THE Belsund Sugar Company Limited has produced excellent working results for the year ended 30th September, 1956. The quantity of cane crushed is substantially higher at 37.65 lakh maunds as against 19.84 lakh maunds, while sugar manufactured amounts to 3.76 lakh maunds as against 2.12 lakh maunds in the previous year. Sales have risen to as much as Rs 100.16 lakhs from Rs 94.19 lakh maunds. The net profit for the year, before providing for Taxation and Depreciation, amounts to Rs 10,77,036 as against only Rs 4,06,004 in the previous year.

In respect of allocations to Funds, the Directors have, apart from providing a sum of Rs 1.25 lakhs for General Reserve and Rs 1.00 lakh for Development Reserve, raised the Taxation amount to Rs 4.80 lakhs from Rs 1.40 lakhs although Depreciation is slightly lower at Rs 90,663 against Rs 1.10 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend to Re 1 from As 12 per share.

According to the Directors' Report, it is expected that more than 30 lakh maunds of cane will be crushed during the current year.

£R$

Cawnpore Sugar

Despite an increase in sales from Rs 1.60 crores to Rs 1.65 crores, the Cawnpore Sugar Company has reported a decline in net earings for the year ended 31st October, 1956, mainly due to expensive operation of the company's additional two factories in Deoria district. The quantity of cane crushed is higher at 61.45 lakh maunds as against 56.77 lakh maunds, while sugar manufactured amounts to 6.38 lakh maunds against 5.91 lakh maunds.

Net profit, after Taxation and Depeciation, amounts to only to Rs 6.65 lakhs as against as much as Rs 8.07 lakhs in the previous year. With the result, Depreciation has been reduced to Rs 2.5 lakhs from Rs 3.0 lakhs; Taxation to Rs 4.00 lakhs from Rs 6.50 lakhs and Rehabilitation Reserve to Rs 3.50 lakhs from Rs 4.80 lakhs. The dividend on the Ordinary shares is, however, maintained at As 12 per share.

£R$

Jute Results

The difficult conditions generally experienced by the jute industry, during the half-year ended 30th June 1956, are fully reflected in the working results of the Nellimarla and Waverley jute mills.

Although the Nellmarla Jute Mills Company has reported an increase in sales from Rs 44.61 lakhs to Rs 47.10 lakhs, the net profit, before providing for Taxation and Depreciaton amounts to only Rs 4,69,760 as against Rs 5,74,809 in the previous half-year. This is mainly due to the rise in manufacturing expenses from Rs 4.02 lakhs to Rs 4.91 lakhs and in "salaries and wages" item from Rs 9.33 lakhs to Rs 10.13 lakhs. A sum of Rs 37,356 (Rs 56,200) is set aside for Depreciation and Rs 1.90 lakhs (Rs 1.85 lakhs) for Taxation. The dividend on the Ordinary shares is, however, maintained 50 nP per share.

The Waverley Jute Mills Company has actually reported a loss for the same half-year; but the accounts show a profit, before providing for Depreciation and after sundry cre-

SOUTH EASTERN RLY TENDERS

The General Manager Garden Reach, Calcutta—23, invites sealed tender No. CON|GM|8|CE(C)|WP|121|C|57 for supply of 18 Nos. Tacheometers, 3 screwed complete. Earnest money—Rs 1000/-.

Tenders will be opened on 14-5-57.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta—23 on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Railway, Garden Reach by local firms.

Each tender should accompany a receipt from the Chief Cashier, S. E. Ry., Garden Reach, Calcutta for depositing the amount of earnest money as specified above without which the tender is liable to be rejected. Approved Contractors who have already made a permanent deposit of Rs 1000/- with the Controller of Stores need not pay the earnest money.

Firms which are not on this Railway's list of approved Contractors must enclose a valid Income Tax Clearance Certificate with the tender.

dits, of Rs 15,659 as against as much as Rs 2.48 lakhs in the previous half-year. Sales are higher at Rs 47.85 lakhs against Rs 44.76 lakhs; but manufacturing expenses have risen to Rs 4.86 lakhs from Rs 4.15 lakhs and salaries and wages to Rs 13.07 lakhs from Rs 12.33 lakhs. A sum of Rs 50,000 (Rs 1.01 lakhs) has been set apart for Depreciation.

The directors have been able to recommend the dividend on the Preference shares only after transferring a sum of Rs 50,000 from General Reserve. The Ordinary dividend is passed over as against 6¼ per cent paid in the previous half-year.

£ R$

Jay Shree Tea

The first, among the Tea companies to present the report and accounts for 1956, is the Jay Shree Tea Gardens Limited. The working results are satisfactory and, with a share capital of Rs 59.29 lakhs (which includes Rs 19,52,500 for bonus shares issued in the previous year), the company has earned a gross profit of about Rs 30 lakhs. The block value of the assets, after setting off the total amount of depreciation (Rs 36.31 lakhs) so far, is Rs 1.08 crores, which is about Rs 48.80 lakhs more than the paid-up capital.

The balance-sheet, as on the 31st December 1956, shows the General Reserve at Rs 41 lakhs and Capital Reserve at Rs 3.95 lakhs. The dividend declared for the year continues to be Re 1 per share. Th carry-forward has been increased from Rs 22,556 to Rs 98,818.

£ R$

Mafatlal Mills

The Mafatlal Fine Spinning and Manufacturing Company has reported a profit of Rs 18.92 lakhs for 1956 after providing a sum of Rs 9.49 lakhs for Depreciation and Rs 14.75 lakhs for Taxation. Other allocations include Rs 2.88 lakhs to Development Rebate Reserve; 1 lakh to General Reserve and Rs 2 lakhs to Dividend Equalisation Reserve. The dividend recommended on the Ordinary shares is Rs 15 per share. Sales have totalled Rs 2.10 crores.

As against a paid-up capital of Rs 87 lakhs, Reserves and surplus stand at Rs 1.24 lakhs. Against a total block of Rs 1.69 crores, Depreciation has been provided to the tune of Rs 1.20 crores, leaving a net block of only Rs 49 lakhs.

Standard Mills

After providing Rs 28.10 lakhs for Depreciation and Rs 35.15 lakhs for Taxation, the Standard Mills Company has shown a net profit of Rs 47.99 lakhs for 1956. The directors have set apart Rs 17.85 lakhs to Rehabilitation and Development Reserve and Rs 7.10 lakhs to Development Rebate Reserve. The Ordinary dividend is Rs 20 per share, while a bonus of Rs 2.50 is an additional attraction. Sales total Rs 5.70 crores.

Machinery to the tune of Rs 3.93 lakhs is under installation. All the machinery installed so far have been working satisfactorily. The company has been granted a certificate of approval for acquiring prospecting licences and mining leases in respect of many minerals in the State of Bombay. Necessary steps are being taken to carry on the prospecting work and results are keenly awaited.

£ R$

Cambodia Mills

The loss of 62 full working days through strikes and lock-outs and a period of "go slow" by labour, are fully reflected in the working results of the Cambodia Mills Limited, Coimbatore, for 1956.

Sales have sharply declined to Rs 91.22 lakhs from Rs 123.06 lakhs in the previous year. Naturally, the net profit, before setting aside for Depreciation, is lower at Rs 3,50,931 as against Rs 4,02,675. A sum of Rs 2.18 lakhs (Rs 2.06 lakhs) is set apart for Depreciation. The dividend on the Ordinary shares is, however, maintained at 5 per cent.

The implementation of the extensive rehabilitation scheme has made satisfactory progress. It is anticipated that all machinery so far ordered will have been installed by September this year, including the Humidification plant, which is already in partial operation.

£ R$

Travancore Cement

The Travancore Cements Limited shows a setback in the net profit from Rs 5.62 lakhs to Rs 4.71 lakhs for 1956 after providing Rs 4.82 lakhs (Rs 5.17 lakhs) for Depreciation. The dividend is proposed to be reduced from 6¼ to 6 per cent. The shares are placed at a discount of a rupee at Rs 8.90.

Cement sales have recovered a modest decline from Rs 49.36 lakhs

Deposit of Current Profits

A Critique of the Draft Rules

ON 30th November 1956, Mr T. T. Krishnamachari took everybody by surprise by introducing in the Lok Sabha Finance Bills Nos: (2) and (3). The tax changes introduced thereby were also out of the ordinary. Finance Bill No: (3) made two major changes in our Income Tax law. Firstly, it re-introduced the Capital Gains Tax. The second was the novel idea that a certain part of the accumulated profits, reserves, and current profits should be deposited with Government by all companies on pain of the depreciation allowances being added back to the total income if such deposit were not made by 30th June each year.

The purpose of this article is not to go into the merits of the idea. This new proposal has already found its way into the Statute Book, and it serves little purpose to set out the possible objections to the idea. When the proposal became law, it was clear Government would prescribe rules defining how much should be deposited, in what manner the deposit should be made, for what purposes the deposits will be allowed to be withdrawn, and other allied questions. Finance Bill No: (3) became law in December 1956. If Government had announced the draft rules shortly thereafter, it would have given sufficient time for the affected interests to examine the matter carefully and offer helpful suggestions with a view to ironing out difficulties that are bound to arise from new ideas of this kind. Unfortunately, the elections intervened, and possibly because of that the publication of the draft rules was delayed. Anyway, the draft rules have now been published in a Gazette of India Extraordinary of the 16th April, and Government have said that any comments that may be received on the draft by the end of April will be taken into consideration before the rules are finalised. This leaves barely two weeks for study of this matter: the time actually available may probably be much less in point of fact, since Gazette copies do not become readily available. One cannot help wishing that a little more time were allowed for consideration of an important question like this.

This is an extremely important subject, and it is necessary that all affected interests (particularly manufacturing concerns) should forward to Government, without delay, their comments on the draft rules, pointing out the difficulties that are likely to arise and the suggestions they would make to remove such difficulties. As the time is short, this has to be done immediately. With a view to facilitating the task of dealing with this important matter, Indian Finance presents this Special Study, in the preparation of which the individual requirements of the major industries of India, such as cotton textiles, Jute, Tea, Sugar and Engineering, have all been borne in mind.

To begin with, it is necessary to take note of what the Statute says in regard to these deposits. What the new sub-section 2-B of Section 10 of the Income Tax Act says is that every company (which wants the benefit of depreciation allowances) shall deposit with Government before 30th June of the year succeeding the Previous Year, "such percentage, not exceeding twenty-five, as may from time to time be notified by the Central Government" of the accumulated profits and reserves to the extent not represented by the fixed assets of the company, "plus such percentage not exceeding seventy-five, as may from time to time, be notified by the Central Government" of the amount by which certain items specified in the section (i.e., roughly current profits) exceeds rupees one lakh. Under Notification No. SRO 1270 of the 16th April, Government have notified the percentage as fifty in regard to current profits: no Notification appears to have been issued specifying what percentage of the "accumulated profits and reserves" is required to be deposited. This is a significant omission which may or may not be inadvertent. Seeing that the draft rules now notified are called the "Current Profits Deposits" Rules, it is just possible that the omission to notify the percentage in regard to accumulated profits and reserves is not inadvertent. This is further strengthened by the fact that, in draft Rule 11, there is a reference to "full" utilisation of accumulated profits and reserves over capital expenditure and repayment of loans secured on fixed assets before an application could be made to the Commissioner for relaxation in respect of deposit of a portion of the current profits. Be that as it may, the important point to note is that, until Government issue a Notification specifying what percentage of the accumulated profits and reserves should be deposited, no deposit need be made in respect of accumulated profits and reserves.

We may now proceed to deal with the draft rules seriatim.

Rule 2: Definition of "approved purpose": The importance of this definition arises from the fact that withdrawals of the deposited amounts will be allowed for expenditure over "approved purposes", and also, less than what is required may be deposited if the profits have been or are about to be utilised for expenditure over "approved purposes". Under the definition, the approved purposes are:

(i) capital expenditure for the construction, erection or acquisition of buildings, plant, machinery and other fixed assets required for the purposes of the existing business of the company;

(ii) repayment of loans obtained on the security of the company's fixed assets; and,

(iii) any other purpose considered as justified, by the Commissioner of Income Tax or the Board of Referees.

With regard to capital expenditure, the following ambiguities have to be noted. (a) Suppose it is desired to acquire a piece of land for erecting a new department or for extension of an existing department. It is not free from doubt whether the definition covers such expenditure: for, the definition refers only to "expenditure for the construction, erection, or acquisition of building, plant, machinery and other fixed assets." If at all, purchase of land could come only under "acquisition of fixed assets"—a construction which is not absolutely free from doubt. (b) the definition refers to "capital expenditure.....for the purpose of the existing business of the company," which means that capital expenditure for a new business is outside the purview of the definition. It would have been better if the draft rule had used the expression "capital expenditure.... for any purpose connected with the business of the company." This would mean that even if it is not the existing business, so long as the expenditure is for a connected line of activity, it would be permissible. In this connection, it is pertinent to point out that the language used in sub-section 2-C of Section 10, also, is "any such purpose connected with the business of the company as is approved by the Central Government." It is submitted that, in the Rules, it is not necessary to depart from the language used in the Statute.

Next, as regards repayment of loans, the definition refers only to repayment of loans obtained on the security of the fixed assets of the company. This means that repayment of unsecured loans, and even loans on the hypothecation of stock-in-trade, will not be approved purposes. The effect of this has to be carefully noted. On the one hand, a major portion of the profits will be utilised by the company for the repayment of loans of this kind. On the other hand, Government want half of these profits to be deposited with them. This will present considerable difficulty in practice. True, the section allows a deduction of rupees one lakh: but that may hardly meet the case, as the requirements of working capital these days are high, what with the prevailing high prices of materials, and the high cost of labour. Perhaps, Government may say that the Commission and the Board of Referees may be expected to consider the application of funds for purposes of this nature (i.e. repayment of unsecured loans, hypothecation loans etc.,) as justified: but, then, suppose, for argument's sake, the Commissioner refuses to concede the point, what will happen? The creditors may enforce the loan, ruining the company thereby, or the company may have to contract its borrowings leading to a shrinkage of working funds, thereby reducing earnings. There are also other aspects to this matter. For example, it is a normal practice for sugar mills to advance moneys to cane-growers, thereby ensuring a regular supply of cane. Should that not be an approved purpose? Tea gardens normally borrow on the mortgage of growing crops. That is not a loan on the security of a fixed asset. But the bank or other lender will want his money to be repaid first. In the case of cotton mills, they normally carry three months' stock of cotton: if cotton prices were favourable, they may decide to carry six months' to one year's stock: but the Commissioner may not agree to that: The same will equally apply to Jute mills also. In the case of the engineering industry, considerable sums are required for working capital: the actual amount required will vary from company to company according to the nature of the work and the quantum of orders. The draft rule contains no provision as to the requirements of working capital. The point, in short, is: why should the management's judgment (as to its requirements), born out of its own mature experience and considerations of business expediency, be supplanted by the judgment of the

Indian Finance
Established 1928

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

Commissioner who has no such business experience, and who in addition may normally be expected to have a bias toward the Revenue?

To remove these difficulties, it is submitted that the words "on the security of its fixed assets" may be omitted from the definition, and a special provision be also made for working capital.

It will be noticed that the Commissioner is vested with considerable discretionary power in regard to allowing relaxations in respect of these deposits. In this context, it would be useful to remember that, nowadays, the quantum of discretionary power vested in the Commissioner is wide indeed. For example, he can decide under Section 23-A as to how much of its profits a company may be allowed to plough back so as to permit it to distribute less than 60%. Again, under the provisions relating to search of premises and seizure of documents, he has wide powers to order them (which might ruin the assessee and bring his business to a standstill). And now, he is given powers to decide how much working capital a company needs, and as to whether a certain expenditure proposed by the company may be justified. It would be well if, instead of leaving such wide powers in the hands of a single individual, however high-ranking he may be, he were assisted by an Advisory Body, whom he should be obliged to consult in all these matters. Such a body should, to be effective, include business interests.

Rule 2: Definition of "Statutory Surplus": This definition is important because what the company is required to deposit is a portion of this surplus, [i.e., a half of the (Statutory Surplus) minus (Rupees One lakh)]. "Statutory surplus" is defined as total income plus depreciation allowances minus income-tax, super-tax and dividends "declared during the previous year". Here, what should be allowed is dividends payable during the year, and not merely dividends declared during the year: for, not unoften, it happens that the former is greater in amount than the latter.

It is a common experience that the Income Tax Act disallows some expenses, (e.g., expenditure over advertisements, bonuses to staff, contributions to charities, etc.). Thereby, the profits as assessed by the Income Tax Officer will be greater than the book profits. The position of the company, however, is that the money has gone out of its hands, though the expenditure is disallowed by the Income Tax Act. Such being the case, the company should not be asked to deposit what is not in its hands. Actual book profits, and not notional income, should be what the deposit is required from.

Rule 5: In sub-section 2-B of Section 10 of the Income Tax Act, the company is required to make the deposit with the Government "before the 30th day of June". Obviously, this will lead to many inequities. For example, this means that a company whose accounts close on 31st December, gets six months' time to make the deposit, while a company which closes its accounts on 31st March will get only three months' time. Quite a few companies close their accounts on 31st May, and they will get only one month. Many Sugar Mills begin the year with 1st July, and they will get twelve months' time to make the deposit.

Rule 5 aims at removing these anomalies to some extent. It allows six months' time for making the deposit in the case of companies whose year closes between 1st January and 1st May. While this should be a welcome provision, it, however, suffers from two major defects. How far a Rule can override the binding words of the Statute is the question. The Statute prescribes 30th June as a mandatory date, and it is a settled proposition of law that a Rule cannot override the Statute. This is the first defect. The second defect is, that the Rule makes an exception only in the case of companies whose year ends between 31st December and 1st May. Why should it not cover those whose year ends on 31st May? And why should those whose year ends on 30th June get twelve months' time to make the deposit? It is suggested that, with a view to removing these doubts and anomalies, the Statute itself be amended (by ordinance if necessary) so as to make the period six months in the case of all companies, whatever be their accounting period.

Rule 9: The deposit is to be made in cash. This Rule permits the deposit to be made in the form of Government securities also. It is, however, not necessary that such sanctity should be attached to Government securities. Suppose a company has placed its money on fixed deposit with a good bank. Why should it not be permissible for the company to deposit with Government the Fixed Deposit Receipt? If this were allowed, the present tight money conditions would not be aggravated, as they would otherwise be if the moneys were locked up with Government.

The Rule facilely assumes that all incomes are in the form of cash only. The incomes of many companies include dividends from other companies, and there are cases where such dividends come, not in the form of cash, but in the form of shares. It would be better if such incomes not in cash were excluded from the total income for the purposes of the deposit scheme as, otherwise, it may lead to distress sales of such shares with a view to making the deposit. This would not be healthy.

It is not Government's intention to hamper industrial development. There are many industries which are of national importance. It is now generally recognised that institutional investors are a major factor in providing industrial finance. Hence, investment of surpluses in industries important to the economy of the country should be encouraged. It should, therefore, be permitted to invest profits in shares and debentures of such undertakings, and the Profits Deposit may also be allowed to take the form of deposit of such shares and debentures. It may appear at first sight that this suggestion would defeat the very object of the Profits Deposit Scheme, which proceeds on the hypothesis that depreciation funds are being used to corner shares; and, to prevent such misapplication of funds, half of the surpluses should be deposited with Government. But, when it comes to a question of investment in new undertakings of importance to the country's economy, this argument of misapplication cannot apply. It would be in the best interests of the country if it is permitted to make the deposit either in the form of cash, or in the form of Government securities, or in the form of bank deposit receipts or in the form of shares and debentures of new undertakings engaged in work considered as being of national importance.

Rule 10: This rule provides that, where the amount of the deposit computed on the basis of the assessment made by the Income Tax Officer exceeds what has actually been deposited by the company, the Income Tax Officer will direct the company to make up the balance by a further deposit with interest at six per cent. The rule further provides that, where the company has deposited more than the requisite amount (this may happen by the company's assessment being reduced on appeal) it will be entitled to ask for a refund of the excess amount deposited. The rule, however, does not provide for interest in this latter case. Instances of this nature may be rare indeed: but, all the same, it would be improper if the rule did not provide for such refunds with interest.

These observations apply also to Rule 15 which also deals with refunds where a company has made a deposit in excess of the statutory requirement.

Rule 11: Under this rule, if a company finds that it has already utilised a substantial portion of its accumulated profits and reserves on approved purposes, and in addition to that has utilised or wishes to utilise part of the current profits for such purposes, and finds itself in insufficient funds for making the deposit, it may make a representation to the Commissioner with adequate proofs. If the Commissioner, on receipt of the representation, is satisfied that the company cannot make the full amount of the current profits deposits, he will:

(1) determine the portion of the moneys attributable to the statutory surplus which have been utilised or required to be utilised for approved purposes;

(2) determine the balance of the moneys attributable to the statutory surplus which remains after excluding therefrom the portion mentioned in (1);

(3) determine the amount by which the balance mentioned in (2) falls short of the current profits deposits; and

(4) direct that the amount mentioned in (3) shall be deemed to have been deposited by the company on the due date and refunded to it on the same date.

An important point to note here is that, before a company can successfully make an application under this rule, it has first to show that it has utilised its accumulated profits and reserves for capital expenditure of the approved type, or for repayment of loans borrowed on the fixed assets of the company, or that it has incurred some other expenditure which the Commissioner approves of. Where such accumulated profits and reserves have been utilised in repayment of unsecured loans or hypothecation loans or other such loans, the company will not be eligible to make an application under this rule. In the comments under the definition of "approved purpose", we have earlier urged that repayment of open loans should also be an approved purpose. If that were not allowed, then Rule 11 would become virtually infructuous, for, very few applications can be successfully maintained under this rule as there will be a large number of instances where accumulated profits and reserves have been utilised for the repayment of open loans.

Rule 16: This rule says that Government shall appoint a Board of Referees. The rule is, however, silent as to the manner of composition of the Board. It would be better if the rule specifies how many members there will be on the Board, and what will be the manner of its composition. The desirability of associating business interests with the Board could be usefully considered.

Forms: Suppose withdrawals from the amounts deposited are required for import of capital goods from abroad. The position will be that a certain sum will be required for the initial payment; later, a further sum will be required as soon as the goods are landed, and this will depend on the delivery dates quoted by the manufacturer, and the availability of shipping facilities. Form C appears to contemplate utilisation of the sanctioned withdrawals within six months of the sanction. This time-limit may, in the light of what has been said above, cause difficulty. It may also be stressed here that it is extremely important that applications for

(Continued on page 806)

A New Portent

East German resentment against Soviet overlordship has found sporadic expression in many ways. The States Security Minister, Ernst Wollweber, recently admitted in a television broadcast that there were several groups ready to rebel against the Government. That they are kept back only by the presence of mighty Russian forces in East German soil is a natural inference.

Apart from the inspiration of events in Hungary and Poland, the average East German cannot submerge his instinctive loyalty to a wider national State, under an ideological preference thrust on him by a conquering power. Dr Adenauer, in one of his recent public statements portrayed West German anxiety for unification in terms which could have disturbed Moscow. Mr Krushchev's present warning to the Western Powers is therefore not altogether without provocation, derived as much from the state of domestic politics in East Germany as from the outspokenness of the West German leaders.

He has threatened to rap the knuckles of any capitalist country, which sought to bring about a 'putsch' similar to the uprising in Hungary. "You may think of doing it, not only in Hungary but, say, in East Germany also. But be careful.....The Oder-Neisse is our common frontier. If someone crosses this frontier, that will not only be an attack against Poland, but also an attack against us. Dont joke with us....". Poland surely will not willingly reunite with Germany and the second part of the warning looks superfluous. Perhaps, Mr Krushchev did not want to leave anything unsaid.

Editorial Notes

The angry tone of his speech is disquieting. The immediate risk of a flareup over East Germany may not lie so much with West German intentions or plans, as with possible Soviet moves to forestall trouble. If discontented elements in East Germany were to be drawn into any indiscretion, the pattern of the Hungarian tragedy may well be repeated. There is no doubt that East Germany has started gnawing the minds of Soviet leaders and that by itself is an ugly portent.

*

ECAFE Food Production

The economic rehabilitation and development of Asia and the Far East during the first post-war decade was more or less concentrated on agriculture. Even normally surplus countries had to restore pre-war conditions of production; the whole world was hungry for food and agricultural raw materials. Since 1954 there has been a marked bias in favour of industrialisation, which is reflected in the accelerated growth of industrial production in the region. The overall gain in 1956 was 8 per cent over 1955, the same as what 1955 showed over 1954.

The emphasis on agriculture, however, continued in spite of a record crop level in the region for 1955-56, exceeding the pre-war average by nearly one-fifth. It was still behind it on a per capita basis. In the race between food production and population, the second has hitherto kept ahead.

This is a sombre thought, especially when the region's cereal output in 1955-56 stood 16 per cent higher than the pre-war average. Excluding China, the total regional cereal output in 1955-56 was 119.4 million tons against an annual average of 103.5 million tons in 1948-52. The rice crop, particularly, registered substantial annual increases for the year under review in the majority of countries; in Japan the year's rice crop was a record exceeding the previous year's by 30 per cent. The few cases of setbacks were due to temporary causes and figured only as exceptions to the general rule. The as yet untamed pressure of population alone could explain the continued priority enjoyed by agriculture in the economic planning of Pakistan, India, Afghanistan, Cambodia, Ceylon and Nepal.

*

Panic at the Down

1956 has been a very good year for cotton mills. Their profits make very much better showing than in the previous year; and, in a number of cases, an increased distribution to shareholders has been recommended. Reserves in all cases have been substantially strengthened; and the cash position of the more important companies is adequate for the requisite payment of deposit in respect of retained profits. Marked progress is reported in the matter of modernisation, so much so that there are only a few mills which have any financial problem for rationalisation plans.

One may be sure that, despite this excellent performance, the powers that control the destiny of our cotton mills are ready with a "but". The "but" in the present circumstances is that, since the enhancement of the excise duties, working conditions have become more difficult. There is, we are told, consumer resistance to the higher prices. But, then, this is the very purpose which the enhanced duties were designed to achieve. We are also told that profit margins have been reduced. But, then, it is too much to expect that the hefty profits of 1956 would be maintained for all time. The simple question is: Though profit margins may be lower, are they so low that the danger signal has to be hoisted?

Bombay and Ahmedabad did ring the alarm bell in the early weeks of this year. The ringing of the bell has abruptly ceased. For, even as the publicity men of the cotton mills were working on the data of piling stocks and overfull godowns, the sales staff were flooded with orders from consuming centres where stocks had run low and which had to cater to the requirements of the marriage season. It is now obvious that any hold-up in the flow of cloth from mills to consumers was of short duration. We may again be hearing of record cloth production, and of such record production falling short of mounting demand.

Consumer demand is by no means an even flow. It has its ups and downs. Panic at every down is unbecoming of a great industry. The deportment of the cotton mill industry and of the sugar industry must change from juvenile reaction to the poise of maturity. Above all, hurried recourse to Government to help them out of this plight and out of that predicament reflects little credit on two industries which have such a high ranking among national industries.

*

Training for Steel Projects

Since the Report of the Engineering Personnel Committee, the problem of supply of technicians for the Second Plan projects has been steadily getting simplified. A two-man Committee reporting subsequently, suggested double-shift working of engineering colleges and other institutions, compression of curricula and abbreviated courses in which technical and practical training could go hand in hand. These proposals, now mostly approved by the Government, would result in a larger number of personnel flowing into the technical pool year after year, at a lower cost in space, time and equipment.

Several foreign countries, such as Britain, Germany, Russia and the United States have also come forward with offers providing facilities for higher training for young engineers from India. The US is reported to have undertaken to provide such facilities for a thousand persons for the Plan period. In the second year of the Plan, about two hundred engineers will have the opportunity for a one-year training in steel production and management methods in the US. On return, they are to be absorbed in one or the other of the State steel projects. These developments and prospects have imparted confidence over a crucial aspect of the Plan, which till recently was causing legitimately grave concern.

Issues in Land Reform

Acharya Vinoba Bhave, now in Kerala, has again proclaimed his faith in the social ownership of land. The concept has to be distinguished from that of State ownership, though the present Government of Kerala may enthusiastically argue that both are identical. Under the British regime, the question as to whether land belonged to the State or was subject to private ownership hang on in sweet indecision, alongside the endless controversy over the classification of land revenue between rent and tax.

The policy followed by the State Governments after the liquidation of Zamindaries has led to the creation of new peasant- proprie-

A Five-Year Plan for Banks

"The institution of Banking has transformed itself into different shapes and forms in different countries and at different times in the same country in order to meet the requirements of changed contexts."

—Necessity for a Banking Plan:

By B. K. Dutt

The banking situation in India today presents a curious paradox. Never before have banks resources been subjected to such strain; and never before have bank profits been so high. The first factor, of course, partly accounts for the second. The growing tempo of economic activity in the country has called for increasing pressure on banks' resources, in that demand for accommodation has risen sharply. There are some other factors, such as medium-term use made of short-term accommodation; and these have been dealt with at length and recurrently in the course of the past few months in the columns of this journal. As a result of these special considerations, however, both the outlook for and the role of the banking system have undergone a revolutionary change. Thus, it has become apparent, as Mr B. K. Dutt has remarked, that a Banking Plan is necessary for meeting the situation in view of the changed context. Mr Dutt suggests that, "to remain useful, the Indian banking system has to undergo certain changes in its thinking and objectives." And this, Mr Dutt says, consists in the need for the banking system "to think in terms of conforming to the requirements of the changing social pattern and the national economy as it emerges out of its colonial form."

The underlying reasons for the banking position as it obtains today can be traced back to the fact that India is now in the process of taking strenuous steps swiftly to transform its economy from its erstwhile colonial one to that of an industrialised nation. For this purpose, a set of projects under the title of the First Five-Year Plan has already been completed; and a second set of schemes comprised in the Second Plan is now being implemented. Both Plans have a direct impact upon the banking system; unfortunately, it would appear that few have realised this interconnection. It is certainly true that little has been done by way of a study of banking needs, except for the Shroff Committee's deliberations on Finance for the Private Sector. But, as we shall presently show, the repercussions of planned endeavours have been keenly felt by the banking system; and it can be taken as certain that, in the forseeable future, the new strains imposed upon banks will be greater. Consequently, it has become a matter of vital importance to the national economy, that careful thought should be paid to the evolution of a Banking Plan.

When the First Plan was drawn up, it was taken for granted that the tempo of economic activity would show a rise forthwith. What actually happened was, however, to the contrary. In 1951-52, both Notes in Circulation and Deposits of Scheduled Banks declined by sizeable margins; and the experience in the next year was the same, except that the declines were smaller. It was not until 1953-54 that the process was reversed. We may, at this point, consider why this was so.

It was assumed—erroneously, as it turned out—that Plan expenditures at the rate of Rs 400 crores a year were bound to be reflected in currency circulation. But what was overlooked was the fact that the disbursements in this regard were made largely on agricultural projects; and money spent thereon, although it had a currency of its own, obstinately refused to percolate into the banking system. Secondly, insufficient regard was had for the fact that India has more than one money market. There is, in the first place, the money market proper, which functions in the urban areas. There is, in the second place, the black money market, in which all transactions are in cash representing tax-evaded incomes. There is, in the third place, the residual money market consisting of the large tracts of this country which are not urbanised. (For the purposes of this study, we can leave aside the second money market since the process of transforming black money into white is beyond the scope of this article. But the other two money markets are important; both have grown in recent years, both require modification and dynamic action on the part of banks). What sets a poser for the Indian economy is that there are no effective links between the urban and agricultural (or rural) money markets. The banking habit, for reasons we need not go into, is not so much in vogue in India as it should be. It thus happens that the currency circulating in the rural money market enjoys a restricted and limited field; and, on this account, the money market proper suffers.

Since the emphasis laid by the First Plan was on agriculture, it was inevitable that Plan disbursements did not immediately benefit the urban money market (or, to use a term which in this article will be interchangeable, the banking system). The First Plan also had a series of projects for the industrial sector; and, because the state of the capital market was such as not to allow of money flowing easily for new enterprises, industry in its own way set about the task of finding the resources needed for expansion. We believe that the phenomenon of bank accommodation being used as medium-term credit originated in that period.

On the one hand, therefore, some portion of banks' advances ceased to be "liquid". On the other hand, expansion of production capacity also necessitated an increase in working capital.

Meanwhile, disbursements in the first two years of the First Plan began slowly to seep into the banking system. The expanded financial needs of industry were reflected in an upward swing to Notes in Circulation; the permeation of funds from the rural money market was to be seen in the improving trend of banks' Deposits. In 1954-55 and 1955-56, Notes in Circulation rose sharply; and so did banks' Deposits. In 1956-57, the first year of the Second Plan, further complicating factors entered the scene.

The main complicating factor of 1956-57 was the import surplus of substantial magnitude. This naturally had a contractionist bearing upon currency circulation. Nevertheless, the experience of the last six years shows that banks' Deposits are today rising at a tempo swifter than the increase in note circulation. This perhaps is due to the higher disbursements in 1954-55 and 1955-56 whose impact upon the banking system would be felt only in 1956-57 because of the time-lag between the incurring of expenditure in the rural money market and the permeation of such funds into the money market proper.

For the future, since the Second Plan's emphasis is upon industrialisation, it is to be presumed that planned expenditures will more immediately be reflected in the banking system. For these reasons, it is to be suggested that, in the presently functioning banking system, the pace of increase in Deposits will be more satisfactory. But such increase in Deposits will not suffice for the successful contribution by banks to the Second Plan. For, the resources needed in behalf of the Second Plan are for a substantial amount. The planners originally relied upon deficit financing to take care of 25 per cent of the resources for the State enterprises. It is now quite clear that the economy cannot afford deficit financing on such a scale, since there is the serious threat of inflation; automatically, it follows that Government will have to find other resources. The avenues open to Government are taxation and borrowings. It need scarcely be stated that, firstly, the scope for increasing rates of taxation is limited; and secondly, it is proper that development plans are financed by borrowings. It is in this context that Mr Dutt's thesis on the Necessity for a Banking Plan is greatly useful. A properly devised programme, he says, should create conditions whereunder:

"(a) the Government can float new loans to the extent the Plan requires, instead of frequently looking to taxation measures or undertaking excessing deficit financing.

"(b) the private sector can raise additional risk capital, long-term finance, medium-term finance and short-term finance, and

"(c) the banking system may attain an improved status through its service to the society, so that its assistance will be sought and advice properly considered in shaping the national economy."

It is to be suggested that the pithy answer to the problem lies in the consolidation, rehabilitation and development of the banking system. Consolidation and rehabilitation engender confidence: and confidence paves the way for development. Development brings about an increase in Deposits: and higher Deposits enable larger subscriptions to Government loans. Mr Dutt has given considerable thought to the question; and his proposals need to be closely examined by all the concerned interests.

Mr Dutt advocates the formation of a Rehabilitation Finance Corporation for a constructive assessment of sub-standard banks. In order to prevent disturbance of the economic life, "a plan of rehabilitation requires to be formulated on the basis of a constructive attitude to borrowers and protection of depositors of the sub-standard banks other than those in the course of winding-up." For this purpose, the Rehabilitation Finance Corporation, wholly owned by the Reserve Bank or by Government, would:

"(i) make a quick survey of the assets of the Banks in liquidation, acquire them at such price as it, in consultation with the Reserve Bank of India, considers proper and hand over the value to the liquidator for distribution to the depositors of the banks in liquidation. (It should be possible to carry out this operation within a period of, say, 18 months);

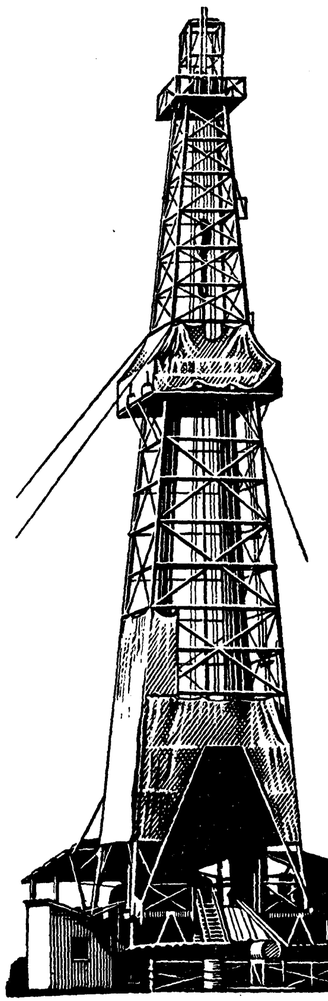
"(ii) provide capital (on a preferential and redeemable basis) for those banks whose deposits have not been impaired;

"(iii) arrange merger or conversion into subsidiaries, of banks whose deposits have been impaired, on the basis of proportionate reduction of their deposit liabilities;

"(iv) arrange consolidation of banks in units of suitable size and having regard to their area of operation;

"(v) arrange with the Licensed banks for taking over the management on behalf of the Corporation, of all or some of the assets of the Banks in liquidation;

"(vi) arrange progressive disposal of the bank shares held by the Corporation, in the first instance to licensed banks with consequential conversion into subsidiaries of the banks whose shares are to be so acquired, and then, gradual resale by the licensed banks to the public, when the subsidiary banks may operate as independent units;



"(vii) arrange proper training of employees in sub-standard banks."

The Rehabilitation Finance Corporation is an integral part of Mr Dutt's Banking Plan, for the simple reason that the spread of the banking habit is to substantial extent dependent upon the confidence enjoyed by the banking system as a whole. Estimates prepared by Mr Dutt indicate that attention needs urgently to be paid to the taking of timely action for forestalling any weaknesses that may emerge in the banking system because of the sub-standard banks. Another measure necessary for endowing banking with the attribute of public confidence is the insurance of banks deposits. This, too, is a matter to which Indian Finance drew early attention. While the idea of a Rehabilitation Finance Corporation needs to be examined by Government from the viewpoints of feasibility and desirability, we may state that there can be no argument about the necessity for insurance of banks deposits. It would redound to the credit of Indian scheduled banks if they took the initiative in the matter; in the alternative, we consider Government directive as essential.

The final suggestion contained in the Banking Plan is also likely to be the most controversial. For, the bold proposal advanced by Mr Dutt is that a five-year programme should be prepared for the opening of 1,000 new bank branches annually. The immediate reaction is likely to be that banks cannot afford such a costly (not to say extravagant) venture. For, the main reason for the nationalisation of the Imperial Bank lay in the fact that it could not, as a private shareholders' bank, undertake the financial responsibility for establishing 400 branches over a period. New branches lose money; and banks cannot afford such loss.

It is, however, clear that such a programme of expansion of bank branches is desirable in the national interest. What is more, it is also desirable from the narrower standpoint of the banking system. The spread of branch banking will bridge the gap between the rural and urban money markets. Flow from the one to the other will be facilitated. The banking system will in due time be enabled to possess itself of resources which had hitherto been denied to it. It is in the national interest desirable because resources now idle will be mobilised for the Second Plan.

According to Mr Dutt, the five-year plan will cost Rs 4.4 crores for the quinquennium. Against this, we have the new deposits that will accrue to the banking system. This gain and this loss will have to be weighed in the balance; and a decision taken on the merits the case. Finally, it is to be noted that Mr Dutt has a ready suggestion in respect of the cost of Rs 4.4 crores. On the basis of scheduled banks advances at Rs 750 crores, Mr Dutt puts forward the view that an increase in the rate charged on advances by 0.15 per cent would cover the total cost of the programme. It is now for Government and the banking system to study the Banking Plan;

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields ! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

B.O.C
A member of the Burmah Group of Oil Companies

ASSAM OIL COMPANY

to make up their minds as to whether or no an expansion in bank branches is essential; and, if the answer is in the affirmative to the last proposition, to decide upon an increase of Rs 0.15 per cent in the rate charged on advances with the proviso that such increase be treated as a special element to be utilised in financing branch expansion.

+

India's Punctilious Record

Details with regard to the return of the Lend-Lease silver obtained from the US Government during the war were announced early this week; and the first shipment left by an American steamer later in the week. The point to note is that India has honoured the commitment as it fell due; and that this action of the Indian Government continues and confirms our unbroken record of fulfilling obligations with unwavering promptitude. We shall not be guilty of immodesty if we point out that India stands second to none, and the first in the company of two or three more countries, in the scrupulous regard evinced in the discharge of international obligations.

There is need and justification for stressing India's performance, especially in the light of the unconcealed relief shown by most nations of the world when the USA, as the biggest creditor, came forward to write off, or settle for, token payments in respect of the enormous sums due to it by way of inter-Allied Debt incurred in the First World War and Lend-Lease obligations arising from the Second World War. Finland and Holland are, if we remember right, the two countries which did not avail themselves of the US suggestion to waive the debt. So far as India is concerned, it was in no way indebted to the USA either with regard to the First or Second World War, except in that it took a Lend-Lease loan of silver repayable in kind at a stipulated period. This only transaction in which this country figured as a borrower is now being settled in punctilious accordance with the terms and conditions of the loan.

The USA has often been afflicted with disquietude about the investment climate in India. We suggest that the most important element in a country's investment climate is its record with regard to the honouring of commitments. In this respect, India can hold its head high.

+

Busy Season Passes its Peak?

Signs of the tapering off the busy season as such are receiving confirmation in the banks' statements for the past two weeks. These are reflected not so much in active note circulation as in the apparently reduced pressure on the banking system for advances. Moreover, a subtle index in this regard is the return of rupee coin from circulation.

The returns of the Reserve Bank for the week ended April 19 disclose a fall of Rs 5.32 crores to Rs 1569.10 crores in Active Notes. Rupee Coin has returned from circulation for Rs 0.45 crores. The Reserve Bank's cash in the till is higher by Rs 5.76 crores at Rs 12.38 crores.

The Centre's balances are lower by Rs 2.19 crores at Rs 51.41 crores; those of State Governments have improved by Rs 4.02 crores to Rs 5.56 crores; and the State Governments' indebtedness to the Reserve Bank has declined by Rs 3.47 crores to Rs 15.17 crores. These changes are presumably linked with, firstly, the decline of Rs 8.39 crores to Rs 10.01 crores in Government Treasury Bills Purchased and Discounted, and, secondly, the sharp rise of Rs 19.99 crores to Rs 112.90 crores in Investments. On the face of it, the addition to the Investment portfolio would appear to indicate deficit financing. However, a more plausible interpretation is possible. In the first place, it is to be suggested that State Governments have sold marketable securities to the Reserve Bank, thus accounting for the rise in Investments. Secondly, the State Governments presumably utilised these resources for (1) improving their balances with the Reserve Bank; (2) reducing their debt to the central banking institution; (3) making their normal payments; and (4) discharging a moiety of their obligation to the Central Government in respect of wheat and rice purchased in recent weeks. Thirdly, the payment to the Centre would have benefited its balances accordingly. Fourthly, this has been taken advantage of by the Central Government to meet their commitment in the matter of the maturing Treasury Bills in the Banking Department. In a sense, therefore, the decline of Rs 8.39 crores in Government Treasury Bills Purchased and Discounted may be said to be a process of "reverse ad hocs".

The figures relating to Scheduled Banks are most interesting, and offer a clue to the easing of the pressure for funds. In the week under review, Banks' Deposits have risen by Rs 2.06 crores to Rs 71.89 crores; and the increase under the head since the last week in March amounts to Rs 14.12 crores. Furthermore, banks' borrowings (as suggested by the Reserve Bank's Other Loans and Advances) have also been much reduced. In the latest week, Other Loans have gone down by Rs 5.60 crores to Rs 98.80 crores; and the decline since March 29 is Rs 29.07 crores.

The final points to note in the Reserve Bank returns is the fall of Rs 4.37 crores to Rs 99.83 crores in Balances Held Abroad; the import surplus continues.

The State Bank's Deposits have, during the week ended April 19, risen by Rs 4.40 crores to Rs 304.48 crores. This has been accompanied by a fall of Rs 1.09 crores to Rs 180.98 crores in Advances. Both these have enabled an improvement of Rs 2.64 crores to Rs 35.83 crores in cash balances.

The return of Scheduled Banks for April 12 shows an increase of Rs 7.35 crores to Rs 1213.55 crores in Deposits. Since, in the relevant week, the Deposits of the State Bank actually showed a drop of Rs 1.39 crores, it is clear that the benefit has wholly accrued to the other member banks. Borrowings from the State Bank are lower by Rs 2.08 crores at Rs 6.71 crores, and from the Reserve Bank by Rs 1.02 crores at Rs 80.94 crores. Cash balances are higher only by Rs 1.11 crores at Rs 126.05 crores, whereas the State Bank's cash had risen by over Rs 7 crores in that week. The total of Advances has passed the Rs 900 crores mark with a rise of Rs 3.77 crores to Rs 902.27 crores; the State Bank's Advances, in the corresponding week, had fallen by Rs 0.84 crores.

It is slightly premature to embark upon a reasoned projection of statistics to speculate on the likely slackness of the slack season in 1957. In another two or three weeks, however, it should be possible broadly to indicate the trend and magnitude of the important changes in bank figures during the ensuing slack season.

*

5 Per cent Inflation in Britain

By PAUL EINZIG

AT the time of writing the outcome of several major wages disputes is still uncertain, but it is widely believed that the 5 per cent increase granted to railway employees by the British Transport Commission will serve as the model for an all-round increase of wages of that magnitude. In existing circumstances this is likely to mean a 5 per cent inflation. There was no increase in productivity in 1956 that would provide economic justification for the higher wages. The output was, if anything, lower than in 1955. It is true, it is widely expected that in 1957 the expansion of the output will be resumed. But it is by no means certain whether the increase will be as much as 5 per cent. For a number of trade unions have adopted the line that overtime must be avoided as far as possible, and the resulting loss of earnings must be made good through an increase in basic wage rates.

But even on the optimistic assumption that the 5 per cent increase in wages will be accompanied by a 5 per cent increase in the output, the higher purchasing power of consumers is likely to result in an inflationary pressure on prices. Additional wages will be paid out from now on every Friday, but it will take some time before the additional goods will become available to consumers. In any case, a large proportion of the additional wages will be spent on food and other goods the supplies of which are not expected to increase, at any rate not until much later, and the prices of which are very sensitive and respond almost immediately to the higher demand. On the other hand, the increase in the output of most manufactures will be in response to a previous increase in consumer demand. For this reason the producers will be in a position to pass on to the consumer the full increase in their costs resulting from the higher wages.

Nor are industrial firms likely to hesitate in future to raise their selling prices whenever they consent to higher wages. In response to the Government's appeal in 1956 for their co-operation in an effort to prevent a further rise in the price level, a large number of industrial firms financed out of profits the wages increases granted last year. But they received no thanks for this self-denial, either from the employees or even from the Government. Regardless of official exhortations, the trade unions were pressing forward with their wages demands. As for the Government, its attitude caused bitter disappointment in industrial circles.

During the second half of 1956 and the first quarter of 1957, many industrial firms, having suffered drastic declines of profits in their effort to avoid raising their selling prices in face of higher costs, decided to make a firm stand. The Government, instead of assisting them in this effort, maintained for a long time an attitude of strict neutrality in face of unwarranted wages demands. Official spokesmen took the utmost care to avoid conveying the impression that they take sides between employers and employees, or even that their sympathies are with efforts of the employers to stem the flood of wages inflation. This was bad enough considering that the employers were fighting the Government's battle against inflation. But there was worse to come. When in March the engineering and shipbuilding workers began a strike, the Minister of Labour, Mr Macleod, brought the utmost pressure to bear on employers to induce them to meet the wages demand to a considerable extent.

Viewed from a political angle, the Government's attitude is easily explained. In order to regain some of the popularity lost in the rank and file of the Conservative Party since the general election, the Government was rightly anxious to make tax concessions to the higher income groups in the Budget in April. But it would have been difficult to announce such concessions in the middle of a major strike. It was important, therefore, that the trade unions concerned should be persuaded to call off the strikes pending the deliberations of the courts of inquiry set up for dealing with their wages demands. This could only be achieved if employers were prepared to meet the unions at something like halfway. Under Government pressure they reluctantly consented to do so. Having announced their determination not to give way and to face a showdown, they were overpersuaded to give way.

(Continued on page 778)

World of Jute

Jute Production on Emergency Footing

The decision of the Government of India to set up a Central Supervisory Body to review periodically the progress of achievement of the jute production target of 5.54 million bales fixed for the Second Five Year Plan has not come a day too soon. As has been noted already in these columns, reports from Bihar, an important jute growing area, indicate that remedial action is urgently needed there if jute production in the next season is not to suffer. From the latest report from jute growing areas in our country, it would appear that so far weather conditions in most places have not been quite favourable for proceeding with sowings. Special efforts, therefore, will be called forth this year if we have to maintain the progress made last year.

It is gratifying to note that Authority is evincing keen interest in achieving raw jute self sufficiency as quickly as practicable. Speaking at the high level conference on promotion of jute production held in Calcutta last week, Dr M. S. Randhawa, Vice-President, Indian Council of Agricultural Research and Additional Secretary, Union Ministry of Food and Agriculture, asked the representatives of the States attending the conference to treat the problem of jute production in India on an emergency footing in view of the difficult foreign exchange position. The fact that supervisory bodies will also be set up at the State level in the jute growing States should enable the States concerned to initiate expeditiously effective action to promote jute production.

The conference also decided to speed up the distribution of fertilizers to jute growers and to distribute an additional 35,000 tons of fertilizers for top dressing of jute during 1957-58 crop year. It had been decided that 50 per cent of the jute area should be fertilised by the end of the Second Five Year Plan period. It was emphasised at the conference that more depots should be opened so that the fertilizers could reach the cultivator in about six to eight weeks' time from now.

As it has been calculated that improved seed, mechanical sowing by seed drills, a reduction of weed growth by inter-row hoeing and the application of chemical fertilizers can increase the yield of jute per acre by over 20 per cent, it may be assumed that a sizable increase over last year will be achieved in jute production in India during the 1957-58 jute year, now that adequate supply of fertilizers to jute growers has been more or less assured.

*

The jute goods market opened the week quietly steady due to lack of genuine business but steadied up by midweek with prices both in the hessian and sacking sections marked up substantially higher. Toward close, however, sackings developed a sagging tendency though hessians continued to maintain a steady trend. Hessian 40"×10 oz opened at Rs 41.37 and by close was quoting Rs 41.68. B Twills Ready began the week rather quiet at Rs 111.50 and steadily moved up in the next two sessions to be done up to Rs 112.75. In subsequent trading it lost ground again to come back to Rs 111.87.

Though the smart rise in US Burlap consumption in March has imparted a better feeling especially to the hessian section, the fact that burlap stocks in that country continue to stand at a high level has somewhat diminished the bullish fervour. It is now known that at the end of March, stocks in US stood at 263 million yards. As such stocks at the end of February stood at 266 million yards, the decline in stocks has been to the tune of 3 million yards only. At the current level of burlap consumption in US, the stocks will last for more than three months. March-end stocks at 263 million yards comprised 134 million yards spot goods 129 million yards afloat. End-February stocks at 266 million yards consisted of 124 million yards spot and 142 million yards afoot. Even the report that consequent on the publication of US March consumption figures, the burlap market in that country had firmed up did not have much effect on local market sentiment.

Reporting on the conditions prevailing in the Indian Jute Industry and Trade during March, the IJMA had indicated that the trade was expecting that enquiries from Argentine might broaden in coming months. Argentine buyers, it may be remembered, were renewing interest in the trade from the second half of last month.

During the past week there had been little overseas enquiry for sackings and perhaps that was responsible for the subdued tendency noticeable in the sacking section. Though hessians also had not been very active, the undertone in that section had been very much helped by hopes of a broadening of interest both from America and Argentine.

Yet another factor had come into play during last week. According to the Indian Jute Crop Report No. 5 issued by the Jute Balers' Association, for the week-ending 20th April 1957, weather conditions in most jute growing areas have not been favourable. Very hot and dry weather with bright sunshine was experienced during the past week in all jute growing areas. As a result, the crop is said to be becoming late. It is said that rainfall is urgently required in Indian Northern, Daisee, Murshidabad and Orissa areas to allow further preparation of the land, healthy growth of the plants and the resumption of suspended sowings. As is to be expected the prospects of a late crop have imparted some steadiness to the raw jute market.

The following table shows the weeks opening and closing prices:

	Week's opening Rs/np.	Week's closing Rs/np.
Hessian:		
40"×10 oz.:		
Ready ..	41.37	41.68
July-Sept ...	41.75	42.12
40"×8 oz. ...	34.00	34.00
40"×7½ oz. ...	31.50	31.44
Sackings:		
Hy. Cees Green ..	111.00	111.82
Cornsacks ..	111.62	111.38
Cubans ...	134.00	134.38
A Twills ...	133.50	134.13
L Twills ...	126.00	125.88
Sugar Bags ...	127.62	128.13
D. W. Flour ..	133.37	133.88

The raw jute market opened steady but dull with small mill business reported done in Jungli Mesta Bottoms at Rs 19 per maund April-May delivery. With mills taking fair interest, steadier conditions developed on Monday with Assam Bottoms done at Rs 28.50 per maund. Toward close the marked ruled fully steady on reports of draught in most of the jute growing areas. Mills were also found to evince keen interest. Business in Assam Bottoms was reported done between Rs 28.50 and Rs 29.00 per maund.

World of Tea

Stock Position

ACCORDING to the latest reports, Tea stocks left at Calcutta warehouses, at the end of the 1956-57 season, were even less than half of those at the end of the previous season. Stocks, at the end of March 1957, totalled 334,349 chests as compared to 662,090 chests a year ago. This sharp fall is stocks is attributed to early stoppage of plucking by the gardens and the substantial increase in shipments from 322 million pounds in 1955-56 to 417 million pounds in the 1956-57 season.

The stock position in the UK is, however, different. Stocks, as on the 12th April 1957, were as much as 143.68 million pounds as compared to 140.37 million pounds in the previous week. The total amount about to be landed on the same date was 29.34 million pounds. Deliveries, during the week ended April 12, totalled 10.61 million pounds and landings 13.92 million pounds. Total afloat was 37.70 pounds including 24.09 million pounds from Calcutta; 388,740 pounds from Chittagong; 3.19 million pounds from Cochin; 6.81 million pounds from Colombo and 3.22 million pounds from other Ports.

In general, the quantity of tea afloat is substantially higher than at this time last year; and, when it is landed, the tea available in the bonded warehouses will be very high. This has naturally been reflected in the London auctions. The distributive trade in the UK consider a stock position of about 110 million pounds to be the safe level; and the excess indicates an over-supply position.

Although Indonesia produced less tea during last year than in 1955, her export was greater by 11¼ million pounds. Indonesia exports to the world were 75.9 million pounds, of which, as usual, Holland was the largst importer with 30.7 million pounds, while Britain took a substantially larger share of the export with 13 million pounds. These significant changes bring the Indonesian trade back to its pre-war pattern, although the recovery of the tea industry does not appear to have been marked after 1949. With the present disturbances in that country, doubts are expressed whether the 1957 contribution to the world market will be on the same scale as last year.

No Export Sale was held in Calcutta this week. In the Internal Sale, offerings were 18,937 peakages. Once again, prices were sometimes up to 10 nP per pund easier when the market opened. Demand improved as the sale progressed and most descriptions were firm to slightly dearer. Black leafed types were a strong feature. Non-wither Dooars, powdery CTC Assams and Residue kinds were sold fairly well. The very few best CTC Assams, on offer, received only limited support and were generally easier. Following rates were quoted:—Medium Dooars Dust Rs 1.60 to Rs 1.65; Medium Assam Grainy Dust Rs 1.70; Medium Assams CTC Dust Rs 1.70 to Rs 1.80 and Best CTC Assam Dust not quotable.

There was a keen general demand for the 4,429 packages of other grades on offer. Clean well-made Whole Leaf grades and BOPs were particularly strong features and all descriptions were dearer.

In the Export Quota section, business was done in Special Export Licence at 23 nP per pound and in Shipping Licence at 22 nP per pound.

A quantity of 575,000 pounds of Dusts was offered in the Cochin market this week. Against a fair general demand, the market was irregularly 10 to 15 nP per pound lower all round except for colourv mediums which were firm to dearer. High-growns were neglected.

In the Colombo market, offerings last week were 5,733,583 pounds for

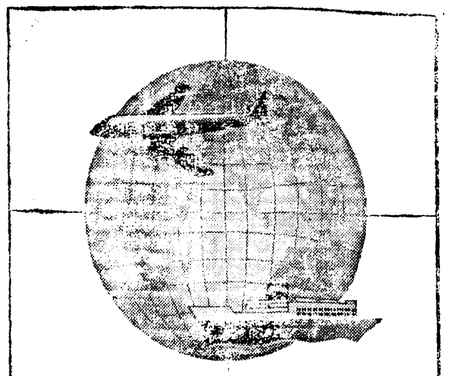
(Continued on next page)

World Overseas

US Notes

American businessmen see many new international trade and investment opportunities opening up as other countries accelerate their industrialization and general economic development. This view was expressed here last week at the annual convention of the Export Managers Club of New York, composed of executives who manage export sales for leading US companies.

More than 1,000 traders attended the two-day meeting. These executives, who are in good position to judge world economic trends, readily conceded that the growth of foreign economies may well lead to increased competition for US exports, and to some dislocation of present US trading patterns. But they are shedding few tears over this prospect. They are confident that a continued rise in living standards throughout the world will tend to create greater demand for all types of goods. And, they are equally confident that American producers will be able to adapt to world market shifts and thus participate in the new sales possibilities ahead.



Delegates noted, in this regard, that a rise in industrial production often touches off an even sharper increase in trade. World industrial output in 1955, for instance, rose 10 per cent, while world imports climbed more than 12 per cent. Constructive steps taken by developing nations to build up their industry also were cited as important spurs to US private investment abroad. Experienced American companies, it was noted, can contribute substantially to economic progress around the world by gearing their investments to development programmes best suited to the individual needs of other countries.

Evidence of the effectiveness of US foreign investment is the fact that sales of goods manufactured in other lands by American-owned subsidiaries last year amounted to $39,000 million. This was more than twice the volume of goods exported directly from the United States. About 76 per cent of the goods sold in world markets by American firms last year were manufactured outside the United States. This contrasts with the pattern in 1942, when 72 per cent of American producers' foreign sales consisted of goods made in the United States.

Much of the responsibility for encouraging the growth of American investment abroad, of course, lies with the foreign countries themselves. Many of them have been offering incentives to new manufacturers, including help in training workers and securing bank loans and building sites. In addition, American businessmen believe that countries interested in attracting US capital should accept respect for contracts as a fundamental requisite. At the same time, American businessmen recognize that they, too, have responsibilities when they invest in enterprises abroad.

In joining and cooperating with development programmes and observing local laws and customs, American companies setting up foreign affiliations are concerned with less tangible but nonetheless important motivations involving human relations and goals. Most of them will go out of their way to train local workers to take over more of the skilled and technical jobs and send as supervisors from the United States persons who can adapt to local conditions and can recognize the special talents and problems of local workers. Generally, they replace American personnel with local supervisors as fast as possible, and they send local employees to the United States to study new industrial techniques. All this, it is admitted, may cost a little more in time, effort and money, but it is considered well worthwhile in the contribution it makes to international understanding and healthy commercial relationships.

FOREIGN TRADE...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service

With a network of correspondents at all important trade centres of the world the United Bank of India Ltd., is equipped to render adequate service and give expert guidance in matters of foreign trade

United Bank of India Ltd.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

BALANCE-SHEET REVIEWS

(Continued from page 770)

to Rs 45.63 lakhs. The directors have stated that the Government have sanctioned a further increase of Rs 5-8 per ton with effect from 22nd September 1956, that is, from Rs 69 to Rs 74.50 per ton.

As regards the White Cement scheme, the entire machinery will arrive by June this year. It is expected that the factory will go into production of this product before the end of this year.

£R$

Investment Notes:

With regard to the issue of 24.80 lakh 'A' Ordinary shares, the Board of Directors of the Alkali & Chemical Corporation of India Limited have stated that they have given careful consideration to the number of acceptances and renunciation letters. The Board feel that shareholders may wish to have further time in which to deal with the new shares provisionally allotted to them and they have, therefore, decided to extend the time by which the forms must reach the Lloyds Bank from the 27th April to the close of business on the 11th May, 1957.

£R$

It is learnt that Messrs Andrew Yule & Company have been appointed as managing agents of the Assam Consolidated Tea Estates (India) Limited. It may be mentioned that this company was incorporated on the 1st April 1957 as a wholly-owned sterling subsidiary of the Assam Consolidated Tea Estates Limited.

£R$

The Automobile Products of India have undertaken to implement the phased programme of manufacture. The hope is expressed that it will be possible for the company, in future not only to continue payment of dividend on the Preference shares, but also to resume payment of dividend on the Ordinary shares.

£R$

Investment Briefs:

Killick Industries have proposed an ad-interim dividend of 4 per cent for the year 1956-57, same as in the previous year.

*

5 PER CENT INFLATION IN BRITAIN

(Continued from page 776)

Industrial employers is not likely to forget this experience. Next time the Government will appeal to them to cooperate in the effort to stem inflation, the appeal may meet with much response. Until 1956 employers usually took the line of least resistance by conceding unwarranted wages demands and adding the extra cost to the price of their goods. After the experience of March 1957, they are likely to resume this attitude. They are in a position to do so, because the wages inflation ensures an adequate demand for their goods at the higher prices.

Of course the Government could repair the damage done by stepping up considerably its disinflationary measures. There are no indications, however, that this is under consideration. In such circumstances industrial firms are not inclined to do the Government's work by taking on themselves the burden and unpopularity of resisting the wages demands. Now that the wages increases appear to have become an annual event, a more or less continuous expansion of the domestic markets for their goods appears to be assured. In the circumstances, many firms will feel inclined to leave it to the Government to worry about any fall in exports which may occur if, as a result of higher wages, British goods should lose their overseas markets.

The worst of it is that, conditions being what they were, the Government was fated to take the line it took in March. The reduction of taxation could not be deferred any longer. Nor could it have been undertaken unless the engineering strike had been called off. But the net result is that the employers' will to resist wages demand has been gravely impaired. —Copyright.

WORLD OF TEA

(Continued from previous page)

which there was active demand, except for light liquoring sorts. Demand for Nuwara Eliya teas was good, but prices for all grades were generally slightly lower following quality. Among high-grown teas, thin liquoring kinds were generally lower; but there was strong demand for other sorts at an advance of about 10 cents per pounds. Medium-grown teas met with active demand and all grades advanced by about 10 cents per pound. Demand for low-grown teas were strong. Among Fannings grades, high-grown sorts advanced by 15 to 20 cents per pound. Tippy sorts were also rather dearer to buy.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

IT has devolved upon me, for reasons that I will presently explain, to take up the thread of the Leading Article in last week's Indian Finance and continue to weave the fabric comprised in free enterprise's illogical objections to all and sundry Government measures. Indeed, it is one such measure, to which protest has been spirited, which has necessitated my completing the analysis begun last week. For, the Deposits of Current Profits are of vital import to Indian industry; and some of the ambiguities, which are contained in the recently published draft rules, need to be stressed. It has consequently happened that the Special Study on the Deposits scheme has crowded out the space available in the Leading Articles section. I may, at the outset, confess that I relish the circumstance that it is now my chore to rebut two quite baseless grievances: these are (a) that the New Loan issues of the Centre and the States leave but little capital for the requirements of Free Enterprise; and (b) that a diminishing importance is being accorded to the representatives of Big Business in the counsels of the Government. My gusto on this account stems from the pleasure comprised in a chance vigorously to debunk assumptions and conclusions that are palpably wrong.

*

It is not merely an apprehension, but a charge frequently made, that public borrowings are, for the Second Plan, to be on such an enormous scale as to drain the capital market so completely that resources are hard to come by for the private sector. Let me add to that apprehension by suggesting that Government's borrowing programme is still chicken-hearted, that the target of New Loan realisations must be raised considerably. This raising of the target is desirable equally from the point of view of reducing the quantum of deficit financing as from the standpoint of the currently small scope for increasing tax revenues without causing further disincentive to individual efforts. So, it may be said that it is even in the private sector's interest desirable to increase the target for Government's market borrowings, since the avoidance of inflationary pressures and of any substantial increase in taxes or in new imposts is devoutly wished for by free enterprise. But, in that contingency, will there not be a further shrinkage in the money market resources available to the private sector? Such a conclusion is inevitable, if we grant that the prior assumption, that Government borrowings adversely affect the capital market for the private sector, is correct.

*

That conclusion is wrong because the assumption is a mistaken one. Let us be clear in our minds as to the existing market for giltedged. The first category of entities interested in giltedged is "institutional investors." By this is meant the banking and insurance institutions, which are statutorily required to invest a portion of their funds in giltedged. Secondly, we have other special funds which by law need to be held in trustee securities. In this category are the provident funds and the newly emerging compulsory deposits of current profits. (In the latter, the choice rests with industry as to whether the deposit should be in cash or in Government securities: giltedged is likely to be the more attractive, since the interest thereon will be available to the company making the deposit). Thirdly, there are the various governmental cash balance accounts. These include surplus resources with State Governments, the Reserve Bank's investment portfolio, the Centre's cash balance investment account and sundry funds in respect of steel equalisation, cement equalisation, railways, etc. In present circumstances, the third category need not be considered, as cash balances are on the low side. But it needs to be recognised that, under the first two heads, funds need specifically to be invested in trustee securities. In the case of life insurance, 50 to 60 per cent of the Net Life Fund is held in trustee securities; and, in the case of the scheduled banks, the ratio of cash and unencumbered securities to deposits needs to be maintained around 25 to 28 per cent, although the statutory requirement is only 20 per cent. These are all funds, in short, which are investible only in trustee securities; and whether or no they are actually invested in Government securities, they will not be available to the private sector. The first point to note, therefore, is that it is not only an exaggeration, but also incorrect, to suggest that Government's borrowing programme has adverse repercussions on the capital market for the private sector.

*

Quite apart from the unsoundness of the negative proposition that governmental borrowing is hurting the private sector, may I ask why such scant recognition has been paid to the positive measures taken by Government to provide institutional finance for the private sector? Why this tendency to overlook the comprehensive facilities that are now available? Why is such credit to Government being begrudged? The capital needs of private enterprise fall into three types: finance in the form of a long-term loan; credit for a medium-term to take care of small replacements and additions; and short-term accommodation to provide for working capital. I would like in this Gossip to describe the many institutions that have sprung up in this context; and the inference will be clear that private enterprise, far from having any grounds for grousing or grumbling, should on the contrary gratefully realise the enormous and all-embracing assistance arranged by Government.

*

First, as to long-term needs. Loan capital and mortgage loans are available through the Industrial Credit and Investment Corporation, the Industrial Finance Corporation and the State Finance Corporations. Both the ICIC and the IFC have already advanced a substantial sum to industry; and the SFCs can be expected to help out smaller industries in the course of the Second Plan.

*

Second, medium-term capital. Indian Finance's suggestion of a Refinance Corporation is being implemented. The RC is to start out with initial resources of Rs 38½ crores, and these are to be made available through scheduled banks to medium industry.

*

Third, short-term accommodation. The Reserve Bank by its usance bills facilities is indirectly freeing, or has agreed to free, Rs 150 crores in the current busy season for enabling scheduled banks to meet the demand for short-term funds. Moreover, the Refinance Corporation's Rs 38½ crores for medium-term advances will free a worthwhile amount to be utilised for working capital advances.

*

Fourth, we have a new kind of resources needed by industry. This is in consequence to India's foreign exchange position, and relates to the provision of loans in foreign currency. The ICIC has a nest egg of $10 million; and, as Sir Ramaswami Mudaliar revealed at this week's annual general meeting, the ICIC is now receiving "a number of inquiries for loans in foreign currency and we expect to present some of these proposals to the World Bank in coming months." What is more, the ICIC Chairman holds out confident hopes of securing "further credits" from the World Bank. Secondly, Mr K. R. K. Menon, the Chairman, disclosed that the IFC would raise a loan in foreign currency from the World Bank with a view to helping industrial concerns in the import of capital goods. That is to say, substantial facilities have been created for catering to the long-term foreign exchange needs of industry.

*

Fifth, there is the question of underwriting share capital. The ICIC has in the brief period of two years underwritten a considerable number of issues. There was a recent case which showed that the Life Insurance Corporation is also prepared to act as underwriters. Both the IFC and the SFCs are empowered to underwrite issues. To say, therefore, that underwriting facilities are not available in India would be wholly untrue. However, they are not being as fully made available as they should be; but this is a different matter.

*

Sixth, there is the special finance required for rehabilitation. Both

the jute mills and the cotton textiles industries are in urgent need of modernisation. The National Industrial Development Corporation is an agency of Government which is dealing with the matter.

✱

Finally, two institutions, the ICIC and the LIC, are known to subscibe to issues of joint stock companies. Shares, both equity and otherwise, are held by the two entities. In respect of the LIC, Government have given the undertaking that the proportion of insurance funds investible in the private sector will not be reduced; and this may mean upwards of Rs 5 crores a year.

Let us again look at the array of available facilities: long-term credit provided by ICIC, IFC and SFCs; medium-term by RC; short term by Reserve Bank and RC; foreign exchange loans from ICIC and IFC; underwriting by ICIC, IFC, SFCs and LIC; rehabilitation finance from NIDC and equity share participation by ICIC and LIC. This covers the whole gamut of financial needs of the private sector. Clearly, therefore, the institutions are there; we have now to consider whether the quantum of resources is sufficient, and whether the best possible use is being made of such facilities as already exist. This we shall now seek to do, though it needs to be pointed out that some of the figures cited may be in the nature of guestimates.

✱

The ICIC started out with Rs 5 crores by way of capital, Rs 7½ crores by way of special advance from Government and Rs 5 crores representing the stand-by arrangement with the World Bank. At at the end of its last financial year, the ICIC (if I remember right) had unutilised resources to the tune of Rs 11 crores, including the Rs 5 crores in foreign exchange. Since, however, applications have thereafter been received involving practically the whole of the rupee resources, and since inquiries have been quite heavy in regard to the foreign exchange loan, ICIC is continuing to pay thought to "the means by which our Rupee resources can be augmented when the need arises." As to foreign currency, we have already noted that the World Bank is quite likely to sanction further credits. For the Second Plan period, we can consequently be reasonably sure that the private sector can count upon a total of anything between Rs 20 and Rs 30 crores from the ICIC.

✱

In the case of the Industrial Finance Corporation, loans sanctioned during 1955-56 amounted to Rs 15 crores. But the provision made by the Planning Commission has been based on the annual average of loans previous to 1955-56, and is thus placed at a total of Rs 15 crores for the Second Plan. In view of the fact that industry is now in the process of intensifying the use of IFC facilities, it is not improbable that Government should revise the figure in this behalf. Personally, I should think that finance releasable through the IFC may be of the order of Rs 30 crores over the Second Plan period.

✱

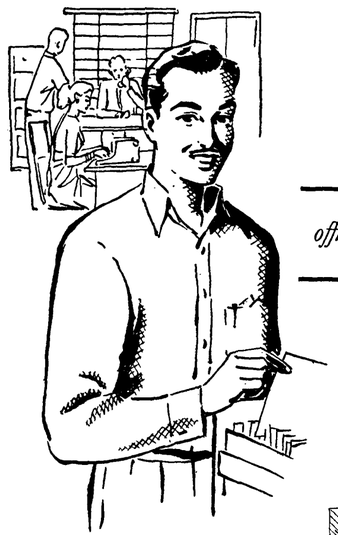
According to the Planning Commission, the resources to be made available through the National Industrial Development Corporation (with special reference to the needs of the jute goods and cotton textiles industries) are to aggregate Rs 55 crores. It is possible that the rehabilitation aspect of the NIDC will be extended to cover the sugar mill industry. In that event, NIDC funds for the private sector may amount to Rs 70 crores.

✱

The State Finance Corporations are bodies about whom it is difficult to collate the necessary statistics. A pure guestimate may place the funds likely to be lendable by them at Rs 10-12 crores for the Second Plan period.

✱

The Reserve Bank's contribution to working capital, by way of advances against usance bills, may be expected to hover around Rs 150-200 crores at busy season peaks.



✱

The Refinance Corporation is, for a start, to provide Rs 38½ crores. We may, I think, count upon at least an extra Rs 12½ crores by 1960-61. Moreover, we must not forget that the first tranche of Rs 38½ crores also "unfreezes" advances for a worth while amount to be utilised in short-term accommodation.

✱

The life insurance funds are snowballing at the rate of Rs 20-22 crores annually. A quarter of this may be channeled into industrial shares. Since the pace of increase will in the future be greater, we would not go wrong

Bombay Review

Gateway Gossip

The Gratulatory Mood

LAST week-end, Bombay witnessed a spate of gratulatory and jubilant festivals, wherein one could sense a return of gay and restrained abandon, which has ever been Bombay's typical deportment. The mood of fervour and pride comes natural to citizens who have every cause to regard their city and their state as pre-eminent in progress and prosperity through a combination of civic responsibility and conspicuous leadership. At the same time, insistence on discipline in the observance of even spectacular celebrations comes easy to a community, most of whom have aught to do with business tempo and organisational efficiency. There is, in a word, a method in Bombay's madness; and the only glaring variation in this respect was the unalloyed madness of the days following the publication of SRC proposals. Last week's carnivals made us forget this ugly and unedifying episode.

Mr Morarji Desai, whose two-day visit to this city was hailed as the first significant official duty of the new cabinet's minister for commerce and industry, said in effect, at the party given by the Progressive Group to felicitate him, that Bombay's return to its traditional ways was a matter of solicitude as much for the present enlarged state as for the whole of India. The leadership which has hitherto been conceded unquestioningly to Bombay was due, as Mr Desai rubbed it in, to its cosmopolitanism and tolerance. The parochialism of the recent past accords ill with the reputation resting on a record of goodwill and broad outlook, and must on no account be allowed to raise its head again. The warning is necessary as the linguistic zealots are yet to realise that retreat is the better part of prudence. The coming months provide, therefore, a challenge to those who cherish and value Bombay's heritage of poise and self-assurance.

From the chief ministership in Bombay to the commerce ministership in New Delhi is a transfer of affections and activities to which Mr Desai had made the necessary adjustments with characteristic aplomb. The dominant trait in him is his passion for efficiency; and he can at will summon the aptitudes and talents appropriate to any situation and for any task. As the head and chief of a state, he was the iron man. As member of the Nehru Cabinet, he is the strong man: that is to say, he will not throw his weight about, but he is alert and alive to the requirements of firm policies and decisive action. The business community can have no excuse if they do not learn to understand where they stand with him. He appreciates their problems, and has given the assurance that they will be sympathetically dealt with. At the same time, it will not do for them to hug the illusion that their interests are paramount, before which every other issue is secondary. They have immense scope; and they have immense obligations, too. This thesis was affirmed and reaffirmed by Mr Desai in the many personal talks he has had, and the many public addresses he has made. In his own telling way, he has reminded them that, maybe, they represent 10 per cent of the population; but Mr Nehru and he and their colleagues have been elected by 90 per cent of the population, to whom answerability is a solemn and, at the same time, a practical obligation.

Forthrightness has its abundant uses, if it is not an offensive display of authority-drest superiority. The cotton mill industry in India must now adjust itself to the position that there shall be no reduction in the cloth excise duties. A wistful enquiry was addressed to Mr Desai at the meeting wherein he discussed the problems of the industry with the representatives of the Bombay Millowners' Association. In the most categorical terms, the Commerce Minister told the country, through the BMO, that the excise duties shall continue at the present levels; that agitation in this respect will only injure the industry, by promoting a wait-and-see attitude among dealers and wholesalers. The BMO has, promptly, issued a press release; and it may now be confidently predicted that the emerging buying pressure for textiles will gather rapid momentum.

Bombay, whose outlook on matters generally is influenced by its predominant business activities, is frankly satisfied that its interests are in the safekeeping and trusty guidance of one of its most respected sons.

Another beloved son of the Western Capital, in whose case also there is an equally significant transfer of activities from the state to the central level, is Mr S. K. Patil. He is out and out a Bombayite, with his finger in every pie for the best part of three decades. The institutions and organisations he is connected with are legion; and he has been the BPCC boss for years. At the Santa Cruz airport, all these organisations had mustered their members and followers to give a rousing welcome to one who allowed himself a brief two-days interval to wind up a thirty years' contacts and involvements.

Mr Patil, on alighting, was smothered in a downpour of garlands; and, in this tendering of deserved respect, there was the wistful apprehension if his successor could so competently run the party machine and inspire and evoke a like measure of party loyalty. Mr Patil is almost irreplaceable; but to keep him, on that account, for ever in the provincial sphere will be to deprive the whole country of the benefits of a unique type of organisational skill and energy-filled action. Mr Patil has been identified with urban interests all along; and it is a good change that Irrigation and Power will bring him into purposeful association with India in its villages.

It was an auspicious coincidence that, in a week devoted to felicitations, an occasion arose for paying homage to Sir Purshottamdas Thakurdas, who, for two generations, has been acknowledged on all hands as the most authoritative and balanced spokesman of Indian business. Businessmen and politicians, Indians and Europeans have been in agreement on one issue: that PT's advice is always marked by close study, careful thought and superlative sagacity. Most important companies on this side of India have, for years, benefited from his mellowed and practical wisdom; and, on the boards of companies, he has shown firmness in policy and understanding of practical considerations. Especially in the guidance of money market institutions like the Reserve Bank and, in the earlier years, the Imperial Bank and the Oriental Life Insurance Company, his leadership has been a major influence in healthy and orderly progress. The occasion for last week's celebration by the elite of Bombay was provided by the publication of a biography of Sir P. Thakurdas, the author being the versatile Frank Moraes. Mr Moraes's biography on Mr Nehru appeared at the zenith of his hero's career; and that on Sir PT sees the light of day in the evening of a long and distinguished career. In both cases, the subject is inspiring; and the author has responded to the call of esteem and the urge of affection. Mr and Mrs Saraiya, who arranged the function, are to be thanked for providing this opportunity for the citizens of Bombay to express their deep gratitude to one who has functioned effectively and correctly for half a century as a great representative and citizen of a great city.

There is appropriateness in Bombay's tribute to Mr Ghansyam Das Birla in the same week in which it paid homage to its own GOM in business. Mr Birla is not a Bombayite only in the sense that his status is governed by the vastness of his empire which embraces almost every province of India, he himself conducting his court in India's capital. In the mid-twenties, GD, with the unerring foresight which is his speciality, realised the imminent importance of New Delhi as the fountain-head of all influence and power, and set up his active headquarters at Albuquerque Road in New Delhi. It then panned out that authority and responsibility in the Birla empire was regionalised, with Mr Rameshwar Das Birla as the head and chief in the Western, Mr Brij Mohan Birla in the Eastern, and Mr Ghansyam Das Birla in the Central zones. Mr Jugal Kishore Birla's portfolio was temples and cognate objects connected with the reinforcement of Hinduism; and Mr G. D. Birla's portfolio also included all-India problems of political and educational import.

This brief description of the Birla set-up should suffice to emphasise that Birlas have long-standing and substantial stake in Bombay's commerce and industry, a greatly strengthening factor in this respect being the Birlas's assumption of the managing agency of Century Cotton Mills, one of the biggest and most progressive units in the textile world. This expansion is impressively testified in the shifting of premises from Church Gate Street to Imperial Bank Building in Bank Street to their own building in Jamshed Tata Road.

The first industrialist to be honoured by the conferment of Padma Vibushan is, as fit and proper, Mr Jehangir Tata. It is equally meet and becoming that the second business magnate to be thus honoured is Mr Ghansyam Das Birla. It is, likewise, in the fitness of things that Bombay regards the event as one which it should celebrate. At the last week-end, fifteen hundred of the Western Capital's leaders in business, society and politics met at the Sardar Patel Stadium to offer felicitations to Mr G. D. Birla.

There was something specially felicitous in the speeches made on the occasion. Governor K. M. Munshi, who presided at the function, was reminiscent of the bonds between Congress leaders and the Birlas. There is poignancy in the thought that Mahatma Gandhi's last few days on this earth were spent in Birla House, Delhi, and Sardar Patel's at Birla House, Bombay. There is much that can be said of this sanctifying association; but the emphasis in the context of this despatch must be on the significant lead which Mr Birla's reply provided for the business community vis-a-vis the Second Plan.

There are aspects to Mr Birla's speech which require a more complete analysis and a more studied examination than I, in the space left to me, can give. So, I shall content myself with reporting that the lead given to businessmen by Mr Birla can be summed up in one sentence: Don't bother yourselves about the private sector or the public sector: think of Indian economic activity as pertaining to the national sector.

Gateway Notes

Indian Plastics Industry

The versatility of plastics has gained for it with remarkable speed an important place in the economy of all industrially advanced countries of the world. The plastics industry in India has also taken rapid strides in the course of the past three, four years and today it occupies a position of some importance among our industries. Recently, however, there has appeared a somewhat discouraging symptom. There has been a steep fall in exports in the last year. Whereas in 1953-54 the value of exports amounted Rs 16 lakhs, it has come to be placed at only Rs 7 lakhs in 1956-57. A resolution passed by the tenth all India Plastics Manufacturers Conference held in Bombay last week viewed "with concern the decline in export of plastic goods on account of the growing competition in foreign markets." The main problem, therefore, is one of making Indian plastic goods sufficiently attractive so that they may regain their lost ground in overseas markets. This is possible only when they compare favourably with others in the field in the matter of price and quality. A third requirement is that they should keep abreast of the latest improvements.

The plastics Exports Promotion Council can render valuable service but so long as our plastic goods do not attain a high quality and competitive price levels, its efforts will be largely ineffective. It is now evident that for the requisite increase in competitive strength the Indian industry has to make further rapid progress which is another name for modernisation. And here is the rub. In the acute shortage of foreign exchange in the country at present, the modernisation programme of the industry has perforce to be spread over a longer period than would have been the case in normal times.

Meantime, much remains to be done in other directions. For instance, there is the question of self-sufficiency in raw materials. The Second Plan has made necessary provisions to increase the supply of basic raw materials and it is expected that by 1960-61 the industry will be able to obtain most of its raw materials from within the country.

Apart from export possibilities, the domestic market also offers immense scope for the industry. There appears to be practically no limit to the uses to which plastics can be put both in the domestic and commercial fields. Plastics has successfully been used where steel and other metals, cement, wood, glass leather rubber and textiles were reigning supreme previously.

*

Cotton Textile Exports

A fervent appeal to Government to make a bold and radical change in their textile policy was made by Mr Jaykrishna Harivallabdas, President of the Ahmedabad Millowners Association at the recent annual General Meeting of the association. The disturbing developments in the cotton textile industry in the past year had rendered such a change quite urgent.

There is no denying the remarkable achievement of the industry last year. It has achieved an all time record output of 5307 million yards of cloth. This represents an excess of 357 million yards over its rated capacity. But things have so developed in the past year that the industry has to be content with whatever satisfaction it can drive from being able to achieve a record production. For, both in the domestic and export markets its performance has been disappointing. Exports in 1956 have been lower than in the previous year. There is still no indication that 1957 will be able to reverse this trend. Analysing the reasons for the steady fall in our textile exports, Mr Harivallabdas has pointed out that there is urgent need for bestowing attention on the quality and price of our textile goods. In the present highly competitive world markets, only goods which combine cheapness with quality have a reasonable chance of attracting the attention of overseas consumers. Due to dearer raw cotton and an ever-increasing wage bill, Indian textiles are fast losing their main advantage. The industry's obsolete machinery render it practically impossibe to effect the desired improvement in quality.

The solution lies in seeking ways and means of affording the industry adequate facilities which will enable it to regain its competivity. As price levels depend directly on cost of production, the primary need is for effecting sizable saving in this direction. As for improvement in quality, it would appear that no marked change is possible without embarking upon a programme of modernization.

GATEWAY MARKETS

Easier Trend in Copper Prices

COPPER prices have revealed a moderately bearish trend in the Bombay Metal market with the ready rate moving down from Rs 185 to Rs 176.50 per cwt. This was mainly due to the absence of demand from North Indian centres who appeared to be satisfied and preferred to keep out until stability was restored and also due to weak London advices. The market, however, showed some signs of stability at the lower levels, thanks to the generally healthy conditions in the domestic market.

The supply position, though comfortable at present, is not expected to become unhealthy as shipments due are not big. Moreover, the demand for the metal from the fabricating industry has been quite good with some upcountry centres figuring as steady buyers.

Importers are confident that the overall demand for the metal will continue to be good. They state that, despite relatively heavy imports, the floating stock in the country has been comparatively small. It is felt that the rate of imports will continue to be higher provided the overseas markets do not suffer a major change.

Among other metals, Zinc ready was steady at Rs 74.50, while Lead ruled quiet at Rs 82.00 per cwt. Tin was cheaper at Rs 129 due to an over-supply position.

On the London Metal Exchange, Copper touched the lowest level of £240 per ton. The end of the strike in Chile and the news that some Custom Smelters in the USA had been offering the metal at 31 cents, were the contributory factors.

Zinc hovered narrowly around £99½ per ton in the absence of fresh developments. Lead had a quiet week with the rate quoted around £111½ per ton.

The market for Tin was subject to unaccountable, though not noteworthy, price fluctuations, the lowest and the highest touched being £774 and £778 per ton. There is a feeling that US buying of the metal has, of late, been rather slow.

*

Gold & Silver

Despite higher arrivals, price movements in the Bombay bullion market were rather erratic due to alternate buying and selling. Silver succeeded in consolidating the initial gains, reflecting psychological effect of the Government's announcement that lend-lease silver obtained from the United States would be returned soon. Arrivals and offtake were estimated around 47 and 29 bars respectively. Chaitra delivery started at Rs 180.25 and, after easing off to Rs 180.19, looked up again to Rs 181.81, to finish at Rs 181.44. Balsakh delivery began at Rs 180.25 and advanced gradually to Rs 181-5. Spot moved between Rs 181-3 and Rs 181-8, to finish at the former level.

Although the market for Gold ruled initially steady, it turned quiet under reports of unauthorised arrivals. Turnover was small. Arrivals and offtake were estimated around 3,000 and 2,000 tolas respectively. Balsakh delivery opened at Rs 105.62 and, after touching a low of Rs 105.47, improved towards the close of Rs 105.53. Spot moved between Rs 105.41 and Rs 105.56, to close at the latter level.

*

Oils & Oilseeds

The markets for Oils and Oilseeds ruled generally steady. Values, after showing an initial advance under the leadership of castorseeds on prospects of overseas business, eased off at the close on fears of Government intervention to check the rise in prices. Castorseeds May delivery opened at Rs 182.25 and, after touching a high of Rs 184.00 and a low of Rs 181.00, finished better at Rs 182.75. Similarly,September delivery opened at Rs 188 and closed at Rs 188.25, the highest touched being Rs 189.75 and the lowest Rs 186.75.

In the Groundnut section, May opened at Rs 174.12 to close at Rs 173.87, the highest touched being Rs 175.25. August delivery opened at Rs 178.37 and closed at Rs 178.37 and closed at Rs 178, the highest touched being Rs 180.

The Linseed section presented a firm trend on slightly encouraging reports regarding exports of linseed oil. May delivery opened at Rs 31.19 and, after touching a high of Rs 31.56, finished at Rs 31.31. September opened at Rs 32.44 and finished at Rs 32.56, the highest touched being Rs 31.81.

Although trading in Cottonseed futures was devoid of fresh features, prices revealed a firm tendency in sympathy with other seeds. May delivery opened at Rs 115.25 and, after touching a low of Rs 114.50, firmed up towards the close to Rs 116.50.

*

NORTH INDIAN MARKETS

(Continued from page 785)

modity was comparatively small. In Coarse grains section, trading in Jowar was featured by a moderate demand from the Konkan for cheaper lots of the Sholapur quality. The Pulses section reflected a distinctly bearish trend with prices suffering a sizable decline on account of the slack consumer interest.

According to the Ministry of Food and Agriculture, the all India final estimate of Ragi for 1956-57 puts the current years' area and production of the crop at 5,674,000 areas and 1,914,000 tons respectively as against the partially-revised estimate of 5,693,000 acres and 1,820,000 tons for 1955-56, showing an increase of 94,000 tons in production.

The all-India first estimate of "Rabi" Pulses, other than Gram and Tur, for 1956-57 puts the current year's area at 9,827,000 acres as against the corresponding adjusted estimate of 9,237,000 acres for 1955-56, showing an increase of of 590,000 acres in area.

Bombay Review

World of Cotton

Import Decision Welcomed

THE Government of India have decided to issue, with immediate effect, licences for the import of raw cotton over 1-3/16" in staple from soft currency areas within a ceiling of 20,000 bales. Cotton, which will qualify to come in under the staple length stipulation, are: all Karnak and Menouli, all grades of Sudan, Gezira 'S' variety and all grades down to grades G/6/L in the 'L' variety and private estate Sudans down to grade four. Licences will be issued on a first-come-first-served basis to actual users and to importers against firm sales to mills on production of the following evidence:

1. Cable offer and acceptances made and received;
2. Firm commitments together with relevant correspondence; and
3. Firm contracts with the mills in the case of orders placed with importers by mills.

Licences will be valid for shipment up to 30th June, 1957. Licensing will be stopped immediately when the ceiling of 20,000 bales is reached. Importers will not be permitted to import cotton on their own account.

Also, the decision made by the Government to allow import of 50,000 bales of East African cotton, though not unexpected, has been generally welcomed by the cotton interests. This decision has virtually led to a scramble for East African cotton by leading Ahmedabad and Bombay mills. Some of these mills are said to have even concluded consiberable amount of business individually. With the result, it is expected that the ceiling of 50,000 bales, fixed for import of this cotton, may be reached very soon.

The Government decision is one of the steps by which the authorities have tried to bring down the high level of cotton prices which have spurted due to the tight supply position. However, the anxiety on their part to receive the supplies as early as possible is revealed by the announcement that licences issued will be valid for shipment up 30th June, 1957.

Meanwhile, about 3.92 lakh bales of cotton have been imported during the first seven months of the current season and the quantity licensed during this perid is for 6.07 lakh bales. Imports of cotton from the US have been higher at 2.49 lakh bales. Receipts of Sudan and East Africans have amounted to 37,397 bales and 56,255 bales respectively. Imports of Egyptians have totalled 33,746 bales.

×

FUTURES TRADING

Trading in cotton futures was resumed on last Thursday after having been suspended on Wednesday at the behest of the Forward Markets Gommission. Although the market revealed an easy tone in the early part of the week and fluctuations were confined to a narrow range, prices developed a hardening tendency towards the closing stages under the influence of Jharilla where improvement was attributed to approaching tendering period. Turnover was estimated at 5,000 candies.

Jharilla May opened steady at Rs 736 and, after touching a high of Rs 743, finished the week at Rs 741. Similarly, Vijay June opened at Rs 855 and, after improving to Rs 857, declined to Rs 852.50 on long liquidation. Vijay April touched a high of Rs 905 and a low of Rs 900, to finish at Rs 902.

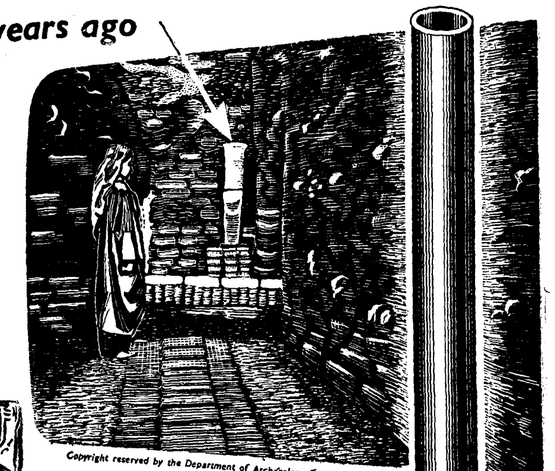
In view of the decision of the Forward Markets Commission that no trading will be permitted in the Jharilla July and Vijay August contracts in respect of the current season crop, interest in the forward section is expected to be subdued until trading in the 1957-58 crop starts. The Jharilla May contract is due to mature in the course of the next few days, and interest in Vijay June will be sustained only for about a month thereafter.

×

SPOT MARKET

In the Spot section, demand from spinners continued to be better. Local spinners sought superfine qualities o fSurti of staplingup to 15/16" at the price ranging from Rs 1,120 to Rs 1,130. There were good enquiries from prominent mills for styles like Saurashtra-grown C02, Khandesh quality, 1973, 0394 and other Surti cotton like 'Maroli at fancy prices.

Among foreign styles, business was done in Bushoga at Rs 1,432; Buthedi at Rs 1,385 and Budama at Rs 1,410, all for June delivery.



×

LIVERPOOL COTTON MARKET

Trading in the Liverpool cotton market continued to be slow with price movements confined to a narrow range. The Sudan futures contract remained unchanged, traders finding it difficult to assess price

Draft Rules for Profits Deposits

THE first moral, to be drawn from the noticeably favourable reception given to the draft rules (published here last week) regarding deposits with the Central Government to be made out of current profits of companies according to the provisions of the Finance Act No. 3 of 1956, is one relating to tactics. As many will recall, there was a wild furore when the proposal for compelling companies to part with a part of their reserves to Government hit the public eye. Stock exchange behaviour, ever ready to react adversely, slumped to new depths of despair. There were genuine misgivings of various sorts including some that questioned Authority's bonafides in the matter. The bill was considered to be yet another attempt on the part of Authority to get over its own embarrassments over working funds by surreptitiously raiding corporate savings. It was also feared that Authority had insufficient consideration for the need for funds of corporate enterprises. It was apprehended that this measure would disable corporate activity disastrously by crippling its working funds. And, finally, since the rules for actual working of the provisions were left for future determination, there was misgiving verging on despair about the actual working of the provisions. It is true that assurances were given of liberal framing of rules and expeditious working in practice. But the provisions themselves were so far-reaching and came down so suddenly, that no one was willing to be comforted.

Now that the rules have been published, and they show every indication of having been carefully thought out and of having been framed with a genuine understanding of the difficulties of corporation finances, it would appear that all the crisis-mongering of December last was quite needless. Authority cannot deny self-righteously any responsibility for such misreading of its inntentions in December last, since it was the incompleteness of the picture that made such fears possible. After all, this was a measure that could, like the capital gains tax, have benefited by detailed previous public discussion. And there was no special urgency about its being announced in its incomplete form in December last, since it was to become effective only with the income-tax year 1957-58. It cannot even be argued that the early announcement gave the companies time to make suitable arrangements (unless, of course, it was time to arrange things to "evade" the provisions, which certainly could not have been the intention of Government!) for complying with the provisions: for, in the absence of the detailed rules, no company could have made any useful arrangements in this regard.

I am referring to this aspect of the matter at some length, because it seems to me that far too often the psychological aspect of any particular fiscal or financial policy is not sufficiently weighed by authority. Too often do we see the spectacle of the public being surprised with a measure that at first seems to be an imposition and a deprivation, which, in the light of later explanations from the Government, is found to be not so bad as it seemed at first sight. It is likely that those that are framing these policies are so constantly in their company that they do not realise that the public's first intimation of such policies lies in the news (usually summarised) reports in the daily press. The reservations and the savings that are familiar to the official mind are not discernible to the public at first sight; and only when explanations are forthcoming do we see the whole picture. But the harm has been done by the first impression; and, when a measure happens to be fiscal or financial, the harm, both in psychological and real terms, is immense and even incalculable.

Consider the present case. After all, here is a measure which, as it emerges after modification by the draft rules, does not cast any doubt about Authority's bonafides; which has been designed with the sole purpose of orienting the flow of funds along channels charted by the Plan; and which is intended to put an end to one of the most notorious misuses of corporate funds. Secondly, the rules themselves have been framed liberally and provisions like time limits make for expedition in actual working. Thirdly, the anxiety of Government to make them even more acceptable to the public is to be gathered from the fact that the draft rules have been circulated for further suggestions from the public for consideration before finalisation. Therefore, this measure in its final form will be one on which much careful thought would have been spent and which would have had the benefit of the most complete public discussion. And yet, the unfortunate impression will persist that this has been a measure that has been thrust down people's throat much against their will and such concessions as have been given have been wrung out of a reluctant Authority. This is a gratuitous difficulty that Government need not have created for themselves.

As for the actual provisions under the rules, I have no space here to dwell on them at length. These will, doubtless, be analysed searchingly by Indian Finance elsewhere. I have space here only to indicate the more important provisions. Under the Act, a company has to deposit with the Central Government a percentage (which has been fixed at 50 per cent for 1957-58 for all companies except those specially exempted) of its current profits by which the statutory surplus exceeds Rs 1 lakh. This statutory surplus consists of the total income of the company for the previous year less the taxes payable thereon and dividends declared in the previous year, plus the sum of depreciation allowances and development rebates. This deposit is to be made before 30th of June following the year in which the profits are made and, in the case of companies whose accounting year falls within the first five months of the calender year, within six months of the end of the accounting year. Within fifteen days of making such a deposit, the company must inform the Income Tax Officer of the fact of deposits and the basis of its calculation, so that the officer will be able to exempt the company from the consequences of non-deposit at the time he makes the assessment.

The deposit to be made to Government need not be in cash, but can be in Government securities of the requisite market value. Money deposit will carry simple interest at a rate to be fixed for each financial year but, for deposit of Government securities, the interest due thereon less collection charges will be paid by Government to the company.

The rules contain provisions for computing the amount of profit deposits due from foreign companies doing business in India, and from companies a portion of whose total income is exempt according to the provisions of the Act. There are also provisions for situations arising out of differences of opinion between the Department and the company about the amount of deposits due. For instance, if there is a shortfall between the Income-Tax Officer's computation and the company's own computation, the shortfall must be made good by the company within 30 days of its being asked to do so by the Income-Tax Officer. If that is not done, the consequence would be that it would be deemed as one which has not made any deposit at all and the depreciation allowances and development rebates will be added back to the taxable income. Of course, the amount the company has already deposited will be refunded by the Board of Referees (a key body in these rules, to which I shall refer later). Provisions are also made for the refund due to assessees by readjustments of total incomes consequent on appellate decisions.

So far about the machinery of actual deposit. Now, about the possibilities of not having to make the deposits at all. The list of categories of companies that are not to make any deposits are:

(1) Companies in which Government (including State Governments) hold not less than 40 per cent of the share capital.
(2) Companies incorporated under a special Act of Parliament.
(3) Banking companies as defined in the Banking Companies Act of 1949.
(4) A company being an insurer as defined in the Insurance Act of 1938.
(5) A company engaged in the generation and supply of electricity.

These exemptions are announced not in the rules but by a separate notification fixing the percentage for computing the surplus over Rs 1 lakh for the assessment year 1957-58. This list can, therefore, be, at least in theory, abridged or enlarged from year to year. But the chances of its being abridged are rather small.

But the most important provisions of the rules relate to the listing of approved purposes for which the companies can obtain from Government a refund of these deposits and the machinery for such refund. The Government's success in working this part of the rules will go a long way in disarming criticism of Government's intentions in the matter. On the whole, the "approved purposes" have been conceived on liberal lines. They are of three categories: First, Capital expenditure for the construction, erection or acquisition, by way of replacement or otherwise, of buildings, plant and machinery and other fixed assets. Second: repayment of loans borrowed on the securities of its fixed assets for business purposes. Third: any other purpose on which the application of the financial resources of the company is, in the opinion of the Commissioner of Income-Tax, or Board of Referees, justified. The last category is a very important provision since there is to be an agency which will

Through Understanding Eyes

Mr Escott Reid, the High Commissioner for Canada in India, has, by all tokens, been taking the responsibilities of his office in the spirit of a genuine ambassador of one great people to another. That he was not content with carrying on routine obligations is clear by the range and tone of his reflections expressed in two recent rotary club addresses, one at Calcutta and the other at Delhi.

His Delhi address is full of warmth for and appreciation of an India surging with life and hope. Mr Reid's reminiscences of his varied experiences and contacts through books and men are uniformly flattering to this country. He als bears testimony to the national determination to see planned economic and social development through until a fair state of economic comfort is secured for the masses. The whole speech carries a message of encouragement and constructive sympathy.

The speech, however, is most valuable for the frank indications it contains of the gigantic character of the national effort called for and of the historical lessons, pointing to danger signals. Referring to the colossal population which India already had and the rate of annual additions, Mr Reid indicated what it meant by way of maternal care, educational facilities etc. In this respect, India's live-stock presents nearly as stupendous a problem as its human numbers; 160 million cattle, 45 million water buffaloes, 40 million sheep and 50 million goats represent the national problem at the live-stock level.

He has also referred to the greatness of Delhi as a metropolitan city. In the course of a brief historical narrative, he drew attention to the fact that the city had 2 million inhabitant's in the days of Aurangzeb and has an equal number now. In between in 1858, the City of Delhi had shrunk into a town of 50,000. In a strife-ridden world, the tragic annals of Delhi must press the need for the most objective, unprejudiced and fearless assessment of the political problems of the State of which the city forms the capital.

*

Punjab National

The Punjab National Bank Limited is in the forefront of the Indian Scheduled Banks which improved their Deposits in 1956. Over the year, Deposits rose by over Rs 16 crores to Rs 106.39 crores. This has contributed toward an increase in the balance-sheet total from Rs 112.89 crores to Rs 141.03 crores.

Cash balances, including money at call, are placed Rs 3 crores higher. Punjab National is one of a few Indian Scheduled Banks to report an increase in its giltedged holdings, with Government Securities shown Rs 2.17 crores higher at Rs 45.68 crores.

Punjab National utilised the bulk of its increased resources in expanding its accommodation to constituents. Advances have gone up by nearly Rs 13 crores to Rs 54.86 crores.

The income by interest and discount has risen by Rs 0.59 crores to Rs 4.02 crores from Rs 3.43 crores; and commission, exchange and brokerage have fetched in Rs 20 lakhs more at Rs 89 lakhs.

Interest paid has absorbed Rs 32 lakhs more at Rs 1.93 crores; and salaries and allowances have taken up Rs 1.80 crores against Rs 1.63 crores. In the result, the balance of profit has improved by more than a third to Rs 87.85 lakhs from Rs 64.41 lakhs.

The provision for income tax has been raised by Rs 16.50 lakhs to Rs 27.50 lakhs. Whereas, in 1955, the Contingency Reserve received Rs 24 lakhs and the Reserve Fund Rs 5 lakhs, the transfer to statutory Reserve in 1956 is Rs 27.50 lakhs. Bonus to Staff account gets slightly less at Rs 13 lakhs. After sundry other provisions, the dividend has been raised to 16 per cent from 14 per cent; and the carry forward is Rs 6.20 lakhs against Rs 2.35 lakhs brought in.

The progress achieved by Punjab National must rank among the best in Indian Scheduled banking in 1956.

*

The Salt Industry

The salt industry in India in the past few years has been in the comfortable position of complete self-sufficiency with regard to internal requirements. This self-sufficiency which has made it independent of imports since 1950, the industry owes to the enlightened policy which the new National Government which came to power after independence, pursued by means of liberal grant of licences to private interests to develop the industry and nearly four-fifths of the total production at present is accounted for by private firms.

The present position of the industry is characterised by an excess of production over internal consumption, production of salt in 1956-57 being nearly 8 crore maunds against consumption at 6½ crore maunds. This had enabled the country to export a record quantity of 75 lakhs maunds of salt this year. But this surplus notwithstanding the requirements of the various salt-based industries such as those manufacturing soda carbonate and other by-products of salt, have still to be met in full. World competition is also a factor which has to be reckoned with in the future

NORTH INDIAN MARKETS

Trends in Sugar Production

INDIA has achieved a record sugar production at nearly 2 million tons in the sugar year, November 1955 to October 1956, against 1.8 million tons in the previous season. As a result of this, India's sugar imports in the first six months of 1956 amounted to only 17,800 tons as compared with as much as 371,400 tons in the first half of 1955.

During 1956, sugar production in Indonesia dropped by nearly 10 per cent as compared with 1955—the post-war peak year. Output in China (Taiwan) was also below the corresponding figure for 1955. In the Philippines, production at 1.1 million tons was 11 per cent below the rather high 1954-55 production.

Meanwhile, out of one lakh tons of sugar allowed for export this year, India has sold 78,950 tons by 31st March; but despatches have yet been small.

According to the Indian Sugar Sugar Mills Association the sugar production during the month of March, 1957 was 3,79,000 tons bringing the total production during the first five months of the season 1956-57 to 15,49,000 tons. The corresponding figures during the last season were 3,35,00 tons and 14,02,000 tons respectively. The off-take of sugar from factories during the month of March, 1957, was 2,02,000 tons as against 83,000 tons during the corresponding of last season. The total off-take of indigenous sugar during the five months of the current season comes to 8,37,000 tons as against 6,80,000 tons during the same period last season. The closing stock of sugar on the 31st March, 1957 was 12,35,000 tons as against 11,33,000 tons on the same date last season.

The sugar season in West Uttar Pradesh will last upto the 15th May, as factories are still getting enough cane to crush. In East Uttar Pradesh, cane-growers have represented to the State Government to compel the sugar factories to take all the cane, otherwise it will go waste.

Despite increased production reports, prices are ruling steady. Following rates (per maund) are quoted in the Hapur market:—Jaswant Rs 28.62; Simbhauli Rs 28.75; Mowana Rs 28.25 to Rs 29.12; Daurala Rs 29 to Rs 30; Rampur Rs 30.50; Amroha Rs 28.34; Bijnore Rs 28.25 and Mansoorpur Rs 28.12 to Rs 30.32.

*

Gur

The Hapur Gur market continued to rule steady with the ready rate recording an advance of 50nP per maund. Daily arrivals have gone down to an average of 200 maunds. There are reports that gur stocks will be used for manufacturing sugar. Prices moved between Rs 10.75 and Rs 11 per maund, according qualty.

*

Foodgrains

Easy conditions prevailed in Hapur Food grains market. Wheat prices declined sharply by Rs 2 per maund on reports of the new crop arrivals. Arrivals last week were estimated at 1,600 maunds and these were lifted by consumers. With the result, pressure of sales through fair-price shops is decreasing. It is learnt that such shops will be closed in major producing areas as soon as prices of wheat ease further.

Rice prices ruled quite with Basmati moving between Rs 24 to Rs 28 per maund according to quality. Although new arrivals have not yet begun, Gram prices recorded a fall of Rs 1.50 per maund. Barely and Bejhar ruled quiet. Jowar prices, however, recorded an improvement due to increasing demand for seeds. Good outside buying enquiry, despite restricted loading facilities, accounted for an improvement in the prices of Peas. Daily arrivals averaged 1,500 to 2,000 maunds. The markets for Arhar and other pulses ruled quiet.

In the Delhi grains market, quiet conditions were visible, wheat prices easing off by about Re 1 per maund. This was mainly due to fresh unauthorised arrivals from the Punjab and Uttar Pradesh. Buyers were lacking for Gram in view of the increased arrivals of the new crop in the Punjab markets. With the commencement of arrivals, the rate for Barley showed a small loss. Among Coarse grains, Maize and Bajra were easy on account of decreased buying activity.

The Bombay grains market presented a mixed appearance. The tendency in indigenous Rice was a shade easier with prices of popular varieties moving down by Rs 3 per candy. This easiness was attributed to the heavy inflow of fresh supplies from upcountry centres and the consequent increase in supply.

Prices of indigenous Wheat revealed an easy tone, Pissi quality being placed at Rs 260 to Rs 270 per candy. The demand for this com-

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Limited, as at 31st December, 1956, and also the annexed Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited under Section 228 of the Companies Act, 1956 by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and to sub-section(5) of Sections 211 and 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Dated, Calcutta, the 7th March, 1957.

RAY & RAY,

The Bareilly Corporation (Bank), Limited

Twenty-ninth Annual Report of the Board of Directors

The Directors beg to submit to the shareholders the audited Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1956.

	Rs.	A.	P.
The Net Profit for the year including Rs. 169-5-1 brought forward from the previous year amounts to	98,862	12	1
The Directors recommend that the above amount be appropriated as under:—			
1. To provision for income-tax	43,000	0	0
2. To transfer to Property Depreciation Fund	4,500	0	0
3. To provision for bonus to staff	11,000	0	0
4. To pay dividends at—			
6 per cent per annum (less income-tax) on Preference 'A' Shares	4,425	0	0
6 per cent per annum (free of income-tax) on Preference 'B' Shares	6,000	0	0
7 per cent per annum (free of income-tax) on Ordinary Shares	26,008	8	0
72 per cent per annnum (free of income-tax) on Deferred Shares	3,816	9	0
5. To carry forward to next year's account	113	4	1
Total Rs. ...	98,862	12	1

There was steady progress in the Bank's business. Due to the prevailing stringency in the money market there is a scramble for funds generally and higher and still higher rates of interest are being offered even by big Banks which is hitting hard on the smaller banks.

Inspite of the increase under interest paid on deposits and borrowings the Bank has maintained its profits and although a larger provision was needed towards depreciation in the value of immovable properties held by the Bank but having regard to the continuous rise in the cost of living the directors consider it proper to recommend payment of a month's salary as bonus to staff.

In accordance with Article 113 of the Articles of Association Shri Hira Lal Khanna retires from the Board of Directors by rotation and being eligible offers himself for re-election.

Messrs. R. S. Gupta & Co., Chartered Accountants, Delhi the present Auditors of the Bank retire at the ensuing Annual General Meeting and they offer themselves for re-appointment for the current year.

By Order of the Board,
G. K. CAPOOR,
Managing Director.

BAREILLY,
Dated, the 10th March, 1957.

Balance Sheet as at 31st December, 1956

AUDITORS' REPORT TO THE SHAREHOLDER OF THE BANK.

We have audited the foregoing Balance Sheet of the BAREILLY CORPORATION (BANK), LIMITED, Bareilly as at 31st December, 1956 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated certified returns from all the branches of which six branches have been visited by us and ten branches not visited by us. In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections(1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949. We report that:—(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have been found to be satisfactory; (b) the transactions of the bank which have come to our notice have been within the powers of the bank; (c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank; (d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns; (e) in our opinion and to the best of our information and according to the explanations given to us the said amounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1956 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

DELHI,
Dated, the 20th March, 1957.

The United Commercial Bank Limited

★ Substantially Increased Profit in 1956 ★ Urgent Problem of Medium-term Credit ★ Wide Scope for Private Enterprise ★

Mr. G. D. Birla, the Chairman, Analyses Indian Economic Conditions

Statement of Shri G. D. Birla, Chairman of The United Commercial Bank Ltd., *circulated to the shareholders at the Fourteenth Ordinary General Meeting of the Bank held on 18th April, 1957.*

Gentlemen,

The Balance Sheet and Profit & Loss Account for the year ended 31st December, 1956 have been in your hands for some time and they bear testimony to the brisk activity of the bank's business in the past year.

PROFIT & LOSS ACCOUNT

We have been able to show the substantially increased profit of Rs. 56,51,658-8-9 in respect of last year's working. This result is naturally a matter of considerable gratification to the Board as it would be to you and the Directors would like to see that it is maintained, and if possible, improved upon. It is, however, necessary, in view of the uncertainties of the monetary outlook and of trade, to sound a note of caution. The resources of banks are not expanding as fast as we would wish with the result that competition for deposits is very keen, and the rate of interest allowed on deposits has risen. But the rise in the rate of interest charged on advances is not adequate to offset the higher cost of deposit money. Borrowings from the Reserve Bank of India are progressively costing more. Operating costs, of which salaries are the largest item, continue to rise. In these conditions the maintenance of future profits at the higher level now attained is dependent on increase in business, greater volume of deposits and prevention of rise in working expenses through the achievement of greater efficiency.

Shareholders will observe that we have considered it prudent in these circumstances to utilise as substantial part of our additional profit to increase our allocation to the Reserve Fund which now stands at Rs. 1.15 crores. At the same time we have been mindful of the shareholders and the staff in that we have increased the dividend payable to shareholders and the bonus disbursed to staff.

DEPOSITS

Turning now to the main features of the Balance Sheet, you will notice that the total of current, savings and fixed deposits and other accounts at the end of 1956 stood at Rs. 52.15 crores as compared with Rs. 47.69 crores at the end of 1955. The increase in deposits of Rs. 4.46 crores represents a rise of 9.3 per cent in 1956 against 17.9 per cent in 1955 and compares with the rise of 7.8 per cent in the deposits of scheduled banks as a whole for the year 1956.

CASH

Cash on hand and with banks was Rs. 7.51 crores and represented 14.4% of our deposit liabilities.

INVESTMENTS

The investments of the banks in Government and other approved securities stood at Rs. 19.43 crores which is a reduction of Rs. 2.74 crores from our holding at the end of 1955. In that year we invested in Government securities the bulk of our increase in deposits but we have now corrected that position and have effected a more even spread over advances and bills. The cash resources and unencumbered investments, together amounting in the aggregate to Rs 22.03 crores, give a ratio of 42.2 per cent to total deposits.

In view of the bill market scheme of the Reserve Bank of India our liquid assets are not confined merely to cash and government securities but also include eligible bills which augment our liquidity.

BILLS

The amount of bills discounted and purchased increased during the year from Rs. 9.74 crores to Rs. 15.92 crores. A good percentage of these are sight bills which are continually falling due while usance bills are available as collateral for advances from the Reserve Bank of India. You will be gratified to note that this self-liquidating asset forms 30.5 per cent of the deposits of the Bank.

LIQUIDITY RATIO

The total of our liquid assets—cash on hand and with banks, unencumbered investments and bills—represents 66 per cent of our deposit liabilities, which you will agree is a very satisfactory liquidity ratio.

ADVANCES

Our advances have risen from Rs 17.85 crores to Rs. 22.54 crores and they form 43.2 per cent of our deposits. We have endeavoured to meet all legitimate demands of our customers for increased accommodation and, for this purpose, have freely drawn upon the facilities available with the Reserve Bank of India for advances against bills and government securities.

FOREIGN EXCHANGE BUSINESS

The foreign exchange business of our Indian and Overseas Branches has shown a gratifying expansion. Owing to the increase in its activity our London branch was moved to more spacious premises at No. 12, Nicholas Lane, E. C. 4.

The credit for the excellent results of the working of the Bank goes primarily to the General Manager, Mr. S. T. Sadasivan and his able deputies and assistants, to whom I take this opportunity to record the thanks of myself and of the Board of Directors. I wish also to record our thanks to the other members of the staff of the Bank for their contribution in achieving these results. I also look forward to greater co-operation from them in the current year and the years to come.

BANK RATE

The official bank rate of the Reserve Bank of India remained unchanged at 3½ per cent but the cost to commercial banks of borrowing from the central banking institution has been progressively increased. In the first place the rate of interest chargeable to commercial banks for loans against usance promissory notes under the bill market scheme was put up in two stages from 3 per cent to 3½ per cent and the concession that the Reserve Bank of India would bear half the stamp duty on usance promissory notes was withdrawn. Early this year, the stamp duty on bills of exchange and usance promissory notes was raised ten-fold to two annas per cent for three months or part thereof. This has enhanced the cost of borrowing against usance bills by a minimum of half per cent and when allowance is made for the fluctuations in the debit balances of customers over a period and of the bank's borrowings against bills, the rise in the real cost is very much more than half per cent per annum. At the same time the Reserve Bank rate for advances to scheduled banks against Government securities was put up to 4 per cent. For all practical purposes, therefore, the bank rate has effectively been raised from 3½ per cent to 4 per cent. The working of the bill market scheme will, however, be much facilitated if the Government would annul the recent enhancement of the stamp duties on bills of exchange and usance promissory notes, leaving it to the Reserve Bank to charge the same rate of interest to scheduled banks for loans against bills as against Government Securities.

While money rates in India are hardening there is a retreat from dear money in other international money markets. The Bank of England rate has gone down from 5½ per cent to 5 per cent while open market rates in London are more akin to a still lower bank rate. The bank rate in West Germany has been brought down in two successive stages from 5½ per cent to 4½ per cent.

MONETARY CONDITIONS

For the past six months conditions in the money market have been very stringent and the demand for funds has continued unabated. Short and long-term factors have been at work in creating these conditions. Among the short-term factors may be mentioned the deflationary effects of adverse balance of payments caused by excessive imports. Imports of machinery have imposed a heavy drain on bank finance and import of iron and steel, which has been exceptionally heavy, has been a new factor in the demand for funds. There has been a basic alteration in the pattern of bank advances, the seasonal character of which has been largely blurred on account of financial requirements of industry being spread evenly throughout the year. Secondly, inventories of trading, manufacturing and engineering companies stood at a very high level. The long-term trend has been the rising demand for money from industries to meet the increased needs of a developing economy. The resources of commercial banks have not risen proportionately to the increased demand. There has been a further tightening of money during the conventional busy season as a result of the requirements of crop finance and of the sugar industry being superimposed on the more stable pattern of industrial demand.

The problem for the monetary authorities is, therefore, how to meet the legitimate demands for accommodation while at the same time keep inflation in check during a period of substantial development expenditure under the Second Five-Year Plan.

It is gratifying to note that the Finance Ministry and the Reserve Bank of India have taken measures to remedy the situation in good time and liberalised the bill market scheme so as to make Central Bank credit freely available to scheduled banks for the legitimate purposes of credit expansion during the current busy season. Another welcome step is the change in the policy of the Reserve Bank as regards open market operations in Government securities. The sale by banks of Government securities during the busy seasgn was a normal method of providing themselves with funds during periods of stringency but the Reserve Bank discontinued buying securities since the middle of 1951 save in exceptional cases and banks had therefore to put themselves in funds by borrowing from the Reserve Bank. During the current busy season the Reserve Bank has changed its policy and has bought securities freely from banks. The only unsatisfactory feature is that bank deposits have not registered a growth commensurate with the growth of economy. Conditions have to be created under which there may be a revival of real savings and encouragement to domestic capital formation.

MEDIUM-TERM CREDIT

The problem of medium-term credit has to be tackled urgently. What should be the organisation or institution that should disburse medium-term credit to private industry and how should the large resources required for the purpose be raised? There is already an appreciable element of medium-term financing included in the advances of scheduled banks and their investments. There is an increase in investments by banks in ordinary and preference shares of industrial companies and in their debentures. The banks have also subscribed to the capital of institutions like Industrial Finance Corporation, Industrial Credit & Investment Corporation of India and State Finance Corporations, which have been organised to extend long term credit to industry. Advances have been made by banks against stocks and other approved securities but in reality the money so raised has been utilised for the purpose of expansion of block.

With the ratio of advances to deposits well over 70 per cent and, in individual cases, topping even the 80 per cent mark, it is clear that commercial banks now lack the credit base to carry the load of medium-term finance to Industry. 60 per cent of bank deposits are repayable on demand, another 30 per cent are, probably, repayable within three to six months and a bare 10 per cent of deposits have a year to run. The idea that commercial banks should grant medium-term loans ranging from five to seven years out of the resources of this nature conflicts with principles of sound banking. Whether medium-term financing should be the responsibility of special institutions or whether commercial banks should undertake this additional responsibility, and if the latter is considered the better course, to what extent the well established rules of practice of commercial banks should, at the present stage of development of banking, be modified and what protection should be given in the event of the loans getting frozen, are all matters which have to be carefully enquired into. Banks may legitimately employ a part of their capital and resources not represented by fixed assets in such loans and this they have already done.

A wider incursion in the field of medium-term loans to industry would require the previous development of long-term deposits from the public. Swiss banks are known to have raised funds through the issue of bonds with a maturity of three to six years and if Indian banks could issue such bonds successfully, a base for medium-term credit to industry would have been established. In Switzerland the stamp duty on such bonds is a nominal 1.2 per mille per annum, whereas by virtue of the recent Finance Act, the stamp duty in India has been stepped up to one per cent. If on the analogy of the debentures issued by Industrial Finance Corporation of India and the Co-operative Central Land Mortgage Banks, the Bonds to be issued by Commercial banks are exempted from stamp duty, and the interest thereon is made payable after deduction of income-tax at source, as in the case of Government Securities, the ground would be well prepared for an interesting experiment.

Such an experiment would, however, take a long time to produce results whereas the medium-term credit needs of industry are urgent. It is, therefore, gratifying to note that Government propose to establish a Refinance Corporation to extend term loans to medium-sized industry out of the resources earmarked for the purpose arising from the sale of United States wheat.

Finance for starting new industries and permanent capital required by existing industries should be left to be raised by issue of new capital to the public through the normal channels and it is here that the Stock Exchange comes into the picture. The Stock Exchange does not create or destroy the prosperity of the country. But it does act as the barometer of the conditions obtaining in industry and, as such, the present low level of activity in the Stock Exchange clearly indicates how confidence in the stability of industry has been shaken among the investors, and how impossible it is for companies, now, to raise any new capital. It is, therefore, necessary to bring about an amelioration in the condition of the middle classes and a revival of the confidence of investors in order that companies might be able to raise new capital through the customary channels.

SUCCESS OF THE FIRST FIVE-YEAR PLAN

The execution of the First Five-Year Plan has been acclaimed as a success on all hands and the targets of development and production have been fully achieved and in some cases surpassed. In the field of agricultural production the output of foodgrains rose from about 54 million tons to 65 million tons; cotton from 2.9 million bales to 4.9 million bales; jute from 3.3 million bales to 4 million bales; oilseeds from 5.1 million tons to 5.5 million tons. In the field of industrial manufactures the production of cotton textiles increased from 4,618 million yards to 6850 million yards; sugar from 1.1 million tons to 1.7 million tons; paper from 114 thousand tons to 200 thousand tons; cement from 2.7 million tons to 4.3 million tons; fertilisers from 46 thousand tons to 380 thousand tons and automobiles from 16,500 units to 25,000 units. The First Plan was a modest one which did not strain the available resources. The total investment was very roughly Rs. 3100 crores of which the investment in the private sector accounted for a little more than half the total. The net borrowing from the Central Banking Institution which is the extent of deficit financing, was only Rs. 250 crores. As a result of the financial operations during the First Plan Period and the economic development during the period bank deposits went up from Rs. 882 crores to Rs. 1042 crores and the currency Notes in circulation from Rs. 1247 crores to Rs. 1467 crores. Thus the total money supply during the First Plan period increased by Rs. 380 crores.

ACHIEVEMENT OF THE PRIVATE SECTOR IN THE FIRST PLAN PERIOD

Another factor to be noticed during the execution of the First Plan is the very substantial contribution made by the private sector for the success of the Plan. In the First Plan period, though the overall investments by the public and the private sectors were about equal, the investment outlay in the large and medium industries by the public sector was Rs. 148 crores as compared with Rs. 340 crores by the private sector. The private sector was able to mobilise the resources required and contributed in such a spectacular manner to the rise of industrial production during the First Plan period.

WIDE SCOPE FOR PRIVATE ENTERPRISE IN THE SECOND PLAN

Turning to the Second Five-Year Plan the industrial development by the public sector in the field of large and medium industries and minerals envisages an investment of the order of Rs. 700 crores whereas the investment allocated to the private sector is Rs. 575 crores over new projects and Rs. 150 crores on replacement and modernization. It will thus be seen that from the financial point of view, the private sector is invited to play as important a part as the public sector in the field of industrial development. In this connection it should be borne in mind that the bulk of the investment in the public sector relates to the three steel projects, heavy electrical machinery, machine tools and fertilisers, all of which, in any case, could not be developed by private enterprise without a very substantial backing from the Government. The wide range of industries awaiting development and expansion on a big scale in the private sector are the iron & steel, ferro-manganese, refractories, aluminium, cables, heavy and light engineering industries, automobiles, railway wagons and rolling stock, casting, industrial machinery, bicycles, motors, transformers, chemicals, industrial explosives, dyestuffs, rayon, sugar, cement, plastics, paper and a host of medium-sized industries too numerous to mention. It is, therefore, on the private sector that the responsibility of normal expansion of industries is placed and the private sector has, therefore, plenty of scope for its initiative and resourcefulness. There is, therefore, no need to emphasize the demarcation between the public and private sectors or to harp upon any imaginary conflict between the two.

FOREIGN EXCHANGE GAP

We are, however, faced with the most serious problems when we turn to examine the resources available to both the public and the private sectors for the execution of the various tasks allotted to them. In my speech last year, I drew your attention to the seriousness of the inadequacy of foreign exchange resources to carry through the Plan. I, then, estimated that the foreign exchange required would be anything between Rs. 1600 and Rs. 2000 crores and that, even on the basis of the lower figure, there would be a deficit of Rs. 800 crores to be found. This gap has turned out to be wider than anticipated. But if I had foreseen serious difficulties in respect of foreign exchange, I admit I had not expected similar difficulties in the availability of internal

capital which has now suddenly become so scarce. Even if we had adequate external finance, without its rupee counterpart, obviously, no industry could be built up. Internal finance has, at present become so dear that even the best industrial scrips are selling on 8 to 10 per cent yield basis. With the interest rates so high, who would invest his savings in a new venture with all its concomitant uncertainties? If none, then how is the Plan to be implemented? The external and the internal finances are the two main rocks on which the Plan may wreck and, therefore, we cannot afford to ignore the danger.

VOLUNTARY SAVINGS

The plain truth of the matter is that the resources for the Plan can come only from savings, whether forced or voluntary. Forced savings can be effected through direct and indirect taxation and such measures as compulsory deposit of reserves. Voluntary savings emerge from the profits of companies and personal savings, and it is these that form the sources of funds for capital investment in new companies in the private sector. With individual taxation at a very high level, there is very little money with the private investor to subscribe to new issues, and the middle class investor, who formed the backbone of every floatation of capital in the past, has ceased to exist. Since the advent of independence, we have looked after the rural and industrial areas very well, but have neglected the middle class, a fact which is perhaps reflected in the recent elections. We must henceforward lay greater emphasis on the prosperity of the urban area—the cities—if the middle classes are to be rehabilitated and reconstituted as a source of support for industrial floatations.

INDUSTRIAL PROFITS

As regards corporate savings, there has, unfortunately, been a sudden change in the pattern of industrial profits in recent months. The Jute industry is in a bad way and had a record of disastrous losses during 1956. The Textile industry, which was doing well a few months back and was expanding production enormously, is now finding it difficult to sell its products. I venture to hope that this is only a passing phase. If not, it is a real danger to production. Tea prices have gone down and the profits of tea companies and the foreign exchange earnings arising out of the export of tea have declined. The coal industry has its own special problems. It is only cement, steel, paper, engineering and a few other miscellaneous industries, which are really enjoying prosperous conditions. I do not mean to say that there is anything in the nature of an industrial crisis brewing but I certainly feel that the present net earnings of industry are not conducive to large-scale investments and quick expansion of production.

The Finance Minister has rightly remarked in some of his speeches that he was not against earnings but that he desired these earnings to be utilised for the benefit of society. This objective is undoubtedly one which will find echo from every quarter but rather than have the earnings put to good use through compulsion, it would be better to achieve the desired result through methods of persuasion.

INCENTIVE FOR SAVINGS

The experience in all democracies has been that without a friendly climate and expectation of reward, there has been no industrial expansion either in the private or in the public sector. Even the public sector can only thrive upon profits. It appears to me that for development of internal finance, the first and foremost action that we have to take is to revive confidence and create conditions conducive to the greater earning by industrial concerns to be ploughed back for expansion schemes.

PRIVATE FOREIGN INVESTMENTS SHOULD BE ENCOURAGED

As for external finance, the search for foreign credits and extended terms of payment goes on and may afford some relief and so also the borrowing from the International Monetary Fund and the World Bank. The time has now, however, come to revise our attitude toward private foreign investment which, if freely encouraged, could go a long way to solve our problem of the exchange gap. History teaches us that all backward countries have been built up with the help of foreign capital and, we cannot afford to ignore the lessons of history. We must appreciate the fact that we can build up India quickly only through the help of foreign capital and, since we are an independent nation, I do not see why we should be afraid of it. I feel therefore that not only should we allow foreign investment without any restriction but we should welcome it, improve the climate for it and make the investor feel that the opportunities for profitable utilisation of capital here compare favourably with those available anywhere else in the world. Sometime ago the Finance Minister stated that he was not against foreign capital but that it had to make peace with Indian capitalists. I hope Indian industrialists will not take a narrow view of the situation but, in the higher interests of the country make it absolutely clear that they welcome foreign capital.

I have tried to deal at some length with the question of internal and external finance required for the Second Five-Year Plan and have also suggested measures which may lead to the establishment of a better atmosphere. I am sure the Hon'ble Finance Minister is already aware of these considerations. Mr. T. T. Krishnamachari is no novice in the field of finance. As Minister for Commerce & Industry, he gave a great fillip to production and left the Ministry with a brilliant record of achievement. He may, therefore, be trusted to apply his talents to the financial problems of the Second Five-Year Plan and achieve greater success in his new sphere of responsibility. The Commerce Ministry is now presided over by an equally able Minister, but like the Finance Minister he is also faced with great problems. I am, however, confident that he would solve the difficulties in such a way that production and trade expand during his stewardship. With these two key portfolios in the hands of such distinguished Ministers, I look to the future with faith and optimism.

P&O

Peninsular and Oriental Steam Navigation Company

The Effects of SUEZ

The Lifeline of East/West Trade

Who would have thought a year ago that a few months later the greatest international shipping highway in the world would be blocked? Stockholders may well ask what the closing of the Canal has cost the P & O. Group. The price of oil, one of the major costs in a liner voyage, rose enormously. The ships are out of their carefully constructed programmes, and have lost some voyages altogether.

It will be many months after the Canal is being used again before the ships can once more be properly spaced out on their normal services, it is impossible to evaluate the nett loss to the Group through the seizure of the Canal by Egypt in July 1956, simply because much of it has been indirect and will continue for long after the ships are passing through Canal again.

To the citizens of this country in their personal lives, to the commercial community, as well as to shipping, this act of sabotage has caused grievous loss. And not only to the West but also to the East.

PORT DELAYS

One of the difficulties which shipping has to face is that of delays at ports; these, due to congestion and to strikes, in the financial year covered by the accounts under review have totalled for the Group 2,808 days, representing 27¾ million d.w.t. days and costing, inclusive of depreciation, £1,048,000. These are formidable figures and have to be covered by the freight. Contrariwise, I should, however, mention the successful steps which the East African Railways and Harbour Board administration have made to obviate delays in their main ports, in particular Mombasa.

OUR EARNINGS

Rates of freight current at the time when the plans for a ship are being prepared are not infrequently below what is required to show a reasonable return on the investment. But fortunately importers and exporters are starting to appreciate that if new ships are to be built to keep open the lifelines of trade, rates of freight must rise to a level which will allow for the current cost of replacement besides providing reasonable interest on capital invested in the ship. In the long term, unless this simple economic fact is recognised, the money to pay for new ships will not be forthcoming.

apply its mind to actual facts of a particular situation. This is better than having a whole series of hypothetical situations provided for in the rules themselves with none having any power to go beyond their letter.

The Board of Referees, which will be appointed by the Central Government, is to be a sort of impartial body which will ensure that neither bureaucratic excess nor the wiliness of companies out to use funds along unproductive channels defeats the central purposes of the Act and the rules. The Board's composition has been left to Government under the rules. This Board will be the final authority for the purposes of these rules and no appeal shall lie against an order passed by it either on a reference made by the Commissioner or a representation by a company for refund of deposits carrying out the approved purpose for which it seeks the refund.

movement in view of the Sudan Gezira Board's decision to change from the public auction method of selling to selling by private tender.

*

CLOTH AND PIECEGOODS:

Steady conditions continued to prevail in the Bombay Piecegoods market. Demand for medium, fine and superfine varities was better. Enquiries from the consuming centres also broadened although prices remained practically unchanged.

It is felt that the offtake will improve appreciably in the coming weeks as the supply position in upcountry markets is said to be tight. Meanwhile, production of mill-made goods has been increasing. The output, during the first quarter of 1957, is placed at 1,374 million yards as against 1,258 million yards in the corresponding quarter and 1,352 million yards in the last quarter, of last year.

On the export front, demand has not yet shown any appreciable improvement. Fair business was reported done for Ghana. Inquiries were received from the UK for medium greys. As far as Indonesia is concerned, the authorities do not seem to have issued fresh licences. Better prospects of business with Burma are visualised.

The Industrial Credit and Investment Corporation of India Limited

*

Inquiries for Loans in Foreign Currency

*

Statement of the Chairman, Sir A. Ramaswami Mudaliar

Addressing the Second Annual General Meeting of The Industrial Credit and Investment Corporation of India Limited, Sir A. Ramaswami Mudaliar said:

Gentlemen:

I welcome you to this the Second Annual General Meeting of the Shareholders of this Company. The Directors' Report and the audited accounts have been in your hands for some time and with your permission I shall take them as read.

Before we proceed to the consideration of the accounts and the adoption of the Directors' Report, I should like to make a few observations of a general character.

From the Directors' Report it will be seen that at the end of 1956 your Company had agreed to give assistance in respect of 24 projects and others were under examination. The total of assistance authorised has now reached over Rs. 8 crores in respect of 28 projects. For the reasons brought out in the Report the present total of our actual investments is of course substantially less.

You will be aware that there has been some criticism in certain quarters regarding our activities. We have been accused of being too slow and too cautious in our lending and investing policy. Your Directors have had these criticisms very much in mind and from time to time have reviewed past activities to see whether these criticisms were justified. They reached the conclusion that they were not. When a Company such as ours is started from scratch it inevitably takes some considerable time to get organised and to gain experience. The record of other companies doing similar business both in India and elsewhere is very much the same as ours in their earlier stages. We set out to do something wider in scope than has ever been attempted in India. We are not a purely lending company concerned mainly with the security offered against our loans. We have done a substantial amount of under-writing of shares and have indeed invested in the share capital of a number of companies, an activity which requires very close consideration of the poposals advanced. At our inception there was a great urge to move forward as rapidly as possible with the development of industries in the private sector and it is only natural that those concerned with these plans, both in Government and outside it, should wish to see our activities expand as rapidly as possible.

You will of course realise that your Board of Directors are not only the custodians of the shareholders' funds but have also entrusted to them a substantial amount by way of loan from Government which has to be repaid in due course. The aims and objects of your Company have been clearly defined and it is realised that these cannot be achieved by being over-cautious. Certain risks have necessarily to be taken in all such ventures but these risks must be carefully calculated risks and not risks incurred blindly.

The detailed investigation involved in examining fully all aspects of a project presented to the Company before the Directors are asked to take a decision has also been the subject of criticism on the part of some industrialists who thought that because they had investigated matters to their satisfaction there was no need for further scrutiny on the part of your management and technical advisers and ultimately by the Board. I believe this is not a correct appreciation of the responsibility which we have in coming to a decision.

There has also been recently some criticism that we have so far failed to make use of the $10 million of credit granted to us by the International Bank for Reconstruction and Development— the World Bank as it is commonly known. I have always been of the opinion that this source must be availed of at the earliest possible opportunity and in fact the talks that some of the promoters of this Company had with the officials of the World Bank at the highest level gave us the optimistic hope that further credits will be forthcoming from the World Bank once this amount was fully availed of. The fact, however, remained that so long as industrialists and promoters of schemes presented to us were in a position to get their foreign currency needs in the normal way they were not willing to take loans in foreign currency from us. In fact there was no application before the Board for foreign currency facilities and the resources of local currency not having been exhausted there was no need to turn to the World Bank and utilise the line of credit open to us.

The situation has now altered as the result of shortage of foreign exchange. Since the announcement by Government of the new policy regarding the provision of exchange for imports of capital goods we have received a number of enquiries for loans in foreign currency and we expect to present some of these proposals to the World Bank in coming months.

Your Company has been established to promote the development of industries in the private sector and I feel it would not be inappropriate if I were shortly to refer to the position which the private sector occupies today in the economy of the country and what its future is likely to be. The position of and the prospects for industrial development in the private sector has undergone substantial change since 1954 when the establishment of your Company was decided upon. In my Speech at the last Annual Meeting I stated it will be evident to everyone that if the establishment of new industries and the expansion and modernisation of old ones in the private sector is to be successfully undertaken it is necessary that all interested in the economic and social progress of the country should avoid a continuing series of shocks to the investing public. I referred to a feeling of uncertainty among the investing public caused by a series of measures that had been adopted. Anyone conversant with the establishment of industries in the private sector would realise that the very high level of taxation has had a dampening effect on such enterprises. The Budgets of 1955 and 1956 and the supplementary Budget have raised rates of Income-tax, Corporation-tax and Super-tax, have imposed dividend, bonus issue and capital gains taxes and have introduced the much debated deposit scheme covering both past and current profits. It has also been freely stated that more rigorous measures of taxation are in the offing and may be introduced in the coming Budget.

Observations about the effects of high taxation on enterprise have been answered by reference to the substantial amount of development which is currently taking place in the private sector. I would like, however, to point out that the current development in the private sector represents in the main the consummation of earlier plans.

Both the Government and the public realise that it is absolutely necessary if the standard of living of the people should be raised that greater industrialisation should take place in the country, that funds should be available for such industrialisation whether in the public or the private sector and that both sectors should function in a complimentary manner if the purpose which Government has in view has to be fulfilled. I hold the view, however unorthodox it may be, that proper development of industries in the private sector would lead to a snow-ball effect gathering more and more momentum by the utilisation of resources saved so as to make further industrialisation possible, whereas there is not the same result or even the same incentive in public enterprises promoted by the State. A very high level of taxation which may produce more money to the State partly for promoting social amenities and partly for investing in public enterprise will have an atrophying effect on private savings and thus on the development of industries in the private sector. There seems to be a realisation on the part of the authorities that their taxation policy has seriously crippled the resources of Indian capital. The change in the policy of the Government regarding the extent to which foreign collaboration in the capital structure of a company can be permitted is a recognition of the shortage both of Indian capital and of foreign exchange. This more flexible attitude of Government towards foreign capital is a welcome sign, which will be appreciated by all who are interested in the industrial development of the country.

I do not want to elaborate any further on the many aspects of industrialisation in the private sector with which we are mainly concerned. The chairmen of various industrial companies have made observations on the present situation and I venture to think that some at least of these gentlemen have done so not merely with a view to criticising Government policy or questioning the accepted social pattern of society but have done so with the genuine desire of bringing to the notice of the Government the consideration which they believe may jeopardise the very objectives of the Government.

Turning now to our own Accounts you will see that after meeting the heavy demands of Income-tax which require over Rs. 15 lacs out of our net income of nearly Rs. 37 lacs, we have for disposal including the balance of Rs. 7 lacs and odd brought forward from last year, a total of Rs. 28.81 lacs. From this your Directors have appropriated Rs. 5 lacs to General Reserve making, with the Rs. 5 lacs provided last year, a total of Rs.

lacs. A Dividend at the rate of 3½ per cent free of income-tax for the year is recommended absorbing Rs. 17½ lacs and leaving a little over Rs. 6 lacs to be carried forward to next year.

In recommending this first Dividend your Directors have had in mind that many of those who invested in our shares have looked for an early return and I would remind you that this Dividend represents a gross return of over 4½ per cent on the share capital. I need not repeat what I said last year about the necessity of building up a substantial Reserve. As our profits grow we must constantly bear this need in mind. However careful we may be we shall not always succeed in avoiding losses, for which due provision must be made.

Our position remains very liquid but, provided the projects we have agreed to assist by way of Rupee loans or Investments are not held up as the result of the shortage of foreign exchange, the figures at the end of the current year are likely to show a very different picture and we shall be continuing our thoughts, to which reference is made in the Directors' Report, of the means by which our Rupee resources can be augmented when the need arises.

You will see that we have adopted the unusual course of giving full details of investments actually made and loans actually disbursed. The reasons for this change are set out in the Directors' Report. It seemed undesirble to confine ourselves to the minimum requirements of the Companies Act since this would have given an unbalanced view of our activities. Before I pass to the normal business I should say something about our prospects. Given reasonable opportunities and reasonable operating conditions I see no reason why this Company should not continue to expand on the sound basis which I believe we have established but much will depend on Government policies and the availability of foreign exchange in the provision of which we shall, with the help of the World Bank, play our part.

Before concluding I have to inform you that two senior officers have been appointed in the course of the year, Mr. Parekh who has been appointed Deputy General Manager and Mr. Johnson who has been appointed Technical Adviser. The addition of these two officers has somewhat strengthened the administrative organisation of the Company but I am bound to state that we still need additional senior officers if the work of the Company is to proceed in the way desired by the General Manager and your Board.

I would like to thank the officers and staff of the Company who have done hard and strenuous work during the year under review. The nature and extent of that work is not reflected by the number of applications which the Board has ultimately sanctioned but by the number of applications received and examined. In respect of many of these constant advice has been sought and freely given; several are undergoing further scrutiny before final consideration by the Board. I would like to pay special tribute to the General Manager and the Deputy General Manager who have both devoted themselves with great earnestness to the onerous duties that they have to discharge.

EDITORIAL NOTES

(Continued from page 773)

torships on an extensive scale. The principle accepted is of individual ownership in land. Divorced from the purely academic discussion, and overlooking for the time being the existence of absentee land-lordism, peasant proprietorship comes to the same thing as land for the tiller.

Acharya Vinoba Bhave does not want the State to come too much into the picture. He even goes to the extent of limiting the area of legislation. His emphasis, on the contrary, is on voluntary effort, which means individual and group initiative outside the goadings and compulsions of Government. But when such initiative is not forthcoming, he may not disapprove of the State providing it. It is here that the Acharya's outlook and recipes will turn out to be a source of gratituous moral strength for the Government of Kerala in their land-reform measures.

When the Chief Minister of Kerala hopes to carry on without coming into clash with the Union Government and when at the same time he has also to carry out at least a large part of what his party manifesto promised to the electorate, the inference can only be that he can go a long distance forward under the light provided by the lamp-posts erected by the Congress, the Planning Commission and the Bhoodan leader.

*

Hongkong & Shanghai

In his statement at the annual general meeting of the Hongkong and Shanghai Banking Corporation, the Chairman, the Hon'ble C. Blaker, has given a wide- sweeping and comprehensive assessment of much of the world connoted by South-east Asia. As such, it is of compelling interest, not to say admirable usefulness, to the student of this exciting area, in which development is proceeding at so swift a pace. But, apart from the more or less factual aspect of the Chairman's statement, Mr Blaker has rendered even more valuable service in his comments at the meeting; for, he has herein drawn attention to one or two facets of economic policy, and his views will no doubt provoke thoughtful discussion.

During 1956, "the shortage of credit to a greater or lesser degree became a matter of increasing concern to merchants and bankers alike." Mr Blaker says that the high rates obtainable in the UK attracted funds; and, in this regard, "Governments also were not slow to follow suit and as a result the banking system in a number of territories was deprived of substantial sums at a time when the demand for advances, mainly for productive purposes, was very active."

Mr Blaker questions the wisdom of such a course of action. Has not, he asks, "the lure of higher interest rates caused them to lose sight of the increased revenue that would have accrued to them through taxation had the funds been available for local development?" Such flight of capital, of course, has not obtained in respect of India; but it is true that the exchange banks have been reluctant to transfer the more costly London money to Indian branches.

The Hongkong and Shanghai Chairman has also referred to the "necessity to turn away business" which has been forced on bankers in many parts of the world. Particularly "as our activities are (spread) over so many territories", an exchange bank's liquidity should "be higher than may be considered necessary by bankers whose interests are mainly confined to one single country". In this respect, Hongkong and Shanghai has the altogether satisfactory liquidity ratio of 45 per cent.

NORTH INDIAN NOTES

(Continued from page 785)

programmes of production in the salt industry. The target for salt production at the end of the Second Five Year Plan has been fixed at 10 crore maunds, and over 5000 licences had been given for developing this industry.

Salt is produced in India from the sea. Nearly 7 crore maunds are produced from the sea while 1 crore maunds are from the Sambar lake. Rock salt the sources of which the country lost consequent on partition is now being recovered from the mines in Mandi district of Himachal Pradesh.

Speaking at a rotary forum at Dehra Dun, Mr S. C. Agarwal, the Salt Commissioner, referred to the new scheme sanctioned by the Government of India to refine and produce 20 lakh maunds of fine white salt per annum. Mr Agarwal also emphasised the necessity of further developing and expanding the export trade in Salt.

CORRIGENDUM.

The profit of the Indian Branches of Lloyds Bank Limited was shown on page 750 of 'Indian Finance', dated April 20, 1957, as Rs. 2,05,61,227-10-2 instead of Rs. 28,63,763-6-11. The error is regretted, and the correct Profit and Loss Account is reproduced below:

PROFIT AND LOSS ACCOUNT OF THE INDIAN BRANCHES FOR THE YEAR ENDED 31st OCTOBER, 1956

EXPENDITURE	Rs.	As.	P.
To Interest paid on deposits, borrowings, etc.	57,65,532	1	7

Madras Review

New Industrial Beginnings

AMIDST the exciting preoccupations with Cabinet formation, allocation of portfolios and similar other developments, there is a likelihood of important economic events escaping sufficient notice. It certainly goes to the credit of the Governments and the businessmen concerned that work on new industries proceeds uninterrupted bv anything which happens in the political sphere. One may attempt a bird's-eye view.

In Mysore, the Chief Minister has envisaged the establishment of a big pig iron factory in Sandur. It will be recalled that the iron ore deposits near Sandur were described by Russian experts as the finest in the world. In the course of a speech relayed by the Bangalore Station of the all-India Radio, Mr Nijalingappa referred to this opinion of the Russian experts and indicated the possibility of starting a pig iron factory. In the same speech, he also referred to the prospective expansion of Badravati.

An Industrial Estate costing Rs 2 lakhs has been sanctioned for Mangalore and the preliminary work such as choosing the site has already been taken up. The question of developing small-scale industries in South Canara has long been engaging the attention of the authorities and many concrete steps are now under active consideration.

The report of the Plantations Committee has accentuated efforts to increase coffee production in many areas in South India. The Government of Andhra are considering the question of growing coffee plantations in the Agency Tracts. An expert from the Mysore State will shortly be inspecting these areas with a view to advise the Government as to how far the possibilities are bright.

The industrial and financial potentialities of tobacco are also being vigorously studied by the Andhra Government. The prospective withdrawal of the Central tax on tobacco is welcomed. Now that the bulk of the tobacco-growing area in Deccan has been brought under a single State administration, a new orientation of policy is easier. One gathers that all aspects of tobacco cultivation, processing, manufacturing and marketing, are engaging the strenuous attention of the Government and there is general expectation of quick and substantial results out of the present deliberations.

In Madras, the visit of the Sudanese Trade Delegation was taken advantage of by the leather industry to carry to a more active stage plans for the export of finished Indian leather goods to Sudan. Mr R. K. Rangan, the Joint Chief Controller of Imports and Exports and Chairman of the Leather Export Promotion Council holds out hopes of a significant volume of trade in leather goods with Sudan. There is the unusually favourable circumstance of Sudan being in a position to supply raw hides and skins in large quantities. A proposal for arranging tanning between the two countries on fifty-fifty basis has been mooted. The Sudan Delegation is also keen on securing training facilities in India for young men from the State.

Prospects for Indo-Sudanese trade in tobacco were also discussed between the Sudanese Delegation and the Tobacco Export Promotion Council.

The supply of engineering and technical personnel through institutions in the Madras State will be nearly doubled as a result of the new admission arrangements for the professional and degree courses. The selection of candidates for the two courses will be in the same manner as was being done for admission to the degree course last year. The change proposed for the ensuing year is that instead of each institution providing a specified quota of seats for the engineering course, it will provide besides this quota an equal number of seats for the pre-professional course. The output will thus be doubled, though at two different levels of professional equipment.

For Andhra, the Union Government have granted permission to start seven cement factories; and further applications are under consideration. A question in the Assembly on the subject of the State Government starting cement factories elicited the answer from Mr Kala Venkata Rao, Finance Minister, that the Union Government had advised against the State Governments undertaking such ventures. This advice was based on the experience of Uttar Pradesh, where a State Government factory had been a heavy financial failure. Why cement alone should fail this way, and why one swallow is thought of as making a summer is not explained.

Meanwhile, the Government have no objection to consider nationalisation of mines. While it is felt rather difficult to nationalise the mica mines, nationalisation of iron ore mines seems to hold greater appeal. The Industries Minister disclosed that it was the desire of the Government to widen the public sector in mines and other industries. But consideration of the Government taking up mines would be deferred till the establishment of the State Trading Corporation in minerals.

In Kerala, the question of the organisation of cooperative marketing for arecanut has been taken up in right earnest. A recent meeting of the Special Marketing Sub-Committee of the Central Arecanut Committee, held at Kozhikode, decided to recommend the liberalisation of credit facilities to arecanut growers, opening up of selling depots at important distributing centres and of collecting and manuring depots at important producing centres.

Efforts for the stimulation of exports of cashew and pepper are also being revitalised. There is satisfaction that already the Cashew and Pepper Export Promotion Council has created a congenial atmosphere and it is hoped that with more vigorous propaganda exports could be substantially increased.

The Government have also decided to extend the cultivation of sea-island cotton. This cotton, the world's finest long-staple variety with staple lengths from 13/4" to 2" and capable of spinning 150 counts, is already grown in a small area in Malabar. The beginnings are rather humble. The seed grown in 1956-57 will cover only an area of 12 acres. Through annual stages, it is expected that it will cover about 3 lakh acres in 1960-61 spread over Kerala, Assam and Mysore. A substantial proportion of this acreage will fall in Kerala.

Preliminary work on the urea plant which would form part of the multi-purpose lignite project in Madras is reported to have commenced. The Union Ministry of Production intends to utilise the fertiliser plant proposed to be located in Neiveli for the exclusive production of urea. It will probably be the largest urea Plant in the whole world. A British firm, which was associated with the lignite project from the very beginning has been appointed technical consultants for the fertiliser project. The project itself was prepared in all its details by this particular firm and subsequently approved by the Government.

*

CLIVE STREET GOSSIP

(Continued from page 780)

in assuming Rs 30 crores for the Second Plan from the LIC.

*

Let us summarise these figures, and present them in the form of a table:

		Rs Crores
ICIC	..	20-30
IFC	..	15-30
NIDC	..	55-70
SFCs	..	10-12
Reserve Bank	..	150-200
Refinance Corpn	..	50-88
LIC	..	20-30
Total	..	320-460

When there is so much potential, if the resources are not fully exploited, it can only mean that an overall supervision (or at least assessment) is necessary. I should say that, in order to assure optimium utilisation of such facilities, it is essential that a Credit Board should be set up. Such an organisation would contain representatives of all these institutions; and it would moreover have room for important business interests. Co-ordination in the services offered to the private sector can be vouchsafed only by collaboration among the agencies concerned. Secondly, such a Credit Board would ensure that duplicating work is avoided. If loans are desired from more than one institution, there is no need for each such body to spend time and effort in the examination of the whole project. Where, for example, the IFC and the ICIC are both approached by a single entity, it should suffice if the Credit Board is satisfied with the soundness of the proposition. The paper work would , of course, be completed later; but the project itself need not be delayed by the need for duplicated prior examination.

*

There are, as I have shown, seven different agencies providing seven different kinds of facilities for the private sector; and the resources that may be expected from the seven agencies are in the environs of Rs 400 crores. Each of the institutions receives help in some form or another from the Government; and only one of them is non-Governmental as such. In the face of these facts, it is either a stubborn refusal to give credit where credit is due, or a surprising ignorance of the facilities available, which alone can explain the private sector's plaint that Government measures and actions have made it difficult for free enterprise to lay its hands on the resources necessary for completing the programme of expansion allotted to it under the Second Plan.

EAVESDROPPER.

Madras Review

South Indian Notes

The New Mysore Ministry

A 11-man ministry headed by Mr Nijalingappa has assumed office in Mysore and it is generally expected that the Chief Minister will shortly be announcing the name of the twelfth member of his Cabinet. There are people in the State who believe that the inclusion of another minister is largely in the nature of a concession to a popular belief that eleven is an inauspicious number.

The formation of the ministry, however, has not been an easy task. The inordinate delay has led to a crop of rumours, one of which has gone to the length of attributing it to a rift between Mr Nijalingappa and the Congress Parliamentary Board consequent to a directive from that august body to include in his cabinet some of its nominees.

Speaking to pressmen after the swearing-in ceremony of his Cabinet, the Chief Minister has disclosed the real cause of the delay. Contrary to popular belief, ministry forming has proved to be a difficult job. Far from there being a scramble, it is becoming quite a strenuous task to find enough people willing to take up ministerial positions. Elaborating the point Mr Nijalingappa says: "After two more general elections people may not come forward to serve as ministers.....A time will come, when, perhaps, leaders will have to go in search of ministers."

This is an entirely new development in the public life of the State and it will be interesting to know whether similar difficulties have been encountered by the Chief Ministers in other States also. Whatever may be the explanation for the unwillingness on the part of the Congress members of the State Assembly to become ministers, it will help rid popular mind of an apparently unshakable belief that the lure of office is the prime motivating force in general elections among candidates belonging to the popular parties. It also points to a growing awareness that there is more of responsibility and little of halo attached to the post of a minister. The novelty of being a minister under democracy has largely worn out in the last five years and past incumbents and their close associates know that it is no primrose path which ministers have to tread.

Apart from this new development, Mr Nijalingappa's task has been complicated by the need to keep his Cabinet a compact one and at the same time provide fair representation to the various regions and sections. It is no wonder that such a delicate matter has taken considerable time.

In the new ministry, only four are new to the office and all of them are staunch partymen. They bring to their new positions their vast experience from their respective walks of life. The Chief Minister is quite happy with his team and he is confident that his colleagues will put forth maximum effort.

Though the placing of a well-knit and efficient team at the helm of affairs is an important prerequisite, progress of the State depends on other important factors as well. In the first place there should be available to the new Ministry the fullest cooperation of the people of the state as a whole. The biggest difficulty, according to the Chief Minister, is finance. While it is true that the Central Government has necessarily to render considerable assistance in this respect, the State on its part has also to augment its revenue from its own resources to the maximum extent possible. Only then a profitable development of the natural resources in which the State abounds can be achieved.

*

Road Transport

Addressing the annual meeting of the Madras branch of the Indian Roads and Transport Development Association, Mr M. V. Venkataraman, Chairman of the Madras Branch, pointed out, how the heavy taxation of motor vehicles lead to stagnation in motor transport by scaring away the investors. The burden which the multiplicity of taxes-central, state and local-impose on the operators of motor transport in the south works out to nearly two annas per ton of goods per mile. How this undermines the competitive efficiency of motor transport will be evident from the fact that the average freight for goods carried by rail works out to only one anna, per ton per mile. A lightening of the burden of taxation, far from checking the flow of revenue to the Government, will have the effect of increasing it and something will be added namely more employment to people, more of trade and commerce and greater prosperity to the country.

Apart from reducing the fiscal burden, Mr Venkataraman, also pointed to the necessity of tarting separate Highways Department, with separate personnel, whose sole work was to form new highways and maintain them in proper order, in all the states, since it was the existence of such a separate department, which enabled Madras to take the top place, in regard to quality and mileage per capita.

Governmental awareness of the importance and needs for road transport, is evident in the Motor Vehicles Amendment Act of 1956. The Act does away with the distance limit on road transport and also makes provision for control of all inter-state traffic, by an All India Inter-state Road Transport Commission. But in the absence of incentive and inducement to operators, the development of road transport will remain tardy, and inadequate.

SOUTH INDIAN MARKETS

World Demand for Ginger

THE Indian crop of Ginger, in which Kerala State has got a near monopoly, is expected to be reasonably good this year. In the world market, competitors for Indian ginger are only those from Jamaica and East Africa. In both these areas, the crop is not reported to be satisfactory and, although Jamaican ginger is considered much better than Indian or East African, the quantity available is not very large.

It is also reported that East African merchants have taken the stand that, on the London market, they cannot economically sell below £200 per ton. This will also be an effective price of about £160 per ton of dry ginger in East Africa. But the price of Indian ginger has been rapidly falling on the London market due to speculative marchants in Bombay and Cochin attempting to keep prices down.

The effective price now is only about £130 per ton, that is, corresponding to an Indian price of about £170 per ton of dry ginger, which is equivalent of about three and a half tons of green ginger. There is a general feeling that this lowering of price may make ginger cultivation uneconomic.

Meanwhile, in the Alleppey market, ginger is nominally quoted around Rs 315 per candy. In the Kozhikode market, the rate is quoted slightly better at Rs 330 per candy.

*

Coffee

According to the latest estimate, India will have 14,000 tons of Coffee for export this year; but export sales are not progressing well to cope with such a big allotment for export. Another disquieting factor is the steady decline in export prices.

Crop prospects for the next season appear quite discouraging. Recent showers are reported to have done extensive damage to coffee blossom in Coorg, Mysore and Nilgiris.

The Pan-American Coffee Bureau is of the opinion that the coffee industry can look forward to 1957 with optimism as there is every reason to believe that, with continued promotion and selling effort, consumption levels may be maintained and even increased. There is a proposal for the formation of a World Coffee Council as an interim arrangement prior to the negotiation of a general International Coffee Agreement. This body will bring together representatives of the coffee producing countries of the world for a continuing study of problems of mutual interest and for the development and application of comprehensive plans for the promotion of world consumption. India's attitude to this Coffee Council is not known.

*

Lemongrass Oil

Present prices for Lemongrass Oil are quoted at Rs 80 per dozen bottles of 16 oz each for spot supply. These are not, however, considered as economical according to producers' opinion. On account of these lower prices, other producers like Haiti, Honduras and Gautemala are not offering any serious competition to India in the world market.

Crop prospects for next season are quite bright in India. The trade estimate places the crop at 1,250 tons.

*

Rubber

The International Rubber Study Group has reported that, as expected, there was a sharp drop in world natural rubber production during February. Because the drop was expected, the market had rarely absorbed its effect despite the small increase in world consumption which accompanied it.

Chinese and Russian imports were responsible for the consumption increase, as other countries were using less than usual during January. Rubber trade circles in London have stated that there is no shortage of rubber despite reports to the contrary. It is pointed out that buyers are spreading their purchases out. Some traders hold that, but for the uncertainty caused by the West Asian situation, the general tendency of prices would have been downward.

*

Tobacco

The first forecast report, issued by the Madras State, states that the area sown with tobacco, up to 25th December 1956, is 44,900 acres as compared with the area of 40,500

Stock Exchanges

CAUTIOUS TRADING: SELECTIVE ENQUIRY

Watch-Dog Writes:

REOPENING after the holidays on a steady note, stock markets have generally developed a quieter tendency with profit-taking checking the recent advance in prices. Most operators have adopted a cautious attitude by lightening their commitments. With only three weeks to go for the Central Budget to be presented, markets have necessarily to be on the cautious side. Also, the Reserve Bank's notification to banks asking them to desist from lending against stocks and shares for speculative purposes has also depressed sentiment.

Activity on the Calcutta Stock Exchange was restricted although a few selective scrips came in for good enquiry.

Conditions on the Bombay Stock Exchange were rather buoyant with selective counters marking substantial headway.

The Madras Stock Exchange developed weakness in the absence of buying support, prices being marked down in Plantings and Textiles.

Although the strained situation in the Middle East tended to restrict business on the London Stock Exchange, the general undertone was satisfactory.

Wall Street closed steady with the main body of stocks showing fractional changes either way.

*

Calcutta

REOPENING after the Easter holidays, the local Stock Exchange displayed an irregular trend and, in the absence of support, prices tended to lower levels in restricted trading. In mid-week, however, better Bombay advices imparted a slightly steadier tendency and, with the speculative issues recovering some of the lost ground on the emergence of bull support, selected scrips staged a minor rally from the low levels. Again, towards the close, the undertone turned hesitant, reflecting the pre-Budget caution.

Any recovery until the Budget-eve will be of a minor character. The primary trend, however, continues to be bullish since the industries are doing well and the corporate news has, so far, been encouraging.

The Giltedged market was devoid of support. Business was small and prices showed only minor variations. Whatever little interest shown, was confined to the nearer maturities. 3 per cent 1986 Conversion Loan opened at Rs 74.62 and, after touching a high of Rs 75.13 and a low of Rs 74.37, finished better at Rs 74.56.

Bank shares ruled quietly steady. United Commercial, after being marked down to Rs 51.50, finished better at Rs 52.50. Hindusthan Commercial changed hands at Rs 9.87 to Rs 10.00 with Central ruling steady at Rs 48.

Thanks to steadier advices from the jute goods market, Jute shares ruled somewhat better with selected ones recovering some of the lost ground. Prominent were Chitavalash taken upto Rs 12.37 from Rs 11.37; Howrah upto Rs 15.37 from Rs 15.12; Kinnison upto Rs 124.50 from Rs 123; National upto Rs 20.50 from Rs 20.10 and Nuddea upto Rs 30.75 from Rs 29.25. Union were half a point better at Rs109.50.

Coal shares were dull. The Government's decision to increase the stowing subsidy for collieries had little effect on sentiment as it was felt that the subsidy was inadequate. Burrakur, after being lifted upto Rs 21.70 from Rs 21.34, receded at the close to Rs 21.60. Bengal were nearly maintained at Rs 216, while Western Bengal moved between Rs 5.34 to Rs 5.50 and Central India between Rs 6.00 and 6.06.

Textile scrips tried to move up following better reports from the cloth market; but failed to retain such gains as the high prices of cotton induced misgivings regarding the profit margin for the industry during the current year. Cawnpore moved up to Rs 6.25 from Rs 6.18 and Dunbar to Rs 176 from Rs 174, to finish at Rs 6.25 and Rs 174 respectively. Kesoram changed hands at Rs 13.44 to Rs 13.77 and Jayshree at 5.44 to Rs 5.62.

Trading in the Tea section continued to be restricted. Fears with regard to over-production in the current year and the easier tendency of prices in auctions, had an adverse effect on sentiment, although a few scrips managed to maintain their previous levels. Prominent amongst these were Brooke Bond having support upto Rs 13.12; Bishnauth upto Rs 19.31; Dhelakhat upto Rs 22.06; Hasimara upto Rs 24.50 and Hantapa upto Rs 168. New Dooars, after a long time, came in for business at Rs 277 and so also Tejolian upto Rs 22.12.

Sugar shares came in for selective support, thanks to the recent announcement of increased dividends by certain companies. Carew had buyers at Rs 7.62 to Rs 7.69; Belsund at Rs 11.12 to Rs 11.18 and SKG at Rs 10.18 to Rs 10.35. Darbhanga, after being marked down to Rs 21.50, recovered to Rs 23.25 at the close.

The little interest shown in the market was mainly due to the lead given by Indian Irons. It was felt that no insurmountable difficulty would be faced by the company in getting the call money on right issues, as it would be within the banking system. Against the week-end closing of Rs 19.69, Indian Irons opened better at Rs 20.03 and, after improving further to Rs 20.12, receded again to Rs 19.66 on selling pressure, to finish the week at Rs 19.93 on better Bombay advices. New shares changed hands at Rs 18.66 to Rs 19.03, while G. K. Williams met with good support upto Rs 26.50 from Rs 25.50. Jessop, after recording a new high of Rs 26.12, eased off at the close to Rs 25.31 on profit-taking. Richardson forged ahead to Rs 18.06 from Rs 17.87 and Braithwaite to Rs 25.12 from Rs 25.00. Marshalls were nearly maintained at Rs 4.75 with Indian Standard Wagon quoting Rs 166 to Rs 168.

The Miscellaneous section provided a few bright spots on investment demand in view of the attractive low levels. Despite easier advices from the metal market, Indian Copper hardened further to Rs 3.32 from Rs 3.26, to finish at Rs 3.26. Rohtas came in came in for good demand upto Rs 18.25 from Rs 17.00 and Hoare Miller upto Rs 7.56 from Rs 6.43. India Steamship changed hands at Rs 9.94 to Rs 10.03; IBP at Rs 29.12 to Rs 29.37; Dunlop Rubber at Rs 24.00 to Rs 24.12; Osler at Rs 6.50 to Rs 6.56, NICCO at Rs 19.25 to Rs 19.44; Indian Aluminium at Rs 12.75 to Rs 12.94 and National Carbon at Rs 25.68 to Rs 25.75. Alkali Chemicals, after easing off to Rs 11.19 from Rs 11.62, recovered to Rs 11.31 on reports of the extension of the time for the payment of money on new shares. Rights are quoted at Rs 0-04 to Rs 0-10. In the Paper section, Orient moved rather irregularly between Rs 30.10 and Rs 30.75, to finish the week at Rs 30.20, while Titaghaur were a shade cheaper at Rs 33.75 against Rs 34.25. Shree Gopal were, however, a few annas better at Rs 15.12.

*

Bombay

DALAL STREET has borne the impact of recurrent selling pressure fairly well during the week under review. Price movements have, however, continued erratic. But, as sentiment veered round the constructive side since the close of the session on Tuesday, the market has staged a modest recovery. There have been rumours that offerings in Tata Steel Ordinary, which had been emanating off and on from certain influential circles, will not be forthcoming for some time, while conjectures that the Budget proposals will not be so bad from the stock market angle have also led to a better feeling. It is to be seen as to how far these conjectures turn out to be correct.

*

SOUTH INDIAN MARKETS

(Continued from page 796)

acres for the corresponding period of last year, showing an increase of 10.9 per cent. The condition of the crop is reported to be generally satisfactory in all the districts of the State.

The area planted with tobacco in Andhra Pradesh, up to the end of December 1956, is estimated at 323,00 acres as compared with 312,000 in the corresponding period of the previous year. The condition of the standing crop is reported to be generally satisfactory except in Nellore, East Godavari and West Godavari.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides showed a further improvement last week, while clearances were maintained quantitatively for all weights. Arrivals of Cow Calf and Buff Calf were on the same level as in the previous week with no changes in clearances and prices. Buff hides were quiet and prices were nominally steady.

On the export front, trading was dull as sellers were extremely firm. Business was reported done in 10/12 lbs at 40½/37½/33½d to 40½/37/33d for runs, fourths and fifths respectively.

In the Tanned Skins section, there was a steady clearance of both Goat and Sheep skins. Prices of the former were a little easier, while those of the latter were steady.

On the export front, prime Goats continued to maintain their position although buyers in foreign countries were strongly resisting any increase in prices. In the Sheep skins section, prices were steady in prime and semi-prime classes: but interest was limited.

THE JAY SHREE TEA GARDENS LIMITED

NOTICE is hereby given that the Eleventh Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at India Exchange (2nd Floor), India Exchange Place, Calcutta-1, on Friday the 31st May, 1957 at 3-00 P.M.

(a) To receive and pass the Directors' Report and Audited Accounts for the year ended 31st December 1956.

(b) To declare dividend on Ordinary Shares.

(c) To elect Directors in place of those retiring by rotation.

(d) To appoint Auditors for the current year and to fix their remuneration.

(e) To transact any other business that may be transacted at such meeting.

The Share Transfer Registers will remain closed from 13th May to 31st May 1957 both days inclusive.

By Order of the Board,
BIRLA BROTHERS PRIVATE LTD.
Managing Agents.

8, India Exchange Place,
Calcutta, the 15th April 1957.

Note: 1. A member entitled to attend and vote at the meeting may appoint a proxy in place of himself and that the proxy need not be a member.

2. The Dividend Warrants for dividend on Ordinary Shares, if passed at the meeting, will be posted to Shareholders registered as on 31-5-1957, on and from 28-6-1957.

DEPOSIT OF CURRENT PROFITS

(Continued from page 772)

withdrawals should be disposed of expeditiously. Delay in disposals is proverbial with some Government Departments. It is imperative that such delays should be avoided at all costs in regard to the refund of these deposits.

Statement I to be annexed to Form C requires, among other things, particulars of the company's investments. Some of the particulars required are "Debentures of other companies", "Shares of other companies", "Loans and Advances." It is to be hoped that, when a company applies for a withdrawal, Government will not tell it to sell those shares and debentures first or realise the loans and advances given by it!

Exemptions: Under Notification No: SRO 1270 of the 16th April 1957, no deposit is required to be made by Government companies electricity undertakings, banks, insurance companies, and companies established by Act of Parliament. The purpose of investment companies is to invest moneys in shares and debentures of other companies: and it would be defeating such purpose if their funds were to be frozen by deposit with Government. So, investment companies should also be exempted from the Current Profits Deposit Scheme.

Your Income tax affairs need not worry you
Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.
You will find it to your advantage to place your Income tax affairs in the hands of your bank.
The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.
Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 555 offices waiting to serve you throughout India.

how far can a road reach?
It can reach right into the future . . . it can break down isolation . . . it can gain access to the inaccessible . . . it can bring economic uplift. But no modern road can reach far without oil! Oil to power construction equipment; bitumen to surface the road; fuels and lubricants for buses, trucks and cars. The Caltex Refinery, nearing completion at Visakhapatnam, will play a vital role in transport development by supplying India with Caltex quality petroleum products. It is a tribute to free enterprise.
OIL is the Lifestream of Progress
CALTEX
CALTEX PETROLEUM PRODUCTS

For the Investor

Virtuous Circle

Investment Gossip:

STOCK Exchanges, while looking forward to the mid-May Budget, evince a sense of resignation, rather than of apprehension. That additional taxation will figure in the Central as well as State budgets, is a fact to which sentiment is reconciled, and share-prices are realigned.

That is to say, there may be something of an initial shock; but the market is disposed to allow second thoughts to induce a sense of proportion and an awareness of perspective.

It is being increasingly realised that the Second Plan must be and can be fulfilled, with targets achieved as successfully as in the case of the First Plan. Commensurate effort at all levels and in all respects is of vital significance; and, so, so far as the new Cabinet is concerned, it is determined to make every effort and mobilise every resource.

The forces that are sure to be released from such an expansionist economy will be more markedly favourable than hitherto. Between projects and disbursements on the one hand and its beneficent effects on the other, there is, necessarily, a time-lag.

The most important point to note in this context is that the stage of time-lag is now past. An analysis of the relevant statistics of the last six years provides heartening testimony.

This development is best studied in relation to (a) bank deposits, (b) new loan subscriptions, and (c) consumption on the part of the population.

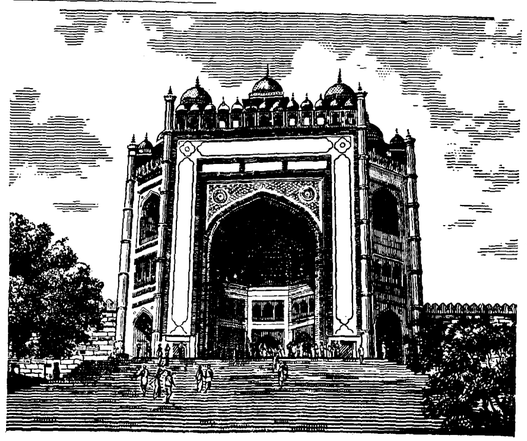
The disbursements made on account of the First Plan took nearly three years to find their way back to the monetised sector. Bank Deposits actually showed a decline or only a very small rise in the first three years. From the fourth year, the return of funds to the banks in the form of Deposits has been snow-balling. In the current busy season, Bank Deposits have recorded a rise of over Rs 100 crores. And this is the period of the year when seasonal factors cause a shrinkage of deposits.

Projecting the three year trends into the coming months, Bank Deposits may be expected to increase by Rs 150 crores in the 1957 slack season.

Expansion of Bank Deposits spells all round improvement in economic conditions.

Bank advances are at an all time peak. This spells all round activity in production and stimulated tempo in commerce.

Subscriptions for the New Loan issues make, likewise, gratifying progressive showing. Enquiries in banking circles prove that provident fund institutions have been steadily absorbing the State Loans, so that, so far as banks are concerned, their investment portfolios have hardly anything left of the parcels of State Loans taken up by them six months ago.



Thanks to foresight and the measures taken to forearm the banks, the 1956-57 busy season has proved less formidable than was apprehended; and, what is more, it looks as though the slack season has already begun. The stage for this year's New Loans may be set earlier than in 1955 or 1956. Open market strategy has maintained giltedged prices; and its objective hereafter must be to effect higher levels of prices.

That consuming power is diffused more widely and effectively, is indicated by the very embarrassments which it has produced. We are consuming more food, more cloth, more sugar, more paper, more cement, and so on and so forth.

If, in spite of record or nearly record production of rice and wheat, the demand outstrips supply, we may lay the flattering unction to our soul that this, too, is a sign and symbol that more people can afford more food.

Taxes and loans will, surely, have higher targets. And why not? The amounts thus collected by the Government are disbursed, thereby releasing more expansionary influences.

This, in short, is what constitutes a virtuous circle. The traditional vicious circle, based on contraction and deflation, has been banished. Its place is being taken by the virtuous circle. The investor, like every other interest, stands to benefit substantially.

Around India with Brooke Bond

The Magnificent Victory Gateway—The Buland Darwaza
At Fatehpur Sikri, close to Agra, the new capital city built by Akbar, stands the Buland Darwaza or the Gate of Magnificence. This 176 feet high gateway, the southern entrance to the Jumma Masjid, was built by Akbar to commemorate his victories in Southern India. The Mughals were unsurpassed in building gateways and arches. Spectacular, massive and monumental, the Buland Darwaza is one of their unique achievements in this direction.
Around here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop. Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.
Brooke Bond Tea
FRESH and GOOD
BB 162

Investment Notes:

Three out of the four jute mills in Andrew Yule group have announced encouraging dividend announcements, reflecting slightly better conditions generally experienced by the jute industry during the latter half of last year. Cheviot has declared Rs 2 and Delta as much as Rs 5 per share for the half-year November 30, 1956, while Orient has raised the dividend from Re 1 to Rs 2 for the same half-year. National has, however, maintained the dividend at 37 nP per share for the half-year ended 31-10-1956. It is generally felt that the working results for the current half-year will be more encouraging, especially when demand for jute goods has been greater during the past two months and when production will be less than last year in view of the resealing of looms from the last quarter of 1956.

Dunlop Rubbers are ruling steady around Rs 24. The company has obtained Government approval for the establishment of another tyre factory in Madras. This new factory, it is hoped, will give the company sufficient overall capacity to meet the demand for its products. As a substantial amount will be required to finance the new project, the company is expected to announce a fresh capital issue.

HIGHLIGHTS

Polonius's advice is: Neither a borrower nor a lender be. But this is, surely, counsel of perfection.

A practicable rule for guidance is: Be honourable as a debtor, and considerate as a creditor.

This is as true for nations as for individuals. Indians whose way of life is governed by faith in Karma are brought up to be this type of debtor or creditor.

By the same token, India's financial history bears testimony to unwavering loyalty to the tradition. In the century during which India carried the obligations of foreign debts, there was not one instance of default. Early in the forties, it had paid off every penny of foreign loans.

In the decade that followed, the tables were turned, with Britain the debtor and India the creditor. Forbearance is the keynote of every agreement and arrangement it made for the gradual utilisation of the sterling balances.

The most impressive postscript is the payment of Rs 50 crores to Pakistan, due not to extraneous pressure, but the moral pressure of Mahatma Gandhi.

Eavesdropper contends that a country, imbibing the Law of Karma and cherishing Gandhiji's teachings, is a superlative credit risk.

Sathe Biscuit & Chocolate Company is to issue fresh capital of Rs 5 lakhs by way of 7 per cent Cumulative Preference shares. The company has, it is understood, has done well during the year ended 31st March, 1957.

£ R$

Investment Briefs:

Indian Wood Products Limited has recommended a final dividend of 20 per cent, making a total of 30 per cent for the year ended 30th September, 1956 as against the same in the previous year.

Assam Match Company has maintained the total distribution at 12½ per cent for 1956.

Minerva Mills have maintained the dividend at Rs 6 per share for 1956.

Stanes Amalgamated Estates, Madras, have proposed to recommend the payment of a further dividend of 6 per cent (equivalent to 60 nP per share) for the year ended 30th June, 1954.

Tropical Plantations have announced a first and final dividend of 12 per cent on the Ordinary shares for 1956.

£ R$

More Textile Results

Balance-Sheet Reviews:

FIVE more cotton textile mills have presented their reports and accounts for the year ended 31st December 1956. The working of all the mills is satisfactory.

£ R$

Podar Mills

The working of the Podar Mills Limited, for the year ended 31st December 1956, has resulted in a profit of Rs 10 lakhs after providing Rs 3.53 lakhs for payment of bonus to the employees; Rs 1.25 lakhs for Depreciation and Rs 1.07 lakhs for managing agents' commission. Out of the profit, the directors have provided Rs 4 lakhs for Taxation. The dividend has been maintained at Rs 12 (including bonus) on the Ordinary shares. A sum of Rs 4.73 lakhs has been carried forward against Rs 3.93 lakhs brought in.

The financial position of the company is sound. Against the paid-up capital of Rs 50 lakhs, Reserves and surplus funds aggregate to Rs 45 lakhs. Investments total to Rs 32.50 lakhs, while cash and other balances amount to Rs 39.16 lakhs. The written down value of the assets, excluding land, amounts to Rs 13.36 lakhs at the end of the year. Sales of cloth and yarn amount to Rs 1.41 crores and Rs 20.92 lakhs, while stocks stood at Rs 15.20 lakhs and Rs 3.18 lakhs respectively at the end of the year.

£ R$

Tata Mills

Tata Mills Limited has reported good results for the same year. The profit for the year, after providing Rs 11.87 lakhs for Depreciation against Rs 20 lakhs, Rs 1.68 lakhs for managing agents' remuneration against Rs 1.57 lakhs and bonus to staff, has amounted to Rs 18.27 lakhs as compared with Rs 7.69 lakhs in 1955. The directors have allocated Rs 8 lakhs to General Reserve against nil and Rs 1.35 lakhs to Gratuity Reserve against Rs 85,000. A dividend of Rs 3 and a bonus of 50 nP per share have been recommended. Sales of cloth total Rs 3.07 crores against Rs 3.10 crores and those of yarn Rs 1.25 lakhs against Rs 1.40 lakhs.

The company's plans for reorganisation and renovation of the mills are making very satisfactory progress. The company's financial position is sound. As against a paid-up capital of Rs 65.82 lakhs, Reserves and surplus total Rs 61.23 lakhs.

£ R$

Svadeshi Mills

The Svadeshi Mills Company Limited has also reported good results for 1956. The profit for the year has doubled over that of the previous year to Rs 31.76 lakhs after providing Rs 14.39 lakhs for Depreciation against Rs 19 lakhs and Rs 3.52 lakhs to managing agents' commission against Rs 1.71 lakhs. The directors have set apart Rs 16 lakhs for General Reserve against nil; and Rs 1.40 lakhs for Gratuity Reserve against Rs 35,000. The distribution to the Ordinary shareholders is higher at Rs 14 per share as against Rs 12 paid last year. Of this, the increased distribution represents a bonus. The carryover is Rs 29,124.

Sales of cloth have been lower at Rs 3.47 crores as against Rs 3.64 crores, while those of yarn and waste

Food Scarcity?

More Irrigation, Record Crops!

DOLEFUL asseverations, that India's Second Plan is in danger of being undermined by food scarcity, are emphatically proved wrong by figures relating to the 1956-57 crops. Indeed, during the past one year, the pressure on prices generally was upward; and the reason adduced for such a state of affairs was usually the disappointing level of agricultural production. Government were scarcely in a position, at that time, to expose the inadequacy of that reason. Thus, all that it was possible for Government to do was to take such measures as would mitigate that aspect of the rise in prices which could be attributed to activities intended to create an artificial scarcity.

The first course of action was to prevent the use of bank funds for speculative hoarding of foodgrains; and, to that end, Government through the Reserve Bank exercised their powers of selective monetary and economic control by means of a directive which called upon scheduled banks to reduce the levels of their advances against foodgrains. What was intriguing, however, was the fact that prices did not respond as favourably as they should have done to a process which was expected to hasten dehoarding. It then came about that even official thinking began to accept as probable the proposition that food production had fallen short of demand.

Meantime, Government also initiated a second measure with a view to the longer term stability of foodgrains prices. Negotiations with the US Government were successfully concluded; and, for strengthening of India's buffer stocks, substantial quantities of wheat and rice were purchased from America. It needs to be emphasised that the Surplus Commodities agreement, under which the rice and wheat have been obtained, specifies that the goods are meant to be held as reserve and to be pressed into service in the event of crop failure.

In March this year, the White Paper on the "interim" Budget placed on record the Government's apprehension that the price rise in 1956-57 was directly derived from a lower volume of agricultural production. At this stage, we would like to pose the question: Has there in fact been such shortfall in foodgrains output?

The Union Ministry of Food and Agriculture has early this week asserted that rice production attained a record level. The area rose to an all-time high of 78.2 million acres; and the crop rose to a new peak of 28.1 million tons. It is significant that the rise in acreage is one only of 1.7 per cent, whereas production has improved by 4.8 per cent. But, first let us see why foodgrains prices tended to rise during the last fiscal year.

The production figures show that there could not have been a scarcity; what, then, happened?

We suggest that, firstly, the "big-time" hoarders prefer to use bank accommodation where available, but that they have cash resources at their disposal with which also they can finance their hoarding. We suggest that, secondly, the recurrent talk of food scarcity created a vast horde of small-time hoarders; and it is these who contributed to the growing fears of demand exceeding supply.

The "big-operator" hoarders had their heydey when sale and distribution of foodgrains were controlled. In the present context, however, it would seem to us greatly difficult for such hoarding to take place on a considerable scale. At the same time, however, there is evidence that some hoarding of this kind was indulged in. The higher level of advances against foodgrains during the last year attests to this. When, by directive, banks no longer provided such accommodation, the big operator was not forced to dehoard because he had black market cash to support him. This hypothesis could partly explain the fact that foodgrains prices did not much decline after advances against foodgrains had been reduced.

In respect of the small hoarders, an analogy offered itself in the UK some years ago. When tea was derationed, it was discovered that retail sales, far from improving, were actually lower (for a few weeks) than the volume sold under ration. What had happened was that the British housewife, in the scarcity era of ration, was inclined to hoard; and, on learning that tea would be abundantly available, she used up her reserves prior to making fresh purchases.

If the scarcity complex impelled tea hoarding in Britain, excessive talk of food shortage in India would have persuaded the average household to lay in a larger reserve store; and the injection of fresh purchasing power by the Second Plan would have enabled such expense being afforded.

Indian Finance
Established 1928
May 4, 1957
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

It is therefore a paramount necessity that we should all desist from statements which will engender the scarcity complex. Pessimistic assessments have the ability to transform food shortage into famine; they have, in the last year, rendered record crops into a shortage.

India today has the buffer stocks obtained from America; we have, moreover, the rice purchased from Burma; and, finally, the experience of better yields should provide the basis for the confidence that food shortages are a thing of the past.

In order that we may banish famine from India's economic dictionary, we consider as urgent action by Government to ensure the optimum utilisation of the facilities being provided by the multi-purpose projects. The various river valley schemes studded all over India have brought into existence any number of new canals. But, while there is water availability, we have grounds for believing that there is not sufficient or satisfactory water utilisation.

Mr Nehru has remarked that, without any substantial increase in the financial allocation for agriculture, targets must be raised considerably. While, by implication, the stress is to be upon improved yields, we may add that the available irrigational facilities could, with negligible extra expense, make the land around the canal produce in more abundant fashion. Proper utilisation of the available water can guarantee that we shall not again experience food shortages, but instead produce record crops each year.

Hopeful Prospects

AFTER the reassuring observations of the Prime Minister at a recent meeting of the All-India Manufacturers' Organisation, the private sector can give up completely the general approach to national economic questions, which was a pitiable combination of a sense of apologetic existence and an instinctive antipathy to whatever the State did. The Prime Minister has, in words appropriate to his position and responsibility, explained most unequivocally how in the future economic and social development, private business is expected to play an extensive role, on the basis of mutual understanding with the Government.

It is not as if this assurance lifts off at one jerk the burdens and handicaps which the business community had been complaining of or that Government could no longer undertake any legislative or administrative step which everyone else would approve. What it does mean is that national problems should henceforward be viewed as a whole without the intrusion of sectional considerations or the projections of old attitudes and habits of thought.

Generally speaking, Mr K. P. Goenka's Presidential Address at the Thirty-First Annual General Meeting of the Indian Chamber of Commerce, Calcutta, assimilates this change. Mr Goenka's main focus is on problems which are of universal concern in India, and in tackling which a concentration of the thought and attention of every important interest in the economy would be most helpful. In the analysis of the President of the Indian Chamber, shortage of funds is both the root and the expression of the central problem of the day. Whether it is a rise in agricultural prices or the banks having less money than they need to lend or bottlenecks in imports of essential capital goods or the Governments going in for more taxation, the hard core of the difficulty wherever and in whatever form it shows itself is dearth of finance.

The most obvious means of arresting the deterioration in the foreign exchange position is to step up exports and cut imports. Restraint on imports has reached its limit and any substantial further cuts would only tend to aggravate internal price rises. The import of capital goods which accounts for the bulk of the extra calls on foreign exchange has a long-range earning potential which should more than compensate the present strain. On the import side, food offers scope for savings. But again and again, calculations in this direction had been thrown overboard by unexpected national circumstances.

Export prospects are not altogether unpromising; but here, a line has to be drawn between what is theoretically possible and what is feasible without damaging the developing domestic economy. Production on all vital fronts is now geared to the requirements of the Second Plan, to increase the wealth potential and to stabilise the basic foundations of full-fledged industrial economy. The long-term objectives are too attractive and too

pressing to be jeopardised by false economies dictated by the immediate stress and strain.

By presenting these facts, Mr Goenka has drawn attention to the dilemma which has been harrassing the country for some time. A curtailment of the Second Plan is sometimes advanced as the most logical solution. Mr Goenka happily does not succumb to this facile temptation. On the contrary he proceeds to emphasise the need for hefty doses of foreign capital, a line of thinking which has already entered into the vitals of official policy.

A number of trade missions have been visiting India recently and studying opportunities for the employment of foreign capital in India. Japan is reported to be agreeable to the export of goods on the deferred payment formula proposed by the Government of India. The Chairman of the Federation of British Industries has announced the immediate possibility of Rs 30 crores worth of similar assistance. The leader of the US Mission has also spoken hopefully on the prospects of US private investment in India. Among the various countries which were represented by these delegations, only West Germany is known to have expressed dissatisfaction with the credit terms proposed for the import of goods. The World Bank sustains its interest. On the whole, it does not at all appear that India's Second Plan will suffer emaciation through want of finance.

Lessons Unlearnt

(Contributed)

HOW treacherous Indian food production still continues to be, in spite of the substantial expenditure incurred on reclamation of land and irrigation during the post-war years could be seen from the production and import figures since 1953. From 68.8 million tons in 1953-54 total food output climbed down to 66.5 million tons in 1954-55 and receded further to 63.4 million tons in 1955-56. It has always been possible to explain such set-backs in terms of national calamities. When the responsibility and initiative for augmenting food production are shared by the Central and State Governments, it is also possible for either of the two to blame the other.

Sir V. T. Krishnamachari told the first meeting of the Northern Zonal Council that most of the States have not succeeded in reaching agricultural targets set for them. Facts undoubtedly support this contention. But then the States can coolly retort that the ultimate villain was the Central Government, which could not make available the funds which they asked for. At last year's conference at Mussooree, the State Ministers accepted the obligation to raise the Second Five-Year Plan targets substantially above the original level, without extra financial outlay. It is too early to see whether this would turn out to be an impossible commitment.

The annual figures for food production referred to above and the recent food shortage show that either the State governments are lacking in enthusiasm or they are coming up against unexpected difficulties. Whatever be the reasons, the present situation implies a clear call for better mutual understanding and coordination. The Deputy Chairman of the Planning Commission has indicated various means by which food production could be stepped up.

When actual output does not tend to correspond to the schedule fixed by the Commission or by other authorities, neither the targets and methods nor the periodical exhortations addressed to the people to push up their sleeves or tighten their belts, suffice to carry conviction. On the contrary, when as is reported from Bihar, people start eating wild tubers and house-holders with their wives and children trek long distances in search of morsels of rice, the call for austerity can be most exasperating. The simple fact seems to be that in spite of all that has happened in the food front during and since the Second World War —crisis after crisis each leaving its trail of distress and warning,—the authorities have yet to display a steady and sustained vigilance and the anxious alertness to adverse possibilities. Mere recriminations and fault-finding between one Government and another will not produce a single blade of corn.

Just now there is acute food shortage in several districts of Bihar and UP. Some neighbouring States are reported to have temporarily banned the export of food grains. These States are no more to blame because from the reports available, they too seem to be faced with actual or threatened shortages. The meetings of the Zonal Councils are an excellent forum where the food problem in its inter-State aspect could be most profitably discussed. Whether the Northern Zonal Council which met under the Chairmanship of the Union Home Minister could make any constructive contribution is not known. The Eastern Council has also met this week; the problem is surely more pressing in the States concerned. A joint initiative by the States of each zone on the food front should be an infallible test of the practical value of the Councils.

Meanwhile, the Programme Evaluation Organisation of the Planning Commission points to certain serious drawback in the functioning of Community Projects and National Extension Blocks. Among the cultivating classes, those with small holdings and less financial resources have not received as impressive a measure of benefit as the more prosperous and bigger cultivators. The resources deployed in the rural areas are inadequate, nor are the people showing sufficient initiative and self-help. This is only statement of a problem. More detailed study has to go into causes and correctives. In any case, successive impartial judgments on the Community Projects sternly argue for a more vigorous application of funds and more business-like principles. The projects we are afraid, are now surrounded by some amount of hallow and illusion, which disable a completely objective approach.

Both in respect of the projects and of food prospects in general, it would be simple wisdom not to underrate difficulties. What food imports have done to aggravate the decline in foreign exchange in recent years is perhaps not so well-known. In 1954, food imports cost Rs 47 crores, in 1955 Rs 33 crores and in 1956 Rs 56 crores. The relatively high level of imports and the unduly high level of domestic food prices have their direct repercussions on the progress of the Second Plan and, at least for that reason, must receive the attention given to a national emergency. As the political situation is a little more complicated today than it was before the elections, even a passing local shortage is likely to be magnified out of all proportions by Opposition parties, making more people believe in inflated versions. Politically, the shortages carry greater risks than before.

The Jarring Report

AS a special emissary of the United Nations Security Council, Mr Gunnar Jarring was seeking in an extremely cautious and guarded manner to explore possibilities of a settlement between India and Pakistan regarding Kashmir. His report, published on April 30, proclaims failure. Though he has found that both sides were still desirous of finding a solution and willing to cooperate with the UN in that task, he could discover no practical basis on which the two countries could come together. Arbitration was rejected outright by India for very strong reasons. It was accepted just in principle by Pakistan. The status quo remains unaltered, without any new advance having been made toward a compromise.

But for this reason, the Jarring Mission could not be regarded as barren of results. The Report is a piece of impeccable fact-finding. No fact is new. In the UN they have heard several times before all the facts and perspectives presented by Mr Jarring. Only, for some reason or other, that august body has been consistently refusing to accommodate all these in the necessary balance and proportion, in its recommendations.

The most significant point pressed by the Report is that the Kashmir question can no longer be discussed in a manner and spirit isolated from the changing political, economic and strategic factors surrounding it, and what is more, the changed pattern of power relations in West and South Asia. The Report also lays emphasis on the grave problems that might arise in connection with and as a result of a plebiscite. The position was placed before the Security Council nearly in identical terms by Mr V. K. Krishna Menon. He failed to catch the ear of the majority. Without the least disrespect to the UN Organisation, it will have to be said that Mr Jarring has by implication taken his sponsors to task for not giving Mr Krishna Menon's assessment the deference it deserved. The Report is intended to be a sure warning that the mistake should not be repeated.

The Jordan Fuse

Current events in Jordan represent an unmistakable threat to world peace. Since the withdrawal of the British subsidy and of General Glubb Pasha, both the army and the finances of the State have fallen into confusion. The recent public demonstrations against the improvised government headed by King Hussein's nominee reflected in some measure the strength of the pro-communist elements and the methods by which they hope to capture power.

In the place of the British who tactfully shook off an ill-received obligation, there is now a consortium of Arab Powers committed to provide ballast to Jordan's finances and defence. A small Syrian force is stationed within Jordan and is now confined to the barracks. Egypt feels being a partner in the overlordship of the State, an attitude which even less powerful neighbours like Saudi Arabia are not immune to.

In this unenviable set-up, to talk of the independence of Jordan would be a cruel joke. Economically and militarily, this tiny principality in the Middle East has come to be at the mercy of innumerable undependable forces, far and near. The establishment of a military regime with all its paraphernalia of control, curfew and compulsion, has given King Hussein some breathing space.

The Eisenhower Doctrine for the Middle East has come up against its first test case. A part of the US fleet has been ordered to move into the Middle East waters. Syria is reported to have invited President Eisenhower's personal envoy, Mr Richards. King Hussein has frankly referred to the Communist menace to the security of his country.

Moscow has hitherto kept virtually mum. While Marshal Bulganin has extended another friendly gesture to the Prime Minister of Britain the Soviet Press does not let slip even the smallest chance to cast aspersions on the US, the latest being a rather undignified charge against the head of the US Central Intelligence Bureau. The latter is alleged to have employed a batch of temptresses to undermine the morale of the Soviet athletes who recently took part in the Olympic games.

It is impossible to discern all the diplomatic manoeuvres behind the Jordan scene. Whatever these may be, one fact is clear. The people of Jordan no longer speak with one voice; and they are becoming the victims of a clash between angry proselytizers. Who else will suffer and how much is unpredictable.

Editorial Notes

Exodus of Medicoes

There is a report that about a thousand doctors from India have applied for jobs in Malaya. The number of Indian applicants is at least ten times as many as the number of openings available. The paucity of qualified medical men in India has been only too well advertised in recent years. The figures of the Central Health Department indicate a shortage of several thousands of doctors and nurses.

Against this national shortage, the reported largescale response to offers from another country looks surprising. If persons in regular public or private employment are intending to leave, it behoves the Government to find out the reason. If it is a question of private practitioners unable to make both ends meet seeking better prospects abroad, that too is a matter for investigation.

The authorities complain of piracy of engineers and other technical men by the private sector and the charge is reciprocated. Movements between the private and public sectors are preferable to an exodus from the country. It is clear that the problem of technical employment is not merely a matter of supply: Effective demand is a compelling factor. Anyway, the State and the Union Governments are obliged to do everything in their power to see that talent is not lured off to other countries.

*

Feeding the Feed

Mr S. K. Dey has suggested wholesale conversion of national food habits as a solution to the persistent food problem. He apparently would have the entire population of India go non-vegetarian. We wonder if there are exact data on the proportions of vegetarians and non-vegetarians in India. It might be possible to take the view that in a country where vegetarian and non-vegetarian food are both inadequate, the present co-existence of the two groups is ideal. After all it cannot be overlooked that the majority of the world's population is non-vegetarian.

What the future holds in the matter of changes in food habits is unpredictable. But a change could be prescribed, only on the basis of an accurate understanding of the relative sufficiency of land in any given country. Can livstock equivalent to cereal and other ingredients in the food intake of the average vegetarian be produced at the same cost, and on the same extent of land?

Even if every other consideration were kept out, this factor, i.e. comparative cost, particularly in terms of land, should be decisive for a preference between vegetarian and non-vegetarian food in vast social groups in a land-hungry country. We hope that Mr Dey speaks with the authority of the requisite data.

*

Air-Conditioned Vestibuled Trains

The first stage of air-conditioned vestibuled train service has been completed; and Delhi is now connected by this amenity with Calcutta, Bombay and Madras. The net-work of Janata trains throughout the country provides for the third-class passengers a definite and substantial implementation of the promises held out by the Congress Government that minimum comforts for decent travel would be made available for those whose means require the use of the lowest class on the Railways. There is an upper strata who can afford a trifle more but cannot aspire to the level of second class or first class tariffs. This category belongs to what may be described as lower middle class and medium middle class.

It is persons in this range who are generally neglected. The poorest one has many champions; the rich at the other end need no sponsors and are well able to look after themselves. The lower and medium middle class are said to form the backbone of society; yet, there is none to play the godfather to them. Air-conditioned third-class travel is, therefore, a sign and symbol that the Railway Board, at any rate are alive to the requirements of the community.

Air-conditioned third-class trains should now be so extended as to cover the entire country with an adequate net-work. The second stage in this expansion must, obviously, centre round Madras, the centre which accounts for the largest traffic in this category of passengers. Madras is now connected with Nagpur and Delhi by the vestibuled service. It must now be similarly connected with Calcutta and Bombay, with through coaches from the former place to Jamshedpur, Rourekela, Bhilai and Sindri.

The carping comment that air-conditioned third class service is a needless luxury is not borne out by the popularity of the bi-weekly service linking Delhi to the Eastern, Western and Central Capitals.

*

An Atlantic Assembly

The suggestion of a Grand European Assembly is again revived, this time from Britain. At a secret session of the Ministerial Committee of the Council of Europe held this week at Strasbourg, Mr Ormsby-Gore, British Minister of State for Foreign Affairs, outlined a plan for a new body, which he hoped, would supersede all the existing European Assemblies and would eventually become an Atlantic Assembly with the US and Canada thrown in.

Never before has a common assembly for Europe been conceived on this scale. The British Minister's conception is trans-continental which itself seems to be its greatest weakness. Whatever might be the present state of the European conscience, in regard to a common high-power body, exaggerated conceptions of unity in interests carry the germs of futility.

Previous suggestions have crashed on the rock of national sovereignty. Common interests have of course gained a much deeper recognition than at any time before. These are also being served by specific bodies attached to particular purposes.

How far a monolithic organisation would be instinctively preferred by the average citizen of the different nations to the relatively inconspicuous but practically effective organisations wedded to specific ranges of work, is problematical. The periodical recurrence of the suggestion for a common assembly is, however, an indication of an unmistakable urge which has not yet found adequate institutional expression.

Slack Season's Threshold

THAT the 1956-57 busy season peak has been passed, is suggested and confirmed in the latest bank statements. The indications, moreover, are that the peak can be placed on April 12, 1957. Before analysing the important features of the 1956-57 busy season, we may first see why it is possible to conclude that April 12 represented its peak. In the first place, Active Notes, after touching Rs 1574.42 crores on April 12, have receded to Rs 1569.10 crores and Rs 1561.91 crores in the following two weeks. In the second place, Rupee Coin has been returning from circulation at a faster pace since the week ended April 12. In the third place, banks' borrowings against usance bills have been declining since the relevant week. In the fourth place, the Other Loans and Advances of the Reserve Bank are also headed downward. In the last place, banks' advances touched a peak of Rs 902.27 crores on April 12, but have since gone down slightly to Rs 901.32 crores. Judged by these yardsticks, therefore, the busy season peak may be said to have been reached on April 12.

If this reading is correct, it is of the utmost significance that the busy season should have attained its climactic level at so early a date as April 12. For, the experience in the past few years has been that the peak has usually been around the first week of May. In the last six years, the only other departure in this respect was, coincidentally, in the 1951-52 busy season.

We say coincidentally, because it was in regard to the 1951-52 and 1956-57 busy seasons that the greatest apprehension was entertained about difficulties to be encountered in meeting the seasonal demand for funds. On the earlier occasion, it was the raising of Bank rate in November 1951 that was responsible for the general anxiety that the then ensuing busy season would be unprecedentedly difficult. In the latest instance, a similar disquietude was universally discernible for the reason that Banks' resources were, even at the threshold of the busy season, fully extended.

But it is, we suggest, no coincidence that the busy seasons which were expected to be the most difficult have in the event proved to present rigours much less stringent than anticipated. For, on the eve of both the busy seasons, there was ample forewarning of the special circumstances which would aggravate tight money conditions; and, with Government taking suitable action, there was sufficient forearming for meeting the challenges expected to be thrown up. It thus happened that the advance preparations themselves enabled a shorter duration for the busy season.

It may, therefore, be stated that the 1951-52 and 1956-57 busy seasons should offer an interesting basis for comparison. In 1951-52, the Reserve Bank adopted a course of action on three specific lines: (a) the inauguration of the bill market scheme; (b) permissive instruction to banks to show their giltedged holdings at an "average market value"; and (c) open market operations with a view to bringing about a pattern of giltedged yields. In 1956-57, official action in behalf of the busy season has comprised: (a) liberalisation of the bill market scheme, with lines of credit approved for Rs 150 crores; (b) an understanding readiness to make outright purchase of securities from banks in genuine need of replenishing their cash; and (c) expeditious payment of Government dues to contractors and suppliers in the course of March.

Apart from the fact that Government have on both occasions taken particular care to institute measures which would mitigate the rigours of the busy season, the money market indicators as reflected in the bank figures also prove to contain points of interest. The following table shows the extent of change under heads of Banks' figures which are significant to the busy season:

NET CHANGE DURING BUSY SEASON
(In Crores of rupees)

	1951-52	1956-57
Reserve Bank:		
Active Notes ...	+39.92	+155.53
Bank' Deposits ..	—28.10	+ 18.44
Other Loans and Advances ...	+44.76	+ 21.05
Usance Bills ..	+24.88	+ 18.87
State Bank:		
Deposits ...	— 6.45	+ 70.48
Borrowings ...	+17.99	— 7.78
Giltedged holdings	— 3.72	— 2.09
Advances ...	+46.66	+ 52.31
Other Scheduled Banks:		
Deposits ...	—20.66	+ 39.09
RBI Borrowings	+24.00	+ 30.91
Giltedged holdings	...	— 23.43
Advances ..	+35.57*	+ 89.61

*Excludes figures relating to bills.

As far as 1951-52 is concerned, the very much smaller increase in Active Notes can partly be attributed to the commodities debacle at the beginning of 1952. The decline in Deposits of Scheduled Banks can similarly be explained. The rise in Advances would surely have been higher, were it not for the downtrend in commodity prices. The extent of the assistance derived from the Reserve Bank is revealed in the decline in Banks' Deposits with the Reserve Bank and in the increase in borrowings from that source and in advances taken against usance bills. A second consideration we must keep in mind is that, in 1951-52, plan disbursements were just beginning, and impact thereof, there was none upon banks' Deposits, upon demand for funds and upon Active Notes.

In respect of the 1956-57 busy season, the trends anticipated in this column in December last have largely materialised. At that stage, we had suggested that Banks' Deposits would rise between Rs 75 and Rs 100 crores; the actual figure is Rs 109.57 crores. Secondly, we expected the expansion in advances to work out to Rs 150-200 crores; the increase is placed at Rs 141.92 crores. Thirdly, we anticipated that the bills portfolio of banks would cross the Rs 200 crore mark; internal and foreign bills touched Rs 185.96 crores on April 12. Where, however, our expectation has been belied is in the advances against usance bills: we had thought that these might rise to Rs 150 crores whereas the peak of such borrowings has been only Rs 73.20 crores. A closer examination of the 1956-57 busy season will reveal why Scheduled Banks did not need to have such large recourse to borrowings against usance bills.

It needs at the outset to be realised that both Authority and the Scheduled Banks themselves expected borrowings against usance bills to reach a mark around Rs 150 crores. For, it is a fact that the lines of credit approved by the Reserve Bank for this purpose were for an amount around Rs 150 crores; and the Reserve Bank would not have approved such an amount, unless requests from scheduled banks were for that figure, and unless the central banking institution had anticipated that banks would need to replenish their resources by this sum. Potentially, therefore, Scheduled Banks were forearmed with Rs 150 crores of additional resources; but, for reasons that will soon be quite apparent, it was unnecessary to utilise them.

At the busy season peak, borrowings against usance bills had increased only by Rs 18.87 crores as contrasted with the anticipated expansion of around Rs 90 crores. But the earlier estimate was based on three assumptions: first, that advances would expand by Rs 150-200 crores; second, that Deposits would go up by Rs 75-100 crores; and third, that the whole of the shortfall in respect of the difference between increase in Deposits and expansion in Advances would be made up by borrowings against usance bills. Moreover, the calculation was on the basis of the maximum in resources necessary. Thus, the increase in Advances has fallen short of the maximum by Rs 58.08 crores; Deposits exceeded the anticipated rise of Rs 100 crores by Rs 9.57 crores; and, finally, Scheduled Banks replenished themselves to the tune of Rs 25.52 crores by sale of giltedged. The three together reduced the need for borrowing against usance bills by Rs 93.17 crores. But then, this would mean that borrowings on usance bills could totally have been avoided. However, Scheduled Banks in the course of the busy season improved their cash balances by Rs 11.24 crores; and this accounts for the higher level of loans taken on usance bills.

What is the lesson offered by the 1956-57 busy season? First and foremost, that Deposits are accruing to Scheduled Banks at a pace

Sterling Support Tactics

By PAUL EINZIG

There was a sharp recovery of sterling on April 24. Although it occurred after a period of weeks during which sterling was reasonably steady, the sudden rise came as a surprise. The market was fairly active, so that the upward movement of the rate could not be attributed to a single fair-sized commercial transaction which is liable to influence the rate on an inactive day. Nor was the international political situation such as to inspire optimism. The Suez deadlock continued, and there was the new trouble in Jordan. As for the domestic economic situation, it looks as though major industrial troubles could be avoided this time, but only at the cost of yet another turn of the inflationary wages spiral.

In the circumstances financial commentators came almost unanimously to the conclusion that the appreciation of sterling was the result of official intervention by the Exchange Equalisation Account. This interpretation was probably correct. It seemed as if the upward movement was initiated by selling of dollars by the British authorities. Once sterling began to appreciate, private operators took a hand and caused an accentuation of the rise. But it is safe to assume that the movement was originated by official operations.

During the 'thirties such official intervention was very frequent; during the post-war period it has been an unusual occurrence. In the overwhelming majority of instances official intervention in the foreign exchange market is purely passive nowadays. The Bank of England, acting on behalf of the Treasury, sells dollars when the rate reaches or approaches $2.78, and buys dollars when the rate reaches or approaches $2.82, or whenever sterling is sufficiently firm to make it possible to pick up some dollars without causing sterling to depreciate. On the present occasion official intervention was active that is to say, instead of operating against an existing trend, the authorities tried to generate a new trend.

Such tactics were resorted to frequently and on a large scale during

(Continued on page 827)

World of Jute

Firm Conditions

WEATHER reports from the jute growing areas have once again come to wield a powerful influence in the jute markets. The continued dry weather conditions have led to an apprehension that the next jute crop may be delayed. The fact that it is too early to come to any valid conclusion either about the size or the time of the new crop has been found to be of little help in countering the thoughts about the possible repercussions on the mills' raw jute stock position in the event of the jute crop being delayed.

Though it is generally accepted that supply of raw jute will be sufficient to meet the requirements of mills till the new crop becomes available, the possibility of a delay in the arrival of the new crop seems to have upset calculations. Considering the fact that during the past week that a considerable quantity of raw jute has been bought at high prices, it would appear that mills have preferred a comfortable raw material stock position to relying on the weather.

With the mills beginning to show interest in spite of advancing prices, sellers in the raw jute market have promptly put up prices. Higher raw jute prices have resulted in higher prices for goods and vice versa. Thus by the close of the week, Assam Bottoms which opened the week at Rs 29.00 has been pushed up to Rs 30.50 per maund. In the goods section B Twills Ready is quoting now at Rs 115.81 as against Rs 111.62 this time last week.

*

Prices especially in the Sacking section gained substantial ground during the past week, while hessians ruled steady in sympathy. The main incentive had come from the raw jute section where prices had been pushed up on expectations of a delayed new crop.

The market opened the week on a dull note with both overseas and local buyers evincing little interest. Speculative interest was also at a low ebb. At the close of the day's transactions. prices displayed a sagging tendency with 40″×10 oz Hessian Ready placed at Rs 41.62 and B Twills Ready at Rs 111.62. July-September Hessian 40″×10 oz was done at Rs 42.00 while B Twills for the same position was quoted at Rs 112.25.

Conditions continued to be uninteresting when the market opened the next day and prices in early dealings moved within narrow limits. Toward close, a slight recovery was noticeable presumably due to reports of an enquiry in woolpacks from Australia. Shippers were also found to evince some interest in all categories of sacking goods. The closing prices for the day showed that Hessian 40″ x 10oz Ready was unchanged at Rs 41.62 while B Twills Ready made some headway to be finally placed at Rs 112.00. Hessian 40″×10 oz July-September delivery was placed at Rs 42 and B Twills July-September at Rs 112.62.

Monday found the market in a buoyant mood particularly with regard to B Twills which were pushed by more than half a point to Rs 112.81 for the Ready position. July-September B Twills were also a strong feature having been done up to Rs 113.37. As for hessian, there had been no marked change though closing price for Hessian 40″×10 oz Ready at Rs 41.32 was slightly higher on balance. July-September Hessian 40″×10 oz was placed at Rs 42.66.

Prices made further small headway on Tuesday, sentiment having been encouraged by reports from the raw jute section where Assam Bottoms was done up to Rs 30 per maund consequent on good mill interest. The small offerings by mills from time to time at the higher levels were easily absorbed by the bazar. At close, Hessian 40″×10 oz Ready improved to Rs 42.00 with B Twills Ready done at Rs 113.50. July-September Hessian 40″×10 oz was quoted at Rs 42.56 and B Twills at Rs 114.62.

B Twills Ready was pushed up to a new high on Wednesday when keen interest was also shown in all sections of the market. Evidently operators were encouraged to put up prices by the continued unfavourable weather in jute growing areas. The argument had been that in all probability the new jute crop would be delayed and consequently there would be a scramble for obtaining the available stock of the raw material. The strong demand for raw jute had already resulted in high prices in the raw jute section. With the raw jute prices going up daily a corresponding marking up of prices in the goods section became inevitable. By the close of transactions on Wednesday B Twills Ready was taken up to Rs 115.81 as against previous closing of Rs 113.50. A sizeable gain was also recorded by hessian with Hessian 40″×10 oz Ready quoting at Rs 42.44. Hessian 40″×10 oz July-September was done at Rs 42.69 while B Twills was placed at Rs 115.00.

The following table shows price trends during the week.

	Week's Opening	Week's Closing
Hessian:		
40″×10 oz Ready	41.62	42.44
,, July|Septr	42.00	42.69
40″×8 oz ..	33.87	34.50
40″×7½ oz ..	31.37	32.12
Sackings:		
B Twills Ready	111.62	115.81
,, July|Septr	112.25	115.00
Hy Cees Green	111.25	115.75
Corn Sacks ..	111.12	115.25
Cubans ..	134.00	137.50
A Twills ..	134.00	139.00
L Twills ..	125.50	129.00
D W Flour ..	133.75	138.00
Sugar Bags ..	128.50	131.00

World of Tea

Slab System of Export Duty

THE Government of India have only recently informed the Federation of Chambers of Commerce that it is not possible to replace the existing slab system of export duty on tea by ad valorem duty. According to the Government, an ad valorem duty has the great advantage in that it adjusts itself to the level of prices. But there is an element of uncertainty regarding the price under this system. Such an uncertainty may militate in some way against entering into contracts for sale.

The Government have also mentioned that there are serious administrative difficulties in implementing an ad valorem rate of duty. The price of tea varies according to grade and from producing district to district and from sale to sale. Furthermore, there are different methods of sale of Indian tea—some quantity is sent on consigment basis to London for auction there and sold on forward contracts, while a substantial quantity is sold in the Cochin and Calcutta auctions. An assessment of the price, which tea will fetch on a consignment basis at the London auctions, will be very difficult. The Government, therefore, observe that any ad valorm deuty, which will ensure automatic adjustment with fluctuations in prices, has to be ruled out as administratively impossible.

Meanwhile, a number of large chain retail stores throughout Britain have reduced the price of tea. The Home and Colonial Stores, for instance, with its 73 branches, announces a drop of 4d per pound, bringing the price range between 4sh and 7sh per pound. The quality of blends is, however, unchanged. Trade quarters in London have stated that there may not, however, be any great change in prices during the current month and any teas, possessing useful characteristics, should sell fairly satisfactorily. But, they add that quite a lot of plain tea is catalogued for sale and this can prove somewhat difficult to sell. It is estimated that, by the end of July this year, all teas of 1956 North Indian and Pakistan season will have been sold.

With regard to production, the trade estimate of South Indian tea crop is 4½ million pounds higher for the first quarter of 1957 than for the same period of 1956. For the first two months, Ceylon's crop was up by nearly eight million pounds. As against increased production in these two areas, the UK stock position is likely to cause some disquiet.

In the first week of April, stocks of tea held in London were 169.5 million pounds. Teas afloat are over 40 million pounds. The fact that only about 28 million pounds have been carried over into the new season with export rights under special licence as against 92 million pounds a year ago may provide some comfort to the trade.

In respect of exports, shipments of Northern India teas to all destinations, with a few exceptions, were lower during the quarter ended March, 1957. Irish Republic was the only country to show a minor increase with an offtake of 6.6 million pounds. Exports to the UK at 71 million pounds show a decline of 11.9 million pounds and those to the USA at 4.7 million pounds were lower by 1.8 million pounds. The downward trend in exports is likely to be continued in the coming months as little tea is now available in Calcutta for export markets.

The Government of India have fixed the price of tea, for the purpose of determining the export duty, at Rs 2.41 per pound as against Rs 2.74 per pound in force from April 1, 1957. The export duty at this price will be 25 nP as against 37.50 nP per pound in force hitherto. This announcement of the reduction in export duty had no effect on market sentiment.

No Export Sale was held in Calcutta this week. In the Internal sale, offerings were 18,325 packages of Dusts. There was less general demand and this, coupled with a decline in quality, resulted in lower rates for most descriptions. Black Leaf types were in good demand and Midle Eastern buyers were operating freely, but prices for these shared in the general decline.

Teas from Assam, Dooars and Cachar were irregular; but were often 4 to 6 nP per pound easier. The grainy CTC teas were, however, up by 20 nP per pound. Powdery CTC Assams were in more demand and were sometimes dearer, particularly the very best. Following rates were quoted:—Medium Dooars Dust Rs 1.60 to Rs 1.65; Medium Assam Grainy Dust Rs 1.65 to Rs 1.70; Medium Assam CTC Dust Rs 170 and Best CTC Assam Dust not quoted.

There was no internal Leaf Sale. In the Export Quota section, business in Special Export Licence was done at 23 nP and in the Shipping Licence at 22 nP per pound.

In Cochin market, 1,900,000 pounds of Leaf teas were offered for export. In the face of good but weakening demand, Common and Low Medium teas were about steady. Mediums were irregularly 15 to 20 nP per

(Continued on page 835)

World *of* Business

Case for Higher Rates

Sir A. Ramaswami Mudaliar's Committee on the rationalisation of the structure of railways rates are reported to have submitted their report in time for their recommendations being incorporated in the Railway Budget for 1957-58. Enough is known of this report to warrant the conclusion that the Railway surplus will be of substantial dimensions. Projecting this surplus to the five year period covered by the Second Plan, the improvement that may be expected on this account may be of the order of Rs 150 crores. Instead of invoking the usual cry of additional burdens on commerce and industry, the public in general, and the business community particularly, should welcome the revised tariffs as an earnest of Government's resolve to mobilise all possible resources such that the Plan will be successfully accomplished.

It is further to be considered how far the charges in the other commercial department, Posts and Telegraphs and Telephones, could be raised so that this section, too, is enabled to make an impressive contribution toward the filling of the gap in the Plan's resources. The poor man's post-card can be left undisturbed; but the services in other respects can bear higher charges. For example, the airmail postage makes the Indian service the cheapest and the most efficient. This traffic, too, can bear a 20 per cent raise. By these means, P & T Department should aspire to contribute an extra Rs 75 crores in the current quinquennium.

All these are not imposts or burdens. They are betterment levies and development obligations.

✱

Grinding Wheels Industry

After a period of ten years' growth under protection, beginning with 1946, production in the grinding wheels Industry is very near a self-sufficient level. The current domestic demand has been placed at a little over 1,500 tons by the Development Wing. And production in 1956 stood at about 1,132 tons. This figure for production is nearly double that of 1954, when production stood at 693 tons. This was made possible by the starting of new factories since 1954. While in 1954 there was only one factory in production, at present the units in production number five, three of them being situated in Bombay and one each in Madras and Delhi. The total capacity is 2,370 tons a year.

The lifting of the ban in 1948, on imports of grinding wheels, segments, oil stores, sharpening stones etc., which was imposed when protection was first given to the industry, has attracted small quantities of imports into the country. Such imports varied between 80.2 tons in 1953-54 and 117.7 tons during the 9 months in 1956-57, for the protected categories. Imports are restricted by the quota fixed by the Government, which amounts to 16 per cent of one-half of the best year's imports, with the stipulation that not more than 50 per cent of the face value of the licences or Rs 500, which ever is higher, can be utilised for the import of wheels of less than 25 inches in diameter and more than 1/32 inch but less than 9 inches in thickness.

The progress of the industry also enabled the Government to scale down the quantum of protection involved a complete ban of imports together with an ad valorem duty of 50 per cent and though in 1951 the rate of duty was fixed at as high a level as 105 per cent ad valorem, this was reduced to 50 per cent exclusive of the surcharge on the recommendation of the Tariff Board in November 1951 and was finally reduced to 25 per cent in 1954. At present Grinding wheels and segments made of synthetic abrasive grains, excluding wheels of any thickness or bore but more than 24 inches in diameter or of any diameter or bore but more than 9 inches or less than 1/32 inch in thickness and diamond impregnated wheels are assessed to protective duty of 25 per cent ad valorem. A new tariff inquiry into the industry has been initiated on April 16, 1957.

The industry is at present dependent on foreign countries for supply of synthetic abrasive grains and bonding materials which are the most important raw materials. However production of these is expected to be started soon in the country. Such imports varied between 80.2 tons in 1953-54 and 117.7 tons during the 9 months in 1956-57, for the protected categories. Imports are restricted by the quota fixed by the Government, which amounts to 16 per cent of one-half of the best year's imports, with the stipulation that not more than 50 per cent of the face value of the licences or Rs 500, which ever is higher, can be utilised for the import of wheels of less than 25 inches in diameter and more than 1/32 inch but less than 9 inches in thickness.

The progress of the industry also enabled the Government to scale down the quantum of protection involved a complete ban of imports together with an ad valorem duty of 50 per cent and though in 1951 the rate of duty was fixed at as high a level as 105 per cent ad valorem, this was reduced to 50 per cent exclusive of the surcharge on the recommendation of the Tariff Board in November 1951 and was finally reduced to 25 per cent in 1954. At present Grinding wheels and segments made of synthetic abrasive grains, excluding wheels of any thickness or bore but more than 24 inches in diameter or of any diameter or bore but more than 9 inches or less than 1/32 inch in thickness and diamond impregnated wheels are assessed to protective duty of 25 per cent ad valorem. A new tariff inquiry into the industry has been initiated on April 16, 1957.

The industry is at present dependent on foreign countries for supply of synthetic abrasive grains and bonding materials which are the most important raw materials. However production of these is expected to be started soon in the country.

✱

Tyre Inflator Industry

The progress of the Automobile hand tyre inflator industry, under the shelter of protection, which was granted to it in 1954 at the rate of 45 per cent, has been fairly satisfactory. While the production of hand tyre inflators increased from 17,150 in 1954-55 to 24,203 in 1955 and 37,455 in 1956, the production of pump connections for the corresponding years was 38389, 42777 and 52641. Against the upward tendency in actual production, the rated capacity has gone down for inflators from 140,000 to 912,00 and for pump connections from 183000 to 159600. Even at the reduced level, the gap between capacity and production is wide.

In spite of the increase which the figures for production reflect, production has to attain higher levels, to ensure self-sufficiency in regard to internal demand. The current annual demand, for hand tyre inflators and pump connections has been estimated at 46,500 and 139,500 respectively by the Development Wing. The demand for inflators and pump connections is expected to increase to 70000 and 210,000 respectivly by 1960.

If future demand of this order is to be met the rated capacity for pump connections will have to be increased from the present level of 159,600 though the present rated capacity for inflators. at 912.00 might be considered adequate.

Though there is scope for further development, the industry is handicapped by having to depend on imports from foreign countries for the supply of certain raw materials like solid drawn seamless brass tubes, bright free cutting mild steel rods and spring steel wire. To ensure cheapness and regularity in the supply of these, the manufacturers have pleaded for removal of duty on imports as well as some changes in the licensing procedure for imports.

The industry is at present facing the tariff inquiry and on the outcome of it will depend its future course of development.

✱

World Overseas

US Notes

"A new era of expanded world trade" in which the United States would have a large share was predicted here today by Thorsten V. Kalijarvi, Assistant Secretary of State for Economic Affairs.

Addressing the National Council of American Importers, Kalijarvi said such foreign trade is important becuse "it generates vitality, well-being, and security of the nation."

America's basic concept, he said is that "as a country we profit by importing as well as exporting. This exchange benefits all of our 170,000,000 people, not just those engaged in the specific transactions."

The US official declared that US foreign trade had made a significant and dependable contribution to the nation's economy. He called for increased American cooperation with organised efforts to increase world trade, such as the General Agreement on Tariffs and Trade (GATT) and the merging European common market and free trade area.

"Without a solid economic foundation," Kalijarvi added, "the mutual defence effort in the free world is built on quicksand."

Kalijarvi pointed to the significant contributions to world trade made during the past few years by the World Bank and by cooperative trade efforts of the 35 GATT nations. In the near future, he added, the effect of the six-nation proposed European common market and free trade area will be felt. The Secretary said further: "The implications for United States foreign trade of the new developments must neither be overlooked nor glossed over. Competition both in world markets and in the United States markets may grow sharper. Competition, both foreign and domestic, in general improves the overall efficiency of the economies of the free world. Competition is, of course, the primary reason for the success of the free enterprise system."

These new developments, he said, create new trade opportunities for American industry.

"Our share in that trade will depend upon the vision which you as private foreign traders and we as government officials manifest in meeting our opportunities."

✱

The American economic scene presents some highly interesting facts these days. Over-all economic activity is running at an all-time peak, despite disappointing developments in some major industries.

According to preliminary estimates by President Eisenhower's Council of Economic Advisers, gross national product—the nation's total output of goods and services—reached a record annual rate of $427,000 million in the first quarter of 1957. This compares with $423,800 million in the fourth quarter of 1956, and $403,400 million in the first quarter of 1956.

The Council's estimates show advances for every sector of the economy, but one. That one is private business investment. The decline in this area was wholly accounted for by a sharp decrease in rate of inventory accumulation. The pace at which businessmen added to their stocks fell from an annual rate of $4,000 million in the fourth quarter last year to virtually zero in the first quarter this year. The fact that inventory buying has been reduced to little more than a replacement basis has meant more than a $4,000 million subtraction from the rate at which the economy has been moving. Yet—and herein lies perhaps the most significant development—despite this "inventory adjustment" total activity has continued to advance.

The drop in inventory buying has contributed, for instance, to a levelling off of industrial production. There have been declines in the output of electrical machinery, lumber, and some household goods, and more moderate declines in steel, coal, textiles, apparel and some other industries. Home construction in addition has been slipping. And automobile production has not been up to full expectation.

These declines have been offset to some extent by gains in industries concerned with chemicals, non-elec-

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

INDIA'S return of US Lend-Lease silver justifies national gratification and warrants international recognition. Of the varied facets of this transaction, I should, at the outset, stress its significance as a reminder and reassurance to "all concerned" ot this country's high sense of integrity and honour in respect of international obligations. An unbroken record of faithful and punctilious discharge of every foreign loan as it matured has not sufficed to evoke world understanding and appreciation of India's superlative performance in this respect. Though I should hasten to add that, in the circles that count such as the World Bank, India is generally regarded as a "good credit risk," inadequate knowledge of the relevant facts in this country's history as a debtor in the international sphere has engendered frequent questionings, occasional doubts and, sometimes, even malicious taunts that a Free India will not know or care or have the means to fulfil foreign debt commitments. An insinuation of this kind was at the bottom of the smear campaign of Sir (then Mr) Winston Churchill in the first half of the thirties; and the nauseous reiteration of a supposed unfavourable investment climate in India has its origin both in suppressio veri and suggestio falsi.

✱

Through the British regime up to the beginning of the forties, India was obliged to carry a perpetual burden of foreign debts. Indians had absolutely no say in the incurring of such obligations; they consisted partly of sterling loans issued in the London market and partly of commitments foisted on India by virtue of Britain's political overlordship. The arrangements were effected between a masterful Secretary of State at the India office and a docile Finance Member in the Viceroy's Executive Council. Ours was not to question why, but to bear and grin and pay the maturing amounts on the due dates. If we dared to question the why and what of the commitments thus incurred or imposed, we were charged with dishonourable conduct. The suggestion, not formally advanced but informally whispered, that India's foreign debt should be examined with a view to ascertaining if all of it had been incurred solely in its behalf roused Churchill's ire to a frenzy of malice; and, in his propaganda against the India Bill, his main argument in opposing self-government was that the first thing which an Indian Finance Minister in a self-governing India would do was to repudiate all foreign debts. Vilification of this kind reached its crescendo by the middle of 1934, when the House of Commons was considering the India Bill.

✱

I happened to be in London in the autumn of 1934, and was called upon to intervene in an East India Association debate on India. The occasion evoked in me the temerity to cross swords with the valiant Churchill. I said, in effect: "Mr Churchill has made your flesh creep and your hair stand on end by conjuring up visions of an Indian Finance Minister repudiating the Sterling loans now held by British investors. The simple questions you have to ask yourselves are these: Is India the kind of country which will default in its debt obligations? Has there been one single instance of such default in the past? I shall answer these posers for you. India has a one-hundred per cent honourable record in this regard; and its attitude toward obligations has a fundamental religious basis. Mr Churchill's case against my country rests on a suggestion made in some quarters that an examination should be made whether every loan and every commitment now comprising India's foreign debt obligations have been incurred for purposes relevant to that country. A simple request for examination provokes a charge of repudiation of debt. What about Britain's debts to the USA? The plain fact is that puissant countries like Britain and France are not paying one cent toward the colossal war debt owing to the United States. This is a case, not of repudiation, but of default. Let Mr Churchill give some attention to this current fact of default before he deals with the hypothetical repudiation by a Free India. Let him, above all, remember that we Indians are actuated by a moral, and not a mere material, approach to the debts we owe. Hinduism enjoins that no man die as a debtor; for, he will have to be born again and work and serve, in a new birth, to repay his creditor. We Indians make every effort to discharge our obligations not for the sake of the creditor, but for the sake of freeing ourselves from the status and after-death consequences of a debtor. So far as I believe, no other nation has this kind of philosophy or this kind of performance in the matter of repaying debts."

✱

The points I then made went home to the audience, so I gathered, after the meeting, collecting my hat and overcoat, I was accosted with the request: Can you let me have a copy of your speech? On my replying that it was not a prepared speech, I was requested to reconstruct the address and to furnish a copy to the unknown friend who, soon enough, announced himself to be R. A. Butler, then Under-Secretary of State for India, entrusted with the task of piloting the India Bill in the House of Commons.

✱

That was twenty-three years ago. Every argument I then advanced, every fact I then cited, is as true today. In fact, truer. For, within a decade of my emphasis on our desire, on moral grounds, to be freed from the plight of a debtor, India paid off to Britain every penny of its sterling obligations, and emerged as a substantial creditor. By the mid-forties, Britain owed India, mostly in the form of Treasury Bills, anything like £800 million. In well over a century, India found itself in debt to its lord and master to the amount of £300 million. In well under a decade, India paid off this entire £300 million and, on the top of it, built a creditor status of the stupendous magnitude of £800 million. The transformation thus achieved endows India's performance with the attributes of a miracle, of which the only parallel then in recorded history was the emergence of the USA from a debtor to a creditor status at the the end of World War I.

✱

This magnificent fact of financial history is little known and less appreciated abroad. There is even less understanding of the further possibility that, had India been a free country as the USA was, the accomplishment to its credit at the termination of World War II would have been sensational in addition to being spectacular. Britain had, during the relevant period, a complete grip over India's financial transactions and a tight control of its monetary and economic policies. This grip and this control were used for keeping, at the lowest level, the pace of foreign exchange accretions to the credit of India. To get a correct measure of how this was done, it will be necessary for me to explain the processes by which Britain (and, through Britain, the Allies including the USA principally) raised the large finances needed for Allied troops, supplies and operations in this part of the world.

The prodigious rupee payments that had to be made in the first half of the forties were directly connected with India being made the main base for the war theatre from North Africa to South East Asia. It was in India that US troops and British troops had to be camped. It was here that air build-up had to be developed, with strategic air-fields studded all over the Eastern regions. It was here that supplies had to be concentrated and store-dumps maintained. It was here that imported supplies had to be vastly augmented by purchases from local production. All of which involved a hydra-headed flood of rupee payments. The USA had to sell its dollars, and the UK its pounds, to buy rupees in unprecedented amounts. In these circumstances, the rupee came to be a currency with a concentrated and sharply rising world demand. The natural result would have been a considerable appreciation in the value of the rupee. Believe it or not, the puissant dollar and the pound sterling were the currencies against which the rupee was purchased. Yet, believe it or not, the rupee was not allowed to appreciate vis-a-vis the US dollar or the pound sterling. Our supply of rupees to America and Britain should have yielded more and more in terms of dollars and sterling. The exchange value of the rupee was pegged at 1s 6d by a stratagem which worked with simple but sinister efficiency.

✱

Let us first examine how the USA's expenditure in rupees was facilitated. As and when the USA needed rupees, it transferred, to the credit of the UK, the needed amount of dollars calculated on the basis of eighteen pence for the rupee. Mark you, the dollars, the thrice-precious dollars, went to swell the foreign exchange resources of Britain. The

latter gave to India a corresponding credit in sterling. This process was somewhat like this: the UK Government would instruct the Bank of England to pay, say, £10 million to India. The Bank of England would inform the London office of the Reserve Bank that £10 million had been credited. The London office of the Reserve Bank would, thereupon, request the Bank of England to invest £10 million in British Treasury Bills. On the London office of the Reserve Bank receiving the scrip for the Treasury Bills, the Reserve Bank in India would add Treasury Bills of this value to its foreign holdings in the Issue Department and issue fresh rupees thereagainst. The rupees thus created would be handed over to the US authorities functioning in this country. So far as India was concerned, it had parted with Rs 13.33 crores in return for a number of book entries. The concerned entries in the books of the Bank of England were as follows:

(1) For payment of £10 million to India, debit the British Treasury and credit the Reserve Bank of India;

(2) For the investment of the Reserve Bank in Treasury Bills, debit the Reserve Bank and credit the British Treasury.

Thus was the status quo restored; but, in the meantime, Britain had paid Rs 13.33 crores to the US authorities in India.

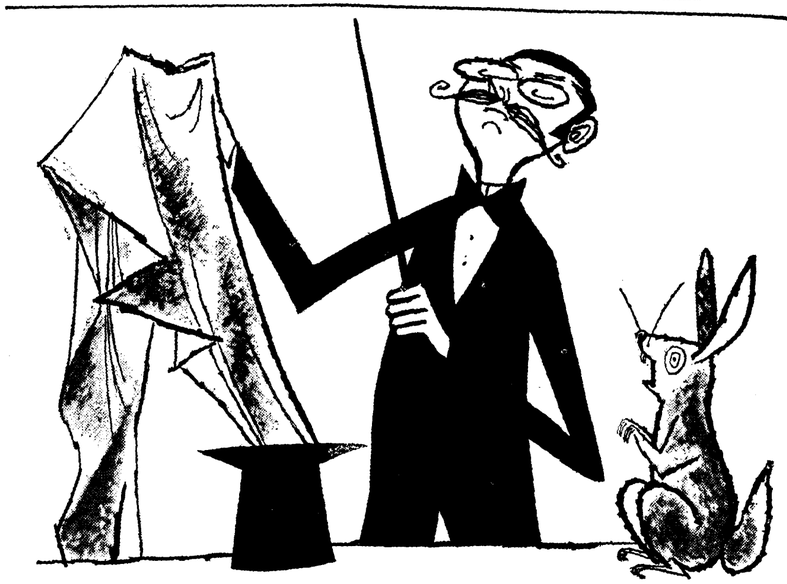
A similar device sufficed to secure for Britain its own monetary requirements of rupees. British Treasury Bills for Himalayan amounts were, by this process, lodged in the Reserve Bank as cover for the rupees so greatly in demand for the USA and the UK Governments. The rupees thus put out in circulation fomented inflation; and the programme of mopping up the rupees by sale of defence loans could not do all the anti-inflation work which the situation demanded. At the end of the war, the losses and gains were as under:

The USA got the rupees; and the UK got the rupees, which both needed desperately. Britain got the dollars, too. India got the Treasury Bill paper abroad, and inflation at home.

If, during the war years, India had been a free agent, it would have received sterling on the basis of an exchange of at least 2s to the rupee; and it would have directly benefited in terms of dollars on the basis of a corresponding exchange value for the rupee. To our American friends particularly, I would like to mention, firstly, that, while the USA makes bounteous gifts of dollars out of its abundance, India made abundant supplies of rupees out of its penury; and, secondly, that the rupees, which, too, had then the distinction of being the most precious and sought-after currency, were made available without stint, without ill grace, without crossfire questioning of the recipient's worth and worthiness.

*

India's record is one of honourable conduct in its status as a debtor, and of considerate behaviour in its status as a creditor. During the phase when the tables had turned, with India owning and Britain owing substantial sterling balances, an amount aggregating £200 million was handed over to Britain in respect of the consolidated liability of pensions accruing to British personnel retired from service in India; and every facility was given for the repatriation of funds in respect of business sold by British firms to Indians. As for the utilisation of sterling balances, from time to time, for imports connected with our development projects, an agreement is in force, showing forbearance on the part of India and understanding on the part of Britain.



*

India's rectitude in respect of its obligations is impressively demonstrated by its foresight and forearming in regard to the repayment of US Lend-Lease silver. As the first step, the silver content in the coins was reduced from ninety per cent to fifty per cent. As a second step, one rupee notes were put into circulation and popularised, so that a return of coins could be facilitated. The coins thus returned were treated for the separation of the alloy in a refinery set up five years ago specially for the purpose. These advance preparations have made it possible for India to repay the loan in kind on the due date out of the swollen stocks of refined silver and of coins.

*

The silver deal is the only Lend-Lease transaction so far as India is concerned. It is not as generally known as it should be that this is the only country which did not ask for or receive the benefit of any other Lend-Lease aid. It follows that India did not need any writing-off of Lend-Lease debt, a writing-off which embraced most countries in the Allied camp. Billions of dollars were involved in the writing-off or whittling-down of the sums which USA was to receive from its former allies at the end of the First World War as well as at the end of the Second World War. In the case of India, the USA was not called upon to show this kind of generosity; and the slate is completely clean with the repayment, now being effected, of the loaned silver.

The secret of Popular Poplin — Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the 'Sanforized' trade mark. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures complete *reliability* of the 'Sanforized' labelled cloth.

Anytime, unannounced—an expert from the 'Sanforized' organisation visits a mill licenced to use the 'Sanforized' trade mark. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest antishrinkage test can carry the 'Sanforized' trade mark on every yard!

It's this kind of constant care which lies behind the success of cloth with the 'Sanforized mark—which makes it such a seller. Such a profit-maker for *you!*

Look for 'SANFORIZED' REGD TD BK on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized.' The trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

Criticism Rebutted

THE accounts of the Industrial Credit and Investment Corporation (ICIC, as it has come to be popularly known) make excellent showing; and Chairman Sir Ramaswami Mudaliar's address at the annual general meeting holds excellent promise. Its policies are appropriate, and its personnel competent. Its leadership shows a sensitive awareness to the needs of Free Enterprise. While building sound traditions and fashioning the right type of organisation, ICIC has not been unmindful of the need to evince initiative. The foundation has, thus, been well and truly laid; and, in this important stage, the directors have greatly benefited from the rich experience and sagacious counsel of Mr Beale, the general manager.

I was, therefore, taken aback to hear it said, though in whispers, that Mr Beale may not be agreeable to serve a further term after the expiry of his present contract. If my information is correct, the contract is for a three-year period. Which means that it may not be many months before Mr Beale prepares to leave India. This will be a very severe loss, particularly as the proposals to be hereafter considered by ICIC will, in a large number of cases, contain an element of foreign exchange, and Mr Beale being at the helm will be of weighty importance in piloting foreign loans with the World Bank and the International Finance Corporation.

A credit line of $10 million has been provided by the World Bank; and ICIC has not so far utilised any portion of this credit. The omens are favourable for the availability of further credit lines, in the event of ICIC requiring such facilities for proved and approved propositions. The International Finance Corporation is disposed to look upon ICIC as the instrument through which it should operate in India. For the smooth and expanding functioning of the connections with these international institutions, Mr Beale, with his acknowledged status as an erstwhile high dignitary of the Bank of England, will be an asset of inestimable value to ICIC. I am sure that its directors will use all their persuasion to retain Mr Beale at least for another term of three years.

It is idle to speculate on the reasons influencing Mr Beale's reluctance to continue in an office which he has admittedly adorned. But, I cannot help feeling that the Indian money market, for its part, has not taken the forward moves for getting the best out of Mr Beale's talents and experience. This remissness on our part could have engendered the thought in Mr Beale that he was not being appreciated in the right quarters. If the Indian money market is to serve the expanding needs of the present and future, there are many institutional and other facilities to be created. And who is more competent to advise the Finance Ministry and the Reserve Bank in these respects than Mr Beale? I have posed the question; and the concerned authorities should furnish the answer.

In an earlier context in this despatch, I have referred to the impending and prospective proposals involving the provision of foreign exchange aid on the part of ICIC. While, in view of the foreign exchange situation. ICIC will be rendering opportune service by according favourable consideration to such projects, there is much that has to be done to make this organisation useful to the many, rather than to the few and select, in the private sector. Some regions in India nourish a sense of neglect; and the feeling is general that the concerns which really need help are those which have no godfathers among the directors and which, likewise, cannot afford legal and other advisers in the drawing-up of schemes and proposals suitable from ICIC's point of view. The directors of ICIC must give thought to the advisability of setting up a public relations department which will be accessible to what I may call the middle-class in the private sector and render them friendly advice and guidance in the preparation of the data and the formulation of the proposal. The upper strata in the private sector are well able to look after themselves. It is the middle class for which ICIC must needs be a friend, philosopher and guide.

The Industrial Finance Corporation is another institution with regard to which orientation to serve the needs of the middle-class is urgent and imperative. Apart from developing a new approach of this kind, both ICIC and IFC must evolve the conventions making possible joint participation in any given proposal. With the proposed setting-up of the Refinance Corporation, the area of joint participation is further extended. Overlapping and duplication of investigation formalities must be avoided. On the positive side, the provision of the requisite facilities can be apportioned among the three institutions in such manner as accords with their respective purposes.

I trust that my comments, on the reorientation of ICIC's attitude with special reference to the needs of the middle class in business, will not have been taken to mean that its usefulness has thus far been restricted. On the contrary, I think it needs to be emphasised that the ICIC has, in its two brief years of existence, proved itself to be an organisation capable of rendering apt and versatile assistance. Sir Ramaswami Mudaliar has apparently heard whispered allegations that ICIC's lending and investing policy is "too slow and too cautious." He has answered such criticism with force and verve.

The ICIC Chairman points out that "the record of other companies doing similar business both in India and elsewhere is very much the same as ours in their earlier stages". Secondly, ICIC set out to do "something wider in scope than has ever been attempted in India". The Corporation is not "a purely lending company" but has also "done a substantial amount of underwriting of shares" and has "indeed invested in the share capital of a number of companies". And these constitute an activity "which requires very close consideration of the proposals advanced". So, says Sir Ramaswami Mudaliar, the directors, in considering the criticisms levelled against ICIC, "reached the conclusion that they were not (justified)".

The next piece of criticism to be rebutted is the charge that ICIC has "so far failed to make use of the $ 10 million of credit granted" by the World Bank. The explanation is simple: no inquiries were made for foreign exchange loans. The position, however, is now changing, in view of the scarcity in this respect; and ICIC has lately received a number of inquiries, and intends to "present some of these proposals to the World Bank in coming months".

Presumably, the arrangement with the World Bank is that, in respect of foreign exchange propositions, the ICIC will first examine any schemes that may be submitted; and, after due consideration, such projects as appear to be sound will, as approved by the ICIC, be forwarded to the World Bank. Thereafter, I suppose that certain formalities will need to be completed by that body. If this presumption is correct, it means that there may be a certain element of delay in completing transactions under this head. I wonder whether it should not be possible for ICIC to secure a straight loan from the World Bank; and the proceeds in foreign exchange could then be allotted directly by the ICIC, provided the scheme in question is approved by Government. I do not know, secondly, what the procedure is in regard to assistance from the International Finance Corporation. It is, however, likely that it is more or less on the same lines as in the case of the World Bank. Since it is of paramount importance to avoid all possible delay, it is to be suggested that some constructive thought needs to be paid to this aspect of foreign exchange loans for the private sector.

I may add that, on the part of the Government, expedition in this matter will be equally necessary. Otherwise, the rigmarole involved, in which half a dozen different entities may be concerned, will lead to unnecessary and undesirable delay.

Gateway Notes

Emergency Relief

The opening of the Central Emergency Relief Institute in Nagpur early this week is yet another significant landmark in the recent history of our country. The institute is the first step in the direction of a concerted effort to provide competent organisations throughout the length and breadth of the country capable of taking up confidently the responsibility of giving succour quickly to people stricken by natural calamities.

In a vast country there will be frequent occasions calling for urgent relief from Government and, experience in India is that especially during the monsoon, relief has to be rendered to several parts of the country all at the same time. Though on these occasions help is available readily both from Government and private bodies, there has always been considerable difficulty in reaching succour to the stricken people in time. As pointed out by Mr G. B. Pant, Union Home Minister, in a message on the occasion of the opening ceremony of the institute, the task is rendered difficult because of the unpredictability of the natural calamities such as floods, fire, earthquake, epidemics etc. The main purpose of the Government's decision to set up a Central organisation is to make relief work effective. It has been found that this objective can be achieved only when we have trained personnel along with suitable materials and equipment.

Inaugurating the institute, Mr Y. B. Chavan, Chief Minister of Bombay, said that the concerted effort on a national basis to combat the problems of natural calamities in a scientific manner would go a long way to render quick relief to the distressed. By pooling together the resources of all States under a central organisation relief can be made quick and adequate. The Nagpur institute will serve as a pivotal point for all the emergency organisations in the country.

*

Piston Assembly Industry

In their report on the automobile industry, the Tariff Commission have laid special emphasis on the need for the development of automobile ancillary industries. With the vast increase anticipated in transport requirements in the country in coming years, there is bound to be a sizable increase in the demand for automobiles and consequently for the products of the automobile ancillary industries as well. With the coming up of the question of continuance of protection to the Piston Assembly Industry before the Tariff Commission, public attention has come to be focussed on the working of one such industry falling under this category. In the course of his opening speech, Mr C. Ramasubban, Member, Tariff Commission, pointed out that the industry had a bright future before it provided it succeeded in maintaining high quality and in keeping its costs low.

There is at present only one unit, India Pistons, solely engaged in the manufacture of pistons, rings and gudgeon pins for use as original equipment as well as for replacement. Its capacity is placed at 3.0 lakhs for pistons, 22.8 lakhs for piston rings and 3.6 lakhs for gudgeon pins. There is another unit, Goetze (India) Ltd with a capacity of 15 lakh rings on single shift and it is expected to go into production in July this year. Hindustan Motors is manufacturing piston assembly for use in engines manufactured by it. The capacity of this unit is placed at 30,000 pistons per annum. There are also some small engineering units engaged in the manufacture of component parts of piston assembly according to orders. Details about their capacity, however, are not available.

One of the main tasks of the Tariff Commission will be the determination of the size of the probable domestic demand for the different categories of components manufactured by the industry. At the 1955 enquiry, the Commission estimated the demand, exclusive of the requirements of the Defence Services, at 6 lakhs each for pistons and gudgeon pins and 48 lakhs for piston rings. The demand was expected to increase by 10 per cent during the next two years. As against this, the Development Wing has estimated the current demand for pistons at 738,000 nos., for piston rings at 5,900,000 nos., and for gudgeon pins at 738,000 nos. One of the producers has estimated the demand at 650,000 nos. for pistons, 4,500,000 nos. for piston rings and 650,000 nos. for gudgeon pins. The corresponding estimates of the other producer are 894,400 nos., 7,633,600 nos. and 894,400 nos.

GATEWAY MARKETS

Silver Steady: Gold Dull

PRICES on the Bombay Bullion Exchange were generally well maintained last week. Occasional profit-taking was readily absorbed by short-covering.

With the returning of 172 million fine ounces of silver by India to the USA, speculations regarding the possibilities of the Indian Government entering the market for the purchases of silver were at last set at rest. The readiness of the US Government to accept the dues in the form of four-anna coins belied the hopes of Government buying silver from the market. Moreover, expectations of higher payment of duty on import of silver and less demand in ready were responsible for the general despondency in the section. Prices, however, turned steadier towards the close of the week on better offtake. Forward silver opened quiet around Rs 182.25 and, after improving to Rs 182.96, reacted again to Rs 182 on long liquidation, to finish the week better at Rs 182.31. Spot silver changed hands at Rs 182.81 and Rs 182.87—the highest touched being 182.96 and the lowest Rs 182.25. Arrivals and offtake were estimated at 12 and 20 bars respectively.

Although Gold showed a softer tendency early in the week, rates improved at the close on profit-covering. Arrivals and offtake were balanced at 2,000 tolas. Forward gold started at Rs 105.69 and, touching a low of Rs 105.56, improved at the close to Rs 105.81. Spot changed hands at Rs 105.44 to Rs 105.69. Sovereign ruled steady at Rs 69.37.

*

Oils & Oilseeds

The markets for Oils and Oilseeds turned generally quiet after showing some steadiness early in the week reflecting fears of heavier margins. After a quiet start, Castorseeds futures attempted to improve on short-covering. May delivery opened at Rs 182.25 and, after receding gradually to Rs 178.25 on bull liquidation, finished better at Rs 180.50. September delivery opened at Rs 188.25 and, after touching a low of Rs 185.50, finished better at Rs 187. In the ready section Madras quality was quoted at Rs 36.25 and Castor Oil, commercial quality, at Rs 19.87.

Groundnuts were quiet under liquidation prior to notice day on Thursday. The turnover was 10,000 candies. May opened at Rs 172.37 and, after touching a high of Rs 172.75, receded gradually to Rs 170.25 at the close. August started at Rs 177.62 and finiesh at Rs 176.62. In the ready section, bold quality was quoted at Rs 34.50 and Groundnut Oil at Rs 19.12.

Cottonseed, distant delivery, advanced owing to straddle operations. May delivery after advancing to Rs 113.75, closed lower at Rs 111. September began at Rs 115.50 to finish at Rs 117.00.

The market for Linseed ruled steady. May delivery began at Rs 30.87 and closed at Rs 30.31. September opened at Rs 31.81 and closed at Rs 31.75.

*

Yarn

Easy conditions continued in the Bombay Yarn market, and prices declined further in the absence of any support. A paucity of buyers was felt in both Art Silk and Staple Fibre yarns. Rumours were current that the Government of India had decided to effect a substantial cut in the import quota for art silk yarn, to be granted to rayon mills in the current period. It was stated that their quota per loom would be reduced to Rs 4 per loom-shift worked during the previous period.

The 120 Dull Cones Snia April contract opened unchanged at Rs 792 and moved upto Rs 794 at which level hedge selling brought down the rate at the close to Rs 790 per case. June delivery opened at Rs 812 and touched a high of Rs 813, to finish lower at Rs 811. In Staple-Fibre yarn section, April contract opened at Rs 612 and, after touching a high of Rs 614 and a low of Rs 607, closed better at Rs 608.

Consumer demand in the Spot section continued on a hand-to-mouth basis and prices generally showed no variation from last levels. Slow conditions in the piecegoods market were the main contributory factor.

The Cotton Yarn section was also subdued although some centres showed little improvement in the demand. Handloom weavers were not in the market to augment their stocks of the raw material.

There are indications that the Government of India will consider favourably the off-repeated plea of the exporters of cotton yarn that they also be given export quotas along with the mills. As the Government are anxious to earn more foreign exchange, it is felt that active steps will be taken to promote exports of cotton yarn also.

*

Metals

Following developments in Jordan and London advices, prices in the Bombay Metal market, especially of Copper and Zinc, developed a firmer tendency. Copper Ready was marked up to Rs 181 per cwt from Rs 178 on reports that quite a good quantity of the metal had been sold from July to December shipment. Another factor, which helped, was that fixed-price goods were not available from Rhodesia, while the same was available from the USA at a premium of £16 to £19 per ton.

Zinc moved up to Rs 79 per cwt on reports of the decrease in floating stocks. The Lead market was, however, quiet at Rs 82 per cwt. Tin improved considerably to Rs 130 per quarter following reduction of stocks.

Problems of Community Development

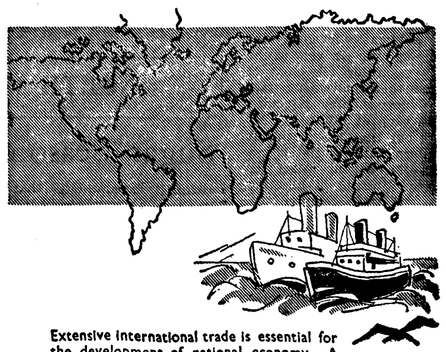
THE fourth report of the Programme Evaluation Organisation, appointed about four years ago by the Planning Commission to assess periodically the progress made by Community Development schemes, was released to the public here last week. It is an important document and, for that reason, unfortunately, apt to be misleading when rendered in capsule summaries or distilled headlines. Being professedly an exercise in unsparing and austere evaluation, it is really a "technical document" which concerns itself mainly with difficulties rather than with successes. The general tenor of the report is, therefore, critical and its particular concentrations are on the weakest points of Community Project endeavours. Authorities concerned with the projects are not particularly likely to be downhearted by the appearance of this report since there is probably nothing in the report of which they themselves have not been more acutely and more immediately aware. That this is so was confirmed by the deliberations of development commissioners that took place in Mussoorie last week. The only question from the point of view of morale that need at all bother any one is the effect on the lay public of the tabloid presentation of this report. I, for one, would consider such concern chicken-hearted: the very idea of a Programme Evaluation Organisation and periodical assessment of community development implies faith in the robustness of the public and the usefulness of free discussion of its failings. It is a measure of our faith in our people which has been justified on this, as in many other things.

There is one consideration that is worth remembering all the time, when one is trying to assimilate the criticisms of the PEO. That is the fact that the idea of community development as conceived by those who have given thought to the subject (and this includes the Community Projects Administration and the Programme Evaluation Organisation) is revolutionary in its implications. It demands from its sponsors a combination of physical, intellectual and spiritual equipment that is exacting in the extreme: Its demand on its beneficiaries is no less taxing. But the reward for even a fraction of these endowments in its sponsors and the beneficiaries is so spectacular that none with any grain of idealism in him can fail to be tempted by it. But, in the actual carrying out of the idea, there are bound to be shortcomings, which are sure to loom large with the background of expectations of those engaged in the experiment. The shortcomings are, therefore, really a measure of the unprecedented nature of the tasks attempted. But this is not to say that we can afford to be complacent about the actual problems that have been thrown up by the attempts at community development. That would be against the very spirit of the idea of development.

These problems have been discussed with great cogency by the PEO and its suggestions need the closest consideration. Generally speaking, the problems discussed by the PEO fall into two broad categories. One is the failings that flow from the inadequacies (relatively speaking) of those who are involved in it. They include the administration and the people. The second set of difficulties is the more serious: these are the imbalances thrown up by the operation of the community projects idea itself. After being in operation for four years, the community development schemes are only now manifesting this second set of difficulties. Of course, theoretically, the difficulties have been anticipated and remedies canvassed even before. But the full social implications are only now emerging and these need the most immediate and searching thought.

Two such manifestations are particularly spotlighted by the PEO. The first of these is the unevenness in the distribution of benefits among the beneficiaries themselves: this manifestation, though not desirable, was not avoidable in the beginning. But what is really alarming is that the imbalance in distribution of benefits is tending to accentuate existing differences in relative well-being. The PEO notes that the richer section of the village gets more out of the programme than the poorer. This is to some extent inevitable, at least in the beginning; but, if allowed to persist, it will defeat the very idea of community development.

The second difficulty arises out of the exaggerated expectations from Government that the rural population have come to have, as a result of the community projects themselves. This is a very serious problem, firstly because there is a limit to Government's resources, both absolutely and relatively, since there are so many importunities on Government funds. Secondly, the psychological purpose of the community project idea was to develop self-reliance and not dependence on Government. If that is not done and, in fact, the opposite tendency is developed, then more harm than good is being done.



Compared to these two important problems thrown up by the community project idea at work, the other difficulties encountered and shortcomings noticed are both conventional and tractable. The PEO evaluates the performance of the administration on each of the various tangible purposes for which the project idea was put into operation. Its findings confirm the tentative conclusions reached by other observers. The most striking successes are in regard to items involving physical change, especially constructional and irrigational activity and those involving change in production attitudes in agriculture and animal husbandry, whereas those concerning cottage industries were neither widespread nor particularly successful. While success has been achieved in regard to items involving the standard of norms of living, especially in regard to primary education and drinking water, those concerning adult literacy and personal environmental hygiene have not been equally successful.

It seems to me that not only is there nothing surprising in this fact, but also that the relative priorities shown by the people are natural and, with unimportant reservations, even sensible. In any ordering of relative importance from the point of view of desiderata of rural life, the order of preferences indicated by relative successes of different programmes is the only sensible one. Therefore, while efforts should be made to achieve better results in those in which there is relative lack of success, they should not be at the expense of the others in which there is already markedly good showing.

Dealing with the administrative problems connected with the community projects, the PEO makes some important suggestions. Since the Second Plan aims at the coverage of the entire rural population by either the community project or national extension programmes, the gearing up of the administration machinery to the tasks of development is vital. The District Officer, whose responsibilities are already heavy in all conscience, is also saddled with development work. It is both humane and sensible that he should be assisted by a number of deputies who will relieve him of the bulk of his routine duties: He will then be able to give his best for the community project activities.

Wagon Supply Problems

Of late, complaints by industries about inadequate allotment of railway wagons and prompt rejoinders with figures by railway managements that so far as they are concerned there is no lapse, have become quite common in our country. It is generally agreed that apportionment of the blame for this unsatisfactory state of affairs will be difficult in view of the known inadequacy of wagons with the railways. The recent complaint in this regard by Mr B. J. Jain, Secretary of the Madhya Pradesh Sugar Millowners' Association, however, seems to point to certain developments which can by no means be described as unavoidable. Considering the harm that is being done to one of our most promising industries which have just started earning precious foreign exchange, the statement of Mr Jain deserves the most urgent and careful attention from Government.

According to Mr Jain, the Sugar industry in Madhya Pradesh is faced with a crisis as some of the factories are not in a position to get cane from rail-heads due to irregular allotment and slow movement of wagons. The matter does not rest there. As is to be expected under such circumstances, the fact that mills are not getting enough cane in time to carry on crushing operations automatically affects the cane grower as well. In view of the uncertainty regarding allotment of wagons and their movement, factories are uderstandably reluctant to purchase cane at railheads. Mr Jain points out that the argument of the Western Railway that it has allotted all the wagons asked for is misleading. Instead of allotting wagons as and when required the Railway allots wagons asked for various days in one day, thereby exposing the factories open to the charge that they are not using the wagons. It is pointed out that nonutilisation of wagons on particular days is due to the difficulty of getting adequate labour and cane to load all the wagons made available.

In a recent speech, Mr A. P. Jain, Union Minister for Food, has pointed out that if today our country is well on the way to establishing itself as a permanent exporter of sugar, it is largely due to the enthusiasm displayed by both the sugarcane growers and workers in the sugar factories. But it would appear that the interest of a section of these people are not being adequately safeguarded. For, it is said that kisans who had cultivated sugarcane in large areas in two districts of Madhya Pradesh are now faced with an economic crisis as a result of the inability of factories to move cane from railheads due to shortage of wagons. Some of the sugar mills in this region are also said to be working much below their capacity and it is expected that output will go down further if there is no improvement in the wagon supply position.

It is unfortunate that when the railway is able to allot all the wagons required by the industry, factories are not able to get adequate supply of cane.

*

Medical Treatment

While it is true that even under the vastly changed national policies in our country, any sizable improvement in the standard of living of the people will have to be a somewhat slow process, it does not necessarily mean that ways and means cannot be found to make the period of waiting for the common man more tolerable in the meantime. This can be achieved by cooperative endeavour of the nation as a whole to bring some of the amenities available in the country within his reach. One direction in which attention may be directed is medical treatment the cost of which today in our country can by no means be considered cheap.

Addressing the inaugural meeting of the reconstituted Development Council for Pharmaceuticals and Drugs, Mr Morarji Desai, minister for Commerce and Industry, indicated how Government and the Pharmaceutical industry working in concert could achieve this objective. On their part the Government have already taken steps for drawing up a National Formulary. Further they are trying to set up an Organic Intermediates Factory for the manufacture of intermediates required by pharmaceuticals, dyes and allied industries.

The former will enable the industry to make drugs available to the common man at very reasonable prices as the industry will be able to minimise expenditure on promotion and advertisement. As the programme of production of the Organic Intermediates Plant will be kept reasonably elastic to adjust according to the needs of the concerned industries, the dependence of the pharmaceutical industry on the import of raw materials will be greatly reduced. The dependence on imports can also be reduced by taking steps to utilise the vast resources of drugs of vegetable origin available within the country. Mr Desai pointed out in this regard that there was no need merely to copy out the trend in western countries of producing every drug synthetically. The quality of indigenous manufactures can be vastly improved by setting up jointly with the cooperation of the medical profession, testing laboratories to certify the products of the Indian industry.

NORTH INDIAN MARKETS

Sugar Season to Close Earlier?

EARLIER expectations that the Sugar season would last till June-end might not materialise this year. If the season ends by May 15, the overall sugar production is not expected to exceed 19 lakh tons. According to the latest reports, many factories are experiencing shortage of cane and some have already stopped crushing operations. While the Government of India are eager that the season should be extended, mills have complained that the recovery is declining and they are, therefore, reluctant to prolong operations.

On the export front, however, the industry is reported to have fared well, the total business put through till April 10 being estimated around 85,000 tons. The balance is expected to be exhausted soon. Rumours are current that the Government will soon announce a further export quota, taking the total upto 2 lakh tons for the current season. A section of the trade, however, fears that higher exports may create scarcity conditions in the internal market and a consequent rise in prices. The industry is reported to have suggested that the decision about more exports should be taken only after June 15 as the total output for the season may be known by then. The carryover for the next season is expected to be around 4 lakh tons.

Meanwhile, sugar prices have recorded slight gains. Following rates were quoted (per maund) in the Hapur market:—Jaswant Rs 28.69; Simbhauli Rs 28.87; Mowona Rs 28 to Rs 29; Daurala Rs 29.50 to Rs 30.61: Amroha Rs 28.25; Bijnore Rs 28.12; Mansoorpur Rs 28.69 to 30.37 and Rampur Rs 30.50.

Prospects of good demand kept the Meerut sugar market steady although the offtake was small. Saurashtra. Gujerat. Rajasthan and the Punjab were the main buyers, though of small quantities. Small grain quality was quoted at Rs 28.50: Medium at Rs 29.75 and the bold variety at 31, all per maund.

*

Gur

In the Hapur market, Gur prices developed a slightly firmer tendency as local arrivals shrunk to an average of 100 maunds daily. Stocks were put at 97,000 maunds. Total arrivals, since the beginning of the season, totalled about 4.55 lakh maunds.

Earlier reports that Gur would be utilised by factories for the manufacture of sugar are now reported to have been found uneconomical by the factories.

*

Shellac

The Shellac market in Calcutta remained practically unchanged. Pure TN quality was quoted around Rs 88 per maund. Arrivals during April till the 27th were 17,420 packages.

Foreign enquiry, especially from the USA is reported to be normal. Shipments have been maintained around 35,000 packages a month.

Arrivals of the Bysakhi crop have begun. Although the crop is likely to be smaller than previous estimates, it may amount to 7 lakh maunds, which will be the same as last year. Sellers are generally reserved following the news that the crop has been damaged by hailstorms in Bihar and western Madhya Pradesh though it is still doing well elsewhere.

*

Foodgrains

Prices of Foodgrains showed a mixed trend last week. In the Hapur market, Wheat prices, after touching low levels of Rs 14 and Rs 15 per maund for average and farm qualities, firmed up to Rs 15.25 and Rs 16.50 respectively at the close. Daily arrivals averaged 250 maunds. Although thrashing operations are in full swing, scarcity conditions in east Uttar Pradesh and Bihar have induced producers to retain stocks in expectation of better prices in the near future.

Gram prices were steady, while Barely and Bejhar improved fractionally as daily arrivals were hardly sufficient to meet the day-to-day demands of consumers. Jowar prices continued to rule steady due to good demand. Brisk buying from Assam, Bihar and east Uttar Pradesh accounted for a hardening trend in Peas prices . Although loading facilities were very restricted, traders were getting stocks ready as soon as loading facilities eased. Prices of other Pulses ruled quiet.

Prices in the Delhi grains market displayed a hardening tendency Demand was better, resulting in the price of wheat moving up by about Re 1 per maund. Gram registered small gains owing to better offtake and good demand from Madras. The improvement of about Rs 1.50 per maund in Rice prices was prompted by higher outside advices. Arrivals were slack, while demand was better.

The Peninsula

Radio-active Sands in Kerala?

India's interest on atomic explosions and their consequences has hitherto sprung from a broad humanitarianism and a special awareness of the sufferings of the Asian peoples, arising out of the concentration of tests in the Pacific. Some time ago, there were reports that fish and vegetables in Calcutta showed effects of radiation. But beyond a thin veneer of curiosity, these reports failed to arouse any serious reaction.

The Union Government have protested against nuclear tests and the latest move of referring the legal aspect of these explosions to a Committee of Asian Lawyers, marks a formal recognition of a development over which the whole world is, though mostly impotently, concerned.

A few eminent persons like Mr C. Rajagopalachari have taken up the hydrogen bomb explosions conducted by Western Powers as an issue which should compel the Indian Union to break off from the Commonwealth. Lately Soviet Russia has also been vigorously competing in H-bomb tests, whose atmospheric repercussions have invaded large areas of China, a circumstance which has provoked frankly uncomfortable comment by one prominent spokesman of the Chinese Government. For China no less than Japan, these nuclear explosions have become a matter of, if not actually life and death, large-scale national debilitation and undermining of physical energy.

India is lucky to be situated farther away from the sites of these tests, though absolute immunity even at this distance is not assured. What is more, even the occurrence of radio-active materials in parts of India are found to be having deleterious effects, though the actual extent of harm remains controversial.

According to Dr H Bentley Glass, of John Hopkins University, the effects of radio-active sands on human beings in South India have already passed the danger limit. Addressing the Annual Meeting of the National Academy of Sciences at Washington on April 24, Dr Glass referred to the studies of Indian scientists on these effects and said that preliminary studies on the Travancore population showed that fishermen living in huts absorbed in the first 30 years of life a radiation dose to the reproductive glands of 50 Roentgens, while fishermen living on the beach received up to a maximum of 177 Roentgens. This was from 5 to 17 times more than what the National Academy of Sciences had recommended as a "permissible limit" for the general population in the US. Even this safe amount of 10 Roentgens was now thought to be excessive by some scientists. This is indeed an alarming revelation and one is tempted to turn for comfort to the rejoinder issued by Dr J. H. Bhabha, the Chairman of the Atomic Commission of India.

Dr Bhabha, commenting on the US scientists' speech, promptly dispelled the fear of any great genetic effects on the population of Kerala arising from the radiation of the monozite sands, one of the main sources of fissionable material. He pointed out how people in Kerala were living for centuries and said that they would go on living. But from what another member of the Commisson is reported to have stated, it does not appear that Dr Bhabha's conclusion represented the final word on it.

That there was some radiation on the neighbouring people and over a fairly large area seem to be universally admitted by the scientists who have studied this question. Where they differ is in regard to the harmful effects of this phenomenon. It is understood that more detailed studies by Indian scientists would shortly be undertaken. Dr Glass also wants this to be done. "It is a matter of utmost urgency that studies on the effects of radiation of monozite of sand on the beaches of Travancore be pushed ahead".

The Doctor also indicates the possibilities of a reappraisal of the present estimate of the danger limit of radiation which could produce mutations in the human race. His present conclusions are drawn from the work of a number of Indian scientists whom he has named. Among them are Mr D. S. Bharatwal, and Mr G. H. Vaze of the Atomic Energy Establishment at Trombay and Mr A. R. Gopal Ayyangar, a Geologist of the Indian Atomic Energy Authority.

At the present state of knowledge of the consequences of the development of nuclear energy, even the fundamental distinction based on industrial versus military utilisation is getting somewhat blurred. Dr Glass quotes good authority, and says that "a hundred megawatt heat reactor will produce annually the same quantity of longlived fission products as the detonation of a one megaton fission bomb.

The problem of safe disposal of the large quantities of the vast mass of this form of energy scheduled to be released in the course of the next few years is itself stupendously alarming. Perhaps, the atomic scientists who have chosen to question openly the wisdom of explosions know much more than what they care to tell the world. In the appeals put forth by Professor Otto Hahn and Dr. Schweitzer, both of them draw the world's attention to the fact that every body, Americans, Britons and Russians, must get together to stop this terrible pest. They have warned that radio activity was a catastrophe to the human race. If even the inactive presence of fissionable materials can be injurious, then opinion will have to be revised on the peaceful utilisation of nuclear energy too.

Once the monozite in Kerala has attracted serious international controversy and the inhabitants of the neighbourhood are naturally puzzled and bewildered, Indian scientists must lose no time in taking up a thorough investigation of the effects of the occurrence of the sand. Dr Bhabha's statement is somewhat reassuring but as his own colleague admits, a conclusive and final verdict on the subject could be given only on the strength of more detailed knowledge of all the relevant facts.

Meanwhile, one would not be surprised, if local non-political opinion becomes suddenly friendlier to the export of the sand. It will be regarded a welcome riddance.

TEZPORE TEA COMPANY LIMITED

NOTICE

The Directors have declared on 25th April, 1957 a Dividend at the rate of 8% per annum, without any deduction for Income-Tax paid by the Company, payable on the Cumulative Preference Shares for the year 1956.

Dividend Warrants will be despatched to the registered addresses of, or in accordance with the instructions received from, those Members whose names appear in the Company's Register on the 28th May, 1957. The Transfer Register will be closed from the 20th May, 1957 to 28th May, 1957 both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.
26th April, 1957.

THE MODERN MILLS, LIMITED.

Notice of 16th Dividend

NOTICE IS HEREBY GIVEN THAT a Dividend of Rs. 5 and a Bonus of Rs. 3 per share of Rs. 50 for the year ended 31st October, 1956, sanctioned by the Shareholders at the Twentythird Annual General Meeting held on the 24th April, 1957, is made payable at the State Bank of India, Bombay, on and after Monday the 29th April 1957 to those Shareholders whose names stood on the Register of Members on the 27th March 1957. The dividend warrants are made negotiable at par at the State Bank of India, Bangalore.

By Order of the Board,
N. SIRUR & CO. PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Registered Office:—
Temple Bar Building,
70, Forbes Street, Fort,
Bombay.
24th April, 1957.

MAHINDRA & MAHINDRA LIMITED

NOTICE

The Eleventh Annual General Meeting of the Shareholders of Mahindra & Mahindra Ltd. will be held at the Green's Hotel, Apollo Bunder, Bombay 1, on Wednesday, 22nd May 1957 at 4.00 p.m. to transact the following business:—

(1) To receive and adopt the Directors Report, the audited balance-sheet and profit and loss account for the year ended 31st October, 1956.

(2) To declare dividend on Preference and Ordinary Shares.

(3) To appoint a Director in place of Mr. A. K. Mitra who retires under Article 110 of the Articles of Association but is eligible for re-election.

(4) To appoint a Director in place of Mr. Keshub Mahindra who retires by rotation under Article 110 of the Articles of Association but is eligible for re-election.

(5) To appoint a Director in place of Mr. Jal H. Mehta who retires by rotation under Article 110 of the Articles of Association but is eligible for re-election.

(6) To appoint Auditors for the Current year and to fix their remuneration.

A member entitled to attend and vote at a Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

By Order of the Board,
KESHUB MAHINDRA,
Director.
11th April, 1957.

The Transfer Books of the Company will be closed from the 8th May 1957 to 22nd May 1957 both days inclusive.

The dividend when sanctioned will be payable to those shareholders whose names stand on the Register of the Company on 22nd May 1957 and the Dividend Warrants will be posted to them on or after 23rd May 1957. Shareholders are requested to immediately notify any change of address.

Kerala's Plans

Though indications were already available as to the policies to be pursued by the Communist Government of Kerala, a clear picture has emerged only after last Saturday when the newly-elected Kerala Assembly met for the first time. Addressing the session, Dr B. Ramakrishna Rao, the Governor of Kerala, explained how the State Government proposed to deal with the various problems confronting it. In the programme to be fulfilled the question of land reforms has been given high priority because it has a direct relation to the two important problems of food production and agricultural development. In view of the urgency of the matter, Government has revised its original proposal and has now decided that draft Land Reform Bills should be straightway prepared by Government itself. In doing this the Government will study all the material so far collected by the Land Reform Panel of the Planning Commission as well as by the Select Committee which studied the bills introduced in the former Travancore-Cochin Assembly.

Reform of the administrative set up, provision of drinking water in the coastal areas, integration of the services, and integration of the educational codes are also given high priority in the programme. On the industrial front, the Government proposes to press its claims for having the proposed second shipbuilding yard within its borders. Moreover, the Centre will be asked to locate a paper mill, a cycle factory, and a rubber tyre factory in the State. The Governor said that the State Government was preparing a Master Plan fully to exploit the State's natural resources. The Government will also do its utmost to maximise production of electricity and transmit current even to remote villages. In this connection a proposal to nationalise existing electricity undertakings now run by private agencies is under consideration.

All this no doubt makes quite encouraging reading. But when one comes to the passage which refers to the financial aspect of these proposals, one finds that there is a big "IF" between them and their fulfilment. The Governor's address itself concedes that the progress that is devoutly wished for by the new Government is dependent on the size of the financial aid given by the Centre. In its opinion the provisions made for the State under the Second Five-Year Plan are inadequate; and it is argued, that even on the basis of the proportion of the State's population to the total population of the country, Kerala is entitled to get almost double the allocation as at present made to it. The correct criterion, however, should be the density of population. The State Government will, therefore, do its best to secure a favourable revision of the provisions under the Second Plan. In this regard it will put up a strong case before the Finance Commission when that body visits the State in June. In order to strengthen its plea further, it will endeavour to get the cooperation of important sectors of public opinion in the State.

*

Wool Industry

Those who shout from the housetops that the days of private enterprise in this country are numbered, would do well to look at the commendable headway being made by our wool industry and the Government's programme of assistance to help it grow big fast. The progress achieved by this industry is borne out by the tribute paid to it by Mr John G. Hurley, leader of the Australian Trade Mission now touring India, who said that he was agreeably surprised at the fine quality of the output of our woollen mills. Quite naturally, its record in the past few years has attracted the attention of Government. From the trend of the speech of Mr Manubhai Shah, Union Minister for Industry, at the meeting of the Woollen Development Council in Bangalore last week, it would appear that Government are contemplating a radical alteration in the target set for the wool industry under the Second Five-Year Plan.

The production of raw wool has risen from 50 million to 60 million pounds per year during the past ten years. Production of woollen and worsted yarn has increased from 19 million pounds in 1954 to 26 million pounds in 1956 and that of woollen cloth from 13 million yards to 16.5 million yards during the same period. The position today is that after meeting the domestic demand of woollen yarn and woollen cloth, the industry has a small surplus for export. Export earnings from woollen carpets and fabric now amount to about Rs 5 crores worth of foreign exchange per year. Thanks to the energetic efforts of the Export Promotion Committee, the exports of woollen fabrics, carpets, druggets and hosiery are on the increase in the current year.

In one important aspect, however, the industry is still backward. A large portion of its requirements of wool tops is being imported. The manufacture of wool tops is a "vitally important sequence which transforms the raw wool into a fine long continuous hank ready for spinning", and facilities for this are inadequate in the country.

Mr Manubhai Shah emphasised the need for achieving self-sufficiency in wool tops by raising the target from 9 million lbs to 18 to 20 million lbs in the next four years and assured the industry that it would get the fullest assistance from Government to speed up the manufacture of woollen textile machinery.

Meanwhile, figures of exports from the various Ports in the country, since the beginning of the current season (November 1956), disclosed a better trend. The quantity exported between November 1, 1956 and January 31, 1957, is higher by 17,333 cwts at 106,123 cwts as against 88,790 cwts in the corresponding period of last season. The USA has continued to be the largest consumer of Indian pepper with the offtake placed around 24,404 cwts in January. Russia has been a close second, with a quantity of 22,000 cwts.

*

Groundnut

The Madras Groundnut market ruled active during the past week, thanks to sizable buying by Calcutta interests. Arrivals averaged 40 to 50 tons per day. Total volume of business was reported to be better than in the past few weeks and stocks with commission merchants declined to some extent. The rate for superior oil-quality seeds was quoted at Rs 162 per candy and the bold variety at Rs 156.

Reports from upcountry centres indicate that rains are immediately required for the standing summer crop as also for sowing operations in the Pollachi-Coimbatore area.

The Groundnut Oil section, however, ruled quiet on fears that Forward Markets Commission might extend the double margin system to groundnut and castorseed following cotton. The rate for the ready position, after improving to Rs 327 from Rs 324, eased off at the close to Rs 325 per candy.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow were slightly better last week. Clearances were also good. Enquiries from the UK still continued to be slow. There were some enquiries for inferior fifths at unchanged prices. Stocks of Buff hides were fair; but business with the UK was more or less impossible as buyers were not interested to purchase at present. In Cow Calf section, arrivals were fair with good clearances. Prices ruled firm. Arrivals and clearances of Buff Calf were fair with prices ruling unchanged.

In the Tanned Skins section, bazar quality Goat skins were 9 to 12 nP per pound higher, while aduterated skins were quoted 9 nP higher.

On the export front, prices for good quality Goat skins remained very firm, 8-9 lbs and 11-12 lbs averages being in good demand. Prime and Semi-prime sheep skins remained firm with London buyers trying to negotiate business at a Reduction.

The markets for Raw Goat and Sheep skins remained unchanged in

(Continued on next page)

SOUTH INDIAN MARKETS

Fresh Improvement in Pepper Prices

PEPPER has annexed fresh gains during the week on sustained enquiries from New York and Bombay. The undertone of the market remains very firm and the rate has moved up to Rs 625 from Rs 575 per candy. A section of traders and growers is bullishly inclined, as shipments to Ruasia and other East European countries, up to the end of May, are likely to be about 4,000 tons. The total export from November to April to all destinations is also expected to reach a high figure of about 9,000 tons.

In the context of the above, any aggressive demand from the USA, in future is sure to push up the prices. But the rise is likely to be slow, as Malabar has to face competition from Sarawak and Lampong during the coming months. Bulls are, therefore, cautious in rigging up prices on fears that Sarawak and Lampong may undersell them during their harvesting seasons, which begin in May in the case of Sarawak and in August in the case of Lampong.

Arrivals in the terminal markets are said to be normal, which are being quickly absorbed as a result of a steady demand. The Sarawak crop has just begun to move; but the quantum of arrivals has not been sizable, which is an advantage to the Indian crop. Much, however, depends on the size of the new crop.

OLYMPUS

(Continued from page 823)

About that pivotal person, the village level worker, certain recommendations made in last year's report are repeated. It is the need for defining his role and functions. Partly as a result of "normalisation" of the community project idea, there is an apparent slackening of tempo: consequently, the village level worker finds, astonishing as it might sound, that he has not enough to do. This shows an orientation of attitude that is not healthy. If a village level worker thinks that his usefulness is over, once a road is made or a community centre is built and a radio set installed, he is sadly mistaken. His task is to get beneath the skin, so to speak, of every villager and devise, with all the ingenuity he is capable of, methods for meeting his requirements. It requires originality, imagination and a high degree of idealism to perform these tasks and there won't be any news reel photographer to publicise these most vital tasks.

The last important point made by the PEO that I shall discuss is its finding about the dismal failure of the co-operative idea in the project areas. Considering the importance attached to co-operation (as an instrument of rural regeneration) under the Second Plan, its failure to capture the imagination of the people in areas that have had some taste of the good things of life is discouraging. Except for the conventional tasks of providing monetary credit, the co-operatives have made no headway. "Multipurpose co-operatives are multipurpose only in name and just function as credit societies". The report suggests detailed study of "integrated finance" which has been working with some success in some of the project areas. It is also suggested that greater education in co-operation be given to people in community project areas so that the attractions of the idea may seep into the community.

The final summing up by the PEO of its findings is: "While there has been considerable increase in rural consciousness of economic and to a smaller extent, to (sic) social needs, the objective of stimulating continuing and positive effort based on self help for promoting economic or social development has been comparatively unsuccessful". This is really an optimistic conclusion. The first job of the community development idea was really not so much the satisfaction of needs as the creation of the consciousness of the needs. The first requisite of getting anything is an acute consciousness of its lack and once this consciousness is there, the lack is sure to be made good. This is so, especially when at the giving end, there is some one who is anxious to do all he can to help.

Bangalore. In Bezwada, goat skins were reported Rs 10 per 100 skins higher with sheep skins ruling unchanged.

*

Coffee

The Coffee Board has released, for export out of India, 1,516 tons of Coffee out of the 1956-57 season. This quantity includes 1,008 tons of Plantation "A"; 227 tons of Plantation "B"; 181 tons of Plantation Triage; 77 tons of Arabica Cherry Flats; 15 tons Arabica Cherry PB and 8 tons of Arabica Cleanings Flats. The last date for tenders is 14th May, 1956.

MINERVA MILLS LIMITED

NOTICE TO SHAREHOLDERS

NOTICE is hereby given that the Thirty-seventh Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Monday, the 17th day of June, 1957 at 4 P.M. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December 1956.
2. To declare a dividend.
3. To appoint Directors in place of those who retire, but also are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 13th day of May 1957 to the 8th day of June 1957, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

Detailed Notice setting forth all the items of business to be transacted at the above Meeting is being published in the Press and will be posted to the shareholders individually.

By Order of the Board,
N. SIRUR & CO. PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Bombay, 24th April 1957.

N.B.:—The Dividend when declared will be made payable at the State Bank of India, Bombay, on and after Monday, the 24th June 1957 to those shareholders whose names stand on the Register of Members on the 13th May 1957 and who have paid all dues to the Company whether in respect of the calls on their shares, interest thereon or otherwise. The dividend warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

STERLING SUPPORT TACTICS

(Continued from page 816)

the 'thirties. They usually aimed at "bear squeezes". When the dealers were short of sterling the authorities intervened in order to accentuate the shortage, thereby frightening the bears into covering. Such operations were often very profitable, and the profits made on them have largely contributed towards the accumulation of a substantial gold and dollar reserve by the outbreak of the Second World War. One of the reasons why some foreign exchange experts advocate the abandonment of the rigid parities of sterling in favour of the system of a floating pound is their nostalgia for the pre-war days when the mobility of the rates made such tactics possible and profitable.

The present experiment with the pre-war tactics was not sufficiently successful to provide supporters of the floating pound with ammunition in their arguments with supporters of the rigid pound. For the recovery of sterling on April 24 proved to be short-lived. Its extent was moderate, and it was followed by a partial relapse during the next two days. Although it is just possible that the demand for sterling that developed as a result of its rise enabled the Exchange Equalisation Account to pick up the dollars spent on bringing about the initiation of the tendency, it seems more probable that on balance the authorities have lost rather than gained dollars. The private demand that followed the artificial rise of the rate was not sufficiently strong or lasting to enable the authorities to derive benefit from it. Admittedly, at the end of the week sterling retained some of the ground gained on Wednesday. But the gain was not substantial, and the position remained fundamentally unaffected.

Nor was the timing of the intervention particularly well chosen. The authorities ought to have intervened at a moment when the natural trend itself was decidedly firm. By accentuating a rising trend they might have scared foreign importers and other sterling debtors into covering their requirements, and sterling balances of foreign banks might have been replenished. But the extent to which this was done on April 24 was moderate. Most of those short of sterling preferred to wait and see how the upward movement was developing. In any case their risk was limited by the official policy of checking any upward movement when it reaches $2.82.

Possibly the authorities are anxious to create the right atmosphere for a Treasury conversion operation which is expected to take place within the next month or so. In order to be able to issue the new loan on reasonably favourable terms it would be necessary to lower the Bank rate once more, or at any rate to create an atmosphere in which a reduction is widely anticipated. To that end firmness of sterling would be helpful, for the Bank rate is not likely to be reduced when sterling is weak. It may be worth while for the Treasury to sacrifice some dollars in an effort to cause a temporary rise in sterling, for the sake of being able to issue its loan on more favourable terms. If this interpretation is correct, then it seems probable that there will be more intervention in the foreign exchange market between now and the issue of the conversion loan. The fact that the rise in sterling was accompanied by a rise in Government loans, and that the latter retained much of their gains after sterling receded some of its artificial improvement, is likely to encourage the authorities to repeat the experiment.—(Copyright).

CLIVE STREET GOSSIP

(Continued from page 820)

Let me add a post-script on India's behaviour with regard to another type of obligation. On the partition of India and on the emergence of Pakistan as a sovereign state, we had to pay something like Rs 50 crores in respect of cash balances. This payment became due when the relations between the two countries were highly strained, and when it could be definitely assumed that the transfer of Rs 50 crores would strengthen Pakistan vis-a-vis India. The first impulse was to freeze this amount. Operations of freezing foreign balances in certain situations are well known in international relations. India was first inclined to have recourse to a measure of this kind. This had, however, to be abandoned, not because of any pressure exerted from any outside quarters, but because of Mahatma Gandhi's moral pressure. He threatened to go on fast, if New Delhi insisted on withholding payment to Pakistan. Rs 50 crores and odd were promptly handed to Pakistan; and we can regard this as the proudest plume in our credit cap.

EAVESDROPPER

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of a Dividend on the Company's Preference Stock at the rate of £1-1-10½ per cent net for the three months ended 31st March, 1957. Payment will be made on 15th May 1957 to those stockholders whose names are registered in the Company's Stock Register on 8th May 1957.

Applications for transfers received in this office before 2 P.M. on Wednesday, the 8th May 1957, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board.

Increase in Export Sales in the Face of Keen Foreign Competition

Statement of Mr. R. E. Castell, the Chairman

Presiding at the Thirty-sixth Annual General Meeting of the Shareholders held at the Company's Office, 7, Armenian Street, Madras, on Friday, 26th April, 1957, Mr. R. E. Castell said:—

Gentlemen,

The Report of the Directors and the Accounts for the year ended 31st December, 1956, having been in your hands for the requisite time, I propose with your permission to take them as read, but I will be glad to reply to questions later.

The delay in publishing the accounts and the holding of the Annual Meeting is regretted, but is due to the many complications which arose in preparing the accounts in accordance with the new Companies Act and because of the additional notice to shareholders which it is now necessary to give under that Act.

The year under review was not an easy one for the Indian textile industry and the present trading results of your Company for 1956 owe much to the progress made with modernisation of machinery and manufacturing methods and to the continuing popularity of the Company's products. That this process of modernisation should be continued is essential for maintaining the Company's high standard of quality and to mitigate the effect of higher wages, heavy sales taxes and excise duties, by every possible economy in production methods. There are obstacles now in prospect which are likely to impede our further efforts with the general programme of modernisation, and I think it right that you should be informed of your Directors' present anxiety on this matter. The obstacles before us arise from India's present shortage of foreign exchange, which has caused Govment to adopt a most stringent import licensing policy. The effect on your Company seems likely to be serious as much of our programme of modernisation depends on our obtaining machinery and components which at present can only be secured abroad, and which may not for many years yet be made in India, whereas our needs are urgent.

Our first new Weaving Shed reached the stage of full operation in 1956 and has made a substantial contribution to the increase in the Company's productivity. The completion of our second new Weaving Shed, the building of which is already well advanced, forms an important part of our modernisation programme and to make this second new Weaving Shed as efficient as the first, we require a range of foreign precision-made components for rehabilitating the existing automatic looms to be transferred to it from the old buildings. The issue of import licences to cover these components is of vital importance.

Yet another cause of anxiety is the prospect of drastic cuts in imports of dyestuffs, textile auxiliaries and other essential stores not now made in India, but which are so vital for our present standards of quality and variety. As you know, almost every yard of your Company's production is either bleached or dyed, and much of it is specially finished by one process or another. Unless we have the materials necessary to supply a range of well woven and properly finished cloths in pleasing and lasting colours, we cannot hope to continue to satisfy the Indian public or our customers overseas, who can afford to be fastidious and exacting, as there are other manufacturing countries eager and well equipped to supply all their needs.

The textile industry as a whole was embarrassed last year by accumulation of stocks and this difficulty generally continues. Your Company was not much inconvenienced in this way, but in spite of the widespread popularity of their products, it was found necessary to reduce prices in order to compete overseas and internally to absorb some part of the heavy increases in excise duties during the year, particularly those from 1st September, 1956.

The final official estimate was that by 1960/61 the per capita demand for cloth would be 18½ yards: other authorities, including representatives of the textile industry, and I share their opinion, consider the official estimate too low. At first sight it seems strange that stocks should have accumulated in 1956 when the total production of mill and handloom cloth, less the quantity exported, provided only 16 yards per capita. While there is no doubt that the higher cost to the consumer had in itself a restrictive effect on purchases, the circumstances in which the latest excise duties were imposed gave rise to a widespread belief that they were of a temporary nature and that cloth would be available later on at cheaper rates. There also seems to have been some diversion of spending by the masses to other essentials and to luxuries also.

I am still convinced, however, that within the next year or two the demand for cloth is likely to exceed supply, and I hope, therefore, that Government will not unduly prolong the implementation of their plans, announced in June 1956, for increasing cloth production.

As you will remember, these plans included the handloom industry and the mills, not to mention the powerlooms and the Ambar Charka: for the Mills the plan was to instal 14,600 additional automatic looms to produce 350 million yards of cloth for export. The condtions attached by Government to the scheme for expansion of the mill industry are most exacting, particularly in the obligation that all the production of the new looms must be exported in addition to almost all the production previously exported. For every yard of the guaranteed quantity not exported, it is intended that a penal duty will be levied on the mill concerned. This condition involves a serious business risk for the industry, in view of the ever increasing competition in overseas markets, which has been reflected in the progressive decline in India's exports of cloth for the past three years.

However, after very careful consideration of all the circumstances, your Directors decided that in spite of the risks, it would be wrong to miss the opportunity of increasing the productive installation of your mills, for which we have all waited so long. We therefore accepted an allocation of 144 new automatic looms, but I am sorry to say that we cannot proceed with the procurement of the additional machinery until Government have announced their policy regarding the looms and other machinery which it will be necessary to import in order to expand our unit with proper efficiency. Even if Government make a decision soon, it is unlikely that the new machinery can be installed and in operation before the end of 1958 at the earliest.

I am glad to tell you that by strenuous effort we succeeded in increasing our export sales last year in the face of keen foreign competition with the result that in 1956 your Company earned foreign exchange to the value of nearly Rs. 1,90,00,000. We shall strive to improve on this performance, but it will be difficult even to maintain it unless we continue to be supplied with those essential machines, components, dyestuffs and other materials which we can as yet only obtain from abroad.

In 1956 nearly 10,000 bales of yarn were supplied by your Mills to the handloom industry against 8,500 bales in the previous year. It is possible that in the next year or two, with so many new spinning mills coming into production, and the spindleage of existing mills being increased, our statutory obligation to supply in quantities which are large for a composite mill such as ours, will be reduced or even removed.

When I addressed you last year, I mentioned that certain disputes which had been raised by labour were to be the subject of arbitration by the Hon'ble Mr. Justice Ramaswamy Gownder.

In all, thirteen major issues were referred to the Arbitrator including such important ones as wages, leave facilities, bonus, shift timings, dearness allowance and gratuity.

The Award was recently published and by it Labour was granted an increased minimum basic wage, a short term Gratuity Scheme and certain other benefits. The rate of dearness allowance, the system of bonus, the leave facilities and shift timings were left unaltered, but in all, the Award has placed a considerable additional financial burden on the Company.

During the year there were one or two stoppages by sections of labour but fortunately work was resumed interruption of the production of the Mills as a whole assumed serious proportions.

For reasons which are difficult for us to understand, the Madras Labour Union withdrew from the Mill Labour Advisory Organisation.

There is little to comment, I think, on the published Accounts which are now shown in much greater detail than has been the practice in the past. It was unfortunate that the improvement in production was off-set by increased costs and reductions in selling prices.

It has been necessary to allocate Rs. 20 lacs from Profit and Loss Account in respect of the short-term Gratuity Scheme, to which I have already referred, this being the estimated liability on this account as at the date of the Balance Sheet.

You will note that an amount of Rs. 35,50,000 has been transferred from Taxation Reserve to the Provision for Increased Replacement Costs of Buildings and Machinery and, as this represents relief from taxation on our profits for 1954 and 1955 through the operation of allowances for initial and extra depreciation and development rebate, it is but logical to utilise it for the purpose for which it was intended by the Government of India, that is, to finance the expansion of our reconstruction programme.

Debentures to the face value of Rs. 8,50,000 were redeemed and cancelled during the year and, in accordance with our practice, a similar amount has been transferred from the Debenture Redemption Fund to the Provision for Increased Replacement Costs of Building and Machinery.

Since the introduction of the Interim Budget in December, 1956, your Directors have been perturbed by the implications of the provisions relating to the compulsory deposit with the Central Government of certain proportions of accumulated and current reserves. It is obvious from our published accounts that the effect of this legislation could be extremely serious for your Company and it is, therefore, sincerely to be hoped that the draft rules which have recently been published for general information will finally make it clear beyond all doubt that those Companies whose reserves are being fully used for the purpose of the business will be exempt from making such deposits.

The liabilities of the Workpeoples' and Employees' Provident Funds, the accounts of which are now maintained by the Trustees, amounted at the 31st December, 1956 to Rs. 1,50,47,590 and Rs. 13,32,355 respectively, and corresponding amounts have been invested in Trustee Securities.

In 1956, the Company made a donation of Rs. 75,000 to the University of Madras on the special occasion of its Centenary. This sum combined with donations from the Bangalore Woollen, Cotton and Silk Mills Co., Ltd. and Binny & Co. (Madras), Ltd., has been earmarked to provide a hostel for accommodating research students in chemical engineering, textile technology and allied subjects.

Nowadays there is little if anything which is either private or free in that sector of enterprise in which we are engaged but in spite of all new problems and difficulties your Company has made further progress. I would like once again to ask you to join me in a word of praise for the executive and supervisory staff of the Management and the Mills. By their conscientiousness and zeal, they are helping your Company to make a valuable contribution towards the Second Five-Year Plan and I only wish that their efforts could be rewarded and further inspired by some mitigation of the present harsh personal taxation.

I deeply regret the untimely death last year of two former Directors of the Company, Mr. B. W. Batchelor, C.B.E. and Mr. D. V. Bulloch, whose energy, foresight and enterprise during their many years of service achieved so much for the lasting benefit of your Mills.

Note:—This document does not purport to be a report of the proceedings of the General Meeting.

The Banglore Wollen, Cotton & Silk Mills Co., Ltd.

Another Successful Trading Year

Prospect of Shortage in Cotton Textile Availability

Review by the Chairman, Mr. R. E. Castell

Presiding at the Seventy-fourth Annual General Meeting of the Shareholders held at the Registered Office of the Company, Agraharam Road, Bangalore City, on Saturday, 27th April 1957, Mr. R. E. Castell said:

Gentlemen,

The Directors' Report and Accounts for the year ended 31st December 1956 having been with you for the requisite time, I propose with your permission to take them as read, but after my speech I shall be glad to attend to any questions members may wish to ask.

The delay in publishing the accounts and the holding of the Annual Meeting is regretted. It is due to complications arising from the introduction of the new Companies Act and because of the additional notice to shareholders which it is now necessary to give.

As you will see from the accounts, your Company has concluded another successful trading year, the results of which have been assisted by the continuing programme of rehabilitation and replacement of machinery and the further improvement of processing methods. In spite of all that has already been accomplished, we still have a long way to go before we can complete our plans for modernisation and for this purpose more machinery and components are required, some of which must of necessity be imported, and we trust that our further progress in this direction will not be retarded by the present stringency in Import licensing arising from the shortage of foreign exchange.

As you know, your Company manufactures an unusually wide range of textile fabrics, including cotton, woollen, union and silk goods, and to maintain our reputation for quality and variety, it is impossible to rely wholly on equipment and materials made in India. Apart from the matter of machinery, therefore, your Directors are perturbed by the prospect of severe cuts in imports of those dyestuffs and other essential stores which can only be obtained abroad.

Last year, the Indian textile industry as a whole experienced an accumulation of stocks, and these conditions still obtain. I think it must be accepted that the heavy increases in excise duties during 1956 were largely responsible for the decline in offtake. Traders have developed the habit of buying cautiously partly because of the general impression that the last increases in excise duties on 1st September 1956 were a temporary measure and also because of the uncertainty about Government's intentions for replacing existing sales taxes on cotton textiles by excise duties. The consumer is also being cautious or may be he is spending more of his money otherwise.

There was no serious accumulation of stocks in your Mills during the year, but it was found necessary to reduce prices for cotton cloth in order to keep goods moving despite the increases in excise duties already mentioned. It seems strange that the supply of cloth should be more than enough when only 16 yards of mill and handloom cloth is presently available for internal consumption and one could reasonably expect demand to be rising towards the official estimate of 18½ yards as at the end of the Second Five Year Plan, an estimate which many of us consider to be too low.

I do not think, however, that we should be misled by the present apparent adequacy of supply as within a year or so there is more likely to be a shortage. I hope, therefore, that Government will proceed with their plans announced last year for the expansion of the textile industry. For the most part these plans depend on expansion by the handloom industry assisted by Spinning Mills and Ambar Charkas and on conversion of handlooms to powerlooms. The expansion of composite mills has in fact been linked to the export trade.

The conditions laid down by Government for the installation of additional automatic looms were difficult in several respects, particularly in their insistence that all the production of the new looms be exported, as well as almost all the production previously exported. However, after carefully considering very aspect of the matter, your Directors decided that the Company should not miss the opportunity to expand their existing installation. We have, therefore, accepted an allocation of 96 new automatic looms, of which we have agreed to buy 24 from Indian manufacturers. We are waiting for Government to announce their policy regarding the other looms which we need to buy abroad.

In spite of intense competition in overseas markets, the Company's export sales of cloth in 1956 were considerably more than in the previous year, and we shall continue to exert ourselves to secure foreign exchange for India by further developing our export trade.

It is pleasing to record that after several years of losses, the Company's woollen section made a modest profit in 1956. This change of fortune was the result of sustained efforts by our technical, administrative and sales staff to increase production and to introduce new qualities and designs. Every further effort will be made to ensure that the woollen section continues to pay its way, but a fair reward is unlikely to come to us or any other unit of the Indian woollen industry so long as the present heavy excise duties and cesses apply to woollen goods. Also, for some time now we have had to pay hiigher prices for wool, both indigenous and imported.

The year brought a further increase in production and sales of our popular Union fabric "Cotswol" and of the heavier cloth "Angola" which although mainly supplied to the Armed Forces is also in general demand.

Production and sales in the Company's silk section exceeded all previous records, but we now face a new problem in that we specialise in the manufacture of superior quality silk sarees and other fabrics, and although we use considerable quantities of raw silk produced in Mysore State, we must rely on importing a proportion of our requirements of filature silk and most of our needs of spun silk to maintain our reputation for the quality of our silk fabrics until such time as the indigenous materials are further improved. Unfortunately supplies of the imported materials have lately been severely cut and unless we can find some remedy for this, our production and trade in silk fabrics is likely to be seriously disturbed.

The imposition of a heavy octroi duty on raw materials and other essential items entering the City limits, announced by the Bangalore Corporation in 1954 is still a matter serious in its implications. The Company lost its case in the Mysore High Court, but has decided to appeal to the Supreme Court, for if this duty prevails, the local industry will be handicapped by an increase in costs which will not affect other manufacturing centres.

Towards the end of 1956, the Company was asked to reduce consumption of Corporation water supply by 40 per cent. So heavy a reduction would have seriously disturbed the Company's manufacturing activities, but fortunately the Authorities later agreed to reduce the cut to about 20 per cent. Within this limit we have so far managed to avoid any serious dislocation of our output, but although we shall continue to do everything we can to offset the reduced water-supply by economies in consumption and use of bore well water, we hope that the former full supply of Corporation water will be restored shortly.

Although during the year we were involved in long discussions and negotiations with the Labour Association on a number of issues, I am glad to say that there were no stoppages of work causing loss of production.

Your Directors have set aside Rs. 3 lacs to cover the estimated cost of Workpeople's housing during 1957, including the electrification of all the houses in Binnypet Village.

The published accounts, particularly the Profit and Loss Account, have this year been shown in much greater detail and I think, give you all the information you require regarding the financial position and the trading results of the Company.

Although there was a slight reduction in the profits of the Cotton Section, satisfactory trading in all other sections was responsible for the improvement in the profits when compared with the previous year.

You will observe from the comparative figures given in the Directors' Report that the allocations for Depreciation, Bonus, Officers Retiring Fund and Dividends remain approximately the same, but that it has been necessary to increase the Provision for Taxation by Rs. 9½ lacs in order to cover the liability on the higher profits and also that arising from the additional burdens placed on companies by the Finance Acts of 1956.

In this regard I refer to the incidence of the increased Dividend Tax which is particularly severe on Companies where the ordinary capital represents a relatively small proportion of the total effective capital. In the case of your Company, for example, the ordinary dividend represents a modest distribution of profits of slightly over 4% on the ordinary capital plus the reserves and it seems to me inequitable that we should be called upon to pay the excess Dividend Tax. However, merely because this tax is assessed arbitrarily on the rate of dividend on the ordinary capital, we are liable to an additional tax of Rs. 2,83,500.

Your Directors view with grave concern the implications of the provisions relating to the compulsory deposit with the Central Government of certain proportions of accumulated and current reserves. This Company, which has consistently followed the conservative financial policy of a reasonable allocation of profits between dividends and reserves is all the more adversely affected by this recent legislation and I can only hope that the draft rules, which have recently been published for general information will finally make it clear beyond all doubt that those Companies where the reserves are being fully used for the purposes of the business will be exempt from making such deposits.

At an Extraordinary General Meeting of the Company held on the 29th March 1957 the necessary resolutions authorising the capitalisation of Rs. 81 lacs from reserves and the issue to shareholders of two ordinary shares for each ordinary share held by them on that date were unanimously passed and the new share certificates are now being prepared and will shortly be issued to shareholders.

You have already received notice of an Extraordinary General Meeting which is to be held later this morning for the purpose of passing certain resolutions regarding the re-appointment of Binny & Co. (Madras) Ltd. as Managing Agents of the Company for a period of 10 years with effect from 1st January 1957. The results of their management over a long period of years are well known to you. I am happy to inform you that the Central Government have approved of their re-appointment and your Directors recommend these resolutions for our approval.

The Workpeoples' and Employees' Provident Funds do not appear in the published accounts of the Company as they are vested in Trustees. The liabilities of these Funds as at 31st December 1956 amounted to Rs. 64,12,070/- and Rs. 4,58,264/- respectively and corresponding amounts are invested in Trustee Securities.

I feel you will wish to join me once again in expressing appreciation of the valuable work done by the executive and supervisory staff of the Management and the Mills.

I deeply regret the untimely death last year of two former Directors of the Company, Mr. B. W. Batchelor, C.B.E., and Mr. D. V. Bulloch, who worked in Bangalore for several years and whose endeavours over a long period contributed much to the present efficiency and prosperity of these mills.

Note:—This document does not purport to be a report of the proceedings of the General Meeting.

World of Cotton

Futures Cross Marginal Levels

ALTHOUGH the Cotton futures market retreated early in the week as a sequel to the Government's determined bid to combat inflationary forces in the commodity, both the contracts rose appreciably and crossed even the marginal levels towards the close. The initial weakness of the market was mainly due to operators' reluctance to extend commitments on fears of further restrictions on transactions. Speculative bulls sold heavily with a view to avoid payment of margins by bringing the price level in Jharilla May contract below the stipulated level of Rs 700. Rates, therefore, opened weak and declined further in the absence of buying enterprise. Towards the close, however, the rate advanced with occasional long liquidation readily absorbed by persistent short-covering. May contract, after opening quiet around Rs 693, advanced to Rs 707 at the close.

Vijay June was in the limelight. The attention of the traders was on this contract as the present level was below the margin price. The speculative bulls, therefore, tried to manipulate in this contract by pulling up the prices. The rate opened somewhat higher at Rs 840 and, after a temporary setback to Rs 836.50, improved towards the close to Rs 856 on bull support.

×

SPOT MARKET:

The Spot market maintained a steady tone with mills evincing interest in all staple varieties.

In the foreign section, a few lots of American cotton were reported to have changed hands. Rumours were current in trade circles that an import quota for one lakh bales of American cotton would be granted, possibly within a month; but mills appeared reluctant to make commitments in Egyptian cotton.

Many mills are now busy with augmenting their stocks of foreign cotton. There was a virtual scramble for securing import licences of East African cotton; and the import quota of 50,000 bales is reported to have been exhausted. The quota for Egyptian and Sudanese cottons is also likely to be exhausted although there is a tendency to wait for some time, expecting a further fall in prices of these cottons.

About a month ago, the industry was prepared to pay 55d per pound for Egyptian Karnak 154 variety; but the recent landslide in cotton in those countries and Sudan's inability to sell its crop in open auctions have encouraged some mills to ask for a further reduction in prices of those cottons.

Although no details are available with regard to the creation of a rupee account for the import of 20,000 bales of Egyptian cotton stapling 1 3/16" and above, it is believed that the cotton will be brought on a private basis and the State Trading Corporation will receive a commission of ½ per cent. It is, however, not known whether the earlier permission to import 20,000 bales from soft currency areas including Egyptian comes under the rupee account.

Meanwhile, followlng rates are quoted:—Bengal Rs 690 to Rs 740; Oomra Rs 800 to Rs 830; Dhollera Rs 780 to Rs 785; Jharilla Rs 800 to Rs 870; Vijay Rs 975 to Rs 980; ER/Bushoga Rs 1,585 to Rs 1,620; Karnak Rs 2,700 to Rs 2,800; Sudan Rs 2,250 to Rs 2,350 and American Good Middling Rs 1,410 to Rs 1,425.

NEW YORK MARKET:

Cotton futures on the New York market eased following early indecision under the leadership of distant October delivery, which dropped nearly by 30 points. Old crop-months, however, ruled relatively steady with trade buying and short-covering absorbing scattered hedges and liquidation. The news from New Orleans, that the Secretary of Agriculture had called for lower prices and bigger crops to solve the cotton problem, evoked offerings in distant contracts.

Some buying of new crops was stimulated at lower rates by the continued unfavourable weather in Texas and expectations of a higher mid-April parity price. Middling spot was quoted at 35.35 cents per pound.

×

LIVERPOOL MARKET:

On the Liverpool Cotton futures market, mills' fluctuations contributed to a steady undertone throughout the week, while some trade buying appeared in later deliveries. Although occasional hedging was absorbed, trading was generally quiet. Attempts were made at inter-month switchings, but no fresh transactions were recorded.

×

CLOTH AND PIECEGOODS:

The Bombay Piecegoods market ruled steady although enquiries

Commercial Banks to Collect Rural Savings and extend credit to Cultivators

Gentlemen,

I extend to you all a hearty welcome to the 110th Ordinary General Meeting of the Bank.

The past year has been one of outstanding progress for your Bank with profits, deposits, advances and foreign exchange business touching new peaks.

BALANCE SHEET 1956.

The Accounts show a profit of Rs. 90.20 lakhs including Rs. 2.35 lakhs brought forward as against a profit of Rs. 69.40 lakhs in 1955. This profit has been arrived at after provision for contingencies. After transfers—Rs. 27.5 lakhs to taxation, Rs. 27.5 lakhs to Reserves, Rs. 13 lakhs for bonus to staff, Rs. 2 lakhs for gratuity to staff and charity—the Board has proposed a final dividend of Rs. 2/- per share in addition to the interim dividend of Rs. 2/- per share. This raises the rate of dividend to 16% per annum. It has been proposed to form a Trust under which a fund will be built up by annual appropriations from profits for gratuity benefits to employees.

DEPOSITS.

The working capital has risen by Rs. 28 crores to Rs. 141 crores registering 2½ times increase over 1950. Against our paid-up capital of Rs. 87.5 lakhs, our reserves stand at Rs. 1.25 crores including the share premia amount of Rs. 37.5 lakhs. Deposits rose to Rs. 106 crores registering an increase of Rs. 16 crores during the year against Rs. 14 crores in 1955. It will be noted that the quantum of increase in the total deposits of all scheduled banks in 1956 declined as compared with 1955. The growing confidence of the public in your Bank is reflected by the fact that of the increase in the deposits of all scheduled banks in 1956, 20% was gained by the Punjab National Bank. Your Bank did not make any general increase in the interest rates and the cost of money remained, therefore, steady in the year under review.

LIQUIDITY.

The figures on the assets side indicate a strong liquid position. Cash in hand, bank balances, money at call and short notice and investments aggregate Rs. 59.3 crores constituting 55.7% of the deposits. If the bills discounted and purchased amounting to Rs. 8.77 crores are added, we have a total of Rs. 68 crores raising the ratio of our liquid assets to deposits of 64%.

LOANS.

Our loans and advances show an increase of Rs. 12.84 crores from Rs. 42.02 crores in 1955 to Rs. 54.86 crores in 1956. There has been 31% increase in our advances, Our efforts to step up advances to meet the developmental needs are continuing and we are strengthening our organisation to that effect both in the Head Office and in the field.

FOREIGN EXCHANGE BUSINESS.

You will be glad to know that there has been rapid increase in our Letter of Credit business. "Acceptances, endorsements, and other obligations" which are mainly in connection with foreign exchange business amounted to Rs. 13.4 crores in 1956 as compared with Rs. 6.53 crores in 1955 registering 100% increase.

BONUS SHARES.

Your Bank's application for issue of bonus shares about which I had mentioned in my review at the last meeting is still pending with the Finance Ministry. The required permission should be obtained before long, because your Bank's issue is against share premia which are but receipts of capital from the shareholders themselves.

BRANCH OFFICES.

Our network of branches continues to expand. With the opening of 14 branches during the year, we have 340 offices including one office in Rangoon and two in Pakistan. The demand for lockers was well sustained and we are continuing to develop this business. You will be glad to know that the Head Office building in New Delhi is coming up and will be complete in about a year for occupation. The removal of the Head Office to New Delhi will meet the convenience and wishes of a large number of the Bank's customers. With regard to branch offices also, we are trying to improve the premises and follow a policy of progressive extension of service to the public. In this connection, our expansion programme is also receiving careful consideration.

TIGHT MONEY.

The problems of the banks during the last year were the consequences of the problems that faced the country. What have agitated all minds are the acuteness of finance for domestic needs as well as to pay for imports and the rising trend of prices. There were the large needs for development, imports of steel, capital machinery, etc. There was an increase of Rs. 158 crores in advances and bills against an increase of Rs. 77 crores in deposits. The banks had to resort to increased borrowings from the Reserve Bank, liquidate a small part of their investments and reduce cash balances to meet the demand. Shri T. T. Krishnamachari, the Commerce Minister, on taking over the Finance portfolio was confronted with the serious problem of credit for trade and industry and the limited capacity of the commercial banks to meet the same. Living up to his reputation for prompt and dynamic action, the Finance Minister had consultations with banks and representatives of industry along with the Governor of the Reserve Bank and liberalised the bill market. This very largely assisted the commercial banks to meet the demand for funds from industry and commerce and Shri T. T. Krishnamachari rightly earns the credit for the easening in the otherwise tight situation. The higher money cost aimed at curbing inflation in India has had no significant effect. Similar is the experience in the U.K. and they are in the process of reversing gears. The giltedged market has been adversely affected and but for the open market operations which induced confidence, there would have been a greater drop in prices. The stamp charges and higher interest rates raised the cost of money to banks. The banks had to incur the stamp charges on bills even when the bills were not ultimately fully utilised. The stamp charges could have been covered if at all necessary in the interest rates. The cost of money from the Reserve Bank induced the banks to raise their interest rates. This affected money already with the banks and pushed up its cost in large commercial centres. New money was not attracted to banks from small investors and mofussil areas.

RISE IN PRICES AND DECLINE IN AGRICULTURAL PRODUCTION.

The second significant economic trend as regards rise in price levels was characterised as inflationary arising from large developmental expenditure. In the White Paper published in March the Finance Minister has analysed that the rise in prices has been basically due to declining agricultural production. There has been some complacency in this respect due to the comparatively comfortable position in regard to agricultural supplies at the end of the First Plan. The White Paper states: "The success of the Plan, it is apparent, would turn largely on the realisation of the targets of agricultural production. Apart from the obvious effect of agricultural production on prices and on the balance of payments, the flow of savings in the economy also depends to a significant extent on production in this sector. Scarcity of food grains and agricultural products in India often leads to relatively sharper increases in agricultural prices than in the prices of manufactures and this in turn leads to a redistribution of national income away from both the fixed income groups and the investing classes". This has been the crux of our problem.

FOREIGN EXCHANGE SCARCITY AND DEFERRED PAYMENT TERMS.

The foreign exchange scarcity is another serious problem to be effectively tackled. The difficult foreign exchange position arising from developmental activities is being understood and appreciated the world over. The appearance of this scarcity condition earlier than expected only confirms that the rate of development has been faster and larger than planned. The position was also aggravated by higher prices of capital equipment and increased transport cost due to Suez crisis. The deferred payment system that has been evolved is of course very costly but it is a screening process by itself. Projects which are not adequately remunerative will not be proceeded with immediately and foreign exchange expenditure to that extent will be automatically curtailed. Representatives of capital exporting countries abroad who have visited our country after the announcement of deferred payment scheme have understood and appreciated the value and desirability of such a scheme. Our efforts in the direction of rapid economic and industrial development are also appreciated. In order, however, that import of necessary equipment in line with the policy enunciated by the Government takes place, certain institutional facilities have to be arranged for. They are (i) the coverage of fluctuations in foreign exchange beyond normal trade risk by Government or any Government agency, (ii) underwriting the risk or giving some acceptable guarantee to the over-

seas seller (iii) association or institution formed by a combination of manufacturers in industries of national importance should be able to obtain financial assistance for development from institutions like the World Bank, International Finance Corporation etc. It will be necessary for the Finance Ministry and the Reserve Bank to work out details.

MAGNITUDE OF SECOND PLAN AND STANDARD OF LIVING

The Second Plan aims at increasing the national income by 1961 to Rs. 13,480 Crores from Rs. 10,800 Crores. The rise in the national income at the end of the Plan is of the order of Rs. 2,680 Crores. Against the present saving of Rs. 800 Crores, we have to save Rs. 1,482 Crores. The increase in our savings for reinvestment and development will be Rs. 682 Crores against a national income increase of Rs. 2,680 Crores. Thus three-fourths of the additional income viz., Rs. 2,000 Crores, will be available for sustaining a higher standard of living. If our effort is not of the magnitude planned, our national income will not go up as envisaged. If our national income does not go up as targeted, the quantum available for consumption will be curtailed with its consequence on the standard of living. What we have to fulfil is no doubt a big task but we have to gear ourselves to the best effort.

RURAL SAVINGS AND BANKS

More funds are needed by both the public and private sectors. There has to be a proper apportionment of the available resources if the overall economic activity has to be stepped up. The tax policy of the Government has to be such as to leave savings in the hands of that class of society which has the habit of saving for investment. While there has been more expenditure in the rural sector, the burden on the urban sector has been increasing. As the Taxation Enquiry Commission has stated: "The per capita tax is uniformly and distinctly higher in urban than in rural areas. The per capita Central taxation in the urban sector is a little over two and a half times the rural estimate while the State taxes come to nearly three times". Vast sums of money are thus diffused and not drawn into the money stream.

The Commercial banks have to organise themselves to collect money from the unorganised sectors and supplement their deposits through other facilities. In large towns there is already keen, rather unhealthy, competition. The current deposits are being converted to Call deposits which were paid higher interest rates. This does not create any additional money but only makes the money dearer.

The commercial banks have, therefore, to expand their activities in the rural areas either directly or through the agency of subsidiary or small banks. To a large extent, the success of this effort will depend on the policy and support of the Government of India and the Reserve Bank. Fortunately, we have at our helm a Finance Minister who is bold and who has ideas and vision. The greater the difficulty of a problem the greater appears to be his resourcefulness and courage. The new Reserve Bank Governor, Shri H. V. R. Iyengar has intimate knowledge of the problems relating to the development of our economy and is aware of the needs of industry and trade. This knowledge and experience will help him to have a practical outlook in his new task.

In the banks' expansion in the country-side, there are certain factors of primary importance. The Government should provide facilities for security of cash and other assets so that banks may be saved of large expenditure on employment of chowkidars, which forms an appreciable percentage of expenditure in small branches. This may be done by giving instructions to the police authorities to take special care for the safety of the property of banks. Some scheme of co-operative insurance may also be evolved by the banks themselves or through Insurance Companies. Secondly, to enable large banks to open branches, the wage structure for the new offices should be in consonance with the prevailing living conditions in the rural areas concerned and not according to the bank classification.

CREDIT TO CULTIVATOR

The third factor is that the banks should be in a position to cater to the credit needs of the rural areas. It is difficult for the banks to make available such credit from their existing resources. The Reserve Bank is not finding a proper agency in the Co-operative banks to make available the entire money that they have apportioned for supplementing credit to the rural areas. The Co-operative banks are only confining their activities to co-operative societies and, knowing as we do, the weak structure of the co-operative societies, in certain States especially, we should not insist on credit being made available only through them. By commercial banks expanding in the countryside, rural credit will be augmented. The commercial banks may also in turn take the help of agencies which have commercial dealings with agriculturists at present such as sugar factories, ginning presses, rice mills, oil mills etc. The Reserve Bank may lay down a condition at the time of discounting the bills of commercial banks for rural credit that the cost of money to the cultivator should not be higher than what he will have to pay when he obtains credit through co-operative societies. We are under the impression at present that credit through co-operative societies is cheaper. What we find today in many parts of the country is that the ultimate cost of money to the cultivator is 3½ to 4 per cent higher than the rate at which the Reserve Bank makes available the money. When we are keen on increased agricultural production we should use all agencies to make available to him necessary credit at reasonable cost. The utilisation of the commercial banks in this sphere will achieve a dual purpose. The non-monetised sector of the country will be monetised through savings of the rural sector coming into banks. The agriculturist will get organised credit in his effort to increase food production which is admittedly the key to the success of the Second Plan. I hope the Reserve Bank will find this proposal worth pursuing.

FINANCIAL INSTITUTIONS

In the growth of new industries, a great handicap is sluggishness in the Stock Exchange. It is difficult for any new enterprise or even the existing ones to raise additional finance through the stock exchange. Therefore, it is important that the financial institutions in the country should carry on a more positive and active role. The Industrial Finance Corporation, the State Finance Corporation and also the Industrial Credit and Investment Corporation have done, satisfactorily during the last year. But for meeting the tempo of development in this country they have to do very much more. The present limit of advances at the State level should be increased considerably. It should be brought up to something of the order of Rs. 25 lakhs. All small and medium needs should be met by the State institutions. The State Corporations should be strengthened by additional resources through the Reserve Bank. The Industrial Finance Corporation of India should increase their limit from 1 crore to 2½ crores of rupees. Most of the large industrial organisations today cost us anything between 3 and 8 crores. Money should be advanced when the Corporation is satisfied that the undertaking or project in question is in line with the general policy and pattern of the National Plan. The Industrial Credit and Investment Corporation should also, in my opinion, be more active and finance large industries like non-ferrous metals, chemicals and large engineering workshops are of very great importance. These industries have been left under the Second Plan to be developed by the private sector. In this connection, it is heartening that a Refinance Corporation is being formed to utilise the USA Wheat Sales Fund for extending medium term credit. The terms that have been announced are very sound and I am confident that banks will take advantage. It will greatly improve money market conditions and the requirements of industry for expansion will be met considerably.

BETTER CLIMATE AND INVESTMENT PROSPECTS

The industries in this country are, by and large, making reasonable profits and I am confident that with the better atmosphere that may now be created with the removal of the uncertainties when the new budget will come, the share market will improve and the investor will come forward to invest his savings in the industrial projects of this country. The process will be greatly aided if the investors find it convenient to borrow money against their industrial securities whenever money is needed and the advances against industrial shares could be rediscounted by the Reserve Bank.

The Finance Minister should come out with a clear cut policy and a four-year budget that will give him the resources that he requires and enable the people to budget as he does and fulfil their responsibilities under the Plan with the resources that they require. I am confident that with the boldness and imagination that he possesses, Shri T. T. Krishnamachari will see that he gets what he requires for carrying on the responsibilities of Government and at the same time creates conditions and an atmosphere under which the people will have the enthusiasm and resources to fulfil a difficult but essential task.

PEOPLE'S GOLD FOR DEVELOPMENT

A suggestion that I would like to refer here is that of the Prime Minister in one of his speeches that the people should give their gold to the Government so that hoarded wealth may be put to use. The Finance Minister should evolve a policy that will induce the people to part with their gold. Even if the Government buys gold at a price higher than the world price the gold stock with the Government will help to strengthen our currency considerably and will enable Government to get money from abroad at more reasonable cost. What the exchequer will lose in the purchase price will be adequately compensated by the large financial resources that could be obtained and by the early development of our country.

Before I conclude, I must express thanks to all our worthy constituents for their continued co-operation and confidence. I owe more than formal thanks to my colleagues on the Board and the Local Advisory Committees. I would also like to welcome our new General Manager, Mr. A. M. Walker, whose experience with the erstwhile Imperial Bank of India should prove of real value to our institution under the present fastly developing conditions in the country. I must also record my appreciation for Shri R. L. Tuli who has carried on with diligence and ability, the responsible and onerous duties of General Manager till Mr. Walker's taking over. I have also to thank other officers and staff at all levels at the Head Office and elsewhere for their loyalty and sense of devotion to the interests of the Institution.

Indian Aluminium Company Limited

*

Significant Results—Prohibitive Increase in Rly Freights

*

The Chairman, Mr. K. C. Mahindra, on Inflation

The following is an abbreviated version of the speech made by the Chairman, Mr. K. C. Mahindra, at the Annual General Meeting of Indian Aluminium Co., Ltd., held on April 27, 1957:

"The period since I last addressed this annual meeting has been an eventful one for your Company. Sales and profits in 1956 attained new heights, the programme for fresh issues of capital was successfully completed, and new patterns, long under preparation, emerged in sales of the Company's products and in the field of labour relations.

You will recall the pioneering efforts the Company has been making for the past five years or more to diversify its production and cater to the needs of industrial consumers for technically more advanced aluminium products. The transportation field provides the most notable example of the success of the Company's efforts in market development, which is reflected in sheet and plate assuming the primary place in shipments of Company's products during 1956. An achievement of some significance is formal acceptance by the Railway authorities of the use of aluminium for the panelling of railway coaches, and it is satisfying to note, our sales in 1956 to the Railways for various applications were double those of the previous year. There has been progress also in the road transport field and several State and private organisations are contemplating complete change-over to aluminium for buses. You will have noted from the Directors' Report, however, that the shipments of circles declined considerably during the past year. Although the utensil industry will continue to be a substantial consumer of aluminium, the possibilities of expanding consumption in this industry appear small compared to the electrical, transportation, building, construction, canning and packaging industries, where the use of aluminium is rapidly increasing.

The success of the recent capital issues made by the Company is a tribute to the confidence reposed in the Company's future and in its management. At a time when investors are shy and money is scarce, it is encouraging to feel that the Company has been able to raise substantial funds on the Indian market. Nevertheless, it should be borne in mind that the Canadian shareholder, Aluminium Limited, subscribed to one-half of the new capital issues, and this subscription assumes added significance today, in the light of the foreign exchange position of the country. The new dollar investment by Aluminium Limited and the loan of one million dollars it is further proposed to obtain from the Company's principal shareholder, are of vital significance to the Company in obtaining imports of capital equipment essential to the execution of its expansion programme.

Some of the advantages that your Company derives from participation of Aluminium Limited have been sharply brought into focus by the generous and prompt willingness of the Canadian group to assist the Company, when the Government expressed its inability to provide the requisite balance of foreign exchange for completing the Hirakud scheme. By virtue of such participation, your Company also receives, at cost, the benefit of the accumulated experience in the technique of aluminium production, fabrication and utilisation of one of the largest companies in the world engaged in this industry. The association of foreign capital is beneficial to your Company also in the training of Indian personnel. Today there are only four foreigners on our permanent staff and all the six operational units of the Company are administered by Indian managers. In an industry which requires technical and managerial skills of a high order, this is a creditable achievement, made possible by a continuous programme of training promising employees at various establishments of Aluminium Limited in Canada and Europe. This policy is being actively pursued in the light of the increasing complexity of the Company's activities, and is meeting the wholehearted co-operation of Aluminium Limited.

I had earlier referred to developments in the field of labour relations as being among the events of particular significance which had occurred during the past year. The comprehensive agreements negotiated at the Company's works at Belur, Muri and Alupuram, which are the result of free 'collective bargaining' between Management and the Employees' Unions, set out in detail the rights and responsibilities of the Management and Workers. For the first time in the history of labour relations in India, the workers also have come forward to agree with the Management frankly and openly that productivity is the true key to progress, that the "payment of bonus on Company's earnings or profits is not considered a sound or satisfactory principle by either party. It is felt by both the parties that relating bonus to production which is directly linked up with workers' effort is a better and more satisfactory principle"—indeed a revolutionary contribution to labour management relations in practice. Your Company firmly believes in the democratic process of free negotiation with the freely constituted representatives of its employees as the only firm and stable assurance of good relations, and the agreements concluded bear testimony to the consistent policy pursued by the Company in this respect. A need of praise and commendation is due to the Company's personnel staff and to the workers for this pioneering achievement in social engineering.

Whatever endeavours we make, whether it be in the field of sales development or production operations or labour relations the success of our efforts is influenced considerably by the actions of the Government. The State today not only operates the Railways, on which we must depend for transportation of our raw materials and finished products, but is also owns an increasing number of manufacturing industries, to whom we must sell our products. It is thus not only measures of direct taxation which affect us, but the host of other imposts such as sales taxes, excise and import duties, and railway freights. Railway freights are of particular significance to your Company as they exert a considerable influence on our competitive position in the market for our products. From January of this year, the Railway increased the freight rate applicable to the movement of aluminium ingot from Alupuram to Belur from Rs. 87 per ton to Rs. 160 per ton. This prohibitive increase in rail freight has compelled us to resort to sea shipment from Cochin to Calcutta, which, although cheaper than the new transportation cost by rail, is nevertheless about 25 per cent higher than our previous cost. This is only an example of how Government actions influence our day to day operations. I appreciate that the development needs of the Railways and for other Government works may be responsible for such actions, but the requirements of the aluminium industry in the context of the country's development should not be overlooked, and there is much need for restraint to be exercised by all of us if an inflationary spiral is to be avoided.

In my address to you last year I raised a small voice, calling attention to the impending threat of inflationary pressures. It is indeed a fact that the world has experienced, during the last decade, a sustained, perhaps a long-term cycle of inflation. The Indian economy has no doubt stood well in this picture; the index of the value of money in 1956, as compared to 1946, shows a deterioration of 28 per cent—only a shade worse than Switzerland and Germany. The annual rate of depreciation of the Indian rupee thus amounts to 3.2 per cent in India, while the U.S.A. rate was 3.4 per cent, the U.K. 4.6 per cent, France 6.5 per cent, Australia 7.5 per cent and Brazil 12.7 per cent. This indeed is a tribute to India's cautious and enlightened management of fiscal and monetary affairs. During the last twelve months, however, the danger symptoms have multiplied and the authorities conceding the existence of severe "stresses and strains" in the economy, recognise that "there is no slack" left. Quicksands of inflation are an impossible foundation for orderly economic development.

We have in India today many varied and puzzling issues, food prices subject to fickle anticipations about the coming monsoon; rising cost of wages and of raw materials in production, the shifting pattern of consumer preferences in the matter of cloth supplies and of cereals; lack of restraint in consumption, an uncontrolled desire to eat more, to clothe well and to live better; monetary stringency induced substantially by heavy workloads. Throw in this economic cauldron the scarcity of resources at the disposal of Government and private business alike, the rapid dwindling of foreign exchange balances precipitated by an appreciable fall in exports and the pronounced dislike of foreign capital to investment in India. A formidable task indeed to find the rightful prescription for progress and development.

It is sometimes averred that in an under developed economy, a steady inflationary tendency is contributory to rapid economic growth, but the crucial problem of the Indian economy today is the desire to instil increased purchasing power amongst the peasantry and at the same time maintain relatively stable prices of things which really count—things like food, clothing and shelter. The menace of inflation is aggravated not merely by the extent and magnitude of deficit financing—a crore a day is the figure revealed in the March Budgetary Statement—but also by the multiplier effect of the distinguishable type of priming through an ever increasing

flow of public expenditure. Illustratively, it is rarely recognised that the injection of an extra ton of steel, worth say Rs. 600/-, involves "new" expenditure of almost Rs. 2,000/-, when the ton of steel is put to use. Consider the consequences of the heroic efforts in 1956 in releasing in the country an additional million tons of steel, a couple of million tons of cement, perhaps a million tons of food grains and 20 per cent more cloth—this vast "multiplier" expenditure in the country would undoubtedly swell the volume of purchasing power and generate a great inflationary demand. So even as the facts of political life in India make a smaller or slower plan of development impossible, the facts of economic life do not permit us to ignore the very real threat of inflation, of rapid corrosion in the real value of the Rupee, which if it occurs. will also have political repurcussions.

The Finance Minister, introducing the Budgetary Statistics last month, stated emphatically that "a greatly increased measure of productivity and savings must be achieved and steps taken for increasing and conserving foreign exchange earnings in order not to allow to an accentuation of inflationary pressures." Higher production per man hour, and increased stimulus to saving habits, are two vital defences which must be reared and strengthened on all fronts.

India is at the crossroads of destiny after a decade of political freedom. The pace and the velocity has quickened. There is a revolution in the air of rising expectations if we are to survive as a nation of decent human beings. It ill befits the experience and the wisdom of the business groups to indulge in cheese-paring polemics about the Plan or diminish the high endeavour required for democratically reaching our objectives of a progressive and a happier society. Foreign observers have pointed out that "Indian business carries on its shoulders a deep sense of sin and it seeks redemption either by finding the shelter of Government doing exactly what it is told" or exhibiting a posture of dialectical defiance under the convenient label of free enterprise. Surely, there is a middle line both for business people and for the planners: there is enough acumen and independence of judgment in the country to present a rational, sober and constructive viewpoint along the line of co-operative endeavour to assist Government in formulating measures both in the fiscal and monetary spheres. A community of responsibility for the Plan is obviously more desirable than obiter dicts from authority or a non-possumus from private business. The Finance Minister has dedicated himself for his next tenure of office to think only of the category of people in the lower income groups and their welfare—a simple dedication worthy of his high office and in line with the dynamic of the situation. Should it not also be the endeavour of all, as well as the decisive criteria for every legislative measure, that this category of people eat more, use more cloth and are better housed?

One should not hesitate in borrowing from overseas experience and with temerity I suggest the policy of "selective expansion", recently advocated for Britain by the London 'Economist', and defined as "the pursuit of maximum pace of expansion and willingness to let the lower income groups have the lion's share of the resulting increase in national income; instead of taking away from one to give another, it puts a lien on progress in favour of those who need it most".

The pace and the characteristic of expansion will be determined at every step by the sufficiency of managerial and administrative talent in the country, but the governing factor and the most imperative task above all in my opinion should be to maintain the respectability of the Rupee both domestic and abroad—the sheet-anchor of stability and growth.

In conclusion I should like to express on your behalf and mine, our appreciation of the services rendered by the staff and the workers of the Company in making possible the achievements of the past year and giving promise of better results for the future."

WORLD OF COTTON

(Continued from page 830)

slackened a little. Due to seasonal factors, the offtake of superfine qualities was more pronounced. Fine and medium varieties were also in fair demand. While the demand from the South Indian centres has slackened, enquiries from Delhi, Kanpur and Calcutta have been maintained.

On the export front, trading conditions were not satisfactory and, due to subdued enquiries, prices of several principal lines of export developed an easier tendency. These were attributed to over-trading witnessed at the time of the Suez crisis.

*

WORLD OVERSEAS

(Continued from page 818)

trical machinery, instruments, petroleum, paper, printing and publishing and food and beverages, among others.

Nevertheless, one must look elsewhere for the principal economic props. in line with earlier predictions, government spending has been rising this year. But the rise has not been sufficient to account for gain in over-all economic activity. That leaves the consumer segment.

The Council's report shows that of the $4,800 million gain in gross national product during the first three months of 1957, fully $4,100 million was attributable to an increase in personal consumption expenditure, to an annual rate of $275,000 million. High employment and personal income levels have combined to bolster the rate of consumer spending. Personal income in March was at a record annual rate of better than $337,000 million, up some $19,000 million from March a year ago.

Moreover, the economy once again is showing an ability to pass through a levelling—off period in some industries without any marked unemployment. In fact, the number of jobless last month actually declined to only 4.5 per cent of total civilian labor force. Employment, meanwhile, was rising to more than 64 million—up 615,000 from the previous month and 971,000 from March 1956.

Britain

STATE OF THE BRITISH ECONOMY

By EARNEST ATKINSON

The Hansard report of the fourday Commons debate on the British Budget proposals—presented to the House on April 9 by the Chancellor of the Exchequer, Mr Peter Thorneycroft—makes sufficiently interesting reading. And there is enough hard statistical fact in it to be worth discussing without going into the politics of it.

In certain Government offices just before the Budget—in particular the Treasury and the Board of Trade—there goes on a special flurry of work to produce for the Ministers who will be taking part in the debate facts and figures that will stand up to the most rigorous parliamentary criticism. It is open to the Opposition—or indeed to Government supporters—to challenge the interpretations put on those figures, and to challenge the policies that have produced them or that are based on them.

But the civil servants responsible for producing them would acknowledge themselves failing in their duty if the raw material they provide were not right. And the Ministers whom thus impartially they furnish with ammunition for debate would have as much cause to complain as would be Opposition speakers who challenged them.

And so when the President of the Board of Trade, Sir David Eccles, was able to say on the second day of the Budget debate that the March figure for United Kingdom exports was the highest ever recorded, no one could belie the fact, although there could be parliamentary argument whether the figure had got so high because of, or in spite of, current Government policies. That, after all, is what the House of Commons is for.

A major review of Britain's economic state and prospects comes, of course, in the annual Economic Survey, which, when it was first produced shortly after the war, was sometimes thought to be intended as a set of oracular prophecies about what was intended or going to happen, but has now come to be more soberly looked upon as an account of how the country's economy stands and how it may be expected to develop if public policies continue on their existing lines.

It was not, therefore, out of context when Sir David Eccles told the Commons in the Budget debate that since the Economic Survey (published on April 2) was drafted, the prospects for British exports had somewhat improved. As a result of the credit "squeeze", British prices had become competitive and delivery dates reasonable in almost all parts of the world; but what had not been known was how much the balance of payments would be checked by the closing of the Suez Canal, the loss of the Egyptian market, and the repercussions of those events in other markets.

It was now clear, Sir David explained, that the troubles arising from hostilities in Egypt had had a sharp effect on the banking reserves, but remarkably little effect on either industrial activity or the volume of exports.

In this Britain seems to have shared the experience of the rest of Western Europe, as discussed in the recently published report—entitled Europe Today—of the Organization for European Economic Co-operation (OEEC).

It says that while the extent to which output has been affected by the shortage of oil cannot yet be accurately assessed, up to the early weeks of 1957 it does not appear to have exerted a major influence. In the motor-car industry, some countries reported substantial cuts in output following falls in domestic and foreign demand influenced by the restrictions on the use of petrol and apprehensions of continued shortage. And there were other examples. That report was published on April 12.

But already, three days earlier, Sir David Eccles was able to say that the "motor-car industry has suddenly started to pick up. In the last few days motor-car manufacturers have written to the Board of Trade forecasting that British steel mills will be unable to meet their demands for steel sheet until the third quarter of this year. That turn-round in output is due to both increasing home and export orders".

He then went on to show that the USA had resumed the position of Britain's best customer that it had last held in 1895 and to give an encouraging account of both the current state and future prospect of her export trade elsewhere. Though there were those to argue that the process could be made faster, none could deny that it was in train. And Parliament these coming months will be watchful to see that the speed of progress is not abated.

THE SHIVRAJPUR SYNDICATE LTD.

*

Increase in Sales—Adequate Export Quota

*

Chairman, Sri A. N. Haksar's Statement

Presiding at the Annual General Meeting of the Shivrajpur Syndicate Ltd., held on 25th April, 1957, in Bombay the Chairman, Sri A. N. Haksar, said:—

Ladies and Gentlemen,

During the year under review it was not possible to step up the Output of your Mines for reasons given in the Report, and Raisings amounted to 83,238 tons as against 91,427 tons in the previous year. However, there was an improvement in the supply of wagons, which enabled shipments and local sales to be increased to 117,482 tons as compared with 82,332 tons in the year 1954-55.

CONTINUED DEMAND

You will also be interested to hear that there has been a continued demand for manganese ore of all qualities, at prices which have shown a progressive improvement over those previously obtained. Although it was the intention of the Management to make new Forward Sales of your Company's Ore to regular Buyers for delivery in 1958 and 1959, consistent with their policy, it was not possible to do so due to the advent of State Trading. You are probably aware that the Government have proposed to canalise the Export of Manganese Ore in a progressively increasing measure through the State Trading Corporation, and that only limited opportunities might be allowed to Mining and Trading interests for direct participation in the Export Trade, within the limits of the broad policy announced by the Government of India from time to time. As a beginning a Quota System of exports on a limited scale was introduced, and your Company was granted a Quota for a period of one year ending 30th June 1957, for the export of 73,650 tons. The Government has also indicated that the balance of ore due for shipment against your Company's old Contracts, which will remain after this Quota is exhausted (i.e. 85,494 tons), can be partly canalised through the State Trading Corporation on a commission basis of 6¼ per cent of the Contracted Price and the remainder shipped subsequently against future Export Quotas.

RISKS INVOLVED

In December last, the Chairman and other representatives of the Syndicate interviewed the Officials of the State Trading Corporation in Delhi and as a result of the discussions which took place, the S.T.C. promised all reasonable facilities in future for disposal of your Company's Ores. However, it may not be out of place to mention here the risk involved to the country's economy as a whole, arising from the advent of State Trading in manganese ore. This is the risk of forcing overseas buyers in gradually increasing measure to turn to new sources of supply, with the result that India's very valuable export trade in this commodity might be very seriously reduced, or even irreparably damaged. State Trading has introduced a dislocation or partial disruption of the old trade channels at a time when the Export Duty on manganese ore together with higher freight rates for shipping caused by the closure of the Suez Canal, have substantially increased overall costs to the consuming countries. It is reported that the Bethlehem Steel Company in the U.S.A. has completed arrangements to extract 600,000 tons of manganese ore annually from its new Mine in Brazil, after 5 years of development and exploration. Of this quantity, about 200,000 tons will be made available for consumption by the American Industry and the remainder will go to the U.S. Government Stockpile. In addition, it is also learnt that the National Tungsten Corporation in the U.S.A. will soon begin exploitation of one of the world's largest manganese deposits, namely a new reef located West of the Andes Mountains in North Chile. There has been increased competition from Russia and South Africa so far as the U.K. market is concerned, while yet another potential competitor is the new State of Ghana from where increasing quantities of ore are expected to be exported. Such sources of supply are likely to prove formidable competitors to the Indian Manganese Ore Trade, and this likelihood would become a certainty if once the steady flow of supplies from India became interrupted or erratic.

Furthermore, I would draw attention to a recent report in a Commercial Publication that a completely new method has been evolved of processing low grade manganese ore deposits in New Brunswick, Canada, and that a prototype plant has already been installed for this purpose. It is claimed that the process will prove economic and it is intended to erect a production plant capable of handling upto 5,000 tons of manganese per day to give an annual output of 75,000 tons of ferro-manganese and 75,000 tons of ingot iron. It is further claimed that the utilisation of the process on a broad scale would make the North American Continent completely independent of other sources of supply by making possible the treatment of low grade manganese ores, which hitherto were regarded as incapable of treatment.

RENEWAL OF LEASES

With regard to the question of renewal of the Shivrajpur Estate Leases, it will be recalled that my predecessor when he addressed you last year referred to the prospects of renewal of the old "North" and "South" Leases and expressed the hope that the Thakore Saheb would sign with your Company a new Lease for a period of 20 years. Unfortunately, due to the illness of the Thakore Saheb's Adviser, execution of the Lease was delayed and in the meantime th Industrial Policy Resolution of the 30th April 1956 was announced by the Government of India. This ruled that new deposits of certain minerals, including Manganese Ore, would in future be worked only by Government, while old mining concessions could be renewed only after the prior approval of the Central Government. Accordingly the Thakore Saheb applied on the 16th October 1956, through the State Government, for the necessary consent to the granting of the new Lease. Your Company has also followed up this appeal, and the Government's reply is awaited.

Whilst on this subject, I might also mention that the Bauxite Lease of your Company at Kapadvanj, working rights of which have been transferred to the Associated Cement Companies Ltd., has been renewed by the Government in accordance with the Mineral Concession Rules, 1949, for a further period of 30 years from the 2nd January 1953.

It will be seen from the Report that various amenities, including the provision of further Buildings and Quarters, are being progressively provided for the employees at the Mines and I am happy to say that our relations with the labour and the Union's Officials have continued to be cordial.

You will also have seen from the Report that permission has been granted by the Government to capitalise a portion of the Reserves by the issue of Bonus Shares. I may assure you that your Board of Directors has this question under active consideration and, if it should be decided that it would be in the Company's interest to make any issue of Bonus Shares the Shareholders will be advised immediately.

ACCOUNTS

Turning now to the Accounts, you will note that the layout of the Company's Balance Sheet and Profit & Loss Account has been changed to meet the requirements of the Companies Act, 1956. The results for the year can, I think, be considered satisfactory, and adequate provision has been made for Taxation and other liabilities which the Company has to meet, for example, Retiring Gratuities to employees. In view of the large expansion programmes which are continuing to proceed on the Mines, particularly in the Pani and Bamankua areas, your Directors considered it prudent to set aside a sum of Rs. 7 lakhs to Mining Development & Prospecting Reserve, Rs. 1 lakh to General Reserve and Rs. 1,50,000 to Equalisation of Dividends Reserve. After making these allocations, the Directors have recommended a dividend of Rs. 5/- per share and a bonus of Rs. 3/- per share, both free of Income Tax, for the year.

As regards the future, both new development and existing Mining Operations are progressing satisfactorily. This, coupled with other measures taken in respect of modernisation of equipment and installation of an additional Generating Set, are calculated to increase production in due course.

The Government appears to be keen to promote exports of ore, and it is hoped that your Company will be granted an adequate Export Quota, thus enabling it to meet much of its shipping commitments during the current financial year. As against this, it should not be forgotten that there exist other factors such as the tendency to an increasing imposition of taxes, increasing costs of mining machinery and Stores, and transport charges, etc., which would increase total mining costs. In fact only last month it was announced that Government had increased the rate of Royalty from 7½% to 12½% for manganese of 45% and over, and at the rate of 10% for ore below 45%. Nevertheless, consequent on the improved trend of the market, the future I feel need not yet be viewed with any undue pessimism.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to shareholders.

WORLD OF TEA

(Continued from page 817)

pound easier. Best liquoring teas were firm with the quality otherwise irregularly lower. Whole Leaf grades were in strong demand.

Fair demand prevailed at this week's auction held in Colombo. Prices of high and medium-grown teas were fenerally lower. Except for coloury sorts, Mediums declined by about 5 to 10 cents per pound, while high-grown sorts were 10 to 20 cents per pound lower for broken grades. Lower-grown and those suitable for the Middle East were, however, sold at firm rates.

The Dunlop Rubber Co. (India) Ltd.

*

Mr. John Luckham's Review

The 31st Annual General Meeting of The Dunlop Rubber Co. (India) Ltd. was held in Calcutta on the 29th April, 1957. Mr. John Luckham, Managing Director, said:

Gentlemen,

The Directors' Report and Accounts for the year 1956 have been in your hands for some time and with your permission I will take them as read.

I should like to preface my remarks this year by referring to changes in your Board of Directors. Mr. Cecil Stack, who had been a Director of the Company since 1942 and Managing Director for the last six years, resigned at the end of last month. During the last year Mr. Stack had been in indifferent health and since he had served for 33 years in this country he decided to accept an appointment offered to him by the Dunlop Rubber Co. Ltd. in London. It was with great regret that the Board accepted his decision and I am sure you will wish to join me in expressing our appreciation of Mr. Stack's long and valuable services.

You will have seen from the notice convening the meeting that it is proposed to appoint Sardar H. S. Malik to the Board. Sardar Malik, as I am sure you are all aware, has recently retired from a long and distinguished career in the service of the Government of India and latterly as Indian Ambassador to France. I am confident that Sardar Malik's wise counsel and great knowledge of affairs will be of the utmost assistance to your Board and I commend this appointment for your approval.

THE YEAR'S TRADING

The factory was working to full capacity throughout the year and new records of output were achieved. Nevertheless, we were unable to meet the demand for all of our products and a shortage of Giant and Cycle Tyres and Cycle Rims necessitated the Government granting import licences for these products to alleviate the situation. We have plans for increasing our production and I will deal with these later on in this review.

Once again distribution of the Company's products was adversely affected due to the shortage of railway wagons. Many pleas have been made from both the public and private sectors for serious action to be taken to improve the situation, and it is to be hoped that this important problem will receive the attention it deserves.

Total sales in value were 12½% higher than in 1955, but with the lower level of selling prices prevailing throughout 1956, the ratio of profit to turnover declined from 3.6% to 3.2% after taxation. This exceedingly modest profit percentage provides, I think, a good measure of our service to the community.

PRODUCTS

We have continued to receive full benefits of the Dunlop worldwide research activities and many improvements have been put into effect during the year.

Last year my predecessor announced the introduction of the new Dunlop Roadster Giant Tyre, and it is with great pleasure that I am able to tell you that this has been extremely successful and has proved ideal for most conditions. This new tyre, combined with the ever popular Dunlop Trakmaster Giant Tyre, provides users with an ideal selection to choose from to cover the different types of service conditions which are found in this country.

Car Tyre performance continues to be excellent and we have retained our premier position in the market.

I must make mention here of the very rapid growth in the development of the Scooter and to say that your Company have prepared themselves to meet the demand for the special type of tyre required.

The Bicycle Industry continues to develop very rapidly and so far we have been unable to keep pace with the demand for our Cycle Tyres and Rims, and, as already stated, imports were necessary to help fill the gap.

Substantial increases in sales were also achieved in our Industrial Rubber Products range. The second Five Year Plan has already increased the demand for Conveyor Belting and we are taking steps to ensure that we can play our part in meeting this. Further great strides were made in Dunlopillo Latex Foam Cushioning and demand remains ahead of production.

Our work in chemical plant lining made considerable progress during 1956, and we now have orders in hand which fully justify our decision to undertake this work.

NEW FACTORY

I am happy to be able to tell you that in addition to the expansion which has taken place and will continue at least for the next two years at your Sahaganj factory, the Company has obtained Government approval for the establishment of another type factory in Madras. The Chairman stated at this time last year that we as a Company hoped to play our full part in meeting the very considerable increase in demand for rubber products which would arise under India's Second Five Year Plan. The new factory in South India will, it is hoped, give us sufficient overall capacity to meet the demands for our products for some time to come. A substantial amount of additional capital will be required to finance this new project and as soon as our plans have been finalised you will be advised of the Board's proposals. An issue of further share capital will form the basis of these plans.

RAW MATERIALS

The raw material supply position, with the exception of crude rubber, was generally satisfactory and we were fortunate that at the time of the Suez Canal crisis we had adequate stocks of imported materials.

As in the previous year, consumption of raw rubber by manufacturers at 31,405 tons far exceeded production at 23,444 tons and substantial imports were made.

Since the world market price of rubber had fallen below the Indian controlled price, Government introduced a cess on imported rubber equal to the difference between the landed cost of the imported rubber and the local price, applicable to all imports after August, 1956. The amount collected under this price equalisation policy is payable to the Rubber Board as a contribution to the rehabilitation of rubber plantations. We were happy to cooperate with Government in this scheme, but have been unable to get any indication of how the importer will stand in the event of the world rubber price again rising above the local price.

Generally costs tended to rise during the latter half of the year, chiefly due to increases in freight rates and import duties. For instance, the duty on rayon yarn, one of our chief raw materials, was increased by 25% and to a lesser extent carbon black and tyre valves were also affected.

PROFIT & LOSS ACCOUNT

The net profit for the year after providing for depreciation, interest and taxation was Rs. 55,09,909 and after taking into account the balance of profit carried forward the amount available for disposal is Rs. 66,81,594 compared with Rs. 61,28,686 for 1955. The Directors are recommending the same rate of Ordinary Dividend as for 1955, that is 15%, which will absorb Rs. 24 lakhs. The Directors also propose the transfer of Rs. 26 lakhs to General Reserve as against Rs. 22 lakhs last year. This will increase the General Reserve to Rs 216 lakhs and you will see from the Balance Sheet that the Ordinary Share Capital is covered more than twice by the total Reserves and Surplus. These reserves are, of course, fully employed in the business and the continued availability of profits for appropriation to reserves is very necessary to assist in providing the funds for development and expansion.

BALANCE SHEET

The additions to Fixed Assets during the year amounted to Rs. 42,22,000, consisting mainly of Plant and Machinery for expansion and modernisation. The amount of depreciation written off in 1956 was Rs. 30,55,000 as against Rs. 27,51,000 in 1955.

Stock inventories at Rs. 455,47,000 were Rs. 63,84,000 higher than at the close of the previous year. This was partly due to increased production but also to the fact that some raw material stocks were abnormally low at the end of 1955. Sundry Debtors were up by Rs. 28,79,000, due to the greater sales turnover. Cash, Bank and Current Balances were also higher, making the total increase in Current Assets Rs. 107,15,000. Deducting the increase of Rs. 17,96,000 in Sundry Creditors and other current liabilities there is shown a net increase in working capital during the year of approximately Rs. 89 lakhs, which is reflected in the combined rise in the bank overdraft (including the usance promissory notes) and unsecured loans.

EMPLOYEE RELATIONS

During the past year we have continued our efforts to maintain and improve our high reputation for congenial working conditions and welfare facilities. At our Sahaganj factory we now house, at low rents, a community of 4,600 employees and their families. The standard of housing is very high and excellent medical services including a modern hospital are available to all. Canteens have been provided in which good meals are available at subsidised prices. The existing educational facilities for children are now proving inadequate and a new school building is under construction. A market building is also being provided to improve shopping conditions for the residents in the Company's housing estate. The construction of 65 additional houses, to which the Chairman referred on this occasion last year, is now well advanced and improved street lighting is being installed. All forms of sport are encouraged, for which the Company provides the necessary grounds and buildings. Thus we strive to look after the welfare of our employees and extend their social amenities. General labour relations remained consistently good throughout the year. Staff and operatives have given us their loyal support and contributed greatly towards the successful outcome of the year's activities. I am sure you will wish to join with the Directors in thanking them for faithful service.

NOTE:—This does not purport to be a record of the proceedings of the Annual General Meeting.

Stock Exchanges

DULL PERFORMANCE

Watch-Dog Writes:

STOCK markets have again witnessed a dull session this week. With interest at a bare minimum, price movements have been insignificant in a restricted turnover. With only ten days to go for the Central Budget to be presented, markets have begun to show hesitancy.

Although activity on the Calcutta Stock Exchange was restricted, selected Engineering and Miscellaneous issues made further headway from last levels, thanks to investment buying.

On the Bombay Stock Exchange, there was complete lack of activity in the absence of incentives.

The Madras Stock Exchange witnessed one of the dullest sessions in recent times.

Fairly active conditions prevailed on the Losdon Stock Exchange with investment buying showing a further expansion. Optimism regarding the economic outlook appeared to have been the main influence.

Wall Street closed irregular. At the close of the week, changes either way ranged mostly to a dollar or so.

*

Calcutta

EXCEPT for selected Engineering and Miscllaneous scrips which made further headway, conditions in other counters on the local Stock Exchange were extremely dull last week. Though the Budget fears had not been reflected in full in prices, operators seemed to be reluctant to follow any rise in prices. Moreover, they felt that banks would hereafter exercise more caution in the case of advances of shares, especially when share prices had already gone down heavily rendering the investors feel, in an increased degree, the need for fresh credit to keep their positions consolidated. With the scattered enquiry at the lower levels, however, the market finished at or nearly the best levels for the week.

The Giltedged market continued to rule quiet with business reduced to small dimensions. Institutional investors preferred to keep out of the market and, as a result, prices showed small changes of importance. 3 per cent 1986 Conversion Loan opened at Rs 74.18 and, after improving to Rs 74.68, receded again at the close to Rs 74.19.

Bank shares ruled quietly steady. United Commercial changed hands at Rs 52.50 to Rs 53, while Central were well maintained at Rs 50. Bank of Bikaner came in for some enquiry upto Rs 22.

Except Ganges, Megna and Nuddea which were corned upto Rs 50.50, Rs 79 and Rs 30.75 respectively by interested parties on rumours of a possible change-over in managing agency, Jute shares continued to remain depressed despite firmer advices from the jute goods market. Operators, before entering into commitments, seemed to be working out the implications following the recent closing down of three jute mills. Howrah moved narrowly between Rs 15.06 and Rs 15.12 and National between Rs 19.95 and Rs 20.25. Budge-Budge and Bally were well maintained at Rs 90 and Rs 146 respectively.

Coal shares ruled fairly steady. Burrakur were pushed upto Rs 22.10 from Rs 21.50 on speculative buying, to finish the week at Rs 22.00. Bengal were taken upto Rs 222 from Rs 215. New Beerbhoom changed hands at Rs 14.44 to Rs 14.62, while Central India hovered idly around Rs 6.06 and Western Bengal around Rs 5.37.

Textile shares continued to lack support in view of the misgivings regarding the profit margin of the industry during the current year on account of the higher cotton prices. Elgins were offered at as low as Rs 20.25 against Rs 21.50, while Kesoram, after touching a new low of Rs 13.12, finished better at Rs 13.25. New Victoria were cheaper at Rs 1.75 against Rs 1.81 with Jayshree quoted around Rs 5.87.

The Tea section continued to record only few dealings in the absence of any enuqiry. The decision to reduce the export duty from 37.50 nP to 25 nP per pound had little effect on sentiment. Sellers were, however, reserved on the belief that the past year's results would be fairly good and that the estates, producing quality teas, might have realised satisfactory prices. Amonst the few transactions recorded were Hansqua changing hands at Rs 25.87 to Rs 26.50; Hasimara at Rs 24.31 to Rs 24.56; Jayshree at Rs 11.25 to Rs 11.37 and Teloijan at Rs 22.12 to Rs 22.56. Tezpore eased off further to Rs 19.44 from Rs 19.87.

Sugar shares ruled quiet as operators were reluctant to enter to fresh commitments on reports that crushing might close earlier during the current season in view of the shortage of cane. Doubts were also expressed that the Government might not announce any more export quota in view of the suggestions in certain quarters that any further exports might create scarcity conditions in the internal market and a consequent rise in prices. Only solitary feature was Darbhanga which was pushed up to Rs 25.75 from Rs 23.12 on buying from interested quarters. Carew moved narrowly between Rs 7.25 and Rs 7.31 with Belsund recovering to Rs 11.00 from Rs 10.81. United Provinces were quoted at Rs 13.50.

Price movements in the Engineering section were mainly influenced by the speculative activity as well as settlement adjustments in Indian Irons. Against last week-end closing of Rs 19.87, Indian Irons opened steady at Rs 19.87 and, after touching a low of Rs 19.75, improved again towards the close to Rs 19.93. The settlement rate was fixed at Rs 19.93 against last settlement of Rs 20.09. New shares changed hands at Rs 18.66 to Rs 18.81.

The most prominent feature in this section were Guest, Keen, Williams which were keenly sought after upto Rs 27.25 from Rs 26.31 following the excellent results produced by the company for last year. TEXMACO touched a low of Rs 18.66 from the opening level of Rs 18.70, to finish the week higher at Rs 18.85. Jessop touched a high of Rs 24.90 and a low of Rs 24.00, to finish at Rs 24.43. Marshalls changed hands at Rs 4.62 to Rs 4.74 and Kumardhubi at Rs 9.06 to Rs 9.25,

Selective support was given to Miscellaneous issues. Most prominent were Rohtas, Indian Copper and Metal Box, being taken upto Rs 18.15, Rs 3.28 and Rs 27.19 from Rs 17. 62, Rs 3.22 and Rs 26.69 respectively. Karanpura Development changed hands at Rs 11.87 to Rs 12.37; Indian Cable at Rs 24.87 to Rs 25.25; Rallis at Rs 29.50 to Rs 30; National Carbon at Rs 24.94 to Rs 25.50; Alkali Chemicals at Rs 11.62 to Rs 11.87; Dunlop at Rs 23.37 to Rs 24.12 and Indian Aluminium at Rs 12.75 to Rs 12.84. In the Paper section, Orient Paper started at Rs 30.20 and, after touching a low of Rs 30.05, recovered at the close to the former level. India Pulp moved narrowly between Rs 21 and Rs 21.19 with Titaghur quoted around Rs 33.56.

*

BALANCE-SHEET REVIEWS

(Continued from page 812)

have been higher at Rs 3.75 lakhs and Rs 1.12 lakhs respectively. As against a paid-up capital of Rs 1.15 crores, Reserves and surplus stand at Rs 1.02 crores. The reduction in cash holding from Rs 7.24 lakhs to Rs 4.39 lakhs is due to the heavy expansion programme of the company.

£ R$

Indore Malwa

Despite a decline in the gross profit from Rs 25.31 lakhs to Rs 22.67 lakhs during 1956, the Indore Malwa United Mills Limited has recommended a higher dividend of Re 11 per share as compared to Rs 9 in the previous year. Of the profit, a sum of Rs 10.16 lakhs has been provided for Depreciation and Development Rebate as against Rs 9.78 lakhs. Taxation absorbs Rs 7.2 lakhs.

Net sales of cloth, yarn and waste totalled Rs 2.57 crores as compared to Rs 2.95 crores.

£ R$

Arvind Mills

The gross profit of Arvind Mills Limited, Ahmedabad, has amounted to Rs 89.86 lakhs after providing Rs 9.61 lakhs for managing agents' commission as against Rs 59.58 lakhs in 1955 after deducting Rs 11.70 lakhs for agents' commission. Sales of cloth, yarn and waste were more or less maintained at Rs 3.48 crores. The total distribution is maintained at Rs 35 per share; but this is recommended on an increased capital of Rs 40 lakhs as against Rs 26.25 lakhs.

Out of the profits, the direcors have provided Rs 12.08 lakhs (Rs 13.52 lakhs) for Depreciation; Rs 12.36 lakhs (nil) for Rehabilitation Reserve; Rs 37.00 lakhs (Rs 19.50 lakhs) for Taxation; Rs 6.06 lakhs (Rs 1.00 lakh) for General Reserve; Rs 5.00 lakhs (Rs 1.00 lakh) for Dividend Equalisation Reserve and Rs 1.00 lakh (same) for Contingency Fund.

The Company has received permission for installation of 15,000 spindles plant for the manufacture of yarn from staple-fibre. Orders for the purchase of machinery have been placed, and it is estimated that the said plant may cost about Rs 60 lakhs. It is expected that the plant will be put into operation before the end of 1958.

£ R$

National Carbon

The National Carbon company has recommended a final dividend of 7½ per cent, making a total of 15 per cent for 1956 as against 32½ per cent in the previous year. It may be mentioned here that, before the company's issue at a premium was made public, the directors had capitalised part of the Reserves. Hence, the dividend for 1956 is somewhat lower.

The company's gross earnings came to Rs 90.42 lakhs as against Rs 86.82 lakhs in the previous year. Depreciation has been provided at Rs 9.12 lakhs as against Rs 7.69 lakhs, while Taxation is higher at Rs 43.62 lakhs against Rs 36.65 lakhs. It is pointed out that the company's expansion programme will continue to involve heavy capital expenditure.

£ R$

Shorrock Mills

The Shorrock Spinning and Manufacturing Company Limited has earned a net profit of Rs 15.65 lakhs for 1956 after providing a sum of Rs 8.16 for Depreciation and Rs 11.30 lakhs for Taxation. The directors have allocated Rs 3.84 lakhs to Development Rebate Reserve; Rs 3 lakhs to General Reserve and Rs 2 lakhs to Dividend Equalisation Fund. Apart from a dividend of Rs 25, a bonus of Rs 5 per share has been recommended on the Ordinary shares. Sales of cloth total Rs 1.77 crores.

As against a paid-up capital of Rs 19.52 lakhs, Reserves and surplus stand at as much as Rs 82.05 lakhs.

£ R$

New Shorrock

The New Shorrock Spinning and Manufacturng Company Limited has reported a net profit, after providing Rs 9.46 lakhs for Depreciation and Rs 23.80 lakhs for Taxation, of Rs 29.03 lakhs. Other allocations include Rs 1.43 lakhs to Development Rebate Reserve; Rs 10 lakhs to General Reserve and Rs 4 lakhs to Dividend Equalisation Fund. The Ordinary dividend is Rs 35 per share. In addition, a bonus of Rs 5 per share has been proposed. Sales total Rs 2.52 crores.

The paid-up capital of the company is Rs 39 lakhs against which Reserves and surplus stand at as much as Rs 1.05 crores.

WORLD OF FINANCE

(Continued from page 816)

outstripping even the most hopeful earlier estimates. What is the reason for such rise in Banks' Deposits? The answer is of significance to all future assessment of money market and economic trends, and lies in the fact that the gigantic plan disbursements are increasingly and more immediately having a favourable impact upon the banking system. The boomerang effects of Government disbursements are being accelerated.

+

United Bank of India

The accounts of the United Bank of India Limited for 1956 indicate that the stage of consolidation has been completed, and that the Bank has now embarked upon an era of progress and expansion. Deposits and other accounts are higher by Rs 2.64 crores at Rs 33.91 crores. Borrowings are shown Rs 0.88 crores less at Rs 1.03 crores. The balance-sheet total has risen by Rs 1.78 crores to Rs 45.18 crores; and there is, we may be sure, every prospect of the Rs 50 crore mark being touched in 1957.

Cash balances have been strengthened by Rs 0.23 crores. There has been disinvestment (or non-reinvestment) in respect of gilt-edged for Rs 0.37 crores. Thus, the bulk of the additional resources was employed in increasing accommodation to constituents, with Advances showing a rise of Rs 2.04 crores to Rs 20.18 crores.

The higher level of advances has enabled a rise of Rs 0.21 crores in the income. Interest and discount have fetched Rs 0.17 crores more at Rs 1.19 crores, while commission, exchange and brokerage have yielded Rs 0.33 crores against Rs 0.29 crores in 1955.

But money was dearer for the bank as well: interest paid has absorbed Rs 0.41 crores as compared with Rs 0.33 crores in the previous year. The increase under salaries is one of Rs 0.10 crores to Rs 0.79 crores.

In the result, the balance of profit has staged a rise from Rs 14.61 lakhs to Rs 15.58 lakhs.

Under the solicitous care of Mr B. K. Dutt, the United Bank of India has emerged from tender infancy, as it were, to robust adolescence. With Mr Dutt now undertaking the duties and responsibilities of Managing Director, it is to be expected that the adolescence will prove to witness speedy growth in strength and size of the United Bank.

+

Bareilly Corporation

The balance-sheet of the Bareilly Corporation (Bank) Limited as at the end of December 1956 discloses a paid-up capital of Rs 5.84 lakhs and a Reserve Fund of Rs 7.46 lakhs. Deposits and other accounts are placed at Rs 1.10 crores; and, with borrowings at Rs 20.04 lakhs, the balance-sheet total is over the Rs 1½ crore mark at Rs 1.54 crores.

Cash balances amount to Rs 14.87 lakhs. Investment in gilt-edged is shown at Rs 63.86 lakhs. Advances are at a figure of Rs 60.16 lakhs.

The income by interest and discount is at Rs 5.77 lakhs; and commission, exchange and brokerage have fetched in Rs 1.19 lakhs. Interest paid amounts to Rs 3.25 lakhs, with salaries and allowances accounting for Rs 2.23 lakhs. The balance of profit is, thus, Rs 98,693.

Taxation receives Rs 43,000; the transfer to Property Depreciation Fund is Rs 4,500; bonus to staff absorbs Rs 11.000; and the dividend distribution takes up Rs 40.249-8. In the result, the carry forward is Rs 113-4-1 against Rs 169-5-1 brought in.

+

Mr Birla on Medium-term Credit

Indian bankers have been greatly exercised over the banking situation, and especially in regard to the problems posed by the already fully extended position of bank resources. But few have given constructive thought to the resolving of the difficulties. One recent instance has been the Banking Plan penned by Mr B. K. Dutt of the United Bank of India. Another important contribution last week came from Mr G. D. Birla, when he addressed the annual general meeting of the United Commercial Bank Limited.

The starting point in this regard must needs be the high ratio of Scheduled Banks' advances to Deposits. The second consideration to be kept in mind is that the demand upon banks' resources will increase in pace with the implementation of the Second Plan. Thirdly, we need to remember that industry will seek specialised finance—medium-term credit—which normally is not provided by commercial banking. Finally, regard must be had for the fact that, already, some proportion of so called short-term accommodation is being put to medium-term use.

To what extent banks will be enabled to increase their Deposits at a faster pace, is a matter that need not in this context be discussed. For, Mr Birla has chosen to spotlight attention on the need for the banking system to provide medium-term credit, and on the manner in which banks can fulfil this need. As the UCO Bank Chairman points out, "the idea that commercial banks should grant medium-term loans ranging from five to seven years out of the resources of this nature (short-term deposits) conflicts with principles of sound banking". And yet, for banks to continue to experience their essentially short-term accommodation being transformed into medium-term credit is equally uncomfortable and disquiering to envisage. The way out seen by Mr Birla is that banks should try to secure "special deposits" in the form of bonds with a maturity of three to six years. Such bonds would provide banks with medium-term Deposits; and, against this, they could in turn extend medium-term accommodation.

Mr Birla has cited the instance of Switzerland, where banks "are known to have raised funds through the issue of bonds with a maturity of three to six years". If Indian banks could do this successfully, he says, "a base for medium-term credit to industry would have been established." There is no doubt that such an innovation is desirable in the interests of Indian banking; and we may presume that Mr Birla will take the initiative in exploring the idea further and, perhaps, help to bring it to fruition.

+

Rs 14 Crore Increase in Banks' Deposits

Slackening money market conditions are suggested in the returns of the Reserve Bank for the week ended April 26. Notes in circulation are lower by Rs 7.19 crores at Rs 1561.91 crores. Rupee Coin has returned from currency for Rs 1.00 crore. In the result, the central banking institution's cash in the till has improved to Rs 20.75 crores from Rs 12.38 crores.

There is no deficit financing; but the Centre's balances have nevertheless risen by Rs 1.42 crores to Rs 52.83 crores. Deposits of State Governments also are slightly higher by Rs 0.82 crores at Rs 6.38 crores; but this has been accompanied by an increase of Rs 1.10 crores in their indebtedness to the Reserve Bank. Other Deposits are negligibly changed at Rs 75.13 crores.

Apparently indicating a contrary and busy season trend is the fall of Rs 4.29 crores to Rs 67.60 crores in Banks' Deposits. But a study of the State Bank return in this respect proves otherwise. In the relevant week, the State Bank's cash and balances with the Reserve Bank went down by Rs 7.01 crores; thus, the balances of other member banks with the Reserve Bank must have recorded an improvement. Slackening conditions, as far as the member banks are concerned, are also suggested by the decline of Rs 4.04 crores in borrowings against usance bills and by the fall of Rs 2.56 crores to Rs 96.24 crores in the Reserve Bank's Other Loans and Advances.

The final point of interest in the returns is the depletion of yet another Rs 7.44 crores in Balances Held Abroad; the import surplus continues to make its impress upon the foreign exchange holdings of the Reserve Bank.

+

The intriguing question posed by the statement of the State Bank for April 26 is this: Why have Deposits and cash balances declined in the last week of a month, particularly since the threshold of the slack season seems to have been reached? The fall in Deposits is one of Rs 5.33 crores to Rs 299.15 crores; and cash balances are lower by Rs 7.45 crores at Rs 28.38 crores. For one possible answer, we have to refer back to the State Bank's return for March 29. In that week, Deposits increased by over Rs 20 crores and cash balances swelled by more than Rs 7 crores. In the relevant week, however, the return of Scheduled Banks indicated a rise in Deposits of only Rs 13 crores odd, and actually a decline in cash balances. Clearly, the accretions to the State Bank must have been of a special nature. It is to be suggested that the rises in the last week of March may have related to tax payments received in behalf of the Government by the State Bank; and, if this thesis is correct, the decline both in Deposits and in cash balances could be explained as relating to transmission of such funds to the Central Government. Some extent of corroborative evidence will be available in the Scheduled Banks' return for April 26: if this reveals (as it should, in view of slack season conditions) an increase in Deposits, there will be firmer ground for believing that special payments have been made over to the Central Government by the State Bank.

It is also to be noted that, after four consecutive weeks wherein the Advances portfolio of the State Bank had declined, the figure under this head marks a rise of Rs 2.40 crores to Rs 183.38 crores. The rise is shared equally by Loans, Cash Credits and Overdrafts(which are Rs 1.25 crores higher at Rs. 155.79 crores) and by Bills Purchased and Discounted (the figure registering a rise of Rs 1.15 crores to Rs 27.59 crores).

+

The return of Scheduled Banks for April 19 discloses the substantial increase of Rs 14.19 crores to Rs 1227.74 crores in Deposits. What is interesting is that, in the same week, the State Bank's increase in Deposits was only Rs 4.40 crores; the accretions, therefore, to the other Scheduled Banks have amounted to Rs 9.79 crores. Borrowings from the State Bank have been paid off to the tune of Rs 1.51 crores, and are placed at Rs 7.20 crores. Indebtedness to the Reserve Bank has also been reduced, by Rs 5.36 crores to Rs 75.58 crores. Cash balances are sharply higher by Rs 8.65 crores at Rs 134.70 crores; and here, too, it is the other Scheduled Banks which have benefited most, since the State Bank's cash balances rose only by Rs 2.64 crores in that week. Giltedged investments are lower by nearly Rs 1.00 crore at Rs 345.03 crores against Rs 346.01 crores. Advances have also shown a small decline from Rs 902.27 crores to Rs 901.32 crores.

Dull Conditions Prevail in April

1 & 2

The Finance Minister's unambiguous statement that Government were determined to go ahead with the implementation of the Second Plan notwithstanding the many obstacles in the way was largely responsible for the uninspiring opening of the stock markets for the month under review. It was argued that in the absence of any indication from the Government to spread atleast some of the major project under the Plan over a longer period, there was little chance of a slackening on the part of the tax collector. With heavier taxation in the offing, therefore, both operators and investors were reluctant to extend commitments while weak holders were anxious to withdraw.

When the Calcutta Stock Exchange reopened on the 2nd after the holidays, sentiment was hesitant with the business passing at a low ebb. Toward the close of the day, however, the more speculative counters attracted some support. Indian Irons opened at Rs 19-3 and after receding to Rs 19-1 recovered on bear covering to close at Rs 19-7. Elsewhere except for continued investor interest in Guest Keen Williams, conditions were quiet.

The Bombay Stock Exchange was unofficially closed on account of the death of a broker. Tata Ordinary was nominally quoted at Rs 169-8.

3

It was Settlement day in Calcutta and in the continued absence of buying interest clearing adjustments further restricted trading. The more speculatives however were again on some moderate request and as a consequence their price levels recorded some improvement over previous levels. The rest of the market remained subdued except for a slight recovery in Indian Cables to Rs 25-9. Indian Irons opened steady at Rs 19-6 and closed at Rs 19-7 after having been done upto Rs 19-9.

A weak trend developed in Dalal Street largely due to the announcement by Tata's that the final call of Rs 35 on TISCO new ordinary shares would be payable by June 1. Evidently it had been considered that in the prevailing tightness of the money market, the drain, as represented by the final call, would render the credit position further difficult. The transactions in Bombay were in terms of Decimal Coinage with effect from this day. Tata Iron shaded to Rs 168.25 from Rs 169.50. Textiles were also quiet in sympathy with Steels. Bombay Dyeing dropped nearly three points to be finally placed at Rs 551.00.

4

The outlook for equities in the coming three or four years was indicated by the Chairman of Hindustan Lever Limited Mr A. L. C. Hoskyns-Abrahall. "... I feel bound to say that, however much we may be able to increase our sales turnover in the future, it does not necessarily follow that there will be a commensurate, if indeed any, benefit to our shareholders. The development of this country costs money, a lot of money, and the private investor will continue to be called upon to pay his share by way of taxes."

With no fresh incentives sentiment came to be swayed by reactionary tendencies brought about by bearish assessment of the investment climate. In Calcutta Indian Irons had additional reasons to become subdued. The production of IISCO during the quarter ended March 1957 was placed as follows:—Pig iron 183,857 tons; Steel ingots 139,830; Semi-finished steel 30,336 tons and Finished Steel 90,242 tons. Taking the accounting year of the company ending March 1957 and comparing it with the previous year, it was found that output of pig iron had declined by 11,830 tons to 695,156 tons; steel ingots higher by 810 tons at 532,315 tons and saleable steel declined from 452,910 tons to 441,483 tons. Though it was generally expected that in view of the expansions under way in the company production would record some decline, the figures were pressed into service by bears to push down the price of Indian Irons on the stock market. In Calcutta Indian Irons eased to Rs 19.08 while other speculatives also suffered a setback on selling pressure. In Dalal Street, Tata Iron lost nearly three points to be placed at Rs 165.50 while Bombay Dyeing reacted to Rs 543.00 from Rs 551.00.

5

The sugar industry was in the limelight. Speaking at the annual general meeting of the Indian Sugar Mills Association Mr S. S. Kanoria estimated that over a five year period at least about Rs 75 to Rs 100 worth of sugar could be exported. After referring to the commendable progress of the industry in recent years, he said; "I believe that this impressive performance is only a foretaste of what the industry is capable of achieving". While inaugurating the conference, Mr A. P. Jain, Union Food Minister, assured the industry that Government would allow fresh exports on receipt of suitable offers.

Selling pressure was in evidence in the stock markets with the speculatives bearing the brunt of the bear attack. In Calcutta Indian Irons on overnight liquidation opened easier at Rs 18.80 and lost further ground during the day's session to be finally placed at Rs 18.64.

In Bombay, the March output figures of TISCO had little effect on sentiment. The company reported the total approximate production of irons and steel at their steel works at Jamshedpur during March 1957 was 95,100 tons of Pig irons, 93,200 tons of steel ingots and 73,600 tons of saleable steel comprising 20,500 tons semis and 53,100 tons finished. Tata Irons after opening at Rs 164.75 receded to close at Rs 163.50. Bombay Dyeing was pushed down to Rs 535.00 from Rs 541.50.

6, 7 & 8

Renewed selling pressure was encountered in the Calcutta Stock Exchange in the absence of support and prices all along the list were further marked down. Indian Irons however moved within narrow limits to close at Rs 19.04.

The Bombay Stock Exchange remained closed on the 8th on account of Sri Ramanavami.

9

Mr Thorneycroft, Chancellor of the Exchequer, presenting the 1957 Budget to Parliament announced that the Government proposed to reduce taxation this year by £100 million. That however, had no immediate effect on local market sentiment which continued to be depressed and listless. Trading on the stock exchanges was on a dull note with prices where marked moving within narrow limits. In Calcutta Indian Irons idled round Rs 18.68. Toward close the scrip made some recovery to be done up to Rs 19.16. In Dalal Street, conditions were dull and Tata Iron shaded to Rs 164.75 while Bombay Dyeing came down to Rs 540.50 from Rs 542.00.

10

The British Budget proposal that trading corporations managed in Britain but operating abroad would be exempted from income and profits tax on their overseas trading profits was expected to increase the flow of investments from Britain to India. Consequently, Stock market sentiment showed signs of improvement. The welcome trend was aided by rumours that the presentation of the Indian Central Budget would be postponed to mid-July. Selected Engineering and Miscellaneous scrips on the Calcutta stock market made some headway. Indian Irons after a quiet opening advanced to Rs 19.24. In the Miscellaneous section Orient paper improved to Rs 30.25. Shortcovering and replacement buying imparted a steadier appearance to Dalal Street with Tata Iron advancing to Rs 168.25 from Rs 164.75. Among Textiles Bombay Dyeing made a sizable advance to be finally placed at Rs 550.50.

11

The previous day's improvement in sentiment was carried a stage further under the leadership of the speculative counters. Business passing was also satisfactory. On overnight support Indian Irons opened higher at Rs 19.54. After moving up further to Rs 19.68 the scrip developed a sagging tendency to be finally placed at Rs 16.42. In Dalal street prices in earlier dealings recorded a sizable advance, sentiment having been buoyed up by the considerable increase in currency as disclosed by the weekly statement of the Reserve Bank. But toward close the higher levels attracted profit-taking and closing prices were consequently lower on balance. Tata Iron closed at Rs 168.00 against previous rate of Rs 168.25 while Bombay Dyeing came back to Rs 548.00 from Rs 550.50.

12

Inaugurating the annual conference of the All India Manufacturers' Organization, Prime Minister Nehru pointed out that though it was inevitable that the public sector should expand he did not want people to think the public sector and the private sector were mutually contradictory or came in the way of each other, pulling each other back.

13, 14 & 15

The encouraging speech of the Prime Minister seemed to have revived confidence in the stock markets when they reopened after the week end. In Calcutta fairly active conditions were noticeable with selected scrips all along the list making some headway. Indian Irons after a steady opening at Rs 19.93 moved up further to Rs 20.21. In the Miscellaneous section Indian Cable was wanted up to Rs 25.75 while Orient Paper changed hands at Rs 31.10. Bombay shares ruled steadier with Tata Iron fractionally higher at Rs 169.75 Bombay Dyeing advanced to Rs 555.00 from Rs 551.00.

16

Draft rules issued by the Central Government regarding the deposits required to be made out of current profits by companies were published. The rules had been framed under an amendment to the Income-Tax Act passed in December last year as part of the Finance No. 3 Act of 1956 which came into force on April 1, 1957.

Equities in Calcutta met with profit taking after a steady start. However, they closed steady Indian Irons opened better at Rs 20.33 and was done up to Rs 20.36 before closing at Rs 20.15. In Dalal Street earlier steadiness could not be maintained and closing prices were lower on balance. Tata Iron however were higher at Rs 171 while Bombay Dyeing was unchanged at Rs 555.

17

The publication of the draft rules regarding deposits of current profits with Government imparted a subdued tendency to markets. Sentiment in Calcutta was affected to some extent by clearing adjustments. In that centre, Indian Irons along with other speculative counters were rather quiet though the undertone generally was steady. Indian Irons encountered profit-taking and receded to Rs 20.09. Among Miscellaneous industrials Indian Cable was a prominent spot having been done upto Rs 27.37. Bombay shares wove an irregular pattern having been subjected to alternate bouts of selling and buying. The closing however was better. Tata Iron was unchanged at Rs 171 while among textiles Bombay Dyeing gained more than two points to be placed at Rs 557.50.

18

The extended weekend owing to the intervention of holidays was the main restraining influence in the stock markets and in the absence of fresh incentives prices ruled quiet. In Calcutta speculatives lost further ground with Indian Irons closing at Rs 19.69 while in Bombay Tata Iron was finally placed at Rs 168 with Bombay Dyeing quoting at Rs 551.

19, 20 & 21

The Bombay and Calcutta stock exchanges remained closed.

Mr Morarji Desai, Union Minister for Commerce and Industry told representatives of Bombay textile industry "in the most categorical terms" that there was no chance of any reduction in excise duty on mill cloth.

22

Reopening after the extended week-end the Calcutta stock exchange displayed an irregular trend at the beginning. In the continued absence of interest prices turned easier toward close. Indian Irons opened better at Rs 20.40 but reacted to close at Rs 19.93.

The Bombay Stock Exchange remained closed.

23

Anxiety over adverse effect of the deposit scheme on companies working continued to govern market sentiment and both operators and investors seemed to be reluctant to extend commitments. In the absence of fresh inquiry, prices tended to sag. In Calcutta Indian Irons shaded to Rs 19.69. In Dalal street sentiment was depressed by the heavy selling pressure encountered by pivotal scrips. Tata Iron eased to Rs 166 but Bombay Dyeing managed to close fractionaly higher at Rs 551.50.

24

The decision of Government to set up a Refinance Corporation in conjunction with commercial banks in the country to provide medium-term credit coupled with the bright prospects of securing loans in foreign currency through the Industrial Credit and Investment corporation of India Ltd imparted a cheerful note to stock markets. Dalal street was particularly active with selected scrips gaining good ground. In Calcutta the speculative scrips recorded modest gains. Indian Irons closed better at Rs 20.15. In Bombay Tata Iron gained three points to close at Rs 169 while among textiles Bombay Dyeing advanced by six points to be finally placed at Rs 557.50.

25

The directive issued to commercial banks by the Reserve Bank not to give advances for speculative purposes had a depressing effect on stock market sentiment. Evidently the move had been interpreted to mean the imposition of a fresh handicap on stock market business. A closer study of the directive had, however, led to the realization that the step had been taken to ensure that the already depleted funds were put to development works that would go to increase production. Even so in the absence of fresh interest the reactionary tendency initiated by the directive could not be effectively countered. Conditions in the stock markets were listless and price movements were confined to a narrow groove. In Calcutta Indian Irons reacted to close at Rs 19.93. In Dalal Street, where the day's session had been brief on account of the death of a member, conditions were subdued with Tata Iron receding to Rs 168 from Rs 169. Bombay Dyeing came back to Rs 556.50 from Rs 557.50.

26

Quiet conditions prevailed in the stock markets in the continued absence of buying support. Sentiment had come to be influenced by the forthcoming Central Budget which was expected to be presented to the new Lok Sabha on May 15. In view of the Budget uncertainties marketmen preferred a wait and watch policy to entering into fresh commitments. Indian Irons moved within a narrow margin to close at Rs 19.87. Tata Iron shaded to Rs 167.50 while Bombay Dyeing was half point lower at Rs 556.

27

An Ordinance providing that retrenchment compensation would be payable in bona fide closure or transfer of an undertaking had been promulgated by Government. The Ordinance, said a Press Note issued by the Ministry of Labour and Employment, had been promulgated as an emergency step which the Government considered necessary to meet the situation that had arisen in the country causing serious hardship to workers. The Ordinance had been given retrospective effect from December 1, 1956.

28 & 29

Trading on the stock exchanges was on an uninspiring note as buyers were conspicuous by their absence. Turnover was on a meagre level in Calcutta where Indian Irons fluctuated within narrow limits to close at Rs 19.84. In Dalal Street also business passing was at a low ebb with Tata Iron marked down to Rs 167.50. Bombay Dyeing was placed at Rs 539.50 xd.

30

Dull conditions prevailed both in Calcutta and Bombay. While in the former, price fluctuations were confined to a narrow margin, a slight improvement was noticeable in the later dealings. Indian Irons in Calcutta opened and closed at Rs 19.87. In Dalal Street Tata Iron recorded fractional gain to be finally placed at Rs 168.25, with Bombay Dyeing advancing to Rs 542.00.

INDEX NUMBER OF WHOLESALE PRICES IN INDIA

REVIEW FOR THE WEEK ENDED APRIL 20, 1957

The official wholesale price index (with the year ended August 1939 as 100) advanced by 0.5 per cent to 423.1 during the week ended April 20, 1957 as compared with 421.2 (revised) for the previous week. The index was higher by 0.3 and 7.9 per cent respectively when compared with the corresponding week of the previous month and a year back.

During the week under review, the index for 'Food Articles' went up by 1.0 per cent to 410.7 as compared with 406.6 (revised) for the earlier week as a result of an increase in the prices of Tea for internal consumption (+39%), Coffee (+5%) and Wheat at Amritsar and Gur (+2% each) notwithstanding a decline in the prices of Wheat (new crop) at Hapur (−16%) and at Jabalpur (—11%) and Gram (—4%).

Higher prices of Manganese ore (average export price) (+9%), Linseed in Bombay (+5%), Rapeseed and Copra (+2% each) and Groundnuts (+1%) raised the index for 'Industrial Raw Materials' by 0.5 per cent to 516.4; the prices of Castorseed (—6%) and raw Hides (—1%) were, however, marked down.

The index for 'Semi-Manuafctures' also moved up by 0.2 per cent to 400.4. Items which exhibited noticeable variations during the week were: Castoroil in Madras (+9%), Mustard oil at Kanpur (+8%). Linseed oil in Bombay (+6%, Buff hides (+5%), Cow hides and coconut oil (+2%), Copra cake (—10%), Mustardoil at Patna (—3%) and Gingelly oil (—2%).

The index for 'Manufactures' duing the week under review remained unchanged at the last week's level of 384.1.

A rise of 0.2 per cent to 568.5 as compared with 567.4 (revised) for the previous week in the index for the 'Miscellaneous' group was caused by an advance in the prices of Pepper, Black at Cochin (+4%) and Cashewnuts (+3%) although the price of Chillies at Bombay declined by 3 per cent.

For the Investor

Vicious Circle

Investment Gossip:

STOCK Exchanges have mostly forgotten their knack to interpret the long-term significance of events. This is attributable to the increasing tendency to fashion operations on "flash" news. The market has thus been reduced to an hour-to-hour recorder. Reactions are in response to momentary news. This development is calculated to hinder their effective service to investors. In other words, Stock Exchanges are disabling themselves for their main purpose of serving and safeguarding and guiding investors.

I am not suggeting that speculation should be banned altogether. But, surely, stock exchange committees must comprise men who will intervene effectively and purposefully when speculation tends to become gambling, pure and simple.

When operations are shaped, not by a clear view taken on present and likely developments, but on technical position of the market and on caprices of powerful gladiators, the investor is driven to the conclusion that it were best to keep out.

Investors, that is, those whose savings keep accumulating, come to utilise the services, not of the stock exchanges, but of the announcements made from time to time in the press on new issues of capital. In their preferences in respect of such new issues, they are impelled by their own horse-sense.

Thus, an investment sector outside the stock exchange has come into being. This sector comprises mostly new issues or additional issues of capital. This sector has been fairly active, thanks mostly to the fact that most of the propositions thus thrown open to investors are of companies of excellent standing and of superlative performance. It is also gratifying that those who trusted their own judgment and invested in such stocks have done well for themselves, while those who have invested in quoted shares through the stock exchange agency have been faring very poorly for over a year.

The emergence of an investment sector of this kind is good so far as it goes. But, it is equally important to recognise the snags.

This sector is, in the circumstances of its development, conspicuous for a direct relationship between the investor and the concern invested in. The result is that initial rates are fixed on the basis of an arbitrary judgment, rather than of lively trading and keen bidding. The essential ingredient in the final judgment is the question: At what rate will investors bite?

This criterion is answered in a way that errs on the side of the investor; for, the entrepreneur is concerned to secure success for his floatation. That is, the prospective yield is, by this process, being stepped up in new issue after new issue.

Such an alluring yield is necessary because some of the blue chips quoted on the stock exchanges are giving between 6 per cent and 5 per cent free of income-tax.

The blue chips are at levels working out to yields so high, that the new issues are offering investors enticing returns on the invested money.

Thus, this newly developed investment sector has brought into being a vicious circle in yields.

This greatly adds to the already dense confusion which prevails with regard to the structure of interest rates.

An eight per cent preference issue was a rarity even in the early twenties, when preference stock was neglected and equities commanded the favour of investors.

An eight per cent preference issue seems to be the normal thing now. It is the cause and effect of the Vicious Circle.

Watch-dog Applauds

Buckingham and Carnatic

IT is some considerable time since I have taken up a balance-sheet for study from the standpoint of the encomium it deserves. I must in this context plead guilty to a charge of neglect; but a mitigating factor in this regard is that stock market behaviour has for some time tended to be so sticky and uninspiring, that I should have needed a rare sense of duty before, in such conditions, I could have picked up a balance-sheet to praise. A second line of argument to defend my position is that the straws in the wind, in the last year, have far from indicated any resurgence of investor interest. The implication of what I have just said seems to be that I envisage a revival of investment activity. It is not quite such a belief which has provoked the recommencement of this feature; rather, it is instead the view that stock prices were never more favourable For the Investor: this is the time for him, when prices are so low, to pause, ponder and plan a reinvestment scheme in which he could concentrate his holdings in shares and scrips which all too clearly can be had for a song. The first such share that I offer For the Investor's consideration is Buckingham and Carnatic.

"What?" I can imagine somebody murmuring, "of all scrips, a cotton textile scrip?" And yet, may I suggest that no section in the long run merits as much interest from the shareholder. It is scarcely unreasonable to argue that the gradually improving standard of life fostered and created by the Second Plan will surely have as its first impact an equally gradual and increasing demand for cotton textiles. When we speak of industries with an assured future, we would do well to bear cotton textiles in the forefront of our minds.

HIGHLIGHTS

It was but two years ago, that banks gave wide currency to fears that costs were running ahead of earnings. With this obsession, they bitterly opposed the proposal for a revised scale of pay to the staff.

The Government allowed themselves to be persuaded by the bankers, and took a decision which left no choice to the then Labour Minister, Mr V. V. Giri, but to resign.

Mr Giri resigned, and his resignation was accepted. But the issue on which he held such strong views was further referred to a one-man Tribunal.

The finding of this Tribunal was that the banks were not sufficiently appreciative of the forces and benefits of expansion which was already in train.

In brief, the learned judge suggested that additional costs would be amply covered by rising income.

The 1956 performance of banks proves the judge an inspired prophet, and proves the bankers to be unmitigated pessimists.

The Leading Article examines the working results of the Big Nine; and the World of Finance makes an assessment of present trends and a projection of these trends into the future.

The conclusion? 1956 was a record year of prosperity and all round expansion for banks. And 1957 will beat even this excellent record.

Indian Finance, with its customary foolhardiness, envisages in the next six months an increase of Rs 150 crores in bank Deposits.

It is now upto the bankers to strengthen this prophecy with their own performance and prayers.

Maiden Dividend by Jay Shree Textiles

Balance-Sheet Reviews:

THE working of Jay Shree Textiles Limited has shown considerable improvement during the year ended 31st December, 1956, thanks to the popularity of the company's products, especially of Hosepipes, Threads, Twines and Belting Yarn. In the past, the country used to import these essential items from foreign manufacturers; but now the company is able to meet almost the entire demand of the country, cutting down imports to the minimum possible and thus effecting a saving of vital foreign exchange.

Sales for the year have increased to Rs 62.30 lakhs from Rs 54.21 lakhs, while the net profit, before Depreciation, amounts to as much as Rs 10,36,799 as against only Rs 3,07,227 in the previous year. A larger sum of Rs 5.67 lakhs (Rs 23,192) has been set apart for Depreciation. A maiden dividend of As 6 per equity share has been announced. A sum of Rs 2,632 has been carried forward to next year's accounts.

Some of the departments of the company have been expanded by adding new machineries. Plans are finalised to make further expansions to meet the rising demand for the company's goods. The company has also been given permission to work 152 of its existing looms on Cotton Canvas. Some of the looms have already been started for the production of this item.

The company has received permission from the Government of India for establishing a new Staple-Fibre Spinning Plant, to which the directors are now giving the necessary consideration.

£ R$

Guest, Keen, Williams

It would be recalled that Guest, Keen, Williams Limited, which specialised in mechanical engineering, particularly in the manufacture of railway specialities, was converted into a public company in October 1956 and that about 5.9 lakh Ordinary shares of Rs 10 each, representing about 30 per cent of the ordinary capital, were offered to the public at a premium of Rs 10 per share for the purpose of financing various development schemes.

Reports released by this company, for the year ended 31st December 1956, reveal encouraging results, showing a net profit, after taxation, of Rs 82.21 lakhs. In respect of allocations to Funds, a sum of Rs 69.61 lakhs has been provided for Taxation, while General Reserve for Plant Rehabilitation absorbs Rs 38 lakhs. The directors have recommended a final dividend of 15 per cent, making 23 per cent for the year. The amount carried forward is as much as Rs 17.04 lakhs.

£ R$

Brushware Ltd.

Thanks to a substantial increase in earnings, Brushware Limited, Kanpur, has raised the dividend from As 12 to Re 1 per share for the year ended 30th November, 1956. Although sales are lower at Rs 4.07 lakhs against Rs 4.22 lakhs, the net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 37,798 against only Rs 14,780 in the previous year. The directors have set apart Rs 4,000 against Rs 4,500 for Depreciation; Rs 17,000 against Rs 3,000 for Taxation and Rs 7,500 against Rs 3,500 for Rehabilitation Reserve.

£ R$

Atul Products

The Atul Products Limited has reported excellent results for 1956. After providing Rs 12.68 lakhs for normal Depreciation against nil, the net profit is Rs 18.27 lakhs against Rs 20.61 lakhs in the previous year. A sum of Rs 6.91 lakhs is also provided for arrears of depreciation. The Ordinary dividend is raised from Rs 5.25 to Rs 6.00 per share. Sales have risen from Rs 1.29 crores to Rs 1.83 crores.

Due to some small difficulties, the company has not been able to take out full production from the Azo plant; and there are hopes that production of Azo dyes will increase during the current year. Similarly, though the production of Sulphur Black increased during the

Rising Operating Costs?

Bigger Bank Profits!

THAT Indian banking is on its way to swift, and perhaps even spectacular, progress, is the categorical and unambiguous impression fostered by the 1956 crop of bank balance-sheets. Almost every bank, without exception, has fared better, whether it be in the matter of Deposits or of gross income or of the balance of profit. And yet, scarcely three years ago, gloom permeated the Indian banking world; the threat of an increase in salaries to staff was resisted with vehemence and even bitterness. Matters were not helped by the strike that ensued, nor by the suspension of clearing for some time. Basically, the objection stemmed from the view then held that banks would be unable to bear any further rise in operating costs; but the assumption on which this view was based was that the prospect was dim for a commensurate improvement in banks' earning capacity. In the event, the pessimists who foresaw a quite gloomy future have been proved wrong. Where they erred is in their incorrect assessment of the trends in banking as they were to obtain in the subsequent years.

The most noteworthy fact about bank affairs lies in the eminently satisfactory upsurge in Deposits. The scope of this article is to analyse the figures pertaining to the Big Nine in Indian Scheduled banking over the last three years. The units comprised in the study are: Allahabad Bank, Bank of Baroda, Bank of India, Central Bank, Indian Bank, Punjab National Bank, State Bank, United Bank of India and United Commercial Bank. Important data on the balance-sheet, profit and loss account and the appropriation account are presented overleaf in the form of a compendious table. All figures mentioned in this article are taken from that table, save for some percentages worked out in the case of individual banks. For a measure of the extent of progress recorded, 1954 figures have been taken as base.

Deposits of the Big Nine went up from Rs 654.97 crores at the end of 1954 to Rs 697.16 crores and Rs 765.51 crores at the end of 1955 and 1956 respectively. With 1954 as base, the indices for the succeeding years work out to 106.4 and 115.5. The best result in this respect comes from Punjab National Bank which, between 1954 and 1956, has increased its Deposits by 40.9 per cent.

Over the period, however, the demand for accommodation grew at an even faster pace. Banks found it necessary, consequently, to replenish their resources substantially by borrowings from the Reserve Bank. From Rs 9.87 crores in 1954, borrowings have risen to Rs 52.47 crores in 1956. The largest single borrower is the State Bank, whose indebtedness to the Reserve Bank was placed at Rs 17.27 crores in the 1956 balance-sheet against nil in 1954. All nine figure as borrowers in 1956 whereas, in 1954, four of them owed nothing to the Reserve Bank.

At the same time, cash balances have also been run down somewhat. Cash balances, including money at call, have declined from Rs 97.43 crores in 1954 to Rs 91.17 crores—a fall from 100.0 to 93.6. Nevertheless, five of the banks did improve their cash position; and Allahabad Bank's solicitous servicing of mofussil centres is revealed in the increase in its cash balances from Rs 3.44 crores to Rs 4.96 crores—a rise of 44.2 per cent.

A very small proportion of the increased resources went to the purchase of giltedged. Investment in Government securities rose only by Rs 8.11 crores to Rs 262.88 crores in 1956; and the improvement is a meagre 3.2 per cent. In fact, only four of the banks have added to their giltedged portfolios. Here, again, it is the Punjab National Bank which has added notably to its holdings, with the figure rising by Rs 12.64 crores to Rs 46.90 crores—a rise of 36.9 per cent.

All other available resources were utilised in the provision of accommodation on a much bigger scale. Loans, cash credits and overdrafts have jumped up from Rs 283.24 crores to Rs 371.50 crores, a rise equivalent to 31.2 per cent. The banks to register the largest increases under this head are Indian Bank, higher by 79.8 per cent at Rs 19.02 crores from Rs 10.58 crores, and Punjab National, higher by 66.4 per cent at Rs 46.08 crores from Rs 27.69 crores.

An interesting point is that banks are preferring to provide aid via the medium of bills purchased and discounted. This portfolio has risen sharply from Rs 45.81 crores to Rs 109.80 crores, an increase that works out to 139.7 per cent. The State Bank and the Bank of India share the honours for actively fostering the bill habit: the former increased its bills purchased and discounted more than five times from Rs 6.17 crores to Rs 32.74 crores, whereas the latter discloses a rise of 133.3 per cent from Rs 6.44 crores to Rs 15.11 crores.

The expanding banking activity is suitably reflected in the profit and loss figures. Income by interest and discount has mounted by 26.1 per cent from Rs 20.63 crores to Rs 26.01 crores. Bank of India and Punjab National are the two banks to make the best showing: Punjab National has improved its income under this head by 45.7 per cent to Rs 4.03 crores from Rs 2.76 crores; and Bank of India by 43.9 per cent to Rs 2.72 crores from Rs 1.89 crores.

In regard to income by commission, exchange and brokerage, the aggregate figure for the Big Nine has marked a rise of 50.5 per cent from Rs 5.45 crores to Rs 8.20 crores. United Commercial highlights this section with an increase of 64.2 per cent to Rs 1.20 crores from Rs 0.73 crores; and Indian Bank has turned in a sensational increase of 200 per cent. United Commercial's earning in this regard is second only to that of the State Bank.

Total income of the Big Nine has staged an increase of 30.2 per cent from Rs 26.87 crores to Rs 34.97 crores. The three banks which stand out in an all round improvement in earnings are: Bank of India, with an increase of 49.4 per cent from Rs 2.35 crores to Rs 3.51 crores; Bank of Baroda showing a rise of 50.6 per cent from Rs 1.53 crores to Rs 2.30 crores; and Indian Bank disclosing a jump of 66.6 per cent from Rs 1.23 crores to Rs 2.04 crores.

But, whether due to a scramble for funds or to the higher cost of money, interest paid has also gone up sharply for the Big Nine, with a rise of 46.6 per cent from Rs 7.51 crores to Rs 11.01 crores. The steepest rise is shown by the Bank of India, whose interest paid has mounted by 100.5 per cent to Rs 1.10 crores from Rs 0.55 crores.

Salaries and Allowances have also gone up by 19.8 per cent to Rs 13.44 crores from Rs 11.22 crores for the Nine Banks. Bank of India's expenditure in this context rose by 41.2 per cent to Rs 1.08 crores from Rs 0.76 crores; and Indian Bank has reported an increase of 42.4 per cent from Rs 0.41 crores to Rs 0.58 crores.

It is to be noted that the operating costs, as such, of the Big Nine have gone up from Rs 18.72 crores to Rs 24.44 crores—an increase of 30.6 per cent. During the same time, total income, as we have seen, improved by Rs 8.10 crores, or 30.2 per cent. Thus, the impact upon the balance of profit is solely from the point of view of the higher tempo of activity. It has thus happened that the balance of profit for the Big Nine has gone up quite substantially, from Rs 4.48 crores to Rs 6.14 crores, an increase that works out to 37 per cent. It can be seen that banks have not only been able to afford the higher operating costs, but that they have despite them considerably augmented their profits.

No detailed comment on the appropriation account figures is either possible or necessary. It suffices to point to two developments. In the first place, the transfers to Reserve and Contingencies have improved rather sharply from Rs 0.30 crores to Rs 0.75 crores; United Commercial Bank has prominently increased its transfer from Rs 6.50 lakhs to Rs 20 lakhs. In the second place, the provision for staff bonus and amenities funds has significantly increased by 32.2 per cent to Rs 1.35 crores from Rs 1.02 crores. It is also noteworthy that dividends are higher only by 10.1 per cent at Rs 2.38 crores against Rs 2.17 crores.

It is, we suggest, an incontrovertible fact that banks are not only having larger resources but also that their margin of earnings has increased. While Deposits of the Big Nine were rising to Rs 756.51 crores from Rs 654.97 crores, their gross income improved from Rs 26.87 crores to Rs 34.97 crores That is to say, the gross income-Deposits ratio has gone up from 4.1 per cent to 4.6 per cent. It may be remarked that the balance of profit has shot up to Rs 6.14 crores from Rs 4.48 crores; and the profit-Deposits ratio in the process was placed better in 1956 at 0.81 per cent against 0.68 per cent in 1954. Only three of the Big Nine are experiencing a balance of profit that is better than one per cent of Deposits. First, Bank of India earns 1.32 per cent; second, Indian Bank's balance of profit works out to 1.40 per cent of Deposits; and third, United Commercial has a balance of profit that is 1.08 per cent of its Deposit liabilities.

It is to be suggested that the trends are indicative of (a) a continuing increase in Deposits; (b) a full utilisation of such resources in Advances: and (c) a sustained increase in gross income. In this view, although a rise in operating costs is inevitable, the prospect for Indian banking is assured in the sense that the improvement in earnings will more than offset higher levels of expenditure. For the future, therefore, it is of heartening significance that Indian banks, in due and continuing process of strengthening and consolidation, will be enabled to fulfil their rightful role in financing the expanding Indian economy.

Tea and Sympathy

ANYONE who tries to invite sympathy for India's tea industry in its present state would come up against an array of hostile facts. In 1956 exports touched the record figure of 516 million pounds. Not only was the ground lost in 1955 recovered, but a substantial further advance was also made. Britain is reported to have purchased 355 million lbs against 248 million lbs during the previous year. The United States took 29 million lbs against 24 million lbs in 1955; Canada recorded an increase of more than 6 million lbs in its annual offtake; Egypt took 22 million lbs against the previous year's 13 million lbs. Australia showed a similar rate of increase. Soviet Russia came in as a new purchaser.

In the country-wise exports statistics, a few setbacks are noticeable. The Irish Republic and Iran, for instance, took less in 1956 than in 1955. But these declines are too negligible to make any significant impression on the total picture. While the leading importers of Indian tea have been taking larger quantities, new customers with colossal buying potential have emerged. The foreign exchange earnings of tea during the year pierced the annual target envisaged in the Second Plan.

It is not the eventual results alone which are a source of satisfaction. Contributing factors are equally gratifying. When it was found that the restriction on consignments intended for the London auctions was jeopardising exports, the Government promptly revised the ceilings and subsequently the export quota too. The Tea Board for its part has been quick to perceive where new propaganda should be directed. West Asia and Australia are quite properly receiving the sustained attention of the Board. Dr B. C. Roy gathers that some of the companies have been giving as much as 40 to 50 per cent dividends to the share-holders.

The Chief Minister of West Bengal, who was invited to inaugurate the first Annual Meeting of the Tea Association of India at the Indian Exchange last Sunday, felt impelled to mention this fact when confronted with the request to reduce the taxes imposed on tea by his Government. Not every tea company finds itself in a position to declare a dividend of 40 per cent. Some would be immensely pleased to be able to attain even half this rate. But whatever be the individual fortunes of Companies, there is little doubt about the vitality and robustness of the tea industry in general. The Plantation Enquiry Commission, it will be recalled, insist that the managements should on the whole restrict dividends to enable replanting and other capital expansion programmes.

Dr Roy could straightaway reject the request for tax reductions on the simple ground that an industry which could produce, export and earn so impressively could well afford to continue to bear the present tax burden. He went a step further to demand the existing taxes as a bare obligation owed to a developing economy. When all the producing units are not equally capable of meeting the fiscal calls, West Bengal's Chief Ministers' assessment might look rather inconsiderate to the smaller and weaker producers. The Government, however, cannot accommodate all the differences in capacity and as far as the average producer of tea goes he can have little room for complaint. Moreover, it is time that industries no less than individuals start looking upon tax-paying as an elementary social obligation, one on which the axe should be applied not first but last.

In his presidential address, Mr H. B. Kanoi argued that the abolition of the multi-point and multifarious taxes would not seriously affect Government's revenues, as corporate and individual taxes would be fetching more. To a large extent it is immaterial at what stage the tax-collector appears and the pocket which he taps, when the original source remains the same.

The growing competition to Indian tea in the export markets has to be squarely faced. Prices will always remain an important consideration for buyers in most countries. East African tea offers a grave threat. But even here, it is no longer possible for India to bring down costs through wage reductions or cuts on amenities which have become part and parcel of the customary emoluments to labour.

After tortuous years of struggle, the tea garden workers are now receiving satisfactory wages and amenities. If they are slightly better-off in this respect than agricultural workers elsewhere, the difference is scarcely to be grudged. In any case, there is no

(Continued on page 915)

Wage Increases in an Expanding Economy

If there is one lesson more than any other which US experience of the last ten years stresses, it is that wage increases are no impediment to an expanding economy. In fact, higher wages stimulate and accelerate the economy. Wage disputes are settled without much ado; for, American industrial leaders have the confidence that the additional cost will be absorbed by the additional production necessary to take care of the additional purchasing power. The attitude to labour's emoluments in an expansionist economy must be one of readiness on the part of industry to meet labour's demands more than half-way. This attitude is now universally understood in the USA. Not so in the UK or in India.

Every wage demand is resisted with a vehemence which has an unthinking quality. Increases are conceded with ill grace. Everything is done to confirm labour's suspicion. Truculence begets truculence. India, which is fortunate in that it is embarking on an expansionist economy, must have a reappraisal of views in this respect.

Take the case of our banks. What an outcry did our bankers raise on the scales of pay recommended by competent and authoritative tribunals! They gave the cheerful promise that, if these scales were adopted, many banks would shut down; and a banking crisis of the greatest kind would materialise. What have the bankers to say after they have prepared their own 1956 accounts and perused the 1956 accounts of their compeers? Headily expanding activity among banks has enabled them to absorb additional staff expenditure and, yet, to make excellent showing. It is time that we in this country, too, realise that we are making a new economy and fashioning a new economics.

Farm Size and Income

In another column we have referred to an outstanding Indian leader's criticism of death duties as undermining agricultural production. The same criticism is levelled in more concrete detail by an ICI Pamphlet entitled Capital in UK Agriculture quoted in a recent issue of The Statist. The pamphlet describes death duties as a major drain on capital and a "serious problem when it comes to maintaining the necessary flow into agricultural and rural development."

In the same article, The Statist also draws attention to a Political and Economic Planning booklet which briefly recounts some of the current problems of British agriculture. Its study of the relative efficiency of small and large farms based on figures supplied by the Ministry of Agriculture has a wider appeal and should be of particular interest to India. It is found that gross returns on farms below 50 acres in size average 10 per cent; between 50 and 100 acres, they are 15 per cent; dairy farms over 100 acres fetch 20 per cent and arable farms over 100 acres 30 per cent.

There can be no denying the fact that many important pieces of legislation since the transfer of power have tended to aggravate fragmentation of holdings. In Sweden, the Government have been trying to increase the size of the farm by the offer of compensation and of finance for land purchases where the size and layout would gain. Over eight years, Sweden was able to reduce its number of very small farms by 8 per cent.

In India, legislation for the consolidation of holdings is on the statute book in many States, but being mostly of a permissive character, the law has failed to produce adequate results. Meanwhile, the process of disintegration of the bigger holdings has been going on. A new check is sought through cooperative farming.

*

Party Introspection

At a secret session of the AICC and subsequently at a meeting of the Uttar Pradesh Congress Committee, Pandit Nehru spoke on the ailments which afflicted the party organisation. The diagnosis largely corresponded to the public impression. Factiousness, feuds, exaltation of personal ambitions, compromises on principles, evaporation of the spirit of service and a general reluctance to give up positions of power and prestige—these have undermined the party's emotional hold on the people. Some of its election losses are conspicuously damaging. The pity is that even afterwards a number of stalwarts continued to engage in personal squabbles and group rivalries to the chagrin and discomfiture of the more upright elements in the organisation.

In Bihar, it took several weeks before the leaders could agree on the composition of the cabinet. In UP, the door is being kept open, possibly to accommodate individuals who would otherwise be troublesome. In Madras, there are more than twenty members now sitting in Opposition, who ought to have been on the Government side. In Kerala, a rebel Congress group has wound itself up after declaring that it has no more purpose to serve!

The manner in which the Central and States Cabinets have been reconstituted is itself ample proof to the incapacity of anyone, not excepting Pandit Nehru, to show the door to a Congressman, once he finds a place in a Ministry. The Prime Minister's repeated exhortations to Congressmen to shun office and to take to constructive work seem to have fallen mostly on deaf ears. No shock treatment is likely to be effective toward the reformation of the human material if it has to sustain on the initiative of not more than one or two men.

If external factors are considered, the prospect for the party is even now in no way dark. A recent census of students' opinion in certain selected centres showed an overwhelming preference to the democratic as against the totalitarian way. The Congress itself has seldom been found wanting in the matter of revising its aims and ideas. New blood appears to be the most serious deficiency. But as long as the old cannot be eliminated till it stinks, the problem remains. If at all there is anyone who can do some wholesale bloodletting, it is Pandit Nehru, beneath whose personal prowess and prestige many blemishes are concealed.

*

Tribal Welfare

What neglect of tribal welfare means in terms of political difficulties in India, is not generally realised. Except to those, who are on the spot in charge of major responsibilities, the impulses and inspiration behind the revolt in Naga land are seldom fully known. It is a confused socio-economic picture, which not only baffles quick understanding, but has always remained susceptible to the inroads of conflicting pulls and interests. Though the Naga area is conspicuous by its militancy there are quite a few potential trouble spots in other parts of India which call for equally anxious attention from the national authorities.

Mr L. M. Srikanta, Commissioner of Scheduled castes, and Tribal Welfare, Government of India, in his speech at the recent all India Tribal Welfare held at Koraput, deplored the dearth of young workers with the necessary amount of enthusiasm and judgment in welfare activities among the tribals. The existing organisations are either wedded to sectarian aims or are debilitated by paucity of funds and personnel. There is plenty of work to be done in several states and the Government are committed to help organisations with funds.

The chances of the misuse of funds are perhaps greater in this field than in any other where non-official bodies function with state aid. Somehow or other the principle of the man who pays the piper calling the tune does not prevail in this particular field. If real national interests are not to go by default and if the disintegrating forces had to be kept off the Central Government will have to undertake a more rigorous scrutiny of the work of all the organisations which function on behalf of the tribal people's welfare.

The most fundamental need is to familiarise the tribal people in gradual stages with the main currents of the Indian culture and link them emotionally with the rest of the population. This is a task which might even be repugnant to bodies which are

Changed and Changing Seasonal Pattern

Although the 1956-57 busy season has run its course without causing undue difficulties to the banking system, and although the slack season has apparently just begun, it is not too early to start thinking constructively in terms of the 1957-58 busy season. For, as we pointed out last week, the less than apprehended severity of the busy season just completed may be said to be directly the result of the ample forewarning and the sufficient forearming. While it is premature to project trends into the next year, and to assess the probable size of the financing needs that may be postulated, we think it would serve a useful purpose to analyse the slack season's prospects and thereafter to indicate the likely state of monetary conditions. In this respect, we may point out that the term "slack season" needs to be redefined. Not many years ago, a distinctive pattern could be discerned in the national economy, with the demand for funds accentuated in the November-May half of the year and with the certain return of funds in the other half. These constituted the busy and slack seasons; there was a clear demarcation between the two, because the monetary system was substantially affected by the demands arising from agricultural activity. In the recent past, however, industrial expansion has been having an increasing prominence in its impact upon the banking sector; and it has therefore happened that the sharp delineation between the busy and slack seasons has tended to be blurred. Moreover, the most important single factor to the economy is now the vast governmental expenditure upon the Second Plan; and since these disbursements are more or less evenly spread over the whole of the year, the slackness of the slack season has been diminished. Nevertheless, there continue to be, broadly speaking, two perceptible halves in which the year can be divided. What these are, will be indicated later in this article.

The gradual obliteration of the slack season's traditional attributes is, for the purposes of the emerging, expanding economy, the first axiom that the student of money market affairs must bear in mind. The second axiom follows from this, that the trend in Deposits of Scheduled Banks, in Active Note Circulation and in Advances of Scheduled Banks will be upward throughout the year. The third axiom should be, we suggest, that the pace of accretions to Deposits of Scheduled Banks will be faster than the rate at which increases are registered in Note Circulation. Though an axiom is a self-evident truth, allowance must be made for inability to read the facts correctly or for a misinterpretation of such data as are available. It is, therefore, the purpose of this article to render all available and relevant data as affecting the money market in such manner as to transform them into self-evident truths. While this is a somewhat ambitious undertaking we are emboldened to do so in the view that, for a correct perspective of and therefore for the right attitude toward money market needs and resources in behalf of the Second Plan, it is a vital prerequisite to look upon the three axioms as basic considerations. Our study begins with slack season data from 1951. The significant money market indicators are published on this page in the form of a table. The paragraphs that follow should be perused in conjunction with that table.

The slack season as it once used to obtain was notable for and reflected in (a) a substantial contraction in Active Note Circulation; (b) a reduction in Scheduled Bank indebtedness to the Reserve Bank and/or an increase in banks' Deposits with the Reserve Bank; (c) a rise in the Deposits of Scheduled Banks at a pace faster than in the preceding busy season; and (d) a decline in the Advances of Scheduled Banks. Taking the first of these, it will be seen that contraction in Active Notes was placed at Rs 177.21 crores in May-October 1951, and that the figure dropped sharply to Rs 23.40 crores in May-October 1955. In the latest year, however, the contrary trend is apparently discernible; for, the contraction in Active Notes jumped up once more to Rs 106.99 crores in May-October 1956. But, in this last context, an important factor responsible must not be overlooked: over the same period, the foreign exchange holdings of the Reserve Bank fell by Rs 135.74 crores; it can, therefore, be suggested that, but for the large import surplus, May-October 1956 may actually have witnessed an increase in Note Circulation. For the future, a continuing import surplus is inevitable; but the gap will—and can—be covered only by other foreign exchange resources (e.g., World Bank loans, US economic assistance, Colombo Plan aid, etc.). For, the present level of reserves cannot much be drawn upon for meeting balance of payments deficits. Furthermore, a not inconsiderable volume of imports already arranged and in process of negotiation will be on the basis of extended credit —obviating the need for immediate payment in foreign exchange. While the payment for the import gap from foreign exchange resources has a contractionist influence on Note Circulation, foreign assistance derived, even if expended on the financing of imports, will by no means similarly affect Active Notes. It is for these reasons that we suggest that, in the future, there will generally be a non-contraction in Active Notes during the traditional slack season.

Turning to the second point, it is to be noted that Deposits of Scheduled Banks with the Reserve Bank rose by Rs 21.55 crores in May-October 1951; and that, in May-October 1956, the increase is no more than Rs 1.66 crores. Again, the State Bank's borrowings were reduced by Rs 6.29 crores in May-October 1951; the reduction is larger in May-October 1956, but borrowings outstanding on October 26, 1956 (at Rs 9.00 crores) were higher than the level at May 12, 1951 (Rs 6.29 crores). While figures relating to Borrowings of Scheduled Banks from the Reserve Bank are not available for 1951 and 1952, the trend since then shows clearly that (1) reduction in the slack season is for smaller amounts and (2) the level of borrowings has gone up sharply. However, it is possible that banks' Deposits with the Reserve Bank may rise, and that borrowings from the Reserve Bank may decline: in the former instance, the central banking institution could invoke its powers to increase the ratio of Deposits to be held with it by Scheduled Banks; and, in the latter, a sharper increase in Deposits of Scheduled Banks may enable some part of the indebtedness to be repaid. In broad terms, nevertheless, it may be stated that increase in banks' Deposits with the Reserve Bank and decline in borrowings have both ceased to be as significant, in the slack season sense, as they used to be.

The following table needs also to be studied in respect of the swifter pace of increase in Deposits as compared with the expansion in Active Note Circulation:

CHANGE IN ACTIVE NOTE CIRCULATION AND SCHEDULED BANK DEPOSITS.

Period.	(In Crores of Rs) Active Notes. (+ or —)	Banks' Deposits. (+ or —)
May 12, 1951 to April 12, 1952 ..	—137.29	— 46.86
April 12, 1952 to May 9, 1953 ..	+ 14.63	— 11.10
May 9, 1953 to May 8, 1954 ...	+ 53.93	+ 11.59
May 8, 1954 to May 7, 1955 ..	+ 95.52	+107.26
May 7, 1955 to May 11, 1956 ...	+196.62	+ 99.49
May 11, 1956 to April 12, 1957 ...	+48.54	+149.31

The figures have been taken from the start of one slack season to the beginning of the next. A detailed explanation is hardly necessary. It is to be stressed that the plan expenditures incurred three years ago would at the present day be in the process of percolating into the resources of the banking system. If we, moreover, have regard for the fact that the Second Plan's emphasis is on industrialisation, it seems scarcely possible that the trend, already distinctly noticeable, of a faster increase in Deposits of Scheduled Banks is capable of being reversed.

The decline in Advances usually occurring in the slack season has steadily grown smaller in size. The State Bank experienced a contraction in Advances of Rs 37.15 crores in May-October 1951. In May-October 1956, the reduction was no more than Rs 10.85 crores. In the case of the other Scheduled Banks, the figures are even more revealing; the contraction in Advances amounted to Rs 48.71 crores in May-October 1951; and, after the size of the decline had gradually become smaller, it has ultimately come about that, in May-October 1956, Advances actually rose by Rs 1.79 crores.

We may, at this point, sum up the main conclusions suggested. The distinction between the busy and slack seasons is being blurred, measured in terms of all the relevant indicators. The Deposits of Scheduled Banks are rising throughout the year: the figures since September 25, 1953 in the main table may be noted in this regard. Active Note Circulation does not tend to contract as steeply during the slack season; and it is possible that some rises may also be registered in the future. Advances of Scheduled Banks may not, in the future, decline in the slack season; and prospects are for increases to be marked up instead. Deposits of Scheduled Banks are benefiting at a faster pace in relation to currency expansion. If the foregoing may be said to have basic importance for the money market, what are the conclusions that can be drawn?

The first important lesson is that Deposits of Scheduled Banks will be rising by such margin as to endow the banking system with fresh and satisfactorily large resources. As we have already seen, Deposits rose by just under Rs 150 crores in the period between May 11, 1956 and April 12, 1957. This was despite the fact that the import surplus must have adversely affected Deposits. Our own view is that the increase in Deposits between April 12, 1957 and the start of the next busy season may be in the vicinity of Rs 150 crores. Its significance for the money market is that banks will be armed with sufficient resources for meeting the bulk of the additional demand for working capital.

The second important lesson is that Active Note Circulation will rise throughout the year, although at a much lower tempo during May-October. Plan disbursements will entail increasing currency circulation; and the busy season demand will be superimposed upon an already high level of Active Notes. The significance of this for the money market is that the continuous rise in Active Notes will foster a further increase in Deposits of Scheduled Banks.

The third important lesson is that there is likely to be less of "slackening off" in Advances in the so called slack season. Industrial demand for funds, both for working capital and financing expansion, is likely to grow at a rate to offset any traditional decline in demand as a result of the release of funds advanced to the agricultural sector. As far as Scheduled Banks are concerned, this will mean that their resources will be very profitably utilised over the whole of the year.

It is finally to be noted that the slack seasons of the future, although less slack than formerly, will nevertheless witness less accentuated conditions in relation to the busy season. The present nomenclatures may, therefore, continue. But the distinguishing marks of the slack season will be: (a) a slackened tempo in currency expansion; (b) a further accelerated rise in Deposits of Scheduled Banks; and (c) a smaller rise in Advances of Scheduled Banks. In the matter of the duration of the two seasons, it may be suggested that the busy season, starting toward the end of October as heretofore, should usually be drawing to its close somewhat earlier around the first/second week of April. The experience of the last six years shows that the busy season has ended in April in only two of them, the peak having been attained on the other four occasions in the first/second week of May. While the underlying reason for the peak having been touched earlier in the 1951-52 busy season was the advance preparedness of the authorities to meet the anticipated challenges, the earlier peak to the 1956-57 busy season was enabled by another factor of vast significance: the heavy governmental disbursements at the close of March mitigated the money market stringency. These disbursements, apparently largely relating to plan appropriations which would otherwise lapse, are likely to occur in concentrated form at the end of every fiscal year. For this reason, it seems very probable that the busy season peak should follow close on the heels of the end of the fiscal year governmental disbursements.

Impact of Month-early Disbursements

CHANGES relating to month-early disbursements and their impact upon the Central and State Governments, on the one hand, and upon the member banks, on the other hand, are the noteworthy features of the returns of the Reserve Bank for the week ended May 3.

Currency has been expanded for Rs 4.97 crores against Rupee Securities; Rupee Coin has gone out into circulation for Rs 1.30 crores; Active Notes have risen by Rs 15.20 crores; and the Reserve Bank's cash in the till has been diminished by Rs 11.53 crores to Rs 9.04 crores.

In the Banking Department, it is to be seen that Investments have increased sharply by Rs 14.72 crores to Rs 127.14 crores. It is necessary for us to analyse the three possible reasons for such changes in Investments and in Rupee Securities. Firstly, a transfer could be made from the Banking Department to the Issue Department to facilitate the expansion of currency and to replenish the Reserve Bank's cash; but, clearly, this is not what has taken place in the week under review. Secondly, sales of ad hoc Treasury Bills could have been effected in favour of the Reserve Bank for replenishing the Centre's balances, with (if found necessary from the point of view of currency circulation) a transfer of marketable securities from the Issue Department to the Banking Department: and this, as we shall see, is a procedure that might have been followed. Thirdly, ad hocs or marketable securities might have been sold to the Reserve Bank by State Governments for replenishing their resources; and this, too, is a likely phenomenon during the week.

Both the Central and State Governments have apparently felt the pressure on their finances of month-early disbursements. The Central Government had moreover to "redeem" maturing ad hocs which had earlier been sold to the Reserve Bank by State Governments. Thus, the decline of Rs 4.57 crores in Government Treasury Bills Purchased and Discounted betokens the maturing of such ad hocs for the cancellation of which the Centre had to meet its commitment. Therefore, for the month-early disbursements, on the one hand, and for the liability on maturing ad hocs, on the other, the Centre has had recourse to deficit financing. The rise of Rs 5 crores in the Issue Department certainly represents ad hocs sold to the Reserve Bank; and it is possible that, of the rise of nearly Rs 15 crores in Investments, Rs 10 crores represents "concealed" deficit financing, in the sense that marketable securities have been transferred from the Issue Department to the Banking Department after Rupee Securities had risen consequent to sales of ad hocs in favour of the Reserve Bank. It follows that the balance of the rise, Rs 5 crores, in the Investment portfolio relates to the sale of marketable securities by State Governments.

After the Central Government had received credit for Rs 15 crores or so, the week's disbursements were still so heavy as to effect a diminution of Rs 1.02 crores to Rs 51.81 crores in their Deposits. Similarly, State Governments, after replenishing their balances by Rs 5 crores or so, have nevertheless drawn upon their Deposits to the tune of Rs 2.12 crores; but this is partly offset by a decline of Rs 0.55 crores in their indebtedness to the Reserve Bank.

Other Deposits are higher by Rs 0.89 crores at Rs 76.02 crores.

From the point of view of member banks, month-early disbursements are ostensibly reflected both in their Deposits and in borrowings from the Reserve Bank. Balances of Scheduled Banks are lower by Rs 3.54 crores at Rs 64.06 crores; and the Other Loans and Advances of the Reserve Bank have risen substantially by Rs 9.07 crores to Rs 105.31 crores. Indeed, borrowings of member banks against usance bills have mounted by Rs 6.75 crores to Rs 59.98 crores. But, as we shall see in the return of the State Bank, at least the decline in balances with the Reserve Bank is due solely to this institution.

Finally, Balances Held Abroad have again been depleted to the amount of Rs 8.49 crores to Rs 83.90 crores.

■

The statement of the State Bank for May 3 discloses a fall of Rs 2.20 crores to Rs 296.95 crores in Deposits; secondly, cash balances are lower by Rs 3.05 crores at Rs 25.33 crores; thirdly, the whole of this decline is in cash and balances with the Reserve Bank, which stand reduced by Rs 3.59 crores at Rs 20.48 crores; and, fourthly, the total of Advances has gone up by Rs 4.54 crores to Rs 187.92 crores. We may recall that, in the previous week, a similar decline in Deposits and in cash balances was interpreted as indicating the transmission of tax payments received by the State Bank in behalf of the Central Government. In the current week, however, a second possible explanation renders interpretation difficult. Are the State Bank changes purely month-early disbursements? is a question that can be attempted to be answered only after the statement for Scheduled Banks for the same week is available.

Although the total of Advances has risen by Rs 6.62 crores to Rs 907.94 crores), the return of Scheduled Banks for April 26 nevertheless appears to be slack season in its other attributes. Deposits have risen by Rs 4.15 crores; and, since the State Bank in the relevant week suffered a reduction of Rs 5.33 crores in this portfolio for special reasons, it is

clear that the other Scheduled Banks added to their Deposits by Rs 9.58 crores. In the second place cash balances of member banks have gone down by Rs 3.60 crores; but the State Bank's depletion in that week was for Rs 7.45 crores; so, the other Scheduled Banks actually improved their cash position by Rs 3.85 crores. While borrowings from the State Bank rose by Rs 0.66 crores to Rs 7.86 crores, indebtedness to the Reserve Bank declined by Rs 2.87 crores to Rs 72.71 crores—the lowest figure since December 21, 1956.

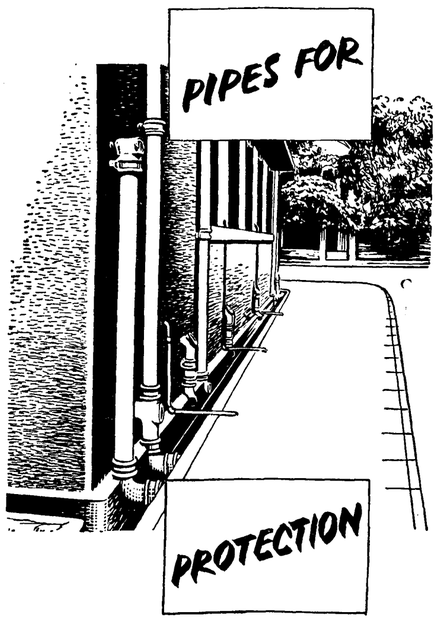
British Inflation must Proceed

By PAUL EINZIG

ANY lingering hopes that inflation in Britain might be halted were severely disappointed when the report of the Court of Inquiry into the wages dispute in the engineering and shipbuilding industries was published on May 2. The report, like practically every public pronouncement these days, pays of course lip service to disapproval of inflation. But the recommendations of the report will inevitably aggravate the pressure for inflationary wages increases. While the employers were prepared to concede an increase of 3½ per cent in return for the abolition of restrictive practices by the employees, the report recommends an unconditional increase of 5 per cent, or an increase of 6½ per cent in return for the abolition of restrictive practices, and an undertaking on the part of the trade unions not to put forward further wages demand for twelve months.

This latter formula is, if anything, even more inflationary than the proposed increase of wages in excess of the increase in the cost of living and in the absence of any increase of productivity. For it does imply the admission of the principle that workers are entitled to an annual increase in wages, regardless of the cost of living or of productivity. Indeed, on the basis of the recommendations of the Court of Inquiry, the interval of 12 months between two wages increases will come to be regarded as a maximum. The report implies that the willingness of employees not to demand wages increases even more frequently must be purchased by employers by an extra increase in wages.



Any findings of a Court of Inquiry in Britain are apt to be regarded with a reverence bordering on the superstitious. Such Courts are looked upon as being supremely impartial dispensers of supreme wisdom. While arguments put forward by politicians or by spokesmen of employers or employees are treated with scant respect by those who disagree with them, recommendations made by Courts in Inquiry, or Courts of Arbitration, or Committees of Conciliation, carry very considerable weight, well beyond the immediate dispute dealt with in the findings. Thus when two years ago such a Court ruled that the Government should cover the deficit of the nationalised railways arising from wages increases, this ruling gave rise to a general stimulus to wages demands in nationalised industries. Until then the national boards were able to argue against excessive wages increases on the ground of the need for balancing expenditure by revenue. But when Lord Cameron ruled that this was not necessary, the granting of excessive wages increases regardless of the solvency of the industries became inevitable.

In Britain Courts of Inquiry in general, and this Court dealing with engineering wages in particular, are regarded with such respect because of the high and well-deserved prestige of British Law Courts. Yet the analogy is entirely false. Judges are in a position to be impartial in interpreting the law, and usually live up to their reputation of impartiality. But those called upon to make a ruling on an economic question such as a wages claim are bound to be influenced by their views on the expediency of their findings. In the present instance, refusal by employees to accept the recommendations would have meant a major strike, and the Court of Inquiry interpreted its task in the sense that it must produce a report which would avert the strike. The terms of the findings had nothing to do with the economic aspects of the problem. The chairman of the Court, a professor of economics, must have been well aware that this wages demand had no economic or moral justification. But he made his ruling, nevertheless, in a sense as to support unjustified wages claims, in the hope that the employers would abide by his ruling against them.

In the circumstances, the Court's recommendation that some permanent body should be set up to deal with the wages question appears to be of small practical value. If the man serving on the proposed body should make an honest attempt at laying down rules impartially, their findings would be rejected by the trade unions. If, on the other hand, the Court were composed of opportunities their findings would merely cover the inflationary wages spiral with a cloak of respectability.

The report condemns any group of employers which would attempt to "offer stubborn resistance to wages claims." On the other hand, it admits that "a general acquiescence in these recurring wages claims worsens the inflationary situation." The logical conclusion that emerges from these remarks is that employers' federations should combine in a united front to resist. But this is not what the Court has in mind. Indeed such a combined effort at resistance would be denounced by Socialists as a "capitalist conspiracy" and the outcome might well be a general strike. What is needed is that some strong group should make a long-overdue stand against unjustified inflationary wages demands, even at the risk of prolonged major strike. The failure of a single major strike to achieve its aims would act as a strong deterrent to excessive wages claims in other industries. But the condemnation by the Court of Inquiry of any such attempt by a group of employers to break the inflationary spiral is calculated to discourage industrialists from fighting inflation even if they were prepared to face the costs of a prolonged strike.

The British Press does not appear to have realised the inflationary implication of the Court's report. Newspapers, like the rest of the public, are hypnotised by the undeserved prestige of such Courts, and most comment on the report is devoted to the discussion of the proposed permanent body to inquire into wages problems. The adoption of this proposal would be a piece of escapism, and continued inflation would be the price the public would have to pay for its unwillingness to face realities.

SOUTH EASTERN RAILWAY TENDERS

The Controller of Stores, S. E. Railway, Garden Reach, Calcutta-23 invites tender No. CS16/57/8712-(R) (57)—for supply of 1 No. Air Compressor plant stationery complete.

Tender Forms are obtainable from the Controller of Stores, Garden Reach, Calcutta-23 on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside Firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach, by local firms. Closing date is 29-5-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender. Earnest Money is Rs. 250/-.

World of Jute

Jute Goods Stocks Rise

Prices in the jute goods market on Wednesday developed a sagging tendency, sentiment having been somewhat depressed by the sizable increase in stocks of jute goods as at the end of April. As against total stocks of 97,700 tons at the end of March, total stocks at the end of last month have been placed 7,300 tons higher at 105,000 tons.

Stocks of hessian cloth and bag at 35,400 tons are 5,600 tons higher while those of sacking cloth and bag at 58,800 tons are 2,300 tons higher. Other varieties at 10,800 tons are lower by 600 tons.

At the corresponding period of last year, total stocks were placed at 107,900 tons comprising 35,900 tons hessian, 63,300 tons sacking and 8,700 tons other varieties. It will be seen, therefore, that as compared with end-April 1956 stocks, stocks at the end of April this year are 2,900 tons lower. Taking the two sections separately, it will be noted that while hessian stocks are only slightly lower, those of sackings show a substantial dimunition.

Considering the fact that less number of looms are in commission now than at the corresponding period of last year, the stocks should be considered high as compared with April 1956. Further it would appear that conditions in the jute industry and trade during last month have not been quite satisfactory compared with the month preceding it. The increase in stocks indicates that despatches during the month have been rather poor. The sizable increase in hessians shows that this section has had a particularly lean time.

It is evident now that overseas buyers, especially in the US, have not shown much interest in the Calcutta market for the simple reason that prices have been marked up. It is common knowledge here that a rise in goods prices has become inevitable because of the firm conditions in the raw jute market, where sellers are reserved on possibility of a delayed jute crop. With their raw jute stock position not very comfortable, most mills have been obliged to buy even at the prevailing high prices.

*

The jute goods market opened on a quiet note due to selling pressure in the Fatka. Prices firmed up considerably on Monday with the revival of bull support. The upward tendency gained further momentum on the next day with the continued interest from bulls. On Wednesday conditions turned somewhat quiet especially in the hessian section as the IJMA stock figures for April published on that day disclosed a sizable increase in the stocks of hessian as compared with the previous month.

The market began the week on a steady note but soon encountered selling pressure induced by speculative unloading in the Fatka. The fact that Mills sold small quantity B Twills and hessian for near shipment was a contributory factor. The market closed quiet with B Twills Ready marked down sharply to Rs 113.56 from previous marking of Rs 115.81 with Hessian 40"×10 oz Ready coming back to Rs 41.80 from Rs 41.14. July-September 40"×10 oz receded to Rs 42.28 while B Twills ruled steady at Rs 115.05.

In marked contrast to the easier tendency in the previous session, the market displayed firm conditions throughout Monday. Apart from revival of speculative support, sentiment had been buoyed up by orders for B Twills from Burma. That day the market closed steady in all sections. Hessian 40"×10 oz Ready recovered smartly to Rs 42.50 while B'Twills also made considerable headway to be finally placed at Rs 115.37. July-September Hessain40"×10 oz advanced to Rs 42.81 while B Twills for the same position was shaded at Rs 115.

Speculative support continued to be forthcoming in all sections of the market on Tuesday and in spite of the absence of genuine foreign business, prices were pushed up further. Mills also did not evince any interest in the proceedings. Hessian 40"×10 oz Ready moved up to Rs 42.75 but B Twills was shaded at Rs 115.19. July September Hessian 40"×10 oz firmed up to Rs 43.09 with B Twills also in good request at Rs 116.10.

The increase in goods stocks imparted a quiet undertone to the market on Wednesday. The fact that hessian stocks at the end of April had increased by as much as 5600 tons was responsible for the decline of prices in the hessian section where Hessian 40"×10 oz ready was marked down to Rs 42.20. B Twills Ready was done at Rs 115.10. July-September Hessian 40"×10 oz and B Twills were marked lower at Rs 42.65 and 115.10 respectively.

The following table shows price trends during the week:

	Week's opening	Week's closing
Hessian		
40"×10 oz Ready ..	41.10	42.43
40"×10 oz July/Sept.	42.28	42.65
40"× 8 oz ..	34.00	34.31
40"×7½ oz ..	31.75	31.93
Sackings		
B Twills Ready ..	113.56	115.10

World of Tea

Obscure Outlook for New Crop

THERE is a general feeling that, in the coming season, the Tea output may exceed demand. As the output will be adequate, buying can be relied upon to be selective and discriminatory in nature. As a result of this, medium and low grades may be sold at unremunerative rates. It is also feared that the production and consumption ratio of the commodity in the world will be upset further with the free flow of tea from China and Japan and competition will become more acute due to the fact that black teas from these areas can be produced at a very low cost, especially when the equilibim between production and consumption in the world is already lost due to growing importance of African tea.

Only very limited quantities of China tea were available to the world markets at a very high price previously; but regular sale of China tea in London was started in August last year. Formosa has also taken steps to increase production and exports of tea, and a target of 30 million pounds has been set up. The Japanese Government has also decided to take steps to prevent the continued falling off in the exports of Japanese teas to foreign markets.

With the result, prospects of tea in the coming season are not bright and it is feared that all, but the fortunate few of North India's producers, will again be faced with no alternative, but to cut down their crops to avoid selling the bulk of their teas at a loss. This somewhat depressing forecast is warranted by the present statistical position in the UK. The demand for tea on the London market has not been encouraging; because UK stocks are reported to be adequate. During April, May and June last year, some 30 million pounds of old season's teas were shipped from North India to London; but no such supplies will be going forward to the UK in the same period this year. Thus, one can anticipate that, by the end of June 1957, the UK's visible supplies will be some 25 million pounds greater than they were in June, 1956.

The serious implications of these figures are emphasised by the fact that, on June 28, 1956, Plain Broken Pekoe was quoted at 35½d per pound —well below production cost. While the UK is over-supplied, other markets are not correspondingly short. However, the London market is now ruling better after the recent fall that brought down Plain Broken Pekoe from well over 60d late last year to the present level of 39d per pound.

On the whole, there is no longer any elasticity in the stocks held by the trade to act as a buffer between producers and consumers and consequently markets will continue to react sharply to the least fluctuation in the supply position. It seems that, in the absence of an International Agreement for the regulation of crops and exports, producers will be obliged to regulate their output according to consumption in order to maintain remunerative prices. Again, they will probably find it worthwhile concentrating on quality from the beginning of the season itself.

In the Internal Sale held in Calcutta this week, offerings were 20,715 packages of Dusts. There was a fair general demand which eased as the sale progressed. CTC Assams were irregular, but were generally easier. The orthodox Assams from this district were 10 nP per pound easier at the close of the sale. Commons and Dooars were also easier and, at the close, were selling up to 12 nP per pound below last rates.

Once again, the black leafy types, suitable for export, were the strongest feature of the sale. Following rates were quoted:—Medium Dooars Dust Rs 1.60; Medium Assam Grainy Dust Rs 1.60 to Rs 1.65; Medium Assam CTC Dust Rs 1.65 to Rs 1.70 and Best CTC Assam Dust not quoted.

Also, 1,186 packages of Leaf grades were offered for internal consumption. There was a good demand at irregular rates.

In the Export Quota section, business was reported done in the Special Export Quota Licence at 15 to 17 nP per pound. Current season quota changed hands at 26 to 27 nP and the market closed with buyers at 22 nP and sellers at 25 nP per pound. Non-transferrable Shipping Licence was initially disposed of at 25 nP and thereafter weakened to 20 nP. Buyers, at the end, showed no interest above 13 nP per pound.

In the Cochin market, offerings last week were about 1,925,000 pounds. There was a further decline in the quality of all offerings. Best Liquoring Nilgiris eased by 15 to 30 nP per pound, while inferior sorts declined by 10 to 15 nP. Good Medium and Melum Brokens and Fannings met with good demand at a drop of 5 to 10 nP. Low Medium and low-grown Brokens were about steady, but similar Fannings ruled 5 to 10 nP per pound lower. Plain descriptions eased by 5 to 10 nP.

Black Leaf Brokens met with keen competition at firm to dearer rates; but prices of Fannings, suitable for the Middle East, again fell away. Whole Leaf grades were a strong feature. Following were the rates quoted:—Plain BP Rs 1.45; Low Medium BOP Rs 1.55 to Rs 1.60; Medium BOP Rs 1.65; Good BOP Rs 1.80 to Rs 1.90 and well-made OP Rs 2.25.

Fair demand prevailed at the auction held in Colombo. Prices of high and medium-grown teas were generally lower. Except for coloury sorts, Mediums declined by about 10 cents per pound, while high-grown

World *of* Business

Straws in the Wind

The US economic climate has been affected by the alternating series of interrogation marks and exclamation marks posed not by the economy itself, but by the economic pundits. While US business has, so to say, been going about its business with its characteristically thorough efficiency and in its own forward-looking style, the men who have a passion for statistics and an urge for prophecy project current trends into the future and give wide currency to fears or hopes as suggested by their fancy or erudition. The record of the last decade is that the soothsayers have been regularly proved wrong on all the occasions when they choose to be gloomy prophets. Undeterred, they argue still; undaunted, they indulge their proclivity for prediction.

Early this year, their reading of the economic stars led them to envisage prosperous business until the mid-year, whereafter, they said, there would be a tapering-off. The reduced production of cars and the lesser tempo in the building of private houses, two disquieting symptoms noted by them in the early weeks of 1957, confirmed them in their forebodings for the latter half of the year.

Meantime, as we may repeat, US business was going about its business with competency and confidence. More employment with more pay has continued to augment personal income to new peaks month after month. Retail sales are keeping up without any sign of let-down. Steel mills are working at over 100 per cent of theoretical capacity. Public spending on the building of roads, hospitals, schools, and so forth shows marked increase. Planned outlay by industry on new plant and on modernisation is near the $40 billion mark; and the prospect is that, in each year of the fifties, a high altitude of capital expenditure will be attained.

By all tokens, the sky is the limit for this strident style of expansion. Expansionist economics sounds heterodox; and orthodoxy paraphrases expansion as inflation. This is very much like giving a dog a bad name. Expansion has demonstrated that it has both vitality and growth. A new approach on the part of the pundits is necessary; and, if they are incapable of it, recurrent discomfiture awaits their pompous platitudes and prognostications.

In the United Kingdom, the forces which are ranged on the side of expansion are regaining their hold. The credit squeeze has hurt, but not damaged, the economy. Industry has shown the stamina to take all this in its stride. The authors and perpetrators of the credit squeeze are being obliged to make further retreat. The City is speculating on the imminence of a lowering of the Bank Rate. Treasury Bill rate has recorded a sharp decline of three shillings. This is, naturally, considered as the straw indicative of the direction in which the wind is blowing.

US Notes

American business plans to maintain a very high level of capital expenditures during the next four years.

And, plans for research and new products by American firms are up sharply.

These are the two principal findings of the tenth annual McGraw-Hill survey of business plans for new plants and enquipment. Results of survey were published recently in Washington Post and other leading newspapers.

Companies participating in the survey employ more than 40 per cent of all industrial employees in the United States. Their responses to the McGraw-Hill questionnaire were made during recent weeks.

The level of business investment in new producing facilities is commonly regarded as the most important single contributor to general economic conditions. Key findings of the McGraw-Hill survey were the following:

In 1957, US business now plans to spend 12 per cent more than in 1956 for new plants and equipment. This is about the same increase shown by the MacGraw-Hill survey last fall.

For 1958-1960, US business already has plans for almost as much capital spending as in 1956. And since these are preliminary plans, the actual expenditures may turn out higher.

Business plans to increase research expenditures 20 per cent in 1957, and to continue stepping up research during the years 1958-1960. By 1960 at least 10 per cent of total manufacturers' sales is expected to be in products not made in 1956.

One-third of all manufacturing firms are planning capital expenditures in 1957 for the purpose of bringing out new products. This is a significant increase from the number of firms planning such expenditures in 1956, the survey said.

*

U.S. Agriculture Department economists are predicting continued improvement in farm conditions in the United States. They base their optimism primarily on the sustained strength of consumer spending in response to rising income. A Department report released this week notes that consumer income in the first quarter of 1957 was 5 per cent greater than in the corresponding quarter of 1956. Total consumer spending also was up some 5 per cent, while retail food sales rose 7 per cent. The Department expects consumer income this year to keep on outstripping the 1956 rate despite a possibly slower rise in overall economic activity.

Farmers also are benefiting from the world-wide economic expansion. The Department observes, with export markets taking the United States agricultural products at a record rate, there may be some slackening of exports later in the year. However, as shipments under government subsidized programme begin to taper off, net income of American farmers in the first quarter this year is estimated to equal an annual rate of $12,000 million about three per cent higher than the rate in the first three months of last year. For 1957, as a whole, the Department expects the increase in farm income to approximate last year's rise. In 1956, the net farm income was $11.800 million, up four per cent from 1955. While farm prices may average slightly higher in 1957 than in 1956, the volume of farm marketings and total farm cash receipts may be lower, largely because of acreage cutbacks. Increased government soil bank payments, however, are expected to more than make up for any reductions in marketings or receipts.

Under soil bank programme, farmers receive government compensation for taking acreage out of production. This is done either to hold down the output of commodities already in heavy supply or to conserve land for future use. In the first three months of 1957, farmers took 21 million acres out of current production, receiving a total of $661 million in government payments. They also added five million acres to the conservation reserve, receiving a total of $75 million. In 1956, farmers received a total of $243 million under the Soil Bank programme.

In line with soil bank goals, large acreage cuts are likely this year for wheat, corn, cotton, tobacco and rice. These will be offset only in part by increased plantings of sorghums, barley and soybeans. In addition, government price supports for such commodities as cotton, major food grains and oil crops are scheduled to be somewhat lower in 1957 than in 1956, in view of large supplies on hand or anticipated. Cash receipts for livestock and products, however, are expected to show some improvement.

Prices of hogs and cattle are more favourable this year than last year. While milk production is at a higher level with no reductions foreseen at this time in government support prices, farm expenses may show some small increase this year, reflecting mostly higher interest and tax payments and larger depreciation charges on capital equipment.

The fixed overhead costs are not much affected by acreage reductions. Current operating costs, however, are likely to hold fairly steady. Higher farms wage rates and, possibly, higher prices for things the farmer buys may well be offset by amounts saved in planting less acreage. The over-all reduction of planted acreage is expected to come to 3 or 4 per cent. Current operating costs account for some 70 per cent of total farm production expenses.

*

Australia

AUSTRALIA'S Exports Payments Insurance Corporation is expected to begin insurance operations during the next few months.

Exporters will be able to obtain insurance cover against losses arising from insolvency of an overseas buyer, protracted default on his part, or inability of the overseas buyer, or his authorities, to transfer exchange to the Australian exporter.

Cover will also be provided against war, rebellion, hostilities, revolution or other disturbances in the overseas countries, and generally, any other cause outside the control of the exporter, and his buyer, arising from events occurring outside Australia.

The Corporation will not insure against fire or pilferage, or damage

THE latest issue of the Economic Review, the official Journal of the All India Congress Committee, contains the text of the acutely perceptive analysis of the affairs of the Congress party that Mr Nehru made at a conference of regional party leaders in Delhi last month. To judge by the amount of naive concern and naiver jubilation it has aroused among some Congress sympathisers and opponents, it would look as though the document was something of an epitaph. In sober fact, however, it is nothing more than an exercise in introspection by a particularly sensitive and conscientious leader. It is also a deliberately and confessedly exaggerated diagnosis of a malaise to which all political parties are prone and from which none of them is ever entirely free. Such periodical "sessions of self examination" are not entirely unknown in the history of political parties; in fact, its absence can be considered a more or less precise indication of the completeness of the death of the particular political party. Some time ago, the British Labour Party had its weaknesses officially exposed by a committee headed by Harold Wilson in terms that would have killed a less robust party. In a sense, such frequent efforts at conscious formulation of one's failings are in direct succession to Gandhiji's famous "Himalayan blunder" confession. In fact, another somewhat less well known incident in Gandhiji's life is even more to the point here. In the riots in Bombay in the early twenties, when Parsis were the target of attack by both Hindus and Muslims, Gandhiji asked a statement of his to be widely publicised. In that statement, Gandhiji had expressed his deep pain at the events and had said: "The Swaraj I have witnessed in the last few days stinks in my nostrils". Some of his trusted co-workers tried to reason with him and told him that a statement in such terms would be a tactical error. He was also told that it would be used against him and his cause for the rest of his life. But Gandhiji was quite adamant and had his way and, paradoxically, his tactics were, in the event, proved to be the only correct one.

*

There is, therefore, no reason for any one to get either unduly alarmed or unduly elated at the picture of Congress that Mr Nehru presented. But that is not the same thing as saying that Congressmen can sit back and take no notice of the core of truth in Mr Nehru's analysis. The document, it must be recalled, was not only a party political one, but a "secret" one. By this, I do not mean that there was anything "hush-hush" about it, but that its immediate audience was official Congressmen. Its larger relevance is, of course, there, since I think it would be true to say that the majority of the people in this country have a basic sympathy with what the Congress stands for. I say this not on the basis of general election figures, but on other data as well. A good proportion of those who did not vote last time were, I think, Congress sympathisers. (This is not the occasion to discuss at length the whys and wherefores of this regrettable, and in some respects alarming fact, but I think its accuracy cannot be denied). To this larger audience, too, Mr Nehru's analysis is of crucial importance.

*

Many of the weaknesses of the Congress which Mr Nehru has listed are not particularly new discoveries. They are also not particular banes of the Congress party. Any party that has been in power for any length of time develops certain characteristics not unlike that of the ordinary normal physical deterioration of a healthy individual as he grows old. It develops a certain flabbiness and accretion of fat. And the Congress has been in power, not, as some people imagine, from 1947 or even 1938, but from 1920 when Gandhiji took over. It is true that the power wielded in the earlier part of its career was not of a sort for which there was the same degree of unseemly scramble that we have witnessed more recently. But the very real domination over the souls of men that the Congress had in those days was also a species of exercise of power that has to be taken into account in any reckoning of the consequences of enjoyment of power. The paradox is not unlike that which resides in one particular fact of normal experience. Every one knows how an ex-athlete in his unexercised dotage is more of a physical wreck than those of us who have had a comparatively unstrenuous and unregenerate (from the point of view of the drill master) youth.

*

Secondly, a party like the Congress, that has had a long innings of power, is not unlike a man who has been happily married for so long that he takes his wife as much for granted as he does his furniture. This taking for granted of a loyalty that is unswerving is something that is dangerous in politics, though, as shrewd old-timers will tell you, not so dangerous as some imagine. But the danger is surely there, especially when new beaus appear on the horizon with seductive blandishments that the husband himself has not bothered to offer his wife: of course, the really shrewd wife knows that "her old man's perfunctorily-offered gifts" are really more substantial than what the others have to offer, but that is a wisdom that is not given to every one.

*

So far about the inevitable and immutable changes in the fortunes of any particular political party or, for that matter, of any organisational and institutional achievements of man. The moral in all such cases is that nothing fails like success. But there is another kind of failure of the Congress to which Mr Nehru refers, and that failure is far more serious: Such failure is not so much the failure of the Congress as of Congressmen. The last elections threw up a lot of unsavoury data on this subject and, more recently, manouevring over Cabinet appointments revealed quite an amount of unseemly stampede for the fruits of power. Here again, a certain amount of robustness is necessary, for the rather raw meat of politics is not for squeamish palates. But when all allowances have been made, the greatest danger to the continued popularity of the Congress lies in the revelation of the orientations based on personalities, caste and other unmentionables in individual Congressmen and the consequential loss of a reputation for organisational integrity. Paradoxically, it is the past of the Congress that makes present weaknesses even more glaring: Despair is universal when the salt hath lost its flavour.

*

If this weakness on the part of individual Congressmen is cured, the other organisational tasks that Mr Nehru has listed become comparatively tractable. Mr Nehru lists, besides recapturing the old reputation for integrity, three essentials for the vitality and dynamic usefulness of the Congress. They are: the recapturing of mass enthusiasm, especially of the young; the providing of intellectual leadership; and the recapture of the early crusading spirit. The sense of inner failure that the Congress suffers from today, he correctly attributes to the loss of a sense of function and direction and a crusading spirit among individual Congressmen.

*

For reasons I shall detail presently, this seems to me an extremely disconcerting paradox: for, if there is one thing that a modern Indian has no excuse for not having, it is a sense of something to do and some where to go. I do not mean that, individually, every one of our countrymen is well provided, has a good job and a happy family and has thus achieved fulfilment. But I do mean that no one in this country can fail to feel the pressure and stress of this creative throes of a a country trying to do things trying to get some where. Why should the Congressman fail to communicate this sense of high adventure and creative endeavour? How, in the presence of so much that offers a true vocation for service, can they be overcome by a sense of nothing to do?

*

The first reason is the obvious one: what most people want is not a vocation but an opportunity to exercise power, however exiguous. Apart from everything else, the impossibility of the desire makes

INDIA
Grand Hotel, Calcutta • Hotel Imperial, New Delhi • Maiden's Hotel, Delhi • Swiss Hotel, Delhi • Clarke's Hotel, Simla • Hotel Cecil, Simla • Palm Beach Hotel, Gopalpur, Gopalpur-on-sea • Hotel Mount Everest, Darjeeling • Hotel Mount View, Chandigarh • Oberoi Palace Hotel, Srinagar

OBEROI HOTELS
INDIA & PAKISTAN

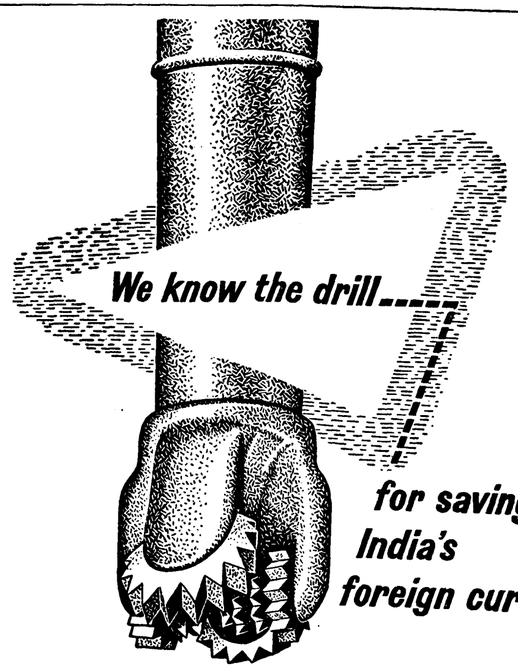
it a futile aspiration, for, not all can have power, and no one can have it for all time. The second reason is that, appalling as it may seem, most people prefer spectacular destructiveness, even when it involves personal pain, to work that is essentially creative, though seemingly unexciting. This really explains the difference between the Congress of the twenties and the Congress of the fifties. The frequent "Satyagrahas" and "fasts unto deaths" that we have seen since independence also show how deeply seated is this particular preference. Shaking centuries of inertia weighing down rural India is hard and unexciting work, but work whose real value is immesurable. Here, one would think, is opportunity for every Congressman who failed to become an MP or a minister. But, it would appear from Mr Nehru's analysis, not many Congressmen would think so.

*

So, if Congressmen lack a crusading spirit and a sense of vocation, the fault lies in them and not in the country where unprecedented opportunities for service are waiting for them. By the same token, recapturing mass enthusiasm depends on the volition of individual Congressmen. There is perhaps no party that the majority of our countrymen would rather follow than the Congress. With such an initial advantage, the capture of their enthusiasm should be a comparatively simple matter.

*

But the third essential that Mr Nehru listed, namely, the creation of intellectual leadership, is more complicated. Mr Nehru's observations in this regard are somewhat cryptic, presumably because the speech was extempore and probably in Hindi and the version available is an imperfect translation. Otherwise, it is difficult to understand the precise implication of his observation, "Comparatively, the intellectual people did not matter very much". Unfortunately, the context also does not help much in unravelling the meaning. There are some senses in which intellectual people do not particularly matter, including the sense in which they do not matter more than others as is sometimes specially pleaded on their behalf. But it is intriguing to hear Mr Nehru say that the intellectuals do not matter in a plea in which he specifically asks for intellectual leadership from his party men.



*

In any political party, what might be called the focus of loyalty, the centre, so to speak, of emotional gravity, has always to be provided by the highest party leadership. Of the first, the Congress is fortunately well provided. But the need for what might be called the middle order of leadership to be provided by intellectuals who will do the political, social and economic thinking for the party can hardly be exaggerated. But, of the "back room boys", the equivalent of, say, a Richard Crossman of the Labour party or of Angus Maude of the Conservative party, the Congress is woefully unprovided. When the AICC's Economic Review was started, I was thrilled, because in it I thought I saw the beginning of an intellectual forum for the Congress, the equivalent of the "Socialist Monthly". But all that the Economic Review has succeeded in doing so far has been to embarrass Mr Nehru by writing something silly about Queen Elizabeth.

*

In my view, the urgency of providing a real and vital intellectual tradition in Congress thinking cannot be exaggerated. The policies that the Congress ultimately offers to the people will have to germinate in the intellectual nursery thus provided. By suggesting this, I should not be understood as advocating a high-

(Continued on page 918)

Oil from abroad costs valuable foreign exchange.
Oil from inside India saves it. And we must
have ever-increasing quantities to cope with the
expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

Bombay Review

Three Stitches to Save Nine

WHILE Mr T. T. Krishnamachari is now necessarily preoccupied with the impending Budget and while, for a few more weeks, he will be kept busy on the Budget's progress through the customary formalities, informed sources in Bombay believe that, soon thereafter, he will devote active attention to such matters as Company Law, Life Insurance, the Reserve Bank, the State Bank, the Industrial Finance Corporation and the proposed Refinance Corporation. In all these respects, it is known that TTK has definite and positive ideas of his own; and he is not the kind of person who tolerates much time-lag between his ideas and their implementation. It is also known that he thinks in terms of reforms signifying less cumbersome procedures, less mystifying functions and more predictable effectiveness. The business community concurs fully in the need for readjustments aimed to achieve such objectives.

It is an open secret that the Company Law as now devised did not receive any enthusiastic support from him. It is permissible to speculate that, had he been the Finance Minister at the time legislation in this respect was piloted through the Parliament, he would have insisted on the official drafters producing a more concise Bill. TTK's opinion is not only that the Act in its present form is too voluminous, but that the expected results may not be realised for the simple reason that everyone and everything get lost in the details, and that the essentials are, thus, apt to be lost sight of. It is undeniable that there is abundant ground for the apprehension that, unless rationalised, streamlined and simplified, this mammoth legislation will be smothered by its own weight.

Even before the ink was dry on the President's signature transforming the Bill into the Act, a file had to be created, listing the amendments that were proved essential for dealing with verbal inaccuracies, ambiguous implications and inconsistencies of various kinds. This file has been growing apace; and it may be said that the Company Law Administration is now ready with a formidable list of amendments. But for the election interlude, an amending bill might have been presented to the spring session of the Parliament. The Department's time-table was reported to require this matter to be brought up in the autumn session.

We can well imagine TTK telling the Company Law Administration that these amendments were good so far as they went; but that what he wanted was a set of amendments designed to make Company Law simpler and conciser. Perhaps, TTK himself has yet no pronounced ideas as to how this admittedly desirable objective of simplification is to be effected in practical terms. It is upto the CLA to get thinking on the lines and to place, before the Finance Minister, a preliminary memorandum by mid-summer. This should activise his thinking and concretise his ideas.

Meantime, there should be second thoughts about the transfer, effected last November, of the Stock Exchanges portfolio from the Company Law Ministry to the Economic Affairs Ministry. The Industrial Finance Corporation also shared the destiny of the Stock Exchanges. This was a kind of first-impulse action on the part of TTK soon after he took over charge of the Finance Ministry. Reconsideration of the relevant issues is called for; and the logical pattern seems to be for the Company Law Administration being entrusted with cognate matters like Stock Exchanges, Capital Issues and the Industrial Finance Corporation. As it is, the Economic Affairs Ministry has its hands full; and it should be grateful for little reliefs.

If TTK has evinced no overflowing love for Company Law in its administration, it is even more noticeable that he entertains justified prejudices against the Stock Exchanges as they now function. He considers that Stock Exchanges, as prices gyrate wildly and recklessly, are no better than gambling dens. Granted they are so, can they be allowed to continue as dens for gamblers and as snares for investors? Can Government afford to stand aside and say: Let them stew in their own juice? Or is it the part of prudence to succumb to procrastination of action on the plea that it is better to let the gamblers have a long rope with which they may hang themselves? The ensuing mischief and resultant damage affect, not the few gamblers, but the many investors, not the limited Stock Exchange circles but the nation's economy in its wide range. The Stock Exchanges are traditionally the barometer of the national economy; and the custodian of the nation's economy can neglect its behaviour only at the economy's peril and to the steward's detriment. Conditions in the share markets are out of joint; and Authority cannot afford to be passive in this matter.

It may be taken as certain that Authority is bound to bestir itself; but the question is: When? We are past the stage when a stitch in time would have saved nine. We are probably in the stage when three or four stitches can save nine. If no action is taken even now, the fabric will be in such tatters that even nine stitches will be of no avail.

It must be confessed that TTK has so far proffered no hints or clues of what he proposes to do —whether he proposes to do anything at all. It is, however, significant that Mr H. V. R. Ienger is fully alive to the important role of the Stock Exchanges and to the actual need of their functioning as a reliable barometer of national economy. Mr Ienger can be trusted to give, at the appropriate time, the right kind of advice; and it may also be hoped that the advice will command the greatest weight.

At the moment, it cannot be said with certainty that restoration of health to Stock Exchange activity has any high priority in the immediate plans of the Finance Minister. Meantime, the presidents of the Stock Exchanges and the authorities of the active shareholders associations should make out a well-documented case that a predominant proportion of investors in industrial shares belong to the middle-class group; and that the committees of the reformed institutions will have the power, and respond to the call, to distinguish between the interests of investors and those of gamblers, on the one hand, and between the interests of shareholders and those of Big Business, on the other, and to take prompt and adequate steps to safeguard and protect the large body of genuine investors and bonafide shareholders. Further, they should prove that, before any action on their part can be effective, the Finance Minister's intervention, on the lines analogous to the measures he initiated in regard to the banking situation, is of imperative significance to bring about the right kind of climate. Mr Krishnamachari does not understand threats or hysteria. The concerned authorities are yet to realise the virtues of a sober and reasoned approach.

Connected with this issue are problems bearing on expansion of the life insurance business and investment of snow-balling funds in purposes directly helpful to the Second Plan. TTK's mind seems to be working in terms of simplifying the administrative set-up. Is too much authority and too much responsibility concentrated in Bombay? Will it conduce to efficiency and effectiveness if zonal managers are given more authority and more responsibility? Should there be more than one Investment Committee? How are the hands of Zonal Managers to be strengthened so that there will be healthy emulation among them as regards the writing of new business? The Life Insurance Corporation is a gigantic organisation; and, while decentralisation is vital for regional pride and performance, some degree of centralisation is inevitable in the same sense in which the State Insurance schemes in the UK are mostly centralised.

Gateway Notes

Cotton Textile Industry

The recent Ordinance in respect of closure of business does not seem to have produced the desired effect in one of our major industries. In Ahmedabad, closures have been reported resulting in the unemployment of hundreds of workers, even after the promulgation of the Ordinance.

In this connection, Mr Khandubhai Desai, General Secretary of the Ahmedabad Textile Labour Association and a former Labour Minister, has addressed urgent communications to the Central Government pointing out the need for taking effective action to check the reactionary tendency in the Cotton Textile Industry. As an immediate step, he has urged the Government to take over control of the mills which closed down during the last two months. Mr Desai has characterised the continued closures as "tactics of the employers". The real clue, however, is to be found in that part of his communication wherein he says that the Ordinance does not appear to be a sufficient deterrent since some of employers have closed down their mills in spite of the Ordinance.

It is evident, therefore, that some units in the cotton textile industry in the country have been left with no other alternative but to close down. It is inconceivable that any employer will have the courage to follow such costly tactics as the closure of his undertaking which now involves the payment of compensation to the workers.

The conclusion is now inescapable that both the Government and Mr Khandubhai Desai are wrong in their diagnosis. The fact of the matter seems to be that marginal units in the cotton textile industry have come to the end of their tether. That this is a more plausible explanation is also borne out by the conditions prevailing in the cotton textile industry and trade.

While it is true that for most part of last year the industry was doing well, difficulties had come to be countered by it since the enhancement of the cloth excise duty in September last. There has been a considerable decline in demand due to consumer resistance to the high prices. Dull conditions have continued to prevail in the cloth market and consequently unsold stocks have accumulated to an alarming degree in mills godowns. With no appreciable improvement on the export front, the industry has been trying its best in the past few months to impress upon Government the urgent need for stimulating domestic offtake if serious consequences are to be avoided.

Now that it has been found that some mills have decided to close down in spite of the Ordinance it has become incumbent on Government to make a thorough study of the working of the cotton textile industry with a view to enable it to play its vital role in the nation's economy.

*

Warehousing Corporation

A sizable improvement in the economic condition of the agriculturists in the Bombay State seems to be no longer a remote possibility now that active steps are being taken to remove one of the greatest drawbacks in the rural economy. The Warehousing Corporation proposed to be set up by the State Government will advance the agriculturists credit against their produce, store it for them and will help them to sell their produce when markets turn favourable. At present the cultivators are left with no alternative but to sell their produce immediately on harvesting when usually the prices are low.

The State Warehousing Corporation is expected to select 60 centres initially and set up warehouses in rented buildings in the vicinity of market places. The All India Warehousing Corporation is also expected to establish warehouses at five centres in the State.

The planning and construction of warehouses at all rural market places have been one of the main recommendations of many committees which have studied the problem of rural economy in the past.

The All India Rural Credit Survey, on the lines of whose recommendations the Warehousing Corporation has been established, has pointed out that the cultivator will not be able to get an equitable return for his labour so long as any one of the four stages through which his produce passes once he has harvested it remains disorganised. Referring to organised storage, the survey points out that in the area to be covered and the coordination to be effected, the direction and endeavour required, it may be likened to the vast railway system of the country.

GATEWAY MARKETS

Smart Rise in Castorseed

TRADING on the Bombay Oilseeds market was featured by a smart rise in Castorseeds under persistent demand from exporters owing to talk of export business with the USSR. Groundnuts also attempted to improve in sympathy; but caution was evident at advances, reflecting fears of increased margins. Linseed and Cottonseed also improved sympathy.

Although the UK and the USA showed only limited interest in their purchases of castor oil, operators tried to push up rates on reports of enquiries from the Communist countries. Shipments of castor oil, during last month, were estimated at more than 4,900 tons —a record for a long time. Shippers were, however, not much impressed by this performance since the current export demand for castor oil continued to be subdued. The USA, the chief buyer, was still inactive and preferred meeting its limited requirements by buying Brazilian oil in view of the comparative cheapness. The UK and the Continent, too, were not sufficiently active. In these conditions, traders were, in general, reluctant to follow any sharp advance in prices.

Castorseed May delivery opened at Rs 179.50, to firm up at close to Rs 182. September delivery opened higher at Rs 182 and advanced further to Rs 189, to finish at Rs 187.75. Ready was quoted at Rs 36 and Castor Oil, commercial quality, at Rs 20.

Thanks to higher advices from Saurashtra, the Groundnut section continued to rule firm. May delivery opened at Rs 176.25, to firm up at the close to Rs 177.12. August delivery opened at Rs 180 and, after touching a high of Rs 182.75, finished the week at Rs 181.87. In the ready section, bold variety was done at Rs 35.25 to Rs 35.75 and Groundnut Oil at Rs 19.75.

The sharp recovery in Linseed prices from the recent low levels was mainly due to enquiries from Australia for 1,500 tons of linseed oil. Linseed May delivery closed at Rs 31, while September delivery, after opening at Rs 32.25 and touching a high of Rs 32.44, finished at Rs 32.25. Ready was done at Rs 31 and Linseed Oil at Rs 16.25.

Trading in the Cottonseeds section remained generally dull. May delivery closed at Rs 113.75 and September at Rs 119.

*

Gold & Silver

Prices on the Bombay Bullion Exchange improved to some extent during the past few days. This change was attributed to broader buying interest in both the metals.

In the Silver section, Banaras, Delhi and Surat figured as steady buyers although their offtake was well below the quantity lifted some time ago. The receipt, on the other hand, declined, thanks to the reduced arrivals of silver coins from Tibet.

Dealers are, however, keeping a close watch on the spot situation since the seasonal demand may slacken after a few weeks. Stocks all over the country, especially in Bombay, are reported to be smaller than usual and the future supply position will depend on the imports of coins from Tibet.

Meanwhile, Silver Baisakh delivery began at Rs 181.50 and moved between Rs 181.37 and Rs 182.12, to finish at Rs 182.06. Jeth delivery started at Rs 180.37 and, after being sold down to Rs 180.06, improved at the close to Rs 180.87. Ready was quoted around Rs 183.25. Arrivals and offtake were estimated around 22 and 14 bars respectively.

Gold continued to forge ahead, sentiment being aided by unabated spot demand. There is a general feeling that the position in this metal will be largely influenced by the future demand from South India, which is usually a major buyer at this time of the year. Gold Baisakh delivery started at Rs 105.50 and, after touching a low of Rs 105.44, improved at the close to Rs 105.62. Jeth oppened at Rs 105.19 and, after improving to Rs 105.22, finished at Rs 105.19. Ready changed hands at Rs 105-14 to Rs 106-4, while Soverign ruled very steady at Rs 69.50.

*

Yarn

The Bombay Yarn market continued to rule weak with prices recording a further fall from last levels. Turnover was limited. The decline in prices was attributed to reports of leading European manufacturers selling fine denier Art Silk Yarn for quick shipment at substantially lower rates—about 4d per pound cheaper.

In the case of Staple Fibre Yarn, the fall in prices was due to the poor demand from the Punjab and Uttar Pradesh. Moreover, stocks with the traders were reported to have considerably increased, while producrs in the South were inclined to dispose of their new production at low rates.

Some improvement was, however, noted in the Cotton Yarn section, particularly in coarse counts, although prices did not show much change, thanks to higher cotton prices. Some leading mills are now reported to be reluctant to part with their stocks of yarn, expecting better prices in the near future.

Bombay Review

World of Cotton

Prospects of Trading in New Crop

WITH interest in trading in the current hedge contracts slowly waning, the cotton trade has begun to turn its attention to the prospects of trading in the new crop. Efforts are understood to be under way for formulating a more realistic hedge contract. The East India Cotton Association has already addressed the Textile Commissioner, making out a case for decontrol of cotton in the ensuing season. According to the Association, the continued control of prices of cotton has hindered, to a great extent, the formulation of a hedge contract. It is stated that, if it is the intention of the Government that control should remain for sometime more, the ceiling and floor prices should be so fixed that the Government will not be called upon to interfere during the currency of a particular season.

In order to check wide fluctuation in futures, it is suggested that the floor prices, for the ensuing season, be raised by Rs 100, viz., from Rs 495 to Rs 600 for Jharilla with 25/32" with a ceiling at Rs 825, which will narrow the gap between the floor and the ceiling to Rs 225 from the present level of Rs 325. This, it is argued, will also encourage the cotton-grower to produce more cotton since he would obtain a higher price for his produce.

But, it is understood that the Government are not inclined to relax the control so long as there is scarcity of supplies. In fact, it is said that the Government may tighten the grip on futures, if necessary. It is not as if the authorities are against the functioning of any futures market in cotton. Because of the tight statistical position, there are indications of runaway prices in cotton futures. The Government's view seems to be that, while the genuine need for hedging should be given all reasonable facilities, any misuse of such facilities of the hedge market should not be tolerated at any rate.

Meanwhile, mills appear to be keeping off the market as they are not interested in entering into commitments at the prevailing rates. With the result, the futures market gave a desultory appearance. While Jharilla was virtually neglected at small advance, Vijay failed to consolidate early moderate improvement on long liquidation. The turnover was small. Jharilla, after touching a low of Rs 713, finished better at Rs 714. Vijay June delivery opened quiet at Rs 851 and, after touching a low of Rs 849-50 and a high of Rs 854.50, finished at Rs 850.

In the Spot section, spinner demand slowed down for domestic styles, although prices were fairly steady. Shippers showed little interest in exportable varieties.

In the foreign section, good business was reported done. A trade agreement has already been signed between India and Egypt whereby the Government of India will get 20,000 bales of Egyptian cotton under a special payments agreement through the State Trading Corporation. It is expected that the Egyptian Government is likely to offer further incentives by way of larger discount than at present in order to reduce the carryover at the end of the season. Incidentally, there are only four months left to complete the current season.

Prospects of more imports of American cotton into this country have also brightened. According to reports emnating from Washington, the International Co-operation Administration has granted aid to India to the tune of $13.59 million to enable her to buy 83,300 bales of cotton of stapling 1 1/6" and above. Under this progamme, the contracts must be signed between May 7 and October 31 and deliveries must be effected between August 1 and December 31, 1957.

Following rates were quoted:— Bengal Rs 690 to Rs 740; Oomra Rs 800 to Rs 830; Dhollera Rs 780 to Rs 785; Jharilla Rs 800 to Rs 870; Vijay Rs 975 to Rs 980; AR/BP/52 Rs 1650 to Rs 1,675; ER/Bushoga Rs 1,585 to Rs 1,620; Karnak 2600 to Rs 2,800; Sudan Rs 2,250 to Rs 2650 and American Good Middling Rs 1,410 to 1,425.

×

NEW YORK MARKET:

The New York cotton market ruled quiet with price movements confined to a narrow range. Traders were still disposed to await developments at Washington on the farm programme and the latest report on the sale of surplus cotton. Bids received by the Commodity Credit Corporation were understood to be very heavy and some trade quarters anticipated that the latest sales would top the million-bale mark. Spot was quoted at 33.90 cents per pound.

×

LIVERPOOL COTTON MARKET

The Liverpool cotton market was much quiet and, apart from small additional American selling, trading was confined to small routine trade transactions. Sudan closed quiet at unchanged rates. This was attributed to the fact that the selling policy of CCC for the rest of the season would, in all probability, be to stabilise prices of US cotton at about the current level.

The CCC holds, as on the 26th April, some 325,000 bales from the 1955 and earlier crops; and 4,000,000 bales of the 1956 crop are expected to be added to their sales next August. Thus, a large supply of cheap cotton will be available for some time to come at prices which are thought to be fairly closely predictable.

×

CLOTH AND PIECEGOODS:

Conditions in the Piecegoods market remained fairly steady. The consuming centres continued to evince buying interest. There was satisfactory demand for superfine lawns, and dhoties. There were also enquiries for sarees, poplins, shirtings and better qualities of coatings.

On the export front, activity is yet to broaden. With the result, prices of some of the qualities have remained easy. Singapore is reported to have booked some orders, while fair business has been concluded with Burma. Although fresh import licences have not yet been issued by the Indonesian authorities, some quantities of grey shirings have been booked for this destination. The price factor is said to be hampering a larger business with the UK.

Suggestions on Profits Deposit Rules

THE Finance Ministry continues to be flooded with detailed memoranda and representations from all parts of the country on the draft rules for the deposit of a portion of the current profits of companies with the Government. Though barely two weeks were available for study of the rules and submission of suggestions thereon, the vital importance of the rules has apparently made affected interests work hard and fast and let the Government have their ideas on the subject in record time. There are many rules whose wording has given rise to ambiguity and quite a number of the communications sent to the Ministry of Finance are not so much suggestions as requests for clarifications. When the rules are finalised, the necessary explanations and amplifications will doubtless be forthcoming either by actual changes in the rules or by a supplementary statement by Government of their real intentions.

The first thing that is worth noting about the many suggestions that have reached Government is that there is a general appreciative recognition on the part of the public that the draft rules show that Government have every intention of working the provisions of the Act relating to deposit of profits in a liberal and realistic spirit. Specific suggestions made by the various memoranda are mainly in the nature of requests for further liberalisation. These also point out particular anomalies that are likely to arise from too literal an interpretation of the rules—anomalies that may in practice verge on impossibilities. Thirdly, there is a general recognition that the real test is yet to come and the success or failure of the scheme will become apparent only in the actual operation of the scheme. It is the sympathy and understanding on the part of authority of the special problems that face particular companies that will ultimately decide the success of the scheme.

Apart from suggestions in writing sent to the Finance Ministry, there has been personal discussion between the senior officials of the Central Board of Revenue and important business interests. On Friday last, for instance, representatives of the Federation of Indian Chambers of Commerce met the members of the Board of Revenue here and discussed the draft rules on the basis of a detailed note they had prepared on the subject.

As has already been commented upon in this journal, the crucial provisions from the point of the companies are: firstly, the definition of approved purposes for refund of deposits; secondly, the definition of statutory surplus, especially its determination with reference to "total income" in the Income-tax sense of the word; and thirdly, the composition of the Board of Referees under the rules.

About the definition of approved purposes, comments have inevitably been that, while the rules are not illiberal, they should go much farther to meet the practical requirements of companies. As will be recalled, Indian Finance had made detailed suggestions in this regard in its leading article two weeks ago. It is true that there is an omnibus provision which says that the approved purpose is any purpose which the Commissioner or the Board of Referees consider to be worthy of their blessing. But the wording of the specific "approved purposes" is such as to make one wonder whether the Commissioner or the Board of Referees would consider as worthy of approval any purpose which has been rejected by implication by the non-discretionary approved purposes. For instance, the rules talk of repayment of loans obtained on the security of fixed assets as an approved purpose. In the face of this definition, would the Commissioner or the Referees consider the repayment of loans on hypothecation of stocks, a purpose worthy of discretionary approval? Or would they consider themselves fettered not only by the explicit provisions but also by what they might think are the implicit reservations?

It is, therefore, necessary either to make it clear that the discretion vested in the Board of Referees and the Commissioner are absolute or to expand the list of "approved purposes". The business community would appear on the whole to prefer the enlargement of the list of specific approved purposes to any arrangement that would leave vast discretion in the hands of the Commissioner or even the Board of Referees. This particular preference gains greater point in view of the rumour current here that the Board of Referees will be a purely official body consisting of a representative each of the Finance Ministry, Commerce Ministry, the Reserve Bank of India and possibly the State Bank of India.

Among specific approved purposes suggested to be included in the rules themselves are: (i) Capital expenditure for the purpose of expansion of existing business and working capital for development and maintenance of business; (ii) Loans of any kind and not merely loans on fixed assets; (iii) Amounts utilised for stock in trade and stores and other advances; (iv) Cash required for business purposes; and (v) Investment in new industrial undertakings.

As regards the rules regarding the statutory surplus, the principal grievance has been provision for its determination with reference to the total income as determined according to the provisions of the Income-Tax Act. This is sure to lead, if not to anomalies, at least to hard cases. Even in the working of the Income-tax Act as it is now, there are impossible situations arising out of the variance between profits on ordinary accountancy principles and the total income determined by the Income-tax Officer. In the case of ascertainment of statutory surplus also, similar difficulties will arise. For instance, donations to charitable institutions and other actual outgoings from the till of the company are for technical reasons part of the total income of the Company. But, since the cash resources of the company have been irretrievably reduced by these outgoings, a notional statutory surplus that assumes their availability is sure to lead to difficulties. A via media would seem to be the adoption of criteria that apply to the determination of "Smallness of Profits" for purposes of application of Section 23-A of the Income-Tax Act. The law on the point has now become settled: it is to the effect that profits according to commercial principles and not "total income" should be the criterion in determining whether or not Section 23-A should be applied. A similar set of considerations may well be made to apply in the present case also.

Another suggestion that deserves consideration is that the reductions from total income allowed for taxes paid for determination of the statutory surplus should include taxes on income other than income tax and super tax and taxes levied elsewhere. In Pakistan, for instance, there is business profits tax and, since the availability of cash would be affected by payment of such taxes, it seems reasonable to provide for their deduction when the statutory surplus is being determined. Then, again, there are difficulties of remittances to India of foreign profits: here, not only total income but even book profits would be an inequitable basis since cash would not actually be available for deposit.

Another suggestion made in the note prepared by the Federation of Indian Chambers of Commerce is the need for clarification of the condition precedent for obtaining the use of the deposits made under these rules. Rule 11 requires that refund of deposit for approved purposes will be available only when the accumulated profits and reserves have been shown to have been used for approved purposes. This will lead to a number of impossible situations. The most glaring instance would be one in which a company has unwittingly used such funds in the past for purposes now considered not worthy of approval for the purpose of these rules. Since no company could have foreseen the coming into force of these new fangled provisions, they obviously could not have arranged their affairs in a manner that would have satisfied the conditions now imposed. Again the words "substantial portion of such reserves" is so delightfully vague. Who is to determine the substantiality of the portion and what would constitute the qualifying fraction, are not known. These points need further consideration.

Before concluding this despatch, I may mention that the draft rules that have been released for discussion are concerned only with deposits from current profits. It will be recalled that the Finance Act No. 3 of 1956 contains provisions for deposit from accumulated profits and reserves. No rules have yet been framed for this latter kind of deposit. Indications here are that rules for such deposits are not being immediately framed but would probably be ready before the end of the financial year. The delay is perhaps intentional. Government are perhaps wanting to wait and see how the present set of rules work before framing the second set.

*

WORLD OF TEA

(Continued from page 903)

kinds were 10 to 20 cents lower for broken grades. Leaf grades were firm. Low-growns and those, suitable for the Middle East, were sold at firm rates.

In London auction held this week, about 25,470 packages, including 13,490 packages of Northern India teas, were offered. The demand for the better types of teas continued and prices for good colour showed advances of up to about 2d per pound. Good medium kinds were generally one penny per pound dearer, although the thinner teas were only firm at the last prices. Clean Gommon teas were in short supply. Plain Broken Pekoe was quoted at 39½d per pound.

Delhi Review

North Indian Notes

Tradition for ITO Service

The Finance Ministry, alive to the expanding role of personal and corporate taxes in the Indian Taxation system and aware of the considerable losses to the Exchequer through rampant tax evasion, on the one hand, and through tax-enforcement's laxity or delay, on the other, is giving considerable thought to the streamlining of administration. The Special Officer's report is in the process of implementation. More Commissionerships and Assistant Commissionerships are to be created. Methods of work and assessment are to be rationalised. Whether these and other measures provide an adequate answer to the undoubtedly important problem remains to be seen.

If, in the early stages, as much recognition of the Department's future role had been evinced as was the case in regard to the Indian Audit and Accounts Service, impressive traditions and correct conventions could have been built up by this time. The Income-Tax Department has grown somehow, anyhow,; and planning from the beginning, which is a distinguishing feature of the Indian Audit and Accounts service, is conspicuous by its absence.

The later service owes much to the vision and foresight of Sir Guy Fleetwood Wilson, during whose regime as finance member the preliminary steps in this respect were taken. Sir Frederick Gauntlett, as Auditor-General, provided forceful leadership; and to him goes the main credit for the half-century-old tradition of independence and integrity. He inspired and encouraged his officers to discharge their task in the spirit that audit as thus conceived was independent of the Executive.

And the men who were selected for the audit service were excellent raw material. The All-India competitive examinations, on the basis of which recruitment was made, were recognised as real tests of merit. Merit, and merit alone could pass through the eye of the needle; and, except for some dilution caused by the later system of nomination, the men who joined the service had the highest qualifications and most rigidly tested capacities from the angle of all-India assessment.

Moreover, the IA & AS remained, for many years, the one and only avenue for talented young men on the basis of fair and impartial competition. The emoluments offered and the prospects ahead were, likewise, markedly favourably as compared with what was within the reach of young men of those days. The best young talents of the country were assured of the best prospects and worked under the best leadership. The result is that the IA & AS enjoys, to this day, recognition in official preferment and approbation in public esteem. It is almost the only service with regard to which there has, at no time, been any charge of corruptibility of its personnel or aspersion on the quality of their work.

An interesting development is that the IA & AS is appropriating a share of the reputation for versatility which, formerly, belonged exclusively to the ICS. Since the appointment of Mr Narahari Rao as Finance Secretary, an office which, till then, was a monopoly for the ICS, we have had a succession of IA & AS men as Finance Secretary. In fact, of the four secretaries in the Finance Ministry, two belong to this service. The chairman of the State Bank and the chairman of the Industrial Finance Corporation are from the Indian Audit and Accounts Service.

We have furnished this somewhat detailed account of the IA & AS cadre with a view to stressing that it is equally open and feasible for the Indian Income-Tax service to attain the same eminence, to develop the same versatility and to win the same governmental preferment. The paramount requisite is the kind of leadership which Sir Frederick Gauntlett gave the Indian Audit and Accounts Service.

Given this kind of inspiration from the fountain-head, traditions will grow automatically. The young men recruited as Income-Tax officers are comparable to their forbears in the Indian Audit and Accounts Service. They have high academic attainments; and they have been tested and proved and selected. They are the kind of men who scorn temptation. In a word, they are excellent raw material. But, on the one hand, they are not vouchsafed the state and status which, from very apprenticeship, the men in the IA & AS were assured of. Nor are their prospects so reassuring. On the other hand, the record of the cadre from the point of view of traditions is virginal. If the Indian Income-Tax personnel had been imbued with any sense of tradition or even of convention, would we have witnessed the unedifying spectacle of a member of the Tax Investigation Commission taking up, on retirement, the brief in important tax-evasion cases pending before that very Commission? Or of Income-tax Commissioners retiring from service and agreeing, on the morrow, to defend clients, some of whose files should have engaged their critical attention only a few days earlier?

The Finance Ministry is convinced that something has got to be done to endow the Indian Income-tax service with prestige and with tradition.

NORTH INDIAN MARKETS

Steady Decline in Lac Exports

THERE has been a steady decline in Lac exports from the beginning of the year. While exports were as much as 37,980 packages in January, they declined to 29,027 packages in February; 28,601 packages in March and 22,220 packages in April. Out of the total shipments in April, shellac accounted for 13,763 packages; Seedlac for 6,384 packages; buttonlac for 640 packages and others for 1,433 packages. The corresponding figures for March were 17,479; 6,845; 866 and 3,411 packages respectively.

The steady decline in exports is attributed to poor interest generally shown by overseas buyers, who are reported to be well-stocked with supplies obtained during the Middle East tension. They seem little affected by the reports of lower crop during the current year, and even low level of prices has failed to attract them.

Although the movement of new crop has begun, trading is very slow in the Calcutta market where the rate remained static around Rs 83 per mound on the basis of Pure TN shellac. The crop is likely to be smaller than previous estimates; but may amount to 7 lakh maunds, same as last year. The main reason for the slow trading in the current season is said to be the shortage of money. As a result, upcountry prices are on the low side.

Shipments during the current month, till the 3rd, were 3,914 packages.

*

Sugar

Sugar markets have continued to rule steadier on good export prospects. A deal of 10,000 tons for export to Pakistan is reported to have been finalised. Indigenous sugar production, upto 15th April 1957, have totalled 17.01 lakh tons as against the corresponding figure last year of 15.46 lakh tons. Stocks with the factories, on the some date, were estimated at 12.85 lakh tons as against 12.21 lakh tons last year.

Following are the mill-delivery prices (per maund) quoted in the Hapur market:—Jaswant Rs 23.69; Simbhauli Rs 29; Mowana Rs 29 to Rs 30; Daurala Rs 29.75 to Rs 30.75; Amroha Rs 28.31; Bijnore Rs 28.12; Manscorpur Rs 28.62 to Rs 30.37; Rampur Rs 30.50.

Prospects of good demand in internal markets coupled with the hope of export possibilities kept the Meerut market firm during the week under review. Prices of each grade hardened; but offtake was, however, small. Delhi was the only conspicuous buyer and that, too, for small quantities.

*

Gur

At Hapur, the Gur market ruled steadier with the ready rate hardening from Rs 11.25 to Rs 11.50 per maund. This was mainly due to the decline in the arrivals, which averaged only 100 maunds daily. Stocks were estimated around 96,000 maunds, the corresponding figure for last year being 69,000 maunds.

*

Foodgrains

Quiet conditions prevailed in the Foodgrains market. The Union Minister for Food and Agriculture has stated that there is absolutely no cause for alarm about the food situation in any part of the country; and the situation is, in fact, hopeful.

According to the Food Minister, some damage has been done to coarse grains like maize, jowar and bajra, which has given rise to greater pressure on wheat and rice. The Wheat crop, despite the damage caused by hailstorm in certain parts of the country, is likely to reach the peak level of 1954/55, that is, little less than 9 million tons. Production of Rice, during the current 1956/57 season, has touched an all-time record of 28,142,000 tons, showing an increase of 4.8 per cent in production over the previous year. The next best year for rice crop was 1953/54 when production was 27.8 million tons.

Meanwhile, in the Hapur market, Wheat prices have recorded a fall of Re 1 at Rs 14.25 per maund for average quality, while farm quality is quoted around Rs 16 per maund. Most of the arrivals have been lifted by consumers, as sales through fair-price shops have been stopped from May 1. Rice ruled quietly steady due to increasing seasonal demand with Basmati quoting Rs 24 to Rs 28.12 per maund, according to quality.

Madras Review

The Peninsula

Curiouser and Curiouser

As a part of the political and economic landscape of India, the Peninsula is becoming curiouser and curiouser. Once the home of all reputed all-India movements, the Southern States are now favouring an insularity which threatens to land each of them in bogs of its own making. Mysore would at the moment seem to be somewhat different from Madras or Kerala; but here, too, if local talk is to be trusted, there has been no reliable fusion of the elements belonging to the old Princely States and the new ones that have been added to them as a result of States reorganisation. The former are at the moment lying low (or so it is said) and may assert themselves at the first opportunity, and the new ministry will have no smooth sailing. In Madras, the political weather is fair enough. The ministry has been formed with an eye to all the different considerations. A spirit of team-work bids fair to actuate the cabinet. Persnal rivalries, though they may not have faded out, are kept discreetly dormant. Kerala has launched a valuable, if not riskless, experiment in democratic Govenment by a Communist Ministry. Here, the most noteworthy feature is the contrast between the self-possession and restraint of the Chief Minister and his colleagues, on the one hand and, on the other, the old propensity to truculent talk outside the ministerial circles. But all the three have one thing in common, a readiness to be politically demonstrative while, at the same time, being gnawed within by more or less grave economic anxieties.

At the moment of writing, the thing most in men's minds is a movement to erase the word "Brahmin" out of the sign boards of hotels and eating houses. It has not proved as much of a sensation as was hoped or feared. Maybe, the Brahmin, owner, noted as Bhavabhuti said for his power of speech rather than strength of arm, will spare the Kazhagamites the physical trouble and erase the word themselves. But what is important is that the passion for a casteless, classless society should free itself through so narrow a groove. In point of fact, here is something the Central Government and constituted authority all over the country should pick up and press through to its logical conclusion. Why not let it be made clear from now, that our secular state will recognise no distinction between one Indian citizen and another, and that, in the eye of the law, it will cease to count in every context? All the elaborate safeguards for scheduled castes, all the elaborate rules about State domicile, the pinpricks which one caste can give to another through its possession or manipulation of political power will be thrown overboard. But that Utopia seems as far off as ever, and petty differences and distinctions will continue to plague the body politic.

Perhaps, the chief merit of the Communist Ministry in Kerala is its freedom from this kind of stunting controversy. There, the Governor's speech to the new Assembly was a respectable statement of policy by the Cabinet in the best traditions of the King's speech in the British Parliament. It was also an adroit political move on the part of Mr Namboodripad, in as much as much he concentrated on the reform of the administration, particularly the elimination of corruption, the association of the other parties and the people in consultation at various stages, the revision of wages and working conditions in State-owned industries and a bid for industrial peace by inviting private employers to follow the example set by the Government. But, as reegards the economic development and the improvement in conditions of life for the masses, the Kerala ministry has sought to create the impression that, if it should fail, the failure would be due to the obstructionism of the Government of India, while credit for achievement, if any, will be its own.

While the Communist Government are most vociferous about the inadequacy of the allocations for Kerala under the Second Plan, the other Governments are no less dissatisfied with their lot. The former stands out because this grouse has both a political and economic importance. It is kept in the foreground and can be played up or down according to the tactics that will be favoured. That is why it has become a part of Communist tactics to pretend that, if Kerala were treated in regard to pepper as Bengal has been in regard to jute, the tip of the Peninsula would be flowing with milk and honey! And yet, what is the place of jute in our national economy and fise, and what is the place of pepper, even taking the short-lived spurt in prices in the early fifties? But party differences apart, all the three southernmost States are alike in that their industrial backwardness and economic discontent have an actual or potential political significance and must be attended to without any show of political weakness or economic patronage

The task is not easy, since all the three States are alike in that their economic potentialities lie more in the fervid imagination of the people and the Government than in the nature of their economic resources. To Mysore, Malnad is an American mid-west which is only waiting to be explored in order to yield its wealth. For Madras, Salem lignite is a near-gold mineral which needs not alchemy but competent chemists to turn into pure gold. Kerala is dreaming of untold wealth and power through possession of the monazite sands. No politician has the sea-green incorruptibility which will make him cut inflated ideas of the people to proper proportions. What is worse, there are few who will not try to make political capital against the Centre as representative either of bourgeois interests or of a North anxious to domineer over the South. The political peril should spur the Centre to a speedy solution of the economic problems of the South. There is a sound beginning for Mysore's Malnad and Madra's lignite, and Kerala needs far more comprehensive efforts. In the distribution of new factories and in the expenditure of large allocations for social service expenditure, the Centre must bear in mind the political as much as the economic needs of particular areas.

*

Speaking at the annual dinner meeting of the Nellore Bar Association, Mr C. Rajagopalachari gave a diagnosis of the reasons why food production has not progressed sufficiently satisfactorily in recent years. Unfortunately, this theme came up in a rather casual manner into an address which was packed with ideas belonging to various spheres of life. C.R. was pleading for wider interests for the individual than pertaining to his immediate occupation or career, a blend of the money-making spirit and heroism and for lawyers particularly a certain interest in public affairs.

Proceeding from the thesis that democracy would be impossible without th rule of law—here one would recall G. M. Tevelyan's well-known observation that one of the main props of democracy in Britain was the Englishman's habitual obedience to law—CR pointed out that the measure of obedience to law depended on the character of the laws enacted. Laws should be equitable and useful. It was only theoretically true that a legislature could make any law it chose. It rested with the lawyers to see that legislatures made only good laws.

Turning to India's food problem, CR sought to explain how in their eagerness to carry out popular legislation, the Indian legislatures had queered the pitch for increasing food production. Though recent agrarian legislation was motivated by the good of the tenant and the cultivator, by and large, it failed to consider the impact on production and eventually on the happiness of the people too. In CR's picture, the landlord was fast losing interest in cultivation. The changes in the laws of succession which provided every girl equal right with every boy led to further fragmentation of land between several absentee land-owners; this law aiming at establishment of equality between men and women was, all the same, inconsistent with the traditions of this country. Likewise the death duty had its adverse repercussions.

These criticisms of land legislation are not heard for the first time. Coming as they do from a disinterested elder statesman who is reputedly capable of discerning the core of any problem and prescribing the most effective remedy for it, the authorities may give them due weight. It is generally admitted that land reform has been almost exclusively inspired by considerations of social equity rather narrowly viewed.

Madras Review

South Indian Notes

No Conspiracy, but Confidence

Madras Governor A. T. John has, in his address to the joint session of the Legislature, viewed the State's food prospects with sombre satisfaction. This has ired the leftists, who shout: Criminal conspiracy. It is nothing of the kind. It reflects the confidence based on assessments made by reliable District Officers. The latter have always furnished accurate reports, and have competently dealt with the situations as they arise. The Government have every reason to place credence in the appraisals submitted from the districts from time to time, and to feel assured that instructions given to them will be carried out effectively. The continuing co-ordination between Madras and the mofussil agencies, and the quiet competency at all administrative levels, enable the State to tackle the ordinary as well as extra-ordinary solutions with minimum fuss and with maximum efficiency.

Neither the Administration nor the population are the sort to talk a difficulty into a crisis. In the mid-forties, Madras and Bengal were both faced with considerable difficulty on the food front. By adopting the agitational approach, Bengal converted the shortage into a famine. By preferring the practical approach, Madras transformed a famine into a shortage. It is hardly necessary to warn Madras of the dangers of a jittery attitude. It knows only too well that such an attitude defeats the end in view.

The campaign now instigated by the leftists about the food situation will not carry weight against authoritative pronouncements that production in the season now come to an end was generally satisfactory; and the State is assured of supplies adequate to its requirements. Except for continued drought in respect of some areas in the Tirunelveli District, harvests have been well above average throughout the province. Particularly so in the Kaveri Delta which is the granary of the State. Rains were timely and well-spread; and improved methods of cultivation are beginning to make themselves felt.

It is refreshing that, while some of the States report deterioration in the food position because of floods or droughts or unseasonal weather conditions, Madras does not add to the worries of the Central Food Ministry. Above all, the State's stubborn refusal to adopt hysteria as an element in State policy deserves wider appreciation and merits emulation on the part of some of the States.

Progress of Cooperative Movement in Andhra

Six per cent of the rural credit requirements in Andhra are now met by the co-operative movement. Considering the fact that the all-India figure in this regard is only three per cent, it will be seen that the movement has made considerable headway in this state. It is also to be noted that much of the progress recorded has been achieved in the course of the last three, four years.

Inaugurating the First Andhra Pradesh Co-operative conference, Mr C. M. Trivedi, Governor of Andhra Pradesh, pointed out that the co-operative movement had been given a vital role in the development of the country and consequently it should be made an increasingly useful instrument for rural progress.

In the course of his presidential address, Mr B. Venkatappiah, Deputy Governor of the Reserve Bank of India, said that the Co-operative movement was ideally suited for achieving the regeneration of the countryside. The kind of progress visualized in our country aimed at restoring vitality to rural economy and the building up the future prosperity of the common man. The two main objectives could be achieved only by strengthening agriculture and rural industry. The programme of development both in the agricultural and industrial fields had been so drawn up as to afford ample room for the expansion of co-operative credit and growth of commercial banking. Mr Venkatappiah made it clear that the co-operative movement could thrive only if it combined the two requirements of viability of organisation and resources in business sense and a vitality of spirit of self-help, initiative and progressiveness in the co-operative sense.

The All India Rural Credit Survey has emphasised the urgent need for considering rural credit in conjunction with marketing, processing and all allied economic activities. The most important thing about rural regeneration is the strengthening of the rural economy to such an extent as to render it capable of withstanding the combined competition from private trade and interests. The co-operative movement in its present position is incapable of achieving the desired result unaided. The Survey has, therefore, recommended active initial help by the State. Now that powerful support is expeced to be given to the primary co-operative marketing societies under the integrated scheme, it may be confidently expected that the progress of the co-operative movement will be much faster in coming years than had been the case so far.

SOUTH INDIAN MARKETS

Hides and Skins Markets Dull

CONDITIONS in the Madras Tanned Hides and Skins markets were dull last week as enquiries from the UK were still slow. Some business was reported done with this country in inferior fifths Cow hides at a slight reduction in prices. Sellers in 7/7½ lbs and 10/12 lbs, however, refused to accept prices offered by London except in isolated cases where a small amount of business was confirmed. In Buff hides, there were good stocks, but business with the UK continued to be very difficult to negotiate as buyers there did not appear interested at present. The small clearances from the market were for local sales only. Arrivals of both Buff Calf and Cow Calf were less and there wos no change in prices.

In the Tanned Skins section, there was practically no change in prices. On the export front, business concluded was very small, partly on account of sellers preferring to wait until after the next London Public Auctions and partly on account of the UK buyers also holding back. The quantities coming up for auction were estimated at 608,000 goat skins and 498,000 sheep skins.

*

Groundnut

Erratic conditions prevailed in the Madras Groundnut Oil market while the seeds section was quietly steady during last week. Arrivals of seeds totalled about 225 tons. Calcutta interests and local small crushes took up sizable quantities. The rate for superior oil quality seed was quoted at Rs 161, while the bold variety was done at Rs 156, both per candy.

In the Groundnut Oil section, business done was small. The rate for the ready position was quoted around Rs 325 per candy. The increase in the incidence of Sales Tax on crushers amounting to over 100 per cent as compared with the position prior to April 1, 1957, coupled with the competition from country, chekkus, free from excise and other levies seem to be affecting the crushers in their production and sales. Representations are reported to have been made to the Madras Government for relief and redress.

*

Pepper

Pepper markets, after ruling firm early in the week, turned a shade quieter at the close of the week on lack of fresh support. In the Alleppey market, rate touched a fresh high level of Rs 625, to finish the week at Rs 600 per candy.

When New York dealers found that Malabar sellers were quoting high, they diverted their attention to Singapore and bought some parcels of Lampong and Sarawak for nearby shipment at $0.26 and $0.25 respectively. This caused firmness in Singapore, despite poor enquiries from Europe where dealers were reported to be waiting for lower prices on improvement in the arrivals of new crop Sarawak.

The main reason for the quieter tendency at the close of the week was due to the report of delay in the shipment of Russian purchases. The future of the market appears uncertain in spite of the improved statiscal position of Malabar as trade, in general, is doubting the possibility of maintaining the present rate of export to the USA when once Sarawak begins pressing.

*

Ginger

The market for Ginger is in the doldrums, mainly due to two reasons. First is the sudden and steep increase in Indian production, which is now beng estimated at 16,000 tons as compared with 9,000 tons last season. This may upset the balance between the world supply and demand. Second is an allegation that exporters in India are depressing prices to an unjustifiable extent.

There has, however, been a heavy export from India during the first quarter of current season. A total of 3,701 tons were shipped during this period as against 1,523 tons in the corresponding period of the previous season. Aden, Saudi Arabia, United States and Britain were the principal destinations of export.

*

Rubber

According to the figures released by the Rubber Board, South India produced 1,220 tons of raw Rubber during March 1957 as compared with 1,165 tons in the previous month and 1,279 tons in March last year. The manufacturers consumed 2,586 tons, including 489 tons of imported rubber. Besides, they consumed 209 tons of sythetic and 314 tons of reclaimed rubber.

Imports of natural rubber during March amounted to 320 tons. Stocks with the estates and dealers, on March 31, amounted to 2,920 tons and those with the manufacturers to 3,454 tons. Synthetic rubber stocks were to the tune of 996 tons.

Industrial Information

FOREIGN TRADE OF INDIA IN FEBRUARY 1957

The provisional figures of foreign trade of India by all routes—sea, air and land—on private and Government accounts, during February 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows:—

Merchandise, excluding transit trade of Pakistan and other overland foreign countries viz. Nepal, Tibet, Sikkim and Bhutan: Exports Rs 5425 lakhs, re-exports Rs 30 lakhs, imports Rs 7132 lakhs; Total trade Rs 12587 lakhs.

Treasure: Exports of currency notes Rs 5 lakhs, others—negligible. Imports of gold Rs 2 lakhs, currency notes Rs 510 lakhs, other—nil.

Balance of trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-export) of merchandise and gold fell short of imports by Rs 1679 lakhs.

CUSTOMS AND EXCISE REVENUE FOR FEBRUARY 1957

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during the month of February, 1957, amounted to Rs 1449 lakhs as compared with Rs 1474 lakhs in the corresponding month of the previous year.

The comparison in the subsequent paragraphs should be taken to refer to that of the current figures with those of the corresponding period of the preceding year.

Of the total customs revenue collections, import duties accounted for Rs 1147 lakhs as against Rs 1197 lakhs, export duties for Rs 267 lakhs as against Rs 263 lakhs and land customs and miscellaneous for Rs 35 lakhs as against Rs 14 lakhs.

The total gross collection of Union Excise duties amounted to Rs 1564 lakhs as compared with Rs 1421 lakhs.

During the eleven months, April 1956 to February 1957, the grand total of gross customs and union excise revenue realised was Rs 33027 lakhs as compared with Rs 28926 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs 12768 lakhs as against Rs 11656 lakhs, export duties for Rs 2814 lakhs as against Rs 3385 lakhs, land customs and miscellaneous for Rs 331 lakhs as against Rs 188 lakhs and union excise duties for Rs 17114 lakhs as against Rs 13697 lakhs.

RETRENCHMENT COMPENSATION IN BONA FIDE CLOSURE

An Ordinance providing that retrenchment compensation will be payable in *bona fide* closure or transfer of an undertaking has been promulgated by the Government of India.

The Ordinance has been promulgated as an emergent step which the Government consider necessary to meet the situation that has arisen in the country causing serious hardship to workers.

In a judgment delivered on November 27, 1956, the Supreme Court held that no retrenchment compensation was payable under section 25F of the Industrial Disputes Act, 1947, to workmen whose services were terminated by an employer on a real and bona fide closure of business, or when termination occurred as a result of transfer of ownership from one employer to another.

Since then a number of undertakings, particularly in Ahmedabad, Kanpur and West Bengal have closed down or put up notices of closure for one reason or another rendering unemployed large numbers of workmen without any compensation.

The Ordinance provides for the following:—

(1) Where a concern is closed down a workman shall be entitled to retrenchment compensation and notice of retrenchment as provided in Section 25F. But if the closure is on account of unavoidable circumstances beyond the control of an employer, the amount of compensation will be limited to three months' average pay.

(2) In the case of construction works (buildings, bridges, dams, etc.) no compensation is payable if the work is completed within two years. If the work is not completed within two years, retrenchment compensation will be payable on the usual scale, but the first two years of the workman's service will be excluded.

(3) In a case of transfer of ownership, retrenchment compensation will not be payable if the conditions mentioned in Section 25F safeguarding the previous service and terms and conditions of work are fulfilled. Otherwise, compensation will become payable.

(4) The Ordinance takes effect from December 1, 1956.

CURRENCY NOTES OTHER THAN THOSE WITH ASOKA PILLAR: LEGAL TENDER FOR ANOTHER SIX MONTHS

The Government of India have announced that the legal tender character of currency notes of the Government of India and bank notes, other than those bearing the Asoka pillar emblem in the design and in the watermark, has been extended for a further period of six months with effect from the 28th April, 1957. This extension has been allowed with a view to avoiding inconvenience to the public, especially in the rural areas, where such notes seem to be still circulating to some extent. With this extension, the total period allowed for exchange of these notes will have been eighteen months and Government desire it to be known that no further extension will be allowed. The holders of such notes should, therefore, in their own interest, have their notes exchanged as early as possible.

A notification to this effect has been issued in a Gazette Extraordinary today.

This limitation of the legal tender character of currency notes other than those bearing Asoka pillar emblem, as already indicated in April 1956, will not apply to the Government of India one rupee notes. They will continue to be legal tender.

The other notes will, however, from 28th October, 1957, be exchangeable only at branches of Reserve Bank of India, agencies of the bank, Government treasuries and sub-treasuries.

IRON ORE DEPOSITS IN INDIA: RECORD PRODUCTION DURING 1955

There was a record production of 4.65 million tons of iron ore in India during 1955. The value in terms of money was Rs 3.24 crores.

Two States of the Indian Union—Bihar and Orissa, between them, accouned for 85% of the total production.

A mineral of world importance, extensive deposits of good quality iron ore are scattered in several areas in Bihar, Orissa, Madhya Pradesh, Andhra and Mysore.

The approximate estimates of reserves of iron ore in country are 21,000 million tons. The State-wise figures are:—

Bihar and Orissa—8,000, Madhya Pradesh—7,000, Mysore—2,500, Madras—1,000, Bombay—300, Andhra—54 and others—2,100.

Out of the estimate, the proved and indicated reserves are 6,400 million tons. The total iron content in all classes of ore may be put at 12,000 million tons.

Nearly three-fourths of the output is being smelted in the country for reduction to pig-iron and for making steel. The rest is exported.

Japan is the principal consumer of iron-ore from India. There was a record export in 1955 of 1.2 million tons which fetched foreign exchange worth Rs 5.3 crores.

INDUSTRIAL WINDOWS

The Indian Standards Institution has circulated, for eliciting comments, a draft Indian standard specification for industrial windows.

This specification supplements the draft specification for steel doors, windows and ventilators which covers requirements for domestic buildings including offices and schools. The range of sizes included in the earlier standard did not meet the needs of industrial buildings, specially factories and warehousess, where large single units are required to be installed.

This standard covers those ranges and provides for sizes varying from 97.5cm×97.5cm or (3'—2⅜"×3'—2⅜") to 197.5cm×217.5cm or (6'—5⅞"×7'—1⅝"). As in the case of domestic windows, the sizes of industrial windows have been fixed so as to fit into modular openings based on a 10 sentimetre module.

The specification includes sizes, tolerances, quality of the material to be used, constructional requirements and fitting and fixing of materials.

Comments on the draft may be sent to the Indian Standards Institution, 19 University Road, Delhi—8 before July 10, 1957.

BISCUITS

The Indian Standards Institution has circulated, for eliciting comments, a draft Indian standard specification for biscuits.

The term 'biscuits' covers a great variety of products and it is not possible to lay down specific requirements for individual varieties. There are, however, certain essential requirements to which all varieties of biscuits must conform.

This draft standard, therefore, lay down requirements which are applicable to all types of biscuits and which would act as the basis for determining the wholesomeness of these products and their freedom from likely deleterious contaminations.

The draft standard specifies that biscuits shall be well-baked but shall not bear signs of scorching. They shall be crisp and of uniform texture. Designs on them, if any, shall be clear. They shall have an agreeable odour, typical of well-baked biscuits and shall be free from off odour, soapy or other off taste, and free from insect and fungus infestation.

In addition to such physical characteristics, there are certain chemical requirements which have also been prescribed in the draft standard. These chemical requirements are for maximum limit for fat content.

A chemical test for determining whether the biscuits have gone rancid or not, has also been specified. All these chemical requirements will safeguard against the unwholesomeness of bicuits, for example, the percentage moisture unwholesomeness of biscuits, for content will reflect upon the crispness and so on.

This draft standard has been prepared by ISI's Edible Starches, Confectionary and Central Products Sectional Committee. In the preparation of this draft standard, the Committee has taken into consideration the views of the suppliers of raw materials, producers, consumers, testing authorities and technologists in the field. Consideration has also been given to the provisions of the Prevention of Food Adulteration Act, 1954.

Comments on the draft standard may be sent to the Indian Standards Institution, 19, University Road, Delhi—8 before June 21, 1957.

(Continued from page 898)

question of going back. Where economy has to be sought is through the provision of work for surplus workers and the large number of hangers-on, who by and large are being maintained on the income of the plantations. We are afraid that no one has yet suggested an effective solution for this problem.

Another, immediately of greater urgency, concerns the expansion of ware-housing facilities in Calcutta. The Tea Committee wanted accommodation for about one million chests at a time. At present the maximum storage capacity is less than 7 lakhs chests. Mr Kanoi's suggestion that private parties should be allowed to build ware-houses with financial assistance from the Government, should appeal to the authorities. If the Government are not willing to tolerate co-existence of State and privately-owned warehouses, they can any day purchase the warehouses constructed under private initiative. As the necessity for immediate expansion of ware-house facilities is beyond question, either the Government should promptly provide them or permit the tea associations and the bigger merchants to put them up. The latter seems to be the more practicable course under present conditions.

Taking a peep into the future, it has also to be recognised that the peak record of tea exports in 1956 does not warrant complacency. Free and unregulated expansion of world tea output can again land every major producing country into trouble. As no independent national initiative toward restrictions on output can avert an international glut, the case for the revival of the agreement among the producing countries is self-evident.

BALANCE-SHEET REVIEWS

(Continued from page 896)

year, the expanded plant has come into operation only recently, and the full effects of this additional outlay will be realised only in the current year.

The company has taken a further loan of Rs 57 lakhs from the Government of India, in addition to the instalment of Rs 75 lakhs out of the loan of Rs 3 crores already availed of last year.

£R$

Asoka Mills

The Asoka Mills, Limited, Ahmedabad, has reported satisfactory working results for 1956. After providing Rs 5.96 lakhs for Depreciation and development and rehabilitation and Rs 14 lakhs for Taxation against Rs 3.10 lakhs and Rs 13.25 lakhs respectively, the net profit is Rs 2 lakhs higher at Rs 16.04 lakhs. Sales of cloth, yarn and waste have risen from Rs 2.07 crores to Rs 2.17 crores.

The directors have allocated Rs 8.54 lakhs to Reserve against Rs 3.50 lakhs; Rs 3 lakhs to Dividend Equalisation Fund against Rs 1.50 lakhs and Rs 1 lakh to Contingency Fund against Rs 2 lakhs. The dividend on the Ordinary shares is maintained at Rs 30 per share.

£R$

Raipur Mills

The Raipur Manufacturing Company Limited, Ahmedabad, has also reported satisfactory working results. After providing Rs 5.38 lakhs for Depreciation against Rs 4.75 lakhs and Rs 14.32 lakhs against Rs 6.65 lakhs for Taxation, the net profit for the year 1956 is higher by more than a lakh at Rs 9.10 lakhs. The directors have recommended a final dividend of Rs 17.50 plus a bonus of Rs 10 per Ordinary share, making a total distribution of Rs 35 per share, same as last year. Sales of cloth, yarn and waste are lower at Rs 1.51 crores as against Rs 1.70 crores.

According to the Directors' report, further progress has been made on the reorganisation of renovation programmes. The financial position of the company is sound. As against a paid-up capital of Rs 30 lakhs, Reserves and surplus stand at as much as Rs 1.12 crores, while current liabilities total Rs 42.26 lakhs.

£R$

Aruna Mills

The Aruna Mills Limited, Ahmedabad, has reported a net profit, after Taxation and Depreciation, of Rs 8.79 lakhs for 1956 as against Rs 7.56 lakhs in the previous year. The directors have set apart Rs 7.31 lakhs (Rs 5 lakhs) for Depreciation; Rs 10.5 lakhs (Rs 8.5 lakhs) for Taxation; Rs 2.58 lakhs (Rs 1 lakh) for General Reserve; Rs 1 lakh (Rs 1.5 lakhs) for Dividend Equalisation Fund and Rs 1 lakh (Rs 1.5 lakhs) for Contingency Reserve. They have recommended a dividend of Rs 25 on the increased ordinary capital as against Rs 30 per share on the old capital. Sales total Rs 1.96 crores against Rs 2.23 crores.

According to the directors' report, a sum of Rs 7.5 lakhs was spent on reorganisation and renovation schemes during the year under review. As against a paid-up capital of Rs 25 lakhs, Reserves and surplus total Rs 1.11 crores.

£R$

Nutan Mills

The Nutan Mills have shown a net profit of Rs 7.40 lakhs for 1956 as against Rs 6.14 lakhs in the previous year, after providing for Taxation and Depreciation. A sum of Rs 4.40 lakhs (Rs 2.80 lakhs) has been provided for Depreciation; Rs 7.40 lakhs (Rs 5.90 lakhs) for Taxation; Rs 2.27 lakhs (Rs 59,267) for General Reserve; Rs 1 lakh (Rs 1.91 lakhs) for Dividend Equalisation Fund and Rs 1 lakh (Rs 50,000) for Contingency Fund. Sales total Rs 1.28 crores against Rs 1.38 crores. As against a paid-up capital of Rs 20 lakhs, Reserves and surplus total Rs 68 lakhs.

£R$

Ahmedabad New Cotton

The working of the Ahmedabad New Cotton Mills Company Limited has resulted in a profit of Rs 3.45 lakhs for 1956 as against Rs 5.07 lakhs, after providing Rs 6.34 lakhs for Depreciation and Rs 4.50 lakhs for Taxation against Rs 5 lakhs and Rs 3.85 lakhs respectively. In addition, a sum of Rs 25,344 has been provided for General Reserve and Rs 75,000 for Dividend Equalisation Fund. A dividend of Rs 20 per share is recommend on the ordinary stock. Sales total Rs 1.21 crores against Rs 1.22 crores.

accustomed to do social work with entirely different motives. An effective common direction and control by the Central Government is the only answer to the prevailing chaos.

WORLD OVERSEAS

(Continued from page 904)

to goods, or against marine or other risks normally insured with commercial insurance houses.

To establish the Corporation in its early operations, the Australian Government has secured the services of Mr R. A. Freeman, who has been associated with the United Kingdom Export Credit Guarantee Department.

✱

Total aluminium available in Australia in 1956 was in excess of the quantity consumed by the market, although the metal had been in short supply during the first half of the year.

The Australian Aluminium Production Commission's plant at Bell Bay, Tasmania, produced 9,734 tons of ingots in the year, according to the Australian Bureau of Mineral Resources.

The Bureau says that although the world position in relation to aluminium has changed in recent months from shortage to one of ample supply, overseas producers, particularly in the United States and Canada, are pressing on with expansion programmes. The producers plan to increase total capacity to 750,000 tons in the next two years.

The Bureau says that the result will be watched with interest in Australia, as it could affect the rate of development of the recently proved bauxite deposits in the north of Australia, where initial plans are under considerations.

(Recently a £3,000,000 company was registered in Brisbane, to develop deposits at Cape York, in the north of the State of Queensland).

✱

A new Australian shipbuilding company is being formed in South Australia to build tugs and other small ships. It will be known as the Adelaide Ship Construction Company Pty. Ltd., and it will use most economical overseas methods of small ship construction, at Port Adelaide.

The Company will be formed in conjunction with a British ship builder, and it is hoped that construction of the first craft would begin early in 1958.

The State possesses at Whyalla, the extensive shipbuilding yards of the Broken Hill Proprietary Co., Ltd., and in March the 28th vessel constructed there was launched. This was the 10,000 ton freighter Lake Torrens.

The Premier of South Australia, Sir Thomas Playford, recently announced that South Australia had prospects of a tanker-building company beginning operations. The project is linked with a decision as to whether or not a Federal subsidy of 33⅓ per cent payable on ships built in local shipyards for the Australian coastal trade can be applied to the project.

The Premier states that he had been informed that the Federal Government would support the establishment of the tanker industry.

Automobile companies who have established either local companies or representatives in Australia are concentrating on Melbourne as a locale for new manufacturing plants, to make either wholly Australian vehicles, or to increase the local content of well known makes.

Recently a large number of these companies have been active in the Victorian capital.

The Rootes Group, which makes Humber, Hillman and Singer cars, and also Commer Trucks, has bought an 83 acre site for a manufacturing division; Volkswagen is planning to press body panels in a Melbourne plant in a few years, and later produce transmission and engines; Renault of France sent two directors to Melbourne a few months ago to survey industrial sites and market possibilities, and Mercedes Benz is likely to begin manufacture of some parts locally.

Standard Car Company has plans to expand and raise the content of its models, and the Italian Tempo Matador Company is likely to begin production of commercial vehicles in Melbourne, or at some other local site, in the State of Victoria.

The vitality of the industry generally is seen in other reports of general expansion throughout Australia.

The British Motor Corporation, which is now completing a big plant in Sydney is aiming at complete production of an Australian car. Mr L. J. Hartnett, who is well known in the Australian motor trade, has been mentioned as likely to be linked with a German company for production of a range of small vehicles.

Freighters Jeep Ltd., offshoot of an established Melbourne Company, will soon make a jeep-type vehicle for agricultural and military use. It is expected that this plant will be in Melbourne, also.

Stock Exchanges

PRE-BUDGET CAUTION

Watch-Dog Writes:

STOCK markets have entered the pre-Budget week and caution has been the key note of trading. Nobody is inclined to speculate on the Budget proposals and enter into commitments either way. There is, however, a general lack of selling pressure and the undertone is remarkably steady, a rather unusual feature a week before the presentation of the Budget.

The Calcutta Stock Exchange ruled dull and prices developed a slightly easier tendency on lack of fresh enquiry.

Equities on the Bombay Stock Exchange, after initial steadiness, were subjected to heavy profit-taking towards the close.

Activity on the Madras Stock Exchange was restricted and the general tone was subdued.

Conditions on the London Stock Exchange were considerably quieter, mainly as a result of the settlement of one the heaviest accounts for some time.

Wall Street closed heavy with an irregularly lower tendency, extending mostly to a point or so.

*

Calcutta

THE local Stock Exchange passed through another week of listless trading. Although trading conditions showed a slight improvement early in the week, they proved short-lived and prices developed a reactionary trend towards the close due to nervous liquidation. This was due to the fact that, in view of the proxmity of the Budget, operators were inclined to reduce their hoidings to the barest minimum in order to be prepared for the worst. Although increased taxation was regarded inevitable in the context of the Second Five-Year Plan, it was felt that additional burden on industry would not be so heavy as to cripple incentive. Sellers were, therefore, cautious.

The Giltedged market was extremely dull. Institutional investors showed little interest and the volume of business contracted further. The only relieving feature of trading in this section was comparative steadiness of short-dated issues. 3 per cent 1986 Conversion Loan opened at Rs 74.33 and, after improving at one time to Rs 75.00, receded again at the close to Rs 74.28.

Bank shares ruled quietly steady. Punjab National changed hands at Rs 52.50 to Rs 52.87 and United Commercial at Rs 53.25 to Rs 53.75. Hindusthan Commercial met with some business upto Rs 5.75.

Except Megna which met with sustained support upto Rs 79.50 from interested quarters, Jute shares remained generally depressed. There was anxiety with regard to the supply of raw jute which, it was feared, would affect the working of the mills. Thanks to encouraging dividend, Delta were enquired upto Rs 139 from Rs 125. Nuddea moved narrowly between Rs 31.00 and Rs 31.50; Howrah between Rs 15.12 and Rs 15.56 and Kamarhatty between Rs 93 and Rs 96. National touched a high of Rs 20.35 and a low of Rs 20.09, to finish better at Rs 20.10. India, after a long time, came in for some business upto Rs 134.

Although trading in the Coal section remained dull in view of the operators' anxiety with regard to the size of the increase in the selling price of the commodity, Burrakur were taken upto Rs 22.06 from Rs 21.87 on speculative buying. Central India were a narrow market around Rs 6.12, while Katras Jherria were in demand upto Rs 54.62 from Rs 53.87. Bhalgora moved between Rs 4.62 and Rs 4.75.

Textiles ruled generally quiet in view of the misgivings regarding the profit-margin of the industry during the current year due to the high prices ruling for cotton. The only exception to the general trend were Jayshree, which hardened further to Rs 6.00 from Rs 5.87 following the announcement of a maiden dividend. The reports of the decision to close down the textile mills belonging to the British India Corporation had an adverse effect on Kanpur Textile mills which, after being pushed down to a new low of Rs 5.93 from Rs 6.25, improved to Rs 6.93 at the close on reports that the Government were taking steps in this connection. New Victoria hovered idly around Rs 1.81.

The Tea section continued to be neglected. Apart from an anxiety to see how the new season would begin, there was a general feeling that the output in the current season might exceed demand and that medium and low grades could be sold only at unremunerative rates. However, there was a belief that the estates producing quality teas, might produce better working results in view of the satisfactory prices realised. The only bright features were Brooke Bond having buyers at Rs 18.12 to Rs 18.19; Hansqua at Rs 26.37 to Rs 26.50; Jayshree at Rs 11.18 to Rs 11.25 c.d; and Sapoi at Rs 29.87 to Rs 30.00. Sonai River, after a long time, came in for business at Rs 12.25 to Rs 12.27 as against Rs 15.52, while Tezpore eased off further to Rs 18.94 from Rs 19.44. Banarhat were offered at as low as Rs 264 against Rs 271.50.

Except Belsund and Carew which were well supported upto 11.00 and Rs 7.43 from Rs 11.00 and Rs 7.31 respectively, other Sugar shares remained generally dull. Operators were reluctant to enter into fresh commitments in view of the reports that the sugar season might close easier this year due to cane shortage, not to speak of a general desire to await the Government decision with regard to the sanction for further exports. SKG moved narrowly between Rs 10.12 and Rs 10.19.

Price movements in the Engineering were rather erratic due to alternate bouts of buying and selling, being influenced by the speculative activity in Indian Irons. Against week-end closing of Rs 19.90, Indian Irons opened better Rs 20.30 and, after advancing steadily to Rs 20.75, receded again to Rs 20.09 on selling pressure. New shares changed hands at Rs 18.97 to 19.54.

Among other Engineering scrips, G. K. Williams were a very firm feature, having sustained support upto Rs 26.37 from Rs 25.50 x.d, TEXMACO opened higher at Rs 14.95 and advanced further to Rs 19.20, to recede again towards close to Rs 18.40. Jessop changed hands at Rs 24.00 to Rs 24.56; Braithwaite at Rs 24.47 to Rs 24.62; Marshalls at Rs 4.72 to Rs 4.82 and Richardson at Rs 16.12 to Rs 16.50.

The Miscellaneous section provided a few firm features on investment considerations. Prominent amongst these were Rohtas taken upto Rs 18.37 from Rs 18.00; Dunlop Rubber upto Rs 24.12 from Rs 23.87; Metal Box upto Rs 27.62 from Rs 27.56; Indian Copper upto Rs 3.32 from Rs 3.28 and Alkali Chemicals upto Rs 12.19 from Rs 11.31. BIC, after being marked down to Rs 6.25 from Rs 6.88, improved at the close to Rs 6.56. BBP moved between Rs 2.50 and Rs 2.68, while IBP were offered at Rs 28.87 against Rs 30.25 on the announcement of a lower dividend for 1956. National Carbon were quoted at Rs 24.99 to Rs 25.09; NICCO at Rs 19.25 to Rs 19.31; Indian Aluminium at Rs 12.75 to Rs 12.81; Anglo Brother at Rs 16.19 to Rs 18.50 and Indian Steamship at Rs 10.03 to Rs 10.12. Indian Cable, after being offered at as low as Rs 24.00, improved at the close to Rs 24.31. In the Paper section, Orient Paper moved rather erractically between Rs 30.10 and Rs 30.40 till midweek. At the close, there was a setback to Rs 28.20 on fears of an excise duty on paper. Shree Gopal were marked down to Rs 14.93 from Rs 15.25, while Titaghur changed hands at Rs 33.75 to Rs 33.87.

*

THE PENINSULA

(Continued from page 912)

The production aspect, inspite of its being overwhelmingly important, had to be treated apart. In fact in the attitude of our Government's methods for stimulating production are more or less divorced from land reform. And some of these methods are also looked upon as specially urgent in view of the new problems created by the redistribution of land. Co-operative farming, for instance, is intended to restore cultivation in large units which land reform legislation has directly assailed.

CR of course was painting only one side of the picture. The breaking up of big estates and the improvement and stabilisation of tenancy rights are inexorable in the social conditions of the present. It is no use blaming the Government for having undertaken this job. Where CR is wholly legitimate in his appraisal and most constructive in his suggestions, is in respect of the need to synthesise or at least to accept a compromise between the distribution and production aspects.

It looks as if the social objective of a fair distribution of land has been attained at considerable cost in incentives to production. This may be a passing stage. But from the way in which the authorities grope for a real solution to the problem of the small-holder of the techniques of cultivation etc., there is ample room for scepticism. Though co-operative farming is enthusiastically pressed for acceptance on a national scale by the Prime Minister the Planning Commission and several leaders all over the country, the idea does not seem to seep through. In the UP influential Congress opinion is sharply divided, on this question. Co-operative farming is considered unacceptable in view of the likely effects on rural employment and more so as the dent into a deep-rooted social tradition it represents.

Even in the Community Projects areas, where rural employment and production remain the principal aims, the small producer has benefitted comparatively little. The Programme Evaluation Report bemoans this fact and warns about the social danger it implies.

Against CR's interpretation at Nellore there is the complementary side pictured by the Governor of Madras in his Address to the Madras legislature. In this address, Mr A. J. John has referred to the appreciable improvement in the agrarian situation resulting from the recent land legislation ensuring fixity of tenure and fair rents to the tiller. The Governor, however, admits that these new and beneficent measures would take a little time to be adequately understood and accepted as the ordinary law of the land.

Further South, the Communist Premier of Kerala hopes to relieve unemployment and food shortage through ceilings on land and re-distribution. These are contradictory statements and steps. The problem is undoubtedly entangled in ideologies. But it should be useful if the Government are to undertake an uninhibited enquiry into where contemporary land legislation has militated against production and to what extent. Such an enquiry should supply the corrective to policies if these are needed, if not critics will be silenced once and for all.

FOR THE INVESTOR

(Continued from page 895)

In such a view, I think the shareholder cannot possibly go wrong with Buckingham and Carnatic. A correct understanding of the 1956 balance-sheet offers, in this regard, a clinching argument. First, however, the profit and loss account, which may not be found particularly spectacular. Sales have registered a rise of Rs 36 lakhs to Rs 9.37 crores; but higher sundry costs have cut into the net profit which, before tax and depreciation, shows a decline from Rs 1.11 crores to Rs 91.31 lakhs. From profits, tax receives Rs 15 lakhs against Rs 39 lakhs; the provision for depreciation is increased by a third to Rs 40.97 lakhs from Rs 30.60 lakhs; the Reserve Fund gets Rs 1 lakh more at Rs 11 lakhs; the transfer to Other Funds is lower at Rs 5 lakhs against Rs 11.89 lakhs; and the ordinary dividend, maintained at 10 per cent, absorbs Rs 17.85 lakhs.

Interest mounts when we switch our attention to the balance-sheet position. Buckingham and Carnatic has a preference capital of Rs 21.30 lakhs; ordinary shares to the tune of Rs 1.78 crores; and debentures outstanding for Rs 78 lakhs. Against this, the Reserve and Other Funds total Rs 2.78 crores—or exactly Rs 1 crore more than the ordinary capital. A glance at the 1955 balance-sheet discloses that, in that year, the Reserve and Other Funds were at a mere Rs 1.63 crores. The intriguing question for which we must find an answer is: Whence this Rs 1 crore odd? For, the transfers from profits add up to no more than Rs 16 lakhs. It remains to explain, therefore, the increase besides of Rs 89 lakhs in unappropriated profits during 1956.

If he will only care to look for them, the investor can find all the explanations to this enigma in the balance-sheet. Before we sift through the balance-sheet, however, we would do well to see how the Directors' Report throws light on the matter:

"The relief from taxation on profits estimated to amount to Rs 35,50,000 has been obtained through the operation of the allowances for development rebate, initial and extra normal depreciation for 1954 and 1955. In accordance with past practice an amount equivalent to the relief has been directly transferred from Taxation Reserve to the Provision for Increased Replacement Costs of Buildings and Machinery.

"Certain specific provisions made by the Company many years ago and deducted in past accounts from the respective assets have now to be shown separately under Reserve and Surplus and the amounts thereof have been transferred to Raw Materials Fluctuation and Stores Reserves."

Specifically, an amount of Rs 38.71 lakhs in respect of reserves made in previous years against Raw Materials and Process Stocks and Rs 20 lakhs in respect of Reserves made in previous years against Stores are both shown as undistributed profits; and, to this we have to add the transfer of Rs 35.50 lakhs from Taxation. To put it more simply, inner reserves built up in the past, of the order of Rs 90 lakhs, now form part of the published reserves.

How, the shareholder might ask, does all this benefit me? In, if I may suggest, two ways. Firstly, such retained profits have been ploughed back: the gross block has risen from Rs 4.50 crores at the end of 1954 to Rs 6.69 crores at the end of 1956—an increase that just slightly falls short of 50 per cent. Secondly, the prudent marshalling of internal resources will, on the one hand, facilitate modernisation and replacement of plant and machinery and, on the other hand, obviate the need for fresh capital —of whatever the sort—to be raised. The improved (from the economic point of view) productive capacity arising from these two factors is sure to mean that the better results inevitably to be experienced by the company in the future will have its direct benefit For the Investor.

£ R$

Investment Notes:

Share Transfer Books of the British India Corporation will be closed from the 25th May to the 22nd June 1957. In a circular letter, issued to the shareholders, attention is drawn to the fact that documents relating to share transfers, which are incomplete, will not be accepted. Transfer Deeds must be properly stamped with duty, which is payable at the rate of 75 nP for every hundred rupees or part thereof of the value of the shares. The Corporation's Transfer Fee is Rs 2 per deed.

The above circular in connection with the distribution of dividend has little effect on shares which, after being offered at as low as Rs 6.25, are now ruling a shade better at Rs 6.75. It is feared that the outlook is uncertain as the Corporation, it is understood, has decided to close down all the textile mills under its management, although the Government is trying to avoid the same.

Dhanalakshmi Mills, Coimbatore, have proposed to issue 24,348 new shares of Rs 100 each, at par, subject to the sanction of the Government.

Textool Company Limited has decided to issue new shares to a nominal value of Rs 10 lakhs to existing shareholders on a one-for-one basis. Transfer Books will be closed from the 21st to the 25th May, 1957.

Virudhunagar Textiles have made the fourth call of Rs 17.50 per share on the Preference Shares.

£ R$

Investment Briefs:

Indo-Burma Petroleum Company has announced a final dividend of Re 1, making a total of Rs 2 per share on the Ordinary shares for 1956 as against Rs 4 per share in the previous year.

In Ahmedabad, Monogram and Marsden Mills have maintained the dividends at Rs 12 per share plus a bonus Rs 2 per share for 1956.

*

NORTH INDIAN MARKETS

(Continued from page 911)

Easy advices from the Punjab, following an increase in arrivals of the new crop in markets, have accounted for a slight fall in Gram prices. Barley and Bejhar, however, continue to rule steady, thanks to consumers' demand in the face of poor arrivals. Continued buying enquiry from North Bihar and East Uttar Pradesh have accounted for steady conditions in ready Peas, although daily arrivals have increased to an average of 2,500 to 3,000 maunds. Traders are building up stocks for early despatch to the needy areas. Arhar prices have recorded a fall following an increase in the arrivals to 400 maunds daily. Urad, on the other hand, has improved due to falling stocks.

A falling tendency in prices has been noticed in the Delhi Grains market. The general decline in prices is led by wheat, which is attributed to reports of easiness in the principal markets of Northern India. Moreover, possibility of removal of restrictions on the movement of the commodity from and to Delhi has also discouraged buyers. Demand for Gram has slackened, while Rice has improved by about Rs 2 per maund on good buying interest coupled with higher advices from the upcountry advices.

A steadier tendency was in evidence in the Bombay grains market. The upward trend in indigenous Rice gathered fresh momentum, being influenced by better demand and higher prices realised at terminal markets in Madhya Pradesh, which were stated to be meeting the requirements of West Bengal, Bihar and Assam. Indigenous Wheat firmed up by Rs 5 to Rs 10 per candy on reports of smaller stocks. In the Coarse grains section, Jowar prices were better by Rs 3 per candy. The Pulses section presented a mixed appearance.

CLIVE STREET GOSSIP

(Continued from page 906)

brow ivory tower for sterile cerebrations by long-haired johnnies. It will be the task of these intellectuals not only to frame the policies but to present them in ways in which common folks can understand them.

*

As I said earlier, the Congress has no need to get alarmist at the diagnosis Mr Nehru has made of its illnesses. By and large, it is accurate, but, as he himself has stated, it is somewhat exaggerated. It seems to me that the Congress is today, with significant differences, where the British Labour party stood in 1952. After a run of office for a considerable time, it has become stale and it needs to renew itself. Fortunately for it, there is practically no end to the opportunities for revitalising itself by creative activity and creative thinking outside the Government. When this realisation dawns on the defeated Congressmen and the unsuccessful aspirant for a ministership, the Congress will have nothing to worry about.

For the Investor

A Bear's Paradise?

Investment Gossip:

The Budget proposals, as outlined by Mr T. T. Krishnamachari on Wednesday evening, have confirmed the worst fears and justified the fullest hopes. Paradoxical as it may seem, the new taxes were being looked forward to with fears in the quarters which have, over the past many months, developed a tax-complex, and with hopes in the quarters which believe that all resources, financial, physical, administrative and psychological, must be mobilised, if need be on a war footing, to ensure the overwhelming success of the Second Plan, and that, toward this end, the contribution must be nation-wide, every section of the community regarding the requisite sacrifice and the attendant austerity as a paramount national duty.

Hopes in this regard are abundantly fulfilled; for, in the incidence of the new taxes, there is no discrimination. Every one, big and medium and small, is dragged into the tax net; or, to put it in the correct perspective, every interest is provided an opportunity to add the drop, which, added to drop by drop, maketh the ocean of the Plan's resources.

Big Business can no more grumble that it has been singled out for heavy imposts. The poor man's travel, his post-card, his bidis, his pinch of sugar—everything, in fact, has been made more expensive.

The new taxes soak the rich and soak the poor. All this soaking is done with a view to augmenting the disbursements which, in turn, will soak the Government. It is a grand process of soaking at all levels; and this kind of economic operation, ultimately, benefits the whole economy as well as its sections.

"Ultimately" be damned, exclaim those who can only see the immediate hurt caused them. But, is this country, or any country, worthy of a great adventure if it has a large proportion of persons who are not prepared to endure today's hurt for the sake of ensuring tomorrow's comfort?

It has been obvious, for a considerable time, that the Stock Exchanges have their destinies moulded by operators who are concerned only with current profits, and are content to let the devil take care of future problems. Their reaction is, it goes without saying, in accordance with the fixed pattern. Indian Irons shed two rupees in the post-Budget session. Gloomy prophets advance the cheerful view that this scrip will soon be quoting at Rs 12.

While I am confident that second thoughts, aided and abetted by positive policies and plans initiated by Government to restore the affections and revitalise the activities of investors, will take full note of geometrically accelerated forces of expansion in response to arithmetically rising public expenditure. I am not so foolhardy as to suggest that, in the short run and in the climate dominated by flash news and flash deals, share prices record further and bigger landslide.

The professionals have now an easy technique for making good profits. Intensify the jitters; fan the panic into flame; and a bear's paradise is sure and certain.

"You are right there," said Babu Moneylall Rupeemull, who called on me at this point of my writing and to whom I read out the earlier part of this article. "The Finance Minister is the best friend of the bears. During the six or seven months he has been Finance Minister, he has provided any number of opportunities for bears to make hefty sales and to make hefty profits. TTK considers that the Stock Exchange comprises only gamblers. If so, he has been the best friend of gamblers."

As for investors, whose interests he professes to protect, he has killed the whole lot of them, Babu Moneylall said with pointed bitterness. The rout of investors was, in his view, so complete that Birlas, who collected over Rs 8 crores by way of preference and other shares a few months ago, would not be able, Babu Rupeemull averred, to raise even Rs 10 lakhs now.

When his temper had calmed down, I invited him for a cool and careful consideration of the relevant factors. "Are you not allowing yourself to succumb to the first shock of all round taxation?" I asked, and continued: "Look at the total amount that all the new taxes are expected to produce and at the relatively small target for direct taxes. What does this show? The conclusion is irresistible that all the additional imposts like the rise in passenger fares, postal and telegraph rates, excise duties, import duties, etc., are intended as much to curb consumption as to bridge the gap in the Plan's resources. You are upset by the higher tax on companies. But how much revenue is this expected to produce? A bare Rs 7 crores! Do you mean to say that, with almost every industrial concern doing surpassingly well, the joint stock companies taken as a whole cannot contribute an extra Rs 7 crores to a Rs 5,400 crore plan? From these disbursements at Rs 1,000 crores a year, how much will industries gain?"

Babu Moneylall saw some force in this argument, but shifted his argument to the difficulties experienced by share-brokers in getting loans against securities. Banks positively refuse to lend any more money on shares, he complained. "On the other hand, with share-prices tumbling down, they are demanding more and more margins. The Bank rate has been raised. The interest on these bank loans will again go up. What incentive is there, in these conditions, for any one to invest in shares? In theory, investors are lauded and given promise of all manner of help. In practice, the investor faces lingering perdition. He is in the mood to prefer death."

The Budget proposals may present an integrated tax system, Babu Rupeemull said, but they will achieve the desired end only if TTK also integrates the money market which certainly includes a healthy stock exchange and confident investors.

Investment Notes:

The Britannia Engineering Company has proposed to issue 20,000-6 per cent tax-free Preference shares of Rs 100 each at par. The shares will be offered, in the first instance, to the holders of the Ordinary shares in the proportion of one Preference share for every 20 Ordinary shares held, fractions being ignored, with the right of renunciation of all or any part of the shares offered to them in favour of any other person. This fresh capital will be utilised for the expansion of the company's works.

The Chairman of the WIMCO has given details of the company's project to set up a paper factory in Calcutta. The project has been designed, partly to meet the company's own requirements of a most important raw material and partly to augment its revenues from sales of surpluses. The capacity of the plant will be 6,000 tons per annum. The cost of the whole project is expected to be around Rs 70 lakhs.

The Coimbatore Cotton Mills Limited has notified that, in regard to the issue of new shares in the ratio of 2:1, the last date for the receipt of applications together with a remittance of Rs 25 per share is June 15, 1957. The new shares will rank for dividend for 1957 from the date of payment of share monies and the amounts so paid.

£.R$

Investment Briefs:

Coonoor Tea has reduced the dividend from 25 to 17½ per cent for 1956.

Lucky Valley Tea has maintained the dividend at 10 per cent for 1956.

HIGHLIGHTS

While the general expectation was that the 1957-58 Budget would be an Atom Bomb, it has turned out to be a super Hydrogen Bomb.

This is the first reaction to the proposals announced by Mr T. T. Krishnamachari on Wednesday. It is proverbial that second thoughts are more reliable.

In this issue, the Budget figures, as usual, in many sections and in many contexts. It has been our endeavour to avoid judgment based on the first shock.

We have tried to provide a perspective and to study the implications in a comprehensive setting. We admit, however, we are too near the explosion and, therefore, propose to issue, before the month-end, a publication which will make its assessment in a less excited mood and whose value will be inestimable as a handy book of reference to every one who has aught to do with taxes, either as enforcing authority or as helpless victims.

The tentative plan for the publication includes: The Budget and the Plan—The Budget and you and me—The Budget and the Kaldor Report—The Budget and the Investor—The Budget and Cost-Price Inflation—New Taxes versus New Loans—Second Thoughts on the Budget—Commentary on the Finance Bill—Commentary on the Wealth Tax Bill—Commentary on the Expenditure Tax Bill—Full Text of the Finance Bill—Full Text of the Wealth Tax Bill—Full Text of the Expenditure Tax Bill—The Budget and its Back-ground—The Budget and New Taxes—Taxes in the Second Plan period—The Railway Budget.

Its price is Rs 5 per copy. Subscribers of Indian Finance will have the benefit of a concessional rate of Rs 4.

Copies must be booked in advance, and advance orders must be accompanied by a remittance for the requisite amount.

Carew Sugar Skips Dividend

Balance-Sheet Reviews:

CAREW & COMPANY, LIMITED has passed over the dividend on the Ordinary shares for the year ended 30th June 1956 as against As 4 per share paid in the previous year. The profit has, however, improved by Rs 3.38 lakhs to Rs 6.47 lakhs. Taxation absorbs Rs 4.58 lakhs more at Rs 5.89 lakhs. A sum of Rs 20,716 has been carried forward against Rs 12,445.

The Rosa factory crushed as much as 3,500,585 maunds of cane as against only 2,685,315 maunds, but the recovery declined from 9.44 per cent to 9.41 per cent. The crush of the Darsana factory has also increased from 4.608,158 maunds to 5,075,082 maunds and the recovery has fallen from 8.98 to 8.12 per cent.

The directors hope that the working of the Rosa distillery will improve in the current year, because of restrictions imposed upon imports of foreign liquor. In the case of the Darsana factory, Pharmaceutical division has made a small profit for the first time and it is expected that its working will improve further.

£ R$

Godfrey Philips

Godfrey Philips India Limited, Bombay, has reported satisfactory results for the year ended 31st December, 1956, showing an increase in cigarette sales to a little over Rs 50 lakhs.

The working has resulted in a net profit of Rs 10.87 lakhs against Rs 9.51 lakhs, after making a provision of Rs 4.59 lakhs for Depreciation and Rs 11.50 lakhs for Taxation. With Rs 11.96 lakhs brought in and adding thereto Rs 62,604 being excess provision no longer required and Rs 1.10 lakhs being provision for tax no longer required, the sum available for distribution is Rs 23.32 lakhs. From this, a sum of Rs 1.06 lakhs has been transferred to Reserve for Gratuities, leaving a balance of Rs 22.26 lakhs. The Ordinary dividend is Rs 20 per share. The carry-over is Rs 13.04 lakhs. Sales total Rs 3.01 crores against Rs 2.51 crores.

Andhra Cement

The Andhra Cement Company has made a profit of Rs 10 lakhs for 1956 after making a provision of Rs 3.2 lakhs for Depreciation against Rs 5.3 lakhs in the previous year. The dividend for the year had already been paid in the form of an interim distribution with a view to avoid certain technical difficulties as a result of the issue of new shares.

Production and turnover tonnage have been well maintained. As compared to the previous year, the profit is lower by Rs 5 lakhs. This is attributed to the elimination of the freight advantage which the company enjoyed following the decision of the Government to pool the prices of cement in the country on an ex-works basis since the trading in cement was taken over by the State Trading Corporation with effect from July, 1956.

The company has been allowed Rs 7 per ton f.o.r destination, which included Rs 15 on account of freight and the company could make around Rs 5 lakhs in the year. While this has cost the company a sum of Rs 2.5 lakhs, the inward freight burden has remained unchanged. In this connection, it may be noted that the factory has to get its supplies of raw materials from as long a distance of 79 miles. While the cost of production remained the same, there was a sizable reduction in the income due to the loss of freight advantage.

It appears that the company has already represented to the Government in the matter, and the enquiry by the Tariff Commission into the question of rise in freight and cost of production will take some time. The prospects for the company, however, appear to be good since the company will be doubling its capacity to 600 tons a day.

The new plant, which is under erection, is expected to go into production shortly. The equity capital has been raised from Rs 50 lakhs to Rs 70 lakhs. It is said that the company is contemplating a further programme of expension, and the Government are reported to have given a licence for a further 600 tons a day.

The Budget and the Plan

Indian Finance
Established 1928
May 18, 1957
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THOUGH, on the face of it, the New Taxation proposals, with their target of Rs 93 crores in a full year, are staggering in magnitude and widespread in range, the occasion and the context demand that they be judged, not in the frenzy of initial shock, but in the calm and with the care of "second thoughts". Authoritative spokesmen of the Government have prepared the public and conditioned their psychology for the prospect that the first two years of the Plan would involve the severest strain both in respect of the resources that need to be mobilised and in respect of the forces that it will release. There has, thus, been general expectation that the May Budget would disclose onerous taxes. The first reaction to the Budget appears to indicate that the worst apprehensions in this respect have been exceeded. We shall not conceal our own feeling that the sweep and severity of the proposed measures warrant such an impression. In the circumstances, it is easy to succumb to the temptation of following the line of least resistance and to join the chorus of condemnation. An attitude of this kind will be most unfair to the Prime Minister and the Finance Minister, whose paramount solicitude is the completion of the Second Plan to such effect and in such style that, by 1960-61, the country will achieve a tolerable level of social and economic accomplishments.

To those who, in the name of realism, would whittle down the Plan or spread it out, Mr T. T. Krishnamachari has given the answer, which, in effect, re-emphasises the Government's view that the Second Plan represents an irreducible minimum; that anything less will fall short of the requirements considered from the point of view of stabilising and reinforcing India's political freedom with social justice and economic well-being. The tasks in this respect can be diluted only at freedom's peril.

This is no whim or caprice or ideological predilection of the present Government. It is a settled conviction. It is an article of faith. It is the keystone of policy. It is the source and fountain-head of all national endeavours. It is the one thing which makes everything else meaningful. The 1956-57 and the 1957-58 Budgets are to be regarded as the main instruments of the Second Plan. If it is conceded, as the Finance Minister has said, that "the Plan is the main theme and dominant concern of all our thinking and policy formulation", then, Mr Krishnamachari has next indicated the basic criteria upon which taxation policy has to be shaped. These are, according to him:

(a) They must produce a sizeable addition to public revenues;

(b) They must provide incentives for larger earnings and more savings;

(c) They must restrain consumption over a fairly wide field so as to keep in check domestic inflationary pressures and to release the resources required for investment; and

(d) They must initiate such changes in the tax structure as would make tax yields progressively more responsive to increased incomes and facilitate an orderly development of the economy with due regard to the social objectives we have adopted.

Let us recognise that these four criteria are unexceptionable. In considering India's taxation policy since the date from which the Second Plan began, we would do well to examine to what extent these criteria have been borne in mind in the formulation of policy. The first criterion to be examined is whether or no the measures since the Budget for 1956-57 subserve the ends of a sizeable addition to public revenue. For this purpose, it is necessary for us briefly to recapitulate the revenues to be obtained from additional taxation over the Second Plan period. Chronologically, Sir Chintaman Deshmukh's Budget for 1956-57 envisaged new taxation measures calculated to yield Rs 35 crores a year; the revenue over the Second Plan period is, thus, Rs 175 crores. Secondly, we had the augmentation of the excise duties on cloth by Mr T. T. Krishnamachari as his first act upon assumption of the Finance Ministership; and the yield therefrom for the Second Plan may be put down at Rs 100 crores. Thirdly, Mr Krishnamachari's mid-year Budget relating to 1956 is estimated to bring in Rs 100 crores in the period until 1960-61. Fourthly, the Finance Minister's Budget for 1957-58 is to secure Rs 78 crores for the remaining part of this financial year. Finally, the 1957-58 proposals will bring in Rs 93 crores a year in the remaining three years of the Plan. All these add up to Rs 732 crores. As against this, let us remember that the Second Plan in its estimate of resources took credit for Rs 450 crores by way of additional taxation; but these original estimates left an uncovered gap of Rs 400 crores. Thus, it may be stated that the revised target for additional taxation over the Second Plan period should be around Rs 850 crores. However, we may point out that, in the revised resources plan that was last year suggested by Indian Finance, it was indicated that the expansionary forces in the Indian economy would raise the surplus from tax revenues on the 1955-56 basis to Rs 500 crores as against Rs 350 crores taken credit for in the Second Plan. As a consequence, this journal has suggested that the target for surplus from new and additional taxes should be around Rs 750 crores. It will be seen, consequently, that the revised target for new taxes has, with the present Budget, been more or less fulfilled. Judged, therefore, by the criterion of augmentation of public revenue, taxation policy in behalf of the Second Plan may be said to be justified.

At the same time, taxation policy must be such that it has regard for the second criterion of providing incentives for larger earnings and more savings. While tax proposals during 1956-57 did not fulfil this consideration, Mr Krishnamachari has been careful to include, in his Budget, proposals which are intended to restore some degree of incentive for earnings, on the one hand, and to foster the thrift habit, on the other. Specifically, a reduction in the maximum rate of income tax, supertax and surcharge from 91.8 per cent to 84 per cent in the case of unearned income and 77 per cent in the case of earned income is a substantial concession whose significance seems so far to have generally been overlooked. Secondly, with a view to succouring the middle classes, Mr Krishnamachari has, firstly, increased the proportion of income which, if expended upon provident fund or insurance premia, will be eligible for income tax rebate; secondly, provided that the surcharge for unearned income will not be levied where the total income does not exceed Rs 7,500; and, thirdly, permitted the employer's contribution to the provident fund to be free of tax in the employee's hands subject only to such contribution not exceeding 10 per cent of the salary. In the third place, from the point of view of encouraging thrift, Mr Krishnamachari has effectively placed a premium on savings by taxing expenditure. While conspicuous spending will be subjected to heavy taxation, there is by implication a reward—by the fact of there being no tax—for savings. In the fourth place, to engender the thrift habit among the masses of our people, small savings are made more attractive and remunerative. The interest offered on savings bank accounts is to be increased by ½ per cent; and a new issue of 12 years certificates, yclept National Plan Savings Certificates will carry 4.25 per cent compound interest; and both these will, subject to certain maxima, be free of tax. While the Wealth Tax must be judged in the context of the Indian objective of socialistic pattern of society, and while the Expenditure Tax is to penalise conspicuous consumption, it is quite clear that a beginning has been made in the provision of incentives for larger earnings and more savings.

The third criterion of taxation policy is for consumption generally to be restricted. Excise duties and import duties fall into this category. The orthodox intention of higher excises is, let us recognise, to curb inflationary pressures. The immediate effect of higher excise duties, however, is ostensibly to increase the inflationary pressure. For, prices rise over a wide front; and the various costs of living indices will register an increase. It has consequently been argued in some circles that the wide range of excise duty increases, far from curbing inflationary forces, will merely add to them. This line of argument overlooks the basic consideration in this matter. The very intention of excise duty is to increase prices. For, it is only by such increase in prices that a decline or restraint in consumption is sought to be attained. So long as the prices were lower, there was no obstacle to the incurring of expenditure on such consumption. By adding to prices, some degree of consumer resistance is sought to be brought about, so that consumption will decline. It is in this sense that excise duty increases fulfil their role of curbing inflationary pressures. As we have already experienced, the excise duty increases of last year on cotton textiles were entirely successful in their objective of reducing internal demand and consumption. Similarly, it is the intention of Government that, with the new excises, internal consumption will be kept in check. An ancilliary, but important, offshoot is that a reduction in internal demand to a corresponding extent releases the availability of goods for export. We may recall that the Taxation Enquiry Commission considered it vital that, in a developing economy, restraint should be placed on consumption, so that "saved" resources could be utilised in further investment toward development. The excise duty increases served both these ends, of releasing resources for investment and of freeing production for

export, as well as a third. The third purpose served by excise duties is to broadbase the tax system so that every individual is brought within the purview of taxation. The difficulty about the Indian economy has been that the per capita income has been so low that the number of tax payers has been small; if not income tax, then surely, indirect taxation.

The final criterion is that the tax revenues should be more responsive to increased incomes. Each increase in individual income is followed up immediately by resources available in the hands of the individual for meeting new wants and new needs. Such income is, therefore, expended for the purchase of the so-called consumer goods. Since the emphasis on taxation in behalf of the Second Plan is on indirect taxation, each stage of increasing incomes immediately is reflected in higher tax revenues for Government. Apart from the various excise duties, we may also refer to the surcharge that has been imposed on railway passenger rates and the increase in the postal rates. These are also two directions in which the consumer rightly is called upon to pay more.

Of the taxes so far imposed, we would not seriously quarrel with their justifiability, except in one or two cases. Indeed, the suggestions in respect of the surcharge on railway fares and higher postal rates both emanated originally in Indian Finance just around a year go. More recently, in an examination of the memorandum submitted by the Associated Chambers of Commerce on taxation policy, we indicated that indirect taxation would necessarily have to play a prominent role in yielding larger revenues for Government. We also utilised that occasion to lend our support to some of the tax reliefs that were suggested by the Associated Chambers. We must, however, add that the extent of the opposition to the increased tariffs could have been minimised by the use of a phrase that should appeal to patriotic emotion. If all these imposts had been termed development surcharges, the feeling that every individual was being asked to contribute his mite to the Second Plan would have been impressively engendered. That apart, we should think that Government's taxation policy has so far fulfilled in letter and in spirit the basic criteria for the determination of tax policy. There are, however, some remarks which we consider it essential to make while on this matter.

In the first place, Government must give some assurance in respect of taxation in the third and fourth years of the Second Plan. For a Plan of such magnitude, it was, we admit, inevitable that the bulk of new taxation had to be put through in the first two years of the Plan. This, indeed, has been done as we have shown earlier. The target for additional tax has more or less been attained. It should, therefore, be possible for Government to give the undertaking that they do not intend in the third and fourth years of the Plan to propose new taxation measures for revenue purposes. If Government seriously wish to fulfil the second criterion of providing incentive—and here we understand incentive to mean encouragement for work generally—then such an assurance becomes inescapable. Since the tax target has been fulfilled, it should be possible for Government to give this guarantee. Such a guarantee would put an end to the uncertainties and apprehensions that each successive Budget must bring in its train further large doses of taxation.

In the second place, Mr Krishnamachari has, quite properly, sought to create an integrated tax structure and policy; but, we suggest, an integrated structure of taxes will have no meaning unless it fits into an integrated policy for the economy as a whole. In this regard, the larger policy that we have in mind must relate also to the money market. One aspect of the money market, to which we would invite the Finance Minister's energies and endeavours, is the borrowing programme of Government. Another aspect of it, which appears so far to have received less attention than its due from the Finance Minister, is that relating to Stock Exchanges. For all that the stock exchanges may be, by virtue of one variety of the transactions taking place, tantamount to gambling dens for speculators, the fact nevertheless remains that a healthy stock exchange is a prerequisite for the successful functioning of the capital market. If, in his Budget, Mr Krishnamachari has afforded the incentive for savings, some good will already have been done. But such savings will be of little use unless they are encouraged to be channelled into the capital market; and this cannot be done until the stock exchanges present a more confident picture. So, we believe that it is a complementary task for Mr Krishnamachari to take such action as will canalise savings into productive endeavour. It is imperative for Mr Krishnamachari to look upon the money market as deserving his attention for formulating an integrated economic policy. While, no doubt, the lines of action that should be taken by the Finance Minister in respect of stock exchanges need scarcely to be repeated, we hope at a later occasion to suggest the ways and means in which the borrowing programme of the Government ought throughly to be revised.

In the third place, while Indian Finance can claim to have been, perhaps, the only journal to welcome the Kaldor recommendations; and while we realise that only piecemeal acceptance of the recommendations could so far have been possible, we feel that it is necessary for Government to state categorically that they ultimately intend to implement the recommendations in toto. Already, the scaling down of the maximum for income tax, super tax and surcharge from 91.8 per cent to 77 per cent is a step in the correct direction. We hope that it represents merely a first step and that, in due course, Government intend to scale down the income tax, supertax and surcharge to the maximum of 45 per cent suggested by Mr Kaldor.

Finally, we feel gratified that Section 23-A companies have, perhaps for the first time, received understanding treatment from an Indian Finance Minister. The reduction in the minimum distributable dividend to 45 per cent of assessed profits for industrial 23-A companies is a significant recognition of the tasks before industrial units falling into this category. Secondly, the fixing of the minimum distributable dividend, in cases where a company's reserves and surplus total 100 per cent of the capital, at the same level of 45 per cent for industrial 23-A companies is also an important concession. Thirdly, the lower rates of the dividend taxes are also to be welcomed. We would be failing in our duty, however, if we did not state that the increase in the bonus tax from 12½ per cent to 30 per cent is too severe. For, while we can appreciate that a bonus issue might circumvent the liability under dividend taxes; and while for that reason, the raising of the bonus tax may be justified, we wish to point out that a deterrent rate of bonus tax is not only unnecessary, but also that it will have repercussions both adverse and unwholesome. It is no exaggeration to suggest that the penal rate of the tax on bonus issues will act as a deterrent to the flow of funds into the capital market.

Thus, we may say that, generally speaking, the 1957-58 Budget presented by Mr Krishnamachari in every way fulfils its intention to bring into being an integrated tax structure. Secondly, the taxes proposed are generally unobjectionable. Thirdly, however, an integrated tax structure must be considered by the Finance Minister to be the starting point for bringing into being an integrated economic policy. As far as the 1957-58 Budget is concerned, a full and detailed examination is being undertaken by this journal; and an announcement has been published elsewhere in this issue in respect of its contents.

Railway Budget

THE Railway Budget presented by Mr Jagjivan Ram differs from its tentative predecessor, only for the introduction of an additional 6¼ per cent surcharge on freight. The new rate is to take effect from the commencement of July and is expected to yield Rs 9½ crores for the current financial year. While the Minister calculates that this surcharge will bring in Rs 71 crores over the Plan Period, the levy itself is predestined to demise as a disinctive source of revenue, when the contemplated revision of the entire freight structure takes place toward the end of the year. In this announcement may be discerned the anticipation of even more revenue than what the surcharge is expected to yield.

Unusually, increases in passenger fares have come as part of the Union Budget. One remote explanation for this transfer of jurisdiction could be found in the expression 'tax' used to indicate the changes in tariff rates. The innovation becomes all the more striking, when the Finance Minister announces his intention to distribute the entire proceeds to the States, after consulting the Finance Commission. It is to be wondered if the Finance Commission had already suggested anything of the kind.

The direct inroad of the Union Government into Railway revenues and the bald transfer of the proceeds to the States are daring departures from prevailing financial practice. Perhaps all this is a manifestation of the all-round pressure for development finance.

For the railways, the direct absorption of the passenger fare increases in the Union revenues represents a considerable deprivation. For, Mr Jagjivan Ram thinks that at least another Rs 200 crores outlay, beyond the Rs 1,125 crores now allotted, would be necessary to enable the provision of an extra 15 per cent passenger capacity and 60.8 million tons of additional capacity for goods traffic which the Second Plan demands. Possibly, he hopes to secure a substantial part of the needed finances in the form of further assistance from the World Bank. The estimate that expenditure on rolling stock and works could be limited to Rs 100 crores reveals a determination to cut costs to the bone. As there is a general shortage of materials, particularly permanent items, like rail sleepers, fittings and signal and inter-locking stores and equipment, a special procuring mission would be going to Europe. Centralised direct purchases should also prove economical.

The most disappointing part of the Budget is the revelation that extensions of railway lines would be cut and that even surveys originally planned are not going to be taken up. Passenger amenities are also conspicuous among the prospects outlined. But even the increase in fares might not check overcrowding.

Editorial Notes

The President

The re-election of Dr Rajendra Prasad for a second term to the highest office in the Indian Union is an event to be welcomed. This time the majority he secured is larger than in 1952. It is unfortunate that several opposition parties both in the Central and in the States legislatures chose to abstain from the voting. The abstentions might have been less numerous but for the fact that a large body of political opinion disapproves on principle a second term for the President and wishes to avoid a precedent. Many should have also thought that for the Presidential office, a system of regional rotation would be of political value.

Dr Rajendra Prasad has served his first term with conspicuous distinction. Personally, not even his worst political enemies will have anything to say against him. A less mature leader than him might not be equally helpful to the new Government, as a symbol and a source of esteemed counsel. Now that the election is over, the entire people should give Dr Rajendra Prasad the homage due to his office and to an individual with a rare record of sacrifice and service both before and after the advent of freedom.

✱

Heavy Machinery Manufacture

Progress of the proposals for the establishment of heavy machinery manufacture in India has hitherto remained more or less a closed book to the public. The details of the reports of the two groups of experts, one British and the other Russian, remain undisclosed, except to the Indian Committee which was asked to pronounce its views on the suggestions submitted by both. As far as we are aware, the Report of this Committee also has not seen the light of day.

Last week there was an unofficial news-despatch that the broad pattern of this prospective industry has been finalised and that the recommendations of both the Soviet and the British teams of experts have been substantially approved. The news-despatch is not clear on the total expenditure involved, though it is mentioned that the Soviet Union has offered Rs 60 crores credit and that a suitable credit line will be opened by the Federation of British Industries too. The possibility of the participation of other countries is indicated.

If, as is reported, the foreign exchange component of the whole scheme is only about Rs 50 crores, the Soviet offer alone would be too big for it. The public impression has been that the British and the Soviet reports were conflicting in respect of some fundamental aspects. This impression may have to be revised. But until the details are made known, it would be difficult to see how, where, and to what extent the two sets of proposals disagree.

As heavy machinery manufacture is second in importance only to iron and steel, it would facilitate timely public understanding of the picture as envisaged by the Government, if the latter publish a complete and detailed account of the decisions taken and the plans formulated. It goes without saying that many States are interested in securing the location of one or more of the heavy engineering plants.

✱

A "Wildcat" Well

Mr R. G. Prough, Chief Geologist, Standard Vacuum Oil Company, addressing a press party at the drilling site near Burdwan, indicated in succinct and rigorously objective terms the significance of the work being carried on there. It is the first test ("wildcat") well to be drilled in West Bengal.

The starting of a new well in an untested area is always an important event. Mr Prough, described the test well near Burdwan as also a symbol of the determination of India to meet the ever-increasing national demand for petroleum products. Even if a particular test well does not yield any result, it may add to the store of geological knowledge of the area and thus aid further efforts toward the location of a successful well.

Proud as he is of the attempt as a symbol and a beginning, Mr Prough is careful not to raise illusions about the chances of discovering oil in that spot.

He summons statistics to show that only one in 967 wildcat wells discovers a major field containing over 50 million barrels of oil. In the US in 1951, one such well in 300 discovered oil in quantities of 25 million pounds or more. The fact that in West Bengal, there are no other deep wells within several hundreds of miles of this location, accentuates the uncertainty of results. The exploration of oil is invariably a costly process and the path of success is strewn with several times more failures than in any other field of industrial endeavour. Hope is sustained by the reflection that all the discoveries of oil in the world traversed this path.

✱

ECE Balance-Sheet

In his farewell address at the opening meeting of the Twelfth Session of the UN Economic Commission for Europe, Mr Gunnar Myrdal gave a brief assessment of the achievement of the Commission during the first ten years of its existence. Posing the question whether the Commission's work had been worthwhile, Mr Myrdal answers in terms of "a yes and a no." The explanation which follows contains a master-piece of political judgment, full of significance to every nation which struggles to keep its integrity in tact.

The ECE Secretary records his growing conviction that the political split of Europe has become increasingly entrenched institutionally and spiritually. This is a forthright statement devoid of illusion or cant. His analysis of the manner in which this unfortunate process is going through has a lesson too obvious to be missed. He points out how even an artificial and international political split calls forth institutional changes and correlated changes on the deeper level of the attitudes of the people which in the end make the split natural. "A political split creates itself the condition for its own continuation".

He has not minced words in describing the present organisation of international relations; it is primitive and "we are far away from functioning as a world community". All the same, hopes of good through constructive effort toward international cooperation are not given up.

In fact, the positive side of the ECE's record lies in this direction. During the period of the cold war, the ECE has refused to accept the position of a mere non-Eastern organisation; on the contrary it has succeeded as a link between the East and the West. The decline in East-West trade has been reversed. Exchange of technological information on an all-European basis is now less fettered, so too that of statistical information. Even amidst the tragic political events of last year the ECE working organs were cooperating with each other in a greater degree than before.

A Straight Shot

Marshall Tito's May-Day message this year is another straight shot against the present High Command of International Communism. Without making any direct reference to Soviet Russia, the Yugoslavian President was sufficiently naive in the choice of his themes and phraseology not to leave room for doubt as to what and where he directs his attack. He expresses abhorrence of violence in the Communist system and pleads for dictatorship of the proletariat directly interwoven with humanism. Last year's events in Hungary were conspicuous by the absence of this element. Even in the thick of the event Tito did not hesitate to express his concern; but since then Russia has been trying to woo back its inconvenient neighbour into a less embarrassing attitude. His reassertion of views clearly unfriendly to Moscow, shows that the breach remains unhealed.

✱

The Independent Member

Addressing a Bombay meeting, Mr V. K. Krishna Menon spoke of the danger of too many Independents thronging the Assemblies. Apparently, Mr Menon has unalloyed faith in the party system, whose usefulness the Independents might neutralise. But he does not seem to consider the perplexity of those who cannot subscribe to any of the proferred party creeds. If every like-minded Independent were, in the alternative, to form into parties, the situation will be far worse.

Very often, as we see in India, the Independent member is a myth; he is only the unspelled choice of clearly distinguishable

Bank Rate : 4 per cent

SOME few minutes before Mr T. T. Krishnamachari presented in Parliament a tax policy that was oriented almost completely to the needs of the Second Plan, there was announced from Bombay another measure that was derived from monetary policy vis-a-vis the Second Plan. The Reserve Bank in a communique stated bluntly that Bank Rate was, with effect from May 16, to be raised to 4 per cent. In the face of the considerable discussion on the pros and cons of higher Bank Rate, what exactly is the significance of stepping up in Bank Rate by ¼ per cent? And is it coincidence that the increase should have been decided upon on Budget day?

As we have pointed out on an earlier occasion, there are three distinctly separate aspects of Bank Rate. Firstly, there is the rate chargeable to scheduled banks obtaining credit from the central banking institution, either against Government securities or against usance bills. Secondly, there is the interest payable on loans taken from the Reserve Bank by co-operative societies and banks, this being understood to represent the sphere of agricultural credit. Thirdly, there is the interest borne by Government on their created money, on the ad hoc Treasury Bills sold in favour of the Reserve Bank. While the basis in respect of all three is Bank Rate, the difference lies in the fact that, since February 1 this year, the cost of central bank credit for Scheduled Bank has effectively been 4 per cent and even slightly more; that the agricultural sector has consistently been favoured by a rate lower than Bank Rate; and that Bank Rate as such is chargeable in respect of credit derived by Government. Thus, for scheduled banks, the raising of Bank Rate does not connote an additional charge—unless the Reserve Bank stipulates that the lending rate against securities will continue to be half per cent over Bank Rate, and unless the burden of stamp duty on usance bills is to be borne over and above Bank Rate.

Nevertheless, it is clear that, at the least, credit for agriculture and for Government is henceforth to be dearer. Our view is that, ultimately from the point of view of the internal economy, higher Bank Rate does more harm than good. If the primary purpose of Bank Rate weapon is to deal with inflationary tendencies, the desired result could as easily have been achieved by selective monetary control. Why, then, is it that the authorities have seen fit to raise Bank Rate at this juncture?

The juncture is important, for it alone affords a clue to the underlying reason that may in this regard have influenced Government. While, in recent years, the world trend has been toward an increase in Bank Rate, the Indian Government steadfastly maintained the central banking institution's lending rate at its status quo. But now, when the world trend is toward lower Bank Rate, the Indian monetary authorities have decided upon and announced an increase. In the second place, if higher Bank Rate is intended to restrain scheduled bank credit, the increase should have taken place on the eve of the busy season; instead, it is at the beginning of the slack season that Bank Rate has been increased.

We therefore believe that a special reason accounts for the present change. Our suspicion is that Government's fiscal and monetary policy is being drawn up with an eye to the aid sought from the World Bank. New tax imposts are such as to curb inflationary pressures both in the sense that they are consumption-inhibitive and that they mop up extra resources which might be contributing to more money chasing fewer goods. Secondly, higher Bank Rate is orthodoxly anti-inflationary to the extent that it renders bank credit more costly. Undoubtedly, these are two aspects of Government policy which strengthen the Indian case for obtaining loans from the World Bank since it is possible for the authorities to claim that they are resisting the forces of inflation with every weapon in their armoury. It is this line of reasoning that would explain the Bank Rate rise being effected at the present time.

We do not, however, consider that Bank Rate will continue to rule at this high level for the remaining years of the Second Plan. As soon as there are distinct signs that the uptrend in prices has been reversed, (and this should be enabled not least by the newly imposed excise duties), it seems to us probable that Government will have found justifiable reason for effecting a reduction in Bank Rate.

It may be, therefore, that the present raising of Bank Rate to 4 per cent is a temporary expedient. How long it is to last, will no doubt depend upon the success attending the diverse Government efforts to bring down prices generally.

+

Refinancing

BOTH the US and UK Governments have come out with new loans in connection with the maturing of old loans. In both cases, the proposed refinancing loans are short-term; and the rates of interest are on the high side. In fact, the rate now offered by the US Treasury is the highest in twenty years. Apart from the onerous interest, these operations are a frank admission that the authorities continue to be unable to plan long term stocks for conversion purposes.

The US Government, after sowing the wind of dear money, are still uncomplaining about the whirlwind of expensive borrowing. The British authorities, however, have been taking steps to abate the storm's fury. The Treasury Bill rate in London has declined from over 5 per cent to below 4 per cent. There has already been one reduction in the Bank Rate; and the City is speculating on the imminence of a further cut in the official minimum.

The UK Treasury has, likewise, fashioned open market operations to such effect that, whereas the maturing loan is of the order of £400 million, the departments hold over £300 million of the maturing stocks. This means that the refinancing loan can be kept at the low target of £100 million. Departmental purchases of the maturing loan have been financed, not by treasury bills, but by judicious sales of short dated stock held in the portfolio. Such sales were made possible by the improved sentiment and rates ruling in the giltedged market since the talk of an early reduction in Bank Rate.

Thus are the British Government valiantly trying to get over the self-made troubles. Authority in the US, however, continues to derive vicarious pleasure from self-inflicted torture. There can be justification for the US obstinacy if the Government are the only victim of the policy. This is not so.

+

Bank Credit at New High

WAS April 12 the false peak of the busy season, and is May 10 to prove the true peak?—such is the question raised by the latest bank statements. It will be recalled that bank figures since April 12 have largely confirmed that date as having been the 1956-57 busy season's nadir; but returns for May 3 and May 10 are such as to suggest the continuance of demand for funds at a rate indicating that the busy season has not spent its force. But a closer examination reveals that abnormal month-early

British Banks are becoming more Enterprising

By PAUL EINZIG

A distinct tendency has become noticeable during recent years in British commercial banking towards a much more enterprising attitude compared with pre-war days. Before the war British banks had been extremely conservative and tradition-ridden. The principle that a commercial bank would only grant self-liquidating short-term credits was firmly established, and the extent to which banks were prepared to depart from it was negligible. Most banks and acceptance houses were even reluctant to grant acceptance credits to domestic customers. They preferred to grant such credits to first-class overseas banks whose name was considered to be a water-tight guarantee—except in situations such as arose during the 1931 crisis—for the self-liquidating nature of the credit.

Domestic industrial and commercial firms, in order to qualify for bank advances, had to keep a balance on their accounts during the greater part of the year, in which case their bank was willing to accommodate them during the busy season. This state of affairs continued for some time after 1945. Deposits subject to withdrawal without notice or at short notice were usually reinvested in Treasury bills, and banks depended for their profits largely on the difference between deposit rates and bill rates after the latter increased as a result of the departure from the cheap money policy. Although banks, acceptance houses and issuing houses came to take a more active interest in the financing of domestic industries, they remained until recently reluctant to grant long-term credits.

During the last year or two a change in their attitude became noticeable in this respect. Under

(Continued on page 950)

STOP PRESS

The full text of the Finance Minister's speech, which became available to us just a short while ago, makes it clear that the Bank Rate rise has as much a budgetary as a money market significance. The Budget is, as it should be, a pronouncedly anti-inflationary budget this year. While the policy considered most suitable for India situated as it is today continues to be one of selective monetary control, and the objective continues to be controlled expansion, the emphasis in current conditions is on control rather than an expansion. The Bank Rate rise expresses the higher concern for control. As is to be expected, the stamp fee payable in respect of usance bills is substantially decreased. Central bank credit which, since last February, has been costing Scheduled Banks 4 per cent or slightly over 4 per cent, will continue to be available at more or less the same rate. The coincidence of the Bank Rate rise and of the Budget announcement is deliberately intended; and it is a notice to "all concerned" that Government will not fight shy of any measures that may be deemed appropriate in an anti-inflation context.

World of Jute

US Burlap Consumption Trends

The news that US consumption of burlap in April has declined by 5 million yards to 68 million yards has not produced any adverse effect in the jute goods market. Evidently, operators have found nothing seriously disturbing in the figures. Firstly, US consumption in the corresponding month of last year had been of the order of 69 million yards—only one million yards higher than in the last month. Secondly, there has been a sizable fall in the total stocks at the end of the month to 257 million yards as against 263 million yards in the previous month. It will be interesting to note that end-April stocks are the lowest since August 1956. Thirdly, the total consumption for the first four months of the current year has been of the order of 278 million yards, which are only 2 million yards less than in the corresponding period of last year. Taking the ten month period ending April 1957, it will be found that consumption is considerably higher at 741 million yards as compared with 697 million yards during July-April 1956. One of the reasons why the lower figure for April has not caused any disturbance in the jute goods market is that this month is not usually noted for high consumption.

Apart from the seasonal factor, burlap consumers in US have been for the past two months severely restricting their purchases to their immediate requirements in view of the distinct possibility of a fall in prices on new crop news. While buyers in the US have been reluctant to make large purchases at prevailing levels, sellers have equally been firm in their attitude. This firmness seems to have stemmed from a number of powerful factors. The fact that the next crop will be delayed has resulted in a scramble for the available supply of raw jute and it is considered unlikely that raw jute prices will record any appreciable decline. Burlap consumption in US during the current year is expected to increase in view of the record-breaking rise in industrial expansion in the country. With the prospects for increased Argentine purchases of burlap considered quite good, it is pointed out that it is not improbable that offtake will even outrun the present rate of output.

Production of IJMA mills during the first four months of the current year has totalled 340,500 tons as compared with 374,900 tons in the corresponding period of last year. Output for the ten months ending April 1957 also shows a substantial decline at 857,800 tons as compared with 894,400 tons in the corresponding ten months ending April 1956.

✱

The jute goods market opened the week on a quiet note, sentiment having been somewhat depressed by the increase in end-April stocks. Toward close, however, the undertone showed some improvement and prices finished steadier. Hessian 44″×10 oz Ready recorded fractional gains to be placed at Rs 42.45. B Twills Ready was also better at Rs 115.75. With continued firm conditions in the raw jute section, prices in the goods section made further headway. The paucity of sellers coupled with buying enquiry helped the upward movement. Hessian 40″×10 oz Ready moved up to Rs 42.65 while B Twills Ready advanced to Rs 116.35. Firm conditions prevailed on Saturday as mills were quoting high prices presumably due to the high prices obtaining in the raw jute section. Hessian 40″×10 oz Ready was wanted up to Rs 42.95 with B Twills Ready in request upto Rs 116.95.

Though conditions continued to be steady when the market opened on Monday, there was some profit taking especially in hessians. Heavy goods, however, were steadier. Price movements throughout the day were confined to a narrow groove and the market closed the day quietly steady with regard to hessians and comparatively steady in respect of sackings. Hessian 40″×10 oz Ready closed at Rs 42.85 while B Twills Ready was unchanged at Rs 116.95. Tuesday found the jute goods market displaying an easier undertone with the raw jute section somewhat dull in the absence of mill interest. There was considerable bear pressure in B Twills and that coupled with the reported disposal of a fair quantity of goods by mills at the recent high levels, accelerated the downward movement of prices. Hessian 40″×10 oz Ready declined to Rs 42.46 while B Twills Ready lost more than a point to be placed at Rs 115.60.

Prices recorded a sharp recovery in later dealings on Wednesday on revival of bull support. Hessian 40″×10 oz Ready was marked at Rs 42.70 and B Twills regained a full point to be placed at Rs 116.60.

	Week's opening.	Week's closing.
Hessian:		
40″×10 oz. Ready ..	42.43	42.56
40″×10 oz. July-Sept.	42.65	42.47
40″× 8 oz. ..	34.31	34.50
40″×7½ oz. ...	31.93	32.12
Sackings:

Hy. Cees Green ...	114.75	116.35
Cornsacks ..	115.25	116.00
Cubans ...	137.50	135.00
A. Twills ...	138.10	140.00
L Twills ...	128.60	129.00
D. W. Flour ...	137.60	139.50
Sugar Bags ..	128.35	129.50

The raw jute market ruled generally steady with prices well maintained around previous levels despite reports of favourable weather conditions in Assam and Northern areas. This is probably due to the fact that in other areas very hot and dry conditions have continued to prevail. It is said that in Wesern, Daisee and Orissa areas more rainfall in urgently needed to proceed with further sowings and to keep young plants healthy. In the earlier stages of the week under review steady conditions prevailed as mills took fair interest. On last Saturday, good mill business was reported done in Assam and Indian Northern Bottoms at Rs 30.50 per maund and Pakistani N. C. Cuttings at Rs 114 per bale of 400 lbs. all for May-June shipment. During the next few days mills did not evince any intrest; even so, the undertone continued steady with the nominal quotation for Assam Bottoms for May-June shipment placed nearly one point higher than previous marking at Rs 31.50 per maund.

World of Tea

Difficulties Ahead

AS mentioned in these colums last week, there is a growing feeling that, in the coming season, the Tea output may exceed demand and, as a result, medium and low grades may be sold at unremunerative rates. It is also feared that the production and consumption ratio of the commodity in the world will be upset further with the free flow of tea from China and Japan. Present indications are, that world crops are not likely to fall below last year as the Ceylon crop already shows a substantial increase, and a further extension of production in East Africa can be anticipated.

The easier trend of prices, noticed in the first Export Sale held in Calcutta this week, suggests that buyers are still cautious as they believe that supply will be adequate in the coming months. It is felt that the world supply will depend greatly upon the size of the North Indian crop which it will not be possible to judge until the end of August. While April has been unfavourable for growth in most districts of North-East India, this is unlikely to have any substantial effect on the crop for the full season unless weather conditions continue unfavourable for a considerably longer period. It is, however, clear that an increase in world production appears probable.

In general, the prospects for tea, during the next few-months, should be considered rather poor with two predominant factors. One is the accumulation of stocks in London where stocks, as on the 3rd May, are shown at as much as 153.00 million pounds as against only 102.05 million pounds on the corresponding date of last year. The other factor is, that the Ceylon and South Indian crop reports put the production figure at about 30 million pounds above last year's during the first quarter. Figures, issued by the South Indian Association in London, show the total production of tea in South India for the quarter ended March 1957 at 27.17 million pounds as compared to only 22.80 million pounds in the same period of 1956.

The tea trade, however, takes a more optimistic view by stating that the worst phase of stock build-up should be considered coming to an end with the present arrivals in the UK and there will be a progressive fall in the stocks as the current consumption begins to tell. Great hopes are also laid upon the increased consumption both within the country and in the Middle East where Egypt is the largest consumer and whose consumption may take an upward turn with increased Indian purchases of Egyptian cotton and the resumption of the Suez Canal traffic.

At this stage, it will be interesting to study the report, issued by Messrs. Carrit, Moran & Company (Private) Limited. Their latest monthly report states:

> "Without the co-operation of producers to regulate exports and further extensions, and without the ability to achieve a substantial improvement in world consumption, the danger of production seriously outstripping consumption must be near at hand."

It is, therefore, necessary to improve the competitive position of domestic producers. It is suggested that the present slab system of imposing export duty should be rectified immediately to ensure that the duty is related to the current prices in Calcutta and Cochin, or to a balanced formula of London and Indian prices. Suggestions are also made with regard to the regulation of output. The first is the renewal of the International Tea Agreement. Secondly, vigorous steps should be made to increase consumption. Thirdly, fluctuations and high prices for export quota should be avoided by swifter releases of quota by the Government.

Meanwhile, offerings in the first Export Sale, held in Calcutta this week, consisted of 7,555 packages of Darjeeling tea. Quality was generally rather disappointing although a number of invoices with useful flavour were on offer. At the beginning of the sale, there was a good demand from exporters and the more useful invoices, on offer, were sold well above brokers' valuations, while the poorer quality teas received fair support, but were often selling below valuations. As the sale progressed, the demand weakened and prices of most descriptions were generally considerably below valuations. Internal operators were active and showed particular interest in

World *of* Business

Justified Monopoly

Iron ore exports, which amounted to 1.75 million tons in 1956-57, are expected to rise to 2.50 million tons in 1957-58. Last year's performance constituted a record; and the 1957-58 exports will, therefore, be yet a higher record. Foreign exchange earnings in the current year on this account will be of the order of Rs 15 crores. The advent of the State Trading Corporation into this particular export trade is abundantly justified by the figures now made available. So far as the past year is concerned, STC did not have a monopoly of this export business. Private shippers and mine-owners were allotted quotas: and these are due to be completed by the mid-year.

Present indications are that, for the twelve month period commencing next July, STC will be the sole exporter of iron ore from this country. Contracts concluded or due to be concluded by the STC for the year July 1957 to June 1958 are said to amount to 2.5 million tons. This is just the quantity which the railways and the ports, with their existing capacity, can tackle. There is, from this point of view, no sense in STC booking more orders or any quotas being allotted to private parties.

As the entire export business in iron ore will be in the charge of STC the national economy will benefit to the full extent of the earned foreign exchange. This point needs stressing as there have been complaints that, in case of iron ore exports made by some private parties, some portion of the sale proceeds was being clandestinely secreted in foreign centres. Charges of this kind have not been substantiated; but suspicion prevails that both foreign exchange and taxation are being circumvented.

That STC hopes to raise the export target to 2.5 million tons this year, is good so far as it goes. It is however, necessary to emphasize that iron ore is one of the commodities which we can spare in substantial quantities, for which there is insatiable demand from many countries, and by means of which and by the self-help which it impressively demonstrates. India can materially narrow the foreign exchange gap. It is, therefore, urgent and imperative that the target for iron ore exports must be speedily and substantially stepped up. Official policy must be able to envisage a target of 10 million tons by 1959-60.

This means more railway facilities and more port facilities. That, in these respects, a new courage and vision will be evinced may be inferred from the fact that Professor Humayun Kabir is now a Transport Minister. While he was a member of the Rajya Sabha, he moved a significant resolution for the development of transport and harbour facilities for the mechanised handling of ore exports. One of the schemes which should engage his immediate attention is that which he outlined in the Rajya Sabha with the wealth of carefully gathered facts and closely reasoned arguments.

Business Managers

Professor V. K. R. V. Rao on the side of acadamecians and Sir Jehangir Ghandy on the side of the businessmen are taking a leading part in the piloting of the scheme for initiating training courses in management career. To the USA goes the credit of realising the role of specialised managerial class in the sturdy expansion of industry. Once the need was recognised for men sufficiently equipped and appropriately trained in managerial techniques, some of the American Universities devised suitable syllabuses and established the requisite training facilities for what has come to be compendiously described as Business Administration. The most notable change in the Administration of American business, particularly in the last two decades, is the rise of a distinct and distinguished managerial class. Economic leadership now belongs to the compact and highly competent managers.

With the vast expansion which is scheduled to take place in India both in the public sector and private sector, considerable demand has risen for industrial managers. In the days of leisurely development, managing agents served as some kind of managerial class. So far as state enterprises were concerned, personnel of the Indian Civil Service, with its reputation for versatility, functioned as business managers wherever and whenever they were called upon to do so. But the new order of things could not depend upon the supposed administrative skill of managing agents or the vaunted "Jack of all trades" attribute of the civil servant. With the support and assistance of Government, considerable progress has been made in the setting up of management schools and in formulating management courses of study and practical training.

Arrangements have been completed for sending five teachers from these schools for intensive coaching in the USA. The ICM is also arranging for the visit of few American experts.

The steps so far taken in this regard provide an assurance that an adequate number will become available for state enterprises as well as private enterprises from the third year of the Plan.

World Overseas

US Notes

Recent US Government reports underscore substantial shift taking place in the United States economic assistance to other lands. They show decline in aid to Western Europe, which has made a remarkable economic recovery and increasing emphasis on the needs of developing lands in other parts of the world.

In report this week on operations of the US Mutual Security Programme for the six months ended, December 31, 1956, President Eisenhower told Congress that his administration had "firmly programmed" more than $800 million for economic development assistance to other free nations. And, three-fourths of this was slated for countries in Asia and Africa.

As of end of 1956, US International Cooperation Administration (ICA), which administers Mutual Security Programme, had 2,431 employees in Asia and Africa, and 842 in Latin America. In contrast it had only 171 in Europe.

With shift in emphasis to newly developing lands has come a shift in type of assistance offered. Western Europe's primary requirements, as under Marshall Plan for instance, were commodities and equipment to rehabilitate already developed economies. But in countries still in early stages of industrial or agricultural advancement, US assistance has consisted largely of technical cooperation and of loans and grants for long-range economic development projects.

This so-called "project" aid has raised some problems. For one thing, it is often more difficult and expensive to administer. For another, it requires managerial and technical skill which is abundant in Europe but not always available in developing lands. Furthermore, since development projects may take a relatively long time to complete, their effective realization may make advisable the commitment of aid funds for more than one year at a time. Such a commitment is not generally possible under present annual budget appropriations system. It is interesting in this connection that the number of recent proposals for revising US Mutual Security Programme have called for greater flexibility in administering the aid funds. Nevertheless, as IGA reports notes, considerable progress was made in allocation of US economic aid during the last half of 1956.

Burma and Indonesia, for instance, entered into negotiations with the United States for development loans. Since the beginning of this year, the United States actually has made available to Burma credits totalling some $44 million. Also, as of end of last year, United States, had contributed $3 million toward building Hirakud Dam in India. In addition, technical help was provided by American engineers and river development specialists working with India's Central Water and Power Commission.

Among other examples, US aid during the six-month-period were wheat for Iran and Greece, an exchange stabilization credit for Bolivia, a high project in Taiwan, and a comprehensive economic aid plan for free Viet Nam.

Shift in US economic aid patterns also is brought out in another recent report, this one by the US Department of Commerce. Covering calender year 1956, it shows that Western Europe received $338 million in US economic assistance, a drop of 50 per cent from 1955. Asia's share, on the other hand, rose more than one-third to $1,228 million.

AFTER months of hectic activity, the republic's ruling apparatus has been formally installed. Members of the Lok Sabha and some at least of the State Legislatures have been sworn into their stern duties as custodians of the commonweal: Cabinets at the Centre and the States have been inducted into office and governors and the President and the Vice-President have taken their oaths of office. The stage is thus set for a quinquennium of dedicated endeavour, if the necessary high purpose is forthcoming from all concerned. The President's address to the joint session of the new Parliament set the tone to the new era of creativity by emphasising the determination to see the Plan through despite checks and impediments. As pointed out by the President, one of the principal reasons for the comparatively poor showing of the first year of the Second Plan has been the presence of other distractions deflecting attention from the purposes of the Plan. It is true, there has been a great deal of chatter about the odds which the Second Plan is already up against: but the real energies of those engaged in the power game were almost exclusively engaged in States Reorganisation in the first half of the year and in electioneering in the latter half. So, politically speaking, the real tasks and tests of the Second Plan are only just beginning, and it is necessary to understand what exactly is in store for all of us in the next five years.

*

This is, in one sense, easy to do, since what is in store is stated in the Plan itself. But that will be but a partial understanding of the future's gifts for us. In the Plan itself, the preoccupation is too exclusively economic. This is not surprising, since the Plan is primarily an economic plan and the preoccupation with the mechanics of development is inevitable. But it is necessary to remind ourselves all the time that what is being attempted is not merely a set of economic acts with statistically predictable economic results. The concern is both ultimately and immediately social, and that is the one reason why our plan is so continually asserted to be flexible in economic terms. The questions that one ought to ask about the plan would have something like the following order of priority: First, are the ultimate social aims of the plan acceptable? If so, then do the political and social means adopted for their realisation commend themselves to you? (In many ways, these two questions are inextricably mixed, but they need answering before you get on to the question that is now to follow). If you are satisfied on these scores, then, are particular economic acts of the Government capable of realising the ultimate aims and are they in consonance with the political and social premises about our means? The last is really a question of technique, a simple calculus of efficiency. Subject to the first two requisites, do particular policies have the maximum effectiveness? The qualification is important, for, it is quite likely that certain other modes of doing things may yield more immediate and more spectacular results if certain kinds of costs, not usually assessed by cost accountants, were not reckoned. But they are ruled out by the implied priority of values I have indicated above.

*

On every one of the questions listed, there is, theoretically speaking, room for difference of opinion. And, if certain political and social forces now released, for whatever reasons, go awry in the coming years, there is a distinct possibility that complacency about the permanence of the listed priority may prove to have been wrong. (That, by the way, is one of the over-riding reasons why the Plan must succeed). But, at the moment, the country as a whole does approve of the ultimate aims and the broad pattern of means employed for realising them. And the success that has so far attended endeavours has been considerable based on these convictions. Therefore, all that is now required is to bend our energies to the particular tasks of the Plan with a will to succeed, instead of dissipating our energies in controversies of an academic sort.

*

Consider the achievements so far. The first decade of our life as a free nation is about to come to a close: it has been so crammed with events in which we have been continually involved that it requires something of a deliberate act of will to acquire the necessary intellectual stance to evaluate it. Do the innumerable particular changes effected add up to at least the beginning of a qualitative change in the lives of our people, or are they merely unrelated instances of mutability? I, for one, have no doubts about the answer: The sum of the changes effected by the process of law-making and by voluntary endeavour has been truly phenomenal. The physical landscape will bear witness to it, no less than the intellectual and spiritual climate. There is still a great deal that is appalling and heart-breaking in the lives of our people, but one enormous gain of the last ten years is that our misery has lost its paralysing effect. There is everywhere (except perhaps among people who pore over particular economic problems and thus miss the wood for the trees) a feeling of having at long last found a sense of direction. Even people who paid the terrible price of our freedom in terms of personal misery, those countless men and women who overnight became hunted exiles in what was but the day before their mother land, would vouch for the recapture of a sense of somewhere to go. This is a gain whose value is immeasureable, for, with this to enthuse our people, there is practically no difficulty that cannot be overcome.

*

This, at any rate, was the mood when the Second Plan was formulated. What has happened since then to give room for the gloomy head-shaking and off-hand pessimism that we have lately been witnessing? One set of comments seems by implication to suggest that the two years have seen substantial distortion in practice of some of the avowed ultimate ends of a free society, believing in the ultimate inviolability of individual freedom. Almost inevitably, certain acts of the Government are instanced as indicative of the progressive invasion of the State into traditional precincts of freedom, to wit, freedom of enterprise. This, it is argued, is a dangerous development. There is a great deal of sophistication, if not sophistry, in much of the comment of this sort. In practical terms, however, its logic breaks down almost as soon as some of the propositions are rendered in concrete terms. For instance, one of the most insistent of the complaints in this behalf has been the expansion of the so called public sector at the expense of the private sector. The relative allocations in the Second Plan have come in for a good deal of criticism in this context. The fallacy underlying all such criticism was exposed recently in a perspicacious speech by Mr G. D. Birla in Bombay. He said: "The Second Plan allocates Rs 750 crores to the public sector. Three steel mills alone would absorb Rs 600 crores of that. To raise so much capital is beyond the capacity of the business community. Similar is the case with heavy industry. The Government of India has not taken up projects which the business community could undertake successfully. When the country produces six million tons of steel, who will fabricate that amount of huge material? Surely, the so called private sector." Developing the same point in his address to the shareholders of the United Commercial Bank last month, Mr Birla said: "The industrial development by the public sector in the field of large and medium industries and minerals envisages an investment of the order Rs 700 crores whereas the investment allocated to the private sector is Rs 575 crores over new projects and Rs 150 crores of replacement and modernisation. It will thus be seen that, from the financial point of view, the private sector is invited to play as important a part as the public sector in the field of industrial development....The wide range of industries awaiting development and expansion on a big scale in the private sector are iron and steel, ferro-manganese, refractories, aluminium, cables, heavy and light engineering industries, automobiles, railway wagons and rolling stock, casting, industrial machinery, bicycles, motors,

transformers, chemicals, industrial explosives, dyestuffs, rayon, sugar, cement, plastics, paper and a host of medium sized industries too numerous to mention. It is, therefore, on the private sector that the responsibility of normal expansion of industries is placed and the private sector has, therefore, plenty of scope for its initiative and resourcefulness."

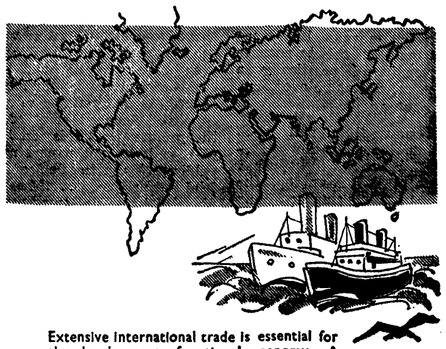
*

I have quoted at such length from Mr Birla as his claim to speak on behalf of free enterprise and his reputation for clear-sightedness in these matters are unassailable. His list of opportunities that lie the way of the man with genuine enterprise in him is staggering in the scope it unfolds. Mr Birla has no use for doctrinaire frills or for logic-chopping about how free should free enterprise be. He is quite content to wrest opportunity where it can be wrested; but, by his account of the matter, opportunity under the Second Plan need not laboriously be dug up, but is lying there to be picked. And yet, he has all the time been speaking only of industrial opportunities. For some obscure reason, the private sector in India is almost always talked of as though it comprised only of private industrial interests. To judge by the cry that the state has almost completely eliminated the private sector, it would appear that there was no economic activity left in private hands. On the contrary, the most significant economic activity of the country, namely, production of food, is in the hands of private individuals: and, what is more interesting, the present land policy of the Government is not to eliminate those who own lands and take them over to be run as state enterprise: instead, Government are increasing the number of land-owners and have created millions of vested interests in land by their land reform measures. Again, next to food, the most important economic activity is cloth, and close on its heels comes building. These, too, are entirely in the hands of private enterprise.

*

Thus, we come to the conclusion that there is no productive activity which the private sector could conveniently have undertaken that the state has taken over for itself. From the point of view of freedom, there can hardly be any objection to a state of affairs that ensures this; and, from the standpoint of practical wisdom, any other policy would be silly.

*



So much about considerations of a general sort on which the Second Plan has been criticised. Criticism of the Plan on its purely economic aspects does not suffer from this kind of sterility and pointlessness. But, even so, two or three crucial considerations are overlooked in most discussions. First among these is that, from the political and social points of view, the targets of the Plan are the minimum we ought to aim at and therefore the necessary resources have to be found. In such matters, as Mr T. T. Krishnamachari pointed out in his note to the AICC last year, the primary resource is in human courage and capacity for sacrifice for a common cause. Secondly, as I have often argued, the short-falls in resources are not as formidable as have been sought to be made out in the last year. About particular strains that the first year of the Plan has manifested, it must be remembered that they are in no sense a surprise packet: Every one of the difficulties we are experiencing today has been anticipated and the correctives indicated in the Plan papers themselves. It cannot even be said that the difficulties have been manifesting themselves earlier than we anticipated, since there has been no precise charting of the time factor in this regard. But the thing to note here is that no one has been caught napping though, undoubtedly, the pains of readjustment, even when they have been foreseen, are irksome. But, as the President put it: "It would be the easier, but not the gainful or constructive way, to bridge the gaps by halting development. This will provide no real or long-term remedy. Our endeavour has to be to mobilise and conserve resources for greater productivity and for maintaining and improving development. My Government is fully aware of the problem and of the effort required. It is equally concerned that our temporary difficulties should not lead us in the direction of retarding progress and development but that the difficulties should be overcome, where necessary, by reconsideration and revision of methods and by planned mobilisation of resources and not by either the abandonment or slowing down of the progress towards our objectives". In other words, not the line of least resistance, but a wide-awake resourcefulness in meeting new situations should be the watchword. Like all the poor of the world, we have to live by our wits. Only by the matching of our wits against odds thrown up by our efforts to catch up with several centuries of progress can we get somewhere. Throwing up our hands in graceful despair would be a confession of bankruptcy of the spirit.

*

The next five years of our national life are going to be, in some respects, the most decisive in the nation's history. Political and social forces that have been released in the last ten years are now held in delicate and somewhat uneasy poise. A plan that succeeds would give these forces precisely that orientation that will make them permanent allies of a way of life that is humane, liberal and socially conscientious and responsible. This is a thought that we will do well constantly to bear in mind.

Bombay Review

Dramatic and Decisive

MR T. T. KRISHNAMACHARI has tackled the much-vexed staff problem of the Life Insurance Corporation of India (LIC, for short) in dramatic and decisive style. There were many thorny issues in evolving a satisfactory and satisfying alignment out of the horde of pay-scales that were in force among the merging life insurance companies. A few of them were of sufficient size and standing to make available to their staff liberal scales of pay. A goodly number were of the medium class; and medium emoluments were, in the nature of the case, applicable to them. Many of the companies were of small size and of indifferent status; and pay-scales in their case were governed by this factor. The 20,000 and odd employees, who, on the setting-up of LIC, were automatically absorbed on the staff of the giant organisation, had to be fitted into a uniform pay-pattern. All of them insisted, for understandable reasons, that the scales must be revised upward so that the many in low or medium scales could, as of right, be on par with the few on the high pay-scales.

The problem, as thus put forward, is easily stated; but the solution presented many difficulties. A great deal of thinking has been directed to the finding of a balanced answer to the baffling question. Talks and negotiations have been taking place, with agitation in strident evidence and with threat of strike hanging like a Damocles' sword. Meantime, the work turned out by the staff has been at a low ebb; and discipline has sunk to a record low. The consolidation of differing types and conditions of business as prevalent among a hundred companies was, in the best of circumstances, a formidable undertaking; but, with the staff sulky and with the supervisory officers unable to exercise any control, there was retrogression where there ought to have been progression.

This state of affairs has affected the flow of new business; and even the servicing of the existing business was none too satisfactory. The deterioration in these respects received exaggerated publicity; and the very wisdom of the nationalisation plan came to be questioned in many quarters. The vested interests, who had been nursing a sense of arbitrary deprival of legitimate business, started a campaign that denationalisation was the correct thing to do in the circumstances. This kind of propaganda was nipped in the bud by the Finance Minister firmly declaring that no proposal of this kind would ever be entertained by the Government. He said that he was equally alive to the need for taking thorough-going steps to retrieve the position, to make up for the lost ground and, in positive terms, to realise the objectives of nationalisation.

It is obvious that Mr Krishnamachari has been devoting anxious and constructive thought to LIC's affairs. It is characteristic of him that priority in the multi-point solution to be adopted is assigned to a contented staff. I have advisedly used the phrase, "characteristic of him". For, both in his private talks and public utterances during the last six months, he has been repeatedly referring to his concern for employees in the lower scales of pay, and has not concealed his own view that, whatever the financial stress may be, redress to this group in the shape of immediate rise in emoluments must engage the solicitude of Governments at all levels. Some of the State Governments like Madras, Mysore and Rajasthan have already acted upon the Finance Minister's hint. Matching action to advice, TTK has pledged a substantial contribution from the Centre toward the States' additional liability on this account.

This is how his mind has been working practically from the time he took over the Finance Ministry. The up-grading of pay-scales in the lower rungs is a vital element in an expansionist economy. If you have the vision to think of an expansionist economy as the only correct policy for India at the present stage and with its future commitment for developmental plans, you must have the courage to take the measures which will set free expansionist forces in the sections that count. It may be recorded, with gratification and in grateful appreciation, that TTK's policy will consistently embrace practical solicitude for the low-income groups.

It is in this background that TTK's dramatic move of last week with regard to LIC has to be understood. The Managing Directors had got together all relevant data; and, presumably, the pay-scales relevant to the Oriental staff figured prominently in such data. Vice-Chairman G. R. Kamath had been holding talks with the presidents of the two Unions, determined that this question must, once and for all, be settled in such a way that everyone concerned would be free and in the right mood to do his job of work with zestful interest. Chairman H. M. Patel had joined the discussion on Thursday morning. By the afternoon of that day, TTK makes an air-dash to Bombay, participates in the talks, clinches the issue by a generous offer, and announces the glad tidings at a hurriedly-summoned press conference the same evening. Th same night, I suppose, he takes the plane back to New Delhi, ready and prepared to resume, by Friday morning, the finalising of the Budget due to be announced on the following Wednesday.

The description underlines the dramatic side of the proceedings; and their decisive character is brought out by the simple and satisfying fact that the benefit of the Oriental's scale of pay is to be extended to the whole range of clerical and subordinate staff, with minor changes and reservations which, too, err on the side of the staff. The presidents of the two Unions were obviously pleased with the outcome; and they have publicly declared that they would recommend acceptance of the settlements to their respective councils. The customary concluding comment on a happy development of this kind is: All's well that ends well.

But it is very much more than that. Firstly, as I have already shown, the present settlement is a promise of hope and cheer to all low-income groups. Secondly, it provides impressive and conclusive testimony to TTK's flair for quick on-the-spot appraisal and for speedy and spirited adoption of appropriate measures. Even TTK's harshest critics are forced to admit that "this man delivers the goods".

When, last November, bankers talked of an impending crisis, TTK called upon them to regard it as a challenge, and, in the end, initiated such measures that what threatened to be a crisis has turned out to be a significant opportunity. Now, he has again demonstrated how purposeful and fully effective his intervention can be. There are many more on-the-spot assessments awaiting his attention, once he is free from the formalities of the Budget. The Stock Exchanges are now the sick man in the national economy; and they need the magical touch of TTK for the transformation of faint hearts into stout hearts, for optimism driving out pessimism, for the investors regaining their important role, putting into the shade the professional's gamblers.

A section of the stock exchange which requires prompt and peremptory tackling is giltedged. The slack season looks like having made an earlier debut. Before long, the ground has to be prepared for the New Loan issues. TTK's motto is: Borrow from strength. In simple terms, May and June must witness such open market strategy as will induce an upward adjustment in the pattern of giltedged prices, and as will instal and establish the faith that the borrowing programmes of the Second Plan period will have all the attributes of the defence and victory loan programmes, of the war and post-war years.

TTK has many chores to attend to in the coming months, all of which he may be trusted to accomplish successfully before he leaves in September for America for the annual general meeting of the World Bank.

Let me add a few post scripts:

(1) There are heartening indications that the settlement arrived at by the two Union leaders on behalf of the negotiating Committee has been hailed by all regional councils as well as by all sections of insurance staff. Greatest satisfaction prevails in Madras and Kerala where the salaries paid by insurance companies were much lower than those in other parts of India: and where, therefore, the benefit from the revised pay-scales will be relatively substantial. The average benefit is estimated to work out to as much as Rs 40 per month per employee. It may be taken as certain that the settlement will be enthusiastically endorsed and unanimously ratified.

(2) There are equally encouraging signs that TTK's bold initiative will have, not only the negative effect of removing discontent, but the positive effect of winning the confidence and spurring the enthusiasm of the entire staff to such effect that LIC's progress and achievements in 1957 will provide a refreshing contrast to 1956.

(3) New business in 1956 might disclose a decline of 35 per cent on the 1955 figure. Some set-back was to be expected in a year of transition resulting in unsettlement, disorganisation and topsy-turvy conditions. Moreover, 1955's new business at Rs 268 crores contained an element of what might be described as forced or adventitious business. If allowance be made for this, the real decline last year may not be more than 20 per cent. All the same, there is no disposition in LIC circles to take a complacent view in this respect. On the other hand there is full determination not only to recover lost ground but to gain new ground.

(4) Omens are auspicious. In the first four months of the cur-

Railway Expansion Inadequate

The record of rail traffic in India in recent years bears ample testimony to the zest with which the authorities have been trying to improve facilities. There is a determined alround effort to see that the railways carry the maximum possible load during the Second Plan. All the same, there is a general and unconcealed feeling that the railways are being asked to shoulder a burden well beyond their capacity.

In an address to the Rotary Club at Ahmedabad, Mr M. Ganapathy, General Manager of the Western Railways, gave pointed expression to this feeling. He said that it would be an almost impossible task to lift an additional 50 per cent of goods traffic and 30 per cent passenger traffic by the end of the Second Plan and he apprehended the possibility of a serious transport bottleneck during the Plan period. This bottleneck might arise on account of contraction of the available transport facilities and the expansion of traffic. How exactly available facilities would contract was not made clear. The expansion of traffic was obvious, as the economy was developing at a fast rate. It is a situation in which he could only appeal for patience on the part of the public and appreciation of the difficulties of the railways. Anticipating the announcement of a higher freight rate, he hoped that the business community would not grudge paying it as it was in the interest of the country, reminding them in the meanwhile that all additional revenue accruing to the railways will be utilised for their development. As the cost of material and labour had risen and as the Planning Commission had reduced the target of expenditure on railways from Rs 1,418 crores to Rs 1,125 crores, a more hopeful assessment of prospects was found impossible.

Bombay Municipal Elections

The reverse which the Congress Party met at the Municipal elections in Bombay has strengthened the hands of those who continue to insist that the reorganisation of the State as announced in October last has to be unsettled, in favour of two linguistic States with the City going to Maharashtra. In the elections to the State legislature, the Maharashtra area of the old Bombay State gave a majority verdict against the Congress.

In the City elections, the Opposition groups captured 68 seats out of a total of 131. Mr S. K. Patel, in a statement made a couple of days later, foresees the prospect of the Congress Party coming back to power in the Bombay City Corporation before long. He has also given some calculations to prove that in the proportion of seats secured; the Congress Party has not fared much worse than it did in 1952, when too it failed to secure an absolute majority. Many others do not see any connection between the civic elections and the linguistic state issue.

The present state of local sentiment, even apart from the fate of the elections speaks forcefully for the opposite, Samyukta Maharashtra camp. If purely civic issues were to have guided the preference of the electorate, the Congress party which after all had a long and satisfactory record of office might have been enabled to continue in power. That all the Opposition groups marched with the same slogan is no less significant.

Mr Dange's speech in Parliament asking the Central Government to reopen the reorganisation issue and threatening Satyagraha and other methods, in the event of non-compliance, seems to draw strength from more facts than the Congress party seems ready to concede. The whole setting appears to augur the revival of an unpleasant issue over which on the whole the Congress had been fighting a losing battle. The best way to check the resurrection of a regular agitation is to demonstrate that no genuine Maharashtrian interest could suffer even to the smallest extent under the present set-up. Mere recrimination and illusory forebodings will not do duly for a convincing leadership of the masses who are still largely under the spell of misdirected aims.

GATEWAY MARKETS

Castor at New Peak Level

THE markets for both Oils and Oilseeds, after ruling very firm during the most part of last week, turned a shade quieter towards the close on easy advices from the spot section and fears of either excise or higher export duty on castor oil. Prices of Castorseed, however, climbed to new high levels on reports of some business done with the UK. Groundnuts were well maintained, but neither buyers nor sellers were inclined to operate freely. Linseed met with some support on probability of some export business in oil with France following reports of some hitch in business with Argentina due to exchange difficulties. Cottonseeds ruled quiet.

The fresh spurt in castorseed was attributed mainly to heavy short-ccvering, induced by rumous that the East European countries were reacting favourably to offers of castor oil from the country in spite of the recent increase in prices. In fact, a section of the export trade believed that the US buyers would catch up with the other buyers since the stocks in that country were dimnishing.

The situation in the spot section was also satisfactory with the crushers and exporters lifting the inflow of the new crop without much strain. The receipt of castorseed was around 4,500 tons per month during the last two months, while the arrivals of castor oil improved from 2,491 tons in March to 3,330 tons last month.

Towards the close of the week, operators in futures market were rather inclined to restrict commitments in view of the forthcoming Budget. Castorseed September delivery, after touching a new high of Rs 189-50, finished the week at Rs 189.25. May delivery closed at Rs 184.75.

In spite of the general cautiousness on the part of traders, the Groundnut section presented a better appearance. August delivery opened at Rs 180.37 and concluded at Rs 180.75. May delivery closed at Rs 179.25. In the ready section, the tendency was comparatively quiet.

Prices in the Linseed section moved in sympathy with the general trend of the market. September delivery opened at Rs 32.37 and finished at Rs 32.31. May closed at Rs 31.12, Prices of spot linseed were a shade better, while Linseed Oil was active on report of enquiry from France.

*

Gold & Silver

Price movements in the Bombay bullion market were confined to a narrow range before easing near the close under pre-Budget liquidation.

With demand continuing to be heavy than arrivals of both fine and unrefined metals, Silver showed a small rise early in the week; but, at the close, prices developed a reactionary tendency. Silver Baisakh, after appreciating to Rs 184.81, receded again to Rs 183.87, to finally close at Rs 184.44. Jeth delivery started at Rs 183 and, after touching a high of Rs 183.12, finished at Rs 182 75. Spot changed hands at Rs 185.50 to Rs 185.87.

Gold softened on increased offerings in the ready section. Although the offtake was heavy, offerings were heavier, resulting in a loss of half a rupee per tola. Moreover, a prominent dealer was reported to have applied "mandi" to an appreciable extent. With the result, Gold Baisakh delivery receded to Rs 107.87 from a high of Rs 108.12, Jeth delivery opened at Rs 106.94 and, after declining to Rs 106.44 on speculative selling, finished better at Rs 106.50. Spot changed hands at Rs 107-10 to Rs 108.00, Sovereign ruled almost steady at Rs 70.25.

*

Yarn

The Bombay Yarn market continued to remain depressed with the daily turnover very limited. In general, traders were reluctant to do large business on the eve of the Central Budget. Rumours about lowering rates for Art Silk Yarn by Continental producers and prospects of getting British goods via the Suez Canal also kept operators away from the market.

Ready prices, however, remained unchanged although some varieties declined by about half an anna per pound.

Prices in the Cotton Yarn section receded further due to lack of sufficient demand. Despite higher prices quoted by some leading mills for their standard qualities, the market rates were lower than the mill rates. The easy trend was more pronounced in the case of fine and superfine counts.

*

Metals

The Metal market in Bombay ruled generally quiet with prices, especially of Lead and Zinc, developing an easier trend. Copper Ready was quoted at Rs 178.50 per cwt. The demand for this metal continued to be good. Zinc was lower at Rs 78 and Lead steady at Rs 82. The weakness in both these metals was inspired by the consistent fall in prices on the London Metal Exchange. The bearish swing has been the result of recent reports from the USA, which has witnessed a controversy over the country's future policy regarding stock-piling in both the metals. It was feared that the Overseas Defence Mobilisation might suspend its stock-piling operations in domestic zinc and lead in view of the competition of the projected purchases. Tin was quiet at Rs 129 per quarter.

In London, trade circles are reported to be feeling doubtful whether Copper will stabilise around £249 per ton, as there is still a notable world surplus in the metal. In Japan, the price or copper has been reduced by 8,000 yen to 316,000 yen from May 1. In the case of Tin, it is reported that increased quantities of Russian tin will find its way into Britain.

Bombay Review

World of Cotton

Import Policy

IT is learnt that, during the first eight months of the current Cotton season commencing from September 1 last, the Government of India have licensed the import of 403,525 bales of cotton, both from the sterling and dollar areas. The arrival, during this period, amounted to 435,102 bales — 150,583 bales from the sterling area and 284,519 bales from the dollar area. The difference in the quantum of licensed and actual arrivals is officially explained by the fact that some cotton imports were effected against licences issued during the previous cotton season.

In addition to the 403,525 bales already licensed, the Government recently permitted the import of cotton of over 1-3/16" stapling from Egypt. 20,000 bales of cotton will be permitted to be imported under this announcement. Also, the Government will shortly permit the import of about 75,000 bales of cotton from the USA under the Development Assistance Programme. Again, the Government have planned to issue licences for the import of 40,000 bales of Egyptian cotton. The Government have also decided to permit the import of about 115,000 bales from the US and Egypt. The total of commitments and already licensed will amount to about 515,000 bales against India's normal annual foreign cotton requirements of 600,000 bales.

Thus, the scramble for imported cotton, witnessed last month, has now subsided. Many mills are reported to have already bought sufficiently large quantities during the past many weeks, while import quotas for East African and Sudanese varieties have been exhausted. Fresh import business is now possible only in the case of Egyptian cotton. Meanwhile, the Joint Chief Controller of Imports, Bombay, has announced that inter-mill sales of imported cotton will not be allowed except with the permission of the Central Government. This step has been taken with a view to avoiding speculative business in foreign cottons.

×

HEDGE CONTRACT:

The special Sub-Committee, set up by the EICA to work out a more realistic hedge contract for the next season has favoured the idea of reverting to a single hedge contract in view of limited carryover and production of cotton in the country. It is also suggested that the price control on cotton be removed and the speculative increase in values should be prevented only by the imposition of heavy margins.

×

CROP FORECAST:

The process of downward assessment of the Indian cotton crop continues. Against the first forecast of 54 lakh bales, latest available reports place the crop outturn at around 47.5 lakh bales. With the tempo of mill consumption showing no abatement, there will be little left to augment the carryover at the end of the season. State-wise, the latest estimate computes Bombay's contribution at 25.25 lakh bales; Punjab 7.8 lakhs; Mysore 3.5 lakhs; Madhya Pradesh 4.1 lakhs; Madras 2.8 lakhs; Rajasthan 2.25 lakhs; Andhra 1.35 lakhs; Assam-Tripura 0.25 lakh and Uttar Pradesh 0.20 lakh bales.

According to the estimate of the American Cynamide Company, the 15 biggest Afro-Asian cotton-growing countries will be able to produce as much as 17 million bales of cotton a year by 1960. This means an increase of about 20 per cent over the present total cotton crop of the 15 countries, which is around 14.7 million bales. This will be about 20 to 25 per cent more than the usual yearly cotton crop of the USA — the world's biggest producer.

×

FORWARD MARKET:

Pre-Budget liquidation made fair inroads into cotton values. After a quiet beginning, the market declined for lack of support and under bull liquidation. The turnover was 5,000 bales. Operators seemed to be waiting for the final form of the new contract. Jharilla May touched a high of Rs 720 and Vijay June Rs 851, to recede towards the close to Rs 712 and Rs 839 respectively.

×

SPOT MARKET:

The Spot section ruled fairly steady with demand continuing for all varieties. Traders, however, were reluctant to part with their stocks, save at their prices. The actual business put through was, therefore, limited.

Activity on the export front was limited. The question about the ban on exports is likely to be taken up by a section of shippers at the forthcoming meeting of the Export Advisory Council.

In the foreign section, a few spot lots of American cotton changed hands. Business for about 4,000 bales took place in Californian at Rs 1,400. Following rates were quoted:—Surat AG mark Rs 1.110; Viramgam Kalyan Rs 880; Hubli Jaydhar (new) Rs 925 and Rampur Rs 890.

×

NEW YORK COTTON MARKET:

With the market still lacking any new development, business was again very quiet last week although new crop positions responded earlier to continued talk of a higher loan on the new crop. Profit-taking and hedging, however, kept the rise in check. Middling spot was quoted at 35.35 cents per pound.

×

LIVERPOOL COTTON MARKET

Conditions in the Liverpool cotton futures market remained dull due to the current level of prices being closely related to CCC selling rates. Reports from the USA indicated that a larger section of the cotton trade in general was approving the principle to abandon the high price

The Railway Budget

THE Railway budget for 1957-58 presented by Mr Jagjivan Ram in the Lok Sabha would seem not to have exhausted the "surprise packets" for which budgets are conventionally notorious for. The one additional burden actually announced was in no sense a surprise since it was generally anticipated and in fact actually "promised" by the Railway Minister in his March budget speech. The proposed increase relates to supplementary charges on goods and parcel traffic which have been raised from 6¼ per cent to 12½ per cent. This is by no means the end of the likely changes in freight structure: for, Mr Jagjivan Ram said that he would introduce a selective variation in rates for goods traffic on receipt of the final report of the Freight Structure Enquiry Committee. This is expected to happen toward the end of the year and the present supplementary charges will then be withdrawn.

The surprise "gift" that Mr Jagjivan Ram was hinting at, but did not actually produce, relates to a possible change in passenger fares. His somewhat cryptic statement that he was not making any changes in passenger fares as his colleague, the Finance Minister, was "considering the matter", has given rise to a flutter of speculation here. The gloomy prediction is heard that this merely indicates a further upward revision to be announced by the Finance Minister. The reason for this somewhat unusual procedure of announcing in a general budget matters connected with railways is rather obscure at the moment. It cannot simply be a case of "passing the buck". The more likely reason is that the passenger fare rates are being linked with certain other new measures to be proposed in the general budget. The exact nature of such linking is not very clear at the moment. In any event, another refinement has been added to pre-budget anticipatory (or should the word be premonitory?) thrills by this tantalising process of hinting at possible new imposts.

From the point of view of revenue estimates, the only changes in the estimates made in March are those relating to the anticipated increase in goods and parcel earnings. The new imposts are expected to yield an extra Rs 9.4 crores for the nine months from July 1957. The consequential change in estimates of net surplus after payment of dividend to general revenue is Rs 30.83 crores instead of the Rs 21.43 crores originally budgetted for.

Dealing with the progress made during the first year of the Second Plan, Mr Jagjivan Ram gave details of the projects on which work was progressing. There was a short-fall of about Rs 15 crores from the total estimated expenditure of Rs 193 crores on works, plant and machinery and rolling stock. The short-fall was almost entirely on works account. This has been attributed by him to shortage of material, particularly of permanent way items like sleepers, rails and signalling and interlocking equipment. Despite these difficulties, a total of 87 miles of new railway lines were opened during the year and work on a total of 524 miles of new lines and on 700 miles of doublings was progressing. Surveys approved of were for a total of 2,800 miles of which field work was on for nearly 2,000 miles. While on the question of survey, the Railway Minister indicated that no further surveys would be undertaken during the year, as there was no prospect of construction work on them being taken on hand during the Second Plan period.

The Railway Minister devoted a good portion of his speech to the financial allocation to the railways under the Plan. He complained that the reduction of the size of the railway plan from Rs 1,480 crores to Rs 1,125 crores is cutting deeply into the essential expansion programme needed for the execution of the other parts of the plan. On the basis of the experience of the first year of the Second Plan, it would appear that even the original estimate of the volume of goods traffic of 180.8 million tons (axed to 162 million tons when the overall size was reduced) is very inadequate. After providing for 25 million tons for essential transport connected with steel production, and for the transport of 6 million tons of additional coal and 4 million tons of additional cement for consumer purposes, very little was left of the additional provision for 42 million tons made in the final estimates of the Plan. As for passenger traffic, Mr Jagjivan Ram holds out no hope whatever. He says that the funds allotted for a 15 per cent increase are quite inadequate to the actual increase and, therefore, overcrowding will, like the poor, be always with us.

Apart from the larger quantum of traffic that expansion programmes under the Plan are sure to generate, there was another factor that is pushing steadily up the cost of the railway plan. And that was the increased cost of labour and essential materials like cement and steel. Mr Jagjivan Ram estimates that, even for achieving the quite modest targets of the plan, an extra hundred crores over the allotted Rs 1,125 crores will be needed.

The essence of these propositions of the Railway Minister has been subject of familiar controversy almost since the first drafts of the plans were made. The centrality of the railway plan to the success of the entire plan has not been seriously controverted by anyone, but the question that can legitimately be asked of the railway authorities is whether all the possible economies in existing arrangements have been thoroughly explored. Have alternative modes that would relieve the pressure on the railways been considered in detail? For instance, Mr Galbraith suggested short distance road haulage as an important reliever of pressure on the railways. While it is undeniable that the essential needs of the railways, especially in projects specifically oriented toward the realisation of other purposes of the plan, should have top priority, exhaustive inquiry into the possibilities of economies in present arrangements is essential.

The Minister made only a passing reference to negotiations with the World Bank for assistance in our development projects. This was inevitable since talks in this regard have reached a delicate stage and it would not be proper for him to have expatiated on them at the moment. Among the other points made by Mr Jagjivan Ram was the extension of the electrification programme by another 500 miles. He also mentioned that a survey of existing passenger amenities is under way and an allocation of Rs 2.98 crores has been made for the purpose of providing further comforts to the travelling public. He also gave a brief account of what is being done to improve the lot of the railwaymen. Two specific points made in this regard by him were that definite proposals for a pension scheme have been formulated by his Ministry and that a committee has been appointed to review the channels of promotion of Class IV staff.

One thoughtful act of the Railway Minister deserves special appreciation. It is the concession announced in the budget to the blind, who are to be allowed to travel with one attendant on a single ticket. A similar concession has been extended to persons suffering from tuberculosis for their journey to and from the sanitoria and hospitals.

Budget Special

A Formidable Bill of Fare

I do not know whether it was the occasion that brought them forth, but both the budget speech and the later broadcast by Mr T. T. Krishnamachari were full of figures of speech. Metaphors and similes, faintly rhetorical questions and traces of irony fairly abounded in both. But the palm must be handed to his euphemistic description of the budget proposals as a 'varied and formidable bill of fare.' One couldn't agree more! Of its variety, in obvious quantitative terms, there can hardly be any doubt. In custom duties alone, he has proposals on as many as ninety items. Union excise items involved are thirteen. Besides these, postal rates have been affected and the dark hints of Mr Jagjivan Ram, of which I had written in my yesterday's despatch, have taken substantiality in increased passenger fares. In fact, the number of items involved are so numerous that their listing is quite impossible. Which reminds me of the apocryphal budget story of the thirties: A particular financial toff sent one of his lackeys to Delhi on the eve of the Budget to ferret out news of fresh taxes on commodities, so that a nice little racket on the side might be promoted. The instructions were that the news was to be conveyed in a kind of rough and ready code: the telegram, purporting to indicate the movements of the employee, would give the information wanted by the particular place he was 'planning to proceed'. The boss duly got the telegram which read: 'Going first to Meerut and then to Bombay and from there to Calcutta . . .' On the present occasion, an agent on a similar errand would be obliged to send his employer a Bradshaw!

As for variety from the point of view of quality, Mr Krishnamachari's claim errs on the side of understatement. For palates that have become jaded with mere income-tax and super-tax, there is the caviare of Wealth Tax with a nice little hors-d'oeuvre of Expenditure Tax. Altogether, Mr Krishnamachari's claim of having provided us with an appetising fare is in every way a modest claim. I do not know the kind of indigestion that the payers of these taxes are going to have, and, for the moment, I don't care. For, the mental indigestion that the proposals are sure to create in those that try to swallow all these proposals at once is more immediately formidable.

Having myself worked Mr Krishnamachari's figures to near death, let me try to get down a few first impressions about the Budget. As

Delhi Review

Progress of Paper Industry

That there is still considerable leeway to be made by the paper industry will be evident from the fact that production of paper and paper boards in 1955-56 has been placed at 1,87,000 tons as against an annual demand of the order of 2,40,000 tons. In view of the improvement envisaged in the standard of living of the people coupled with the progress of literacy, it is anticipated that demand for paper and paper boards will increase sizably in coming years. The Planning Commission have accordingly fixed a target of 350,000 tons for production and 450,0000 tons for installed capacity under the Second Five Year Plan. The Commission have further estimated that demand is likely to go up by 400 per cent within the next 15 years. As the projects which have been licensed during the First Five Year Plan are expected to increase the installed capacity to 422,000 tons, the problem is reduced to one of providing for a further increase of about 28,000 tons in installed capacity.

The manner in which the Indian paper industry has responded to the call for increasing production in the past few years has left no doubt as to its ability to discharge the heavier responsibility under the Second Plan with efficiency and promptitude. Even so, there is one fundamental weakness which, though it may not constitute a serious handicap now or in the near future, will place the industry in an unenviable position some ten years hence if left unattended. The raw material position is even now not quite satisfactory. Already there is keen competition between the various units within the industry for obtaining their full requirements of bamboo and timber which have good demand in other industrial and commercial fields also. In recent years the supply of the main raw materials has come to be governed by new regulations imposed by State Governments who are naturally anxious to set up paper mills in their region. Moreover, with the rapid increase in installed capacity, it has become necessary to bestow serious thought on the problem of ensuring adequate supply of raw materials. In this connection it is to be noted that unlike its counterparts in other countries, the Indian paper industry is based on an integrated mill system in which the mills produce both pulp and paper. This characteristic has inevitably confined the industry to regions where the raw materials are available in adequate quantities. Even so, the need to trnsport the bulky raw material to mill stations has resulted in costly delays and the consequent increase in the cost of production. The present dependence of the industry on imports for a portion of its raw material requirements is another drawback which should be remedied if its growth is to be smooth.

A good deal of the difficulties can be got over by following the example of the paper industry elsewhere. In view of the emphasis placed by Government on the development of small scale in dustries, the question of setting up pulp mills has to be given high priority in the programme of development of the industry. When once pulp, in adequate quantities becomes available, paper mills of different sizes can be put up at convenient places without having to worry unduly about the supply of raw material. The transport of pulp in bales is comparatively cheap as the wagon space required will be much smaller than that needed to transport the bulky raw materials.

It is gratifying to hear, therefore, that both the industry and Government are working in close cooperation with the common object of enabling the industry to grow strong enough to meet not only the current demand but also to grow in such a manner as to be able to shoulder heavier responsibilities in the future. Speaking at the recent annual general meeting of the Indian Paper Makers' Association, Mr P. H. Sykes revealed that the Indian paper industry considered itself lucky in that it had the fullest cooperation from Government. He said that apart from the very real understanding of the problems facing the industry, Government had realised the necessity to "link it (the raw material problem) with their desire for increased production".

★

The Road System

Speaking at the twenty-first Roads Congress at Shillong, Mr P. L. Varma indicated the magnitude of the road development required in our country. Per square mile of area, the road mileage in India was 0.26 as compared to 1.11 in the United States of America, 1.99 in the United Kingdom, and 2.4 in France. He pointed out that a road system designed to bring all the villages within a distance of 3 miles of a metalled road in developed areas, 9 miles in semi-developed or forest areas, and 20 miles in undeveloped areas would be something like Rs 4,000 crores. At the rate of development envisaged under the second plan, it would take 75 years to attain the proposed target which would even then give us a road system at the rate of 0.5 miles per square mile of area.

The vital importance of road transport in the context of the rapid development of the nation's economy has been adequately realised and recent years have witnessed commendable progress in road development. At the end of the First Five Year Plan, the total mileage of roads stood at 3,16,668 as against the target of 3,31,000 miles envisaged under the Nagpur Plan. It is now confidently expected that this target will be reached during the second plan period.

From what Mr Varma has indicated, it is quite evident that very much remains to be done in this country if road transport is to reach a level comparable with other advanced countries in the West. As has been calculated by him, the cost of a road system that can cater to the needs of 75 per cent of the inland transport will run to astronomical figures. There are other important problems to be tackled also. Paucity of trained engineers and absence of proper procedure for carrying on works, are now largely responsible for the slow and poor achievements. With cooperation of all those who are connected with the development of the road system, however, the defects noted by Mr Varma can be remedied.

NORTH INDIAN MARKETS

Sugar Production

ACCORDING to the figures released this week, production and despatch of indigenous Sugar amounted to 18.22 lakh tons and 10.35 lakh tons up to April 30, 1957 in the current season as against 16.53 lakh tons and 8.06 lakh tons respectively in the corresponding period of the previous season. Stocks with the factories, as on the 30th April, stood at 13.14 lakh tons as compared with 12.58 lakh tons on the corresponding date of last season.

Production in Uttar Pradesh is estimated at 10.4 lakh tons. The State, which has half the number of the country's total of 124 sugar factories, has almost doubled its production during the last five years. Factories in the State crushed 16.4 crore maunds of sugarcane, producing 5.92 lakh tons of sugar in 1950/51. In the last year of the First Plan, they crushed 27.72 crore maunds of cane, producing 9.89 lakh tons of sugar. This year, 30 crore maunds of cane were crushed.

In this connection, it may be recalled that the official all-India final estimate of sugar, for the current season, has put the figure at 20.2 lakh tons as against 18.6 lakh tons during the last season. As against this, production in the first six months of the current season (till the end of April) has amounted to 18.22 lakh tons as compared to 16.53 lakh tons in the corresponding period of the previous season. Original expectations were that the season this year would last till the end of June. But the cane supply situation is such that, at best, the season may prolong till the end of this month. Many factories seem to be experiencing short supply of cane and some of them are reported to have already stopped crushing.

Trade circles have repeatedly suggested that a decision on additional export release should be postponed till the middle of next month, when a clearer idea of the total output for the season will be available; but overseas demand for Indian sugar is still unsatisfied. Considerable enquiries are being received from countries such as Burma, Ceylon, Pakistan and Persian Gulf Ports. Further developments are, therefore, eagerly awaited, especially when the Government are eager to have a longer sugar season.

Meanwhile, sugar markets are ruling steadier with prices recording further gains over last levels despite the Government's announcement of a release of a further quota of 1.64 lakh tons for free sale. This is mainly due to good outside buying enquiry and expectations of further early exports. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Jaswant Rs 29; Simbhauli Rs 29.12; Daurala Rs 30.00 to Rs 30.75; Amroha Rs 28.62; Bijnore Rs 28.25 and Mansoorpur Rs 28.87 to Rs 30.62.

Mills in the Meerut district are likely to close down by next week after crushing all cane available; but, in Muzaffarnagar and Central Uttar Pradesh, large quantity of cane is still left uncrushed. The State Government have assured that mills will be persuaded to continue crushing till the end of June.

Madras Review

The Peninsula

The Centre and the South

visit of Mr Namboodripad, Communist Chief Minister of ala, to New Delhi and the re- nce in the President's speech arliament to the first mine-cut he lignite deposits of Salem be said to typify the present tions of the Southern States he Centre. The former sym- ses the political relation bet- n the two and the latter the omic. Obviously, the two are no means as dicisive as they appear. It is not as if Mr boodripad is preoccupied with tical problems or that Madras rried only over the economic. two overlap over wide areas. t transpires at Delhi in all the tings between the Communist of the Kerala Government the heads of different Union bers is of paramount import- not only to the conditions of g of the people of Kerala but to the political future of the on. There has been much ng the last two months to est that, for a Communist, Mr boodripad is extremely level- ed. Whether or not it is re- garded as a compliment, the fact remains that, ever since the election results revealed that he was to head the Government of Kerala, he has shown a remarkable freedom from impatience for a fight with possible political opponents. The idea that the Ministry should work within the Constitution probably originated with him. While others were busy queering the pitch with the Centre, he was making it clear that working within the Constitution does not mean readiness to follow all the policies of the Congress Ministry at the Centre and that the Constitution does provide for differences of opinion between the Centre and the State Governments. Though he has kept above the issue of nationalisation of plantations, he has also shown awareness of its implications as a practical policy. The Governor's speech to the Assembly was drawn up so carefully that the Communist Government can take all the credit for whatever improvement they may be able to effect, but shove the blame on to the Centre, if they so chose, for their failures.

That, however, is only a skillfully designed background for Mr Namboodripad's talks in Delhi. The interview he gave to the Press before he left Madras for Delhi shows a realistic grasp of the problems on hand and a calm determination to make the most of the opportunities he will have at Delhi. His first concern is to give relief to the people in the matter of food. As a notoriously deficit province and one incapable of varying its deficit, Kerala is dependent to an abnormal extent on the rice that the Centre alone can provide. Luckily, the Chief Minister's visit coincides with a buoyant mood in the Centre so far as current supplies are concerned; whatever may happen about the higher targets of food production which the Planning Commission have adopted as an obvious after-thought and without regard for its implications, the Food Ministry is for the moment on velvet. Mr Jain proudly declared the other day that the import programmes will be pushed through and supplies and reserves will both be satisfactory. In these conditions, Mr Namboodripad should have no difficulty in ensuring adequate supplies. And, since the Communist administration will be both efficient and incorruptible, he will be able to return home as a conquering hero, so far at least as food is concerned. And that, for the present, should suffice and he can well afford to mark time.

As for economic development, Madras and Mysore would seem to have the advantage. For one thing, Kerala was regarded by private capitalists as dangerous ground even before the advent of a Communist Ministry. For Communism is much older in that State; and it has been hard for the Government to persuade industrialists to establish new enterprises there. Whether Mr Namboodripad will be allowed to inaugurate an NEP without an antecedent OEP, it is not possible to say. Madras, for its part, is not only cherishing dreams of a steel plant following quickly on the way of the Neiveli Project, but has the prospect of a few more sugar and cement mills and, what is even more important, a fresh spurt in cottage industries, particularly handlooms. The experience of the last four years, in which the handlooms have been spoon-fed and made much of, has shown that no considerable improvement can be expected till the weavers are assured adequate supplies of yarn at a fair price. New spinning mills on a co-operative basis are to be established in Tirunelveli and a few other places and much political as well as economic capital is sure to be made out of this. Mysore also will have a good share of the expansion in sugar and cement. But, what is more important, it may now set much store by Malnad since the rail links between the Tamil districts on the one side and Mangalore on the other are not a far-off hope.

Political differences will not stand in the way of Madras and Mysore appreciating the efforts of the Communist Chief Minister of Kerala getting a better deal from the Centre in regard to allocations under the Plan and in the matter of allocations of Central revenue. The visit of Mr Santanam and his colleagues to Trivandrum did not get much attention in the Press, though it is certain that the Kerala Ministry made much of their supposed claims on the revenues derived by the Centre. It is a pity that there are still the foggiest notions about financial devolution in the conditions of India and none at all about the impact of planning on the system which has been in force till now.

Madras Review

South Indian Notes

A Meeting-point

The all-India Sarvodaya Sammelan held at Kaladi represents a unique synthesis of Indian political opinion. The effort which the Sarvodaya organisation stands for is blessed by every political party in the country. A most inveterate anti-communist like Mr C. Rajagopalachari and a most ardent communist like the Chief Minister of Kerala have sent messages of goodwill to the Sammelan. The President and Secretaries of the Congress party and a number of socialist leaders were present.

Acharya Vinoba Bhave cited stanzas from the Upanishads and stressed the effectiveness of love and persuasion as against the imposition or invasion of ideas. For him the Bhoodan movement is a service to God.

The communist Premier of Kerala could look at it as a purely economic matter. He described the ideas of the Acharya as providing the basis of mutual cooperation among the entire rural population and a practical solution for the problem of land relations, cottage industries, rural education and public health services.

All parties seem to be agreed that mere legislation would not solve the land problem and that a change of popular outlook particularly on the question of the ownership of land is necessary. The Acharya repeated the warning that if this particular problem was not solved by means of non-violence and love, he would be compelled to put faith in Communism as the only alternative. The Kerala Law Minister unequivocally emphasised the desirability of terminating individual rights on land. He voiced his Government's hope that the Acharya's tour in Kerala would prepare the ground for the land reform proposed through legislation.

*

Return to Policy-holders

Dr V. S. Krishna, Vice-Chancellor of the Andhra University, addressing a Seminar of the Life Insurance Corporation, has thrown up a controversial suggestion. It is that, as the insurance business progressed, the amount collected by way of premia on policies should be equal to the amount distributed to the policy-holders. If this does not happen, the Vice-Chancellor thinks, it would be tantamount to indirect taxation. In his view, the business of insurance is more important for the benefit it does to the individual faced with unexpected situations in life, than as a media for savings.

The function of insurance as a media for savings is likely to develop further with its extension to new spheres and the State taking upon itself new social responsibilities. Irrespective of the nature of the ownership and management of insurance business, it could also provide funds for investment.

THE BENGAL FLOUR MILLS CO. LTD.

The Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company a final dividend of 13¾% for the year ended 31st December, 1956.

By Order of the Board,
BALMER LAWRIE & COMPANY LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta,
10th May, 1957.

SOUTH INDIAN MARKETS

Prospects for Rubber

ACCORDING to the figures released by the Indian Rubber Board, total production of raw rubber, during the first quarter of the current year, was 237 tons more than in the same period of last year. As for consumption, the progress has been greater with 7,228 tons consumed in the first quarter of last year, the figure for the same period of this year being 530 tons higher. It makes an average rate of consumption, which will raise the total for the year to above 31,000 tons. The general view is, that the prospect for 1957 production of rubber is quite good, and both production and consumption may be well above last year's.

Applications for the new planting-replanting of the first year's acreage under the ten-year Rubber Replanting Scheme in South India have been accepted from 910 units, covering a total area of just over 6,200 acres. This is a significant step in the process of rehabilitation of the rubber plantations in South India, which latterly have tended to lag behind in the production of rubber, while manufacturing requirements have been steadily rising.

Last year's gap between production and consumption was nearly 8,000 tons and it is estimated that the 1957 gap will be still higher at 13,500 tons. In view of this widening gap, it is of the utmost importance that the scheme, now set afoot to replant 70,000 acres at the rate of 7,000 acres a year, spread over the next ten years, should be watched vigilantly so as to result in the South Indian plantations meeting adequately the country's requirements in the years ahead.

*

Coffee

A news latter of the Indian Coffee Board has stated that negotiations have been finalised to sell 725 tons of Plantation "A" coffee to the USSR.

The Board's latest revised estimates of the 1956-57 crop are placed at 40,425 tons (27,785 tons of Arabica and 12,640 tons of Robusta). The Board released a total quantity of 8,316 tons of coffee in the internal market through various channels, for the four months ending April 1957, the release for April being 2,191 tons.

The receipts into the Pool of the 1956-57 crop, upto April 30, amounted to 39,515 tons of Arabica Cherry and 11,299 tons of Robusta). Most variety has come into the Pool and further receipts may not be appreciable. There were 31,600 tons of Coffee remaining with the Coffee Board, as at the end of March this year. This quantity is the largest ever carried by the Board as at that date.

The quantity sold for export out of the new crop amounts to 2,763 tons out of about 14,000 tons available for export. The monthly offtake, during the first quarter, was almost the same as last year's, although the year may end with a monthly average of slightly over 2,000 tons as against less than 2,000 tons per month during last year.

Following were the range of prices (per cwt) quoted at the monthly coffee auction held at Tiruchi last week:—Plantation "A" Rs 212-10 to Rs 216-10; Plantation PB 228.10 to Rs 229.70; Robusta PB Rs 160.50 to Rs 161; and Arabica Rs 153.90 to Rs 155.90.

*

Pepper

Pepper markets have been ruling fairly steady during the past few weeks, although turnover was rather restricted as both buyers and sellers were awaiting new developments. In the Alleppey market, the rate was quoted around Rs 600 per candy.

The remarkable steadiness in prices is mainly due to some interest shown, of late, by American buyers. Moreover, sellers to Russia are reported to be actively covering their commitments. In this connection, it is generally felt that the Government of India may announce, as early as possible, a limit on the supplies of Malabar pepper to Russia and its associates so as to restrict their chances of re-export of Malabar pepper to the UK and other European countries and the USA. Otherwise, Russia and others will be earning foreign exchange by reselling Indian pepper at the cost of India.

Although it is rather difficult to forecast how long the market will continue to rule steadier and the future depends upon the attitude of Sarawak sellers and New York buyers, it does not appear that Indian growers will have to face any serious difficulty until new season's Sarawak and Indonesian crop move in substantial quantities.

According to the present estimate, the new Indian crop will not exceed 20,000 tons. Consumption has been increasing. According to one estimate, the home market consumed nearly 50 per cent of the last season's output of 19,000 tons. The internal market will require still more this season in view of the lower prices at which the commodity is available.

The harvesting season begins in May in the case of Sarawak and in August in the case of Indonesia. There are reports that their production also will not come up to the original expectation. The world supply of pepper may, therefore, be lower this season when compared to last season.

*

Groundnuts

Firm conditions continued to prevail in the Madras Groundnut market where arrivals of seeds averaged 30 tons a day. Small-scale crushers and Calcutta interests were the main buyers. Superior oil-quality seed was quoted at Rs 162 to Rs 164 per candy, while the bold variety was quoted at Rs 158 per candy.

Reports from the producing centres indicate the immediate need for rain, not only for the summer crop already sown, but also for further sowings. Absence of rain, it is stated, will result in the yield going down.

In the Groundnut Oil section, the rate for the ready position improved to Rs 329 per candy. Calcutta interests took up sizable quantities for nearby positions, as sellers were reluctant to part with their stocks at lower levels.

Stock Exchanges

Slump on a Wide Front: Mild Recovery at Close

Watch-Dog Writes:

WITH operators hesitant to enter into fresh commitments, conditions in stock markets remained generally dull till the pre-Budget session on Wednesday this week. There was, however a feeling of mild optimism that the Budget would not be so bad for investors as many seemed to apprehend. With the result, there was no selling pressure, except for profit-taking at higher levels.

But the post-Budget session witnessed a debacle in share values due to general nervous unloading as market circles did not anticipate such heavy and widely-affecting imposts. The announcement of the increase in Bank Rate was another contributory factor. The consensus of opinion in market circles was that, while the unprecedentedly heavy taxation might bring in sizeable additional revenue, it was bound to kill all incentives to save and expand the resources available for investment. Prices, therefore, crashed headlong as no support was forthcoming even at lower levels. Although prices recovered slightly on short covering and scattered buying at the lower levels, the undertone remained weak due to loss of confidence.

Stock Exchanges in Calcutta, Bombay, Madras and Delhi displayed a quiet and subdued tone till Wednesday, reflecting pre-Budget cautiousness. The slight recovery in prices, noticed after the announcement of the Railway Budget proposals, was only short-lived. In the post-Budget session, prices slumped on a wide front on unrelieved general nervous unloading. Although there was a slight recovery in prices towards the close owing to bear-covering, the undertone remained nervous in an extremely restricted turnover.

*

Calcutta

TRADING on the local Stock Exchange, till the pre-Budget session, was a tame affair and, except for the speculative issues fluctuating erratically on alternate bouts of buying and selling, price movements in other scrips were insignificant and the trend was undecided. Suggestive of the utter disinclination of operators to enter into any commitments, the turnover became next to negligible. Although the general fear was that the unsatiable requirements of the ambitious Second Plan would dominate the Budget this year, there was a feeling of mild optimism in certain quarters that the Budget proposals would be so framed as not to cause any damage to capital formation.

But a veritable collapse of confidence characterised the immediate reaction of the market to the announcement of the Budget proposals. Values slumped with no signs of abatement in selling pressure and no support was forthcoming even at lower levels. It was felt that the attractiveness of industrial investments had substantially decreased and it was not worthwhile taking the risk of putting money in equity shares.

Thanks to the emergency measures taken by the Calcutta Stock Exchange Committee, a halt was cried to the steady and sharp decline in values on Thursday. The Committee decided to impose a ban on blank sales in Indian Irons and that any seller of this scrip should deposit a margin of Rs 3 per share. Also, an interm settlement was arranged in order to enable the operators to square up their transactions and get overpayments difficulties, following being the interim clearing rates:—Indian Irons Rs 17-00; New shares Rs 15-88; TEXMACO Rs 16-50; Orient Paper Rs 25-50; Burrakur Coal Rs 22-00 National Jute Rs 19-00 and Indian Copper Rs 3-20. But for the measures taken by the Committee, prices would have been carried down a stage further from the post-Budget levels. Thus, a slight recovery in prices was noticed towards the close of the week, although the undertone remained still nervous as operators lost confidence in the market.

Sellers predominated in the Giltedged section as a sequel to the increase in the Bank Rate, from 3½ to 4 per cent. 3 per cent 1986 Conversion Loan, after opening at Rs 74.25 and improving at one time to Rs 74-50, receded at the close to Rs 73.50.

Bank shares came in for limited enquiry. United Commercial changed hands at Rs 53.50 to Rs 54.00.

Jute shares were completely neglected, mainly due to continued anxiety with regard to the supply of raw jute and the profit-margin of mills following the firmness of raw material prices.

Coal shares continued to be listless as operators were reluctant to enter into commitments in view of their anxiety with regard to the size of the increase in the selling price of the commodity. They felt the doubt whether the Coal Price Committee, appointed to enquire into the price structure, would be able to submit its report within the stipulated period of two months. The only solitary feature was Burrakur which met with consistent support from speculators.

Textile scrips ruled fairly steady, thanks to better advices from the cloth and piecegoods markets.

Dealings in the Tea section were few and far between as operators were busy in assessing the prospects for the industry in the coming season. The general feeling was, that the output might exceed demand and, as a result, that medium and low grades could be sold at only unremunerative rates. Above all, operators seemed to be worried over the plea recently made by the West Bengal Chief Minister that tea companies should pay dividends more than 6 to 7 per cent.

Sugar shares came in for some liquidation following the announcement of the excise duty on the sweet commodity. Some of the scrips recorded sharp declines in prices.

The worst affected, in the week's trading, was the Engineering section where prices recorded the lowest levels for the year after the announcement of the Budget proposals although there was a slight recovery at the close due to short-covering and scattered buying, thanks to the emergency measures taken by the Stock Exchange Committee.

Miscellaneous issues were no exception to the general trend of the market. Prices of all scrips, especially of concerns manufacturing paper, cement and tobacco, were marked down sharply following the announcement of the excise duties. Indian Copper was the only scrip, which ruled relatively steady in view of the sustained demand from investors. The following table shows the price trends of the most important scrips during the week:—

	Week-end Closing Rs.	Pre-Budget Rate Rs.	Post-Budget Rate Rs.	Thursday Closing Rs.
Giltedged:				
3% 1986 Conversion ..	74.40	74.25	...	73.50

THE INDO-BURMA PETROLEUM CO., LTD.

NOTICE IS HEREBY GIVEN that the FORTY-NINTH ANNUAL GENERAL MEETING of the members of the Company will be held at the Registered Office of the Company at Gillander House, Netaji Subhas Road, Calcutta on Monday the 10th June 1957 at 10 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit & Loss Account for **the year ended 31st December 1956.**
2. To sanction the declaration of a dividend.
3. To elect a Director in place of Mr. H. J. Silverston, who retires by rotation and is eligible for re-election.
4. To consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act 1956 has been received by the Company.

As an Ordinary Resolution:

That the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to Mr. Mohamed Ismail Kee Kee Bhai, a Director who has attained the age of 68 years and who retires by rotation, and that he be and is hereby re-appointed a Director of the Company.

5. To consider and, if thought fit, to pass the following resolution of which a special notice as required by Section 261 of the Companies Act 1956 has been received by the Company.

As a Special Resolution:

That Mr. W. Hutchinson who is an employee of Messrs. Steel Brothers & Co. Ltd., the Managing Agents, be and is hereby elected a Dirctor of the Company.

6. To appoint Auditors for the year ending 31st December 1957 and to fix their remuneration.

Notice is further given that the Equity Register of Members of the Company will be closed from 27th May 1957 to 10th June 1957 both days inclusive.

By Order of the Board,
Steel Brothers & Company Ltd.,
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta.

8th May, 1957.

N.B. (1) A member entitled to attend and vote at the above-mentioned Meeting may appoint a Proxy who need not be a member to attend and, on a poll, to vote on his behalf.

(2) An explanatory statement concerning items 4 and 5 as required by Section 173(2) of the Companies Act 1956, has been posted to the shareholders.

WORLD OF FINANCE

(Continued from page 928)

demand in May could possibly be the cause of such money market indicators.

Notes in Circulation have jumped up by Rs 18.25 crores to Rs 1595.36 crores; and the rise since April 26 totals Rs 33.45 crores. Rupee Coin has gone out into circulation for another Rs 0.98 crores on top of the previous week's outflow of Rs 1.30 crores. The demand for funds has been both on account of Governments and of member banks.

Rupee Securities have risen by exactly Rs 20 crores to Rs 949.87 crores. This must, it would appear, relate to deficit financing; but past experience has been that, when ad hocs have been sold in favour of the Reserve Bank, the increase under Rupee Securities has not generally been for a round figure. If not deficit financing, then, does the rise in Rupee Securities connote the transfer of securities from Investments in the Banking Department? And has such transfer been made so that currency could be expanded thereagainst?

Certainly, the low level of State Governments' Deposits, at Rs 2.11 crores, may have warranted replenishment by sale of marketable securities. Thus, all that can be said with certainty is that, during the week, Governments (either Central or State or both) have had to find extra resources. We should think it is a combination of created money and of marketable securities sold by State Governments and then transferred to the Issue Department.

After such replenishment, the Centre's balances have improved by Rs 3.11 crores to Rs 54.92 crores; but those of State Governments have declined by Rs 2.14 crores to Rs 2.11 crores. The States have, moreover, increased their borrowings by Rs 3.51 crores to Rs 19.23 crores.

As far as member banks are concerned, their Deposits show a fall of Rs 4.40 crores to Rs 59.66 crores. The return of the State Bank shows that it is almost solely responsible for this decline. At the same time, the Other Loans and Advances of the Reserve Bank have risen by Rs 8.40 crores to Rs 113.71 crores; the State Bank accounts only for Rs 3 crores odd of this. It would appear, therefore, that Scheduled Banks have in the week taken substantial loans from the Reserve Bank, though this can be confirmed only after the return of member banks for May 10 becomes available. Advances against usance bills are marked Rs 2.26 crores higher at Rs 62.24 crores; and the Reserve Bank appears to have discontinued its practice of giving the running total of such advances.

Another intriguing change, for which it is difficult to discover an explanation, is the rise of Rs 8.68 crores in Other Deposits to Rs 84.71 crores. In the course of the recent past, sizeable increases have been registered under this head; but those clearly represented the contra relating to the purchase of foreign currency from the International Monetary Fund. It is doubtful if any such similar transaction has taken place; and we are consequently left wondering as to the reason for the rise.

Finally, Balances Held Abroad confirm Mr T. T. Krishnamachari's fears of a difficult foreign exchange position by revealing a drop of another Rs 9.84 crores to Rs 74.07 crores.

The State Bank's return for May 10 discloses a rise of Rs 3.87 crores to Rs 300.82 crores in Deposits. The State Bank has besides found it necessary to increase borrowings by Rs 3.02 crores to Rs 3.39 crores. What is more, cash balances have also been run down by Rs 3.69 crores to Rs 21.64 crores. All this was necessary in order that the State Bank could increase its advances by Rs 5.18 crores to Rs 193.10 crores. Since this represents a new peak to Advances, the question we have to consider is whether the busy season has continued until the present week. The figures since April 12 show that the increase under Advances has taken place only in the first two weeks of May, whereas they were steady around Rs 180 crores in April. It is this fact which lends plausibility to the theory that the sharp rise in Advances in May may be due, not to the extension of the busy season, but to abnormal month-early demand.

Similarly, in the case of the return of Scheduled Banks for May 3, it is to be noticed that Deposits have, for the first time since the week ended March 22, recorded a decline of Rs 5.17 crores to Rs 1226.82 crores; in the relevant week, the State Bank's decline in Deposits was Rs 2.20 crores. Secondly, borrowings both from the State Bank and from the Reserve Bank have gone up, the former from Rs 7.86 crores to Rs 10.61 crores and the latter from Rs 72.71 crores to Rs 81.37 crores. On the other hand, cash balances are better by Rs 0.53 crores at Rs 131.63 crores as compared with the depletion in this regard of Rs 3.05 crores in the relevant week by the State Bank. Lastly, the total of Advances has risen by Rs 15.68 crores to Rs 923.61 crores, the State Bank's share being Rs 4.54 crores. The fall in Deposits may be attributed to month-early disbursements. As a consequence, and since the demand for funds was also sharply higher, Scheduled Bank borrowings are at a higher level. But over Rs 3½ crores of this have been applied by Scheduled Banks other than the State Bank to augment their cash balances. Finally, Advances as such account for almost the full extent of the increase in bank accommodation: Loans, Cash Credits and Overdrafts are higher by Rs 14.58 crores at Rs 739.00 crores. It is possible that the use of the medium of Loans, Cash Credits and Overdrafts in preference to bills suggests that the demand during the week related more to month-early disbursements than to an extension of the busy season.

*

WORLD OF TEA

(Continued from page 929)

the lower-priced Brokens and smaller Fannings grades.

In the Internal Sale, offerings were 19,902 packages of Dusts. There was a fair general demand at irregular rates. The market wos generally easier with the best CTC Assams being a weak feature and selling between 10 and 20 nP per pound below last rates. Black exportable sorts were well supported at slightly lower rates, while the remaining offerings were up to 12 nP per pound easier. Following rates were quoted:—Medium Dooars Dust Rs 1.55; Medium Assam Grainy Dust Rs 1.60; Medium Assam CTC Dust Rs 1.60 to Rs 1.65 and Best CTC Assam Dust not quotable. Also, 43 packages of Leaf grades were offered for internal consumption.

In the Export Quota section, business was reported done in New Season's teas at 24 nP; Special Export Quota Licence at 18 nP and Shipping Licence at 18 nP per pound.

In the Colombo market, offerings totalled 5,123,283 pounds. Improved demand at considerably higher rates was evident for better quality teas. Strong bidding by South Africa resulted in mediums and good Brokens advancing substantially, while there was fair demand from other centres. Low-grown teas were about steady except coloury sorts and mediums which declined by 5 to 10 cents per pound. Higher-grown teas declined by about 10 cents per pound; but there was a strong demand for Dimbula-Dickoya types with advances ranging from 20 to 50 cents per pound. Persian Gulf teas were in less demand than in the previous week.

A small auction, to clear up the outstanding portion of the 1956-57 crop, was held in Chittagong last week. Leaf offerings were 2,400 chests and Dusts totalled 1,509 packages. There was weak demand for Dusts, Plain Sylhet Dust being quoted at Rs 1-12 per pound. In the Leaf section, there was a considerable quantity of legg-cut Fannings, which shared in the sharp decline in prices. Most lots were disposed of at an average fall of 10 to 12 annas per pound. Prices of Green teas showed a fall of 4 annas per pound over last levels. The next sale, being the first of the 1957-58 season, is progammed for Wednesday, June 12.

In London auction held this week, offerings were 25,965 packages, including 19,749 packages of Northern-India teas. Good demand was in evidence with attention concentrated on the better liquoring teas. The market for all other sorts was very irregular and, in some cases, prices were not always maintained. This was especially noticeable for teas which were thin and lacking in colour. Rates, however, remained unchanged.

OLYMPUS

(Continued from page 936)

I said earlier, it is simply impossible to make anything like a careful analysis of all the proposals within such a short time. Detailed consideration must, therefore, await a further occasion. Generally speaking, Mr Krishnamachari wants his Budget judged, at its best, by its ability to serve the ends of the Plan and, at its worst, by its inescapability from the point of view of the Plan. This is a fair enough basis for estimate, and any one who, at this time of the day, says that this irrevocable commitment to the Plan is wrong is merely wasting his time and breath. More particularly, Mr Krishnamachari has listed four criteria that have guided him in the formulation of these proposals. These are, in his own words: '(a) a sizable addition to public revenue; (b) incentives for larger earnings and more savings; (c) restraining of consumption over a fairly wide field so as to keep in check domestic inflationary pressures and to release the resources required for investment; and (d) initiation of such changes in the tax structure as would make tax yields progressively more responsive to increased incomes and facilitate an orderly development of the economy with due regard to the social objectives the country has adopted'. I shall indicate in the rest of the space how these considerations have been translated in the proposals formulated.

The claim that sizable increase in public revenues has been made possible by these new levies is undeniable. The estimated yield from the new taxes is of the order of Rs 78 crores. And, even after taking into account this extra revenue, the overall deficit would be quite considerable. Thus, from the point of the need for resources, TTK's claim is justified. As for the second criterion, the claim that the Budget is devised to promote incentives is vindicated by the reduction in personal taxation at the highest level from the present level of 91.8 per cent to 84 per cent for unearned income and to 77 per cent for earned income and corresponding adjustment in lower slabs. This is perhaps the one feature of the Budget which every one is likely to welcome.

The third criterion is presumably in operation in the wide range of indirect taxation and import duties (both have other functions, too). Consumption is sought to be curbed by diminishing the satisfaction per unit of money. How far in actual operation the general inflationary pressure washes out hopes of saving, remains to be seen.

The final claim that a beginning is being made in structural changes in incidence of taxation is also justified. (In the opinion of some, only too well justified). Both the Wealth Tax and the Expenditure Tax are innovations, the latter without even 'historical experience' to back it. The broadening of the tax base is to be seen in the wide range of indirect taxation which leaves practically none untouched and in the lowering of the maximum non-taxable income from Rs 4,200 to Rs 3,000 for individuals.

BRITISH BANKS ARE BECOMING MORE ENTERPRISING

(Continued from page 928)

the influence of the relative scarcity of capital resources, much industrial expansion came to be financed by means of bank credits. In some instances long-term credits for periods up to ten years were granted for specific purpose such as the building of tankers. In other instances short-term credits were granted on the understanding that the facilities would be renewed again and again. Had it not been for this more liberal attitude of the banks, industrial expansion would have been gravely handicapped by lack of funds available for investment. Owing to the high level of taxation the volume of savings that could be invested in equities or industrial debentures has declined considerably. The deficiency of risk capital has been covered to some extent by the increasing willingness of insurance companies, trusts of every kind, pension funds, &c. to depart from "giltedged" investment and invest in good equities. Even so, but for the change in the attitude of the banks, industries would have encountered serious difficulties.

According to some bankers of the old school, this tendency has gone too far. Several bank chairmen, in their annual speeches to shareholders, expressed their hope that long-term lending by banks should remain the exception. In reality, it seems that British banks could well afford to go much further in that direction. In the light of the change in the situation the principles of liquidity that had become established could and should be re-considered.

The reason why it has always been regarded an elementary rule of sound banking that a high degree of liquidity should be maintained is the feeling that banks must always be in a position to face unflinchingly any conceivable withdrawal of their deposits. But as far as Britain is concerned a run on the banks is a matter of the past. Even during the crises of the 'thirties there were no bank failures in Britain. During the inter-war period a few relatively unimportant banks got into difficulties, but the authorities saw them through, and depositors or creditors suffered no losses. In some instances the banks in difficulties were taken over by other banks. Even in the absence of official assistance, mutual support by the banks themselves would be forthcoming on a sufficient scale to avert a failure which would be damaging to the whole banking community.

Although in Britain there is no arrangement similar to the deposit insurance in the United States, British depositors are satisfied that default on their deposits is simply inconceivable. The banks have come to be regarded as eternal, just like the Government itself. From time to time during the inter-war period information transpired about heavy losses or large-scale immobilisations affecting one or the other bank. But nobody worried unduly about it. For one thing, it was an open secret that most banks had very substantial inner reserves, out of which such losses could be covered without having even to reduce dividends. Likewise, the heavy depreciation of the banks' holdings of Government securities in recent years caused no concern among depositors. It is also well-known that the Bank of England itself has a very large inner reserve. Its size is a closely-guarded secret, but it is understood to be very substantial. Even the Labour Government resisted, after nationalising the Bank of England, the temptation of raiding these reserves. They are available for assisting banks in difficulties.

In any case, no Government could afford nowadays to allow a bank crisis to develop. If a bank should get into difficulties through an imprudent credit policy or through unforeseen losses, its shareholders may suffer but its depositors would be looked after. In such conditions the banks could well afford to commit themselves in long-term lending to a much greater extent than they have done so far. There is no likelihood of large-scale withdrawals of deposits that would create an embarrassing situation. And if the unexpected should happen the bank in difficulties would be assisted by the other banks, the Bank of England and the Treasury. This being so there is no reason why they should not employ a larger proportion of their resources in the type of loans that is needed the most.

The changed attitude of many wealthy depositors may in fact tend to press the banks to go further in the direction of a more enterprising policy. Until recently Treasury Bills were only acquired by banks and other financial institutions. As a result of the high Treasury Bill rates during the last two years, many private firms, and even individuals with ample liquid resources have acquired the habit of buying Treasury Bills. This means that less Treasury Bills are available for the banks. They have to allow their liquidity ratio —the proportion of their easily realisable investments to their total investments—to decline below the traditional limit of 30 per cent. Once this tradition is abandoned, one of the psychological obstacles to long-term lending will cease to operate. It is true, the conversion of deposits into Treasury Bills would reduce the resources of banks available for investment. But if, in order to make up for the decline in their profits, the banks should expand their industrial lending, this would tend to replenish their deposits. For this reason, even though the banks view the new interest of their customers in Treasury Bills with dismay, the change is likely to work out to the advantage of the community.

NORTH INDIAN MARKETS

(Continued from page 937)

recording slight gains due to poor arrivals, which are estimated around 100 maunds daily. Stocks are estimated at 96,000 maunds, the corresponding figure for last year being 70,000 maunds.

The Uttar Pradesh Government are reported to be considering a scheme for stabilising gur prices by setting up special types of sugar factories or refineries which can manufacture sugar from gur.

*

Foodgrains

Steady to firm conditions were noticed in the Hapur Foodgrains market. Wheat prices registered an improvement of one rupee per maund during last week. Buying enquiries were fairly heavy from Bihar and other eastern parts of the country; but despatches were hampered for want of adequate loading factilities.

Gram prices also registered gains on the Punjab advices, stockists being the main supporters. The markets for Barley and Bejher ruled steady due to good consumer support in the face of smaller arrivals. Jowar prices were also steady due to falling stocks. Peas advanced further on brisk buying enquiry from Bihar and East Uttar Pradesh. Arhar recorded an advance of Re 1 per maund, while prices of other pulses also advanced in sympathy.

Prices in the Delhi grains market showed a modest recovery. Wheat improving by about Re 1 per maund. There was good demand for Gram from Madras and the rate hardened to Rs 12.00 from Rs 11.75 per maund. The rise of about Re 1 per maund in the rates of Rice was attributed to higher advices from the producing centres. Barley also steadied up slightly. Among Coarse grains, Maize was quoted slightly higher as a result of slack arrivals.

The Bombay grains market presented a firm appearance and the upward tendency was aided by reports of higher prices ruling in the growing areas. Rice recorded an advance of Rs 5 to Rs 7 per candy. Reports indicated that the areas deficit in the commodity were keen buyers in the terminal markets of Madhya Pradesh and Andhra.

Trading in the Wheat section was confined to scattered deals in indigenous quality. The general level of prices, however, continued to be very high, especially for supplies of superior wheat. The strength in rice and wheat had a sympathetic effect on the Coarse grains section, where Jower and Bajra rose by Rs 2 to Rs 5 per candy.

EDITORIAL NOTES

(Continued from page 927)

groups or combination of groups. When, on the contrary, a member happens to be just an outstanding personality, he is also invariably politically impotent. A sprinkling of Independents in a bi-party system is surely preferable to the virtual anarchy of multiple parties seeking to represent every little shade of political opinion.

WORLD OF COTTON

(Continued from page 935)

support and acreage control schemes and return to freer production and marketing on a one-price system. American buyers, however, supported distant deliveries, while intermonth switching was again prominent. Trading in Sudan futures remained idle.

×

CLOTH AND PIECEGOODS:

Conditions in the Bombay Piecegoods market ruled much better last week, thanks to good demand from the consuming centres. Dealers felt that the offtake would continue to be at a high level in ensuing weeks also. Enquiries originated largely from South Indian centres, Delhi, Kanpur and Amritsar. Popular mills are reported to be receiving orders for delivery of goods in June/July next.

Although the export demand for cloth has not yet witnessed a similar improvement, exports of cloth, during the first quarter of the year, have been encouraging. The quantity of cotton piecegoods, passed for shipment from the major Ports of the country during this period, has registered a rise of 67 million yards at 260.25 million yards as compared to the performance in the first quarter of last year.

GATEWAY GOSSIP

(Continued from page 933)

rent year, new business has been flowing in at the rate of Rs 5 crores per week. Vitalised zest of the staff can be trusted to improve on this average. The 1957 target must be Rs 300 crores.

(5) In order that LIC officers and staff at all levels may be able to devote the fullest attention to the procuring of new business and the servicing of old business, TTK is considering a proposal for entrusting the work of investments to a Board of Trustees to be set up for the purpose and to work in consultation with the Reserve Bank.

*

SOUTH INDIAN NOTES

(Continued from page 939)

If Dr Krishna's contention is that this particular business should not be conducted with a profit-motive, it would militate against the policy being pursued in most countries. The policy-holders will be getting back amounts equal to the premia paid, perhaps with some interest, which will still leave in the hands of the management a considerable profit-potential. Unlike other businesses, insurance calls for no heavy capital investment. For this reason, profit expectation can be low and need not be higher than what is required to meet average risks.

The policy-holder, however, has the option of investing in media which bear interest but which do not cover risks. Risk coverage can demand a price; and that is why the difference between what is taken from and what is paid to the policy-holder acquires justification. Under present conditions in India, an element of indirect taxation will have to be admitted.

Bombay February 18, 1665. Only a small island of mud-flats and fishing villages, was what Humphry Cooke took over from the Portugese, as part of the marriage portion of the Infanta Catherine of Portugal for her husband, King Charles II of England. During the centuries that have passed there has risen in that place a modern city of steel and concrete—a mighty industrial centre. Thousands of tons of STEEL have gone into the making of this city.

Brahmanabad

Inside a house excavated at Brahmanabad in Sind, has been found an interesting piece of earthenware tubing. A basin like altar which probably served as the seat for bathing some household deity, is connected by this tubing to a covered drain. This tubing unlike other pipework found at various sites of the Indus Civilisation, has a corrugated outer surface, obviously as a safety measure against breakage.

For the Investor

To Spite the Face

Investment Gossip:

THE Bombay Shareholders' Association has pointed out that the corrosion in share values in the past 8 months is on average 30 per cent. It is a devastating thought that losses of this magnitude have coincided with Mr T. T. Krishnamachari's regime as Finance Minister.

It is possible that he, for his part, has taught the gamblers the lesson of their lives. This presupposes that it is the gamblers who are the sufferers in the share debacle.

The truth is that what suits the game of gamblers is wide fluctuations in prices. If the fluctuations take up the prices, the gamblers will make money by bull operations. If the fluctuations take the prices down, they make money by bearing the market. Fortunes are easily made by playing the bear; for, there is no question of any financial outlay for taking delivery of shares.

It will, therefore, be wrong to lay the flattering unction that recent events in the Stock Exchanges have taught the gamblers a lesson.

The real sufferers are the large body of investors who find that 30 per cent of the value of their holdings is wiped out. If, in a campaign against gamblers, the investors are hurt to the point of their losing confidence in industrial shares, it will be very much like cutting the nose to spite the face.

There are, as yet, no signs that New Delhi is unduly upset by the adverse developments on the gilt-edged as well as in the share market. In the present mood and with the present outlook, investors cannot be expected to make any response to new loans or to new capital issues. This is a state of affairs which can do great damage to the Second Plan even if the new taxes make better showing than expected.

New taxes constitute only one element in the financial programme of the Plan. An equally important element is the market loans. No State Government can hope to repeat last year's performance, so long as last year's State Loans are quoting at heavy discounts.

Neither can the Union Government hope to repeat last year's performance, so long as all the 3½ per cent loans and the 3¼ and 3¾ per cent loans are showing capital depreciation in the books of the investors.

If the Government think that a higher rate of interest is the answer, they are sadly mistaken. If the giltedged history of India is closely studied for the past thirty five years, it will be realised that subscriptions for new loans tend to be lower and lower in a period of rising borrowing rates. Before any decision is taken to step up the borrowing rate this year, let there be a study of the giltedged history from the point of view of relative public response in the period of ascending borrowing rate and in a period of descending borrowing rate.

The lessons of history no less than the need for common prudence and the urge of common sense demand that Mr Krishnamachari gives his immediate and personal attention to the doldrums now afflicting the giltedged and share markets, with a view to initiating and sustaining a magical transformation. Nothing less than a magical transformation is needed if the Second Plan is not to flounder on the rock of market loans and capital issues.

Investment Notes:

At a Meeting of the Board of Directors of The Indian Iron and Steel Company Ltd., 51,83,708 fully paid Ordinary shares of Rs 10 each in the Company, offered on the 12th March 1957 to the Ordinary shareholders as on the 11th March 1957. at a price of Rs 13.50 per share, were allotted to the shareholders or their nominees who accepted the offer and to those who applied for additional shares over and above the shares to which they were entitled by Rights. subject to the approval of the Reserve Bank of India to the allotment of additional shares to non-resident shareholders and Rights shares to non-resident renounces.

Out of 51,83,708 Ordinary shares offered, the shareholders or their nominees accepted 50,27.765 shares to which they were entitled or 97% of the shares, and applied for 2,78,993 additional shares. the offer being accordingly over subscribed to the extent of 1,23,050 shares. Applications for 15.050 additional shares had to be excluded for non-compliance with the issue conditions and allotment in respect of the remaining valid applications for 263,943 additional shares was made by the Board of Directors on the basis of a formula approved by the Controller of Capital Issues according to which

(i) applicants for not more than 150 shares each received their allotment in full and
(ii) applicants for more than 150 shares received allotment on the basis of an allocation of 150 shares in each case plus 20 % of the excess of the shares applied for over 150.

HIGHLIGHTS

Men's minds continue to be filled with the trials and travails of the Budget. So, it is not surprising that the Budget figures prominently all over the pages of this issue of Indian Finance.

The reader is advised to read, mark, note and digest all that has been said in this connection in these articles. He will find much to mitigate his trial and soften his travail.

The basis for this Budget is the Second Plan. The Plan gives meaning, coherence and justification for the Budget.

Thus viewed, the tremor of the Budget becomes the thrill of the Plan. It is only in this spirit that the entire public should view the Budget and their responsibilities toward it.

There is no question of whittling down the Plan or spreading it out. Mr Krishnamachari cannot do it. Even the Prime Minister cannot do it. The sovereign Parliament itself cannot do it. The Parliament has been elected on the mandate of completing the Second Plan alike with regard to its high targets and broad range.

Those who advised a smaller Plan or an extended Plan do not seem to understand aright the people's voice. That voice is: "Fulfil the Second Plan".

Excellent Corporate Results

Balance-Sheet Reviews:

THREE companies. National Rayon Corporation of Bombay, National Carbon Company of Calcutta and Ashok Leyland Limited of Madras, have produced excellent working results for 1956. National Rayon has raised the dividend from Rs 12 to Rs 14 per share, while National Carbon has recommended a final dividend of 7½ per cent, making a total of 15 per cent for the year. Ashok Leyland Limited has announced a dividend of 6 per cent as against nil the previous year.

£ R$

National Rayon Corporation

Thanks to a substantial increase in sales from Rs 3.42 crores to Rs 4.22 crores. the National Rayon Corporation Limited has reported a net profit, before providing for Taxation and Depreciation, of as much as Rs 1.45 crores as against only Rs 1.02 crores in the previous year. Apart from setting aside a sum of Rs 26.61 lakhs for Taxation, the Depreciation amount has been raised to Rs 60.00 lakhs from Rs 50.00 lakhs and Deferred Taxation Reserve to Rs 10.00 lakhs from Rs 5.00 lakhs. The Debenture Redemption Reserve is maintained at Rs 10.00 lakhs, while General Reserve is reduced to Rs 7.00 lakhs from Rs 10.00 lakhs. The dividend on the Ordinary shares is. however, raised to Rs 14 per share (including a bonus of Rs 2 per share) from Rs 12 per share.

According to the directors' report, the expansion of the Rayon plant, taken on hand, is progressing satisfactorily. The second stage of the expansion was completed in December last, and the third and fourth stages are expected to be completed within a short time. With the completion of this expansion. the total installed capacity of the plant will be 24 tons per day on the basis of 150 denier.

The erection of the Caustic Soda Chlorine Plant is also progressing satisfactorily, and it is hoped that the plant will go into operation some time in the third quarter of this year. An application has also been made to the Central Government for permission to increase the capacity of the Caustic Soda plant to take care of the requirements of the Caustic Soda for the proposed Tire Card Plant.

The putting up of the Tire Card Plant is expected to cost about Rs 3 crores. The erection of this plant make take round about two years or so from the date of placing orders. With a view to partly finance this new venture undertaken by the company, the Board of Directors have decided to increase the equity capital of the company by a further issue of 80,500 Ordinary shares, to be offered to the shareholders in the proportion of one for every two equity shares held. It is proposed to issue the new capital at a premium of Rs 25 per share. subject to getting the necessary sanction from the Government of India.

£ R$

National Carbon Company

The National Carbon Company (India) Limited has achieved satisfactory progress in all areas of business during 1956. Sales amounted to a record of Rs 5.19 crores as compared to only Rs 4.52 crores in the previous year, thanks to increased demand for both consumer and industrial products. In this connection, it may be added that both the Calcutta and Madras factories have achieved high levels of production and the number of cells manufactured by these units have exceeded all previous records.

The net profit for the year, before Taxation and Depreciation, amounts to as much as Rs 99.55,180 as against only Rs 94,51,584 in the previous year. An interim dividend of 7½ per cent was declared and paid during the last quarter of the year. The directors have now recommended a final dividend of 7½ per cent, making in all 15 per cent for the year.

According to the directors' report, several new batteries were introduced during the year. and the company is now able to offer a complete line of 'Eveready' batteries for all types of radio receivers and for various other classes of electronic equipment now in use.

The Zinc Rolling Mill of Metals & Ores Company, a division of National Carbon Company (India) Limited, was completed in Alipore. Calcutta. During the four months of operation, 245 tons of zinc were processed; and by the end of the year, production had reached rated output. The mill is operating satis-

The Capital Budget

Indian Finance
Established 1928
May 25, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius

CAPITAL outlay in 1957-58 is to rise sharply by over Rs 200 crores to Rs 906 crores from Rs 697 crores in the Revised Estimates for 1956-57. The figure for 1956-57 itself represents an increase of Rs 216 crores over the previous year. Thus, the accelerated tempo of disbursements under the Second Plan is fully reflected in the Capital Budget. Moreover, the Second Plan's predominant preoccupation with industrial development is also unambiguously indicated. Capital outlay on railways has risen from Rs 67.52 crores in 1955-56 to Rs 103.81 crores in 1956-57 and is put down at Rs 124.17 crores in the Budget for 1957-58. Secondly, industrial development, which accounted only for Rs 11.07 crores in 1955-56, absorbed Rs 79.19 crores in 1956-57 and is estimated to cost Rs 185.92 crores in 1957-58. A third head under which disbursements have gone up sharply relates to schemes of Government trading; these are placed at minus Rs 29.59 crores in 1955-56, Rs 29.95 crores in 1956-57 and Rs 49.35 crores in 1957-58. Finally, in respect of capital outlay, there is a contra increase by virtue of the transfer to the Capital Budget of the transactions relating to the American loan commodities. It is these which, in the main, are responsible for the Capital Budget nearly doubling itself within the space of two years.

As far as the receipts are concerned, there are three important heads under which notable changes are to be discerned. Firstly, the credit from new loans has gone up from Rs 106.35 crores in 1955-56 to Rs 209.93 crores in 1957-58. Secondly, a sharp rise in Other Deposits and Advances, from Rs 40.89 crores to Rs 179.43 crores, is due partly to the inclusion of the contra item in behalf of American loan commodities. Finally, net receipts from Treasury Bills are, in the Budget for 1957-58, at nearly three times the 1955-56 figure. In this respect, however, the Budget figure has not taken account of the new taxation proposals. As such, the receipts from Treasury Bills, after taking credit for the new taxes, will need to be placed lower at Rs 275 crores against Rs 368 crores. Such reduction in the quantum of Treasury Bills will mean that the budgeted surplus on Capital account of Rs 33.19 crores will instead be converted into a deficit of just under Rs 60 crores. We may now study the important changes that have been enumerated.

The capital outlay on Railways, details of which are given in the Railway Budget, scarcely needs a lengthy analysis. The Railway Plan is proceeding apace although, in 1955-56, the Revised Estimate of disbursements fell short of the Budget figure by something like Rs 10 crores. It is clear that the outlay in the last three years of the Plan will need to be considerably stepped up if the Railway Plan is to be implemented in full; possibly, the intensification of work in this behalf is waiting upon the successful conclusion of negotiations with the World Bank for financial aid relating to the foreign exchange element of the railway projects. Secondly, however, the interim raising of the surcharge on freights, pending the wholesale revision once the recommendations of the Freights Structure Inquiry Committee are examined and implemented, is likely to provide the railways with the full quantum of the internal resources toward the Railway Plan. We need, nevertheless, to note that the pace of disbursements so far is possibly so slow as to make inevitable an aggravtion of the transport bottleneck around 1959.

In respect of industrial development, the bulk of the expenditure is put under the aegis of the Ministry of Steel, Mines and Fuel. Disbursements on the Rourkela steel project are put down at Rs 60 crores in 1957-58. The schedule calls for the first blast furnace to go into operation in October next year, and the entire plant to be in operation by the end of 1959.

The second Government steel plant at Bhilai receives a provision of Rs 63.33 crores. Since the plant and equipment, being supplied by Russia, is to be paid for in 12 annual instalments, we are to infer that the Budget provision is largely in respect of expenditure to be incurred in this country. Two interesting points about the Bhilai steel projects are: firstly, that the entire plant is to be put into commission by the end of 1959 and, secondly, that the payment is to be effected in Indian rupees; but the amounts thus credited may be utilised by the USSR either for the purchase of goods in India or for conversion into pounds sterling. It is, however, quite likely that the Bhilai steel plant imposes no drain upon foreign exchange resources if, as anticipated, Indian exports to the USSR increase in satisfactory manner.

The third steel plant, at Durgapur, is given a provision of Rs 33.50 crores. But details as to the progress and schedule are not available.

There are three other important provisions under the Ministry of Steel, Mines and Fuel, which exceed Rs one crore each. The Neiveli Corporation receives a Budget provision of Rs 4 crores; a provision of Rs 1 crore has been made for two coal washeries; and Rs 2.91 crores have been provided for the oil exploration scheme. The one other large allocation under industrial development is the provision of Rs 5.10 crores for investment in the Indian Airlines Corporation. This has regard to the purchase of five additional Vickers Viscount aircraft. It is intended that the IAC may commence the operation of services from Bombay to Ahmedabad via Baroda; from Madras to Vijayawada through Hyderabad; and from Madras to Cochin through Tiruchinapalli, Madurai and Trivandrum.

The sharp rise in the capital outlay on schemes of Government trading is due primarily to Government transactions in foodgrains. The gross expenditure during 1957-58 is estimated to be Rs 146.25 crores, this being offset by Rs 90.81 crores in recoveries.

As already stated, the transactions on American loan commodities now form part of the Capital Budget. This is a contra item; and Rs 40.30 crores are expected to be credited under the Development Assistance Programme from America, and another Rs 55 crores in respect of assistance received under Public Law 480 (Surplus Commodities).

Turning now to the receipts, discussion may be limited to figures under new loans and Treasury Bills.

Dealing first with loans, the Centre intends to raise Rs 100 crores by way of its New Loan for 1957; the balance of Rs 109.93 crores represents foreign aid from various sources. As far as the centre's borrowing within India is concerned, part of it—Rs 31.75 crores—will be needed for discharge of debt (Rs 31.50 crores for the Victory 1957 loan and Rs 0.25 crores for expired loans). Thus, the net borrowings are scarcely of the order of Rs 70 crores. This is by no means big or bold borrowing by Government, especially in the context of a target of Rs 1,100 crores gross over the Second Plan period. While new loan realisations, of the Centre and the States combined, reached the annual average during 1956-57, it is doubtful in the extreme if subscriptions in the current year will even approach it. For, with the State loans quoting at a discount, it will be imprudent on their part to expect their issues to be a success in this year. Indeed, until such time as the giltedged market is toned up, it should be a difficult task for either the Central or the State Governments to do well in their borrowing programme. The prospect, therefore, is that the States will be unable to enter the giltedged market in the current year and that the Centre will not find it possible to increase its target. Thus, the new loan collections of 1957-58 are likely to fall short of the annual average required by anything like Rs 100 crores. Raising of Bank Rate on Budget day, though no coincidence, will have unfortunate repercussions on Government's borrowing. The fairly disastrous decline in giltedged values since then is surely evidence in advance that the New Loan will be greeted with less enthusiasm.

While this journal has long held that a sound borrowing policy must be the basic foundation on which all economic policy must be evolved, there seems to be a general unawareness of the prerequisite conditions for successful borrowing. The fallacy that has gained adherents and believers is that, the larger the interest offered on a New Loan, the bigger the subscriptions to it will be. No fallacy could be so mistaken or, we may add, so dangerous. For, it is this fallacy which is responsible for such indifferent and wishy-washy giltedged policy as we have had. It seems to be taken for granted that all that the authorities need to do is to raise the interest each time a New Loan is announced; and it is complacently believed that this should be enough to attract larger subscriptions; and if, on the contrary, the New Loan is a failure, the lack of enthusiasm is put down to the money market tightness or some such facile and convenient scape-goat. What is overlooked is the fact that each increase in interest offered causes an automatic adjustment on the loans already outstanding; and this adjustment takes the form of depreciation in giltedged values. The investor can scarcely be blamed if, in the suspicion that further capital depreciation may be in store, he refuses to be enticed by the all too superficial increase in interest. A rising pattern of giltedged prices, and a borrowing programme in which each successive offer is less favourable to the investor, can alone guarantee the success of Government's borrowing in the Second Plan.

We would further suggest that, if giltedged policy is charted out on the right lines, there is no reason why the target for market borrowings cannot be increased to Rs 1,500 crores gross for the Second Plan. For, the conditions are in every way—save the giltedged policy—propitious. Firstly, Scheduled Banks have in

recent years kept their new investment in Government securities at a minimum. In order to fulfil the statutory requirement of 20 per cent of Deposit liabilities being held in cash and unencumbered securities, the trend lately has been to augment cash resources. If the giltedged market were in sound health, they would surely prefer to keep on hand a larger holding in giltedged, since such investments are interest-earning, and cash is not; but, at the present stage, the apprehension of capital depreciation makes them prefer cash to giltedged. Secondly, the Life Insurance Corporation and other State and quasi-State agencies are having an increasing capacity for giltedged; it is this capacity which has spelled the success of Government loans in the recent few years. One estimate that we have been given is that the Life Fund is increasing at the rate of Rs 50 crores a year (this relates presumably to income both by interest and by premia). Out of this, Rs 10 crores are understood to be allotted for mortgage loans and loans on policies. Another Rs 10 crores are said to be available for investment in the private sector. Thus, the amount available for giltedged may be anything like Rs 30 crores. Thirdly, the balances in provident funds are snowballing to substantial size. The extension of the scheme to more and more industries further increases the quantum of funds seeking giltedged for investment. We may note, in this respect, that provident funds do not have spare balances of large magnitude only once in a year—that is, Budget-time. Instead, the funds accrue each month. The present practice is for some of the Scheduled Banks, which buy State Loans, gradually to pass these on to provident fund institutions. We should suggest that the intermediary of the Scheduled Banks can be eliminated. State Loans should be made available through the Reserve Bank tap—at rates steadily more favourable to the Government—for the bulk of the year. This will not only be fully taken up; it will also avoid the artificial bear-raid rendered possible by huge State loans concentrated over a short period of time. These are, may we suggest, factors which should enable Government to draw up a sound and well thought out giltedged policy.

There is little that needs to be said about the credit taken under deficit financing. Past experience has recurrently been that the actual amount of deficit financing has been much less than the earlier Budget estimates or the revised estimates. We believe that created money should be placed around Rs 200 crores in 1957-58 as against the Budget estimate of Rs 275 crores. This improvement would be derived from (1) an expansion in tax revenues; (2) some small element of over-subscription to the New Loan; and (3) a lag in expenditure.

Summary of Capital Transactions

The Neiveli Project

To say that South India is industrially backward in comparison with the North is a half-truth. If the disparities in natural resources are kept in view, the industrial development of the South will have to be reckoned quite in proportion to any other region in India. Tobacco and mining in Andhra, cotton textiles, matches, electricity and plantations in Madras, gold and steel in Mysore, fertilisers and aluminium in Kerala are sign posts to a general industrial awareness and much concrete achievement arising out of it. In cement and in several consumer goods industries, all the States can show creditable development. There are thousands of villages where the artisan and the small industrialist ply their trade.

At the same time the heavy concentration of new industries in other regions of India does provide justification for the feeling that the Union Government should be a little more zealous in the matter of the future industrial development of South India. When new resources are discovered which correct the imbalance in regional industrial potential, the demand for attention naturally becomes more pressing and insistent.

The Neiveli Lignite Project, which the Prime Minister inaugurated on May 20th, must set at rest every suspicion of discrimination or bias in the industrial policy of the Centre and must erase once and for all whatever sense of frustration exists in South India. The Prime Minister who had visited the site three years ago and apparently has been taking a personal interest in the progress of the preliminaries, feelingfully described the Project as one of those outward symbols of a great people going ahead. His appeal to the engineers and workers to do their duty in the spirit of partners in a great endeavour breathes a kindred emotion.

If words can impress a people that projects like this are their common possession, Pandit Nehru's address at Neiveli must have achieved that purpose. He gave the proper emotional direction to the whole project. As the setting up of a Corporation for the management of the project might lead to propagandist misdirection about the actual role of the Central Government, the Prime Minister also thought it necessary to make a timely reference to the fact that whoever ran the show, the greatest benefit from the Project was bound to go to the Madras State. His hope that it will give a push to the industrialisation of South India is supported by the facts narrated below.

The mining scheme which forms part of a larger Integrated Project is estimated to cost about Rs 17 crores and yield an annual supply of 3½ million tons of lignite. The Integrated Project will involve a total cost of Rs 70 crores. The lignite is to be used in place of coal for various industries. A number of large, medium and small-scale industries are envisaged for the area. Immediately a fertiliser plant, other chemical and cement units, factories for the manufacture of porcelain ware and a synthetic oil factory figure in the scheme of things to come.

In close proximity to the lignite mines, an iron and steel plant would be set up, utilising the iron ore and manganese ore available in Salem. There is an unofficial report that the Government of India contemplate erecting India's biggest iron and steel plant in South India. It does not at all appear to be an impossible proposition.

A proposal for the erection of a factory of high tension insulators is under consideration. A thermal plant with capacity reaching to 211,000 kwts forms part of the Integrated Project and will be in a position to supply electrical energy in bulk for industrial purposes all over Madras. Thus with Neiveli as the heart and nerve centre, prospective industrial development in the South can extend to the comparatively remote districts of Tinnevelly and Kanyakumari in the Madras State and portions of Kerala and Mysore.

Transport will very likely be a serious problem as even now bottlenecks are frequent and serious. But to some extent Neiveli provides an answer to this problem as well. The use of processed lignite of over 1½ million tons for industries in South India will mean a substantial saving in transport both in terms of distance and bulk. The expansion of transport facilities will therefore present less difficulty than in other areas of India. While expenditure to the tune of Rs 70 crores naturally creates a large volume of employment for skilled and manual workers, the scope is somewhat limited by the fact that the mining itself owing to inescapable natural reasons, is to be done by mechanised processes. Where employment opportunities have to be sought more abundantly is through the auxiliary industries, for which prospects are clearly marked out. All this calls for more planning and coordination than has possibly gone in hitherto. The project represents a great fulfilment and a great opportunity. With a sincere eye on economy and for putting the right man in the right place, the opportunity can be fully utilised.

Editorial Notes

A Great Patriot

Mr T. Prakasam, who died early this week at the age of eighty-six, belonged to three generations, of which two were contemporaneous with his active political career. His dashing debut into public life belongs to the Pre-Gandhian era. For the last forty years, he was enjoying the affectionate respect of the whole country. The Lion of Andhra displayed amazing courage and prowess on many a historic occasion, risking means of living and life with equal unconcern.

He chose to be a patriot and an agitator, when the rewards in view were only the gaol, physical suffering and the prospect of premature death. He had the first two in ample measure. Since the transfer of power, he had to get embroiled more and more in provincial politics and was confronted with situations amidst which others excelled. After Swaraj, Andhra Province claimed his zeal. Though his own fortunes in recent years were more of a colourful than of a steady kind, the birth of the Andhra State and later on of the Andhra Pradesh enabled Mr Prakasam to see the fulfilment of his greatest ambitions as a national leader.

*

A Disappointing Bias

The speeches and observations, made by the Prime Minister during his stay in Ceylon, and his joint appeal with the Ceylon Premier, give the impression that the discussions he was having in the island concerned more certain broad international issues than those pending between India and Ceylon. Toward the end of the joint statement there is expression of confidence that Indo-Ceylon differences could and should be solved to the satisfaction of both countries. Beyond that, there is scarcely any indication of positive results in the latter sphere.

It is quite proper that the principal spokesmen of the two Governments should reiterate their faith in the UN as an instrument of world peace, should abjure agression, and should insist that the nuclear tests should be suspended. As both Russia and the Western Powers have found it convenient to explode their test bombs in the East, Asian countries have a special interest in the abandonement of these mercilesss exploits.

In India immediately, evidence of some progress in the negotiations over the fate of the Indian settlers in Ceylon would have produced satisfaction of a more concrete kind.

For several reasons, a situation like what obtains in Ceylon, seems to have arisen in Malaya also, in consequence of the country's Constitutional changes. Unfortunately, the meeting of the two Prime Ministers at Colombo does not seem to have broken new ground or given signs of a formula by which the long-drawn-out issue of Indian settlers could be solved on a fair basis. Even on the question of national jurisdiction on Coastal waters, Ceylon seeks to put up counter-claims against India's and get the controversy settled through the proper international agencies.

*

Food Subsidy

In his budget speech, the Union Finance Minister announced his intention to set apart Rs 25 crores for a food subsidy fund. The argument on behalf of the subsidy was neatly summarised by himself. The new tax proposals involved a raising of the burden on the necessities of the common man. Though there are special reasons for applying pressure on consumption, there is also the need to maintain consumption at a reasonable level in terms of nutritional standards, and this purpose the food subsidy is intended to meet.

The mere mention of the subsidy should not be interpreted as implying official fatalism against rising prices. The amount suggested for the fund could also be a remote upper limit. The diversion of so considerable an amount would mean correspondingly less for purposes of the Plan For this very reason, the Government would be impelled to take a stern view of both domestic production and price levels. A new seriousness has already found expression in the Prime Minister's attitude to State's performances, when he intervened in the Lok Sabha debate on the President's Address. He stated that some States Governments failed to implement declared policies in regard to food and the Union Government were keen on devising ways and means through the Planning Commission and "other methods" to ensure their implementation in every State. The very high priority given to agriculture was again emphasised. Presumably, the Prime Minister does not share Mr A. P. Jain's confidence that the over-all supply of food grains is immune to serious risks. Mr Jain himself had to promise imports in suitable quantities to keep prices down. On the question of price, Union Ministers do not think coherently. While the Home Minister looks upon the present food prices as a legitimate shift of income to the cultivator, the Finance Minister is anxious that these should be brought down.

*

Middle East Concord

The reported agreement by which Iraq and Saudi Arabia have undertaken virtually to pool customs and foreign exchange control and to cooperate on all economic and political matters, can well augur a new and more hopeful phase in Middle East politics. If there are no mental reservations on either side the political 'vacuum' which unmistakably exists in this region will probably be filled on purely local initiative. The two monarchs, according to unofficial versions of the discussions culminating in the agreement, have decided to fight shoulder to shoulder international communism.

To facilitate joint action on the political and cultural levels, Iraq appears to have abandoned certain territorial ambitions. Possibly Saudi Arabia will turn sympathetic to the Bagdad Pact, if it does not decide on formal participation. For the Western Powers, quite lovely hopes are possible. In Jordan, communism is being openly and triumphantly fought. All the recent national trends in the Middle East go to create a situation over which Russia might gnash its teeth and its opponents breathe a sigh of relief.

Meanwhile, a few major transport links between the Baghdad Pact Capitals are in prospect, with the US footing the bill. Though anti-communism forms the key note of the present political moves in Jordan and Saudi Arabia, their impact on Egypt and on the present Pan-Arab entity is obscure. As long as Israel is reckoned a common enemy, neither the US nor Britain can give full emotional approval to any step toward political consolidation in the Middle East, howsoever. otherwise friendly

*

Communist Wage Reform

The latest annual UN Economic Survey of Europe gives an account of contemporary wage reform in the Soviet Union and other Eastern European countries. The occasion for the present moves arose out of the Soviet Union's decision to impart freedom to labour mobility through the abolition of the labour discipline Acts and the relaxation of direct administrative control. Hitherto the differences in basic wage-rates have remained substantially neutralised by high rewards for special individual efforts.

When accompanied by State direction of employment, these extra incentives did not militate against the flow of the various skills into appropriate channels and against the attraction of skilled jobs gainst the unskilled. The withdrawal of State direction of employment inevitably created a new situation. For instance, in Hungary in 1954, as many as 30 per cent of the skilled workers were employed outside their specialised trades. Opportunity for receiving handsome extra emoluments in the same grade of jobs stiffed interest in higher grades.

The reform which is being adopted in the Soviet Union, Czechoslovakia, Poland and Rumania, is mainly in the direction of a drastic increase in the basic wage. The pattern of relative wages as between industries and geographical regions is adjusted and the system of premia for overfulfilment of norms and attached to superior skill and qualifications is simplified. The special rewards offered for over-fulfilment of norms for piece-workers which could be as much as 84 per cent of the basic wage before is now reduced to a maximum of about 22 per cent. The whole reform is conceived with a view to offer better incentives on the basis of more equitable distribution of incomes.

World of Finance

The Ways and Means Budget

FOR the first time, the total of the Ways and Means Budget exceeds the Rs 1,000 crore mark in 1957-58. This reflects the intensification of expenditure upon Second Plan endeavours. While the figures for the last three years are presented elsewhere on this page in the form of a table, there are certain interesting features in this respect that need to be studied. In the first place, each of the years since the beginning of the First Plan has contributed to the Ways and Means Budget by virtue of a revenue surplus. In 1957-58 also, it needs to be noted, the effect of the Budget proposals is to transform the revenue deficit of Rs 33.12 crores into a surplus of Rs 44.73 crores. In this wise, the revenue surplus since 1951-52 is as follows:

1951-52	Accounts	128.09 crores
1952-53	Accounts	38.93 crores
1953-54	Accounts	8.50 crores
1954-55	Accounts	33.51 crores
1955-56	Accounts	40.45 crores
1956-57	Revised	37.94 crores
1957-58	Budget	44.73 crores

What is of particular significance is that the actuals have in nearly every instance produced a revenue surplus as contrasted with a budgeted deficit. In this light, it may be anticipated that the realised surplus during 1957-58 will exceed the budget figure of Rs 44.73 crores. Such favourable experience, combined with New Loan realisations higher than planned for, has in the last three years reduced the magnitude of deficit financing. In 1954-55, for example, the Budget took credit for Rs 250 *crores* against Treasury Bills; the revised estimates placed the figure at Rs 230 crores; and the actuals were no more than Rs 138 crores. In 1955-56, ad hocs budgeted were at Rs 340 crores; the revised estimates at Rs 240 crores; and the actuals at Rs 132 crores. In 1956-57, the Budget figure was Rs 355 crores; the revised estimates at Rs 270 *crores*; and the actuals are even lower at Rs 240 crores. In this background, we may briefly examine the place of deficit financing in the Second Plan.

It was originally estimated that the Second Plan would rely upon deficit financing for Rs 1,200 crores, that is, a yearly average of Rs 240 crores. But it has also been known that the tempo of created money would be at its highest in the first two or three years. More recently, however, it has been decided that the quantum of deficit financing should be around Rs 800 crores; this journal's view has been that the figure should be Rs 700 crores. On this last basis, the annual average is Rs 140 *crores*; but, since the bulk of created money would be completed by, say, the fourth year of the Plan—with a tapering off from the first year—the plan for deficit financing may be somewhat as follows: Rs 240 crores in *1956-57*; Rs 200 crores in 1957-58; Rs 160 crores in 1958-59; Rs 120 crores in 1959-60; and no ad hocs in 1960-61. The *actuals* for 1956-57 are already known to be Rs 240 crores; and the Budget figure for 1957-58 is Rs 275 crores, after taking into account the new tax proposals. Having regard to recent experience, it is not too much to expect the actuals to fall short of the budgeted figure by Rs 75 crores.

Turning once again to the Ways and Means Budget as such, it will be seen that, under receipts, credit is taken for Rs 100 *crores* in respect of Rupee Loans and Rs 109.93 crores by way of Other Loans. While the former relates to the Central New Loan for this year, the latter comprises Rs 90 lakhs from the World Bank for the Second DVC Loan, *Rs 36* crores from the USSR for the Bhilai Steel Project and Rs 73.03 crores from the USA. It may be noted that, in 1956-57, credit was taken for Rs 100 crores against Rupee Loans and Rs 39.5 crores for Other Loans; the revised estimates show that Rupee Loans fetched Rs 157.73 crores, but that the Other Loans realised somewhat less at Rs 31.50 crores. In the current year, however, with the raising of Bank Rate, the New Loan realisations may not greatly exceed the target. On the other hand, the fructifying of negotiations with the World Bank for loans on the Railway Projects may substantially augment receipts from Other Loans. Thus, it is not improbable that the Ways and Means Budget will be as favourably affected during 1957-58 as in the previous year by receipts under Loans.

We should like to take this opportunity of suggesting the need for a fourth Budget. At present, we have the revenue Budget; the capital Budget and the Ways and Means Budget; what we feel is necessary, and would serve a useful purpose, is a Foreign Exchange Budget. It is true, for the period of the Second Plan some assessment has been made of foreign exchange requirements. But it is, we suggest, essential in India's present circumstances that a budget be cast of foreign exchange needs and resources each year. While, in such accounts, the intangible comprised in loans under negotiation would not be included, it should be possible to give a broad indication of the imports anticipated as being necessary during the ensuing year; and this should enable tighter "regulation" of foreign exchange expenditure. The procedure, as we see it, would first consist of a projection of current trade trends; and to the import gap thus worked out would be added the approximate value of capital goods for specific projects which are planned to be received during the year. Even in respect of foreign exchange, let us remember that the first three years are expected to present the greatest strain. The usefulness of such a Foreign Exchange Budget would therefore lie in quicker action to permit imports (if anticipated inflationary tendencies should materialise).

The capital Budget as such provides for a surplus of Rs 33.19 crores; the effect of the tax proposals is to transform the revenue deficit of Rs 33.12 crores into a surplus of Rs 44.73 *crores*; these two factors enable the overall deficit to be met by expansion of Treasury Bills to be placed at Rs 275 crores against the March (interim) Budget figure of Rs 365 crores; and a favourable experience both under Loan Receipts and revenues should still further reduce this figure to around Rs 200 crores.

As for the disbursements, capital expenditure accounts for rather more than half of the total of Rs 1,070 crores. Loans to State Governments are at Rs 248 crores. Discharge of Debt is placed at Rs 38.74 crores as compared with Rs 83.81 crores in 1956-57. In the last financial year, the revised estimates place the discharge of 3 per cent Victory Loan 1957 at Rs 79.30 crores; Rs 75 lakhs for expired loans; Rs 95 lakhs for Railway Sterling Annuities, etc.; Rs 2.12 crores for repayment of loans to the World Bank; and Rs 62 lakhs as the first instalment to the USSR on account of the Bhilai Steel Project. In the current year, Rs 31.50 crores have been provided for the discharge of the balance of the 3 per cent Victory Loan 1957; Rs 25 lakhs for expired loans; Rs 61.60 lakhs for Railway Sterling Annuities, etc.; Rs 1.62 crores for loans from the World Bank; Rs 1.08 crores as the first instalment on the US Wheat Loan; and Rs 3.57 crores for repayment to the USSR. There is also, we may add, the contingent liability of Rs 60 crores odd on the purchase of foreign currency from the International Monetary Fund, although the terms of the loan permit another two/three years for repurchase. In any case, it will be seen that discharge of debt requires a much smaller provision during the current year; and if the New Loan realisations during 1957 approximate the figures for 1956, Government's ways and means position would be substantially helped.

The crucial aspect of the Ways and Means Budget is, of course, the target for market loans. As we have often emphasised in these columns, the borrowing programme of Government is picayune and chicken-hearted. While, for reasons mentioned earlier, any raising of the target during 1957 will scarcely be feasible, we believe that Government should seriously consider measures which will tone up the giltedged market in such manner as to facilitate a bolder borrowing programme for the remainder of the Second Plan period.

Bank Deposits and Advances at New High

A predictable decline in Active Notes and an unusual increase in its Other Loans and Advances are revealed in the Reserve Bank returns for May 17. Notes in Circulation are lower by Rs 5.13 crores at Rs 1590.23 crores; Rupee Coin has returned from circulation for Rs 0.18 crores; and the Reserve Bank's cash in the till has improved by Rs 5.30 crores to Rs 15.17 crores.

There has been no deficit financing; and both Rupee Securities and Foreign Securities, in the Issue Department, are unchanged.

The Centre's balances have fallen below the Rs 50 crore mark with a decline of Rs 5.05 crores to Rs 49.87 crores. This is presumably because the Central Government had to meet their commitment in respect of maturing Treasury Bills held in the Banking Department. For, Treasury Bills Purchased and Discounted are marked down by Rs 5.08 crores; and the figure under this head, which had risen rather sharply in the first week of April as a result of State Governments replenishing themselves, has once more returned to its normal level of around Rs 2 crores.

State Governments were able to improve their Deposits by Rs 0.97 crores to Rs 3.08 crores only after increasing their borrowings from the Reserve Bank by Rs 1.46 crores to Rs 20.69 crores.

Other Deposits show a small rise at Rs 35.30 crores: Investments are higher by Rs 1.40 crores at Rs 127.30 crores; Balances Held Abroad have steeply been drawn upon by another Rs 9 crores, and are placed at Rs 65.07 crores; and both Other Liabilities and Other Assets show negligible change.

Scheduled Banks have increased their Deposits by Rs 2.89 crores to Rs 62.55 crores; but it would appear that their borrowings continue to be on the climb, since the Reserve Bank's Other Loans and Advance have registered a rise of Rs 6.02 crores to Rs 119.73 crores. Advances against usance bills, however, are higher only by Rs 1.04 crores at Rs 63.28 crores.

The State Bank's return for May 17 discloses that it is solely responsible for the increase in the balances of member banks with the Reserve Bank. Cash and balances with the Reserve Bank are higher by Rs 2.85 crores, with the total of cash improving by Rs 2.48 crores to Rs 24.12 crores. Deposits are higher by Rs 0.76 crores at Rs 301.58 crores. There is a small decline of Rs 2.19 crores to Rs 190.91 crores in Advances.

+

The return of Scheduled Banks for May 10 records a new high both in Deposits and in Advances. Deposits are higher by Rs 9.93 crores at Rs 1236.75 crores; the State Bank's gain in the relevant week was Rs 3.87 crores. This did not suffice to meet the expansion in Advances; and borrowings from the Reserve Bank have consequently risen by Rs 8.27 crores to Rs 89.64 crores. Cash balances have besides been drawn upon by Rs 2.49 crores; but the State Bank's cash was reduced by Rs 3.69 crores in that week. Finally, Advances have staged a rise of another Rs 12.27 crores to Rs 935.88 crores, the State Bank's Advances in that week rising by Rs 5.18 crores.

+

Whether the busy season reached its peak on April 12 or on May 10 is still a matter of doubt. On the one hand, bank figures for April suggest the possible date as the second week of that month. On the other hand, the sharp rise in Advances in the first two weeks of May lends plausibility to the theory that the nadir was touched on May 10. Our view, however, continues to be in favour of the earlier date. This is based on the belief that the expansion in bank accommodation in the first ten days of May is likely to have stemmed from a particular factor, namely, the pre-Budget stocking up in commodities in which increases were expected either in excise or in import duties. It remains to be seen whether the central banking institution will accept the proposition that the May expansion, since it took place after an interregnum of relatively slack conditions, was abnormal and not a continuation of the busy season as such.

On the hypothesis that April 12 marked the end of the busy season, the bank statistics since then point to the possibility of the materialisation of our reading that slack season accretions to Deposits of Scheduled Banks will this year total Rs 150 crores. In the four weeks since April 12, Banks' Deposits have gone up by Rs 23.20 crores. Five more months of the slack season remain. In this connection, we may remark that augmentation of Deposits in the first four weeks of the 1956 slack season amounted to Rs 16.33 crores, while the total increase during the season was Rs 39.74 crores. The slightly longer tenure of the 1957 slack season, the abatement to be expected in the import surplus, the more immediate benefit accruing to Scheduled Banks from Government's plan disbursements—all these should ensure that, in the period April-October 1957, the Deposits of Scheduled Banks will strikingly improve.

+

Sterling and the Franc

By PAUL EINZIG

THE French Government's determination with which it is defending the franc against devaluation compels admiration. It recalls the successful resistance to adverse pressure against the franc by Poincare in the 'twenties and by M. Reynaud in the 'thiries. But unfortunately this time the dice are heavily loaded against the staunch defenders of the franc. During the inter-war period the French Governments that followed each other in rapid succession had largely themselves to blame for the endless series of devaluations. Internal political instability was the main cause of the weakness of the franc. In the post-war period that factor has continued to operate, but it has been overshadowed by two major sources of weakness —the heavy military expenditure on the defence of Indo-China and later of Algeria, and the strength of Communist influence in the French trade unions.

In face of the heavy military requirements, all efforts at balancing the budget have failed to produce the desired result. And the pressure of Communists in wages disputes has made it impossible to moderate wages inflation. As a result, the price level in France is decidedly too high. The balance of payments situation is unsatisfactory, and the French authorities have to support the franc on an extensive scale against adverse pressure aggravated by speculative anticipation of its devaluation.

In such circumstances the possibility of a devaluation cannot be

(Continued on page 976)

World of Business

Coir Industry

The prosperity of the coir industry is a matter of such vital concern to the economy of Kerala State, since it gives employment to ten lakhs of people, in the state. Further its position as a great foreign exchange earner had given it an importance in the economy of the whole country. In 1956-57 about 81,000 tons of coir and coir products worth about Rs 930 lakhs were exported from Indian ports of which a major share of 65,000 tons worth about Rs 746 lakhs were shipped from Cochin alone.

But the coir industry in the state is at present in the grip of a crisis brought about by chaotic organisation in the production and marketing levels. The existence of too many intermediaries at all levels of production and marketing as well as lack of adequate finance for producers and low wages for workers seem to be the maladies which needs to be overcome if the industry is to be brought to a state of healthy functioning.

Speaking at a conference convened to consider ways and means to solve the problems facing the coir industry Mr K. P. Gopalan, Minister for Industries in the Kerala State, drew pointed attention to the necessity to organise the industry on a sound basis by the elimination of middlemen and by the organisation of co-operative societies and exploring foreign markets through Indian embassies and the establishment of a Central marketing society at Cochin.

Regular supply of husk at prices remunerative to the suppliers is also a problem, which has to be solved in an adequate way. Touching on this aspect, the Minister spoke of the Government's determination to make available sufficient supplies even by subsidization and further pointed to the necessity to relate the price of husk to the prevailing price of coir products from time to time. Other lines of Government action indicated by the Minister to help increase production were in relation to finance needed by producers and marketing. The Minister also disclosed that the State Government had approached the Centre to increase the allotment to coir industry in the Second Five Year Plan from Rs 53.5 lakhs to Rs 150 lakhs.

*

Export of Manganese Ore

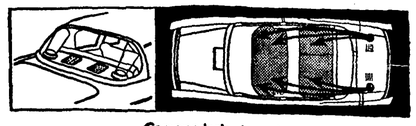
A joint sales policy in regard to the export of Manganese ore from the country is the latest move of the State Trading Corporation, as part of its programme of promoting exports from the country, to earn the much needed foreign exchange. Though India has been a leading exporter of Manganese ore, new sources of supply such as Brazil, Canada, South Africa, Venezuela and Chile, have reduced the bargaining strength of the country, and the disorganised sales policy of this country had detracted from the bargaining strength still further with unfavourable effects on the price realised.

The joint sales policy is intended to present an organised trade front of public and private sectors to obtain the best market and prices for the Manganese ore exported from India. The new move will give practically no room for foreign buyers to play off private exporters and the corporation against one another in the matter of prices.

Under the new scheme a machinery would be set up so that private exporters can negotiate on behalf of the corporation and vice-versa. For the smooth and successful functioning of the scheme, the Corporation is also stated to be prepared to work out satisfactory financial arrangements with exporters and mines and, it is not expected to affect adversely small organisations which have been traditionally buying from small producers and helping them to market their ore abroad. Their new position would be either as agents of overseas buyers or suppliers of the ore internally or as an intermediate agency between the State Trading Corporation and the buyers.

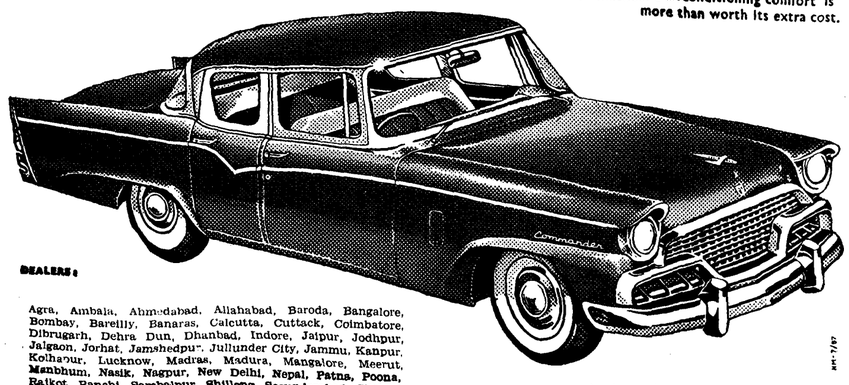
Problems of Paint Industry

Though the paint industry has made steady progress in recent years, there is still a wide gap between production and installed capacity. As against an installed capacity of nearly 65,000 tons, production in 1956 has been of the order of only 41,000 tons. Two factors seem to have been responsible for the existence of such large idle capacity. Firstly, current demand for paint products is only around 40,000 tons. Secondly, exports have considerably declined during the past three, four years.



In the course of his presidential address at the annual meeting of the Indian Paint Manufacturers' Association, Mr A. E. Faizullabhoy pointed out that though the outlook for the industry was encouraging in view of the fact that consumption of paints, varnishes and enamels was estimated to increase to 60,000 tons by 1960-61 due to the increased tempo of industrial activity envisaged under the Second Five Year Plan, there were quite a few problems which should be solved if the industry was to go ahead confidently. In the first place, there was the problem of the supply of raw materials. Titanium dioxide was in short supply and the manufacturers had been continuously plagued by irregular supply and prohibitive cost. The industry had been experiencing a number of difficulties in the administration of excise duty. Considerable difficulty was continued to be encountered in obtaining test reports.

Airconditioned COMMANDER



PRODUCT OF STUDEBAKER - PACKARD CORPORATION

for cool, comfortable motoring in summer

Even on hottest, stickiest days, the air-conditioned Studebaker Commander offers cool, comfortable motoring. The interior of the airconditioned Commander stays always clean, free from noise and dust and keeps you and your clothes fresh as freshly dressed.

Commander's airconditioning comfort is more than worth its extra cost.

HINDUSTAN MOTORS LTD. CALCUTTA

World of Jute

Raw Jute Supply Position

FIRM conditions have continued to prevail in the raw jute market despite reports of satisfactory progress of the jute crop in Assam and Northern areas. Presumably sellers' reluctance to discount rates has stemmed from reports that weather has continued to be unfavourable during the past week in most other jute growing areas, and especially in Purnea, the largest jute-producing district of Bihar.

The trend of raw jute arrivals in Calcutta and mill areas in the past two months has been such as to revive apprehensions about the considerable difficulty mills have to face in the event of the next crop becoming late. Arrivals of raw jute during the ten months ending April 1957 have totalled 54,84,000 bales as against 57,05,000 bales in the corresponding period of the previous year. That arrivals in the past two months have slowed down will be evident from the fact that upto the end of February this year, raw jute arrivals had been higher at 46,26,000 bales as compared with 45,82,000 bales for the 8 months ending February 1956. From March, the position has changed as the total has begun to lag behind and, at the end of April the gap has become more pronounced.

A redeeming feature is the lead still maintained by arrivals of jute of Indian origin which during the ten months ending April 1957 have amounted to 49,26,000 bales as compared with 43,28,000 bales in the corresponding period of previous jute year. It is, however, to be noted that during last month arrivals have declined sharply to 341,000 bales from 4,41,000 bales in the previous month and 384,000 bales in the corresponding month of the previous year.

Arrivals of jute from Pakistan during the month are lower at 34,000 bales as against 38,000 bales in March; such arrivals during the ten months of the current jute year have amounted to only 558,000 bales as against 13,77,000 bales in the corresponding month of the previous year.

As for the total availability of raw jute during the current jute year, we have the following data: Final Government Estimate of Indian jute and mesta for 1956-57 —56,95,000 bales; Indian crop carry forward (Trade estimate)— 2,47,000 bales; Opening stock 10,23,000 bales; Arrivals from Pakistan during 10 months ending April 1957—5,58,000 bales. Thus, the total availability of raw jute within the country, taking into account only the arrivals from Pakistan during the 10 months ending April 1957, is of the order of 75,23,000 bales. As against this the total estimated Indian consumption is placed at 64,20,000 bales. An important point to be noted is that out of a total of 59,42,000 bales of Indian supply (1956-57 crop and 1955-56 crop carry forward), only 49,26,000 bales have reached Calcutta and mill sttions upto the end of April 1957.

*

The jute goods market opened on an easier undertone induced by selling pressure in the Fatka coupled with mills' eagerness for forward business. Hessian 40″×10 oz Ready shaded to Rs 42.56 from Rs 42.58 while B Twills Ready dropped 45 nP to be placed at Rs 116.45. October-December Hessian 40″×10 oz was also shaded at Rs 42.61 while B Twills for the same position receded to Rs116.19 from Rs 116.62. Saturday found the market in no better condition as bear pressure continued unabated. Hessian section, was, however slightly better on balance with Hessian 40″×10 oz Ready done at Rs 42.75. Sackings were marked down with B Twills Ready at Rs 116.40. October-December Hessian 40″×10 oz was almost unchanged at Rs 42.60 but B Twills declined rather sharply to Rs 115.50 reflecting mills' selling for forward positions.

Trading commenced again on a quiet undertone on Monday with prices moderately marked down all along the line. Presumably reports of rain in some areas of West Bengal and Assam were responsible for the predominance of sellers. Toward the close, however, some support was forthcoming at lower levels and the market closed quietly steady. Hessian 40″×10 oz Ready came back to Rs 42.60 while B Twills Ready was marked down to Rs 115.82. October-December Hessian 40″×10 oz shaded to Rs 42.50 and B Twills lost another half point to be placed at Rs 115.

Hectic activity was noticeable on Tuesday when speculators pushed up prices throughout the day. Rumour had it that enquiries had come from Argentine for the purchase of hessian. Shippers were also rather keen in buying ready hessian and sackings. The result had been that, by the end of the day's transactions, Hessian 40″×10 oz Ready was pushehd up by nearly 55 nP to Rs 43.15 while B Twills Ready gained nearly Rs 1.38 to be finally placed at Rs 117.20. October-December Hessian 40″×10 oz also advanced to Rs 43.20 with B Twills for the same position regaining lost ground to Rs 116.60.

Prices declined sharply on Wednesday as bear pressure reasserted itself with redoubled force on news of poor shipping instructions as well as reports of rain in Daisee areas. The fact that the raw jute market showed no signs of weakening helped check the down trend and the market closed quietly steady. Hessian 40″×10 oz Ready came back to Rs 42.50 with B Twills Ready hammered down to Rs 115.60. October-December Hessian 40″×10 oz was placed at Rs 42.62 while B Twills was marked down to Rs 115.44.

The following table shows week's opening and closing prices:

	Opening	Closing
Hessians:	Rs	Rs
40″×10 oz Ready	42.56	42.58
,, Oct-Dec.	42.61	42.62
40″×8 oz ..	34.50	34.25
40″×7½ oz ..	32.12	31.87
Sackings:		
B Twills Ready ..	116.45	115.60
,, Oct-Dec.	116.19	115.44
Heavy Cees Green	117.50	116.25
Cornsacks ..	117.50	115.85
Cubans ..	139.00	139.00
A Twills ..	140.00	139.00
L Twills ..	129.25	128.00
D. W. Flour ..	139.50	138.00
Sugar Bags ..	130.00	129.00

The raw jute market opened steady with fair mill business reported done in Assam Bottoms and Indian Northern Bottoms at Rs 31.50 per maund and Deshal Mesta Bottoms at Rs 28.50 per maund for May-June delivery. On Monday the market ruled somewhat

World *of* Tea

Reaction to Excise Duty Proposal

IN Tea circles, there is a general feeling that the effect of the increase in freight as well as excise duty on tea will be a blow to the efforts that are being made to popularise Indian tea. It is also felt that the increased cost of sugar will curtail the internal consumption of tea to the extent of about 50 million pounds. Tea producers whose finances have been strained by the existing export duty as well as the levies of the Assam and West Bengal Governments will, therefore, find little comfort at the further increase of the excise duty.

There is already a surplus production of Common tea for which no market is found, due mostly to the competition from other countries which have no export duty. Again, an increase in world production appears probable. The effects of a serious over-production will naturally mean a severe financial strain on many gardens with the high level of cost structure and also the creation of a large stock of surplus tea which can probably be adjusted only over a long period.

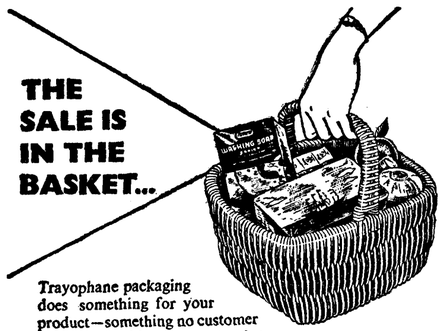
Meanwhile, reports from London have revealed that, with about 212 million pounds of tea lying in the warehouses or on the way to the UK, traders there are becoming resigned to a period of depression ahead. Its depth and duration is a matter of guess as the answer to the riddle can only be given by the British housewife. She hoards some tea when any danger to regular supply is feared, and she generally exhausts the stock before buying afresh. The trade is, however, hopeful that events moved so far in November last that cornering could not have been much and, within another month, consumption will begin to be reflected in heavier depletion of stocks. For the present, the prospects for tea are none too cheerful.

Well-known tea brokers in Calcutta have stated that the trend of prices in the coming months will depend on the figure of production and particularly by the size of the North Indian crop, which cannot be assessed with any accuracy until the end of August. Present indicatons are, that world crops are not likely to fall below last year. The problem will, therefore, be to find market for the surplus quantity.

In this connection, Sri B. C. Ghose, the Vice-Chairman of the Tea Board, has stated that the cost of production and labour charges are on the increase, while provident fund has just been introduced. He states: "How can the industry bear all these expenses if no incentive is given for increase in the consumption of tea". He concludes by stating that, unless the excise duty on tea is reduced, if not eliminated, there is not the least doubt that tea consumption in India will show a definite trend towards decrease.

In Calcutta, no Export Sale was held this week. In the Internal Sale offerings were 20,421 packages of Dusts for which there was a fair demand. Due to the new excise duty, the market declined and most sorts were 10 to 20 nP per pound easier. Medium Assams with good liquors were upto 12 nP easier, while Commons and Dooars were upto 20 nP below last rates.

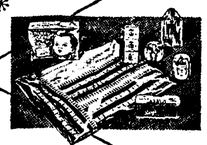
Medium CTC teas received more support than in recent weeks and the very few good CTC teas, on offer, were dearer. Following rates were quoted:—Medium Dooars Dust Rs 1.35 to Rs 1.45; Medium Assam Grainy Dust Rs 1.45 to Rs 1.50; Medium Assam CTC Dust Rs 1.50 to Rs 1.55 and Best CTC Assam Dust not quotable. There was no Leaf Sale.



In the Export Quota section, business was reported done in Special Licence at 20 nP per pound. The rates for New Season's quota and Shipping Licence were nominally quoted at 20 nP with sellers at 24 nP per pound in the case of the former, and at 18 nP with sellers at 20 nP per pound in the case of the latter.

In the Cochin market, a total of 2,215,000 pounds were offered last week. The quality of the offerings again showed a further decline. Best liquoring descriptions met with fair demand at irregularly easier rates. The lesser Nilgiris were occasionally dearer. Good Medium Brokens and Fannings met with keen competition at an advance of 10 to 15 nP per pound. Clean Leaf Medium and Low Medium Brokens advanced by 5 to 10 nP and similar Fannings by 5 nP per pound.

Black Leaf Brokens were keenly competed for at 5 to 10 nP above last levels; but similar Fannings again ruled easier. Whole Leaf grades came to a strong and generlly dearer market. Following rates were quoted:—Plain BP Rs 1.45 to Rs 1.50; Low Medium BOP Rs 1.60 to Rs 1.65; Medium BOP Rs 1.70; Good BOP Rs 1.95 to Rs 2.05 and Well-made OP Rs 2.30.



On the London market, 14,552 packages of Ceylon teas were offered this week. Good flavoury invoices were in keen requst and sold at high prices. Other descriptions were irregular and mostly easier. Medium kinds generally

I do not know how the notion has got around that a Budget is something to which one "reacts." On the day of the Budget and for a few days thereafter, every one asks every one else what his "reaction" to the Budget is. Newspapers, ever willing to peddle trivialities, print quantities of "reactions" the morning after the night before—of the Budget, I mean. Members of Parliament trooping out of the House, having just heard a whole series of complicated and highly technical proposals, tell waiting correspondents what their "reactions" are. One member says he is "dizzy", and another, I suppose, that he has a "belly-ache". Elsewhere, there are the prominent public men; a motley crowd mostly of ex-politicians, climbers on the make and socialites of all descriptions, whose views on all subjects under the sun are, for some obscure reason, conventionally thought important by newspapers. These people also tell us obligingly what their "reactions" to the Budget are. And, finally, there is the Stock Exchange. Here, of course, you have the typical Pavlov dog. The Stock Exchange in India does nothing but "react" all the time, and all its reflexes are conditioned by the flashes on the teleprinter. On the day of the Budget, the analogy assumes an almost nightmarish appositeness. One has only to see the operators actually at it, in the special Budget session, to be irresistibly reminded of the automatic salivation at the sound of the bell that Pavlov's experiment had so conclusively proved.

*

I am myself bothered on the Budget by telephone calls and personal inquirers asking for my reactions. I invariably tell them that the Budget is not something to which you react, but a set of financial proposals to be studied carefully before any opinion is hazarded. This is particularly so when Budgets are no longer the accountancy of the estimates of incomings and outgoings of a police state or even of a Welfare State. Indian Budgets of the last few years have become an instrument of social policy, a breeder-reactor of structural changes in the Indian economy. Their acceptability and inescapability are no longer solely dependent on what used to be considered the inviolable laws of "sound public finance." A whole series of new considerations has to be taken into account before you pronounce final judgment on it.

*

What are these considerations? Firstly, in its broadest statement, it is the achievement of the directive principles of the Constitution. It is wrong to consider this a remote consideration, since no act of the Government of India can be judged apart from these principles. The tangible form these principles have taken is that the Budget is simply an assessment of the Second Plan and stands or falls by its ability to secure the necessary finances for it: so, it can be criticised fundamentally only on two grounds: first, that it is not necessary to impose all the burdens that the Budget actually proposes to impose in order to obtain the finances needed for the Plan; and second, that the proposals, though they may secure the finances needed, have potentialities of defeating the Plan by generating forces that are inimical to its success. In other words, what is not open to critics to say at this stage is that the Plan should not be the starting point of measuring the wholesomeness or otherwise of the Budget.

*

This is a matter of crucial importance, and I should like to deal with it at some length. I have seen reports that an informal meeting of the Congress party, held to discuss the Budget proposals, made suggestions to the effect that the Plan should be whittled down if it meant the imposition of the burdens outlined in the Budget. Mr T. T. Krishnamachari is reported to have replied that it was not for him to modify the Plan, and any fundamental changes could be decided upon only by the Prime Minister and the Party. With great respect to the Prime Minister, I suggest that it is not even for him to decide fundamental changes in the Plan. And, of course, the Congress party is even less entitled at this stage to modify the Plan in any basic matter. In the first place, the Plan has been debated at length in Parliament, and adopted in its present form. Therefore, the only authority that can modify it would be Parliament, and not the Prime Minister. And, even if the ruling party wants to obtain formal approval of Parliament, it cannot morally do it on the strength of its present majority. For, the Congress party has been sent back to power principally on its promise to see the Second Plan through. Indeed, many of the opposition parties have bitterly complained that the Congress party has appropriated for its electioneering purposes the exclusive credit for the Second Plan's formulation. So, if the electorate has sent the Congress back to power on its promises to work the Second Plan, the party cannot, now that it is in convenient possession of power, disregard the fundamental mandate of the people.

*

So, the only considerations are, firstly, whether or not the Budget is designed to subserve the Plan and, secondly, whether it is inescapable for the purposes of the Plan. Taken as a whole, I do think the Budget proposals pass these two tests. And, what is more important, and as I shall show presently, it can be safely assumed that, other things remaining equal, the present proposals exhaust the total of tax burdens that are necessary for the Plan. This aspect of the matter will doubtless be dealt with in great detail in the Special Study that Indian Finance is bringing out. For my present purposes, I shall merely indicate how, with the current set of proposals, the planned expectations of additional tax revenues should be more than realised. (This, of course, on the assumption that the cost of the Plan does not go up further).

*

I shall give here a rough calculation that would indicate the truth of this assertion. Firstly, Sir Chintaman Deshmukh's Budget for the first year of the Plan expected an additional annual yield of Rs 35 crores from the new taxes he levied. Secondly, Mr Krishnamachari's first act on assumption of office as Finance Minister was an excise duty on cloth, the yield from which for the Second Plan period would be about Rs 100 crores. Thirdly, the mid-year Budget of last year is expected to yield Rs 100 crores for the Plan period. And, finally, this year's Budget is to yield an additional Rs 78 crores for the remaining nine months and Rs 93 crores for the next three years. All these add up to a total of Rs 732 crores. It will be recalled that this journal had suggested last year that, on the basis of an increased outlay of Rs 5200 crores, and a reduced quantum of deficit financing at Rs 700 crores, the estimated additional taxation would be only Rs 700 crores. Now that the new levies from the Centre have already achieved a figure higher than this estimate, there is no reason why further tax burdens should be in store for us.

*

So, as far as additional taxes are concerned, there is a case for saying that there has been more tax than there need have been. It is true that the Indian Finance estimates, under other heads like yield from existing taxes and market loans, are somewhat higher than those made by the Plan. But cogent reasons have been given for the reasonableness of those estimates. In any case, it cannot be the intention of Government that the only direction in which they will make any efforts to secure fresh resources is in that of taxes. I think that it is very necessary that Government should make it clear, to themselves and to others, that, while the inescapable burdens of the Second Plan would have to be borne by all of us, no burden that is not necessary for the purposes of the Plan will be laid on the people. This is the least they could do, when they sternly call for admittedly burdensome sacrifices. This is paramount, especially when the sacrifice is called for from the very poor, as has been done by the Finance Minister. It is his barest duty, therefore, to see that the estimated yields from the existing taxes are collected to the maximum and, secondly, that the loan programme is given the closest attention and receipts therefrom maximised.

*

On both these subjects, I have written often enough. On the subject of tax evasion, my feelings verge on fanaticism. I do not see either equity or logic in a system in which fresh burdens are imposed on the honest tax-payer, while the sharks and whales are allowed to escape from the net of taxation.

it is not as though the Government feel that there has been no evasion. Mr Krishnamachari has publicly endorsed Professor Kaldor's view that the unpaid taxes in this country are of a staggering order. He has also promised to turn his attention to the task of tackling this problem. In fact, with his customary energy, he has already set about initiating changes in the administrative machinery needed for the new tasks. While it is true that the three taxes, on income, expenditure and wealth, should afford an automatic cross-check of evasion in one or the other, the time taken for the emergence of the whole picture in the cases of individual assessees will not be less than five or six years. So, this automatic check will not be available till after the Second Plan period. Moreover, the notorious evader is the man who has perfected a whole series of "benami" transactions where the apparent is not the real. He will not be caught by self-balancing returns. At the present state of the law and ramifications of economic power, to fulfil requirements of proving that the apparent is not the real is an almost impossible enterprise. So much so, the Investigation Commission were authorised to relax, for their purposes, the requirements of the strict laws of evidence and benami. It should be a matter for serious consideration, whether or not a body similar to the Investigation Commission, with all their powers, should not be brought into

Bombay Review

Company Law Revision

AS foreshadowed in this column a fortnight ago, Mr T. T. Krishnamachari has initiated an examination into the new Company Law's working; but the enquiry now proposed is much more than a departmental affair. The task in this respect is entrusted to a compact and business-like Committee headed by Mr Viswanatha Sastri, formerly judge of the Madras High Court and latterly Chairman of the Tax Investigation Commission. The requisite talents are sharply reflected in the Committee which consists of Mr G Basu, pre-eminent among Indian auditors; Mr J. D. K. Brown, a Chartered Accountant cum industrialist and businessman; Mr C. C. Shah, a Bombay solicitor; and Mr K. R. P. Aiyangar of the Company Law Administration. The terms of reference follow the pattern that was suggested in this column; and the Committee is requested to make recommendations for rectifying verbal inaccuracies, drafting mistakes, obscurities and inconsistencies; for dealing with practical difficulties that have come to light in the sixteen months of the law in operation; and for making the final legislation less cumbersome and more concise and precise. The official communique recites the terms of reference in the following words:

> "The Committee is expected to recommend such changes in the Act as may be considered necessary (a) to overcome practical difficulties in its working and in its administration, (b) to remove such drafting defects and obscurities as may have interfered with the proper working of the Act, (c) to ensure the better fulfilment of the purposes underlying the Act, and (d) to consider what changes in the form or structure of the Act, if any, are necessary or desirable to simplify it."

The Committee is called upon to complete all this work in the space of three months. It will meet in New Delhi on Monday, May 28. The formal opening will, most probably, be addressed by TTK; and regional directors and state registrars of joint stock companies have been summoned to attend the session. The Finance Minister is likely to indicate his own impressions which, as usual with him, are in general but clear outline. He does not seem to be impressed with the need or functions of the Company Law Commission; nor does he seem to be much in favour of Government taking action on their initiative in the case of a Company's lapses. The shareholders are the proper agency for initiating action of this kind. It will be for the Committee to examine if the Law, as it stands now, duplicates the investigating procedures. There is, it is felt, far too much emphasis on formal details; and the danger of missing the wood for the trees is obvious.

By September, the report of the Viswanatha Sastri Committee may be expected to be in the hands of Government; and, if it receives the kind of drive for which TTK has become noted, the Amendment Bill may be introduced in the Parliament in the November session.

Like rapidity marks the progress of the scheme for setting up the Refinance Corporation. Mr H. V. R. Iengar, the Governor of the Reserve Bank, has had the necessary consultations with bankers both in Bombay and Calcutta; and it is possible to confirm that the Corporation's directorate will include what may be called the working bankers. The Exchange Banks will have one representative and the Indian Banks will have two. The Reserve Bank, the State Bank and the Life Insurance Corporation will be duly represented. The present Budget makes a provision of Rs 15 crores being made available to the Corporation as the first instalment from the US counterpart funds. This is in addition to the capital of Rs 12½ crores. For the first few months of its working, the Corporation will, thus, command resources up to Rs 27½ crores. All of which is an auspicious omen of a spectacular start and substantial service for the new institution.

Another gap in the institutional facilities, currently engaging the constructive consideration of the Finance Minister, is a Housing Finance Corporation. This gap is particularly felt after the several private Life Insurance companies were merged into the Life Insurance Corporation. Prior to this development, almost every insurance company was a regular provider of loan facilities against urban properties, principally in the more important cities. This kind of mortgage business has, however, not been taken up by the LIC. Beyond making advances against contracts completed before its formation but remaining unfilled, the LIC has not been entertaining any new proposals for mortgage business. This is because a number of advances made on house properties by some of the companies have revealed gross abuses, such as inflated valuation, borrowers of small credit standing and vexatious litigation. The LIC seems to think that, until all the pastness is cleared, it should refrain from fresh advances.

While, admittedly, gross abuses have come to light, and while the time and energy that should be devoted to the expansion of busi-

ness are partly consumed in the precincts of solicitors and courts, it is realised that genuine borrowers are now suffering from want of traditional facilities. To make up for the lacuna, TTK is reportedly examining how far a specialised institution will answer the purpose. It has to be particularly borne in mind that housing activity has been assigned a high place in the Second Plan. Arrangements already set afoot or shortly to be set afoot cover house properties in the region of Rs 10,000 to Rs 15,000. In cities like Bombay and Calcutta, the higher strata of the middle class have to think of houses in terms of a value of Rs 1 lakh or thereabout. This is due to the high price of land and to the consequent necessity of putting up buildings large enough to provide accommodation which can also be let out. Persons belonging to this category were the principal clients for the mortgage business of the old insurance companies. The Housing Finance Corporation will be greatly welcomed by the potential borrowers in this group.

To provide comments on TTK's Budget is beyond the purview of this despatch. But it is pertinent to report on Bombay's reactions. The first shock was expressed in the word "savage" being on everybody's lips. The targets and ramifications are much in excess of the apprehensions held in this respect. Business circles had resigned themselves to the inevitability of a number of new imposts. But, in the actuality, the new taxes, both in their magnitude and in their wide sweep, surpass the worst expectations. Something like consternation seized the Stock Exchange; and there was an avalanche of selling. At one stage, buyers had completely withdrawn. No one was prepared to take a firm view. There are reasons to think that second thoughts are generally of a sobering character. That price-inflation will be widespread, is feared; but it is argued that, as in the case of the November excise duties on cloth, consumer resistance will develop. If consumers are less greedy for the ordinary as well as the good things of life, that is, it is pointed out, just the purpose of the Budget. If austerity is accepted without grumbling or protest in the emergency of a war, why should there be any bitterness if a similar call is made in the emergency of the Plan? This is a healthy interrogation mark dominating the second phase of Budget reaction.

*

FOR THE INVESTOR

(Continued from page 955)

(iii) the allotment on the above basis being subject in each individual case to a limit of 20 times the existing shareholding.

The Company has started posting Allotment Letters to shareholders and expects to complete their despatch within a period of one week.

Dunlop Rubber Company (India) Limited has announced a right issue offer of 14,00.000 new Ordinary shares of Rs 10 each at a premium of Rs 5 per share to those shareholders whose names are registered as on the 11th June 1957 in the ratio of seven new ordinary for every eight shares held. After the right issue, the ordinary capital will be raised to Rs 3 crores from the present Rs 1.60 lakhs. The proceeds of the issue will be utilised for building a new tyre factory at Madras. Meanwhile, the company has recommended an interim dividend of 7½ per cent for the current year, payable on or after 19th June. 1957. Transfer Books are closed from the 4th to the 11th June, 1957.

BICs are now ruling better at Rs 6.40 as against a low of Rs 6.35 touched early in the week. Although it cannot be said that the impending closure of the Kanpur Textile Mills is completly over, there are some indications that the closure move will be averted for the time being. The Hungerford Investment Trust of Singapore is reported to have withdrawn its application from the Allahabad High Court for winding up of the BIC.

CLIVE STREET GOSSIP

(Continued from previous page)

being. This avoids, on the one hand, the blanket enlargement of powers under the Income-tax Act and, on the other, gives a compact body of investigators power to pursue confirmed tax dodgers without being encumbered by disabilities of a crippling sort.

*

So much for collecting the existing taxes. The other reliever of pressure on the taxpayer is the market loan. It seems common sense that it is better to tempt a donkey with the carrot than to beat it with a stick, especially when you are not a sadist, and all that you want is to make it move. Mr Krishnamachari should give immediate thought to the subject of Government loans and the money market by an inevitable extension of Stock Exchange health. An integrated policy for the purposes of finding resources for the Plan means a policy in which the dove-tailing of taxation policies into the policies governing the money market and the capital market is perfect. It is my firm view that not enough has yet been done to bring about this integration. The official attitude has been chicken-hearted about possibilities of obtaining money by loans though, year after year, there is evidence of the willingness on the part of the rich and the poor to part with money as loan to Government. It is high time that this gingerly approach is shed, and the beginnings are made of an intelligent total approach to the question of resources (not only for the public but also for the private, sector). It is only then that the real extent of the need for the burdens of taxes imposed will reveal itself.

*

The other criteria on which the Budget should be judged, I shall discuss next week.

EAVESDROPPER

... and YOU!

All 6,500 of us in Hindustan Lever, a small army of men and women, have something very important in common. For us, it is not enough to make soaps, toiletries and cooking fats—with each of our products we aim to give you what you need in unvarying quality, so that you—the families of India—may know and trust and use them.

For almost eighty years, we have grown with your growing needs. And, like a flowering plant, we have put forth new and exciting blooms—dynamic pioneering activities behind the actual manufacturing scenes. Our Market Research department—unique in this country—carefully studies your preferences, your habits and opinions, and guides production with its findings. Our Quality Control department carries out strict tests on each product from the raw material stage to the finished article. The Dalda Advisory Service and the Washing Information Service are there to help you make the best use of our products.

And what are these products? You know them well—Sunlight Soap, for instance . . . Lifebuoy . . . Lux . . . Rexona . . . Gibbs S.R. Toothpaste . . . Dalda Vanaspati . . . and others that have become household friends. We are proud that so many of you have chosen to use them every day in your homes. At the same time we realise that your patronage lays upon us a duty, that of keeping steady our common aim, to offer the very best quality and value to our customers . . . to you!

Bombay Review

Marketing Handicrafts

The Indian Co-operative Union recently conducted a survey of Indian handicrafts, under the auspices of the All-India Handicrafts Board, Union Ministry of Production. The survey finds that the marketing of handicrafts by private agencies is beset with major defects; they pay unfair prices, make illegal deductions and defer payments whenever possible. About 97 per cent of production is handled by private agencies.

This unsatisfactory state of affairs however does not impel the Co-operative Union to recommend the substitution of State enterprise. On the contrary. it has given a forceful warning against "the weaknesses of private enterprise producing an unthinking enthusiasm for State enterprise." The survey goes on to point out that the marketing of consumer goods, particularly those which are not articles of necessity for masses, is normally considered to be a legitimate field for private enterprise "even in socialist thought."

At present 3 per cent of the production is being handled by Government, co-operatives and other non-profit-making organisations is handled. The survey insists that there should be a fairly rigid demarcation of spheres between the two sets of marketing agencies. the State bodies confining themselves to the handling of production in the State factories and workshops. The defects of private marketing will have to be remedied through a series of reforms including legislative measures, State assistance in various forms, the organisation of small-traders' marketing co-operatives and appropriate changes in their working conditions.

Innumerable steps are suggested for improvement in the conduct of business in the emporia run by the Governments and by semi-official bodies. Among these is the suggestion for the payment of a commission of ½ to 1 per cent on the turnover to the staff; an idea indicative of the survey's faith in practices encouraged by imaginative private enterprises. Eventually, co-operatives are thought of as the panacea.

A survey of this character might have given some general idea of the repercussions of the changing social economic pattern on the market for the different types of handicrafts. The omission of this important point is to some extent justified, because this has to form an appropriate subject for the Research Division which the All India Handicrafts Board has been asked to open.

*

Food Situation

The present level of prices obtaining for rice and wheat, in Bombay is indicative of a shortage of foodgrains in the State. The price of rice which should not normally be more than Rs 17 per maund, now varies between Rs 22 and Rs 28 per maund, while imported wheat released by the Government at Rs 14 per maund is being sold to the consumer at Rs 18 and above.

While everybody is agreed about the scarcity of food-grains in the state there is a difference of opinion, between the Government and the merchant community about the real cause for this high prices of foodgrains. While the Government tries to put the blame on unscrupulous traders who are reported to be engaged in busy hoarding of the foodgrains, the charge is hurled back at the Government, by the merchant community for curtailing the supplies of foodgrains to traders. And accordingly they have clamoured for releasing the available stocks of foodgrains in the custody of the Government, which is estimated at not less than 70,000 tons in respect of rice and nearly 40,000 tons in respect of wheat so that the artificial scarcity in foodgrains would go away.

While in regard to the prices of wheat, the state Government has made up its mind as to the proper line of action to fight the rise in prices, in regard to the rice situation it is still undecided. The rise in wheat prices is reported to be confined to one variety-white wheat, the price of which had gone up from the Rs 14 per maund to more than Rs 20. Therefore it has been decided by the State Government, to withdraw the different varieties of imported wheat, and flood the greater Bombay markets with one particular variety of wheat.

In regard to the rise in the price of rice a similar course of action has been advocated by the merchant community since it is learnt, that the Government of India, is having huge stocks of imported Burma rice which can be released at Rs 16 per maund a price which is considerably lower than the prevailing rates. The Government is still undecided about this line of action because of the feeling that the Burma rice may not prove attractive to the people.

In its determination to fight the food scarcity, the Government of the State has decided to build up food reserves throughout the State, and for this purpose Union and State Government godowns are being taken over. Further, scarcity works had been started in areas where crops had failed.

GATEWAY MARKETS

Bullion Scales New Peak

BULLION prices shot up last week, scaling new peaks of the season on excellent spot demand throughout the country. When the taxation proposals were announced and the earlier fears of impost on bullion dispelled, prices rallied on consistent buying. Seasonal demand. expectations of higher demand as a sequel to the Budget proposals and the rumours that the authorities might decide to devalue rupee with a view to earn more foreign exchange. created boomlike conditions in the market. Towards the close, however, the market turned a shade quieter due to slight profit-taking, induced by talk of increased unauthorised arrivals.

The Silver section continued to depict a hardening tendency with sentiment stimulated by higher upcountry advices. Jeth delivery started at Rs 185.69 and, after shooting up to Rs 186.81 on heavy buying, eased off at the close to Rs 186.69. Ashad delivery opened at Rs 183.87 and. after touching a high of Rs 184.69, finished at Rs 184.00. Ready, after finding buyers upto Rs 190-75, closed finally at Rs 190-43.

After witnessing new high levels, Gold suffered a small setback on profit-realising. Jeth delivery started at Rs 108.69 and, after touching a new record of Rs 109.12, finished at Rs 108.62. Ashad delivery opened at Rs 107.69 and, after touching a low of Rs 107.44 and a high of Rs 108.12, finished at Rs 107.87, Ready began at Rs 111.69 and went up to Rs 112.12 before closing at Rs 110.14. Sovereign ruled very firm at Rs 72.

*

Oils and Oilseeds

The Oilseeds market in Bombay presented a very steady front with Castorseed establishing a new level of Rs 200.25. Best levels could not, however, be maintained till the close due to profit-taking.

Reports of business with the United States continued to stimulate sentiment in the Castorseeds section. It was reported that the USA had bought 200 tons of commercial castor oil at 19.75 cents per pound as against the recent nominal rate of 19 cents.

Conditions in the domestic market have continued to be satisfactory with the traders and crushers absorbing the steady inflow of the new crop. While the speculative activity and monetary stringency have accounted for a sizable discount at which spot goods are sold, nearly half of the crop has already been marketed. Meanwhile, Castor September delivery. after touching a new high of Rs 200.25 from Rs 197.25, finished at Rs 198.50.

Prices in the Groundnut section developed a hardening tendency due to demand from vanaspati interests. May delivery closed at Rs 178, while August, after opening at Rs 181.37 and touching a high of Rs 183.62. finished at Rs 183.00. In the ready section, bold quality was quoted at Rs 35.75 and Groundnut Oil at Rs 19.94.

Trading in the Linseed and Cottonseed sections was listless. Linseed September delivery moved between Rs 32.12 and Rs 32.44 and Cottonseed September between Rs 116.25 and Rs 117.00.

*

Yarn

The Bombay Yarn market continued to rule weak, prices of both art silk and staple-fibre yarns showing further declines from last levels in the absence of any support.

The ready section also felt the paucity of buyers as most of the weavers adopted a hand-to-mouth policy in regard to their yarn purchases, pending the correct picture o: the excise and import duties. The rayon market also ruled dull and was devoid of buyers.

*

Metals

The Budget proposals had little effect on the Non-Ferrous Metal market. Copper ready was quiet. quoting around Rs 175 per cwt as demand was comparatively lower than that of the previous week. The stock position of the metal was also healthy. Zinc, however, ruled firm at Rs 80 per cwt following the tight supply position. The bulk of incoming consignment was reported to have been sold out. The Lead market was inactive and quiet, the rate being quoted at Rs 82 per cwt. Tin also ruled rather quiet at Rs 130 per quarter as demand was not up to the mark.

On the London Metal Exchange, Copper was quoted lower at £233¾ per ton due to poor demand. Zinc remained almost static around £84 per ton. Some of the prominent zinc smelters in the USA were reported to have cut down their prices from 13.50 to 12.50 cents per pound. Lead ruled at £96 per ton. The market for Tin continued to rule weak for the last few weeks on lower Singapore advices. the rate being quoted around £764 per ton.

Bombay Review

World of Cotton

Speculative Buying at Low Ebb

THE Cotton futures market in Bombay was devoid of any activity during the week under review. In the absence of any speculative buying and the reluctance of sellers to do business, the rates for distant delivery showed a tendency to sag; and the absence of any new taxation on the commodity had no effect on the market.

Following fresh directives, issued by the Forward Markets Commission regarding the imposition of margin in Vijay delivery from June 1 and the notice of squaring-up of business in May Jharilla, prices plunged downward on heavy liquidation from speculative quarters.

The Forward Markets Commission issued two directives. From June. a margin of Rs 20,000 on 100 bales of every outstanding purchases will be imposed in June Vijay contract. In Jharilla May contract, all outstanding business will be squared up at the closing rate on May 23. These notices were issued before the opening of the markets, with the result rates tumbled down on panicky selling by bulls. Towards the close, however, prices improved moderately under short-covering, largely prompted by technical considerations following a sharp setback. The turnover was 5,000 bales. Vijay June, after touching a low of Rs 813, terminated at Rs 819.50, the highest touching being Rs 820. Jharilla May delivery improved to Rs 706 from a low of Rs 695.

The Spot section, however, continued to rule steady in view of the sustained buying interest shown by mills and the inclination to pay high prices for popular growths. Traders were. however, reluctant to part with cotton, save at their prices and consequently premia for many varieties hardened.

Mills' demand for foreign cottons also broadened. It was felt that a substantial business was likely to be put through immediately after the Government of India had announced an import quota against the USA procurement authorisation. Rumours were also current that the Egyptian Government had decided to raise its discounts presently offered to India from 10 to 13 per cent. This higher discount coupled with falling prices at the Alexandira cotton market was expected to help Indian mills to secure Egyptian cotton at lower rates.

Meanwhile, the Egyptian Government has published its cotton policy for the new season and has decided to allow forward cotton transactions for the new season as from May 18. It is reported that Egypt will do everything to increase its cotton exports in order that all cotton importing countries can be fully supplied. The Government will consequently collaborate closely with Egyptian and foreign firms. The communique, issued by the Egyptian Government, states further that a bonus of 10 per cent will be granted if the purchases are made in Swiss francs or in dollars. This will be the maximum bonus for September and October deliveries.

On the export front, bitter sentiment prevails in the trade over the ban on further sales of Indian raw cotton with effect from March 30 last. It is learnt., that apart from the official harassment in respect the grant of licences, shippers are also pressed by overseas buyers, specially from Japan, to expedite shipments. With the month of May nearing close, shippers are naturally in a quandry as to whether they will at all be able to honour their commitments, particularly for May shipments.

×

STATISTICS:

Of a total crop of about 48 lakh bales, more than 40 lakh bales are reported to have been marketed. According to official statistics. mills have consumed 2,724,023 bales of Indian cotton and 338,725 bales of foreign cotton during the seven months of the current season ending March 31, 1957 as compared to 2,568,772 bales and 339,395 bales respectively in the corresponding period of the prevous season.

The monthly average consumption this season, for the first seven months, has been running at 389,150 bales of Indian and 48,390 bales of foreign cotton. On this basis, consumption during the current season may total to 46 lakh bales of Indian and about 5.81 lakh bales of foreign growths. The carry-over for the next season is, therefore, expected to decline by at least two lakh bales.

×

NEW YORK COTTON MARKET:

The rise in new crop months provided the main feature of trading on the New York cotton futures market. A good part of the demand was connected with the continued activity in the Worthstreet cotton textile market where converters

The Food Situation

THE Budget having driven every other thought out of one's mind last week, one has one's excuses for not having written about a crucial debate in Parliament around the same time. I am thinking of the debate on the motion of thanks to the President's address, which was interrupted by the "explosive" Budget proposals of Mr T. T. Krishnamachari. Now that the first shock of the Budget is over, and its detailed discussion in Parliament is due only on the 28th and the days following, it may perhaps be worth while to deal with one of the subjects that was referred to by the President in his address and taken up in the debate that followed it.

The food position in the country, especially in relation to prices, has its element of paradoxes, if not anomalies. The principal obstacle in the way of any firm conclusions would appear to be insufficiency of data and conflicts even in official estimates. Often, there is considerable variation (to put it euphemistically) between the reading of the situation by the Centre and by the States. For instance, both in the President's address and in the statement on the food situation made by Mr A. P. Jain in Parliament last week, the claim was made (in the words of the President) that "food production has increased." Mr Jain himself gave certain figures, which I shall discuss presently. His conclusion also was that the total production of cereals was higher than that of last year or the year before, and therefore there was no cause for alarm. But this reading is somewhat difficult to reconcile with the reports from eight of the fourteen State Governments that crops have been damaged to a considerable extent. One notorious reason usually given and generally thought to be well founded for this variation is that the State Governments are given to exaggerating their difficulties in order to obtain from an indulgent centre help that they really do not need, or help that they could avoid if only they did their duties more efficiently and wholeheartedly. Local Governments notoriously lax in procurement even during periods of controls have become less and less willing to take the administrative steps to see that hoarding of foodgrains does not take place. Local pressures of various sorts, and the desire not to court unpopularity by being strict in their methods are responsible for understatement of production figures given out by State Governments.

Moreover, it would appear that, at the first sight of trouble, a hue and cry is raised with barely concealed suggestions of regional discrimination on the part of the centre. The centre is understandably (though praiseworthily) sensitive to such accusations; and, in its desire to avoid seeming heartless and step-motherly, it takes on responsibilities that it should squarely have placed on the shoulders of the States. While it should help where the States are in genuine difficulties, it is the centre's plain duty to tell the States that abdication of responsibility at the first encounter with difficulties is intolerable and irresponsible, especially in the context of the Second Plan, in which every grain imported is putting a strain upon our scarce foreign exchange resources.

That there has been distress in certain parts of the country owing to regional failure or damage of crops on account of natural calamities, cannot be denied. But, even here, the difficulty has been in respect of the prices rather than in the absence of the commodity itself. On the production side, Mr Jain gave certain figures which are worth quoting. Rice output has reached an all-time record of 28.1 million tons. As for wheat, in spite of recent damages in certain parts of the country, the production is expected to be about 8.6 million tons against 8.3 million tons of last year and the record figure of 8.8 million tons of 1954-55. The production of coarse grains has also recorded an increase over last year, though it was about three million tons less than the record of 1953-54. Altogether, the total production of cereals this year is expected to be about 56.2 million tons, which is higher than either last year or the year before.

It is obvious that agricultural production, especially of foodgrains, should show massive and spectacular increase if the basic conditions for the success of the Second Plan are to be satisfied. There has been persistent misgiving that the utilisation of the irrigation projects, big and small, has not been as extensive or as productively efficient as it should have been. This impression was deepened by reports of the discussion at the conference of Development Commissioners at Missouri recently. Moreover, the momentum released by the Community Project idea has not been uniformly self-propelling with the result that stagnation has set in once again in areas where the original official impetus has been withdrawn. The crucial test of the success of the Community Project idea would still be its ability to achieve the revised targets of the Second Plan in the matter of agricultural production.

One other factor that seems to be responsible for a certain apparent sense of confusion in the agricultural part of our plan is the presence of ideological conflicts. There is a general impression that the ruling party is paralysed by a divided mind over the adoption of co-operative methods in agriculture. There is also a clearly discernible division in party orientations over the worthwhileness of the Chinese example. It will be recalled that the delegation that visited China to study agricultural methods produced an enthusiastic majority report and a correspondingly depressing minority report. Both views have apparently adherents in the party and, what is more interesting, there is a certain regional characteristic about the polarisation of these views. It is now an open secret that the Congress in the UP is opposed to the whole-sale adoption of the cooperative farming idea that has apparently found ideological favour with the official national party thinking on the subject.

All these differences would be of no practical importance, if it were not for the fact that they are interfering in the bending of the real energies of the people toward food production. Obviously, there is need for caution in any attempt at forcing the pace of structural changes in the agricultural economy, if it means slowing down of production. The cooperative idea need not necessarily mean the abandonment of traditional satisfactions from agricultural ownership and vocation, and therefore opposition to it on that score need not be insuperable. On the other hand, the record of cooperative endeavour in the country has not been very encouraging even in its comparatively traditional fields. Therefore, it would appear to be the simplest act of practical prudence to go slowly from cooperative credit, warehousing and marketing to more complex forms of communal and cooperative endeavour. Meantime, the idea needs to be worked out in all its implications in pilot projects for which the villages obtained under Gramdan offer the most appropriate experimental material.

But, from the more immediate point of view, the difficulties of the food situation are mainly in respect of prices. The seriousness of this aspect of the matter has, one is glad to report, been fully realised by Government. This is to be inferred from several facts. First, the President himself referred to it in his address. Secondly, Mr Jain announced in Parliament last week that Government were setting up a committee to investigate fully into the cause of rise in food prices despite higher production. The committee is to suggest "immediately and from time to time remedial measures which would prevent speculative hoarding and arrest undue rise in prices." Thirdly and perhaps most importantly, Government's desire to have firm control over food prices is to be inferred from the Budget provision of Rs 25 crores for the creation of a fund for food subsidy. At a press conference last Saturday, the Finance Minister gave a definite promise that he would do what he could to bring food prices down. According to him, the prices are now "just on the borderline of being reasonable and unreasonable" and he said that more fair price shops would be opened to see that the prices did not get out of hand.

Though a committee has been appointed to go into the causes for rising food prices and to suggest remedial measures, Mr Jain has argued that the prices have not gone up as high as is sometimes made out. His thesis is that, with 1952-53 as base year, the latest whole-sale index for rice is 103, for wheat 90 and for cereals, taken together, 100.5. This shows "that the current prices are not generally higher than 1952-53 and that 1954 and 1955 were unusually low price years and the continuance of these low prices could not be expected."

The reasons for increased prices have, despite the appointment of a committee for inquiring into them, also been anticipated both by Mr Jain and by the other participants in the debate. They are, of course, well known and well worn: increased consumption, because of increased purchasing power in hands that had hitherto been empty; and speculative hoarding by consumers because of constant talk of shortage and high prices. The remedial measures are also well known. On a long-term basis, the only solution is more production with no unmanageable increase in the number of mouths to feed. On a short-term basis, hoarding must be made firstly impossible by credit control leading to monetary stringency and secondly unprofitable by release of stocks held by Government through fair price shops, whose number must, if necessary, be increased. As yet, no suggestion has been heard for the revival of controls and rationing, but time alone will show whether the present arrangements will be adequate to meet the situation. In any case, the report of the committee appointed to help Government in the matter is being awaited with interest.

North Indian Notes

Life Insurance after Nationalisation

The statement of business transacted by the nationalised Life Insurance Corporation for the year 1956 shows a fall of Rs 68 crores, from the figure of Rs 268 crores in 1955.

Speaking in the Lok Sabha, the Deputy Finance Minister Mr B. R. Bhagat, traced the cause to the absence in 1956, of certain favourable factors, which obtained in the two previous years, such as staff insurance schemes, estate duty legislation, and substantial reduction in premium rates in 1954. While the staff insurance scheme produced business valued at Rs 18 crores in 1955, the reduction in premium rates in 1954, provided an incentive to policy holders to convert their old policies into paid-up policies and take fresh policies at reduced premium rates and this resulted in an unduly large increase in new business estimated at Rs 36 crores each in 1954 and 1955. Similarly the estate duty legislation also led to the issue of a large number of policies as the purchase of such policies enabled the lives assured, to reduce the incidence of estate duty.

In view of the fall in business in 1956, the corporation has taken some new measures to step up business. The restrictions on assurance of the lives of women have been removed, and unconditional policies without extra premium being charged, are to be issued to army and navy personnel provided they have no intention to engage themselves in aviation gliding or parachuting.

Superannuation schemes have also been formulated, the object being provision of pension to employees on their retirement from service. With a view to giving these benefits to industry at the lowest possible cost the corporation has decided to offer specially reduced rates for these schemes.

In view of the above measures the business of the corporation is likely to increase in the coming years, and the monthly break up of the figures for 1956 seems to support this view. For the heavy fall in business was mainly confined to. September and October and was brought about by a dislocation of work resulting from movements of staff fom one office to another consequent upon the formation of the Life Insurance corporation. The volume of business during the remaining two months was satisfactory and showed progressive improvement

*

Railway's Progress

The development programme chalked out for the railways under the Second Five year plan is in danger of grave setbacks in view of the reported shortage of steel required by the railways. The Indian railways received only 50% of their requirements of steel last year, and current available supplies are even lower, making up only about 45% of the total requirements at 1.6 million tons for 1957-58.

The natural consequences of such a state of affairs with regard to steel supplies, will be delay in the completion of a number of line capacity and other developmental works. Even the Second Five year plan is likely to suffer greatly, if railway expansion is to be held up.

The requirements of steel are in respect of permanent way, wagon manufacture, bridge girders and workshop use, and this rules out possibilities of indigenous materials being used as substitutes for steel.

This short-fall in the supply of steel, has stirred the central Govt. to immediate action on lines calculated to improve the situation. Firstly with effect from April 1st., 1956, the responsibility for the procurement of the more important categories of steel has been transferred from the Ministry of Commerce and Industry to the Railways Ministry. This was done to ensure expeditious supplies of the material.

Now the steel procurement unit of the Railway Boards office in New Delhi is responsible for the procurement of the various categories of steel.

Secondly, a railway steel procurement mission to the UK and other steel producing countries is expected to start from the country soon. To facilitate the work of the mission, the various Indian embassies at foreign centres have been asked to contact the various sources of supply, and they have been furnished with the details of the steel requirements. The mission is likely to be given fairly wide powers, to negotiate the supply of steel, and to conclude contracts on the spot, without having to refer back matters to New Delhi.

NORTH INDIAN MARKETS

Unstable Sugar Markets

SUGAR markets in all important centres are now in an unstable state following the proposal of an increase in the excise duty. Sugar factories are reported to have put the ex-mill rates by about Rs 3 per maund. in addition to the enhancement of Re 1 they had effected before in anticipation of the rise in excise duty. Traders are, on their part, are quoting varied rates, ranging between Rs 7 and Rs 9 per bag higher than on the Budget-eve, not realising the full implications of the increase. while retailers have been charging upto 12 nP per seer more.

Though traders had been expecting a rise in excise duty to balance the rumoured abolition of Sales Tax on sugar during the last few days, the steep rise in the impost without any relief in Sales Tax came as a surprise to many. The markets are, therefore, in an unsettled condition.

The general opinion is, however. that the present prices have already discounted the rise in excise duty since the commodity had already gained Rs 2 to Rs 3 per bag. A section of the trade feels that the future tendency will depend on the attitude of the mills, which may have to share a portion of the increased impost in the event of consumer resistance to very high prices.

Meanwhile, in the Hapur market, wholesale rates are quoted at Rs 29 to Rs 32 per maund. according to quality.

Sugar production, during last month. amounted to 277.000 tons, bringing the total output upto April 30 of the 1956-57 season to 18.22 lakh tons. The corresponding figure for last season were 2.51 lakh tons and 16.53 lakh tons respectively. Offtake of sugar from factories. during the month under review, was 1.98 lakh tons as against 1.25 lakh tons during April, 1956. Total offtake of indigenous sugar. during the first six months of the the current season comes to 10.35 lakh tons as against 8.05 lakh tons during the same period last season. Stocks, as on the 30th April, were 13.14 lakh tons as against 12.58 lakh tons on the same date last year.

*

Gur

Gur prices have remained more or less unaffected by the sharp rise in sugar on account of the slack demand in the face of sufficient stocks. In the Hapur market, arrivals were scanty, averaging 50 maunds. Stocks were estimated around 96,000 maunds. Total arrivals. during the current season, were estimated at 4.60 lakh maunds. Rate for the ready position is quoted at Rs 11.50 to Rs 12.25 per maund, while Kotha wet and dry mixed quality is quoted at Rs 11.50 per maund.

Foodgrains

Thanks to the Food Minister's Statement that production in the country has increased considerably, conditions in the Foodgrains market have remained quiet with prices showing a slightly easier tendency. In the Hapur market, Wheat has recorded a fall of 50 nP per maund to Rs 14.75 for the average quality and to Rs 16.25 for farm produce. Outside support for the commodity is now slack, stockists being the main purchasers.

Demand for Rice continues to be good, Basmati quoting Rs 24.00 to Rs 28.50 per maund, according to quality. Gram prices have recorded a modest fall, while Barley and Bejher have eased slightly due to increasing stocks. Pulses have also recorded a fall in values. Arhar easing off by 50 nP per maund.

Prices in the Delhi grains market have. however, shown a rising trend. Wheat has recorded a rise of about 50 nP to Re 1 per maund due to slack arrivals. After an early spell of steadiness, Gram rates have eased slightly due to lack of outside enquiry. Maize and Bajra have slightly improved as a result of good enquiry, while Urad has hardened by about Rs 1.50 per maund due to slack arrivals.

In the Bombay grains market, the recent upward trend in Rice has gathered a fresh momentum with prices of several qualities recording a rise of Rs 5 to Rs 7 per candy. This is mainly due to sustained demand from deficit States. Trading in the Wheat section has been quiet, thanks to the increase in Government supplies.

In the Coarse grains section. Bajra prices have hardened by Rs 5 to Rs 7 per candy, while Jowar prices have eased by about Rs 5 in view of the subdued buying interest in the face of larger arrivals resulting from the improving position regarding railway booking in the growing areas.

*

Shellac

The Shellac market in Calcutta ruled very steady with Pure TN quality hovering narrowly around Rs 84 per maund. Shipments, during the month up to 15th. were higher at 17.948 packages as against 12.942 packages in the corresponding period of last month. This improvement in shipment is mainly due to the buying interest shown by the USA and the Latin America. Stocks are ample at present and prices are generally considered to be reasonably profitable.

In London, business remains rather limited. Sellers are reluctant to extend their commitments in forward at discounts on the quoted rates. June delivery is quoted at 217sh.

The Peninsula

A Meeting Postponed

THREE of the five Zonal Councils met in quick succession after the elections. All the three belonged to Northern India. What exactly happened in the meetings is not fully revealed to the public and the brief press reports gave little clue to the volume of constructive work done. Possibly, the discussions were of an exploratory character. providing a beginning and just registering a new initiative. Even that way, the meetings should have been of value. They demonstrated the earnestness of the States concerned to bring problems to a common forum and to initiate joint measures.

For some reason or other, the Southern Zonal Council has not yet met. It is learnt that the inaugural meeting may take place in June or July. A Hyderabad news-message says that the Andhra Pradesh Chief Minister has a tour programme which extends up to the end of the third week of June and till then the meeting cannot take place. Presumably there is only languid interest on the part of the Governments concerned. If it is really so, it would be pitiable. Because, there are a number of urgent problems which call for joint discussions and a larger measure of mutual understanding and good-will. than discernible at present.

It is heartening to see that Mr Bhaktavatsalam. the Madras Food Minister has suggested a conference of the Food Ministers of the Southern States to consider steps for maximising food production and for taking co-ordinated measures in the sphere of movement and distribution. From what Mr Bhaktavatsalam told a Press Conference, it would appear that he himself would invite his counterparts from Andhra and Kerala and Mr A. P. Jain, the Union Food Minister, to participate in the Conference. The venue would be fixed at any convenient centre.

The proposed conference is bound to be useful as some States in the South are deficit areas and others can afford to help with supplies. A regional approach could be the best. Moreover local scarcities are often caused by unchecked and largely unnecessary flow of food grains from one State to another.

But food is only one of the many items on which inter-State cooperation in the South is called for. The border disputes carry no urgency about them; they can lie over for any length of time. though, as was found in the recent visit of Mr Nijalingappa to the northern borders of Mysore, these disputes have the effect of keeping alive emotional tensions between linguistic groups, who in ordinary times lived together in amity with scarcely any awareness of the differences in language.

Economic issues are clearly more urgent. The Second Plan has got into stride. Finance is all important and the present tendency of the State Governments to importune the Centre for larger and larger funds is understandable. But no less important is the need for the amicable settlement of disputes over the sharing of certain natural resources in South India. There is, for instance, the question of the river waters of Travancore which the Madras Government have been desiring to divert in part. for the use of the Madura District.

The development of Cochin Port and possibly of another major port in Mysore is a matter of regional rather than mere State interest. The commercial hinterland to these ports spills over State boundaries. As transport has to be economised by every possible means the bare requirements of the economic development in the South dictate complete understanding on the obligation of the different States in the matter of routing freight.

Then there is the immense economic prospect opened by Neiveli. The supply of lignite and electrical energy from Neiveli could reach Mysore, Kerala and Andhra. These governments could put their heads together and formulate agreed schemes for industrial development, and ways and means of sharing scarce technical personnel. All these are matters which could be discussed in the comparatively cosmopolitan and disarming atmosphere of a Zonal Council rather than on a bilateral basis, where the obsessions of the past would only be too prone to butt in and spoil chances of understanding.

*

WORLD OF TEA

(Continued from page 964)

declined by one to two pence per pound, while poor liquoring sorts were two to three pence lower. Also, 5,375 packages of Southern India teas were offered. There was a rather weaker demand and prices were mostly one to three pence per pound lower.

Tea stocks in London, as on the 10th May 1957, were 156.60 million pounds as against 153.00 million pounds in the previous week and 105.14 million pounds a year ago. Landed between 4th and 10th May 1957 were 14.58 million pounds, while deliveries during the same period were 11.25 million pounds.

*

WORLD OF COTTON

(Continued from page 970)

were buying print cloths and broadcloths for third and fourth quarter deliveries. Distant October, however, continued to sag owing to the Washington uncertainties; but eventually made some recovery in other positions. Spot was quoted around 35.40 cents per pound.

×

LIVERPOOL COTTON MARKET

Values on the Liverpool cotton futures market improved slightly with mill fixations in the nearmonths, while spot-house hedging transfers into more forward deliveries were offset by some trade buying in these positions. Sudan contract remained inactive with buyers only at much lower differences. Distant position continued under small selling pressure.

×

CLOTH AND PIECEGOODS:

Conditions on the Bombay Piecegoods market continued to rule better, thanks to demand for a wide range of qualities. The offtake was also satisfactory, the main consuming centres being Amritsar, Kanpur, Uttar Pradesh, Bihar, Madhya Pradesh. Calcutta, Delhi and South India.

On the export front, however, conditions remained more or less unchanged. Stray enquiries were received from Hong Kong and Singapore. There were hopes of a larger business being concluded with Burma as import licences were said to have been issued to some of the Joint Venture Corporations. Indonesia is said to have booked some quantities, while moderate business is reported done with Australia.

SOUTH EASTERN RLY. TENDERS

The General Manager, S. E. Rly., Garden Reach, Calcutta-23 invites sealed tenders for supply of the following materials·

Tender No. CON/GM/16/PIPES/F1/57 for supply of 1,62,000 Rft. 'B' and 'C' class Cast Iron Pipes or alternatively Asbestos cement pressure pipes 4", 5", 6" & 8" dia. or Galvd. Iron Pipes 4", 5" and 6" dia.

Earnest money is Rs 1,000/-. Tenders will be opened on June 14, 1957 at 12.00 hours.

Quotations which are not subject to grant of or recommendation for import License will be preferred.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta—23 on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Railway, Garden Reach by· local firms.

The tenders should accompany a receipt from the Chief Cashier, S. E. Railway, Garden Reach, Calcutta for amounts towards earnest money as above without which the tender is liable to be rejected. Approved Contractors who have already made a permanent deposit of Rs 1,000/- with the Controller of Stores, need not pay the Earnest Money.

Firms not on this Railway's list of approved contractors must enclose a valid Income-tax clearance certificate with the tender.

8-15. GENERAL MANAGER.

SOUTH EASTERN RLY. TENDERS.

The Controller of Stores, Garden Reach. Calcutta—23, invites sealed tenders for supply of the following materials:

1. Tender No. CON/COS/9/ENC/BSP/WP/3862/59/GA/57 for **supply of** 40 sets of (i) Taps and Dies 1" to 1½" B.S.W. and (ii) 60 Nos. stock handles for the same. **Earnest** money is Rs 400/-.
2. Tender No. CON/COS/10/ENC/BSP/WP/3848/15/B/57 for supply of (i) 3 Nos. Winch Crab 5 tons capacity and (ii) 3 Nos. Winch Crab 10 tons capacity. Earnest money is Rs 300/-.
3. Tender No. CON/COS/11/ENC/BSP/WP/3894/34/F1/57 for supply of 3570 Nos. C.I. Manhole cover 1'—6" dia. complete with frame. Earnest money is Rs 500/-.
4. Tender No. CON/COS/12/ENC/BSP/WP/3661/2/F1/57 for supply of 20 tons wire for fencing 7 stands 3 S.W.G. × 14 S.W.G. Earnest money is Rs 450/-.
5. Tender No. CON/COS/13/WP/933/SPL/OD/F2/57 for supply of 7 Nos. Signal Bracket 3 doll type A (Lattice) Main Post 21'—9". Earnest money is Rs 300/-.
6. Tender No. CON/COS/14/WP/CM-1/196/GB4/57 for supply of 254½ **CWt.** G.I. Wire 8 S.W.G. Earnest money is Rs 250/-.

Tenders will be opened on June 4, 1957 at 12.00 hours.

Tender forms are obtainable from the Controller of Stores (Construction), Garden Reach, Calcutta—23 on remittance of Rs 2/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, Garden Reach by local firms. Closing date 17-6-57 at 12 noon. Firms not on the Railways list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender. Earnest money is Rs 500/-.

S 13

SOUTH EASTERN RLY. TENDERS

The General Manager, South Eastern Railway, Garden Reach, Calcutta—23 invites tender No. GM. 17/57/9018-R(57) for supply of 1 No. Morris M. 60 or similar 3-Ton capacity Mobile Crane Petrol-Electric driven, 21' Swan necked jib complete with all equipment and accessories. Makers: M/s. Herbert Morris Ltd., England.

Tender forms are obtainable from the Controller of Stores, S. E. Rly., Garden Reach, Calcutta-23 on remittance of Rs 5/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, Garden Reach by local firms. Closing date 17-6-57 at 12 noon. Firms not on the Railways list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender. Earnest money is Rs 500/-.

S 13

Madras Review

South Indian Notes

CR and the Budget

No other criticism of the Union Budget has been so stinging as what Mr C Rajagopalachari says about it. CR is vehemently opposed to the tax on wealth and expenditure which he fears will lead "to great oppression, utter misery and general demoralisation", and that the measure of official scrutiny into individual and family finance necessitated by the new taxes will amount to a serious inroad on the sacred secrets of family life and will generate wide-spread corruption. He even goes to the extent of forecasting revolt and conspiracy, when the restraints that hold now are no longer capable of doing it. Instead of pursuing with these taxes, CR would have a curtailment of the Second Plan. If that is not done, the consequence he sees ahead is calamitous and might include the forfeiture of democracy.

The two new taxes which have infuriated Mr CR admittedly form an untried experiment. Though these levies have been advocated by eminent economists in Europe and America, no government had hitherto come forward to implement them. The practical difficulties emphasised by the advocates themselves must explain this universal hesitation. In India, all these difficulties are recognised and understood.

The taxes are proposed, in order to close the fiscal net on sections of the community, where much taxable capacity remains untapped or elusive. The Union Finance Minister is fully aware of the risks involved and this very awareness must impel suitable administrative measures. As the expansion of State services and a steadily increasing sphere of contacts between the official and the private citizen are inseparable from a welfare state, CR's picture of a future in which no family secrets could be kept is inescapable, where it is not overdone.

*

Livestock Improvement

Among the several measures, adopted from time to time, by the Central and State Governments, to bring about livestock improvement, the Key Village Scheme. is the most important. The scheme was sponsored by the Indian Council of Agricultural Research. Under the scheme, Key Village Centres are to be set up in all the states, with Key Villages at the bottom of the gradation and the Key Village Block occupying the middle position.

In Madras State the scheme was initiated in 1954, and has made commendable progress as judged by the number of various Units of livestock development. At present there are five Key Village centres in the State, and nearly 20 K-y villages blocks. Further, five supplementary extension centres, for the systematic utilisation of bulls in the Key Villages were also started in 1956-57. This progress indicates that the target of the Second Five Year Plan, for setting 18 Key Village Units and 40 supplementary extension centres is well on the wav of realisation.

But. the progress of the scheme in the state, has raised the new problem of efficient technical supervision. Such technical supervision is called for in respect of artificial insemination, regular selection and inclusions of calves under the subsidv scheme and periodical culling of calves not coming upto the standard. Provision of such staff has become the responsibility of the State Government, which necessitates vast expenditure. An appeal to the Central Government to share part of the expenses was made by Mr M. Bhaktavatsalam. Home Minister of Madras. when he inaugurated the first Southern Regional Seminar of Key Village Officers in Coimbatore.

The scheme embraces both the breeding and feeding aspects. But while the breeding aspect is easier of achievement the problem of increasing feeds and fodder in the rural areas is a tremendous one. Though for the development of fodder production, a subsidy has been provided, under the All India Key Village Scheme, a lasting remedy for it could only be found when the villagers take to mixed farming as well as co-operative system of land utilisation. The cultivation of leguminous fodder crops. besides providing highly nutritious fodder for the livestock, would also enrich the soil fertility resulting in higher agricultural production and consequently higher income to the cultivator.

SOUTH INDIAN MARKETS

Taxes Crush Crushing Industry?

TRADING in the Madras Groundnut Oil market came to a standstill last week following the announcement of the increase in excise duty on non-essential vegetable oils. The duty has been raised from Rs 70 to Rs 112 per ton. It is generally felt that the oil-crushing industry, which has already been finding it difficult to compete with the small-scale crushing units enjoying concessions in the shape of exemption frm taxes and duty, will be seriously handicapped. The only redeeming feature is that excise duty will have to be paid at the rate of Rs 112 per ton only for clearances of 125 tons. The exemption limit of 125 tons has been reduced to 75 tons and, for clearances above 75 tons and upto 125 tons. the old excise duty of Rs 70 per ton will have to be paid.

Even with the old excise duty of Rs 70 per ton, several crushing units have had to close down or curtail production; and the present heavy impost is the proverbial last straw on the camel's back. It is generally feared that the crushing industry will be badly hit and several big units may have to go out of business. With the result, the rate is nominally quoted at Rs 339 per candy for the ready position.

In the seeds market, rotary crushers purchased only small quantities around Rs 164 per candy for superior oil-quality and Rs 159 for the bold variety. Tanjore and Vridhachalam continued to report decent arrivals of summer crop; but prices were unchanged from previous levels.

It is reported that, in the Pollachi area. only one-eighth of the area under groundnut has so far been sown after the recent rains and that further rains are needed to complete the sowings. In South Arcot area. the summer seasonal rains have failed this year and the outturn is expected to be adversely affected unless there is rain within a few days' time. Other things being equal, first arrivals of the main summer crop (Coromandel variety) are expected about the middle of June.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate and there was a steady clearance at unchanged levels. Arrivals of Buff hides were also moderate with prices ruling steady due to local demand. Prices of Cow Calf remained unchanged, while those of Buff Calf were easier by six ples per pound.

On the export front. business was difficult on account of buyers in the UK adopting a go-slow policy in regard to their purchases. Some businee was, however, reported done in 8-8½ lbs at 44d, while 10-12 lbs were freely sold at 30d. Light weight runs, fourths and fifths were better at 52d.

In the Tanned Skins section. arrivals of Goat and Sheep skins were fair and there was a normal clearance with local prices recording an advance of one to two annas per pound. On the export front, Madras sellers were reported to have put their prices further by 3sh 6d. With the result, only stray sales were done at rates acceptable to Madras sellers.

The market for Raw Hides ruled steady with Madras tanners operating in a normal way in all sections.

In the Raw Skins section, prices ruled higher, Goat improving by Rs 25 and sheep skins by Rs 15 per 100 skins.

*

Coconut Oil

It is learnt that forward trading in Coconut Oil has already started at Alleppey and Cochin with effect from May 20. The Oil Millers and Merchants Association, Alleppey, has been recognised by the Forward Markets Commission for the purpose of conducting forward trading in the commodity. In view of the representations made by the Cochin Oil Merchants Association, facilities for futures trading in coconut oil are extended to Cochin also by the Commission. The Cochin Association will, however, carry on the coconut oil futures contracts under the recognised Alleppey Association.

*

Cashew

Cashew crop this year, is estimated at 85,000 tons in Africa and 70,000 tons in India. Large quantities of raw nuts are available, and the processors are operating their factories without much encouragement from the American market, where prices are ruling around 48 cents per pound.

According to the latest reports from Cochin. the State Trading Corporation may figure more prominently in the export of Cashew to East European countries. Russian buying, during the first quarter of this year, was about 1,000 tons and another 1,200 tons shortly to be bought. The STC, for passing the order along, is to get 4 per cent commission.

*

Pepper

Steadier conditions were noticed in the Pepper markets. At Alleppey, the rate is hovering around Rs 600 per candy. Judging from the working of the markets at all the primary centres, it appears that the growers will remain rather free sellers at round about the level of Rs 600.

Advices from Singapore have stated that. though arrivals from Sarawak are on the upgrade, the quantity involved is not so heavy. Foreign buyers as well as exporters at Singapore are, however, expecting pressure of arrivals in the very near future. Any further hardening of prices is sure to encouage expansion in arrivals from Sarawak where holders are reported to be holding up shipments whenever prices are down.

Mahindra & Mahindra Limited

*

Exceedingly a Successful Year

*

Manufacturing Difficulties

*

Mr. K. C. Mahindra's Survey

The following is an abbreviated version of the Speech delivered by the Chairman Mr. K. C. Mahindra at the eleventh Annual General Meeting held in Bombay on May 22nd, 1957:

This is the first occasion on which the Chairman of your Company is addressing the Shareholders. It is a matter of satisfaction and a little pride that the report which has been presented to the shareholders reflects the conclusion of an exceedingly successful year of operations for the Company. It has been a year where high levels of sales and earnings have been reached. This achievement was possible principally because of your organisation keeping pace with the demand of an expanding economy. Illustratively, for instance, Government put through a programme of heavy purchasing of Steel from abroad. As one of the principal importers of steel, your Company was in a position to service this demand for additional steel and thereby continue to occupy a dominating position in imports. It should be mentioned that under the very rigid regulations governing steel business, the profit margins are extremely low and importers and dealers usually depend upon large volume in order to meet the substantial expenditures of such an operation.

The turnover in Jeeps and allied vehicles was about 20% more than the previous year, but a very satisfactory improvement was made by the Spare Parts Division. Tractors achieved a remarkable advance in sales, almost tripling the record of the previous year. With the commissioning of your new Trailer factory at Pimpri the Company is now in a position to embark on the manufacture of heavy Trailers, and several steps are at present being taken to improve upon the techniques of production, and equip ourselves to service the demands for heavy trailers in the country.

The problem of manufacture of Jeep components has been our foremost concern, and while the progress so far made is in accordance with the progressive phases of manufacture presented to Government in 1955, it is early to say whether the restrictions now enforced in respect of import of capital goods and tooling would seriously disturb the schedule of timing. Every effort is being made to overcome the difficulties of foreign exchange, and I have hopes that no serious set-back will be experienced during the current year in maintaining our progress.

Shareholders will appreciate that although it was the original design to gradually build and concentrate the Jeep operations at Pimpri, a major decision in this respect became inevitable last year when owing to scarcity of steel and cement it was found that the requisite building operations would not be completed within the time available to us. Accordingly, decision was taken to re-locate the Jeep programme. For this purpose we were fortunate in acquiring certain built-up factory areas in Worli and in Ghatkopar and accordingly the manufacturing operations did not suffer too much of a lag in time.

I will not be doing my duty to the shareholders if I were to gloss over the great difficulties which the manufacturing organisation is facing today: difficulties principally in the matter of foreign exchange but also connected with scarcity of steel and cement, shortages of appropriate raw materials of industry and the continuously rising costs. Problems of this nature will surely retard if not bring to a halt, our expansion programmes.

There is, besides, the great problem of financing the operations, which are now at a high level. You will have noticed in the Directors' Report a reference to the line of credit of approximately one million dollars which the Willys Overland Export Corporation extended to the Company. This credit is in itself an evidence of faith and confidence which our Principals have shown in your organisation, and I should like to place on record on your behalf our appreciation of this gesture from the Kaiser interests, who now own the Willys organisation.

During the year, the Tariff Commission rendered a great service to the automobile industry by presenting a very able report to the Government, and it is encouraging to know that the industry has now been placed in the category of protected industries eligible for receiving the favours and the bounties attached to such developments. Nevertheless, the industry, in order to become strong and self sustaining, must proceed to develop sound and healthy lines. It is imperative that during the ten years' period recommended by the Tariff Commission and accepted by the Govment, the ten years of protectiveness, the industry should shape its course in a manner that it relieves the country and the consumers of such burdens as will naturally be suffered during the protection stage. I do not see this happy consummation being reached unless a considerable degree of common exploration and research is carried out in order that we develop on automotive vehicle which will suit not merely the conditions of locomotion and transport in the country but which will also suit the pockets of the millions of this land where purchasing power is so low and where the roads are scanty and undeveloped. Your Company is engaged in developing a vehicle ideally suited to the road conditions of India but I must confess it does not qualify as a peoples' car because of its high cost today. Cost can only be brought down by sheer weight of volume turnover. There is no other way in the automobile industry. It is incumbent upon the operators of the automobile business in India to explore the operational uses of a vehicle like the Jeep, to develop and build on its functional structure and evolve the multitypes suitable for what people need, suitable for the roads and available within the purchasing power of an ever increasing number of users.

The Tariff Commission also laid considerable stress on the necessity for common production programmes for auxilliary components like forgings, castings, chasis members, etc. No one need quarrel with the general proposition. It is however doubtful whether such an object will be achieved when the types and models of vehicles being produced are so disparate in characteristic and so few in number.

In another place I called attention to the inflationary pressures which have begun to weigh rather oppressively on our economy. The Finance Minister has devised some bold measures to curb the inflationary potential and to keep down domestic consumption through a series of heavy excise duties. In the Budget presented last week to the Lok Sabha an unequivocal affirmation has been made that sustained increased productivity and savings are the only true key to progress. This statement will be welcomed, particularly in the light of the heavy sacrifices he has called for from the organised business section of the country. I draw attention however to a serious omission—the continual inflation of wage demands aided and abetted by Industrial Tribunals and Ordinances has not received the rebuke it deserves, for be it not ignored that the wage laverage upwards is the most potent and powerful threat to the success of any disinflationary measures. A wage freeze, a moratorium for 5 years on wholesale increases in wage demands, would be amply justified under the existing competitive urges when prohibitive restraints are being imposed on payments to shareholders and wealth, qua wealth, is being taxed to satisfy socio economic purposes. The promise to hold prices in the agricultural sector will require a reorientation of transport operations and methods, for it is my belief that mal-distribution of food grains stock is mainly responsible for the scarcity conditions which have developed in various odd spots in the country.

One important sphere of inflationary pressure has not come within the broad sweep of Mr. T. T. Krishnamachari's measures—the positive influence of rising public expenditure. No amount of restraint on consumption or on credit would be of avail if the magnitude and the pace of Governmental spending is not diminished. The volatile spenders, both State and Central, need to be kept in check under a strong leash if the delicate balance of stability is to be achieved. The distinguished Governor of the Bank of England stated recently that "the economic machine could not be driven with one foot on the accelerator of public expenditure and the other on the brake of credit restriction". Mr. Cobbold went on to add that it was not for the Bank to suggest where public expenditure should be cut. That was a political judgement, but it was his prime duty to "sound warning bells when Government and near Government spending is putting too heavy a burden on the country's resources". How true it is of our present economy. We look to the Finance Minister to exercise enough persuasion with his colleagues so that political judgements conform to dire economic necessity of the moment.

For the success of our ambitious plan of development the cooperation and enthusiasm of the people must be marshalled; a feeling of commonness of responsibility must be generated; likewise a sense of sacrifice must filter down to the people. From this angle, deliberate increase in costs of living may provide the feeling and the background of obligations and responsibility. Our able Finance Minister is a realist; he should have risen above the historical emotions respecting salt, as also the moralising sanctions respecting prohibition. Rajkumari Amrit Kaur, a devoted follower of Gandhiji, and

erstwhile Minister of Health has urged the abandonment of symbolic attachment to salt and has also advocated the scrapping of prohibition laws: these two can provide him immediately with substantial revenues and at the same time incite a large number of the low income category of our population to participate in the grand venture.

Another aspect of the economics of disinflation which has not engaged the attention of our Finance Minister is the imperative need for providing incentives for greater production all round. Mrs. Joan Robinson, the eminent Cambridge economist who has studied deeply the Indian plans and made several visits to India for the purpose, stated a few months ago that "to support any large scheme of investment with a long gestation period there must be an appropriate amount of quick-yielding investment to get the consumption sector (including food production) into the posture to meet the demand that will fall on it—if the threat of inflation hangs over the Plan, it must surely mean, not that the Plan is too large, but that the balance is wrong".

When I come however to the tax measures affecting Joint Stock Companies, I cannot but help regard the new burdens as indicative of the "certain ambivalence" in economic thinking to which the Finance Minister has himself drawn attention. The increase in Corporation taxes, compulsory deposits and tax on wealth are positive disincentives to capital formation, which by itself has not presented a promising picture over the last five years. A recent survey by the Indian Institute of Public Opinion arrived at the depressing conclusion that "there was no significant rise in the rate of capital formation between the years 1952-53 and 1955-56. The Second Five Year Plan assumed that the rate of saving in the economy would be stepped up from 7% to between 10 and 11%, and this assumption was made in the belief that the capital formation in the last years of the First Plan was undergoing some change in an upward direction, possibly of the order of 1 to 2% a year. It now appears that so far as 1955-56 is concerned there is no justification for this assumption and that it may be that capital formation in 1956-57 has even fallen back below 7%."

External dis-savings are huge and consumption expenditure is steadily mounting up. Yet in addition to heavier corporation taxes, a fresh tax on the "wealth" of a company has been imposed, because of "the peculiar economic structure" in India. The Finance Minister has said that "companies were being brought within the wealth tax because in India a very large number of companies were owned by a group of individuals, that company shares were not broad-based." Surely, it is not only being unrealistic but a little disingenuous to place heavy burdens on the source and the instrument of capital foundation—a role which hardly fits the credentials and the personality of Mr Krishnamachari. The egalitarian crucible appears to have consumed the promising yeast of change which the Finance Minister wishes to introduce in the fundamental bases of tax policies of the country. Assuming that a tax on wealth was demanded by the political judgment of the majority of the people, and that wealth was being concentrated in few hands, surely tax on the assets of a productive instrument is not the best method of divesting individuals of a portion of their holdings, for you are thereby hurting the most the very organs which should stand four square in the battle for fighting inflation, for sustaining stability and for furthering industrial growth. On the contrary, the effects of the proposed taxation measures will be far-reaching in respect of disincentives, in respect of capital formation, in respect of savings apart from the incongruous and unjustifiable levy of multiple taxation on the same quantum of income and now wealth. Perhaps the Finance Minister is of the opinion that such disincentives are demanded by the existing strains in the economy. But one should have thought that the most important aspect of a rational policy of taxation is to create incentives and add to the national income so that resources available for taxation are continuously being augmented.

While Mr. Kaldar recommended a tax on personal expenditure, tax on gifts and a tax on annual wealth, he simultaneously recommended a reduction in rates of income and super tax to 45 per cent—all to form a harmonious basis of taxation, a self-checking system which will provide incentives for savings and discourage evasion. This portrait of a new taxing system is missing from the proposed measures. Delhi perhaps has not learned that policy cannot be processed from haphazardly collected and oddly assorted recommendations. The complex difficulties of administering the new taxation measures in an equitable manner have not been fully realised, nor serious note taken of the inevitable harrassment and corruption which will be entailed in evaluating personal expenditure and wealth.

Perhaps it is the view of the Finance Minister that a halt should be called to development and expansion particularly in the private sector. The most significant sentence in his Budget Speech is a sentence of five negatives: "These measures are not intended to curtail genuine investment in the private sector, though it would not be unreasonable to assume that a slight slowing down for a short period will not, in present circumstances, be undesirable." If disincentives are really what are being aimed at, businessmen should frankly be told to go slow but we should not be asked to accept the sort of Alice-in-Wonderland economy in which the more the Government spends and the higher the taxes went, the more would be left for investment and spending.

In conclusion, I should like to express on behalf of the shareholders their appreciation of the commendable efforts of the staff and the workers of the Company in achieving such remarkable results in the past year, which give promise of a good future for the organisation.

*

STERLING AND THE FRANC

(Continued from page 962)

ruled out. Although the Government fully deserves to be successful in its resistance to devaluation, it would be unwarranted optimism to assume that the sacrifices made to that end will necessarily produce the desired result.

What is worrying financial circles in London and in other banking centres is whether, if and when the franc should be devalued, pressure on sterling would increase to such extent as to become irresistible. There could be no doubt that, should sterling be devalued first, the franc could not survive on its present parities for twenty-four hours. The psychological effect of a sterling devaluation on the franc would become a decisive factor. Is there any reason to believe that the psychological effect of a franc devaluation on sterling would be equally decisive? If a sufficiently large number of people should believe this to be the case, the devaluation of the franc would greatly aggravate the adverse pressure on sterling. It is important, therefore, to examine in advance the position that is liable to develop after a devaluation of the franc.

It would be idle to deny that there is in many ways a high degree of similarity between the British and French position. Although the domestic political situation in Britain is not as unstable as in France, the Socialist gains in recent local elections and the "rebellion" of a number of Conservatives as a result of the Government's decision to submit to Nasser's terms concerning the use of the Suez Canal have caused a certain amount of uneasiness about the future of the Conservative regime.

This uneasiness is unjustified, because the discontented elements in the Conservative Party are most unlikely to carry their criticisms sufficiently far to endanger the Government. They will only abstain from supporting the Government so long as they are satisfied that they can make this danger without risking a defeat of the Government. And in the absence of a defeat in the House of Commons there is no reason why there should be a general election for another three years. But these facts are not generally realised, so that the fears of political changes constitute a real factor in the sterling position.

Notwithstanding the cuts in military expenditure which the British Government has undertaken or intends to undertake, that item remains unduly heavy, and it will continue to press on sterling. But this burden is not nearly as troublesome for Britain as it is for France. There is more willingness in Britain than in France to face realities by giving up overseas possessions to retain which would be too costly.

On the other hand, from the point of view of the industrial situation Britain's position is about as bad as that of France. Even though the numerical proportion of Communists in British trade unions is negligible, their influence on wages demands is fully as strong as in France.

Let us now draw attention to the important differences between the position of sterling and that of the franc. Britain's gold and dollar reserves are much stronger than those of France. Moreover, Britain has much larger easily realisable overseas investments as a second line of defence. Britain's balance of payments position is also much sounder than that of France. Above all, while the franc is distinctly overvalued at its present parities, the same cannot be said to be true about sterling. In spite of recent wages increases and the prospects of further increases, British exports remain competitive in many spheres. While a devaluation of the franc may be necessary in order to restore equilibrium between the price levels in France and in other countries, the same cannot be said to be true about sterling. Of course if the rising trend in wages should proceed much further, Britain would find herself sooner or later in the same position as exists in France today. But at the moment the level of British prices and costs does not call for a devaluation.

There remains the question of the psychological effect of a devaluation of the franc. Beyond doubt, it would be followed by a fresh burst of speculation against sterling. But in possession of substantial gold resources, reinforced by recently obtained dollar facilities, the British authorities would be in a position to face such a pressure, provided that domestic inflation could be held in check. From this point of view a relaxation of the credit squeeze would be ill-timed if it were to coincide with a French devaluation. Already the revival of activity in the motor industry as a result of the relaxation of instalment credit restrictions has gone a long way towards bringing back inflationary overfull employment. It seems that excessive confidence on the part of the British authorities in sterling's capacity to resist after a devaluation of the franc may become a source of graver danger than excessive pessimism on the part of the foreign exchange markets.

Stock Exchanges

UNSETTLED CONDITIONS: DISTRESS SELLING

Watch-Dog Writes:

TRADING in stock markets has been generally dull and featureless during the week under review. Although there has been a marked recovery from the post-Budget levels, confidence is lacking and an unsettled feeling prevails. Considering the drastic taxation proposals, it is, however, felt that the markets will take some more time to regain the confidence.

Conditions on the Calcutta Stock Exchange remained subdued, fresh offerings depressing prices in all sections.

Trading on the Bombay Stock Exchange was dull and featureless with apprehensions about the settlement adversely affecting sentiment.

Although some activity was noticed on the Madras Stock Exchange, prices gave way under mild selling pressure that slowly emerged in Planting shares.

On the London Stock Exchange, the tendency of prices was irregular although selective support occasionally lifted prices

Calcutta

IN the absence of any incentive and due to lack of sustained support, equities on the local Stock Exchange displayed an easier tendency last week. Because of the fond hopes nursed on the eve of the Budget, the market's disappointment was profound. The emergency measures taken by the Stock Exchange Committee, immediately after the Budget announcement, imposing a ban on blank sales in Indian Irons, caused a recovery in prices; but it was short lived following the subsequent withdrawal of the ban. In general, professional operators as well as investors were reluctant to enter the market on the impression that the increase in various company and personal taxes would hold out the threat of a rise in the existing level of dividends. Moreover, they seemed to be working out the impact of higher excise duties on respective industries, before entering into fresh commitments.

Except for a mild flutter following the announcement of the increase in the Bank Rate, trading was uneventful in the Giltedged market. Sellers were in evidence in most of the long and medium-dated Loans. 3 per cent 1986 Conversion Loan opened at Rs 73.37 and, after receding to Rs 72.87, recovered towards the close to Rs 73.50.

Bank shares ruled quietly steady with United Commercial changing hands at Rs 53.87 to Rs 54.25; United Bank of India 'A' at Rs 6.50; 'B' at Rs 8.68 to Rs 8.75 and 'D' at Rs 4.25.

Jute shares were completly neglected due to continued anxiety with regard to the availability of raw jute and profit-margin of mills. Even the absence of any excise duty on jute goods intended for internal consumption had no effect on sentiment. Howrah, after offering at as low as Rs 13.44 from Rs 15.12, improved at the close to Rs 14.06. National touched a high of Rs 20.15 to recede towards the close to Rs 19.40. Nuddea changed hands at Rs 31.50 to Rs 32.50 and Anglo-India at Rs 136 to Rs 140.

Coal shares were generally listless as operators were reluctant to enter into commitments, pending the release of the Coal Price Committee's report. Burrakur remained sticky at Rs 22 for most part of the week, while East Indian were offered at Rs 23.80 to Rs 24.00 and Western Bengal at Rs 5.12 to Rs 5.18. Central India, however, came in for sustained enquiry upto Rs 5.90 from Rs 5.84.

Dealings in the Tea section were few and far between, as operators were still busy in assessing the prospects for the industry in the coming season. Moreover, the announcement of the excise duty gave rise to a fear that it would hamper the working of the tea gardens, especially when the tea circles were expecting an over-production. It was also felt that the increase in excise duty would promote the growth of tea industries in other countries and which, in turn, might result in a severe competition with such countries. Amongst the few transactions recorded were Bhatkawa changing hands at Rs 23.62 to Rs 23.75; Hantapara at Rs 156 to Rs 157 and Jayshree at Rs 10.00.

Sugar shares ruled comparatively steady on the feeling that the present high level of prices ruling for the commodity had already discounted the rise in excise duty. Belsund met with business at Rs 10.56 to Rs 10.87; Carew at Rs 7.25 to Rs 7.31 and SKG at Rs 9.93 to Rs 10.00.

Textile scrips ruled generally quiet in the absence of fresh support. The only bright spot in this section was Cawnpore which recovered partially to Rs 5.81 from the recent low

THE ASSAM SAW MILLS & TIMBER COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of the ASSAM SAW MILLS & TIMBER COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 14th June, 1957, at 10-30 A.M. for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th September, 1956, and to receive the Directors' and Auditors' Reports thereon.
2. To appoint a Director in place of a retiring Director.
3. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 31st May to 14th June, 1957, both days inclusive.

By order of the Board,
BIRD & CO. (PRIVATE) LIMITED
Managing Agents.

Calcutta,
16th May, 1957.

NOTE:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A Proxy need not be a member of the Company.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

The Transfer Books of the Company will be closed from Monday, the 24th June, to Saturday, the 20th July, 1957, both days inclusive.

The dividends for the year ending 31st March, 1957, when sanctioned, will be made payable to those shareholders whose names stand on the Share Registers of the Company on Saturday, the 20th July, 1957.

By Order of the Directors,
Tata Industries Private Ltd.,
Managing Agents,
J. D. Choksi,
Director.

Bombay,
17th May, 1957.

JENSON AND NICHOLSON (INDIA) LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Thursday, 20th June, 1957, at 11 A.M. for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit & Loss Account for the year ended 31st December, 1956 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect a Director in place of Mr. B. J. Nicholson, who retires by rotation and is eligible for re-election by passing the following resolution of which special notice as required by Section 281 of the Companies Act 1956 has been received by the Company.

   "Resolved that Mr. B. J. Nicholson who has attained the age of 68 years, and who retires by rotation be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act 1956 shall not apply to him."
4. To appoint Auditors and fix their remuneration.
5. **As Special Business:**—To pass, if thought fit, the undernoted resolutions:—

(i) (As an Ordinary Resolution) "That Mr. H. S. Challis be appointed an Alternate Director of the Company to act for Mr. B. J. Nicholson during his absence from West Bengal".

(ii) (As a Special Resolution). "That the consent of the Company be accorded to the holding by Mr H. S. Challis of the office or place of profit of Secretary and Accountant of the Company notwithstanding that he be a Director of the same."

The Share Transfer Books of the Company will be closed from the 13th to 20th June, 1957, both days inclusive.

By Order of the Board,
H. S. Challis
Secretary.

2, Fairlie Place,
Calcutta, 8th May, 1957.

NOTE: A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

EXPLANATORY STATEMENT

The Resolution set out under item 3 is required as Mr. B. J. Nicholson has attained the age of 68 years and hence cannot be reappointed a Director except by a resolution in respect of which special notice has been given in accordance with Sections 190 and 281 of the Companies Act 1956. Notice has been duly received that this Resolution will be proposed.

Mr. B. J. Nicholson will be away from India for more than three months and the Board of Directors recommend that Mr. H. S. Challis be appointed to act as his Alternate; accordingly the Ordinary Resolution under item 5 (i) has been proposed.

The Special Resolution under item 5 (ii) is necessitated by the facts therein specified and the operation thereon of Section 314 of the Companies Act 1956.

of Rs 5.69 on reports that the move for the closure of the mills might be postponed for some time. New Victoria were cheaper at Rs 1.62 against Rs 1.70, while Bowreah were enquired at Rs 112.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 17.78, Indian Irons started higher at Rs 17.90 and, after improving further to Rs 17.96, receded to Rs 17.48 on selling pressure, to finish the week better at Rs 17.60. New shares changed hands at Rs 16.27 to Rs 16.78, to quote Rs 16.48 at the close. Among other Engineerings, TEXMACO touched a high of Rs 18.05; Jessop Rs 25.00 and Richardson Rs 15.62, to finish at Rs 17.30; Rs 24.12 and Rs 15.19 respectively. Braithwaite were, however, better at Rs 25.00 against Rs 24.50 with Britannia nearly maintained at Rs 13.50.

Trading in the Miscellaneous section was featureless. Orient Paper were subjected to alternate buying and selling, resulting in the rates moving erratically between Rs 25.50 and Rs 27.25, to close finally at Rs 25.80. Titaghur touched a high of Rs 33.37 and a low of Rs 32.37, to finish better at Rs 33.25. Similarly, Shree Gopal closed better at Rs 15.12 after touching a low of Rs 14.94. Indian Copper moved between Rs 3.29 and Rs 3.44, to close at Rs 3.34. Indian Cable were marked down to Rs 22.34 from Rs 23.25; Rohtas to Rs 17.31 from Rs 18.12 and Dunlop Rubber to Rs 23.00 from Rs 24.25. BIC were cheaper at Rs 6.19 against Rs 6.70; India Steamship at Rs 9.97 against Rs 10.12; Angelo Brothers at Rs 17.75 against Rs 18.12 and National Carbon at Rs 23.62 against Rs 24.44. Indian Aluminium met with good investment demand upto Rs 12.87 from Rs 12.75. BBP moved narrowly between Rs 2.37 and Rs 2.53.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED.

The Directors of The Dunlop Rubber Company (India) Limited announce the following decisions:—

1. A Rights offer of 14,00,000 new Ordinary Shares of Rs. 10 each at a premium of Rs. 5 per share for cash payable in full on application will be made to the members whose names appear on the Register of Members in respect of the existing Ordinary Shares on 11th June, 1957, in the proportion of seven new Ordinary Shares for every eight Ordinary Shares then held.
2. An interim dividend at the rate of 7½% free of tax for the year ending 31st December, 1957 will be paid on 19th June, 1957 to the members whose names appear on the Register of Members in respect of the existing Ordinary Shares on 11th June, 1957.

For the foregoing purposes notice is hereby given that the Share Transfer Books and Register of Members holding Ordinary Shares in the capital of the Company will be closed from 4th June, 1957 to 11th June, 1957, both days inclusive.

Holders of Ordinary Shares under blank transfers are particularly reminded that it is necessary to register the transfers prior to 4th June, 1957 in order to be entitled to the Rights offer. Legal representatives of deceased shareholders should get their legal representations immediately registered with the Company to enable them to receive and deal with the Letters of Rights on behalf of the estate of the deceased.

By Order of the Board,
J. LUCKHAM,
Managing Director.

Calcutta, 22nd May, 1957.

BALANCE-SHEET REVIEWS

(Continued from page 956)

factorily and it is expected that the rated output will be maintained throughout the current year.

In addition to the Zinc Rolling Mill, the construction of the Flashlight Case Factory, which is to be located at Lucknow, is proceeding rapidly. Plans call for production to commence during the second half of the current year.

£ R$

Ashok Leyland Ltd.

Ashok Leyland Limited has also produced excellent results for 1956. Total sales were nearly double those of 1955, turnover amounting to Rs 2.86 crores as against only Rs 1.50 crores. The net profit, before providing for Taxation and Depreciation, works out to as much as Rs 13,97,233 as against only Rs 3,22,299 in the previous year. The directors have, after allocating Rs 3.55 lakhs (Rs 1.43 lakhs) to Depreciation; Rs 1.60 lakhs (Rs 85,000) to Taxation and Rs 1.50 lakhs (nil) to General Reserve, recommended a dividend of 6 per cent for the year.

According to the Directors' report, the progress of the phased manufacturing programme, implementation of which commenced in the latter part of 1955, has been satisfactorily maintained. At the end of the year, components representing about 15 per cent of the c.i.f. value of a complete chassis were being manufactured at the Ennore factory. Progress will continue during the current year, and it is expected that actual production will continue to be ahead of that given in the programme.

£ R$

Digvijay Cement

After providing Rs 17.02 lakhs for Depreciation against Rs 18.00 lakhs, Shree Digvijay Cement Company Limited has reported a profit of Rs 20.92 lakhs for 1956 as against Rs 25.55 lakhs in the previous year. A sum of Rs 10 lakhs has gone to General Reserve. The dividend on the Ordinary shares has been increased from Rs 8.50 to Rs 9.00 per share. Sales have totalled Rs 1.92 crores against Rs 1.68 crores. A sum of Rs 9.54 lakhs has been provided for tax liability out of the Contingency Reserve in respect of the company's assessments up to the accounting year ended December, 1955.

The extention plant of the company went into production from October 1956 and, as such, the rated capacity of the factory has increased. The matter of fixation of fair prices has now been referred to the Government.

Shree Niwas Mills

The Shree Niwas Cotton Mills of Bombay has earned a profit of Rs 15.22 lakhs for 1956, after making necessary provision for Depreciation and taxation. The directors have maintained the dividend at Rs 12 per share.

Necessary permission has been obtained from the Government exempting the company for attaching the balance sheet and profit and loss account of Hall and Anderson Limited, a subsidiary of the company. The directors have taken over a small textile unit at Kotah, during the year, known as Shree Gopal Industries Limited.

£ R$

Sirsilk Limited

The working results of the Sirsilk Limited, for the year ended 30th September 1956, are rather disappointing. Although sales of chemicals, yarn and fabrics have recorded a handsome rise from Rs 72.32 lakhs to Rs 1.15 crores, the company has earned only a nominal profit of Rs 23,561, subject to Depreciation. The result, however, compares favourably with the loss of Rs 7.61 lakhs increased in the previous year. The accumulated losses, after adjustment of the year's profit, amount to Rs 23.59 lakhs.

The directors have, in their report, stated that steps are being taken for improving the working of different plants. By the end of the financial year, the spinning plant had almost achieved the rated capacity.

£ R$

Aurangabad Mills

The Aurangabad Mills Limited has earned a profit of Rs 17,966 for 1956 as against only Rs 324 in the previous year. Sales of cloth have dropped from Rs 40.97 lakhs to Rs 37.79 lakhs. While sales of yarn have fallen from Rs 3.90 lakhs to Rs 2.24 lakhs, those of waste have risen from Rs 43,880 to Rs 61,109.

The directors, in their report, state that the heavy increase in excise duty, levied by the Government in March 1956 and September 1, 1956, have seriously upset the cloth market. The increase in excise duty had ultimately to be borne by the company even in respect of the sales which were outstanding on the date when the increase was announced.

WORLD OF JUTE

(Continued from page 963)

dull as mills did not evince much interest at prevailing rates. Sellers, however, continued to be reserved as they were reluctant to discount rates. Tuesday witnessed considerable activity as it would appear that both sides had agreed to climb down a little. While sellers showed some interest at slightly lower biddings, mills were keen buyers with the result fair volume of business was put through at Rs 31 per maund for Assam and Indian Northern Bottoms. Conditions became somewhat dull on Wednesday in the absence of fresh mill interest except in small quantities. Prices, however, were maintained at previous levels with Assam Bottoms quoted at Rs 31 per maund.

STATE BANK OF INDIA

NOTICE IS HEREBY GIVEN that a Local Meeting of the Shareholders of the State Bank of India on the Branch Register of Shareholders kept at the Calcutta Local Head Office of the Bank will be held at the Calcutta Local Head Office, No. 3, Strand Road, Calcutta, on Wednesday, the 26th day of June 1957, at 4-00 P.M. (Standard time) for the purpose of electing one person to be a Member of the Local Board at Calcutta in pursuance of Regulation 48 of the State Bank of India General Regulations, 1955, in place of Shri Dhirendra Nath Mitra, a Member of the Local Board, whose term of office will expire on the 30th June 1957.

P. C. BHATTACHARYYA,
Chairman.

Bombay, 22nd May 1957.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of a Second Interim Dividend on the Company's Ordinary Stock at the rate of £3 per cent net (tax applicable at 8s. 6d. in the £) for the 15 months ended 31st March, 1957. Payment will be made on 28th June, 1957, to those stock-holders whose names are registered in the Company's Stock Register on 8th June, 1957.

Applications for transfers received in this Office before 12 O'Clock noon on Saturday, the 8th June, 1957, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,
I. A. MACPHERSON,
Agent.

Victoria House,
CALCUTTA, 18th May, 1957.

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

GOVERNMENT SEEKS
THE CO-OPERATION OF
THOSE WHO BUY AND
THOSE WHO SELL

The 1957-58 Budget proposals seek to raise the Union Excise Duties on tea, coffee, matches, sugar, paper and vegetable oils by a small fraction over the existing levels. That the increases are slight will be plain from the following schedule:

TEA—by 20 nP per lb. COFFEE—by 16.25 nP per lb.
SUGAR—by 5 nP per lb. TOBACCO—Generally by 13 nP per lb.
VEGETABLE OILS—by 2 nP per lb.
ORDINARY WRITING PAPER—by 1¼ nP per quire.
MATCHES—by 9/10th nP for a box of 40 sticks
—by 1-2/5th nP for a box of 60 sticks.

CURB PROFITEERING – PAY FAIR PRICES

TEA and COFFEE: The increases in terms of cups of tea and coffee are no more than 1/3 nP. and 1/2 nP. respectively. This would include the additional cost of sugar as well. Unless, therefore, your retailer is selling you cups of tea and coffee with only nominal profits, there is no reason why he should charge more.

SUGAR: The increase in duty is 5 nP per lb. or 10 nP per seer or about 16 nP per viss. The addition to retail prices should not be greater than this. In any case, perhaps you could consume a little less.

MATCHES: The duties are being raised by 9/10th nP in the case of a box of 40 sticks and 1-2/5th nP in the case of a box of 60 sticks. After allowing for reasonable profits to manufacturers and trade, the retail prices should be: 4 nP per box of 40 sticks and 6 nP per box of 60 sticks.

PAPER: The increase in duty is about 1-1/2 nP per quire of ordinary writing paper. The actual increase in price should not, if at all, be more than this.

VEGETABLE OILS: The new duty involves a rise by 2 nP per lb. But no duty is charged on the produce of *Ghanis* in villages and small towns or of small producers whose output is up to 75 tons per year. The increase in duty should, therefore, have no effect on oil produced from these sources.

Prices of certain vegetable oils in urban areas have risen during the last year by 10 to 20 nP per lb. This means there is already sufficient profit to the various sectors of industry and trade. There is no reason why the small increase of 2 nP per lb. should not be absorbed by the producers and the trade.

TOBACCO: Hukka tobacco prices should not go up by more than 13 nP per lb. For *biris*, a packet of 10 *biris* should cost 1/10th nP more. The only variety of cigarettes affected by the increase in duty is that manufactured exclusively from Indian tobacco, such as "Char Minar" or "Shah-i-Deccan" on which the effect is 1/3 to 1 nP per packet of ten. Other varieties remain unaffected and should not suffer.

Investment Gossip:

HAVE Stock Exchanges already had second thoughts on the Budget? Do they now think that Mr T. T. Krishnamachari's tax proposals do not have anywhere near the disincentive connotation that they, the stock exchanges, had earlier placed on them, the proposals? And now that the first shocked reaction to the Budget has been safely left behind, is the future before Stock Exchange prices less bleak, more cheerful?

The answers to all three questions may be said to be in the affirmative. While TTK's formidable bill of fare did quite take the breath away, the price trends since the Budget show clearly that the chief cause of the frenzied fluctuations is the market wontedness to base its reading of any given situation in terms of a flash decision in response to flash news. No more does the Finance Bill, or the Finance Minister's new taxation proposals, consist of a brief two sheets or three; indeed, no more does the steward of the country's finances find it possible to refer to, least of all deal at length with, all the changes postulated by his Budget.

Thus, the ramifications or significance of any given Budget cannot possibly be understood within the short space of time that is the interim between the announcement of his proposals by the Finance Minister and the convening of the special Budget session in Dalal Street or in Lyons Range. It follows that the movement of prices thereafter, for some time at least, is on the basis of half-understood and sometimes wholly misinterpreted analysis of the Budget. I should go so far as to say, that it is these days necessary to spend perhaps a week over the Budget papers before one can fully understand the import of the Finance Minister's proposals.

Indian Finance has, in this view, felt that it should satisfy the need for a compendious publication on the Budget; and whose study will engender in the reader a proper appreciation of what the Budget means to the various sectors of the economy.

Once upon a time, it was customary for the Government of India to bring out a Bluebook on the Budget; but this would be published as late as six months after the proposals were made in the Legislature; moreover, they merely consisted of the full texts of the speeches made and of the explanatory memorandum to the Budget and allied data.

Somewhat ambitiously, we have undertaken a publication of far greater scope. A special publication brought out by Indian Finance this week contains the full texts of the three bills pertaining to the Budget; the full texts of the speeches of the Finance Minister and the Railway Minister; and, besides, commentaries and critical and constructive articles on various aspects of the Budget are published.

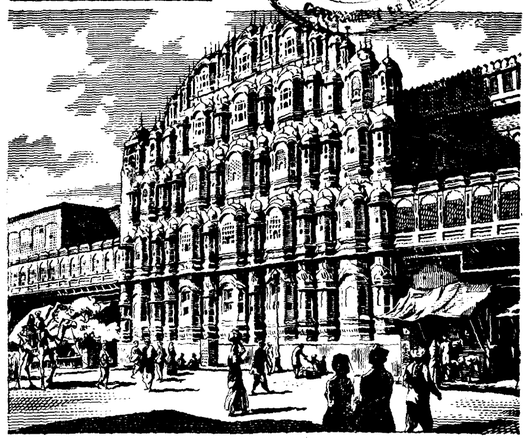
Subscribers to Indian Finance may obtain this publication, entitled '1957-58 Budget: A Study', at the concessional rate of Rs 4 a copy. The published price is Rs 5 per copy. The Study (in which, I may parenthetically add, I am represented by an article on the Budget and the Investor) should prove not only valuable, but invaluable, to the student of India's economy.

£ R$

Investment Notes:

There is a growing feeling that the increased Budgetary impost of 30 per cent on bonus scrip issues will lead to withdrawal of bonus applications to the Controller of Capital Issues over a wide front. Although the position will vary with each company in terms of the actual amount distributed, it appears that, in most cases, it will take anything from 6 to 12 years to make up the bonus levy. Companies are, it is learnt, are generally unwilling to take such a "long-term" view.

For obvious reasons, the Century Spinning, which had proposed a three-for-two scrip issue, may drop the proposal as a sequel to the enhanced levy. The company will now have to pay about Rs 49 lakhs for putting through the scheme.



Shivrajpur Syndicate, which had been considering for some time a bonus issue of two-for-one, may abandon the scheme. Capitalisation of the order of Rs 14 lakhs from the Reserves will imply a tax of Rs 4.20 lakhs.

The Thackersey group of mills is also due to consider the bonus scheme in the light of the altered circumstances. It is clear that the company's verdict will be in line with the general trend.

A notable exception to the general trend is Scindia Steam, which has been considering a one-for-five issue. This company is expected move ahead, subject to the Government's sanction.

Kumergode Estates, Madras, have announced that the draw of the third lot of Rs 30,000 Debenture Stock, for redemption on the 30th June 1957, will be held on June 20.

Around India with Brooke Bond

The Palace of Winds... **Jaipur**

One of the most beautiful cities in Rajasthan is its capital Jaipur, famed for its architectural beauty. Of the many palaces, forts and buildings that adorn the city, no visitor should fail to see the Hawa Mahal or the Palace of Winds. A unique feature of the Hawa Mahal, a building in red sandstone, is its ornate facade with rows of tiny balconies projecting in tiers from the first floor to the top. Inside the building is housed a priceless collection of old Rajput paintings, manuscripts and other objects of historical interest.

Around here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop. Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

HIGHLIGHTS

How is one to define speculative activity? As good a definition as any other, is to call it activity which is based not on facts, but on views or "conjecture".

How does one conjecture? Fundamentally, of course, one starts with facts; and then one proceeds to introduce a number of "if's" and "maybe's", so that a conclusion is reached that is possible.

But not necessarily probable. Because the key factor is an unknown quantity. This factor comprises the actual steps that may be taken in any given matter by the concerned authority.

Nevertheless, this speculative activity has the effect of exaggerating trends. For example, if there is depletion of foreign exchange resources, consequent to import surplus, the flight from the rupee is accentuated by the speculators.

This, indeed, is what has possibly happened. It is known that the foreign exchange position is difficult; but a step further, and you have the "conjecture" of the speculators that devaluation of the rupee is a likely enough eventuality.

So, transactions multiply in purchase of sterling and US dollars on a forward basis; this further puts pressure on the foreign exchange position.

Such facts about forward purchase of sterling and dollars (on a speculative basis) must easily be discernible to the Reserve Bank's routine apparatus for their normal investigation of banks' books.

The World of Finance article suggests that, after such examination, the exchange control authorities must insist upon the squaring up of speculative transactions.

It has moreover been indicated that devaluation is out of the question; and that India has other means whereby it can successfully tackle the problem of foreign exchange.

Excellent Results of Calico Mills

THE Calico Mills of Ahmedabad have produced excellent results for the year ended 31st March, 1957. The directors, at the meeting held only towards the end of last week, decided to recommend a final dividend of Rs 19, making a total of Rs 30 per share. It may be recalled that, for the fifteen months ended 31st March 1956, the dividend was Rs 30 per share.

The profit for the year works out to Rs 1.86 crores before making provision of Rs 14.87 lakhs by way of managing agents' remuneration and Rs 20.10 lakhs for bonus to employees and workers. The directors have provided Rs 68.32 lakhs for Taxation and Rs 17.33 lakhs for Depreciation, while Rs 12.34 lakhs has been transferred to Rehabilitation and Development Reserve and Rs 20 lakhs to General Reserve. The amount carried forward is Rs 1.18 lakhs.

With the above allocations, the Reserves and surplus of the company, as on the 31st March 1957, stand at Rs 3.50 crores of which Re 1 crore stands to the credit of Dividend Reserve; Rs 1.32 crores to General Reserve; Rs 1.15 crores to Rehabilitation and Davelopment Reserve and Rs 1.62 lakhs to Diamond Jubilee Benevolent Fund.

The new caustic soda and Chlorine plant of the company in Bombay is expected to go into production before the year-end.

The Plan and the National Character

Indian Finance
Established 1928
June 1, 1957

"The Wise Man in his Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius

IT is not wholly fantastic to see behind a good deal of the Budget proposals the manifestation of certain basic weaknesses of our national character. It is not that the Budget proposals are irreproachable or that all criticism is either interested or perverse. But there is quite a volume of adverse criticism that is specious and has every appearance of being consciously or unconsciously motivated by a profound desire to evade basic social responsibilities. For centuries, it has been our national habit to want something for nothing and what is worse, to forego willingly that something, if it could not be had for nothing. Otherwise, it is difficult to explain the appalling indifference to social injustices—such indifference being shown even by those who are the abject victims of such apathy. Now that a compassionate social conscience—for which we have to thank, by and large, the West—is egging us on to do our plainest duties as men in a community, we try to summon up all our resources in sophistry (which are apparently endless) to evade them as self-righteously as we can.

Thus it is we find that the poor find unexpected champions and the rich, strange bedfellows. Folks whose temperaments are notoriously anything but liberatarian are suddenly discovering the virtues of a free society. And, though particular criticisms cancel each other out, we find that what Mr Nehru called the national pastime of finding fault goes on unabated and unembarrassed. When foreign comment on the worthwhileness of what is being attempted and on the soundness of the means employed for the purpose is pointed out, it is dismissed as "obviously" interested praise. Such a smug sense of one's own imperviousness to "flattering" may be slightly more sophisticated, but it is nonetheless a species of self-love, if the imperviousness extends to what in fact has been accomplished.

The only permanent remedy for this national malady is a purposeful introspection by leaders of men and opinion and a conscious effort at educating our people out of such social irresponsibility. Something along the lines of the efforts of the Rashtria Swyam Sevak, without their alleged communal orientations, should be attempted. We should instil in our people a sense that our duty toward our fellows is no less compelling than to ourselves, even when the latter takes the form of the duty of working out our personal salvation. Perhaps, an even better way of putting it would be in terms in which Gandhiji formulated it for himself: the only way that one can work out one's personal salvation in India today is by working out India's salvation.

On a short term basis, however, the slackening of national purpose can be tackled only by a strategy of morale support. In other words, the planners and the executors of the Plan should not over-estimate the public's ability to face facts without flinching and to fight with its back against the wall. Ours, apparently, is not a temperament which understands a "plan pursued on a war footing", or "generation that is sentenced to hard labour." In all the seemingly sombre and uninviting predicaments involved in those phrases, there is a challenge to which the active or "Rajasic" temperament responds eagerly. Ours apparently is not such a temperament. It is not that we have not been used to misery: on the contrary, it has been only too much with us. But it has been a dull ache rather than an active stab of pain and, therefore, an appeal to purposive austerity does not evoke an adequate response.

How is one to deal with a situation like this in which, on the one hand, there is persistent erosion of confidence and purposefulness and, on the other, a profound apathy to self-meliorative endeavour? Plainly, a strategy in which all that is offered is blood, sweat, toil and tears will not do. The superior person will only descant on the utter futility of such sacrifices and the simple folks recoil from the unusual demands which, they are told, are futile anyway.

The only thing to do under the circumstances is to indicate clearly the considerable accomplishments that have taken place as a result of planned endeavour so far. None but the very blind can deny that, between 1947 and 1957, there have been important and significant changes for the better in the lives of our people. But these facts have not got across to the people. A final assessment of the First Five-Year Plan, for instance, has not yet been made public. It seems poor strategy that, in a plan that is to be a "war", nothing whatever is said of victories won, and the morale of the fighting forces is constantly allowed to be sapped by talk of crisis and breakdown. It is time that Government gave some thought about counteracting the effects of the depressing talk of the difficulties of the Second Plan that they, no less than their critics, have been indulging in in the last few months. The beginning of a sensible policy in this regard would be to publicise as widely as possible the achievements of the First Plan and the hopes of the Second.

STOP PRESS

ALL revisions that we could expect have apparently been completed by Mr T. T. Krishnamachari in his Budget for 1957-58. The nature of the reliefs given is indicative both of Government's determination to be unyielding in the matter of basic policy and of Authority's willingness to be sufficiently flexible in adjustment of details.

The reliefs agreed to were warranted and are desirable and justified. While the withdrawal of the levies on kerosene and newsprint does not fall under this category, their repeal constituted the first revision of the Budget.

As we go to press, news is to hand of what is presumably the final list of revisions. Firstly, as far as individuals are concerned, a child allowance of Rs 300 a child is to be made, subject to a maximum of Rs 600; but this concession will not be extended to those whose income exceeds Rs 20,000. Secondly, the over 20,000 set are also to be deprived of the marriage allowances. Thirdly, the lower income earner is to benefit by the withdrawal of the higher rate for post card; but inland envelope rates are to rise to 15 nP for the first 1½ tolas and 10 nP for every additional 1½ tolas. Fourthly, suburbanite commuters and short distance travellers whose train journey is for a distance less than 15 miles will not face any increase in fares. Finally, their tea and coffee will also not suffer the higher excise duty.

From the point of view of industry, the most important concession is that new companies, under certain conditions, will receive a "tax holiday" in respect of the Wealth Tax for a period of five years. The repeal of the higher imposition on coffee and tea may be said to be in recognition of the role they need to play as exchange earners.

It is, thus, fair to state that Government's second thoughts on the Budget reveal an understanding appreciation of the viewpoints both of individuals and of industry. With these various adjustments, the anticipated income from the 1957-58 taxation proposals will be Rs 5 crores less at Rs 73 crores. The effect of the tax cuts, as reckoned for a full year, is Rs 5.78 crores. Thus, at a cost of Rs 5 crores to the exchequer, Mr Krishnamachari bids fair to soothe and allay the dismay—or is it too strong a word?—that greeted his Budget proposals for 1957-58.

In another matter, too, Mr Krishnamachari has shown himself to be a quick-acting and resolute Finance Minister. He has, as it were, anticipated this week's World of Finance article, and has come out with the forthright statement that there will be no devaluation. The Finance Minister has, very properly, emphasised the stability of the Indian Rupee; and he is, no doubt, already taking steps on the lines suggested in the World of Finance article, and has come out with the implicit change problem.

In this background, however. the fact remains that the rupee's discount in the New York free market has of late widened. Thus, apparently, the foreign estimation of Indian currency is today not so favourable as it used to be. But there can, we should point out, be another reason for such depreciation as we may be witnessing in the free quotations. With the tightening up of travel regulations for Indian citizens, it is to be presumed that there is at least an attempt to get round the law by arranging for exchange needs sub rosa. It is not unlikely that such pressure on the rupee accounts for its latter-day depreciated quotations. So, it may be that the price in the New York free market is not an index of the foreign estimation of the rupee as such; and it also follows that, so long as the Indian Government continue to impose rigorous travel regulations, the gap between the free market rate and the official rate will also continue.

The two specific statements made by Mr Krishnamachari are, firstly, that "the rupee is strong today in comparison with many currencies in the world" and, secondly, that it would be his endeavour "to the extent of my ability to sustain the value of the rupee." Proof as to the first is available in the fact that the Indian rupee is greatly sought after in South-East Asian countries; and, in respect of the second, it is to be presumed that the Finance Minister will utilise his trip to Washington in September for the meeting of the World Bank to arrange, if necessary, further stand-by credits with the International Monetary Fund.

It is particularly at a time when the foreign exchange position is difficult that currency must be defended. It would, therefore, be appropriate for the Finance Minister to make the explicit statement that there shall be no devaluation.

Editorial Notes

Impulse for Economy

The overlapping of the Railway and the Union Budgets through the announcement of fare increases by the Finance Minister diverted more Opposition fire against the Railway Ministry than it would possibly be, if the usual procedure were to have been followed. Mr Feroz Gandhi, jocularly described the Railway Minister as a pick-pocket. Though its sting was drowned in the laughter the description evoked, there were many critics who voiced the charge that the Railways were spending more than what was strictly necessary.

It was emphasised that within five years of the Second Plan the Railways would be spending an amount bigger than their entire capital investment over the last one century. Mr Frank Anthony's disappointment over the decline in operational efficiency "when 2½ railway men are doing the job done by one worker in the pre-independent days," falls in the same pattern. The Railway Minister promptly declared that he had stopped the construction of the multi-storeyed air-conditioned building for the headquarters of the Southern Railway. The proposal for a new building to house the General Manager's Office at Gorakhpur has also received a similar stay-order.

These are welcome gestures; but yet are no adequate answer to the general complaint of extravagance and waste in the Government and in the industries and services managed by them. Significantly, the major note of Parliamentary criticism on the two budgets was economy. Three women members pleaded for simpler public habits for Ministers. No one will have any sympathy with the state of affairs in which Rs 170,000 could be spent by a State Social Welfare Board in order to distribute about Rs 47,000, as was alleged by a member from Kerala.

The summer shift of offices was pointed out as another source for economy. The automatic vote recording apparatus which ironically enough the Minister for Labour could not understand at first was assailed as a symbol of unessential expenditure. A mania for innovations seems to have gripped the official mind in many places; the Uttar Pradesh Chief Minister takes his officials to task for suggesting the introduction of pressure cookers in the rural areas of the State. He rightly wonders how the suggestion could be implemented. A Government keen on trimming expenditure by their private citizens can avoid inviting ridicule only if they themselves are meticulous in their spending habits. The Budget debate leads to an insufficiently favourable impression.

Demographic Outlook

The cynic who said that the best thing for a man to do is not to be born at all, and the next best to die as quickly as possible, can from his grave draw a sense of vindication from the demographic perplexities of contemporary world. After having reduced the death rate and stimulated a remarkable increase in longevity, man is now confronted with a shortage of resources to feed a population which has begun to grow at an accelerated pace with each person hoping to live much longer than his predecessors could.

The United Nations Demographic Year Book released last week states that every hour an average of almost 5,000 persons are added to world's population. This is equivalent to an annual addition of 43 million. Birth and death rates do show marked country-wide variations. Against 34 to 113 infant deaths per 1000 in Eastern European countries in 1955, Western Europe shows an average rate of 4.2 per cent, while, in the US and Canada, it is no more than 2.7 per cent; in Australia and New Zealand, the infant mortality rate is less at a little over 2 per cent.

Latin America, Africa, South West Asia and Oceania register the highest rate of increase in population. North America and USSR are considerably behind; Europe is in the distant rear, the respective rates of annual increase being 2 per cent, 1.7 per cent and from 0.6 to 1 per cent. The largest absolute addition is made by Asia, at about 24 million persons a year. Among the 60 countries whose statistics are considered fairly reliable the majority registered higher rates of increase during 1950-54 as against 1945-49. The relatively high rates of increase in the earlier period had become still higher in the later. Under-enumeration is common and sometimes it is as high as 10 per cent. The Report estimates that only about 42 per cent of the births and 33 per cent of the deaths are currently being registered in the world.

The Common Ground

The Japanese Prime Minister's visit to India before he proceeds to the United States represents much more than a neighbourly gesture. He could convey personal impressions of the biggest friendly nation in this continent. His statements from Delhi amply betray the contemporary embarrassments of his country. It would be cruel to find fault with Japan as trying to make the best of all the worlds.

Mr Nobusuke Kishi is now in charge of the destinies of a State which understands the economic value of trade with the Chinese mainland, along with the inescapable necessity not to offend the US seriously for any reason, the emotionally sound appeal of Panchshila and Asian solidarity and at the same time the invaluable benefits of military assistance from a Big Power and of other similar mutually contradictory national requirements.

These vital embarrassments peep through his extremely cautious and guarded observations. If Mr Kishi has expressed himself lukewarmly on such subjects as regional military pacts and the Baundung Conference, he has to be understood more in sympathy than in ire.

Indo-Japanese relations are brightened by a number of events in the recent past. Mr Kishi made grateful mention of these. India wrote off its war reparations; the San Francisco Treaty, which was not fully satisfying to Japan, did not receive India's approval. India warmly and enthusiastically supported Japan's admission into the UN. Japan also cherishes Dr Radha Binod Pal's refusal to condemn the "so-called war criminals". Both countries are keenly anxious that the nuclear tests should stop. India's initiative and zeal in this respect should be all the more pleasing to Japan, as Japan happens to be the worst affected immediately.

France and Indian Industrialisation

Among the industrially advanced countries, which have been participating with finance and technical skill in India's industrial development, France has hitherto remained conspicuous by its absence. Several foreign trade missions came to India in recent months. None came from France. French economic aloofness might well have been the result of political differences with India on the subject of the African Colonies.

Lately, however, a number of leading French industrialists are reported to have applied their minds to the question of participating in Indian industrial projects. It is gathered that a complementary initiative is available from the Indian side too. In many ways, the French economy is more secure than many of the Western European economies, but new international impacts are now being felt.

As a bastion of democracy in Western Europe, France has also to look far beyond its shoulders. Unofficial reports claim that already understanding has been reached between the French and Indian Governments on the tenure of credit likely to be available from France. French interest may immediately be concentrated on oil refineries and ship-yards and whatever advances the French Banks would be making to Indian industry is likely to bear the guarantee of the French Government.

Coal Workers' Output

The most recent statistics on monthly productivity of workers employed in coal mines reveals a reversal of the trend seen for January 1957. In January, the output levels in all categories of workers reported by the Chief Inspector of Mines, Dhanbad, registered a decline in relation to those of November and December 1956.

The output per manshift for miners and loaders was 1.13 tons

No Devaluation

THE foreign exchange markets in India have been functioning, in the last few weeks, under the shadow of the rapidly dwindling foreign assets. In such circumstances, a question which constantly engages the attention of the exchange bankers and other concerned interests is whether the Rupee would be devalued. A question of this kind has to be merely posed, and banks and every one who can set afoot precautionary operations, the main feature of which is the building up of an overbought position in US dollars and in sterling. At an earlier stage, banks were apprehending the devaluation of sterling; and, against such a contingency, an overbought position in US dollars had been built up. On the top of this, sterling purchases for considerable amounts have taken place in recent weeks. While, strictly speaking, the functioning of exchange control is supposed to render difficult a speculative flight from the Rupee, it has been experienced that, by one stratagem or another, a thick layer of speculative business can be superimposed upon the quantum of legitimate transactions.

While we have no doubt that such speculative purchases of dollars and sterling may be said to be the normal feature in the planning of operations on the part of banks and businessmen, and while the cumulative total of such purchases should be very considerable, we have no means of making even rough estimates in this regard. We suggest that the exchange control is, however, in a position to make an assessment and, what is more, to insist that speculative positions should be squared up. The effectiveness of intervention by exchange control in India is maximised by the more or less total absence of foreign short-term funds in the Indian money market. It is such balances that caused embarrassment to the London money market, with its abundance of quick balances on foreign account. We are, fortunately, spared this kind of development beyond our control. We are also fortunate in having, in active functioning, a continuing system of statutory investigation conducted by the Reserve Bank into the books of the Scheduled Banks. We suggest that the Reserve Bank's agency in this respect should undertake a speedy examination of the books of banks from the point of view of speculative foreign exchange contracts. The announcement of such an inquiry should by itself lead to considerable covering operations, resulting in the strengthening of the country's exchange position.

The technical position in the exchange market should respond instantaneously. The present doubts about the strength of the Rupee should give way to the conviction that it is not to India's interest in present circumstances to have a depreciated currency. The Second Plan is the paramount criterion to every aspect of monetary policy; and, in relation to this criterion, the simple fact to note is that a devalued Rupee would add to the Plan's cost, which has already risen by Rs 400 crores. We cannot simply afford any increase in the outlay on the Plan. It follows that we cannot afford the devaluation of the Rupee.

Our contention is that there is no occasion, and there will arise no occasion, for the adoption of so desperate a remedy as devaluation.

In the first place, devaluation would create more problems than it would solve. Exchange circles are suggesting that a devaluation to 1s 4d would add to the value of sterling securities by Rs 40 crores or so. Moreover, it is reasoned that the cost of the Plan would rise only by ten per cent odd of its foreign exchange element; and this, too, may be of the order of Rs 800 crores, as relating to the foreign exchange gap for the remainder of the Plan period; thus, the cost of the Plan would rise by Rs 80 crores. What, however, is forgotten is that all imports would cost more; and, if imports until 1960-61 are likely to aggregate, say, Rs 4,000 crores, the net increase in the cost of the Plan would work out to Rs 400 crores. The gain, then, Rs 40 crores; and the cost, Rs 400 crores. Nor would it be correct to reason that devaluation would give an impetus to exports and discourage imports. For, such increase in the volume of exports may just about offset the loss in foreign exchange earnings consequent to devaluation; and the quantum of imports would scarcely show any change, since the restrictions on non-essential imports are already most drastic. In the case of a country where internal inflation is causing a large import surplus, devaluation may be the orthodox as well as the appropriate remedy. In the case of a country where the emerging inflationary pressure is sought to be remedied by increased production; and where that increase in production depends on the import of capital machinery for the purpose, devaluation is all too clearly ruled out.

In the second place, it is not as if India's foreign exchange position cannot be tackled by other means. We have already had recourse to the International Monetary Fund for emergent aid; and we have purchased currency against the gold tranche and the first tranche. Furthermore, stand-by arrangements have been concluded for a further amount of $72.5 million. We can expect this to be drawn upon imminently.

In the third place, the effect of the import restrictions is yet to be reflected in the foreign exchange figures. The raising of import duties late last year, and the substantial cut in the import list, are reckoned to correct the imbalance in current trade. But, presumably because commitments had already been entered into, the first five months of 1957 have not in any appreciable measure shown evidence of an abatement in the depletion of foreign exchange resources. Nevertheless, it is not unreasonable to anticipate that, in the near future, the import restrictions should begin to prove "effective". Therefore, in the near future, the drain on foreign exchange reserves may be expected to slow down appreciably.

This suggests that, at least in respect of our present foreign exchange position, the difficulties are short-term in character. Thus, in the fourth place, negotiations may be set afoot with the IMF for the purchase of the remainder of $200 million that we are entitled to. Since India's total commitment after such further arrangement with the IMF would be for the repurchase, within three to five years' time, of $400 million, all that matters is that the concerned interests—in this case, the Finance Ministry and the IMF—should be satisfied that India would be able to set apart within that time Rs 200 crores in foreign exchange. With Mr T. T. Krishnamachari boldly envisaging steel exports, perhaps even by 1958-59, there are grounds to place confidence in India's ability in this respect.

In the fifth place, the question of the issue of gold bearer bonds may be re-examined; and such bonds could usefully free the sterling securities held as backing. We may state here, in brief, that the scheme advanced by Indian Finance has been somewhat misunderstood. We are not suggesting that subscriptions should be called for in terms of jewellery. Rather, what should be sought to be attracted are the hoards in the form of coins and bars. The bearer aspect of the bonds would firstly ensure anonymity for the subscriber; and secondly make such bonds negotiable freely. Lastly in this context, the hazards of safe deposit should make the scheme attractive, especially as Government would undertake to redeem the bonds in kind at a given time.

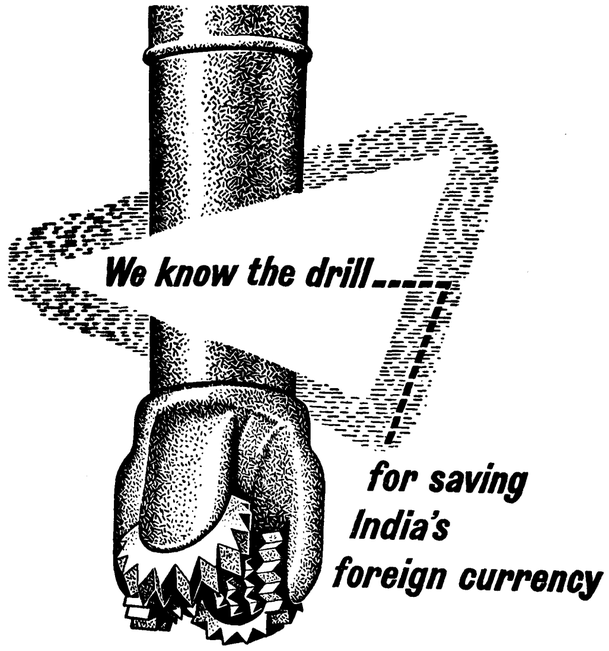
Decline of British Government Loans

By PAUL EINZIG

RECENT decline of British Government loans is causing much concern in official circles and among bankers. From the point of view of the Treasury and of the taxpayer it means an increase in the burden of the funded debt, as and when re-financing operations have to be carried out. From the point of view of banks, it means the depreciation of a large proportion of their investments. For, while insurance companies, pension funds and trust funds have been switching over to equities, the extent to which banks are in a position to do this is negligible. All they can do is to confine themselves, as far as possible to shortdated Government securities. Even these are liable to be affected appreciably by the downward trend of "gilt-edged" stocks, especially as the provision in this year's Finance Bill has brought to an end the demand for short-dated stocks for the purpose of avoiding death duties.

Disappointment over the delay in the reduction of the Bank rate may have been the immediate cause for the weak trend in recent weeks, as a result of which Government loans are now nearly down to the level to which they declined at the time of the Suez crisis. But more profound influences are also at work. Foremost among them is the growing realisation by investors that by confining themselves to Government loans they do not safeguard themselves against the depreciation of the real value of their investments in terms of goods, or even against the depreciation of the nominal value of their capital. A 5 per cent yield barely covers the annual increase in prices. So conservative investors who in the past would have considered equities as too speculative are now going for good-class industrial equities in preference to Government loans.

Moreover the Treasury's policy of aiming at the reduction of the amount of Treasury bills has its share in the responsibility for the unfavourable trend in long-and medium-term Government loans. This policy has been thrust upon the Government by an aggressive campaign that has been proceeding during the last year or two, putting the blame for inflation on the excessive volume of Treasury bills. The argument is that, since the traditional liquidity ratio—the proportion of easily realisable assets to total assets—of British bank is 30 per cent, an increase in their holdings of Treasury bills above the limit provides both opportunity and temptation for them to expand their credit, notwithstanding any official policy aiming at credit restriction. It has been argued by bankers, economists and financial journalists that, in order to make the credit squeeze effective, the Treasury must reduce the volume of Treasury bills at all costs. And since there is no overall budgetary surplus to absorb



Treasury bills, the only way in which the end can be achieved is by funding operations. But such operations mean that the supply of Government loans must be increased at a time when demand for them tends to decline.

The policy of reducing the proportion of the floating debt means a complete reversal of the Keynesian policy of de-funding, thanks to which Britain and other countries had been able to finance the Second World War at a much lower interest rate than the First World War. This ill-advised policy of re-funding is based on ideological dogmatism. As a reaction to the ideological dogmatism of the Socialist regime of 1945-1951, under which nationalisation and physical controls were favoured for their own sake regardless of the economic arguments involved, the pendulum has swung in the opposite direction under the Conservative regime of 1951-1957. This new ideological dogmatism—it is not really Conservative but flavours out-dated side-whiskered nineteenth century liberalism—demands that the Government should abstain from trying to enlist the co-operation of banks in an effort to restrain credit inflation without having to raise interest rates to a prohibitive level.

Under the orthodox doctrinaire conception the only way in which the monetary authorities are entitled to intervene to check credit expansion is by raising interest rates to a level at which borrowing is effectively discouraged. Any appeal to bankers to practise self-restraint has been condemned by the numerous and vocal adherents of this revived orthodox school. In other countries, such as the United States for instance, it has proved to be feasible to bring credit expansion more or less to a halt without having to burden the taxpayer and industry with prohibitive interest rates. Thanks to the success of the orthodox campaign in Britain, hundreds of millions of pounds are paid out by the Government in unnecessarily high interest charges, and further hundreds of millions of pounds are paid by industry. As the interest charges paid by the latter are passed on to the consumer, the net result of high interest rates have been an addition to inflation.

The alternative would have been to induce banks not to make full use of the increase of their liquidity ratios for expanding credit. But this would have been against the dogma of pure laissez—faire. Those opposed to this policy maintained that bankers are fully entitled to land to the utmost limit set to their lending by the established principles of sound banking—that is, they are within their rights to expand credit so long as their liquidity ratio is above 30 per cent. Some of the dogmatists who argue on such lines go so far as to disapprove of any exhortations addressed to trade unions that they should moderate their wages demands. They feel that on the principle of laissez-faire the workers are fully entitled to claim their market value determined by supply and demand in the labour market, and the way in which this market value should be kept down is not by persuading bankers to abstain from excessive credit expansion but by preventing them from expanding their credit. This, according to the dogmatists, could and should be achieved solely by a reduction in the volume of Treasury bills leading to a fall in the liquidity ratio of banks.

Unfortunately dogmatism has prevailed in Britain over common sense. The liquidity ratios of banks are now down in the vicinity of 30 per cent. But even this does not prevent a further credit expansion necessitated by the rising level of wages and prices. The banks can replenish their holdings of Treasury bills by keeping down and reducing their investments in medium-term Government loans. This will make funding operations too costly, and the Treasury will eventually revert to the Keynesian policy of de-funding. Meanwhile the mistaken policy means a depressed gilt-edged market.

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

World of Jute

Forward Trading in Jute

Though it is now more than six months since Government announced their decision to allow forward trading in jute and jute goods under the auspices of the East India Jute and Hessian Exchange, futures trading is yet to commence. Evidently, the framing of a suitable constitution for the proposed market which will be competent to shoulder the responsibility has not been easy. It is, therefore, gratifying to hear that it will not be long before forward trading in jute and jute goods will become a reality. It is understood that the Exchange has almost completed the task of drawing up its Articles of Association and Bye-laws in a way acceptable to the Forward Markets Commission. It is also reported that it will soon be in a position to convince the Commission that it has made adequate arrangements for the smooth functioning of transferable specific delivery contracts and that it represents all the different jute interests.

*

Generally steady conditions prevailed in the jute goods market last week with prices recording small gains on balance. Sentiment had been sustained mainly by the raw jute section as well as by reports of small but widespread enquiries from overseas markets.

Conditions were active when the market opened for the week as bull operators showed keen interest in all sections. In early dealings prices moved up sharply. Toward close, however, rates slightly declined on mill selling coupled with profit-taking at the higher levels. Hessian 40″×10 oz Ready was done at Rs 42.70 and B Twills Ready Rs 115.95. October-December 40″×10 oz Ready advanced to Rs 42.94 with B Twills for the same position marked at Rs 115.95.

Rates were considerably marked up on Friday as bulls continued to give active support encouraged by the firm trend in the raw jute market as well as by reports of enquiries from Argentine. Hessian 40″×10 oz Ready advanced by 55 nP to be done up to Rs 43.25 while B Twills Ready by nearly one point to Rs 117. October-December 40″×10 oz was also higher at Rs 43.15 B Twills moved to Rs 116.85. Though business passing was at a meagre level on Saturday, prices were well maintained as follows: Hessian 40″×10 oz Ready Rs 43.20; B Twills Rs 116.90. October-December Hessians 40″×10 oz Rs 43.20 and B Twills Rs 116.80.

In the absence of any fresh foreign enquiry, the market ruled generally unchanged on Monday in earlier dealings. Later on prices declined on heavy seling pressure in the Fatka. Hessian 40″×10 oz Ready reacted to Rs 42.82 and B Twills to Rs 115.50. In the forward section, prices were steady with October-December Hessian 40″×10 oz quoting at Rs 44.25 and B Twills at Rs 116.

Tuesday again witnessed increased activity in the market with prices all along the list recording sizeable gains. The sacking section was particularly firm as there were reports of enquiries from Australia. Hessian 40″×10 oz Ready regained most of the lost ground to be finally placed at Rs 43.10. B Twills was also higher at Rs 116.57. October-December Hessian 40″×10 oz and B Twills were firm features at Rs 43.12 and Rs 116.75 as mills showed little interest for forward delivery.

Narrow price movements characterised trading most of the time on Wednesday; but toward close sentiment showed slight improvement on speculative buying in the Fatka. Hessian 40″×10 oz Ready was placed at Rs 43.06 while B Twills was quoted at Rs 116.65. In forward delivery, October-December Hessian 40″×10 oz and B Twills were well maintained at Rs 43.10 and Rs 116.70 respectively

Though mills had not been showing sustained interest, the raw jute market had continued to rule fully steady and the weeks closing prices were slightly higher on balance. The firm trend had been brought about mainly by reports of unfavourable weather conditions in most jute growing areas. During the week mills gave frequent indications that they would be interested in buying sizeable quantities of the raw material at lower than prevailing price levels. But sellers were reluctant to discount rates. Presumably they were confident that mills would perforce have to agree to their quotations in view of the receding prospects of an early new crop. According to the crop report issued by the Jute Balers Association for the week ending 25th May, 1957, weather conditions in Assam had been favourable with alternate rain and sunshine. In all other jute growing areas weather had continued to be very hot and dry with no rainfall. As a consequence, sowings had been suspended. Except in Assam, river levels in Bihar, West Bengal and Orissa had been below normal.

During the early part of the week moderate mill business was reported done in Assam Bottoms at Rs 31, Deshal Mesta Bottom at Rs 28 and Daisee Mesta Bottoms at Rs 27.50 all per maund for May-June Shipment. Toward close small quantity business was done in Jungli Bottoms at Rs 28.50 per maund for May-June shipment. Assam Bottoms May-June delivery was nominally quoted at Rs 31.50 per maund.

The following table gives the week's opening and closing prices:

	Week's opening Rs.	Week's closing Rs.
Hessian:		
40″×10 oz. Ready ..	42.80	43.06
40″×10 oz. July-Sept.	43.10	43.55
40″×10 oz. Oct.-Dec.	42.75	43.10
40″× 8 oz. ..	34.50	34.50
40″×7½ oz. ..	32.06	32.44
Sackings:		
B. Twills Ready ...	116.40	116.65
B. Twills July-Sept. ..	116.25	117.05
B. Twills Oct.-Dec. ...	115.80	116.70
Hy. Cees Green ...	116.62	117.25
Cornsacks ...	116.00	116.75
Cubans ...	139.00	139.00
A. Twills ..	139.00	140.00
L. Twills ..	128.00	128.50
D. W. Flour ..	138.50	137.50
Sugar Bags ...	128.50	129.00

World of Tea

Production and Export Trends

ACCORDING to figures released this week, the North Indian Tea crop for April 1957 is estimated at 19.3 million pounds as compared to 19.8 and 19.2 million pounds in the corresponding months of the previous two years respectively. The South Indian crop is estimated higher at 14.27 million pounds as compared to an actual outturn of 10.08 million pounds in the corresponding month of 1956. The total crop for the first four months of this year is placed higher at 41.45 million pounds as against 32.89 million pounds in the same period of last year. In Ceylon, the crop is placed at 37.15 million pounds as compared with 49.82 million pounds in April 1956.

African production of tea is steadily increasing and fresh capital is flowing in for the speedy development of the industry. Total African output has now reached about 70 million pounds of which over 50 million pounds are available for export to the West. It is expected that, within the next few years, a large proportion of the present immature area will come into bearing.

In respect of exports, shipments of Northern India tea, during the period 1st April to 11th May 1957 have shown a substantial decline to 16.32 million pounds as compared to 29.32 million pounds in the corresponding period of last year, the decline in exports to the UK being more pronounced at 8.04 million pounds as against as much as 23.29 million pounds.

The improvement in the production of South Indian teas, during the past few months, is reflected in the larger shipments from the Cochin Port. Shipments rose to 4.52 million pounds in April 1957 from 3.96 million pounds in the corresponding month of last year. Total shipments for the first four months of this year were fractionally lower at 21.28 million pounds as compared to 21.57 million pounds in the same period of 1956.

Although exports of Northern Indian teas have shown a substantial decline, it is encouraging to note that shipments to Egypt have substantially increased to 2.09 million pounds during the period mentioned above as against only 0.74 million pounds in the corresponding period of 1956. There is a general feeling in trade circles that, unless larger exchanges for cotton are contemplated, the former level of Indian tea exports to this country may not be maintained. As India has a large adverse balance with Egypt, a larger exchange covering a few other items should be considered possible. Ceylon, however, is not going to let India have the initiative in this rich market.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 9,400 packages which were of a generally ordinary description. The few invoices, on offer, that possessed attractive flavour, were keenly competed for and were sometimes dearer. There was much less demand than in the last sale; and most kinds were sold at 50 nP per pound below valuations and sometimes more.

The weakest feature of the sale were Brokens and Fannings grades and these were frequently withdrawn. There was less interest shown by the internal buyers than in Sale No. A; but exporters gave good support to well-made Whole Leaf grades although at lower rates.

In the Internal Sale offerings consisted of 19,767 chests of Dusts. There was a fair general demand and prices improved as the sale progressed. There was less buying of Middle East types; but clean-leafed teas from all districts were about firm. Medium CTC Assams were firm and sometimes dearer but the best CTC Assams were a weak feature and often difficult of sale. Commonest types were generally irregular. Following rates were quoted:—Medium Dooars Dust Rs 1.40 to Rs 1.45; Medium Assam Grainy Dust Rs 1.50 to Rs 1.55; Medium Assam CTC Dust Rs 1.55 to Rs 1.65 and Best Assam CTC Dust not quotable.

There were also 325 chests of Leaf grades on offer and prices were irregular and generally easier.

In the Export Quota section, the price of Special Export Licence gradually weakened to 13 nP from the opening level of 18 nP per pound. Non-transferrable Shipping Licence moved irregularly between 14 nP and 18 nP per pound. Business in New Season's quota, after being transacted upto 25 nP, finished the week at 22 nP per pound.

(Continued on next page)

World of Business

Plywood & Teachest Industry

With the grant of protection, the plywood and tea-chests industry had grown bigger in size by a sizable addition to its production capacity. When protection was first granted to the industry in 1948, by the conversion of the revenue duty of 30 per cent ad valorem, into an equivalent protective duty, production in the industry was not sufficient to meet internal demand. But thanks to protection enjoyed by the industry continuously for a period of nearly 10 years, production is at present at a self-sufficient level. In 1956 production of plywood tea chests stood at 5.56 million sets or 98.33 million square feet and of commercial plywood at 25.83 million sq. ft.

The number of approved factories at present stands at 66, of which 14 are in Assam, 35 in West Bengal, 11 in Kerala, 3 in Mysore and one each in Bihar, UP and MP. The installed capacity of the units on single shift basis has been assessed, on the basis of the information supplied by the Units, at 211 million Sq ft, or about 11.93 million sets. The amount of capital invested in the industry upto 1956 is estimated at about Rs 3.5 crores and the number of persons employed at 6425.

The major problem confronting the industry is in regard to raw material supplies, especially difficulties in obtaining adequate supply of timber at a reasonable price. A satisfactory solution of this problem hinges on the State Government's policies in regard to auctioning of forest coupes, fixation of timber prices, availability of adequate means of transport between forest areas and timber yards and the system of distribution of timber. Further the industry is dependent on imports from UK and West Germany for its requirements of synthetic glue. The industry is at present facing a new tariff inquiry.

✱

Deisel Fuel Injection Equipment Industry

The Deisel Fuel Injection Equipment Industry, had its claims to protection which rested on its being an auxiliary to the automobile and other diesel engine manufacturing industries, sanctioned in September 1955. Protection involved the levy of an import duty of 60 per cent ad valorum, standard, on single cylinder fuel injection pumps for stationary diesel engines and nozzle holders with a clamping capacity up to 1" clamping diametre for nozzles and component parts thereof excluding elements and delivery valves when imported separately and nozzles respectively.

Under the impact of protection production in the industry registered a notable increase. The output of single-cylinder pumps by the Motor Industries Company Limited Bangalore (MICO) increased from 3,887 in 1954 to 12,408 in 1956 while the output of nozzle holders by the same firm jumped from 3,813 in 1954 to 34,291 in 1956. Production of other items such as elements and delivery valves shared the same progressive character. The present capacity of MICO on single shift is estimated at 12,000 for single-cylinder pumps, 6,600 for multi-cylinder pumps, 48,000 for nozzle holders, 66,000 each for elements and delivery valves and 75,000 for nozzles. There are also two other firms manufacturing deisel fuel injection equipment, namely, Fuel Injections Ltd, Bombay and Kulko Engineering Works Ltd., Kolhapur. But only MICO has been producing fuel injection equipment on a commercial scale.

Production is still far from being at a self-sufficient level and 4,791 single cylinder fuel injection pumps, valued at Rs 388,181 and 52,171, nozzleholders, valued at Rs 963,373 were imported during 1956. But the import policy since 1957 has been tightened. While during the period July 1955 to December 1956, the quota of established importers remained at 100 per cent general and 100 per cent soft, with the imports of single cylinder pumps and nozzleholders being restricted to 10 per cent of the face value of the quota licences during each of the licensing period, from 1957, the import quota of established importers has been reduced to 66-2|3 per cent general and 66-2|3 per cent soft with the stipulation that not more than 12-1|3 per cent of quota licences may be utilized for import of single-cylinder pumps, and nozzleholders.

Opening the public inquiry into the question of continuance of protection to the industry Mr C. Ramasubban emphasized the important role of the industry in the development of the automobile industry, and appealed to the manufacturers, consumers and importers to act in a united and cooperative way, so that the industry could develop on sound lines.

World Overseas

Britain

THE value of British exports in April was £272,200,000, according to the final trade figures for the month issued by the Board of Trade in London Re-exports were valued at £8,600,000, and imports at £349,700,000.

The value of the exports was £25,000.000 less than in March, and that of the imports £12,000,000 less, and the visible trade deficit rose to nearly £69,000,000. Allowing for the carry-over of delayed imports, the average trade gap this year of £62,500,000 a month is of much the same dimension as the visible deficit of £56,000,000 a mosth for the period Jasuary-April 1956.

The commodity pattern of trade remained comparatively unaltered in April compared with the first quarter of this year. Exports of engineering products were up by one per cent. and the recovery in motor-car exports continued, while exports of steel also showed a marked upward rise. Petroleum imports, for the first time since the closing of the Suez Canal, reached the average level for the first 10 months of 1956, their value—at £43,000,000—being nearly two-fifths greater. Seasonal movements accounted for the other changes in the April import pattern.

The main feature of the area pattern of trade was the rise in exports to the dollar orea by £9.000,000, two-thirds of which was accounted for by the liner Empress of England delivered to Canada. As a result, exports to Canada in April doubled their first-quarter monthly average.

Although the oversea trade figures were rather less favourable in April than in the two previous months, the trend of oversea trade in the first four months of this year were relatively unaffected by the changes in the April figures, writes a London correspondent. They show exports continuing to rise, although somewhat less rapidly than in the previous year, and an increase in imports, which is largely due to higher prices, over the stable level of 1956. The balance of visible trade also has maintained broadly the improved position achieved before the Suez crisis, although it has not yet shown any advance on that position.

✱

The fall in exports was, persaps, rather bigger than would normaly have been expected on seasonal grounds, but the main part of the overall decline in exports in April was in the range of miscellaneous manufactures, coal and coke, and petroleum products.

An important trend at the moment is that leading export lines —namely, engineering products, including cars and steel—show continuing expansion, and it is in these sectors of exports that a further buoyancy of exports is probably to be looked for. And although the slackening in the rate of growth of dollar exports noted in the first quarter of this year continued in April, exports to the dollar area have continued to rise in absolute terms.

✱

WORLD OF TEA

(Continued from previous page)

In the Cochin market, a total of 1,179,000 pounds was offered. Quality showed a further falling away. A good demand prevailed throughout the sale. Best Liquoring descriptions were barely steady, but the lesser Nilgiris generally eased by 5 to 10 nP per pound. Good Medium Brokens and Fannings were well supported at around last rates. Medium and Low Medium Brokens of clean appearance ruled fully firm to 5 nP per pound dearer; but stalky kinds and all Fannings in these categories came to an easier market.

Black Leaf Brokens again met with excited demand at an advance of 10 nP per pound: but similar Fannings were in only limited request at lower rates. The demand for Whole Leaf grades was again a very strong feature and they were sold at generally higher prices. Plain Broken Pekoe was quoted at Rs 1.50 to Rs 1.55; Low Medium BOP at Rs 1.65; Medium BOP Rs 1.75; Good BOP at Rs 1.90 to Rs 2.00 and well-made OP Rs 2.35.

In London auction, 25,916 packages were offered this week. There was a good and general demand, prices for many useful liquoring invoices having been fully firm and often dearer. Mediums were generally steady at last rates; but poor sorts were irregular and often rather easier. Plain Fannings were priced at 3sh 2d as against 3sh 2½ per pound quoted last week.

Tea stocks in London, as on the 17th May 1957, were 158.43 million pounds as compared to 156.60 million pounds in the previous week and 104.42 million pounds a year ago. Landings between 11th and 17th May were 11.97 million pounds, while deliveries were 10.14 million pounds. Total afloat was 33.16 million pounds including 15.11 million pounds from Calcutta: 52,800 pounds from Chittagong; 3.41 million pounds from Cochin; 12.62 million pounds from Colombo and 1.96 million pounds from other Ports.

SOUTH EASTERN RLY. TENDERS.

The General Manager, Garden Reach, Calcutta—23, invites tender No. GM. 18/57/9091-R/C(57) for supply of one No. Ropier-8 Super or similar Petrol-Electric Mobile Crane as per specification.

Tender forms are obtainable from the Controller of Stores, Garden Reach, Calcutta—23, on remittance of Rs. 5/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 24-6-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income-tax Clearance Certificate with the tender. Earnest money is Rs. 1,000/-.

Clive Street Gossip.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

THE two-fold criterion that I offered last week, for judging the Budget, it would be recalled, was: First, do the new burdens laid on the people justify themselves as the inescapable price for the Plan? Second, even if they did, do they have potentialities of defeating the very purposes of the Plan by releasing forces inimical to its success? In my Gossip last week, I dealt with the first of these considerations and came to three conclusions: Firstly, the present levies were inescapable in the overall context of the need for finances for the Plan. Secondly, and more importantly, the present proposals should, other things remaining equal, exhaust the sum of new levies for the rest of the Plan period. Thirdly, the new levies will justify themselves only if the Government show by concrete results that they are making every effort to obtain finances for the Plan from other sources as well. From this point of view, I offered two suggestions: One was the necessity for streamlining present tax laws and administration in order to put an end to the tax evasion that is admittedly taking place. The other was the need for an integrated fiscal and financial policy that will direct not only involuntary but voluntary communal savings along productive channels indicated in the Plan.

✱

This week, I shall consider in some detail the second aspect of the criterion, namely, the possible ancillary effects of the Budget proposals from the point of view of the success of the Second Plan. It is obvious that the Plan will defeat itself if its costs go up owing to the pressure of prices. It is equally obvious that the Plan will fail if, for whatever reason, there is sullen non-cooperation from the public. How do the present proposals come out when examined from these two standpoints? And what are the steps proposed by the Government, either in the Budget itself or in the discussion thereon, for neutralising these possible effects of the Budget?

✱

It has been claimed in certain quarters that the wide range of excise levies will have a distinctly inflationary effect on the economy and thus inevitably push up the cost of the Plan and increase the misery of the poorer sections of the public. But, paradoxically, one of Government's principal justifications for these levies is their disinflationary character. Here, indeed, we have the familiar situation in economic controversy which makes the layman dismiss economics as mere learned twaddle. Theoretically, it is orthodox economics that taxes act, at least after a while, as deterrents of consumption. In fact, one of the four criteria that Mr T. T. Krishnamachari enunciated in regard to the Budget was restriction on consumption over a fairly wide field so as to keep in check domestic inflationary pressures and to release resources required for investment. The principal mode, apart from the Expenditure Tax, by which this has been sought to be done in the present Budget is by excise duties on a variety of articles of daily consumption.

✱

But the question will still remain as to what is to happen during the time-lag that lies between the raising of prices and the drop in consumption, and what steps are to be taken to see that the situation does not really get out of hand. There is no general answer to this, since it is only a series of acts that would bring about the desired results and these are acts that will have to be devised as you go along. All that one can say is, that the Government should be prepared for any eventuality in this regard, and not be caught napping.

✱

Secondly, the really troublesome inflationary pressure would be that released by inadequate agricultural production. The one thing that ought to be safeguarded against is the possibility of food scarcity during the Plan period. For, once there is wide-spread distress on this account, the entire psychological prop of the common people would collapse, and it would be difficult to save the Plan with all the resources in the world. Ultimately, this is a problem that can be solved only by a massive increase in agricultural production. Official claim is that there has been a sizeable increase in production during 1956-57; but, it cannot be denied that there has not been anything like the 30 to 40 per cent increase in output that we need for the purpose of insulating the Plan from inflationary pressures. There is distressing evidence of lack of purpose in this regard: ideological considerations have gained the upper hand recently in all discussion of the subject, polemical zeal displacing constructive energy. Secondly, there is also evidence of insufficient utilisation of available physical resources, many of them brought into being at great expense for the very purpose of increasing agricultural production.

✱

But all these are not considerations arising out of the Budget. And no framer of budgets can hold himself directly responsible for inflationary pressures brought to bear upon the economy by insufficient production. A Finance Minister is entitled to expect that his colleague, the Minister for Agriculture, will do his duty as well as he ought to, and that he will create the conditions for the success of the Plan by fulfilling those parts of the Plan for which he is responsible. All that the Finance Minister can do in a Budget is to provide for a real emergency in the event of things getting out of control. This is what Mr Krishnamachari has done in providing for a Food Subsidy Fund.

✱

Again, people who are complaining about the possibility of inflation generated by the Budget, do not seem to have given much thought to any of the proposals that the Finance Minister has made for encouraging savings. After all, the Budget, like any other instrument of economic policy, assumes that members of the public will take into account relative and sometimes conflicting satisfactions that are sought to be derived from responding to one or the other of the situations created by it. By making consumption unattractive and savings attractive at once, the Finance Minister has tried to solve simultaneously the problem of resources and the problem of inflation. Concessions like increased exemption levels in income-tax for contributions to Provident Funds and payments of life insurance premia; exemptions on the employers' contribution to the Provident Fund from tax; increased interest offered on small saving investments of all sorts—these are all directed at mopping up the increased purchasing power generated by the Plan.

So far about the possible danger to the success of the Plan from inflationary forces: my conclusion in this regard is that, while there is a distinct possibility of the emergence of short-term inflationary tendencies as a consequence of the Budget proposals, their impact is likely to be less significant than what is likely to be generated by inadequacy of production, especially in agriculture. Secondly, as far as the Budget is concerned, it has made serious attempts to render spending less, and savings more, attractive.

✱

The second desideratum for the success of the Second Plan which I mentioned earlier is even more complicated. Unlike the problem of inflation, the creation of a psychological mood favourable for the success of the Plan is not something on which any one can lay down the law, for, the forces at work are intangible. Moreover, these are forces whose pressure is only half understood by people who are too preoccupied with paper planning. Ultimately, a Plan succeeds only if the people who are to benefit by it are willing to work it. And they may, for reasons that may seem perverse to the planner, refuse to work it. When such a mood of sullen non-cooperation is reached, nothing can be done unless you decide to impose it on unwilling folks in a totalitarian manner. This, of course, is out of the question as far as we are concerned.

✱

There is no doubt that, as far as the present set of proposals is concerned, there has been a good deal of opposition to it. It was bound

to be so, considering the fact that there was hardly any area in the economy of the country which it did not impinge upon. It is true that the objections of particular sections cancel each other out: that is hardly any satisfaction to a Government that has to contend with the psychology of men rather than with particular rational objections. Mr Krishnamachari is right in claiming that the Congress is back in power on the basis of its promise to work the Plan, and that he has no tangible evidence that the people have changed their minds since the elections. But it would be wrong to consider particular verdicts at the polls as irrevocable until the exact opposite is shown to be the popular desire.

At the moment, there is not only a lot of confusion in the public mind about the centrality of the Plan to our progress, but also a certain sense of weariness about the demands that the Plan is making. This may be nothing more than a passing mood, but, even so, it is necessary to combat it and take the people along with you. This cannot be wholly done either by painting a glorious picture of what is in store for us at the end of it all, or by grimly telling the people that sacrifices must be made in order to get what we want. I am not so cynical as to think that the people as a whole will not be inspired by a vision of a wonderful future which they may not conceivably live to enjoy and for which they are called upon to make present sacrifices. But it is necessary to realise that there is a limit beyond which such blandishments cannot go. A man pushed beyond that limit may shrug his shoulders, and say, "In the long run, we shall all be dead, so why should I bother? Or what has posterity done for me that I should go to all this trouble to make it happy?"

*

To the socially irresponsible, nothing matters; and therefore they may be left out of the argument. But the vast majority of people are reasonably patriotic individuals who are also reasonably self-regarding individuals. They respond readily to a combination of idealism and assurance of the protection of reasonable self-interest. In my estimation, these persons would be quite willing to put up with the present burdens if certain categorical assurances were given them: The first of these would be that, as far as fresh taxes are concerned, we have reached the end at least as relating to the Second Plan period. This is an assurance that Government should be able to give since, as I showed last week, the yield from the fresh levies would more than cover the maximum from fresh taxes that one can reasonably expect. The psychological effect of an assurance like this would be electrical, in the current atmosphere of

sulky gloom. On the contrary, the absence of such an assurance would merely deepen it: and calls for further sacrifices will only fall on cynical ears. This would be especially so when rampant evasion is going on under the very nose of authority, and all that authority does is to levy more new taxes.

*

Secondly, Government should not attempt taxation measures in this piecemeal manner, giving the impression that new-fangled ideas are being adopted only for their potential revenue-yielding capacity. Mr Krishnamachari has made the claim that his Budget is the beginning of the rationalisation of the Indian tax system. So, in a sense, it is. But the impression is persistent that the end of this rationalisation will take a long time in coming. This impression should be removed. Government have before them the Taxation Enquiry Commission's Report and the Kaldor Report. The Kaldor recommendations are a coherent system of taxation in which every part supports every other part: they try to do several things at once—make evasion impossible, put a premium on socially constructive use of one's earnings and so on. It is not my suggestion that Government should accept his proposals in toto, but I do say that authoritative decisions on them should be, at least in their broadest terms, made available to the public immediately.

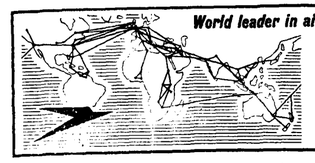
*

Thirdly, the public at large need the most categorical evidence of wisdom in spending. This, they certainly are entitled to, in view of the burdens they are asked to bear. I am not suggesting that Government should be penny pinching in their use of funds. But I do believe that there is a good deal of scope for economy: it goes without saying that no expenditure that does not directly relate to programmes under the Plan should be encouraged. Even within the Plan projects, there should be rigorous thinking not so much on not spending, but on spending wisely.

*

There is one other aspect of the matter of spending money raised at such privation to the public, that needs reference here. It is the unnecessary dependence by States on the Centre for financing their plans. In most cases, the States seem to have abdicated their responsibilities in the matter of raising the necessary resources. If one were to judge by the attitude of some of the leaders at the State level, it would appear that they want to reap the political advantages of development plans without paying the necessary price for it themselves. Many of them do not hesitate to blame the Centre for insufficient allotments, and play upon local feelings to blackmail the Centre into acquiescence. Sometimes, even the Centre's unpopular taxes (levied only because the States will not do their duty) are made use of as comfortable alibis. It is freely stated that, after all these taxes, nothing is left for the State Governments to collect from the "poor" tax-payer.

*



The Centre, too, seems to have been overcome by a sense of fatality about this shirking of responsibility by the States. It may seem that not much harm would probably result from this state of affairs in a total plan. But the mischief of the situation lies in the divorce of spending from the raising of revenues. Political considerations that have no relation to permanent welfare of the whole country often distort the central purposes of the Plan. If the claim is that all our privations have to be borne, because the Plan must succeed at any cost, the least that should be assured is that the money thus collected is spent on the Plan and nothing else. It would be the ultimate refinement in tragic irony, if the Plan succeeded in the matter of finding the resources, but failed because the money was not wisely spent on it.

Trimming Reserve Bank Functions

Mr T. T. Krishnamachari's statement in Parliament with respect to the impending readjustments in the functions of the Reserve Bank and, as a consequential step, in those of the State Bank, provides at once the explanation and justification of the excessive, and almost exclusive, concern which, in four successive issues, this column has evinced in the money market's organisation, working, and institutional facilities and techniques.

It is now confirmed that the Reserve Bank will shed most of what may be called extraneous functions; and these will be fitted into the working of the State Bank. The Agricultural Credit Operations Department may, from this point of view, be appropriately transferred to the State Bank, which is now charged with the special mission of initiating and expanding rural credit on a significant scale.

As I had pointed out in an earlier despatch, the Agricultural Credit Operations Department did not find a place in the Reserve Bank Bill as originally drafted. It was a later intercalation; and, for this reason, it has never had the attribute of an integral element in the Reserve Bank. The Finance Member, who piloted the Reserve Bank Bill accepted the chapter or [illegible]ricultural operations, mainly on account of pressure from a certain section of the Assembly Members; but he never concealed his own view that this Department would turn out to be a fifth wheel in the coach.

Now that the State Bank has to groom itself for catering to the fullest requirements of rural credit, it is in the fitness of things that the considerable amount of work that has been developed in this Department, together with the men trained in that work, are transferred to the State Bank, which will thus have the advantage of starting with a useful nucleus.

The Reserve Bank, thus rationalised, is as it should be, the core and centre of the money market. Its functions as a Bank of Issue have increased greatly owing to the simple fact of note circulation expanding from about Rs 180 crores in 1939 to over Rs 1500 crores now. Moreover, the regulation of the supply of currency in relation to demand and requirements is no longer the simple affair that it used to be. Deficit financing is a factor which has powerfully entered the calculations and estimates about the composition of the cover for the note issue. Meantime, account has to be taken of the repercussions caused by a persistent import surplus of considerable magnitude. At the present moment, the Reserve Bank has to watch with serious concern the vicissitudes in foreign assets in relation to the present statutory level of Rs 400 crores as the minimum cover in foreign securities.

As a Government Bank, the tasks and responsibilities of the Reserve Bank have multiplied several fold. The State Governments have come to regard the Reserve Bank as their financial adviser in matters connected with new loans, ways and means advances, etc. The Government of India, for their part, rely upon the Reserve Bank for services wider in scope and more considerable in magnitude. The new loan issues in the early years of the Reserve Bank used to have a target of Rs 30 crores Rs 35 crores against present-day targets of Rs 100 crores to Rs 150 crores. In addition, the States aim to secure Rs 50 crores to Rs 70 crores from new loans. Accordingly, open-market operations call for more consummate strategy.

Likewise, Government's requirements of foreign exchange are now so large that, while in the old days, the problem was one of arranging £30 million a year for the India Office, the Reserve Bank has now to tackle requirements which are 8 to 10 times greater. As a Bankers' Bank the Reserve Bank is the mentor on the one side and friend in need on the other. There is the statutory obligation for the Reserve Bank to conduct periodical inspection of the books of every Bank.

This is a stupendous undertaking, and it had to be organised de novo. The supervisory staff had to be handpicked and had to be specially groomed. A vast army of personnel had to be recruited, trained and suitably directed. This young Department had to build traditions to such effect that the Banks would not be unduly irked by periodical inspection. The work in this respect has been so admirably discharged that an exchange banker recently told me that the Inspection Department of the Reserve Bank was a pattern and model for this kind of delicate and detailed work.

While discharging this statutory task with firmness and with understanding, the Reserve Bank has been steadily improving its equipment and techniques in the provision of Central Bank credit to the Banking system at the times and to the extent required. Where, in the prewar years, it was a straight-forward loan against eligible securities, and the total of such loans would be Rs 20 crores at the peak, the Reserve Bank has now to work mainly on the basis of the bill market scheme. This means much more detailed work and much more need for quick and decisive judgment. Also, Central Bank credit made available to the banking system is several times the average figure of the thirties.

As the central figure in the money market, the Reserve Bank has now many-sided responsibilities. In this respect, it has to maintain close association with the State Bank of India and with the Life Insurance Corporation, which will be in the nature of two main pillars in the money market. The Reserve Bank is the largest single shareholder of the State Bank; and, for many reasons and from many points of view, it has a vital stake in the varied aspects of the State Bank's working.

So far as the Life Insurance Corporation goes, it is now confirmed

Export Promotion

Of late, discussions on export promotion schemes have become prominent, and reflect naturally enough the very tight position in which the country has been placed in regard to foreign exchange requirements so badly needed for the successful completion of the Second Plan. The Export Promotion Committee had therefore sent a questionnaire to all trade bodies, inviting their views and suggestions on the subject. The Indian Council of Foreign Trade is one of the premier private organisations whose main objective is to foster and promote our foreign trade. Its views must naturally evoke the attention of the Government.

The suggestions made by the working Committee of the Council cover almost every facet of the export trade. It has pressed for the adoption of both short-term as well as long-term measures, to push up the export trade. In regard to short-term measures, the Committee has drawn attention to matters like simplification of Government rules and regulations, avoiding unnecessary delay in the issue of licences, taking fiscal measures to introduce new commodities in foreign markets, avoidance of frequent changes in Government policies relating to export trade etc.

In the list of long-term measures emphasis has been laid on matters relating to supply of quality goods, prices and delivery. The system of pre-shipment inspection, to ensure the quality of goods exported, is recommended for as many commodities as possible. Prescription of proper standards by the Indian Standards Institution would also help in the production of standard quality goods. To bring the price of Indian exports to competitive level, fiscal measures such as remission of income-tax on profits from exports, subsidies to certain specific items of exports, adjustment of export duties and finally favourable rates for conversion of foreign currency into Indian currency have been mentioned as deserving the consideration of the Government. Further, creation of free trade zones in important port towns has been suggested. The advantage claimed for this arrangement is that such zones would eliminate all the formalities which have to be gone through at present, and thus help to increase the flow of exports.

So far as export policy and procedure are concerned, the Committee is in favour of progressively doing away with the quota system, keeping in mind the production and internal demand for the commodity in question. Increasing quotas for exports even at the expense of internal shortage, has been advocated to preserve the foreign market. Priority for transportation of goods meant for export and a freight structure which would help in offering the products at competitive price in foreign markets are found necessary, to expedite the movement of goods at cheap rates.

To develop and increase the invisible exports, the Committee has suggested (1) the creation of a net work of our banking institutions in the various parts of the world, to enable them to finance our foreign trade, (2) establishment of a number of branches of Indian Insurance Companies in foreign countries and (3) extension of credit facilities on liberal terms to the Indian shipping companies, by the Government, for the acquisition of more ships to increase the country's tonnage.

Tourist Traffic has been mentioned as an item, which could be made to contribute more to foreign exchange earned, by means of publicity and propaganda, provision of better hotel accommodation as well as comfortable traffic facilities.

Absence of adequate facilities to finance the export trade, it is pointed out, is holding up our exports. In this connection, the creation of cooperative banking and export finance corporations in different states with Government assistance; to finance export trade at reasonable rates of interest has been suggested. Further, the establishment of an All India Export and Import Bank has also been suggested. Other lines of improvement mentioned in the reply of the Committee are in relation to provision of more information about foreign markets and greater publicity for Indian products in foreign markets through participation in foreign trade fairs, as well as through sending trade delegations to other countries.

Finally, the Committee has, deplored the intrusion of the State Trading Corporation into normal trade channels, and has prayed for the restriction of its activities to trade with communist countries and to cases dictated by the larger interests of the country.

GATEWAY MARKETS

Oils and Oilseeds Recede

THE steady and sharp rise in the prices of Oils and Oilseeds, noticed last week, proved short-lived; and the market developed a reactionary tendency during the week under review. As a matter of fact, a bearish sentiment enveloped the market and the downward movement in prices reflected the cumulative effect of fears of tighter Government measures to check the rising prices of essential commodities, lower UK advices for castor and linseed oils and the complete absence of American enquiry.

The fall in prices in the Castorseeds section was more marked. Early in the week, seniment was strengthened by reports that some shippers had been able to realise from the US buyers 20.65 cents per pound for Indian commercial castor oil. But the optimism, resulting from the above reports, proved short-lived when some of the shippers failed to put through business with American buyers even at slightly lower prices. UK also did not seem inclined to follow the rise in Indian rates. The lack of enquiries from other buyers also contributed to the general liquidation by bulls.

In the futures section, turnover was about 20,000 candies. May delivery closed at Rs 181.75, while September, after opening at Rs 191 and improving to Rs 191.25, receded at the close to Rs 186.75. Ready was quoted at Rs 37 and Castor Oil, commercial quality, at Rs 21.25.

In sympathy, the market for Groundnut ruled easy, as mills and vanspati manufacturers were cautious buyers. May delivery closed at Rs 176.25, while August, after touching a high of Rs 181.12, finished lower at Rs 180.00. In the ready section, bold quality was quoted around Rs 36.75 and Groundnut, Oil at Rs 20.62.

The Linseed section also reflected and easy trend. While arrivals continued to be good both in Bombay and upcountry centres, traders reported a continued absence of foreign demand on account of the persisting disparity in prices. This led to a marked increase in the pressure of supplies in the market. May delivery closed at Rs 30.56, while September finished at Rs 31.19 after improving to Rs 31.44 early in the week.

Although the increase in the excise duty on vegetable non-essential oils came in for severe criticism at the hands of crushers, it placed the Cottonseed oil producers in a comparatively better bargaining position in the internal market. The demand for cottanseed oil is generally expected to go up in the coming months and a good business is reported to have been done around Rs 20 per quarter. Meanwhile, in the futures section, Cottonseed September delivery moved narrowly around Rs 113.50.

*

Gold & Silver

The scramble for bullion, that followed the announcement of Wealth Tax and Expenditure Tax in the Union Budget, oppears to have subsided for the time being as judged by the recent behaviour of the bullion market. Futures in both the metals suffered a sizable fall from the high levels touched some days ago.

Silver bore the brunt of the liquidation. The sizable setback in this metal was attributed to expectations of larger inflow of Tibetan bars, as trade reports indicated that duty had been paid for their import. Offtake and arrivals were balanced at 16 bars. Jeth delivery touched a high of Rs 184.25 and a low of Rs 183.50, to finish better ot Rs 183.81. Ashad delivery, after tounching a high of Rs 183.19 and a low of Rs 182.25, finished better at Rs 182.50. Spot moved between Rs 184.19 and Rs 185.37.

Sentiment in the Gold section also remained depressed, as the seasonal demand for the metal, which had coincided with the Budget, had shrunk to a noticeable extent. Arrivals were estimated around 3,000 tolas as against an offtake of 2,000 tolas. Gold Jeth delivery touched a high of Rs 107.50, to finish at Rs 107.28—the lowest level touched being Rs 106.94. Ashad delivery moved between Rs 106.44 and Rs 106.94 to close at Rs 106.78. Ready changed hands at Rs 108.06 and Rs 108.25, while Sovereign receded to Rs 71.37 from a high of Rs 72.50.

*

Yarn

Conditions in the Bombay Yarn market continued to remain unsettled as many commission agents refrained from doing any business as a protest against the recent Sales Tax circular. With the result, daily turnover in both the spot and futures sections was very moderate.

The Cotton Yarn section also ruled dull and uninteresting for want of buyers. Some mills were reported to have lowered their rates on account of mounting stocks of yarn with them. Buyers, particularly handloom weavers, were reluctant to augment their stocks on account of falling demand for handloom cloth. Conditions in the Royon section were also dull, and business was at a low ebb.

Bombay Review

World of Cotton

Futures Trading in Only One Contract

IT is learnt that the East India Cotton Association will conduct futures trading in only one contract, based on Jharilla Moglai 25/32" instead of the two during the current season. The details of the contract have been finalised and the Board of the Association is expected to give its formal approval for the contract and the details of the contract will be submitted to the Forward Markets Commission before the end of the month.

In view of the reduced carryover during the current season, the Association is understood to have come to the decision that a sound backing to the contract can only be given if there is a single hedge contract for the whole season. Under the proposed contract, the rate for invoicing back cotton, rejected in survey and/or appeal, shall be on the basis of spot rate of basic cotton instead of on forward rates as at present.

Tendering differences will be fixed on spot rates instead of forward rates as at present with a proviso that a Special Committee or the Board of the Association will, at their discretion, vary the rates up to 50 per cent of the difference between the ready and forward rates. The Board is understood to have decided to provide sufficient safeguards to check undue rise in cotton prices.

During the delivery period, the buyer will have to deposit Rs 200 per bale with the Association against his purchases only if the rate rises above Rs 750. Anytime, during the currency of the contract other than the delivery period, if the rate goes over Rs 750, then the buyer will have to deposit Rs 50 per condy. The ceiling for trading in forward market will be Rs 30 below the ceiling, to be fixed by the Government for the ready cotton. March, May and August will be the months of delivery.

Speculation is, therefore, rife about the official ceiling for the next season. It is widely believed that it will be maintained at Rs 820 per candy. This will mean that a heavy margin will be in operation around Rs 750. and the curtain will fall at Rs 790. At the same time, the possibility of the "floor" being raised by Rs 50 is not ruled out.

A major hurdle in the orderly operation of the futures market is the speculative activity percolating through the non-transferable specific delivery contracts. The authorities contend that, although these contracts are legally non-transferrable, they are transferrable for all practical purposes. No effective solutios has been found to curb the ingenious device adopted for the purpose; but the Commission hopes to tighten the screw during the next season.

×

FUTURES MARKET

The cotton futures market has been virtually devoid of any activity during the week under review. Speculative interest is at a low ebb and the daily turnover has considerably declined. In the absence of any other contract on the expiry of Jharilla May delivery, business has been very thin in Vijay June contract. Moreover, fixation of higher room rates has adversely affected sentiment in the market where values have disclosed a sharp fall on accumulation of selling orders. Towards the close of the week, however, profit-covering orders paved the way for a modest rally. Vijay June, after touching a low of Rs 809 from Rs 817/50, finished the week at Rs 814.00.

SPOT MARKET

Steadier conditions were in evidence in the Spot market, reflecting good mill demand for all staple varieties. The principal attention was paid to good lots of 197-3, 0394 and Jaydhar. Mills also bought a fair quantity of Kalagin and Kalyan varieties. Purchases by shippers had been small and confined to Bengals and Kalagin.

Among foreign cottons, spot lots of Egyptian and Sudans were keenly competed for. Contrary to earlier expectations, the Government of India's announcement for the import of a further quantity of 1.6 lakh bales of US cotton did not enthuse the trade.

Although American cotton is at present the cheapest of all imported varieties, many mills had already bought in sufficient quantity their requirements of American cotton and were reluctant to augment their stocks. The buying spree, witnessed in American cotton last month, has almost ended. With the result, the mill response to the new import permission is expected to be poor for some time. There is also a tendency to wait till the details of the licensing procedure, contracting and shipment period are made known.

Meanwhile, following rates were quoted:—Bengal Rs 690 to Rs 740; Oomra Rs 800 to Rs 830; Dhollera Rs 780 to Rs 785; Jharilla Rs 800 to Rs 870; Vijay Broach Rs 975 to Rs 980; AR|BP|52 Rs 1,650 to Rs 1,675; Karnak Rs 2,600 to Rs 2,800; Sudan Rs 2,250 to Rs 2,650 and American 1⅛" Rs 1,350 to Rs 1,360.

×

NEW YORK COTTON MARKET:

Price movements in the New York cotton futures market were rather irregular, mainly due to the confusion of ideas regarding the eventual fate of the Soil Bank programme and the uncertainties of price support legislation in the 1958-59 crop.

Meanwhile, the United States Agriculture Department has estimated world cotton production in 1956-57 at 38,185,000 bales, showing a decline of 1,540,000 bales from the record high 1955-56 production of 39,725,000 bales.

Communist countries are still net importers of cotton—notably from Egypt— despite an increase in Soviet production. In fact, Egypt is the leading exporter to Communist countries. Up to April last, Egypt had exported around 300,000 bales to the Communist countries. Pakistan is listed as the second largest exporter to the Communist countries, having sent 33,000 bales to China.

India and the Nuclear Tests

NEWS on the subject of test explosions of nuclear weapons have achieved new heights of tragic absurdity lately. In the first place, the sophistry and hypocrisy of the self-justifications of these deadly experimenters show up, as nothing else can, the moral irresponsibility of those that are currently playing the power game in the international arena. The kind of political waffle that is served up by equivocating politicians on the subject can, under other circumstances, be faintly amusing, but in the present context they only nauseate. The other day, for instance, one of these worthies summed up the need of the hour as 'strong national defence accompanied by strong national repugnance for what we are forced to do'. The redoubtable Mr Selwyn Lloyd came out some time ago with the ineffable collector's item about the tests being opposed only by commuist fellow travellers. I should be interested to know when the Pope and Dr Schweitzer moved into the pink penumbra of crypto-communists.

But more recent developments have taken the issue beyond the pale of mere academic discussion of abstract morality. Of course, the issue was never simply academic in the normal sense of the term: on the contrary, it had always had an immediate and practical urgency since it involved not mere local damage (bad enough in all conscience), or even serious hazards to health of the people of the world by atmospheric poisoning by radiation. But what seems the ultimate in evil potentiality, the atmospheric poisoning caused by radiation can reach out not only in space but in time and can have the most bloodcurdling genetic effects on the future generation. It can cause bone cancer, blindness, idiocy, haemophilia and other unthinkable horrors to unborn generations. Scientists of all nations and of irreproachable antecedents, like our own C. V. Raman and Otto Hahn of Germany, have come out with grave warnings about the possible effects of these explosions. It is true that there are scientists who discount the likely harm from these experimental tests. But, surely, when the differences of opinion are so deep and about a subject so fundamental as the future of the race, the sensible attitude to adopt is to proceed on the more pessimistic assumption. This is particularly so, since the difference of opinion is not about the actual effect of the 'unsafe radiation' (on whose horrible effect there is absolute unanimity) but about whether or not we have reached the undefined 'maximum harmless radiation'.

Apart from this humanitarian aspect of the matter, the issues involved are getting a more complicated kind of political colouration in the last few weeks or months. In other words, what began as a political issue (a competitive race in East-West destructive potentiality) became a moral question because of the fundamental nature of the hazards involved. Accumulation of recent political facts seems, however, to reveal a kind of ugly political pattern: These facts are, broadly, one: the most immediate hazards from these test explosions are for people who are living in the Asian part of the world. Secondly, the protests of the people and governments of the area most immediately affected have been ignored with a cold deliberation and single-minded fanatacism to pursue the tests that has disillusioned many in this part of the world. This is not simply a case of Asia versus Europe (including Russia) and America, that is to say, between folks of European origin and people of Asian origin, for New Zealand and Australia are also in the danger zone. And since the possessors of the deadly knowledge that make these tests not only possible, but necessary (since these are tests designed to verify certain hypotheses already arrived at) are the big three, the question also takes on the aspect of the big nations getting away with whatever they want despite the protest of the small ones. Admittedly, these are patterns that one traces in a succession of events that may have other compulsions and possibly less disreputable motivations. But that the events lend themselves to such a plausible thesis is in itself a great misfortune, especially when they come so soon after the Anglo-French adventure in Egypt and Russian intervention in Hungary.

Yet another unfortunate aspect of these experiments is that their numbers are being needlessly multiplied by mutual suspicion. Mr Krishna Menon gave some interesting figures in the Lok Sabha the other day. There have been 110 test explosions so far: of these 70 were by the US, 30 by the USSR and 10 by the UK. Fantastic as it may seem the suspicion I mentioned above is not the suspicion subsisting between traditional enemies but that between friends. Britain and America are at cross purposes by refusing to share with each other secret knowledge. Thus Britain wants nuclear equality not only with Russia, but with America. Mr Macmillan will consider talks of control only when this equality with both America and Russia is achieved by Britain. To achieve this entirely sterile equality (since the additional weapons are superfluous in the event of war, as the existing stock of bombs is enough to destroy civilization), Mr Macmillan is willing to risk the goodwill of many friendly nations, including some members of the Commonwealth.

In the course of the last few months, opposition to the holding of the tests has been mounting, especially from Asian quarters. The Japanese Government and, later, the Japanese Parliament protested vigorously against these tests. Unfortunately for Japan, Soviet Russia's tests also are proximate source of danger for her. In fact, Russia is reported to have had as many as five unannounced tests in April, all of which were conducted, ironically, after Mr Bulganin's offer to Japan to support a campaign against the British tests near Japan! In their competitive fury, Britain and the US also explode their experimental bombs, again, unfortunately in regions close to Japan. And when one remembers that the world's first atom bombs that caused unprecedented damage to life and property were the ones that were dropped on Japanese cities, and when one also finds that Japan's present protests against further hazards to the lives of its people are going unheeded, its bitterness is understandable.

The volume of Asian protest has been steadily increasing since the resolution passed by the Japanese Parliament. In the joint declaration in Colombo by the Indian and Ceylonese Prime Ministers, the distinguished statesmen called for the suspension of these tests. Later, there was the joint declaration by Mr Nehru and Mr Kishi, Prime Minister of Japan, in New Delhi last week calling for the same. And, finally came last week's official resolution moved in the Lok Sabha by Mr Krishna Menon and passed unanimously by which an appeal for immediate suspension of these tests was made. Later in the week, a private member's resolution was unanimously passed with government amendments that made it more or less the same as that officially sponsored in the Lok Sabha.

These resolutions which have set the seal of authority to wide-spread popular feeling in the country were somewhat tardy in coming. In two brilliant speeches in Parliament, Mr Krishna Menon cogently explained why India, already a target of attack from various quarters for allegedly presuming to be the keeper of the conscience of the world, was not anxious to ruch in where its own interests were not immediately at stake. The Rajya Sabha resolution, as originally proposed, had asked for the summoning of an international conference to consider the danger from these explosions. It is easy to see how such assumption of responsibility by India is quite uncalled for, especially when we have more immediate tasks of our own to attend to. Secondly, as Mr Menon pointed out, "The Government and the people of India should shy away from any resolution that suggests that we carry the responsibility on our shoulders or that we have the strength and the qualifications to bring this about". We are not a substitute for the United Nations, nor are the Big Powers, especially now, willing to be lectured by India on international good conduct.

Without the riders to the effect that the errant nations will be arraigned at a conference in New Delhi, the resolution requesting the suspension of tests immediately, is likely to achieve its limited purpose of lending our support to the increasing volume of world opinion. Mr Krishna Menon was very tart about the special pleadings by communist members on behalf of Russia. Russia was contended to be somehow less blameworthy; firstly, because it had offered to stop these tests, and, secondly, because it was conducting its tests in its own territory. As for the first contention, Mr Krishna Menon asked the pertinent question of what prevented their making good their word. Marshal Zhukhov put the real Russia's attitude to the issue less hypocritically than his Indian communist friends when he plainly conceded Britain's right to test nuclear weapons as long as others did not stop doing it. As regards the Russians exploding nuclear weapons only within their territory, Mr Krishna Menon pointed out that the atmosphere was 'not partitioned' and there was no atmospheric insulation round Siberia.

Mr Menon also dealt effectively with the arguments that favoured registration of the number of explosions and control of such experiments under international auspices. All these devices, he said, would perpetuate these by giving them a respectability they ought to be denied in view of the ultimate hazards to mankind involved in them.

The resolutions as they were finally passed were both wise and humane without being in the least of the sort that would ruffle feel-

North Indian Notes

Co-operative Farming

The report of the Programme Evaluation Organisation of the Planning Commission, in regard to the working of the co-operative farming societies in different parts of India, points to the conclusion that the movement has gained only sporadic success, the actual results varying very much from one society to another. Instances of complete success are there, and in one of the three societies selected in Bombay State, the standard of cultivation, was found to be of a very high order, with the result, that the cotton sold by the society fetched the highest price in the market. Such cases of unqualified success are more the exception, and the number of societies taken up for study also shows a sprinkling of societies which were complete failures.

The failures have been complete in cases where, fraudulent motives have been the dominant factors in the running of the co-operative farming societies. Two instances one each in Punjab and UP have been noticed where the societies have been reduced to the position of a joint family enterprise, with the powerful landlords who are related to one another, running the whole show, to the exclusion of any outside element, the objective being to preserve their large holdings from any possible repurcussions of the land reforms legislation.

Though the standard of cultivation in these cases is fairly high they are co-operative societies in name only, the whole scheme being vitiated by the bad motives of the members. A similar departure from the high ideals of co-operative farming, is provided by a society in Hyderabad which has been turned by the big landlords, into an instrument of exploitation to prey on the small.

The societies growing commercial crops have shown no better results. A cane society in Bihar was found to be over-capitalized and ill managed. The area that the society was managing was too small for the number of permanent men and bullocks employed on the farm.

The inquiry undertaken, has brough to light certain other defects which have detracted from the success of the movement as a whole. For example, absence of permanent occupancy ond ownership rights in land has been observed to have reacted on the attainment of maximum efficiency in certain areas. The inquiry though confined to 22 selected co-operative societies is instructive in its findings and should promote efficiency in the future working of the societies, by opening the eyes of the authorities to existing defects.

Land Reform Legislation

One of the major preoccupations of State Legislatures following the achievement of independence has been in respect of measures calculated to reorient the system of land tenure obtaining in the various states, in such a way, as to lift the burdens of the underprivileged and unpriviliged on land. The sum of these state endeavours, has been a series of land reform measures enacted from time to time in the various states. The movement has gained greater momentum, with the publication of the Second Five Year Plan, in which the urgency of such measures has been greatly emphasized.

A review of the progress of the land reforms in the different states of the Union, during the Second Plan period is available in the text of the statement on land reform legislation and proposals made in the Lok Sabha by Mr S. N. Mishra, Deputy Minister for planning.

The land reform legislation shows certain uniform trends. The major preoccupation of the state legislatures, had been in regard to fixing a ceiling on land holding and legislation to that effect has been passed in Assam, Jammu and Kashmir, Punjab including Pepsu and West Bengal, the ceiling having been fixed at 50 acres, 22½ acres 30 standard acres, and 25 acres respectively. A similar bill is awaiting final enactment in Bihar.

Regulation of rent in a proportion so as to be remunerative to the cultivator, has also been uniformly attempted by the state Governments. The share rent has been fixed at 50 per cent of the gross produce in the case of irrigated lands and 45 per cent of the gross produce for dry lands in Andhra Pradesh, at ¼ of the produce where the landlord provided bullocks and seeds and 1/5 when the tenant provided them, in Assam, and at 33 1/3 to 40 per cent of the normal gross produce varying according to the class of land in Madras.

Similarly the right of the landlord to resume land from tenants has also been sought to be restricted by legislation. In Assam 2/3 of the area subject to a maximum of 33 1/3 acres has been fixed as the limit, while in Bombay the limit is one half of the area leased subject to a maximum of three economic holdings. In other states also fixity of tenures to tenants has been ensured by means of legislation and ejectment of tenants from lands has been sought to be stayed in Madras, Mysore Kerala, Orissa etc.,

The land reform, movement, has also been pushed in other ways for example, by the abolition of Inams in Andhra and by the abolition of Zamindaries in urban areas in UP.

NORTH INDIAN MARKETS

Grains Easy : Sugar Dearer

THE reports, that the Essential Commodities Act may be amended to empower the Government to requisition food stocks without paying the local "market" prices, have generally unnerved the Food-grains markets in various centres. Market circles are inclined to await further details of this step. The move is viewed by traders with serious apprehensions on account of its far-reaching implications, while consumers have greeted the move with a sense of relief. There is a general feeling that, if the Government can supplement this measure with an efficient system of equitable distribution, it will go a long way in easing the present difficulties.

For obvious reasons, conditions in the Hapur market remained quiet last week, when Wheat average quality was quoted at Rs 14.50 and the farm quality at Rs 16.50 to Rs 17.00 per maund. Rice prices, however, continued steady due to good seasonal demand; and the supply position was reported to be satisfactory. After early slight fall, Gram prices improved on the Punjab advices. Barley and Bejhar prices also improved slightly, while Jowar continued to attract good demand at unchanged levels on better demand for seeds in the face of poor stocks.

Peas attracted good buying enquiry from Assam and Bihar and most of the local stocks, estimated around 96,000 maunds, were in the hands of Bihar traders. Pressure of the new crop arrivals is gradually declining. Arhar prices recorded a steady trend although heavy arrivals from the neighbouring centres resulted in local stocks rising. Prices of other Pulses ruled steady.

In the Delhi grains market, steady conditions prevailed. Gram rates were, however, soft due to better supply. Rice recovered initial losses, while there was good demand for Maize and Bajra. Other Coarse grains were slightly better.

Turnover in the Bombay grains market was at a low ebb on account of the month-end slackness in demand. Rice prices eased by about Rs 3 per candy in the wake of strong rumours that the Government would requisition stocks lying with the trade. Reports of the likely resumption of sales of imported rice also exercised a sobering effect on the market, while consumer interest was comparatively small.

Trading in the Wheat section was featured by a sizeable decline in the prices of indigenous qualities. Jowar prices eased by about Rs 5 per candy following a substantial improvement in arrivals. Bajra, however, continued to rule firm despite seasonal slackness in demand, thanks to a continued shortage of superior qualities with their arrivals remaining small. The Pulses section presented a mixed trend.

Meanwhile, the all-India second estimate of Gram for 1956-57 puts the current year's area and production at 23,354,000 acres and 5,350,000 tons as against the adjusted second estimate of 22,333,000 acres and 4,636,000 tons for 1955-56, showing an increase of 1,021,000 acres in area and 714,000 tons in production. The final estimate Kharif Pulses puts the area and production at 16,166,000 acres and 1,664,000 tons as against the partially-revised estimate of 15,567,000 acres and 1,632,000 tons for 1955-56. Some of the pulses included in this estimate are also grown during "rabi" season in some States.

*

Sugar

Trading in the Sugar markets continued to be restricted following the imposition of additional excise duty and the consequent rise in prices. In the Hapur market, following mill-delivery rates were quoted (per maund):—Daurala Rs 34; Amroha Rs 32.62; Bijnore Rs 32.37; Mansoorpur Rs 33.50 to Rs 34.75 and Rampur Rs 34.50.

The Government of India have, from May 8, reduced prices of cane, supplied to the factories in Uttar Pradesh, in order to link it with sugar recovery and enable factories to continue crushing for some time more without any loss and absorb the remaining cane. Crushing is also being carried on by several mills in other parts of the country, and an effort is made to manufacture more than 20 lakh tons. After the satisfactory performance over three seasons, it can, however, be expected that the industry will ensure an output of about 20 lakh tons and there will be a sizeable increase when the new factories start production.

In this connection, the President of the Bombay Sugar Merchants' Association has justified the export of 2 lakh tons of sugar this season as production can amount

(Continued on page 1010)

Madras Review

The Peninsula

Factions, Factories, Fiscal Favours

EXCEPT for the Conference at Ooty which claims to be grappling with the problem of raising agricultural output by 40 per cent, there is a strange quiet here in the South which one hopes is not the calm that presages a storm. The tag at the end is not the result of a temperamental pessimism. The feud between the two Kazhagams has broken out in violent crime both at Tuticorin and Madura and the manner in which it was committed suggests that, like a rocket, it has powers of self-propulsion. An eye is the only proper equivalent of an eye, as a tooth is of a tooth.

The threat to law and order is unmistakable; and even more disturbing is the fact that the warring elements have their unavowed affiliations to political parties and the danger that the feud can be closed by the choice of a common policy. These are ugly possibilities over which distant authority more than the men on the spot can keep a watchful eye. But it is as easy in such matters to exaggerate the danger as to under-rate it, though it is the former that constitutes error on the safe side.

However, the general feeling particularly in Government circles is one of self-satisfaction. With the first mine cut for lignite duly made by the Prime Minister, the public is easily persuaded that the gates of a new economic heaven have been opened before their eyes. Visions of Salem as Jamshedpur and Ahmedabad in one are being busily conjured up, while the thought that the days of power cuts will soon be left behind exhilarates far larger numbers.

More important for the present is the prospect of the Government getting larger sums from the Centre as its share of the divisible pool and of taxes levied by the Union for the benefit of the units. State Governments are in an exceptionally favourable position in relation to some of the levies proposed by Mr T. T. Krishnamachari. They are wholly free from the odium of having added to the burdens on the poor. They can keep aloof from the agitation against additional taxation without appearing unsympathetic. At the same time they can use the revenues as they like without being answerable to the authority which voted the taxes. No wonder the Chief Minister of Madras is able to tour through the villages appearing to the poor in the garb of a Vikramaditya!

Agitational protests against the new taxation measures proposed by the Union Government started a little earlier in Madras than in other parts of India. The DMK took out processions on Sunday, carrying placards demanding the withdrawal of the proposed levies on tea, coffee, matches, sugar and railway fares. The Union Finance Minister was urged to withdraw the taxes and the State Government to take immediate steps to check the rise in prices of essential commodities.

While the local public are genuinely concerned over the rise in prices and the new taxes, immediatly their attetion is concentrated more on the 'fluepidemic.' The impact of an epidemic on economic life is sharply drawn this time; a number of commercial firms, industrial establishments and Government offices in the Madras City are being obliged to work with considerably depleted staff. There are large numbers of employees who are reporting sick with flu. One or two among the Cabinet Ministers and their families are also reported to be afflicted and their official tour programmes are consequently upset.

The re-opening of schools may have to be put off, if the spread of the epidemic is not arrested in the course of the next two weeks. The authorities and the public seem to be alertly watching the preventive and relief measures taken in other parts of India and the trend of occurrence of the disease in other South East Asian countries also.

*

WORLD OF FINANCE

(Continued from page 995)

Finally, we wish to suggest that there is nothing sacrosanct about the Reserve Bank of India Act's requirement that foreign securities to be held as currency for backing should not fall below the Rs 400 crore mark. We may note that, in the United Kingdom, the country's foreign exchange reserves are held, not by the central banking institution, but in the form of an Exchange Equalisation Fund. It is true, the monthly statistics of trade and gold and dollar reserves regularly make public the country's position in this regard. In India, since these reserves form part of the central banking institution's statement of position, the drain on foreign exchange is made apparent at the shorter intervals of a week; and, consequently, to that extent it aggravates speculative pressure and activity. While we are not suggesting the divorce from the Reserve Bank figures of the foreign exchange reserves, we believe that it would be proper enough, at a pinch, for Government to suspend the currency requirements in respect of the level of foreign securities.

It is our view that the lines of action to be taken by Government stand out as being self-evident: first, the drawing upon the $72.5 million of stand-by credit from the IMF; second, a further arrangement for $200 million with the IMF; third, the issue of gold bearer bonds for freeing foreign securities held as backing for currency; and fourth, the suspension of the Rs 400 crore minimum level. If the speculative movement in foreign exchange is to be arrested, and even perhaps reversed, what is necessary for Government categorically to state is that devaluation is out of the question; and that, other measures proving insufficient, they intend to run down their holdings of foreign securities to the extent necessary.

In concluding, we would point out that, after a long period when the Indian Rupee (in the New York free market) was quoting at a discount of less than four per cent, the present discount has broadened to 9.2 per cent. A statement on foreign exchange policy should serve to correct this foreign estimation of the Rupee's stability.

*

Sharp Decline in Active Notes

A sharp decline in Active Notes, almost of traditional slack season proportions, is revealed in the Reserve Bank returns for the week ended May 24. Notes in Circulation are lower by Rs 11.83 crores at Rs 1,578.40 crores; Rupee Coin has returned from circulation for Rs 0.48 crores; and Notes held have moved up by Rs 12.41 crores to Rs 27.58 crores. It is worth noting that the fall in active notes is the sharpest since the week ended September 21, 1956. Secondly, Notes held in the Banking Department are at their highest since October 26, 1956—the start of the 1956-57 busy season.

Rupee Securities and Foreign Securities are unchanged. This is not, however, to say that no deficit financing has taken place.

In the Banking Department, Investments have risen by Rs 9.74 crores. To this must be linked the improvement of Rs 4.35 crores to Rs 54.22 crores in the Central Government's Deposits. It is possible to suggest that the increase in Investments indicates deficit financing for Rs 10 crores.

State Governments have augmented their balances by Rs 2.58 crores to Rs 5.66 crores; in so doing, they have moreover reduced their borrowings from the Reserve Bank by Rs 0.80 crores to Rs 19.69 crores. Other Deposits are more or less unchanged at Rs 85.43 crores.

+

Scheduled Banks have substantially improved their position vis-a-vis their balances with the central banking position. Deposits of member banks are, it is true, slightly lower at Rs 62.36 crores against Rs 62.55 crores. But their borrowings against usance bills are lower by Rs 3.63 crores at Rs 59.65 crores; and their total indebtedness would seem to have been diminished by an even larger sum, since the Reserve Bank's Other Loans and Advances have fallen by Rs 8.46 crores to Rs 111.27 crores.

The possible imminence of action by Government in respect of the foreign exchange position is suggested by the further drop of Rs 8.16 crores to Rs 56.91 crores; at this level, the reserves exceed the statutory minimum by less than Rs 70 crores.

+

The return of the State Bank for May 24 discloses an increase of Rs 2.51 crores to Rs 304.09 crores in Deposits. The borrowings of Rs 3.64 crores have been liquidated. Cash balances have improved by Rs 1.49 crores. Advances show a drop of Rs 1.74 crores to Rs 189.17 crores.

Deposits of Scheduled Banks fell by Rs 2.81 crores to Rs 1233.94 crores in the week ended May 17. In the relevant week, the State Bank had added to its Deposits by Rs 0.76 crores. Borrowings both from the State Bank and the Reserve Bank were placed higher, borrowings from the former rising by Rs 1.02 crores to Rs 11.95 crores, and from the latter increasing by Rs 5.64 crores to Rs 95.28 crores. Besides, cash balances fell by Rs 1.55 crores to Rs 127.59 crores, the State Bank in that week have augmented its cash position by Rs 2.48 crores. The total of Advances shows a small rise of Rs 0.85 crores to Rs 936.73 crores, although loans, cash credits and overdrafts actually dropped by Rs 2.83 crores.

The question remains uncertain as to whether bank figures for the first three weeks of May were induced by transactions in commodities which were expected to have a higher excise or import duty on them. Though the May 24 return of the Reserve Bank offers testimony of the "slack" season continuing from where it left off at the end of April, the return of Scheduled Banks for that week must be awaited for a further clue.

Madras Review

South Indian Notes

Food Production

The various schemes, drawn for increasing food production, under the Second Five Year Plan, in the State of Mysore, are intended to make the State self-sufficient in regard to food supplies by 1960-61. While the actual quantity of food-grains produced in the State in 1956-57 stood at 38 lakh tons, the schemes drawn under the Second Plan, envisage an increase in production by nearly 4 lakh tons, by 1960-61 and for this an outlay of nearly Rs 148 lakhs has been programmed, during 1957-58. Central assistance, by way of loans and subsidies to the tune of about Rs 103 lakhs, is also expected to be available to the State.

The plan for agricultural development, cover a variety of schemes but priority has been given to irrigation and the Japanese method of cultivation. The Japanse method of cultivation will be extended to cover an area of three lakh acres as against the present coverage of 1.16 lakh acres.

The irrigation scheme includes fresh works, costing more than Rs 50,000 each, as also schemes estimated to cost less than Rs 50,000 each. An expenditure of about Rs 26,30,000 is expected to be incurred for the irrigation works under the first head. Part of the finances required for the schemes, would be met from loans from the Central Government. Moreover irrigation facilities will be extended by sinking nearly 1108 wells at a cost of Rs 607,000 in the dry areas of the state.

Under the land reclamation scheme, vast stretches of private fallow land in Coorg as well as 25,775 acres of waste lands will be made fit for cultivation.

The other schemes relate to distribution of seed and fertilizers, and nearly 98,000 maunds of improved seeds are proposed to be distributed. This is expected to benefit an area of 350,000 acres. Under the fertilizer distribution scheme, the Government propose to distribute 3983 tons of super phosphates and 500 tons of bone-meal. In addition one lakh tons of urban compost were proposed to be manufactured and distributed to cultivators during the year.

*

Railway Development in the South

The work in regard to the various schemes of development in the zone of the Southern Railway is proceeding in a satisfactory manner. This was the view expressed by Mr T. A. Joseph, General Manager, Southern Railway, at a Press Conference in Madras.

The most important of the railway development works in the South are the laying down of new line between Quilon and Ernakulam and the conversion into broad guage of the existing metre gauge line of 51.75 miles from Renigunta on the Madras Bombay Line to Gudur on the Madras Vijayawada line. Work on the latter is nearing completion, while the former line is expected to be opened before the end of this year.

The Southern Railway has also in hand schemes for remodelling some of the railway station yards, to increase movement capacity and also schemes for remodelling some important railway stations.

New schemes so as to ensure quick transit as also transport of consignments within a specified period, were introduced in certain lines. Further to facilitate additional traffic from the North to the South, the interchange quota, for the South Eastern Railway, via Waltair, was increased from 280 wagons to 300 wagons. Similarly the quota for the Central Railway via Vijayawada was raised from 500 to 550 wagons. Further doubling of certain lines has been programmed so as to increase the line capacity for handling heavy traffic that would be generated at the close of the Second Five Year Plan.

The only scheme that was held up was the one relating to electrification of the railway line between Tambaram and Villupuram. Technical considerations as to whether Direct Current or Alternate Current traction should be used, seems to have been the reason for this.

On the financial side, the gross earnings registered an increase from Rs 47.47 crores in 1955-56 to Rs 49.85 crores in 1956-57. Side by side, the working expenses also increased from Rs 36.32 crores in 1955-56 to Rs 38.11 crores in 1956-57. Improvement was noted under all the principal heads of traffic, the increase in the head 'passengers' being Rs 104.37 lakhs and under 'goods' being Rs 149.99 lakhs.

SOUTH INDIAN MARKETS

Pepper Development Scheme

IT is officially stated that a scheme for the development of the Pepper industry in Kerala has been drawn up by the Madras State Government. The scheme, which will function for four years during the Second Five-Year Plan period, envisages the establishment of seven pepper industries—one in each of the seven districts of the State—to raise rooted cuttings from quality vines of high yield for distribution to growers.

The scheme will be worked by a Pepper Development Officer and all the district nurseries will be linked with the headquarters. Moreover, a systematic attempt will be made to replace the old and uneconomic pepper vines by improved varieties, so that the average yield and the total production of pepper in the State will be increased to 'a very great extent'.

*

Ginger

The all-India final estimate of black peper for 1956-57 puts the current year's area and production at 233,600 acres and 31,600 tons as against the partially-revised estimate of 232,500 acres and 32,000 tons for 1955-56. This shows an increase of 1,100 acres in area and a decline of 400 tons in production over last year. The decrease in production has occurred in Kerala and Mysore States and has been attributed generally to unfavourable weather conditions during the flowering and growing period of the crop.

Meanwhile, pepper markets have continued to rule steady. In the Alleppey market, the rate is quoted around Rs 600 and Rs 606.25 per candy for inferior and superior Palai Thekkan varieties respectively. In the Kozhikode market, Wynaad quality is quoted at Rs 685 and the Country variety at Rs 650, both per candy.

The future of the markets now depends upon Sarawak where prices are held rather tightly in view of the comparative small arrivals from Sarawak and buying by Indo-China. Indo-China is reported to have bought some quantity from Singapore, possibly for re-export to New York for obtaining foreign exchange.

The all-India final estimate of dry Ginger for 1956-57 puts the current year's area and production at 39,700 acres and 14,900 tons as against the partially-revised estimate of 39,800 acres and 15,300 tons for 1955-56. This shows a decrease of 400 tons in production over last year. The decrease in production occurred in the major ginger-growing States of Kerala and Andhra Pradesh.

In the Alleppy market, Ginger is nominally quoted at Rs 337.50 per candy. At Kozhikode, the rate is quoted around Rs 340.

Rubber

Production of Rubber in India has gone up by 852 tons in April as compared with the previous month. Consumption has also increased by 321 tons during the same period.

The monthly statement, issued by the Rubber Board, shows production and consumption figures at 2,072 tons and 2,907 tons respectively. The relative figures for the previous month were 1,220 tons and 2,585 tons. The quantity of imported rubber during the month was 649 tons.

Stocks with the estates and dealers and stocks with the manufacturers, as on the 30th April 1957, were 3,867 tons and 2,632 tons respectively.

*

Coffee

With the increase in excise duty on Coffee, announced by the Finance Minister, he has wiped out at one stroke all the reduction in prices he managed to bring about in recent months to the benefit of the domestic consumer. The duty amounts to Rs 840 per ton to which must be added the Board's Pool expenses, currently about Rs 220 per ton, thereby increasing the attractions of illicit trade in coffee. With the increase in the price of sugar, an enlarged home market for coffee will cease to be of any validity.

According to the latest reports, the quantity of coffee received from the 1956-57 crop was 39,515 tons; and the coffee held in stock exceeded well over 32,000 tons—a record for India. Of this, nearly half was on the West Coast requiring removal before the onset of the monsoon. This will substantially add to the cost and, with a steady downward trend in export prices, the prospects for the commodity are not cheerful this year.

*

Groundnuts

Conditions in the Madras Groundnut market ruled rather quiet last week. Crushers and operators did not show much interest as they seemed to be worried by the recent levies of excise. Arrivals averaged 25 to 30 tons a day. Calcutta interests and local small crushers only took up small quantities. The rate for superior oil-quality seed was quoted around Rs 165 per candy.

It is reported that there were good showers in Pollachi last week and that ryots were completing sowing operations. In view of the late rains, the season is expected to be late by four to six weeks.

In the Groundnut Oil section, the rate for the ready position was quoted around Rs 340 per candy. Sellers were unable to offer at workable levels, while buyers were found to be in no hurry to do any business.

OLYMPUS

(Continued from page 1005)

ings. The moral case for the suspension of tests was well brought out in the debate: but the political aspect of the matter was prudently not lost sight of. There was no wobbling in the compassionate concern for mankind in the resolution, but all trace of priggishness was deliberately removed from the appeal to desist from these deadly experiments.

In this final form, it was yet another instance of the modest and constructive approach to international problems that India has been pursuing since it formulated its independent foreign policy in 1948.

*

NORTH INDIAN MARKETS

(Continued from page 972)

to over 20 lakh tons. He expresses the view that, if stocks with the mills are maintained at about 3 lakh tons, sugar prices in the country will prevail at about 3 lakh tons, sugar prices in the country will prevail at reasonable levels. Besides the adoption of measures to raise the capacity for production, an increase in the yield of sugarcane as well as an improvement in its quality is essential. The industry has, therefore, a busy time ahead.

*

Gur

At Hapur, the Gur market continued to rule quiet due to slack outside buying enquiry. Since arrivals have gone down to an average of 75 maunds daily, stocks have declined and are estimated around 88,000 maunds.

Shellac

The new taxes in the Budget have thrown Calcutta Shellac dealers into a confusion and prices have suffered as a result. The rate for Pure TN quality is quoted around Rs 80 per maund as against Rs 85 quoted a week ago. Shipments during the current month, upto 23rd, amounted to 23,926 packages.

On the London market, Continental buyers are not showing any interest, while trade with Britain is patchy. The USA is doing some business at the lower levels now prevailing; but buyers are very price-conscious. June delivery is quoted at 214 sh per cwt.

*

GATEWAY GOSSIP

(Continued from page 1002)

that the Corporation will devote its exclusive attention to the procurement and servicing of business and the life funds will be transferred to the charge of a board of trustees consisting of the Governor of the Reserve Bank, the Chairman of the State Bank and the Chairman of the Corporation. This means that the Governor of the Reserve Bank will combine in himself the over-all guidance of investments of considerable size not only in the gilteged securities but in stocks and shares pertaining to the private sector.

*

SOUTH INDIAN MARKETS

(Continued from page 1008)

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate with a steady clearance. There was very little change in the prices of Buff hides arrivals of which were as usual. Clearances of Buff Calf were reported to be restricted and those of Cow Calf were slow.

On the export front, enquiry from the UK was limited to better selections. Market quality Buff Calf was practically impossible to sell. Some tanners were, however, making offers in combination with runs and thirds.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate with a steady clearance. Prices remained almost unchanged.

In the export section, conflicting prices were being quoted and no definite indications of sales at Madras prices were available. Most tanners of semi-prime and prime qualities, however, reported a well-sold forward position for the next few weeks.

*

BALANCE-SHEET REVIEWS

(Continued from page 992)

including a bonus of Rs 5, per share has been recommended. Sales have fetched Rs 2.03 crores.

£ R$

Indo-Burma Petroleum :

Despite an increase in sales from Rs 2.12 crores to Rs 2.23 crores, the Indo-Burma Petroleum Company Limited has reported a decline in earnings for the year ended 31st December, 1956. This is mainly due to a rise in expenditure to Rs 1.87 crores from Rs 1.71 crores. In this connection, the directors have, in their report, mentioned that the two wells, that had been drilled in Lancashire, failed to prove oil or gas in commercial quantities and the company's share of expenditure on this account was Rs 5.93 lakhs. With the result, the net profit, before providing for Taxation and Depreciation, amounts to only Rs 50,32,049 as against as much as Rs 62,45,269 in the previous year.

In respect of allocations, the Depreciation amount is reduced to Rs 2.91 lakhs from Rs 4.32 lakhs, while Taxation has been raised to Rs 28.93 lakhs from Rs 28.90 lakhs. No provision is made for Investment Reserve as in the previous year when a sum of Rs 2.00 lakhs was allocated to this item. The directors have recommended a final dividend of Re 1, making a total of Rs 2 per share for the year as against Rs 4 paid in 1955. The dividend is payable on or after the 11th June, 1957.

£ R$

Dunbar Mills

The working of the Dunbar Mills, Calcutta, during the year 1956, has resulted in a substantial decline in earnings, mainly due to the strike at the miles which lasted for about two months. Although sales have shown a rise to Rs 1.61 crores from Rs 1.53 crores, the net profit, before providing for Depreciation, amounts to only Rs 7,53,893 as against as much as 13,12,855 lakhs in the previous year. Apart from setting aside a sum of Rs 1.00 for General Reserve, the Depreciation amount is raised to Rs 4.28 lakhs from Rs 1.00 lakh. The dividend on the Ordinary shares is raised to Rs 6 from Rs 2.50 per share.

£ R$

Lakurka Coal

The Lakurka Coal Company has shown a profit of Rs 11,833 for the year ended 30th April, 1956 as against a loss of Rs 71,297 in the previous year. Raisings are higher at 61,275 tons against 55,654 tons, while despatches are lower at 56,093 tons against 62,500 tons. A sum of Rs 29,800 (Rs 10,300) is provided for Depreciation. The dividend is maintained at As 2 per share. A sum of Rs 5,291 is carried forward.

Stock Exchanges

FRACTIONAL RECOVERY

Watch-Dog Writes:

ALTHOUGH the trend of equities has been indecisive during the week under review, a small recovery in prices is recorded on balance, thanks to the sustained support lent by the Life Insurance Corporation. This does not mean that the markets have got over the panic created by the Budget proposals; but are stabilising at lower levels. There is still a sense of frustration among speculators and investors alike. Market circles are now awaiting the release of the report with regard to the decision of the Select Committee, appointed to enquire into the new tax proposals.

A slight improvement in sentiment was noticed on the Calcutta Stock Exchange, although business was still restricted.

Price movements on the Bombay Stock Exchange were rather irregular due to alternate buying and selling.

Turnover on the Madras Stock Exchange continued to be restricted and the trend of prices was halting.

Firm and active conditions prevailed on the London Stock Exchange, the main impetus being the latest pledge by the Chancellor of the Exchequer of further tax reductions.

Wall Street closed barely steady with a majority of gains, ranging mostly to one dollar or so.

*

Calcutta

ALTHOUGH trading on the local Stock Exchange was still restricted, a slight improvement in sentiment was discernible during the week under review. The slight recovery in prices was partly due to bear-covering and partly to the excellent support extended by the Life Insurance Corporation. The fillip was also provided by the encouraging amount of subscriptions received by the Indian Iron & Steel Company Limited against its offer of right shares at a premium of Rs 3-50 per share. Also, there were signs of investment enquiry for some of the first-class issues on a fresh appraisal in the light of the new tax proposals. Higher levels, however, could not be maintained till the close due to profit-taking as operators were inclined to be cautious in their commitments, pending the release of the Select Committee's report. The market finished the week with minor gains on balance.

The Giltedged section presented a steady front and prices showed an improving tendency, mainly attributed to the limited support extended by the Reserve Bank for some of the selected issues. 3 per cent 1986 Conversion Loan opened at Rs 73.42 and, after improving to Rs 73.87, receded towards the close to Rs 73.25.

Bank shares ruled steadier with Punjab National changing hands upto Rs 54 from Rs 52.25; United Commercial upto Rs 54.00 from Rs 53.75 and Hind upto Rs 32.75 from Rs 32.25.

Jute shares continued to remain depressed in view of the growing fears with regard to the raw jute supply position. The only exception to the general trend was National, which met with consistent speculative support upto Rs 20.00 from Rs 19.50. Nuddea were enquired at Rs 32.12 to Rs 32.87; Reliance at Rs 6.62 to Rs 7.00; Gourepore at Rs 231 to Rs 234 and Anglo-India at Rs 136 to Rs 130.

There was limited trading in the Coal section as operators seemed to be awaiting the recommendations to be made by the Coal Price Committee before entering into fresh commitments. The only three bright spots were Burrakur having speculative support upto Rs 22.37 from Rs 21.75; Bengal upto Rs 216 from Rs 212 and Central India upto Rs 5.94 from Rs 5.87. Western Bengal moved narrowly between Rs 5.12 and Rs 5.14 with Pench Valley quoting around Rs 14.50.

In the Tea section, dealings continued to be very few on lack of buying enquiry. The encouraging interim dividend announcements made by some of the tea companies in McLeod group had no effect on the market sentiment. Apart from fears of over-production, operators felt that the increase in excise duty would have to be borne mainly by producers which, in turn, might reduce the profitability of the gardens. Amongst the few transactions recorded were Brooke Bond changing hands at Rs 16.75 to Rs 16.88; Dhelakhat at Rs 21.50 to Rs 21.62; Grob "B" at Rs 12.75 to Rs 13.00; Hasimara at Rs 20.87 to Rs 21.00 and Patrakola at Rs 145 to Rs 148. The withdrawal of the duty has, however, been received with relief.

The firmness in the prices of Sugar shares, noticed after the announcement of the increase in excise duty, was proved to be short-lived. Operators had the feeling that profit-margins might be affected if mills had to share a portion of the increased impost in view of the consumer resistance to the prevailing prices. The only scrip, which came in for some enquiry, was SKG, moving narrowly between Rs 10.00 and Rs 10.06.

Except for some recovery in Kesoram from Rs 13.00 to Rs 13.31 and New Victoria from Rs 1.62 to Rs 1.76, little interest was generally shown in the Textiles section. There was a feeling that the absence of any relief in the Budget proposals as originally anticipated, and the heavier Corporation Tax would affect the profit-margin of the mills.

Engineering shares ruled generally steady although price movements were mostly influenced by the speculative activity in Indian Irons in view of settlement adjustments. Following were the settlement rates, figures shown within brackets being last settlements:—Indian Irons Rs 18.48 (Rs 19.39); TEXMACO Rs 17.45 (Rs 18.25); Burrakur Coal Rs 22.37 (Rs 22.25); National Jute Rs 20.00 (Rs 20.00); Orient Paper Rs 26.00 (Rs 27.70) and Indian Copper Rs 3.36 (Rs 3.36).

Thanks to the news of the success of the Indian Iron right issue offer and the reports that there might not be settlement difficulties in Bombay as apprehended earlier, Indian Irons started higher at Rs 18.18 against the week-end closing of Rs 17.84. The scrip, after forging ahead to Rs 18.45, receded again to Rs 18.18 on selling pressure, to advance again to Rs 18.57, finishing the week at Rs 18.42. New shares touched a high of Rs 17.36 and a low of Rs 17.03, to close at Rs 17.30.

Among other Engineering scrips, TEXMACO were at one time taken upto Rs 17.70 from a low of Rs 17.20, to ease off at the close to Rs 17.35. Jessop moved irregularly between Rs 23.94 and Rs 24.37, to finish at Rs 24.31. G. K. Williams were a very firm feature having sustained investment demand upto Rs 27.25 from Rs 26.50. Richardsos closed a shade quieter at Rs 15.06 against Rs 15.37 with Britannia having buyers upto Rs 13.56 from Rs 13.43. Burn were a steady feature at Rs 305.

In the Miscellaneous section, price movements were rather irregular due to alternate bouts of buying and selling, although selected scrips tried to close at or nearly the week's best levels, thanks to enquiry from investors. The following table shows the price trends of the most active scrips:—

		Week's High Rs	Week's Low Rs	Week's Closing Rs

EDITORIAL NOTES

(Continued from page 994)

as against 1.13 tons in November and December; for 'all persons employed underground and in open workings', the output fell from 0.62 ton in November and December to 0.60 ton. There has been a similar decline for the category of 'all persons employed above and underground.' In February, the level rose to 1.15 tons for the first category and for the second, the November and December levels at 0.62 ton were restored.

For miners and loaders, the monthly average output has been steadily on the rise since 1953; in the latter year it was 1.05 tons, rising to 1.09 tons in 1954 and 1.10 tons in 1955. It reached 1.12 tons in 1956. For the first two months of 1957, the average stands at 1.14 tons. In the other two categories also, the average annual productivity level has been going up though not continuously. The extent to which changes in techniques of production have contributed to this increase does not seem to have been analysed in detail.

WORLD OF COTTON

(Continued from page 1004)

ties. Dealers expressed concern over the break in the trading activity. It was feared that, unless the issue was resolved satisfactorily very soon, they would be put to severe hardship, particularly when money conditions continued to be tight. The improvement in demand, however, continued to prevail.

On the export front, usual buying interest was evinced from foreign countries. Sudan accounted for moderate business in voiles and mulls, while Saudi Arabia was reported to have issued import licences. It is also reported that the Burmese Government has decided to extend the shipment for export of cotton textiles to Burma under the P.L. 480 scheme, up to the end of June, 1957.

THE BENGAL FLOUR MILLS CO., LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the One Hundred and Twenty-Third Ordinary General Meeting of the Company) will be held at its Registered Office, 21, Netaji Subhas Road, Calcutta, on Wednesday, the 19th June, 1957, at 12 noon to consider the Profit & Loss Account for the year ended 31st December, 1956 and the Balance Sheet as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to declare a dividend, and to transact other ordinary general business of the Company.

Notice is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 3rd June, 1957, to 19th June, 1957, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta, 22nd May, 1957.

NOTE:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

Industrial Information

WHAT DRILLING AN OIL WELL MEANS

A hundred and forty-foot steel tower pointing to the sky marks the spot chosen for the drilling of the first oil test well in West Bengal. The gaunt steel tower, square at the bottom and tapering to the top, the oil derrick, is a dominating feature of any area where drilling for oil takes place. In fact the derrick has become the symbol of oil fields and oil production.

This is not accidental. For the drilling equipment must be suspended from a derrick or they cannot be operated. Besides the derrick makes possible the upright stacking which permits speedy handling, of miles of heavy pipe which must be driven into the earth as drilling progresses.

The 147-foot high derrick with a 25-foot square base rigged up by Stanvac near Burdwan is specially designed for the drilling conditions likely to be encountered in West Bengal. Like all modern derricks, this particular one is capable of carrying the load of hundreds of tons of equipment needed for drilling the well and to take the shocks of drilling operation. Moreover being built of special steel, it has the rigidity to withstand violent storms. A distinct advantage about this modern rig is that it can be assembled within a short time for starting on a new job and dismantled just as quickly—ready for moving to the next. This is a far cry from the 60-foot derrick of pine wood, cut, nailed and permanently installed at the well which Drake had drilled to usher in the oil age.

Speaking of Drake, it might be mentioned that he struck at a depth of only 69 feet. Today wells more than a mile deep are numerous while many go down as deep as two miles. The Stanvac well is expected to go down to a depth of 10,000 feet, which is still considered unusual. The equipment which is now being used for the Stanvac Project, is specifically designed to drill wells to a depth of eight to ten thousand feet, though with slight adjustments and some ancillary equipment, the depth to which the rig will go can be materially increased.

The type of equipment which Stanvac has installed is known as the rotary drilling rig— the more modern of the two principal methods, for drilling oil. The older is known as the cable-tool method, in which o hole is punched into the earth by repeatedly dropping from a cable a heavy cutting tool called a bit. Developed by the Chinese many centuries ago to dig water wells, the cable tool method is far less frequently used today than the rotary method. In this later type of drilling, a hole is bored into the earth much the same way as the carpenter's brace and bit burrows into a piece of wood.

A heavy turntable which rests on a steel base just above the derrick floor is rotated on roller bearings. This table grips and turns a pipe with the 'bit' or the cutting tool attached to the lower end.
