (revised) for the earlier week in the index for Manufactures was brought about by a decrease in the prices of jute manufactures (−2%) and dyestuffs (−1%). The price of glass was, however, marked up by 3 percent. The index for Miscellaneous rose by 6.7 percent to 601.5 against 563.5 (revised) for the earlier week mainly as a result of the re-appearance of tobacco leaf (joti pollah) at an increased price. Prices of betelnuts (+2%) and cashewnuts in Quilon and tiles in Bengalore (+1% each), also recorded advances while black pepper and chillies (−1% each) showed declines.

EXPORT QUOTA FOR COCONUT OILCAKE

The Government of India has reviewed the export policy for coconut oilcake and has decided to release a quota of 5,000 tons for export by all shippers during the half-year July-December, 1957. The detail licensing procedure will be notified by the export trade control authorities at the ports.

ACC HONOURS THE CODE

1

"Producers and distributors owe it to the consumers of their products that they shall always be of the highest quality and available at a reasonable cost."

Code of conduct—**FORUM OF FREE ENTERPRISE**

Indian cement is required to pass the high standards laid down by the Indian Standards Institution. It is tested against these standards both in the laboratories of the producing factories as also at the Government Test House, Alipore. ACC cement passes these standards with a substantial margin of safety and is comparable in QUALITY with the best cement produced elsewhere in the world.

Since 1944, the selling price of cement has been fixed by the Government of India. Twice, in the past, the Company has voluntarily reduced the price of its cement. The price which the Company receives has remained unchanged since 1948. The current higher cost to the consumer is due to excise duty and the price equalisation surcharge levied by Government to subsidise imports through the State Trading Corporation.

Honesty, hard work, courtesy, continuous initiative and service to the community are the foundations on which the edifice of Free Enterprise rests. These are also the sure foundations on which the ACC edifice has been built to last.

LESS DEMAND AT TEA EXPORT SALE

SELECTIVE BUYING IN DUSTS

AT Sale No. 6, held on 15th and 16th July, offerings at the export auction consisted of 26,259 chests. There was less demand when the market opened, and as the Sale progressed prices eased. Well-made leaf grades and black leafed teas suitable for the Middle East were firm on last rates, but medium Assams were from 5 to 10 nP easier, except for brighter liquoring teas which were well supported at about last rates. C.T.C. teas were generally easier, and although useful prices were again paid for the best, these were not up to last week's level. Commons showed an easier tendency and prices were sometimes 5 nP below last rates. Flavoury Darjeelings sold well, but there was less competition for tippy grades and prices for these were as much as Re. 1 a lb below valuations.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.50	1 15 0 to 2 0 0
Plain B.P	1.94	1 8 0 to 1 8 6
Plain Fannings	1.78	
Medium B.P.	2.20	2 2 0 to 2 4 0
Medium Fannings	2.20 to 2.30	
Best Assam C.T.C B.P.	3.80	
Best Assam C.T.C Fgs.	4.50	4 0 0 to 5 0 0

At the Internal Sale, 9,296 chests of Dust were on offer. There was a further improvement in the quality of offerings from Assam. There was a strong demand when the Sale opened but this weakened as the Sale progressed. Powdery types were again in more demand than the larger Dusts. C.T.C. Assams were strong at the beginning of the Sale, but at the close some were as much as 20 nP easier, while any teas with quality were in strong demand.

Quotations

	1957 Rs	1956 Rs.
Medium Dooars Dust	1.60 to 1.70	1 6 0
Medium Assam Grainy Dust	1.70 to 1.80	1 12 0
Medium Assam C.T.C Dust	2.40 to 2.70	
Best Assam C.T.C. Dust	3.00 to 3.10	2 6 0 to 3 10 0

Of the 326 chests of Leaf on offer, 102 were of green tea for which there was very little demand.

FREIGHT MARKETS WEAKER

FURTHER weakness has developed in the freight markets generally and 41s was accepted for a single coal voyage in July from Hampton Roads-Continent. In the time charter section, the rate for a *Liberty* for five months' trading is 22s 6d a d.w. ton and for 12 months nominally 25s. In the Indian ore trade, Mormugao-Continent was done at 72s 9d f.i.o. and Visakhapatnam to two French ports at 92s 6d f.i.o. In the local coal trade Calcutta-Aden was fixed at 70s and a particularly vicious feature of this and the ore trade has arisen due to the appalling delays at Sandheads. Many of the ships now arriving were chartered when markets were considerably higher and through no fault of the ship, she is detained at Sandheads outside the port limits until her cancelling date under the charter is missed. Some of the less reliable charterers are taking advantage of this to cancel existing charters and refix at current rates, although it is extremely doubtful if the gain made is passed on to the ultimate beneficiary. It is understood that legal opinion in London favours the case of owners and a test case is likely to be made.

LINSEED BETTER

After a quiet opening last week, a generally firmer undertone prevailed: better prices were recorded due to a fairly good demand from crushers, while ready goods were very scarce. The weekly turnover was small. The oil section improved following an appreciable advance in U.K. prices. Some small activity was recorded, but buyers were unable to meet sellers' higher quotations, as the disparity between overseas and local prices, though smaller, still existed. Latest quotations were as follows: ready-July Rs. 22-4 a maund and August-September Rs. 22-8 a maund.

HIDES AND SKINS QUIETLY STEADY

The market in skins was quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 13th July and 15th July, 1957)

Cowhides: Wet salted (Slaughtered) 12,400 pcs. on the basis of Rs. 12.50 to Rs. 22.

Goatskins: Wet salted (Daissee, Killed) 23,700 pcs. on the basis of Rs. 275 to Rs. 300, Rs. 330 to Rs. 350 and Rs. 375 to Rs. 385; Assam-Dinajpur 4,700 pcs. on the basis of Rs. 325 to Rs. 335; Purneah-Kissenganj 11,100 pcs. on the basis of Rs. 305 to Rs. 310.

Bazaar Stocks

(15th July, 1957)

Cowhides: Wet salted 1,68,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 29,000 pcs.; Assam-Dinajpur-Murshidabad 22,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 28,000 pcs.

Red Fort

The Sawan and Bhado Pavilions are all that remain of the once enchanting Hyat Baksh Gardens at the Red Fort. The fragrant and colourful flowers are gone. Gone are the playful fountains and cascades. Gone too are the craftsmen who designed and installed underground pipes so long ago to drain and beautify the gardens. But the pipes themselves remain as testimony to their skill.

Plantation Topics

NATIONALISATION OF KERALA PLANTATIONS

GOVERNMENT DECIDES TO POSTPONE MEASURE

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Communist Government of Kerala has shelved for the time being its proposal to nationalise foreign-owned plantations in the State. This was stated by the Chief Minister on his way to Madras to attend the recent meeting of the Southern Zonal Council.

Mr. T. V. Thomas, Labour Minister of Kerala, told the Plantation Labour Committee which met recently that the State Government had decided to appoint yet another committee to revise the wages of estate workers The Committee has recommended that coffee estate workers in Travancore-Cochin may be given bonus at the rate of 6¼ percent of their total cash earnings for each of the years 1953, 1954, 1955 and 1956. This rate is inclusive of the bonus already paid for these years. Balance due on this account should be disbursed before 10th August, 1957. The question of bonus for coffee estate workers in Malabar has been postponed for the next meeting of the Committee. According to another decision of the Committee, rubber estate workers in the Malabar area will get bonus for the years 1955 and 1956 at the same rate as has been recommended for their counterparts in Travancore-Cochin. The dispute between managements and workers in the rubber estates in Malabar over the application of the Madras settlement of 15th April, has been decided amicably. According to this settlement, the managements have agreed to pay wages at Rs. 1.72 a day to the workers who have till now been paid Rs. 1.44.

The State Trading Corporation of India opened a regional office in Cochin in the first week of July. This office will be directly under the control of the Madras branch of the Corporation, which is trading in some of the plantation crops produced on the west coast such as pepper, cashew kernel, lemongrass oil and coffee with the Communist countries where there is little scope for private trade.

Levies on Tea

The Nilgiri Planters' Association held its annual general meeting a few days ago. Mr. M. W. Hoare, chairman, addressing the meeting said that a country, greatly in need of foreign exchange, could not afford to undermine the competitiveness of its products by levying an export duty as well as a cess on tea. He expressed the view that the abolition of the export duty would be an imaginative step which would place Indian tea in a strong position in the world market. Commenting on the Madras budget he said: "Considering the rate of agricultural income tax proposed in a neighbouring State (Kerala), the enhancement in the rates made by Madras should be considered moderate. Nevertheless, it is not a small increase.

"Another important thing to be borne in mind is that apparently Madras still considers that planting can be subjected to severer taxation, but not the rest of the vast field of agriculture. If the whole of agriculture had been taxed, even at rates considerably lower than those already applicable to planting, the State would probably have balanced its Budget".

Continuing he said: "If as a result of the heavy tax burden borne by the planting industry no new investment can be attracted, no increase in area and productivity can be achieved, and savings have to be contrived out of estate maintenance and care, the present level of taxation defeats a greater purpose and not only will the yield of taxation decrease, but also the wealth of the nation."

Coffee and Tea in Nilgiris

Referring to coffee, the chairman said that the problem of Nilgiri coffee was not so much one that could be overcome by improved cultural practices as by economic factors. There was a price at which the grower would find it worth while to devote all his attention to better growing. As far as the Nilgiris area was concerned, the margin of advantage has been against expansion under coffee, and a very large number of the smaller growers are replacing coffee by tea.

Coconut Oil Rises

A windfall has come for coconut growers in India in the form of import restrictions on coconut products from 1st July. They are now harvesting the benefits of this foreign exchange saving device. The price of coconut oil has gone up from Rs. 475 towards the end of June to Rs. 504 a candy on the Cochin market in the first week of July, mainly as a result of the demand created by the absence of the imported material There has been a heavy rush of orders from Bombay, Calcutta and also the upcountry markets, some of which the dealers on the west coast could not accept on account of the smallness of stocks at their command Indigenous supply is poor as this is the lean production period in Kerala and the production of copra has been affected by inclement weather As a matter of fact, the supply situation is very tight now. Prices are not likely to come down to the previous level, until the supply is increased by imports, or by increased indigenous production with the change of the season.

CALCUTTA TEA AUCTIONS IN JUNE

DEMAND IMPROVES TOWARDS CLOSE

OFFERINGS during June totalled approximately 60,200 chests. In Sale No. 1, there was a rather poor demand and the main support came from internal buyers. The few bright liquoring C.T.C. Assams and the first flush Dooars sold quite well, although generally below brokers' valuations, while the more ordinary brokens were 10 to 20 nP below expectations and Fannings grades were very weak, many being withdrawn, say Messrs. Carritt Moran & Co. Private Ltd. in their monthly tea market review. Whole leaf grades, however, were keenly competed for and realised satisfactory prices but Darjeelings without flavour were easier except where leaf appearance was attractive. In Sale No. 2 there was an improved demand with rather more interest from exporters. Whole leaf grades were again a very strong feature and sold at a premium and Fannings grades received more attention although a number of lines were withdrawn without bids. The last sale of the month opened with a strong and general demand from all sections of the trade. All descriptions shared in the general advance, stylish whole leaf grades, flavoury Darjeelings and good C.T.C. teas being keenly sought after at enhanced rates.

The teas from Darjeeling offered in Sale Nos. 1, 2 and 3 were of an ordinary first flush description and although leaf appearance was well up to standard and some attractive F.O.Ps were available there were only a few invoices with flavour. In Sale No. 3, however, some teas showed improvement and there were a few with quite nice early second flush character. Apart from a few bright but thin liquoring C.T.C. Assams, quality generally was unattractive in Sale Nos. 1 and 2, but leaf appearance was fully average and there were a few useful tippy grades on offer. In Sale No. 3, quality began to show improvement and there were a number of quite useful C.T.C. teas and a few bright liquoring invoices of orthodox manufacture. Teas from Dooars comprised the major part of the offerings for the three sales held in June. Apart from a few bright liquoring first flush teas, quality was of a very ordinary description, but leaf appearance generally was about average. Leaf appearance from Cachar was about average, but cup quality was disappointing, the liquors with few exceptions being rather plain and below the standard expected.

Quotations

	1957-58 Rs. nP.	1956-57 Rs. nP. (nominal)
Sale No. 1 Plain B.P. ...	1.75	(not quoted)
Sale No. 2 " " ...	1.77	1.56
Sale No. 3 " " ...	1.85	1.47

Internal Market

Only three sales were held during the month at which a small quantity of 494 chests of Leaf was offered, of which 257 chests were of new season's manufacture. The leaf appearance was generally rather fibrous and prices were a little irregular. At the four sales held during the month, a total of 50,291 chests of Dust was catalogued for sale, of which 14,811 chests were of new season's manufacture. Quality of old season's teas continued to be of an ordinary description and prices again moved in buyers' favour, but that of new season's invoices was generally bright with a clean leaf appearance. After Sale No. 1, the second sale of the month, prices for new season's teas began to appreciate and there was a firmer and more active tone to the market. C.T.C. Assams which showed early signs of quality and Darjeeling invoices with attractive flavour were a particular feature. There was no demand for exportable kinds and prices for these only shared the firmer tendency of the orthodox descriptions.

Quotations

	1957-58 Rs. nP	1956-57 Rs. nP
Sale No. 49 Clean Common Dust ...	1.44	1.31
	1957-58	1956-57
Sale No. 1 " " " ...	1.39	1.32
Sale No. 2 " " " ...	1.37	1.39
Sale No. 3 " " " ...	1.45	1.34

Export sales up to and including Sale No. 3 totalled 64,811 chests at an average price of Rs. 2.30 compared with 52,006 at an average price of Rs 2.31 during the corresponding period of the 1956-57 season. Internal sales at 962 chests of Leaf and 12,085 chests of Dust (Rs. 2.20 and Rs. 1.60) go against 309 and 1,831 chests (Rs. 1.31 and Rs. 2) for the same period last year.

The estimated North Indian crop to the end of May 1957 was 45,683,917 lbs compared with 54,764,564 lbs to the same date last year. The average figure at this date for the three years 1954-1956 was 53,977,108 lbs. The price of Export quota decreased from 25 nP a lb at the beginning of the month to 18 nP a lb on 15th June. The market hardened in the last two weeks, and at the close of business on the 28th June, the price had risen to 24 nP a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th May, 1957 to 23rd June, 1957 with the corresponding figures of the previous year in parentheses were as follows: by steamer 72,695 (80,395) by rail 25,304 (43,906) by air 6,632 (7,851) making a total of 104,632 (142,152). Since the beginning of the season, 1st April, 1957 to 23rd June, 1957 arrivals have been: by steamer 83,874 (118,863) by rail 53,298 (76,532) by air 19,093 (18,225) making a total of 156,225 (242,004) chests.

COMPANY AND PUBLIC NOTICES

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Eleventh Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta, on the 8th day of August, 1957, at 3 p.m. for the following purposes:—

(1) To consider the Profit & Loss Account for the year ended 31st December, 1956, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.

(2) To declare a Dividend on the Ordinary Shares.

(3) To appoint Auditors and to fix their remuneration.

(4) To elect Directors in the place of two Directors retiring by rotation. In this connection special notice has been received by the Company pursuant to Section 190(1) and 281(2) of the Companies Act, 1956 of intention to propose the following resolution :—

"That it is hereby declared that the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. P. C. Chaudhuri who has attained the age of 81 years and that he be and is hereby reappointed a Director of the Company."

AS SPECIAL BUSINESS

(5) To consider and if thought fit to pass with or without modification the following Resolution :—

"That the Board of Directors of the Company be and is hereby authorised to borrow for and on behalf of the Company money in excess of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose, as the Board may at any time and from time to time deem necessary for the purposes of the Company."

Explanatory Statement

Article 67 of the Articles of Association of the Company vests in the Board of Directors unlimited power to borrow moneys for the purposes of the Company. Sub-section (1) (d) of Section 293 of the Companies Act, 1956 imposed a limit on this power which may be enlarged by a resolution of the Company in General Meeting. The statutory provision restricts the borrowing power of the Directors where the moneys to be borrowed, after the commencement of the Act, together with moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free Reserves, that is to say Reserves not set apart for any specific purposes. Your Directors recommend, that the statutory borrowing power of the Board be enlarged and unrestricted as laid down in Article 67 of the Articles of Association of the Company, i.e. that the borrowing power exercisable by your Directors prior to the date of commencement of the Companies Act, 1956, viz. the 1st April, 1956, be restored

(6) The Share Transfer Register of the Company's Ordinary Shares will be closed from the 1st August to the 8th August 1957, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
D. A. HOUGHTON,
Secretary.

4, Bankshall Street, Calcutta.
19th June, 1957.

THE TITAGHUR JUTE FACTORY COMPANY, LIMITED

THE Directors of this Company regret that they are unable to recommend payment of an interim dividend on ordinary shares for the year ended 31st December, 1957. The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half-year ended 30th June 1957. This dividend will be paid on 1st August. 1957 less income tax at 8/6d per £ and the Transfer Register will be closed from 20th July to 1st August, 1957, both days inclusive.

P. WILLIAMS,
Secretary.

Dundee, 12th July, 1957.

THE VICTORIA JUTE COMPANY, LIMITED

THE Directors of this Company regret that they are unable to recommend payment of an interim dividend on ordinary shares for the year ended 31st December, 1957. The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half-year ended 30th June. 1957. This dividend will be paid on 1st August. 1957 less income tax at 8/6d per £ and the Transfer Register will be closed from 20th July to 1st August, 1957, both days inclusive.

P. WILLIAMS,
Secretary.

Dundee, 12th July, 1957.

THE SAMNUGGUR JUTE FACTORY COMPANY, LIMITED

BANKS

H indicates that Share capital is half paid. O C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE CHANGE IN BRITISH POLICY ON JUTE GOODS

LESS PROTECTION FOR DUNDEE: REDUCED DIFFERENTIAL ON IMPORTED PRODUCTS

LAST week's announcement by the President of the U.K. Board of Trade represents a major revision of the policy which the British Government has hitherto pursued in relation to the Dundee jute industry. Sir David Eccles's statement that the Jute Control, the sole purchasing agency for imports of manufactured jute goods into the United Kingdom, would with effect from 18th July reduce its existing "mark-up" for hessians imported from India and Pakistan from the previous 40 percent to 30 percent must be regarded as the first step in abolishing the indirect subsidy which the Dundee mills have for long enjoyed by reason of the British Government's purchases of all jute goods coming into the country and subsequent equalisation of the cost of locally manufactured and imported goods by selling both at a fixed single price to the U.K. consumer. The Jute Control, operated by the British Board of Trade, is the last survivor of some hundreds of wartime industrial controls. Originally it was responsible for purchases of both raw jute and manufactured goods. A year or two ago, the Control relinquished its activities in raw jute and handed the trade back to private enterprise: the present decision to reduce by a quarter the permitted differential between the cost of imported Indian and Pakistani manufactures and the selling price of Dundee goods presages the final extinction, in due course, of the Control which had its origin in the strategic necessities of the war.

It has been accepted for some time past that the activities of the Control have run counter to some of the main strands of Britain's professed trade policy. In so far as it provides an indirect subsidy to Dundee, the Control offends the spirit, if not the letter, of certain international declarations: in another sense, it can be argued that it has gone against the grain of freer intra-Commonwealth trade, though certainly not to the advantage of non-Commonwealth producers of manufactured jute goods. Perhaps the worst that can be said is that the Control is an anomaly, and from that point of view the announcement of the President of the Board of Trade will be welcomed in this country. But it is to be noted that Sir David Eccles based his decision to reduce the "mark-up" on none of the considerations mentioned above. He had decided, he said, to reduce the Control's selling prices for the principal types of imported hessians because existing prices were increasingly operating against the interests of consumers and of jute cloth as an industrial material. A prime objective of his decision is, therefore, to make the U.K. jute industry more competitive. But, time and again, experience has shown that whole industries or units thereof, are rarely appreciative of ministers who want to make them more competitive and view their altruism with a good deal of suspicion. Dundee is no exception. Sir David Eccles's declaration has been received there with very mixed feelings.

*

The fact that sacks made from imported jute cloth will now be cheaper will inevitably affect the production of the Dundee mills unless they can reduce their own production costs. The President of the Board of Trade claimed that with the former 40 percent mark-up, the price of jute sacks was penal and uneconomic to U.K agricultural and industrial users. If no reduction in price was possible then the way would be still further opened for substitute materials, a state of affairs which was causing concern, not merely in Britain but in India and Pakistan as well. His argument was reinforced by a back-bencher who alleged that sections of the U.K carpet-making industry have consistently criticised the selling policy of the Jute Control in the postwar period because it has operated to the disadvantage of British carpet manufacturers. Nonetheless, if some U.K. jute manufacturers are now forced to the wall, there will be strong resentment in Dundee, where a local unemployment rate of 5 percent is perceptibly higher than the national average. Indeed, in the course of the debate following the Board of Trade announcement, Mr. John Strachey, member of Parliament for Dundee (West), went so far as to declare that if Parliament destroyed the industry it would have gone far to destroying the City of Dundee itself. He added: "We in Dundee feel a certain bitterness when we are told that this blow is being struck at us in our best interests; what consolation is it to Dundee if now Indian hessians are allowed in and they compete effectively with paper bags? That will give not one man or woman in Dundee employment: there is absolutely no consolation in that". We may take Mr Strachey's *cri de coeur* as an indication of the measure of protection which the Control has given the U.K. jute industry.

*

A further argument used in the debate was that there was no need to give better terms to Indian imports if, in fact, paper substitutes were already exercising strong competitive pressure on Dundee prices. Substitutes, it is claimed, are acting as a spur to better and cheaper production of jute manufactures in the U.K. as elsewhere. Here, perhaps, Sir David Eccles's critics are on stronger ground. Since the war, the Dundee industry, which is much smaller than its Indian competitor, has invested about £10 million in the modernisation of plant and machinery. It has, in fact, achieved a high degree of mechanisation and specialisation of its production. And, rightly or wrongly, it is claimed that this large investment was made on the implied assurance that the protection afforded by the Jute Control would be continued.

In point of fact, of course, the Jute Control is to be continued. All that is now proposed is that the protection which it has *given* to the U.K. manufacturer shall be somewhat less effective than heretofore. Dundee's fears are, of course, understandable: there is a strong disposition to regard the reduction by a quarter in the mark-up as merely the thin end of the wedge and the first of several subsequent cuts. Apart from shareholders interests in the matter, there are 20,000 workers engaged in the U.K. industry, on behalf of which it was urged in the Commons debate that guarantees should be given that there will be no further cuts in the mark-up for three or four years to come. Failing such an assurance, mill managements would be quite unable to plan the kind of reorganisation necessary to effect further reductions in manufacturing costs. No such assurance was forthcoming from the Government benches and it must be assumed that, having at last plucked up courage to grasp the very painful nettle represented by the Jute Control, ministers are reluctant to be put in the position of having to do it a second time.

But last week's change in the Control's mark-up policy is not the only difficulty confronting the U.K. jute industry. The detailed implications of the proposals for a European Common Market and a Free Trade Area have still to be assessed, but in general it would seem that these represent a further assault on the concept of protection, the prospect of which cannot be very welcome to an industry which has been artificially sheltered for some years past. Uncertainties about supplies of raw material are also an ever-present threat to production and the stability of the Dundee mills. Last March, the chairman of the British Jute Trade Federal Council spoke of Pakistan's policy of "planned scarcity and high raw material prices" which embarrassed the U.K. manufacturer and encouraged the use of substitutes and bulk handling. Indian jute manufacturers have their own special difficulties but, if it is any comfort, there is plenty of evidence to show that their brethren in Dundee are also carrying a heavy burden of troubles.

APPROACHING THE I.C.I.C.I.

THE Industrial Credit and Investment Corporation of India is more than just one of the several investment corporations which have been established in recent years. It came into being in January 1955 as a purely privately-owned concern started for the express purpose of promoting the development of industries in the private sector. The date is significant, for the same month saw the Avadi session of the Congress Party and the formal acceptance of the socialist pattern of society as an objective of economic policy. It is noteworthy that while the Indian Government veered to the left in its ideology, it took part in discussions with the U.S. Government and the World Bank which led to the establishment of I.C.I.C.I. New Delhi gave the Corporation an interest-free loan of Rs 7½ crores and guaranteed a World Bank credit of $10 million given to it. The Corporation provides a remarkable example of international economic co-operation. Of the Rs. 25 crores of authorised capital, Rs. 5 crores in ordinary shares of Rs. 100 each has been issued and paid-up. Stock worth Rs. 2 crores has been taken up by Indian banks, insurance companies and the directors, their friends and associates; Rs. 50 lakhs by American subscribers; and Rs. 1 crore by subscribers in the U.K., including British exchange banks. U.K and other Commonwealth insurance companies and others. The remaining Rs. 1½ crores of ordinary shares were offered to the public in India in February 1955 and were oversubscribed. I.C.I.C.I now has more than 2,000 shareholders, including the Life Insurance Corporation, into whose hands have passed the shares originally taken up by certain of the Indian and other Commonwealth insurance companies.

*

Its functions include the granting of loans, the underwriting of ordinary and preference shares, and direct subscription to such shares in a variety of industries in all parts of India. Of the total rupee resources of Rs. 12½ crores, more than Rs. 8 crores of assistance, in one form or another, has been sanctioned and a number of requests for assistance, in the form of rupees and foreign exchange, are being considered. Intending applicants for financial assistance from the Corporation will find the new I.C.I.C.I. brochure, sub-titled "What it is and how it works," worthy of study. Small industries and those run by proprietors or partnerships and private limited companies are not normally granted assistance. Rs. 5 lakhs is the normal lower limit of the amount of assistance. The general policy is to distribute assistance to industries all over India and to a large number of companies, rather than to provide large-scale assist-

SUING FOR DAMAGE CAUSED BY WILD ANIMAL

A DIFFERENCE BETWEEN FACT AND LAW

(FROM OUR LEGAL CORRESPONDENT)

THIS is an odd sort of case to happen in England, and is of some importance as to the issue decided to those engaged in heavy jungle transport in India. It concerns six tame or domestic elephants, a couple of midgets, man and wife, and a tiny dog of illegitimate birth, in short a mongrel, of a courageous, even ferocious, nature. We quoted a week ago the dictum that it is not news if a dog bites a man but it is news if a man bites a dog. What about a dog, and a little one at that, biting a herd of elephants? That is what happened one day in Mr. Bertram Mills's famous circus in Olympia. Mr. and Mrs. Behrens, the two little midgets, were on show at the circus in a booth which they and their manager licensed from Bertram Mills Circus Limited. The booth was in a passage way, and along this passage way, as was well known to the two midgets, passed several times a day in dignified, orderly and placid progress, never doing the least harm to anyone, six Burmese elephants.

One mentions that the elephants were Burmese because it seems to have been contended later that the Burmese variety is more peaceable and tractable than its Indian or any other counterpart. The manager of the two midgets owned and—contrary to the circus regulations—kept near the booth a tiny dog which you might have thought was, jointly with the manager, its owner, responsible for the events which happened on 2nd January, 1954. The dog did not like the elephants. Moreover, he considered it his duty to protect his master's words, the midgets and their booth. Twice that day the herd had lumbered past him and his charges. Twice he had put up with it with a warning growl or two. Now here was the solemn procession again, complete with trainer and grooms. It was too much and Tiny went for the whole herd, yapping, snarling and biting at their legs. The mastodons were not perturbed but they were a little annoyed. After all, there was the loss of face. So they ponderously chased the dog down the passage. Tiny disappeared and was no more seen. But in passing the midget's booth one of the elephants knocked it down and it fell on little Mrs Behrens who was within the same and who sustained injuries for which she later sued for damages; sued not her manager, whose dog it was, which was the proximate cause of all the damage and which dog was living in or near the booth contrary to the circus regulations, but Mr. Bertram Mills, the owner of the elephants. Was he liable?

"Yes", said Devlin J. If these animals had been horses, oxen or dogs, the result would have been different, for Mr. Mills had been guilty of no negligence at all. But in law there is a vital distinction between domestic or tame animals and animals which are what the law calls *ferae naturae* (wild by nature). The keeper of an animal *ferae naturae* has "an absolute duty to confine or control it so that it shall not do injury" and is liable for any injury which it causes if it escapes from control. In actual fact, it was the little dog that was "wild by nature" rather than the elephant. In fact but not in law. His lordship held that "as a matter of law an elephant is an animal *ferae naturae*." That is no doubt correct of England, where the elephant is not native to the soil. But one begins to feel a bit hesitant about it in India, where elephants with their wise, gentle nature are used increasingly nearly all over the country in transport and other work and are looked upon virtually as domestic animals.

(Behrens v Bertram Mills Circus). (1957. 101. *Solicitors Journal.* 208.)

* * * *

It would not be fitting if we closed this short series of notes on recent English legal matters without our customary respectful references to the activities of the British Circumlocution Office during the past six months or so. Charles Dickens devoted a full length novel, *Little Dorrit*, to a most venomous attack on this venerable Government department and thought he had given it its death blow. But Dickens it was who died and 80 odd years later the Tite-Barnacles still in charge of its various branches penetrate every corner of the kingdom with their cheerful slogan: "Whatever is required to be done, the Circumlocution Office is beforehand with all the public departments in the art of perceiving *how not to do it.*"

The other day the writer picked up his local west of England daily and came across the following inspiring example of the department's zeal. For 300 years, "Bristol Milk" has been a term applied to a drink which is certainly not produced by a cow. It is, in fact, a very famous sherry known all over the world, but not until April last known, it seems, to the Circumlocution Office. Now, you will be well aware that Under the Sales of Goods Act it is a serious offence, in Britain as it is in India, to sell to the public goods not of the nature and quality demanded and to misdescribe them. The Circumlocution Office, having no doubt bought a bottle of Bristol Milk and investigated its contents, discovered that the contents were not milk at all but an alcoholic beverage. So the Office got to work. "Sherry," it informed the firm, "is not a dairy product and it is a criminal offence to mislead the public as to the nature, substance and quality of food."

The firm, being threatened with a prosecution, slipped up badly. Making the woeful mistake of crediting Mr. Tite-Barnacle with a sense of humour, the firm, in its reply, tried the effect of a little genial sarcasm; perhaps also, being unable to believe its eyes when it read the ultimatum, it might even have thought that Mr. Tite-Barnacle was pulling its legs, which is the very last thing that grave and serious executive would do. It replied that it also marketed an even more famous beverage, "Bristol Cream", which was not the "oily part of milk which gathers on the top" but sherry; and it added, perhaps to the consternation of the proprietors of firms like Colgates, Ponds and sundry shoe polishes, that all shaving creams, hair creams, face creams and shoe creams, none of which is produced by a cow, were in the like condemnation with themselves. Goodness knows what might have happened after the latter disclosure. Fortunately, however, a more senior Mr. Tite-Barnacle was seen by the firm and the newspaper adds: "I am pleased to say the Government official finally relented, but only after learning that these two sherries alone earned about half-a-million dollars a year for Britain through exports." *(Bath Chronicle and Herald* 27th April, 1957.)

* * * *

From Bristol across the country to Felixstowe in Suffolk, in which pleasant county the Circumlocution Office has a branch known as the County Planning Authority, of which Mr. John Gordon in the *Sunday Express* says in recounting this story: "As odd as the ways of Government in trade are the ways of these new age planners, who think God has endowed them with special wisdom to teach the rest of us how to live." Mr. E. V. Rachael took over a new house in Felixstowe. The Circumlocution Office (County Planning branch) decreed that it should be painted cream. But Mr. Rachael thought he would like a nice restful green. So he painted his house green. Along came outraged authority crying: "You can't do that. We said cream and it must be cream." But the Office conceded after protests that "our authority to give orders extends only to the first painting. Once you have painted it cream, there is nothing we can do to stop you putting any other colour on top of the cream. Green, if you like." So if you buy a house in Suffolk you can paint it any colour you wish. But you must first go to the useless expense of painting it cream to the satisfaction of the county's surveyor. As Mr Gordon comments: "Sometimes I think we've got the wrong people in the mental homes."

* * * *

It is really astounding, this in-bred submission of the average Briton to petty officialdom. Probably not a single male citizen in the whole realm would have had the hardihood to do what Miss Vivien Leigh (Lady Olivier) did the other day. Learning that the Office proposed to sanction the conversion of the historic and beautiful St. James's Theatre into a block of offices, the great actress calmly walked into the House of Lords and started to address the assembled peers in protest against the proposal. Her action shocked the whole country, Conservative, Labour and Liberal. Recently, one heard the matter debated in the B.B.C. "Serious Argument". Labour was represented by the Rt. Hon. Mr. E. Brown, a former Secretary of State. Mr. Brown is about the most independent of the Labour front bench and an advanced radical who you might expect to have supported Miss Leigh. Not a bit of it. He was the most Tory of the Tories and sounded like Lord Eldon or Sir Charles Wetherell opposing the Reform Bill in 1831. He even lost his temper over the lady's impropriety. What she had done, the Rt. Hon. gentleman said, was illegal, most improper and must be put down, as no woman, not even a peeress in her own right, was entitled to address the House of Lords. All the same, the little lady's action has shaken up the whole Circumlocution Office and today one learns over the radio that the proposal is being reconsidered.

* * * *

The Office is very strong in the provinces and looks like getting away with its following contribution towards a solution to the housing shortage problem, notwithstanding that Mr. John Gordon in the *Sunday Express* has once more butted in on the decent silence with which it likes to envelope its endeavours. From the Bristol and Felixstowe branches, we proceed to that of the village of Kislingbury in Northamptonshire. "In that village there are," says Mr. Gordon, "two rows of houses in which people live happily, healthily and comfortably. Suddenly all the occupiers have received notice that the District Council proposes to demolish the houses as unfit. Did the Council make a careful examination of them before it decided to throw the people into the street? Apparently not. In fact no representative of the Council has been inside most of the houses to find out their defects, if any. Before Authority decides to pull down people's homes, I think it should go and look at them."

THE acute congestion in the ports which has been developing over the past few weeks seems, I fear, to be leaving the Government largely unmoved. In saying at his Press conference on Monday that present conditions in Calcutta Port are extraordinary, but not "critical or grave", Mr. Raj Bahadur betrayed a complacency to which all three adjectives might, not inappropriately, be applied. Had I been Shipping Minister, I would not have considered the present time as the most opportune to suggest that the working of the Port shows the rapid advance the country is making with its development schemes. If the confusion and indiscipline now visible there is indeed any indication of development progress elsewhere, there is reason to feel sorry for the country. But this particular flight of fancy is perhaps less disquieting than the Shipping Minister's suggestion that such conditions as now prevail in the Port neither are being experienced for the first time nor are beyond the Government's expectations. If the latter is in fact the case, it is a remarkable commentary on the quality of the planning which has been done, that while our foreign exchange reserves have been liberally spent, we may not have much to show for it in return except ships, foodgrains and essential equipment uselessly piled up to adorn the Hooghly landscape. The Government of India's reluctance to concur in a move to increase freight rates is understandable, considering the costs; but to expect shipping lines to run their services as a charity in the interests of a five year plan which has clearly been lacking in coordination seems rather far-fetched. Much can still be done to save the situation, such as tightening discipline at the docks and putting the working of the ports generally on an emergency basis. But if the tendency continues to greet every crisis with a volley of sermons, I fear there may not be much improvement that we can expect.

* * * *

Dr. J. C. Ghosh has done well to tell the country that the prospects of introducing free and compulsory education in India by January 1960 are nil. The makers of the Constitution doubtless inscribed the date therein with the best of intentions, and to aim high is an entirely admirable thing for a new nation, but a little realism in time pays. Education should not be treated as just one more "welfare activity" for it is only an educated people, technologically and otherwise, which can hope to carry through an ambitious economic plan. On the other hand, planning is essentially a matter of priorities: and it is in their fixation that a little less idealism will do the country no harm. Mr. Deshmukh's argument that education should be included in the still undefined "hard core" of the plan is worthy of serious consideration by the Government, which should extend its present attitude of relative flexibility not so much to the question of education as to some other expensive ventures prescribed by the Constitution. An Andhra Minister recently spoke of the continuing need for English in education, and during his current stay in the south the President will have ample opportunities of finding out at first hand that haste in the enforcement of Hindi is fraught with many dangers—not all of them merely educational. There is, then, the subject of Prohibition, on which the Centre has yet to take a firm stand. Granting—which there is no reason to do—that the directive on Prohibition had any place at all in the Constitution, it is now for the Government of India to decide whether it is entitled to the priority accorded to it by some fanatics who are not all to be found only in the State capitals. The country, which is being asked to make tremendous sacrifices in the name of the plan, and foreign investors who are being invited to finance it in part, are entitled to know that the Government really means to place first things first and that available revenue is not being thrown away in useless or secondary pursuits.

Assurances from high places notwithstanding, my native caution bids me treat the possibility of a sports stadium in Calcutta, composite or otherwise, with some reserve. The consent of the Opposition in the West Bengal Assembly is doubtless welcome, but I had not heard it suggested anywhere that in past years this was the reason why Calcutta went without a stadium. With the exception of the Government of India—a party which might have some *locus standi* in the matter—everyone seems agreed that Calcutta must have a stadium, although opinions differ as to where and of what kind. The recent unpleasant incident following a football match appears to have strengthened the case for one, without establishing the exact connection. I share the enthusiasm for a stadium, and it is not necessary for me to venture an opinion on the details in dispute. More up my street is the economic line of enquiry. It would be perfectly legitimate to argue that Calcutta needs a stadium as it needs, and has got, a museum or a zoo or a botanical garden: economic considerations here are secondary. On the other hand, if the Calcutta public expects a profit from the stadium—as there are reasons to suspect from the many references I find to what are called vested interests—then there is clearly a need for entering a caveat. Assuming that the Government of West Bengal has the funds to lend and that the Centre is prepared to spare the cement and the steel, the stadium will be some years in construction. Interest charges and depreciation will come into the picture before long. Even after it is granted that the present gates of our football grounds cannot stand the rush, which is by no means a daily occurrence, it should be looked into now whether the gate money expected will stand the expenses. Decorative Metro stations in Moscow are all right but I doubt whether Dr. Roy has been able so to condition the people of Calcutta as Mr. Jyoti Basu's friends in the Kremlin have managed. Some refugees may prefer hutments to a stadium, and I hope Dr. Roy will not be confronted with a delegation of them led by—Mr. Jyoti Basu, of course.

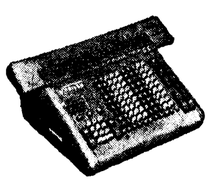
What prospect India has of obtaining a loan from Britain to get over her foreign exchange crisis, I would not know for certain; nor, I suspect, would Mr. H. M. Patel, the Finance Ministry's Principal Secretary, who has recently completed some polite discussions on the subject in London. But a correspondent who has been making his own private enquiries in the City writes that, on strictly economic considerations, the prospect would seem to be dismal. Fortunately, however, in this case, economics may not be a complete guide to human action, so he feels that some assistance from Britain in the nature of a gesture might be forthcoming. As a footnote to this not very cheering assessment, he adds that, like the rupee in Europe's free markets, optimistic reports by informed observers from India itself about economic prospects here are now beginning to be rather more liberally discounted in London. The warning discourages me from my earlier intention to issue a few recommendations, but an interesting point has been raised by "Lombard", the *Financial Times*' commentator on monetary affairs, about what Britain should do in the present situation. His point is that if Britain is to live up to her rôle as banker to the sterling area more fully, she has an obligation to try and provide credit assistance for India, especially as the credit which might be given is likely to be more than covered by this country's holding of sterling balances. This might seem to be somewhat of a departure from earlier practice, and it carries the obvious risk that if assistance is extended to one country, other spendthrifts might line up in the loan queue. But, from New Delhi's point of view at least, the idea may be worth pressing that the functions of the sterling area be diversified in this manner—provided, of course, that prodigals undertake to mend their ways. A little more evidence of the latter (such as realistic treatment of foreign investments which are already here) would considerably strengthen India's argument in favour of the former. Unfortunately, that evidence is still lacking.

* * * *



The Asutosh Museum of the University of Calcutta has made its own contribution to the International Geophysical Year by unearthing an ancient city near Calcutta. The archæologists seem to think that this township, probably on the Vidyadhari, could be the same as that referred to by Ptolemy as Ashtagaura. For myself, I suspended my disbelief and went on to learn that the city flourished between 200 B.C. and 200 A.D., and that at the time it had extensive contacts with the Græco-Roman world. As is inevitable with the laity, I then proceeded to speculate what Calcutta might look like to archæologists two thousand years hence if this fair city of ours were to be struck down by a natural calamity. The recent rains have shown us that some of our broader streets can well look like rivers, and the archæologists of 3957 A.D. will almost certainly guess that there was once in Calcutta a great river called Chittaranjan Avenue which was at its deepest near the temple in Thanthanya. If the relics of collapsing houses survive, which is by no means certain, they will perhaps be regarded as the left-overs of an earlier civilisation to which Calcutta would be held an heir. If the movement underground occurs in the next few weeks, the archæologists of the future will also have the skeletons of a large number of ocean-going vessels from which it will be possible to walk into several conclusions. Some, I dare say, will think that in 1957 Calcutta was a flourishing port, oblivious of the fact that the possibility had been ruined by dock labourers led by irresponsible trade unionists. What will they make of the ruins that may remain of the new secretariat of the Government of West Bengal on Strand Road? Perhaps that there was once an effective Government in Calcutta—which would be neither wholly wrong nor wholly right. Writers' Building? They will be hard put to it to find why the structure might have been named so, and some learned scholar will probably get a doctorate for proving that this was the building Tagore lived in before moving into the defunct structure in Selidah about which there has been much noise in recent weeks. What of Royal Exchange? This is where one must draw a line, but if the National Secretariat in New Delhi be subjected to the same sort of fate it would be found that the Bengal Chamber had warned the Government of India of many of the dangers that eventually overtook the country and turned everything into archæological material.

TEXTILE MACHINERY CORPORATION LIMITED

MR. K. K. BIRLA'S SURVEY OF ENGINEERING INDUSTRY

Addressing the 17th Annual General Meeting of the Shareholders of the Textile Machinery Corporation, Limited held at Belgharia, 24-Parganas, West Bengal, on July 23, Mr. K. K. Birla, Chairman, said:—

Ladies and Gentlemen,

I have great pleasure in welcoming you to this Seventeenth Annual General Meeting of Textile Machinery Corporation Ltd. The Directors' Report and the audited accounts and the balance sheet for the year ended 31st December, 1956 are already with you and with your permission I shall take them as read.

Gentlemen, we are passing through an important phase in the industrial development of our country under the very ambitious Second Five Year Plan. In order to implement the Plan to the full extent, the Finance Minister has had to come out with a rather bold Budget including some altogether new taxation proposals like the Wealth and Expenditure Taxes. The reduction in rates of Income Tax and Super Tax particularly in earned income is welcome and is calculated to provide an incentive to the people generally to earn more and save more. But the imposition of Wealth Tax on companies and individuals, it is feared, is likely to cause disinvestment. The indication given by the Finance Minister, however, of proposing certain changes to the Select Committee on the Wealth Tax Bill with a view to lightening the burdens sought to be imposed, is very heartening. I am sure nobody would grudge a little sacrifice to enable the Plan to progress, but I feel it is imperative to keep a watch against eventualities which may impede the tempo of industrialisation and thus jeopardise the very object of the sacrifice itself. At the same time, the greatest caution and responsibility has to be exercised by the Government in the matter of utilisation of the revenues raised so as to minimise waste and create confidence in the public that their sacrifices are put to the best possible use for the progress of the country.

The industrial advancement of a nation is to a very large extent dependent on the existence of well developed Engineering Industries within the country. This explains the importance attached to and the high targets fixed for Engineering Industries in the Second Five Year Plan. At present the value of Engineering goods imported in the country annually is in the vicinity of Rs. 350 crores which represents roughly 45% of the total imports. With the rising crescendo of progress the requirement of Engineering goods will further increase substantially and, therefore, the vast scope for the expansion of these industries in the country is quite evident. The expansion of Engineering Industries is desirable from other points of view also. In the first place, these industries have a strategic importance and are indispensable for defence purposes. Secondly, they are capable of earning foreign exchange which the country needs so much for her development programmes. The export of Engineering goods at present stands at an insignificant figure of Rs. 4 crores only as against the total export trade valued at about Rs. 600 crores There is considerable scope for export of Engineering goods to the Middle East and Far Eastern regions as also perhaps to the South American countries. These are potential markets for India and there is no reason why in due course she should not be able to take full advantage of them. The delegation recently sponsored by the Engineering Export Promotion Council for visiting East African countries also felt convinced that there is a good scope for developing exports of engineering goods to those countries The delegation, however, was also of the view that markets everywhere have become highly competitive and buyers are getting exceedingly discriminative regarding quality. Of course, quality always plays an important part in the establishment and maintenance of export markets for any industry. In the case of Engineering Industry this is particularly so because, unlike other goods, the life of machinery is pretty long. and consequently customers are naturally much more anxious about the quality and serviceability of Engineering goods than of consumer goods. In this connection, I am happy to inform you that as a result of special attention constantly devoted towards improvement of quality, the products of your Company have now achieved a very high degree of excellence.

Progress of Engineering Industry

During the past five years the Engineering Industries of the country have developed appreciably. In fact, their progress has been more remarkable than of the other industries as the following indices of production would show :—

Industry	Index of production in 1956 (Base 1951 = 100)
1. Cotton Textiles	118
2. Jute Textiles	127
3. Cement	154
4. Iron & Steel	118
5. Sugar	175
6. Engineering (General & Electrical)	218

Considering the Major Engineering Industries separately, the progress achieved during the past five years will be evident from the figures given below :

Item	Unit	Production in 1951	Production in 1956	Index of production in 1956 (Base 1951 = 100)
1. Automobiles	Nos.	22272	32138	144
2. Diesel Engines	,,	7248	11944	164
3. Electric Motors	000 HP.	143	360	251
4. Sewing Machines	Nos.	44460	130388	293
5. Grinding Wheels	000 lbs.	708	2478	350
6. Transformers	000 KVA	196	911	467
7. Bicycles	Nos.	114276	664367	574
8. Screws (machine)	000 Gross			
	Nos.	127	1278	1006
9. Machine Tools	000 Rs.	4730	8202	173
10. Ring Frames	Nos.	276	1116	405
11. Carding Engines	,,	Nil	732	...
12. Steel Structurals	000 tons	30	180	600
13. Railway Wagons	Nos.	3707 (1951-52)	14300 (1955-56)	386

The progress of certain Major Engineering Industries deserves special mention. In the structural Engineering Industry, for example, the quantum of fabrication in 1951 was only 30,000 tons roughly. In 1956 the production stood at about 180,000 tons; that is to say, it rose to six times of what it was in 1951. According to the future programme of development, the production in 1960 is estimated at 500,000 tons and would thus stand at 16 to 17 times that of the 1951 figure.

Similarly, thanks to the helpful policy followed by the Ministry of Railways, the manufacture of Railway Wagons has also shown considerable progress. In 1951-52 the production of wagons was 3,707. In 1955-56 it reached 14,300. In other words, production has already increased roughly 4 times within four years. Future programme is no less ambitious. New Licences have been granted to 16 firms for establishment and expansion of capacity and it is hoped that by the end of 1960-61 the annual indigenous production of wagons will reach the figure of 25,000.

Textile Machinery

Textile Machinery is another line in which development has been equally spectacular. In 1951 the production of Ring Frames stood at 276. In 1956 it had increased to as much as 1,116 so that the index of production with 1951 as base rose to 405. Similarly, in the case of Carding Engines, while there was no production in 1951, the industry had so far developed by 1956 as to give a production of 732 engines in that year. Future programmes of development are well in hand and it is estimated that by the end of the Second Five Year Plan, the capacity for Ring Frames and Carding Engines would be expanded to roughly 2,800 and 4,000 respectively.

Gentlemen, the manufacture of industrial machinery occupies perhaps the most important place among Engineering Industries. The annual demand for machinery in the country at present is of the order of Rs. 140 crores and it is expected to go up to Rs. 300 crores by the end of the Second Five Year Plan. As against this requirement, the present indigenous production is about Rs. 23 crores only and the balance has to be imported. The progress and future programme of development of some of the important branches of machinery idnustry would be clear from the following figures :—

Name of Industry	Production in 1950-51	Production in 1955-56	Target for 1960-61
	(Figures represent value in lacs of rupees)		
1. Cotton Textile Machinery	110	400	2050
2. Jute Machinery	Nil	12	250
3 Sugar Machinery	Negligible	28	250
4. Cement Machinery	,,	56	200
5. Machine Tools	31.8	75	1000

According to the programme of development as amplified recently, the country should be able to produce annually about Rs. 100 crores worth of machinery by the end of the Second Plan. Presuming therefore that the programme is fully carried out, there would still be a shortage to the extent of about Rs 200 crores. There is thus a good deal of scope for both the private sector and the public sector to expand and fill this gap The Goverernment of India have already held consultations with Russian and British experts regarding the type of workshops which are to be put up in the public sector in pursuance of their policy of expanding these industries It appears that they propose to adopt partly the Russian pattern and partly the British pattern. When the proposed expansion takes place it would provide great scope for the expansion of ancillary industries also.

An important branch of machinery industry is the manufacture of Machine Tools. There is at present a big gap between requirement and indigenous production of Machine Tools. During the year 1956 the indigenous production was worth only Rs 80 lacs while imports were to the tune of Rs 7 to Rs 8 crores. The demand for Machine Tools is bound to rise steeply with the progress of the Second Five Year Plan. The production of steel is going to increase from 1.3 to 4.5 million tons per annum during the Plan period. The demand for Machine Tools would therefore also increase correspondingly. The requirement of Machine Tools by the end of Second Plan has been estimated at Rs 17 to 18 crores per annum, whereas the total indigenous production both from the public as well as the private sector is expected to expand to about Rs 10 crores. On this estimate there would still be a shortage of Rs 7 to Rs 8 crores. Considering the importance of the Machine Tool Industry it appears to be very necessary that earnest efforts are made not only to overcome the shortage but also to produce more than the requirements so that the surplus may be exported to earn foreign exchange.

Gentlemen, as I have tried to indicate above, the Engineering Industries of the country, encouraged by a very generous and helpful attitude of the Government of India, have achieved a good deal of progress during the last five years. The performance of these industries, however, could have been even better but for certain factors which have been hampering their progress. One of these factors is the scarcity and the rising trend in the prices of the principal raw materials—pig iron and steel.

The prices of the more common sections of steel and pig iron for the years 1952 and 1957 are given below :—

	Prices in rupees per ton	
	July 1952	May 1957
1. (a) Steel Bars & Rods ...	383	645
(b) ,, Plate ...	407	733
(c) ,, Structural (angle, channel & joist)	375	655
2. Pig Iron	147	225

Rise in Steel Prices

There has been continuous rise in the prices of steel and pig iron during the period 1952 to 1957 and the prices now prevailing are very high indeed as related to the ultimate prices which the consumer is prepared to pay for the finished articles. Apart from the high prices, these important raw materials are also not available in adequate quantities. The total quantity of steel available in 1956-57 was 3.1 million tons, made up of an indigenous production of 1.3 million tons and an imported quantity of 1.8 million tons. This was inadequate for the country's requirements which may roughly be put down at 3.5 million tons. During the next few years on account of foreign exchange difficulties and the consequent restriction of imports the total availability of steel, it appears, may be reduced further whereas the actual requirements would no doubt go on increasing progressively. Similarly, the present annual indigenous production of pig iron for sale to foundries is about 3.8 lac tons while our requirements are of the order of 7 lac tons. Unless, therefore, a larger and regular supply of steel and pig iron is assured to the engineering industries, it would not be possible for a good number of them to achieve the targets fixed for them.

Cement is another commodity which is in short supply and would affect the expansion programme of engineering as well as other industries. The present production of cement in the country is roughly 5 million tons annually while the requirements are not less than 10 million tons. So long, therefore, as the indigenous production does not reach the level of requirements, some arrangement for the import of the requisite quantity appears to be necessary. At the same time the industries also can curtail their requirements of cement by reverting as far as practicable to the use of lime and mortar in the place of cement.

Among the other handicaps in the progress of Engineering Industries may be mentioned the rising cost of rail transport. In the Railway Budget presented to the Parliament in the month of May the surcharge on freight has been further increased by another 5¼%. This increase in surcharge is general and applies to all commodities irrespective of their relative importance in the country's economy or their capacity to bear additional burden of transport cost. In order to place the competitive capacity of the engineering industrial units scattered all over the country on the same footing in the different markets of India, it appears to be necessary that some concession should have been made in freight on finished engineering goods for long distances.

The shortage of trained technical personnel is another difficulty which is holding up the progress of the Engineering Industry to a great extent The number of engineering graduates turned out every year by the existing institutions is quite inadequate to meet the rising demand for such personnel in the country and it is very essential that more institutions are established so as to provide arrangements for engineering education to a larger number of the country's youth. It is very encouraging to note that the Government of India are taking necessary steps in this direction.

The recent decision to constitute a Refinance Corporation to help the medium sized industries is most opportune. According to present indications, this Corporation would be advancing loans only for the purpose of expansion of capacity and not for enabling sales on credit. Since the goods manufactured and sold by the Engineering Industries would in a large number of cases be used for the expansion of capacities in other industries and would entitle the latter to obtain loans, the arrangement in such cases also should indirectly help the Engineering Industries and is therefore welcome.

I would now deal briefly with the progress achieved in and the plans we have made for the different divisions of your Company.

Cotton Textile Machinery Division

Stimulated by increasing demand, Ring Frame production rose progressively month by month during the year under review and on occasions, went even higher than the rated capacity.

In Carding Engine production—a project we undertook as a first step towards making the remaining items of Spinning Machinery in collaboration with M/S Howa Machinery Ltd. of Japan—the progress made should be deemed satisfactory, considering the difficulties we encountered. Deliveries of Machine Tools and imported parts were considerably delayed. These delays are attributed to the suppliers' inability to cope with the overall increase in demand for machinery all over the world and also partly to the shortage in shipping available. the Suez crisis coming in to worsen a shipping position that was already bad. On account of these difficulties we were unable to get on with the work as quickly as we desired. Cards are in assembly now and deliveries will start within about a month.

On the whole, we can take it that the Cotton Textile Machinery Division has done well during 1956. Plans have been set afoot at the instance of the Government of India for expansion of capacities for Ring Frames and Carding Engines and also for the manufacture on a substantial scale of Drawing Frames. Speed Frames and Blow Room Machinery under a programme phased out over the period 1957-60, These proposed expansions are based on calculations made for the output of cloth sufficient for an annual *per capita* consumption of 20 yards in the country by 1961. Whether expansions would actually be undertaken by Cotton Mills to the extent justifying the increased capacity to be installed as envisaged above in the Machine Building Industry is still to be seen. The Cotton Textile Industry is at present in a none too happy position. Due to financial stringency caused by heavy stocks and high prices of cotton several mills have closed down and the expansion schemes in quite a number of others are kept in abeyance. This recession is likely to continue for some time and the recovery when it comes will only serve to put the mills back to where they stood a few months back. As per present trends, we may perhaps be compelled to curtail our own production. We hope, however, that this position would not continue very long.

Tariff Enquiry for Ring Frames and Components is due in 1957. Since the last enquiry, the industry has made significant advances in installed capacities and outputs. Increased off-take by Cotton Mills has helped to bring down overheads in our industry, but this advantage was nullified by the increase in the prices of raw materials and in wages.

A point that is hardly appreciated is that the existence of the Textile Machinery Industry in India has helped to maintain reasonable price levels for Textile Machinery over a long period. Prices of all types of imported machinery the production of which has not been developed yet in India on any significant scale, as for example. Machine Tools, Sugar Mill Machinery, Paper Mill Machinery, etc., have risen very much, whereas the prices of Ring Frames and its components have been steady for the last 7 years in spite of rise in the cost of raw materials and wages. This benefit has been secured to the Textile Mills and the ultimate consumer of cloth solely through the expansion of the indigenous Textile Machinery Industry.

Jute Machinery Division

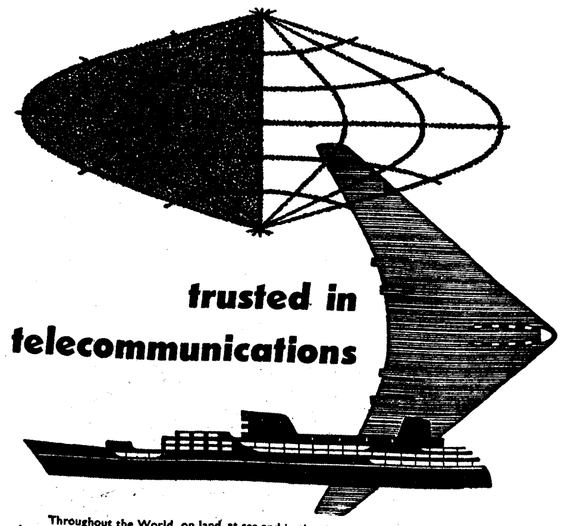
This project, undertaken in collaboration with M/S. Fairbairn Lawson Combe Barbour Ltd., of the U.K., has already been implemented in part and from purely a technical point of view, with fair success too. Jute Spinning Frames have been produced with a fairly high standard in design and workmanship. Unfortunately, however, we are short of orders and have been compelled to reduce production. We hope that conditions in the Jute Industry will improve soon and orders for machinery would be forthcoming in such quantities as may permit us to resume manufacture if not to expand capacity further.

Boiler & Heavy Engineering Division

In this division we can look back with some real satisfaction on a good year's work.

In the manufacture of Locomotive Boilers the way has been smoothened for an easy flow of production at the rate of one Boiler per month. The working team in the shop has acquired skill to handle work to such an extent as to justify further development of this line.

Construction work on new factory extensions is now fairly under way and orders for plant and equipment have been placed in respect of two of our new major projects, viz. manufacture of Water Tube Boilers in collaboration with M/S. Combustion Engineering Inc. of U.S.A., and of Sugar Mill Machinery in collaboration with M/S. Stork-Werkspoor of Holland. Shop erection work for this purpose was hampered for want of adequate and timely supplies of cement and steel. These shortages continue to hold up our other development schemes as well.



Wagon production which has been on a sound footing for some considerable time improved further during the year under review. We are short of shop floor area at present. A sizeable increase in output can be expected when the new wagon shop already erected is in commission and affords the much needed relief. I am glad to inform you that the Railway Board have given us an order for 288 Passenger Coaching Underframes against their Procurement Programme for 1957-58. We welcome the opportunity of developing this Division particularly as there is a possibility of our getting orders for some new items as well.

Our Structural Shop has commenced fabrication work for Radial Crest Gates for the Panchet Hill Dam of the Damodar Valley Corporation. The gates are being made to the designs of M/S. VOEST of Austria. Our factory has also successfully completed orders for structural parts of plant required by the Iron and Steel Industry. Work of this character has assumed considerable importance at present. Efforts are being made by the Government of India to build up sufficient capacity in the country for plant and equipment required by Heavy Industries namely Coke Ovens, By-Product Plants, Blast Furnaces, Steel Melting Furnaces, Ore Crushing and Grinding Equipment, Mining Equipment, Plate Work and Pressure Vessels Work for fertilizer and other plants. We have been undertaken such work for some considerable time and can successfully handle an appreciable portion of this kind of work required for projects in this country.

Steel Foundry Division

This is yet another division which has shown good results. We are particularly glad to have been able to make Cast Steel components of Railway Equipment in our Steel Foundry to feed our own lines of production which till now had to be imported from abroad and were not available in adequate quantities The Steel Foundry in conjunction with our Forging Shop has brought in self-sufficiency to some extent. We need a second Steel Furnace to meet our requirements fully Our Rolling Mill project when implemented will enable us produce special alloy stee's and mild steels of the specifications that we are badly in need. Necessary steps are being taken in this behalf.

Gentlemen, after surveying the general conditions, progress and difficulties of the Engineering Industry in general and your own Company in particular, I have now come to the end of my address. But before concluding, I wish to place on record my deep appreciation of the unremitting efforts made by the officers, members of the staff and workers in sustaining the progress of your Company.

trusted in telecommunications

Throughout the World, on land, at sea and in the air; wherever telecommunications makes its vital contribution to modern society, S.T.C. is trusted to produce and provide complete integrated communication systems and equipment to meet the exacting demands of today and to anticipate the needs of tomorrow.

Standard systems cover the whole broad field of telecommunications including : line and radio transmission, telephony, telegraphy, radio broadcasting, radio communications, radio navigation, cable communications, submarine communications, sound reproduction, railway communications, remote control.

Standard products include : electronic computers, test apparatus, power cables, capacitors, transistors, valves, selenium and silicon rectifiers, germanium devices, quartz crystals, magnetic materials.

For communication projects large or small ; from an inter-office telephone system to an inter-continental telecommunication network, consult S.T.C.

THE CALCUTTA MONEY MARKET

CONDITIONS EASIER

Wednesday, 24th July.

CONDITIONS in the Calcutta money market have eased further during the past week. Practically all categories of advances show a decline. Accommodation against grains and seeds has decreased notably, presumably in response to the recent Reserve Bank directive. Sugar credit is returning on the usual scale, while small decreases have been noted in cotton and jute advances also. In the interbank market, there were not many offers but the call rate remained at 3½ percent.

Very few bills have passed in the exchange market, and it seems that shipments are suffering badly because of the dock situation. Remittance has been on a normal scale. Sterling has recovered partially after an easier spell earlier.

* * * *

Bullion was steady on good spot demand and silver increased from the previous week's level of Rs. 178 to Rs. 178.50. quoted today. The rate for forward delivery was Rs. 178. The prices in London and New York remained the same.

Gold rose in sympathy with silver from Rs. 108.50 to Rs. 109. The sovereign declined from Rs. 71.75 to Rs. 71.50.

* * * *

During the week ended 19th July, Government of India Treasury bills for Rs. 65,64,50,000 were sold in favour of the Reserve Bank.

* * * *

Declines of Rs. 28.18 crores to Rs. 1,553.15 crores in the total note issue, and of Rs. 25.02 crores to Rs. 1,517.90 crores in active notes, were the notable features of the return of the Reserve Bank of India for the week ended 19th July, 1957. The currency contraction was adjusted by reducing foreign securities by Rs. 12 crores to Rs. 400 51 crores and rupee securities by Rs. 18 crores to Rs. 906.81 crores. and also by increasing rupee coin from Rs. 126.24 crores to Rs. 128.06 crores. Increases of Rs. 2.64 crores to Rs. 31.19 crores in balances held abroad and of Rs. 27.91 crores to Rs. 246.37 crores in the investments of the Banking Department were partly due to transfers of securities from the Issue Department. Deposits of the Government of India rose by Rs. 57 lakhs to Rs. 54.02 crores and other Government accounts were Rs. 1.68 crores higher at Rs. 3.09 crores. Balances of commercial banks improved by Rs 11.11 crores to Rs. 87.82 crores. Other loans and advances declined from Rs. 81.34 crores to Rs. 69.98 crores, of which advances to scheduled banks against usance bills amounted to Rs. 37.26 crores (Rs. 45.39 crores). Ways and means advances to Governments stood at Rs. 27.79 crores (Rs. 27.58 crores).

* * * *

The return of the State Bank of India for the week ended 12th July, 1957, shows a drop of Rs. 1.86 crores in total deposits to Rs. 311.18 crores. Investments in Government securities remain unchanged at Rs. 94.10 crores, while other authorised investments are up by Rs. 10 lakhs at Rs. 11.53 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have decreased by Rs. 4.88 crores to Rs. 177.19 crores. Cash and balances are, in consequence, shown at Rs. 39.22 crores or Rs. 4.21 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 12th July, 1957, shows Demand and Time liabilities at Rs. 715.71 crores (Rs. 13.06 crores on account of borrowings from banks) and Rs. 559.87 crores (Rs. 4.10 crores), compared with Rs. 713.14 crores (Rs 14.46 crores) and Rs. 563.76 crores (Rs. 4.12 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 2 lakhs and Rs. 1.23 crores to Rs. 41.32 crores and Rs. 74.74 crores, respectively. There is a drop of Rs. 39 lakhs to Rs. 332.25 crores in investments. Advances and bills discounted, at Rs. 904.21 crores, show a fall of Rs. 10.76 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 9.1 percent and 70.9 percent, against 9.0 percent and 71.7 percent.

* * * *

Provisional figures of foreign trade of India by all routes (i.e.) sea, air and land, on private and Government accounts, during April 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise*, excluding transit trade of Pakistan and other overland foreign countries viz. Nepal, Tibet, Sikim and Bhutan: Exports Rs. 47.33 lakhs, re-exports Rs. 52 lakhs, imports Rs. 90.35 lakhs: total trade Rs. 138.20 lakhs. *Treasure:* Exports (including re-exports) of currency notes Rs. 18 lakhs, current coins (excluding gold coins) Rs. 1 lakh, others nil. Imports of gold Rs. 2 lakhs; currency notes Rs. 3,96 lakhs, others negligible. *Balance of Trade:* The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 42,52 lakhs.

The net profit of the PUNJAB NATIONAL BANK for the half year ended 30th June, 1957, has amounted to Rs. 62.92 lakhs, including Rs. 6.20 lakhs brought in. The directors have decided to declare an interim dividend of Rs. 2.50 a share.

* * * *

The net profit of the INDIAN BANK LTD., MADRAS, has amounted to Rs. 23,60,115. An amount of Rs. 8,13,491 has been brought in. The directors have resolved to pay an interim dividend of 5 percent and a bonus of 1½ percent.

* * * *

The net profit of the INDIAN OVERSEAS BANK, including the amount brought in, has totalled Rs. 18,29,840.12.

* * * *

The profit of the BANK OF BARODA, including Rs. 4,75,752.34 brought in, has amounted to Rs. 20,40,950. The directors have resolved to declare an interim dividend at the rate of 12 percent per annum, and to carry forward the balance of Rs. 14,40,951.

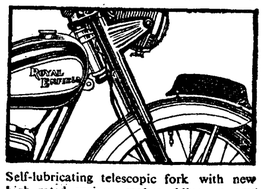
"Doctor, come quickly"...and his Royal Enfield Motor-cycle takes him there within minutes! Its low petrol consumption helps save money as well as time, too!

When every minute counts

—there's nothing like a **ROYAL ENFIELD** **ENSIGN 150**



TRAVEL AROUND on your own ROYAL ENFIELD Motor-cycle! It's *the* way to save time—no delays waiting for crowded trains and buses, no fear of missed appointments. You save money, too... ROYAL ENFIELD ENSIGN 150 gives you as much as 130 miles to the gallon!

Large wheels give you greater stability, manoeuvrability and make riding a pleasure.

And look at all the advantages a real, full-sized motor-cycle brings you: greater sturdiness, smoother pick-up, better shock absorption, higher road clearance, larger wheels for better manoeuvrability, better traction, more efficient braking...and a far, far higher resale value!

You'll agree that for a man who wants to go places there's nothing like a ROYAL ENFIELD ENSIGN 150.

Self-lubricating telescopic fork with new high rated springs, makes riding on any surface comfortable and safe.

ROYAL ENFIELD takes fatigue out of travel

IRREGULAR TREND IN STOCK MARKETS

GILT-EDGED RISE: INDUSTRIALS STEADY

THE general undertone of the stock markets during the past week was satisfactory, but business was small and selective with the result that no definite trend developed outside gilt-edged securities. A sustained recovery in gilt-edged after the recent fall provided the outstanding feature and appreciable gains were recorded in this section. The recovery gained momentum after attention had been drawn to the very high redemption yields obtainable on medium-dated stocks, and although there was no vast expansion in business, activity improved and prices went steadily ahead. The rest of the market was subdued by the current inflationary trends, domestic labour troubles and disturbances in the Middle East. The Prime Minister's week-end speech had very little effect, but the economic debate in Parliament was being awaited with a good deal of interest. Foreign bonds and rails attracted very little attention. Dollar stocks remained an active market and fresh gains were recorded in many instances. The dollar premium improved further to 17 percent. The industrial market was without a decided trend, but the tone was satisfactory and prices for the most part were well maintained. The reduced profits and dividend of the General Electric Company, which followed the profit margin warning by the chairman of Courtaulds, were adverse factors, but they did not impair the generally satisfactory tone. South African gold shares were selectively supported, with finance house issues firm. Copper shares tended higher and base metals held steady to firm. Leading oils were easier, but western hemisphere issues provided a number of strong features. Quieter conditions prevailed in the rubber share market, but selective buying was responsible for a firm trend on most days. Tea shares were irregular, but there were a number of good features. Chargola eased sharply however, following the liquidators' report.

The Money Market

Due to Government departmental disbursements and dividend money, short loan conditions in the money market throughout the greater part of last week were very easy. In fact, there was a large supply of funds at one time, and the authorities skimmed off much of the surplus in order to keep the situation within bounds. The market was, therefore, able to secure the bulk of its requirements at cheap rates, the highest paid being 3½ percent and the lowest 2½ percent. There was a good turnover in October and "hot" bills at 3⅜ percent. Last Friday, the situation changed due mainly to the fact that there were no maturities in the hands of either the banks or the market due to the incidence of the Easter holiday three months back, and once again the market was working on a short supply basis.

U.S. Federal Reserve Return

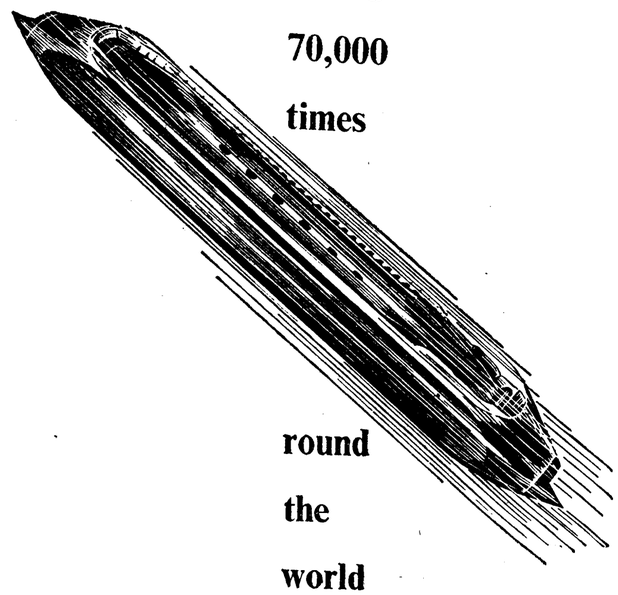
The U.S. Federal Reserve return for the week ended 17th July shows that the gold stocks rose by $1 million to $22.625 million. Foreign deposits rose by $109 million to $454 million, while foreign investments fell by $204 million to $3,661 million. The Federal Reserve bought $17 million worth of bills and sold $1 million worth of notes and $28 million worth of securities held under repurchase agreements. Total discounts and advances declined by $264 million to $644 million, while the aggregate excess reserves of member banks rose by $64 million to $221 million. The daily average excess reserves of member banks fell by $65 million to $515 million, while their daily average borrowings declined by $154 million to $1,059 million. Business loans of the New York city banks fell by $85 million to $11,762 million compared with a decline of $39 million to $10,033 million in the corresponding week of last year.

Vegetable Oils Quietly Steady

Generally dull conditions prevailed last week in most sections of the vegetable oil market, although values were maintained with isolated improvements towards the close. Linseed oil for nearer deliveries turned dearer on selling reserve in fairly moderate enquiries. However, linseed lacked attention with both Canadian and U.S. varieties considered dear. Prices of Indian castor oil varied considerably according to sellers, but basic values were unchanged in quiet trading. Nigerian groundnut oil remained fully firm with afloat parcels sold to Rotterdam up to £127 c.i.f., and forward shipments to U.K. ports priced £1 higher at £128. Argentine groundnut oil also advanced around £1 a ton for August-September shipments to north Continental ports. The Nigerian Board raised its price of new crop groundnuts to £71 c.i.f., November-January, while nearer shipments were confined to a few resale parcels for July-September despatch at £71 on net terms. Soyabeans continued to make headway in price, but most European buyers remained indifferent. Coconut oil showed little change with a possible buying interest in Straits oil mentioned up to £91 c.i.f for August shipment. Copra was featureless, while palm kernels ruled steady but had fewer buyers.

Rubber Prices Lower

Rubber futures opened with prices barely steady in a quiet market but a firmer trend developed due to improved advices from Singapore. Although trading was much quieter than of late, there was fairly keen interest early in Nos. 2 and 3 sheet at prices only barely below those asked for No. 1 sheet. Traders reported smaller offerings from Indonesia and those which came forward were absorbed at about ¼d a lb below comparable grades of Malayan. Following some liquidation at lower levels in Singapore, prices eased in the absence of support. Sellers did not press, however, and outside speculative orders aided a small rally. Dealers continued to work on a hand-to-mouth basis and this had the inevitable result of hardening prices when orders emerged. Latterly, business was very small and of a selective character. Values lost an interim gain of ¼d a lb and closed ⅛d lower on the week. Moderate business was done in sole crepe on the unchanged basis of 38d a lb for ⅛th inch smooth No. 1 on the spot. Offtake was about evenly matched with supplies coming forward.



Reduction in Quicksilver

The London ex-warehouse quicksilver price was reduced from £90 to £89 a flask. This is the first reduction in the price for nearly a year, during which time it has risen uninterruptedly from £83¼. The current decline is generally ascribed to arrivals of Mexican metal at prices well below the recently quoted spot price. As far as can be ascertained, the quantities of the Mexican metal involved are not unduly large—some quarters say that they total a few hundred flasks—but they have come to the market at a time when fresh buying is reported to be extremely quiet because of seasonal factors.

Paris Gold Softens

Paris gold prices eased over the past week from their record peak on 12th July when the ingot at 485,000 francs was at its highest since 1953. Profit-taking and reduced demand earlier in the week, it was said, were the main reasons for the weaker tone. The bank strike, it is believed, hindered some operations as bullion dealers sometimes found it difficult to draw funds.

FACTS BEHIND FIGURES

Flying 70,000 times round the world

To and fro fly the shuttles in the 70,000 looms of India's 105 jute mills. Each travelling at a speed of 9,000 picks an hour (the length of a pick averages two yards), these shuttles together cover a distance equivalent to about 70,000 trips round the world, weaving 1,000,000 tons of jute cloth each year. The jute industry is India's most important foreign exchange earner; jute products form over 60% of India's dollar exports. Texmaco, pioneer manufacturer of cotton textile machinery in India, also supplies this important industry with the complete range of jute mill machinery, designed and built to established international standards, in technical collaboration with the world renowned British company, Fairbairn Lawson Combe Barbour Ltd.

NARROW FLUCTUATIONS IN SHARE VALUES

MARKET AWAITS ANNOUNCEMENT ON CENTRAL LOAN

Wednesday Evening.

THE stock market has been dull for the greater part of the past week. Prices have moved narrowly in the absence of interest. Institutional support has been lacking presumably because an announcement on the Central Government loan issue is expected any time now. Market guesses are that the loan will be two-fold—medium-dated and long-dated. The better-class equities have attracted a small amount of investment attention. But much anxiety prevails over the effects of the Wealth Tax Bill.

Tea shares have weakened in response to this week's auction prices. Jutes remain depressed because it is thought that the congestion at the port is having an adverse effect on the working of the industry. Engineerings have fluctuated narrowly, but coals have been neglected. There has been selective support in the miscellaneous section. Gilt-edged are dull, although the prices of short-dateds have improved.

Details of the week's trading follow.

* * * *

The Government security market remained quiet and there was a further recession in the prices of most medium-dated and long-dated loans. In contrast, short-dated issues were remarkably steady, and prices showed a further improvement. The 3% Conversion Loan 1986 met with selling pressure and reacted from Rs 73.05 to Rs. 72.75, while 3% Non-terminable Paper was quoted nominally around Rs. 73. In short-dated loans, 3% 1957 was marked at Rs. 99.80 and 3% 1958 was quoted higher at Rs. 99.70; 2½% 1961 met with good enquiry at Rs. 93.60 and 2¾% 1960 was asked for at Rs. 96.45. The 3% 1959-61 was traded around Rs. 97.90, but 3½% 1961 was slightly easier at Rs. 93.30. In the medium-dated group, 2¾% 1962 was unchanged at Rs. 93.90, but 3% 1963-65 had sellers over, and the price was marked down to Rs. 93.30. The 3½% 1964 was easier at Rs. 97.55 and 3½% 1965 was offered at the lower rate of Rs. 97.40; 3½% 1967 was marked back to Rs. 97.80. In the long-dated group, 3% 1966-68 was quiet at Rs. 90.80, but 3% 1970-75 was remarkably steady, and recovered to Rs. 85.60 buyers. State loans were neglected and little business was reported.

Preference shares were once again dull and only one transaction was reported, in the jute section, in Anglo-India at Rs 90. Among miscellaneous issues, Alkali and Chemical were wanted at Rs. 97.50 and Associated Hotels changed hands around Rs. 57. A small lot of Brooke Bond Tea was taken at Rs. 79.80 and British India Corporation were crossed at Rs. 104. Calcutta Electric were better at Rs. 9.75 while Cawnpore Sugar were easier at Rs. 110. Dunlop Rubber Second were taken at around Rs. 84 and Dalmia Cement Second were offered at Rs. 33.25. Duncan Brothers were marked at Rs. 56 and Gillanders Arbuthnot at Rs. 60. A small lot of Indian Iron and Steel changed hands at Rs. 98. Martin Burn were crossed at Rs. 97, as were Metal Box at Rs. 87.50. Rallis India were sold at Rs. 61.50 and Rohtas Industries "B" at Rs. 64. Titaghur Paper Second came to hand at Rs. 84.

Bank shares were in good demand, particularly Punjab National which improved from Rs. 57 to Rs. 60 and United Commercial from Rs 57 to Rs 58. United Bank of India "D" shares changed hands at Rs. 4.19.

In the railway section, Bukhtiarpur-Bihar were crossed, after a long interval, at Rs. 15, and Dehri-Rohtas recovered from Rs. 10.12 to Rs. 10.37.

Cotton shares were featureless, with the exception of Kesoram which were fairly steady around Rs. 13.37. Jayshree were quoted at Rs. 6.25 and Elgin were done at Rs. 22. Cawnpore Textiles were transacted at their previous rate of Rs. 7.25 and Swadeshi Preferred Ordinary were crossed at Rs. 11.50.

Coal shares were dull and neglected. Prices moved to lower levels. Bengal eased to Rs. 226, East Indian to Rs. 23.50 and Hurriladih to Rs. 21.50. Amalgamated were reported at their previous rate of Rs. 16 and Burrakur were steady today around Rs 22. Equitable were steady and were crossed at Rs. 25. Karanpura Collieries were marked down from Rs. 85 to Rs. 82 and Pench Valley changed hands at Rs. 16.62.

Jute shares were difficult to sell, and in the absence of support prices moved to lower levels, as will be seen from the following table:

	Opening 18th July	Closing 24th July
	Rs.	Rs.
Bally	138	132
Barnagore	83	81
Fort Gloster	295	288
Howrah	16.50	16.12
Kinnison	125	122
National	18.20	18.05
Orient	102	98

In the electric supply section, Calcutta were unchanged at Rs. 12.12, as were United Provinces at Rs. 121. No other business was reported.

In sugars, Carew were steady at Rs. 7.75, Dyer Meakin at Rs. 6.37, Champaran at Rs. 22 and Darbhanga at Rs. 22.75. Samastipur rose from Rs. 10.50 to Rs. 11.25.

In the engineerings, Indian Iron were at one time sold down to Rs. 19.87, but later recovered to Rs. 20.18, to close quiet again at Rs. 20.06. Bhartia Steel were steady at Rs. 14.31, as were Braithwaite at Rs. 27.62, Britannia Engineering at Rs. 13.06 and Burn at Rs. 315. Jessop were better at Rs. 24.69 and Richardson and Cruddas improved to Rs. 14.50. Textile Machinery on the publication of an excellent report, improved from Rs. 17.35 to Rs. 18; profit-taking at the close, however, brought the price down to Rs. 17.60. Guest, Keen, Williams were steady at Rs. 27.75, and Marshall were crossed at Rs. 5.2.

In paper, Orient were slightly better at Rs. 25 and Sirpur recovered from Rs. 8.25 to Rs. 8.87. Titaghur closed higher at Rs. 32.62, as did India Paper Pulp at Rs. 19.94.

In cement, Assam Bengal were unchanged at Rs. 5.62, but Dalmia rose from Rs. 11.12 to Rs. 11.75. Sone Valley were marked back from Rs. 6.25 to Rs. 6.06. Jaipur Udyog were crossed at Rs. 12.37 and Ashoka were reported at Rs. 9.56. Orissa were steady at Rs. 14.

In insurance, a solitary transaction was reported in Ruby General at Rs. 5.56.

In shipping, India Steamship fluctuated narrowly around Rs. 10.40 and India General Navigation were marked back from Rs. 78 to Rs. 76.

Among miscellaneous issues, Aluminium Corporation were steady at the higher rate of Rs. 10.06,

For those you leave behind

DO you realise that you expose those who depend on you to grave risks, by failing to make immediate arrangements for their welfare, when you are no longer there to look after them yourself?

If you haven't yet done so, please make a will — or execute a Trust in their favour — *now!*

The administration of estates is a highly complicated matter these days, and it would be difficult to find a better Executor or Trustee than a bank which is always accessible, and which can be depended on to act with prudence, sympathy and impartiality. A bank is human — but it never dies.

The State Bank of India accepts appointment as Executor and Trustee, solely or jointly with any other person — and its services are at *your* disposal.

Why not call on your nearest Bank Agent or send for a copy of the Bank's Booklet on Executor and Trustee business?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA
Largest of the Indian Joint Stock Banks

as were Balmer Lawrie at Rs. 154. Birds Investment were sold down from Rs. 13.62 to Rs. 13, but Britannia Biscuit recovered from Rs. 13.25 to Rs. 13.37. The outstanding feature was British Burma Petroleum which improved from Rs. 2.70 to Rs. 2.94, following confirmation of the company's decision to refund to shareholders a sum of one shilling a share. British India Corporation were steady at Rs. 6.70 and Clive Row were better at Rs. 10.25. Dunlop Rubber met with investment enquiry at Rs. 21 and Hindustan Lever were better at Rs. 19.56. Indian Aluminium were unchanged at Rs 13.62, but Indian Cables were marked down to Rs. 23.75. Indo-Burma Petroleum were steady at Rs. 26.50, as were Metal Box at Rs. 26.75. Jardine Henderson were slightly easier at Rs. 72, but Martin Burn were unchanged at Rs. 23.62. National Insulated Cable met with good enquiry and improved to Rs. 21.94. National Carbon closed a shade better at Rs. 24.56. Enquiry continued for National Tobacco, with the price improving further to Rs. 10.75. Similarly, Rohtas Industries rose from Rs. 18.12 to Rs. 18.44. Shaw Wallace were enquired for at the previous rate of Rs. 11.

In the mining section, Indian Copper fluctuated narrowly around Rs. 3.30 while Orissa Minerals were depressed at Rs. 19.37. Burma Mines were slightly easier at Rs. 2.40 while Western Stockholders were unchanged at 94 nP.

Tea shares were dull in sympathy with the rest of the market, and in the absence of investment support, prices drifted to lower levels. Bishnauth were easier at Rs. 21.25, as were Bormah Jan at Rs. 17.75 and Brahmapootra at Rs. 5.93. Dhelakhat were fractionally better at Rs. 24 and Namburnadi were crossed at Rs. 18. Methoni had sellers at Rs. 21, and Bhatkawa were placed at Rs. 24.25. Nagri Farm improved to Rs. 21.25, but Poobong were shaded at Rs. 8.75. Dauracherra were better at Rs. 10.88 and Loobah came to business at Rs. 5.19.

* * * *

The profit of SHAW WALLACE AND COMPANY has declined from Rs. 33.27 lakhs to Rs. 27.41 lakhs for the year ended last December. Bringing in Rs. 3,65,280, there is a balance of Rs. 31,06,135. Taxation provision absorbs Rs. 13.96 lakhs (Rs. 16.03 lakhs). Goodwill has been written off by Rs. 39.64 lakhs after transferring Rs. 40 lakhs from general reserve. Investment reserve is allocated Rs. 3 lakhs. The ordinary dividend is the same at 10 percent, leaving a carry-forward of Rs. 3,64,354. The directors say that the decline in profits is attributed to the "impact of the Companies Act on our earnings from managed companies, the continued recession in world prices of tea and the generally difficult trading conditions that prevailed for the greater part of the year and which unfortunately still continue at the present time." Strenuous efforts are being made to counter-balance such adverse trends. A new superphosphate factory has been created in Madras and came into production in April-May 1957; it is hoped that this will produce a useful addition to profits, although it is not expected to be on a full revenue-earning basis until 1958.

* * * *

The revenue profit of the HATTIKHIRA TEA COMPANY has declined by Rs. 2.10 lakhs to Rs 1.80 lakhs during the year ended last December. Making various adjustments and bringing in Rs. 23,810, there is Rs. 83,024. The dividend has been cut from 7½ percent to 5 percent, leaving a carry-forward of Rs. 20,024. The crop fell from 20,455 maunds to 16,910 maunds, and the average price was Rs. 1-12-4 a lb against Rs. 1-8-1 a lb. Estimates for the current year provide for a crop of 20,000 maunds at a cost of Rs. 22.28 lakhs.

Bombay Market

SHARES DULL BUT STEADY

GOOD CORPORATE NEWS HELPS MAINTAIN PRICES

Wednesday Evening.

STEADY conditions prevailed in the Bombay stock market during the past week and fluctuations were narrow. Activity was restricted to selected scrip but operators were inclined to cut down their commitments. Although good corporate news helped improve sentiment, uncertainties about the wealth tax and the expenditure tax were a restraining factor. Expectations about the issue of the Central loan at an early date induced caution. After erratic fluctuations, Tata Steels closed at Rs. 176.75 on the news of the ordinary dividend. The company decided to pay Rs. 9.50 on each old share and at Rs. 2.54 on each new share, including interest. The distribution was considered fairly satisfactory, and it was thought that the company's prospects would improve as the expansion schemes progressed. Indian Irons were subdued at Rs. 20.12 on selling, especially from Calcutta interests. Alcock Ashdown were taken at Rs. 270, while Tata Locomotive improved to Rs. 157.50 on the payment of a higher ordinary dividend. Premier Construction came to hand at Rs. 161 and Larsen and Toubro were transacted at Rs 15.30. There was little interest in automobile shares, and Premier Automobile were done at Rs. 88. In spite of the prospects of collaboration between Hindustan Motors and General Motors, the former scrip were freely offered at Rs. 7.10.

Selected mill shares improved on balance. Bombay Dyeing receded to Rs. 581 and Century were higher at Rs. 449 on buying from knowledgeable quarters. Swadeshi realised Rs. 187 and Simplex were taken at Rs. 162. Kohinoor were supported at Rs. 277 and India United Ordinary rose fractionally to Rs. 411.40 on influential support.

There were a number of bright spots in the miscellaneous group. Associated Cement rose to Rs. 164.50 on prospects of an early expansion in activity, while Digvijay Cement were maintained at Rs. 140.50. In the sugar group, Belapur made Rs. 239 and Walchandnagar Industries were taken at Rs. 256.25. Mining shares showed little change and Indian Copper were steady at Rs. 3.30. Shivrajpur Syndicate were shaded at Rs. 83.50. Professional activity was seen in steamship company shares, and Scindia Steam improved to Rs 20.10. Great Eastern Shipping were transacted at Rs 21.75. National Rayon improved to Rs. 232.50 on short-covering and Bombay-Burmah were higher at Rs. 608.50 on replacement buying. Tata Chemicals were steady at Rs. 18.20 and Wimco were done at Rs. 154.

Bank shares met with support on the publication of good results during the half-year ended last June. United Commercial Bank improved to Rs. 58.25 and Bank of India came to hand at Rs 140. Insurance shares were neglected, and New India Assurance lost at Rs. 43.

Electricity supply undertakings were easier, and Ahmedabad Electric declined to Rs. 94.50. Tata Hydro changed hands at Rs. 119.50.

THE WEEK'S TRANSACTIONS

NEW WINGS TO SERVE INDIA!

INDIAN AIRLINES CORPORATION ADDS TURBO-PROP VICKERS *VISCOUNTS* TO ITS FLEET

ABOVE-THE-WEATHER SMOOTHNESS: Powered by four mighty Rolls-Royce turbo-prop engines, the *Viscount* flies *above the weather* at 20,000 feet...while you relax in the fully-pressurised cabin as comfortably as in your own home. The swiftest, smoothest flying you've ever known!

A PERFECT VIEW FOR EVERYONE: There's no vibration, no noise in a *Viscount* flight. You can speak softly, be heard clearly. Luxurious, adjustable armchair seats invite you to r-e-l-a-x; and the world's largest air windows ensure you a perfect view...no matter where you sit!

THE FIRST—AND THE FINEST: Makers of the world's first turbo-prop airliners, Vickers are proud to be supplying India with new wings to fly in her service. Fly by *Viscount*—and join the thousands all over the world who've discovered *how wonderful* air travel is!

FACTS ABOUT THE I.A.C.
VISCOUNT

- *The VISCOUNT has a cruising speed of 320 m.p.h.*
- *The VISCOUNT has a carrying capacity of 44 passengers over ranges of up to 1,250 statute miles*
- *The VISCOUNT is powered by four Rolls-Royce Dart turbo-prop engines*
- *The VISCOUNT is in service with 18 passenger airlines throughout the world*
- *The VISCOUNT has logged over 500,000 airline hours*
- *The VISCOUNT was the world's first turbo-prop airliner—and is still the world's most preferred*

INDIAN AIRLINES CORPORATION

VICKERS-ARMSTRONGS (AIRCRAFT) LIMITED
Represented in India by:
Vickers India Private Limited, Killick House, Home Street, Bombay 1

(Adv. 5461 (a))

Dalmia Products
for modern homes and offices

QUALITY STONEWARE AND PORCELAIN PRODUCTS

1 STONEWARE PIPES (for underground drainage) salt glazed, acid-resistant and tested to standard specifications.

2 DALMIA PORTLAND CEMENT for general construction

3 R.C.C. SPUN PIPES for irrigation, culverts, water supply and drainage, available in all classes and sizes.

4 PORCELAIN SANITARY WARES Indian and European closets, wash-basins, urinals etc.

5 INSULATORS AND ACID-RESISTANT TILES etc.

6 REFRACTORIES for all industrial purposes; firebricks, mortars, insulating bricks in all heat ranges and shapes.

DALMIA CEMENT (BHARAT) LTD.
DALMIAPURAM (TIRUCHIRAPALLI)

RURAL CREDIT FUNCTIONS OF RESERVE BANK

OBJECTIONS TO CHANGE IN THE SYSTEM

By V. V. R. Sharma

THE rôle of the Reserve Bank as the central banking authority for the country has been the subject of controversy. This is due to the Finance Minister's recent suggestion in the Lok Sabha to transfer to the State Bank certain of the functions of the Reserve Bank in the field of co-operative agricultural credit. Mr. Krishnamachari expressed the opinion that the Reserve Bank should not bother itself about day-to-day operations of a "commercial nature" but should remain the reviewing authority for banking activities. Some of the functions of co-operative banking at present discharged by the Reserve Bank, Mr Krishnamachari suggested, should be transferred to the State Bank. This, according to him, will not only put the Reserve Bank on a sound footing as the central banking authority, but will also enable the State Bank to come into its own as an important instrument of national policy.

In suggesting a radical departure from the existing policy on co-operative credit, the Finance Minister's intentions seem to be good. Perhaps he wants to reorganise the Reserve Bank, and widen the field of activity of the State Bank. Whatever his ultimate objective might be, he has now, perhaps unwittingly, stirred a hornet's nest. Leading co-operators and co-operative institutions have reacted to his proposal unfavourably. It is not clear from his remarks whether what he actually meant was either (1) to effect a complete transfer of the Agricultural Credit Department to the State Bank or (2) to substitute the machinery of the State Bank for the whole or part of the existing co-operative credit structure. If he meant both, it will necessitate major changes in the structure of the co-operative banking system.

The Reserve Bank came into existence in 1935. A special Department of Agricultural Credit was created the same year "to co-ordinate the operations of the Bank in connection with agricultural credit and its relation with State co-operative banks and other rural credit institutions. The Reserve Bank of India Act was amended from time to time, with a view to making the Bank more effective in the matter of "financial accommodation" (short-term, medium-term and long-term) to State co-operative banks. The formulation of a long-term plan for rural finance relating to both policy and organisation, however, led to the appointment of the All-India Rural Credit Survey Committee. This Committee, on the basis of factual studies conducted in various parts of the country, suggested revolutionary changes. It recommended an "integrated scheme of rural credit", which was approved and accepted by State Governments, the Planning Commission, the Central Government and Parliament, and incorporated in the second five year plan. Plans for the reorganisation of rural credit, marketing and warehousing, have accordingly been formulated by the States in collaboration with the Reserve Bank.

Assistance to Co-operatives

The revitalisation of the co-operative movement which has been envisaged in the second five year plan has been welcomed as a timely step in the direction of strengthening the rural economy. The Government took over the Imperial Bank to set up in its place the present State Bank with the main object of increasing credit facilities in rural areas. Two funds—the National Agricultural Credit (Long-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund—have been created under the supervision and control of the Reserve Bank. The State Governments, which are mainly responsible for co-operative work, have been made "partners" in the management of co-operative societies by subscribing to a part of the share capital. This is to ensure proper and timely supply of credit to agriculturists through primary credit societies.

The rate of progress in implementing the recommendations of the All-India Rural Credit Survey Committee has been satisfactory. In the case of no other Committee has such quick and prompt action been taken by the Central Government. At such a stage, the Finance Minister wants to put a halt there and turn the whole scheme of rural credit in a different direction. The real point to be considered here is not whether co-operative banking should be the responsibility of the Reserve Bank or of the State Bank, but whether the exercise of executive functions by the Reserve Bank is consistent with its position as the reviewing authority and, as such, those functions should be vested in it. The Finance Minister does recognise the rôle of the Reserve Bank as the central banking authority. To make it fully effective, he has even agreed to afford it the opportunity to get itself in touch with the activities of various governmental bodies by securing representation on them. But his contention seems to be that the Reserve Bank, which is the banker's bank and the supreme adviser to the Central Government on economic, financial and credit policies, will not be able to do its job effectively as long as it is saddled with the executive functions for the organisation of rural credit—which could easily be the domain of, say, the State Bank. This automatically gives rise to another question, namely, whether a central banking authority is competent enough to be held directly responsible for the actual operations of co-operative banking? The Finance Minister has further complicated the issue by arguing that when the Reserve Bank was started, the Government had no commercial bank of its own and, therefore, it had to make use of the agency of the Reserve Bank for the purpose of providing agricultural co-operative credit.

Australian Central Bank

It may be of interest to note, in this connection, how the Commonwealth Bank of Australia, even today, undertakes a considerable responsibility on its own, by financing rural co-operative societies, pools and other types of organisations. Following the Commonwealth Bank of Australia Act of 1953, the business of the general banking division of the Central Bank was transferred to the Commonwealth Trading Bank of Australia, with the single exception of the rural credit department. The rural credit department continued to function as a part and parcel of the Commonwealth Bank of Australia, with facilities for money being drawn from the Bank's funds, to meet seasonal requirements of agriculture as and when necessary. Here is evidence to show that the so-called executive functions undertaken by the Reserve Bank in the field of rural credit, are more or less similar to those undertaken by the central bank of a different country. The Commonwealth Bank of Australia has even gone a step further by dealing directly with co-operative societies themselves and not with banks.

It is almost a common feature with central banks all over the world that they provide the necessary facilities for discounting or re-discounting of agricultural paper, the period for which such accommodation is made available (for the production or marketing requirements of agriculture, animal husbandry, etcetera), being invariably longer than that for other purposes. Whether this financial accommodation is provided by the central banks to commercial banks or co-operative banks or to both, would largely depend on the type of business they do. Since co-operative banks are mainly interested in the problems of agriculture, rural credit and marketing of farm produce, such financial accommodation is generally granted to them only.

Practice in Canada

In developed countries such as Canada and Australia, the commercial banks play an important part in meeting the credit requirements of the rural population. But, in India, the banks have not developed that much: they have shown little interest in agricultural finance. Such being the case, it naturally has become the responsibility of the Reserve Bank to cater to the credit needs of co-operative societies. It provides a very substantial part of the co-operative agricultural credit disbursed today. In this way, it keeps itself constantly in touch with co-operative banks, and is in a position to know the extent to which co-operative banks need to be refinanced by it. In an under-developed country like India, there seems to be no alternative but to give a large measure of assistance to co-operative banks—if they are to survive—until institutional agricultural credit is fully developed. Otherwise, "co-operation" will make little progress. Since "co-operation" is a State subject under the Constitution, and the Reserve Bank is the banker's bank and expert financial adviser to the Central and State Governments the latter should be in a position to have an intimate knowledge of matters relating to co-operative agricultural finance. Then alone will it be able to function with greater efficiency in the field of economic as well as credit policy.

Functions of the Reserve Bank

The Reserve Bank actually functions in the traditional manner of a central banking authority. As the banker's bank, it does business only with banks and such other institutions but not with private individuals or private trade. In the field of agricultural credit, both because of the difficulties involved, and for historical reasons, the joint stock banks have done little. The Reserve Bank's interest in the economic development of the country and in the co-ordination and regulation of agricultural credit is of paramount importance. It deals with State co-operative banks, the State Governments and the Central Government. This function is made explicit under Section 54 of the Reserve Bank of India Act.

Without a sound co-operative society there can be no sound co-operative finance and without a sound co-operative financing system, there can be no sound agricultural finance. It is not correct to say that agricultural credit was entrusted to the Reserve Bank, as the Government then had no commercial bank of its own. The Reserve Bank was not established as a Government-owned bank, but the Legislature and the Government of the day considered rural credit, an important central banking function in a predominantly agricultural country. Thus under Section 17 of the Reserve Bank of India Act, it has been providing financial accommodation to the co-operative movement for seasonal agricultural operations and the marketing of produce, as well as for non-agricultural purposes, through State co-operative banks.

There are 24 State co-operative banks in India today with which the Reserve Bank does business. The State or apex co-operative banks, in their turn, deal with the district or central co-operative banks and banking unions, which number 478. The latter cater to the requirements of primary credit societies spread all over the country—which constitute the base of the co-operative credit structure. There are now 159,939 such societies in all having a membership of 7,790,850, compared with 143,320 societies with a membership of 6,565,416 at the close of last year.

The Reserve Bank has developed certain associated functions such as research, the training of higher and intermediate personnel and the inspection of co-operative banks. The latter, for instance, is not a statutory function of the Reserve Bank; it is actually the business of the State Governments. But the Reserve Bank has undertaken a scheme of "voluntary" inspection of co-operative banks, especially those which borrow or seek to borrow from it. The State Governments have welcomed it. This function, however, does not clash with those of central banking of the Reserve Bank. By inspection, it is only supplementing the statutory work of the officials such as the registrars of co-operative societies and also strengthening co-operative banks. It is thus evident that the Reserve Bank has not gone out of its way to do any "commercial business" as the Finance Minister thinks, but is really serving the interests of the nation as the supreme advisory and co-ordinating authority, on all matters of money, credit and banking. It would be inappropriate and unwise to entrust this function to any institution other than the central bank of the country.

Scope for State Bank

The State Bank as a State-partnered institution, attuned to the objectives of State policy, can, no doubt, now be expected to take sufficient interest in rural finance. It can develop and successfully fulfil its various functions envisaged in the field of commercial banking, remittance and treasury arrangements, industrial finance, financing of agricultural marketing and warehousing, and "responsive" support in certain aspects of rural finance to co-operative banking. The field before the State Bank is so vast and important that it need not unnecessarily burden itself with additional responsibilities which are successfully being carried out, at present, by the Reserve Bank. Actually, a distinction can be made between "production finance" for agriculture and "processing and marketing finance"—the former being made available to the existing co-operative financing institutions by the Reserve Bank as specified under Sections 17(2b) and 17(4a) of the Reserve Bank of India Act and the latter being dispensed with by the State Bank of India, which is already providing such finance to the private trader in its capacity as a "commercial bank."

The State Bank today is a subsidiary of the Reserve Bank, closely associated with the latter and with the Central Government. One can even say that it is the creation of the Reserve Bank, in that the nationalisation of the Imperial Bank was recommended by the Rural Credit Survey conducted by the former. It can no longer be called a "pure" commercial bank or a profit-making institution. Therefore, it makes little difference, whether co-operative banks deal with the Reserve Bank or the State Bank. If the resources of the State Bank—short-term, medium-term and long-term—are inadequate, the necessary resources can be obtained from the Reserve Bank from time to time. But the whole idea behind the Finance Minister's proposal seems to be that primary co-operative societies should be made to deal directly with the State Bank—eliminating, in the process, those interposed institutions which stand between primary societies and the Reserve Bank. However laudable the proposal might appear to be, its implications are very serious from the point of view of agricultural finance and the co-operative movement in general. It will immediately dislocate the promising developments just begun, impair the whole system of co-operative finance and seriously endanger the success of the present and future plans of economic development in the co-operative sector.

Interest of State Governments

The major part of rural finance required will ultimately have to come from the Reserve Bank, the only institution which can assist in the creation of such credit. Therefore, the "burden" or "responsibility" of the Reserve Bank does not seem to be reduced to any appreciable extent, until of course, the Finance Minister deems it necessary to transfer to the State Bank even the refinancing, advisory and developmental functions of the Reserve Bank concerning agricultural credit and co-operative banking. The Finance Minister seems to think that all these are matters of internal arrangements among the Central Government, the Reserve Bank and the State Bank. But the State Governments are as vitally interested in these matters. So any hasty action might bring "political repercussions" involving the very existence of co-operative institutions, and cause confusion among those States which are committed to making "co operation" a success.

New Delhi

ENQUIRY INTO PAY STRUCTURE OF CENTRAL GOVERNMENT EMPLOYEES

COLLECTION OF COST DATA BY COAL PRICES REVISION COMMITTEE

(FROM A NEW DELHI CORRESPONDENT)

THE speeches made by the Prime Minister and the Finance Minister in the Lok Sabha last Friday, on a Communist member's resolution asking for a second Central Pay Commission, were in the nature of a fighting retreat. They argued forcefully against releasing an inflationary price-wage-cost spiral, and secured the defeat of the resolution, but conceded the substance of the demand by offering to conduct an enquiry into the pay structure. It is true that the findings of an enquiry will offer the Government greater flexibility in interpretation and decisions than the precise recommendations of a Commission. But few doubt that it will result in an increase in administrative costs. That will be so even if direct increases in pay and allowances are kept to the minimum, and greater emphasis is laid on the provision of amenities. If, as is proposed, the enquiry covers the employees of State Governments and local bodies also, any action to reduce the disparity in the emoluments of different categories of public servants, wholesome though it would be in itself, will entail an even grater cost.

The concession that has been made in response to the demand for a review of Government employees' emoluments is on par with the compromise in the industrial sphere which was reached at the Indian Labour Conference earlier this month. There, the Central Minister for Labour, Mr Gulzarilal Nanda, succeeded in inducing workers' representatives to give up the demand for a general rise in wages—by offering to set up wage boards for a number of individual industries, yet to be specified. Mr. Nanda was asked at a Press conference last week whether his offer was significantly different from the demand. He replied that the two would amount to the same thing only if a dozen or more industries were selected for wage revision all at once. This, presumably, is not the Government's intention.

At the root of the Government's ambivalent attitude to wage demands, both in the public and private sectors, there seems to be a divergence of views on the extent to which wages have in fact lagged behind prices, and on the chances of the cost of living coming down rather than continuing to rise. Mr. T. T. Krishnamachari quoted the general index of consumer prices for the working class—in the absence of any all-India index of middle-class cost of living—to show that there was a rise of only two points in April this year (107), compared with 105 during 1951. He added that there was no question of any rise in "productivity" within office walls during this period to justify an increase in Government servants' emoluments. It is possible, however, to look at the figures in another way. The same index figure dropped to 96 during 1955, and employees may choose this as the basis of comparison rather than 1951 since they feel entitled to a share in the 18 percent increase in the national income which it is claimed, has taken place during the first plan period, and in the 25 percent increase which is promised for the second.

Mr. Nanda obviously sympathises with this view, and does not entertain much hope of a stabilisation, let alone a fall, in prices in the near future through the controls, which the Finance Minister has been advocating, but which the Food Minister rules out. Many will perhaps share the Labour Minister's doubts about the price level being brought under control. He put forward the proposition at his Press conference last week that there can be no wage freeze because there has been no freezing of profits. Against this view, it can well be argued that while wages in many industries have increased in recent years as a result of the awards of the numerous State and all-India industrial tribunals, the effect of corporate taxation during this period has been nothing else but the freezing of profits. It is enough to cite the tax on dividends and bonus issues, and the scheme for the compulsory deposit of half of company profits.

Coal Price Revision

The controlled prices of coal, which have been causing continuous controversy during the past 13 years, it is expected, will be revised on a reasonably long-term basis soon after the official Price Revision Committee completes its work. During the discussions it has held with representatives of employers and labour so far, the Committee has heard conflicting evidence ranging from the workers' assertion that no further increase in coal prices is called for, to the industry's plea that the revised prices should not only cover the increased costs fully, but should also allow a reasonable margin to permit the building of funds for expanding production according to the plan target. In the light of these discussions, the Committee has framed detailed questions relating to costs on which information is to be sought from selected collieries producing different grades of coal. The information will supplement the studies which were carried out by two teams of cost accountants last year, and is expected to be received by the end of August. Allowing a fortnight for the study and analysis of the data, the Committee hopes to draw up its report by the end of September. The composition of the Committee is such that it should not take the Government unduly long to arrive at decisions on the recommendations.

Agreement on Colliery Wages

Meanwhile, the Government of India is determined to ensure that the Appellate Tribunal's award is implemented by all collieries in accordance with the tripartite agreement which was recently reached out of court. In return for an *ad hoc* increase in coal prices, which has since been announced by the Government, employers were to withdraw their appeal to the Supreme Court against the Appellate Tribunal's award. But it appears that a certain colliery has refused to implement the tripartite agreement, on the ground that no increase has been announced in the price of soft coke. In the event of repudiation by even one of the numerous parties to the appeal, the Supreme Court will be unable to give the force of a decree to the out-of-court settlement. The Government is prepared to introduce legislation, if necessary, to make the settlement binding on all the parties concerned.

The Government is of the view that there is no justification for an interim increase in the price of soft coke pending the findings of the Price Revision Committee which is going into the cost structure of hard and soft coke also. Though the production of soft coke by collieries in West Bengal and Bihar is only a small fraction of the coal output (25.240 tons during March last compared with 155.107 tons of coal), it is an important element in the common man's cost of living in the areas where it is used as domestic fuel. In the official view, the price increase of Rs. 5 a ton for soft coke which was granted in July 1956, following the award of the Mazumdar Tribunal, was on the high side and no further increase is, therefore, necessary in spite of the rise in the wage bill following the Appellate Tribunal's award.

While the revised coal prices to be announced by the end of the year will be awaited with the greatest interest by the industry, there are indications of an end to the barren controversy over the definition of "contiguous areas" in connection with the implementation of the Coal Bearing Areas (Acquisition and Development) Act. It will be recalled that the Government gave an assurance at the time of enactment of the law that it was not intended to take over contiguous areas which might be required by the existing private collieries for expansion. Collieries which expressed their difficulty in planning for expansion, not knowing precisely what areas might be acquired by the State, have been asked to inform the Government of the areas which they themselves would like to work. The disposal of such applications for expansion is being speeded up by the Central Ministry of Steel, Mines and Fuel.

World Bank Loan for Ports

India is seeking assistance of the order of $60 million from the World Bank for the improvement of port facilities. The need for this has been highlighted by the delay in Bombay in unloading ships carrying urgently needed foodgrains. The strain on port capacity in recent years has been caused by a variety of factors. In the first place, the bulk of the berths are designed to receive ships of relatively small draft which formerly brought consumer goods and other light cargo. The ports have now to receive a greater number of large ships carrying cargo of considerable bulk or weight for handling which the available mechanical equipment is inadequate. Other reasons for congestion include the arrival of a number of ships without adequate notice, due to the diversion of ships to meet the exigencies of the food situation; the non-availability of berths when improvements are being effected; and labour trouble ranging from general indiscipline to go-slow methods and sudden strikes.

With the modernisation that has been effected so far and the efforts made by the Transport Ministry to introduce the piece-rate system of payment for dock labour at the major ports, three-shift working in Calcutta, Madras and Bombay, round-the-clock deliveries to consignees and dumps for the reception of iron and steel and other material which the railways cannot immediately clear from the docks, the performance of the major ports during 1956-57, it is stated, is considerably better than in the previous year. During 1955-56, a total of 23.9 million tons of cargo was handled by the major ports, as follows:

Calcutta	8.09	million	tons
Bombay	10.3	,,	,,
Madras	2.4	,,	,,
Visakhapatnam	1.3	,,	,,
Cochin	1.6	,,	,,
Kandla	.217	,,	,,

During 1956-57, on the other hand, Calcutta and Bombay alone handled 20.8 million tons, though the total figure for all major ports is not yet available. If the modernisation plans can be completed as planned, the ports will be able to handle 33 million tons of cargo annually by 1960-61, not taking into account the marginal addition to capacity which can be achieved if there is full co-operation from labour. This, it is anticipated, will be adequate for meeting the requirements of foreign trade by the end of the second plan.

Metric System of Weights and Measures

If a beginning is to be made with the metric system of weights and measures from 1st April, 1958, as was agreed by the majority of State Government representatives at the week-end conference on the subject, the areas where the Standards of Weights and Measures Act is to be brought into force on that date will have to be determined by the end of September. The Central Ministry of Commerce and Industry considers it desirable that the relevant notifications should be issued at least six months before the date of enforcement, so that the public and the interests concerned might not complain of inadequate notice. The coming into force of the Act in selected areas will not mean that the existing systems of weights and measures will be illegal. Section 14 of the Act allows the continued use of the old measures and weights along with the new till they are expressly withdrawn. The Ministry of Food and Agriculture has suggested that the metric system could be introduced in all the regulated markets in the country from April next. There are more than 500 such markets in the States of Andhra, Bombay, Madras, Madhya Pradesh, Mysore and Punjab where the existing system of weights and measures have been effectively enforced. Side by side with price information in the usual form, the regulated market committees will be required to quote prices in metric units. Another field in which conversion is expected to be undertaken immediately is the replacement of milestones and furlong stones by kilometre stones on national highways. The State Governments have also agreed to take similar action on the roads for which they are responsible.

While the Centre has offered to assist the States in meeting the non-recurring expenditure that will be required for the changeover, the experience of certain States has been cited to show that stamping fees can fully meet the recurring expenditure on the enforcement of standard weights and measures. In Punjab, the Weights and Measures Department has an average annual income of Rs. 1.66 crores and an expenditure of Rs. 1.25 lakhs only. In Bihar, during 1955-56, the income was Rs. 1.30 lakhs and the expenditure Rs. 1.08 lakhs. In Hyderabad and Mysore, the expenditure exceeded income because of the low rates charged for stamping. In Hyderabad, the fee for stamping weights varied from 1 anna to 1½ annas, against 3 annas to 9 annas in Bombay.

Prospective Demand

The Central Commerce and Industry Ministry has attempted to estimate the prospective demand for metric weights and measures when the new system is brought into force throughout the country by the end of 1966. Assuming that the number of weights and measures in use, proportionate to the population, is the same in the rest of the country as in Bombay prior to the reorganisation, the replacement that will be required in the whole country in the next few years will be: commercial weights, 3,738,406; bullion weights, 424.242; liquid capacity measures, 1,874,398; dry measures, 772.338; and measures of length, 130.536. The number of weights and measures that will be required in April next will, of course, depend on the size of the initial programme. The ordnance factories have agreed to devote their spare capacity to the manufacture of weights and measures, but their capacity is limited. According to a preliminary survey, they will not be able to meet in full even the requirements of the Central Government departments. The recognised manufacturers of weights and measures will, therefore, be encouraged to produce the new units in adequate quantities.

Problem of Dry Measures

The question has been raised in this connection whether dry measures in the metric system should be manufactured at all, in view of the proposal to prohibit the use of dry measures in trade. The sectional committee of the Indian Standards Institution on commercial weights and measures has recommended such prohibition on the ground that dry measures lend themselves easily to malpractices of various kinds. The committee, therefore, has not designed any metric dry measures. But while a majority of the States have accepted the proposal to do away with dry measures, the Government of Kerala and Madras, where dry measures are extensively used in the grain trade, have opposed the recommendation. They do not think that a ban on dry measures is feasible or desirable, and are of the view that the scope for malpractices in weighing is no less. The matter will be considered further.

London

INFLATIONARY FORCES GAIN MOMENTUM

GREATER SUPPORT FOR ECONOMIC ADVISORY BODY

(FROM OUR LONDON CORRESPONDENT)

THE inflationary price-wage spiral, far from being halted, seems to be gaining momentum. The recent rise in the price of coal is a contributory factor to the forthcoming rise in freights; and that in its turn, it has now been said, will lead to a still further advance in the price of coal. Dearer gas rates for wide areas have also been announced or are under consideration to meet the extra cost of coal, and all the time the cost of living creeps up and the wage claims keep on coming in. Cotton workers have just been granted a shilling in the pound rise from next month which will cost the textile industry about £5 million a year. Where further rises are excluded for the next 12 months—for instance, in the engineering industry—they are being replaced by demands for a 40-hour week without loss of earnings (equivalent to a 2s a week increase) and higher holiday payments. A countrywide bus strike is being staged for more wages, and the Labour response as a whole to the principal problems facing the country is difficult to understand, being severely critical but at the same time completely unco-operative even in devising ways and means to overcome them.

To some extent this general holding back may well stem from the Government's attitude so far as it is possible to tell just what this is from the public pronouncements of the Ministers most concerned with economic developments. The Chancellor of the Exchequer, Mr. Peter Thorneycroft, has shown by his review of the situation to the National Production Advisory Council, that the problems and the dangers are fully appreciated, but apart from further exhortation for restraint on wages, profits and prices—the only practical step taken being the raising of rates at which local authorities and nationalised industries borrow from the Exchequer—it is apparently held that the economy is not threatened by any new crisis, and almost the only snag is that wage rises are outstripping the increase in production with the inevitable consequences.

Debate on Inflation

It is possible, of course, that Mr. Thorneycroft has been holding his fire so far knowing that an economic debate is inevitable and that will be the most appropriate and effective occasion for disclosing his views. The debate is fixed for 25th July and it is expected that the Opposition, led by Mr. Harold Wilson and Mr. Gaitskell, will divide the House on a vote of no confidence. The Chancellor is expected to base his case on two main arguments. Firstly, the picture is by no means as black as it has been painted. Secondly, an important contribution to price stability can be made by the "impartial and authoritative body" which the Government intends to set up as a kind of economic umpire. In spite of the recent round of wage and price increases, Mr. Thorneycroft will contend that the economic outlook is not discouraging. In the first half of this year, Britain's exports rose by 6 percent in value compared with a year before, and exports to north America were up by 7½ percent. The gold and dollar reserves increased by £88 million. It has not been necessary to use the Export-Import Bank loan or the stand-by credit furnished by the International Monetary Fund after the Suez crisis. Steel production has been running 5 percent higher than a year ago, coal production 3 percent higher, and the May output of the motor industry, a big contributor to exports, was the highest ever. In fact, the country's whole output of goods and services for the first six months of the year was 2 percent up on 1956. The lesson from all this, in the Government's view, is that inflation can be controlled if wages, profits and dividends are kept within the bounds of Britain's increasing productivity.

As a result of the recent talks, Mr. Thorneycroft has secured support from the employers for the economic advisory body idea, but the trade union leaders are still uncertain and are giving the matter final consideration. Their support may also be forthcoming, but with or without it, the Government is likely to announce shortly the appointment of this "impartial and authoritative body" to advise on productivity, prices and incomes. It is expected that it will consist of three to five members and will be independent. It is hoped that it will help to bring economic problems more prominently to public attention and give the Government periodical guidance in dealing with them.

Bank and the Credit Squeeze

The inflationary trend of Government financing and the real threat to the credit squeeze are apparent in the latest clearing bank figures covering the period 15th May to 30th June. Advances show a rise of £81 million to £2,080 million, with the overdrafts of the nationalised industries only £6.4 million higher at £57.5 million. There are special factors to explain this big rise; not only are companies making up half-yearly and month-end balances, but the half-yearly interest on loan and overdraft accounts is also debited and, on the basis of a total amount of over £2,000 million at an average rate of, say, 5½ percent, it would alone account for at least £55 million. Eliminating these seasonal factors, the rise would be explained by normal expansion in the loan demands of essential industry. What is more significant is that the rise has been met without liquidity ratios having to be run down or investments sold, though it is noticeable that Treasury bill holdings jumped up by almost £50 million. Whether the same explanation is valid in relation to the increase in bank deposits, over which the banks have little control, is another matter. Gross deposits rose between mid-May and the end of June by £205.3 million to £6,490 million. The index of net deposits compiled by Lloyds Bank, which irons out seasonal fluctuations, was up by more than a point to 107.9. Here is the real reflection of inflationary finance, for which the responsibility must be laid not on Lombard Street but on Whitehall.

Balance of Payments Improves

There was a sharp fall in both exports and imports in June, and the trade gap narrowed, according to the preliminary estimates of the Board of Trade, to which brief reference was made last week. Exports totalled £275.8 million, which is £27 million below the record total in May. Imports fell even more sharply to £324 million, which is £50 million below the May total. Re-exports were £10.1 million, and the trade gap was only £38 million. This compares with £59.8 million in May and £68.9 million in April and, from the point of view of the balance of payments, is a marked improvement in the appearance of the third quarter as a whole. These figures complete the trade returns for the half-year. Exports have averaged £281.2 million a month, which is 6 percent more than in the corresponding period of 1956. Imports have averaged £350.1 million a month, also 6 percent higher than in the corresponding period of 1956. Imports, however, have been inflated this year by the arrival of cargoes that should have come last year but were delayed by the Suez Canal trouble. The Board of Trade estimates that these accounted for about one quarter of the increase. The excess of imports valued c.i.f. over exports and re-exports valued f.o.b. averaged £57.3 million a month, or £6.5 million more than in the corresponding period of 1956. Allowing for the imports delayed from 1956, there is little change.

The mildly favourable impression created by the trade figures may be slightly modified by the decline now shown in exports to the dollar markets. Last month Britain's exports to north America at £34.4 million were nearly £4½ million less than in May. Sales to the U.S.A. were down from £21 million to £19.7 million and to Canada from £17.7 million to £14.6 million. These figures look disappointing, although it is unwise to read too much into the performance of a single month. In spite of the June setback, dollar exports in the first half of this year were still 7½ percent above the corresponding period of 1956.

Good Progress of Attock Oil

Shareholders in Attock Oil will be encouraged by Mr. T. T. McCreath's annual statement, and the accompanying report and accounts for 1957. The directors say that the company should continue to earn profits at the 1956 level, and thereby "maintain a satisfactory dividend" on the capital as increased by the current free share and "rights" issues. Burmah Oil has agreed to take up its quota of 50,000 shares under the "rights" issue of 500,000 shares, to be made at a probable price of 26s. The board now discloses that the finance is needed to buy heavier and more powerful drilling gear. This equipment is to be used to reach the greater depths involved in the prospecting now being done in Pakistan. Funds are also needed to modify and improve the refinery plant.

Increased demand for oil in Pakistan is reflected in the Company's greater prospecting activity. One seismic survey has been completed and another may now be set in progress. Although other oil companies are showing an increasing interest in the area, Attock remains the sole discoverer of all oil-producing fields in West Pakistan. In spite of the heavy costs involved in the programme, net liquid assets have increased from £784,703 to £1,187,767 at the year-end.

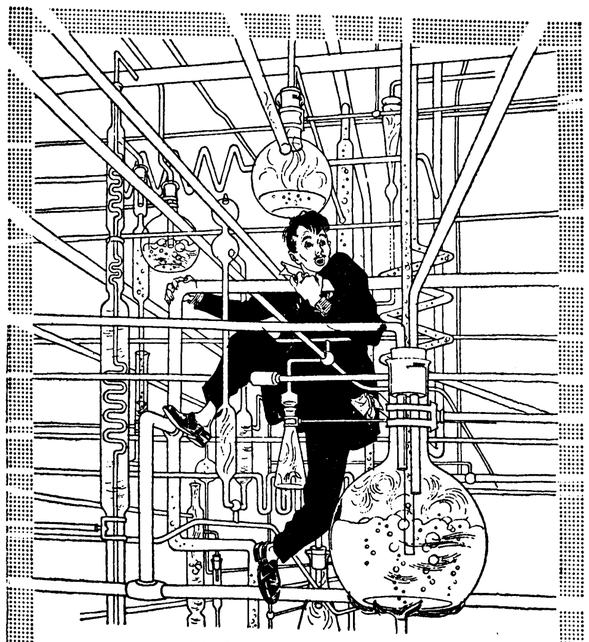
Changes in Jute Price Control

There will be a mixed reception for the latest action of Sir David Eccles, President of the Board of Trade, who recently announced in the House of Commons the steps to reduce the price of sacks made from imported jute cloth to meet competition from substitutes. The jute industry here, concentrated mainly in Dundee, is protected by a unique system of State trading. The Jute Control is the sole importer of the great bulk of jute goods supplied from overseas which it re-sells at prices comparable with those at which an efficient cross section of the domestic industry puts equivalent goods on the market. Sir David pointed out that these arrangements were increasingly operating against the interest of users of jute goods. He had discussed the problem with both sides of the industry and had decided to alter the basis of the Control's selling prices for the principal types of hessians imported for making sacks. The mark-up for these hessians was about 40 percent. This has been reduced to a flat 30 percent from 18th July.

Dundee will be hit unless it can reduce its costs, and is not happy because it has recently re-equipped at a cost of about £10 million in anticipation of continued protection. Bag manufacturers and sellers doubt whether the step goes far enough to assist jute bags to compete with substitutes, while the trade union side of the cotton industry will not welcome the whittling away of a plan which it was urging should be used to shelter the cotton industry from cheap cloth imports from India and Hongkong. On the other hand, cheaper jute bags will be welcome to farmers and other users, and both Indian and Pakistani exporters of raw jute should find the move equally helpful.

Restriction on Textile Imports

Lancashire's representatives in Parliament are trying hard for the removal of the disabilities of the cotton industry. One urged on the Colonial Secretary the other day that steps might be taken to reduce cotton textile imports into this country from Hongkong, only to elicit a reply from Mr. Lennox-Boyd that the imposition of any restrictions on the colony's exports to the United Kingdom would be contrary to Government policy. It helped not at all to point out that Hongkong was responsible for the failure of the efforts of the recent Lancashire cotton mission to negotiate a voluntary restriction scheme with their counterparts in India, Pakistan and the colony, for the representatives of the last named alone were unprepared to co-operate. The Colonial Secretary merely pointed out that he had a responsibility to maintain the prosperity of the colony which it would be undesirable to overlook. It is understood that Lancashire, convinced now that Government assistance may be written off, is working on various proposals to safeguard its position by its own actions, but whether support will be as widespread as would be necessary to achieve results remains to be seen.



Brevities

Tea prices at London auctions have been recovering steadily in recent weeks. Plain broken pekoe is now 3s 3d a lb, against 2s 11½d a month ago, only 2s 8d a year ago, but as much as 5s 6d at the close of last year and the beginning of this one. Stocks in bonded warehouses at the half-year ended June were about 150 million lbs (against 120 million lbs a year earlier) or a little less than four months' consumption.

The cost of living rose again last month for the second month running, and by the same margin. According to the Ministry of Labour, the official retail prices index (January 1956 = 100) on 18th June was 106, compared with 105 on 14th May and 102 on 12th June last year.

The Mercantile Bank of India is paying an interim dividend of 12½ percent on the A, B and C shares, against 7 percent. The board is considering proposals for the abolition of the uncalled liability on the A and B shares and the reconstruction of the company's capital, subject to the necessary consents being obtained.

Mawchi Mines announce that the Burmese Government has agreed to a valuation of £1 million for the company's assets in Burma. This would be the basis for the capitalisation of a proposed Burmese joint venture company to which Mawchi's assets would be transferred for shares and in which the Burmese Government would then purchase an initial interest of 50 percent. Negotiations are proceeding on this basis.

"Help—let me out!"

Many motorists may have wondered, seeing the rather technical look of some petrol advertisements, just what it's all about. Perhaps, blinded by science they even wonder whether there is very much in it after all.

This is a pity, for things have been happening to petrol. It is better—and *different*. Modern petrol is no longer obtained by simple distillation. First-class high power petrols—such as SHELL and B.O.C.—are produced by advanced refinery processes that lead to better fuels at an economic cost. But refining is only half the story. Additives play an increasing part in giving motorists the higher performance they need. You probably remember the first important additive—tetraethyl lead—which in 1922 sensationally reduced petrol 'knock'. The latest, and most important since tetraethyl, is I.C.A.—the ignition control additive—which, incorporating tricresyl phosphate, was developed by Shell Research to overcome problems of power loss through engine deposits. These deposits interfere with normal firing of the mixture, particularly in high compression engines, and were a serious brake on engine design. I.C.A. has proved the complete answer. It is a triumph of fundamental research as far removed as can be from an advertising 'stunt'. It is by products such as SHELL and B.O.C. petrol with I.C.A., available at Burmah-Shell sales points, that motoring becomes better, smoother and more economical.

BURMAH-SHELL... *in India's life and part of it*

ACC HONOURS THE CODE

1

"Producers and distributors owe it to the consumers of their products that they shall always be of the highest quality and available at a reasonable cost."

Code of conduct—**FORUM OF FREE ENTERPRISE**

Indian cement is required to pass the high standards laid down by the Indian Standards Institution. It is tested against these standards both in the laboratories of the producing factories as also at the Government Test House, Alipore. ACC cement passes these standards with a substantial margin of safety and is comparable in QUALITY with the best cement produced elsewhere in the world.

Since 1944, the selling price of cement has been fixed by the Government of India. Twice, in the past, the Company has voluntarily reduced the price of its cement. The price which the Company receives has remained unchanged since 1948. The current higher cost to the consumer is due to excise duty and the price equalisation surcharge levied by Government to subsidise imports through the State Trading Corporation.

Honesty, hard work, courtesy, continuous initiative and service to the community are the foundations on which the edifice of Free Enterprise rests. These are also the sure foundations on which the ACC edifice has been built to last.

HIGHER TEXTILE OUTPUT TARGETS NECESSARY

UNSATISFACTORY PROGRESS OF HANDLOOM SECTOR

(FROM OUR BOMBAY CORRESPONDENT)

THE assurance given by Mr. Morarji Desai, Central Minister for Commerce and Industry, at the recent convention of textile interests in New Delhi that the Government of India was prepared to review from time to time the overall target for cloth production as well as the targets set for the different sectors of the industry has been welcomed here. The position now obtaining conforms to the Government of India's textile policy which was announced in June last year. It was assumed that the annual per capita consumption of cloth would increase to 18.5 yards at the end of the second plan period On this basis, the total annual internal demand was computed at 7,400 million yards. In addition, another 1,000 million yards was reserved for the export market. The total requirement was, therefore, fixed at 8,400 million yards. Against this, the actual production was estimated at 6,700 million yards on the basis of the output for 1955, leaving a deficit of 1,700 million yards.

It was proposed to bridge this gap by the expansion of all the sectors of the textile industry. Handlooms, supplied with millmade yarn, were to contribute an additional 700 million yards: 35,000 new powerlooms were scheduled to produce 200 million yards: 75,000 *Ambar Charkhas* were proposed, which were supposed to manufacture yarn for 300 million yards: and the mill industry was authorised to install 18,000 new automatic looms to produce another 350 million yards intended for the export market only. The balance of 150 million yards was to be allocated at a later stage presumably after the Government had had an opportunity of reviewing the progress made under its new policy. A recent report by the Planning Commission states: "Handloom production from mill yarn rose from 1,473 million yards in 1955 to 1,541 million yards in 1956, showing an increase of 68 million yards as against the five-year target of 700 million yards. The installation of powerlooms fell short of expectations, and against 15,000 powerlooms proposed to be installed during 1956-57, sanctions were issued for only 7,281 powerlooms. The production of *khadi*—both traditional and *Ambar*—was estimated to have increased by about 10 million square yards, from 25.4 million square yards in 1955-56 to 34.5 million yards in 1956-57, against the five year target of 300 million yards of cloth to be produced from *Ambar Charkha* yarn. Compared with the sanctioned programme for the manufacture and introduction of 75,000 *Ambar Charkhas*, over 60,000 *Ambar Charkhas* were introduced by the end of the year."

Case for Revision

It would appear that the small-scale sector has not kept pace with the rate of expansion prescribed for it nor does it seem likely that it will be able to meet the demands made on it within the stipulated period. On the other hand, mill production increased to 2,703 million yards in the first half of this year, compared with 2,583 million yards in the corresponding period of 1956. On the face of it, a case exists for a revision of the Government's policy and for the further expansion of the mill industry in order to bridge the deficit, but Mr. Morarji Desai had a point when he said that the mills had not availed themselves of the Government's permission given last year to install new automatic looms. In fact, he gave "a friendly caution that those licensees who fail to take effective steps for the installation of the balance of the spindles within the next three months may find themselves deprived of these licensed capacities." Only 1.2 million spindles had been installed of the 3 million sanctioned. The Minister added that foreign exchange difficulties would not stand in the way of importing automatic looms and other equipment required by the textile industry, and expressed the hope that mills would soon place orders. He also indicated that the Government was not opposed to the principle of converting plain looms into automatic ones, but the process of transition would have to be phased over a reasonable period because of the foreign exchange position and the question of employment.

Accumulation of Stocks

The Commerce Minister, however, said that the "question of immediate expansion" of the mill industry "was irrelevant and unrealistic" in view of complaints of accumulation of stocks for want of demand. But it may be pointed out that the textile trade was seriously dislocated last year when the excise duty on cloth was enhanced. This was a burden that the mills, trade and the consumer were reluctant to bear. The demand was kept in abeyance in the hope that the Government would revise its decision to increase the excise duty. This stalemate continued for some time. More recently, trade has been hampered because the details relating to the inter-State sales tax still remain to be worked out. It may be that when this is done, there will be a revival in trade. Meanwhile some Bombay mills report that they have received orders on a forward delivery basis.

Cotton Futures Steady

The Jarilla March contract fluctuated between Rs. 714 and Rs. 720 a candy. Reports of excessive rains in the cotton-growing area of Saurashtra exerted an upward pressure, but profit-taking at higher levels proved a steadying influence. The strength of the other commodity markets also acted as a steadying factor. The average turnover was around 10,000 bales a day. The spot market was also active and good business was done in domestic growths. Wagad, Lakshmi, C02, Vijay and Surti types were in particularly good demand. The consumption of indigenous cotton is placed at 401,000 bales in May, against 409,000 bales in the previous month and 349,000 bales in May last year.

Extra Quota for Imports

The Government of India's announcement of a 50,000 bale import quota of sterling area cottons of 1in. to 1⅛in staple has been welcomed here, because mills expect that the supply position will be somewhat tight at the end of the year. Most of the lower staple variety of East African cottons can be imported under this quota, and it seems likely that there will be a buying rush. The landed cost of East African cottons will vary between Rs. 1,250 and Rs. 1,300 a candy, against Rs. 1,100 for similar qualities produced within the country. Meanwhile, it is reported that the Government of India may issue an additional import quota of 20,000 bales of Egyptian cottons. It is believed that the current Egyptian price of 52 a lb., inclusive of the 13 percent discount, is attractive and this quota too will be fully used if and when issued. Cotton stocks in the Sudan are mounting and it is believed that the Sudanese Finance Minister who is scheduled to visit India in the near future will offer Sudan cottons against rupee payments. Arrivals of foreign cottons this season from September 1956 to the end of last month amounted to 530,000 bales, against 527,000 bales in the corresponding period of the previous season. Imports from the U.S.A. increased from 6,500 bales to 342,000 bales while those from Egypt and the Sudan fell from 325,000 bales to 92,000 bales. Imports of East African growths fell by over 100,000 bales to 77,000 bales. In view of the Government's policy to import higher staples from the U.S.A. during the current season, it is expected that the pattern of trade will change further in favour of dollar area cottons. The actual consumption of foreign cottons during May this year was 49,089 bales, against 55,184 bales in the same month of last year.

Piecegoods Unchanged

The cotton textile market ruled steady with moderate enquiries from Calcutta, Madras and Kerala. These related to seasonal goods like crepe, flanellete and grey sheeting in coarse and medium counts. There were also some enquiries in fine and superfine counts. Prices were largely unchanged. Export enquiries remain somewhat disappointing. The total quantity of piecegoods consignments passed for shipment from Bombay amounted to 193.35 million square yards during the second quarter of this year, against 246.12 million square yards in the first quarter. But it is hoped that export business will pick up during the current quarter. A Burmese buying mission is expected to visit India by the middle of next month and it is believed that good orders will be placed. Reports from Indonesia indicate that import licences there may be issued this month and trade circles here believe that they stand a good chance of obtaining a fair share of this business.

Mixed Trend in Vegetable Oils

The castorseed September contract opened at Rs. 167.25 and dropped to Rs. 166.50 on the very first day. There was fresh support at this low level and the quotation went up to Rs. 172. Towards the middle of the week, it moved between Rs. 170.50 and Rs. 167, but export prospects helped steady the market at Rs. 170.75 at the close. Some 500 tons of castor oil were sold to the U.K. and the Continent at £145 a ton c.i.f. in bulk for the Commercial quality and at £152 a ton c.i.f. in bulk for the B.S.S. quality. There was also a steady demand from local shippers against their previous commitments. U.S. buyers are still not showing any interest at the current quotation of 17.75 cents a lb. The August delivery groundnut contract opened at Rs. 178.75 and improved to Rs. 179.50 on the following day. There was no support at this price with the result that it subsequently fluctuated between Rs. 177 and Rs. 179. The opening of the new crop contract at a discount of Rs. 24 a candy led to an easier sentiment. Moderate arrivals of groundnuts and groundnut oil were reported and the entire quantity was purchased by vanaspati manufacturers and crushers. Prices of both commodities moved within narrow limits. The September linseed contract opened at Rs. 29.50 and after increasing to Rs. 30 returned to the original level at the close. Arrivals of linseed and linseed oil were small and there was hardly any trading. The firmness of the cotton market gave strength to cottonseed futures which opened at Rs. 109.75 but increased to Rs. 115. There was some profittaking at this level which acted as a depressing factor, but the tone continued firm.

CONGESTION IN MADRAS PORT

IMPROVING LABOUR EFFICIENCY

(FROM OUR MADRAS CORRESPONDENT)

THE turn-round of vessels in Madras port has deteriorated and the extension of port handling facilities is now regarded as less important than restoring the efficiency of labour. The reasons for the congestion in the port, with chartered vessels hanging about for days, have made shipowners no less anxious than the authorities. Customs and other staff have been urged to work harder. Government cargo, especially grain has posed a new problem, and the shortage of workers at present may necessitate the employment of casual labour. It has been suggested in a local newspaper that the army should be requested to do some essential civilian work and army vehicles too could be employed to carry goods to godowns. The agents of shipping companies have expressed concern over this problem. Mr. Haja Sheriff, M.L.A., as the agent of Scindias, has mentioned the altered pattern of foreign trade as a reason for the delays and difficulties. The loss due to lack of facilities for berthing is placed around Rs. 18 lakhs to Rs. 21 lakhs a month. The transfer of cargo to lighters and the diversion of ships to minor ports are regarded as necessary for an improved turn-round of vessels.

The Chief Engineer of the Port Trust told the steamer agents association that Madras port requires to be developed further and the harbour has to be deepened soon for taking in bigger ships. The Chief Engineer also pointed out that cargo meant for Delhi and other distant places was landed in Madras, and the growth of the ore traffic from Andhra has created a new problem. Furthermore, there is not enough land for building storage sheds. The installation of more cranes or other equipment may not afford substantial or immediate relief. He doubted whether minor ports could be used effectively for ocean-going traffic and was of the opinion that the minor ports development fund could not be easily employed to carry out improvements.

Electricity Board

The creation of an autonomous Electricity Board with the Secretary in charge of the Public Works Department as chairman has been explained. The fact that licensees running supply companies are not yet represented on the Board is as important a grievance as the decision to postpone extensions. In the recent Budget debate, it was explained that while the progress of the Kundan project would be maintained with Canadian aid, it might not be possible to adhere to the schedule and five schemes would have to be deferred. Rural electrification, in spite of the Budget provision, might suffer due to difficulties over the equipment needed for transmission lines. The improvements to the city's electric supply undertaking are not complete and consumption is restricted by staggering. The State Government's investment in electricity over 30 years is substantial, for it has been placed at Rs. 60 crores and the return of about 10 percent is also well above other income, such as is secured from irrigation projects. This does not, however, permit any reduction in the power tariff and the explanation offered is the need to charge less for power provided to agriculturists who also are affected in some measure by the staggering of electric supply ordered till 31st December. But the supply of electricity in rural areas means a saving in diesel oil imports. What is more, the Government gets minimum guaranteed charges even when land is lying fallow and pumping is more or less seasonal.

State Monopoly of Sandalwood Trade

During a recent discussion on sandalwood sales and extraction, reference was made to the fluctuation in oil prices in foreign markets The Government wants to have a monopoly of the trade in sandalwood, as in Mysore. India's monopoly of sandalwood has to be maintained by agmarking oil for both home and foreign markets. Reference was made to a move on the part of Bombay interests to buy sandalwood from South Africa on the score of its cheapness. The complaint is unusual as all trade with South Africa is prohibited for over ten years. Anyway, the Minister was confident that the Union Government would help the State Government to prevent imports.

New Superphosphate Factory

The opening of a superphosphate factory along with a sulphuric acid plant in Avadi by Shaw, Wallace and Co. showed that the private sector is willing and able to supplement fertiliser supplies. The factory aims to produce 33,000 tons of superphosphate a year and the Avadi works will supply certified fertiliser to be used straight or as a mixture. Mr C. M. A. Bathurst, local director of Shaw Wallace, pointed out that potash had still to be imported from Europe but licences were hard to get. Since the State Government hopes to raise food production by 20 percent within five years by an extensive use of manures, the new Avadi plant is essential, especially as the prospects for an ammonium sulphate plant in Neiveli are still uncertain. The help of Shaw Wallace who run Indo-Agri was acknowledged by the Minister who said that as land was limited, higher average yields are the key to self-sufficiency. The factory will gain through the opening of a polytechnic organised by the Murugappa Trust. The industrialists, connected with the T.I. Cycle factory, have arranged to open a school in Avadi, offering a three-year course in training for engineering trades for those who have left school. The Government has sanctioned the scheme, since it will ensure trained labour for industries The new polytechnics in Salem and Pollachi will supplement those in Madras, Madurai and Karaikudi.

The secret of Popular Poplin—Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete *reliability* of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for *you!*

Look for 'SANFORIZED' MEGD TO BE on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information 'Sanforized' Service, 95, Marine Drive, Bombay 2.

Engineering and Transport

BIGGER WORLD DEMAND FOR AIRCRAFT JET FUEL

PROBLEM OF WEIGHT IN TURBOPROPS

WORLDWIDE demand for aircraft jet fuel is now bigger than that for aviation gasoline, says the July issue of *Oil Progress*, the quarterly publication of the Caltex group of companies. Another important development has been the virtual change-over in military planes from the reciprocating engines to the turbine types. The article, written by Mr. N. Austin Murray, assistant manager, aviation sales department, California Texas Oil Company Ltd, states that in the five years preceding 1956, world demand for jet fuels increased sevenfold, from 15 to 105 million barrels a year. "In this same period," the article continues, "the consumption of aviation gasoline rose only 40 percent, from 73 to 102 million barrels a year. Fully 95 percent of the increase in jet fuel demand was required by the military services, while the rise in aviation gasoline was about equally shared with the civil airlines.

"In the conversion from piston-engine aircraft to turbojets and the so-called turboprops, civil aviation has just begun to reach its stride—and a long, swinging stride it is. At no time in the history of commercial aviation has there been such a flood of orders for new transport planes as have been placed during the last two years. A tally of firm orders now on the books shows that by 1962, there will be more than 800 turbine-engined transports in operation. The total cost of this immense fleet will exceed billion dollars, but this tremendous outlay is brought into truer perspective by the realisation that one four-engine jet transport is the equivalent of a modern ocean liner in terms of passenger-miles a year," he writes.

It has been found that most turbine engines can operate equally well with any of several different fuels—kerosene; certain of the wide-cut distillation products containing both gasoline and kerosene fractions; aviation gasoline and, in some laboratory tests, even light diesel oil. In most cases, the engine itself is not the critical factor, but the environmental conditions encountered in operation impose practical limits to its versatility. Varying altitude, extremes of heat and cold, fuel tank capacity, ready availability and, not least important, the necessity of maximum utilisation of fuel energy—all these are factors which operate to control the kind of fuel to be used," Mr. Murray adds.

Weight of Fuel

"The variations encountered in the weight of fuel for turbine-engine planes is a particularly serious problem that is being given careful study by refiners, airline operators and plane manufacturers. It arises from the fact that U.S. West Coast crudes produce kerosene having a density up to 6.91 lbs a gallon, whereas kerosene made from eastern hemisphere crudes may weigh as little as 6.455 lbs a gallon Now, while the fuel load of a piston-engine plane accounts for perhaps 20 percent of the gross weight, in a jet the fuel may weigh up to 50 percent of the gross. Since some of the new types of jet transports may take aboard about 20,000 gallons at a refueling, it is obvious that, depending on the kerosene available, there can be a weight difference of more than 9,000 lbs—a difference that could affect payload by as much as 17 percent.

"In the face of these developments, the oil industry, too, finds itself on the threshold of a new era. For today's many types of turbine engines, it is called upon at present to produce seven or eight different kinds of jet fuel, but fortunately finds general agreement that this is both wasteful and inefficient." All major refiners are co-operating fully, says Mr. Murray, with the airlines and plane manufacturers in the preparation of the new specification aimed at keeping the number of fuels to a minimum, but recognise, at the same time, that the desired reduction in types of fuel is up to the customer. They are thus in the peculiar position of having to plan for new demands without knowing exactly which fuels will be required. Over the years, the industry has proved its resourcefulness and versatility in developing ever finer fuels and lubricants for the increasingly critical demands of engine manufacturers. The jet age represents a new kind of challenge, but one for which the refining industry stands ready," he concludes.

B.O.A.C. INTRODUCES REGULAR BRITANNIA SERVICE THROUGH DELHI

With effect from 21st July, the large turbo-prop airliner, the Bristol *Britannia*, starts regular passenger services through Delhi on the Britain-Japan route of the British Overseas Airways Corporation. Scheduled time for the new 1,250-mile service from London to Tokyo is 41 hours, cutting six hours off the old *Constellation* piston-engined airliner schedule. *Argonauts* going to Tokyo take more than 72 hours, including a night-stop in Hongkong. There are three mixed-class *Britannia* flights a week on this route but two of them overfly Delhi. West of Delhi stops are made in Karachi, Beirut and Zürich and the *Britannia* covers the distance to London in 16 hours. This is one hour faster than the schedule previously envisaged because of the substitution of Beirut for Istanbul. Preparations are also well advanced for the inauguration of a *Britannia* jet-prop service through Bombay on the route between London and Colombo.

Jute

NEW BODY TO SUPERVISE JUTE PROMOTION PROGRAMMES

UNNECESSARY DUPLICATION OF I. C. J. C. WORK LIKELY

IT is reported from New Delhi that the Government of India has constituted a new body for the promotion of jute-growing. The duties of this body are to be of a supervisory nature and it will review from time to time the progress made in achieving the targets set. It will also collect information on the adoption of improved methods of cultivation. This seems to be an unnecessary duplication of the work done by the Indian Central Jute Committee. The result might be overlapping and confusion. The new body will, with the exception of a representative of the I.J.M.A., consist entirely of officers of the Governments concerned, many of whom are already members of the I.C.J.C. If it was felt that the I.C.J.C. was not tackling the job with sufficient energy or had not the necessary authority, it would have been better to have strengthened it instead of setting up a new organisation. The I.C.J.C. meets only twice a year. At these meetings, it reviews the progress made with schemes already in operation and plans future projects. The main spadework is, of course, done in sub-committees, which meet more frequently. If the authorities in New Delhi were not satisfied with the progress being made, they could have added to the I.C.J.C. the officers who are now being brought in to constitute the new body and they could have issued instructions that the I.C.J.C. should meet more frequently, say, once a month. They could also have appointed a full-time chairman instead of an officer to whom the I.C.J.C. is only a side-show and they could have armed him with the necessary powers to get things going.

From the information available, it seems that the new body will be simply a reviewing body. It will not have the power to plan new projects or to organise new schemes. While there may be some advantage in having constructive criticism of the work of the I.C.J.C. and the departments of agriculture in the States concerned, this seems to be an expensive way of obtaining opinions, for it will mean the setting up of a new office with new staff and all the other paraphernalia.

Jute-Growing in U.P.

According to a newspaper report, U.P. produced more jute in 1956-57 than the target figure set for 1960-61. If the report is correct, this is a satisfactory achievement. It is also stated that a crop of 110,000 bales was produced on 47,000 acres, whereas the acreage planned was 50,000 acres. This gives a yield of 2.34 bales an acre which, by the standards prevailing in lower West Bengal and in East Bengal, is very poor. That is probably due to soil and climatic conditions as much as to the lack of experience among growers. Soil conditions may be improved by the use of fertilisers and by the development of strains more suited to U.P. land. Growers could benefit by instruction from the field staff of the I.C.J.C. and the State Department of Agriculture.

Surprise has been expressed that the U.P. mills do not confine their purchases to U.P. jute, but the plain fact is that the jute grown in U.P. is not yet suitable for being spun without the admixture of other qualities. The fibre is brittle. If used alone, the yarn would be apt to break frequently and the wastage would be high. There is a further disadvantage in that U.P. jute usually carries a high percentage of root, which reduces its economic value. These faults may be overcome in time, but until they are overcome, the U.P. mills will have to continue to buy jute from Assam and West Bengal. In this connection, it may be asked why, if U.P. jute has these faults, Calcutta mills buy it. The reason is that it is sold in Calcutta at a lower price—a price dictated by its inferiority compared with Bengal jute. As Calcutta mills have ample supplies of the latter, they can use the brittle and heavy-rooted U.P. jute, though some of them doubt whether it is economic to do so.

It is satisfactory, however, that efforts are being made in U.P. to produce more and better jute. We would not like to do or say anything to cause discouragement. It is hoped that the research which is now being done to find varieties suitable to U.P. soil and to find fertilisers which give the best results will be successful. It is also good to know that a seed multiplication farm has been established and retting facilities provided. Some of the other States might learn from U.P. with advantage to themselves and the industry.

U.K. Jute Goods Prices

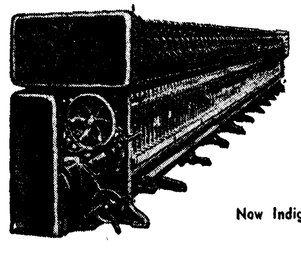
The reduction of the "mark-up" margin on jute goods imported into the U. K. from 40 percent to 30 percent has caused some apprehension in Dundee as it will enforce a reduction in the price of Dundee goods if manufacturers there are to compete. On the other hand, it is not likely to be of very much benefit to India. The President of the Board of Trade has explained that this step has had to be taken in order to protect the jute industry itself against competition from substitutes, principally paper bags. The Dundee industry has hitherto been protected against competition from Indian jute goods because the U. K. Jute Control has been the sole importer of jute manufactures and 40 percent has been added to the landed cost before the goods are released to U. K. buyers. This 40 percent has now been reduced to 30 percent and the Dundee manufacturers are to lose their protection to that extent.

Apart from complaints from users of jute bags about the high cost which has been forcing them to use other kinds of bags, bag manufacturers themselves have been complaining that they are losing business because their bags are too expensive. Complaints have also come from U. K. exporters of other goods, in the manufacture of which jute cloth in the U.K. has given an advantage to foreign competitors. It has been pointed out that even the use of jute cloth for packaging goods for export has put U. K. exporters at a disadvantage. It is not likely that the reduction in the "mark-up" will have any material effect in the Calcutta market. Although it may stop the fall in the consumption of jute bags and cloth in the U.K., it is expected that the Dundee industry will find means to make its prices competitive. In consequence, the proportion of U.K. and Indian cloth and bags may not show much change.

THE JUTE MARKETS

The raw jute and gunny markets experienced typical "end-of-the-season" conditions during the past week, with neither section showing any great activity. Overseas markets were quiet, and the only business reported was of a speculative nature. The fibre section eased in sympathy with gunnies, and on account of the lack of interest from Calcutta mills. The latter, however, increased their purchases in the local Cossipore markets, which tended to counteract the fall.

Manufactured Goods: There was very little interest in the manufactured goods market, and price movements were mainly the result of speculative activity. There was a big change over the past few weeks in the price ratios of various deliveries. For many months, forward shipment heavy goods were quoted at a premium over the ready position, and showed better profit. Consequently, Calcutta mills preferred to take this profit and the bulk of the business was done in the forward positions. From 10th July, however, the ready position came into prominence, and it now commands a premium of about Re. 1 over the other positions. This is perhaps a natural result of so much forward business having been done earlier in the year, the effect of which is only now being felt. Speculative activity, which at the beginning of the week was small, gradually increased with the approach of the settling day (20th July). Ready goods were extremely short and a squeeze developed, pushing up the rate of B Twills out of all proportion to the rest of the market, until at one stage they were quoted at a premium of Rs. 1.75. The demand was soon satisfied, and rates dropped as rapidly as they had risen. Opening quotations last Thursday showed very little alteration and B Twills were based on Rs. 115.55 for ready delivery with October-December shipment Re. 1 lower. Hessian was quiet and 40in. 10oz. stood at Rs. 42.50 for both the near and forward positions. Up to the week-end forward B Twills were mostly unchanged, but the ready position fluctuated rapidly and it eventually reached Rs. 116, only to fall back after the week-end to the former levels. Towards the close, the market weakened considerably on account of the poor shipping position and the serious congestion at the docks. It also came under the influence of a prominent speculator who sold heavily in an attempt to bear the market. Heavy goods reacted promptly.



On Wednesday morning, the market had recovered slightly and opening quotations were based on the following:

	July Rs.	August Rs.	September Rs.	Oct.-Dec. Rs.
40in. 8oz.	34.45	34.45	34.40	34.25
40in. 10oz.	42.36	42.55	42.55	42.45
B Twills	115.25	114.75	114.50	114.25
Heavy Cees (Plain)	115.25	115.25	115.25	114.50
A Twills	139.25	139.25	139.25	139.25
Liverpools	127.50	128.50	128.50	128.75
Cornsacks	117.25	117	117	115.80

Raw Jute: The fibre markets were very quiet and the business concluded under contract was much smaller than in earlier weeks. The Calcutta mills appeared to be confident that prices would

come down, but their optimism was not shared by sellers, who in most cases still held bullish ideas. The latter were probably encouraged by the increased activity in the Cossipore markets, where they had difficulty in meeting the demands of local representatives. This spate of buying coincided with a heavy fall in imports, which last week were only about half those of the previous week and very much lower than last year at the same time. In the trade, however, this was not unexpected, as imports had been well above the average throughout the season; the falling off of wagon arrivals carried no great significance, in spite of the attempts of some operators to emphasise it. The only effect was the fall in stocks in Cossipore, which were reported to be around 75,000 bales, but this figure was well above the corresponding one for this time last year.

Quotations at the opening last Thursday showed a slight increase, and New Crop Assam jute stood at Rs. 31.25 a maund for July-August shipment. There was no alteration in this rate up to the week-end, but on Monday sentiment was easier and prices dropped to Rs. 31 a maund. Business was on a small scale, and consisted mainly of purchases of Old and/or New Crop Dhubri-Northern-Assam jute at Rs. 30.75 to Rs. 31.25 for July-15th August shipment, and Rs. 31 to Rs. 31.50 for ready bills of lading and July shipment. Small lots of Assam Tossa were done at Rs. 31.75 to Rs. 32.50 a maund basis Bottoms. Daissee and Desal mesta fetched Rs. 28.50 to Rs. 29 a maund, while jungli mesta passed at Rs. 27. New Crop jungli white from selected districts was done at Rs. 29 a maund for August-September shipment. Pakistan Cuttings again came in for a great deal of interest and N.C.'s were bought on ready bills of lading at Rs. 107 to Rs. 108, and for August-September shipment. Old and/or New Crop, at Rs. 105 to Rs. 105.50 a bale.

At the close, the market was unchanged, and opening quotations on Wednesday morning were as follows:

Indian Jute	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	31	July-August
Northern	31	"
Purnea Desal	30.50	"
Purnea Jungli	28	"
Daissee	32	"
Assam Tossa	32	"
Murshidabad Tossa	31.50	"
Jungli Tossa	30	"
Northern ex Calcutta	31	"
Local Packing	28.50	Ready
Mesta:		
Assam	29.50	July-August
Northern	29.50	"
Desal	29.50	"
Daissee	29	"
Murshidabad	28	"
Jungli	27.50	"
Bimli F.A.Q.	28.25	"
Pakistani Cuttings N C's 104 a bale		Aug.-Sept.

New Crop Dhubri-Northern-Assam jute was quoted at Rs. 31 for July-August shipment.

Imports in the Cossipore area during the week ended 23rd July amounted to 295 wagons, which was 141 less than in the previous week, and 165 less than in the corresponding week last year. Business was brisk, with mill agents taking up larger quantities than of late, so stocks fell. Sellers were asking for higher prices and were inclined to hold on to their stocks.

THE PAKISTANI JUTE MARKETS

FALL IN LOOSE FIBRE ARRIVALS

(FROM A NARAYANGANJ CORRESPONDENT)

As expected, loose jute arrivals have fallen during the past week. This slightly bullish factor has been strengthened by reports of better Calcutta prices for gunnies and cuttings. As a result, loose jute prices have increased somewhat. The moisture content remains high. The past few days have seen more rain and a rise in the rivers, due to which greater arrivals of loose jute are expected in the various bazaars and in Narayanganj. It is interesting to note that even for early jute, the amount of croppy ends is distressingly large.

Reports indicate that sales overseas so far have been remarkably small. Most balers, however, maintain that they have good sales on their books and the way in which some of them are buying freely confirms this. While reports so far show that Dundee is extremely well bought, it is noted from the E.P.C. registrations for the last 15 days of June that 12,000 bales were bought by the U.K. Germany is undoubtedly short, and it is reported that very attractive prices are being paid for afloat jute to this destination. Interbaler business in Narayanganj has been restricted to ready sales for Export Firsts and Lightnings which are nominally quoted at Rs. 205 and Rs. 196. Interest in Cuttings is negligible and the prices continue to decline.

The Karachi gunny market is weak at Rs. 126 with no buyers. The market is inactive and distress sales below this level have been reported. Hessian remains unchanged at Rs. 56-8. The influenza epidemic, apart from crippling most business houses, is having an even more serious effect on the jute mills and production in practically every one of them has been seriously curtailed. In view of the already persistent complaints, particularly from the U.S.A., of late shipment penalties by Pakistani jute goods shippers, relations in the near future are likely to be strained, since this epidemic, combined with the transport chaos, is going to be the cause of even longer shipment delays.

THE FOREIGN JUTE MARKETS

LOWER PRICES FOR IMPORTED GOODS

(FROM OUR DUNDEE CORRESPONDENT)

The U.K. jute industry criticised the announcement last week in the House of Commons of the President of the Board of Trade that he was reducing the difference between prices for Calcutta goods and those for Dundee goods from 40 percent to 30 percent. This means that the rates for hessians, at present confined to 40in. 10oz., 45in. 11oz. and 36in. 10oz., will now be reduced in the case of imported goods, and if Dundee manufacturers wish to continue to manufacture these widths, they will have to reduce their prices to the same level as those at which the Jute Control would sell. The net price for 40in 10oz. hessians from the Control is now 98s a 100 yards having been reduced to that from 105s 5d. The reductions are approximately 7 percent for 40in. 10oz., 10 percent for 45in. 11oz. and 3 percent for 36in. 10oz. Dundee manufacturers have not been busy for some months past, and a fair proportion of their orders have been for these sizes mentioned, estimated at between one-third and one-half, so that this reduction in prices will make a pretty big difference to the profits of the industry, especially in the case of the small firms.

The raw jute market showed a firmer tendency last week and most sellers were asking £1 more. There was not so much offering, especially for July-August shipment. Western Germany, it was reported was buying pretty freely for this shipment, and shippers are now chary about selling any more. Later shipment is also very firm and dearer. Mill Firsts are quoted at from £114 to £117 for July-August, Mill Lightnings from £108 to £111 and Mill Hearts from £106 to £109, while August-September is from £110, £106 and £102, respectively and September-October at £1 less in each case. Old crop jute is more or less nominal now. Good marks of Daissee 2/3 are from £112 and grade from £110, while grade Tossa 2/3 is at £118 and fours from £114, July-August, and for Tossa £113 and £106, respectively, new crop, September-October, c.i.f.

Calcutta goods are steady at 64s 6d for 40in. 10oz. and 49s for 7¼oz., July, 64s 9d and 49s August and 65s and 49s September, with B Twills at 177s, 175s 9d and 174s 9d for respective positions, f.o.b., Calcutta. At a meeting of the Prices Committee held last week it was decided to make no change in the local prices for jute yarns and cloth.

U. S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in June was quite satisfactory, having been 9 million yards more than for June last year. The estimated consumption for the first six months of 1957 was 6 million yards higher than for the same period in 1956, more use of burlap for industrial purposes accounting for a substantial part of this increase. U.S. burlap stocks declined in June. At 252 million yards (of which 148 million yards were spots and 104 million yards were afloats), stocks declined 9 million yards from the previous month, but were 12 million yards higher than for June last year. Appearing below are two tables which include the June figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry.

TAXES ON KERALA PLANTERS

GOOD PROSPECTS FOR PEPPER

(FROM A SOUTH INDIAN CORRESPONDENT)

A BILL to amend the Travancore-Cochin Agricultural Income Tax Act of 1950 was introduced in the Kerala Legislative Assembly last week. Under the Bill, planting companies in Kerala will have to pay agricultural income tax at a flat rate of 25 nP a rupee on the whole of their agricultural income. Super tax on a slab rate ranging from 12 nP to 37 nP, it is also proposed, will be levied. The new rate of super tax will be for a total agricultural income of Rs. 25,000 or beolw—12nP; over Rs. 25,000 to Rs. 1,00,000—19nP; over Rs. 1,00,000 to Rs. 3,00,000—25nP; over Rs. 3,00,000 to Rs 10,00,000—31 nP; over Rs. 10,00,000—37 nP. The Finance Minister in his Budget speech on 7th June, estimated the revenue from the enhanced super tax at Rs. 65 lakhs. At present, the plantation companies pay a flat rate of 25 nP a rupee as agricultural income tax and 12 nP a rupee as super tax.

Protest from Planting Companies

The Association of Planters of Travancore in a memorandum submitted to the Chief Minister of the State says that the proposed rate of super tax is very heavy and discriminatory. It will weaken and demoralise the plantation industry in Kerala. The memorandum adds: "The total agricultural income tax here, as now proposed, would come to 62 percent against 45 percent proposed in the adjacent State of Madras. The industry here would thus be greatly disabled in competition with that in Madras. The proposed rate of taxation of agricultural incomes is higher than that adopted by the Central Government for business incomes. Further, the agricultural income tax law does not allow initial, or special depreciation on newly installed factory machinery or transport vehicles, in the case of purely agricultural companies.

"The super tax on slabs above Rs. 25,000 is discriminatory. Instances are not few of managements who have amalgamated smaller units into one so as to effect economy in administration and efficiency in management. Such large formations naturally earn larger profits and would under the new scheme fall in the higher slabs. It would appear at first sight that this is only a case of the principle of higher taxation for the wealthy being correctly applied. But it should be obvious that the shareholders of a wealthy company are not necessarily wealthy, and that the high rates of taxation come down on comparatively poor persons, just because they happen to have invested their small savings in large and well-conducted companies".

Higher Pepper Exports

More Indian pepper is being exported, although prices are falling. During the first seven months of the current season, (from November 1956 to May 1957), pepper exports from India amounted to 11,088 tons, showing an increase of 1,071 tons over those of the corresponding period of last season. It is estimated that another 2,743 tons were exported, during June 1957. This brings the total export for the first eight months to 13,832 tons. Estimates on the current season's production are conflicting. The official estimate places it at over 31,000 tons. The market considers this exaggerated. The Government has been issuing exaggerated estimates of the crop for the past few years. Trade estimates are more dependable. Its original estimate of the current season's crop put it at 24,000 tons. This had to be revised later in view of the crop failure in Tellicherry. The latest trade estimate is for a crop of 22,000 tons.

Internal consumption of pepper has been increasing, due to lower prices. According to one estimate, nearly 9,000 tons were absorbed by the home market last season. The Indian Pepper and Spice Trade Association estimates that during the first half of 1957, it was about 5,000 tons. At this rate, the home market might have absorbed more than 6,600 tons during the first eight months of the season. As the season has still four months to go, the internal market, it is estimated, will require 3,400 tons more.

Low Stocks

Stocks are placed at a figure like 4,500 tons on the basis that production is 22,000 tons and the carry-over from the last season's crop is 3,000 tons. The figure is arrived at after deducting home consumption and export from this total estimated supply. This is an unusually low figure for stocks. The carry-over in normal years comes to 2,000 to 3,000 tons. According to one estimate, forward deals for very nearly 500 tons covering July to October, have been completed so far. Thus the quantity available for the remaining period of the current season is limited.

World Supply

Demand from abroad has recently slackened. The market explanation is that it is on account of the rush of arrivals from other producing countries in the consuming centres abroad. The rush of Sarawak's new crop has begun and the Indonesian crop is near at hand. The latest indications are that like India, their output will be lower at 30,000 tons, against the original estimate of 35,000 tons. India's next crop, which will be available from October-November, is also likely to be a smaller one. Thus the world supply of pepper will be less than what the buyers abroad have been expecting. There is also no indication that world consumption of pepper has declined, or is likely to go down. Imports into the U.S.A., the principal consumer of pepper, were the highest for the past ten years at 17,699 tons during 1956. Import figures of other countries are not discouraging. Pepper is getting new markets, notably in eastern Europe. So it seems that the pepper market has better times ahead.

ESTIMATES FOR COFFEE CROP THIS YEAR

FURTHER EXPORT RELEASES

According to the latest newsletter issued by the Coffee Board, the total coffee crop of the 1956-57 season is placed at 42,200 tons, and the blossom shower estimate of 35,750 tons for 1957-58 stands. A clearer picture of the crop for 1957-58 can be got only in September. The total quantity sold for export out of the 1956-57 crop till the end of June, including a quantity of 725 tons sold to Russia, comes to 7,980 tons consisting of 7,629 tons of Plantations and 351 tons of Arabica Cherry. Tenders have been invited for a further quantity of 1,073 tons consisting of 430 tons of Plantations, 539 tons of Arabica Cherry and 104 tons of Robusta. Bulgaria and Hungary are among the latest customers of Indian coffee. They have been added to the list of countries for which destinational quotas of coffee have been fixed during the current year. Bulgaria has been allotted 500 tons Plantations, and 300 tons Arabica Cherry, and Hungary 200 tons Plantations and 100 tons Arabica Cherry.

Internal Consumption

The releases of coffee for internal consumption for the half year ended June 1957, were 12,467 tons against 11,433 tons for the corresponding period last year, showing an improvement by over 1,000 tons. Of the total quantity of 1,994 tons offered to the trade through pool sales and local sales in June the actual offtake was 1,760 tons. In pursuance of the Board's new propaganda policy, four coffee houses including the one in Bangalore, have been closed. Applications have been invited from well-established restaurants for being selected as "approved coffee houses."

The Board has decided to participate in a larger number of overseas fairs and exhibitions this year. The additions to the list include Anuga Fair, Cologne Damascus International Fair, Damascus, International Marsaille Fair, Marsaille, and Indian exhibitions in Peking and Shanghai, where Indian coffee will be served in the cup and limited quantities of green coffee samples distributed.

COCHIN TEA SALES

At Sale No. 19, 1,300,000 lbs of tea were on offer. The market was quiet as Low Medium and Medium descriptions were irregularly 10 nP easier with Fanning grades the weakest feature of the Sale. Best Liquoring, High-grown and Whole Leaf types were irregular and considerably easier.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 12-7-56 (Rupees a lb.	Average for the period (Rupees a lb.)
No 1	1.16	1.16
No 2	1.11	1.11
No. 3	1.06	1.06
No 4	1.01	1.01
No. 5	96	.96
	Sheet cuttings 1	.96
	do. 2	.91
Water White	—	—
R.M.A. No. IX	1.27/29	1.24½
R.M.A. No. 1	1.20/25	1.19½
	Crepe No. 2	1.08
	do. No. 3	1.03½
Sc. Crepe No. 1	1.00	.99
Sc. Crepe No. 2	.94/96	.95½
Sc. Crepe No. 3	.88/94	.91
Flat Bark	.82/85	.83
	Sc. Crepe 3X	.93

To arrive at f.o.b. Colombo prices, add 53.53 cents a lb for crepe other than scrap crepe and 31.53 cents for scrap crepe to the above market prices.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of June:

Upper Assam: Weather abnormally wet: outturn is slightly under last year; black rot reported in Doom Dooma; red spider prevalent in Sonari: and lifting in North Lakhimpur.

Central Assam: Excessive rain in Moran and abnormally dry weather in Golaghat; poor outturn; prospects vary from poor to fair; looper moth present in Jorhat with slight red spider blight moth.

Lower Assam: Weather unfavourable in Bishnauth and deficient rain in Nowgong; outturn poor; prospects fair.

North Cachar: Weather normal; prospects fair; red spider blight severe in some districts; outturn normal.

South Cachar: Monsoon delayed; outturn poor; prospects fair; red spider blight severe and helopeltis prevalent in Chargola; black rot in Longai.

Eastern Dooars: Weather seasonable; outturn normal; prospects fair; red supider blight prevalent in Jainti sub-district.

Central Dooars: Weather seasonable; outturn normal; prospects fair; red spider; blight lifting.

Western Doars: Deficient rainfall in places; outturn below last year; red spider blight is lifting in Chalsa and thrips is lifting in Oodlabari; prospects fair.

Darjeeling: Weather reports bad; outturn poor; thrips lifting, prospects fair.

Teral: Rainfall deficient; outturn less than last year; red spider blight lifting; prospects fair.

Commodity Markets

WHOLESALE PRICE INDEX RISES

The official wholesale price index (base year ended March, 1953=100) rose by 1.0 percent to 111.5 during the week ended 6th July, 1957, compared with 110.4 (revised) for the previous week. The index was higher by 0.5 and 8.6 percent, respectively, when compared with the corresponding week of the previous month and that of last year. Higher prices of onions (+27%), maize in Dohod (+14%), milk in Ludhiana (+12%), tea (+11%), rice in Saharanpur (+9%), in Jagdalpur (+7%) and in Kakinada (+5%), bajra in Coimbatore and coconut oil (+8% each), wheat in Rajkot (+6%), gram in Moga, black pepper in Cochin and cloves (+5% each), groundnut oil (+3%), barley, ragi, cashewnuts and mustard oil (+2%) and jowar, bajra, urd, gingelly oil, eggs, gur, chillies and betelnuts (+1% each) pushed up the index for Food Articles by 1.7 percent to 111.1. The prices of bananas in Bombay (-12%), cardamoms in Mangalore (-7%), arhar in Delhi and potatoes (-6% each) and rice in Mercara and Jayanagar, wheat in Rewa and black pepper in Madras (-5% each), however, moved down. The index for the Liquor and Tobacco group remained stationary at the previous week's level of 94.3. A rise in the prices of castor oil in Bombay (+7%) was responsible for an advance in the index for the Fuel, Power, Light and Lubricants group from 111.5 to 111.6 during the week. The index for the Industrial Raw Materials group rose by 0.2 percent to 120.9 compared with 120.6 (revised) for the previous week. Items which showed noticeable changes during the week were: castorseed (+5%), copra (+4%), raw cotton (+2%), cottonseed (-5%) and linseed (-2%). The index for Intermediate Products fell by 0.6 percent to 108.1 due to a decline in the prices of cotton yarn (-3%) and linseed oil (-1%). The prices of tin (+13%), zinc (+11%), lead (+8%), copper (+5%) and brass (+1%), however, showed advances. The index for Finished Products moved up from 108.4 to 108.5 on account of an increase in the prices of leather belting in Bombay (+5%), glass (+3%), and handloom cloth, oilcakes and machinery (+1%).

IMPORT OF TEXTILE MACHINERY ON DEFERRED PAYMENT TERMS

The Government of India has announced the import licensing policy for the textile machinery items covered by the capital goods licensing scheme for the current quarter, July-September, 1957. The policy which takes into account the indigenous production provides that for the import of carding engines, ring frames and automatic looms, applications will be considered only on deferred payment terms as outlined in the public notice dated 29th June. Further, the importers of carding engines and ring frames will have to produce documentary evidence of firm orders having been placed with indigenous manufacturers to the extent of four such machines against one to be allowed for import. For the import of automatic looms, the applicants, in addition to satisfying the condition of the deferred payment terms, will have to submit documentary evidence of firm orders having been placed on indigenous manufacturers to the extent mentioned in the public notice. A committee is also being appointed by the Government to go into the question of the quality of indigenous automatic looms and to suggest measures for ensuring quality standards and expeditious delivery.

WEAKER DEMAND AT TEA EXPORT SALE

LESS BUYING IN DUSTS

AT Sale No. 7, held on 22nd and 23rd July, offerings at the Export Auction amounted to 32,487 chests. There was less enquiry than in the previous week and as the Sale progressed demand weakened. Most C.T.C. teas met with a rather restricted demand at prices which were 20 nP to occasionally 50 nP easier and there were some withdrawals. The very best teas of this description were, however, quite well supported. but generally below valuations Plain teas were from 4 to 8 nP easier, while Medium Assam Brokens and Fannings were 10 nP and sometimes 15 nP lower depending upon quality. Brown leafed Dooars with bright liquors received fair support. but the plainer kinds were a weak feature. Flavoury Darjeelings sold well, while tippy teas and stylish leaf grades were strong.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.50	1 14 0 to 1 15 0
Plain B.P	1.90	1 8 6 to 1 9 0
Plain Fannings	1.74	
Medium B.P.	2.10	2 2 0 to 2 4 0
Medium Fannings	2.15 to 2.20	
Best Assam C.T.C. B.P.	3.60 to 3.80 (nominal)	4 0 0 to 5 0 0
Best Assam C.T.C Fgs	4.00 to 4.50 (nominal)	

At the Internal Sale, 11,475 chests of Dust were on offer. There was less general demand and the market opened at a lower level, prices weakening further with the progress of the Sale. There was again more demand for the powdery Dusts and these did not show the same decline as the more leafy types, which were sometimes up to 12 nP easier except for a few Assam teas with quality. C.T.C. Assams were a weak feature and at the close were as much as 30 nP easier. although there was a fair demand for the few best bright liquoring invoices. Darjeeling teas were generally neglected.

Quotations

	1957 Rs.	1956 Rs
Medium Dooars Dust	1.55 to 1.65	1 6 0 to 1 7 0
Medium Assam Grainy Dust	1.65 to 1.75	1 12 0
Medium Assam C.T.C. Dust	2.40 to 2.50	
Best Assam C.T.C. Dust	2.75 to 3.10	3 2 0 to 3 8 0

The 360 chests of leaf on offer met with a limited demand

SHARP FALL IN FREIGHT RATES

THE freight markets last week continued to slump at an alarming rate. The trans-Atlantic coal rate fell to 35s. There was no firmness in any sector of the market. and vessels are now facing ballast passages to obtain employment in Eastern waters In the local coal trade. a vessel was taken for Saigon at 62s 6d and an August ship to Karachi at 55s which shows a decline of 20s on the last fixture made. A vessel which missed her cancelling date for coals to East Pakistan was refixed at 40s or 12s below the previous rate. Calcutta-U.S.N.H. was done at $(U.S.)12.50 for manganese ore. Cement from Constantza to Visakhapatnam paid 82s 6d f.i.o., and steel from Black Sea to India 96s. The statements attributed to the Central Minister for Shipping by the local Press have come as a distinct shock to shipping interests in Calcutta. and will doubtless be read with amazement by shipowners who have the misfortune to have ships lying off Indian ports for weeks awaiting berths. The oft reiterated excuse that the current congestion is the result of a rush of ships through the Suez Canal is not tenable. Before the Canal was closed, warnings were given and suggestions were made by shipping interests of the likelihood of a congestion in 1957. As a matter of interest. of the 93 vessels in the port, 35 came through Suez. and of the 34 at sandheads, only 15 passed through the Canal.

LINSEED FIRM

A firm trend has been noted throughout the past week and prices have been slightly better. Sellers were reserved due to a scarcity of supplies from the producing centres. while buyers have displayed a fairly keen interest. The volume of trading during the week has been small. Prices have advanced in the oil section. With the exception of small local parties. buyers have been uninterested at higher levels because of a decline in the U.K. prices. which has created an even wider disparity than before. Latest quotations were as follows : Ready-July Rs. 22-8 a maund and August-September Rs. 22-12 a maund.

HIDES AND SKINS STEADY

The market continued quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 16th July and 22nd July, 1957)

Cowhides : Wet salted (Ord.) 84,000 pcs. on the basis of Rs 7.50 to Rs. 9; Wet salted (Slaughtered) 15,600 pcs on the basis of Rs. 12 to Rs. 21.50.

Goatskins : Wet salted (Daissee, Killed) 39,900 pcs. on the basis of Rs. 330 to Rs. 350 and 370 to Rs. 380. Assam-Dinajpur-Purneah 4.500 pcs. on the basis of Rs. 300 to Rs. 320 ; Purneah-Kissenganj 3.500 pcs on the basis of Rs. 330; Pakur-Patna (Ord) 9,000 pcs. on the basis of Rs. 300 to Rs. 315; Muzafferpore 5,000 pcs. on the basis of Rs. 333.

COMPANY AND PUBLIC NOTICES

BALLY JUTE COMPANY LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8. India Exchange Place. Calcutta. on Wednesday the 4th September, 1957 at 2-00 P.M. for the following purposes :—

(1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March. 1957.

(2) To declare dividends on Preference and Ordinary shares.

(3) To elect a Director in place of the retiring Director.

(4) To appoint Auditors and to fix their remuneration.

(5) As special business to consider and if thought fit, to pass with or without modification the following resolutions which will be proposed as Ordinary Resolutions :—

a) "RESOLVED that the Books Registers and other documents of the Company required to be maintained and disclosed under the provisions of the Companies Act, 1956. shall be kept open for inspection by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees. if any. at the Registered Office of the Company on any working day from Monday to Friday between the hours 3 P.M to 5 P.M. (S.T.) and on Saturday between 11 A.M. to 1 P.M. (S.T.) provided however the Register required to be maintained under Section 307 of the Companies Act. 1956 shall be open for inspection by any member as aforesaid during the period prescribed under Clause (a) of subsection (5) of Section 307 of the Companies Act. 1956."

b) "RESOLVED that consent of the Company be and is hereby given to the Board of Directors to contribute and/or subscribe from time to time to any national. political. charitable. benevolent public or general and other funds not directly relating to the business of the Company or welfare of its employees such amounts as may be considered proper by it notwithstanding that such amounts in any financial year may exceed Rs. 25.000/- or 5% of the Company's average net profits as determined in accordance with the provisions of the Companies Act. 1956. during the three financial years immediately preceding. whichever is greater."

(6) To transact any other business which may be brought forward at the meeting with the permission of the Chairman.

The Share Transfer Books of the Company will remain closed from 14th August. 1957 to 4th September, 1957 both days inclusive.

By Order of the Board.
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.
CALCUTTA.
Dated, 16th July, 1957.

N.B. (i) The Directors have recommended the following Dividends :—

On Preference Shares @ 7% free of Incometax.

On Ordinary Shares @ Rs. 2/- per share free of Incometax.

If dividends on shares as recommended by the Directors are approved at the meeting, the Dividends will be payable only to the Registered Shareholders whose names appear on the Company's Register on the 4th September. 1957. No application need be sent for dividends as relative dividend warrants will be posted to such shareholders by the 21st September 1957.

(ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(i) **Explanatory Statement in regard to special business to be transacted at the meeting :—**

(a) Certain Registers and documents required to be maintained and disclosed by the Company under various provisions of the Companies Act, 1956, are to be kept open for inspection to the extent and in the manner and during such hours as may be fixed by the Company in General Meeting. It is proposed to fix the days and hours for such inspection by a resolution of the Company and hence the resolution is put before the General Meeting of the Company.

(b) The Board of Directors have to give contributions from time to time to various institutions including charitable and other funds not directly related to the business of the Company or to the welfare of its employees and which are at times in excess of the limits as laid down in Section 293(i)(e) of the Companies Act, 1956. A resolution has. therefore. been proposed to authorise the Directors to contribute to such funds in excess of the above limits.

THE HATTIKHIRA TEA CO LTD.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14. Old Court House Street, Calcutta on Friday, the 23rd day of August, 1957, at 3-30 p.m., for the following purposes :—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1956.

(2) To declare a dividend.

(3) To elect Directors in place of the retiring Directors. In this connection Special Notice is hereby given of the intention to move the Special Resolution at the meeting. that is to say :—

"That Mr. J. R. Hollander who retires by rotation be and is hereby appointed a Director of the Company. such appointment to have effect as and from the 15th May. 1957".

(4) To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Transfer Book of the Company will be closed from 15th August, 1957 to 23rd August, 1957, both days inclusive.

OCTAVIUS STEEL & CO LTD.,
A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta. 20th July, 1957.

NOTE :—

A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT.

In the Special Notice given by the Company to the Shareholders, under item 3 of the annexed notice for Annual General Meeting. intimation has been given of intention to move a Special Resolution for the re-appointment of Mr. J. R. Hollander who will retire in rotation at the meeting. Special Notice of such intention has also been given to the Company. Since Mr. Hollander is also a Director of Messrs J. Thomas & Co. Private Ltd., who are the brokers of the Company for the sale of their tea. it is considered desirable that he should be appointed to the Board by Special Resolution.

The Special Resolution has been framed so as to have retrospective effect on and from the date of appointment of Mr. Hollander.

THE HATTIKHIRA TEA CO. LTD.

THE Directors have decided to recommend to the forthcoming Annual General Meeting of the Shareholders a dividend of 5% in respect of Season 1956 payable without deduction for Income Tax paid by the Company.

OCTAVIUS STEEL & CO LTD.,
Managing Agents.

INADEQUACIES OF THE INDIAN PORTS

REALITIES BEHIND THE CONGESTION PROBLEM

THE serious congestion which has been developing at the ports over the past four or so months seems to have found the Government of India baffled, unprepared and almost helpless. To those familiar with the mental adventures of ambitious bureaucracies, it may not be surprising that, during the past few weeks, the reaction in New Delhi and among the port authorities has followed the familiar pattern of excuses after somnolence. The Shipping Minister, Mr. Raj Bahadur, has delivered himself of the opinion that the conditions now prevailing in Calcutta port are not beyond the Government's expectations—a remark which betrays how extraordinary has been the lack of co-ordination in planning the import of food and essential materials that are vital to economic progress. It has been evident for years that port facilities in India have been inadequate for the demands placed on them. Yet, while an expansion in imports has been coolly ordained and an expansion in exports hopefully expected, little has been done to widen the years-old bottlenecks through which the goods have to pass. The result is that, as at the end of last week, 42 ships were lying at Sandheads, outside Calcutta; waiting periods for import berths ranged from 15 to 25 days, and for export berths from seven to 15 days. In Bombay, there were 37 vessels waiting for berths, including 15 carrying grain; delays amounted to between 15 and 30 days. As far as Madras was concerned, there were 26 ships waiting at Roads and in port; waiting periods for import berths varied from 14 to 30 days, while for ore export berths they ranged from 15 to 40 days. As for Visakhapatnam, there were 21 ships at Roads and waiting in port; to get import berths took anything from three to 40 days, and to get ore export berths the waiting period ranged between 30 and 40 days.

*

The official attempt so far has been to suggest that this state of affairs has resulted mainly from fortuitous and unexpected circumstances. This is only partly true, although the consequences reflect poorly on an administration which has for some years been claiming flexibility in planning as one of its main virtues. Ministers have been heard to say that the congestion in the ports is a direct result of the Suez crisis; there has been a "bunching together" of ships because vessels coming round the Cape of Good Hope (before the Suez Canal was reopened) and those coming through the Canal since its reopening have been arriving simultaneously. It has not often been mentioned that this is a contingency which many countries, both east and west of Suez, have had to face; those that have faced it successfully have done so mainly because their appreciation of the effects of the Suez Canal closure began last November, not last week. If Indian ports, and Calcutta in particular, are in a sorrier state than those of almost any other nation in the world because of the Suez troubles, the reason is that the forewarnings given over many months by importers, exporters and the shipping companies have nowhere been more steadily ignored than in this country. Less than 40 percent of the ships now in Calcutta port or waiting outside it have come through the Suez Canal; if it be allowed that the time of their arrival has been unavoidably inconvenient, congestion would have still resulted with the ships which have not used the Canal at all. Another familiar explanation which has been offered for the current troubles at the docks is that work has suffered because of the monsoon and because of the influenza epidemic. The latter may be accepted as a regrettable mischance, but it is to be hoped the port authorities will not ask that the monsoon be henceforth regarded as an unpredictable calamity.

The reasons underlying the inadequacies of the ports in fact go much deeper, and the attempt to offer recent temporary mishaps as an excuse signifies nothing more than that the tradition of complacency continues. The fundamental responsibility for this complacency is the Government's. After all is said and done about the second five year plan being far too ambitious, the fact remains that the one aspect where ambition has been clearly lacking is in the provision of transport facilities. Orders have been placed with suppliers abroad for foodgrains, steel plant equipment, industrial machinery and raw materials. But little thought has been given to how these imports will be handled at the quaysides and ultimately moved to the centres where alone they might be of any use. While it has long been evident that the capacity of the ports and of the railways would be inadequate for the traffic offering, reliance has continued on hindsight rather than foresight in solving crises. No serious effort has been made to phase imports to ensure that their inflow is smoother. Unusual types of cargo have been arriving, for handling which the port authorities have neither the means nor the experience. The attempt has been to resort merely to temporary expedients which offer no way out of the resulting confusion. Much of the equipment used by the ports is obsolete; and Calcutta's enjoys the doubtful distinction of being among the few organisations of its kind in the world where a maintenance programme worth the name still remains to be evolved. It cannot be pretended that the shortage of handling equipment has developed either because it was not available or because the money to buy it was not there. If, with a little foresight and in response to repeated warnings, orders for it had been placed earlier, the present troubles would have been less serious. As for finance, it is an astonishing commentary on the energy and initiative which guides the destinies of the ports that out of a provision of nearly Rs. 50 crores made for them under the first five year plan, barely Rs. 27 crores was actually spent. Calcutta, as a shining example of sloth, could use no more than Rs. 3½ crores out of its allotment of over Rs. 12 crores.

*

Apart from the fact that imports have not been properly phased, port development has been neglected and handling facilities remain poor, one of the most important factors contributing to the present difficulties is labour unrest. Many stevedoring workers in Bombay went on strike early last month, and a general strike of port labour was only narrowly averted. Calcutta has suffered a go-slow movement for a number of weeks. In spite of the warmth of the homilies issued recently by the Central Labour and Shipping Ministers, the undercurrent of unrest among dock workers continues. If it breaks out in a more serious form, the loss to the country will be incalculable. It is important therefore, that urgent, and not purely verbal, measures be taken to ensure discipline at the docks. Although the earnings of port labour have increased steadily in recent years, productivity has almost as steadily decreased. Quick action may, for this reason, be necessary in implementing schemes for paying workers according to the work they do; the introduction of the piece-rate system in Calcutta, even if initially in a somewhat simplified form, will be keenly awaited. (Such a system is already in operation in Bombay.) The publication of the Chowdhury Committee's report on the All-India Port Workers Federation's demand for rationalising the pay scales and service conditions of different categories of labour in the major ports is also overdue.

*

A variety of expedients have been suggested recently to alleviate the congestion in the ports. A naval berth is to be commissioned in Bombay for food ships, greater use is to be made of lighterage facilities, mechanical appliances are to be speedily procured, Customs procedures are to be streamlined, and increased use is to be made of minor ports. So, at least, the Government has promised from the Olympian heights of New Delhi, but whether its newly-born anxiety over these problems will be matched by more energetic action in the lower ranks remains to be seen. The most optimistic estimate of the time it will take for the congestion in the ports to ease has come from precisely the source from which it might have been expected—the Government, which says it will take two months. But many whose cynicism has not waned in spite of the miracles of our time see no way how the abnormal congestion of today can be ended before four to six months. Even so, if it can be reduced to what, by Indian port standards, can be described as "normal" before December, shipowners as well as importers and exporters may have reason to celebrate the phenomenon with lavish Christmas parties. Meanwhile, the country may need to face up to the consequences of sloth, inefficiency and indiscipline at its docks by having to pay heavier freight charges on the commodities it imports and exports. To blame a possible increase in freights on shipowners or anybody else would be disingenuous. Considering that each day's delay in the working of an average cargo vessel (of 10,000 tons) costs £1,000 or even more, the realisation is necessary that losses running into lakhs of rupees which have already been suffered by shipping companies, both Indian and foreign, are too heavy to be borne indefinitely. Responsibility for the critical situation prevailing in the Indian ports today is one which it will do the Government no good in the longer run to shirk.

CENTRAL GOVERNMENT LOAN ISSUE

FURTHER details of the Government of India's borrowing programme for the current financial year have just been announced. As indicated by the Finance Minister a few weeks ago, it is for a total sum of Rs. 100 crores. As a change from last year's practice, two loans are being simultaneously floated: (a) 3½ percent National Plan Bonds, fourth series, redeemable at par on 1st August, 1967; and (b) 4 percent loan, redeemable at par on 1st August, 1972. The issue price for the first is Rs. 99.50 percent, so its running yield is 3.76 percent and its redemption yield 3.80 percent. The issue price for the second is Rs. 100 percent. Interest will be paid half-yearly. Unlike last year, no short-term loan is being issued. Subscription lists for the new loans will open on 5th August and close on 8th August. The Government reserves the right to close the lists earlier without notice should the subscriptions total Rs. 100 crores before the end of this period. It also reserves the right to retain subscriptions up to 10 percent in excess of the notified amount.

Last year, the Government issued three separate loans simultaneously—short-dated, medium-dated and long-dated—for a sum of Rs. 150 crores. Subscriptions totalled a little over Rs. 157 crores, of which Rs. 77 crores came in cash and Rs. 80.52 crores through conversions. This year, over Rs. 30 crores, it is believed, will be realised through the conversion of 3 percent Victory Loan of 1957 and 3 percent Loan of 1958, at 100 percent and 99.70 percent, respectively. The terms of the new Central loans are considered attractive, so it is believed that the response will be good. Since the announcement however, the price trend has been downwards not only in stocks of closely comparable maturities, but also in long-dateds and medium-dateds generally. Short-dated securities, however, maintain their firm trend. The new medium-dated loan might appeal especially to banks because they are inclined to keep their investments more liquid; in spite of the move towards higher interest rates, it is not a good proposition for them to block their funds in long-dated stocks. It is hoped that the number of State loans will be very few. The Central Finance Minister may have succeeded in dissuading many States from issuing separate loans of their own in view of the stringency in the money market. The small savings campaign needs to be strengthened but the States have so far approached the problem half-heartedly. It is hoped that they will act more vigorously now that

they have been promised a higher proportion of the total collections if they do not raise loans. From the money market's point of view, the Central Government's borrowing policy this year has its good features: the amount to be borrowed is not so heavy, and the rate of interest has been realistically fixed.

EARNING MORE DOLLARS

A PESSIMISTIC VIEW OF LONG-TERM PROSPECTS

MACMILLANS, a publishing firm which derives from the same family as Britain's Prime Minister, has published a book by Sir Donald MacDougall entitled *The World Dollar Problem*. It is the more opportune for not being (in the journalistic sense) particularly topical. We ought to be reminded that, though lack of dollars in the world is not at present critical, the long-term dollar problem still exists. Sir Donald MacDougall's study of the subject is already arousing controversy. His view of the prospect over the next 20 years or so is, on the whole, pessimistic. He sees in the United States a community of immense wealth, both natural and acquired (that is, in resources and technique), and a community that is peculiarly sensitive to competition from abroad. There is a chronic tendency in such a community to export more than it imports. And Sir Donald foresees a continuing rise in prices in the non-dollar world, which would, of course, strengthen that tendency. This authority does not foresee the next dollar crisis as imminent; it may be delayed, he thinks, a number of years. Other authorities believe that the next year or two will be difficult but that international payments will fall into better balance later. These ideas are worth considering.

There is no denying the deterioration of many countries' balance of payments over the past year. Many countries of Europe as well as those of the sterling area have run into deficit, and only a few countries have added significantly to their reserves. Western Germany and the United States are prominent among those few countries; but the increase in West German reserves, due essentially to the undervaluation of the West German currency, has weakened rather than strengthened the non-dollar countries as a whole. This further transfer of reserves from the weaker to the stronger countries is a retrogressive tendency that may cause serious damage to international trade if it persists, for the weaker countries will be compelled to reimpose restrictions on trade (as France has done already this year). Alternatively, it may cause devaluation of a number of currencies. Sir Donald MacDougall has, indeed, little confidence in the stability of the non-dollar currencies in general; he seems to regard widespread devaluation as an inevitable result of America's economic superiority. Other observers are not so certain that this superiority will endure. They note that American production has been static or declining this year, after a much longer period during which Europe, not the United States, has made the most impressive economic advances. We may be a little sceptical about M. Khrushchev's repeated declarations that Soviet Russia intends to surpass the United States economically, but analysts without his bias, following the trends through some years into the future, do not regard the idea as absurd; and the latent potentialities of China are even greater than Russia's. India is another country that will certainly, before many years have elapsed, change the balance of the world's economy; so will Australia, in due time. Only the economic fringes of the African and the South American continents have been properly explored.

* * * *

It is inconceivable that the United States will retain its relative position in the world when these and other regions, as well as western Europe, are more developed. It is therefore difficult to believe that a shortage of dollars—if there must be a shortage—will always mean "a dollar crisis". For instance, the countries of western Europe, if unable to earn enough dollars to pay for what they want to buy in the United States, will surely be able, much more easily than they can now, to satisfy their requirements in the sterling area, eastern Europe, China or elsewhere. However, we have to keep the problem in perspective. It is comforting to know that it may solve itself ten years hence, but if there are the potentialities of a crisis five years hence we must shape our policies to avoid it. This is not a matter that can be discussed independently of, or in a spirit of hostility towards, the United States; and the United States has an obvious interest in it, for a shortage of dollars on a worldwide scale would drastically curtail America's exports—unless the Administration were prepared again, in the face of growing internal opposition, to make huge loans and grants to foreign countries.

It is obviously necessary to make scarce reserves as nearly adequate as possible. Facilities for international credit must be extended; and the question of raising the price of gold, and so the value of all gold reserves, cannot, surely, be answered for ever with a blank negative. But the quickest way to get more dollars is to earn them. The American public is willing enough to buy foreign goods (subject, of course, to the inflationary tendencies in the non-dollar world that disturb Sir Donald MacDougall and others), and it is surely the duty of the American Administration to oppose those manufacturing and mining and farming interests that resist liberalisation of trade. This year the United States has displaced Australia from the position of the leading market for U.K. exports; and the goods that the U.K. sells to the United States are predominantly consumer goods, whereas other markets are generally more interested in capital goods. If such progress is allowed to continue (but the experience with bicycles, wool goods, etcetera, is not promising), and if the American economy becomes buoyant enough to buy more sterling commodities, the dollar problem of the sterling area will not be intractable; and other countries are certainly not backward in selling to that market. But there is no assurance that the American economy will not lapse into recession, and even a mild one could have serious effects abroad. It is necessary, therefore, not only to try to earn more dollars but also, at the same time to develop trading relations as energetically as possible in the non-dollar world.

CURRENT COIN

Kalyanpur Lime and Cement.—On another page of this issue of Capital appear the details of a fresh offer to the public of 10,750 ordinary shares of Rs. 100 each in the Kalyanpur Lime and Cement Works Ltd. The subscription list will open on 9th August, 1957, and will close on 23rd August, 1957, unless closed earlier at the discretion of the directors. It will not, however, be closed before 17th August, 1957. Rs. 50 is payable on application and a further Rs. 50 on allotment. The ordinary and preference shares of the company which are already issued and paid-up are officially listed by the Calcutta Stock Exchange. The present issued capital of the Kalyanpur Lime and Cement Works is Rs. 52¼ lakhs, consisting of 4,000 fully-paid 7 percent cumulative preference shares of Rs. 100 each, 15,750 fully-paid 6 percent tax-free cumulative participating preference shares of Rs. 100 each, and 32,750 fully-paid ordinary shares of Rs. 100 each. The company is now issuing 21,500 ordinary shares of Rs. 100 each, out of which 10,750 shares have been taken by the directors and their friends. The remainder, which have been underwritten by the Industrial Credit and Investment Corporation of India Ltd., are being offered to the public. The company's capital requirements for expansion are estimated at Rs. 98 lakhs. Of this sum, Rs. 31½ lakhs will be found from the share capital subscribed in 1954 for the new extension; Rs. 45 lakhs from the loan received from the Industrial Finance Corporation; and Rs. 21½ lakhs from proceeds of the present issue. The company was founded in 1937 to take up, as a going concern, the business of Kalyanpur Lime Works Ltd., with the purpose of starting a cement factory for the manufacture of Portland cement, and is situated amidst extensive limestone quarries. The erection of the new plant is nearing completion and it is expected to go into production by September-October 1957. When the plant starts operating, it is expected that cement production will be quadrupled, with a resultant increase in profits. The company will also enjoy the special benefits of the Income Tax Act for the development rebate and depreciation allowances. The latest balance sheet for the year ended 31st December 1955, showed a net profit of Rs. 1,48,900 after providing Rs. 1,49,679 for depreciation. An interest payment of Rs. 2,28,583-6 to the Industrial Finance Corporation on the loan taken for the extension of the company's factory, however, wiped out the profit. The resultant loss of Rs. 76,683-2 was set off against the unabsorbed balance of the carry-forward of the previous year's profit (Rs. 92,882-3-8), leaving a credit balance of Rs. 13,199-1-8, which was carried forward. A sum of Rs. 77,805-11-6 was set off against reserve for rehabilitation and expansion account in accordance with the Government's orders.

* * * *

Protection to Piston Assembly.—The Government has accepted the Tariff Commission's recommendation that protection to the piston assembly industry should be continued until 31st December, 1960. The present annual demand, exclusive of the requirements of the defence services, amounts to 804,000 pistons, 5,688,000 piston rings and 804,000 gudgeon pins. It is likely to increase at the rate of about 20 percent each year during the next three years. As was the case at the time of the Commission's last enquiry, two companies are licensed for the manufacture of piston assembly and parts, namely, India Pistons (Private) Ltd., Madras, and Goetze (India) Private Ltd., New Delhi. In addition, Hindustan Motors Ltd., Calcutta, produces pistons for use in engines of its own manufacture. Some small engineering units also make pistons and other component parts, according to orders, but details of their capacity, production, etcetera, are not available. The Commission has discussed at length the question of improving the quality of the indigenous products. It has pointed out that the quality of the rings produced by India Pistons is satisfactory, but the firm should make "determined efforts" to tighten its inspection procedure. It should also endeavour to rationalise its production programme and concentrate efforts for the manufacture of such types and sizes as are most in demand. Indigenous manufacturers of automobiles, motor-cycles and scooters, diesel and other types of internal combustion engines should expedite their negotiations for obtaining their requirements from India Pistons. Referring to the formulation of standard specifications, the Commission says: "We still feel that the work of laying down standards should be expedited and, therefore, recommend that the Indian Standards Institution should endeavour to finalise the standard specifications for pistons, piston rings and gudgeon pins as early as possible." India Pistons Ltd. proposes to manufacture aluminium castings in its own foundry but their cost is "likely to be higher" in the initial stages than the landed cost of imported castings. In view of these factors, the Commission has recommended that protection to the industry should be continued for a further period of three years at the existing rates of duty.

* * * *

New Life Insurance Business.—The Life Insurance Corporation completed total new business amounting to Rs. 117.24 crores from 1st September, 1956, to 24th June, 1957, according to a statement in the Lok Sabha by the Deputy Minister for Finance, Mr. B. R. Bhagat. The zonal break-down of figures was as follows:

Zone	Sum Assured (in crores of rupees)
Northern	16.98
Eastern	22.68
Central	18.26
Southern	32.41
Western	26.91
	117.24

* * * *

Idle Capacity in Pencils.—Domestic production of pencils has been increasing steadily. From 214,53,000 gross in 1951, it has been more than doubled to 552,34,000 gross in 1956. Import restrictions over the years have served as the main stimulus to higher output. But in spite of the rise, unutilised capacity in the pencil-manufacturing industry is large. Mr. S. L. Jain, in his address from the chair at the recent annual general meeting of the Indian Pencil Manufacturers Association, has put the ratio of idle capacity to the total at 60 percent. The current rated capacity of the industry, computed on the basis of a single shift a day, is 1.5 million gross a year, he says. The proportion of utilised capacity, therefore is about 40 percent. Emphasising that the idle capacity "at so high a level as 60 percent is something very ominous which cannot be viewed with equanimity", Mr. Jain suggests that the Central Ministry of Commerce and Industry should help "create conditions favourable" for the existing units to utilise their capacity fully. The starting of new units should be discouraged until the capacity now lying idle is fully taken up. The pencil-manufacturing industry, he says, should be brought within the scope of the Industries (Development and Regulation) Act, 1953, so that its expansion and growth could be regulated with a view to avoiding "competitive waste". Mr Jain however shows a welcome awareness of the need to improve and standardise the quality of pencils manufactured in India. The Indian Standards Institution, in active collaboration with the National Physical Laboratory and the Forest Research Institute, has already prepared the final draft of the Indian standard specification for black lead pencils. "The formulation of the standard will, indeed, fill a long-felt gap and accelerate the pace of progress of the industry so long contending with the rule of thumb," he says. The pencil industry is handicapped by a shortage of experts. The Government has requested the T.C.M. authorities to lend the services of some, but Mr Jain thinks that other countries, particularly the U.K., Germany and Japan, should be similarly approached. Speaking on the raw material problem, he points out that India has to depend upon foreign sources for all items except graphite. The National Physical Laboratory has done good work for the beneficiation of Indian graphite, and a small pilot plant has been put up to meet the needs of the pencil industry. But slats made out of Indian timber do not meet its requirements. Besides, their price is higher than the landed cost of the foreign material. Mr. Jain urges that steps should be taken by the Government to "explore possibilities of suppiying pencil slats manufactured out of approved Indian timber in the required quality, at competitive prices and on a commercial scale."

* * * *

Publicity and Industrial Costs.—The techniques of publicity as a means of mass communication have proved invaluable for economic progress. Since the Industrial Revolution in the west, numerous possibilities of mass production have been created, so manufacturers have become eager to sell in markets spread all over the world. Speaking at the Rotary Club this week, Mr. R. K. Sirkar, advertising manager of Dunlops, has said that publicity in India is hardly 25 years old, but the considerable interest now shown in it demonstrates its increasing importance. Critics of publicity programmes assert that expenditure on sales promotion represents a high proportion of the price paid by the consumer. But they forget that planned publicity has led to the creation of a large mass market, and a significant reduction in unit cost. Two American examples which may be cited in support of this view are automobiles and radio sets, where a significant reduction in unit cost was brought about by mass production within a short period of time. In India also, the bicycle industry provides an example where advertising has brought direct benefits to the consumer. In 1955, the industry spent approximately Rs. 13 lakhs on publicity, leading to increased sales and to a reduction in price, on an average, of Rs. 10 a cycle. "This meant a saving of about Rs. 50 lakhs to consumers in one year." The unit cost in handicrafts and cottage industries is high, generally on account of a low volume of output. The publicity campaign now undertaken by the Government is based on the assumption that an expansion of the market will bring down the unit cost of production, which in turn will help expand the market further. In effect therefore, planned publicity can be a great economiser, Mr. Sirkar says.

* * * *

Suez Canal Traffic.—The gradual stepping up in the size of convoys using the Suez Canal has led to many people feeling that either the Egyptian Canal Authority has been unjustly denigrated or the alleged difficulties in handling Canal traffic have been exaggerated. So far, shipping using the Canal has experienced no great difficulty and ships' masters have been reported as saying that conditions generally are much as they were in the days of the Suez Canal Company's administration. On the other hand, their official reports to owners are obviously not quite so optimistic, for Viscount Simon, addressing the Chamber of Shipping recently, expressed the general anxiety which is felt about the lack of experience of many of the pilots. That this is not unjustified is evident from a letter to the *Daily Telegraph* over the signature "Ex-Suez Canal Pilot." Recalling that when the Suez Canal Company withdrew its pilots last autumn, there still remained a considerable number of experienced Greeks and Egyptians who are quite capable of handling the few large ships using the Canal today, the writer continues: "The present traffic is a very small proportion of the former number of ships making transit, and few are more than 8,000 tons gross, which was the maximum tonnage given to a pilot starting on the Canal. Thus, the large ships are, for the moment, assured of a capable pilot and by a capable pilot I mean one who can handle his ship in any emergency with safety, and who has the captain's confidence. It would be a different story if traffic suddenly returned to the normal volume of the period immediately before September. Another lucky break for the Egyptian Canal Authority is that from the day the old pilots quit to the closing of the Canal by Colonel Nasser's wanton sabotage they had no fog, sandstorms, or strong winds. They were able to operate in ideal conditions, and by day only. Not only that, but the experienced pilots still remaining were obliged to work 16 hours a day, making the entire transit from one end of the Canal to the other. The pressure on them had been killing, and it is certain they could not have continued much longer." The writer contends that to run a few ships in one convoy a day with no night work, without having to manœuvre to tie up and get under way again, and under ideal weather conditions, is a simple matter. "But step up the pace with double convoys of some 25 or more ships, navigating by night as well as by day, and further complicate the issue with the numerous strong winds, sandstorms and banks (which the present régime has yet to encounter), and the story is vastly different," he continues. "When full traffic is resumed, we will see how the 'seven-day wonders' compare with the body of men who for many years had kept the Suez Canal running smoothly with an accident rate which was a minute fraction of one percent of the total traffic."

* * * *

Incentives for Employees.—A problem which is attracting increasing attention is that of eliminating labour troubles by the introduction of incentive schemes for employees. Tried successfully by many employers in the advanced industrial countries for some time, the idea is spreading to new areas still under development, and not surprisingly the earlier methods call for special adaptation to meet rather different circumstances. For instance, under what is believed to be the first scheme of its kind in Africa, about 3,500 Europeans and 500 African workers will be able to participate in the employees' share purchase plan to be introduced by Sir Ronald Prain's Rhodesian Selection Trust group of mining companies. The plan includes some unusual provisions, designed to safeguard the employees' contributions. It is open to all employees receiving a basic salary equivalent to £200 a year. Up to 10 percent of basic pay may be contributed each month, though maximum monthly contributions cannot exceed £25. The employing companies will contribute an amount equal to one-half of the participants' own contribution and the funds will be used by trustees to buy R.S.T. or Roan Antelope shares in the market, according to the employee's own choice. Shares will be held by the trustees, but the participants will receive the dividends. After five years, both classes of shares can be withdrawn, and the employee can withdraw his own shares at any time. But if he does so within five years of the purchase date, he will not be entitled to all the shares bought with the company's money, but he may get a proportion of them. An interesting feature of the scheme is that if the total market value of shares withdrawn is less than the cost of those bought with the participant's own money, the difference will be made up in cash. This means that no one will get back less than he puts in, whatever happens to the market price of the shares. As far as the law allows, the trustees will exercise voting rights according to the wishes of the participants. Once shares have been withdrawn, holders will be able to attend the company meetings, though the shares will no longer be covered by the company's indemnity. No "probationary period" will be required. Any employee of the group can join the scheme as soon as he starts employment, provided his salary falls within its provisions.

WORLD TEA TRADE

MESSRS. W. S. Cresswell and Co have compiled a very interesting and elaborate statement on the subject of tea with tables and diagrams showing imports, deliveries, stocks, distribution of crops and the fluctuations of prices during the last twelve years. We observe that the crop of Indian tea, which in 1885-86 was only 68 million lbs, has now risen to 145 millions, while that of Ceylon during the same period has advanced from a little under 4 millions to almost 109 millions. On the other hand, the China outturn has decreased from 222 to 126 million lbs. The great bulk of the Indian and Ceylon crops go to the United Kingdom, for we observe that out of a total of 254 million lbs., 226 millions went there. On the other hand the position in China has been very much altered. The following are the figures in millions of lbs:

	1885-86	1896-97
United Kingdom ...	149	38
Australia ...	22	6
America ...	41	53
Russia ...	8	22
Sundry ports ...	2	6

It will be observed that the great shrinkage in China tea has been entirely with the United Kingdom, the shipments to other places having advanced. America takes 53¼ million lbs of China tea but only 2 millions of Indian and three-quarters of a million of Ceylon. Russia takes nothing worth mentioning of either Indian or Ceylon tea. Messrs. Cresswell and Co. desire to impress upon the tea industry the importance of being well represented at the Grand Exhibition of Paris in 1900, and to make an effort to push the consumption of Indian tea throughout the Continent. They also advise very careful attention to manufacture and quality, it being of importance, in view of the large crops that may be expected from India in future, that the consuming public should be accustomed to regard our teas of all classes as the best in the market. Messrs Cresswell and Co. have laid the tea industry under some obligation by their excellent report.

PAYING LUMP-SUM GRATUITY ON RETIREMENT

ADMISSIBILITY OF DEDUCTION UNDER INCOME TAX ACT

(FROM OUR LEGAL CORRESPONDENT)

THIS note concerns the question of the deductibility or non-deductibility for purposes of income tax by business concerns of lump-sum payments made voluntarily and in good faith to retiring employees in consideration of and in gratitude for past services. To make such a deduction valid, the payment must be brought within the scope of Section 10(2)(XV) of the Income Tax Act as being "expenditure.....not being in the nature of capital expenditure or personal expenses of the assessee, laid out or expended wholly and exclusively for the purpose of such business, profession or vocation." Expenditure may be voluntary but nevertheless incurred for the purpose of the business; and although in income tax matters it is unwise to indulge in general statements, there is no doubt that "pensions, gratuities and other voluntary payments made to employees for the sound commercial purpose of enabling the company to retain the services of the staff and increasing their efficiency *may* be deductible as being wholly and exclusively laid out for the purpose of the trade."[1]

"May be", said the Lord Chancellor. Each case must depend on its own facts and circumstances; and "For the purpose of the trade" means for the purpose of keeping the trade going and not winding up the trade. At first sight, you might think that payment of a gratuity or pension on retirement does not in any way "keep the trade going". Retirement of an employee is the end of him in the business and the more efficient he is, the less his leaving will serve "the purpose of the trade". But the prospect of a pension or gratuity at the end of it makes for long, efficient and loyal service. Moreover, as Scrutton J., put it in another English case: "Though the reporters have no legal right to a payment on retirement it has been the habit of the employers to give a gratuitous pension or to make a gratuity of a lump sum on retirement after long service. One cannot help using one's ordinary knowledge of human nature to know that in some cases the expectation of gratuities may materially affect the amount of salary.....When I find that the commissioners have found that it is the habit of these employers to give their reporters gratuitous pensions or gratuities of lump sums, I cannot help seeing that there is evidence upon which the commissioners, judging facts, may find that those payments were made in the way of their trade because they may at any rate affect the amount of ordinary salary which they pay to their reporters."[2]

* * * *

And that brings us to the latest reported Indian case on the subject, one from Madras. The Appellate Tribunal had referred the following question to the High Court: "Whether the payment of Rs. 40,000 paid to Mr. I. H. Philips on his retirement from the service of the company was not an admissible deduction under Section 10(2)(XV) of the Income Tax Act, 1922?" The facts were never in dispute. The assessee, which was a private limited company, was incorporated in 1928 to carry on business in the manufacture of leather. Gordon Woodroffe Ltd. was the parent company and, after the incorporation of the assessee company, Gordon Woodroffe Co. Ltd. were the managing agents. Mr. Philips was employed in the parent company from 1922 to 1935, and thereafter he was employed in the assessee company. He was manager of the assessee company and also one of its directors from 1940.

Mr. Philips decided to retire from service with effect from 4th April, 1949. He had rendered much valuable service and when he resigned his directorship, at a meeting of the board of directors dated 24th March, 1949, it was resolved "to accept Mr. Philips's resignation with regret and to place on record the keen appreciation of the board of his long and valuable services to the company. It was further resolved to convey to Mr. Philips the best wishes of the directors and the staff on his retirement from India.....It was also resolved to recommend at the forthcoming extraordinary general meeting that Mr. I. H. Philips be paid a gratuity of Rs. 50,000 and to recommend further that the parent company should be asked to contribute a portion of this sum."

These recommendations were accepted. A sum of Rs. 50,000 was paid as a gratiuity to Mr. Philips, of which the assessee company paid Rs. 40,000. The balance was paid by the parent company. This payment of Rs. 40,000 was claimed by the assessee as an allowable deduction in the assessment year 1950-51. The claim was disallowed by the Department and on appeal the Tribunal agreed with the Department. The Tribunal held that the payment was not an allowable deduction on two grounds: (1) the amount was not expended wholly and exclusively for the purpose of the business and (2) that it was also capital in its nature. Disagreeing with both these conclusions the assessee company carried the matter to the Madras High Court.

On the second point the High Court found for the assessee. Every lump-sum payment is not necessarily an expenditure of a capital nature. The test is this: "But when an expenditure is made not only once and for all but with a view to bring into existence an asset or advantage for the enduring benefit of trade, I think that there is very good reason...for treating such expenditure as properly attributable not to revenue but to capital." Thus Lord Cave L.C., in the leading case on the subject, some 30 years ago.[1]

"Judging by that test," said Rajagopalan J., "it should be obvious that the expenditure in question was not of a capital nature. The payment of the Rs. 40,000 did not 'bring into existence' any 'asset for the enduring benefit' of the business the assessee carried on...It was a payment to an employee who retired from the service of the assessee company in grateful recognition of his past services, which the assessee company justly assessed as valuable services. It should be noted that the good faith attendant on the transaction was never in doubt." So the Tribunal was wrong on its second contention and the assessee company was safely over that hurdle. But there remained another and much more difficult one. The other requirement of Section 10(2) (XV) of the Act was that the money was laid out or expended wholly or exclusively for the assessee's business. Was it so laid out?

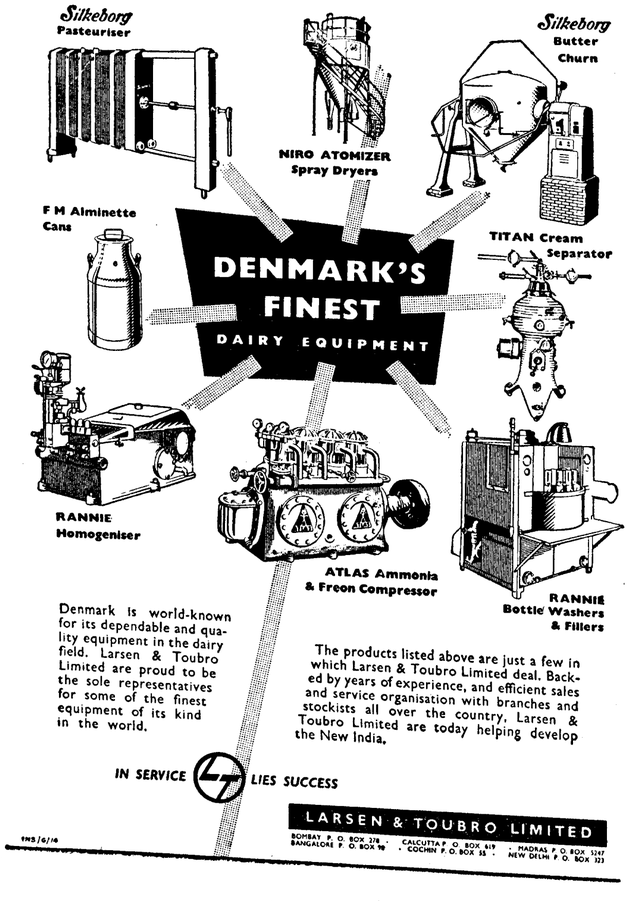
* * * *

For guidance in similar but not identical cases, it may be noted that it would have been a substantial help to the assessee's case, if it could have been shown that it was a habit or custom of the company with other employees to give a gratuitous pension or make a gratuity of a lump-sum on retirement. To make or not to make such a payment as a customary thing would not be conclusive either way. But the custom, if established, of making a regular practice of such payments would have been of strong evidential value, as the "expectation of gratuities may materially affect the amount of salary"...and would be "evidence upon which the commissioners, judging facts, may find that those payments were made in the way of their trade because they, at any rate, may affect the amount of the ordinary salary they pay to their employees."

The point is thus put by Messrs. Hannan and Farnsworth.[3] "Arrangements for the retirement of employees are a necessary part of the operation of a business. Consequently, financial provision by an employer for such a happening is more or less directly associated with the earning of the profits. An employee is likely to give better service when he can reasonably expect to receive a gratuity or pension upon the termination of a long period of employment. The expectation, though it may rest only upon the fact that similar provision has been made for former employees, is calculated to promote better relations between employer and employee with beneficial results to the business concerned. For these reasons, it is now generally recognised that the payments made by an employer to his retired employees are a proper charge in arriving at the taxable profits of his business."

But in the present case, though the High Court offered an opportunity to counsel for the assessee to produce evidence of similar payments having been made in the past either by the assessee company or by its parent company, no real evidence of such similar payments was forthcoming. The court was careful to say that it did not lay down that, in the absence of such precedents, a claim under Section 10(2) XV must necessarily be disallowed. "Every company has to make a beginning", said Rajagopalan J., "and a first payment of its kind does not cease to be deductible if it satisfies the requirements of Section 10(2) XV."

Admitting the above and making a note of it for future guidance, nevertheless the question remained, what was the nature of the payment made to Mr. Philips? Was the expenditure incurred in the future interests of the business of the assessee? Was there any connection between the purpose of the payment and the future conduct of the business of the assessee? Those are the tests to be satisfied before it can be said that in paying gratuities of this kind money was "laid out or expended wholly and exclusively" for the purpose of the business of the company. On the facts in Mr. Philips's case, the court held that the assessee company did not satisfy these tests. His lordship held that the payment "was obviously made to Mr. Philips in grateful and just recognition of the valuable services he had rendered to the company. But those services had already been rendered. The payment was certainly not to secure the services of Mr. Philips in the future. The assessee did not establish that the payment was designed in the interests of the future business of the company, either to act as an incentive to the employees still in service or to act as an incentive to employees to be recruited in future."



The claim therefore failed.

[3] *Principles of Income Taxation* .. 478.

IT is not without some little apprehension that one can ask the Government to use its discretion in deciding what foreign books, and magazines, should be imported into India. But, with import control as thorough as it is likely to be for some time to come, there is perhaps no alternative. Liberalisation has been promised, and I look forward to receiving foreign journals a little fresher than has been the case recently. When dictionaries and technical books begin to be scarce and more expensive because of an anticipated shortage, it is surely time to realise that import control may have gone too far. The situation is made the more distressing by the continuing sight of many quite useless journals on the pavements of Chowringhee and Park Street. The memory of what the Calcutta Police once did in its misguided zeal to clear these shops of what it considered undesirable literature makes one shrink from recommending that kind of censorship, but there are other ways of ensuring that India gets the books and periodicals she needs while waiting for the lighter stuff until there is a little more foreign currency to spare. Not the least puzzling thing in the wayside stalls is the ubiquity of journals evidently bought for dollars: the "sellers" of American culture hereabouts will perhaps be the first to hail their disappearance. The very small size of the readership in the country rules out the economic feasibility of reprinting foreign publications locally. India is for a long time to come unlikely to know the paperback revolution of the United States, and the National Book Trust will be well advised to think things over before venturing into the publishing business in a big way. Most worthwhile American books, however, are republished in England, at a cheaper price if after some delay, and India should not need to go without essential reading matter of sufficient variety if imports are allowed liberally and judiciously—with the Government being liberal and importers being judicious. Books with sterling qualities will thus be freely available. As for those with what Graham Greene has called dollar qualities, American publishers may consider the price variations their British compatriots introduced long ago in what are now called under-developed countries. What, I wonder, is the "colonial price" of yore called now? Commonwealth price, or Colombo Plan price?

* * * *

The Communist Party's decision to become a mass Party in India will doubtless be warmly welcomed by those, and they are many, who have forgotten the entire experience of the European Left in the twenties and the thirties, and by those, perhaps as many, who like to see in every Communist manœuvre another step towards democracy. More cards will be issued by the Party and carried by innocents, and more elections will be fought. A mass Party the C.P.I. may still not be, in the sense understood in democracies. The Communist Party is not a mass Party even in Communist countries; its membership in Soviet Russia is a small fraction of the total population. And that is because it just cannot be otherwise. Even in their most "overground" phases, Communist Parties function in devious ways, and I seem to remember that one of the charges against P. C. Joshi, who probably made the Party more of a mass one than it has ever been since, was that he had weakened the underground apparatus of the Party, without which, the other faction contended and Joshi admitted in tears and amid sobs, a Communist Party could not possibly function effectively. Changes in Communist ways are only too frequent, as the new converts may find out before long, but there are changes a Communist Party can never make without ceasing to be itself. Marx, Lenin and Stalin are thrown in and out at convenience by every Communist Party in the world, and the C.P.I. is doubtless capable of much hibernation, but the question remains whether it can so jettison its ideals as to be a truly democratic Party. There is evidence that Communists have sometimes been cheated out of power by not very honest devices: France represents an example, where electoral reform was something more, or less, than democratic. On the other hand, there are reasons to think that a Communist Government voted to power at the Centre in India would be the last elected Government India may know.

* * * *

Much too much may be made of Mr. Maxwell Gluck's ignorance of the Ceylon Prime Minister's name and of his inability to pronounce Mr. Nehru's. If the successful running of a chain of 140 stores is no guarantee that a man will make a good ambassador, nor is his ability to say foreign names without any difficulty. The criteria to apply are of a wholly different category. The manner of Senator Fulbright's questioning makes me suspect that at some stage of the proceedings Party rivalry got in, and if his object was to discredit the United States' ambassador-designate to Ceylon his success may be of a very transient character. Mr. Bandaranaike is unlikely to hold it against Mr. Gluck that the latter had once failed to recall his obviously unfamiliar name; Mr. Bandaranaike may remember that at Oxford he had had some difficulty with such British names as Cholomondley and Cockburn. As for Mr. Nehru, I am not aware that there is only one authorised pronunciation of his name. His first name at any rate I have heard said in Calcutta in a manner no north Indian would approve, including perhaps Mr. Nehru. Is it absolutely impossible that, before the Commonwealth Prime Ministers Conference in London recently, Mr. Nehru had to ask someone about the correct pronunciation of Mr. Diefenbaker's name—or Dr. Nkrumah's and Mr. Louw's? None of these names are as straight as Sen or Evans, although the former I have heard said in Delhi as San and the latter as Eebhaans. To hold receptions, however, is an important part of an ambassador's duties these days, and it is polite of a host to be able to receive his guests by addressing their names as correctly as possible. While in Canada as Governor-General, Lord Willingdon was once reminded by a young adviser that His Excellency might have trouble with some Canadian names, adding with a touch of superiority I imagine, that the difficulty would be of a temporary nature. His Excellency promptly reminded the intrepid young man that, as he had served as Governor of Madras for five years, no name could possibly hold much dread for him. Ceylonese names are not always easier or shorter, and after his term in Colombo Mr. Gluck will, I hope, be able to give Senator Fulbright a name or two that will beat him. Those Americans who may be appalled by Mr. Gluck's apparent ignorance should also be reminded that correctly pronouncing foreign names is perhaps the least of the problems facing American diplomacy today.

* * * *

To succeed in a keenly competitive market, it is essential that one's representatives or salesmen must be adequately equipped, not only practically but theoretically as well. Unfortunately, theoretical training in business was long regarded almost as an affectation of questionable value. In America, however, most of the universities and technical colleges offer business training in a variety of forms—with the result that, over the years, American salesmanship has earned the high reputation it now enjoys. Many young Indian business executives of today have undergone their initial training abroad, but for obvious reasons the facilities have been available only to the few. Most technical trainees naturally have gone to Britain, but it is not until quite recently that the U.K. has had anything comparable to the American system of business training to offer in colleges and universities as opposed to apprenticeship in firms. The normal economic training leading to a B.Com. degree, though useful, today calls for reinforcement by specialisation, and it is in the latter aspect that most countries fail to emulate America's example. A correspondent in Britain writes that the Manchester College of Commerce is planning a large-scale attack on this problem, not only for students engaged in qualifying for the innumerable opportunities which commerce and industry now have to offer, but also for business men already in employment who seek to expand their special qualifications. It is felt that new courses are needed as an additional service for people who are already in managerial positions. So firms are being sent circulars to ascertain what demand there would be for courses additional to those already being provided. The Department of Professional Studies is to offer the new courses now being considered for "senior and middle" executives in business in a series of six or eight two-hour lectures followed by discussions.

* * * *

Uncharitable as it may seem, I cannot help suspecting that the Government's decision to stop issuing regularly the old series of wholesale price indices for publication in newspapers has something to do with its inflationary sins, which in turn have something to do with the current labour troubles. For people who have recently seen the old series of indices (with August 1939 as base, equalling 100) hovering around 430 or 440, it may be some consolation that the revised series (with 1952-53 as base, equalling 100) is hovering around a mere 111. But the consolation is, of course, derived only from a relatively minor statistical adjustment, and it cannot conceal the important fact that prices continue to rise. It is not the introduction of the revised series of indices that I object to, by all accounts, their deficiencies should be fewer than those of the old series. My point is that both series should have been issued simultaneously to newspapers for some months at least, so that fixed-income earners may have been in a somewhat easier position to judge just how sharply prices are rising and just how fast the Nasik press is printing paper notes. Mr. Nehru's admission on Tuesday that the current unrest among employees of public utilities and other organisations is connected with the rise in the cost of living seems half-hearted. It is true, as he says, that prices have risen more in certain other countries; but it can hardly be a compliment to India that she is not as reckless, unless the intention is nowadays to compare oneself with the lowest common denominator of fiscal judgment. Nor do I fully appreciate Mr. Nehru's remark about strikes by employees in public utility services or in the Government being much more serious than in ordinary industrial enterprises. Private steel and cement factories, to mention only two examples of "ordinary industrial enterprises", do work that is in no way less important than, say, the post office. To suggest that strikes in the former could be treated as a casual occurrence while in the latter they would be a national calamity seems a peculiar distortion to offer.

HISTORY AND BUSINESS.

The Company was incorporated in 1937 to take up as a going concern the old established business of Kalyanpur Lime Works Ltd., at Banjari. Dehri-on-Sone (Bihar) with a view to start a Cement Factory for manufacture of Portland Cement.

The Company has been producing from a 120 Ton per day Plant installed in 1946, on the average 39,000 Tons per year of an excellent quality of Portland Cement under the brand "KC" which is greatly in demand and is accepted and recognised as of a high standard. As part of the Industrial expansion in India during the First Five Year Plan, the Company embarked on a scheme of expanding the Plant capacity so as to achieve an annual production of 1,50,000 Tons of Cement per year. The Works are situated at Banjari in the District of Shahabad, Bihar amidst extensive Limestone quarries. Electrical power is to be obtained from the Damodar Valley Corporation and Coal is within 200 miles from the Works. The costs of raw materials electric power and fuel are low in comparison with other cement factories in India.

The proposed expansion in production will reduce the incidence of wages and overheads to the level of other post-war installations. There is a ready market locally for the cement produced in the large scale construction works in progress such as the Damodar Valley and Kosi Projects. The erection of the Company's new Plant is nearing completion and it is expected to go into operation during September/October 1957. The old Plant was obtained from the firm of KRUPPS of Germany who have also supplied the new Plant which is equipped with the latest type of machinery.

ESTIMATE OF CAPITAL EXPENDITURE AND MODE OF ITS FINANCING.

The Capital requirements for the expansion are estimated at Rs. 98 lacs as follows :—

Machinery & Plant	Rs. 79,00,000
Buildings & Railway Siding	Rs. 9,00,000
Spare Parts	Rs. 3,75,000
Brokerage	Rs. 10,750
Issue Expenses	Rs 22,375
Underwriting Commission	Rs 26,875
Working capital and/or Contingencies	Rs. 3,65,000
Total	Rs. 98,00,000

The total requirements of Rs. 98 lacs will be found as follows :—

From Share Capital subscribed in 1954 for the new extension	Rs. 31,50,000
From Loan received from the Industrial Finance Corporation of India	Rs 45,00,000
From Proceeds of this issue	Rs. 21,50,000
	Rs 98,00,000

To the extent by which the working capital falls short of actual requirements, recourse will be had to Bank borrowings secured on Stock-in-Trade.

MORTGAGE OF FIXED ASSETS.

The Industrial Finance Corporation of India has advanced a loan of Rs. 45 lacs to the Company against Mortgage Debentures secured on the Fixed Assets, at 6½% per annum with a rebate of ¼% which will be allowed for prompt payment of interest and instalments. These Debentures will be redeemed and the loan repaid in full by 1st July, 1974. During the continuance of this security the Trustees under the Debenture Trust Deed shall have power to appoint two persons to be Directors of the Company and such nominee Directors shall not be subject to retirement by rotation nor be required to hold qualification shares. The Debenture Trust Deed further provides for restriction of dividend to 6% per annum on the Paid-up Capital of the Company provided however that this may be varied with the written consent of the Corporation.

PROSPECTS.

The production from the old plant during the past five years was achieved from existing machinery for which the paid-up Capital was Rs. 21 lacs. The gross average annual profit during these five years was Rs. 3,26,409/- before annual provision of Rs. 1,45,848/- for depreciation. From the Auditor's Report quoted hereunder it will be seen that in the last two years, losses have been incurred consequent on the payment of interest charges to the Industrial Finance Corporation of India on funds borrowed against the New Plant, which will shortly be ready to commence operations. The total annual output when the New Plant comes into operation is estimated to be about four times that of past years. The profits of the Company calculated thereon should in the opinion of the Directors, after payment of interest and loan instalments to the Industrial Finance Corporation of India and the dividends on Preference Shares and the necessary transfers to reserves, enable the Company to pay a dividend on Ordinary Shares. The Company will enjoy the Special benefits of the Income-tax Act as regards development rebate and depreciation allowances. The Capital structure has been designed to take full advantage of these concessions and to ensure that this Company has low capitalisation in relation to the Block Account so that Ordinary Shareholders will get maximum benefit from the low capitalisation.

THE KALYANPUR LIME AND CEMENT WORKS LIMITED—*Cont'd.*

FINANCIAL INFORMATION.

To

The Directors,
The Kalyanpur Lime & Cement Works Ltd.,
2 & 3, Clive Row,
Calcutta.

CALCUTTA, 17th July, 1957.

Gentlemen,

We have examined the Books and Accounts of Kalyanpur Lime & Cement Works Ltd., as kept at the Head Office at Calcutta in which are incorporated certified returns from the Factory and other Offices, for the five years ending 31st December, 1956 and we report that the profits and losses of the Company are as set out below. These profits and losses have been arrived at after charging all expenses of working and management including fair depreciation for wear and tear (Depreciation allowable for Income-tax purposes is shown in a separate statement hereunder) and after making such adjustments as are, in our opinion, appropriate.

The sale figures include Railway Freight to destination as all Cement sales were till 30.6.56 on F.O.R. destination prices. As and from 1.7.1956 the State Trading Corporation of India Private Ltd., sells all cement and they now purchase Cement produced in the country at ex-factory rates and they on their own account incur freight and sell at F.O.R. destination prices.

	Year ended 31-12-1952 Rs.	Year ended 31-12-1953 Rs.	Year ended 31-12-1954 Rs.	Year ended 31-12-1955 Rs.	Year ended 31-12-1956 Rs.
INCOME :					
Sales	36,34,960	35,24,637	32,62,681	36,53,091	32,62,923
Cement used for New Plant Construction etc. ...	...	...	...	1,01,260	1,61,111
Closing stock	2,01,589	2,56,994	2,35,956	1,98,311	1,46,808
Income from Interest	...	...	...	...	1,29,667
Miscellaneous Receipts	13,248	11,025	7,049	5,167	9,306
TOTAL INCOME :	38,49,797	37,92,656	35,05,686	39,58,329	37,09,815
EXPENDITURE.					
Opening stock	3,54,725	2,01,589	2,56,994	2,35,956	1,98,311
Raw Materials, Salaries and Wages, Manufacturing and Establishment expenses	24,91,838	24,85,666	24,19,985	26,00,903	26,39,082
Freight, Transport & Sales expenses	5,16,552	5,85,166	4,58,161	5,59,363	2,91,440 *
Union Excise duty	...	...	...	2,00,236	1,87,094
Interest and Bank Charges	94,131	1,24,172	62,990	63,292	1,56,055
Dividend written off now paid	24	10	...	...	...
TOTAL EXPENDITURE	34,57,270	33,96,603	31,98,130	36,59,750	34,72,482

* Freight, Transport and Sales expenses of 1956 are not comparable with other years because prices of Cement as fixed by Government of India as and from 1-7-1956 are on F.O.R. Factory basis and exclusive of sales Commission as against F.O.R. destination during earlier years and inclusive of sales commission.

Profit before depreciation, Taxation and Industrial Finance Corporation interest	3,92,527	3,96,053	3,97,596	2,98,579	2,37,333
Depreciation provided per Accounts	1,42,685	1,40,144	1,39,590	1,49,079	1,57,143
Interest paid to Industrial Finance Corporation of India on Loan of Rs. 45 lacs borrowed for New Plant installation	...	...	...	2,28,583	2,23,984
Taxation after allowance of all Depreciation allowances and rebates	Non-assessable due to carry forward of unabsorbed depreciation.	1,44,534	1,12,506	Non-assessable	Non-assessable
Net PROFIT/LOSSES AFTER TAXATION	2,49,842	1,11,375	55,460 Loss	79,683 Loss	1,43,794

The Depreciation allowances and rebates as per Income-tax Rules are as follows :—

Normal Depreciation	83,203	75,973	80,030	85,241	91,851
Additional allowances	7,747	7,706	10,663	30,384	37,381
Multiple Shift allowance	49,383	1,098	721	627	1,100
Initial allowance	65	7,500	5,521	59,514	45,602
Development Rebate			9,644	27,875	16,030
TOTAL	1,40,398	92,277	1,06,579	2,03,641	1,91,964

We also report that the assets and liabilities of the Kalyanpur Lime & Cement Works Ltd., as at 31st December 1956 which is the last date to which the Company's Accounts were made up prior to the date of this Report, are as set out below. These assets and liabilities have been arrived at, after making such adjustments, as in our opinion are appropriate.

STATEMENT OF ASSETS AND LIABILITIES AS AT 31st December, 1956.

	Rs.	Rs.	Rs.
FIXED ASSETS :			
At original cost plus increase on re-valuation as at 31st December 1951

M. MUKERJEE & CO.,
Auditors, Chartered Accountants.

THE KALYANPUR LIME AND CEMENT WORKS LIMITED —*Cont'd.*

GENERAL INFORMATION.

Underwriting : The Industrial Credit & Investment Corporation of India Limited, Fort House, 221 Dadabhoy Naoroji Road, Bombay 1, have agreed to underwrite 10,750 Ordinary Shares of the nominal value of Rs 10,75,000/-. The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their underwriting obligation.

Commission : i) Brokerage will be paid by the Company to recognised Brokers and Banks at the rate of 1% on the nominal value of shares allotted in respect of applications bearing their stamps.

ii) Brokerage on the same basis will be payable to The Industrial Credit and Investment Corporation of India Limited on allotments in respect of applications made or procured by them provided that the relative forms of applications bear their respective stamps.

iii) Underwriting Commission at the rate of 2½% of the nominal value of the shares underwritten is payable to The Industrial Credit & Investment Corporation of India Limited in accordance with the terms of agreement contained in letter dated 20th July, 1957 from the Underwriters and the Company's acceptance thereof.

Expenses of the Issue : The expenses of the issue, other than brokerage and underwriting commission are estimated to amount to Rs 22,375/- and will be payable by the Company.

Directors : i) The number of Directors shall be not less than 4 nor more than 12. Each Director shall be entitled to a sum of Rs. 101/- for each Board Meeting attended plus reimbursement of out-of-pocket expenses incurred by him in attending meetings. The Chairman of the Board of Directors shall be paid as remuneration for his services a sum of Rs. 1,000/- per month plus reimbursement of out-of-pocket expenses incurred on any matter connected with the business of the Company or in attending meetings of the Directors of the Company.

ii) Qualifications of a Director, except that of a nominee Director appointed by the Industrial Finance Corporation, shall be holding of shares of a nominal value of at least Rs. 1,000/- in the Company.

iii) The Company shall be Director managed and shall have no Managing Agents or Managing Directors.

Rights, privileges and re-trictions attached to shares The following is a summary of the rights, privileges and restrictions attached to the Preference and Ordinary Shares of the Company.

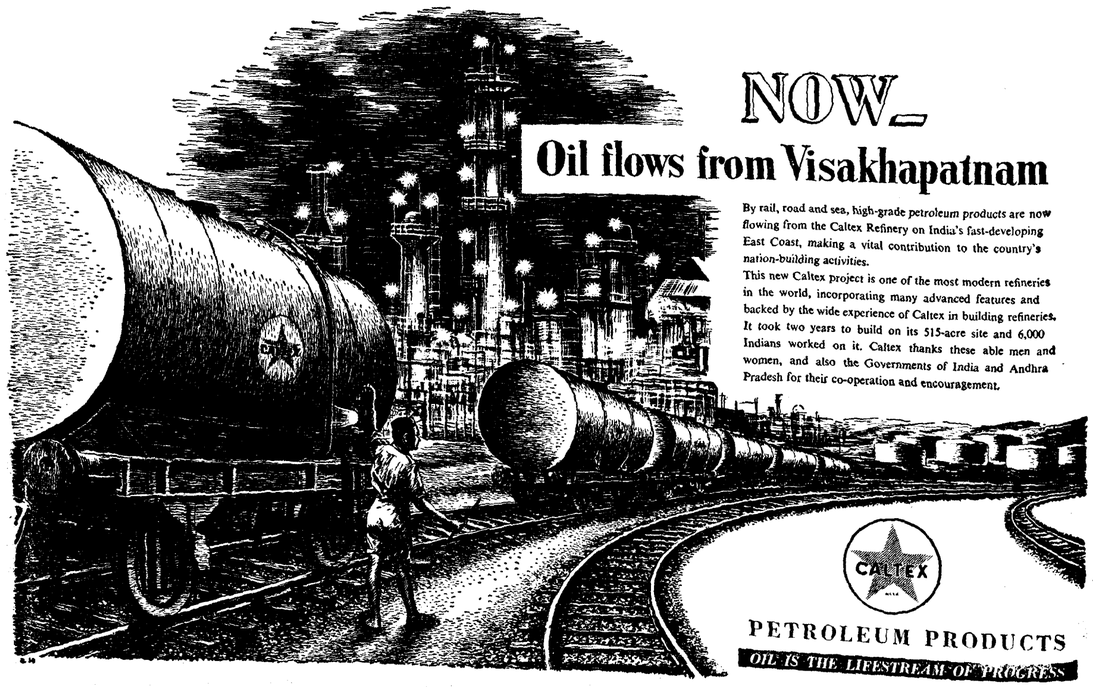
i) The 7% Preference Shares shall confer on the holder the right to a fixed cumulative preferential dividend at the rate of 7 per cent per annum on the capital for the time being paid up thereon, and shall rank in a winding up as regards return of capital and payment of arrears of dividends down to the commencement of the winding up (whether earned or declared or not) in priority to the Ordinary Shares but shall not confer the right to any further participation in profits or assets.

ii) The 6% Preference shares shall confer on the holder the right to a fixed cumulative preferential dividend free of any tax on incomes, at the rate of 6 per cent per annum on the capital for the time being paid upon the said shares and the right to an extra 1 per cent on such paid up capital for every 1 per cent of dividend on the capital paid upon the Ordinary shares in excess of 7 per cent per annum but not exceeding for any year a total dividend of 9 per cent per annum on the said 6 per cent preference shares.

iii) In winding up, the holders of the said 6% Preference Shares will rank pari passu with the 7 per cent Preference Shares and will be entitled to repayment of capital in priority to all other Ordinary shares for the time being forming part of the capital of the Company but with no other right or participation either in its profits or assets.

iv) The above two issues of preference Shares rank pari passu in all respects except as regards the rate of interest and participation in profits.

The Prospectus together with copies of the Reports, Licences and Contracts relating thereto may be inspected at the Registered Office of the Company during the usual business hours on any business day for the period the subscription list is open.



APPLICATION FOR SHARES.

Application for shares should be made on the Form accompanying the Prospectus and delivered before the close of the Subscription list together with a remittance for the amount of application money to the following branches of the State Bank of India, Apollo Street, Bombay; Strand Road Calcutta; First Line Beach, Madras and at Ahmedabad, Amritsar, Allahabad, Agra, Ajmer, Bhagalpur, Banaras, Baroda, Bangalore, Chandigarh, Cuttack, Cochin Coimbatore, Delhi Dalmianagar, Gwalior, Gorakhpur, Gaya, Hyderabad, Jodhpur, Jaipur, Jabalpur, Jhansi, Jamshedpur, Kanpur Kakinada, Lucknow, Muzzafarpur, Monghyr Meerut, Moradabad, Madurai, Nagpur, New Delhi Patna, Poona, Ranchi, Shillong, Surat, Tanjore, Tiruchirapalli, Trivandrum, Visakhapatnam and Vijayawada.

Copies of the Prospectus and the Application Forms are available at the said offices of the State Bank of India, from the Brokers to the issue named below, from the Underwriters and from the Company's Registered Office. Where no allotment is made the deposit will be returned in full and where a partial allotment is made, the unutilised balance will be returned. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted when due will render previous payments liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which may be inspected at the Registered Office of the Company during Office hours. The Share Certificates will be issued within 3 months of the date of allotment.

5. Messrs. KOTHARI & SONS, Oriental Buildings, Armenian Street, Madras-1.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

EASIER CONDITIONS CONTINUE

Wednesday, 31st July.

EASIER conditions have continued in the Calcutta money market during the past week. There has been a decline in practically all categories of advances. Sugar credit has been returning and accommodation for grains and seeds has decreased. In the interbank market, there has not been much change in the conditions and the call rate still quotes 3½ percent.

There have been a fair number of tea and gunny bills in the exchange market, the former having increased on expectations that the export duty will be raised. A few bills have passed on account of miscellaneous shipments also. Remittance has been on a normal scale, but demand in the forward section has decreased. Sterling is steady against the U.S. dollar, although it has weakened in relation to the Canadian currency.

* * * *

Silver was steady because of a lack of arrivals. The price advanced from the previous week's level of Rs. 178.50 to Rs. 180, quoted for ready delivery. The rate for forward delivery was Rs. 179.75. There was no change in the London and New York prices.

Gold was easier at Rs. 109. The sovereign stood at Rs. 71.50.

* * * *

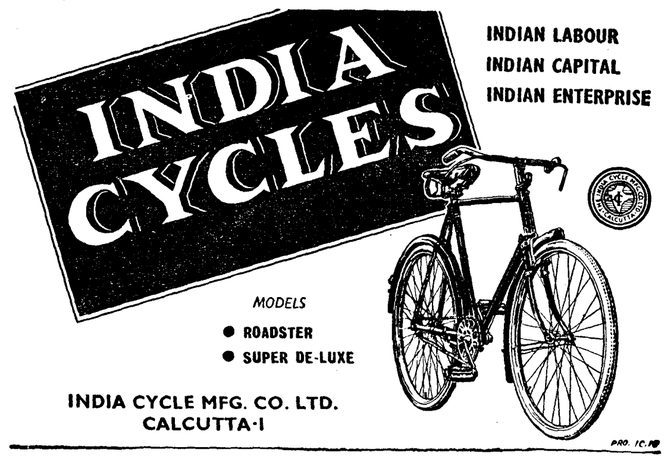
During the week ended 26th July, Government of India Treasury bills for Rs. 70,22,00,000 were sold in favour of the Reserve Bank.

* * * *

Declines of Rs. 17.88 crores to Rs. 1,535.27 crores in the total note issue, and of Rs. 19.07 crores to Rs. 1,498.83 crores in active notes, were the notable features of the return of the Reserve Bank of India for the week ended 26th July, 1957. The currency contraction was adjusted by reducing rupee securities by Rs. 20 crores to Rs. 886.81 crores and by increasing rupee coin from Rs. 128.06 crores to Rs. 130.18 crores. Some of the securities were transferred from the Issue Department of the Bank to the Banking Department, in which investments increased by Rs. 34.44 crores to Rs. 280.81 crores. Deposits of the Government of India were Rs. 12 lakhs lower at Rs. 53.90 crores and other Government accounts declined by Rs. 90 lakhs to Rs. 2.19 crores. Balances of commercial banks rose by Rs. 16.01 crores to Rs. 103.83 crores. Balances held abroad diminished further by Rs. 11.50 crores to Rs. 19.69 crores. Other loans and advances fell from Rs. 69.98 crores to Rs. 63.29 crores, of which advances to scheduled banks against usance bills amounted to Rs. 29.47 crores against Rs. 37.26 crores. Ways and means advances stood at Rs. 26.19 crores (Rs. 27.79 crores).

* * * *

The return of the State Bank of India for the week ended 19th July, 1957, shows a rise of Rs. 1.07 crores to Rs. 312.25 crores in total deposits. Investments in Government securities are up by Rs.1 lakh at Rs. 94.11 crores, while other authorised investments are down by Rs. 20 lakhs to Rs. 11.33 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 2.62 crores to Rs. 174.57 crores. Cash and balances are, in consequence, shown at Rs. 45.20 crores, or Rs. 5.98 crores higher.



* * * *

The statement of the position of scheduled banks for the week ended 19th July, 1957, shows Demand and Time liabilities at Rs. 724.67 crores (Rs. 17.65 crores on account of borrowings from banks) and Rs. 563.32 crores (Rs. 4.39 crores), compared with Rs. 715.71 crores (Rs. 13.06 crores) and Rs. 559.87 crores (Rs. 4.10 crores), respectively, in the previous week. Cash has decreased by Rs. 2.20 crores to Rs. 39.12 crores, while balances with the Reserve Bank have increased by Rs. 8.70 crores to Rs 83.44 crores. There is a rise of Rs. 3 lakhs to Rs 332.28 crores in investments. Advances and bills discounted, at Rs. 892.48 crores, show a fall of Rs. 11.73 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 9.5 percent and 69.4 percent, against 9.1 percent and 70.9 percent.

* * * *

The following is a statement of the cash balances of the Central Government on the last day of April 1957 :

	Rs.
(1) At the Reserve Bank of India in India	24,77,60,000

RESTRICTED ACTIVITY IN STOCK MARKETS

GILT-EDGED FIRM: INDUSTRIALS IRREGULAR

London, 31st July.

THE stock markets failed to develop a decided trend during the past week, and prices generally moved within narrow limits. Business was restricted by holiday influences and by the many uncertainties currently operating in the markets including the wage and price position, labour troubles and the disturbances in the Middle East. The increases in steel prices were expected, so they had very little effect. A feature was the continued firmness of gilt-edged securities after their sustained fall recently. While business in this section was not at a high level, there was practically no selling and prices edged up further. Gains were small on modest buying, but the main point was that the market fully maintained the better levels established after the recent fall. Dollar stocks were very active at one time and the dollar premium touched nearly 20 percent before reacting later to 15½ percent. This reflected the more cautious view of dollar securities following their advance recently and indications that the expansion in the Canadian economy was tending to slow down. The London prices of dollar stocks were down, reflecting the fall in the premium and the lower levels in trans-atlantic markets. Interest in foreign bonds and rails was very limited, but Baltic issues occasionally met with speculative buying. Prices in the industrial market generally fluctuated within narrow limits and presented an irregular appearance. Leading issues showed very little change. There were however individual features elsewhere. South African gold shares were generally subdued, but finance house issues attracted support prior to the week-end and selected Free State issues were in demand. The copper belt labour troubles brought a reaction in copper shares after earlier firmness. Other base metals ruled steady to firm. Leading oils suffered a setback on the news of the projected cut in U.S. oil imports and the shares were lower on the week. Western hemisphere issues however were in demand throughout.

The Money Market

After a brief spell of tight credit conditions due to lack of maturities because of the Easter holidays three months ago, short loan conditions in the money market last week were again comfortable. There was not quite the same easiness as was seen in the previous week, but nevertheless, supplies were ample, and after having been up to 3⅞ percent at the beginning of the week, the rate for money fell to 3½ percent and 3¼ percent, with lower rates paid for late balances. There was a good demand for bills, with October and "hots" changing hands mostly at 3⅜ percent. The Treasury bill rate at last Friday's tender showed very little change at £3 16s 10.1/82d percent.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "London gilt-edged securities had a sharp rally from their bear market lows. Industrials reflected domestic and international uncertainties. Gold shares were quiet, but technically satisfactory. Wall Street was cautious. Industrials were still awaiting more definite encouragement from gilt-edged securities since any national economic malaise would affect both the sections. Industrials remained fairly firm, but may only hold their ground in face of the pressure on profit margins."

Activity on Wall Street

High grade corporate issues last week resumed their advance on Wall Street on renewed investment demand attracted by recent setbacks, together with the good reception given to new issues reaching the market. Long-term U.S. Government obligations lost ground, with several issues coming within fractions of their record lows set in June, but staged a recovery towards the week-end. Rails drifted irregularly lower in quiet dealings, while convertibles displayed a mixed appearance in moderate activity. German Nationals were firmer, but Italians were easy. Greeks were off fractions to one point, while Serbs were unchanged to slightly higher on a small volume. Norwegians rose by small fractions. Australian 3½ percents of 1967 added over one point, but others showed only minor changes either way. Japanese Government loans were steady. South African 4½ percents dipped, but recovered later. Chile 3 percents finished with a small fractional decline, while several Brazilians moving irregularly.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 24th July shows that the gold stock rose by $1 million to $22,626 million. Foreign deposits fell by $71 million to $383 million, while foreign investments rose by $66 million to $3,727 million. The Federal Reserve bought $208 million worth of certificates under repurchase agreements, but sold $121 million worth of bills. Total discounts and advances fell by $238 million to $406 million, while the aggregate excess reserves of member banks fell by $51 million to $170 million. The daily average excess reserves of member banks rose by $52 million to $567 million, while their daily average borrowings fell by $320 million to $739 million. Business loans of the New York city banks fell by $181 million to $11,581 million compared with a rise of $11 million to 10,044 million in the corresponding week last year.

Quiet Trading in Vegetable Oils

Generally quiet trading conditions prevailed last week in most sections of the vegetable oil market, although linseed oil rallied on a broader enquiry, with the advance intensified latterly by sharp opening gains in Canadian linseed. August deliveries of British Standard Specification linseed oil, on ex-tank U.K. terms, gained around £4 a ton and the more forward deliveries around £2 a ton. Canadian linseed advanced nearly £1 a ton over the pre-week-end levels, although American seed was still obtainable at £43¼ c.i.f U.K., for August shipment. An occasional dealer was prepared to talk at lower rates for Nigerian groundnut oil, but generally selling levels were unchanged in quiet trading. Groundnuts were dominated by resale offers, mostly at prices well under the origin leve's. Coconut oil ruled barely steady in slow trading, while copra inclined to weaken with European consumers taking up limited quantity of Philippines at $167 a ton c.i.f., August-September basic ports. Malayan palm oil made £92 c.i.f., September-October, with further sellers offering at £92½ c.i.f. Indian commercial grade castor oil tended to be easier with general sellers around £1 a ton lower. However British Standard Specification grade was reasonably steady on continued firmness at the origin. Castorseed was usually 10s a ton cheaper, while East African sesamumseed was offered £1 a ton lower without apparent result. Both U.S. and Canadian soyabeans continued to weaken in modest trading.

Rise in Paris Gold

Although less active than the stock market, the Paris gold market last week kept a close watch on the overall financial situation. A wave of hoarder demand carried prices and turnover to levels not seen for a long time. Bullion dealers were anxious to learn how severe the anti-inflationary measures by the Finance Minister, Mr. Felix Gaillaird, would be. Only the main lines of economic policy were known and the details—including the Budget estimates for 1958—were keenly awaited. On the whole, the market did not appear to expect any drastic measures on the home front before the I. M. F. meeting in September. In fact, bullion dealers predicted a fall in gold prices and activity soon. The ingot gained 10,000 francs, with business running to several hundred kilos in a day.

Price Reduction in Platinum

One of the two leading U.K. platinum refiners has reduced the price from £34 to £31 a troy ounce, with immediate effect. The new price is more realistic in relation to the prevailing market conditions generally, trade quarters declare. It is not yet known what the selling policy of the other refiner will be. Thus, a price range from £31 to £34 is indicated against a uniform price of £34 previously. This is the first change in the refiner's price for nearly 18 months.

U.S. Rubber Consumption

U.S. consumption of natural rubber, excluding latex, during June amounted to 35,658 tons compared with the revised figure of 40,644 tons in May, according to the Department of Commerce. U.S. consumption of latex was 5,447 tons in June against May's (revised) 5,867 tons. Stocks of natural rubber at the end of the month totalled 79,986 tons, while stocks of latex amounted to 10,382 tons. The U.S.A. used 21,154 tons of reclaimed rubber in June against 23,816 tons in May (revised). The consumption of synthetic rubber in June was put at 70,230 tons compared with May's (revised) 80,242 tons. The production figure of synthetic rubber in June is not available; the May figure was 83,413 tons.

MEASURES TO MODERNISE OILSEEDS CRUSHING INDUSTRY

To modernise the oilseeds crushing industry and to increase its employment potentialities the Government of India has decided to continue the subsidy of Rs. 150 for each new *ghani* replacing the older model. The subsidy will be available for 10,000 *ghanis* every year. Research work will also be conducted at selected centres with a view to improving the "Wardha *ghani*." The Government has asked the Indian Central Oilseeds Committee and the State Governments to make arrangements to ensure production of *ghani* oilcakes without any wastage of oil. These steps have been taken to implement some of the recommendations of the Oilseeds Crushing Industry Enquiry Committee, set up by the Government of India in 1956. The Government has agreed that more power-driven mills should not be set up in the country, except in areas where alternative methods of crushing oilseeds are not feasible. In buying oilcakes for meeting its requirements, the Government will purchase *ghani* products only. Another recommendation accepted by the Government is that the oilseeds crushing industry should be allowed to operate fully its present installed crushing capacity. The Government has also accepted the recommendation that the production subsidy of Rs. 2.50 a maund of oil produced by the *ghanis* should be reduced to Rs. 1.87 a maund.

Stocks and Shares

INDIAN IRON DIVIDEND ANNOUNCEMENT DISAPPOINTS MARKET

FAVOURABLE REACTION TO TERMS OF CENTRAL LOAN ISSUE

Wednesday Evening.

EASIER conditions have prevailed in the stock market during the past week. Disappointment centres mainly on the fact that, while the Indian Iron dividend for the year ended 31st March, 1957, has not been increased beyond Re. 1 on the ordinary shares, no indication has been given about future dividend prospects. The company reports that it approached the Government for permission to increase the distribution but failed. The dividend will come up for sanction by shareholders at the annual general meeting, which is to be held on 11th September. The net profit after provision of 1.35 crores for depreciation, writing back Rs. 47 lakhs from taxation contingencies account and transfer of Rs. 2,28,29,569 to reserves, is Rs. 69,97,532. For the previous year, the net profit was Rs. 65,18,301, after provision of Rs 1.20 crores for depreciation and transfer of Rs. 2,80,97,838 to reserves. The ordinary share register of the company will be closed from 4th September. 1957, to 11th September, 1957, both dates inclusive, and the dividend, if sanctioned, will be paid on or after 24th September, 1957, to those shareholders whose names appear on the register of members on 11th September, 1957.

Apart from the Indian Iron dividend news, the major development this week has been the announcement of the Central Government's loans. Considering the conversion facilities which have been offered, it is expected that the loans will be subscribed without soaking up too much of the market's resources. The terms of the issue are considered favourable.

Much anxiety prevails about the labour situation, especially the threat of a postal strike. The congestion in the ports, it is feared, is likely to hamper industrial working, as both imports and exports are certain to be delayed. The various sections of the market have been dull, although some investment enquiry has been noted for selected industrials.

Details of the week's trading follow.

* * * *

The outstanding event in the gilt-edged market was the announcement of two new Central Government loans (fuller details appear elsewhere in this issue) which will open for subscription on 5th August. As the terms and timing were correctly anticipated, the initial reaction among existing issues was negligible, though little interest was shown in most loans, with the exception of short-dated securities. The 3% Conversion Loan 1986 was the worst affected, and the price was marked down from Rs. 72.75 to Rs. 72.10 without any real business passing, while 3% Non-terminable Paper was marked at Rs. 72.50. Short-dated loans remained steady and fractional gains were recorded; 3% 1957 was quoted higher at Rs. 99.85, and there were ready buyers of 3% 1958 at Rs. 99.70. The 3% 1959-61 hardened to Rs. 99.75, and there were buyers of 3½% 1961 at Rs. 99.33; 2½% 1961 was in strong demand at Rs. 93.60 cum-voucher, and 2¾% 1960 was asked for at the higher rate of Rs. 96.50. The 2¾% 1962 was supported at Rs. 93.90, and 3½% 1962 was traded around Rs. 97.45. In medium-dated loans, 3% 1963-65 was offered at Rs. 93.30, and 3% 1964 was quoted nominally at Rs. 93.60; 3½% 1964 eased further to Rs. 97.50 and 3½% 1965 was marked down to Rs. 97.32, while 3½% 1967 was shaded at Rs. 97.75 with sellers over. With the exception of 3¾% 1974 which was quoted lower at Rs. 98.35, long-dated loans were more or less unchanged; 3% 1966-68 was marked at Rs. 90.80 and the enquiry for 3% 1970-75 continued, with the price improving to Rs. 85.70. State loans remained dull and neglected, but there was a noticeable improvement in Madras issues, and the prices of both 1967 and 1968 were marked up to Rs. 97.75. In contrast, U.P. and Bombay State loans were on offer, with the price of 4% Bombay 1967 easing to Rs. 98.75 and 4% Bombay 1970 to Rs. 98.65. Both 4% U.P. 1967 and 1968 were quoted lower at Rs. 96.

Business in preference shares was on a disappointing scale. In jutes, Delta were sold at Rs. 70 and Hukumchand at Rs. 96.50. Naihati 1st were crossed at Rs. 90 and Waverley changed hands at Rs. 30.50.

In the miscellaneous group, Arthur Butler were reported at Rs. 8.75 and Associated Hotels were marked at Rs. 56.75. Bharat Collieries were done at Rs. 49 and Burn 7% around Rs. 115. Calcutta Electric were placed at Rs. 9.56. Dalmia Cement Rs. 100 paid-up were at Rs. 82 and Rs. 40 paid-up at Rs. 31. Godfrey Phillips were taken at Rs. 61, Hall and Anderson at Rs. 64 and Humayan Properties at Rs. 8.75. Indian Iron were enquired for around Rs. 99 and Kesoram at Rs. 104. Kettlewell Bullen 1st were marked at Rs. 55. Kumardhubi Engineering receded from Rs. 94 to Rs. 92. Martin Burn were at Rs. 90. New Victoria were placed at Rs. 4.37 and Orient Paper 2nd were crossed at Rs. 64.50. Rallis India were offered at Rs. 61.50 and Rohtas Industries "B" at Rs 62.

In the banking section, Allahabad fully-paid came to hand at Rs. 365 and Bank of Bikaner were reported at Rs. 119. Punjab National were easier at Rs. 58.50, as were United Commercial at Rs. 57.50. United Bank of India "D" shares were unchanged at Rs. 4.12.

In railways, a solitary transaction was reported in Dehri-Rohtas at Rs. 10.44.

In cottons, Bengal Nagpur were lower at Rs. 6.62, as were Cawnpore Textile at Rs. 7 and Kesoram at Rs. 13. Jayshree Textile changed hands at Rs. 6.19 and New Victoria Cotton at Rs. 1.70.

Coal shares attracted very little attention, and in the absence of support, prices tended to sag. Bengal receded from Rs. 226 to Rs. 222. East Indian from Rs. 23.50 to Rs. 22 and Equitable from Rs. 25 to Rs. 24.75. Katras Jherriah were marked down to Rs. 56.50 while Raneegunge were unchanged at Rs. 10.75. Union were a nominal market at Rs. 17.

Dull conditions continued in the jute section and prices in most cases were shaded. Here is a chart showing representative price movements:

	Opening 25th July Rs.	Closing 31st July Rs.
Agarpara	7.62	7.12
Anglo-India	138	133
Auckland	78	77
Bally	132	128
Budge-Budge	83	72
Champdany	103	96
Gourepore	224	216
National	18.10	18
New Central	12.37	12

Contrary to the general trend, Cheviot improved from Rs. 120 to Rs. 125. Kinnison were steady at Rs. 122, as were Megna at Rs. 82.

Sugar shares were more or less unchanged, though Balrampore were steady at Rs. 5.40, Carew

More power to the pound!
with a
WOLF DRILL

To industry and the individual, WOLF's offer a wide range of low priced powered tools. Write today for full details of any of the range of WOLF Portable Electrical Tools.

Reduce your overheads! Increase efficiency! Step-up production with WOLF's matchless General Duty Electric Drill (Type SD4c). This performance-packed, high speed portable machine offers industry more power-to-weight ratio than any other drill of its kind. The revolutionary design adds manual force to powered penetration—the removable side handle facilitates awkward drilling jobs with maximum accuracy and minimum effort.

This is the ideal drill for maintenance work and light constructional engineering, including the general purpose needs of builders, plumbers, garage service stations, etc.

at Rs. 7.50, Dyer Meakin at Rs. 6.44 and Darbhanga at Rs. 23.

The outstanding event in engineerings was the announcement yesterday of a dividend of 10 per-cent on the old ordinary shares of the Indian Iron and Steel Company for the year ended 31st March, 1957. Although no increase in the dividend was expected in most quarters, the announcement was received initially with some disappointment, as no indication was given about the future dividend policy following the increase of the ordinary capital in April last. The shares at one time fell to Rs. 19.27, but subsequently recovered to Rs. 19.36 at the close. Bhartia Steel were easier at Rs. 13.75, as were Braithwaite at Rs 27.50. Burn improved from Rs. 316 to Rs. 318 and there was a keen enquiry for Guest, Keen, Williams at Rs. 28. Indian Standard Wagon were quoted at the lower rate of Rs. 176. Jessop and Richardson and Cruddas were offered at Rs. 23.75 and Rs. 14, respectively. Textile Machinery, after being sold down to Rs. 17.30, recovered at the close to Rs. 17.55.

In papers, there was a good enquiry for Titaghur, with the price improving from Rs. 32.50 to Rs. 32.75 and sellers were scarce. Sirpur were enquired for around Rs. 8.81 and Orient, after being sold down to Rs. 24.55, closed slightly higher at Rs 24.70. India Paper Pulp and Shree Gopal were shaded at Rs. 19.87 and Rs. 14.75, respectively.

In cements, Assam Bengal were unchanged but steady at Rs. 5.56, as were Dalmia at Rs. 11.75. Jaypur Udyog were crossed at Rs. 12.50 and Orissa Cement were better at Rs. 14.12. Sone Valley were depressed at Rs. 5.94.

In insurances, Concord of India were taken at Rs. 11.69 and New Asiatic were reported at the slightly lower rate of Rs. 4.06.

In shippings, India Steamship were quietly steady at Rs. 10.34 while India General Navigation lost four points to close at Rs. 71.

Among miscellaneous industrials, Aluminium Corporation met with good enquiry with the price improving from Rs. 10.12 to Rs. 10.62. Balmer Lawrie were steady at Rs. 156, as were Bengal Flour at Rs. 27.50 and Britannia Biscuits at Rs. 13.50. British Burma Petroleum receded from Rs. 2.90 to Rs. 2.74 while Clive Row were unchanged at Rs. 10.19. Dunlop Rubber were shaded at Rs. 20.75, Indian Aluminium were unchanged at Rs. 13.50, and Hindustan Lever were easier at Rs. 19.37. Indian Cable were slightly better at Rs. 24.25 but Indo-Burma Petroleum were easier at Rs. 26.25. Metal Box met with good enquiry, with few sellers even at Rs. 27.25. National Tobacco receded from Rs. 10.75 to Rs. 10.56 and National Carbon were marked lower at Rs. 24. Jardine Henderson and Martin Burn were unchanged at Rs. 72 and Rs. 23.56, respectively. Rallis were done at Rs. 32.50 and Rohtas Industries at the lower rate of Rs. 18.19. Shaw Wallace were marked at Rs. 10.12 ex-dividend.

In the mining section, Indian Copper reacted from Rs. 3.50 to Rs. 3.26 and Karanpura Development from Rs. 12.50 to Rs. 11.50. Burma Mines were offered at Rs. 2.3 and Western Stockholders at 93 nP. Metal Corporation eased from Rs. 8.87 to Rs. 8.12, while Orissa Minerals were unchanged at Rs. 19.31.

Tea shares were featureless. Nagri Farm being traded at Rs. 20.50 and Sungma at Rs. 11. Ananda Bag changed hands at Rs. 21 and Bishnauth were crossed at Rs. 21.25. Brahmapootra were quoted at Rs. 5.75, as were Dhelakhat at Rs 23.75. A small lot of Dessai and Parbuttia changed hands at Rs. 285 and East India were crossed at Rs. 22.12. Teloijan came to hand at Rs 25.75 and Tezpore and Tyroon were marked at Rs. 21.62 and Rs. 44.25, respectively. Dauracherra were done at Rs. 10.06 as were Loobah at Rs. 5.25. Hansqua at Rs. 24.75 and Jayshree at Rs. 10. A small lot of Banarhat were done at Rs. 335 and Baradighi Ellenbarrie and Hasimara changed hands at Rs. 21.87, Rs. 187 and Rs. 22.75, respectively.

The CONCORD OF INDIA INSURANCE COMPANY has shown a surplus of Rs. 2.07 lakhs for the year ended last December, after providing Rs. 2.15 lakhs for taxation. The dividend is the same at Re. 1 a share, leaving a carry-forward of Rs. 1,68,870. The fire department showed a surplus of Rs. 2.92 lakhs. The surplus of the accident department amounted to Rs. 78,538, while the marine department incurred a loss of Rs. 1.38 lakhs

* * * *

Providing Rs. 4¼ lakhs for taxation, there is a balance of Rs. 8,65,352, including Rs. 3,42,910 brought in, of the HERCULES INSURANCE COMPANY LTD. for the year ended last December. The dividend has been maintained at Rs. 2 a share, leaving a carry-forward of Rs. 3,85,352. The fire department has shown a surplus of Rs. 5.02 lakhs. The surplus of the accident department amounted to Rs. 2.05 lakhs, and the marine department earned a surplus of Rs. 4,338.

* * * *

Providing Rs. 27.27 lakhs (Rs. 32 lakhs) for taxation, Rs. 70.14 lakhs (Rs 1.05 crores) for depreciation and making other adjustments, the profit of the TATA LOCOMOTIVE AND ENGINEERING COMPANY LTD. has amounted to Rs. 89.15 lakhs for the year ended last March, against Rs. 92.73 lakhs. The ordinary dividend has been increased by 2 percent to 8 percent. General reserve is allocated Rs. 20 lakhs (Rs 18 lakhs), leaving a carry-forward of Rs. 1,18,206 (Rs. 1,29,979). The directors say that in order to finance the substantial increase in the volume and value of operations as well as the current capital expenditure programme, the company had to raise considerable amounts of additional finance during the year under report. These additional funds were mainly provided out of borrowings from banks and retained earnings. The continued growth of the company's business, the nature of which is such that large stocks of raw materials, imported components and work-in-progress have to be financed over a period of months before sale proceeds on the finished products can be realised, will require further working capital to be raised from time to time. In addition, funds will be needed to meet further capital expenditure. While most of the current capital expenditure programe will ultimately be financed from retained earnings, the rate of expenditure during the next two or three years will be greater than can be provided from this source. The methods by which the necessary funds can be raised for both these purposes are receiving their attention.

* * * *

The INDIAN COPPER CORPORATION has produced good results for the year ended last December. The profit increased from £1,474,804 to £1,507,184. The dividend has been declared at 20 percent (including an interim of 6¾ percent), against 45 percent but the capital has meanwhile been raised from £914,200 to £1,371,300 by the issue of bonus shares. General reserve is allocated £175 000 (£200,000). Taxation provision absorbs £885,027 against £633,046. Depreciation is the same at £175 000. The carry-forward is £114.980, against £117,083 brought in. Sales amounted to 9,787 long tons, compared with 10.791 long tons. Production of refined copper rose by 347 long tons to 7,628 long tons. Output of rolled products, which includes 2,260 tons of cold rolled brass and 75 tons of cold rolled copper, was 6,788 long tons, compared with 5,769 long tons in the previous year. The rolling mill again restricted the output of brass sheets and circles to conform to the requirements of the market.

You couldn't be in better hands!

I.A.C. gives its staff an extensive and carefully planned training so that *you* may enjoy air travel to the utmost!

The Hostess who looks after you is a perfect example of I.A.C's excellent service to air travellers. Noted for her charm and willingness to be of service, she always has a pleasant smile, a friendly and reassuring manner which puts you at ease immediately. Her training teaches her to be highly proficient in an unobstrusive way; and while she is willing to participate in passengers' conversations, she never intrudes.

The I.A.C. Hostess works efficiently and cheerfully. She is taught to serve food with finesse for five or forty-five. And wherever her duties with I.A.C. take her, she is at all times, in all places — helpful, knowledgeable and completely at your service.

She is typical of the staff of I.A.C.

You couldn't be in better hands.

Bombay Market

PRICES EASE IN QUIET TRADING

CLOSING UNDERTONE

STEADIER

Wednesday Evening.

THE Bombay stock market was quiet during the past week and share prices fell on selling pressure. The accumulation of stocks in cotton mills, coupled with adverse rumours about the dividend of the Indian Iron and Steel Company, caused nervousness. The lack of interest shown by the Life Insurance Corporation was a restraining factor. It was feared that credit would become more stringent in coming weeks as the new Central loans was expected to mop up a substantial amount of cash from the market. Towards the close, there was a slight recovery on short-covering. The maintained dividends from the Indian Iron and Steel Company and from the Kohinoor Mills Company helped sentiment. Tata Steels recovered to Rs. 172.50 and Indian Irons were quoted at Rs. 19.33. Alcock Ashdown were offered at Rs. 265, and Premier Construction at Rs. 154.75 attracted little attention. Automobile shares lacked interest and sellers predominated. Premier Automobiles changed hands at Rs. 87.50 and Hindustan Motors were sold at Rs. 6.75. Tata Locomotive reacted to Rs. 153.50 on profit-taking.

In the mill group, Bombay Dyeing were maintained at Rs. 568 on influential support and Kohinoor recovered to Rs. 267.25 on paying the same interim dividend. Simplex were taken at Rs. 161 and Svadeshi were done at Rs. 177.50. Century reacted to Rs. 429 on realising and India United Ordinary were bought at Rs. 11.25 by knowledgeable quarters.

Miscellaneous industrials were fractionally shaded in sympathy with the general trend. Associated Cement slipped back to Rs. 161 and Digvijay Cement were transacted at Rs. 139.50. Routine business was transacted in sugar shares. Belapur came to hand at Rs. 235 and Phalton Sugar realised Rs 141. Mining shares were subdued and Indian Copper fell to Rs. 3.26. Shivrajpur Syndicate decreased to Rs. 83. Steamship company shares were steady on prospects of increased freight earnings. Scindia Steam were maintained at Rs. 19.45 and Great Eastern Shipping were wanted at Rs. 22. National Rayon made Rs. 226.75 and Tata Chemicals lost a few annas at Rs. 17.95. Wimco were done at Rs. 153.50.

Banking shares were steady on an improved outlook. United Commercial Bank were bought at Rs. 57.50 and Bank of Baroda changed hands at Rs. 102.25. Insurance shares were freely offered and buyers were not interested at current rates. New India Assurance were shaded at Rs. 43 and Orient were transacted at Rs. 3,625.

Profit-taking reduced top gains in electricity supply undertakings. Ahmedabad Electric declined to Rs. 94 and Tata Power were fractionally lower at Rs. 1,228.75.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations (highest) for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last-named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise].

PRODUCING COALMINING EQUIPMENT IN INDIA

DETAILS OF RUSSIAN REPORT

(FROM A NEW DELHI CORRESPONDENT)

THE details are now available of the project for the manufacture of coalmining equipment which was recommended early this year by a team of six Russian specialists led by Mr. A. F. Eshtokin. The Indian Government has since decided to implement the project with Russian collaboration. In estimating the demand for coalmining machinery in India in the nearest ten-year period, the experts took into account the mining and geological conditions and the present level of mechanisation at the typical mines and quarries which they visited in the three principal areas—Raniganj, Jharia and Bokaro—as well as the level of production envisaged by the end of the second and third five year plans. Their report notes that, under the second plan, coal production is to be increased by 58 percent, from a little more than 38 million tons in the base year 1955 to 60 million tons in 1960 at an annual rate of more than four million tons. About 80 percent of the total output in 1960 is to be produced by underground mining and 20 percent by open-cut.

The Indian authorities gave the Russian team to understand that, under the third plan, coal production would have to be increased further by 40 million tons to 100 million tons. The increase, it is envisaged, will be secured as follows: 14.5 million tons from open-cut and 25.5 million tons from underground mining. The latter figure is, in turn, broken up into 8 million additional tons from the existing mines and 17.5 million tons from new mines. It is proposed to open, during the third plan period 60 new mines with an average annual capacity of 360,000 tons each in the public sector, and 22 mines with an average annual capacity of 180,000 tons each in the private sector—giving a total of 82 new mines with an average yearly output of 300,000 tons each.

Need for Increasing Output

According to the team, the development of coal production at the rate envisaged is necessary to meet the needs of expansion in iron and steel and in other branches of industry. It is at the same time justified "by the existence of large coal reserves in the country and favourable geological and mining conditions. According to the memorandum of the Central Ministry of Production dated 12th December, 1956, the total coal reserves in India amount to 42,442 million tons". But the Russian experts have noted that the output of miners a shift in India is at present low due to inadequate mechanisation. They say: "The mechanisation of the existing mines and quarries, which are at present being expanded and reconstructed, as well as the construction of new coalmining enterprises, will require a large amount of coalmining equipment while, as is known, the industries of India produce no such equipment. The only exception is the production of mine cars, cages and headgear pulleys which are manufactured in small quantities."

The team has estimated the total weight of equipment required for the construction of a new mine with an output of 300,000 tons of coal at 1,710 tons in a vertical shaft, and 1,526 tons in an inclined shaft. Taking the average figure of 1,618 tons, since the new mines will be constructed both with vertical and inclined shafts, the total weight of the equipment required for 82 mines is placed at 132,700 tons. This is exclusive of the electro-mechanical, heat-engineering, railway and other equipment which will have to be produced in special plants. Next, it has considered the equipment that will be required for the mechanisation of the existing mines. The Russian experts were given to understand that, by 1960, the following level of mechanisation will have been reached for the main operations: cutting, 43 percent; loading, 12 percent; conveying, 12 percent; haulage and winding, 90 percent. On the assumption that mechanisation is to be introduced fully for all these operations during the third plan period, and allowing also for the equipment required for the proposed expansion of output by 8 million tons from the mines that will have been opened by 1960, the team has estimated the demand for equipment to meet both the needs at 154,000 tons.

Third Plan Demand

The total weight of the mining equipment that will be required to meet the demand of newly built and existing mines in the third plan period, assuming full mechanisation, will therefore be 132,700 plus 154,000 tons, i.e., a total of nearly 287,000 tons. Out of this, the weight of the main machinery (arrived at by excluding headgears, cages, skips, pulleys, bunkers, discharging facilities, etcetera, will be 182,700 tons, which should in fact be placed at 201,000 tons after making an allowance of 10 percent for spare parts. The average yearly demand for mining equipment both for new and existing mines, on the basis of full mechanisation of the main operations, will, therefore, be 40,200 tons during the third plan period. However, the former Central Ministry of Production informed the Russian team that it is proposed to attain only the following levels of mechanisation at the end of the third plan period: cutting, 64 percent; loading, 70 percent; conveying, 70 percent; haulage and winding, 90 percent. "Given these figures," the team's report says, "and full mechanisation of haulage and winding being unconditionally necessary, the average level of mechanisation of the main operations will constitute approximately 75-80 percent. The average yearly demand for the main machinery and equipment, corresponding to this level of mechanisation, is taken at 30,000-32,000 tons. To supply this demand, it is recommended to build a specialised coal machinery building plant with a capacity of 30,000 tons a year."

The above estimates of equipment required for the coal expansion programme do not include the means of mechanisation for quarrying, "because the machines and mechanisms for quarries (mechanical shovels, bulldozers, drill rigs, rolling stock, etcetera) due to their peculiar features, do not correspond to the profile of a coal machinery plant". Likewise, the Russian team has ruled out the construction of a coal machinery plant with a capacity above 30,000 tons so as to include in the manufacturing programme some items of equipment other than the main machinery. "The putting into operation of such a plant due to the wide range of items to be produced on a large scale, would be very difficult and would take a long time to master the projected capacity," it says. The production programme recommended by it for the proposed coal machinery plant is as follows:

Name of equipment	Number of units	Weight in tons
1. Machines for coal getting:		
(a) Heavy longwall and shortwall coal cutters ..	400	2,160
(b) Coal loading machines	200	
2. Machines for coal conveying: (Scraper-chain conveyors, reversible belt conveyors for inclines, gate belt conveyors and cross-entry belt veyors)	1,150	12,745
3. Machines for coal haulage: (Unified 14-ton and 7-ton mine electric locomotives and electric winches) ...	420	4,821
4. Winding equipment: (Electric winding machines of various specifications ...	50	1,926
5. Pumps and fans ...	300	1,919
6. Spare parts and reduction gears		6,429
Total ...		30,000

Forge-Foundry

The report also discusses in detail the capacity of the forge-foundry which is to form an integrated part of the establishment. The plant site will cover 111 acres, and the number of personnel that will be required is estimated at 4,200 (including 3,325 workers). The team has not recommended any specific site for the location of the plant, but has indicated the requirements which any site that may be chosen should meet. The cost of the plant is tentatively estimated at Rs. 13.2 crores, made up as follows: construction work, Rs 4.2 crores; purchase of equipment (f.o.b.), Rs 8 crores; and other expenditures including the erection of equipment and the purchase of tools and accessories, Rs. 1 crore. The estimate does not include the cost of demolition of existing buildings and compensation to the owners, vertical levelling of the plant site, designing work, power supply systems outside the plant, water supply and sewerage arrangements, plant siding and automobile roads, building of the township and social amenities, maintenance of the supervisory staff during construction, etcetera. The estimate is also exclusive of freight charges for the transportation of machinery from the port to the plant site, import duties and other Indian taxes.

A number of recommendations have been made by the team for the training of personnel for the coal expansion programme. These include the sending abroad of a group of engineers for one or two years to study up to date mining techniques and the organisation of production; sending to coalmining enterprises within India, which have achieved a high level of mechanisation, a group of engineers and designers to study local operation conditions and the training of engineers and technicians for the coal industry in the higher and secondary technical institutions in the country. The scientific and research work in the sphere of designing the most economical and efficient machines should, at the first stage, be concentrated directly at the plant. At the next stage, it is recommended, India should set up "a Scientific Research Institute of Organisation, Technology and Mechanisation of Coal Production as well as an Institute for designing new types of machines for the coal industry".

Equipment from other Factories

To increase the manufacture of coal machinery, and particularly in order to produce the items of equipment which will not be manufactured at the proposed plant, it has made the following specific suggestions: "The Chittaranian State Locomotive Works has technical capacity for the manufacture of compressors of 100 and 40 cubic meters a minute and compressed air receivers. The Braithwaite and Company engineering works in Calcutta can manufacture large capacity mine cars, individual equipment and mine headgears. The James Alexander and Company engineering works in Calcutta, if it is slightly reconstructed, can considerably expand the volume and range of production of coalmining machinery. The Burn and Company engineering works in Calcutta has technical capacity for setting up the production of pneumatic and electric tools, steel structures for collieries, etcetera". It has also commended for consideration the question of establishing three to four special plants for the manufacture of coalmining machines, individual equipment and steel structural works. "As the commissioning of these new plants progresses," its report says, "the manufacture of certain types of machinery (pumps, conveyors, fans, electric locomotives) should be excluded from the production programme of the first plant in order to secure the increase, by this plant, of the production of such machines as coalmining and heading combined machines, coal cutting machines and electric winding machines."

U.K. PLAN TO INCREASE STEEL PRODUCTION

THE U.K. steel industry has announced plans for sharply stepping up its production. A five-year plan costing a total of £600 million envisages an increase in the output from 23.5 million ingot tons in 1958 to 29 million ingot tons by 1962. These plans are announced in a White Paper, "Development in the Iron and Steel Industry: Special Report, 1957," issued by H M Stationery Office, together with the Iron and Steel Board's annual report for 1956. "On the information available, the board's conclusion is that demand for steel in 1962 is likely to be in the neighbourhood of 24 million ingot tons for home consumption, and 5 million ingot tons for direct export" the report points out. The board believes that the use of steel will continue to increase for as long ahead as need be considered at present. The board does not, at the moment, see a large-scale application of nuclear energy to steel-making, but points out that if the electricity cost is reduced by the use of nuclear reactors, this may lead to greater use of electric furnaces in the industry. The third annual report of the Iron and Steel Board published recently emphasises the changed pattern of home demand for steel. In the U.K. in 1956 more steel went to shipbuilding and heavy engineering industries and less to consumer goods. Total production this year is estimated at 22.5 million tons.

CALTEX REFINERY NOW IN FULL OPERATION

The Caltex oil refinery in Visakhapatnam is now in full operation. Since the last unit went on stream on 14th July tests confirm that the entire refinery is operating satisfactorily and will be able to maintain its capacity. There are now about 500 employees on the operating staff. The Caltex refinery's annual output of quality products is 74,000,000 gallons of petrol, 21,257,000 gallons of superior kerosene, 8,177,300 gallons of inferior kerosene, 31,631,000 gallons of diesel oils and 26,495,000 gallons of fuel oils.

TALK OF REDUCTION IN STATUTORY PAPER CURRENCY RESERVE

AGREEMENT ON IMPORTING TEXTILE MACHINERY FROM EASTERN GERMANY

(FROM A NEW DELHI CORRESPONDENT)

SINCE the issue of the Reserve Bank return for the week ended 19th July, it is rumoured that the Government may soon have to invoke Section 37 of the Reserve Bank of India Act. This Section empowers the Government to authorise the Bank to reduce the paper currency reserve of foreign securities below the prescribed level of Rs. 400 crores, down to an absolute minimum of Rs. 300 crores. On 19th July, the foreign securities held by the Reserve Bank in the issue department dropped to Rs 400.52 crores from the level of Rs. 412 crores, which had been maintained for a long time. There was only a small accretion to the balances held abroad by the banking department. The balances stood at Rs. 31.19 crores or only Rs. 2.64 crores higher than at the end of the previous week. Judging from the size of the payments deficit in recent weeks and the consequent rate of drawing down of the reserves, it would appear that a further transfer of securities from the issue department will become unavoidable by the end of this month or early in September.

The only development which can obviate this step is a substantial foreign loan, such as has been under informal discussion with the U.K. for some time. But the chances of a British loan have been rated low since the return of the Principal Finance Secretary, Mr H M Patel, from London. It is reported that Mr Nehru conveyed the discouraging prospect to the Congress Working Committee when it met here recently. However, the hope has not been abandoned altogether that Britain will come to recognise a loan as the more expedient alternative to the running down of the sterling balances. If it is in India's interest not to allow her credit to be adversely affected by a raid on her currency reserve, it is equally to Britain's advantage, it is argued, to earn interest, besides goodwill, from a loan, instead of having to acquiesce in India's utilisation of her own sterling holding. The matter will doubtless be discussed by Mr. T. T. Krishnamachari during the Commonwealth Finance Ministers Conference in Ottawa and his scheduled visit later to London. But a drop meanwhile in the sterling reserves, below the level of Rs. 400 crores, seems most likely.

Indo-East German Trade Agreement

An agreement was signed last Friday by the State Trading Corporation with Dia Maschinen Export of Eastern Germany for the import of textile machinery worth about Rs. 1.2 crores for the private sector. This is the first transaction under the special payments procedure which was negotiated by the two countries only ten days earlier, on 16th July. The Indo-East German payments procedure is in many ways the most advantageous of the arrangements that India has so far negotiated with various countries in order to minimise foreign exchange expenditure and to promote exports. Egypt and Afghanistan have agreed to accept payment for their exports up to a specified—and relatively small—limit in rupees, which will be utilised for the purchase of Indian commodities. Russia, under the trade agreement of 2nd December, 1953, agreed to receive payment in rupees but subject to the condition that any balances in the rupee accounts "will be convertible on demand into sterling". Moreover, the rupee proceeds under the trade agreement can be utilised by Russia for a variety of purposes, including payments for the maintenance of her Embassy and Trade Representation and not only for the purchase of Indian goods. Even the long-term credit arrangement of 2nd February, 1955, for the construction of the Bhilai steel plant, which offered the additional advantage of deferred payments, provided that the rupee proceeds "may be utilised by the Russian organisations for the purchase of goods in India and/or be freely convertible into pounds sterling". The same condition will apply to the long-term credit of Rs. 60 crores which was offered by her last year.

In contrast to these arrangements, the payments agreement with Eastern Germany provides for the import of machinery and industrial raw materials, without any ceiling on the volume of transactions a year, against deferred payment in rupees which shall be wholly utilised by Eastern Germany for the purchase of Indian commodities. Moreover, these purchases will be subject to a certain amount of regulation of the quantities and prices of different commodities since all contracts will be made with or through the State Trading Corporation.

Proposed Arrangements with Russia

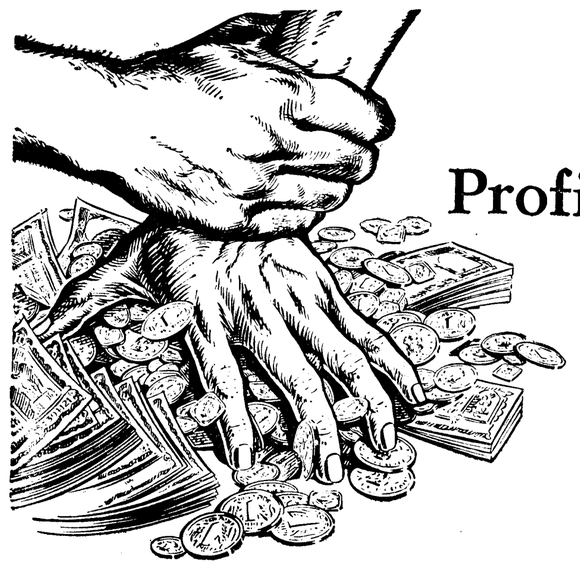
This arrangement is valuable not only in itself, but also as the model for a possible deal with Russia for the purchase of coalmining equipment, which India will need in large quantities in the coming years if the second plan targets of coal production are to be fulfilled. Negotiations for the purchase of Russian coalmining equipment (independent of and additional to the equipment which the Russians will bring in for developing the Korba coalfields) have been proceeding for several months. While the Russians have offered to sell the equipment under the rupee payments procedure of the Indo-Russian trade agreement, Indian officials have been pressing for a scheme of deferred payment, combined with a provision for the regulated use of the rupee proceeds by Russia for the purchase of Indian commodities through the State Trading Corporation. Now that such an arrangement has been successfully negotiated with Eastern Germany, the Russians could also perhaps be induced to agree. It is likely that the Indian proposal for the purchase of Russian coalmining equipment will be discussed with the Russian delegation which is arriving shortly to determine the utilisation of the long-term credit of Rs. 60 crores.

On the latter subject, the Indian Government is ready with its ideas. A list of projects for which it would like the Russian credit to be utilised, together with a rough estimate of the value of the machinery and equipment to be supplied by Russia, has been drawn up. It is as follows: the heavy machine building plant and the project for the manufacture of coalmining equipment, Rs. 26.5 crores; the thermal plant which will form part of the lignite project in Neyveli in south India, Rs. 16 crores; development of the Korba coalfields, Rs. 8 crores; equipment for balancing and reconditioning the methanol plant in Sindri, Rs. 1 crore; and an optical glass plant, Rs. 85 lakhs.

Higher Technical Studies

The Government of India, it is learnt, has decided to utilise a part of U.S aid under the technical co-operation programme during 1957-58 for meeting the foreign exchange cost of the fourth regional institute of higher technology, the last of the series scheduled for completion during the second plan period. The eastern regional institute, which was established with assistance from U.N.E.S.C.O., has been functioning in Kharagpur since before the second plan. The construction of the western regional institute in Bombay, for which the equipment and expert services will be provided by Russia through the U.N. programme of technical assistance, has been taken in hand and it is hoped to admit the first batch of students next year. With the offer of West German aid and the earmarking of U.S. assistance for the remaining two institutes, which will be established in Madras for the southern region and in Kanpur for the northern region, the imolementation of the programme for training and research in higher technology is now assured.

The prospects for speedily increasing engineering personnel at the graduate and diploma levels are also bright following the Government's acceptance early this year of the recommendations made by a two-man committee comprising Dr. J. C. Ghosh, member of the Planning Commission, and Mr. L. S. Chandrakant of the Union Education Ministry. This review committee was able to suggest a method by which the targets proposed earlier by the Engineering Personnel Committee could be achieved and even surpassed at a smaller cost than was estimated by the E.P.C. The method is simply to expand the capacity of the existing engineering colleges and polytechnics to the maximum extent possible, limiting the number of new institutions to the minimum even if this should defer the attainment of the ideal of "regional balance" in the outturn of engineering personnel relative to demand.



At lower levels of technical skill, however, the outlook is not so encouraging. The following table shows the distribution of pupils in secondary and technical-vocation schools in recent years:

Year	Secondary schools* No. of schools	Secondary schools* Enrolment	Technical-Vocational schools** No. of schools	Technical-Vocational schools** Enrolment
1953-54	25,766	59,31,000	2,599	2,17,000
1954-55	27,518	63,67,981	2,752	2,56,620
1955-56 (Est.)	32,668	70,00,000	2,900	2,80,000

* "Secondary schools" include middle, high and higher secondary schools.

** "Technical-Vocational schools" include normal schools for teachers but exclude schools for music, dance, etcetera.

In other words, in 1953 there were about 29 academic (including science but more of arts than

The desire to earn a fair wage or to make a legitimate profit is necessary and healthy, and is in sharp distinction to profiteering which is anti-social and evil.

Profiteering

Forum of Free Enterprise earnestly appeals to all to desist from profiteering.

Forum equally appeals to the Union Government to give a lead by eliminating profiteering by the State Trading Corporation, for example in cement.

Forum of Free Enterprise

A non-political organisation to educate public opinion on Free Enterprise

science) students for one technical-vocational student; in 1954-55 and 1955-56, the corresponding ratios were 31:1 and 35:1, respectively. Thus, while facilities for education are expanding, the gap between academic and technical studies at the secondary stage is also widening. One of the reasons for the lag in technical-vocational education may be the relative costliness of technical schools. It has been estimated that the average cost a student in a school for vocational and technical education was Rs. 194 compared with Rs. 66 in ordinary secondary schools in 1953-54.

Reforming Secondary Education

In August 1954, the Central Government announced a scheme to implement the recommendations of the Secondary Education Commission (1953), a prominent item of which was the conversion of high schools into "multi-purpose" schools by the introduction of at least two vocational courses. It was proposed that 500 high schools should be thus converted into multi-purpose schools within the first plan period. As against this target, assistance for the conversion of 470 schools was sanctioned by the Union Education Ministry. According to the information available with the Planning Commission, the educational authorities at the State level had formulated concrete proposals for the establishment of only 334 multi-purpose schools during the last two years of the first plan, and the number actually converted is expected to be less.

Under the second plan, out of the provision of Rs. 55 crores for secondary education, the largest single allocation of Rs. 15.5 crores is for the conversion of 900 high schools into multi-purpose schools. But the Budget provision of Rs. 2.8 crores in 1956-57, for the conversion of 213 schools, has fallen to Rs. 1 crore in 1957-58 for the conversion of 180 schools, while there is no information about the actual results achieved so far. Considering that there are about 11,000 high schools at present, and that, at best, only about 1,200 out of them will have become multi-purpose in character by 1960-61, it will obviously be a long time before the country attains the distribution of the secondary schools population which has been proposed in a recent study by the Union Education Ministry.

The proposal is as follows: "At the age of 11, 50 out of every 100 pupils should be diverted to junior trade, crafts and agricultural schools where, besides general education, they will receive training in specific jobs (not merely professional 'bias'), leading to employment in agriculture and subsidiary professions at the age of 14 and above. The remaining 50 will continue education in regular middle schools, with perhaps science and mathematics as compulsory subjects. Of about 50 pupils passing out of the middle schools, 40 will be diverted to various types of technical schools, leading to employment at the ages of 16, 17 or 18. Only 10 pupils will continue in the upper grades of high schools where they will receive, besides general education, a disciplined knowledge of the fundamentals of the sciences and mathematics. Only half of the successful matriculates may go to the universities and other professional institutions, the rest being absorbed in appropriate civil and defence professions."

Such a pattern of education may be very remote, but its desirability is brought out by the latest analysis of educated unemployment by the Labour Division of the Planning Commission. The overall number of educated persons registering themselves at the employment exchanges in the country has been increasing steadily in recent years. But while the numbers of matriculates, intermediates and graduates in general have been continuously on the rise, the number of engineering graduates has been coming down steadily. The number of medical graduates has also shown a downward trend. The following table showing the composition of educated registrants at employment exchanges is self-explanatory:

As on	Matriculates	Intermediates	Graduates Engineering	Medical	Others
31.3.1954	1,22,342	16,456	739	222	17,687
31.3.1955	1,45,054	20,020	587	207	19,071
31.3.1956	1,71,924	25,827	439	207	23,103
31.3.1957	1,80,698	30,691	354	211	23,992

Retreat on Refinery Location

The Government's offer last week to call for a project report on an oil refinery not only in Barauni, which the Cabinet had favoured after prolonged consideration, but also in Gauhati, which had been explicitly rejected on economic and strategic grounds, is a retreat under the pressure of popular agitation. The Prime Minister, in a statement on the subject, said: "It would be a bad and extraordinary precedent if decisions on economic matters are made regardless of the normal factors that have to be considered." But is there not a precedent already in the Government's decision to concede the substance of a second Pay Commission for Central employees, also under the pressure of agitation and against its own better judgment?

ACC HONOURS THE CODE

2

"Customers are entitled to courtesy, promptness and good service, and every endeavour shall be made to see that they receive them."

Code of conduct—**FORUM OF FREE ENTERPRISE**

The ACC distributes cement through an organization which reaches down to the small consumer, and in accordance with the over-all allotments made by Government. Every mode of transport is pressed into service — rail, road, river, canal, sea — to see that the cement is delivered to the customers with promptness and courtesy.

This is not all. The ACC does not remain content with delivering a high quality product to the entire satisfaction of its customers. It also provides through its technical department, the Concrete Association of India, *free technical service* and information to cement users throughout the country.

This is Free Enterprise at its best, honouring the Code both in letter and spirit.

PROSPECTS OF A U.K. LOAN TO INDIA REVIEWED

STANDBY CREDIT: AID FOR SPECIFIC PROJECTS

(FROM OUR LONDON CORRESPONDENT)

FOLLOWING a general talk between Mr. Macmillan and Mr. Nehru during the meetings of the Commonwealth Prime Ministers, two senior officials of the Indian Finance Ministry were urgently summoned from New Delhi to continue discussions with Treasury officials here on the possibility of India raising a loan of about £200 million on which she was prepared to pay 1 percent over Bank rate as interest. The Indian officials have returned home, apparently without making much progress towards achieving their objective, though no official disclosure has been made on the talks themselves. The main difficulties are only too evident. This country faces heavy capital expenditure in the spheres of nuclear-power development, modernisation of the railway system, development of the steel industry and for road building, quite apart from the increases in Government expenditure on the social services, pensions, etcetera. Whatever cuts may be possible in other directions, and especially in defence expenditure, British resources are bound to be insufficient to finance the vast scale of development that is now being planned all over the Commonwealth. India is only one of a dozen countries clamouring for capital, and each one is convinced that its economic plans are essential and urgent. In the present state of the London trustee market, and legitimate doubts whether India can really afford development at the rate envisaged by her planners, a public issue would be impossible. A Government loan would present the additional problem of being taken as a precedent by other borrowers.

Is there any way out of this dilemma? The subject has been discussed at some length by the City Editor of the *Manchester Guardian*, who thinks it might lie in a standby credit and an extension of the scope of discussions for specific credits from various sources for individual projects. He explains that it is true that a loan to India might not be conceived as an addition to the claims on real British resources. India still has some £340 million of sterling balances in London. If no loan is granted, these balances will be drawn down to pay for excess imports under the current five year plan. Conversely, if a loan was granted it would presumably be accompanied by an agreement not to draw down the sterling balances any further at the same time as drawing on the loan. In fact, the Indian idea seems to be one of a general backing for the rupee currency during the period of heavy external deficits.

Standby Credit

Such a standby credit could probably be granted without risking any additional strain on Britain—provided that it could be done in a form which made it quite clear that this was not a signal for a general increase of overseas lending. But even so it would have to be certain that the rate of growth of India's deficit requirements was firmly under control. In recent weeks the drain on the London sterling balances has been reduced to under £4 million a week, at that rate the legal currency reserve of £300 million will be reached by October, and by the end of the year the reserve would be down to the emergency base of £225 million.

The raising of further credits is clearly very urgent. A number of specific credits for individual projects are in fact under discussion. If suitable terms can be arranged, the paper feels, British credits will probably be forthcoming for several of the major industrial schemes now being planned. All this, however, may not be enough to allow India to continue her expansion at the very rapid rate of the past year. No doubt Indian plans for maintaining reasonable financial stability during this stage of construction will be further explained when the Union Minister of Finance, Mr. T. T. Krishnamachari, comes to London in the autumn.

Independent Council

Hopes that recent official warnings about inflation will be followed by some more positive action are only to be partially realised. The setting up of an independent council on prices, productivity and incomes, announced by the Chancellor of the Exchequer during the economic debate in the House of Commons, will be welcomed, even though T.U.C. co-operation is being withheld for the present. Mr. Thorneycroft's latest survey of the general economic scene should go some way in dispelling the anxiety that the country is moving towards fresh difficulties. He described the external outlook as good with exports rising faster than imports. The gold and dollar reserves are up—an increase of £88 million in the first half of the year—and both invisible earnings and production are rising. Especially encouraging was the disclosure of a £125 million balance of payments surplus in the 12 months ended last June. This is a great improvement on the mere balance which the Prime Minister forecast at the time of the Suez crisis. Moreover, Mr. Thorneycroft looks for a further improvement in the coming year. Nobody should quarrel with the Chancellor's contention that there is no simple act of policy which is a remedy for inflation. It must be in the nature of a combined operation. What remains in doubt is whether Mr. Thorneycroft's measures will ensure this.

Apart from the independent council, on which the Chancellor said "our hope is that it will create a fuller appreciation of the facts, both among the public and among those more immediately concerned with costs and price matters," he also announced three specific moves against inflation. These are: "some difficult decisions" to hold down Government spending in which he hoped he could count on support "however unpopular that process may prove to be"; investment in basic industries like steel, power and transport will go forward as planned but "it may well be necessary to rephase some programmes, to see that not too many reach a peak at the same moment", and the credit squeeze and bank restrictions must continue. His most significant comment, suggesting that the Government really meant business, was his reference to the fact that there could be no more wage rises or increases in dividends which cannot be met out of higher production. "If saying 'No' leads to some measure of disagreement, so be it. It will be better to have disagreement than a policy of drift."

Overseas Trade Returns

With the detailed overseas trade returns for June, we have the Board of Trade's usual half-yearly analysis, which discloses that the overall picture is rather better than most people expected it would be. Incidentally, it also provides the reason for the "no crisis" tone of ministerial utterances recently and clears up the apparent paradox of linking confidence with warnings. With trade back to normal with the reopening of the Suez Canal, imports in June dropped heavily, and for the half year as a whole arrivals were just over 6 percent larger in value and about 3 percent larger in volume compared with the first half of 1956. About one-quarter of this increase was due to the arrival of shipments delayed from 1956 by the closing of the Canal. The Board of Trade has worked out that if this element of carry-over is excluded, the underlying growth of imports this year was probably only about 4½ percent in value and 1½ percent in volume. There were three main reasons why imports increased so little at a time when the economy shows clear signs of renewed expansion. Oil imports were lower (though they are now almost back to last year's level) and coal and steel imports were only half as large as last year. Arrivals of other industrial materials, with the exception of rubber and aluminium, rose by no less than 8 percent in volume.

Total exports for the first six months of the year were 6 percent in value and about 3 percent in volume above the first half of 1956. The rate of growth, however, was less rapid than last year, when the underlying increase was nearly 10 percent by value and 6 percent in volume. The easing in the upward trend has thus been mainly in the volume of shipments. The total visible trade deficit for the half-year was £342 million, £36 million more than in the first half of 1956. The difference corresponds roughly with the amounts of delayed imports, so that the real deficit seems to be about the same as last year and, as the freight and insurance element was greater this year, the balance of payments on trade account should be more favourable than the trade statistics might suggest.

European Market Develops

The big drop in exports to dollar markets in June by £4.5 million to £34.4 million, emphasises another feature brought out by the half-yearly trade analysis, namely, the changes in its distribution. In the first half of this year exports to the O.E.E.C. countries rose by 13 percent. In contrast, total dollar exports, which rose by 24 percent last year, were less than 5 percent up in the first half of this year compared with a year ago. The rate of increase to the United States fell from 19 percent to 9 percent, and to Canada from 26 percent to 3½ percent. While this was partly due to fewer deliveries of ships and aircraft, most dollar exports, with the exception of cars to the United States, have grown more slowly this year than last. The most rapid increase has been in exports to the Continent of Europe, particularly to France, Switzerland, Italy, Belgium and Denmark.

In price levels, Britain is still being fortunate. In June there was a continued fall in the price of fuels, reflecting the price advantage of Middle East oil over dollar oil and of lower freight rates, and this led to a further welcome movement in Britain's favour in the terms of trade—the ratio of import to export prices. The import index fell 1 point to 109. With the export index unchanged at 110 for the fifth month in succession, the terms of trade moved down another point to 99, the lowest level since October last year. Apart from a 10-point drop in the fuels index to 128, there were also slight downward movements in the indices for basic materials and manufactured goods. The export index for manufactured goods rose by 1 point to 109.

Drop in Export Credits

Recent expansion in the coverage provided by the Export Credit Guarantee Department does not appear to have stimulated business, for the feature of the latest quarterly figures is the sharp drop in the value of medium-term business. Although there was no decline in business, the value fell from £33 million to £4.9 million in the second quarter of 1957. No explanation is offered in spite of the importance of these medium-term policies, which involve large-scale capital projects and the sale overseas of heavy industrial plant and machinery. Yet the figure is the lowest for two years. Admittedly, the £33 million value of transactions in the first quarter of 1957 was a record, but throughout last year the figures ranged between £17.7 million and £23.2 million for medium-term business.

In the short term, these statistics are difficult to interpret, but one may assume a big fall in the number of capital goods contracts in the more risky markets. The value of all business declared as shipped was £119.4 million in the second quarter of 1957, or 20 percent up on last year. In the first quarter of 1957 the total was £143.5 million.

Finance Bill

At the end of three months' intermittent discussion on the Budget proposals of last April, the Government secured an unopposed third reading for the Finance Bill last week. Alluding to the fact that little alteration has been made in the estimated Budget reliefs of £100 million, the Chancellor of the Exchequer, Mr. Thorneycroft, exclaimed: "How right we were!" The Government had resisted pressure which might have upset the balance of payments position. It could now assert that its policy was rightly attuned to the needs of the moment. Alterations to the Bill in 12 Parliamentary sittings added no more than about £100,000 to the Budget's £97 600,000 tax relief in the current year, and just over £130 million in a full year. In the first 13 weeks of this financial year, some £32 million has already been invested in National Savings towards the £127 million required.

The Financial Secretary to the Treasury, Mr. Powell had some advice to offer during the debate to firms trading overseas. He recalled the Chancellor's rejection of Conservative amendments giving non-resident subsidiaries the minor benefits of overseas trade corporation status in addition to major benefits enjoyed by virtue of not being resident. Some companies might be contemplating repatriating subsidiaries. He urged them to consider whether there might not be some suitable solution within the Bill as now drafted. Such a solution might be on the lines of having a central board of directors in the United Kingdom and a local board managing operations in the overseas territory. In this way a company could qualify as an overseas trade corporation while retaining, through its local board, direct association with the Commonwealth territory. "The Inland Revenue will be prepared to discuss the question, where such a solution would be appropriate in any particular case, with those concerned." The Chancellor and Inland Revenue wished to learn from the experience of working these provisions.

Brevities

Less coal was produced in the week ended 20th July at 3,787,000 tons than in the previous week, but outout so far this year is more than 3 million tons higher than in the corresponding period of 1956.

British aircraft industry exports totalled £52,869 228 in the first six months of the year, with £9 910,307 in June, the fourth highest monthly total ever achieved.

Car output for the first six months totalled 388,572, of which 204,956 were exported, against 412,907 and 181 435 in the same period of 1956. With exports of buses, trucks and delivery vans numbering 62,000, overseas currency worth about £120 million was earned by the motor industry, whose total exports set an all-time record at £220.5 million for the half-year.

COMPLEXITIES IN THE LEVY OF SALES TAX

NEED FOR GREATER UNIFORMITY IN PROCEDURES

(FROM OUR BOMBAY CORRESPONDENT)

VARIOUS problems arising from the levy of sales tax were discussed at a two-day conference here sponsored by the Federation of Indian Chambers of Commerce and Industry. The President of the Federation, Mr. Babubhai M. Chinai, was in the chair. Mr. Y. B. Chavan, Bombay's Chief Minister, and Mr. U. N. Dhebar, the Congress President, also addressed the conference. In his presidential address, Mr. Chinai explained that the main objective of the conference was to explore ways and means of removing some of the irritating aspects of the tax without in any way reducing the revenue derived from it. He said that the mercantile community was not opposed to the sales tax because it was realised that additional resources were required to finance the the second five year plan. But he posed the questions: "Are all these complexities necessary? Should the cost of compliance be so heavy as to drive a wedge between the Government and those authorised to collect the tax on the Government's behalf? Could not the administration be made simpler, the regulations less complex and goodwill nurtured in place of distrust?" Specifically, Mr. Chinai suggested that a uniform definition of the term "sale" be applied in all the States.

Mr. Chinai raised another pertinent question when he asked why there should be a single-point sales tax in some States, a double-point sales tax in other States, a multi-point sales tax in yet other States, while some operate a combination of all three. He went on to say: "Cannot the States agree to a minimum list of luxury articles on which the rate of tax is the same in all the States? The States complain of avoidance and evasion. Is this not largely due to the differences in rates itself?" Mr. Chinai rightly conceded that the demand was not "for rigid uniformity but for uniformity in fundamentals, in the basic structure and procedure. We do not expect complete uniformity in rates, but within limits there is considerable scope for uniformity and co-ordination." In reply to this point, Mr. Chavan said that each of the systems of taxation, the single, double and the multi-point, had their advantages and disadvantages and each State must, therefore, be left free to choose a system which suited it best. On the actual rate of the tax, Mr. Chavan pointed out that some States might find it easy to bear an incidence of 8 percent on ordinary goods while others might find an incidence of even 5 percent too hard to bear.

Incidence of the Tax

Referring to the actual incidence of the tax, Mr. Chinai said that sales tax was essentially a tax on consumption and therefore there was hardly any justification for the exporting State to collect sales tax on goods going out to another State. He said: "Although strictly speaking, there is little justification for a tax to be levied by the exporting State—for sales tax is essentially a tax on consumption—the lack of any provision prohibiting the levy of further sales tax apart from the State in which the goods are ultimately consumed, has caused serious apprehensions in the minds of the business community. Once inter-State sales tax is paid, the goods should be subject to tax only in the consuming State. There should be no tax in the intermediate stages. This question is very vital to trade," he added. Similarly, with goods exported to foreign countries there was an opportunity for the modification of the sales tax regulations. Mr. Chinai pointed out that almost all goods exported from India attracted sales tax at various stages. He cited the example of Western Germany where a cumulative rebate of the turnover tax levied at different stages was given to the exporter. He suggested that the principle of exempting exports to foreign countries from internal levies would not be served if only the last transaction was freed of the sales tax. Mr. Chinai said that the broad objective should be that sales tax levied on goods exported should be refunded in full.

Mr. Chavan, however, did not agree with this contention and said: "I doubt if it can be reasonably argued that because the export of some goods has to be encouraged, no goods which are exported should bear at all any tax or should bear one tax and not another. After all, the tax is a small part of the price of the exported goods." The Chief Minister may be right when he says that the sales tax is but a small part of the total price of the goods exported, but it must be remembered that however small a charge, it has a cumulative effect when considered in conjunction with other charges. The main point is that export prices must be kept down to the minimum. In the case of highly competitive commodities, even a slight increase in the ultimate price is likely to have undesirable consequences.

Conflicting Interpretations

Mr. Chinai also referred to certain ambiguities in the law and the conflicting interpretations of certain provisions. These, he said, had imposed great hardships on the trade and whenever the Federation sought to remove these, a fresh set of complications arose. The Chief Minister conceded that there was considerable scope for improvement and reiterated the Government's decision to appoint a committee which would examine the problem as a whole. "I have no desire at all to defend or to advance reasons for all that is being done for the recovery of sales tax," he said, and added that it would be to the Government's advantage to consult expert bodies like the Federation before arriving at a definite policy.

Cotton Futures Listless

Listless conditions prevailed in the cotton futures market, with interest gradually shifting to the spot section. The Jarilla March contract moved between Rs. 715 and Rs. 720 a candy and the volume of business was restricted. On the other hand, the spot market was lively following a reported scarcity of popular styles such as 320 F, Jaydhar, Lakshmi, Kalyan, Surti and 197/3. Varieties suitable for export were comparatively neglected. Moderate business was reported in Omra Deshi but there were no enquiries for Bengal and Kalagin. But shippers have requested the Government to revalidate some of the existing licences which were not used and subsequently cancelled. It is not likely that the export policy for the new season's growths will be announced until the quality of the crop has been finally assessed. Meanwhile, exporters have also made a request for the abolition of the export duty of Rs. 50 a bale or 30 percent *ad valorem*, whichever is lower, on Zoda, yellow pickings and other varieties which have no spinning value.

Further Orders for American Cottons

The earlier enthusiasm on the 50,000 bale import quota for East African cottons has now subsided and only limited business has been put through. The reason is that American growths are cheaper and easy to obtain. On the lower types of East African cottons like Jinga, Mwanza and Tanganyika which can replace some of the indigenous growths, price is again a deterrent factor. The price differential between East African growths of lower types and their Indian equivalents is computed at around Rs. 200 a candy. The trade here has suggested that higher East African types like B.P. 52 and Bushoga should be included in the recently announced import schedule and the date of shipment be extended by three months to 30th December, 1957. It is believed that business in these varieties will be on a substantial scale. Further orders are being placed for American cottons while only stray transactions have been concluded for Egyptian and Sudanese growths. Importers here are anxiously awaiting a further import quota of 20,000 bales of Egyptian cottons under the special payments scheme. Consumption by mills amounted to 3,535,000 bales of domestic growths and 428,000 bales of imported cottons during the first nine months of this year. On this basis, it is estimated that around 600,000 bales of imported growths will be required for the 1957-58 season. It is believed that most of this quantity will be imported from the United States under the aid programme.

Market Research for Textiles

Meanwhile, the Union Minister for Commerce and Industry, Mr. Morarji Desai, speaking here said that there was a great need to step up market research in a bid to boost India's export trade in textiles. Mr. Desai said that it was essential to offer goods that foreign countries needed. Dress habits and local fashions should be carefully studied and taken into account when producing cloth for the markets concerned. Mr Desai stressed the need for improving techniques and lowering production costs in order to compete in foreign markets. Mr. Desai addressed the All-India Handloom Board and warned that if mill yarn produced for the handloom sector was not consumed by it, the Government would be under great pressure to permit increased production by the mill industry and even allow exports of cotton yarn. It was the Government's responsibility to see that the entire quantity of cloth required for internal production and export was actually produced. It was up to the handloom industry to prove that it was capable of taking advantage of the facilities offered to it, and produce an additional 1,000 million yards inclusive of 300 million yards from *Ambar Charkha* yarn. The Industries Minister pointed out that adequate credit facilities had been made available to the industry. Production and marketing finance from the cess fund was made available to the State Governments till March 1957. Subsequently, the Reserve Bank had agreed to make available the required funds at a nominal rate of interest and the Government had undertaken to subsidise the interest rate and to bear a part of the losses in the case of non-recovery of loans.

Higher Prices for Rayon Yarn

Spot prices of imported and domestic rayon yarns increased by about 6 to 8 annas a lb following the Government of India's decision to refuse import licences to established importers. *Ad hoc* quotas, however, will be issued to actual users. The request to switch import quotas of cotton yarns of 80s and above to rayon yarns has also been refused. There was no effect, however, on the futures market. The August 120d delivery contract fluctuated between Rs 820 and Rs. 825 a case. The October delivery contract was nominally quoted at around Rs. 835 a case. The 2/40 staple fibre August contract declined by Rs. 4 to Rs. 580 a bale and the October delivery contract by Rs. 5 a bale to Rs 585. There was hardly any demand from handloom and powerloom factories because of mounting stocks in consuming centres.

Increased Export Ceiling for Cotton Yarn

The Government's decision to increase the export ceiling for cotton yarn from 5,000 bales to 17,500 bales and to extend the shipment period to 31st December, 1957, has failed to enthuse the market. The export demand for cotton yarn is increasingly limited because of severe competition from Pakistan. The internal demand was also poor.

Castorseed Prices Better

The September delivery castorseed contract moved in sympathy with the demand for castor oil from the United Kingdom. The contract opened at Rs. 169.25 and increased to Rs 176.50 on reports of U.K. enquiries for oil. The price of B.S.S castor oil increased by £3 a ton to £154 and moderate business was transacted at this rate. The demand, however, was soon satisfied and the U.K. buyers withdrew from the market. The September castorseed contract then fell to Rs. 171.25 towards the close. Arrivals of castorseed and oils from upcountry centres were comparatively small, which helped to sustain the spot market. Arrivals of groundnuts and groundnut oil continued to be small because of the higher prices prevailing in the producing centres. On the other hand, vanaspati manufacturers and crushers were eager buyers. This imparted strength to the spot and the futures market.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

Jute

PORT TROUBLES HAMPER SHIPMENT OF JUTE GOODS

NEED TO AVOID DELAYS IN SUPPLIES

FURTHER reflections on the U.K. jute goods trade have been prompted by the latest series of questions put to the President of the Board of Trade in the House of Commons by members interested in the Dundee industry about the recent cuts in the selling prices of foreign goods. Why, they asked, did the Government take this decision when unemployment figures were so high? As a result of protection being reduced, these figures were liable to rise further, so the Government was asked what steps it proposed to take to rectify this. Almost the only remedy mentioned was increased diversification of the industry. Meanwhile, the question has arisen whether Indian bags and sacks can compete effectively with paper bags. This question has been passed frequently in the past, but has never been answered satisfactorily. Present indications are that world demand for jute goods has not shown any substantial increase.

If the fight against substitutes is to continue, the availability of goods is of paramount importance. In this, India is badly handicapped by her poor port facilities and her labour troubles. Overseas consumers, having ordered gunnies for a certain shipment period, are not prepared to wait for weeks afterwards before those goods are shipped. The eventual delay will make them hesitate before ordering more from the same source, which has such an uncertain delivery position. They will be forced to look elsewhere for their requirements, and probably go in for substitutes, the manufacturers of which will be able to give reasonably accurate delivery dates. Before India can hope to compete or take advantage of the present situation, the shipping problem must be dealt with first. This question is causing serious embarrassment to the trade.

Payment for Raw Jute

Raw jute sellers have shown considerable anxiety during the past few months over the failure of several buyers to fulfil their contractual obligations under the reimbursement clause. Delays in payment have been frequent, and in many cases they have caused heavy financial losses to sellers who have had their money blocked in this way, as payment of interest against advances, either through their bankers or brokers, has nullified any profit they may have made on the transaction. With this in mind, various sellers' associations have passed a resolution recommending that their members insist on payment as laid down in the reimbursement clause of the standard I.J.M.A. contract. Failure of a buyer to comply with these terms will mean the immediate submission of the case to arbitration. To counteract this move, business has been done by some mills on the basis of the market price, plus a set premium over and above the contract price for payment at 60 days' sight.

THE JUTE MARKETS

Conditions were quiet in the jute goods and fibre markets during the past week. Gunnies showed a gradual decline in the absence of foreign or local demand. Speculators found difficulty in operating and it seemed that the bullish sentiment had disappeared. Raw jute prices reacted in sympathy with gunnies, but sentiment in the former was stronger. Fibre business was reported almost daily and it helped maintain confidence.

Manufactured Goods: The gunny market was dull, the outlook being governed by delays to shipments at Calcutta port. These delays caused considerable embarrassment, so prices declined, especially for forward shipment. The nearer deliveries were temporarily maintained on account of speculative activity before the end-of-the-month fatka settlement. Quotations last Thursday showed ready B Twills at Rs. 115 and October-December shipment at Rs. 113.60. Hessians were also easier, with 40in. 10oz. on offer at Rs. 42.25 and Rs. 42.35 for the near and forward positions, respectively. Over the next few days, prices in all sections and for all deliveries showed a gradual decline, with forward shipment leading the way. By Saturday morning, forward B Twills were at a discount of Rs. 2 which widened to Rs. 2.50 by Tuesday, when July shipment was quoted at Rs. 114.30. At the close, the market was weak, with no overseas interest, and mills were not offering at the prevailing rates.

On Wednesday morning, the goods market showed a slight improvement, and opening quotations were as follows:

	Ready	August	Sept.	Oct.-Dec.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	34.10	34	34	33.80
40in. 10oz.	41.62	41.90	41.80	41.80
B Twills	114.90	113.40	113	112.40
Heavy Cees (Plain)	114.40	114	113.75	113
A Twills	137	137	137	137
Liverpools	126.25	127	127	127
Cornsacks	116.75	116.40	116.20	114.80

Raw Jute: In contrast to the manufactured goods market, there was a fair amount of activity in raw jute. Calcutta mills bought small lots daily at falling rates. Those which were not interested in jute under contract were active in the local Cossipore markets through their agents. Thus confidence in this section was maintained in spite of the weakness of the gunny market. Prices, however, reacted in sympathy towards the week-end but only small business was reported at the lower rates. Many sellers continued to hold bullish ideas, which was unusual for a time of year when the nearness of new crop arrivals normally tends to pull down the market. The decline in imports in Cossipore, coupled with the activity in local markets and the consequent drop in stocks, prompted sellers to remain bullish. Opening quotations last Thursday were based on new crop Assam jute at Rs. 31 a maund for August shipment, but this price was discounted by 50 nP on successive days. By the week-end, business was being done at Rs. 30. Sellers were reluctant to discount any more, and after the week-end rates remained constant in spite of the depressing influence of the goods market.

Business consisted mainly of new crop transactions. Jute from the Dhubri, Northern and Assam areas varied in price from Rs. 31.50 and Rs. 31 for ready bills of lading, down to Rs. 28.75 for September-October shipment. Daissee was done at Rs. 30 for October shipment, and the same price was paid for Daissee white for September shipment. Old crop jungli mesta came in for some interest, and business was done at Rs. 21.50 to Rs. 22 for X Bottoms, the higher rate being for payment at 60 days' sight. Small lots of Northern and Assam Tops and Middles passed at Rs. 35 and Rs. 32.50 on a similar basis. The price of Pakistan cuttings varied from Rs. 101 to Rs. 98 a bale.

At the close, the market was unchanged, and quotations on Wednesday morning were as follows:

Indian Jute	Landed at Mills Rs. a md. basis Bottoms	Shipment
New Crop:		
Assam	30	August
Northern	30	"
Old Crop:		
Purnea Desal	29.50	"
Purnea Jungli	27	"
Daissee	31	"
Assam Tossa	31	"
Murshidabad Tossa	30.50	"
Jungli Tossa	29	"
Northern ex Calcutta	30.50	"
Local Packing	28	"
Mesta:		
Assam	29	"
Northern	29	"
Desal	29	"
Daissee	28.50	"
Murshidabad	27.50	"
Jungli	26.50	"
Bimli F.A.Q.	27	"
Pakistani Cuttings N C's	101	"

Although imports in the Cossipore markets improved slightly last week, wagon arrivals were still less than at this time last year. For the week ended 30th July, arrivals were 345 wagons. In the previous week, they were 280 wagons, but during the corresponding week of last year, 475 wagons reached the Cossipore sidings. Good business was reported by mills' representatives and prices were well maintained. Raw jute stocks in Cossipore remained at 75,000 or 80,000 bales, most of which were low quality jute and jungli mesta. High-grade supplies were practically unobtainable, and good prices were offered for jute in this category.

MARKETING AND TRANSPORT OF JUTE IN INDIA

OVER three quarters of all jute produced in India are sold at the grower's hut within the first four months of the marketing season. This is one of the many findings recorded in the Indian Central Jute Committee's report on the marketing and transport of jute in India (revised and enlarged) just published. Pressure from creditors is said to be the main reason for early disposal of jute by cultivators while preference for sales at the grower's home is dictated mainly by considerations such as difficulties of rural transport and smallness of individual offerings. Besides diversity of weights, arbitrary deductions and the absence of storage facilities at the secondary markets tend to encourage cultivators to stay out. Explaining the lack of staying power of the jute growers, the report points out that the co-operative credit now available constitutes an insignificant proportion, roughly 3.1 percent, of the total borrowings by cultivators. As the societies advance loans on the security of land, cultivators with bigger holdings are the principal beneficiaries of co-operative credit, but the majority owning tiny holdings tend to be neglected because they are not considered creditworthy according to present security requirements. In order that the main purpose of the co-operative credit system, which is to release needy growers from the clutches of professional moneylenders, may not be frustrated, the report recommends relaxation of the relevant rules on security provision for loans.

Regulated Markets

A large number of improper deductions and allowances, both in cash and kind made in the secondary and terminal markets are passed on wholly or in part to growers. The establishment of regulated markets with warehouses for storing growers jute will enable sellers to get a fair proportion of the Calcutta landed price. To relieve pressure on the railways which so often causes bottlenecks in the transport of jute, the report suggests the early development of the river and road transport systems. Movement of jute prices at different points of marketing has been studied and the basis of price structure analysed. Priced at Rs. 8 (12s), the revised report incorporates a number of new features like the effect of partition on raw jute supply in India, special measures taken by the Government to meet the requirements of the jute industry and recent changes in marketing practices, and also a wealth of statistical information which will make it an invaluable book of reference to the jute trade and industry. The credit for the bulk of revision work goes to Mr. S. M. Gupta, Marketing Officer of the I.C.J.C., who was also a co-author of the previous edition published in 1940. Copies of the report are available from the Publicity Officer, Indian Central Jute Committee, 4, Hastings Street, Calcutta 1.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 20th July 1957	1,396.9	21.578.4	22,975.3
1st to 20th June 1957	939.9	19.076.7	20,016.6
1st to 20th May 1957	2 250.5	12,773.1	15,023.6
	Sacking		
1st to 20th July 1957	20,702.7	1,084.9	21,787.6
1st to 20th June 1957	19,426.3	946.8	20,373.1
1st to 20th May 1957	16,334.1	1,015.3	17,349.4

THE PAKISTANI JUTE MARKETS

INCREASE IN FIBRE PRICES

(FROM A NARAYANGANJ CORRESPONDENT)

THE Pakistani mills, which are the biggest market factor for jute in East Bengal, are to be partly blamed for the recent increase in fibre prices. They have suffered, as have so many balers, from the non-delivery of contract jute, and as a result, are purchasing freely in the open market to satisfy their requirements. The loose jute market is steady at Rs. 32-4 for B Bottoms. Meanwhile, encouraged by high prices, traders are still wetting the fibres and they appear to be withholding the higher qualities as they did last year. The result is that the jute which gets wet anyway in transit due to heavy rains is arriving in an appalling condition. Furthermore, all the croppy and heavy rooted material is being sold in Narayanganj whereas the better stuff is remaining in the hands of upcountry stockists.

It is hard to decide on the policy for the next few months of this season. The bulls think that prices will remain steady. The mills are regular buyers and the *beparis* are still strong financially. Overseas buyers of certain destinations are short of jute. Finally some balers have sold at good prices and even at Rs. 32 for B Bottoms, they can afford to buy freely. On the other hand, from the bears' point of view there is hardly any doubt that £110 for Export Firsts at this time of the season and in comparison with the gunny market, is out of all proportion and far too high to allow buyers to purchase freely. In spite of the late crop, imports are increasing and should arrive in quantity very soon.

Opposing Views

The trade is fairly evenly divided in its view of the market and the two opposing views hitherto expressed are more or less as mentioned. But it would appear that the logical outcome would be for prices to come down. This is because when imports arrive in quantity, they must be larger than the combined requirements of the mills and balers who have sold at high prices. Furthermore, when the quantity does arrive, the very serious financial restrictions which have been placed on most balers will almost certainly be felt. There are indications that the very attractive prices being paid for afloat jute are tempting certain elements of the trade to despatch as much as possible unsold and conversely to restrict their sales for shipment jute. If stocks of afloat jute reach large proportions, which is quite possible, the market might collapse, and in sympathy the market for shipment jute is also likely to come down.

Inter-baler business in Narayangunj remains restricted partly due to a shortage of jute in the stockists' hands. E.P.C. registrations for the next month or so will unfortunately not give a true picture of purchases since it is felt that a fair proportion will be shipped unsold. The Karachi gunny market remains weak and there has been some nervous unloading by stockists at reduced prices. The biggest mill quotes nominally Rs. 119 ex-mill but the true market for B Twills is Rs 145 ex-Karachi godown. This, brought down to ex-mill prices, is approximately Rs. 113-8, which is arrived at as follows: Rs. 12-8 for freight and landing charges from Chittagong to Karachi, Rs. 12 for sales tax and Rs. 7 for excise duty. The Pakistani charges for getting goods f.o.b. are about Rs. 1-8 a 100 bags so that the internal market f.o.b. price for B Twills is approximately Rs. 115 which is not really higher than Calcutta's. Report that a steamer has been chartered to take large quantities of B Twills to Karachi is likely to weaken the market further in spite of the fact that most of these B Twills will not be for sale but will be shipped against previous sales to Government departments.

Plantation Topics

EXPANDING U.S. DEMAND FOR TEA

INCREASED EXPENDITURE ON PUBLICITY

THE year 1957 marks the seventh successive year of the tea promotion campaign in the U.S. market. It also marks the year in which the four partners in the U.S. Tea Council—India, Ceylon, Indonesia, and the U.S. tea trade—have, because of competitive pressures and increasing advertising costs, increased the total amount of money available by about 50 percent, the chairman of the Council, Mr. R. B Smallwood says. Before the formation of the Council, the U.S. tea industry experienced a downward sales trend for over 50 years. Following the second world war, tea consumption in the U.S.A. was at its lowest level since 1828. For four years after the war "consumption stayed just about even." Then the Council came into being. Since its advent, grocery store sales have increased from 69.3 million lbs in 1950 to 79.6 million lbs in 1956. This represents an increase of 15 percent. "Total market has increased from 96 million lbs in 1950 to 105.9 million lbs in 1956, or a total increase of 10 percent. These are significant figures indicating significant gains in the highly competitive market place. When the Council was first formed, the partners agreed that it might take a full five years before any action countering the former downward trend would be possible. We feel that the gains that have been made in the first seven years of the industry-wide operation are indeed happy ones—and that the future looks bright," the chairman says.

Consumer Advertising

The Council's objective is to increase tea consumption in the U.S.A. Last year imports of tea amounted to 101.7 million lbs and total sales were 105.9 million lbs. "However, for two years we have been just about holding our own. The 106 million lbs level is a good level in one sense, since it is the second highest rate of use we have had in the U.S.A. But we cannot stand still. We will either get bumped from our 106 million lbs sales plateau, or we will haul ourselves upward once again," the Council's annual report says. The Council's programme aims to increase consumption through advertising which, according to its 1956 budget, amounted to 76 percent of its expenditure, and publicity which was about 8 percent. The balance of its funds was spent as follows: "merchandising"—to stimulate special interest groups to pay more attention to tea which amounted to 8 percent of its expenditure. Research accounted for 2 percent—and administration 6 percent. The Council's major programme is consumer advertising. In 1951-52, a successful formula for tax advertising was developed, which called for concentration of the Council's effort in a limited number of markets "to provide enough impact, weight, and depth of impression to move the consumer to action." Increased advertising costs have been slowly forcing the Council to compromise that formula since 1954. But bold action was taken in 1956 to restore the campaign to its former level of effectiveness.

Consumer Advertising*

Year	Magazine	Newspaper	Radio	Television	Outdoor	Total
1950	475,296	227,945	——	——	——	703,241
1951	490,074	207,506	7,920	7,775	——	713,275
1952	310,252	122,654	33,327	303,503	115,574	885,310
1953	——	——	——	806,480	——	806,480
1954	——	——	——	1,153,490	——	1,153,490
1955	——	——	——	909,714	27,821	937,535
1956	——	——	9,652	906,410	32,416	948,478

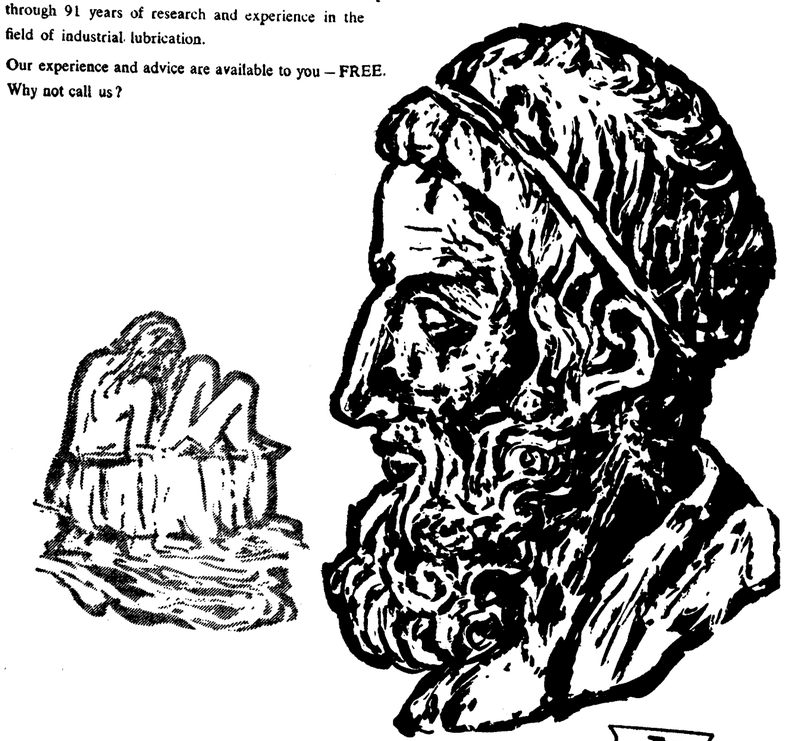
* These are consumer media expenditure figures only. They do not contain any of the expenditures for trade advertising, point of sale advertising materials, production charges and other such advertising costs since comparable figures are not available for all years.

Limited Coverage

In 1952, "the Council recognised that with a product as low in consumer interest as tea, with our competitors outspending us about 50 to 1, and with the money available for tea, it was necessary to switch our advertising approach from national coverage to a market-by-market approach." After a series of tests in 1953, television became the Tea Council's basic medium limited in coverage to major markets. Instead of a broad coverage, it went after a heavy depth of penetration in a smaller area. Then, as in 1956, the Council concentrated its hot tea advertising in 11 or 12 basic markets accounting for 37 to 40 percent of U.S. food store sales. For iced tea it has been expanding its coverage to include an additional 18 or 19 of the important markets.

Increased Spending

It has been clear since 1955 that some positive action would have to be taken—either an increase in the advertising fund or a reduction in the scope of the advertising programme. The united decision by all members of the Council to increase their contributions assures the continuation of an effective campaign for tea, both hot and iced, in the U.S. market. In 1957, the Council is to spend about $1,800,000 on its consumer advertising programme. "That is roughly an $800,000 increase over the money available for consumer advertising in 1956," the report says.



COCHIN TEA SALES

At Sale No. 20, 950,000 lbs of tea were on offer. There was much less demand. Low Mediums and Mediums were irregularly 10 nP easier. Fanning grades were the weakest feature of the Sale. Best Liquorings were barely steady while Whole Leaf types remained much easier.

That leisurely bath...

...may have *started* Archimedes thinking—but it took years of expert, scientific investigation to establish *The Law of Specific Gravity*. So too, MOBIL products started in a small way—but have grown to leadership through 91 years of research and experience in the field of industrial lubrication.

INCREASED PRODUCTION OF COTTON YARN

WORLD TRADE IN PIECEGOODS EXPANDS

COTTON yarn production in those non-Communist countries for which figures are regularly available, including all the principal cotton textile exporting nations, was about 2½ percent greater in 1956 than in 1955. This rate of expansion was maintained in the first quarter of 1957, according to the Cotton Board's latest *Quarterly Statistical Review*. As frequently happens, the conditions experienced by the north American cotton industries are the reverse of those operating in the rest of the world. Cotton yarn output in the United States and to a lesser extent, Canada, is running below the level of a year ago. In contrast, output in Japan and India has registered a considerable increase, and the United Kingdom, all the western European countries except Portugal and most other countries with the exception of Hongkong also produced more cotton yarn in the first quarter of 1957 than in the corresponding period of 1956.

Exports of cotton piecegoods from the main non-Communist exporting countries in the first quarter of 1957 were maintained at the relatively high level reached in the preceding quarter, and exceeded the volume of trade done in the first quarter of 1956 by about 7 percent. This result is all the more striking in that Japanese exports were less than in either the preceding quarter or the corresponding quarter of last year. This main influence behind the increase was a further sharp expansion in shipments from India, while exports from the United States, Hongkong, Pakistan, France and Portugal were also well above the level reached in the first quarter of 1956. On the other hand, there was little change compared with a year ago in the rate of exports from the United Kingdom and the Netherlands, and German and Italian shipments appear to have declined. World trade in piecegoods of man-made fibres in the first quarter was well below the record level reached in the final quarter of 1956 but was about 11 percent greater than the 1956 first quarter total. Japanese exports were well below the previous quarter's figure but showed a considerable expansion compared with a year previously. Exports from virtually all the Continental countries were greater than in the first quarter of 1956, but shipments from the United Kingdom and, probably, the United States were slightly less.

Backlog of Orders

The continued buoyancy of the home trade has to a certain extent counteracted the effects of the stagnation in export demand and the steep rise in imports. As a result, the volume of new orders received by the producing sections of the British cotton industry up to about the end of May was not unsatisfactory and the overall decline in order books has been fairly small. The fine-yarn section of the industry has been shortest of orders in the last month or two because of the lack of confidence in the price level of long-staple cottons. Producers generally have been fully engaged in working off the backlog of orders. In the spinning section, the output of cotton and cotton waste yarns continues to increase, the May level being the best for over two years. The output of spun rayon yarns has not been as great as in the first two months of the year; but there has been a compensating increase in the level of production of blended yarns. Whereas yarn output in the first four months of this year was 4 percent greater than in the same period of 1956, cloth output remained virtually unchanged. The proportions of cotton cloth on the one hand and rayon and mixture cloth on the other hand, have not altered very much since last autumn, but comparing the first four months of 1957 with the corresponding months of 1956 cotton cloth output has increased by 2½ percent, while rayon and mixture cloth output has decreased by 6 percent. The decline in the output of colour-woven cotton cloth is worthy of note. At the end of April the labour force in the weaving section of the industry showed a decrease of 6,600 compared with 12 months previously, whereas the net loss of labour in all other sections of the industry over the same period was only 700.

Piecegoods Exports

Exports of cotton piecegoods from the United Kingdom in the first quarter of this year were rather less than in the final quarter of 1956, and there was little change in the rate of shipment in April and May. The volume of exports so far this year has been, however, almost identical with that in the corresponding months of last year. First quarter shipments to Burma compared unfavourably with the previous quarter's level because of the completion of deliveries under the special "triangular" arrangements. Exports to the largest markets in the first quarter were much the same as in the corresponding period of last year. The main changes were in shipments to the medium and smaller markets, upwards in the case of New Zealand, Scandinavia, Ceylon, Indonesia, the Belgian Congo, French Africa and Cyprus, and downwards in the case of Rhodesia, British East Africa, India and the United States. Exports of piecegoods of man-made fibres (including mixtures) in the first quarter of this year were rather greater than in the previous quarter but less than in the corresponding quarter of 1956. Compared with the first quarter of last year, shipments to Australia and British West Africa have fallen off rather sharply. The sizeable trade with Indonesia appears to have virtually disappeared, but shipments to Cyprus have been fairly heavy. Cotton yarn exports continue to be well maintained.

The expected sharp increase in imports of cotton piecegoods materialised in the first quarter of this year, the volume being swollen by goods delayed by the closing of the Suez Canal. The quantity imported during the quarter has only been exceeded in one other quarter, and that was at the height of the scramble for supplies in 1951. India and Japan accounted for most of the increase in the first quarter; arrivals from Hongkong have been remarkably steady for the last 12 months. So far the industry has had little success in its efforts to persuade India, Pakistan and Hongkong to limit their exports to the United Kingdom.

U.S. Recession Continues

The U.S. cotton industry still appears to be suffering from a recession in demand. With stocks of finished products at an uncomfortably high level, prices falling and margins narrowing, production schedules have had to be cut back further. Leading firms in the industry have reported smaller profits and have reduced dividends. In the first quarter of this year, spinning mills consumed 9 percent less cotton and 8 percent less rayon staple than a year previously, though consumption of synthetic staple was about 11 percent greater. Tyre cord and fabric production in the first quarter was 5 percent less than in the corresponding period of 1956; this, however, represents a considerable recovery from the position in the fourth quarter of 1956, when production was 19 percent less than in the corresponding period of the previous year. The latest figures of fabric production relate to the fourth quarter of last year, when cotton cloth output showed a drop of about 5 percent in comparison with a year earlier, rayon cloth output one of 20 percent (as much as 44 percent in pure spun fabrics) and nylon cloth output one of 24 percent, though this latter figure represents a considerable improvement over the previous quarter's performance. More recent reports speak of a measure of recovery at least in the man-made fibres section of the textile industry.

There was a further moderate increase in the level of exports of cotton piecegoods from the United States in the first quarter of this year, and the volume of goods shipped remained greater than it had been a year previously. There is little doubt that the main reason for the improvement has been the equalisation payments made by the Government to exporters of cotton products. The most significant increases over the past 12 months have been in shipments to Canada, the Philippines and South Africa. Once again there appears to have been little change in the quantity of piecegoods of man-made fibres exported. The restrictions imposed by the Japanese on their exports to the United States have been so effective that American imports of cotton piecegoods from that source in the fourth quarter of last year were less than half the level reached in the first quarter.

Overproduction in Japan

Output of cotton and spun rayon yarns and of cotton and rayon fabrics in Japan in the first quarter of 1957 were slightly less than the postwar record figures recorded in the fourth quarter of 1956, but remained at a very high level. Once again the Japanese textile industry appears to be moving into a phase of overproduction. With domestic offtake disappointing, stocks have been mounting and prices falling. Both rayon and cotton have been affected. The output of rayon staple has been curtailed since April, and the curtailment of filament yarn production has also been considered. Overproduction in the cotton sector may be met by a cut in raw cotton imports. It is reported that this step may have to be taken because of the shortage of foreign exchange, but that it would get the support of the spinners, who wish yarn production to be reduced.

Japanese exports of cotton piecegoods totalled 334 million square yards in the first quarter of 1957 compared with 363 and 382 million square yards in the first and fourth quarters of 1956, respectively. A slight improvement in the rate of export to an average of 114 million square yards a month in April and May has been reported. Exports to the United States continued to shrink in the first quarter and almost all the other main markets took smaller quantities than in the preceding quarter, though shipments to Indonesia and Hongkong expanded. More recently it has been reported that Indonesia has stopped issuing import licences because of the shortage of foreign exchange. Exports of rayon piecegoods in the first quarter of this year totalled 276 million square yards, compared with 236 and 334 million in the first and fourth quarters of last year, respectively. Shipments to most of the main markets declined, in particular British West Africa, Hongkong and Indonesia, but trade with South Africa continued its steady expansion.

Japanese exports to Australia should benefit substantially by the reported agreement whereby Australia will grant Japan most-favoured-nation stutus. The Japanese are likely to make gains at the expense both of the Australian textile industry and of other exporting countries, of which the most important in this market are the United Kingdom and India.

Textile Output in India

Indian Mill production of cotton yarn and cloth has continued to forge ahead so far this year. The first quarter's figures showed increases of 133 percent and 9 percent, respectively, in comparison with the first quarter of 1956. This overstates the real expansion, however, as production in January 1956, was seriously affected by civil disturbances in Bombay. The Government is reported to be considering the possibility of increasing the number of spindles, the increased production being earmarked for export. There have been numerous reports of slack domestic demand and mounting stocks of cloth, usually attributed to the increased excise duty on mill-made cloth. This may account for the big increase in exports which was recorded in the fourth quarter of 1956 and which is understood to have continued in the first quarter of this year. The markets which took greater quantities of Indian cloth in the fourth quarter in comparison with both the preceding quarter and the corresponding quarter of the previous year include the United Kingdom, Aden, Burma, Singapore, the Sudan and Ethiopia. On the other hand, shipments to Indonesia continued to shrink.

Large Production in Western Europe

The Continental cotton industries continue to fare better than the British industry. Cotton yarn production in these countries, considered as a whole, in the first quarter of 1957 was about 11 percent greater than in the first quarter of 1956, the corresponding increase in British production being less than 4 percent. In most of the Continental countries the rate of increase in the output of yarns and fabrics of man-made fibres has been even greater than that of cotton goods. The greatest expansion over the last 12 months—of the order of 15 to 20 percent—has taken place in Italy and France. There are continued reports that the French Government intends to restrict imports of raw cotton in the interests of the balance of payments and to compel the substitution of rayon staple. The output of the German and Belgian industries continues to expand at a fairly rapid rate, but the labour shortage in the Netherlands has confined the increase in production to comparatively small dimensions. Portugal is virtually alone in having suffered a decline in output over the last 12 months.

Western European exports of cotton piecegoods in the first quarter of 1957 are estimated to have been much the same in total as in the preceding quarter and perhaps 6 percent greater than in the first quarter of 1956. French exports appear to have been stabilised at the markedly improved level reached in the final quarter of 1956. Portuguese exports, too, have expanded, thanks in part to increased trade with Scandinavia. Belgian and Dutch exports remain at a high level, mainly because of an expanding trade with each other. In the case of the Netherlands, this has compensated for a decline in shipments to Indonesia. German and Italian exports appear to be steady at a comparatively low level. The main feature of the German trade is the marked increase in exports to the Netherlands, while France was the largest market for Italian exports of cotton goods in the first two months of this year.

Exports of piecegoods of man-made fibres from western Europe in the first quarter of this year were slightly less than in the preceding quarter but about 12 percent greater than in the corresponding period of last year. German exports appear to have declined sharply in the first quarter to about the same level as in the first quarter of 1956. There was probably little change in the level of French and Italian exports, but Dutch, Belgian and Austrain exports have expanded in the course of the last 12 months.

WHOLESALE PRICE INDEX UNCHANGED

THE official wholesale price index (base: year ended March 1953=100) remained stationary at the previous week's revised level of 111.3 during the week ended 13th July. The index was higher by 0.8 percent and 8 percent, respectively, compared with the corresponding week of the previous month and that of a year ago. Prices of potatoes in Mandi (+12%) and in Shillong (+5%), bajra in Anakapalli (+9%), onions in Delhi (+8%), mustard oil in Delhi (+7%), ragi in Bangalore and salt (+6% each), gram in Delhi (+5%), tea (+3%), jowar and fish (+2% each) and barley, mung, masur and betelnuts (+1% each) showed increases while milk in Ludhiana (−21%), turmeric in Cochin (−17%), urd in Bombay (−11%), potatoes in Delhi (−10%), eggs in Bombay (−7%), wheat in Dhanduka, Rewa and Delhi and black pepper in Cochin (−5% each) and arhar, ghee and coffee (−1% each) moved down, and as a result, the index for Food Articles showed a slight fall from 110.7 (revised) to 110.6. The index for the Liquor and Tobacco group remained stationary at the previous week's level of 94.3. The index for the Fuel, Power, Light and Lubricants group rose by 2.4 percent to 114.2 compared with 111.5 (revised) for the previous week due to an increase in the prices of coal (+7%) and castor oil in Kanpur (+4%). The price of castor oil in Bombay (−5%), however, moved down. The index for the Industrial Raw Materials group receded by 0.2 percent to 120.5 compared with 120.8 (revised) for the previous week. Items which showed significant variations were: groundnuts in Hyderabad (−7%), raw wool in Fazilka (−5%), raw cotton and lac (−3% each), raw jute (−2%), cottonseed in Hyderabad (+13%), linseed in Kanpur (+12%), copra in Kozhikode and raw skins in Delhi (+6% each), tanning materials in Calcutta (+5%) and rapeseed (+4%). Higher prices of 40s cotton yarn in Calcutta (+7%), zinc in Bombay (+6%) and lead (+4%) pushed up the index for Intermediate Products by 0.3 percent to 108.7, compared with 108.4 (revised) for the previous week. The prices of tin (−4%) and copper (−3%), however, moved

CONTROLLING RISE IN GRAM PRICES

The Government of India in exercise of its powers under the Essential Commodities (Amendment) Act, has issued a notification with a view to controlling the rise in prices and preventing hoarding of gram, including split gram and its products in the States of Punjab, Rajasthan and 15 districts of Uttar Pradesh. These are: Saharanpur, Muzaffarnagar, Meerut, Bulandshahr, Mathura, Agra, Mainpuri, Etah, Farrukhabad, Etawah, Jhansi, Jalaun, Banda, Aligarh and Hamirpur. The notification states that the price at which gram, including split gram and its products, will be sold in any of these localities will be in accordance with the provisions of sub-section 3(A) of the Essential Commodities (amendment) Act. Under this sub-section, the Government can compel any stockist to sell at the average price of the past three months in the particular locality—not the prevailing market price on the date of sale. The notification will remain in force for a period of three months.

Calcutta Markets

FAIR GENERAL DEMAND AT TEA EXPORT SALE

EASIER TREND IN DUSTS

AT Sale No 8, held on 29th and 30th July, offerings at the Export auction consisted of 47,587 chests. There was a fair general demand, but buyers followed quality closely. Although there were some withdrawals, bright liquoring teas of all categories were well supported and were generally firm. Plain and low medium teas met with a fair enquiry but prices declined by 10 to 15 nP depending on quality. The very best CTC's were well supported, but teas of this description with plain liquors were 30 nP and sometimes up to 50 nP easier. There was fair support for the whole leaf grades and Darjeelings but these shared in the general decline and the more flavoury Darjeelings and tippy teas were irregular.

Quotations

	1957 Rs.	1956 Rs.
Clean Black Pekoe	2.40	1 15 0 to 2 0 0
Plain B. P.	1.80	1 9 0 to 1 9 6
Plain Fannings	1.68	
Medium B. P.	2.00	2 4 0 to 2 6 0
Medium Fannings	2.05	
Best Assam C.T.C. B.P.	3.50 (Nom.)	4 0 0 to 5 0 0
Best Assam C.T.C. Fgs.	4.00 to 4.25	(Nom.)

At the Internal Sale, 19,207 chests of Dust were on offer. There was less demand and the market was generally quieter. Prices for almost all descriptions were easier. There was an increased weight of CTC Assams on offer and these met with much less demand and with the exception of the very best, prices were often 30 nP below valuations. Towards the close of the Sale, demand further weakened and there were some withdrawals. Bright liquoring Orthodox Assams showed the least decline but the plain liquoring teas from this district together with Commons and Dooars were up to 10 nP easier.

Quotations

	1957 Re	1956 Rs.
Medium Dooars Dust	1.50 to 1.60	1 7 0 to 1 8 0
Medium Assam Grainy Dust	1.60 to 1.70	1 9 0 to 1 10 0
Medium Assam C.T.C. Dust	2.10 to 2.40	
Best Assam C.T.C. Dust	2.60 to 3.00	3 0 0 to 3 4 0

There was only a fair demand for the 682 chests of Leaf on offer.

FALL IN FREIGHT RATES CONTINUES

THE freight markets continued to deteriorate last week. Trans-Atlantic coals declined to 34s while Empire type tonnage was fixed at 16s 9d for five to six months' trading, which shows a fall of 10s 9d a d.w. ton since May. Pakistan was in the market for Australian wheat and paid 80s from South Australia for August-September loading which appears to be a high rate compared with 80s from West Australia to the Continent. Mormugao-Gdynia was done at 72s 6d f.i.o., and East Coast India-Japan was reported to 76s. Mormugao-Italy paid the low rate of 60s f.i.o., and Calcutta-Northern Range $(U.S.)12.25 gross terms. Much activity at ports has followed the recent meeting between the Government and shipping interests, but it is a matter of great concern that the Secretary, Central Ministry of Transport, when speaking of Visakhapatnam gave the delays there for ore loaders as seven to 21 days against the actual of 35 to 40 days, and for steel discharge eight to 20 days, against an average of 60 tons a day discharge which means a turn-round of over two months. Similarly, in Calcutta, detention to ships has been underestimated by the Port Commissioners by as much as 50 percent.

HIDES AND SKINS QUIET

The market was quiet. Stocks were less than in the previous week.

Bazaar Sales

(Between 23rd July and 29th July, 1957)

Cowhides: Wet salted (Ord.) 10,700 pcs. on the basis of Rs. 7.50 to Rs. 10.50: Wet salted (Slaughtered) 15,500 pcs. on the basis of Rs. 12.00 to Rs 21.00.

Goatskins: Wet salted (Daissee, killed) 84,940 pcs. on the basis of Rs. 280 to Rs. 300, Rs. 330 to Rs 355 and Rs. 375 to Rs. 390: Assam-Dinajpur 9,300 pcs. on the basis of Rs. 350 to Rs. 380: Purneah-Kissenganj 500 pcs on the basis of Rs 278: Muzafferpore-Patna 33,300 pcs. on the basis of Rs. 320 to Rs. 325.

Bazaar Stocks

(29th July, 1957)

Cowhides: Wet salted 2,35,000 pcs.

Goatskins: Wet salted (Daissee, killed) 83,900 pcs: Assam-Dinajpur-Murshidabad 34,000 pcs: Muzafferpore - Patna - Pakur - Purneah - Kissenganj 63,000 pcs.

SUGAR MARKET RISES

During the week ended 31st July, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 1,500 bags and stocks fell 35,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs 37-12 for ordinary grain and Rs. 38-8 for big grain. Futures rates were Rs 37-10 and Rs 37-6 d. respectively. The market rose due to arrivals and low stocks.

LINSEED STEADIER

ly conditions were last week maintained, rices advanced somewhat. Arrivals were or and scarcity of goods was the chief fea- the market. Sellers were very reserved; and despite a keen interest from buyers, the weekly turnover was small. A firmer tendency was noted in the oil section, and there was a good demand from local buyers. Activity was very limited due to the paucity of ready goods. Latest quotations were as follows: July-August Rs. 23 a maund and August-September Rs. 23-4 a maund.

SHELLAC FIRM

During the week ended 30th July, the market was quiet at the beginning, and firm at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 85 buyers, 92 done.
Lemon No. 1 Shellac	Rs. 88.50 buyers, 93 done and buyers, 95 buyers.
Lemon No. 2 Shellac	Rs. 84.50 to 90 buyers.
F. O. Std 1 Shellac	Rs. 79.50 buyers, 81 done and buyers, 86 buyers.
Pure TN Shellac	Rs. 74 buyers, 77, 80 basis done and buyers, 82 buyers.
4% I. T. N Shellac	Rs. 66 to 75 buyers.
No. 1 Kusmi Seedlac	Rs. 83 to 90 buyers.
No 2 Kusmi Seedlac	Rs. 78 to 85 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 76 done and buyers, 82.50 buyers.
Fine Bysaky Seedlac (C. P.)	Rs. 70 to 78 buyers.

Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the earnest money deposit receipt with the tender.

GENERAL MANAGER

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

ASSAM OIL COMPANY

COMPANY AND PUBLIC NOTICES

DALMIA CEMENT (BHARAT) LIMITED
(DALMIAPURAM)

NOTICE is hereby given that the Fifth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Dalmiapuram (Distt. Tiruchirapalli) on Saturday the 21st September, 1957 at 11-30 A.M. to transact the following business :—

1. To receive and adopt the audited Balance Sheet, Profit and Loss Account and Appropriation Account for the year ended 31st December, 1956, the Report of the Directors and the Auditors thereon, and to declare a dividend. (The Directors have recommended a dividend of 7% on Preference Shares, 12½% on Ordinary shares and 12½% on Deferred shares free of income tax.)
2. To elect a Director in place of retiring Director Shri B. D. Goenka.
3. To elect a Director in place of retiring Director Shri V. H. Dalmia.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider and pass the following Resolution :

   "RESOLVED that it be and is hereby confirmed that the dividends declared at the General Meetings of the Company held on 20th July, 1953 and 30th September, 1954 for the accounting years 1952 and 1953 respectively, were intended to be free of income tax and the payment of dividends as such for the said years is confirmed."
6. To consider and pass the following Special Resolution with or without modifications, as thought fit :

   RESOLVED by way of a Special Resolution that—

   (i) financial transactions between Orissa Cement Limited and this Company on a few occasions in the year 1956 by way of payments by this Company to Orissa Cement Limited in New Delhi and receiving payment from it in Calcutta be and are hereby approved;

   (ii) the opening of a current account with Orissa Cement Limited, a company under the same management, be and is hereby authorised subject to the condition that the amount due to this Company on the said account at any time shall not exceed Rupees Twenty Lakhs; and

   (iii) approval be and is hereby accorded to the supply to and receipt from Orissa Cement Limited, a company under the same management, of services, spare parts and other equipment whenever required, whether by way of transfer or loan and the transactions of such nature till date are confirmed.
7. To consider and pass the following Special Resolution, with or without modifications, as thought fit :

   RESOLVED by way of a Special Resolution that the payment on behalf of the Managing Agents of printing and postage expenses in connection with the notice issued by them concerning the new issue of capital by this Company and the subsequent recovery of such expenses from the Managing Agents be and is hereby approved and ratified.
8. To consider and pass the following Special Resolution, with or without modifications, as thought fit :

   RESOLVED by way of a Special Resolution that approval be and is hereby accorded to transactions being made with The Shevaroy Bauxite Products Co. Private Ltd., an associate of the Managing Agents, for the supply of any materials and rendering of any services even though the value of such materials or cost of such services might exceed Rs. 5,000/- in the aggregate in a year and RESOLVED further that transactions of such nature till date are confirmed and ratified.
9. To consider and pass the following Special Resolution, with or without modifications, as thought fit :

   RESOLVED by way of a Special Resolution that the occupation by Hari Brothers Private Ltd., of a portion of 2, Hardinge Avenue, New Delhi on rental basis till date and the continuance of the said arrangement be and is hereby approved.
10. To consider and pass the following Special Resolution, with or withcut modifications, as thought fit :

    RESOLVED by way of a Special Resolution that the payment of royalty to Dalmia Jain Trust at Annas Ten per ton (as reduced by tax thereon) of limestone and clay received by the factory from quarries and consumed, be and is hereby approved.
11. To consider and pass the following Special Resolution, with or without modifications, as thought fit :

    RESOLVED by way of a Special Resolution that the arrangement with Orissa Cement Limited regarding common secretarial facilities at Calcutta and Delhi Offices under which it has agreed to contribute half of the nett expenses of the said offices of the Company, be and is hereby approved.
12. To consider and pass the following Ordinary Resolution, with or without modifications, as thought fit :

    Approval of the Central Government having been received vide letter No. 41 (377-A)—CL/56 dated 18th July, 1956 of the Department of Company Law Administration, RESOLVED that with effect from 1st October, 1957, the fee payable to a Director of the Company for attending a Meeting of the Board or any Committee thereof be and is hereby revised and fixed at Rs. 150/- per meeting attended.
13. Any other business that may ordinarily be transacted at an Annual General Meeting.

The Share Transfer Books of the Company will remain closed from 26th August to 21st September, 1957, both days inclusive. The dividend when sanctioned, will be made payable on or after 30th September, 1957, to those shareholders whose names appear on the Register of Members on 21st September, 1957.

Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the Meeting.

By Order of the Board of Directors,

For DALMIA CEMENT (BHARAT) LIMITED,
S. C. AGGARWAL,
Secretary.

Dated : 29th July, 1957.

EXPLANATORY NOTES.

Item No. 5 of the agenda : The Auditors have pointed out that at the declaration of dividends for the accounting years 1952 and 1953, it was not made clear that the dividends were free of income tax, as it were paid. Even though the intention was clearly to declare the dividends free of income tax, this was not specifically stated and the matter is, therefore, being clarified by seeking confirmation of the shareholders. The position in regard to this matter has been explained in detail in para No. 17 of the Directors' Report also.

Item No. 6 of the agenda : Orissa Cement Limited and this Company are under the same management within the meaning of the term under Section 370 of the Companies Act, 1956. Various restrictions have been placed on transactions with companies under the same management under the said Act. In para 12 of the Directors' Report, a detailed explanation has been given regarding the transactions with Orissa Cement Limited during the year 1956, which were considered by the auditors as requiring regularisation in accordance with the Companies Act, 1956. It is considered desirable that a current account be opened between the two Companies as this would enable them to render financial assistance to each other to tide over temporary need for funds required for working capital. Such an arrangement would obviously be to mutual advantage. Besides, considering that various plant and machineries at the factories of the two Companies are similar in many respects, it becomes expedient from time to time for them to extend assistance to each other by supply of services, spare parts and equipment required by one and which could be provided by the other. Sarvashri V. H. Dalmia and Kamalnayan Bajaj, Directors, are interested being also Directors of Orissa Cement Limited.

The approval of the shareholders is sought in respect of such transactions to comply with the provisions of the Companies Act, 1956.

Item No. 7 of the agenda : Shareholders will remember that when the Company recently issued fresh capital, the right to subscribe to the fresh ordinary capital was restricted to the members holding ordinary shares of Rs. 2/8/- in accordance with the Scheme relating to the conversion of these shares into fully paid up ones. As a result, the members holding ordinary shares of Rs. 10/- did not get an opportunity to subscribe to the new capital issue. The Managing Agents offered to renounce the Rights, to which they were entitled, on payment of certain premium, in favour of those members holding Rs. 10/- ordinary shares who wished to avail themselves of the offer. The offer made by the Managing Agents was with a view to giving some participation in the subscription of the fresh capital to the holders of Rs. 10/- ordinary shares. The circular containing the offer of the Managing Agents was posted from the Registered office and the expenses incurred were debited to the Managing Agents' account and subsequently recovered from them. The auditors have suggested that this might be regarded as an infraction of the provisions of the Companies Act, 1956. The matter is, therefore, being placed before the member and they are requested to accord their approval by a special resolution.

Item No. 8 of the agenda : The Shevaroy Bauxite Products Co. Private Limited is an associate of the Companys' Managing Agents, Hari Brothers Private Limited and is a leading supplier of bauxite in South India. The Shevaroy Bauxite Products Co. Private Limited and this Company help each other in various ways from time to time by supply of materials and by rendering of service to each other. As the value of these supplies and cost of such services ordinarily exceed Rs. 5,000/- in a year, the approval of the members is sought under Section 260, of the Companies Act, 1956 by way of a Special Resolution and it is also being requested that the transactions of this nature which have taken place till date may be approved and ratified. The Managing Agents are interested as The Shevaroy Bauxite Products Co. Private Limited is its associate and Shri V. H. Dalmia, Director, is interested being also a Director of the said Company (The Shevaroy Bauxite Products Co. Private Limited).

Item No. 9 of the agenda : The Company owns a building in New Delhi which is located at 2, Hardinge Avenue, a portion of which was given to the Managing Agents for occupation on rental basis. This arrangement has been in effect since a long time. In view of the various provisions of the Companies Act, 1956, as suggested by the auditors, the approval of the members is sought to the continuance of this arrangement.

Item No 10 of the agenda: Royalty is being paid on limestone and clay drawn by the Dalmiapuram Works from the quarries. The liability for such royalty payment exists under an agreement since the very establishment of the Dalmiapuram Works and a mention thereof was made in the prospectus issued by Dalmia Cement Limited at the time of commencement of its business. When this company acquired the Dalmiapuram assets from Dalmia Cement Limited, under the scheme approved by the High Ccurt of Madras, it was one of the conditions that all obligations and liabilities of Dalmia Cement Limited in respect of Dalmiapuram Works would devolve on this Company. One of these liabilities is the payment of royalty to Dalmia Jain Trust on limestone and clay. Shri J. Dalmia, one of the Trustees of the said Trust, was until recently a Director of this Company. Shri V. H Dalmia, Director, has been appointed a Trustee in the said Trust in the place of Shri J. Dalmia, who has resigned from the trusteeship. As such, the Company has been advised to get approval and ratification of the arrangement for payment of royalty by a special resolution in view of the provisions of the Companies Act, 1956 and accordingly a special resolution for this purpcse is being placed before the shareholders.

Item No. 11 of the agenda : Instead of setting up its own secretariat, Orissa Cement Limited, a Company under the same management, requested the Company to agree to common secretarial organisation at Calcutta and New Delhi and offered to contribute towards the expenses of these offices. Similar request was received recently from Dalmia Iron & Steel Ltd., who has agreed to pay 10% of the expenses of the Calcutta Office and a sum of Rs. 500/- in lump sum towards the expenses of the Delhi Office. These sums were fixed keeping in view the volume of work involved. The arrangement with Orissa Cement Ltd., has also been finalised and as against a contribution of 1/3rd in the past, with effect from 1st January, 1957, it is contributing half of the nett expenses of these two offices after adjusting contribution received from Dalmia Iron & Steel Ltd., or which may be received from any other Company in future. Sarvashri V. H. Dalmia and Kamalnayan Bajaj, Directors, are interested being also Directors of Orissa Cement Limited.

Item No. 12 of the agenda : The Companies Act, 1956 has imposed considerable responsibilities and liabilities on the Directors of Limited Companies. In view of this, the Directors have to exercise greater caution and to devote more time and energy upon the work of the Company and follow its various activities. Vide letter No. 41 (377-A)—CL/56 dated 18th July, 1956 of the Department of Company Law Administration, the Central Government has approved an increase in the sitting fees payable to the Directors of the Company from Rs. 100/- to Rs. 150/- each for every meeting attended. Under the Resolution, it is proposed to fix the sitting fees at Rs. 150/- with effect from 1st October, 1957. As the proposal involves an increase in the meeting fees of the Directors, all Directors may be regarded as interested.

By Order of the Board of Directors,

For DALMIA CEMENT (BHARAT) LIMITED,
S. C. AGGARWAL,
Secretary.

NEW DOOARS TEA COMPANY LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of Shareholders, a dividend of Rs. 6/8 per Preference Share and a dividend of Rs. 35/- per Ordinary Share, in respect of the year ended 31st December, 1956, without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & COMPANY LTD.,
Managing Agents.

Calcutta, 25th July, 1957.

ORISSA CEMENT LIMITED
(RAJGANGPUR)

NOTICE is hereby given that the Seventh Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company at Rajgangpur on Saturday, the 28th September, 1957 at 11-45 A.M. to transact the following business :—

1. To receive and adopt the audited Balance Sheet, Profit and Loss Account and Appropriation Account for the year 1956, the report of the Directors and the Auditors thereon, and to declare a dividend. (The Directors have recommended a dividend of 4½% on preference shares and 12½% on ordinary shares free of Income Tax).
2. To elect a Director in place of retiring Director Shri V. H. Dalmia.
3. To elect a Director in place of retiring Director Shri Kamalnayan Bajaj.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider and pass the following ordinary resolution :—

   "RESOLVED THAT it be and is hereby confirmed that the dividend declared on the 29th September, 1956 for the accounting year 1955, was intended to be free of Income Tax, and the payment of dividend as such for the said year is confirmed".
6. To consider and pass the following resolution as a special resolution, with or without modification, as thought fit :

   "RESOLVED BY WAY OF SPECIAL RESOLUTION THAT—

   (a) the opening of a current account with Dalmia Cement (Bharat) Ltd., a company under the same management, be and is hereby authorised subject to the condition that the amount due to this company on the said account at any time shall not exceed Rupees Twenty Lakhs :

   (b) the transactions with Dalmia Cement (Bharat) Ltd., a company under the same management, till date, under which this company received temporary loans on a few occasions be and are hereby approved ;

   (c) approval be and is hereby accorded to the supply to and receipt from Dalmia Cement (Bharat) Ltd., a company under the same management, of services, spare parts and other equipment, whenever required, whether by way of transfer or loan, and the transactions of such nature till date are confirmed".
7. To consider and pass the following ordinary resolution with or without modification, as thought fit :

   "RESOLVED THAT the Directors be and are hereby authorised to borrow moneys whenever required, provided that the moneys so borrowed together with the moneys already borrowed by the company (apart from temporary loans obtained from the company's bankers in the ordinary course of business) do not exceed the aggregate of the paid up capital of the company and its free reserves, that is to say the reserves not set apart for any specific purpose, by more than Rupees Fifty Lakhs".
8. Any other business that may ordinarily be transacted at an Annual General Meeting.

The Share Transfer Books of the Company will remain closed from 2nd September to 28th September, 1957, both days inclusive. The dividend when sanctioned, will be made payable to those shareholders whose names appear on the Register of Members on 28th September, 1957.

Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a Shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 42 hours before the commencement of the Meeting.

By Order of the Board of Directors,

For ORISSA CEMENT LIMITED,

For DALMIA AGENCIES PRIVATE LIMITED,
J. DALMIA,
Director,
Managing Agents.

Dated : 16th July, 1957.

EXPLANATORY NOTES :

Item No. 5 of the agenda : The auditors have pointed out that at the declaration of dividend for the accounting year 1955, it has not been made clear that the dividend is free of Income Tax, as it was paid. Even though the intention was clearly to declare the dividend free of Income Tax this was not specifically stated and the matter is, therefore, being clarified by seeking confirmation of the shareholders. The position has been explained in detail in para 13 of the Directors' Report also.

Item No. 6 of the agenda : Dalmia Cement (Bharat) Ltd., and this company are under the same management within the meaning of the term under section 370 of the Companies Act, 1956. Various restrictions have been placed on transactions with companies under the same management under the Companies Act, 1956. In para 9 of the Directors Report, a detailed explanation has been given regarding the transactions with Dalmia Cement (Bharat) Ltd., during the year 1956, which were considered by the auditors as requiring regularisation in accordance with the Companies Act, 1956. For the reasons mentioned in the Directors' Report, it is considered desirable that a current account be opened between the two companies. Financial assistance by one company to other is also of mutual advantage. Besides, a lot of mutual co-operation exists between the two companies and considering that various Plant and Machineries at the factories of the companies are similar in many respects it becomes expedient from time to time for the two companies to extend assistance to each other by supplying services, spare parts and equipment required by one and which could be provided by the other.

The approval of the shareholders is sought of such transactions to comply with the provisions of the Companies Act, 1956.

Item No. 7 of the agenda : The capital expenditure over the expansion of the cement works and for the establishment of the Refractory Plant has increased beyond the original estimate due to rise in prices of materials, labour charges on account of additional machineries having been installed for securing greater efficiency of production, etc. Besides the requirement of working capital has also gone up on account of the increase in the prices of spare parts and other materials. It may be necessary to resort to further borrowings for sometime until the full benefits of the company's expansion projects begin to flow in. Under section 293(1)(d) of the Companies Act 1956 the consent of the shareholders is required for borrowing in excess of the paid up capital and free reserves of the company. Accordingly the shareholders are being requested to give necessary authority to the Directors.

By Order of the Board of Directors,

For ORISSA CEMENT LIMITED.

For DALMIA AGENCIES PRIVATE LIMITED,
J. DALMIA,
Director,
Managing Agents.

THE INDIAN IRON & STEEL CO., LTD.
12, Mission Row,
Calcutta-1.

NOTICE.

APPROACH has been made to the Government of India without avail for permission to an increase in the rate of dividend for the year ended 31st March 1957, on the Ordinary Share Capital of the Company ranking for such dividend. At a Meeting of the Board of Directors held to-day the Directors have accordingly recommended payment of a dividend of **One Rupee per share** free of Indian Income Tax being at the same rate as the preceding year. This dividend awaits sanction by the Shareholders at the Annual General Meeting to be held on the 11th September, 1957.

The Ordinary Share Register of the Company will be closed from the 4th September, 1957 to the 11th September, 1957, both dates inclusive, and the dividend, if sanctioned, will be paid on or after the 24th September, 1957, to those Shareholders whose names appear on the Register of Members on the 11th September, 1957.

THE EUROPEAN COMMON MARKET AND INDIA'S FOREIGN TRADE

SLENDER PROSPECTS OF A CONTINENTAL CUSTOMS UNION

THE West German Bundestag and the French National Assembly have just ratified the twin treaties instituting the European Common Market and the atomic energy pool ("Euratom"). Neither body can be assumed to have understood exactly what it has done, for there exists no parliament on earth capable of digesting a document of 473 articles and 21 annexes devoted to one of the most complex problems the human mind can envisage. And even if they succeeded in understanding the treaties, they would be in no certainty of foreseeing what would flow from their application—our own recent experience of planning in this country shows what gulfs lie between a paper plan and the actualities of economic life. So it can be said that the Continentals have made a jump in the dark, impelled by the vague and not unreasonable hope that there must be some more sensible way for the world's most cultured nations to organise their lives than the present patchwork of protection and competitive inflations. "Jump in the dark" might seem a cynical way to describe the fruition of a plan that has been studied and amended over several years, but it must be remembered that with a plan so complex, every amendment brings in new unknowns; the multiplicity of escape clauses and special dispensations introduced into the pact in recent months has increased, not diminished, the vast uncertainties of the scheme. It is enough to notice that the inclusion, on French insistence, of the African colonies within the Common Market is enough to upset all the forecasts made before this suggestion was accepted—and it may also upset world trade in general, which is why India and the other Commonwealth countries have been much concerned about it.

Uncertainty might appear to be diminished by the fact that the six nations of Continental western Europe already have some experience of co-operation, the Common Market being only one stage in a general European unity movement that has been in progress since the war. But the history of these postwar attempts at co-operation in western Europe has only one sure lesson: that ratification, by parliaments, of co-operation agreements means nothing where the reluctance to surrender national sovereignty persists unabated. In recalling here the failure of earlier efforts at European unity we will be writing a cynic's history of co-operation on the Continent.

*

The first attempt of this sort was the Franco-Italian customs union, which was carefully and hopefully elaborated in the years 1946-48 but was wrecked by the competitive wine industries of these two countries and was never even submitted to the national parliaments. The next and much more important was the European Defence Community (E.D.C.), sponsored, blessed and supported by the United States and Britain, duly signed in 1952, several times re-written to meet all possible objections—and then finally killed by the French Parliament in August 1954. Immediately E.D.C. was buried, Messrs. Anthony Eden and Mendès-France devised the West European Union, which included Britain's historic commitment to station forces on the Continent in times of peace, and which was consecrated in the London and Paris Agreements of 1954. This unity plan contained precise stages for the inauguration of monetary, economic, social and cultural co-ordination in western Europe —all of which have remained a dead letter although no Government or parliament has ever rejected or repudiated the treaty. Earlier, in February 1952, the Lisbon conference had produced the precise plan for the structure of N.A.T.O., each member agreeing to its exact contribution. Today, five and half years later, none of the Continental nations has met its commitments and, apart from American depôts of modern weapons, N.A.T.O. is a hollow shell. A multi-party French delegation in Lisbon took the formal public engagement to provide N.A.T.O. with 12 divisions of troops, 27 air squadrons and a fleet of 300,000 tons; but today the organisation has at its disposal, as the French share of the common effort, just two divisions.

Yet another example of attempted economic integration, and one that deserves to be compared with the Common Market, is the projected liberalisation of trade under the auspices of the Organisation for European Economic Co-operation (O.E.E.C.) This began in 1949 with a 50 percent liberalisation which was supposed to be extended in stages until almost all imports (90 percent) were free. Progress was made in that direction up to the point of 75 percent liberalisation in 1952, when France ran into difficulties and suspended all import concessions and came back to zero. Eighteen months later, a timid (8 percent) beginning was made again and progressed to 79 percent in January 1956 and then to 82.3 percent this year, whereupon France was once again in trouble and cancelled all progress. So the leading partner in the scheme is back to zero, and promises to remain there indefinitely.

*

This is the unimpressive balance-sheet of ten years of effort toward military and economic co-operation in western Europe. Five total wrecks, and only one vessel (the coal and steel pool) still afloat but with no idea where it is going. It is the same parliaments and the same politicians as have alternately sponsored and sabotaged these ventures who now expect us to believe that their solemn ratification of the Common Market treaty is the dawn of a new age. Given that the treaty is not to begin to be implemented before 1959 and that it will require 12 or 15 years after that to be fully in force, we can allow ourselves some doubts —doubts that are strengthened when we find that there are six escape clauses for every one positive commitment and that even that positive commitment is ferociously opposed in western Europe by an opposition that has been outvoted but not disarmed. Moreover, this latest and by far the most ambitious attempt at economic integration is undertaken just when western Europe's political problems are acutest, with France sinking further into the Algerian quagmire, with Western Germany more feverishly uncertain than ever about reunification and with the imperialist members of the community losing the sympathy of those who possess no colonies in everything that touches the outburst of nationalism in the Arab world.

The point of this pessimistic review of the latest move toward European unity is not simply to suggest that we shrug our shoulders at another display of Continental fantasy. Rather it throws light on the necessary orientation of Indian trade policy. It is plain that if the Common Market were to be instituted like clockwork and exactly as planned, India's commercial links with the rest of the world would be noticeably affected. The free importation into western Europe of many colonial products from the French, Belgian and Dutch empires that compete with similar Indian goods: the exclusive canalisation of West German investment capital toward French Africa; the redirection of the interests of machinery exporters to new fields; the possibility of a higher Continental tariff against the rest of the world; and finally the considerable impact of increased intra-European trade on Britain and hence the sterling area—all these developments would have evident repercussions on India's foreign trade. The Government has shown its awareness of this by following closely, through its membership of G.A.T.T., the progress of the Common Market scheme. When we consider the scheme against the background of previous failures in the field of Continental co-operation and in the context of present political and economic difficulties (especially in France), we can safely draw the conclusion that even if the Common Market begins to come into existence, it is not going to present Indian exporters with any sudden *faits accomplis*. The disturbance of world trade likely to be caused by a slow and probably partial introduction of the Common Market will be gradual, and affected parties abroad will have ample notice of each stage. Inconveniences, such as arise, will be lost in the continual changes and upsets to which world trade is nowadays liable in any case; and there is no reason to suppose that only inconveniences will result from the limited measure of economic unification likely to occur in western Europe in the next two decades.

The practical conclusion is that Indian interests can be adequately safeguarded if the Government of India follows the evolution of the Common Market in consultation with G.A.T.T., and above all in close and continual exchanges of opinions with the other members of the Commonwealth, several of whom (such as Canada and the African Dominions) would be much more severely affected by any unexpected success of west European integration. But this conclusion is based on the pessimistic assumptions about the future of the Common Market set out above. We should not, for that, lose sight of the possibility that this time the west Europeans really will succeed, and that something like a six-nation customs union could begin to take shape within the next five or ten years. Reasons have been given for thinking that that is not going to happen. But there are two factors that could push western Europe quite rapidly in the direction of economic integration, and thus make the Common Market, not a menace for Indian and Commonwealth trade, but a new force to be reckoned with. These two factors are Sahara petrol, and the possibility that private enterprise might begin to take integration more seriously than the politicians have done so far.

*

Attention is drawn to these two possibilities not because they appear at present to be very likely, but because this is the quarter from which complications could arise. Supposing (we repeat that this is the realm of suppositions, but not improbable ones) that peace could be restored in Algeria by the time the Common Market treaty comes into force and that by then the exploitation of the Sahara oil deposits began on a large scale, then west European unity would have received a most powerful impetus. The flow of petrol payable in Continental currencies as against the present supplies payable mainly in dollars and sterling, would turn the Continent inwards upon itself and make possible all the unification plans nowadays canvassed: it would, for example, redirect the flow of investment capital from the six nations to a quite new field. Secondly, the Common Market could gather unexpected acceleration if private industry (and agriculture) in the six countries decided to take the lead away from administrators and politicians, who have talked so long about unity and done so little for it: that is, if firms in the same industries in the various countries decided to unite and split up the Continental market between themselves without waiting for parliamentary sanction.

Something of this order has already begun to occur, though mainly as a form of hedging by private enterprise *just in case* Governments force a common market on it. The major industries in the Continental countries have now reached a stage of development where they need bigger markets but are [illegible] effect of open competition [illegible]

ments. Fearing that they would have to solve this dilemma anyhow if their Governments forced them into a Common Market, many of them have begun to put their heads together to find painless ways of meeting the danger, if possible of course at the expense of consumers and tax-collectors. If such solutions prove relatively easy to find, then some of the private interests that have so far fought and opposed the Common Market could well become its most eager supporters. As a test of this possibility, there is a need to watch the progress of the various Continental motor-car industries, for these concerns have most to lose from a return to free trade and most to gain from a calculated expansion of the Continental market. Although only a possibility, the chance that western Europe might at last unite deserves, then, to be considered. The Continent of Europe was convulsed by the fevers of modern nationalism while Asia and the rest of the world still slumbered in disorganisation and colonialism. History has its ironies, and it is always possible that today, while Asia, Africa and the Arab world are shaken by the nationalist philosophy that they imported from Europe, that Continent might begin to find its way to a new, supra-national order.

AMERICAN CAPITAL IN THE STERLING AREA

PROBLEMS OF COMMONWEALTH DEVELOPMENT

THE lack of capital in Britain for the development of the sterling area leaves a gap which only American capital, apparently, is at present capable of filling. Official publications that have recently appeared in Britain put this controversial matter in a new perspective. Not long after the Commonwealth Prime Ministers' conference, where there were full opportunities for exchanges of views, and where the British representatives had to disappoint any optimists still remaining in the other sterling countries, the British Government has published a White Paper presenting facts and policies relevant to the export of capital. The tenor of this document is that for major capital projects the other countries of the Commonwealth will have to rely mainly on their own resources and on loans from non-sterling sources. This document has been interpreted in some quarters as an official hint that the countries which envisage projects requiring outside assistance on a substantial scale should proceed forthwith to negotiate with the World Bank or with the United States direct; alternatively as an official hint to American capital that it will be welcome in the British Commonwealth in any quantities in which it may be available. This development of the dispute (for a dispute it has inevitably become in recent years) must be peculiarly distressing to the new Government of Canada, which has aspired to diminish the influx of American capital and to strengthen the country's ties with Britain by using British capital instead.

* * * *

Almost at the same time as the White Paper has appeared the annual report of the Bank of England on the U.K.'s overseas investments. The information in these surveys cannot be up-to-date and the latest relates to 1955. It is, however, of special interest because 1955 was the year when Britain's trade and industry reached their highest peak of activity, when demand for capital at home was more than usually keen and the prospective rewards for capital investment were more than usually inviting—and when American investors first showed keen interest in British securities. It is regrettable that the Bank's figures do not include sales to foreigners of shares in U.K. companies. They are concerned with the investments of U.K. residents in external securities known to the London Stock Exchange, and with any additional dollar securities that are known to the authorities through the operation of the Exchange Control. So reckoned, they show that even in 1955 there was a slight—but very slight—increase in the nominal value of the U.K.'s overseas investments, the total of £2,137 million as at end-1955 being £10 million more than the total of a year earlier. More significant, however, are the Bank's details of sales of investments in Commonwealth countries, foreign countries, and countries not classifiable by area. The aggregate sales of such securities amounted to £75 million, of which £43 million represented sales of shares in Commonwealth countries and £25 million of the proceeds went to South Africa.

There is no detailed information on the buyers of these securities but there can be little doubt that most of them were bought by Americans, though Europeans were not inactive in such transactions. It is to be hoped that in due time some information on foreign purchases of U.K. securities will be compiled, for the extent of foreign participation in Britain, especially in British industry, ought to be fully known. One development of special interest and significance is the bid (the result of which will not be known until at least some weeks hence) by Massey-Harris-Ferguson for one of the "Big Five" automobile firms in Britain, Standard Motor Company. If the shareholders of Standard Motor agree to the merger with the big Canadian agricultural machinery group (and their directors have recommended them to do so) only two of Britain's "Big Five" motor firms will be controlled at home, three will be controlled in north America—Ford by the American Ford, Vauxhall by the American General Motors, and Standard by the Canadian Massey-Harris-Ferguson.

* * * *

The Commonwealth countries that need British capital will doubtless appreciate the significance of this development. With credit restricted at home, even a major British company has gone short of capital. A big north American company (with which the British company was already working) sees opportunities in this situation. British investors' interest is immediately aroused because dollar stocks (which they would get in exchange for their shares) command in London a handsome premium over their north American prices. Whether this particular transaction is concluded or not, it is a precedent that may be followed, by U.S. as well as by Canadian companies. Even such basic industries as steelmaking could come under the eye of the enterprising north American investor. There is, of course, a great deal of American capital invested in Britain, as elsewhere in Europe, through subsidiaries of American companies. It is not capital that would necessarily be directly available for investment in under-developed countries, but it is a part of the total store of American capital, and the flow of American capital into Europe must diminish the supply available for other foreign use. The risks are considered to be less in Europe than in under-developed countries, some of which are frankly unattractive to American investors. It is by no means certain, therefore, that the British Government's "invitation" (if it was so intended) to the Commonwealth countries and the United States to get together and arrange finance will much increase the flow of capital to the needy countries. Those in the Commonwealth are still, in a sense, Britain's responsibility, and Britain should adjust her internal policies so that she can provide the capital that the White Paper has so cogently argued is not available at present.

OUTLOOK FOR BRITISH EXPORTS

THE confidence being displayed in Britain in the immediate economic outlook, not only in official quarters but by business men as well, seems to be based on the present strength and encouraging prospects—so long as prices can be kept competitive—of the overseas trade position. Authoritative and independent confirmation of this is available in the *G.E.C. Export Guide*, which shows that favourable prospects continue for British goods abroad. The latest available information on export opportunities for 36 major groups of British manufactured products in 34 important world markets is that they are good in 16 countries, improving in seven, deteriorating in eight and bad in only three, with India figuring in the last of these groups. The outlook is "good" in Australia, Burma, Canada the Federation of Rhodesia and Nyasaland, Hongkong, Iraq, Italy, Malaya and Singapore, New Zealand, Nigeria, Norway, Switzerland, South Africa, Russia, Venezuela and Western Germany. It is "improving" in Argentina, Belgium, Egypt, Portugal, Spain, Sweden and the United States. It is "deteriorating" in Ceylon, Denmark, France, Ghana, Kenya the Netherlands, Pakistan and Trinidad; and it is "bad" in Finland, India and the Irish Republic. The important feature of these allocations into categories is that even though the overall demand for British exports may continue in world markets, the markets themselves continue to change. Here is a further indication that exporters must continually assess and re-assess their prospects in foreign countries; furthermore, though overall demand from any one country may be at a satisfactory level or may even show expansion, import needs can change swiftly, which means that different kinds of goods are required. Hence, exporters must continually bear in mind the many variables which enter into the successful conduct of foreign trade. Since the publication of the *March Guide*, in a period of only three months there have been improvements in Australia, Burma, Egypt, Hongkong, Iraq, Portugal, Spain, Sweden, Russia and the United States. On the other hand, deterioration has taken place in Finland, Ghana, India, Kenya and Trinidad. According to the *Guide*, trading prospects with Egypt are likely to improve though at present trade is at a standstill, whereas those with Hongkong are now good, which shows the volatility of this market.

Although the United States has become Britain's largest single export market, by absorbing 8 percent of the total export trade totalling £259 million, trade there can be expanded further. Each American bought only £1.7 worth of British goods in 1956 against £12 worth sold to each Canadian and £27 to each Australian. British trade with Latin America has seriously deteriorated in the last six years—from 7 percent to 4 percent of total U.K. exports. This decline in Latin American trade has been caused by the economic instability prevailing in most countries of this region. There are signs, however, that conditions are changing for the better. In two of the most important Latin American countries, in Brazil and in Argentina, a system of limited convertibility has been introduced. The most prosperous Latin American country is undoubtedly Venezuela but, while this country has not had any payments difficulties, and the value of British exports has grown, there still seems ample room for further trade development. The *G.E.C. Export Guide* also examines British exports of selected important manufactures in 1956 to the American continent—i.e., Canada, Jamaica, Trinidad and Tobago, the United States and Latin America—as well as the export performance of certain new or greatly expanded industries. This analysis brings out in relief the fact that more railway vehicles and engineering products could be exported to these regions. The export of woollen and worsted yarns has proved successful during 1956, but trade in cotton yarn and woven fabrics to the Americas is low. Exports of aircraft and parts are high—the United States taking one-quarter of all British export shipments—and so are office machinery exports. It is interesting to learn also that British trade with Asian countries in the Communist sphere of interest promises considerable potential, even though the actual volume of trade is strictly limited by their holdings of sterling or by direct trade with the U.K. Demand for the products of U.K. industries is high and will continue to be so if China's present pace of industrial expansion is continued, and particularly if the twelve-year programme is realised. During 1956, Western Germany exported a little more than Britain, and Japanese exports were twice as high as Britain's. For the western world in general, and Britain in particular, the present may be a propitious moment for cultivating Chinese trade since China was dissatisfied with deliveries by some of the Iron Curtain countries during 1956. Further, it is likely as the *G.E.C. Export Guide* points out, that "deliveries, especially those from the Soviet Union, will continue to fall short of current needs."

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a drop of 9.4 points for February 1957. Mainly contributing to the decrease were cotton consumption, steel ingots, cement, paper, coals and wagons loaded. Cheque clearances also fell.

* * * *

Resources for the Plan.—In his address from the chair at the recent annual general meeting of the New Great Insurance Company of India Ltd. (a brief report on which appears on a later page), Mr. Tulsidas Kilachand voices the private sector's complaint that the State is appropriating too big a share of the country's financial resources, thereby placing "the non-Governmental sector at a serious disadvantage". At the same time, non-developmental expenditure by the Government is rising. Expressing his concern about this, Mr. Kilachand suggests that the Government give urgent attention to the problem of "wastage of expenditure through inefficiency". If the Government can stop this wastage, it is likely that "additional imposts for financing the second plan might not be necessary or at least might be lessened." Mr Kilachand points out that in the name of planning, the Government is tending to assume "ever-increasing functions through a series of legislative enactments and other measures." Experience shows that "rigid controls on different aspects of economic life" hardly promote the expansion of productive activity. Referring to the general insurance industry, Mr. Kilachand hopes that the new Code will help most insurers to take full advantage of the growing industrialisation of the country, and extend their activities at home as well as in the neighbouring countries. He pleads for a substantial increase in the proportion of the Government's insurance business given to the Indian Insurance Companies Association pool.

* * * *

Finances of World Bank.—The World Bank has reported a net income of $36 million for the fiscal year ended 30th June, 1957, compared with $29 million for the preceding fiscal year. Its total reserves amount to $289 million. Gross income, exclusive of loan commissions, was $74 million, compared with $64 million in the preceding year. Expenses totalled $38 million and included $29 million for interest on the Bank's bonds. The Bank made 20 loans in 15 countries totalling the equivalent of $388 million during the year, bringing gross total loan commitments at 30th June to $3,108 million. These loans were made in Australia (two loans), Austria (two loans), Chile, Costa Rica, Ethiopia, India (three loans), Iran, Italy, Japan (two loans), Netherlands, Nicaragua, Peru, Ruanda-Urundi, Thailand and Uruguay. Disbursements were $332 million, compared with $284 million during the preceding year. Cumulative disbursements to 30th June amounted to $2,296 million. During the year, the Bank sold or agreed to sell $57 million principal amount of loans without its guarantee. On 30th June, the total sale of loans amounted to $333 million, of which $264 million was without the Bank's guarantee. Principal repayments received by the Bank amounted to $26 million. Total principal repayments to the Bank, including prepayments were $191 million on 30th June. In addition, the total of $122 million of borrowers' obligations which had been sold by the Bank had been paid on or before maturity. On 30th June, the funded debt of the Bank was $1,033 million, showing a net increase of $183 million during the year. The Bank's borrowing operations consisted of three U.S. dollar bond issues totalling $275 million and a loan of Sw fr 200 million (U.S. $46 million) from the Swiss Government. On two of the issues (each of $100 million), the Bank permitted purchasers to delay payment and receipt of the bonds to the extent of $47 million, of which $3 million was delivered during the year. A total of $44 million of these bonds remain to be delivered at later dates. The Bank retired at maturity and through purchase and sinking fund operations a total of $94 million. Argentina and Viet Nam became members of the Bank during the year bringing total membership to 60 countries. Brazil, the Dominican Republic, Ecuador, Israel and Nicaragua increased their capital subscriptions, so that the total subscribed capital was $9,268 million on 30th June.

* * * *

Export Risks Insurance Corporation.—A corporation to provide protection to exporters against risks arising in the export trade has been constituted by the Government. Known as the Export Risks Insurance Corporation of India (Private) Limited, it has been registered under the Companies Act, 1956, with its headquarters in Bombay. The Corporation will have an authorised capital of Rs. 5 crores, which will be subscribed entirely by the Government. The subscribed capital, to begin with, will be Rs. 2.5 crores, and it will be increased from time to time as business expands. The decision to set up the Corporation has been taken by the Government on the recommendation of the Committee which was asked to consider the scope of a scheme of export credit guarantees for Indian exporters. Its principal function will be to insure risks involved in the export of goods from India, on a credit basis, which are not normally covered by commercial insurers. The main risks which will be covered are: (i) diversion risks; (ii) import and export control risks with certain safeguards; (iii) insolvency and default risks; (iv) war and civil war risks; (v) transfer risks; (vi) any other risk caused by factors outside the control of the exporter or buyer which arises from events occurring outside the exporters' country; (vii) c.i.f. risks; and (viii) the inability to recoup by sale expenses incurred on market surveys, publicity, stock holding and other promotional measures for the development of a particular market. The board of directors of the Corporation will consist of seven members. Mr. R. M. Gandhi, ex-President of the Indian Merchants Chamber, Bombay, will be chairman and Mr. T. C. Kapur, at present Officer on Special Duty in the Ministry of Commerce and Industry, will be managing director.

* * * *

Chartered and Eastern Banks.—The Chartered Bank announces that its offer to acquire the whole of the issued share capital of the Eastern Bank Ltd. has been accepted by holders of over 90 per cent of the shares. To enable those shareholders who have not yet accepted the offer to do so, the closing date for receiving acceptances has been extended from 31st July, 1957, to 21st August, 1957.

* * * *

Taxation Criticisms.—Speaking at the third quarterly general meeting of the Maharashtra Chamber of Commerce, Mr. K. H. Dhamdhere, vice-president, has said that the wealth tax and the expenditure tax have taken everyone by surprise, "but they seem to be the thin end of the wedge introduced with a view to procuring recurring income for the implementation of the ambitious plans." Criticisms have been made that these taxes will discourage capital formation in the private sector and that they will impose double taxation on companies. Furthermore, the heavier excise duties are an additional burden on industries since they cannot always be passed on to consumers. They will raise the cost of production and narrow the margin of profit. The conference on sales tax held recently in Bombay under the auspices of the Federation of Indian Chambers of Commerce and Industry informed the Government of the numerous difficulties experienced by business men. It has been made clear on several occasions that the latter are not averse to the payment of sales tax as such. What they want is uniformity of structure, policy and procedure in sales tax laws. Mr. Dhamdhere endorses the recommendation of the conference to hold a tripartite convention consisting of the representatives of the Union and State Governments and of the business community "to consider and evolve an acceptable scheme and basis for the sales tax." The conference recommended centralisation of the tax and distribution of its proceeds to States. The Government should accept the proposal for a model sales tax act. This is the more necessary as the definition of certain basic terms like "dealer," "sale", etcetera, varies from State to State; likewise, the turnover limits, procedure for collection, forms to be filled in, particulars to be furnished, procedure for revision appeals and many other aspects also vary in different States. Mr. Dhamdhere welcomes the assurance of the Chief Minister of Bombay that a committee will be appointed to examine the structure of the tax, and hopes that this will be done soon.

* * * *

Foreign Exchange from Insurance.—The general insurance industry is expanding its operations overseas, and the Indian Insurance Companies Association has set up a department to help member companies which might be directly or indirectly interested in foreign business. The work of organising the department, however, is yet to be completed, and the details are being worked out. Explaining this step, Mr. R. M. Desai, chairman of the Association, has said at the recent annual general meeting that if export earnings, both visible and invisible, are to be stepped up to meet the foreign exchange crisis, insurance, banking and shipping services will have to play an important part. The overseas operations of Indian insurance companies have already been valuable. "There is an excellent scope for our companies to extend their activities still further, particularly to the various neighbouring countries". But in order to inspire confidence among foreign clients greater facilities and incentives will have to be provided by the Government. The Reinsurance Corporation set up by the industry recently with official help is designed to reduce foreign exchange expenditure, Mr Desai adds. Referring to the internal problems of the industry, he says that many unhealthy features have existed for a long time. In 1952, a Code of Conduct was introduced for evolving standards and sound practices in business. Administrative machinery was also created to "ensure the proper observance of the Code." But it "failed by and large" to produce the desired results, so a revised Code of Conduct has had to be introduced since January this year. "It represents a determined effort on the part of the general insurance industry to set its house in order and should receive the earnest support of all those who wish that this important business should continue as a free enterprise in the private sector." Dealing with specific objections, Mr. Desai says that the feeling in certain quarters that the Code provision which requires "the payment of premium before the assumption of risk" will cause hardships to the insurer and to the insured, has not been justified in practice. "In fact, this is the one provision that has been working very well." Mr. Desai also draws the industry's attention to the point that if a Code had not been evolved on a voluntary basis, there would have been legislation to check the malpractices which it is the aim of the new Code to remove. "It is hardly necessary to point out that there is an inherent advantage of a certain degree of flexibility in operation under the Code, which a legislative enactment with all its rigidity and restrictions, often amounting to detailed interference in the day-to-day working of companies, cannot possess."

A RUPEE LOAN

THE further reduction in their official rate of discount by the two great Presidency Banks accompanied by a fall in the value of rupee paper is taken as a certain sign that the Indian money markets are being industriously prepared for the reception of a rupee loan. The sound policy of borrowing upon a currency rather than a sterling basis is fully recognised in well-informed quarters as the policy which should guide the Indian Government in normal times. The present, however, is felt to be quite an exceptional time. During recent months, India has passed through a series of crises which has made it essential for the Government to spend money upon a lavish scale upon a variety of remedial measures. In addition, famine, pestilence and earthquake have made the people abnormally poor for the time being. Added to all this the deliberate policy of the Government in closing the mints and keeping them closed for more than four years has unduly contracted the currency and prevented its natural and healthy growth as the requirements of trade might demand. The apparent ease of the money markets is regarded as purely artificial and the policy of the Government in calling upon the native markets to furnish the money at a time like the present, when everything possible should be done to assist those markets, is regarded in London in all well-informed quarters as extremely ill-advised.

CLAIM UNDER INSURANCE CONTRACT

SCOPE FOR APPLICATION OF ARBITRATION CLAUSE

(FROM OUR LEGAL CORRESPONDENT)

THIS case relates to the meaning and application of an arbitration clause in an insurance policy, and the insurance reader may view the decision with a certain amount of reserve, as does the writer. Mr. Dina Nath Suri alleged that under a policy which he had effected with the Great American Insurance Co. Ltd. and which remained in force from 6th March, 1947, to 6th March, 1948, he had insured his house in Rawalpindi for Rs. 40,000 and the household effects contained therein for Rs. 10,000 with the defendant company, and that in consequence of the then disturbances he had been forced to leave Rawalpindi and flee to India on 1st August, 1947, leaving behind his house and furniture. He had learned in January 1948 that during the month of September 1947, his household goods had been looted by Muslims. He thereupon preferred a claim to the company, and after a lengthy correspondence, the company by its letter dated 13th April, 1949, rejected his claim, informing him that as a result of a report from Messrs Sinclair Murray and Company and from investigations carried out on behalf of the company, it appeared that the premises were neither looted nor burnt. The petitioner, Mr. Dina Nath, further alleged that he had received this letter which came from Calcutta by registered acknowledgement post on 17th April, 1949, and he filed his application under Section 20 of the Arbitration Act on 16th July, 1949, claiming a reference to arbitration in accordance with the terms of Clause 18 of the policy.

Let us get two short points out of the way first. One of the grounds upon which the company resisted the claim was non-compliance with Clause 13 of the policy, the relevant portion of which reads: ".....or if the claim be made and rejected and an action or suit be not commenced within three months after such rejection.....all benefit under this policy shall be forfeited." Another ground was Clause 19, which reads: "In no case whatever shall the company be liable for any loss or damage after the expiration of 12 months from the happening of the loss or damage unless the claim is the subject of pending action or arbitration."

As for the first point under Clause 13 of the policy, it is of course a fact that if parties enter into a contract with their eyes open, they are bound by its terms, and the strict, literal, grammatical meaning of Clause 13 would appear to be that the three months at the expiry of which the benefit of the policy would be forfeited would begin to run from the date of the rejection of the claim by the company and not from the date of the communication of such rejection to the assured. Moreover, there is judicial authority for the above contention in *Shaw Wallace and Company* v *Gurbuzsing Beshensing*. A.I.R. 1929 Sind 58.

However, the lower court decided the point in favour of the petitioner on the ground that the period of three months mentioned in Clause 13 must be deemed to begin from the date on which the repudiation of his claim by the company was actually received by him and his evidence that he received the letter on 17th April, 1949, was believed by the lower court mainly on the ground that the company had not produced the "registered acknowledgement due" form which would have shown a different date if the petitioner's allegation was incorrect. Maybe it would. But one's everyday experience demonstrates the fact that 50 percent of these "acknowledgment due" forms are never delivered by the post office to the sender. Still, there was no reason why the court should disbelieve the petitioner's evidence on the point. On appeal by the company to the High Court, Falshaw J. agreed with the lower court's view and met the contrary view of the Sind High Court in Shaw Wallaces' case by disagreeing with and declining to follow it, in the writer's respectful opinion, quite rightly.

* * * *

On the second point, the insurance expert may look dubiously, as the writer certainly does, on the reason in the judgment appealed against for rejecting the company's contention that the claim was barred by Clause 19 of the policy. The Clause, in the plainest and most unambiguous terms, absolves the insurance company from any liability "after the expiration of 12 months" from the date of the loss "unless the claim is the subject of pending action or arbitration." The effect of Clause 19 was surmounted by the lower court by holding that the company could not take advantage of the fact that it had taken so long to investigate the petitioner's claim and that the repudiation of the claim following a lengthy correspondence itself only came very much more than one year after the loss or damage was sustained. Why not? The parties entered into this contract of insurance at arm's length and with their eyes open.

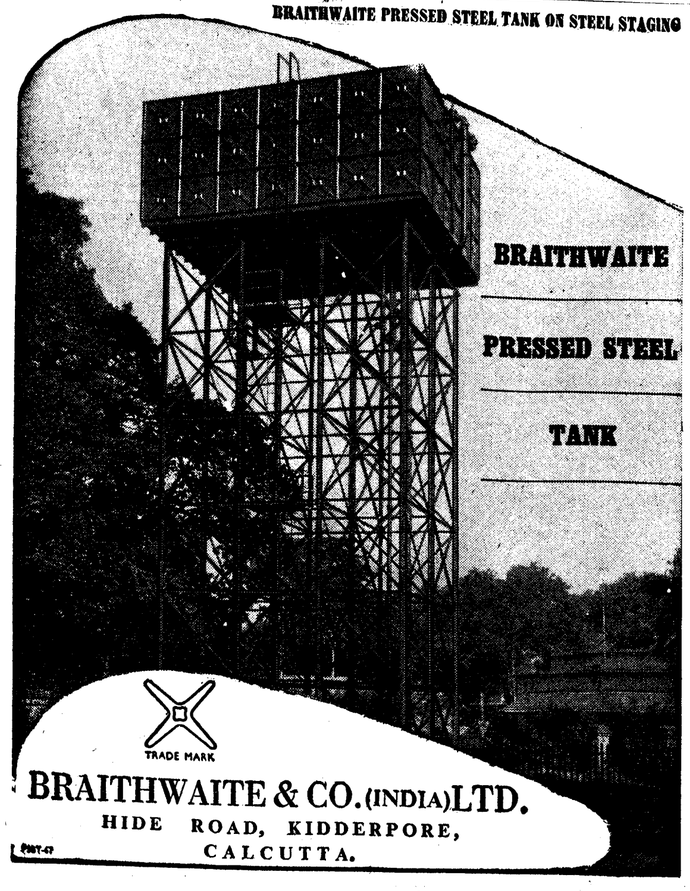
The clause is a common form, one appearing in every policy of this kind. The assured must be presumed to know what he was agreeing to. He was aware that the correspondence was dragging on and the prescribed 12 months expiring. Surely it was up to him to remind the company of that fact and to intimate to it that if his claim was not settled he would take his proceedings before the period ran out; and to do so? The law is not a code of ethics. If I owe my creditor money and after two and a half years he is becoming importunate, I may be a moral clot for doing so, but there is no legal reason why I should not drag on a non-committal correspondence and continue so to do until the claim is statute barred. Not that the company did this. It considered that it had a perfectly good defence on the merits.

The High Court, without dissenting from the lower court's reasoning on this point, found against the company on another much more substantial ground. The insured was a "displaced person" and the Court held that under the Displaced Persons Act, 1951, he was entitled to the benefit of the Act, the effect of which is to nullify clauses in any insurance policies which absolve the company from liability after a certain period where the claim is brought by a displaced person on property insured in West Pakistan before 15th August, 1947, and compulsorily left behind by the displaced person.

* * * *

But to any reader who shares the writer's hobby down the years of trying to elucidate the precise grammatical meaning of sentences and phrases in English, it is the third point relied upon by the company which will be of most interest. Now, bearing in mind the company's version of the facts and that Mr. Dina Nath was applying for arbitration under Clause 18 of the policy, read the relevant part of that Clause carefully: "If any difference arises *as to the amount* of any loss or damage, *such* difference shall.....be referred to the decision of an arbitrator." (Italics ours). The company's case was: "There is no difference as to the amount of any loss, on which to arbitrate. We say that there was no loss at all in as much as your premises were never looted as you claim they were. We repudiate the whole policy and that is not a matter for arbitration under Clause 18 but is a matter for a law suit."

As Falshaw J., put it later in the High Court: "The learned counsel for the company has argued that the total repudiation of any liability on the part of the company takes the dispute between the parties out of the scope of these words, which..... will only come into play if the company admits that some loss or damage has been caused and the dispute is only regarding the extent." Counsel's (Mr F C. Bedi's) view as to the meaning of and the implications arising from this extremely limited arbitration clause has the respectful concurrence of the writer who hopes it will appeal also to the reader. As a matter of interest, one has consulted a standard work on insurance[1] and has found some valuable guidance. The learned author, Mr. A. K. Bhattacharjee, gives us quite a number of authorities on these often badly drawn arbitration clauses. Space limits our choice to one only. It was the present case in reverse, as it was the insurance company which resisted litigation and tried to insist on arbitration after it had totally repudiated liability under the policy.



A claim was made for indemnity for the loss of goods by fire under a policy, one of the conditions of which provided that if any difference arose *as to the amount of loss* (italics ours) such difference should be referred to arbitration. It was held that the repudiation of the claim on the ground going to the root of the contract precluded the company from pleading the arbitration clause as a bar to a suit to enforce the claim. Of course this was a case of wanting to eat your cake and have it too. The company sought to repudiate the contract containing the arbitration clause and at the same time to rely on the arbitration clause as precluding a law suit. Mr. Dina Nath did not seek to do this. He did not repudiate the contract. On the contrary, he relied on it *in toto*, including the arbitration clause. However, the point which interests the writer is not the purported repudiation of the clause but the scope of it, assuming it to be in full force. "As to the amount of loss."

In another case cited by Mr. Bhattacharjee, exactly the same words were used and Lord Dunedin held with the concurrence of the majority of the other law lords that "the arbitration clause only applied to differences as to the amount of loss and therefore not to a claim which the respondent rejected altogether, whatever the loss might be."[2] That represents counsel's contention for the company as summarised earlier in this note to the effect that the clause would only be operative where the company admits that some loss has been sustained and the question is "how much"? The English authorities are conflicting and even the House of Lords has been by no means unanimous.

Falshaw J. found against the company and for Mr. Dina Nath but certified the case as a fit one for a Letters Patent Appeal. "It does not seem to me," said his lordship, "to make any difference whether the company says that no damage or loss at all has been caused or whether it says that some damage has been caused but not as much as is claimed by the insured. In either case, it is quite obvious that there is a dispute between them as to the amount of loss or damage and it does not seem to me that any authority is necessary for holding that the present dispute between the parties falls within the scope of the arbitration clause in the policy."

A DITCHER'S DIARY

AS this is written, no concrete indication is available whether the threatened strike by posts and telegraphs employees will or will not materialise. But there is no denying that the Government's handling of the situation during the past few weeks has been as inept as might have been expected. In saying this, it is not the hurried introduction of the Essential Services Maintenance Bill that I refer to: the measure may be a little drastic, but it has become necessary. Nor am I worried about the prevailing and apparently unshakeable conviction in New Delhi that the strongest prophylactic against strikes are speeches from the mighty. What baffles me is the Government's strategy of surrender by instalments—proven by experience to be as foolish a practice as any ever conceived. Broadly, as I see it, the recent history of the dispute between the Government and its employees runs somewhat as follows. The latter asked for more pay; the former said no. The latter then asked for interim concessions, and for the appointment of a Pay Commission to ascertain whether the claim for more pay was justified. The Government ignored the first of these demands; on the second, it shilly-shallied, and then announced that it would have not a Commission, but an "enquiry" on the pay structure—a difference of such subtlety that its meaning will have escaped many besides myself. However, when the hen ultimately got to work and laid the egg, it turned out to be a Commission of Enquiry and not an "enquiry". There was no mention of interim concessions, but a little more clamour from employees brought the announcement that the Commission would be free to make an interim report on the relief they should get. The fiasco which has threatened to mature this week might well, one feels, have been avoided if the Government had at the very beginning stated how far it was prepared to go, and then firmly held its ground. The dilemma now, I suppose, is that devotion to the second five year plan does not permit the Government to go very far (because more money for its employees will mean less money for the plan) and devotion to democracy does not permit it to hold its ground.

* * * *

Among the strange arguments used by Mr. Nehru in asking posts and telegraphs employees not to strike is "the need to maintain the value of the rupee." That the strike threat may have some vague and indirect influence on the rupee's worth, need not be denied. But considering the conscientiousness with which the Government has applied itself to safeguarding the value of the currency, it can hardly be surprising if the employees' response is even more hollow than the argument. Certainly, the Government's plea to help defend the rupee seems oddly timed, coming as it does after a week when earlier mistakes have brought another sharp decline in the Reserve Bank's foreign exchange holdings; when permission has been given to reduce the minimum limit for the paper currency reserve by Rs. 100 crores; and when prices are still rising. These developments may seem inevitable now, but the fact cannot be ignored that all of them have resulted from deliberate Government policy. It looks as if "the need to maintain the value of the rupee" is still inadequately appreciated even in New Delhi, for an obviously inspired report emanating from the capital this week talks of the foreign exchange reserves in terms such as to suggest that holding them is a rather useless formality. Admittedly, there is nothing "sacred" about having foreign securities to back one's paper currency; but if that is so, perhaps there is nothing sacred about being solvent either. The gradually spreading notion that a country's courageous march towards bankruptcy is a token of the economic progress it is making seems one of the most remarkable perversions of our time. It is conveniently forgotten that a currency's worth springs primarily from the confidence which people, both at home and abroad, have in it. That confidence depends, not on the largeness of the figures printed on paper notes, but on the adequacy and the convertibility of the real assets which back them.

* * * *

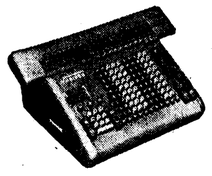
Every citizen of India must do everything he can to raise more money, and still more, for financing the second five year plan. I am all for it. But Mr. Ashok Sen, the brilliant Law Minister at the Centre now, may be going about it in a manner some people will disapprove. I have nothing at all to say about the Working Journalists Act, even less about the Journalists Wage Board. The validity of these measures is to be decided shortly by the Supreme Court. Meanwhile, the Law Ministry's directive that the case under consideration affects only the parties concerned raises the question whether the executive is not, not for the first time, seeking to interpret a law—hitherto regarded as a function of the judiciary. But let me go back to what the directive may mean to journalists outside the Goenka group of newspapers. A militant trade unionist in journalism tells me that he expects nothing at all from Mr. Sen's directive except a debating point, that the Government of India, the executive, wants the disputed law to be implemented here and now. Who, then, is likely to profit from the Law Ministry's latest note to Labour Ministries in the States? Only one answer suggests itself: the Government, in the form of stamp duties. It must be obvious that any newspaper-owner can now make the same sort of application to the Supreme Court as the Express newspapers and obtain the same sort of injunction. As I said, everybody should help finance the second plan, and that includes newspaper proprietors. It is only the method of the Law Ministry's exacting the money which seems to me barely legal and rather unjust.

* * * *

Even in the United States, as far as I know, they do not yet have public relations departments attached to courts of law. It is, however, possible so to undermine the prestige of the judiciary of a country—by employing it for purpcses wholly irrelevant, such as the enforcement of ill-defined concepts of social justice—that it may soon need to do its own "selling." Nothing like this has happened in this country yet, but a serious erc der of confidence in the judiciary may have been the rôle it has in recent years been obliged to play in re-interpreting the old law of master and servant. (Some of the best pieces in our "Without Prejudice" have been on this.) Quasi-judicial enquiries and commissions are other recent phenomena about which the seniormost civil servants appear to have an attitude somewhat lacking in definition. This is the only explanation I can find of Mr. J. N. Talukdar's recent appeal for an increase in bus fares. The subject is before a specially appointed committee of enquiry, and the public, to whom the Director-General of State Transport was addressing himself, could scarcely do anything to help Mr. Talukdar. Was he, then, preparing the public mind for a rise in fares, in case the committee should recommend one? Tram fares are also being examined, and the case for an increase there is at least as strong as that for bus fares. How much longer is the daily Press in Calcutta going to take to tell its public that adequate and comfortable public transport is incompatible with what I understand are among the lowest fares in the world? Newsprint, surely, is not the only commodity to have appreciated in price.

* * * *

A very irregular listener of All India Radio programmes though I am, I doubt whether protests against the proposed half-hour cut thereof will be nearly as extensive as those against some other economy measures. How much money the Ministry of Information and Broadcasting hopes to save by giving us half-an-hour less of entertainment (or instruction, as Dr. Keskar would perhaps prefer to put it) it has not been announced, nor is the Indian Statistical Institute likely to be asked to find out what use will now be made of the so many man-hours released from listening. On the face of it, however, All India Radio appears to have set an example that could well be emulated by many with profit. In the same Ministry, for instance, the Films Division could save considerable footage by reducing the length of its newsreels. One lecture fewer by Dr. Keskar on the excellence of Indian classical music may appear to many a bearable loss, and it might be true of the opening of yet another welfare centre somewhere. Could not the Press Information Bureau's hand-outs be fewer in number and shorter in length? Then, imagine the amount of paper that would be saved if some of the Ministers made fewer speeches or made them shorter by, say, half-an-hour. This might well be a surer way of conserving newsprint than the price-page schedule and some other equally devious measures "sold" to the Government by interested parties. It can also be argued that the resultant relief will not be only to the country's financial stringency; it will also be audio-visual.



* * * *

It was inherent in the nature of the struggles carried out by the Indian National Congress that, at the end of its journey, the country should find itself better supplied with campaigners and demonstrators than with administrators and constructive organisers. (Many will remember the angry reference the late Sardar Patel once made to "volunteers.") Devadas Gandhi, whose death on Saturday morning deprived Indian newspaper-owners of a leader they badly need today, was brought up amid stirring events, but his great father saw to it that he could do such undramatic but highly useful things as putting a paper to bed and getting it out on time. As President of the Indian and Eastern Newspaper Society and the All-India Newspaper Editors Conference he was often in charge of delicate negotiations with people not always friendly to the industry he represented. Often he astonished the other side, which was the Government sometimes, with his grasp of every detail of the highly complicated business of editing and managing newspapers. He was a managing editor in the sense that he managed *and* edited newspapers, and did both very well too. A great deal of the acrimony now bedevilling employer-employee relations in the newspaper industry would never have been heard of if expanding organisation had not removed one wing of the industry so far from the other.

THE NEW GREAT INSURANCE COMPANY OF INDIA LIMITED

CHAIRMAN MR. TULSIDAS KILACHAND'S REVIEW

Presiding over the Fourteenth Annual General Meeting of the Shareholders of the Company held at Bombay on the 27th July 1957, and in moving the adoption of the Directors' Report and Accounts, Mr. Tulsidas Kilachand, the Chairman of the Company, made a brief survey of the existing economic situation.

Speaking in particular on the Second Five-year Plan, Mr. Tulsidas felt that the success of the Plan depended, in the ultimate, on the mobilisation of active support and co-operation of all sections of our society. People, high and low, should be enthused into undertaking voluntary sacrifices and accepting certain compulsions. Past experience, however, showed that rigid controls on different aspects of economic life hardly promoted expansion of productive activities, and in this context, the Chairman deprecated the growing tendency on the part of the State to assume ever-increasing functions through a series of legislative enactments and other measures

In the sphere of finance, Mr. Tulsidas added, the tendency towards over-centralisation manifested itself in the mobilisation of the bulk of the financial resources of the community by the Government through taxes, borrowings etc., a major portion of which was first earmarked for programmes sponsored by the Government, thus placing the non-Governmental Sector at a serious financial disadvantage.

Wastage of Public Expenditure

The Chairman also expressed concern at the mounting non-developmental expenditure of the Government and opined that it was essential that the Government should better focus their energies on getting rid of wastage in expenditure through inefficiency. If this was achieved, it was likely that additional imposts for financing the Second Plan might not be necessary or at least might be lessened.

Dealing next with the problems facing General Insurers, the Chairman expressed the hope that the revised Code of Conduct would enable most of the Insurers who had yet to develop fully to take advantage of the industrialisation of the country and to extend their activities, both in the home market and in neighbouring countries. He also took the opportunity to plead for a substantial increase in the share of the Indian Insurance Companies' Association Pool in the Government Insurance Business.

Before concluding his general observations, Mr. Tulsidas referred to the setting up of the India Reinsurance Corporation, financed and managed by General Insurers, and hoped that the successful functioning of the Corporation would be of considerable assistance to the country, not only in reducing the drain on the foreign exchange but also in contributing, in course of time, to the country's foreign earnings.

Dealing with the departmental accounts, Mr. Tulsidas stated that the gross income for the year 1956 was Rs. 64,75,988 in Fire, Rs. 26,63,959 in Miscellaneous Insurance and Rs. 45,60,403 in Marine, whilst the net premiums were Rs. 31,00,407, Rs. 20,68,855 and Rs. 15,34,009, respectively. After providing for losses and expenses, and reserve at 50% in respect of Fire, a sum of Rs. 4,35,426 was transferred to the Profit and Loss Account. The Chairman, also added that Rs. 1,96,273 and Rs. 1,16,242 respectively were transferred from the Profit and Loss Account to the Miscellaneous and Marine Revenue Accounts.

In the Profit and Loss Account, after providing for the necessary outgo, the balance left over amounted to Rs. 3,40,257. The Directors proposed to transfer to Taxation Reserve Rs. 1,00,000, to Staff Gratuity Account Rs 40,000. and to pay Eighth Dividend on Ordinary Shares at Rs 1.50 per share free of income-tax, amounting to Rs. 1,50,000/- being at the same rate as last year.

The Chairman also took the opportunity to thank the Company's Agents, fieldworkers, officers and staff for the splendid work that they had done last year.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting of the Company. It is a mere publication of the Chairman's speech.

Finding me is costly business

says Adipocere (*Pronounced 'adi-po-saire'*)

Finding oil—that's me in one form or another—is an expensive business Shall I stagger you with figures? I am afraid I shall have to, so here goes...

On an average, and the West Bengal Basin is on the other side of hopeful averages, an exploration venture costs per month

1 Geological party.....Rs. 35,000
1 Gravity party .....Rs. 80,000
1 Seismic party .....Rs. 3,25,000
1 Drilling party .....Rs. 6,00,000

making the impressive total of Rs 10,40,000 per month.

Add to this a whole line of other expenses and you can imagine what it costs to find me. In the Barco Concession of Columbia it took 17 years and Rs. 10,50,00,000 to make the first discovery; in Iraq ten years went by along with Rs. 31,00,00,000 before the first oil was marketed. And what's more—the search for oil is one of the world's riskiest businesses! In areas where oil has not been found before, as in West Bengal, only 1 out of 10 wells drilled ever produced oil. The other 9 are costly dry holes.

See what I mean when I say that finding me is a costly business?

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DECLINE IN ADVANCES CONTINUES

Tuesday, 6th August.

THE fall in advances has continued in the money market during the past week. There has been a slight increase in cotton accommodation. But all the other major categories such as jute, sugar and grains and seeds, show declines. In the inter-bank market, conditions have been tighter presumably because of subscriptions to the Central loans; the call rate has mostly been quoted at 3½ percent, although transactions at up to 4 percent have also been reported.

Trading in the exchange market has been cautious. There have been a fair number of tea bills but very few on account of gunny shipments. Remittance has been on a moderate scale.

* * * *

Silver was quiet in the absence of interest and the price for ready delivery declined to Rs. 180. The forward rate was quoted at Rs. 179.75. Prices in London and New York showed little change.

Gold was steady on keen demand for ready metal and the price rose from Rs 109 to Rs. 109.50. The sovereign was higher at Rs. 71.50.

* * * *

During the week ended 2nd August, Government of India Treasury bills for Rs. 103,55,00,000 were sold in favour of the Reserve Bank.

* * * *

Increases of Rs. 66 lakhs to Rs. 1,499.49 crores in active notes and of Rs. 14 lakhs to Rs. 1,535.41 crores in the total note issue were the notable features of the return of the Reserve Bank of India for the week ended 2nd August, 1957. Foreign securities in the Issue Department were reduced by Rs. 25 crores to Rs. 375.52 crores, while rupee securities were increased by an equivalent amount to Rs. 911.81 crores. A portion of the latter were transferred from the Banking Department, in which investments declined by Rs. 15.21 crores to Rs. 265.60 crores. Deposits of the Government of India were Rs. 1.94 crores lower at Rs. 51.96 crores, while other Government accounts rose by Rs 98 lakhs to Rs. 3.17 crores. Balances of commercial banks, at Rs. 108.32 crores, showed a rise of Rs 4.49 crores. Balances held abroad increased by Rs. 6.63 crores to Rs. 26.32 crores, and a portion of the securities were transferred from the Issue Department. Other loans and advances rose from Rs. 63.29 crores to Rs. 69.18 crores, of which advances to scheduled banks against usance bills amounted to Rs. 31.87 crores against Rs. 29.47 crores. Ways and means advances stood at Rs. 23.54 crores (Rs. 26.19 crores).

* * * *

The return of the State Bank of India for the week ended 26th July, 1957, shows a rise of Rs. 13.28 crores to Rs. 325.53 crores in total deposits. Investments in Government securities are up by Rs. 5 lakhs at Rs. 94.16 crores, while other authorised investments remain unchanged at Rs. 11.33 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 2.85 crores to Rs. 171.72 crores. Cash and balances are, in consequence, shown at Rs. 59.98 crores, or Rs. 14.78 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 26th July, 1957, shows Demand and Time liabilities at Rs. 741.92 crores (Rs. 17.98 crores on account of borrowings from banks) and Rs. 568.72 crores (Rs. 4.22 crores), compared with Rs. 724.67 crores (Rs. 17.65 crores) and Rs. 563.32 crores (Rs. 4.39 crores), respectively, in the previous week. Cash has fallen by Rs. 1.59 crores to Rs. 37.53 crores, while balances with the Reserve Bank have risen by Rs. 7.08 crores to Rs. 90.52 crores There is a rise of Rs. 28 lakhs to Rs. 332.56 crores in investments. Advances and bills discounted at Rs. 885.11 crores show a drop of Rs. 7.37 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.8 percent and 67.5 percent, against 9.5 percent and 69.4 percent.

Holders of the loans should lodge their securities well in advance of the due dates to facilitate delivery of the securities and interest warrants on the due dates. In view of the heavy work involved, the period for delivering securities tendered for payment of interest on the above loans may be extended to five clear working days.

SHARP EXPANSION IN CREDIT

RESERVE BANK REPORT ON 1956 TRENDS

THE Reserve Bank of India has just issued two of its annual publications on banking—the *Report on the Trend and Progress of Banking in India, 1956;* and the *Statistical Tables relating to Banks in India. 1956.* The former reviews banking trends and policy during the year, mainly based on the various statements submitted by the banks under the Banking Companies Act, 1949. The latter contains statistical data on individual banks as well as the banking system as a whole, based on the annual balance sheets.

Economic activity during 1956 was characterised by the emergence of inflationary pressures in contrast with the comparative monetary stability which prevailed in 1955, says the report on the trend and progress of banking in India. This was primarily the result of an increase in the magnitude and tempo of the developmental expenditure. For the banking system, the year was one of considerable stresses and strains as the mounting demand on it for credit by trade and industry was not accompanied by a commensurate expansion in its resources. This led to the emergence of an acute financial stringency, analogous to the experience in 1951. During the first half of 1957, however, banking resources have expanded significantly The higher level of activity for the banking system, in conformity with the growing tempo of economic activity, was reflected in a sharp expansion in bank credit. The level of advances of all scheduled banks, exclusive of money at call and short notice and due from banks in India, rose by Rs. 151 crores or 25.5 percent to Rs. 745 crores at the end of December 1956—the largest rise in any year since 1951. The pressure of credit demand on bank resources, which was exceptionally high in the busy season of 1955-56 continued into the slack season that followed, indicating a continuing of the trend noticed in previous reports towards a broadening and growing diversification of the Indian economy; it also reflected partly a trend towards the accumulation of stocks which is commonly observed in a phase of expansion.

The growing developmental activity led to a large increase in the advances of banks, which was not matched by a corresponding accretion to their deposit resources; in fact, the pace of deposit expansion slowed down in 1956. Thus, the net deposits of scheduled banks increased by Rs. 77 crores compared with Rs. 90 crores in 1955, the rate of expansion going down from 10.1 percent to 7.9 percent. Net time deposits increased by Rs. 45 crores, against the rise of only Rs. 32 crores in net demand deposits, a continuation of the trend noticed in 1955. Since the end of the year, the pace of deposit expansion has undergone a significant increase.

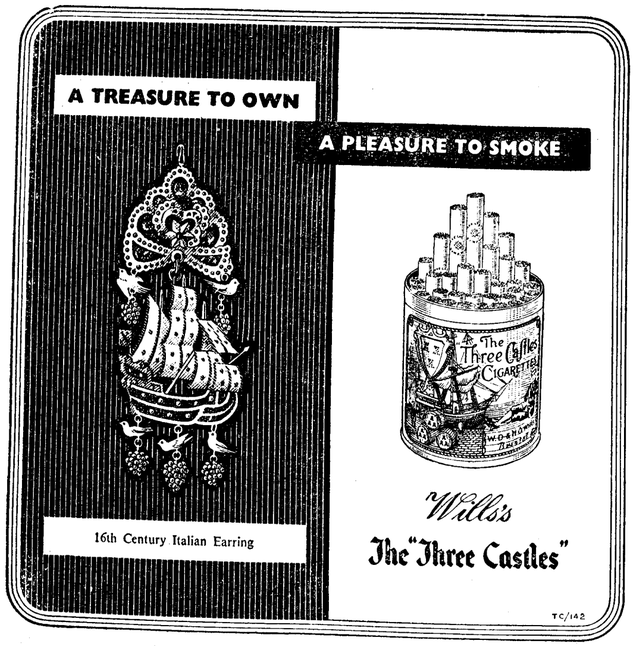
The sustained demand for bank credit, with an inadequate growth in deposits, led the banking system to have larger recourse to the Reserve Bank. Over the year, the total of outstanding borrowings from the Bank by scheduled banks increased by Rs.

This may shrink **This will not shrink**

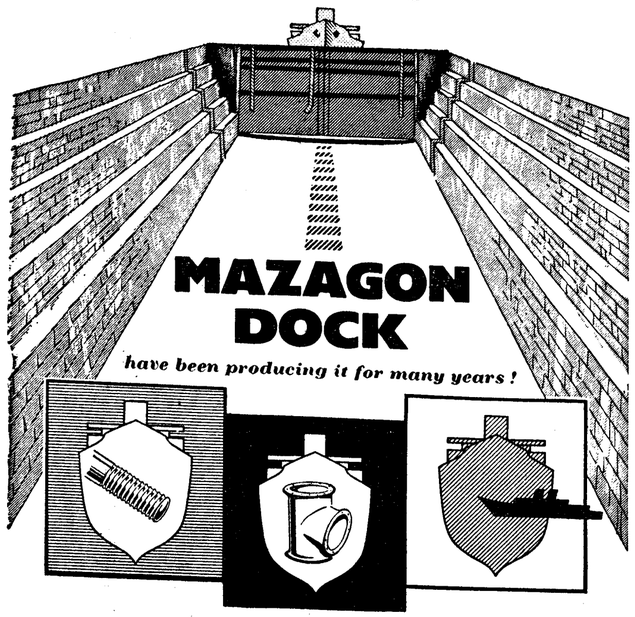
That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized'—knowing they bear this assurance: This garment will not shrink out of fit—even after many, many washings!

It adds value and prestige to your own label—enables you to sell with confidence—and assures the public that you take trouble to give them value.



People rely on you to serve them well—so serve them cloth labelled 'Sanforized'.



Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements

56 crores against a rise of no more than Rs. 20 crores in 1955. An interesting feature of the Reserve Bank's lending has been that while a relatively greater rise took place in gross borrowings against Government securities than under the bill market scheme, the outstanding amount of borrowings under the latter at the end of 1956 was much higher at Rs. 65 crores than that against Government securities which amounted to Rs. 21 crores. This was in spite of the rise of ½ percent in the bill market rate at which funds were lent, and the higher stamp duty towards the end of the year.

With a record rise in bank credit, the total of bank investments declined in 1956 by Rs. 18 crores, the ratio of investments to net deposits in consequence recording a fall from 42.3 percent to 37.5 percent. This decline was the result of the unloading of investments in Government securities to meet the greater demands of trade and industry.

Branch Expansion

The total number of offices of banks rose during 1956 by 107 to 4,192, compared with a rise of 53 in 1955 and 11 in 1954. This was the largest increase in the postwar period and reflected the increasing pace of branch expansion. On the organisational side, the report draws attention to the amendments to the Reserve Bank of India Act and the Banking Companies Act, as well as to the growing rôle of the Reserve Bank in financial administration in the context of a developing economy. It refers to the setting up of the National Agricultural Credit (Long-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund during the year. It also discusses the improvement in the standards of operation and financial soundness of the banking system which has taken place as a result of the Reserve Bank's policy of periodical inspection of banks. By the end of 1956, all the reporting banks had been inspected at least once, and wherever defects were observed in the working of individual banks, they were called upon to take steps to remove them. A few were also called upon to submit periodical reports to the Reserve Bank showing the progress made by them.

During the year, licences were issued to one Indian scheduled and three Indian non-scheduled banks to carry on banking business in India raising the total number of licences so far issued to 49. While the licence granted to one non-scheduled bank in 1950 was cancelled during the year, 47 non-scheduled banks were refused licences. Nineteen non-scheduled banks went into liquidation or were ordered to be wound up in 1956, while certain proposals for amalgamation received consideration of the Reserve Bank.

Refinance Corporation

The *Report* observes that in view of the rapidly rising investment in the private sector, particularly in industry, banks may also be required to meet a part of medium-term credit needs of industry. In this connection, it refers to the proposal to set up a Refinance Corporation, the main object of which would be to help augment the resources available with the banking system for the use of medium-sized industrial units (i.e., units having resources up to Rs. 2½ crores) in the private sector. It also points to the possible inadequacy of bank resources to meet the rising demand for bank credit of the private sector under the second five year plan. The need for extensive branch expansion towards the solution of the problem has been emphasised. Measures have been suggested for the further strengthening of the general financial position of banks either by way of merger or amalgamation of smaller units, wherever possible.

Banking Statistics

While the banking report gives data relating to the business of banks within India only, the statistical tables cover the operations of banks in India as well as outside. According to the latter, total deposits of all reporting joint stock banks rose by Rs. 80 crores during 1956, compared with a rise of Rs. 92 crores in 1955. This was largely accounted for by scheduled banks (Rs. 76 crores), deposits of non-scheduled banks having risen by only Rs. 4 crores. While total deposits of Indian scheduled banks rose by Rs. 84 crores, those of foreign scheduled banks declined by Rs. 7 crores. Total credit extended by joint stock banks, on the other hand, rose by Rs. 158 crores in 1956 against Rs. 92 crores in 1955. Investments of joint stock banks in Government securities declined by Rs. 18 crores, the whole of which was accounted for by scheduled banks, while "other investments" showed a rise of Rs. 3 crores.

The foreign business of Indian scheduled banks, that is, deposits and credit (including bills purchased and discounted) extended by them outside the Indian Union, rose by Rs. 1 crore and Rs. 7 crores, respectively, against a fall of Rs. 5 crores and Rs. 1 crore, respectively, in 1955. The number of their foreign offices, however, fell from 99 in 1955 to 98 in 1956.

Operational Results

The current operating earnings of Indian scheduled banks improved by Rs. 8 crores over 1955, while their current operating expenses increased by Rs. 5 crores with the result that their net profit before taxes (after taking into consideration recoveries and depreciation in assets) increased by Rs. 3 crores compared with a rise of Rs. 33 lakhs in 1955. The net profit of exchange banks increased by Rs. 46 lakhs in 1956 against Rs. 58 lakhs in 1955. The ratio of current operating expenses to current operating earnings of Indian scheduled banks stood at 79 percent in 1956 against 82 percent in 1955. For exchange banks, the ratio was a little lower at 76 percent compared with 77 percent in 1955.

Stocks and Shares

CENTRAL GOVERNMENT LOAN ISSUE REPORTED FULLY SUBSCRIBED

SHARE PRICES EASE IN DULL TRADING

Tuesday Evening.

TRADING has been extremely dull in the stock market during the past week. The main feature has been the report this afternoon that the Central Government loans have been fully subscribed. Operators' thoughts at the close today are dominated by the Posts and Telegraphs employees' strike threat. The Calcutta Stock Exchange Committee has announced that in view of the proposed strike and the cessation of postal facilities for registration, all outstanding deliveries are being suspended until further notice. The decision about clearing shares will be announced later.

Prices have eased in practically all sections because business has been dull. Some investment enquiries have been noted in engineerings and papers. Miscellaneous industrials have come in for selective attention. Tea shares reflect the disappointment over this week's auction results. Gilt-edged are slightly better, although the Conversion Loan is depressed.

Details of the week's trading follow.

* * * *

Except for 3% Conversion Loan 1986 and 3% Non-terminable Paper, there was a change for the better in gilt-edged and prices recovered slightly from the lowest levels touched. Selling pressure abated and buyers found it difficult to obtain their requirements due to a shortage of scrip. The 3% Conversion Loan 1986 touched a new low of Rs. 71.60 and 3% Non-terminable Paper was marked back to Rs. 72. In the short-dated group, 3% 1957 hardened to Rs. 99.90 and 3% 1958 was steady at Rs. 99.70. There were no declared sellers of 3% 1959-61 at Rs. 97.95, while 3½% 1961 was traded around Rs. 99.33; 2½% 1961 changed hands at Rs. 93.55 ex-voucher and 2¾% 1960 was asked for at Rs. 96.50, while 2¾% 1962 had buyers at Rs. 93.90 and 3¼% 1962 was in demand at Rs. 97.45. Among medium-dated loans, 3% 1963-65 recovered from Rs. 93.25 to Rs. 93.30 and 3½% 1964 was better at Rs. 97.55; 3½% 1965 improved fractionally to Rs. 97.33 but 3½% 1967 was shaded at Rs. 97.70 without attracting any buyers. In the long-dated group, 3% 1966-68 and 3% 1970-75 were bright features, their prices being marked up to Rs. 90.95 and Rs. 85.85, respectively, but 3¾% 1974 was offered at Rs. 98.30. There was a broadening of enquiry for State loans but trading was restricted by the paucity of sellers; 4% Madras 1967 and 1968 were marked up further to Rs. 96.10 and 4% U.P. 1967, after being marked down to Rs. 95.75, turned buyers at this price. There was a reasonable enquiry for most other State loans standing at a substantial discount, but in the absence of sellers little business was reported.

Very little business was done in preference shares during the three-day period covered by these notes. In jutes, Alexandra were marked at Rs. 86 and Reliance at Rs. 72.50. Lansdowne came to hand at Rs. 86. Among miscellaneous issues, British India Corporation were reported at Rs. 103.50 and Burn 7% at Rs. 114. Calcutta Electric met with enquiry on investment account and were taken at Rs. 9.56. Cawnpore Sugar were reported at Rs. 108, and Hall and Anderson at Rs. 60. Indian Aluminium had buyers at Rs. 98. Rohtas Industries "B" preference were offered at Rs. 63.50 and Shaw Wallace had buyers at Rs. 65.25. Titaghur Paper 2nd preference were crossed at Rs. 84.

In the banking section, there were buyers of Punjab National at the higher rate of Rs. 59. Hind Bank advanced from Rs. 31.50 to Rs. 32.50.

The only share transacted in railways was Dehri-Rohtas at around Rs. 10.44.

Cotton textile shares were more or less unchanged, although Bengal Nagpur were easier at Rs. 6.31 and Cawnpore Textiles at Rs. 6.87. Dunbar were marked lower at Rs. 140. Kesoram were unchanged at Rs. 13. Elgin Mills droppped sharply today from Rs. 22 to Rs. 20.

The coal section experienced one of its dullest sessions. Business was on a very small scale, and prices showed little variation. Bengal were quoted at Rs. 220, without any business passing, and Amalgamated were reported at their previous price of Rs. 15.25. Bharat Collieries were unchanged at Rs. 6 and Burrakur fluctuated narrowly around Rs. 21.62. South Karanpura receded from Rs. 8.50 to Rs. 8.30 and there were stray sellers of Union at Rs. 16. Seebpore were placed at Rs. 25.81 and Western Bengal at their previous quotation of Rs. 5.40. East Indian eased from Rs. 22 to Rs. 21.50.

Jute shares evoked little interest, with the exception of Megna which closed one point better at Rs. 83 and Gourepore which spurted today from 216 to Rs. 225. Here is a chart showing representative price movements:

	Opening 1st August	Closing 6th August
	Rs.	Rs.
Barnagore	80	76
Delta	125	120
Gondalpara	570	530
Union	105	100
Nellimarla	11.37	11.31
Chitavalsah	12	11.87

National fluctuated narrowly around Rs. 18 and Howrah around Rs. 16.25.

The only share bought in the electric supply section was Calcutta, around Rs. 12.19.

In sugars, Carew were steady at Rs. 7.50 as were Dyer Meakin Breweries at Rs. 6.44. S.K.G. were shaded at Rs. 9.94 but Darbhanga were fairly steady at Rs. 22.50 as were U.P. at Rs. 15.25.

In engineerings, Indian Iron were less active than in the previous week with the price at one time dropping to Rs 19.15; tonight's closing quotation is Rs. 19.18. Shares which met with investment enquiry included Braithwaite at Rs. 27.50, Burn at Rs. 322. Indian Standard Wagon at Rs. 176 and Indian Steel and Wire Products fully-paid Ordinary at Rs. 57. Jessop were depressed at Rs. 22.87 as were Richardson and Cruddas at Rs. 13.62. Textile Machinery, after improving to Rs. 17.60, reacted at the close to Rs. 17.40. Guest, Keen, Williams were readily absorbed at the higher rate of Rs. 28.44.

In paper, India Paper Pulp were better at Rs. 19.87 and Titaghur improved to Rs. 33.12.

SISTAS 58-3

Orient Paper fluctuated narrowly around Rs. 24.50. Sirpur were taken up around Rs. 8.87.

In cement, Orissa were steady at Rs. 14 while Dalmia were slightly easier at Rs. 11.44. Sone Valley were sold at the lower rate of Rs. 5.87 while Assam Bengal were steady at Rs. 5.61.

In insurance, Ruby General were transacted at their previous rate of Rs. 5.62.

Among shipping shares, Bengal Assam changed hands around Rs. 105 and Calcutta Steam at Rs. 14.87. After a long interval, Fraser and Co. were transacted at Rs. 16.75. India Steamship were fairly steady at Rs. 10.31, and India General Navigation were unchanged at Rs. 71.

Among miscellaneous industrials, Alkali and Chemical were better at Rs. 13.50, as were Angelo Brothers at Rs. 19.12. Britannia Biscuits were enquired for at Rs. 13.50 and Calcutta Tramways were offered at Rs. 15.87. Clive Row Investment improved to Rs. 10.12 and Dunlop Rubber changed hands freely at their previous quotation of Rs. 20.62. Hindustan Lever were steady at Rs. 19.62 while Indian Aluminium were shaded at Rs. 13.31. Indian Cables and National Insulated Cable met with good enquiry at Rs. 24.50 and Rs. 22.37, respectively. Indo-Burma Petroleum were asked for at Rs. 26.12 and Metal Box hardened to Rs. 27.50. National Carbon were better at Rs. 24.37. Rallis India were unchanged at Rs. 32.50, as were Rohtas Industries at Rs. 18.12 and Shaw Wallace at Rs. 10.12.

In the mining group, Burma Mines were slightly better at Rs. 2.82 but Chrestien Mica Industries receded to Rs. 13.87. Indian Copper were quiet at Rs. 3.26, while Orissa Minerals were better at Rs. 19.25. Western Stockholders met with small enquiry at the higher rate of Re. 1.

Tea shares were lifeless. Ananda Bagh declined to Rs. 21.25, as did Betjan to Rs. 24.75 and Bishnauth to Rs. 20.62. Brahmapootra changed hands at Rs. 5.37 and Brooke Bond were taken at Rs. 18.62. Teen Ali had buyers at Rs. 26.31 and Tezpore were marked at Rs. 20.75. Dauracherra were fractionally easier at Rs. 10, as were Jayshree at Rs. 9.56. Hansqua changed hands at Rs. 24.75.

* * * *

The net profit of the TATA IRON AND STEEL COMPANY has amounted to Rs. 2.63 crores for the year ended last March, against Rs. 1.76 crores, after providing Rs. 2.72 crores (Rs. 3.45 crores) for taxation, Rs 2.47 crores (Rs. 2.43 crores) for depreciation, transferring Rs. 2.60 crores (Rs. 3.28 crores) to plant rehabilitation and development and Rs. 95 lakhs (Rs. 78 lakhs) to development reserve. The ordinary dividend has been declared at Rs. 9.50 an old share and at Rs. 2.54 a new share, less interest at 4 percent, amounting to 80 nP a share. The carry-forward is Rs. 4,15,397 against Rs. 4,04,945 brought in. The directors say that the dividends on the equity capital are equivalent to the maintenance of the previous dividend of Rs. 10-8 on the old shares and a return of a little over 5 percent on the amount paid-up during the year on the new ordinary shares. As the new and old shares rank *pari passu* for dividends, the total amount of dividends to be paid has been allocated between the two classes of shares in exact proportion to the amount paid up on each class of shares during the year under report. An amount of Rs. 1.74 crores, transferred to the plant rehabilitation and development reserve in terms of the Tariff Commission scheme of 1955, is less by Rs. 54 lakhs than the allocation in the previous year. The reduction is due mainly to the fall in despatches of saleable steel resulting from increased works use under the present capital expenditure programmes and to the higher rates of income tax and supertax now payable. Similarly, the annual allocation for plant rehabilitation of Rs 1 crore after deduction of tax under Government's notification of 1951 has been reduced to Rs. 86 lakhs because of the higher incidence of taxation. A representation will be made to the Government of India to restore the net figure to Rs. 1 crore by suitable additions to retention prices to take care of the additional tax. The directors mention that under the current programme of expansion, modernisation and renewals, the company has planned to incur over the five year period 1955-1960 a total capital expenditure, including interest during construction, of about Rs. 118.7 crores. To finance this capital expenditure, the company has so far made the following arrangements:

	(Rs. crores)
World Bank loan against the first mortgage of the company's properties	36
New share capital, including premium	13.5
Special advance from Government (unspent balance on 1st April, 1955)	5.2
Bank borrowings	10
Retained earnings and sale of investments	37
Total	101.7
leaving a balance still to be provided of	17

The company has initiated negotiations in the United States with a view to raising the balance of the funds required.

* * * *

Providing Rs. 3 lakhs for taxation and making other adjustments, there is a balance of Rs. 1,85,537 for the TRITON INSURANCE COMPANY for the year ended last December. The dividend is the same at 45 percent, leaving a carry-forward of Rs. 1,88,113 against Rs. 2,61,326 brought in. The fire department made a profit of Rs. 1.05 lakhs. The profit of the marine department amounted to Rs. 2.15 lakhs. The miscellaneous department increased its profit from Rs. 4,190 to Rs. 14,927.

* * * *

Providing Rs 7.40 lakhs (Rs. 5.90 lakhs) for taxation, the profit of KETTLEWELL BULLEN AND COMPANY has amounted to Rs. 4.49 lakhs. Bringing in Rs. 1,77,297, there is Rs. 6,26,652. Investment reserve is allocated Rs. 1 lakh. The ordinary dividend is Re. 1 higher at Rs. 5 a share, leaving a carry-forward of Rs. 1,76,652.

Bombay Market

EQUITY PRICES EASE IN DULL TRADING

ANXIETY ABOUT STRIKE THREATS

Tuesday Evening.

LISTLESS conditions prevailed in the Bombay stock market during the past week and equity prices were shaded, where changed. Operators were worried about the strike threats in the public sector and were inclined to restrict their commitments to the bare minimum. Any good news seemed to have little effect. The improvement in the piecegoods market failed to inspire confidence in the mill group. The favourable working report of the Tata Iron and Steel Co. Ltd. for the year ended last March was counteracted by the disappointment over the dividend of Re. 1 a share declared by the Indian Iron and Steel Co. Ltd. The market had expected that the Government would permit the company to increase the ordinary distribution by a small amount.

Tata Steels were idle around Rs. 172 in spite of lower budla charges. Indian Iron declined to Rs. 19.15 on selling pressure from Calcutta interests. Tata Locomotive declined to Rs. 153·25 and Larsen and Toubro were shaded at Rs. 15.50. Premier Construction fell to Rs. 155.50. Automobile shares lacked interest, and Hindustan Motors were freely sold at Rs. 6·75, while Premier Automobiles were fractionally higher at Rs 87.50.

Mill shares showed widespread losses. Bombay Dyeing reacted to Rs. 563.50 and Kohinoor fell to Rs. 267.25 in spite of a satisfactory interim dividend of Rs. 10 a share. Svadeshi declined to Rs 176.50 and Apollo were shaded at Rs. 2.48. India United Ordinary dropped to Rs. 11.50 and Century were lower at Rs. 426.25 on selling pressure.

Miscellaneous shares declined in sympathy with the general trend Associated Cement were lowered to Rs 160 and Digvijay Cement were bought at the lower rate of Rs 139.25. Among sugar shares, Belapur were available at Rs 225.50, while Bhopal improved fractionally to Rs. 19.80. Among shipping shares, Great Eastern received attention and the price improved to Rs. 22.15 on higher dividend prospects. Scindia Steam, however, declined to Rs. 19.40 on realising. In the mining group, Indian Copper were maintained at Rs. 3·26, but B.B. Petrol slumped to Rs. 2·24 Shivraipur Syndicate were maintained at Rs. 82.50. Bombay-Burmah eased to Rs. 582.50 and National Rayon to Rs. 225.50. Tata Chemicals were shaded at Rs 18.20 and Tata Oil were transacted at Rs. 39.25 ex-dividend.

Banking shares lost fractionally, and Bank of India slipped back to Rs. 139.50. Punjab National were quoted at the lower price of Rs. 61. Insurance shares were neglected and sellers predominated. New India declined to Rs. 43 and Oriental were available at Rs. 3,625.

Among electricity supply companies, Ahmedabad Electric were placed around Rs. 93.75 and Tata Power were done at Rs. 118.75.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last-named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise].

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

SPECIFICATIONS IN TEXTILE TENDERS

(FROM A SPECIAL CORRESPONDENT)

THE most interesting outcome of the Man-made Fibres Conference held in Oxford was the issuing of a challenge about the future form of specifications of Government departments and public bodies, when asking for tenders. The contention was made by one speaker that the day was past when there had to be insistence upon the kinds of materials to be used in the articles for which tenders were sought. There should be, instead, so it was stated, only a stipulation that, whatever the materials entering into an article's composition, these should possess certain enumerated qualities. Thus when textiles were to be purchased, the insistence should be upon such properties as tensile strength, weight a unit area, thickness, resilience, compressibility, etcetera. No further qualification should be added that the textile must be of cotton, wool or other named fibre.

As a matter of fact, the makers of man-made fibres have already secured substantial concessions in this matter. A few years ago, insistence upon indicated fibre components for articles wanted was common on the part of Government departments and public bodies. But hundreds of instances could now be cited where such is not the case, the articles ranging from Service uniforms to hospital equipment. Upon the whole, where clothing is concerned the requisite qualities have been supplied through the blending of man-made fibres with natural; but in industrial fabrics and also much military equipment, man-made fibres are often those solely used in the manufacture. A special point of grievance with man-made fibre manufacturers is that public bodies and the Services' authorities are extremely tardy in changing their definition of what should constitute a blanket—and blankets are a considerably large item in textile marketing. The great majority of official purchasers of textiles demand that a blanket must be all-wool. The retention of their conservative attitude is helped by the fact that the all-wool blanket is second nature to the average Briton. A sure way to trouble is to present a Serviceman or an hospital patient with a blanket having no connection with a sheep. However, the makers of rayon have been successful in getting blankets approximately half wool and half viscose staple into hospitals and other institutions. Incidentally, it was claimed at the conference that inroads have been made into the position hitherto occupied by hessian as a wrapping material, many Government departments now allowing wrappers to be made of standard or waste man-made fibres.

Properties of Fibre

It is evident that this subject of specifications being worded to require the possession of properties by materials, without demanding that they be of certain fibres, will come much to the front, and, in principle, will extend beyond textiles. Many new materials for industry are being introduced and it must be granted, in view of this happening, that wordings of specifications are often partially obsolete. The rights of the new materials to usage when of proven value will have to be fully recognised. On the other hand, the old materials have been severely tested and over much longer periods, and it would not be wise to permit the newcomers too easy an entry. The safeguarding body in this and allied fields will have to be the British Standards Institution. While it is true that the blending of different basic materials often confers a fresh advantage upon the resultant final material there is no justification for claiming that this must be so as a matter of course. Each case will have to be considered strictly on its merits and it must not be allowed to rest upon the advocacy of interested parties. It may be queried, for example, whether the blending of nylon with wool is always a gain. Moreover, there is a big difference between the dyeing virtues of the two fibres. There is something to be said for the complete integrity of material in a manufactured article, indeed as much as for alloys, and diverse compositions.

Wage Increases

Further salary and wage increases have been granted to a large section of the community—from members of Parliament and civil servants downwards. Under these circumstances, there is manifest a general tendency to rejoice once more, the horrors of inflation notwithstanding. A type of industrialist who does not bask in the genial warmth thus induced is the obtainer of foreign contracts. Hardly have overseas contracts been obtained, said one of these to the writer recently, when "the prices of my labour and materials rise. I cannot safeguard myself against this ever-recurring contingency by the wording of the contracts. If my customer accepted such conditions, which is extremely unlikely, they would be a standing inducement for him to intensify his efforts to get supplies from my foreign competitors at the first opportunity. I have met these situations so far by the judicious use of substitute raw or semi-finished materials. This results in the prices of the substitutes themselves going up—and I have reached the limits of my ingenuity in that direction." Not only does the quality of British goods suffer through the necessity of these resorts, but the chances of getting back to the old standards of production are continually receding. This is a theme upon which, from one angle or another, a good deal is now being said. It has occupied the attention of the Manchester branch of the Clothing Institute, where various clothing manufacturers have proclaimed that they are now buying cloth from the Continent because of its allegedly superior dyeing.

Rising Fuel Costs

Meanwhile, the cost of fuel is again rising, and British manufacturers all along the line have to make offsetting economies, if they can, and in any way not excluding the reduction in the number of elderly workers. Courtaulds estimate that their fuel bill will be increased by £250,000 during the current year. It is curious that, at the moment, little is being said by Whitehall on the need for economy. Perhaps it would be unseemly on the eve of a new campaign for whipping up the sales of Premium Bonds. Perhaps, as an alternative explanation, a reasonable time must elapse after the granting of additional emoluments to members of Parliament. Both the Prime Minister and the Chancellor are contenting themselves with exhortations to all and sundry to produce more. The House of Commons itself has adjourned for the longest vacation period ever recorded. But even if there are no physical limitations to producing more and more, the fact remains that unless there be a profound change of spirit, there cannot be an ever-rising output without a decline in the quality of what is produced. Which must bring some kind of Nemesis. There is much talk in business circles of ensuring that no fall in the consumption of goods occurs. American methods of salesmanship are the methods to be adopted.

Activities of N.R.D.C.

The report of the National Research Development Corporation is scarcely an impressive document; but it is not entirely devoid of interesting reading. Firstly, the financial construction of the Corporation is an enviable one, and provides a useful model for anyone about to set up a similar body. The Corporation has borrowing powers of £5 million by way of advances from the Board of Trade, but the Board may, with Treasury approval, waive any payments of interest on advances to the Corporation within ten years from 28th June, 1949. A useful clause in an emergency, although the Corporation does not appear to date to have had to take advantage of it. The remuneration of members of the advisory council and the staff amounted to £98,000 during the year ended 30th June, 1956. The excess of expenditure over income for the year, before charging interest on advances, was £307,000, the chief items of revenue were £95,000 from patent rights and £75,000 from exploitation of inventions. These figures, surely, are not ambitious for a national undertaking. Indeed, they are small besides the working results of even the most modest of public joint-stock concerns.

The chief function of the Corporation is to secure, where the public interest so requires, the development of exploitation of inventions resulting from public research, and of any other invention which appears to the Corporation as not being developed or exploited "or sufficiently developed or exploited." Of the inventions communicated to the Corporation in the year under review, 171 came from Government departments and Research Councils, private firms contributed an identical number and universities 49. Although the Corporation's direct influence upon industrial development is not pronounced, it is not negligible. It was a pioneer of the production of electronic computers, including the prototype "Pegasus." Attempts are now being made to bypass certain stages of the development of these computers. A fresh activity which is being sponsored, relates to the use of an electronic computer for a specific business purpose, namely, for the inventory of engineering stores and the production control of complex equipment. A method of preparing frozen milk which can be stored for at least 12 months has been developed in co-operation with the National Institute for Research in Dairying. Production of the acetate "Hecogin" from sisal pulp is now fully established and royalties are being paid to the Corporation by the exploiters of the process.

Directory of U.K. Chemical Manufacturers

The 1957 directory of the Association of British Chemical Manufacturers is available, free of charge, to all persons and firms having a genuine use for the volume. It consists of 200 pages, and gives the names and addresses of 260 chemical manufacturers and their products, together with proprietary names and also trade marks. It is the first issue of the directory since 1955, and a number of additions and revisions have been made necessary by the passage of two years.

We do business with the nicest people...

And we are deeply interested in these nice people: in *you*! That's why we have a special Market Research Department that devotes itself to finding out what you like and don't like, why you buy—or don't buy.

Our teams of interviewers travel all over the country, calling on families in city, town and village, and noting your growing needs and changing preferences. This fact-finding process enables us to introduce new products like Rinso, or change a familiar one in some way—the perfume of Lux Toilet Soap, for instance.

Many of our products are, perhaps, already your household friends, and you appear on the charts and reports compiled by our interviewers. But you are more, much more, to us than facts and figures... you are the very people we do business with. We spare no trouble in trying to meet your needs, in offering you the very best value for your money.

LEGISLATION TO BAN STRIKES IN ESSENTIAL SERVICES

MINIMUM OF FOREIGN SECURITY BACKING FOR CURRENCY LOWERED

(FROM OUR NEW DELHI CORRESPONDENT)

A CONTROVERSY developed in Parliament when the Home Minister moved for consideration the Essential Services Maintenance Bill. Nearly half a million Central Government employees, including those of the Posts and Telegraphs Department, have served notices to go on strike from 8th August, in spite of the Prime Minister's personal intervention and the appointment of a second Central Pay Commission, announced on 3rd August, to review the pay structure of Central employees. Except for the grant of interim relief, the Government has met most of their demands. As far as interim relief is concerned, the Government thinks that it would accentuate inflationary pressures. The Communists have spared no pains to indicate that they are the principal Party behind the threatened strike, which aims to paralyse the administration. In order to meet the threat, the Government has curtailed postal and telegraph services since Monday, and it may use the military to maintain essential services. In addition, it has got the Bill enacted; it defines essential services and prohibits strikes in them. It declares the prohibited strikes as illegal and provides for penalties for persons participating in them. The services included are postal, telegraph, telephone, railway or any other transport services for the carriage of passengers or goods by land, water or air: any services connected with the operation and maintenance of aerodromes, or with the operation, repair or maintenance of aircraft; any services connected with the loading, unloading, movement or storage of goods in any port; any service in any mint or security press; any service in any defence establishment connected with the manufacture, storage or distribution of arms or ammunition or other military stores or equipment. The Government has taken the power to add to this list if, in its opinion, a strike in such services would prejudicially affect the maintenance of any public utility service. The penalty for participation in strikes declared illegal under the Act is six months' imprisonment or a fine not exceeding Rs. 200 or both. The penalty for instigation or support with money of strikers is one year's imprisonment or a fine not exceeding Rs. 1,000 or both. The Act empowers the Government to arrest without warrant persons who are reasonably suspected of having committed any offence under it. It overrides all existing laws.

Appeasement of Labour

The present crisis can be traced to the policy of appeasing a class of workers, which has become an integral part of the welfare State ideology. This appeasement is confined to workers who are generally organised by "outsiders", who have acquired a nuisance value, and whose activities are often anti-social.

Experience has shown that flouting of the Prime Minister's advice pays dividends. The case of bank employees illustrates the point. Bank employees went on strike in spite of the arbitrator's award, which had been fully implemented, and against the Prime Minister's appeal. The Union Labour Ministry thereafter surrendered and gave in on all the issues concerning which the strike had been organised, thereby destroying the value of arbitration. Workers now feel that it pays to flout the Prime Minister's advice and that the Government will give in if they can muster adequate nuisance value to back their demands. The Government's surrender has invariably strengthened the Communist front.

The episode has brought to light several other inconvenient facts. It has shown the non-representative character of certain labour organisations. It has also shown how defective the Government's publicity machinery is. The public knows little about what the Government's case is, and what its surrender to the direction action threat would mean.

It has also shown how ill-equipped the Union Labour Ministry is. No one knows what effect the last ten years of the welfare State has had on the productivity of Indian workers: whether it has gone up, and if so, whether the rise in productivity has any relation to the rise in the cost of production, following a higher wage bill.

This country has suffered for a long time on account of different scales of payment for the same kind of work. There is hardly any justification for the glaring disparity between the pay scales of the Central Government employees and those of the States. In this context, mention should be made of a much-abused category of human beings called tax-payers. They have gladly borne the burden of taxation to make India great and strong. They should perhaps now be given some relief if their taxes are to be diverted for non-developmental purposes.

One pertinent question is what would happen if the recommendations of the Second Pay Commission do not satisfy the leaders of Government employees, just as the Bank Award did not meet the wishes of bank employees? They may order another strike. What is needed is a determination to halt the appeasement of labour and a change in labour policy aimed at linking wages not to the artificially and mechanically worked out index numbers, but to the productivity of labour. "Outsiders" should be eliminated from labour unions. It is true that some Congressmen will also suffer, but the country will gain a great deal.

Announcement of the Finance Minister

The following is the text of the Finance Minister, Mr. T. T. Krishnamachari's statement in the Lok Sabha, announcing the appointment of the second Pay Commission: "On Friday, 19th July, the Government indicated that it was considering the question of instituting an enquiry, among others, into the structure of emoluments and the conditions of service of the Central Government employees. The Government has now reached a decision on this matter. It is proposed to appoint a commission of enquiry to go into this and other related questions. Mr. Justice Jagannadha Das, Judge of the Supreme Court, has agreed to be the Chairman of the Commission. He will be assisted by four other members whose names I expect to be able to announce shortly. The terms of reference to guide the work of the Commission are as follows. The Commission shall (i) examine the principles which should govern the structure of emoluments and conditions of service of the Central Government employees; (ii) consider and recommend what changes in the structure of emoluments and conditions of service of different classes of Central Government employees are desirable and feasible keeping in mind the considerations mentioned below; and (iii) recommend, in particular, the extent to which benefits to Central Government employees can be given in the shape of amenities and facilities.

"In making its recommendations, the Commission will take into account the historical background, the economic conditions in the country and the implications and requirements of developmental planning, and also the disparities in the standard of remuneration and conditions of service of the Central Government employees on the one hand, and of the employees of the State Governments, local bodies and aided institutions on the other, and other relevant factors."

Minimum Foreign Security Reserve

The Government has permitted the Reserve Bank to reduce the paper currency backing for the rupee in terms of foreign securities to Rs. 300 crores. Under the Reserve Bank of India Act, backing for the currency must be maintained above the minimum of Rs. 115 crores in gold and Rs. 400 crores in foreign securities. There is, however, a provision that with the permission of the Central Government, the foreign security part of the backing may be reduced to Rs. 300 crores, provided the

permission is renewed every six months. The lowering of the backing below Rs. 300 crores is permissible only by an amendment of the Act. The sterling balances or foreign securities during the week ended 2nd August were down to Rs. 401.84 crores.

Results of First Plan

The official review of the achievements of the first five year plan was published last week. Considering the composition of the Planning Commission, it is so far the frankest assessment of the first plan's results. In spite of the theory of physical planning, financial issues have been given importance. The views of the Planning Commission on the financing of the first plan, therefore, should have crucial bearing on the financing of the second. The Commission says: "It was recognised from the very beginning that the aim of fiscal policy both at the Centre and in the States should be to provide from out of the current revenues as large an amount as possible to finance the rising investment expenditures to be undertaken in the course of the plan period. The Central Government imposed substantial taxation in 1951-52 partly for this reason, but mainly in order to generate a disinflationary climate. Export duties which had been raised in 1950-51 were raised further on a number of commodities in order to draw into the public Exchequer a proportion of the increasing incomes being made in the export sector. The other measures taken in that year include a surcharge on income tax, an increase in the corporation tax, additional excise duties and import duties. Altogether, the increase in taxation proposed in that year amounted to Rs. 32 crores.

"Towards the close of the year, it became necessary to reduce the export duty on jute. In the two subsequent years, inflationary pressures had abated and some further reductions had to be made in export duties. The other changes made in these two years were relatively small. In 1954-55, sizeable increases were made again in excise duties. By this time, the expenditure on the plan had risen substantially and it was intended that the outlay should be stepped up as rapidly as possible in order to ensure the fulfilment of the plan. The additional taxation imposed in 1954-55 amounted to Rs 11 crores. In 1955-56, the final year of the plan, both direct and indirect taxation was raised further, the major increases being under income tax and excise duties. The yield of the new tax measures was estimated at Rs. 17 crores for the year. Altogether, over the five years the yield of additional measures of taxation at the Centre excluding export duties, which in their nature are variable, was about Rs. 175 crores.

Contribution from Revenues

"As for the States, the contribution from revenues over the five-year period was Rs. 269 crores, compared with the plan estimate of Rs. 410 crores —a short-fall of about 34 percent—despite the transfer of Rs. 80 crores or so to them as a result of the Finance Commission's award. The target of additional taxation by States as laid down in the plan was Rs. 230 crores. Actually, it is estimated that the total yield of all the measures taken by State Governments during the plan period was of the order of Rs. 80 crores. In the report on the five year plan, the Statewise break-up of this total of Rs. 230 crores was not fully worked out. This was done later and targets for each individual State were worked out in consultation with the authorities concerned. The following table compares the performance relating to additional taxation by each State relatively to the targets.

Additional Taxation in the States

States	Five-year targets.	Achievements (1951-56) (Rs. crores.)
PART A		
Assam	3.5	3.3
Bihar	7.3	3.0
Bombay	23.5	24.0
Madhya Pradesh	10.6	2.3
Madras (including Andhra)	39.3	8.0
Orissa	9.4	2.0
Punjab	5.0	4.5
Uttar Pradesh	50.2	11.0
West Bengal	36.9	4.5
Total of "A"	185.7	62.6
PART B		
Hyderabad	7.4	1.0
Madhya Bharat	4.9	2.7
Mysore	9.2	3.0
P.E.P.S.U.	4.1	0.4
Rajasthan	3.3	2.6
Saurashtra	4.7	2.1
Travancore-Cochin	11.0	6.0
Total of "B"	44.6	17.8
Total of "A" and "B"	230.3	80.4

"Bombay fulfilled the target fully. Assam and Punjab almost fulfilled the target. In other States, the actual tax effort was much below the targets prescribed. It might be mentioned in this connection that the target of Rs. 230 crores included, in some cases, measures of economy in the matter of expenditure. It was also recognised that these targets were not based on any close study of the taxable capacity of the States. Nevertheless, the conclusion is inescapable that the progress in the matter of additional taxation in the States has not been commensurate with the requirements of the plan.

General Sales Tax

"Of the total yield of Rs. 80 crores, about a half was accounted for by general sales tax, tax on sale of motor spirit and sales tax on tobacco, cigarettes and cigars. Taxes on motor vehicles also made a significant contribution. While irrigation rates were put up in some States, these increases yielded only Rs. 6 crores compared with the plan estimate of Rs. 29.5 crores. The additional revenue from taxation of land, which the plan had placed at Rs. 34 crores, turned out to be only Rs. 5.4 crores. It must also be mentioned that while the plan had estimated the States' share of estate duty at Rs. 21 crores, actually this source contributed only a little over Rs. 2 crores." The following table shows an item-wise break-up of the additional tax measures in the States:

	Rs. crores.
1. Taxation on land (land revenue, agricultural income tax, etcetera)	5.4
2. Irrigation rates	6.0
3. Electricity duties	3.0
4. Motor vehicles tax	9.3
5. General sales tax	31.8
6. Tax on sale of motor spirit	6.0
7. Sales tax on tobacco, cigarettes and cigars	1.4
8. Tax on capital transfers (estate duty and transfer of property in urban areas)	3.1
9. Surcharge on passengers travelling by public transport and buses	5.3
10. Miscellaneous	9.1
Total	80.4

In several instances, particularly in Madhya Pradesh, schemes were added at the instance of the State Governments on the specific understanding that finances for those schemes would be found by the State concerned. Largely on political considerations, it was the Centre which ultimately was called upon to foot the bill. The observations are pertinent in the context of financing the second plan.

Shortfall in Current Year

In 1957-58, the State Governments were to raise Rs. 147 crores from their own budgetary resources, including Rs. 31 crores from fresh taxation. The indications, however, are that there will be a shortfall of the order of Rs. 11 crores. The interim budgets presented by the State Governments contained almost no proposals for fresh taxation. On the contrary, they showed a revenue gap of about Rs. 70 crores. The estimates of States' resources for the plan also included receipts from market loans aggregating Rs. 53.5 crores. It now appears that the loans for the year will have to be on a much smaller scale. This will mean an other shortfall in resources of at least Rs. 25 crores.

The Planning Commission says: "From the experience of the last few years, it is clear that the plans of the State Governments cannot but slow down, unless the fullest effort is made by them to raise the resources required. The urgency of the problem may be seen from the fact that since last year several States have been running substantial overdrafts with the Reserve Bank for long periods. These overdrafts appear to be due, not to short-period difficulties, but to the insufficiency of resources to meet their budgeted expenditure. It is apparent that the implementation of State plans, even after allowing for all the Central assistance that the Centre can make will require a substantial effort by the States themselves to raise additional resources." Experience has also shown that such statements by the Planning Commission remain pious exhortations. As the Centre has formulated the plan, it is assumed that it must find the resources to implement it.

Utilisation of Russian Credit

The Russians have agreed to negotiate with the Government of India on the following five schemes, to be financed out of the 500 million roubles credit in 1959-61: (i) heavy machine building works; (ii) mining machinery plant; (iii) power station in Neyveli; (iv) optical glass factory; and (v) development of Korba coalfields—coal mines, quarry, coal beneficiation plant, repairing shops. The negotiations will commence shortly.

Fertiliser Equipment on Deferred Payment Terms

A contract for the supply, on deferred payment terms, of electrolysers, which constitute the first large section of the Nangal fertiliser plant, has been awarded to an Italian firm, it is disclosed here. An initial payment amounting to 10 percent of the contract price in foreign exchange has been made to the firm on the award of the contract, the balance of 90 percent being payable in instalments commencing from July 1960. Similar deferred payment terms, it is expected, will be negotiated for the supply of other sections of the plant involving foreign exchange. Tenders for the supply, erection and commissioning of the fertiliser group of plants have been received and are being examined. The examination of tenders for the supply of electrical equipment is also in progress. Tenders for the supply, installation and commissioning of the heavy water plant will be invited shortly.

Coal Washeries

The Government has decided to set up two coal washing plants, the first of which will be in Dugda between the Bokaro-Kargali and the Jharia fields. This will supply coal to the Rourkela and Bhilai steel plants. The second plant will be near Patherdih and will supply coal largely to the Indian Iron and Steel works.

Proposal for New Delhi-Moscow Air Service

Russia has asked India's permission to operate a New Delhi-Moscow air service via Tashkent. New Delhi's reactions are still awaited. Meanwhile, details have been sought about the frequency of the service and whether Russia will agree to India operating a similar New Delhi-Moscow service via Damascus. As India already operates a daily service to London, an extension of a New Delhi-Moscow service is not possible.

Pan American Airways is adding a third service through India via New Delhi by the end of this month.

MORE CONFIDENCE IN ECONOMIC OUTLOOK

CAPITAL ASSISTANCE TO COMMONWEALTH

(FROM OUR LONDON CORRESPONDENT)

FEARS about the economic outlook appear to be taking a back seat once again. Optimism in official quarters continues, supported just lately by the reappearance of some gilt-edged buying with a consequent recovery in prices, and some slight easing of the pressure on sterling in the exchange market. The Chancellor of the Exchequer's almost casual mention in the recent economic debate that in the last 12 months, from mid-1956 to mid-1957, the external balance of payments on current account has yielded a surplus of "£125 million or more", contrasted with Mr. Macmillan's anticipation last December that it would be no more than "roughly in balance", appears to be restoring confidence. Mr. Thorneycroft went on to add: "There is no reason whatever why in the coming year we should not do better still." It is true, of course, that the Government has said many times that the U.K. must have a surplus of more than £300 million a year to fulfil its international obligations, repay its debts and invest capital overseas. It is still far from that target, but in view of the terrible dislocations of the past 12 months, the Chancellor's news is very good indeed. This assessment is not vitiated by the adverse showing of the gold and dollar reserve figures for July—the first decline since January—since this was more or less inevitable in view of the large deficit with E.P.U. Indeed, the £5 million drop was less than was expected.

Another piece of good news is that production has at last started to rise again. For three successive months, April, May and June, the index of industrial production issued by the Central Statistical Office has been well above that of last year. Adjusted for seasonal factors (which is necessary because Whitsuntide fell in a different month this year), the index numbers were 138 for April, 140 for May, and a provisional estimate of 140-141 for June. The corresponding figures for last year were 136, 136, and 138. In the first six months for 1957, the index has averaged 141, compared with 139 in the corresponding period of 1956. Detailed figures for a number of important products show that the advance in the past two months has been greatest in steel, man-made fibres, electricity, cars and cotton. There has also been some increase in the output of mined coal and sulphuric acid, but the production of bricks and cement, which reflect building activity, has dropped back.

Commonwealth Investment

In view of the balance of payments position and the pressure for finance in the Commonwealth, it is surprising to learn from last week's White Paper on Commonwealth development that the U.K. is in fact providing something like £200 million a year for this purpose. Although it contains little new, it does provide for the general public a useful summary of the facts in a convenient form, besides giving a pointer to future policy. Direct private investment, it says, forges the most permanent trading links between countries, and is best adapted to undertake the risk investment which often produces the most valuable addition to economic progress. Having faced this issue squarely, the proposals further to encourage the work of the Commonwealth Development Finance Company, the privately-backed organisation formed in 1953, are logical and commendable. It is recognised that the present rate of investment, about £200 million a year, is as much as can be provided under present conditions of capital scarcity. Greater emphasis will and should be placed on the scope for wider use of British managerial experience and technical "know-how".

Suggestions for creating a new Commonwealth development agency and bank are rightly rejected. An additional organisation could do nothing to increase the amount of capital available. The statutory Colonial Development Corporation's commitments will continue to be among the dependent territories. It is suggested that its experience, but not its funds, should be at the disposal of the new independent members of the Commonwealth. The task of making Commonwealth financing attractive is placed where it belongs, with the borrowers. Their policies, with those of the United Kingdom, can create the atmosphere for mutually profitable investment to flourish.

Bank of England Report

As usual, the annual report of the Bank of England provides little guidance in its 16 pages to the financial outlook, for it consists mainly of statistics which, for the most part, have already been available from other sources. Nevertheless, the report does offer some fresh information to enable a better appreciation of developments in the field of overseas finance. It discloses, for example, that last year, U.K. merchanting transactions between non-sterling-area countries carried through on a sterling basis amounted to £205 million. This compares with a revised figure of £178 million in 1955 and with £163 million in 1954. It discloses a big increase in commodity business through London and throws some light on the activities of unofficial overseas markets in transferable sterling and just how the rate is supported. The report says that during 1956, the total value of commodities sold by London dealers to countries outside the sterling area was £424 million. That is £31 million more than in 1955. This increase was largely in three commodities—raw sugar, copra and grain. The first two are derived largely from dollar sources, from Cuba and from the Philippines, but are sold for sterling. Dollars are spent on them and transferable sterling is earned by selling them. The effect is to give dollar support for transferable sterling, and the dollars are used with maximum effect, because the amount of transferable pounds they earn is increased by the extent of the London trading commission. Sales of grain, however, usually have to be made against dollars when sold outside the sterling area. These, therefore, do not give support to the transferable rate. Of the other commodity markets, there were larger receipts for rubber, copper and tin, which were almost offset by reductions in coffee, cocoa, lead and cotton.

The Bank of England report also continues the series of estimates begun in October 1950 of U.K. overseas investments. The latest figures show that the total nominal value of U.K. overseas investments at the end of 1955 was £2,137 million, against a revised total of £2,127 million at he end of 1954 and £2,017 million at the end of 1953. The 1955 total of interest and dividends from these investments was £207.3 million, which compares with a revised figure for 1954 of £186.5 million. Of even more interest in this section, perhaps, is the amount of foreign investment in British-held securities. It is shown that sales of shares in Commonwealth countries amounted to a cash value of £43 million; sales of investments in foreign countries amounted to £27 million and sales of investments in countries not classifiable by area to £5 million, a total of £75 million. South Africa collected most of this money—£25 million; Rhodesia and Nyasaland got £9 million. Of the foreigners, there were substantial sales of German and Japanese Government bonds and of the shares and loans of companies operating in France, Mexico and Brazil. The sales of investments not classifiable by area were mainly of oil company shares. In total, the Bank comments, these sales were "unusually large in 1955."

Bank Figures Back to Normal

The half-year bank returns are so distorted by special factors as to give a misleading picture of how things stand in that quarter of the economy. The latest clearing bank returns cover up to 17th July, and in that short period of 17 days, the June rise of £81 million has been more than wiped out and total advances are down by £87.9 million at £1,991.9 million, which is £62.1 million higher than at the same time in 1956. In spite of monthly advances by the Exchequer of £21.9 million, the nationalised industries could reduce their bank overdrafts by only £6 million. The total was £53.6 million against £59.6 million at 30th June. The rise in total deposits from £6,439.9 million at end-June to £6,501.2 million at mid-July looks modest enough, but a truer perspective is given by Lloyds Bank's index of deposits adjusted for seasonal variations. It is up from 107.9 to 108.8. At the present time there is no doubt that the rise in Treasury bills is the significant factor. In the 17 days, they went up by no less than £112.6 million; the banks already hold £70 million more of them than at the same time last year, while the liquidity ratios have risen to the high point of 35.5 percent.

Freights Go On Falling

Tramp shipping freights are still sagging. In spite of the approach of the peak time for shifting the north American harvests, the grain freight to the U.K. has dropped at least £1 in a month and coal freights too are lower. The fall is looked upon with rather mixed feelings for it cuts both ways. One of the biggest contributors to the U.K.'s overseas earning power is its merchant navy, which, in 1956, brought in a net £108 million, according to the Treasury's latest *Bulletin for Industry*. This invisible export balance is small compared with the U.K.'s total cargo and passenger shipping earnings of £500 million, most of which came from liners. On tramp shipping, the U.K. these days is a payer on balance. Other invisible items are: credits—interest, profits and dividends £83 million and dollar travel £37 million: debits—military spending overseas £178 million and Government grants to colonies and others £46 million.

G.U.S. Bid for Whiteaways

Sir Harold Gillett and his fellow-directors of Whiteaway Laidlaw, the expert drapers and merchants, formerly operating stores in India and the Far East, recommend acceptance of an offer by Mr. Isaac Wolfson's Great Universal Stores for the equity of the business. The bid is for 90 percent of the £589,380 issued ordinary capital. Two G.U.S. "A" 5s ordinary shares, priced around 51s, are offered for each five Whiteaway ordinary shares, priced around 21s. It is planned that the present board should stay in office. Mr. Wolfson is to develop the business of the company which, reorganised over recent years, will clearly provide his group with valuable additional outlets. Results for the year ended 28th February, 1957, are now released, showing that the group's net profit has fallen from £67,778 to £40,590, and the ordinary dividend is halved to 5 percent. The accounts include a provision of £30,000 to allow for reduced selling prices of slow-moving stock in Canada.

Manchester-Karachi Coach Service

A licence for an express coach service between Ardwick Green, Manchester, and Karachi, Pakistan, was granted the other day by the North-west area Traffic Commissioners. The service is to operate four times a year, in March, May, July and October, at a single fare of £69 and a return fare of £115, to cater for the Pakistani population of the greater Manchester area. The applicants were Mahmood-ul-Hassam Mir, Mohammed Ali Chowdhri and Mahboob Alam Rasal, trading as Horizon Travel Services, Downing Street, Manchester. Opposition came from Sheffield United Tours, and James Smith, Wigan, but the applicants agreed to a condition that only passengers at the full fares should be carried and that there should be no setting down or picking up of passengers anywhere outside Pakistan.

Pakistan International Airlines has ordered from Lockheed Aircraft Corporation two *1049H Super Constellation* aircraft for use on either passenger or cargo services. Scheduled for delivery early next year, they will be used to double existing seven-a-week flights between East and West Pakistan and to expand the present Karachi-London service.

Brevities

Holders of over 90 percent of the £10 (£5 paid) shares of Eastern Bank have accepted the share exchange offer made by Chartered Bank. The offer has been extended to 21st August.

The U.K. Board of Trade announces that the quota for the import of raw coffee beans from dollar sources for the year ending 30th August, 1958, is increased by £500,000 to £3 million.

The Radcliffe Committee, appointed only two months ago to enquire into the whole financial system, has started taking oral evidence.

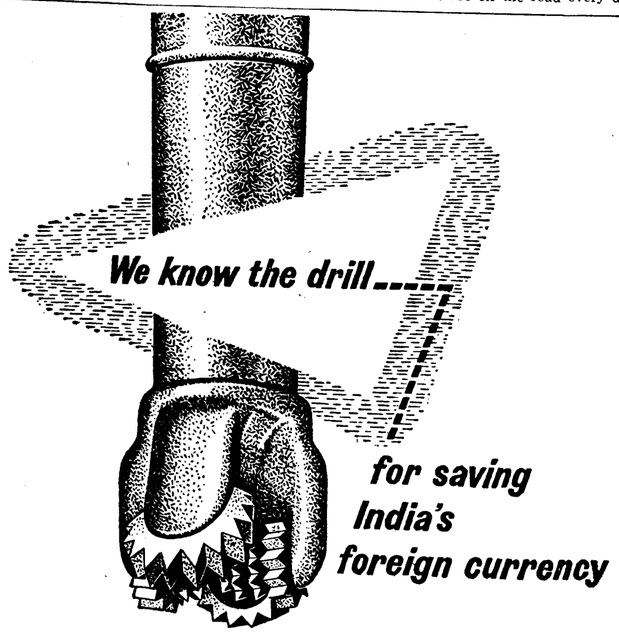
DISCONTENT AMONG STATE GOVERNMENT EMPLOYEES

STRIKE AVERTED IN ELECTRICITY DEPARTMENT



(FROM OUR MADRAS CORRESPONDENT)

THE flood of letters in the newspapers about the the discontent of Posts and Telegraphs employees in the past fortnight has attracted attention to differences in the nature of the work performed by Central and State Government servants. It has been argued that, in the nature of things, the former are entitled to more consideration from a Pay Commission. What has been offered so far gives little satisfaction to State Government employees. However, the Electricity Department's lower grade staff, by giving a strike notice last month, drew attention to the fact that their pay is poor and their prospects are uncertain. The strike has been averted by an offer to examine and revise their salaries. Meanwhile, officers too have made known their opinion about the existing disparities. Any review of wages for skilled workmen engaged in outdoor work must take note of wages prescribed by tribunals. But there is no doubt that the Government's socialist professions will be tested by its response to the demands from its own employees.

The recent announcement of the Union Government's plan to avert the strike and to examine the disparities in pay did not please non-Gazetted Government servants in Madras. They suggested that the pay of Central Government employees might be revised downwards without regard to the rising cost of living. Expressing sympathy with the Posts and Telegraphs employees, N.G.Os have asked for a separate enquiry into their pay and terms of service. Congress leaders here, evidently taking the cue from Bombay, have objected to the proposal for a strike by public servants in essential services. They have even offered to send volunteers to run offices in an emergency. It is reported that the Congress Reform Committee has extended support to the Posts and Telegraphs Union, along with the Socialists and Communists. The anxiety about picketing and demonstrations has been dispelled by the new legislation against stoppage of work, but there is a widespread fear that postal and other delays may increase.

Decimal Coinage in State Transport

The adoption of decimal coinage by the State Transport organisation from 1st August has encouraged speculation whether the change-over will be easy and smooth. The Government has argued that it has to pay three annas more for a gallon of petrol and diesel oil and it cannot afford to retain the old fares, especially when it has to spend big sums on getting new buses. Furthermore, the Transport Department has to pay extra dearness allowance to workers and it cannot afford to lose any money when the Posts and Telegraphs Department has raised its charges as expressed in decimal coinage. The plea that conductors should not be penalised for any loss when handing over the daily collections was put forward. But the main grievance at present is not over this problem. After the trams stopped running, traffic has increased, so the Government's daily receipts have also progressively risen. But one question now asked is why nationalisation has not produced enough earnings to permit the withdrawal of overaged buses that are unsafe for travellers. The capital outlay of Rs. 11 lakhs may result in some relief but the delivery of vehicles ordered so far has been delayed and even now about 25 percent of the vehicles are off the road every day.

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

USE OF NUCLEAR POWER IN INDUSTRY

INCREASED COAL OUTPUT IN U.K.

TOWARDS the end of June, a secret conference took place in Harwell. It was secret because of the peculiar character of its subject, the application to industry of what the public calls hydrogen power and scientists call fusion energy, or "controlled thermo-nuclear reaction". This was not the first such conference at Britain's centre of nuclear research, but it was the first where practical advances in the control of fusion energy could be discussed. Within the past year the subject has been brought down from the clouds of theory to the firm ground of experiment: Britain has already evolved—years sooner than most people expected—an experimental device for controlling nuclear fusion. It is much too soon to say that all the problems of converting the limitless energy potential of the hydrogen in the world's oceans have been solved: but the example of fission energy suggests that progress from now on may be rapid. It is possible to indicate in general terms what this development implies. It is most important, perhaps, at this stage to emphasise what the development does not imply. Conventional energy will not be replaced by nuclear energy (whether by fission or by fusion), because demand for energy is constantly increasing. More positively, the implication is that the demand for energy will be satisfied. The fear that expanding industry will be periodically frustrated by shortage of power is receding.

It is, however, the energy of nuclear fission that will fill the gap in the next decade or two; and fission energy means, primarily, electricity. Whether fusion energy (assuming that it can really be harnessed) will also be applied mainly through the medium of electricity it is not yet known. The development of the new processes could mean that the electrical industry and the commodities (such as copper) associated with them would not develop as rapidly as had been supposed. These developments must be viewed in perspective. The energy of hydrogen has not replaced the energy of uranium, any more than the energy of uranium has replaced the energy of coal and oil. Britain is concerned with the next few years as much as with the next few decades. It has been suggested that the rapid development of the West European economy in the past few years has outrun the region's available energy and that progress will be slower in the next few years because there will not be enough energy to sustain development at the recent pace. In Britain this impediment could not only restrain the development of industry at home but also limit the supply of capital available for the sterling area; it could thereby weaken the sterling currency.

Success in Coalmining

An important change has been observed in Britain this year. It is not related to the remarkable expansion of the nuclear-energy programme, but rather to the success of Britain's coalmining. It will be wrong to say that Britain has no longer any shortage of coal, for large coal, such as is burned in railway locomotives and domestic grates, is still imported (mostly from the United States) in appreciable quantities. But the shortage of coal in general, as distinct from particular grades of it, is at least temporarily, and quite possibly permanently, overcome. Britain's output of coal, which was 222 million tons last year (only slightly more than in 1955), has been rising sharply this year and may advance on last year's total to the extent of some millions of tons. Consumption, on the other hand, is more or less static.

Reduction in Imports

This situation, if permanent, is of great importance to the British economy. It means that heavy expenditure on imports of coal can be further reduced (and entirely eliminated if householders can be persuaded to modernise their heating so that they consume less large coal) and that a reasonable proportion of the lost export trade can be regained. And there are good reasons to believe that the improvement is permanent: the big expenditure on capital development in the postwar era is, after a slow start, showing substantial results, and the increase in the price of coal is persuading consumers to effect economies that have been technically possible for many years. A sufficiency of coal for the next few years means something else. It means that the interim deficiency of power between the era of coal and the era of nuclear energy may not arise, for at the same time as the period of the gap is being narrowed at the one end by the increase in supplies of coal it is being narrowed at the other end by the acceleration of the nuclear-power plan.

Nuclear-power Programme

The nuclear-power programme, published early in 1955, though it covered a period of many years, is now a document of only historical interest. The latest formal revision of the plan when the first commercial contracts were placed at the end of 1956 is equally outdated by developments. Technology is developing so fast in this new industry that it is no longer possible to formulate a programme at all. When arrangements are made to build three nuclear power stations, the number increases to four, five, six within a matter of months; and every project planned to produce a certain output of power is modified before completion to produce much more power for approximately the same cost, because innumerable technical improvements—most of them slight individually—are steadily improving the efficiency of energy produced by nuclear fission.

STOCK MARKETS UNCERTAIN

STEADY RISE IN GILT-EDGED

London, 7th August.

THE main feature of the past week was the steady improvement in gilt-edged securities, but the stock markets otherwise presented an uncertain appearance. Prices in most sections were lower compared with the previous week's levels. Business was restricted by holiday influences and by the current political and economic uncertainties. In addition, the lower trend of Wall Street was an unsettling influence, particularly on oil shares, which were also affected by the projected 10 percent cut in U.S. oil imports. The disturbances in the Middle East and the wages and prices position at home were further adverse factors affecting the markets generally. There was a steady recovery in gilt-edged securities from their recent depressed levels. A more confident feeling was evident in the market and fresh gains ranging up to one full point were recorded. Medium-dated stocks were particularly favoured on consideration of the high yields obtainable on redemption. In an otherwise quiet foreign bond market, German Potash and Baltic issues were supported. Rails were featureless apart from Canadian Pacifics, which receded together with other dollar stocks under the influence of trans-atlantic markets, and a more cautious view of Canadian securities. The industrial market lost ground under the influence of the lower trend of Wall Street and due to a lack of interest during the peak holiday period. However, several good features developed. These included Imperial Tobacco, Furness Withy and Bleachers Association. South African gold shares tended easier in spite of some satisfactory monthly mining reports. Platinum shares fell sharply on the adverse outlook for the metal. Copper shares lost ground, reflecting the fall in the metal price. Other base metal issues were uncertain. Oil shares fell back although western hemisphere issues were often in demand. Shell Trinidad and Trinidad Petroleum were prominent, but profit-taking reduced the gains. Although business was rather small there were several bright spots in rubber shares. Anglo-Indonesian were strong on the projected U.S. bid, while eastern buying was responsible for other occasional improvements. Tea shares were subdued, but small gains predominated.

The Money Market

The end-of-the-month factors, heavy holiday demand and special payments made it very trying for borrowers in the money market last week. Credit was in short supply, and under pressure 4 percent was paid for fresh day-to-day accommodation, with 3½ percent as the minimum rate. The gap between supply and demand on one or two occasions were quite wide, but this was made good by official intervention. However, the market was forced to borrow a very small amount from the Bank of England at the penal rate of 5 percent. Bill business was inevitably reduced by the cash position, and a firm rate of 3-25/32 percent ruled for October and "hot" maturities. For the first time in several weeks, the market revised upwards its tender bid for Treasury bills which resulted in the average rate being pulled down several pence to £3 16s 4.78d percent.

Activity on Wall Street

In a generally slow market for foreign bonds, a few German Nationals showed both gains and losses of a point or more on a few sales. Italian issues gave up some ground at the outset but in subsequent dealings developed a steadier trend. Among Japanese issues, Tokyo Electric 6 percents were a soft spot, easing over one point to $94—the lowest point for 1957. Chile 3 percents were firm and moderately active, advancing over two points from the year's lowest point to finish at $41½. Long-term U.S. Government obligations were easily influenced by small orders either way. Investment quality corporates drooped back from their recent highs in a small volume of business but recovered fractionally on improved investment buying towards the close. Rails drifted irregularly in slow dealings.

Easier Trend in Vegetable Oils

With the exception of linseed and linseed oil—both of which were subject to violent price fluctuations—most sections of the vegetable oil and oilseeds market had an easier undertone. Only spasmodic activity was recorded where buyers were attracted by lower prices. At the finish, the approaching holidays were exerting a quietening influence. Linseed developed largely into a weather market, with prices in Winnipeg moving rapidly from one extreme to the other on reports coming from the main growing areas. Around mid-week reports of crop damage and a general lack of moisture were enough to cause near-limit advances. But often when the market opened a sharp reaction was seen before the day was out and on balance over the week there was no material change in rates. After easing a little over the week-end linseed quotations in London moved up from £2 5s to £2 10s a ton with Canadian within the range of £50 5s to £50 10s and December-January shipment from West St. John £51 5s. Practically, the whole of the advance was eliminated within 24 hours and the market finally lifted a few shillings. Castorseed continued to move down on lack of support. Linseed oil reflected the sharp movements in the seed but there was only selective buying at the higher levels. Near positions continued at a substantial premium. Castor oil moved down about £2 a ton but the origin reported a steady market. India and Pakistan 43 percent cotton expellers were rarely referred to with sellers generally repeating recent prices and awaiting events.

Rubber Prices Recover

The relative inactivity which characterised trading in recent weeks continued. In the early session, factory interest was small and dealers stayed to the side. The fair amount of offerings from the Far East coupled with the lack of factory demand caused prices to ease. Latterly, however, a drying up of cable offerings together with a slight rise in factory demand resulted in an upward move. Futures moved in the same direction as actuals, first declining by as much as 35 points in one session on liquidation and then recovering on short-covering. The Goodyear Tyre and Rubber Company has announced price increases of 3 percent on tyres and 3 to 5 percent on its other products.

Unstable Price for Quicksilver

The London ex-warehouse price of quicksilver has stood at £87 a flask since 22nd July following a reduction of £3 at that time. The present level is not considered stable. The Mexican metal on the spot is believed to be available at lower than the quoted price, while some unsold metal afloat is scheduled to arrive in the United Kingdom shortly. So far, however, Spanish and Italian metals have not been competing with the Mexican, presumably on the assumption that it is only a temporary market factor. The present market position is interesting in that the current spot price in London is below the Spanish and Italian f.o.b. price.

Issue of Italian Silver Coins

Following the decision of the Italian Cabinet to authorise the minting and issue of 500 lire piece silver coins, it is estimated that approximately 1,625,000 kilos of pure silver will be needed. About 65 million coins will be minted. The major part of the silver required will have to be imported. At present Italy produces about 28 tons of silver a year.

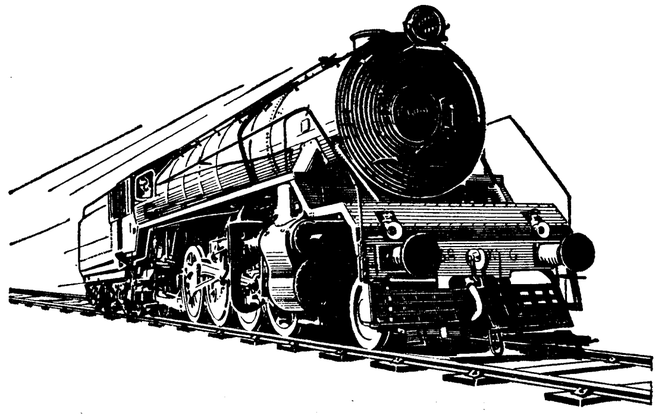
FACTS BEHIND FIGURES



Generating

166,000,000 ft. lbs.

of power

Up and down the railway tracks of India run, on an average, 6,638 locomotives everyday. Together they generate nearly 166 million foot pounds of power during the year to carry 1,234,44 million passengers and 115 million tons of freight. The Second Five Year Plan schedules an expenditure of Rs. 900 crores (18.8% of the total outlay of the public sector) on railway development.

Carriage by rail is the most important method of transporting men, machines and materials across India. Providing steam power to keep the trains on the move are the locomotive boilers manufactured by Texmaco. Texmaco, pioneer in many fields of engineering, designs and builds locomotive boilers for the Indian Railways.

Plantation Topics

INSECURITY IN KERALA PLANTATIONS

MULTIPOINT SALES TAX ON CARDAMOM AND CASHEW

(FROM A SOUTH INDIAN CORRESPONDENT)

THE law and order situation in Kerala plantations is deteriorating alarmingly. Estate managers have been finding it difficult to maintain discipline for sometime past but today the threat is plain violence. Workers on many estates resort to violence and hooliganism to reinforce their peremptory demands. The Association of Planters of Travancore, which is a representative body of planters in Kerala, in a memorandum recently submitted to the State Chief Minister, says that a general sense of insecurity of life and property is growing among the planting community. There have been many instances of organised attacks on planters by workers.

Lack of Police Help

The planters complain of the lack of police assistance when it is badly needed. It has been pointed out that there have been 49 separate appeals to the police connected with 14 separate instances where immediate violence and lawlessness were apprehended. Senior officials of police were invariably absent from their offices and homes on most of the occasions and only on seven occasions did the police actually visit the estates concerned. In all cases their line of approach was to appeal to the excited mob to desist from violence.

Plantations are often situated in areas which are far away from towns and police stations. Moreover, management personnel on any estate would be numerically insignificant in comparison with labour. The Association of Planters of Travancore therefore warns that situations like these can and do go out of hand unless police assistance is promptly available. Its memorandum says that the atmosphere in the plantation districts of Kerala is tense and inflammable. Discipline is at a low ebb, management personnel are weighed down by a grim and poignant sense of insecurity while estate work suffers badly, production is hit hard and the industry sustains heavy losses.

Slab Rate for Supertax

The Finance Minister of Kerala has agreed to correct an anomaly in his Bill to levy supertax on plantation incomes. At the select committee meeting, the Minister has offered to introduce a slab rate system similar to that proposed for individuals and families. The select committee has decided that for the first Rs. 1 lakh of the total agricultural income the super tax should be 12 nP in the rupee, and for the next Rs. 2 lakhs, 19 nP and so on. As a result of this readjustment, the estimated revenue from the supertax on agricultural income will be falling from Rs. 65 lakhs to Rs. 40 lakhs.

The planters' demand for a replanting allowance, as in Madras, was turned down on the plea that the rate in Kerala is comparatively lower and that the revenue will be depleted by another Rs. 25 or 30 lakhs. The Bill as amended by the select committee was passed by the House on 25th July.

The select committee on the Sales Tax (Amedment) Bill has decided to exempt cardamom and cashew from the levy of multipoint sales tax. With this change almost all the plantation crops of Kerala have a single-point sales tax.

Increased Madras Agricultural Income Tax

The Madras Legislative Assembly passed the Madras Plantations Agricultural Income Tax (Amendment) Bills on 25th July. It seeks to levy increased taxes on agricultural income from plantations. At present, tax is levied as follows: on the first Rs. 1,500 of the total agricultural income—no tax; on the next Rs. 3,500—5 nP in the rupee; on the next Rs. 5,000—10 nP; on the next Rs. 5,000—15 nP; on the next Rs. 5,000—20 nP; on the next Rs. 5,000—25 nP; and on the balance of total agricultural income—35 nP in the rupee. According to the revised Act there will be no tax on the first two categories mentioned above, while on the other categories up to the last there will be an increase of 5 nP in the rupee; on the balance or the seventh category the tax will go up from 35 nP to 45 nP in the rupee.

How do the new rates compare with the agricultural income tax rates in the neighbouring State of Kerala? No agricultural income there is exempted from taxation. There the plantation income is subjected to a uniform levy of 25 nP in the rupee.

Likely Fall in Cashew Output

It is doubtful whether India will produce as much cashew kernel as she produced in 1956 in spite of a record raw nut supply. About 20 percent of the 60,000 tons of African nuts imported has gone waste. The usual yield is 10 cases of kernels from one ton of raw nuts, but the average yield from the imported African nuts, amounts to only seven cases (one case=50 lbs). Raw nut imports from Africa this year are estimated at the high figure of 80,000 tons. India's output is placed at 70,000 tons. Due to a late beginning of their work this season, the processing factories in Quilon are expected to continue operations up to October-November, or one month later than the usual closing period. They estimate the season's output of cashew kernel at 1,200,000 cases. But with the carry-over from last season, the total quantity which will be available for shipment may not be appreciably less than last year's figure.

Kernel prices have recovered to 50 cents (U.S.) a lb. This is due to the expected fall in production. Sellers are even demanding 51 to 52 cents (U.S.). Exports to the end of June amounted to very nearly 600,000 cases, representing 50 percent of the season's output. Another 650,000 cases have been sold forward. The 1,000 tons which Russia bought are still awaiting shipment.

Bullish Tendency in Lemongrass

Lemongrass oil market is inclined to be bullish due to the loss suffered in production on account of the heavy rains recently experienced in the producing areas. The report that lemongrass oil is no more an essential factor in the synthesis of Vitamin A has so far had little effect on the market.

Coir Production Declines

It is estimated that coir production on the west coast has gone down by 10 to 15 percent of the average seasonal output, as a result of the heavy monsoon rains and the slump in the market. But prices are expected to look up again within a few weeks.

The election of large growers' representatives to the Coffee Board is about to be held. The 1954 Act does not contain sufficient provisions to ensure the election of real large growers to the Coffee Board.

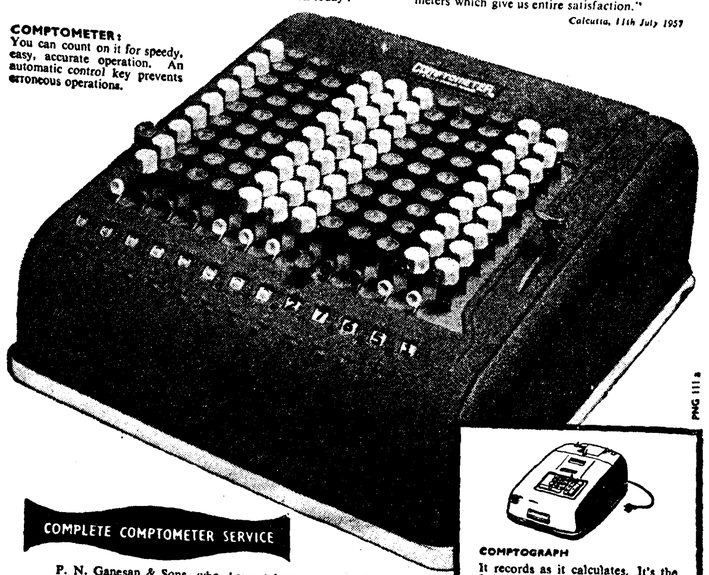
ACREAGE AND OUTPUT UNDER TOBACCO INCREASE

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India third estimate of tobacco, 1956-57, puts the current year's area and production at 1,007,000 acres and 300,000 tons, against the adjusted third estimate of 997,000 acres and 287,000 tons for 1955-56. This shows an increase of 10,000 acres or 1.0 percent in area, and 13,000 tons or 4.5 percent in production during the current year over last year. The nominal increase in area during the current year has been shared by Bihar, Madras, Uttar Pradesh and Mysore, and has been attributed to favourable climatic conditions at the time of sowing. The increase in production during the current year has been reported by alsomt all the major tobacco-growing States except West Bengal. This increase in production is partly due to an incease in area and patly to favourable weather during the growing period of the crop. This estimate does not contain information on the late variety of the crop grown in U.P. It does not also give information about the final position of the crop in the case of Punjab, Kerala, Rajasthan, Delhi, Himachal Pradesh and Tripura. The final position as for these States will be included in the final estimate. Past experience has shown that the final estimate figures are slightly higher than those of the third estimate.

COCHIN TEA SALES

At Sale No. 21, 1,200,000 lbs of tea were on offer. The market was very weak and withdrawals were heavy. Prices were irregularly 10 to 15 nP lower for everything except Tippy teas and Orange Pekoes which were very [illegible]

Delays in your accounts department can slow down your organisation — hinder its growth



COMPTOMETER — the world's fastest, most accurate Adding-Calculating Machine — can handle all your figure work most efficiently!

WHATEVER THE SIZE OF YOUR ORGANISATION, an efficient accounts department is the nerve-centre of your business. Backlogs or bottlenecks will be reflected in poorer turnover, slow growth of your business. That is why progressive organisations everywhere employ Comptometers for fast, efficient, accurate accounting. Why not ask us for a FREE demonstration today?

Here's what Brooke Bond India Private Limited has to say about Comptometers:

"We have used your Comptometers for over 34 years and find them an invaluable part of our accounting system. We have now 22 Comptometers which give us entire satisfaction."

Calcutta, 11th July 1957

COMPTOMETER: You can count on it for speedy, easy, accurate operation. An automatic control key prevents erroneous operations.

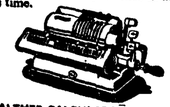
COMPLETE COMPTOMETER SERVICE

P. N. Ganesan & Sons who have taken over the Felt & Tarrant Offices in India are equipped to offer you the same quick, efficient repair and maintenance service as before. You'll get a spare machine when yours is taken for repairs. They'll train your staff free of charge to become skilled Comptometer operators. Every Comptometer you buy carries with it a guarantee, against any manufacturing defect, for one year. Write today to any of our offices for demonstration:

MADRAS: No. 12/13 Angappa Naick Street, P. O. Box No. 1257
CALCUTTA: P-35 Royal Exchange Place Extension, P. O. Box No. 2372
BOMBAY: Kitab Mahal, Hornby Road P. O. Box No. 356
NEW DELHI: Lala Sriram Building, Connaught Place, P. O. Box No. 49
KANPUR: 11/209 Sm. Parbati Bagla Road, P. O. Box No. 78
SECUNDERABAD: 8062-A Kingsway, P.O. Box No. 27

P.N. Ganesan & Sons

Sole concessionaires in India for world famous Comptometer, Comptograph, Walther Calculator and Comptometer Dictation Machines hitherto marketed in India by Felt & Tarrant (India) Company



COMPTOGRAPH

It records as it calculates. It's the fastest machine in its class, and yet so moderately priced. Anybody can work it.

COMPTOMETER DICTATION MACHINE

Dictate, listen, transcribe, erase and re-use ..... it enables you to get through your correspondence in half the time.

WALTHER CALCULATOR

Multi-purpose calculator that can calculate anything ... cubic contents, percentages, area, volumes!

Jute

EASING THE TRANSPORT OF RAW JUTE

PROPOSALS FOR CONSTRUCTION OF GANGA BARRAGE

IT was stated recently in the Lok Sabha that the Government was considering the amendment of the Damodar Valley Corporation Act. During the debate on the proposals, a number of important announcements were made, among them being one which could have a far-reaching effect on the raw jute trade. This concerned the Ganga Barrage. The Barrage was the subject of a recent debate in the West Bengal Legislative Assembly, the entire proceedings of which have now been placed before the Union Irrigation and Power Ministry. Mr. S. K. Patil, the Union Minister assured the House, and particularly the West Bengal members, that the Barrage is under "active consideration". He even went so far as to say that the proposals had been accepted, but qualified the statement by hinting that there were certain problems in the way. If the proposals materialise, then the transport of jute from the jute-growing areas to the mills will be simplified. At present, jute from Murshidabad and the surrounding areas has to travel an extra 200 or 300 miles to the mills by being routed via Pakistan and the Sunderbans. On the journey, those who transport it are subject to considerable delays, harassment and increased freight costs. If the Ganga Barrage were completed, then a direct waterway would be opened up to Calcutta via the Hooghly, cutting by more than half the distance to be covered, with a considerable reduction in freight charges. Customs formalities at the Pakistani borders could be done away with and mills would receive their purchases within a reasonable time. Thus the uncertainty of supplies from these areas would be reduced.

As a result of the reduction in traffic on the main waterways due to a new route being set up, the transport of jute from other areas, which would still have to use the Pakistani route, would be speeded up, so a general improvement in the mills' supply position would result. Other advantages listed concern flooding, and some think that many areas which are now annually subject to inundation will escape it. A number of these areas heve jute fields. If the crops there can be spared the havoc caused by flooding, there should be a considerable improvement in the quality of jute. The idea of a direct waterway in this region is not a new one; early in the present century, a navigable channel existed from the mouth of the Hooghly along the entire length of the route which is at present being discussed.

New Crop Arrivals and Moisture

August has brought with it the first arrivals at the Calcutta mills of new crop jute. These have been most disappointing. Initial reports indicate that the moisture content is the highest for many years. In many cases, the fibre has already been affected, and the majority of arrivals have not been in a storable condition. Some in the trade thought that the lateness of the monsoon this year would alleviate the problem of moisture in jute during the current season. But they seem to be wrong. The problem is not directly connected with climatic conditions. The practice of watering has increased with the rise in the price of jute. In the days when prices were low, claims for moisture were the exception rather than the rule. The number of sellers then was considerably smaller than now, and more supervision could be exercised as a result of premium marks being packed. When this system lost favour with the mills, the incidence of claims increased.

Pakistan Ordinance on Wet Jute

Meanwhile, it is understood that in Pakistan, the Government proposes to promulgate an ordinance to prohibit trading in wet jute. An official estimate states that wet jute sales have covered about 10 percent of the total trade in jute. The proposed ordinance will enable claimants to bypass the law courts, to which manufacturers can already resort except for the attendant delays; the ordinance will empower inspecting officers to impose fines on the spot or even to confiscate shipments should they prove to contain excessive moisture. This is a step in the right direction, but unless it is rigorously enforced malpractices will continue in much the same way as they did when the Customs and excise authorities had similar powers.

At the same conference, an East Pakistani Minister said that mills would be permitted to use mesta to a limited extent in the production of jute goods. This is reversal of previous orders, for it is not long since the Pakistani Government put a ban on mesta production. In spite of the ban, large quantities of mesta have been grown this year in East Pakistan, and member mills of the P.J.M.A. are anxious to use this cheaper raw material. The reason given by the Government in acceding to the industry's request is that it has decided not to destroy the mesta crop this year because of the shortfall in the normal jute crop. The ban on the export of mesta or mesta products, however, still stands.

THE JUTE MARKETS

The jute goods market was a little more active during the past week, and prices varied considerably. Rumours of overseas buying brought about a rise at one time, but they were not confirmed, so idle conditions prevailed later. Raw jute prices were stable throughout, although business was occasionally reported at below the quoted rates. A fair amount of business was transacted, and it prevented any large price reductions. Messages from the jute-growing areas continued to be favourable, and no serious flooding was reported. Mofussil prices continue to lead Calcutta rates, so local operators were firm in their ideas.

Manufactured Goods: There was very little interest in the gunny market at the opening, and prices, especially of sacking constructions, fell rapidly. Unconfirmed reports of overseas interest arrested the fall, so rates slowly recovered over the next few days. The improvement was most marked in hessian, and at one stage rates for 9 and 11 porter fabrics advanced while heavy goods prices sagged. This was mainly because business was reported with America in hessian, which was followed by fairly heavy speculative activity in the fatka. Hessian prices continued to rise and moved independently of sacking. By the close on Tuesday, 40in 10oz was quoted at about Rs. 1.25 over the week's opening rates, while B Twills were 50nP better. Calcutta mills were not keen to sell goods at this stage; most of them were unable to take advantage of the better price ruling for ready shipment goods, being fully sold for this position. Forward shipment stood at a fairly large discount, especially in sacking, which restricted activity in that sphere. Opening prices last Thursday showed B Twills at a disadvantage, and ready shipment was 90nP lower at Rs. 114, while October-December shipment lost 40nP to Rs. 112 a 100 bags. Over the next two days, prices advanced by about Re. 1, but the rise was short-lived and the gains were partially discounted by the close. Conditions in hessian were much better, and after an initial drop of about 25nP, 40in 10oz opened at Rs. 41.40. For the rest of the week, prices showed a daily increase, with the exception of the final day when a negligable loss was recorded.

Wednesday was a holiday; on Tuesday, quotations were based on the following:

	Ready Rs.	August Rs.	Sept. Rs.	Oct.-Dec. Rs.
40in. 8oz.	34.75	34.65	34.55	34.25
40in. 10oz.	42.55	42.50	42.45	42.35
B Twills	114.60	113.60	113	112.50
Heavy Cees (Plain)	114.75	114.25	113.75	113
A Twills	137.75	137.75	137.75	137.75
Liverpools	127.50	128.25	128.25	128.25
Cornsacks	116.50	116.50	116.10	114.60

Raw Jute: Business was brisk in the fibre markets, and transactions were reported daily. New crop jute was the main attraction and deliveries varied from ready bills of lading to October-November shipment. A fair quantity of old crop jute was still available, but it was being held by large sellers and was not put up for sale. Some mills showed that their position was not as strong as they had claimed, and there were requests for quick guaranteed shipment or ready bills of lading. Others, however, held very bearish ideas, and indicated prices well below the current rates. Sellers showed no interest in counterbids, as prices upcountry were still above those in Calcutta. This caused a bullish sentiment to prevail among sellers and the undertone was strong. Raw jute rates were unchanged throughout the week, and ruled on the basis of Rs. 30 a maund for Dhubri-Assam Bottoms for August-September shipment.

Business was done in new crop Dhubri-Northern-Assam at Rs. 30.25 a maund for ready bills of lading and seven days' shipment, Rs. 30 for August shipment and Rs. 20.75 to Rs. 29.50 for August-September shipment. Northern Tops and Middles were done at Rs 35 and Rs. 32.50 respectively. Interest was shown in Daissee White; mills paid Rs. 29 for August-15th September shipment, and Rs 28.50 for September. Jungli mesta Middles passed at Rs. 28.25 and bimli F.A.Q. at Rs. 25.50 for September-October shipment. In pucca bales, Pakistani cuttings were done at Rs. 100 for August-September shipment.

Wednesday was a holiday, and quotations at the close on Tuesday were as follows:

Indian Jute	Landed at Mills Rs. a md. basis Bottoms	Shipment
New Crop:		
Assam	30	August
Northern	30	"
Assam Tossa	31	"
Daissee	30	Oct.-Nov.
Daissee White	29	Aug.-Sept.
Old Crop:		
Northern ex Calcutta	30.50	Ready
Local packing	28	"
Mesta:		
Assam Northern	29	August
Desal	29	"
Daissee	28.50	"
Murshidabad	27.50	"
Jungli	26.50	"
Bimli F.A.Q.	26.50	"
Pakistan Cuttings N.C.'s	100	"

Arrivals in the Cossipore markets for the week ended 6th August totalled 360 wagons, and were slightly better than in the previous week. But they were only half the total for the corresponding week of last year when 750 wagons were logged. Heavy business was transacted by mill representatives, and prices ruled firm throughout. The firmness of the upcountry markets contributed to the steady undertone, and sellers were reserved. New crop arrivals were said to contain heavy moisture, and in many cases the quality of the jute had suffered. There was still plenty of old crop jute in stock, but the bulk of it was low quality jungli jute and jungli mesta.

JUTE AND GUNNY STATISTICS

THE Department of Statistics of the Indian Jute Mills Association has issued its *Annual Summary of Jute and Gunny Statistics*, a booklet containing comparative annual jute and gunny statistics for the past 25 years. The compilers have introduced a number of innovations to make the publication more useful. For example, a table on the supply and distribution of raw jute has been introduced for the first time, while in the jute forecast table an additional column showing the yield an acre has been added. All-India figures for mesta have been introduced in another table. The data on the share of jute and jute goods in the export trade of India and the share of jute goods in foreign exchange earnings are especially interesting. Embodying as it does important statistical details, the booklet will prove useful to those who are connected with the jute industry and trade. Copies of the publication are priced at Re. 1 each and are obtainable from the Department of Statistics, Indian Jute Mills Association, Post Box 280, Calcutta.

GUNNY SHIPMENTS IN JUNE

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of June 1957 after providing for short shipments. These figures include shipments to coastal ports.

	Bags (Tons)	Cloth (Tons)	Total (Tons)
Hessian			
Gross	1,811.1	30,708.8	32,519.9
Short Shipped	133.3	998.8	1,132.1
June 1957 (Net)	1,677.8	29,710.0	31,387.8
May 1957 (Net)	6,179.0	19,920.4	26,099.4
April 1957 (Net)	2,171.0	21,007.0	23,178.0
Sacking			
Gross	25,391.7	1,533.3	26,925.0
Short Shipped	1,946.3	Nil	1,946.3
June 1957 (Net)	23,445.4	1,533.3	24,978.7
May 1957 (Net)	27,665.9	1,963.6	29,629.5
April 1957 (Net)	22,910.2	1,401.3	25,311.5

THE PAKISTANI JUTE MARKETS

FIBRE PRICES DECLINE

(FROM A NARAYANGANJ CORRESPONDENT)

LAST week, raw jute prices dropped by Rs. 2 a maund. Judging by the quantity of imports and the keenness of sellers, they are likely to drop even further. The fall in prices has continued unchecked in spite of the announcement that prices in the border areas are to be increased by Rs. 3 a maund. The implication is that the previously fixed border prices were unrealistic. As far as is known, there has been no substantial border buying by the Marketing Corporation although jute is beginning to come in adequate quantities. Within a week, traders except to see imports of 40,000 maunds a day into Narayanganj. The flow of arrivals from upcountry centres is slower presumably due to the fact that most firms have reduced their establishments elsewhere and Narayanganj is now considered to be the most important selling centre.

The pucca bale market has followed the loose jute market in its downward trends but prices of cuttings have not declined in proportion mainly due to heavy buying a few days ago by two of the mills. It is reported that they bought 25,000 bales of cuttings for August-September-October delivery. They also bought 25,000 maunds of kutcha bales long jute for September delivery.

The report that the chairman of the Jute Board called in a meeting of exchange bankers gave currency to several rumours. It is said that the chairman gave the bankers to understand that private firms, as opposed to limited companies, would not be allowed to export during this season and that serious steps were being taken to investigate malpractices and to obtain reports on shippers from the London Jute Association. These rumours have not yet been confirmed but there is no doubt that several more balers will not be allowed to trade this season. These balers will probably be Indians. Those whose export activities will be stopped on account of their being private firms can get over this difficulty by registering themselves as limited companies; but this will take time. Meanwhile, they will be unable to trade even though they are allowed to do so because the banks cannot give overdraft facilities to foreign companies unless they are foreign exchange earners, that is to say, exporters. If indeed the 40 odd private firms are not allowed to trade, the more reputed companies will get all the business and buyers will probably have less reason to complain about bad quality and late shipments. On the other hand, it must be remembered that there are other companies, which are either not trading for a variety of reasons or have restricted their trading activities this season so that the overall result will be to bring down prices considerably. This will suit the buyers, who have been looking for economic jute prices; but Pakistan's foreign exchange position will suffer since the earnings will be reduced. From the traders point of view it is to be hoped that they will be able to buy locally and sell overseas at a profit even if the margin is only small.

BATTLE FOR CIVIL AIRCRAFT MARKET

FUTURE NEEDS OF WORLD OPERATORS

SINCE the war, when it became apparent that the development of civil aviation would soon outstrip the availability of adapted wartime types of aircraft, the struggle to design, test and build special aircraft to meet the needs of various operators has been extremely keen. As might have been expected, the U.S.A. soon established almost complete superiority, with the Douglas and Lockheed products virtually dominating the medium and long distance route markets. In the former, however, British and Continental aircraft manufacturers soon developed new machines offering advantages over the adapted *Dakota*, and the appearance of the *Comet* was hailed as the final answer to the long-stage operators' requirements. The unfortunate accidents to this aircraft set development back a number of years—and incidentally gave U.S. manufacturers time to adjust their ideas and rejoin the fray—but also led to the appearance of the turbo-prop, which, in the *Viscount* and *Britannia*, is offering an invaluable bridge between the piston-engine and jet stages of aircraft development. This is not just a stop-gap, for it is confidently believed that turboprop aircraft, and their number is increasing, will continue to meet special requirements well into the pure-jet age.

For the present, the turboprop aircraft market is almost a British preserve, though the French and U.S. manufacturers are working desperately to provide adequate alternatives as a means of retaining their hold on their regular customers, for it certainly looks as though the turboprop will provide the most economic answer to the short-haul operator for a long time to come, as well as to the long-stage operator of tourist-class travel for the mass without too great a sacrifice of amenities with the possible exception of speed. Where the competition threatens to be keenest is in the pure jet aircraft market, for although the U.K. pioneered here and, indeed, still holds pride of place in the provision of jet engines, the *Boeing* and *Douglas* aircraft will introduce the first more or less general movement by international airlines into the provision of jet travel.

Growing Variety

It seems doubtful, however, whether this will be more than a purely temporary phase. The *Comet*'s early misfortunes, though they occasioned disappointment, did not give rise to despair. Investigation of the causes has been instructive and the development and production of newer and better types of jet aircraft has gone forward steadily in the U.K. as well as in other European countries. It should not be long before world airline operators will be in the happy position of being able to pick and choose from a wider variety of aircraft the one best equipped to meet their special needs. So far as the U.K. is concerned, the following paragraphs survey the present position in and the immediate outlook for the aircraft industry. It must be kept in mind, however, that in a recent discussion on future types at the International Civil Aviation Organisation's Montreal headquarters, it was agreed that the advent of aircraft such as the *Boeing 707* and *Douglas DC-8* jets, and the Bristol *Britannia* and Lockheed *Electra* propeller-turbine planes, would bring a consolidation period which might last ten years.

So far as British manufacturers are concerned, B.E.A. and B.O.A.C., the two State-owned corporations, provide the basic "home" market and not unnaturally represent an important factor in aircraft development plans, both directly and through the Government. Discussions between all these parties are going on more or less continuously. Not so long ago, for instance, they were concerned with a British subsonic jet airliner suitable for Commonwealth routes and available by 1962, while the *Comet IV* took care of B.E.A.'s need for a jet plane to meet Continental competition on European routes. The aircraft for B.O.A.C., it was considered, would carry considerably more passengers than the 60 in first-class seating or 76 in tourist accommodation, which the *Comet IV* can take. Cruising speed would be 600 to 650 m.p.h., compared with 500 m.p.h. for the *Comet IV*. "Suitable for Commonwealth routes" means that the proposed airliner should not require extremely long runway and have a range of about 2,500 miles. This range would be far too short for non-stop flights between London and New York.

Design Ideas

Individual manufacturers are basing their design ideas on these well-defined lines while simultaneously keeping an eye on overseas markets. Handley Page, for instance, have recently announced a turboprop version of the *Herald*. It will carry 43 passengers in a pressurised cabin and will have a speed 70 m.p.h. higher than that of the *Herald* with piston engines. This will bring its speed up to nearly 300 m.p.h., while its take-off and landing performance will, it is claimed, be almost as good as that of the piston-engined machine at any rate in temperate regions. Including all furnishings, the new turboprop *Herald* will cost £175,000—£25,000 more than the piston-engined version. Operating costs according to the manufacturers, will be 1½d to the passenger-mile. The basic alteration is the substitution of two Rolls-Royce Dart turboprops for four Alvis Leonides Major piston engines. The Darts are to be the R.D.A 7 series, which develop a total equivalent horse-power of 2,105 each.

A swept-wing jet airliner which could fly nonstop from London to Australia with 120 passengers in 18½ hours at 590 m.p.h. has also been designed by Handley Page. "If we find a customer, the aircraft could be developed by the mid-1960s," Dr. G. V. Lachmann, the company's director of research, said recently. Increased efficiency and range are obtained by employing laminar flow, a method of reducing drag by sucking away turbulent air on the wing surfaces. Research on the wing has been pioneered in the U.K. by Handley Page for the past four years.

Jet Service in Europe

According to the present state of the international order book, several foreign airlines competing on British European Airways routes will have pure jets in service before the Corporation. Air France and the Scandinavian Airlines System have both decided to invest in the French *Caravelle* turbo-jet. Delivery is promised in late 1958 or early 1959. In addition, there is an added challenge to the British airline in that the larger Americ[an] jets now being test-flown will be flying into Euro[pe]. This has changed the thinking of B.E.A. executives, who earlier had decided to wait until an all-British jet airliner would be available in the mid-1960s. Now it has been decided that it is vital for this gap to be closed if B.E.A. is to compete on even terms. Though several aircraft designs are under consideration, it is probable that B.E.A.'s problem will be solved by the de Havilland company's latest version of the *Comet*, which will be able to compete on favourable terms with turboprop aircraft. The new *Comet*, the *4B*, will carry 99 tourist-class or 84 first-class passengers, compared with the 60 of its predecessor, the *4A*. The pay-load also is increased—from 14,500 lbs to 20,000 lbs. Its weigh[t] (152,500 lbs all-up) and speeds (490 m.p.h. to 5[00] m.p.h.) however, remain the same. This mea[ns] the de Havilland company says, that costs a f[irst] class seat-mile are cut by 15 percent to 1.4[d] long stages and 2d on 500-mile stages. The claims that this margin is big enough to esta[blish] the pure jet's superior operating economy except very short-stage operations. The even passenger-load—the point where the begins to make a profit—averages 37 per[cent] a 750-mile stage, and 50 percent on a 300-mile

The long-haul problem of B.O.A.C. is also to be met in the end by British aircraft, for after a full study of alternative types and discussions with manufacturers, the Corporation has secured Government approval for capital expenditure of about £68 million to purchase 35 aircraft and spares of a new model being developed by Vickers as a private venture. The firm is leading the short-haul market with the *Viscount* turboprop, but has never eased up on fresh development. In this same field, and as an alternative to the *Britannia*, it is offering by 1960 a big advance in the *Vanguard*, with superior operating economy, especially on ranges up to 1,500 miles. As an alternative to the U.S. jets, Vickers propose offering from 1963 the *VC-10*, which will have a "double-bubble" fuselage and several "unusual features" which have not yet been more specifically defined. The *VC-10* is to be a medium to long-range fast turbo-jet, powered by four Rolls-Royce Conway engines, and the Corporation's version will have seats for up to 120 passengers. B.O.A.C. and Vickers-Armstrongs are now jointly engaged in the preparatory work required to draw up the detailed specification and conditions of contract, and the Corporation has indicated to the company that when this task has been completed to their mutual satisfaction it intends to place an order for 55 *VC-10* airliners for delivery beginning in 1963.

B.O.A.C. Britannias

Mr. Gerard d'Erlanger, chairman of B.O.A.C. commenting on the announcement, said: "My Corporation has every faith in the ability of Vickers-Armstrongs (Aircraft), Limited, to produce an airliner which, in companionship with our other new equipment, will help to keep B.O.A.C. pre-eminent on the air routes of the world, in the mid-1960 period and beyond. Altogether, the total cost of British aircraft and spares ordered for B.O.A.C. relating to Bristol *Britannias*, de Havilland *Comet IVs*, Vickers *Viscounts* required for our associated companies, and the Vickers *VC-10* project amounts to approximately £150 million." The manufacturer has stated that it will have a cruising speed competitive with those of other jet aircraft operating in the mid-1960s but, in addition, it will have an especially good airfield performance at high level and high temperature airfield. It will have a double-b[ubble] fuselage of similar appearance to that of the propeller-turbine Vickers *Vanguard* and, like the *Vanguard* it will have very capacious freight holds. The upper deck will be able to accommodate some 120 passengers but, in high-density seating, up to 147 passengers can be carried.
