with 85,800 tons, saleable steel at 66,900 tons as against 65,100 tons.

13

According to a fresh survey recently conducted by the Geological Survey of India, the Raniganj Coal fields were estimated to contain about 13 thousand million tons of coal—nearly twice the amount estimated in an earlier survey in 1928. The reserves, therefore, on the basis of the current rate of consumption should last a few centuries.

At a conference on Promotion of Jute Production held in New Delhi, Dr Deshmukh, Union Minister for Agriculture, said that he was very much anxious to tackle the problem of increasing jute production on a high priority basis. The Conference felt that it was necessary to bring additional area under jute in order to achieve the revised target of 5,540,000 bales of jute laid down for the Second Plan period.

The Development Council for Sugar Industry approved the sugar industry's production target of 2.16 million tons for 1957-58. The Council also commended the decision of the Government of India to allow export of sugar upto 50,000 tons for the present.

14

Prices all along the list moved up in Calcutta on renewed buying interest brought about by better advises from Bombay. Indian Irons opened firm at Rs 28-12 and closed at Rs 28-13. In Bombay despite profit taking in earlier dealings, undertone became fully steady later on renewed bull support. Reports of settlement difficulties however, continued to impart some caution. Tata Iron was not much changed at Rs 175-4. Bombay Dyeings on the other hand were 5 points higher at Rs 567-8.

The Indo-Pakistani trade talk began in New Delhi. Considerable significance was attached to the talks as it would be first time that a trade agreement between the two countries was being negotiated through full-fledged delegations from both Governments.

15

Rumours about a rise in Bank rate was responsible for depressing sentiment on the stock markets. The adverse effect of the rumour was particularly noticeable in Bombay where Bombay Dyeing receded to Rs 566-4 from previous closing of Rs 567-8. Tata Iron, however, continued to rule steady around Rs 175-8. In Calcutta Indian Irons was subdued at Rs 28-12 while several bright spots were noticeable in the miscellaneous section, with Indian Cables advancing sharply to Rs 33-10.

16

An undercurrent of caution prevailed in the stock markets in view of the discussion by the UN Security Council of the Kashmir dispute. Pakistan had asked the council for a reiteration of the undertaking for a plebiscite in Kashmir and for an injunction against an integration of the State with India. It was generally apprehended in market circles that any further deterioration in the relations between India and Pakistan would affect the short-term as well as the long term prospects of the industries in India. In Bombay the list finished the day with selective issues recording fair declines while in Calcutta price movements traced an irregular patterns. Tata Iron declined from Rs 175-8 to Rs 173-12 with Bombay Dyeing coming back to Rs 558-12 from Rs 566-4. Indian Irons opened at Rs 28-8 and lost quarter point by close to be placed at Rs 28-4.

17

While India and Pakistan were ranged on opposite sides in the UN over Kashmir, the delegates from both the countries in New Delhi seemed to have reached a broad understanding on the commodities to be exchanged between the two countries under the new trade agreement.

The fact that earlier fears about a rise in bank rate had been belied helped regain confidence in the share markets. Dalal Street gave the lead with values opening firm. Sizeable gains were noticeable over a wide front and the selected issues recorded fair turnover at advancing price levels. Tata Iron was up by Rs 2-4 at Rs 176 while among textiles Bombay Dyeing spurted to Rs 565 from Rs 558-12 The higher advices from Bombay aided sentiment in Calcutta also and prices under the leadership of Indian Iron closed higher on balance. Indian Irons opened at Rs 28-11 and closed fractionally better at Rs 28-13.

18

The recovery movement was carried a stage further with the speculative counters both in Bombay and Calcutta making further substantial gains. Dalal Street was buoyant on reports that soon the effect of the expansion would be evident in the shape of a sizeable increase in production at TISCO in Jamshedpur. Tata Iron gained 2½ point to be placed at Rs 178-4. Bombay Dyeing also advanced in sympathy to Rs 572 from Rs 565. In Royal Exchange Indian Iron after opening at Rs 28-10 closed six annas higher at Rs 29.

19

Speaking at the first meeting of the Panel for paper and pulp industries Mr Manubhai Shah, Union Minister for heavy industries disclosed that Government of India had given permission for setting up 22 new paper mills in the country during the Second Five Year Plan period. This together with substantial expansion of the existing 21 paper factories would raise the country's capacity for the production of paper boards from 210,000 tons per year to 540,000 tons by 1960-61.

20 & 21

The Calcutta stock exchange remained closed on January 21. In Bombay conditions were quite cheerful in the beginning, but midway through the session prices developed a sagging tendency in the absence of fresh support and bull realising. Thanks, however, to the continued firmness of Indian Iron in kerb trading in Calcutta, Dalal Street closed the day on a steady note. Tata Iron moved up to Rs 181-4 with Indian Iron done upto Rs 29-9.

22

India and Pakistan signed the new three-year trade agreement. The agreement was expected to come into force from February 1, 1957 and was to remain in force for 3 years. Under the agreement the two Governments had undertaken to explore all possibilities for expansion of trade between the two countries on the basis of mutual advantage.

The Calcutta Stock Exchange opened the day on a cheerful note with the speculatives encountering fresh support. In sympathy with the market leader, the rest of the market also showed some improvement. Tata Iron made further headway to Rs 182-12 from Rs 181-4. In textiles Bombay Dyeing was also slightly better at Rs 579-6. Indian Irons in Calcutta opened at Rs 29-9 and closed higher at Rs 29-13.

23

The Calcutta Stock market remained closed on account of Netaji's Birthday. The undertone in Bombay continued to be steady with Tata Iron hardening to Rs 183. Indian Iron in Bombay was well maintained at Rs 29-14.

24

Sentiment was rather subdued in Stock markets on reports from the UN Headquarters that Five Powers Australia, Colombia, Cuba, the UK and the USA were sponsoring a resolution for reaffirming earlier UN stand for a plebiscite in Kashmir. In view of the firm declaration both by Kashmir and India that accession is a domestic affair concerning Kashmir and Kashmir alone, operators on the stock markets were reluctant to extend their commitments until something definite was known about the Kashmir dispute. Dalal Street was first to exhibit a reactionary tendency with Tata Iron marked down to Rs 181 from Rs 183 and Bombay Dyeing to Rs 578-2 from Rs 583-12. Calcutta, however, continued to rule firm under the leadership of Indian Irons which encountered strong buying support. After opening at Rs 29-9 the scrip at one time during the day crossed the Rs 30 mark to be done upto Rs 30-2, to be finally placed at Rs 29-15.

25

With Russia abstaining from voting, the UN Security Council passed the resolution sponsored by the Five countries by ten votes to nil. In essence the resolution declared that the future of Kashmir should be decided by a free and impartial plebiscite under UN auspices.

The development over Kashmir evoked heavy realizing pressure in Bombay were Tata Iron turned quiet at Rs 180-4 with Bombay Dyeing receding from Rs 578-2 to Rs 573-2. In Calcutta though the generality of scrips continue to rule fairly steady the more speculatives encountered selling pressure. Indian Irons after opening at Rs 29-12 receded further to close at Rs 29-10.

26, 27 & 28

Narrow price movements characterised trading in the country's stock exchange in Calcutta Indian Iron opened at Rs 29-14 and after moving within a narrow range closed at Rs 29-13. In Dalal street Tata Iron was subjected to alternate bouts of selling and buying with the closing level slightly higher on balance at Rs 181.

29

The special Bench of the Labour Appellate Tribunal asked Government to consider the desirability of amending the coal miners' bonus scheme. The Tribunal recommended that in fixing the minimum wage bonus should not be included in the calculation. It was apprehended that as a result of the award of the Appellete Tribunal the working cost of the coal industry would increase. The fact that the Award had been given retrospective effect from May 26, 1956 had been generally construed as bearish for coal shares in particular and for the generality of shares as well.

The most powerful influence that initiated the reactionary tendency in the markets on that day had been the announcement regarding their forthcoming rights issue by Indian Iron & Steel Company Limited. By a notice the company reaffirmed its decision to issue the rights offer of 5,183,708 new shares of Rs 10 each at a premium of Rs 3-8 per share. It was further announced that the shares would be offered to those persons who were registered as holders of ordinary shares in the company's register of members on the 11th March 1957.

30

Coal shares were depressed in Calcutta consequent to the publication of the coal award. The stock market elsewhere also was dull with Indian Iron done at Rs 29. The Bombay Market remained closed.

31

The increase to 4 per cent by the Reserve Bank of its rate of interest on advances to scheduled banks against Government securities imparted a subdued tendency to stock markets. In Calcutta Indian Irons after earlier steadiness closed lower at Rs 29.3. In Bombay Tata ordinary was sold down to Rs 178 after touching a high of Rs 180-12.

steel brings you the news
Yes, that paper you are reading owes its existence to steel. It is steel that helped to manufacture the paper, did the printing and even helped to collect the news that it carries. There is hardly any facet of life where steel does not play a part in one way or another.
TATA STEEL
SERVES THE NATION
Steel, today, is very much to the fore in the nation's thinking. India's steel-making capacity is being rapidly enlarged to provide a sure and solid basis for the country's advancement.

For the Investor

Stock Exchange Prayer for Nehru

Investment Gossip:

The elections are due to begin in a fortnight; and stock exchange news must take second place by the side of election fights and election results, whose vicissitudes and fortunes will leave little place for aught else in the columns of papers and the mind of the population.

After the elections, market should develop a firm trend; and much, of course, depends upon whether or not the Congress continues in power at the Centre and in the States.

The Congress Governments have come in for criticism from the spokesmen of Big Business; but they will be the first to admit that taken all in all, Congress policies and plans are the least unfavourable to them. If PSP comes to power, what will be the reaction of Big Business? If Communists come to power, what will be the fate of Big Business?

I have merely to pose the questions in order to show that it is to the private sector's interest to pray devoutly for the return of Congress to power.

Omens and indications, now available, favour the continuance of Nehru Government and Nehru policies. I hail this as the most bullish factor for the national economy and, therefore, for the investor.

£ R$

Investment Notes:

SHREE Gopal Paper Mills have proposed to offer 75,000 new shares of Rs 100 each, known as Second Preference shares, carrying a fixed cumulative preferential dividend of 7 per cent. These are redeemable at par between the 12 and 15th year from the date of issue.

The Thackersey group of mills—Hindoostan, Western India and India Manufacturing—has proposed to capitalise a part of the reserves and issue bonus shares in the ratio of two new shares for every share held. This is subject to the sanction of the Controller of Capital Issues.

It is learnt that the shares of Khandesh Spinning and Weaving Mills and Jam Wire Products have been eliminated from the official list of the Bombay Stock Exchange.

Kirloskar Brothers have decided to capitalise a part of their Reserves and issue Bonus shares in the ratio of 1:3, subject to the Government sanction. This move has been initiated with a view to maintain a reasonable relationship between the share capital and Reserves.

Amalgamated Coffee Estates have decided to issue 22,500 equity shares in the proportion of 1:2 to holders as on 14th February, 1957.

Andhra Bank has made a second call of Rs 15 per share on the 47,980 partly-paid shares of Rs 100 each (Rs 70 paid-up), payable on or before the 30th April, 1957.

Standard-Burrakur Amalgamation Proposal Abandoned

Balance-Sheet Reviews:

THE proposed merger of the Standard Coal and Burrakur Coal companies has been dropped. It will be recalled that, in June 1956, the shareholders of the Standard Coal Company had approved a scheme of amalgamation with the Burrakur Coal Company, under which it was intended that shareholders of the Standard would receive two Ordinary shares of Burrakur for every Ordinary share held. There was, however, a considerable opposition to this scheme from a section of the Ordinary shareholders of the Burrakur Coal Company.

Apart from the fact that it appears unlikely that the amalgamation scheme will be approved by the requisite majority of ordinary shareholders in the Burrakur Coal Company, the present market price of Burrakur ordinary shares is now such that the formula of two Burrakur shares for one Standard share will almost certainly be unacceptable to the Burrakur shareholders, while any lower ratio will not be attractive to the shareholders of Standard Coal. The directors have, therefore, felt that there is no alternative, but to abandon the amalgamation scheme as being impracticable under current conditions.

In the light of the above situation, the directors of the Standard Coal Company have given careful consideration to the possibility of liquidating the company. It has, however, been found that there are certain legal obstacles connected with the transfer of the title of the coal properties orginally owned by the company and, in addition, certain outstanding matters, such as pending tax appeals, which will delay the liquidation proceedings for a period of several years. Apart from these considerations, recent changes in the Taxation laws of this country as pertaining to the liquidation of companies will result in a substantial percentage of the company's assets, represented by accumulated reserves being dissipated in tax liabilities during the process of liquidation.

In view of the difficulties in the way of liquidation and the substantial financial loss to the shareholders that will result therefrom, the directors have considered that the company should remain in existence, but change its main business to that of an investment company. Out of its present assets, it is intended that the company will dispose of its share in the Chief Mining Engineer's bungalow at Bhulanbararee and its holding in Government securities and debentures. This will leave the company with the following assets:—(1) 15,000 Ordinary shares in Coal Shipments Limited; (2) 9,275 Ordinary shares in Sijua (Jherria) Electric Supply Company; (3) 200 Ordinary shares in Industrial Credit and Investment Corporation of India; and (4) 802½ bighas of coal-bearing land in Mouza Sowardih.

The first three items of the above assets are expected to yield a reasonable return although, in the case of Coal Shipments Limited, the profits made and the dividends payable fluctuate to a wide extent, dependent on the coal export market.

As regards Sowardih Mouza, it is intended to retain this meantime as, in the event of a change in the policy of the Government of India towards the private sector in the coal industry, it might be practicable to work this property or to dispose of it at an attractive price. In the event of Government continuing their policy that all future development in the coal industry should be in the public sector, it is likely that

(Continued on page 295)

HIGHLIGHTS

The election fever has spread over the whole country. And no wonder.

The Second General Election of India's young democracy will create history, as did the first. That is the Spectacular aspect.

The practical aspect is: will the Congress return to power? The fate of the elections lies in the laps of the gods and of the goddesses. If so, the Nehru Government, who have steadfastly stuck to, and implemented, moral values are sure to win the favour of the gods and goddesses.

Such is the hope and prayer also of Eavesdropper and Watchdog who, too, have been afflicted with the election fever.

British Bank Rate Reduction

By PAUL EINZIG

DURING the greater part of January the City was confidently expecting a Bank rate reduction, in anticipation of which the Stock Exchange and stering were very firm during the greater part of the month. But when Thursday followed Thursday without the announcement of a change following on the weekly meetings of the Court of the Bank of England, dealers, speculators and investors began to abandon hope. Towards the end of the month the markets developed a hesitating tone and government loans became distinctly weaker. Sterling, too, lost some of its earlier improvement, and the decline of Treasury bill rates came to a halt. When it became known that, so far from gaining gold in January, the Treasury had to part with some of its recently borrowed dollars to settle earlier deficits with the European Payments Union and to finance the import of dollar oil, hopes of an immediate Bank rate reduction were almost completely abandoned.

Thus it was that when on February 7 the reduction of the Bank rate from 5½ to 5 per cent was announced, the decision came as a complete surprise. Even though commentators claimed that it was an "inevitable" technical consequence of the previous decline in market rates of discount, the attitude of the markets on the eve of the reduction certainly gave no indication that dealers, investors and speculators were anticipating the change. And commentators had put forward an impressive array of arguments to show why a change was not to be expected in the immediate future. Foremost among these arguments was the deterioration of the Budget position and outlook. During the greater part of January the Stock Exchange was confident that cuts in defence expenditure and a general economy drive would enable the Chancellor of the Exchequer, Mr Thorneycroft, to make appreciable tax reductions in his Budget. The publication of substantial Supplementary Estimates gave rise to second thoughts on the subject. In any case the weekly Exchequer returns showed that current expenditure was running considerably above Estimates. It is true, the current deficit was largely offset by a reduction of Government capital expenditure. But from the point of view of the next Budget this is small comfort. For the cuts in capital expenditure are by their nature non-repeatable, while the rising trend in current spending is continuous.

During the wave of optimism in January the authorities abstained from reducing the Bank rate, for fear of exaggerated psychological effects in the form of an accentuated boom. But now that the psychological pendulum has swung in the opposite direction it was considered safe to lower the Bank rate. Indeed the response of the markets was far from exaggerated. Most comments abstained from forecasting further Bank rate reductions in the near future, and the Stock Exchange acknowledged the change with moderate rise. Sterling was slightly weaker, presumably because the lower Bank rate may have caused some withdrawals of funds transferred to London in connection with interest arbitrage operations.

The Bank rate cut may be criticised on the ground that sterling is not yet firm enough to justify it. Nor has the danger of inflation subsided. If the reduction of the Bank rate is followed by a relaxation of the credit squeeze, and if it is accompanied by a Stock Exchange boom, exaggerated wages demands would be pressed forward, and the rising wages-costs-prices spiral would become accentuated. It is true, shortages in fuel oil might cause unemployment or short-time working in some industries. But it would strengthen the bargaining power of workers in the coal industry, railways and some other industries.

Even so, the Chancellor was right in deciding in favour of lowering the abnormally high Bank rate. He would be right in following up this move by further cuts before his Budget statement in April. For it has come to be realised that in conditions such as have existed in Britain during recent years, the Bank rate weapon is largely ineffective. There was a revival of the cult of Bank rate-worship after the experience in 1952, when the increase of the Bank rate was followed by a

U. N. Imbroglio over Kashmir

Indian Finance
Established 1928
February 16, 1957
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THOUGH it is viewed as the main, even exclusive, concern of India or Pakistan or the Kashmiris, the most distinctive aspect of the Kashmir problem today is the imbroglio which is the creation of the U.N. There is a widespread feeling in India today that the Government have created a lot of avoidable trouble and embarrassment for themselves which are not the less because of the soundness and justice of our case. It is felt that neither the initial reference to the U.N. eight years ago nor the inopportune announcement of our opposition to the plebiscite was called for in the conditions of the time and that in both cases an impractical faith in the virtues of straightforwardness has led up into unwise courses of action. Likewise, it may be said that we never pressed home the advantage of the U.N. Commission's finding that Pakistan was the aggressor. So far as Pakistan is concerned, her supporters might contend that she too had suffered from a similar inertia, while India was integrating Kashmir's political and economic organisation with her own and that she raised only a dramatic protest at the last moment with no hope or expectation that it would be effective in preventing the dissolution of the Constituent Assembly. It is natural that in all discussions of the Kashmir problem, the present position and future prospects should be considered only from the stand point of what each of the two countries is capable of doing to secure its real or declared objectives.

If a final settlement depends on a state of affairs in which the two countries and the U.N. would acquiesce in as irrevocable, then there is nothing now to point to its early attainment. One of its essential conditions is an open clash in which Pakistan would be decisively humbled; and the avoidance of such an open clash is the one thing on which the U.N. is most interested. And it is from this point of view that the U.N. may be said to have bungled most.

To understand U.N.'s ineptness over Kashmir, one must compare its actions over similar situations and problems in other parts of the world. It is significant that within a few months the U.N. was called upon to handle three critical issues, namely, the war in the Middle East, the trouble in Hungary and the "crisis" in Kashmir. The differences in the handling of these issues are themselves extremely revealing. But more important, in our view, is the U.N. record over Korea and Indo-China. The parallelism between Korea or Indo-China and Kashmir is closer because, thanks to the great powers, both these areas have been subjected to a political partition, which has facilitated the alignments of the power blocs. But while in Korea and Indo-China the partition was achieved before the U.N. was seized of the issue, in the case of Kashmir, the international organisation had a valuable opportunity of preventing such partition and making Kashmir an example of disinterested international action.

For bringing about the cease fire and some form of international supervision in Korea and Indo-China, India was a prime mover and her initiative was found invaluable in bringing about and preserving international peace. Kashmir, on the other hand, was not at the start, and even today is not, an issue between the power blocs. Soviet Russia was not in the picture; and in the voting on the Security Council's recent resolution her representative abstained from voting. The Chinese Premier even now is skillfully equivocal and prefers to speak for peaceful settlement rather than for either of the two disputants. This shows that, all these years and up to the present moment, the Western Powers had the chance to throw the full weight of their power and influence on what they deem to be right and secure a final settlement on that basis.

This, they were never prepared to do partly because of the mistaken idea that their interests did not coincide with what is right and partly because they knew they could not openly take side with what is wrong. They recognised from the outset the advantage to themselves of keeping Kashmir as an wound in India's body politic and expected to use it according to every turn of circumstance to bait India or as a bait for Pakistan. This, they have so far succeeded in doing, except that few among the Western statesmen really reckoned with the possibility of Pandit Nehru categorically denying India's obligation in regard to a plebiscite.

Though the Prime Minister made his first announcement in this regard nearly a year ago, neither Britain nor the U.S.A. visualised the possibility of his sticking to that position on the floor of the U.N. Security Council. It is possible too that they did not expect Pakistan to bring up the question of Kashmir's integration with India in the dramatic manner in which she did. Once these unexpected developments happened, they could only in the traditional policy of befriending Pakistan without being too inimical to India. As this kind of tight-rope walking cannot be continued indefinitely, it became necessary for Mr Dulles to declare that he did not consider India as having flouted the U.N. and for M. Pineau to make it clear that he favoured only fresh negotiations between the two countries.

Soviet Russia, which sees all too clearly the kind of knots in which the Western Powers have tied themselves over Kashmir, is in no mood to provide them a welcome relief or diversion by using the veto in the Security Council. It has conveyed to the Western Powers its determination to see that they suffer in full the consequences of their treacherous impartiality as between India and Pakistan. While the British and the American Press raves about Mr Nehru having come out in his true colours, their Governments cannot permit themselves a similar latitude. Consultations continue, but without any purpose other than the correction of impressions unintentionally created by their recent conduct.

The Kashmir problem is unique among major international problems in that it is the one question in which its intrinsic merits counted for least. In the Arab-Israel problem, the West is fully aware of the rights and wrongs of the two sides, and every proposal reflects this awareness. In the Suez Canal issue, the soverignty of Egypt and the international character of the waterway were both given due weight by all except Britain and France. So far as the Hungarian troubles were concerned, it was never doubted that Russia was in the wrong and, equally, that no one could dream of calling her to mend her ways. It is only in Kashmir that the nations have shut their eyes on a long list of highly important facts; Pakistan's aggression, the legal validity of Kashmir's accession to India, the prolongation of the dispute by the U.N., the nature of the progress accomplished by India in Kashmir, which shines by itself and even more by contrast with the Pak record on the other side of the cease-fire line and, most important of all, the difficulty of fitting Kashmir into the international arena in the neat manner in which Korea, Indo-China and, to a lesser extent, even the Middle East have been filled. In the wide international field, there is nothing but a process of attrition for the Kashmir dispute, however, formidable the Western combination may at times appear to India. As between India and Pakistan, it is, and will for a long time, be, part of a number of other problems, to which should now be added the perplexities of an unstatesman-like Government at home. The Pakistan Government's main use for Kashmir is that it can be used at any time as a loudspeaker for a call for jehad against India. But even that use may decline with time. In spite of occasional unsureness of touch and its pathetic faith in the strength of mere right, Indian policy regarding Kashmir is by no means a failure.

The Personality of India's Mixed Economy—IX

THE main point of this series of articles is that, if planning in India is to have a distinctive personality of its own and remain free from ideological bias, as indeed it has remained so far, it must be based on a working theory of economic growth and be actuated by a fairly clear concept of welfare, individual and national. It has been pointed out in earlier articles that, as a valid theory of economic growth is wellnigh the despair of the economist and the sociologist, the authorities in India must try to make the most of the light they can get from an analysis of the causes of economic decline in the British period of our history and make fair deduction therefrom about the best ways, not only of arresting the decline, but also of stimulating the positive growth. If the decline throughout the British period and the stagnation in the prewar years pointed clearly to the need for strengthening the national economy at its base by development in the public sector, it also suggests that, once such development is accomplished, the primacy of the public sector would not be equally indisputable. The basic weaknesses of the national economy will then have been removed; and the full exercise of the new-found strength would be impossible

(Continued on page 298)

Editorial Notes

Shaping the Middle East

The joint communique, issued by President Eisenhower and King Saud, toward the close of the latter's American visit, carefully omits any direct reference to the Eisenhower Doctrine for the Middle East. Nor is the communist threat brought in as a ground or criterion for the economic or military aid offered by the United States to Saudi Arabia. Only, the economic facilities to be considered by the US would augment the combined aims of the interests of the two countries. These aims are elaborated as the just settlement of the problems of the Middle East by peaceful and legitimate means within the framework of the UN Charter.

If the methods specified for the settlement of all the problems of the Middle East provide a clue to the obscure aspects of the Eisenhower Doctrine, there is scarcely any reason to be worried over the present direction of US policy on this area. Settlement through the UN is just what the Indian Union has been consistently pleading for. Barring the extension of US use of the Dhahran air field in Saudi Arabia for another five years, the communique does not mention any direct military quid pro quo for the aid offered. If as the communique claims, King Saud has functioned as a spokesman of the other Arab leaders also in his cofabulations with the President, the result should be of vast importance.

While in the US, the Saudi Arabian monarch also gained opportunity to exchange thoughts with Prince Illah of Iraq. The meeting of the two is reported to be the first of its kind between the traditionally rival ruling dynasties of Arabia. Good relations between Iraq and Saudi Arabia would obviously strengthen the political compactness of the Middle East. But none of these incipient achievements could be deemed as providing the unassailable foundation of a constructive US policy; some isolated gains are conceivable.

The hospitable persuasions of Washington might have softened King Saud's attitude to the Baghdad Pact. But how far he has been reconciled to the British association with it has no proof. The communique blesses the political independence and territoriti integrity of every nation in the Middle East. Is it likely that the King has been convinced finally of the futility of thinking in terms of the extinction of Israel? What is more certain is that as a consequence of the visit, US arms will be channelled into one more Middle East country. It matters little whether this country is a member of the Baghdad Pact.

The steady replacement of Britain and France by the East European countries in Middle East trade, would, from the standpoint of the cold war, also find some compensation in the US rivetting new economic links in the region.

*

Calcutta Port Finances

The working results of the Calcutta Port for the year 1955-56 show an actual surplus considerably higher than what was expected in the revised estimates. The total income for the year stood at Rs 9,96,93,000 and total expenditure at Rs 9,34,61,000, yielding a surplus of Rs 62,52,000 as against Rs 34,71,000 in the revised estimates. The increase was mainly accounted for by the higher tonnage of total traffic handled. There was also a noticeable change in the pattern of trade passing through the Port.

Among imports, food grains and flour recorded a substantial decline over the initial estimates; salt was about 8 per cent up; the innumerable items coming under the classification "other cargo" actually amounted to 27 lakh tons against an estimated import of 20 lakh tons. "Other cargo" exceeded expectations by about the same proportion in exports as well. The opposite relation was seen in respect of coal and tea exports; the latter turned out to be substantially smaller than in the estimates. Gunnies and ores were up, the first to the extent of 16,000 tons over the estimated figure of 920,000 tons and the second to the extent of 68,000 tons over the estimated 800,000 tons.

Against the original budget anticipation of 7,360,000 tons of cargo, the actual total traffic amounted to 8,031,000 tons. Port charges remained more or less stationary. The cost of the upkeep and maintenance of the port including the costs of services rendered in connection with handling goods worked out to Rs 11-10-2 per ton as against Rs 11-12-3 in the previous year, when the total traffic was less by 217,000 tons. The net income per ton for the year on goods alone, was 12 as 5 pies.

Out of the surplus, Rs 42.5 lakhs would go to replenish the Revenue Reserve Fund, which was being depleted during the previous years through drafts to make up revenue deficits. The balance of Rs 20 lakhs goes to the Vessels Replacement Fund, which remains below the net risk figure.

*

Coconut Production

Presiding over the meeting of the Indian Central Coconut Committee, Mr M. S. Randhawa, the Deputy Chairman of the Indian Council of Agricultural Research, not only gave details of the plans and programmes of the Committee for the current Plan in his address, but also dealt with many of the problems and prospects of the coconut industry in India.

India is the second largest producer of coconut in the world. According to official statistics, the area of coconut plantation is over 1.5 million acres and the annual production of nuts is roughly 3,400 million. Production falls far short of requirements. The deficiency is made up by way of import of copra and coconut from, mainly, Ceylon and Malaya. The overall problem is how to increase production in the shortest possible time to an extent which will make India self-sufficient in this important oil yielding tropical nut.

The distribution of production of coconut in India, Statewise, has a bearing on the problem since the economic contours of the different States inevitably influence the directions of economic policies pursued by them. Formerly Madras was the largest coconut producing State in India. On the reorganisation of the States, Kerala with 10.8 lakh acres, has now become the foremost coconut—growing State. Mysore comes next with 2.13 lakh acres and Madras now occupies the third position with 1.31 lakh acres under cultivation.

Necessarily, the task of augmenting the yield involves a simultaneous extension of the acreage of the crop along with intense cultivation. The successful implementation of a programme for doing so will depend to a considerable extent on the coordination and unity of efforts of the different coconut—growing State Governments. An important function of the Central Coconut Committee is to provide the agency through which such co-ordination can be made effective.

The other important function concerns research work. The proper conduct of research is an important aspect of the effort to increase production. It is now mainly being done at the two Central research stations at Kerala and the regional research stations at Kerala, Madras, Bombay, Orissa and Andhra. How important research work can be was recently demonstrated by the effective use of a well co-ordinated attack with pesticides developed at three stations to eradicate the root and leaf disease which had attacked palms over a wide area in Kerala. In the programme of the Central Committee for development during the 2nd Five-Year Plan emphasis has rightly been laid on research work and the Plans which are in the process of implementation provide for the expansion of the two research stations, the starting of more regional research centres and the setting up of an extensive chain of nurseries for seedlings.

*

Middlemen's Profits

In every competitive economy, the "middle man" is looked upon as a leach and an exploiter. In India, sometime ago an official committee found that the much-abused middleman was generally not absorbing a larger slice of the price of the product than his species elsewhere. In Britain, popular judgment is perhaps less severe; but in no way flattering to the middleman. The investigations of the Committee on Horticultural marketing have revealed facts which undoubtedly supply a corrective to the exaggerated notions of middleman's profits, at least in the trade concerned.

A recent issue of the Economist sums up the principal findings of the Committee. Middle man's profits are generally not excessive. About a third of the total value of sales of fruits and vegetables are accounted for by distributing cost. This percentage compares reasonably well with European countries; in the United States, the distributive margin is much higher. : In times of glut, retailers more often than not do not keep up prices unfairly. On the whole, retail prices, though relatively rigid, move in sympathy with producers' prices. Whole-sale dealers are guilty of sharp prac-

Recourse to Emergency Aid from I.M.F.

THE arrangement by India with the International Monetary Fund for the drawing of $200 million is in line with the suggestions offered in this column on a number of previous occasions. For it was becoming patently clear that, until such time as India did receive the foreign aid anticipated for implementation of the Second Plan, the dwindling size of our foreign exchange reserves would need to be rectified, as a short term measure, by recourse to emergency aid from the IMF. In this understanding, we had reasoned, in our reassessment of foreign exchange and the Second Plan, that the then obtaining dismay about our foreign exchange position was unjustified and unwarranted. But, around the time of the Finance Minister's mid-year budget, we had reason to believe that the pace of foreign exchange depletion would, for a number of reasons and due to variety of causes, slow down. Such abatement in the outflow did, in fact, materialise in December and January. As a consequence it appeared possible that our exchange reserves would stay above the Rs 400 crore mark for some months. In such a background, the only surprising features about last week's announcements are, firstly, that India should draw on the IMF at a time when the reserves are at the relatively comfortable level of Rs 506.36 crores and secondly, that the amount involved should be only $200 million. Before, however, we essay an answer for these two questions, it would be useful to appreciate the how and why of the technique of help from the IMF.

One of the three purposes of the IMF is cognate to the issue. According to the Articles of Agreement, the IMF is intended "to give confidence to members by making the Fund's resources available to them under adequate safeguards, thus providing them with opportunity to correct maladjustments in their balance of payments without resorting to measures destructive of national or international prosperity". A member "purchasing" currency from the IMF can avail of this assistance to meet a deficit in its balance of payments on current account. The definition of "current transactions" includes the following.

(1) payments in connection with foreign trade; (2) other current business including services, and normal short-term banking and credit facilities; (3) interest on loans and net income from other investments; and (4) payments of moderate amount for amortization of loans or for depreciation of direct investments.

Normally, there are restrictions as to time and amount in the purchase of currency from the IMF. The restriction as to amount is determined by the quota of a member, the quota being constituted by the member's subscription to the Fund in gold and in its own currency. The restriction as to time limits the drawing in any period of 12 months to one-fourth of the quota. However, as an IMF publication points out, "these quota limitations do not preclude a member from securing additional assistance from the Fund if that is required, since the Fund may waive the quota limitations specified in the Fund Agreement, and has frequently done so". The significance of this extract cannot surely be lost on Authority in this country.

In addition to the facility of direct drawings against its quota, a member may also conclude what is known as a stand-by arrangement with the IMF. That is to say, an agreed amount of resources would be available for use by a member whenever a member requests a transaction.

The first stand-by arrangement was concluded with Belgium in June 1952; and it was renewable every six months for a period of five years. Other members who are availing, or who avail of this facility are Chili, Iran, Peru, Finland and Mexico.

The purchase of currency by a member involves a service charge of ½ per cent; and there would be no further cost if "repurchase" is made within three months. Secondly, there is again no further charge if the Fund's holdings of a member's currency do not exceed the member's quota. For purchases of currency which remain outstanding for over three months, a graded rate of interest is charged. As for the stand-by arrangement, a charge of ¼ per cent is made.

It is important to note that the IMF is empowered and prepared to undertake operations in the currency of any member. For example, if Pakistan should expand its trade substantially with India, and if Indian imports from country continued to be relatively small, Pakistan would be in a position to purchase Indian rupees from the IMF to tide over the situation. In such a contingency, of course, the IMF's holdings of the Indian rupee would decline; and the purchase by India thereafter of dollars could be for an amount such that the quota with the IMF of Indian rupees does not exceed the Indian quota; and, since, in that case, the IMF's holdings of Indian rupees would still be of an amount smaller than the quota, the transaction would not involve the service charge. But, for reasons quite apparent, sales by the IMF have involved, so far, only four currencies—the US dollar, sterling, the Belgian franc and the deutsch mark.

The procedure for repayment to (or repurchase from) the Fund is also laid down. Members report to the IMF as to the monetary reserves held by them at the end of their financial year. Then, as an IMF publication has it,

"If a member's monetary reserves have increased during the year, and if the Fund's holdings of the member's currency exceed 75 per cent of its quota, the member is obliged to use half of the increase in its gold and half of the increase in its convertible currency reserves to repurchase its currency from the Fund. If a member's monetary reserves have decreased during the year, and if the decrease is less than the amount by which the Fund's holdings of the member's currency have increased, the member must repurchase from the Fund an amount of its currency equal to one half of the difference. These repurchase provisions do not apply when a member's monetary reserves are less than the amount of its quota."

The time within which a member is expected to effect repurchase is between three and five years.

We will now turn to the specific transaction of last week. India's quota with the IMF is $400 million. This means that, normally, India could have obtained only $100 million over a 12 month period, apart from any stand-by arrangement. According to the communique, India is to draw $60 million immediately; $67.5 million after a month; and may count on another $72.5 million by way of stand-by arrangement over the next twelve months. Thus, the total amount involved is $200 million.

The questions that we have posed earlier, and which remain to be answered are: Firstly, why did India approach the IMF when our reserves are still relatively comfortable? Secondly, why is the amount involved $200 million.

We suggest, in answer, that the fresh deterioration in foreign exchange holdings, as reflected in the Reserve Bank returns of the recent past, is no accident. Moreover, it may be that planned imports are anticipated to run down our balances by $100 million in the immediate future. In this certain knowledge, Government may have decided upon expeditious recourse to the IMF.

As for the second question, the two drawings are for $127.5 million; and this amount constitutes the gold tranche of $27.5 million together with 25 per cent of India's quota at $100 million. The standby for $72.5 million is presumably for rounding off the figure to $200 million.

Furthermore, authority may be expecting that the drain on foreign exchange reserves will last only for a short while and that the size of the decline will not exceed $200 million. Such a view would be based on three factors.

Firstly, the desired impact upon imports consequent to the mid-year Budget is soon to be fully felt.

Secondly, the drastically revised import policy announced for January-June will also bear fruit.

Thirdly, the negotiations for loans and aid of various sorts may shortly be concluded.

These three factors would explain why India has chosen to request the IMF for $200 million, or half its quota, instead of following in Britain's footsteps and going the whole hog.

Thus, the early recourse to the IMF should not be interpreted as suggesting that India's foreign exchange position is precarious. On the contrary, the real significance lies in the limited utilisation of the IMF's facilities, for, this indicates that Government themselves have the confidence that, not too many months away from now, our balance of payments will stabilise.

+

Easing of Credit Squeeze

THE expected has happened, but not to the expected extent. The Bank of England rate was, on Thursday last week, reduced by ½ per cent to 5 per cent. The opinion in the City favoured a lowering of the rate by a full one per cent. That the decrease was by only half a per cent, and that there have been semi-official declarations to the effect that the lower Bank Rate does not mean any relaxation of the credit squeeze, may be taken as reflecting the still-continuing potency of the advice of the orthodox school. The latter would not read the signs of the times; and, in such quarters the faith persists that the Bank Rate could do the whole job of exorcising inflation. The admission of the US President that the Bank Rate could not do the whole job carried no meaning to them. Nor do they attach any significance to the subsequent easing (though to a slight extent) in the tight credit position in New York. The Treasury Bill Rate had receded from 3.3 per cent to 3.1 per cent; and the yields in Bonds had also lost ground. Financial commentators in the USA have noted that the Federal Reserve Board have so far refrained from taking counter-measures designed to check the relaxation in the credit squeeze. In London, too, the Treasury Bill rate has recorded further decline, and is now slightly

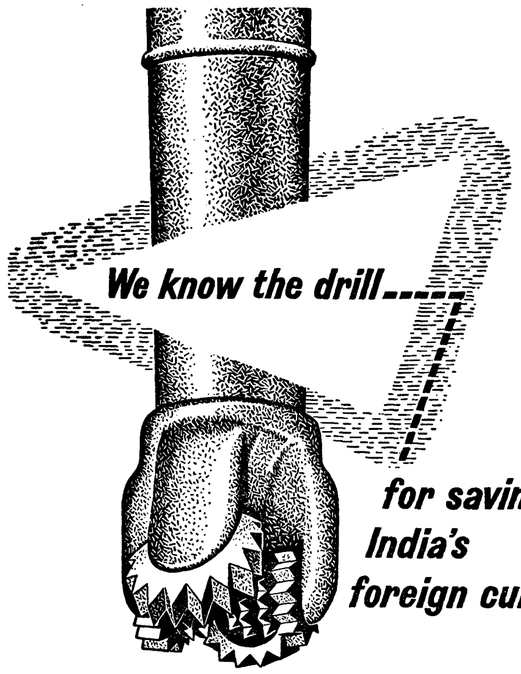
over 4½ per cent. If the week-after-week set-back in the average Treasury Bill tender rate could be construed as one of the immediate causes for the last week's lowering of the Bank of England rate, the present rate of round about 85 shillings may likewise force the hands of the authorities in the coming weeks.

There are reasons to think that the downward trend in the Treasury Bill rate will continue. The British Government have announced a funding operation involving £300 million. The final quarter of the financial year is a period, during which fresh tender issues remain lower than the maturities. So, with the weekly offer on a reduced scale, bidding is sure to be keener; and it need not be a matter for surprise if the average Treasury Bill rate in London recedes to 80 shillings in the course of February-March. Should this hope materialise, a 4½ per cent Bank Rate is unavoidable.

The Funding Loan, now announced, is a 3½ per cent 1999-2004 stock at an issue price of 80 per cent. Thus is a capital appreciation of 25 per cent guaranteed. The long-term character of this loan is significant as showing that the British authorities may hereafter pay more attention to the health of the giltedged market from the point of view of its receptivity to long-term new issues.

+

Reserve Bank's Purchase of Dollars



THAT foreign exchange for $60 million has been received by the Reserve Bank from the World Bank in persuance of the agreement concluded with the latter under the emergency aid provisions, is indicated by the Reserve Bank return, dated February 8, for the Banking Department. The two weekly statements of the Central Banking Institution bear the impress of the consequential changes arising from this receipt, as also of the changes connected with month-early disbursements and with the seasonal demand for finance in full stride.

The details of the emergency aid are discussed in a leading article in this section; and what is relevant to this context is that the first instalment of the aid was due to be made immediately. The arrangement is, no doubt, between the Government of India and the World Bank; but the transaction is actually recorded in the books of the Reserve Bank of India as the custodian of the country's foreign exchange reserves. The payment of $60 million by the World Bank accounts, therefore, for the rise of Rs 28.32 crores in the foreign balances held abroad in the Reserve Bank's Banking Department. This $60 million is in the nature of purchase of dollars from the World Bank for payment in rupees by the Reserve Bank. The payment having thus been made in rupees, the World Bank has, presumably, allowed the amount to lie in deposit with the Reserve Bank, in whose return for the Banking Department "Other Deposits" register, as a consequence, a rise of Rs 28.75 crores to Rs 41.79 crores.

The first week of a month usually records a considerable expansion in active note circulation, and in the outflow of rupee coin from the reserve into circulation. Notes in circulation at Rs 1,519.65 crores show a sharp rise of Rs 25.63 crores. Rupee coin in the Issue Department shows a fall of Rs 1.92 crores to Rs 121.34 crores. This is a measure of the additional demand for coin in the week under review.

To provide for the increased requirements of currency, there has been expansion of Rs 20.00 crores in rupee securities held in the Issue Department. It is to be carefully noted that only Rs 5 crores or so represents created money, that is, cash replenished for the benefit of the Centre through a fresh issue

(Continued on page 297)

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

World of Business

Sugar Industry in Mysore

The Mysore Sugar Company Limited is a Government company, in the sense that more than fifty per cent of the equity share capital is held by the Government; and yet we see in the speech of Mr S. Muninanjappa, the Company's Chairman and Managing Director, an uninhibited freedom displayed in the discussion of the problems concerning the industry. He was talking almost as if he were the Chairman of a Company which had nothing to do with the Government in its composition.

This is a robust tradition and represents one of the most agreeable features of the autonomy which joint-stock companies of this character possesses. A Government servant, once he is placed in the position of the Chairman of a business concern must feel thoroughly free to discuss questions bearing on the well-being of the company and the industry concerned, without any oppressive sense of restraint. Otherwise, even the Government will not be in a position to understand where the shoe pinches and where mistakes in policy occur.

In his Chairman's speech at the 23rd Annual General Meeting of the Company Mr Muninanjappa properly laid stress on the problem of the price for the grower. It will be recalled that wherever the sugar industry has grown this problem has raised its head and tended to remain obstinate. Even in the bigger producing areas like the UP and Bihar, the interests concerned have not been able to provide a final and universally acceptable solution. For the most part improvisations and hotch-potch remedies had done duty.

In Mysore, as usual, the cane suppliers have been demanding prices higher than those fixed by the Government, both for delivery at the factory gate and delivery at rail centres. The Government have appointed a Committee to examine their demand. Meanwhile, the cane growers of Mandya were granted an additional price of Rs 3 per ton for supplies made during 1954-55. This price was settled through separate negotiations between the growers and the company.

The deal, which inevitably cut into the profits of the company during the year under report had to be regarded as a forerunner of more such demands likely to arise in subsequent years. Though sugar prices were hitherto ruling fairly high, the future was uncertain. The Chairman believes that the days of high sugar prices are over and if the downward trend now noticeable, gains momentum, there may be little left, out of which the growers can be paid an extra price.

For this reason, he thinks that an early settlement of what ought to be paid to the growers is imperative. In this connection, he draws attention to the unduly high rates of cess on sugar cane. The Mysore rate is Rs 6 per on, the highest prevailing in the whole of India. In Madras, it is only Re 1, while in Andhra it is Rs 2. It is estimated that this difference in rates leads to a difference of Rs 40 to Rs 50 per ton in the price of sugar. Two consequences are indicated: one is the adverse position in which the Mysore industry finds in respect of competition with that of Madras and Andhra. The other is that the factories are not able to pay extra price for cane to the extent otherwise possible.

At this context, one may add by way of comment that as long as there was an overall shortage of sugar in India, this competition which the Chairman of the Mysore Sugar Company speaks of could not have any serious effect on the fortunes of any sugar-producing region. In both demand and supply a certain territorial delimitation has been in existence; and against handicaps in certain respects, a region may be having advantages in others, of an at least partly compensating nature.

But the point that the issue of a generally acceptable sugar cane price has to be faced squarely continues to hold. Mr Muninanjappa's suggestion is that there should be an ungrudging preference for the criterion of sucrose recovery, in fixing the remuneration to cane suppliers. The acceptance of this criterion will surely be an incentive toward the production of cane with a higher sucrose content; but it will have practical difficulties.

Barring this important issue, the sugar industry in Mysore appears to have a clear prospect. In the enlarged Mysore State, there are already four sugar factories and in another couple of years at least an equal number will be established. When all these get into full production stage, the State will become self-sufficient in regard to sugar.

For the country as a whole, a stage has already been reached when exports could be looked upon as a matter of course. An initial quota of 50,000 tons has been released by the Government of India for export through the Indian Sugar Mills Association. Sugar production reached an all time record of 18.6 lakh tons in 1955-56, while consumption proceeded a little ahead to 19 lakh tons. Both bid fair to go forward further. There is every reason to think that the national target of 22.5 lakh tons fixed for the Second Five Year Plan will be exceeded by the industry, if all the new units licensed come into existence and the expansion programme of existing ones proceed according to schedule. In fact, it is possible to envisage hefty and increasing annual exports. Disposal of stocks has even now assumed something of the nature of a problem.

With what amount of assurance a fall in the domestic price of sugar can be predicted is not clear, the Mysore sugar Chairman does look forward to an era of lower prices. Company profits are likely to be adversely affected if such a trend sets in. As in other industries, the Government will have to balance carefully considerations of domestic consumption and prices with those of exports.

The Mysore Sugar Company has had a satisfactory year to report. The expectation of a bad crop in Mandya for 1956 was happily falsified and for the succeeding year a record production is being looked forward to. The company plant has been augmented and with a few more arrangements the targetted crushing capacity of 2000 tons of cane per day will be attained.

One of the principal difficulties of industries in Mysore is the unavailability of coal nearby.

Now that an enterprising firm has undertaken to supply coal besides bearing the cost of the conversion of the sugar factory boilers for burning of coal instead of baggasse, the company is examining the question of releasing baggasse for paper manufacture. This will mean the fullest and the most economic utilisation of a valuable by-product,

World of Jute

Markets Depressed

PRICES in the jute goods market have continued to move downward throughout last week as foreign enquiries have been conspicuous by their absence. At one time during the week Hessian 40"x10 oz Ready has declined by one rupee before regaining part of the lost ground. The decline in the case of B Twills Ready has been much more pronounced, this construction losing as much as Rs 2 during the same period.

Apart from the fact that this time of the year usually is a slack period so far as foreign enquiries for jute goods are concerned, the easier undertone has been brought about largely by the sizable decline in raw jute prices. Assam Bottoms which was quoting around Rs 31-8 a week ago is on offer now at Rs 28-8 per maund.

It would appear that raw jute holders have been obliged to revise their ideas drastically in the course of the past couple of weeks. In an earlier issue, it has been shown that even on the basis of the most conservative estimates there should be available within the country itself enough jute to meet the requirements of mills during the remaining portion of the current jute season. Evidently mills have also realised that with the energetic steps being taken by Government to increase production in the next season, raw jute sellers will soon be anxious to dispose of their stocks. Once raw jute prices have started climbing down, the speculative elements have found it easy to depress goods prices, taking advantage of the present low level of foreign enquiries.

That despatches of jute goods during January have not been as bad as anticipated by marketmen is revealed by the stock figures as at the end of the month. At 104,100 tons, total stocks are higher by 8400 tons as compared with December. Stocks at the end of the corresponding month of the previous year stood at 73,400 tons. Stocks of hessian cloth and bag at 23,900 tons are 4,200 tons than the previous month and compare with 25,600 tons at the end of January 1956. Sacking cloth and bag have increased by 3,800 tons to stand at 68,500 tons as against 45,300 tons at the end of the corresponding month of the previous year. Other varieties are also higher by 400 tons to 11,700 tons and compare with 7,500 tons at the end of January 1956.

Production of jute goods during January 1957 amounted to 88,800 tons made up of 38,800 tons of hessian, 43,500 tons of sackings and 6,500 tons of ther varieties. Mills have worked 212 hours as against 206 during December. The increase in the hours worked accounts for the increase in production. During the corresponding month of the previous year production totalled 88,900 tons with only 200.5 hours worked. Evidently the larger number of looms that was in commission at that time had been responsible for the high level of production.

From the two sets of figures it is now possible to get a rough estimate of the despatches during the last month. The industry has begun the month with an opening stock of 95,700 tons. Since production during the month has amounted 82,800 tons and the month has ended with a stock of 1,04,100 tons, offtake from the mills has totalled 80,400 tons which compare with actual despatches of 90,500 tons in the previous month and 72,900 tons in the corresponding month of the previous year.

*

The jute goods market opened the week on an easier note with prices all along the list sharply marked down. It was apparent that bull operators were nervous in the continued absence of foreign enquiries. Toward the close of the day, however, prices steadied up somewhat, helped by reports of Government orders for B Twills for February delivery. Hessian 40"x10 oz Ready closed at Rs 42-8 while B Twills was slightly shaded at Rs 114-2. The next day in earlier dealings prices again developed a sagging tendency but, with the release of stock figures as at the end of January which disclosed an increase of 8,400 tons as compared with previous month, sentiment seemed to have improved somewhat as it had been generally anticipated that stocks would show a bigger rise. Even so, prices on balance were lower at close with Hessian 40"x10 oz Ready placed at Rs 42-1 and B Twills Ready at Rs 113-14.

Prices declined sharply on Saturday on heavy bear pressure in the Fatka and Hessian 40"x10 oz Ready reacted to Rs 41 with B Twills placed at Rs 113. Values continued in the downtrend though hessians seemed to have resisted successfully any further deterioration. On Monday Hessian 40"x10 oz Ready declined steeply to Rs 112-2. There was some improvement in sentiment on Tuesday as the undertone had been helped by steadier advices from the raw jute market. With bear covering prices steadied up somewhat. Hessian 40"x10 oz Ready gained 8 annas to Rs 41-9 while B Twill's also advanced by 12 annas to be placed at Rs 112-14. On Wednesday due to selling pressure by a prominent bear operator prices again declined sharply especially in B Twills which came down by more than one point to Rs 111-12. Hessian 40"x10 oz Ready also was shaded in sympathy at Rs 41-8.

The following table shows price trends during the week:

	Week's Opening Rs. a.	Week's Closing Rs. a.
Hessian:		
40"x10 oz..		
Ready ..	42 9	41 8
April-June .	41-13	40 12

Sugar Bags ..	131 8	129 0

World of Tea

Immediate Price Prospects

THAT the downward movement of prices during the month of January was largely due to the heavy offerings of indifferent quality teas, is a known fact. There is a general belief that sales in the current month will also follow the same market trend as in January although the few bright liquoring teas, due to come up for sale, may enjoy a good enquiry. Also, the quality of the offerings is expected to show a further decline as more end-of-the-season teas will be placed on the market. It is possible that buying for the outmarkets may, as during January, be restricted to the better qualities of tea on offer.

The stock and afloat position in the UK is now satisfactory and its operations on the Calcutta market during the next few weeks will perhaps be on a small scale sufficient to assure its supplies during the North Indian off-season. However, with substantial quantities of tea expected on sale in London soon, it is expected that the decline in prices will become much sharper. The degree by which the fall may set in was established this week by the drop in Plain Indian teas from 5sh 1½d to only 4sh 5½d per pound. Indicative of the increasing supply position are the catalogues for the coming auctions, which show some 68,000 packages scheduled for next week's sale and 87,000 packages for sales in three week's time.

The state of the Calcutta market during the coming weeks will, therefore, be largely determined by the strength of the internal demand. In this connection, the monthly report, issued by Messrs J. Thomas & Company for January, states:

> "Teas for price" may be in strong demand from the internal buyers and should continue to sell well in February. Medium and Low Medium teas, especially the end-of-the-session descriptions, may, however, ease further as shipments, since the closing months of the 1955 season, have indeed been consistently heavy and practically every country has, by now, obtained its requirements. It is considered doubtful if the USSR will at this stage in the season re-enter the market on any substantial scale, but the prices of the better quality teas will tend to inflate to the extent of its operations. Buying for the Middle East will be dependent upon the availability of freight and this factor may contribute to fluctuations in the price of teas suitable for export to that area.
>
> It is considered unlikely that there will be any surplus of tea at the close of the current season and the bulk of the available supplies should be taken by the internal market. On the other hand, no major shortage is visualised and it is expected that prices should, by and large, continue to rule at current levels for the remainder of the season".

Meanwhile, in the Export Sale held in Calcutta this week, offerings amounted to 65,235 packages for which there was a good general demand at slightly easier rates. Once again, bright liquoring teas were a strong feature and were keenly competed for at dearer rates, while the very few best CTC teas were also well supported. The CTC offerings were, however, one anna per pound easier.

Commons and Mediums with declining quality were generally one anna per pound easier, although the broken grades received better support than in recent weeks. "Tea for price" was also from half to one anna per pound easier. Well-made and stylish Whole Leaf grades were slightly dearer, but the poorer kinds were often upto As 2 easier.

Tippy sorts received fair demand, but Darjeelings were generally As 2 to As 4 per pound below last rates. Following rates were quoted:—Clean Black Pekoe Rs 2-4-0; Plain BP Rs 1-15-0; Medium Assam BP Rs 2-0-0 and Best CTC Assam BP Rs 2-8-0 (nominal).

In the Internal Sale, offerings consisted of 18,718 packages of Dusts for which there was a good general demand. Clean Leaf types and bright liquoring sorts were sold well at about valuations, particularly orthodox and CTC Assams. The few lines of non-withered Dooars with improved liquors were also well supported; but the remaining offerings were definitely easier at the commencement of the sale and, at the close, were as much as As 2 per pound lower. Following rates were quoted:— Medium Dooars Dust Rs 1-12-6 to Rs 1-13-0; Medium Assam Grainy Dust Rs 1-13-6; Medium Assam CTC Dust Rs 2-2-0 and Best CTC Assam Dust Rs 2-10-0 (nominal).

Also, 2,521 packages of other grades were offered for internal consumption. There was a good general demand for these. The cleaner Leaf teas were well supported although they were at times easier.

In the Export Quota section, the rate opened at 40 pies per pound and gradually declined toward the close to 35 pies Business was reported done between these levels.

In the Cochin market, about 1,900,000 pounds of teas were offered. Quality again showed improvement, particularly amongst the Low Me-

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

IN just over a fortnight will begin India's second general elections. Some 193 million voters will indicate their preferences in the matter of the persons that should govern them and in the matter of policies they wish followed. Four years ago, a similar opportunity was given for the first time to about 150 million voters. Enthusiastic foreign comments on its smoothness and fairness had a mixed reception in the country. Many there were who had taken for granted both qualities singled out for praise and the administrative and political adequacy of Indians to what seemed to them to be a normal task of democratic government. In so doing and therefore resenting somewhat what they considered to be condescending praise from abroad, they were doing less than justice to themselves and to the sincerity and keenness of observation of the foreign commentators. The comparative absence of fuss in what in sober fact was an unprecedented experiment is, in a sense, a measure of our readiness for democracy. But that does not take away a jot from the fact that the experiment was indeed without a precedent and on a scale never attempted before or since elsewhere. In the first place, in sheer numbers, there was no parallel in any democracy to the first elections. Secondly, no country in the world has given adult franchise straightaway on its very first elections. It is true that we have had experience of elections before, but they have been on such limited franchise as not to count at all. Even now, there are few countries in the world which have given as wide a franchise as the Indian Constitution has done. There are many European countries that deny franchise to women today. And lastly, though there are some misconceptions about the so called illiterate's political maturity, at the time the general elections were held four years ago, the questionings about uninformed political power were not wholly specious. In any case, the doubts have been effectively silenced only by the political sagacity exhibited by the Indian electorate the vast majority of which was unlettered. If for nothing else, for the demonstration of the particular fallacy about the so called illiterate, India's first general elections deserve praise.

Moreover, however matter of course we ourselves might have taken the administrative tasks thrown on the country by the elections, the administrative equalness to the task was by no means self-evident. It is not that the implication of the foreign praise in this regard was that their previous doubts on this point were due to the fact that it was Indians who were doing the task and that they would have had no misgivings, if they themselves were doing the job. It is simply that even if they had had to do it, they would have been put off by the magnitude of the task and, therefore, they praised what in effect seemed to them a task that anyone would have found unmanageable. It was quite simply that it had never been done anywhere else before. Of course, we knew better and the world has known better since with the result when elections had to be held in Sudan, the automatic choice for inducting the democratic process was our election commissioner, Mr Sukumar Sen.

*

Experience elsewhere had made many wonder about the freedom with which the elections would be allowed to be held. This again was a misgiving that many in the country resented, but there was absolutely no reason to get riled about it. Free and fair elections are not such an every day occurrence, if you take the world as a whole, that one should not wonder about its automatic occurrence in a young democracy. But again, in the event, the Indian elections proved that all the candidates had the freest opportunity to campaign and convert the voters to their view, and in fact did. Many may have forgotten what happened in view of later developments, the Congress was defeated in a number of places where their record was comparatively barren. In fact, in Madras it was then, the Congress had no absolute majority and had an uneasy and uncertain time till further developments including the creation of Andhra in 1953 made things easy for it. The impartiality with which the Election Commission had performed its task would have been evident by the number of cases that came up before the election tribunals and the scrupulosity with which these cases were disposed of.

On the whole, then, looking at it objectively and from the outside, the first elections were indeed something of a phenomenon. Even more remarkable and fundamental is the fact that we take these elections most seriously. I think it will be readily conceded that our various preoccupations with complex legislative and administrative problems of States reorganisations could now have been legitimately used as a reason for postponement of elections. But it was not done. Again, the present need for unity in view of the uncertainty over Kashmir could have been urged by the ruling party as a reason for postponing them. But this was not done. The record of many another country in this regard has been nowhere near that of ours. As a rule, no government in power is anxious to go to the country again for a verdict in its favour unless compelled to do so by either law or by the pressure of events. As recently as two months ago, when Sir Anthony Eden resigned, there was in Great Britain a situation in which the resignation of the government was called for. The country had at no time been so divided as then and the chances were that the Conservatives would not have been sent back. But the government refused to resign and conduct a general election. They were technically within their rights, of course, but the moral I wish to draw is the reluctance of any party in power to face the electorate that has sent it to the seat of power. Nearer home, Pakistan that is vociferously canvassing a plebiscite in Kashmir, is still to hold its first general elections under its Constitution. The reluctance of the Pakistani leaders is understandable in view of their record and in view of their fear that they may not be in all certainty be sent back. Governments have changed in quick enough succession in Pakistan, but that has happened as a result of caucus intrigues and palace revolutions. It would surely be difficult to get elected, for instance, for Mr Suhrawardy with the support of his party in East Pakistan, if, as reported, the party holds the view it does on military alliances. Such lack of correspondence between party professions and government action can coexist only in contexts where they have no way of effective encounter as in an election. No wonder Pakistan is not too anxious to have any elections.

*

As regards the prospects in the second elections, it is agreed by all knowledgeable persons that the Congress would get back to power in the Centre and in most of the States. Even leaders of the opposition parties have gone on record as saying that it is not only a possibility but even an inevitability. The reasons are not very far to seek. Speaking in terms of policy first, the Congress has one which the majority of our countrymen are willing to accept as almost the only one that will meet the requirements of the situation. About foreign policy, there is hardly any difference in essentials at all between the parties. Here and there are differences on particular questions of no immediate importance to us and these are differences that cancel out the influences of parties other than the Congress and thus leave the Congress the more firmly in the Centre. For instance, the Communist is heckled by the Praja Socialist over Hungary and the Communist twits the Praja Socialist as an American stooge. Neither of them can bring the same charges against the Congress and each is obliged to defend the Congress when it is attacked by the other on these questions. Thus the Communist is not in a position to join hands with the Praja Socialist when it comes to Hungary and is in fact obliged to do the job of the Congress for it.

*

A new factor that has somewhat adventitiously come to the aid of the Congress election prospects is the present resumption in the

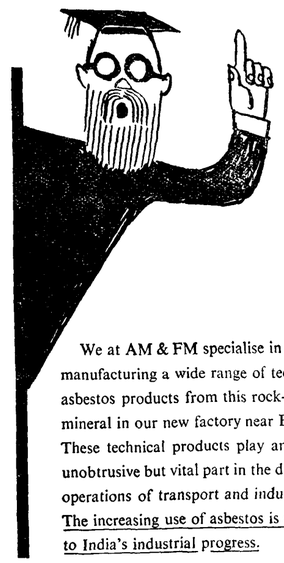
Security Council of the discussion of the Kashmir issue. The unanimity of the country over the Kashmir issue and the sense of urgency and seriousness of the situation have very properly underlined the need for unity in the country. Exhortations for unity at the moment can only mean the necessity for supporting the leadership of Mr Nehru and inevitably of the Congress. So from the point of view of foreign policy, no opposition party is in a position to dislodge the Congress from power.

From the point of view of domestic policies, the Congress again is in a strong position. The enunciation of the socialistic pattern of society and the steps taken by the Congress through the government to translate the policy in action have been both sincere and tangible. Explained in the terms in which Mr Nehru constantly explains it, the policy commends itself as reasonable and inevitable under the circumstances. As often argued in these columns, the policy has even more fundamental attractions as something of an unique experiment in a new kind of civilisation. The attempt to realise by democratic means a society in which the exploitational nexus between man and man is removed and is replaced by a relationship that diversifies the seats of economic power in the widest commonalty has basic attractions that utopias and brave new worlds have. As regards the concrete steps taken, by which practical men judge the progress toward the ideal, they have the virtues of practicality and enterprise. There is no desire to impose solutions that are impractical, but there is no timidity in effecting changes. The first and the second Plans have stood the test of the most unsparing scrutiny and have on the whole survived them. Though the opposition parties say that the Congress should not appropriate to itself what in fact the halo that properly should belong to the whole people, such niceties of sportsmanship are hardly likely to be respected in electioneering. This reduces the opposition parties to the position of picking holes on details of achievement or to deny that the First Plan has made any difference to the lives of the people. To take the latter assertion first: the opposition party is in an unenviable disadvantage of having to deny literally monumental facts. Granted that the Congress can take credit for what the Government has so far done, then the Congress can point to Bhakra Nangal, Chittaranjan, Bokaro, Thilaya and Hirakud and a hundred other fruitful productive endeavours big and small. Moreover, the electorate will ask as indeed one shrewd voter is reported to have asked a communist candidate, why Chou En Lai and Krushchev praise the immense progress that has been made in India in the last few years. Though a possible answer that leaves the question of actual achievement of Congress is there, that is, unfortunately not open to the communist. He cannot very well say that they were all speaking with their tongues in their cheeks.



*

Therefore, the opposition party is left with saying either of two things: One is that the real fruits of the endeavours of the First Plan have not reached the masses of our people and their conditions are just as bad as before if not worse. Secondly, it can say that whatever has been done has been done at enormous cost and that there has been terrible wastage and these things would have been done much better by it. The answer to the first complaint is to refer to statistical indices and to point to the very real and tangible changes in the lives of most people. It is no doubt true that we are still very far from where we ought to be, and there have been ups and downs, but, on the whole, it will be difficult to sustain a blanket assertion that people are worse off than before independence. The second complaint is even more easily answered, especially if the Congress does admit to deficiencies. Waste in enterprises as large as those undertaken, though deplorable, do sometimes occur. And, in any case, the assertion that the opposition would have made a better job of it had they had the opportunity is purely hypothetical and cannot be usefully discussed.

*

This leaves the opposition with only the weapon of attacking personalities and exploiting local

Bombay Review

A Policy for State Commercial Enterprises

THE official announcement of the appointment of Mr H. V. R. Iengar as the governor of the Reserve Bank of India has confirmed earlier anticipations in this regard and is generally welcomed here. First among the reasons for such gratification is the expectation that the appointment of one who has been a close and trusted collaborator in other spheres with the present Finance Minister will put an end to the unhappy relations between the country's central banking institution and the Finance Ministry. The state of near-cold war that existed between them has been causing serious worry to responsible students of financial affairs in the country during the last few months. Whatever the merits of the differences, the fatalism with which the differences were allowed to drift into serious public controversies revealed dangerous inadequacies in Administration's resourcefulness. Moreover, in the matter of proprieties, the honours were not with the Finance Ministry. The culmination of the gracelessness of the ministry was seen in its inability or unwillingness to express the conventional and customary appreciation of the services rendered by the former chief of the Reserve Bank.

It will be recalled that a somewhat similar pattern of relationship between the ministry and the State Bank was allowed to develop last year without any apparent concern for its seriousness. That such history should repeat itself in the relationship of the Government with the Reserve Bank is, therefore, ominous. A re-examination by Government of the whole basis of the relationship that should subsist between the chiefs of these banking institutions and themselves, therefore, an urgent necessity.

In a sense this is a problem that has a wider relevance to the whole question of State enterprises and nationalised institutions. But merely to point to these problems in relationships and to use them as arguments against nationalisation is to exhibit a partisan mentality. On the other hand, to imagine that these are 'teething troubles' and have no more fundamental source is to be dangerously complacent. **There is no** use b:ing the fact that the work of a chief executive or general manager is different from the work of a senior head of a government department. In spite of the variety of experience which the war and the years after independence have afforded the civil servants, officials in India cannot, as a class, claim to be at home in an atmosphere appropriate to a business corporation. The difficulties are, principally, of three kinds. One, the mental habits acquired during a life-time of routine-ridden government business. The second and even more formidable difficulty, is the proneness of government and ministers to regard the chiefs of the enterprises as in no way different from their secretaries and joint secretaries. Lastly, and most importantly, there is the vague but by no means unfounded fear that haunts officials and ministers alike. It is the fear that many members of Parliament suddenly and inopportunely awake to their responsibilities to the tax payer and queer the pitch for all. In these conditions, the task of providing adequately for the efficient management of State-owned business-units must be approached in an appropriate spirit of open-mindedness, practical sense and respect for principles valued in business sphere as also in political sphere. All this is easier said than done, not because such qualities are impossible of attainment, but because their effectiveness does not depend upon the individual possessor of such qualities but of the creation of traditions embodying them. The creation of such traditions takes time.

Here it is well to be thankful for such bounties as we do in fact have. Alone among the countries of South-East Asia, our administrative talent has been of a remarkably high order. The educated classes in India, man for man, are equal to those in advanced countries of the West and they are equal to the solving of any problem so long as it can be solved by the application of brain power by the individual concerned. Even in the matter of machinery, we had an efficient framework that has won the approbation of impartial observers. But difficulties have arisen where capacity for cooperation is the more important need. The adoption of adult franchise has made the impact of political influences on any situation unpredictable and difficult to control. The trouble is even more pronounced in the States than at the Centre.

All this is relevant to the question of providing efficient management for State commercial enterprises. The immediate effect of nationalisation has been a change of atmosphere at the top of management and the ushering in of uneasy and uncertain relations between the executive of the concern and the ministry over it. The 'Politics' of every place and every department is added to the political influences radiating from the capital. The minister is worried about the kind of questions he may have to answer on the floor of Parliament and in press conferences or when he meets delegations with political pull. The officials, on the other hand, are harassed by the urgent and apparently overwhelming problems of transition to which is added the responsibility of making such a success of their job as to silence critics of nationalisation of the particular enterprise entrusted to him.

The Life Insurance Corporation is a typical example of the problem. Some there are, who consider the whole affair a mistake and as something whose motivation was unhealthy. Others, with greater justification and constructiveness concede the Government's bona fides. But they point out that many of the most teasing problems now faced would have been avoided had the government set about its business in stages. For instance, the Government could have merely stepped into the shoes of the shareholders of the companies and allowed them to continue for sometime in their various separate identities for all practical purposes. Business would have proceeded apace in undisturbed conditions and the dead wood in each unit could have been cut in an unobtrusive manner over a period of time. The problem of common scales of pay and all the attendant discontent and agitation by employees would have been avoided. Integration of business could have been tackled in comparative leisure and quiet. Screening of top officials could have proceeded without hurry and changes effected without undue public attention. In actuality, however, things were done in such a way that the public had the impression that the Government had bitten more than they could chew. It looked as though the Government could not swallow the bit or spit it out even if they would. There was fall in efficiency, disruption of routine, discontent and frustration at all levels and intolerable strain on conscientious senior officials.

All this is said not with a view to twit authority, but in the desire to stress the importance of ensuring for the executive of a State business corporation freedom from insidious political influence, undue public attention and interference and domination from outside. The requirements of ultimate parliamentary control over the disposition of the funds of the tax payer and other matters of importance to the citizen are beyond any question. But, as pointed out by Mr Appleby, there is need for a sense of proportion and a sense of perspective among legislators about this matter. Here as in so many other matters, the prospects are brighter in the Centre than in the States. And since the local political ambitions are likely to increase the clamour for enterprises under the auspices of the States, the danger from this difference in maturity between the State legislatures and Parliament becomes a further cause for worry. The only limitation over which we cannot, for other reasons, feel happy for this kind of expansionism is lack of funds at the State level.

Be that as it may, the principle that needs recognition is that the political authority of the legislatures should not be allowed to hang like a Damocles' sword over the heads of nationalised concerns. If the forthcoming elections should succeed in sending in a number of responsible persons both on the treasury benches and in the opposition, the desired conventions to obviate this predicament can be built easily and quickly.

Even if the legislators are educated in their responsibilities in the manner indicated above, we would still be left with the question of the relationship between the executive head and the parent ministry. Here, the history of the State Bank has been rather depressing. The circumstance that both Dr John Matthai and Mr Handoo felt compelled to resign their posts and responsibilities is indeed difficult to get over. The worst feature of both the episodes was that there was no adequate official explanation for either. In the case of Mr Handoo, such information as did percolate seemed to point to a deplorable lack of loyalty on the part of the Finance Ministry to its own senior officials. As for its relationship with the Reserve Bank, the last few months' history has not been of an edifying sort. In justification of the expectation that the appointment of Mr H. V. R. Iengar would usher in a new phase in relationship, it is not enough to point to the personal qualities and the personal relationships between the persons concerned. It is necessary that the right to function freely and without constraint in his new role should be assured to him. That is the least of the reward that an experienced man of affairs shouldering serious responsibility is entitled to.

Gateway Notes

Trends in Corporate Business

THAT corporate business in India has on the whole, been faring well since the post-Korean crisis, is evidenced by the Balance Sheets and Profit and Loss Accounts of 751 public limited companies analysed by the Research Department of the Reserve Bank of India. These companies have a paid-up capital of not less than Rs 5 lakh each and together they represent two-thirds of the total paid-up capital of all public limited companies registered in India, outside the Banking, Insurance and Investment fields.

One of the outstanding facts to be noticed through this analysis is that in 1954, there has been a sizeable rise in gross profits and capital formation. The total gross capital formation of all the companies covered was of the order of Rs 132 crores in 1954 as against Rs 49 crores in 1953. This figure was also well above the average for the four years 1951-54; during this four period, the total gross capital formation amounted to Rs 307 crores. out of which a little over 60 per cent was in the form of fixed assets. Almost the same ratio of fixed assets to total capital formation could be seen in 1954 also.

In one respect, the two years 1953 and 1954 provide a market contrast; while 1953 there was an inventory liquidation to the extent of Rs 14 crores mainly on account of raw materials, in 1954 there was inventory accumulation to the extent of Rs 10 crores, almost entirely due to finished goods and works-in-progress.

Of the capital formation of Rs 307 crores over the four year period 1951-54, Rs 75 crores was derived from internal sources, representing roughly one-fourth of the total. The total gross profits for the period amounted to Rs 347 crores, out of which Rs 142 crores went for taxes, and Rs 130 crores to share-holders.

Not only did the ratio of net profits i.e. retained and distributed profits to the net worth i.e paid-up capital and free reserves, after having fallen sharply between 1951 and 1952, tended to rise in the succeeding two years, but the ratio of gross profits to total capital employed and to gross sales was also moving more or less in a similar direction. Though the year 1954 saw a substantial rise in total profits as against 1952, it was still behind the position as obtained in 1951. Profits before tax, after falling sharply from Rs 85 crores in 1951 to Rs 55 crores in 1952 rose back to Rs 66 crores in 1953 to Rs 78 crores in 1954.

While the major part of the increase in profits after tax during 1954 was retained within the business, about 2/3 of the profits after tax was distributed as dividends, and slightly over 2/5 of the profits before tax was absorbed by taxation. The latter ratio is almost the same over the entire four-year period.

One special circumstance noteworthy for the year 1954 is the striking sectional disparities in fortunes. The majority of the principal industries earned higher gross profits; in the opposite group figure cotton, jute, sugar, paper and shipping; the vegetable oil industry was among the few which incurred losses.

From the point of view of the share-holder also, or to be more precise the ordinary shares 1954 was a better year than the two previous years. In fact in respect of the average rate of dividends, it stood higher than even 1951, though total profits were less. The average rate of dividends stood at 8.3 per cent in 1954, with the majority of the principal industries showing an increase; as against the rate of 8.2 per cent in 1951; 7.2 per cent for 1952 7.5 per cent for 1953. Tea plantations gave the highest dividends. Iron and steel just maintained the previous rates. The position was masked by an apparent decline in the rate of dividends for some industries; for paper and cement, the amount of dividend did not decline; it was a case of increase in paid-up capital. Less fortunate were jute, vegetable oil and shipping, for which there was a genuine decline in rate of dividends.

The trends with regard to gross assets and income from sales were also of the same general pattern. The total of gross assets rose from Rs 1136 crores as at the end of 1950 to Rs 1433 crores as at the end of 1954. Of this, Rs 743 crores consisted of fixed assets; and inventories Rs 317 crores, the gross fixed assets raising by 34 per cent during the four year period and inventories increasing by 14 per cent. Plant and machinery accounted or 3/5 of the gross fixed assets.

On the side of gross liabilities, net worth constituted over 2/5 of the total and comprised paid capital of Rs 380 crores and reserves of Rs 207 crores Borrowings represented 1/5 of the total gross liabilities. Depreciation amounted to Rs 354 crores and taxation reserves to Rs 77 crores for 1954 as against Rs 253 crores and Rs 58 crores respectively for 1950.

Income from sales which stood at Rs 1087 crores in 1951 shrunk to Rs 962 crores in 1953 and revived to Rs 1026 crores in 1954. That the course of manufacturing expenses also more or less corresponded is indicated by the figures at Rs 756 crores, Rs 590 crores and Rs 636 crores for the three years respectively.

GATEWAY MARKETS

Trend of Metal Prices

METAL markets have been ruling weak during the past many weeks following easier London advices, the weakness in Copper being more pronounced. The London price for copper has slumped to £244½ per ton, this being the lowest since 1954. Contributing to the weakness is the reduction of £20 to £250 per ton in the rate fixed by the Rhodesian Selection Trust group of companies. US Customs smelters have also cut their price by 2.75 cents to 34 cents per pound, while primary producers have also reduced theirs. In both Britain and the USA, the supply is adequate, while consumption has fallen far behind it.

Users of copper in the UK are not expected to buy any substantial quantities in the near future, partly because most of them are well-booked in forward contracts and partly because they are not inclined to operate while prices are declining. The outlook in the USA is similar. Consumption has declined, while outside demands are poor.

With the result, copper markets in India have depicted a weak tone. Although demand continues to be good and stocks, which arrived recently, are reported to have been sold out, the rate for the metal has declined steadily to Rs 180-8 per cwt as against Rs 185-0 quoted only a week ago. Many think that the future price trend is likely to be downwards in view of the excessive supply.

Zinc prices have remained practically unchanged and are confined to a narrow range between Rs 72-8 and Rs 74-0 per cwt Supply position continues to be tight; and whatever metal-cut zinc has arrived is reported to have been sold out. A Russian steamer is expected to arrive by February 15. In London, the metal is quoted lower at £99 per ton as against £102 a week ago. The supply position of high-grade zinc is, however, reported to be still tight.

Trading in the Lead market was featureless with the rate hovering around Rs 82 per cwt. In London, the rate has shown a slight decline to £112½ from £112¼ quoted early in the week.

The market for Tin has been ruling steady with the rate quoting around Rs 134 per quarter, although the London rate is lower at £764 against £780 per ton. The market in Singapore is ruling steady, prices moving around St. dollars 384 per picul.

*

Gold & Silver

Prices in the bullion market showed a mixed trend. While prices in the Silver section showed a declining tendency under liquidation prompted by fears of further imports of Tibetan coins, Gold steadied up on short-covering induced by better offtake.

Arrivals and offtake in Silver were estimated around 12 and 30 bars respectively. A feeling was growing that the present high prices could not be maintained for long despite limited arrivals and stocks of the metal. Some of the bells were, therefore, hesitant and liquidated their holdings, resulting in a drop in prices. Magh delivery declined to Rs 182-15 from a level of Rs 184-1 and Phagun delivery to Rs 182-10 from Rs 183-12. Ready closed lower at Rs 183-8 after touching a high of Rs 184-10.

Gold has continued to present a firm trend although prices showed some easiness early in the week in sympathy with the counterpart. Arrivals and offtake were estimated around 2,000 and 5,000 tolas respectively. Magh delivery finished at Rs 107-15 and Phagun at Rs 107-13 respectively. Ready moved between Rs 107-13 and Rs 108, while Sovereign was quoted at Rs 69-4, showing a rise of half a point.

*

Oils and Oilseeds

Steady to firm conditions prevailed in the Oils and Oilseeds markets during the past week. Owing to unfavourable weather reports from Gujerat and other producing regions, futures commenced on a firm note. However, at higher levels, "longs" preferred to book profits due to apprehension of intervention by authorities.

Castorseed May delivery, after firming up to Rs 159-4, receded toward the close to Rs 153. Ready was quoted at Rs 32-12 and Castor Oil, commercial quality, at Rs 18-4.

Groundnut May delivery opened at Rs 168-8 and, after touching a low of Rs 164-14, closed better at Rs 166. Ready Bold was quoted at Rs 34-2 and Groundnut Oil at Rs 18-8.

Linseed May delivery opened at Rs 28-14 and, after touching a high of Rs 29-6, finished the week at Rs 28-12. Ready was quoted at Rs 30-14 and Linseed Oil at Rs 17-8.

Cottonseed February opened at Rs 100-12 and, after improving to Rs 101-4, receded at the close to Rs 99. May delivery moved between Rs 99 and Rs 102-4, to finish at the former level.

*

Yarn

Trading in the Yarn market continued to be featureless and a fresh decline in prices was recorded in the absence of any support. There was nervous selling on reports of the conclusion of a bulk deal for 3.22 million pounds of yarn which the Japanese producers had agreed to sell to the Silk and Art Silk Mills Association at a rate of 10 per cent lower than their official prices. With the result, Snia Rayon Yarn 120 Dull cones February delivery was hammered down by more than Rs 20 to Rs 789 per case.

Staple-Fibre Yarn moved down in sympathy, 2/40 February delivery declining from Rs 660 to Rs 646 on nervous unloading and speculative selling.

Spot prices of both rayon yarn and staple-fibre yarns also lost about half anna per pound in the absence of demand from upcountry centres, particularly from the jari industry at Surat.

The Cotton yarn section, continued rule dull in spite of a substantial improvement in raw cotton. The daily offtake was poor, mainly due to reports that handloom cloth had not been moving satisfactorily and that cloth stocks were accumulating.

World of Cotton

Margin System for Forward Trading

THE East India Cotton Association has introduced a more rigorous system of margins for forward transactions in Cotton. According to a directive from the Forward Markets Commission, margins will be calculated under a slab system against outstanding purchases. Under the new system, a deposit of Rs 25 per bale shall be payable if the price of Jharilla is above Rs 700 and Vijay Rs 800. There were no deposits at these levels hitherto. A deposit of Rs 35 per bale shall be payable if the price of Jharilla is above Rs 725 and Vijay Rs 875. The current margin lines are at Rs 770 and Rs 920. Again, a deposit of Rs 50 per bale will be payable if the price of Jharilla is above Rs 750 and Vijay above Rs 900. The present margins are operative at Rs 795 and Rs 945 respectively. The Commission's directive has stated that they are of the opinion that it is expedient, in the interest of the trade, to alter the marginal lines and the rates at which deposits will be calculated for payment into the clearing house.

The notice of introduction of margin was placed on the notice board of the Association sufficiently before the commencement of trading on Monday to give the trade the opportunity of understanding the implications of the margin system. But the market completely ignored the stringent margins; and both the contracts were pushed up due to keen bull support and heavy bearcovering on reports of scarcity of contract. The sharp rise, especially in the case of Vijay, was due to report of frost damage to crops from Broach and other districts and the cold wave in some of the cotton-growing areas.

Moreover, the sudden announcement by the Government with regard to a fresh export quota of two lakhs bales infused new blood in the market. Contrary to earlier expectations, export duties were not raised, with the result export prospects are considered very bright. In view of the unsettled conditions in the market, the announcement of the latest quota was welcomed by trade circles. It was also felt that the present quota would be absorbed in no time.

For obvious reasons, the futures market was buoyant despite the introduction of a more regorous system of margins. The advance, necessitating special clearings, was attributable to extensive general buying although profit-taking at bulges pruned extreme gains. Jharilla contract was pushed at one time upto Rs 695 from Rs 681 before winding up the week's session at Rs 692. Similarly, the Vijay contract advanced to Rs 825 from Rs 788-4 to finish at Rs 823.

The ready market at Sewri continued to rule firm with increasing spinners' demand for domestic styles on apprehensions of crop damage following reports of cold wave from Broach, Surat and Gujerat. Good business was reported done in Jharilla and over staple varieties.

In the export section, demand for Bengal and Oomra was more in evidence following rumours that a further quota for Bengal might be released. Japan, UK, France and other countries are in the market and a business of about 15,000 bales has been already put through. Indian quotations, despite a heavy unofficial premium demanded for licences by quota-holders, are on parity with those of Pakistan and a substantial quantity can be sold in the coming weeks. Of the total quota, 50,000 bales are allocated for Bengals and the balance for other varieles stapling ¾" and below.

Activity in the import section, however, considerably declined, although enquiries continued for spot lots of Americans. According to the latest reports, the quantitative ceiling fixed for cotton imports from the sterling area will shortly be reached. The ceiling is placed around 65,000 to 70,000 bales. But, it is quite likely that, in order to ensure adequate supplies of foreign cotton to Indian mills, import of American cotton, under the PL/480 Programme, might be allowed. An announcement to this effect is expected by the end of this month.

Meanwhile, it is understood that the applications pending against the Indo-Burma-US tripartite agreement will be taken up for consideration if and when room is found to accommodate them. The general apathy to go in for Egyptian and Sudanese varieties on account of their high prices has induced the Government of India to allot large imports of American cotton. In case the US is reluctant to give more cotton to India this season, which is not very likely, the Government may allow lower quality cottons from the sterling area.

Following rates were quoted in the Sewri market:—Bengal Rs 690 to Rs 760; Oomra Rs 785 to Rs 820; Dholera Rs 750 to Rs 760; Jharilla Rs 790 to Rs 820 and Vijay Rs 940 to Rs 945.

×

KARACHI:

The Karachi cotton market, after ruling firm early in the week, turned a shade quieter at the close. Speculative selling based on the possibility fo granting export subsidy by the US Government and larger crop estimate (Pakistan) caused values to fall. The recent announcement of higher freight rates also acted as a damper. Sind Deshi was quoted at 4F Roller at Rs 86-9; Punjab Roller Rs 87-8; Punjab Deshi at Rs 81-0; at Rs 88-1 and 289F Punjab Saw Gin at Rs 104-9.

×

NEW YORK:

The trading pattern on the New York cotton market showed no important change, new crop months giving some further ground, partly due to week-end squaring-up transactions. Trade interests continued to support near-bys, which closed steady. Sales approximated 70,000 bales. Spot was quoted at 35.55 cents per pound.

×

LIVERPOOL:

The Liverpool cotton market ruled easier in the absence of trade support. Light hedging in both the contracts stressed the limited offtake. Trading was slow and dealings were mainly professional. The Egyptian contract remained idle, while Sudan contract was quiet.

×

CLOTH AND PIECEGOODS:

The Cloth and Piecegoods markets continued to present a listless front. Business in the domestic sphere was on a hand-to-mouth basis, while, in the export sector, interest seemed to have ebbed after last month's record shipments. On balance, prices ruled barely steady.

On the export front, Burma accounted for a measure of sustained offtake in greys. It is expected that this country will enter the market for other qualities as well. The political developments in Indonesia continued to keep the business outlook obscure.

*

WORLD OF BUSINESS

(Continued from page 285)

now being consumed as mere fuel. In all likelihood, the company's economic position will also be strengthened thereby. The decision will be taken after all the pros and cons, necessarily technical, are carefully examined and weighed.

*

Chloride and Exide Batteries

The products of the Chloride and Exide Batteries Limited enjoy an overwhelming preference in Indian Railways, Telephones, the Army and in Road Transport. This circumstance alone is a sufficient compliment to the quality of the batteries, especially at a time when this country is becoming quality-conscious in every field. In this preference also lies the assurance of a ready and willing market for all the new varieties of batteries the Company is expecting to produce, in answer to the growing national requirements. Thanks to the indigenous manufacture of batteries, imports have stopped and a sizable export market is in view. The Indian factory which went into full production of Railways and Industrial batteries some years ago would not have achieved the present exemplary reputation for its products, but for the overseas technical assistance made available from the parent institution in the UK which could draw from the experience of half a century.

The film show which the Management of the Company arranged during the Exide Sales and Service Conference at the Light House Miniature Theatre last Thursday conveyed a lively impression of the processes of the manufacture and several other interesting aspects. The crisp introduction given by Mr Gregson, the Managing Director of the Indian Organisation, enriched the information conveyed by the Film.

The following statistical table brings out the essential features of the Industry in India and Pakistan in the year under review as compared with the preceding year:

	Year ending 31st August:			
	INDIA		PAKISTAN	
	1955.	1956.	1955.	1956.

Olympus

New Deal for Railwaymen

ON Sunday last, the Union Railway Minister, Mr Jagjivan Ram announced here at a meeting with the representatives of the National Federation of Indian Railwaymen and top officials of the recognised zonal Railway Unions from all over the country, the details of a scheme designed to revise the pay structure of a large number of categories of lower grade posts in the Railways. The beneficiaries would be principally white collar workers, though sundry benefits have been conferred on firemen and drivers. Most of the Union leaders who were present were clearly overwhelmed both by the suddenness and sweeping nature of the changes proposed and all of them were gratified about the extensive benefits sought to be conferred on the non-gazetted staff. The experiment was described as 'bold' and even 'phenomenal' and the Railway Minister was warmly congratulated by all the Union leaders present.

Many a cynical eyebrow was raised at the apparent timing of the announcement and the fixing of the retrospective date line of the commencement of the new benefits from April 1956. When the time comes for casting the votes next month, as many as 170,000 employees, their families and their sympathisers will have not only promises of future benefits but actual and palpable evidence of the ruling party's benevolence. This reaction was not confined to leaders of parties apparently dependent on the votes of lower paid employees but to leaders of unrecognised railway unions with political affiliations other than the Congress. Even folks who have no overt association with 'labour' but who have an immediate personal stake in the outcome of the coming elections were clearly annoyed at the further advantage the ruling party has gained for itself by this well-timed gift.

All this cynicism is not quite fair to the Government. For one thing, these concessions have not been thought up overnight as an election stunt. They are really the fulfilment of promises given by the former Railway Minister at the time of presenting his budget and in other contexts. So if electioneering has entered into the calculations, it must have done so at least a year ago. And if it is said that the announcement so long delayed could have been delayed for some more time, that would not only be asking for too quixotic a sense of 'Cricket' in politics but a real callousness to the real interests of the Railwaymen themselves.

Moreover, recent accidents on the Railways and consequent public scrutiny of the responsibilities of the lower paid staff in the railways has brought to light the enormous amount of responsibility laid on them. For the amount of responsibility a Station Master, for instance, bears, the emoluments he has been getting and the prospects he had to look forward to, all these days have been pitifully inadequate. Moreover, the 'white collar' railway worker has special and peculiar difficulties of his own. There is first the difficulty he shares with other low-paid white collar workers, that of being neither here nor there, so to speak, neither completely assimilated with the large body of other categories of industrial workers nor being able to class himself, because of the cash nexus, with the managerial class. This is a psychological and social difficulty by which all that the poor white collar worker got was the worst of both the worlds. In practical terms, he had the mortification of seeing that the emoluments of the industrial labour of the Railways had gone in some cases by as high as 200 to 300 per cent since 1947, he himself had been left, for all practical purposes, out in the snow. Human nature being what it is, this grievance must have been even more gnawing than the fact of the absolute superiority that the managerial class enjoys in contrast to him. To crown all, there was the further difficulty in that his was a grievance that he cannot too openly ventilate in view of the need for solidarity with the other Railway workers.

Thus there is a substantial justification for the benefits now announced. Inevitably, they are going to cost a pretty penny to the Government. There is conspicuous official disinclination to give any estimate of the extra expenditure these proposals would involve. This is perhaps natural in view of the fact that the Railway Ministry has had its original estimates for the Second Plan drastically pruned by the Planning Commission and has made a grievance of it. It does not, therefore, want to appear to be involving itself in large and in some view, avoidable extra expenditure. But such attempts at pulling the wool over the eye temporarily deceive none. Unofficial and rough estimates place the extra expenditure at about Rs 5 crores a year. If the increased emoluments now announced succeed in imbuing the railwaymen with a new sense of enthusiasm for the tasks of the Railways in the Second Plan, then even from the Plan's point of view, the increased expenditure now proposed would be justified. For, a central assumption of the Plan is the smooth and orderly functioning of the Railways, so that transport bottlenecks do not occur. The ensuring of this at slight additional cost may ultimately prove to be a real economy.

Some of the salient features of the new scheme may be noted. These proposals which will have retrospective effect from 1st April 1956 will benefit as many as 16 categories of employees totalling to about 170,000. They would be station masters, assistant station masters, clerks and ticket examiners and so on. Some idea of the extent of the benefits now sought to be conferred will be had from an examination of the proposals with regard to the station masters and assistant station masters. Out of about 23,000 station masters in the country, only some 3,000 draw basic salaries in grades ranging from Rs 100 to Rs 500. As a result of the changes now proposed the number of such posts in the higher grade will be trebled to 9,000. The new basic grade for station masters will be Rs 100-185 and the number of such posts will increase to nearly 7,000 from the present 2,000. As regards the clerical staff, those in departments other than Accounts have had a long-standing grievance of discriminatory treatment against them in the matter of smooth progress in the same scale. This anomaly has now been remedied. Other categories of employees on the clerical and checking staff have had sundry benefits conferred on them the total effect of which is to increase their present scales of pay and to open up avenues of promotions that were either non-existent or closed before.

Much ingenuity has gone into the fixing of these new scales and they have been so devised without any apparent violence to the basic pay structures recommended by the Central Pay Commission in 1947. It is quite conceivable that in adjustments of this sort there may be inequalities of immediate benefits. In some ways these inequalities may be invidious and even inequitous, and confer greater benefits on comparatively new entrants into service than on old and experienced workers. For instance, a station master who has been in service for a long time and is well past in his old scale the present new minimum, derives no immediate benefit by being upgraded. But in readjustments of this sort, there is always bound to be some apparent anomaly of this kind and no scheme of readjustment can avoid them. The only thing that can be ensured is that no one is really worse off than before and that the majority do get substantial benefits.

There has been some apprehension that concessions to Railway employees might open up the floodgates of demands of similarly placed workers in other departments. As a matter of fact, there

Ambar Charka

The experience gained so far with the Ambar Charka Programme has emboldened the All India Khadi and Village Industries Board to proceed confidently ahead. For the year 1957-58, the Board has recommended the establishment of 180,000 Ambar Charkas. The Ambar Charka Enquiry Committee had conceived of the year's expansion programme more or less in the same measure.

In recommending a target of this order, the Board has gone on the following data. Up to the 4th week of January 1957, total production on the Ambar Charka exceeded 7 lakh square yards, of which a little over 6 lakh was produced from yarn spun on Ambar Charka. The quantity of yarn produced up to that rate was 2,77,600 pounds. A further 150,000 square yards of cloth is under production. Out of 50,025 Ambar Charkas manufactured, 32,765 were distributed to the Parishramalayas and the rest to spinners. Out of the total of 57,205 persons admitted for training, 26,312 have completed the course; 1410 have finished training as instructors.

The Khadi produced from Ambar Charka is estimated to cost on an average of Rs 1-4 per yard as against the average of Rs 2 per yard for Khadi produced from hand-spun yarn on the traditional charka. The Board is contemplating to combine the yarn produced on the traditional charka with Ambar charka yarn in the weaving of cloth, with a view to bring down the price of Khadi cloth generally.

This difference itself speaks for the superior efficiency of the Ambar Charka and the competitive cheapness of cloth produced through it. It stands to reason that the Ambar Charka should in course of time completely replace the traditional charka. Why the Board should be so solicitous on preserving the traditional charka, which is costlier to the extent of 12 annas per yard of cloth is not understandable. Now that the Board has a wider responsibility, its attachment to the traditional charka should react to the revealations in cost relations. As there is no question of replacement of human labour, the cheaper variety of charka should automatically displace the more costly ones.

Perhaps, in this process the Ambar Charka itself may get outdated, if in response to the incentives offered by the Board, ingenious individuals put into the field charkas which are capable of yielding finer varieties and at a considerably reduced cost. Such inventions are not at all improbable. If the marvellous yields in Indian agriculture reported from here and there by enterprising peasants are a pointer, the nation can look forward to similar achievements in the field of textile equipment on non-mechanical lines.

This line of reasoning leads us to the conclusion that even some soft-pedalling of the Ambar Charka programme would be advisable; so that when once the inventive potentialities of the country find full expression, further expansion could be made with the aid of the most economic charka available. There is of course the pressure of immediate demand, which counsels against indefinite waiting. But that seems why the Board has fixed a time limit for the prize entries.

*

With a Sound Future

India's glass industry is favourably placed in more than one respect. Not only is it labour intensive but it can absorb workers, skilled and unskilled, who are otherwise unemployable in any major industry. Being of an ancillary character, it is capable of automatic expansion corresponding to the general industrial expansion of the country. As pharmaceuticals, chemicals, preserved, fruits and similar other industries are on the eve of steady and extensive growth, the glass industry can look forward to an agreeable future.

The present strain on India's foreign exchange resources provides a compelling need for self sufficiency in every possible field, where the technical know-how is relatively simple and fully accessible, and there is already a good record of production and development. No extra stimulus needs be applied. Even as a competitive product glass has, in the world of containers, a number of advantages to claim, as for example, transparency, resistance to corrosion, easy washability, appearance and flexibility in fabrication.

It is on these grounds that Mr F. N. Sen could strike a general note of confidence in his Presidential address at the Twelfth Annual General Meeting of the Bengal Glass Manufacturers' Association. He drew particular attention to the fact that the industry has been able to achieve in 1955 a production of 124,000 tons as against the First Plan target of 139,000 tons for 1955-56. But even with this level of production, imports continue on a substantial scale and in certain items have recorded increases. This is disconcerting, because about 50 per cent of the capacity of the working units and about 65 per cent of the overall total capacity is still lying idle. Many registered factories are not producing at all.

In this condition, Mr Sen naturally asks why there should be an expansion of capacity as is contemplated in the Second Five Year Plan. He is not against expansion, as such but insists that 'except for reasons of economy of production and diversification of output on newer and untried lines", sufficient caution must be exercised in the matter of new licensing. There can be no two opinions on this point.

On the research and export promotion side, the industry is already well served by organisations and individuals alike. It, however, shares with others, big and small, the problem of inadequacy of rail transport and the embarrassments of what is considered to be an unduly harsh labour legislation.

NORTH INDIAN MARKETS

Slump in Shellac Prices

DESPITE satisfactory shipments and poor arrivals from upcountry centres, the Calcutta Shellac market has witnessed a slump in prices. Imports of shellac from Thailand are meagre and stocks in the local market are reported to be substantially low. The market has not, however, responded to these bullish factors and the rate for Pure TN variety, which was quoting upto Rs 105 only a month ago, has been showing a downward trend from the third week of January, to quote presently around Rs 86 per maund. Even at this low level, demand is not reported to be keen. The marked fall in prices is attributed to lack of overseas demand, particularly from the USA and the large Bysakhi crop which will start moving into the market soon.

Total shipments of lac, during January 1957, were 37,980 packages as compared with only 35,851 packages in the previous month. Of the total, shellac accounted for 26,963 packages; seedlac for 7,426 packages; buttonlack for 442 packages and others for 3,149 packages. The corresponding figures for December 1956 were 25,915 packages; 5,595 packages; 1,046 packages and 3,295 packages.

Linseed

It is announced that forward trading in Linseed will start shortly in Calcutta under the auspices of the Calcutta Wheat and Seeds Association. The Central Government, by a resolution on November 19, 1955, recognised two associations—one in Calcutta and the other in Bombay to conduct forward trading in Linseed under the Forward Contracts Regulation Act of 1952. The trading in Calcutta will now take place at 149, Cotton Street.

*

Sugar

Sugar markets have continued to rule quiet with prices showing an easier tendency, mainly due to a heavy stock position and expectations of overall increased production during the current season. Dealers are reported to be reluctant to carry any heavy stock with them due to fresh arrivals from the upcountry centres. Moreover, floating stocks are reported to be quite comfortable; and most of these stocks are of the previous season's output, while the arrivals are all out of the current season's output from upcountry centres.

Above all, loading conditions are far from satisfactory. Again, crushing is now in full swing and all the factories are reported to be getting enough cane.

Meanwhile, there is a belief that the firmness of the current international price may encourage the Government of India to permit additional exports. The strong statistical position of the world's sugar market has already enabled Indian shippers to use 40 per cent of the export quota during the past fortnight. Nearly a dozen countries have approached India for sugar, West Asia being the main customer.

The Khandsari market, at Hapur, continued to rule quiet; and the Uttar Pradesh Government's recent decision to reduce the Sales Tax on the commodity was not considered adequate to protect the industry. Rates moved between Rs 23 and Rs 27 per maund, according to quality.

*

Gur

In sympathy with the sugar market, Gur prices have also been developing an easier tendency. At Hapur, the rate for the ready position is quoted at as low as Rs 10-4 per maund as against Rs 11-3 in the previous week.

Outside buying enquiry is slack and demand from the consuming centres is diverted to the Punjab and other markets where prices are reported to have fallen below Rs 10 per maund. Stocks at Hapur have swelled to 35,000 maunds,

Madras Review

The Peninsula

Views on Sanskrit Study

THE evidence tendered and views expressed by the various representatives of academic opinion in the Madras State before the All-India Sanskrit Commission should provide agreeable surprise to those who have been thinking that Sanskrit was getting friendless in this area. The Commission have already examined a number of well-known educationists, scholars and public men. Many more distinguished persons will be giving evidence before the Commission during their sojourn in Madras. But the sense of the State is already clear from what the Commission have come to gather from the various spokesmen.

In a despatch of this character, one cannot cover the entire gamut of evidence; and reference to some shall by no means indicate that the views of others have been less worthy or constructive in content. The names covered are representative of a wide range of functions, status and public importance. That within this wide range, opinion should be well-nigh uniform on the desirability of making Sanskrit an important item in the curricula of studies and not a mere avoidable, optional subject, betokens a very happy future for this rich and basic heritage.

Dr Lakshmanaswami Mudaliar is emphatic that whether for financial or other reasons, the provision for the study of Sanskrit in any institution should not be removed. While conceding that the present system of Sanskrit study could be maintained as far as the school curriculum was concerned, he has suggested a fundamental innovation on the three language-formula, which is now before the public for national acceptance.

Dr Mudaliar's proposal is that Sanskrit may be taken in the place of Hindi, as after all it is Sanskrit which is going to help the students in learning Hindi. Hindi might be taken up as a post-employment course for those who entered government service. Dr Mudaliar also challenged the superstition that without a basis of study in the school, the language could be acquired all of a sudden in the college. He stressed that the foundation for Sanskrit study in college and university should be laid firmly in the school.

The idea of starting separate universities for the study of Sanskrit did not appeal to him; on the contrary, he would prefer the language being taught in all the universities. Two Sanskrit Universities, functioniong as high level centres, one in the North and another in the South, were all that could be desired by way of separate institutions and these, according to him, should come under the purview of the University Grants Commission; the Central Advisory Board for Sanskrit did not impress him as of any great value.

He was also found to be an advocate of the old traditional style of learning, he thought that the modern types of education were not able to produce much depth. Likewise, he would have Ayurveda taught as a distinctly separate course and not as a simplified or amalgamated subject. Simplification and integration with allopathy, he believed, would sound the death-knell of Ayurveda. Those who wanted to be acquainted with more than one system might pick it up after sufficient specialisation in the other. On the future condition of distinguished pundits, Dr Mudaliar said that it could be ameliorated through a system of funds and help from the Religious Endowments Board and other temple funds.

Mr Sundarakrishnamachariar, Principal, Vidya Pith, Thyagarajanagar went a step further in the advocacy of Sanskrit as an essential preliminary equipment for Hindi. He wanted that Sanskrit should be the first language for those who sought to learn Hindi. It was pointed out that the Rashtra Bhasha was Hindi and not Hindusthani and therefore Sanskrit was the door to that language.

At Kanchipuram, the Commission heard the views of His Holiness, Sri Sankaracharya and a number of other renowned scholars of the place. His Holiness had no objection to widen the range of subjects for the Sanskrit students engaged in the study of sastras; but insisted that there should be schools to train pundits purely on the old methods. These schools should be supported by the State or the public. He was anxious that the Pundit tradition which was now dwindling should not be hastened toward extinction by any step that the Government or any other public authority might take.

In his scheme for the extension of the study of Sanskrit the following proposals figure. Students of archaeology and epigraphy should have Sanskrit as a compulsory paper. Students of engineering, law and medicine should have it as an optional subject, particularly the contribution of Sanskrit texts on the respective branches of learning. Candidates for the IAS examination and Government employees should have a general acquaintance with the language. A large number of patashalas should be opened, where all sections of the public would be admitted to the study of Sanskrit, just like architecture or arts. And a system of public graded Sanskrit examinations by ad hoc bodies should be organised.

Mahamahopadhyaya Anantakrishna Sastrigal pleaded for separate safeguards for the Pundit tradition and the conferment of equal salary and status on Pundit teachers with the rest of the staff in the University. The headmaster of the Veda Vedanta Vaijayanti School expressed the view that Vedadhyayanam should form an essential part of Sanskrit study in the School. He believed in its intensive cultivation by the student for a period of fifteen years.

In Dr Raghuraman, the Commission found a warm advocate of simplification in the methods of teaching and for the use of graded text books in conversational style.

At Sriperumpudur, Mr Seshachalam Chettiar, President of the Ubhaya Vedanta Sanskrit College complained against the Government insisting that there should be at least 20 students to obtain the teaching grant. Mr Chettiar said that they were not worried about the finances, but wanted to maintain and increase the number of students who could be trained in the Sanskrit Colleges and Schools maintained by them. He also warned against the indiscriminate introduction of modern subjects as they might lead to Sanskrit learning getting squeezed and its quantum progressively reduced.

On the whole, the views set forth by the Madras educationists and scholars represent a highly practical via media between the nostalgic extremism, even wishing to make Sanskrit the State language of India and the uncompromising hostility to have anything to do with the language in the future educational set-up, except giving it a fugitive role as a remote haunt of unrespected scholarship. The Vice-Chancellor of the Madras University has spoken emphatically for a clear and effective status for Sanskrit. He represents in a fair measure, the constructive opinion in this State on this subject.

Meanwhile one should not ignore the highly realistic suggestion put forward by one of the gentlemen who gave evidence at Kanchipuram that there should be some endeavour on the part of the well-wishers of the language to convince unfriendly elements that Sanskrit was not the preserve of anyone section and that it did not confer special material benefits of any kind, to those who knew it. Where there is indifference or antipathy, it has to be fought by spreading the conviction that the language is a genuinely national legacy, to be cherished by every one alike.

BALANCE-SHEET REVIEWS

(Continued from page 279)

this property will be compulsorily acquired.

The above proposals will result in the company having available for investment about Rs 18 lakhs which the directors intend for investment in Ordinary shares, partly in companies under the management of Bird & Company and F. W. Heilgers & Company and partly in other companies. In this connection, the directors have stated that, although it is difficult to make accurate predictions as to the future earning capacity of individual companies and the future tax liabilities of Standard Coal Company, it should be possible to pay a dividend of not less than 10 per cent and possibly more.

Meanwhile, the working of the Standard Coal Company reveals a net profit, before providing for Depreciation, of Rs 1,11,064 for the year ended 31st December 1956 as against a loss of Rs 72,927 in the previous year, thanks to a substantial rise in sales from Rs 57,625 to as much as Rs 5.31 lakhs. Apart from providing Rs 30,000 for General Reserve, the Depreciation amount has been halved to Rs 1,000. The dividend is, however, maintained at 10 per cent.

In a circular letter, issued along with the directors' report, it is stated that the managing agents have agreed to purchase ordinary shares at the current market price of Rs 20-12 per share from any member, if he is not willing to continue as a member of the company and does not approve of the change of its character. This offer will remain open upto March 15, 1957.

£ R$

Britannia Engineering

Thanks to a sharp rise in sales, the working of the Britannia Engineering Company has resulted in a substantial rise in profits for the year ended 31st December 1955. Total sales, reported both by the Works and Agency departments, have risen to Rs 1.1 crores from only Rs 69.64 lakhs, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 15,47,345 as against only Rs 9,86,009 in the previous year.

Apart from setting aside Rs 1.67 lakhs for Depreciation Reserve and Rs 1.00 lakh for Doubtful Debts, Depreciation amount has been raised to Rs 3.38 lakhs from Rs 2.44 lakhs; Taxation to Rs 4.00 lakhs from Rs 3.23 lakhs and Machinery Reserve to Rs 4.00 lakhs from Rs 2.50 lakhs. Due to increased allocations, the directors have found it just possible to maintain the dividend at 15 per cent.

*

CLIVE STREET GOSSIP

(Continued from page 288)

grievances. This is a weapon that it is using to some purpose, especially in view of the fact that many a Congressman is vulnerable in this regard and local grievances, right or wrong, are very strong. It is not unlikely that in some places, the local discontent over States reorganisation will prove of decisive importance if not of absolute superiority of the Congress, at least of its relative size. Bombay, both its Maharastrian and Gujerat wings and Orissa are the two areas in which these factors may weigh heavily with the electorate.

*

Thus the official opposition parties like the Communist and Praja Socialist parties have formidable difficulties in the way of upsetting the Congress. The Communists have to depend solely on the loyalty of the compact groups of their supporters in various parts of the country and even here, former areas of their influence as Telengana have slipped from their hands. The Praja Socialist Party which has, on balance of ability, integrity and patriotism the best credentials to become a proper opposition party is divided both in its policy making and leadership. The leftist efforts at combining in a united opposition has failed everywhere except West Bengal. In Kerala where high hopes of such alliances were entertained, the expectations have been completely shattered with the result that the P.S.P. has been obliged to choose as its friend the Muslim Leage. In Maharastra, candidates of both P.S.P. and the Communist parties will be sponsored by the Samyukta Maharastra Samithi, but the elections will be fought on the symbols of their own parties. In Gujerat, on the other hand, the Communists have chosen to fight as nominees of Mahagujerat Parishad, but the P.S.P. will fight in its own but with an adjustment with it. How this can be squared with Mr Ashoke Mehta's association with the composite Bombay State idea is only one of a hundred unresolved conundrums of the P.S.P. policy. On the whole, except where there are local grievances, and in West Bengal, leftist disunity is so conspicuous as to put the Congress in great advantage.

*

The chief source of Congress candidates' worry is from their erstwhile colleagues who have set up on their own against official Congress candidates. The reasons for this opposition are not always respectable or mentionable. But in some parts of the country, as in Madras, there has been a genuine dissatisfaction with the candidates chosen on behalf of the Congress and the somewhat overt communal orientation of Congress choice. How far this was a tactical necessity and how far this was the result of the present party leader's own inclinations can be debated for a long time without coming to any firm conclusions one way or the other. But the Congress reformists as those who have got out of the Congress have called themselves have some influential backing. But in these matters, unless one takes the view that he will vote only for the best candidate regardless of the party to which he belongs, the choice has to be inevitably for the party which has the balance of acceptability on the whole. That is the price you pay for the party system which is by no means an unmixed blessing or even a wholly democratic institution.

But the 'revolt' from within the Congress may be a blessing in disguise from another point of view. If in the course of next few years these dissidents along with the Praja Socialist party do evolve a recognisable national opposition, then one of the most important adjuncts of parliamentary democracies will be available to us. At the moment the Congress has to provide its own critics. In the next few years, it will have to provide, paradoxical as it may seem, its own opposition. It will be the final service of the Congress which has so much else to its credit.

EAVESDROPPER

ORIENT PAPER MILLS LIMITED

NOTICE

NOTICE is hereby given that an Extra-ordinary General Meeting of the ORIENT PAPER MILLS LIMITED will be held on Wednesday, the 13th March, 1957 at 8, India Exchange Place, Calcutta—1 at 2-30 P.M. to consider and, if thought fit, to pass, with or without modification, the following resolutions:—

AS AN ORDINARY RESOLUTION

1. "RESOLVED that consent of the company be and is hereby given to the transfer of the Coal Mining Lease dated the 19th August, 1955, granted in favour of the company by the Orissa State Government for a period of 30 years, to the Central India Coal-Fields Limited for the unexpired residue of the said term of 30 years together with the benefits, rights, liberties and privileges and subject henceforth to the payment of the rent reserved by and the performance and observations of the conditions and covenants as contained in the said Lease and payment by the Central India Coal-Fields Ltd. of the actual cost of this company incurred in connection with the Colliery and that the directors of the company be and are hereby authorised to effect the said transfer and to do the needful in this connection."

AS A SPECIAL RESOLUTION:

2. "RESOLVED that the Articles of Association of the company be altered in the manner following:

A. For Article 37, the following shall be substituted, namely;

'37. The company shall have a first and paramount lien upon all the shares (other than fully paid up shares) registered in the name of each member (whether solely or jointly with others) and upon the proceeds of sale thereof for all moneys (whether presently payable or not) called or payable at a fixed time in respect of such shares and no equitable interest in any share shall be created except upon the footing and condition that Clause 14 hereof is to have full effect. And such lien shall extend to all dividends and bonuses from time to time declared in respect of such shares. Unless otherwise agreed, the registration of a transfer of shares shall operate as a waiver of the company's lien, if any, on such shares.'

B. For Article 38, the following shall be substituted, namely:

'38. (a) For the purpose of enforcing such lien, the Board of Directors may sell the shares, subject thereto in such manner as they think fit but no sale shall be made unless a sum in respect of which the lien exists is presently payable and until notice in writing of the intention to sell shall have been served on such member, his executors or administrators or his committee, curator bonis or other legal representatives as the case may be and default shall have been made by him or them in the payment of the sum payable as aforesaid for seven days after the date of such notice.

(b) The net proceeds of the sale shall be received by the company and applied in or towards payment of such part of the amount in respect of which the lien exists as is presently payable and the residue, if any, shall be paid to such member, his executors or administrators assigns or his committee, curator bonis or other legal representatives as the case may be.'

C. The word 'three' appearing in line 4 of the Article No. 184 be substituted by the word 'six'."

By Order of the Board,
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

Stock Exchanges

Lack of Confidence: Sagging Tendency in Prices

Watch-Dog Writes:

IN the absence of any news of influence, sentiment in stock markets remains generally depressed. With buyers few and far between and tired bull liquidation much in evidence, equity values have registered an all-round decline. Bulls seem to have lost nerves, while bears are emboldened in their operations in view of acute stringency in money supply. Professional operators are now waiting for a lead.

The Calcutta Stock Exchange experienced another dull session during the past week, when prices displayed a sagging tendency.

Prices on the Bombay Stock Exchange suffered a further setback on tired bull liquidation although they showed a slight recovery at the close under the lead of Bombay Dyeing.

Dullness and apathy characterised trading on the Madras Stock Exchanges.

The London Stock Exchange opened the new account on a dull and uncertain note; but the closing tone was satisfactory.

Wall Street closed heavy, with a fairly good representation of declines extending mostly to a dollar or so.

*

Calcutta

Calcutta, Thursday Evening.

EXTREMELY dull conditions characterised trading on the local Stock Exchange during the past week. In the absence of any support as well as due to small selling, prices generally displayed a sagging tendency. The main depressing news continued to be the unchanged situation as regards Kashmir, and fears of worsening Indo-Pakistani relations kept operators hesitant. The position was aggravated by the scramble for funds, which drove certain institutions to unload a wide range of shares and securities, in instalments and at progressively lower rates, on an unwilling market. Thus, confidence in the market was impaired in view of various uncertainties.

In the Giltedged market, business was somewhat restricted. There was some interest in certain directions and the tone was fairly well maintained. This was due largely to the recent open market operations of the Reserve Bank as also to the absence of any substantial offerings. 3 per cent 1986 Conversion, after opening at Rs 73-10 and improving at one time to Rs 74, finished the week at Rs 73-12.

In sympathy with the giltedged section, Bank shares ruled generally quiet. United Commercial eased off further to Rs 56-4 from Rs 57, while Allahabad Contributories were done around Rs 180.

Despite easier advices from the jute goods market, Jute shares were fairly maintained around last levels. Signs of easiness in the supply position of raw jute and the consequent steady fall in its prices made operators to feel that the working of the mills should become more economic and that the industry might not fall a victim to any more squeeze in the remaining period of the current season. Anglo-India changed hands at Rs 139 to Rs 141; Dalhousie at Rs 93 to Rs 100; Gourepore at Rs 223 to Rs 225 and Nuddea at Rs 32 to Rs 32-8. National moved rather erratically between Rs 20-8 and Rs 21-5 on alternate buying and selling, to finish at Rs 20-13. Reliance, after touching a high of Rs 10-6 and a low of Rs 9-10, finished at Rs 9-13.

Sentiment continued to remain depressed in the Coal section where operators were reluctant to enter into commitments, while buyers were scared by the clear indications of the effects of the recent award by the Appellate Tribunal. Burrakur met with limited speculative activity, resulting in the price moving within a narrow range around Rs 21. Equitable eased off to Rs 25-4 from Rs 25-9 and South Karanpura to Rs 9-9 from Rs 10. Western Bengal were As 2 cheaper at Rs 5-13.

Textiles came in for limited enquiry; and the recent announcement with regard to relaxation of credit against textiles by the Reserve Bank had no effect sentiment. Discouraging advices from the piecegoods market continued to be a depressing factor. The only two scrips, which met with some enquiry, were Cawnpore and New Victoria which hovered idly around Rs 7-15 and Rs 1-15 respectively.

Except Belsund which came in for some enquiry upto Rs 11-6 from Rs 10-12, little interest was shown in the Sugar section. Ramnugger were marked back to Rs 24-12 from Rs 25-2, while SKG were dull at Rs 11-4. U. P. were quoted around Rs 14 and Dyer Meakins at Rs 5-14.

In an otherwise dull market, the Tea section ruled fairly steady although buying continued to be selective and turnover remained restricted. Operators had a general feeling that the statistical position of the industry remained good. It was also felt that the present increase in world production would be easily absorbed by the rise in overall consumption and that even a stage might be reached when internal buyers would find themselves short of stock during the latter part of the season if enquiry from the UK was maintained at the present level. Operators, therefore, continued to lend support to scrips of those gardens producing best quality teas. Prominent amongst these were Brooke Bond having buyers at Rs 20-14 to Rs 21-3; Bishnauth at Rs 21-10 to Rs 22-2; East India at Rs 23-2 to Rs 23-8; Hantapara at Rs 202 to Rs 205; Hasimara at Rs 28-11 to Rs 28-14; Hoograjuli at Rs 29-8 to Rs 30; Sapoi Old at Rs 30 to Rs 30-8 and Tezpore at Rs 21-6 to Rs 21-9.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. Indian Irons, after starting steady at Rs 29-4, receded gradually to Rs 28-7 due to selling pressure on weaker Bombay advices, to finish better at Rs 28-12. In sympathy, TEXMACO were pushed down at one time to Rs 20-8 from Rs 20-13; Jessop to Rs 27-4 from Rs 28 and Richardson to Rs 20-8 from Rs 21, to close better at Rs 20-9; Rs 27-6 and Rs 20-9 respectively. Braithwaite, however, continued to receive good support upto Rs 28-6 from Rs 28 on reports of improved working. Burn, after a long time, came in for business at Rs 328 to Rs 330.

Trading in the Miscellaneous section was dull and featureless. The steady fall in copper prices had an adverse effect on Indian Copper which eased off further to Rs 3-7 from Rs 3-9. India Steamship shed another three annas to Rs 10-3 following the delay in the announcement of the interim dividend. Orient Paper moved narrowly between Rs. 33-4 and Rs 33-9, while Titaghur shed half a point at Rs 38-9 on modest profit-taking. Indian Cable were marked back to Rs 29-13 from Rs 31-4; Dunlop Rubber to Rs 26-12 from Rs 26; NICCO to Rs 20-8 from Rs 20-12; National Carbon to Rs 26-4 from Rs 26-9; Rohtas to Rs 19-9 from Rs 20-1 and BIC to Rs 8-4 to Rs 8-8. BBP were well maintained at Rs 2-13, while IBP were As 4 cheaper at Rs 35-12. Hoare Miller met with sustained support upto Rs 8-3 from Rs 7-10, to close a shade easier at Rs 8

*

Bombay

DALAL STREET is once again in a state of despondency. Industrial scrips have suffered a major recession during the week ended 13th February. Shorts who had recently covered their sales have again replaced them with free supply of contracts while the bull traders disillusioned by the low level of prices have been forced to liquidate their holdings in the falling market adding to their cumulative losses in the past few months. Even the speech of the Finance Minister assuring a fair deal to the private sector had a momentary effect while the main trend remained downward. The market is once again facing a crisis of confidence and even at bargain hunting prices, genuine support has remained conspicuous by its absence. Additional disinvestment on behalf of those associated with TISCO in Tata Steel shares during the week provided a fresh damper as the market was thick with rumours that a further large parcel of the shares had to be still liquidated. Whatever the reasons may be for this sort of disinvestment, it has created very bad impression on the market. With election fever running high for another month or so, acute stringency in money market with further taxation measures in the offing and the Kashmir situation still hanging fire, operators as such have not been able to discern any silver lining on the horizon at the moment. It is difficult to say as to when the tide will turn. In the meanwhile, the approaching end of the Account period and possibility of heavy 'Satta' on carry forward charges in Kohinoor, Swadeshi, Tata Mills and Gokak Mills on account of the forthcoming closure of transfer books has added fuel to the fire. The market technically is in an oversold state and is entitled to a rally.

The prevailing system of Satta or carry forward charges every fortnight at the time of settlement has been encouraging the bear operators. 'Indian Finance' has been tackling this question off and on; but unless all the Stock Exchanges in the country jointly try to reform the system, it is considered likely that bull operators will not be able to raise their heads in view of the very acute stringent conditions in the money market. The bear operators get 'Satta' for nothing while in view of the indirect check on dividends on account of the penal tax, the bulls have to pay much more by way of carry forward charges than what they get by way of annual dividends. Something has to be done on this issue if the Stock Exchanges want to survive from the clutches of the bears.

THE TINGAMIRA TEA SEED COMPANY, LIMITED

NOTICE is hereby given that the 32nd Annual General Meeting of the Shareholders of THE TINGAMIRA TEA SEED COMPANY, LIMITED, will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 12th March, 1957, at 4 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st March, 1956, and the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. R. H. D. Campbell, who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st March, 1957, and to fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit, to pass the following resolution:—

"That the Board of Directors be and is hereby permitted with effect from the Commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 1st March, 1957 to 12th March, 1957, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
CALCUTTA,
7th February, 1957.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 19th March 1957, only to those members whose names are registered in the Books of the Company on the 12th March 1957, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

The Resolution being Item No. 5 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293(1)(d) of the Companies Act, 1956.

A SEMI-FLEXIBLE STERLING?

(Continued from page 177)

restrictions instead of allowing sterling to decline by another 10 cents or 20 cents at a time.

Had the flexible system existed during the run on sterling in 1947 Dr Dalton would have authorised the Exchange Equalisation Account "with a song in his heart" to allow it to decline again and again. Nor would Sir Stafford Cripps have lost face by eventually consenting to a drastic devaluation, after having emphatically disclaimed any such intention on half a dozen public occasions. Even the two Conservative Chancellors Mr Butler and Mr Macmillan would have preferred to avail themselves of sterling flexibility in the downward direction rather than check the expansion of industrial output by the adoption of their disinflationary measures.

The advocates of the semi-flexible system would still claim to be able to defend sterling under that system more effectively against speculative pressure than under the present arrangements. In their view so long as the official policy is to maintain sterling rigidly in the close vicinity of its parity, speculators attacking sterling stand a chance of making a profit by taking negligible extent of risk. The extent of their possible losses is strictly limited by the Government's policy of preventing a rise above $2.82. Once that limit is removed those who go short in sterling would run a much grave risk, the extent of which would be difficult to estimate.

It is true an appreciation of sterling above its present limit would necessarily be temporary because it would react unavoidably on British and Sterling Area exports. Many speculators would not be in a position, however, to wait until sterling relapsed to its parity or below it. They might feel impelled to cut their losses by covering at an unfavourable rate. The mere possibility of such losses would discourage the extent of adverse pressure on sterling during unfavourable periods. It would enable the Exchange Equalisation Fund to pursue deliberate tactics, somewhat similar to those pursued during the 'thirties, aiming at inflicting punishment on speculators in sterling. The scope for such manoeuvres would of course be much narrower than under full flexibility when sterling could be allowed to decline as well as to rise. Even so, according to the apostles of the elastic rate half flexibility is better than none.

It seems probable that when sterling approaches its upper limit pressure will be brought to bear on the Government to allow it to go beyond that limit. Nor would it be altogether safe to assume that the Government will not listen to that advice. Admittedly by allowing sterling to rise instead preventing it through buying dollars, the authorities might abstain from securing as much gold as they would secure under existing system. Even this is by no means certain, however. Possibly the mere announcement of the suspension of the upper limit of $2.82 would lead to a covering of short positions and a replenishment of depleted sterling balances on a large scale. Foreign importers, who during recent months were deferring their long-overdue payment for goods delivered, would hasten to repair their omission. Conceivably the Exchange Equalisation Fund would be able to secure a larger amount of dollars than under the rigid system, without having to arrest altogether the rise in sterling.

These considerations are no doubt examined in official quarters with due care. While the chances are that the Government will adhere to present policy, it would not be altogether safe to take this for granted.

OLYMPUS

(Continued from page 186)

tory, is inimical to the idea: The creators of Pakistan have a direct responsibility in the creation of the history inimical to the idea, and, in fact, as they loudly proclaim in season and out of season, Pakistan is a triumph of forces inimical to that idea. Even now, there are counterparts in India of Muslim fanatics of Pakistan, though less numerical and less influential, who are straining at the leash that curbs them from a more overt communal politics. A plebiscite in Kashmir now would be an open invitation to the release of the worst communal passions which we look upon with the utmost horror. Pakistan, on the other hand, has no qualms on this ground since its very approach is an endorsement of the communal idea. If the Security Council imagines that the pristine principle of plebiscite is something for which even the price of a possible communal blood-bath is worth paying, we must respectfully submit that it is talking in this fashion because it is we and not the council that are going to pay the price. Apart from the human aspect of it, which we consider most important, there is the question of the principle behind the idea. It is unrealistic to expect that India, with the greatest desire to please the Security Council, would be willing to jeopardise the principle on which its whole polity is based.

Therefore, "reagitating" the Kashmir issue, as Mr Menon aptly called the current activities of the Security Council, is not going to solve the problem. It will, on the other hand, create fresh problems which we, for our part, have no intention of allowing to be created. Our other preoccupations with our own people cannot let us have the luxury of Kashmir letting loose a new wave of communal passions. The Security Council would do well to bear this in view when it makes up its mind in the weeks to come on what further action should be taken in the matter.

INDUSTRIAL INFORMATION

(Continued from page 180)

the date from which the liability of dealers to pay tax under the provisions of the Act on inter-State sales arises.

In order to remove this misapprehension, it is hereby notified for the information of the public that the liability of dealers to pay tax under the said Act on inter-State sales can arise only on and from the date which may hereafter be appointed by the Central Government in a notification issued in the Gazette of India under Section Six of the said Act. That notification has not yet been issued, and therefore, no tax is for the time being payable on inter-State sales.

REVIEW OF BUSINESS BY CALTEX COMPANIES DURING 1956

Caltex companies sold the equivalent of 218,000,000 barrels of crude oil and refined products in 1956, an increase of more than 10 per cent over 1955, it was reported over the week-end in a statement issued in New York by California Texas Oil Company, Limited.

In 1956 Caltex companies and their affiliates also:

1. Spent $80,000,000 for new equipment and supplies, 75 per cent of which went into the economies of the 67 countries of the Eastern Hemisphere where Caltex companies operate.
2. Took delivery of three new tankers and authorized construction of sixteen more.
3. Completed new refineries in Australia and Japan, installed new units in existing plants in Holland and France.
4. Entered the West German retail market in partnership with a local company.
5. Developed plants for a major expansion of crude oil transportation facilities in Sumatra.
6. Continued a world-wide programme of geological exploration, and development of existing fields.

This progress came about, the statement added 'Despite international developments which had some adverse effect on the orderly conduct of business. However, these developments were brought about by action of the governments involved, and naturally can be resolved only by them".

DRAFT STANDARD FOR WATER TAPS

The Indian Standards Institution has issued, for eliciting comments, a draft Indian standard specification for sand cast brass screw-down bib taps and stop cocks for water services.

Bib taps and stop cocks are most commonly used water fittings and are generally subject to heavy usage. They should, therefore, be robust and of a corrosion—resistant material, and the construction should be such as to withstand a certain degree of mishandling.

The draft standard, which has been prepared with a view to meeting these requirements, specifies materials, sizes, dimensions and tolerances, and constructional features. As a general guide to the buyer, minimum overall weight of different sizes of bib taps and stop cocks has been given in the standard.

Comments on the draft may be sent to the Indian Standards Institution, 19 University Road, Delhi—8.

NEW RAILWAY BOARD MEMBER

Shri Karnail Singh, at present General Manager, Chittaranjan Locomotive Works, has been appointed Member (Engineering), Railway Board. He succeeds Shri P. C. Mukerjee, who was appointed Chairman, Railway Board, on December 31, 1956.

INDO-CZECHOSLOVAK TRADE AGREEMENT EXTENDED

Letters were exchanged today in New Delhi between the representatives of the Government of India and the Government of Czechoslovak Republic extending the validity of the Indo-Czechoslovak Trade Agreement up to March 31, 1957, pending further negotiations between the two countries.

The Trade Agreement was signed on November 17, 1953, and was initially valid up to December 31, 1954. It was extended from time to time and was valid up to the end of 1956.

INCREASED PRODUCTION OF SUGAR

The production and despatches of sugar from indigenous factories amounted to 6.20 and 3.82 lakh tons up to January 15, 1957 in the current season as against 5.28 and 3.03 lakh tons respectively in the corresponding period of the last year. The stocks with the factories on January 15, 1957 stood at 7.65 lakh tons as compared with 6.37 lakh tons last year.

WORLD OF FINANCE

(Continued from page 176)

added that Authority seems to have the clear intention that giltedged prices should not be adversely affected by the higher rate now proposed.

In the field of central banking credit, the Reserve Bank's policy of qualitative control is seen in: the inauguration of the bill market with favourable terms for advances against usance bills; the stepping up of the rate on such advances by ¼ per cent, as the scheme came to be increasingly utilised; a further rise of ½ per cent what time money rates tended to be very firm; a liberalisation of the scheme of advances in tune with the greater need for funds on the part of the banking system; an enhancement of the stamp duty with further reference to money rates and the busy season; and, now, the raising of the rate for advances on Securities on a par with the effective cost to banks of credit on usance bills.

GATEWAY GOSSIP

(Continued from page 182)

are paid an ex works price plus packing charges, but excluding excise duty and other expenses. The STC, in turn, sells the cement at an equalised price of Rs 102-8 per ton FOR. Mr Khatau points out that the FOR price before State trading commenced was approximately Rs 90 per ton. In effect, what the STC does is to utilise the existing selling agencies of the cement manufacturers as agents for purchase and sale of cement. Why, then, should the STC figure as a middleman?

Ostensibly, the reason, as Mr Khatau pointed out, lies in the need to set up an equalisation fund and to rationalise railborne cement movements. Mr Khatau answers—rather, refutes—the validity of these reasons. Firstly, he points out that the industry had, in recognition of the cement gap, "offered to import foreign cement and to sell it to the consumer at cost". Secondly, it was suggested that "price equalisation should be done without profit, by raising the price of Indian cement by just so much as would be necessary to meet losses on the sale of imported cement at a common delivered price applicable to both." Thirdly, the industry also offered to evolve a pattern of distribution which would involve only the minimum rail movement.

The ACC Chairman has gone on record as saying: "We believe that all forms of State Trading constitute a serious infringement of the right of freedom of trade in a democratic society." This, however, is a point on which, as I shall presently show, my views differ from those of Mr Khatau. But Mr Khatau is perfectly proper in drawing pointed attention to the fact that:

"State Trading in cement runs counter to the declared policies of Government itself as enunciated in the Industrial Policy Resolution early last year and in which an attempt was made to strike an admirable balance between State and Free Enterprise."

Let me clarify my views on State Trading and on State trading in cement. In the overall scheme of planned development, it is inevitable and even necessary that Government should assume the responsibility for taking effective and positive measures for fostering and finding new markets for Indian exports. Secondly, the Government have an equal responsibility to ensure that we should be able to obtain commodities which may not be available through normal trade channels. For both these purposes, I think State Trading is good for the Indian economy. For instance, I envisage the STC as having an honourable role to fulfil by way of agreements being concluded with East European countries for an enlarged quantum of trade. In this light, incidentally, as far as concerns the import of cement, I think that the participation of the STC in arranging for imports is not in itself wrong.

But the STC has to be clear-eyed as to its operations within the country. Where the existing trade channels in India are sufficiently developed, and where the operations in such trade are not blatantly anti-social, I think the STC would do well in desisting from interference with or assimilation of such existing trade. What does the STC do in India, which the Cement Marketing Company was not previously doing? That is rhetorical question; for, it is quite clear that, for trading in and distribution of cement, the STC was quite unnecessary.

A final word about State Trading in this country. A test case has already proved that the Centre's notions of State Trading have been somewhat vague. Clarification is thus necessary of the aims and purposes of State Trading. I trust that authority will, soon after the elections, consider as one of its major tasks the evolution of a clear policy for State Trading—one that will imbue the STC with the authority and responsibility for concluding trade agreements on a governmental level, but one which leaves the existing trade interests to continue their operations unhindered.

✱

DEFICIT FINANCING FOR RS 15 CRORES

(Continued from page 176)

The Centre's net expenditure would appear to have been heavy, since its balances have increased only by Rs 0.85 crores to Rs 51.46 crores in spite of its ways and means having been replenished by Rs 15 crores against ad hocs.

The possibility of transactions between the Central and State Governments is suggested by the sharp upswing of Rs 6.30 crores to Rs 13.33 crores in the latter's balances; and this has been accompanied by a reduction of nearly a crore in State borrowings from the Reserve Bank.

The status quo in the position of the banking system is indicated by the small drop of Rs 1.22 crores to Rs 51.76 crores in Deposits of member banks; and, at the same time, reduction of indebtedness has not taken place to any significant extent since the Reserve Bank's Other Loans and Advances, at Rs 102.19 crores, show negligible change from Rs 102.61 crores in the previous week.

There is also irrefutable evidence of greatly increased utilisation of the facility of advances against usance bills; this perhaps is indicative of the liberalisation of the scheme in recent weeks by the Reserve Bank. Another reason for advances against usance bills being maintained at a high level may lie in the fact that the enhanced stamp duty is to be effective from February.

The Reserve Bank's advances against usance bills are placed at Rs 59.31 crores, as compared to Rs 60.70 crores last week and Rs 17.69 crores in the corresponding week of 1956. The running total of loans against usance bills shows a smart rise from Rs 9.20 crores as at 20 January 1956 to Rs 45.62 crores on 25 January 1957.

Finally, there has occurred a steep decline in the foreign exchange holdings of the Reserve Bank. After having held remarkably steady for six weeks or so, the depletion during the week ended January 25 has been of the order of Rs 13 crores. A possible explanation is that exchange banks, which it is thought may have sold TT in December 1956 for purposes of window-dressing of Indian balance-sheets, may have repurchased sterling. A second possible explanation, which would also partly explain the Centre's high level of disbursements, is that some payments of interest and principal may have been made in respect of IBRD loans, wheat loan and Russian loan.

+

The return of the State Bank for January 25 reveals another smart increase in deposits from Rs 245.76 crores to Rs 252.03 crores. Since the week ended 2 November 1956, Deposits of the State Bank have gone up by Rs 22.66 crores. Deposits of Scheduled Banks rose by Rs 30 crores between 2 November 1956 and 18 January 1957. The inference, therefore, is that the State Bank has benefited by a windfall, possibly in the shape of a special account of governmental variety.

The windfall has been invaluable to the State Bank as it has been called upon substantially to increase its accommodation to constituents. Advances have shot up by more than Rs 6 crores during the week to a new high level of Rs 160.83 crores; and the expansion in advances since November 2 has exceeded Rs 30 crores.

For the first time in recent weeks, Deposits of Scheduled Banks show a considerable rise; they have gone up by Rs 15.29 crores to Rs 1125.29 crores. This has enabled borrowings from the Reserve Bank to be reduced from Rs 79.10 crores to Rs 75.13 crores; and cash balances are slightly higher at Rs 104.05 crores as against Rs 103.27 crores. The higher Deposits have come in handy, as Advances rose by Rs 7.44 crores to Rs 815.87 crores. Since the week ended November 23, each week has witnessed a rise under Advances; and, since the week ended December 7, each level has constituted a new high.

The statement of the State Bank of India for the week ended January 25 reveals a sharp increase of Rs 6.27 crores in deposits to Rs 252.03 crores. Borrowings from other banks are lower by Rs 1.12 crores at Rs 17.63 crores, while other liabilities, including inter-office adjustments are higher by Rs 0.64 crores at Rs 4.26 crores.

On the assets side, cash balances and Investments remain almost unchanged at Rs 17.96 crores and Rs 106.92 crores against Rs 18.03 crores and Rs 107.05 crores respectively. Advances have risen by Rs 6.06 crores to Rs 160.83 crores —"Loans, Cash credits and Overdrafts" accounting for a rise of Rs 4.27 crores and "Bills Discounted and Purchased" for Rs 1.79 crores.

+

According to the returns of the Scheduled Banks for the week ended January 18, both Demand and Time Liabilities have risen, the former by as much as Rs 13.22 crores to Rs 666.38 crores and the latter by Rs 2.07 crores to Rs 458.91 crores. Borrowings from the State Bank are higher by Rs 1.28 crores at Rs 11.80 crores, while those from the Reserve Bank are lower by Rs 3.97 crores at Rs 75.13 crores. Cash and balances with the Reserve Bank have declined by Rs 1.13 crores to Rs 84.80 crores and Investments by Rs 0.30 crores to Rs 362.12 crores. Advances, Inland Bills and Foreign Bills have all risen by Rs 5.21 crores, Rs 1.82 crores and Rs 1.41 crores to Rs 649.67 crores; Rs 113.21 crores and Rs 52.99 crores respectively.

✱

CLIVE STREET GOSSIP

(Continued from page 181)

unwilling public and its resourcefulness in matching wiliness with wariness. Culturally and intellectually, there is a most reassuring ferment in the country. I have no doubt, in time, this will yield impressive results. But it is unfortunately true, and it is a thing that I deeply deplore, that nothing startlingly and breathtakingly original in the realms of thought or imagination has yet emerged from independent India. Both in terms of the best contemporaneous achievements elsewhere and in terms of our own best in the past, present achievement is pitiful. Perhaps, I am impatient. But on the day in the not distant future when we are at the end of the first stage of our pilgrimage as Republic, I should like to have as my companion a new Kalidasa or a new Sankara.

✱

Mr P. A. Seshan, for long a valued and valuable colleague to all of us working in Indian Finance, has now joined the distinguished team who help to maintain, and keep maintaining, The Hindu in the universally acknowledged reputation of being The Manchester Guardian of India. Mr Seshan was, for a while, actively engaged in the formulation and preparation of the literature designed by The Employers' Association of India to publicise the virtues of free enterprise. Mr Seshan was not unequal to the propagandist bias which he had to impart to his studies and writings while he was in this assignment; but, in consonance with his talents and training, he will find himself in poise and at home in the kind of objective and sober assessment of men and events, which The Hindu has, consistently and unwaveringly, stood for throughout its long and progressive career. For my part, it is a flattering thought that old staffers from Indian Finance are in much request from leading dailies to tend and nurture their economic consciences.

The importance of banking to the
COFFEE INDUSTRY

COMMERCIAL cultivation of coffee in India dates from about 1830, and is still almost entirely confined to South India. The yearly crop varies between 20,000 and 30,000 tons, most of which is consumed in India. When a surplus of Indian coffee is available for export, it finds ready buyers in fastidious foreign markets.

Without banking, the growth of the coffee industry would have been impossible. The availability of ready funds when needed, the collection of dues in any part of the country, and the other facilities and guidance offered by a good bank—these are an integral part of the structure of the coffee industry.

We at Palai are proud that so many leading coffee plantations, and indeed important firms in every field of business and industry in South India, employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investment—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

* * * *

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI — TRAVANCORE
Branches at: Madras, Madurai, Cochin, Quilon, Trivandrum, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

PC-9158

For the Investor

The Irony of it

Investment Gossip:

THE Calcutta Stock Exchange did a nose-dive on Tuesday; and Indian Irons fell to below Rs 27. Reason? The Securities Contracts (Regulation) Act is to take effect as from Wednesday.

There is superb irony in this cause—effect relation. The coin of the Act is to protect the investor; and the speculators have hailed it as another danger signal For the Investor.

The point of the irony is sharpened when it is added that, not the whole Act, but only two articles of it, become effective from February 20. One of the articles puts a ban on options—theji-mandi as it is popularly called. The second article refers to transfer of shares; and buyers of shares are advised to lodge the scrip for transfer before the transfer books are due to be closed.

Bombay, however, did not take so devastating a view of the Act coming into force in part. Dalal Street witnessed buying on a modest scale, and share-prices were maintained, where they did not register an advance.

Tuesday's dealings in Lyons Range, as does stock exchange behaviour over a period of time, go to show clearly that, as the share markets function now, the interests that dominate prices and inspire sentiment are the professional gamblers, and not the bona fide investors.

For no fault of his, and for no adverse development worth mention, the genuine investor sees his shares shed prices and dip below intrinsic values, all because speculators who have no shares to sell and whose techniques do not involve taking delivery of shares carry out merciless bear raids on the markets.

Stock Exchanges, which are supposed to protect the investor, provide, on the contrary, fullest facilities for the gamblers.

There are exchanges which deal only in the speculative counters and which, in spite of it or because of it, do a thriving business. The Katni market thrives like the green bay tree.

Government should, without delay, complete the job of recognition of stock exchanges, and take knave-proof steps to prevent the functioning of unrecognised exchanges.

Government should also insist that those who have had associations with future markets of the type which confines its activities to speculation do not get a foot-hold in the recognised stock exchanges.

The rules of the recognised Stock Exchanges must be so devised as to safeguard and protect the investor in every respect. There must be a definite provision requiring sellers and buyers to declare, in time for the clearing, the actual number of shares which will be given delivery of, or taken delivery of.

In the absence of such a provision, the bears find themselves in the enjoyment of an unearnt premium.

I have written repeatedly on this matter; but I am in doubt if Mr Gutt has been impressed with my reasoning. I should commend this matter to the personal attention of Mr H. M. Patel.

For my part, I am convinced that rules which thus make a present of an unearnt premium to the fellow who sells shares without having any are the negation of the vaunted protection to the investor.

To return to this mid-week's nose-diving. For the past few months, the bears have had a merry time on the Stock Exchanges. They believe that they can indulge their propensities with utter impunity. High grade shares, with attractive yield on current prices and with all the advantages of growth stocks, are in the doldrums. Authority seems unconcerned. Let the bears and bulls settle it among themselves—this sums up Authority's lofty attitude.

The investor, who now winces, is not the only galled jade. Government, too, will realise soon enough that they are in the plight of the galled jade.

The financing of the Plan, in the public sector no less than in the private sector, is admittedly a grave problem. Adverse developments in the Stock Exchanges will render this problem grave beyond solution.

Let Authority be warned betimes. It has a vital stake in the good behaviour and good health of Stock Exchanges.

£ R$

Investment Notes:

IN an otherwise dull market, Shipping shares have been receiving good support at steady levels. Developments in the shipping sphere have, in recent weeks, shown that the industry will make rapid strides in the coming years and that it is assured of a bright future. In Calcutta, India Steams are quoted around Rs 10-2. In Bombay, Scindia Steams have scored As 12 at Rs 19-4.

In Bombay, Voltas Limited has decided to pay a dividend of Rs 90 on old shares of Rs 1,000 each or at the rate of Rs 9 on split-up old shares of Rs 100 each, for the year ended 31st August, 1956 as against

HIGHLIGHTS

The demand for funds is there, as any and every body is only too painfully aware.

The supply of funds is there, as every banker who has had liberal credit limits fixed by the Reserve Bank can testify.

Scheduled banks are the agency to "marry" this demand with this supply.

Is there a slower tempo in this marrying business? Yes.

Why? The reason seems to be: technical considerations having a bearing on a bank's balance-sheet.

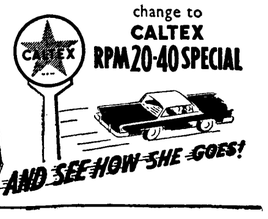
How is this technical conundrum to be solved? The Leading Article elaborates the answer with a wealth of figures and with an array of arguments.

A motor oil so good it cuts petrol consumption up to 15%

CALTEX RPM 20-40 SPECIAL WORKS FOR YOU LIKE THIS

when you start your car
you need the performance of a 20 oil
Every time you start, your engine needs a light, quick-lubricating 20 oil. Bearings are then instantly protected, petrol is not wasted overcoming friction caused by a heavier oil, excess power is not drained from the battery.

ten minutes later
you need the performance of a 30 oil
As your engine warms up it needs a SAE 30 oil—an oil with more "body" to resist the increase in engine temperature. At this stage, a lighter 20 oil would not give complete protection or maximum performance, a SAE 40 oil would be too heavy.



twenty minutes later
you need the performance of a 40 oil
Out on the open road your engine will operate more efficiently with the full-bodied protection of a SAE 40 oil.

RPM 20-40 SPECIAL meets engine requirements during all stages, gives extra protection at full throttle and ensures cooler, smoother running all the time.

RPM 20-40 SPECIAL gives you these important benefits:
1. Up to 15% increased mileage per gallon
2. Up to 33% less consumption of oil
3. Quicker, smoother engine response during warm-up
4. Less drain on battery
5. Minimises wear
6. Meets passenger car and truck manufacturers specifications
7. Can be used in all weathers, all seasons, all driving conditions

Investment Briefs:

Dimakusi Tea and Gohpur Tea have recommended interim dividends of 10 per cent each for 1956, payable on or after 6th March, 1957. Transfer Books will remain closed from 26th February to the 6th March, 1957.

Grob Tea and Teen Ali Tea have recommended ad-interim dividends of 10 per cent each for 1956, payable on or after the 13th March, 1957. Transfer Books are closed from the 4th to the 13th March, 1957.

Walchandnagar Industries and Ravalgaon Sugar have raised their dividends from Rs 18 and Rs 9 to Rs 21-0 and Rs 12 per share respectively, for the year ended 30.9.1956.

Brady Engineering has maintained the dividend at Rs 3 per share for 1956.

In Madras, K.C.P. Limited has proposed not to declare further dividends on the shares of the company for the year ended 30.6.1956.

Virudhunagar Textiles have passed over the dividend for 1955.

£ R$

Dividend Doubled by Scindia Steam

THE Scindia Steam Navigation Company has produced excellent working results for the year ended 30th June, 1356. Though the cargo carried during the year is lower at 1,914,693 tons as against 1,958,638 tons in the previous year, total freight earned has increased to Rs 9.81 crores from Rs 8.30 crores. With the revenue of Rs 38 lakhs by way of passage, total revenue from freight and passage money amounts to Rs 10.18 crores, showing a rise of Rs 1.30 crores. Among the reasons for the increase in earnings may be attributed to the rise in freights in overseas services and more ships having been placed on India-UK-Continent service.

The profit for the year, before providing for managing agents' commission, depreciation and Sinking Fund, amounts to Rs 2.58 crores. To this has been added Rs 11 lakhs, being non-recurring receipts relating to previous years, which brings a total of Rs 2.69 crores. From this, the directors have provided Rs 25.74 lakhs for managing agents' commission against Rs 10.26 lakhs; Rs 94.16 lakhs for normal depreciation and Rs 73 lakhs for special Depreciation Fund against Rs 74.69 lakhs in the previous year.

Allocation to Sinking Fund remains unchanged at Rs 10 lakhs. Provision for Gratuity is Rs 13 lakhs against nil. This leaves a balance of Rs 48.40 lakhs to which is added a sum of Rs 44.08 lakhs being the excess provisions made in previous years, no longer required under Depreciation and other heads; Rs 11 lakhs transferred from Development Reserve created last year and Rs 2.73 lakhs being the amount brought forward from last year, which brings the distributable surplus to Rs 1.06 crores.

A sum of Rs 19.76 lakhs is written off for debenture issue expenses, while Rs 20 lakhs is transferred to Annual and Special Survey Reserve; Rs 13 lakhs to Dividend Equalisation Reserve and Rs 90,751 to General Reserve. The dividend has been stepped up from As 8 to Re 1 per share. The carry-over is Rs 5.62 lakhs.

The Development Rebate of 25 per cent, allowable under the In-

The Bill Market Scheme— the Next Logical Step

Indian Finance
Established 1928
February 23, 1957
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

ALTHOUGH there is every evidence that scheduled banks have substantially increased their use of the facilities offered by the Reserve Bank for advances against usance bills, we cannot help the impression that there is a new hesitation, if not altogether reluctance, in the further availing of such aid. This impression is derived from a number of apparently unconnected facts, which, however, are inter-related. In the first place, it is undoubtedly true, as was pointed out in a leading article some weeks ago, that the facilities thus offered by the central banking institution were made use of mostly by the State Bank of India and the exchange banks. In the second place, Mr T. T. Krishnamachari confirmed last week in Madras that substantial recourse was being had to the bill market scheme by the exchange banks. In the third place, it is known that the borrowings by the member banks are for an amount that is far less than the total lines of credit applied for to the Reserve Bank and sanctioned by it. It is understood that, since the decision was taken to liberalise advances against usance bills in order that the rigours of meeting the current busy season requirements might be minimised, the Reserve Bank has been examining every application or proposal with the utmost expedition and solicitude. Moreover, the lines of credit already sanctioned are said to be in the vicinity of Rs 150 crores; but advances outstanding against usance bills, as shown in the Reserve Bank statement for February 15, amount to no more than Rs 59 crores. The paradox is that, while the money market is experiencing every anticipated tightness, member banks would appear to look upon borrowings against usance bills as a last resort and no more. It is necessary, particularly since the next few weeks will witness a greatly aggravated demand for funds, that we should get at the root of the problem and discover why it is that scheduled banks are thus reluctant about availing themselves fully of the facilities comprised in the Reserve Bank's bill market scheme.

One of the criteria used in judging a bank balance sheet is the ratio of advances to deposits. The acuteness of the money market position is sought to be emphatically discovered in the very high proportion which advances as a whole bear to deposits. In such a view, there are some banks which consider that, in the interests of the balance sheet position as such, they should not dare to permit advances to be more than 75 to 80 per cent of deposits. It is to be noted that advances here include inland and foreign bills purchased and discounted.

But this is a fancied predicament that does not affect the exchange banks. The exchange banks operating in India have in recent years had a level of advances that is as high as, if not higher than, the total of deposits. Of course, the exchange banks could do this safely, since what matters most in their case is the consolidated balance sheet of their working; and the imbalance in Indian operations would be corrected by a much lower volume of advances in the other countries in which they operated. If only for this reason, exchange banks have not shirked borrowings of large magnitude against usance bills from the Reserve Bank. Furthermore, the high bank rate in England since February last year discouraged them from adding to their resources by drawings on London. It was, therefore, a welcome expedient for them, as they were enabled in more inexpensive manner to augment their resources with which to meet the increased demand for accommodation.

For somewhat different reasons, the State Bank has also found it convenient to have considerable recourse to the Reserve Bank for borrowings against usance bills. Even when the advances-deposit ratio for all scheduled banks taken together was around 60 per cent, the State Bank used to keep its advances at just over 50 per cent of deposits. When, therefore, other banks started to feel the pinch, the State Bank could safely increase the size of its loans; but, because its giltedged holdings were also at a high level, it became necessary for the State Bank to finance the heightened tempo of its loans by borrowing from the Reserve Bank against usance bills.

The other Indian scheduled banks, however, do not possess the special circumstances attaching to the exchange banks or the State Bank. Instead, their starting point for 1956-57 busy season was on the footing that the total of their advances was already at a level orthodoxly considered to be the maximum that they, in their balance-sheets, could show. Already, the total of advances and investments exceeds the figure of deposits; that is to say, other resources have had to be found in order to meet the increased demand for funds—the deposits have not been of sufficient size. In the week-ended February 1, 1957, the ratio of advances to deposits of scheduled banks is placed at 73.48 per cent. If the apposite figures relating to the State Bank are excluded, the advances-deposit ratio is found even more startling at 77.79 per cent.

ALL SCHEDULED BANKS
(In crores of rupees)

	1-2-57	28-12-56	3-2-56	30-12-55	31-12-54
Deposits	1144.14	1113.69	1048.06	1032.88	942.07
Advances Including Inland and Foreign Bills	840.71	788.46	683.04	631.45	583.41
Ratio of Advances to Deposits per cent	73.48	70.80	65.17	61.13	61.92
Net Advances* Including Bills	781.83	731.26	664.17	612.59	580.51
Ratio of Net Advances to Deposits per cent	68.33	66.55	63.37	59.30	61.62
Investments in giltedged	361.27	364.75	380.45	385.05	348.04
Ratio of Investments to Deposits per cent	31.57	32.74	36.30	37.28	36.94

*Excludes usance bills against which borrowings have been made from the Reserve Bank.

The apparent conclusion, then, is that the high watermark of advances has already been reached, because the advances-deposit ratio has touched the academically "safe" peak.

Yet, the fact remains that, so far in the current busy season, the expansion in advances has amounted to Rs 94 crores. Against this, let us remember that the anticipated expansion in advances, during 1956-57 busy season, was Rs 150-200 crores. That is to say, in the next three months or so, banks will be called upon to meet demand for another Rs 56-106 crores. How is this demand to be met? For answer, it is necessary for us to see exactly how the expansion in advances during the recent past has been met. A table published on this page is, in this context, worth studying. In the period since the end of 1954, deposits rose by Rs 202.07 crores. In the same period, advances rose by Rs 257.30 crores. As a result the advances-deposit ratio rose from 61.92 per cent to 73.48 per cent. Over the same period, giltedged investments rose by Rs 13.23 crores. Allowing for some element of running down of cash balances, it is apparent that scheduled banks have had to take recourse to larger borrowings. For the purpose of this study, the borrowings from the Reserve Bank against usance bills are alone important. The borrowings under this head, of course, mean that bills for the requisite amount have been pledged as security to the Reserve Bank. If we deduct that element of bills which have been made over to the Reserve Bank, we would get a figure which we may define as net advances. We shall presently see why it is necessary to coin the term "net advances".

Two of the items figuring in a bank balance-sheet are "bills for collection" and "acceptances, endorsements and other obligations". Both these items are contra entries. In both, the asset of the bank is exactly equivalent to its liability. In the matter of bank's borrowings against usance bills, let us realise that these also are in the nature of a contra item, being matched on the asset side of the ledger by bills for corresponding amount. Our suggestion is that such a new entry should be created and made to form part of a bank balance-sheet. We may now explain the usefulness of thus devising the new entry.

As we have already seen, the hesitation to increase borrowings from the Reserve Bank against usance bills mainly stems from the desire to avoid an advances-deposits ratio in excess of 75-80 per cent. If banks could be enabled to draw up their balance-sheet in a manner that would include the new contra item, the ratio in question would be at a lower level. As a point in instance, we extract below the relevant figures from a bank balance-sheet: (In Rs Crores).

Liabilities

	1955	1956
Deposits	67.55	69.55
Borrowings against usance bills		7.35

Assets

	1955	1956
Advances	46.10	57.21
Investments	18.93	16.81

If we recast these figures, by introducing the contra relating to usance bills, the position would be: (In Rs Crores).

Liabilities

	1955	1956
Deposits	67.55	69.55
Liability on usance bills as per contra		7.35

Assets

	1955	1956
Net Advances	46.10	49.86
Customers' liability on usance bills as per contra ..		7.35
Investments	18.93	16.81

In the balance-sheet as published, the advances-deposits ratio has gone up sharply from 68.25 per cent to 82.26 per cent. With the change suggested, the ratio would show but a small rise from 68.25 per cent to 71.69 per cent. What, in particular, needs to be noted is that, to the extent that the bank's additional borrowings in future are against usance bills, to that extent will resources be released for further advances without the advances-deposits ratio showing any increase. The advances in the recast table are the "net advances" which we have earlier defined.

In the case of all scheduled banks, the advances-deposits ratio has gone up from 61.92 per cent at the end of 1954 to 73.48 per cent on February 1, 1957. If, again, allowance is made for the new contra entry, the net advances-deposits ratio is shown to have gone up only to 68.33 per cent from 61.62 per cent. As at present constituted, the position of scheduled banks would be as follows: (In Rs Crores).

Liabilities

	1954	1-2-57
Deposits	942.07	1144.14
Borrowings against usance bills	2.90	58.88

Assets

	1954	1-2-57
Advances	584.41	840.71
Investments	348.04	361.27

This table can be recast as follows by the introduction of the contra relating to usance bills: (In Rs Crores).

Liabilities

	1954	1-2-57
Deposits	942.07	1144.14
Liability on usance bills as per contra	2.90	58.88

Assets

	1954	1-2-57
Net Advances	580.51	781.83
Customers' Liability on usance bills as per contra	2.90	58.88
Investments	348.04	361.27

The difference between the old and the recast figures is this: in the former case, the advances-deposits ratio goes up from 61.92 per cent to 73.48 per cent; in the latter, from 61.62 per cent to 68.33 per cent. As the clinching argument in favour of the introduction of the new contra item, we first show what the position of scheduled banks may be at the peak of the current busy season: (In Rs Crores).

Liabilities

	? ? 57
Deposits	1200.00
Borrowings against usance bills ..	160.00

Assets

	? ? 57
Advances	950.00
Investments	350.00

The recast basis would be as under:

Liabilities

	? ? 57
Deposits	1200.00
Liability on usance bills as per contra	160.00

Assets

	? ? 57
Net Advances	800.00
Customers' Liability on usance bills as per contra	160.00
Investments	350.00

In the former case, the advances-deposits ratio would be placed at 79.17 per cent; in the latter, 66.67 per cent.

Strictly speaking, let us realise that the usance bills hypothecated to the Reserve Bank and the borrowings taken thereagainst are contra items, that is to say, of a self-liquidating character. If member banks are induced so to show that element of their usance bills against which they replenish their resources, we may be sure that optimum use will be made of the bill market scheme; and, secondly and more importantly, that the task of financing the current busy season will be rendered much less difficult than it is presently thought to be.

The Personality of India's Mixed Economy—X

IN the last two articles of this series, an attempt was made to show how a revision of the basic principles of our economic policy will be necessary, once the present programme of building up heavy industries and encouraging cottage industries is completed. For, this policy has involved, as a practical requirement of its successful execution, the complete eclipse of the private sector, while economic thinking in influential political circles and among the mass of the intelligentsia in the country has made an inviolate principle of what is in essence a practical expedient. It is, therefore, necessary to recognise that, when the time comes when a similar expediency will point in a different direction, Government and people must be prepared to give the whole question the necessary reconsideration. There has been no example in history of planning through the public sector for a higher standard of living. Though the communist countries have achieved industrial progress, they are not yet in a position to claim economic progress in the sense of assuring the common man sufficiency of the material requisites of life. In spite of the absence of historical precedent, it may be recognised that if Soviet Russia or any of its satellites in Eastern Europe had chosen to ignore military requirements for a time, they could have diverted their industrial potential to the production of consumer goods. The same thing cannot be said of India as it will be five or ten years hence. For, not only will it be lacking the large scale organisation of industries for consumer goods, but it will also have brought into being an expansion of cottage and small-scale industrial production. It is possible that its military requirements will also have increased considerably above the present level. In such conditions, the place of the private sector and of large-scale and small-scale private enterprise therein will have to be thought out afresh.

If this re-thinking is to be done on the right lines, ideas about the best ways of stimulating the production of consumer goods will have to be supplemented by clear concepts of welfare as it concerns the common man and from the standpoint of the nation as a whole. It is necessary to make special mention of the nation in this context as there is a great danger that, in India, without tradition of excessive individualism and indifference to national interests, the national aspect will be more or less completely ignored. One cannot lay sufficient stress on the simple fact that there can be no good life for the individual, unless there is a strong nation to keep guard over the ways of life valued by the people and that, equally, there can be no strong nation unless it comprises individuals who are happy and free from a sense of frustration. Ideas of the good life for the individual are inevitably conditioned by the environment provided by the strength or weakness of the national state. And, so far at least as India is concerned, it is sure to formulate radically new ideas of the good life, if it can be sure of a fair degree of freedom from aggression from abroad. But, so long as that freedom appears to be too much to ask, irrespective of whether it is militarily strong or weak, the scheme of good life, on which a welfare state will order the life of its citizens, will have to provide for the demands which defence will make on the individual citizens as well as on the nation. This aspect of the problem of welfare will be examined in a later article of this series.

It is important here to consider the problem from the standpoint of the individual. The average man in modern times is so used to thinking of his needs in terms of money incomes, and what is worse, in terms of the class conflict and class differences, that it has become well-nigh impossible to consider questions of welfare in absolute as distinct from comparative terms. Even were it possible to arrive at clear ideas of the necessary conditions and ingredients of individual welfare, the test would still remain of convincing the majority of voters on the point and persuading them to give the essential support necessary for making such welfare the goal of public policy. It must be recognised that, where happiness is concerned, direct experience is the only satisfying test. If the average voter or worker or employee does not agree with the concept of welfare as it is formulated by a statesman or a social scientist or a philosopher, there is no process of argument or reasoning by which he can be convinced on the point. The only way of securing his agreement is to immerse him in that kind of happiness, so that direct experience will open his eyes to its intrinsic excellence and its superiority over other concepts which he had entertained formerly.

Such a course of action is open only to a benevolent autocracy, and not to a representative democracy, where the popular Government have to keep in step with the ideas of the common people while, if they are so inclined, trying, though within limits, to do good to the people against their will. Political considerations cannot, therefore, be ignored. Class consciousness, obsessions with money incomes, the anxiety to keep up with one's neighbours and/or other persons with whom one normally compares one's self, these are all relevant to the problem when it is considered, not for its logical or philosophic soundness, but for its appropriateness as the basis of public policy. In a country like India, the difficulty is all the greater, because the poverty of the masses and the backwardness of the economic organisation as a whole have subsisted alongside the spectacle of large riches in the hands of a few individuals and the ostentatious waste in their ways of life.

The common man's economic consciousness is the result, not of his own strenuous attempt to improve his lot, but of the changes in the political set-up, the constant reiteration of extravagant promises by the Government about improvement in the standards of living and ceaseless incitement to demand more and

(Continued on page 333)

The New Resolution

The Resolution on Kashmir now before the UN Security Council, even if it were to be devoid of practical consequences, would further tarnish India's international prestige. None of the influential sponsors could, at any stage, think that India would accept the Resolution and cooperate in the task assigned to Mr Jarring. The Anglo-US pose of the area of agreement between India and Pakistan is too crude to deceive anybody. India's uncompromising opposition to the induction of a UN force in Kashmir was most emphatically made known to the United Nations and yet the Resolution calls upon Mr Jarring to examine with the assistance of India fruitful proposals in the light of the previous UN resolutions. Among these, specific mention is made of the proposal for the use of a temporary UN Force.

India could afford to do no more than bid good-bye to the esteemed gentleman who was also the Swedish Ambassador to India for three years, even before he decides to start. This embarrassment could have been spared, if the Security Council which seems to be aware of the dangers of a false step, had displayed sufficient delicacy in its understanding of the Indian position. That it is not done is regrettable.

Coming so quickly in the wake of the previous Resolution, the present one holds an inescapable lesson for India. Barring Columbia, all the powers interested in the previous Resolution, are found solidly arrayed behind this one too. Not all the facts and oratory of Mr Krishna Menon could break this phalanx or undermine its collective enthusiasm to throw Kashmir back into the political melting-pot. What is even more disquieting is the lukewarmness of the Russian delegate, who was content with suggesting a half-hearted amendment.

Outside the Security Council, the contagion of the religious approach to the Kashmir issue is spreading. The Masjumi Party in Indonesia has endorsed the demand for a plebiscite. Even Ceylon does not seem to like Indian indifference. A joint statement issued by the Prime Ministers of Ceylon and China requests India to come to a settlement with Pakistan through direct negotiations. The implication is that Kashmir is not the settled issue which India claims it to be. Some New York Papers have taken an unabashed and even untruthful line against India.

Editorial Notes

Brick Manufacture

The experts participating in the Symposium on brick manufacture, organised by the National Building Organisation, did not give the same degree of approval to modernisation of brick-making in India. West Bengal produces bricks in large quantities and of the highest quality. The near presence of coal, which is the costliest ingredient in the manufacture, would ordinarily have made brick produced in this State comparatively cheap; but it is not found to be the case. Bengal bricks have become "the best and costliest". Similar gaps between production cost and consumer price may exist in other States as well. These could be explained mainly with reference to swollen profits in trade.

Mechanisation will surely be the way to put more bricks into the market, and in course of time at a cheaper price. The very expansion of the building industry will necessitate mechanisation. There are also certain technical requirements, particularly for big structures, which the traditionally manufactured bricks do not adequately answer.

But none of these reasons would justify any hurried change in the direction of modern and improved technique. As pointed out by Sardar Swarup Singh, the brick industry as it has developed is highly decentralised and labour-intensive. While in the interest of standardisation and improvement the State can do a great deal, it would be unwise to upset the present structure of the industry as it has become a country-wide subsidiary occupation for the small peasant and worker. Brick-laying is a sphere in which organised assistance from the Government and cooperation can yield wonderful results, in terms of employment and housing.

A Boon Ahead

It is reported that the Government of India are considering the reclamation of about 80,000 square miles of contiguous land in Central India for the resettlement of displaced persons from East Pakistan. This area is to be carved out of three States, Andhra Pradesh Madhya Pradesh and Orissa. The task will be shared in its initial stages by the Ministries of Agriculture, Rehabilitation and Home Affairs and on the advice of the Ministries of Community Development, Works, Housing and Supply. The assurance of coordination between all these Ministers augurs well for the scheme.

One of the principal objections raised by new settlers from East Bengal in the interior of India is that congenial social environment is lacking; often, the area is not large enough to accommodate the amenities and institutions which will create a sense of distinctive existence and the perpetuation of traditions peculiar to the people of Bengal. A single compact area of this size will most effectively meet this objection.

Now that the West Bengal-Bihar territorial adjustment has been accomplished and is regarded as final on both sides, a strong ground for the political resistance to the settlement of displaced persons outside West Bengal has been removed. There is also reason to believe that the displaced persons themselves have come to imbibe a practical view of what is possible and not possible for them within the crowded State of West Bengal. From the side of the Government, all the impediments revealed by past experience could be foreseen and forestalled.

Two difficulties will yet have to be faced. One is the high terrain of the land which is generally within a range of 2,000 to 3,000 feet. The settlers will have to acclimatise themselves to this high level land. Another is the presence of a large number of Adivasis whose population also is expected to be raised in the process of resettlement. Good relations between the two social groups will have to be carefully nurtured. If successful, the scheme will compensate for all the waste and tentative spending of the last few years on those who had crossed the Bengal border.

*

A Living for Writers

The problems of the book trade were discussed in a recent Seminar at Madras. The participation of representatives from the US not only enriched the suggestions for future development but lent a sumptuous prop to the hopeful. The inspiration of foreign experience, particularly that of the English-speaking world, will, however, have to be strongly discounted when the entire market for the author is not more than one of the fourteen or fifteen language areas in India and when not more than 15 per cent of the population know the rudiments of reading and writing.

Even the most brilliant publication in an Indian Language, not excepting Hindi, may not secure a readerage comparable to a publication in English which is just readable. There is no use overlooking this bare fact. Perhaps this is the reason why authors seek English as the most profitable medium or, as one of the speakers pointed out, divert their energies into writing newspaper articles or publicity stuff. The more dogged type have to hang around the gates of the text-book committee members.

Neither the reorganisation of marketing nor a little more generosity on the part of the publishers can rehabilitate authors to the extent desirable. As is now being done to the artists, the State can offer material rewards. But if the State is to get too deep into the picture, the disgusting struggle for patronage may well starve out much genuine talent, to the glory of the superficial gate-crashers.

All told, the problems of contemporary authorship take a sad complexion. The true writer can secure a decent living only from a prosperous and unprejudiced public. Just now, open judgment is frequently corrupted. And the general standard of living is too low to make worthwhile books in most of the languages sought as a private possession even by the most cultured as a matter of course. In another decade or two, the prospect can become brighter.

Higher Interest Rates— Also higher Giltedged Prices

CENTRAL Bank credit now costs a full 4 per cent so far as scheduled banks are concerned. Co-operatives continue to pay no more than hitherto. Cost of Central Bank credit extended to Government in respect of ad hoc Treasury Bills remains also unchanged. The significance and effectiveness of selective monetary control are made clear by the fortnight's developments in the readjusted structure of money rates and in the rising pattern of giltedged prices. In broad terms, all money rates have been stepped up by half per cent in line with the increase of ½ per cent in the interest charged by the Reserve Bank on advances given to member banks against Government and other eligible securities. Rates paid by banks, on deposits of varying kind, are higher by ½ per cent; and rates charged by banks to their clients are correspondingly higher. There is no reason to think that the customers of banks are seriously complaining about the higher rate or that industry and commerce are in any way finding it an unbearable burden. Short term rates are settling down to the new conditions; and there has been a remarkable degree of smoothness in effecting the readjustments. Business circles in India have still the comfort that they are, in respect of the cost of their borrowings, much better off than their compeers in countries like the UK and West Germany.

It must also be gratefully noted that, while there is, as there must be, a very strong demand for credits, official policy in this country has never made a fetish of credit squeeze. Far from it. Soon after Mr T. T. Krishnamachari took over the Finance portfolio, he sensed that the 1956-57 busy season might impose a considerable strain on the resources of the banking system; and, after consultations and discussions, issued peremptory instructions that the bill market scheme be so liberalised as to provide the additional Rs 150 crores or so that might be needed. The Reserve Bank has responded with promptitude and understanding. There can no longer be any grievance in any quarter of vexatious delay or needless objection in the disposal of applications for credit lines against usance bills. Ideas of limits have become expansive; and proper significance is given to the bank whose signature is affixed to the bill. Credit lines for nearly Rs 150 crores have been sanctioned. At the time of writing, something like Rs 70 crores have been provided against usance bills. There is, thus, an unutilised margin of Rs 80 crores.

It may be added that the Reserve Bank is prepared to consider applications for further credit lines.

At this point, we may refer to the points made in the Leading Article on the new hesitation on the part of scheduled banks with respect to the facilities provided under the bill market scheme. The hesitation arises from misgivings about the distorted "look" of advances-deposits ratio. While, on the one hand, the loans given by banks on usance bills figure on the assets side, the Central Bank credit availed of by the banks figure on the liabilities side. The suggestion, now made for Authority's urgent consideration and implementation, is that the loans given by banks on usance bills be separated from the other loans and advances and shown distinctly as a new item contra to the loans taken from the Reserve Bank on usance bills and also shown distinctly as a new item. These two have an essentially self-liquidating character and stand in the same footing as other items which appear simultaneously on both sides of the balance-sheet.

Once the hesitation of the banks in this regard is overcome, bank credits available for meeting the mounting seasonal demand should prove adequate.

+

Steep Rise in Advances

Busy season demand, aggravated by month early disbursements, has occasioned a steep increase in the Advances of Scheduled Banks as revealed in their return for February 8. Moreover, for the first time in four weeks, the Deposits of member banks have recorded a decline, and that, too, of sizeable dimensions.

Advances have risen sharply from Rs 669.14 crores to Rs 688.39 crores; this has been partly offset by a fall of Rs 4.02 crores to Rs 114.42 crores in Inland bills; and Foreign bills show negligible change at Rs 53.44 crores against Rs 53.13 crores. In the result, the total of advances has jumped up by Rs 15.54 crores to Rs 856.25 crores.

Secondly, the Deposits of Scheduled Banks were depleted by over Rs 4 crores. Demand Liabilities fell by Rs 3.51 crores to Rs 676.24 crores, while Time Liabilities were placed Rs 0.58 crores lower at Rs 463.82 crores.

It therefore became necessary for member banks substantially to borrow from the Reserve Bank. The indebtedness to the central banking institution increased by nearly Rs 16 crores to Rs 96.39 crores from Rs 80.51 crores. More than half of the increase in borrowings was against usance bills, the figure outstanding under this head having gone up from Rs 58.88 crores to Rs 67.63 crores.

After recourse to the Reserve Bank in such manner, cash balances were generally unchanged, although balances with the Reserve Bank fell by Rs 2.85 crores to Rs 48.78 crores.

The returns of the Reserve Bank for February 15, pertaining as they do to the middle of a month, are largely featureless. Active Note, fell by Rs 4.03 crores to Rs 1515.62 crores; Rupee Coin returned from circulation for Rs 0.25 crores; and, as a result, cash in the till improved by Rs 4.27 crores to Rs 11.28 crores. There are no other changes in the Issue Department figures.

The statement relating to the Banking Department offers up three interesting points. In the first place, Investments are marked higher by Rs 7.30 crores at Rs 44.02 crores. In this regard, it may be mentioned that the Reserve Bank has in recent weeks figured as buyer of securities in its open market operations. But it is open to question whether, within the span of a single week, such purchases could have been for an amount as large as Rs 7 crores. One possible hypothesis is that the increase under Investments is derived partly from open market purchases, and partly as a result of deficit financing. That is to say, after ad hocs had been sold in favour of the Reserve Bank—say, for Rs 5 crores—marketable securities could have been transferred from the Issue Department to the Banking Department. At the same time, however, it is possible that member banks should have sold giltedged for large amount during the week; and, in this case, confirmation should be available when the return of Scheduled Banks for February 15 is published.

In the second place, member banks have improved their position vis-a-vis the Reserve Bank. Other Loans and Advances are lower by nearly Rs 4 crores at Rs 120.33 crores against Rs 124.22 crores. Banks' Deposits are higher by Rs 0.89 crores at Rs 51.59 crores; and the outstandings against usance bills have declined considerably by Rs 8.44 crores to Rs 59.18 crores. A combination of an increase in Deposits and decline in Advances has perhaps enabled this reduction in the indebtedness to the Reserve Bank.

In the third place, loss of foreign exchange holdings continues to be heavy. Roughly one-third of the foreign exchange obtained from the International Monetary Fund has been lost within the past week. Balances Held Abroad are nearly Rs 9 crores lower at Rs 113.43 crores against Rs 122.16 crores.

As for the State Bank's return for February 15, Deposits have again gone up by a sizeable amount to another new high: the increase is one of Rs 4.51 crores to Rs 265.01 crores. This improvement in resources has not, however, been utilised in reducing borrowings. Instead, a part has gone toward an expansion in Advances from Rs 172.46 crores to Rs 173.51 crores;

THE COMMISSIONERS FOR THE PORT OF CALCUTTA

NOTICE

Repayment on the 1st September 1957 of 5% Calcutta Port Trust Debenture Loan 1927-57-87 issued on the 1st September 1927

The Commissioners for the Port of Calcutta, in pursuance of the right reserved by them at the time of issue to repay the 5% Calcutta Port Trust Debenture Loan 1927-57-87 for Rs. 1,50,00,000 issued on the 1st September 1927 at any time after the expiration of thirty years from the date of issue, on six months previous notice, hereby give notice of their intention to repay the said loan on the 1st September 1957.

The holders of debentures of this loan should tender their debentures at the Local Authorities Loan Section, State Bank of India, Calcutta, at least three weeks before the due date of repayment with the following endorsement on the back of each debenture:—

"Received payment in full of all demand for Principal and interest thereon"

(Signature of holder)

Interest on the Loan will cease from the 1st September 1957.

Calcutta Port Commissioners' Office,
15, Strand Road, Calcutta.
The 11th February 1957.

P. C. Mitter,
Secretary,
Calcutta Port Commissioners.

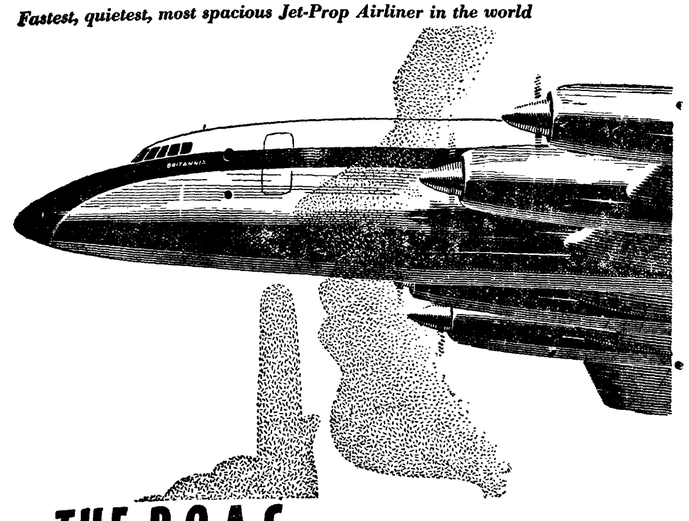
Britain's Adverse Trade Balance

By PAUL EINZIG

BRITAIN'S adverse trade balance during January came as a shock to British public opinion which, on the basis of the favourable trade figures of previous months, was inclined to assume that on the present occasion British exports remained unaffected by the sterling scare. Yet it stands to reason that a wave of distrust in a currency tends to induce foreign importers to defer or cancel orders from the country concerned. They do so in the hope of being able to buy its goods at a lower price after the devaluation of its currency, or for fear that rival importers who defer their purchases until after the anticipated devaluation would then be able to undersell those of their competitors who had bought their goods before devaluation. Amazingly enough, this aspect of the sterling scale has not been realised to any noteworthy extent in Britain.

Official pronouncements and Press comments stress the withdrawal of foreign sterling balances, the deferment of foreign payments due in sterling, the increase of non-sterling imports by some Sterling Area countries in anticipation of a devaluation, and even speculative short selling of sterling. They ignore that the cancellation or deferment of foreign orders for British and Sterling Area goods is much more important than any of the above influences.

The British export figures for November and December showed no sign of being thus influenced by the sterling scare caused by the Suez crisis. It appeared to some of those few people who had been aware of this factor that, after all, the factor need not necessarily operate. In reality it did operate, only it took some two months before its effect became evident in the figures of the trade returns of the United Kingdom. This time lag is perfectly normal. Two months or more are liable to elapse between the placing of orders and the actual shipment of the goods. The favourable export figures in November and December were reflecting the execution of orders placed in September and October, prior to the acute sterling scare. During the late summer and early autumn British exports began at last to benefit by the relentless disinflationary measures adopted by the Government in 1955 and 1956. Had it not been for the Suez crisis, the balance of payments would in all probability have continued to be favourable in January.



Unfortunately, there is reason to believe that the sterling scare of November-December did lead to cancellations or deferments of orders for British and Sterling Area goods by countries outside the Sterling Area. This explanation of the unfavourable trade figures for January is much more convincing than the officially-inspired explanation attributing the increase in the adverse balance to the transport difficulties resulting from the Suez stoppage. That stoppage affected imports as well as exports, and there is no particular reason why it should have caused a widening of the gap between them. It is true, the price of oil imports increased, and so did freight charges on imported goods. On the other hand, since the Suez situation caused a much more acute shortage in oil tankers than in shipping tonnage in general, it must have affected the quantity of imports to a larger degree than the quantity of exports.

Sterling remained unaffected by the adverse trade balance, because of the reinforcement of its defences with the aid of the dollar facilities arranged in December. The return of confidence in sterling resulting

The Rayon Industry

The news, published last week, that Mr D. N. Shroff, Chairman of the Silk and Art Silk Mills Association, has concluded an agreement with the Japanese art silk industry for the purchase of more than 3 million lbs. of rayon yarn from Japan at prices 10 per cent lower than the ruling prices in Europe, which is India's main source of supply, helps to draw attention to the rapid progress and the buoyant outlook which characterise this branch of the textile industry. Indeed, the rayon industry is one of those industries to which the private sector can and does point with pride and satisfaction.

It is hardly seven years since the first lb. of rayon was spun or woven in this country. The Travancore Rayons Ltd., the first mill to be started in India, went into production in 1950. Other mills, some with the Acetate plant but mostly with the Viscose plant, were set up in quick succession and the increase in production was spectacular and unbroken. The current installed capacities of the mills is 27½ million lbs. in terms of 150 deniers (which is the unit of weight for 9000 metres of rayon yarn expressed in grammes), while the actual production in 1955 was 22½ million lbs. of all deniers from 100 to 450. In the same year, i.e. 1955, world production of rayon reached the astounding figure of 5016.7 million lbs. a fact which highlights the importance which this man-made fibre has come to assume in the production of textile goods in the modern world. It is estimated that by the end of 1957 the world production figure will go up by another 1860 million lbs.

In comparison with these figures India's Second Plan objective of 668 million lbs. by 1961 may appear modest but actually it is not so, and will not appear to be so, when it is remembered, firstly, that amongst the 34 countries in the world (besides the Iron Curtain countries) interested in the manufacture of art silk, India, starting from scratch, has, within the short space of 7 years, already outstripped 14 countries, and, secondly, that India has to depend on imports of all the 3 basic raw materials necessary for the production of rayon by the commoner viscose process.

The handicap of nearly complete dependence on foreign countries for the raw materials is easily imaginable and it is this major sobering fact which should prevent one from drawing an over optimistic picture of the future of the industry, bright though the outlook otherwise is. The fact has to be accepted that neither in the current, nor, perhaps, in the next Five Year Plan will India start producing the rayon grade caustic soda and sulphur in sufficient quantities. As for the third and most important raw material, wood pulp of the requisite softness and texture, it will be many years before a Pulp Plant can start working for converting suitable Indian varieties of wood into rayon grade pulp. Thus, even if the development of the heavy chemicals industry becomes rapid beyond expectation in the 3rd or the 4th Plan, so far as the near future is concerned, the basic fact in the rayon industry will continue to be its dependence on imports for raw materials.

Plans for the near future should as of necessity, therefore, be concerned with the installation of plants for turning out yarn rather than for production of the raw materials. Since machinery for rayon plants is not manufactured in India, its installation will also involve import and, consequently, expenditure of foreign exchange. It is estimated that to instal plants with a capacity to produce 50.7 million lbs. of yarn—the amount imported in 1955-56 at a cost of Rs 13.3 crores—it will be necessary to spend about Rs 20 crores worth of foreign exchange. But, if once that is done, the expenditure (of foreign exchange) for production of the same quantity of yarn will come down to Rs 3.75 crores, representing the cost of imported raw materials and spare parts of machineries. In such an event it will, therefore, mean an annual saving in foreign exchange of Rs 10 croes, not a negligible sum.

The grant of the ad hoc import licence of the value of Rs 75 lakhs which has made the agreement with Japan entered into by Mr Shroff possible, shows that the Government's import policy as regards the rayon industry does not envisage radical changes except, of course, to the extent dictated by the changes in the general import policy.

In circumstances such as these, the rayon industry will have to adjust its plans to the exigencies of its continuing dependence on imported materials. Viewed against this background the agreement with Japan, providing as it does for purchase at advantageous competitive prices, will be generally welcomed.

World *of* Jute

Sharp Decline in Sacking Prices

PRICES have again declined all along the line in the jute markets during the past week. Hessian 40"×10 oz Ready which was quoting at Rs 41-8 a week ago closed on Tuesday afternoon at the low level of Rs 40-11 while B. Twills Ready during the same period recorded a fall of Rs 2-6. Assam Bottoms was also easier by 8 annas at Rs 27-8 per maund.

While the reactionary tendency has been brought about partly by the continued absence of foreign enquiry, it would appear that a sizeable portion of the decline in prices has stemmed from the speculative activity of a kind which has absolutely no reference to the actual trading conditions in the jute markets.

It is, however, to be admitted that a decline in prices has become inevitable under prevailing circumstances. In the first place, raw jute prices which have been largely responsible for keeping goods prices at a high level have taken a downward trend during the past two, three weeks. Indications are that the decline is not yet over. The trend of arrivals of raw jute into Calcutta and mill stations lends support to the expectation that mills will have no difficulty whatsoever in obtaining a steady supply of the raw material.

During January 1957, arrivals of jute totalled 7.32 lakh bales made up of 6.82 bales of Indian origin and 50,000 bales of Pakistani. This compares with 7.52 lakh bales received during December 1956 and 7.29 lakh bales in the corresponding month of the previous year. So far in the current jute year (July-January 1957) a total of 40.49 lakh bales has been received while the comparative figure for the previous season is 39.01 lakh bales. Though as compared with December 1956 arrivals of raw jute of Indian origin is lower by about 6,000 bales they are higher by about 1.54 lakh bales as compared with January 1956. It will be seen, therefore, that there is still a considerable quantity of raw jute in the growing areas waiting to be moved to consuming centres. In the first seven months of the current jute year, arrivals of raw jute of Indian origin are higher by 6.99 lakh bales at 36.26 lakh bales as compared to those during the corresponding period of the previous season. As the total of the raw jute and mesta crop for the season 1956-57 is placed by official forecasts at 56.15 bales, there should be left a minimum of 19.89 lakh bales which if spread out over the remaining five months will give a monthly average of nearly 4 lakh bales. Considering the fact that during February-June 1956, a total of 19.62 lakh bales of raw jute of Indian origin had reached Calcutta and Mill stations, the prospects of raw jute supply during the next five months seem to be quite bright.

It is no wonder, therefore, that raw jute prices have come back to more realistic levels. This is a development which is to be welcomed by Mills. They may also derive some encouragement from the trend of burlap consumption in US.

During January 1957, burlap consumption in US has been placed at 75 million yards. As compared with previous month, it is higher by 3 million yards. It is also higher by the same quantity as compared with the corresponding month of the previous year. Stocks are lower by 1 million yards at 266 million yards. Though they are higher by as much as 23 million yards as compared with January 1956, it is significant to note that there has been no increase. The fact that during July-January 1957 burlap consumption has totalled 538 million yards as against 489 million yards during the comparable period of last year shows that burlap is steadily gaining ground in US.

*

The jute goods market opened the week on a steady note but soon developed a reactionary tendency under selling pressure from a prominent bear operator. In the absence of overseas enquiry prices closed quiet at the end of the day, with hessian 40"×10 oz Ready at Rs 41-8 and B Twills ready at Rs 111-12. Prices continued to show a declining trend the next day also as bears appeared to have gained ground over bulls in the tussle on the eve of the due date. Hessian 40"×10 oz Ready was done at Rs 41 and B Twills Ready at Rs 111-10. With the bulls unable to take Delivery Orders on due date, value decline sharply in the sacking section with B Twills Ready marked down to Rs 109-8. Hessian 40"×10 oz Ready was, however, unchanged at Rs 41. Conditions continued to be uninteresting on Monday as foreign enquiry continued to be conspicuous by its absence. A slight improvement in sentiment, however, was noticeable as there were reports of some covering business in heavy goods. While Hessian 40"×10 oz was unchanged at Rs 41 B Twills Ready gained one rupee to be marked at Rs 110-8. The market again slumbed on liquidation by bulls. Hessian 40"×10 oz Ready lost five annas to Rs 40-11 while B Twills declined to Rs 109-6.

The figures of Despatch of gunnies during January 1957 made available on Wednesday reveal that exports have declined sharply to 64100 tons from 73800 tons in the previous month. Export of hessians at 31900 tons are nearly 9000 tons lower while that of Sacking at 28600 tons is less than 3000 tons lower. Internal consumption at 14700 tons compares with 16700 tons recorded in December 1956. Total despatches (export and internal consumption) at 78800 tons are against 90500 tons in the previous month and 72900 tons in the corresponding month of the previous year.

The following table shows price trends during the week:

	Week's opening	Week's closing
Hessian:	Rs. a.	Rs. a.
40"×10 oz. Ready	41 8	40 11
Sackings:		
B. Twills Ready ..	111 12	109 6
Hy. Cees Green ...	114 8	112 5
Cornsacks ...	114 10	111 5
Cubans ...	136 0	133 8
A. Twills ..	137 0	134 0
L. Twills ...	130 8	127 8
D. W. Flour ...	137 0	134 8
Sugar Bags ...	129 0	125 0

World *of* Tea

Sharp Fall in Exports

ACCORDING to figures released this week, exports of Northern India teas are substantially lower at 33.01 million pounds last month as against as much as 39.75 million pounds in the corresponding month of the previous year. This decline in exports is shared by all countries. The only two exceptions were USSR and Egypt, the former importing 1.9 million pounds and the latter 2.42 million pounds as against nil and 1.32 million pounds respectively in January last year. Exports to the UK at 25.32 million pounds show a decline of less than a million pounds, but those to the USA have declined to 983,973 pounds from 3.4 millions in January last year. The general decline in exports is mainly attributed to poor demand from overseas countries, who are reported to be well-stocked with tea purchased during the past year.

Returns published in London by the International Tea Committee, show that, compared to 1955, Britain imported more tea from India, Ceylon and Africa last year and less from Pakistan, China and Japan. Despite the fact that 1956 produced many handicaps, Britain imported as much as 512.63 million pounds as compared to 491.30 million pounds in 1955.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 64,275 packages. There was a fair general demand which weakened as the sale progressed. Tippy teas and a few bright liquoring invoices were well supported and were sometimes dearer, while well-made and stylish Whole Leaf grades were a strong feature.

Commons, Mediums and CTC sorts were all one to one and a half annas per pound easier at the commencement of the sale; but eased further as the sale progressed and, at the close, were fully As 2 and sometimes As 2½ per pound easier. The poorer Leaf grades also shared in the general decline. There was less demand for Darjeeling teas. Following rates were quoted:—Clean Black Pekoe Rs 2-2-0; Plain BP Rs 1-13-0 to Rs 1-13-6; Medium Assam BP Rs 1-14-0 and Best CTC Assam BP Rs 2-6-0 (nominal).

In the Internal Sale, offerings were 18,001 chests of Dusts for which there was only a fair demand at the beginning of the sale; but this improved as the sale progressed. Although prices were easier early in the sale, they showed some recovery toward the close. The few bright liquoring CTC Assams with a clean leaf appearance were sold well; but the more ordinary descriptions showed a further decline.

Leafy orthodox Assams opened one anna to one and a half annas per pound below last rates; but the powdery kinds were more popular and, at the close, were selling about valuations and were occasionally dearer. Commons and orthodox Dooars were a little irregular; but the clean black leaf types were generally firm to dearer. Following rates were quoted:—Medium Dooars Dust Rs 1-13-0; Medium Assams Grainy Dust Rs 1-13-6; Medium Assams CTC Dust Rs 2-2-0 and Best CTC Assam Dust Rs 2-10-0 (nominal).

Also, 2,578 packages of other grades were offered for internal consumption. There was a fair demand, but prices showed a decline of about As 2 per pound.

In the Export Quota section, the rate, after opening at 45 pies per pound, developed a hardening tendency toward the close to 48 pies. Business was reported done between these levels.

A little over 550,000 pounds of Dusts were offered in the Cochin market. The sale opened to a good general demand for all types. Commons and the better liquoring Dusts remained steady. Buyers, however, followed quality closely in their dealings in high-grown dusts. All other types showed a slightly easier tendency and prices were irregularly one anna per pound lower.

In the Colombo market, offerings consisted of 6,333,788 pounds for which there was a good general demand. Among high-grown teas, there was active demand for all Brokens with improved quality at a considerably higher rate, which strengthened as the sale progressed. There was, however, less demand for medium-grown teas. Although low-grown teas met with good demand, all Broken grades were sold at 5 cents per pound lower. There was strong demand for Fannings grades, Tippy sorts being considerably dearer.

In London auction held this week, offerings were 24,499 packages out of 44,086 packages catalogued for sale. There was a general demand and prices for well-made Plain Liquoring descriptions were firm to dearer. Other kinds were rather irregular and sometimes slightly easier. Plain Fannings were quoted at 4sh 4d per pound.

Tea stocks in London, as on the 8th February, were 73.58 million pounds as against 65.46 million pounds in the previous week and 96.04 million pounds a year ago. Landed between 2nd and 8th February 1957 were 18.58 million pounds, while deliveries during the same period were 10.46 million pounds.

World Overseas

US Notes

Much has been said and written about the benefits of private investment around the world. More often than not the stress has been on the flow of American funds to other lands, notably those in need of outside capital to speed their economic development. But there is another side to this picture. The fact is that private foreign investment in the United States also has been booming.

Foreign holdings in the United States now come to about $30,000 million quite a jump from the $13,000 million before World War II. Even allowing for changes in the value of the dollar, this represents a substantial rise in the volume of foreign investments. The fact that foreign investments today represent a smaller share, proportionately, of American industrial property does not detract from this achievement. It must be remembered that American industry itself has undergone a phenomenal expansion in the past decade. European assets represent more than half of the total foreign investment in the United States. This can be taken as a tribute to Western Europe's remarkable economic recovery since World War II recovery to which in turn private as well as governmental American investment contributed.

The flow of private capital to the United States is nothing new, of course. Americans are well aware of the contributions made by outside capital, mostly European, to American industrial development over the past 150 years. In the early years of the United States, investments went chiefly into such industries as mining, transportation, and the manufacture of basic industrial goods—all fundamental to balanced economic development in more recent years. These investments have been taking in a much wider industrial scope.

British capital, for instance, is well established today in such American industries as rubber, oil, food products, tobacco goods, toileries, phonograph records, newsprint and building materials.

Dutch industrial interests in the United States now include oil, chemicals electronic equipment, food and beverages.

West Germany's interests are concentrated largely in the chemical and pharmaceutical industries.

French investors are active in the electronics, garment, fashion and food industries.

Every economic expert, virtually without exception, will agree that foreign capital, initiative and know-how have had many beneficial effects on US industrial progress. These effects were, of course, obvious in earlier years. But they are evident also today in a variety of ways. Examples are found in several modern consumer goods industries.

European influences had led, for instances, to far-reaching innovation and improvements, in the products and manufacturing methods of the apparel, candy, furniture and household goods industries in the United States. Other important benefits flow from the freedom according to foreign investors in the disposition of their earnings. Since Americans traditionally have welcomed private capital from abroad, dollars earned in the United States can be reinvested in American industry or returned to the investing country. In the process, US industrial growth may be furthered, the value of the investments enhanced, trade balances improved, and more purchases of needed American goods made possible.

*

Britain

THE United Kingdom economy in general was now a good deal stronger than it would have been without the financial measures taken in the past two years, said Mr Cameron Cobbold, Governor of the Bank of England, in a speech read on his behalf to the Coventry Chamber of Commerce.

"We are now entering a new phase," Mr Cobbold said. "We have survived some critical months in the exchanges, and sterling has regained its strength in the markets. But this has been done largely by negotiating big credits; and to the extent that we draw on those credits, repayment will add to our future burdens".

In appealing for a bigger safety margin in domestic finances and balance of payments, Mr Cobbold said: "The standards of living, production and employment we all hope for are within our grasp. But they will not be handed to us on a plate. We have several years' hard plodding in front of us. And it is not safe to risk another crisis."

The Bank Rate of 5½ per cent, which he believed helped materially in weathering last year's storm, was a crisis rate, and it was obviously desirable to make some adjustment as soon as conditions allowed. Last week's alteration of the Bank Rate to 5 per cent should thus be seen as an adjustment to market conditions, with no implication of a change of policy. Nor should it be seen as a decision to abandon the use of interest rates in favour of other ingredients of monetary control.

* * *

OVERSEA TERRITORIES' INCREASED INTEREST IN HOUSING PLANS

In reviewing more than three centuries of British housing and building policies in oversea territories, Mr G. A. Atkinson, colonial liaison officer at the Building Research Station of the Directorate of Scientific and Industrial Re-

search, said that one of the fields in which British help would be most needed in the immediate future was that of professional and technical training.

He added that as territories such as Malaya and the Gold Coast became independent members of the Commonwealth they would, naturally, be increasingly building for themselves. But it was in such specialist fields as town planning, low-cost housing, school and hospital building, building research, professional and technical training, development of local building-materials industries, large civil engineering works and, without doubt, the building of atomic energy stations, that the British contribution was most likely to be needed.

Mr Atkinson pointed out that the pattern of housing development was much the same in all British oversea territories. It was one which depended, above all, on an efficient building industry. Builders from Britain had helped to promote this efficiency in almost every oversea territory, and a number of large contractors had set up subsidiary organizations in these territories. Their work had done much to raise local technical standards. In some instances, materials and equipment had been supplied from Britain; in many others, British firms had helped to establish local industries.

Mr Atkinson also said that the increasing demand for higher education had exerted the greatest

(Continued on page 323)

WHAT HAS HE TO DO WITH CEMENT?

Cement builds his home. It is in the pavement on which he walks, the school in which he learns the arts of man, the hospital which he may need, the swimming pool, sports track and gymnasium that build his team spirit and his muscle. It is in the dams, power houses, factories, grain silos . . .

CEMENT — more and yet more cement — is the need of his future. The Associated Cement Companies Limited, which has doubled its output between 1948 and 1955, will double its production again during the next five years. The success of the Second Five-Year Plan and the future of India's youth both depend upon Free Enterprise.

The ACC is helping to build his India of tomorrow.

ALL the world over, the coal miner is given an extra and additional inducement because, admittedly, the conditions of work—hundreds and sometimes thousands of feet under the ground—are, to use a euphemism, uncomfortable. In most countries, the State itself assumes the responsibility for the welfare of those engaged in the mining of coal; the laws relating to the safety measures that must be taken are, quite correctly, rigorous. For, coal mining is not only uncomfortable—it is dangerous as well unless the most careful safeguards are provided. The experience of most countries has been that, with inducements thus offered, coal production has risen to the extent planned for. But, the increase in production, and especially since the end of the Second World War, has not been accomplished without additional cost. Some part of the higher cost has, however, been offset by an improvement in productivity on the part of labour. In the result, it has happened that the consumer has been called upon to pay a trifle more for this basic fuel. Such is what I may term the world coal position. Now, we may turn to coal in terms of India and the Second Plan.

*

Strange to relate, in a country so full of unemployment and under-employment, the securing of labour for the Indian collieries has not been easy. Indeed, in the not distant past, the main source of labour for the coal mines was the rural and the agricultural districts. It is in these regions that we could find the greatest amount of what we may term under-employed labour. To men and women such as these, the employment available at the coal mines was a welcome source of additional income. Unfortunately, just as their farming chores were part time, even so they considered employment at the coal mines to be seasonal. When the harvest approached, or when it was time for sowing of crops, hell or high water could not prevent the return of the peasants to their farms. So, it has been a chronic problem with the colliery industry that it should seasonally be plagued by absenteeism. One could almost see the trend of a physical season in the figures relating to the raisings of coal. As the years passed, and especially after India gained independence, Government showed themselves to be particularly solicitous of the welfare of the workers in the coal mines. But, did it do any good?

*

I trust the reader will pardon me if I dwell on what seems to be unnecessary detail. One of the requirements, contained in the spate of post-independence labour legislation, was that pithead baths should be provided for the workers. From the point of view of hygiene and personal health, such a requirement was essential and is praiseworthy. But, I repeat, did it do any good? As far as I know, the pithead baths are all in good condition—the only complaint they would make, if they had a voice to express their grouse, would be that they were scarcely used. For, the fact is that the coal mining labour has scrupulously avoided the new facility that was thus provided. Instead, as they had done for so many years, the workers continued and preferred to wash the grit off their bodies in running water—in the streams and rivers that India abounds with. I would not go so far as to characterise the expenditure on pithead baths as useless or futile. But I certainly feel that it is a waste of money to provide facilities unless these are accompanied by the education of those intended to be benefitted as to the purposes of their being created. Moreover, I also think that the expenditure in this regard could have been deferred for some time—deferred, that is to say, until the general improvement in the standard of living of the masses in this country automatically educated the workers to such effect as to enable them to draw the full benefit accruing from pithead baths.

*

Or take the matter of creches. Here, there is not as clear cut a disuse of the facilities which by statute had to be provided. But, here, too, the labour women did not fully or immediately realise the usefulness of creches. This, too, meant money; but, on the whole, I should think it was necessary expenditure. My only plaint is that more effective propaganda could have been conducted with a view to the optimum usage of creches.

*

And then there was the matter of solution for the seasonal absenteeism. A suggestion that emanated from the industry was that an attendance bonus should be paid to colliery labour. The line of reasoning was that the inducement offered by a bonus for regular attendance would, in some measure, rectify the periodic absenteeism. This was an instance where Government action could have done a lot of good. But, did it do any good? Not quite, because the law as it emerged from Government was that a bonus should be payable by the colliery—but that it would be on a quarterly basis. This at once defeated the very purpose of the attendance bonus. For, what happened was that the periodic French leave was taken as before—but labour was better off to the extent of bonus for two quarters of regular attendance.

*

I could go on in this strain, but I do not think I need to. The effective result of labour legislation and Government stipulation of selling prices on coal has been that coal has the unenviable reputation of being India's most controlled industry. No colliery manager can these days afford to do anything without a prior consultation of the statute books. Let me not be thought to be against the provision of such facilities for colliery labour. On the other hand, I think such labour legislation as we have had has in the main been of an essential character. Secondly, the idea of inducement or incentive for the colliery worker is a world-wide phenomenon against which India cannot remain insulated. The controls are essential from the point of view of accident prevention and safety in the pits. But there is one outstanding difference between the working of the colliery industry in this country and elsewhere; and it is in this regard that the Indian colliery industry suffers under a grievous handicap.

*

From time to time in the recent past, as I have said, various measures have been prescribed for the colliery industry. Each one of them has had the inevitable effect of increasing the costs of production. Such a phenomenon, a trend of rising costs, is by no means peculiar to India. But, elsewhere, the industry's burden was to some extent mitigated by improvement in productivity—but this has not been the happy lot of the Indian industry. Again, although I am not in a position to give the detailed figures, the natural economic laws have been allowed to operate in the rest of the free world such that the consumer rightly was called upon to pay a trifle more. In India, however, we have had a more or less rigid price structure for coal sales, the while that the operating costs were, by statute, rising by leaps and bounds.

*

Matters came to a head last year, when a Tribunal Award was announced; and, as a result of this award, the wages of coal labour were to rise substantially. According to its terms, the award could be appealed against, by labour or by the industry, within a month. It was no secret that it would be beyond the ability of the industry to afford the higher wages on the basis of the then current selling prices of coal. Nevertheless, after a good deal of confabulation, management decided to leave it to the good sense of the Government to revise the selling prices suitably, and forbore from appealing. The industry desisted from appealing, because it did not wish to disturb labour conditions: for, an appeal would immediately have meant labour unrest, perhaps even a strike. After the time stipulated for appeal had run out, Government, in recognition of basic facts, approved an increase of Rs 3 per ton for Bengal and Bihar coal. But well was not left alone; and, within the stipulated time, some elements in the industry—both labour and management—did prefer an appeal.

*

The Appellate Tribunal late last month gave the findings of its investigation. Mainly, the Tribunal

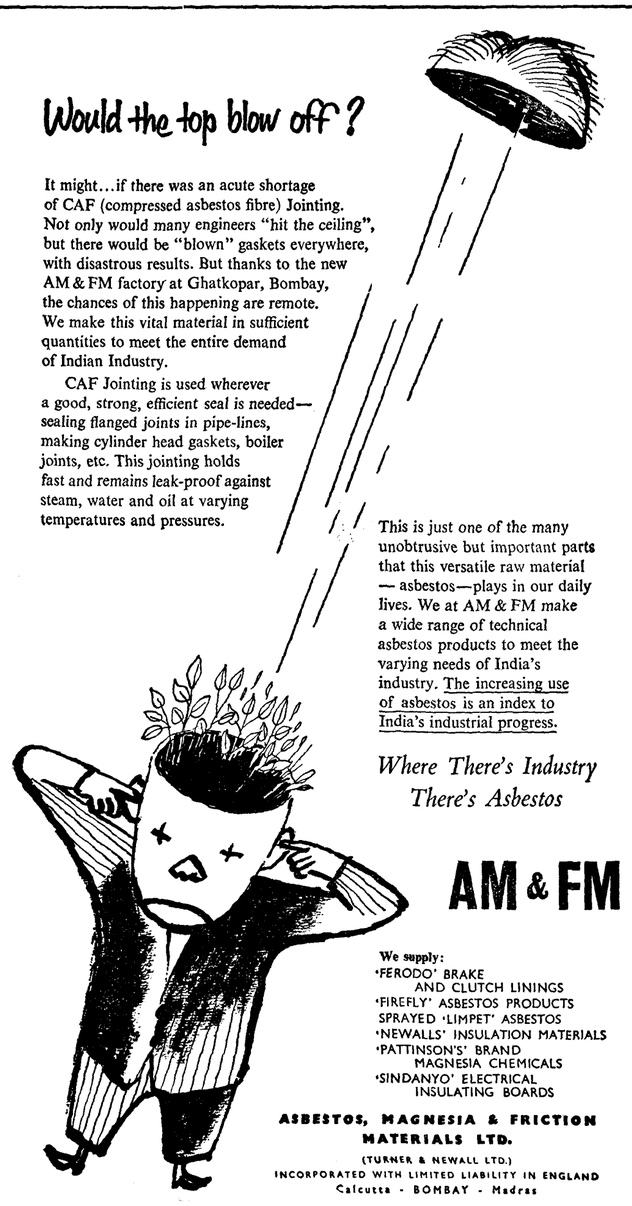
has announced that the minimum wage should be Rs 78-4-4 against Rs 69-1 indicated by the lower Tribunal; that workload units should be reduced for certain categories of workers; that certain classes of workers should be upgraded; that men and women labour would be given equal pay; that a variable dearness allowance would be payable in accordance with the cost of living index; and that these concessions were to have retrospective effect from the date on which the lower Tribunal's award had been binding.

If I may say so, and if we add a proviso, the Appellate Tribunal's Award, save one decision, is unexceptionable. By all means, let us spread prosperity; surely, it is right that the difficult and dangerous conditions of work be properly recompensed. But one decision is wrong. This concerns the retrospective applicability of the Award. I put it to authority that those who came to this decision did not know the cost involved; were unaware that the industry could not afford such cost; were ignorant of the fact that the industry would be unable to recoup from customers the retrospective increased cost; and did not recognise that retrospective enforcement was impracticable.

*

In round figures, the extra cost to the industry for the seven retrospective months would work out to Rs 4½ crores. Where is this money to come from, especially since Government themselves recognised that the lower Tribunal's Award already necessitated a higher selling price? I trust I will not be told that the Reserves of the industry, as these are shown in the balance-sheets, are to be utilised for this purpose. The reader will remember that, some years ago, the justification for a puja bonus for jute mills labour was made out on the existence of reserves. The Reserves are not available as cash —they have long since been ploughed back into the business, and are today in the form of additions to block, in stocks and other assets. The industry cannot issue a "supplementary" bill in respect of coal sold in the last seven months, even if Government were to approve a "retrospective" increase in coal selling prices. So, quite obviously, the applicability of the Appellate Tribunal's Award cannot be retrospective.



*

Now, as to the proviso without which the Award will effectively have no meaning. The qualification is fair, just and reasonable: it is that, for increases in cost for which the industry is not responsible and which it could not avoid, recompense must be made by way of revision of selling prices. What is more, as a matter of policy, since the colliery industry seems destined every now and then to have new and additional expenditure thrust on it, Government must without loss of time announce the compensatory increase in selling prices. For, the past experience of an agonising interim between higher costs imposed and revision in coal prices has been most unsettling; and it is an uncertainty that the national economy cannot afford to entertain for quite apparent reasons.

*

Delay in decisions is dangerous, all the more so in respect of the colliery industry. The Second Plan cannot be allowed to fail; and one of the essential targets to be attained is in the matter of coal production. For, industrialisation, the plans and projects for plenty, has to wait upon the sufficient availability of the basic fuel, coal. Authority and industry are of one mind as to the need for going full speed ahead with the development work which will enable production to rise to the targetted 60 million tons. Unfortunately, every so often something has happened to upset calculations and to engender doubt and diffidence. In consequence, leaders of industry who should be busy with blueprints are instead preoccupied with drawing up of memoranda and representations. Such a state of affairs does the country no good: the progress of development is retarded. I cannot sufficiently emphasise the need on the part of Government for expeditious decisions in their coal policy. It is time we realise that coal is a strategic sector in the Second Plan; accordingly, it is time that the colliery industry was spared the agonizing interims.

Gaps To Fill

DEVELOPMENTS over a number of years are such as to assign an increasingly significant role to institutionalised savings in the programming of financial resources for the Second and subsequent plans. The flow of savings toward industrial enterprises has dried up in part, or been diverted elsewhere, to some extent, owing to a variety of causes; and it is being realised that present and prospective requirements of the national economy demand urgent and imperative solutions whereby the capital stream can be of adequate magnitude.

In the twenties and early thirties, there was considerable repatriation of foreign capital not only because of political factors, but because of the destiny of personal fortunes. Britons like the late Sir David Yule and the late Lord Inchcape had risen to great name and fame and made large fortunes which they had shrewdly invested in their Indian businesses. When such British leaders of business retired to their home at the end of distinguished and prosperous careers, it was natural that their stake, too, was gradually transferred from this country. This process was further necessitated by complexities caused by double taxation, death duties, etc.

The latter considerations have, likewise, played an important part in most Britons repatriating their rupee investments on their retirement from India. It could be said that nine out of ten British employees, while serving in India, cultivated the savings habit, invested wisely, and prized the attractive yield and relative safety of such investments. If taxation and other imposts were not so onerous and complicated, many of them would continue (as their forebears) to hold on to their rupee stocks. But, it is sad to relate that, while we are offering a theoretical welcome to foreign capital, we have raised a practical barrier to the continuing role of a foreign holder of rupee securities. Gone are the days when British investors held large parcels of jute shares and engineering shares, of coal and plantation shares. Thus has dried up an important tributary of the stream that provided risk capital.

Sardar Patel, while unifying India, was unwittingly responsible for some dismemberment of the Indian capital market. Ruling princes like Gwalior, Baroda, Jaipur and Travancore were in the nature of perennial rivers feeding and enriching the capital market of this country. In the slump that followed the World War I boom, it is the Gwalior money, handled with sympathy and understanding by Mr F. E. Dinshaw, that saved many a business from extinction. Darbhanga was no less firm believer in the potentialities of Indian industry and proved a no less trusty friend in need. Merger of States and abolition of Zamindaris have deprived the capital market of a ready source of ample funds.

The setting-up of Pakistan has meant a denial to India of the large sums diverted to the investment market by the Adamjees and Ispahanis.

Meantime, the steeply graded taxes on personal incomes have been incapacitating the small but virile band of investor-operators, who got in and got out of shares, punting wisely and sustaining the tempo and liveliness of share markets.

Meantime, also, the upheaval in Nepal brought to an abrupt end the gambols of the Ranas in stocks and shares. For a time, they figured prominently as shareholders of important companies, as ready subscribers on a large scale for new capital issues, and as large depositors with banks. The Rana money today is a shadow of its former self.

So far as I know, Authority has very little awareness of the gravity of these developments. Most popular Ministers are disposed to regard the stock exchanges as gambling dens, and to think that the investor is none other than the bloated capitalist. They are blissfully ignorant of the fact that the so-called capitalist subsists on the capital subscribed by thousands of individuals such as you and me and the Minister. If the Stock Exchange is today a gambling den, it is up to the Ministers to make it a safe and reliable investment market. If you do not like the capitalist, let not your anger be passed on to the thousands of small investors who are not the sinners, but those who are sinned against.

This is a diversion; but the point to emphasise is that the capital market is now obliged to derive its main support from this fragile community of small investors. For one thing, the functioning of the Stock Exchanges is dominated so overpoweringly by the antics of the bears, and Authority displays such a total lack of solicitude for the well-being of the Stock Exchanges and for the maintenance of a clear Stock Exchange outlook, that the small investors are getting more and more averse to investments in shares.

For another thing, though drop by drop maketh the ocean, the thousand rupees upon thousand rupees contributed by thousands of small investors would not be adequate to the large capital demands of the Second Plan. These investments have to be suitably and effectively supplemented. The answer is: Institutionalised savings.

As at present situated, the Life Insurance Corporation and the Provident Fund institutions may be said to be two major agencies providing savings of this kind. While life insurance was the responsibility of the private sector, a moiety of the accumulating funds (approximately 15 per cent) was being invested in industrial shares. There was, in some cases, an element of caprice in the investment policy; and, on the stock exchanges, the impact of their purchases was but slight. In regard to debentures and high-grade preference shares, they made their presence felt. After nationalisation, the declared policy of the authorities is to maintain a similar proportion of investments in the private sector. To this end, the Life Insurance Corporation has been occasionally purchasing shares from the open market; and we have also heard of a case in which the Corporation underwrote a portion of the additional capital issued by a cotton mill. Taken all in all, however, it is not the past performance, but the future policy and plans, which can be of any great significance in this respect.

The 1956 results of the Life Insurance Corporation have not so far been announced. At the time of writing, we are in the dark as to the total business underwritten in the last year, the total addition to the life fund, the pattern of investments followed in respect of the accruing funds. Relying purely on guess-work, the accretion to the life fund may be said to be of the order of Rs 10 crores, and the investment in giltedged may be of the order of Rs 9½ crores, and those in ordinary shares of the order of Rs 50 lakhs. It may also be that there was some amount of reinvestment in respect of funds released from the maturing or redemption of stocks.

If the Life Insurance Corporation is to secure a prominent place in the scheme of things, it must deal in more impressive magnitudes. One would, for instance, like to see the Corporation investing a snow-balling Rs 30 crores every year—say, Rs 25 crores in giltedged and Rs 5 crores in industrials. The Corporation is reported to be working on a scheme designed to attract a very large proportion of the population now outside its purview. The scheme will fix a maximum limit to each policy; and there will be no medical examination. If the Corporation succeeds, by this and other plans, to make life insurance more effectively wide-spread, the life fund may be expected to go up by leaps and bounds. The scheme needs, therefore, to be expeditiously examined and finalised, and energetically to be implemented.

While the matter is being pursued with vigour and enterprise, it is for the Corporation to see how far the funds available for industrials can be substantially increased. The Corporation could be a powerful instrument of economic policy. What the Reserve Bank is in regard to open market strategy in giltedged, the Life Insurance Corporation should be in relation to open market strategy in industrials.

The Corporation functions, in this respect, through an Investment Committee. I understand that the Committee meets every fortnight. It should be possible for the Committee to enlarge the scale of investments in industrials. The funds are there; and, if I may say so, the scrips are there. Current prices are so tempting, and the yields at current levels are so attractive, that the Corporation would be combining profit with strategy if it intervenes in the share market on an impressive scale.

As for the Provident Fund's accumulating contributions, their significance is mainly for trustee securities. The point to emphasise in this context is that the extension of the provident fund scheme to a wide variety of industries has meant a current availability of anything like Rs 35 crores every year by way of institutional savings. The accretions in this regard, too, have a snow-balling character.

Our business leaders may usefully consider the potentialities of investment trusts from this point of view. Under auspices which guarantee integrity and which spell confidence, an Investment Trust with a large capital should be set up; and the Government may be requested to utilise a portion of the counterpart funds of US surplus commodity loan for investment in the debentures of such a trust. The successful functioning of such a trust may be an inspiration for the launching of similar enterprises. It may be emphasised and underlined that investment trusts are an apt agency for the fostering and useful employment of institutional savings.

This review should necessarily include the mention of the ICICI, which, for some reason, appears to be somewhat dormant after the first spell of activity; and of IFC, which must take immediate steps to enlarge its scope and activity beyond the uninspiring confines of a mortgage agency.

Bombay Review

Gateway Notes

An Illuminating Retrospect

THE lectures Sir Chintaman Deshmukh is giving on Indian economic development during the last decade, under the auspicies of the Dadabhai Noaroji Memorial Prize Fund could be expected to provide a critical and illuminating retrospect of a type which few else in contemporary public life are capable of. The first lecture which is claimed to be a bird's view of the major events from 1946 to 1950 is a reassuring beginning. The period of time chosen was marked by the development of several heterogeneous and mixed trends. And even a person who occupied a pivotal place in the economic scene could not discover a single activating force persisting throughout.

In the mixed bag presented in the first lecture controls, India's association with the IMF and World Bank and the relation between the Reserve Bank and the Union Ministry of Finance stand out. The first is even now a theme of deep controversy. In another recent speech, he indicated the desirability of taking steps which are usually associated with the policy of deficit financing. He must have meant controls also. Whatever it might be, in the present lecture he appears as an unfriendly critic of the decontrol taken toward the end of 1947. The immediate consequences of that step clearly justifies his attitude. The controls had to be restored in a few months and in the meanwhile, prices had soared in the open market. While a general judgment on control can seldom be safe in the conditions of India, the experience of the late forties has shown that the utmost care should be exercised in deciding when physical controls could be imposed and, what is even more important, when they could be removed. In the final lecture in the series, we may get a more precise review on this subject in its relation to the Second Plan situation unfolding from time to time.

Turning to the nationalisation of the Reserve Bank in January 1949, a task 'completed and put to work without a jolt', he recalled how the smooth working of the partnership between the Reserve Bank and the Finance Minister was further fortuitously assisted and firmly established' with the appointment of the Ex-Governor of the Reserve Bank as the Government of India's Minister of Finance. He felt impelled to recall an observation which he made immediately after the nationalisation of the Reserve Bank, emphasising the point that it was not after all the theoretical constitution of the institution which mattered, but the spirit in which the partnership worked and that success ultimately depended on the manner in which the Government desired to be served and provided the needed opportunities.

He also felt glad that India's association with the IMF and the World Bank, about which some apprehensions were entertained in the legislature, has been vindicated by experience.

*

Bicycle Industry

Three or four years ago, one would have been dubbed a visionary if one had declared that India would become self-sufficient in bicycles in the course of the next few years. For, such had been the trend in the industry at that time that it was generally taken for granted that it would take considerable time for the country to reach a position wherein the indigenous industry would be able to meet the entire demand. Thanks to the enlightened policy pursued by Government, the seemingly impossible has been achieved and in record time.

That the industry had made rapid progress during the last three years will be evident from the fact that in 1956 production by the large scale manufacturers alone totalled 6.6 lakhs bicycles as against 3.7 lakhs in 1954. In 1953, there were only six large units producing bicycles in the country with a rated capacity of 389,500 on single shift basis and their actual production was only 264,169 bicycles. At present, there are 18 units licensed under the Industries (Development and Regulation) Act 1951 of which 14 are in production. The sanctioned capacity of the 18 units aggregates 12.735 lakh bicycles a year which includes permission accorded to some units to work double shift. Four more units have been licensed recently thus bringing the number of units to 22 and the aggregate annual capacity to 15.075 lakhs of bicycles. Adding to this the sanctioned capacity of 2.19 lakhs per annum of the small scale producers, the total installed capacity for bicycles will come to 17.94 lakhs. As against this the Planning Commission have estimated the total demand (including export target) at 725,000 in 1956-57, 800,000 in 1957-58, 900.000 in 1958-59, 1,100,000 in 1959-60; and 1,250,000 in 1960-61. Over and above the units manufacturing complete bicycles, there are about 500 units manufacturing components. The last three years have also witnessed a considerable reduction in the dependence of the industry on imports with the result that new units are not permitted to import more than Rs 24 worth of components for a bicycle.

It would appear that in spite of its rapid progress, the Indian Bicycle industry has still a long way to go before it can be in a position to look after itself. It is no secret that consumers prefer cycles manufactured by units having technical collaboration with foreign firms and those manufactured by units which use mostly imported components to those having larger percentages of indigenously made components. The reason is not far to seek. Cycles coming under the former category are of a higher quality than those falling under the latter.

With considerable production capacity both in regard to small units manufacturing complete bicycles and in regard to components being put up in the country, quality control has become an urgent necessity. Unless each and every component produced in the country is of the required high quality, the progress of the industry as a whole will be retarded.

Opening the Tariff Commission's public enquiry into the question of continuance of protection to the bicycle industry, Mr K. R. Damle, the Chairman, declared that the developments that had taken place during the last three years justified the assumption that healthy all-round progress was possible, provided, of course, the two sectors, namely, large scale as well as small scale worked toward progress in harmony and understanding.

It may be recalled that the Indian bicycle industry was first granted protection in 1947 on the recommendation of the Tariff Board by converting the then existing revenue duties into protective duties at the same rates. Since then two inquiries have been held, one in 1948 and the other in 1953. In 1949, on the recommendation of the Board, the rates of duties were raised from 24 per cent preferential and 36 per cent standard to 60 per cent preferential and 70 per cent standard. In 1953 protection was extended for a further period of two years. Again the period of protection was extended upto 31st Dacember 1957.

As the future plans for the industry envisage a progressive increase in exports, it is all the more essential that strenuous efforts are made to improve quality and reduce costs. It is rather disappointing to note that some of the new units are not furnishing the Tariff commission with the periodical statisticol information required for watching the progress of the industry. Similarly, it has been found that none of the manufacturers of bicycles or components has yet applied for license to the Indian Standards Institution though standard specification for nine items have already been published by the Institution.

GATEWAY MARKETS

Mercury Prices Easier

THANKS to augmentation of stocks, Mercury prices have been developing an easier tendency during the past few days. In the Bombay market, the price for ready has dropped to Rs 1,190 per jar, while distant deliveries are quoted somewhat still lower.

With recent indents of about 150 jars, floating stocks in the market are estimated around 600 to 650 jars. It may be noted, in this connection, that imports of quick silver, during the previous two years 1954-55 and 1955-56 were almost nil, while imports for five months from 1st April to 31st August 1956 amounted to 19.208 lbs valued at Rs 2,96 :08.

According to data released by the United States Bureau of Mines, world mercury production, last year, reached 198.000 bottles (of 34.5 kilograms), thus exceeding the 1954 level by 8 per cent. Italy was the leading producer with 53,520 bottles followed by Spain with 45.000 bottles. Mexico doubled its production to 29.800 bottles and moved up to the third place on the list. The USA is the fourth with 18,960 bottles and Yugoslavia is fifth with 14,600 bottles.

*

Oils and Oilseeds

The Oils and Oilseeds markets developed a quieter tendency after an early spell of steadiness. There was, however, a general inclination to support the market at all setbacks irrespective of the impact of the crop movement. It was also felt that through export business at the moment remained very small, it was considered likely that overseas buyers might evince interest in purchases once again.

Castorseeds softened under reports of somewhat increased arrivals. May delivery opened at its 155-8 and, after touching a low of Rs 154-8 and a high of Rs 156-6, finished at Rs 155-12. Ready was quoted at Rs 33-0 and Castor Oil, commercial, at Rs 18.

In Castor Oil, Brazil has been a eager seller at reduced rates, while France is reported to have sold a part of her previous purchases to the US. This has brought down the would price by 2½ cents per pound.

Bombay Review

World of Cotton

Trend of Consumption

CONSUMPTION of Cotton in India is placed at 15.25 lakh bales for the four-month period beginning September 1956 as compared to 15.19 lakh bales in the corresponding period of the previous season. While there is only a modest rise in the total figures, the sharp improvement in the consumption of Indian cotton is evidenced by the improvement from 369,505 bales to 407,605 bales in December. Reflecting the steady improvement from month to month, the average consumption of Indian cotton has gone up from 372,470 bales for the first three months to 381,250 bales for the first four months. If the present trend is any indication, it is quite within the realm of possibility that Indian cotton consumption wil reach the estimated level of 45 lakh bales before the season is completed.

Side by side with the consistent improvement in the consumption of Indian cotton, that of foreign cotton has declined from month to month upto November, though the December figure shows an improvement. The total offtake at 201,257 bales for the four-month period under review compares favourably with 185,643 bales recorded in the corresponding period of the previous season.

It is interesting to note that, although the volume of East African cotton shows an increase for the period, there has, in fact, been a decline in the consumption trend of this cotton from month to month. So has been the case with both Egyptian and Sudan cottons. In the case of US cotton, however, there has been a distinct improvement throughout the period under review. Thus, the relative increase or decrease in the consumption of different varieties of foreign cotton has been the result of the import policy of the Government. The following table gives relevant figures of cotton consumption and stocks, both Indian and foreign, for the first four months of this season (in bales of 400 lbs each):—

CONSUMPTION.

Varieties.	Sept. 1956 to Dec. 1956	Sept. 1955 to Dec. 1955
Indian ...	1,525,011	1,518,805
Pakistan ...	Nil	Nil
Egyptian ..	43,908	58,506
Sudan Egyptians ...	33,457	37,632
Sudan Americans ...	1,176	1,385
East Africans ..	99,658	71,535
American—USA ...	22,267	12,208
Total Foreign cotton including other varieties ...	201,257	185,643

STOCKS.

	As on 31st Dec. 1956	As on 31st Dec. 1955
Indian ...	1,072,674	1,083,361

Total Foreign cotton including other varieties ..	176,634	159,221

COTTON FUTURES:

Listless conditions prevailed in the forward section of the cotton market. Interest was conspicuously absent from the start of the session owing to operations of margin at a moderate rise. With only a few days to go for the maturity of the Jharilla contract, talks about tenders started. The general belief was that tenders would be very low in spite of a bumper crop this season. The EICA Board, however, decided to prepare boxes at an early date to expedite the opening of the new contracts. According to informed circles, business in new contracts will commence shortly.

Meanwhile, ICC Jharilla advanced on short-covering, prompted by approaching tendering period. The rate opened at Rs 686-8 and, after advancing to Rs 690-0, finished at Rs 685-8. ICC Vijay April delivery opened at Rs 810 and, after touching a high of Rs 812-4, finished at Rs 810-0.

"...and a bonus of goodwill to the management —for installing the 'Tushar' WATER COOLER!"

QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR now?

With the TUSHAR you get
- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

'Tushar' WATER COOLERS
A modern must for factories, offices, schools, hotels, hospitals and colleges.

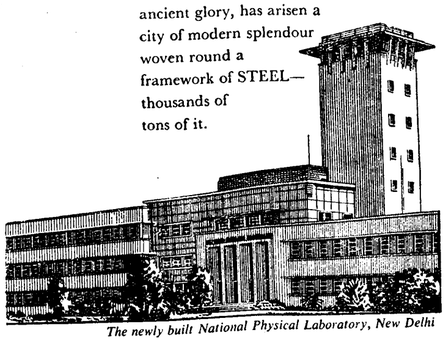
'Reagitating the Kashmir Issue'

AN emergent meeting of the Union Cabinet is to be held on the 19th of this month at which the latest position regarding the discussion on Kashmir in the Security Council will be considered. India will have to make up its mind on what attitude it should take to the suggestion that Mr Jarring of Sweden should visit the Indian subcontinent and discuss the issue with both Governments and report back by the middle of April. On the presumptions and implications of the latest resolution sponsored principally by the UK and the US, Indian views are clear and unequivocal: but two considerations may weigh with Government: one, the need for keeping the "politics" of the issue free from the personality of the distinguished visitor and to avoid seeming inhospitable to a statesman of a friendly country and a former member of the New Delhi diplomatic community. On this, there is no serious difficulty, since New Delhi has never been guilty of the kind of gaucherie that is only too frequent in Pakistan where, apparently, a diplomat may be treated as a persona non grata, even though no such indication is given to the Government he represents. As on previous occasions, when Dr Frank Graham and Sir Owen Dixon came to India in pursuance of resolutions that India did not accept, every courtesy will be extended to the distinguished visitor and every assistance offered to study the questions involved.

The second consideration is that, even though the resolution as worded and as elucidated contains words and points of emphasis that India cannot and will not accept, there is just a possibility of spelling out of the resolution a desire to explore solutions other than plebiscite, dimilitarisation and stationing of UN troops in Kashmir. The delegations of the sponsoring countries have been at some pains to explain that the resolution does hold the balance even and is not weighed in favour of Pakistan. There is some element of irony in this explanation, as indeed in the conduct of the leading powers throughout the discussion of the issue, for, it ignores the basic fact that India considers itself the aggrieved party in the dispute. The bland assurance that it is treated as an equal with the aggressor against whom it complained is given as though it were intended to sooth an intractable and unreasonable child. But, despite this, and the obvious reference to plebiscite and the idea of a UN force for Kashmir, it is explained in private conversation in the United Nations Headquarters that the new resolution does not bind the new mediator to concentrate on plebiscite and dimilitarisation. One of the directives of the resolution, that he should "examine proposals which are likely to contribute to the establishment of conditions for progress towards a settlement of the dispute", is stated to indicate that alternative solutions are not unwelcome. How far this assurance is to be gleaned directly from the resolution itself, which harps on previous resolutions on the subject and in which the plebiscite idea is repeated as though it were a mantram, is problematical. But, making the most charitable assumption that the Security Council is interested in solving the problem in a manner that is acceptable to both parties even though such a solution may not be all that Pakistan has asked for in public, it is just possible that Mr Jarring will be allowed to discuss other possible solutions for the dispute. If such a possibility exists, in however exiguous a form, New Delhi will be only too ready to co-operate in examining it. This consideration, therefore, is one which is sure to weigh heavily with Government. Thus, whatever the fate of the resolution now before the Security Council, Mr Jarring may not find himself unwelcome in New Delhi.

As for the resolution itself, its disingenousness is so patent that even Colombia, which sponsored the January 24th resolution, has been forced to protest. Its constant references to earlier resolutions would seem to imply that all that it is interested in is to see that earlier resolutions on the questions, accepted by both the sides, were implemented. The argument runs like this: India's complaint was that conditions for the implementation of the resolution of 1948 were not created by Pakistan not removing its troops. Well, let Pakistan remove them now so that the plebiscite may now be held. There are weighty objections to such a simplification of the problem, but worse is yet to come. The sponsors who say that all that they want is old promises redeemed, are insidiously introducing in this resolution new elements like the stationing of a UN Force in Kashmir. This is a new Pak suggestion by which Pakistan wants the Security Council to declare as deserving of 'consideration'. It is this lack of consistency that has made the Colombian representative, Mr Francisco Urutia, protest against the resolution. In his own words, "We cannot add to a resolution a whole series of new ideas, especially with regard to the presence of a UN force without the parties having requested it, because we might be asked to do likewise in connexion with Cyprus and New Guinea and in connection with other pending problems. I do not see why we should tie a millstone round Mr Jarring's neck—the millstone of new ideas that are included in the draft resolution but which were not included in the 1948 resolution."



What Mr Urutia does "see" is that the whole conduct of the big powers over this issue has consisted of such enlarging of the issues from time to time that no one seems to remember today how it all started. The Colombian delegate has now suddenly discovered the inconsistency and the unreasonableness of not sticking to the original point, which he takes to be the earlier point of agreement, namely, the 1948 resolution which was conditionally accepted by India. What India suggests is either of two alternatives: one is to go back, as suggested by Mr Urutia, to the starting point—India's original complaint in 1947. It may be asked why we should not start with the latest point of agreement as does the Colombian delegate

Rural Credit

That money lender in villages continue to be the dominant source of finance in spite of the spate of legislation introduced in various states to put down their influence and reduce the role of private credit in agricultural financing, is evident from the statistics of the relative proportion of the diverse sources of agricultural credit available in the revised edition of 'Agricultural Legislation in India' issued by the Economic and Statistical Adviser of the Union Ministry of Food and Agriculture. The share of personal credit, as revealed in the report, comes to about 77 per cent while institutional credit accounts for only 7.3 per cent of the total. The unwholesome aspect of the situation, is not the high percentage of private credit but rather the usurious nature of it which being facile, prompt and easy, is associated with high rates of interest. And the report points out that there has been little improvement in the terms in which private credit is available.

This, no doubt, points to deficiencies in the administrative machinery charged with implementation of the measures passed by State Governments to regulate private money-lending. But this failure of the administrative machinery, is itself traceable to the absence of an alternative source of credit, which can, by being able to compete with the money-lenders, drive him away, by making private credit superfluous. Thus the real cause for the ever-persisting dominance of the money lender, is the slow progress made by institutional credit, and only when the latter is able to spread its net far and wide into each and every village can an end of the regime of the money lender be conceived. So the real remedy lies in an intensification of the cooperative movement, in regard to which the findings of the All India Rural Credit Survey will be found relevant.

The Survey traced the failure of credit cooperatives to structural and functional deficiencies of the primary societies and Central Banks, which were biased in their lending operations against small and medium cultivators. Insistence on security of movable property, bias towards productive credit against consumption credit of which latter the cultivators were in greater need, and a pronounced tendency to favour urban interests were some of the factors which barred the progress of institutional credit in the rural areas.

To isolate the problem of agricultural finance from other aspects of farming is to hinder a speedy solution of it. The need for finance arises out of the various operations of farming and if the latter can be conducted in a way which will reduce the number of chances, when the cultivator has to seek the money lender's aid and which will augment his own monetary resources, the pinch of finance will not be as acute as it is now.

*

Systems of Medicine

Speaking in the Golden Jubilee Celebration of the Unani Medical College Allahabad, the Union Health Minister, Raj Kumari Amrit Kaur, emphasised the need to revive the ancient systems of medicine like the Ayurveda and the Unani which, she pointed out contained a vast store of knowledge. The two systems were most popular in the past and they are declared to be in no way antagonistic to modern medicine, which has been developed by Europe on the foundations laid by the Arabs. In the course of her speech, the Union Health Minister explained how the two ancient systems could best serve the interest of the country and promote medical advancement if they shed the element of rigidity which had so far clung to them and adopt a system of scientific training of students. She cited as a case in point, the reluctance of the practitioners of the ancient systems to make use of all the diagnostic aids of modern medicine. The ultimate aim, she said, should be the training of Vaidyas and Hakims, who would, as specialists treat patients with Ayurvedic and Unani Drugs of approved value.

Referring to the part played by Government in the matter of encouragement to these two systems, she outlined the three angles of approach chosen by the Government to take necessary action namely (1) stimulation of research (2) improvement of quality of education and (3) utilization of the services of the persons trained in these systems in the country's health programmes. The establishment of the Institute for research into indigenous systems of medicine, she pointed out, was the first step in the realisation of the main objectives. The establishment of a post-graduate teaching centre at the Jamnagar Institute, the financial provision made in the Second Five-Year Plan for the improvement and up-grading of selected Ayurvedic and Unani institutions, setting up of an advisory Committee on Unani and the grants given to the Tibia College Aligarh were other impotant measures taken by the Government to give support to the ancient systems of medicine.

NORTH INDIAN MARKETS

Sugar Production

THE all-India first estimate of Sugar, produced directly from cane in vacuum pan factories, puts the current season's production at 19.38 lakh tons as against the actual production of 18.62 lakh tons in the previous season, showing an increase of 76,000 tons or about 4 per cent. This increase in production has been shared mainly by Uttar Pradesh (51,000 tons) and Bombay (23,000 tons).

Production and despatches of sugar from indigenous factories amounted to 8.12 lakh tons and 4.58 lakh tons up to January 31, 1957 in the current season as against 7.12 lakh tons and 3.66 lakh tons respectively in the corresponding period of the previous season. Stocks with the factories on January 31, 1957 stood at 8.81 lakh tons as compared to 7.58 lakh tons on the same date last year.

Out of the 50,000 tons allotted for exports recently, business to the tune of 45,000 tons is reported to have been completed. Expectations are now held in certain circles that, as a measure of the export drive, the Government may release further sugar quota for export.

Markets, in the meantime, are ruling steady. Loading conditions have improved and offtake from the factories is mainly to Rajasthan and Bombay. Crushing, for the season, is in full swing, while cane supplies to the factories are fairly heavy. Following mill-delivery rates per maund) are quoted in the Hapur market:—Jaswant Rs 28-12; Simbhauli Rs 28-14; Mowana Rs 28-8 to Rs 29-0; Daurala Rs 29 to Rs 30; Amroha Rs 28-4; Mansoorpur Rs 29 to Rs 30 and Rampur Rs 31-8.

*

Gur

The Gur market in Hapur continued to rule quiet with prices showing an easier tendency as demand from the consuming centres was diverted to the Punjab and Anakapalli and other markets in the South where prices had fallen further. Arrivals from the neighbouring districts were heavy at an average of 4,000 maunds daily, while stocks had swelled to 80,000 maunds. More than half the crop is reported to have already reached the market. The rate is quoted at Rs 9-14 to Rs 10-2 per maund. Sowing of cane, for the next season, has already begun.

*

Foodgrains

The market for Foodgrains ruled steady. At Hapur Wheat recorded modest gains despite large-scale regular sales through fair-price shops. The coming crop is reported to be progressing under healthy conditions.

Prices of Rice recorded slight gains during the week, Basmati quoting Rs 23-0 to Rs 27-0 per maund, according to quality. Coarse grains prices scored gains in all sections on reports of shortage of stocks and the possible delay in the arrivals of the new crop. Gram continued to attract good demand and, despite good crop prospects, prices continued to rule steady. Barley, Bejher and Maize advanced by nearly As 4 per maund. Peas ruled quiet as the standing crop was reported to be fairly good and was expected in the market by the middle of March.

The Delhi grains market ruled quiet. Due to unauthorised arrivals from the Punjab, Wheat showed a loss of about As 8 per maund. The easiness in Guwar was due to the ban on the export of guwar gum. Demand for Gram slackened, with the result, rates softened slightly. Among Pulses, Urad was in goood demand, resulting in a rise of about Re 1 per maund in the rates.

Also, the Bombay grains market presented a quiet appearance with prices moving within a narrow range. Trading in Rice reflected a subdued tendency, mainly attributed to slightly lower advices from the terminal markets in Madhya Pradesh and Andhra. In the Wheat section, buying interest was limited due to the high prices ruling for the commodity. Trading in Jowar was featured by a good demand for comparatively cheap qualities. Arrivals of the crop were moderately good. Prices of Bajra kept steady with the receipt being sufficiently large to meet the demand.

*

Shellac

Trading in the Calcutta Shellac market continued to remain dull with prices developing an easier tendency. This was mainly due to the fact that supplies were known to be adequate to cover demand until April when the new crop would arrive in the market. There is a general feeling that prices are unlikely to move upward unless there is a sudden buying from any quarter.

In London, arrivals of shellac are reported to have been high. It is also reported that there is still a lot of this commodity at the docks which will expand commercial stocks. Buying has, however, been quite active. February delivery shellac is quoted around 230sh with sellers at 240sh.

Madras Review

The Peninsula

Where the Private Sector Stands

The constituency, whose favour Mr T. T. Krishnamachari seeks, is among the most well-informed and critical in the whole of India. South Madras represents a fair cross-section of Indian middle-class with a considerable top-layer of business and hereditary aristocracy. The verdict of the constituency can, on no showing, be emotional or to any great extent prejudiced by undemocratic considerations.

As the bulk of the voters should have already made up their minds, Mr Krishnamachari's speeches in Madras are important more as the vindication of his stewardship of the Commerce Ministry and lately of Finance than as an electoral appeal. Unofficial estimates of chances already assign the Union Finance Minister overwhelming strength. Even when the private sector is strongly represented in this constituency, he can afford to be somewhat unyielding and even unflattering.

That he has chosen to be both is seen from his speech at the Vivekananda College. Commenting on Mr A. D. Shroff's suggestion that the new section of Indian Income Tax Act regarding compulsory deposit and the new excise duty on cloth should be withdrawn as a step toward reassuring the private sector, Mr Krishnamachari said that he was going to do nothing of the kind.

He went even further to warn the private sector that these two measures would not be repealed even if he were not to go back to Delhi. He explained how the decisions were the result of 'concentrated thought being exercised on the country as a whole and the human beings living there', and that it was not a matter of thinking of one particular individual here or there or the political future of one particular group or other. Thus he virtually disabled even a successor repealing the two measures, in the remote event of himself getting defeated in the elections and not continuing as Finance Minister. He was sure that even if the new man did not understand the significance of what had been done, he dared not repeal it; 'that was the thing the critics have to understand.'

But this resolute denial did not go alone. In the same speech, he offered alleviating assurances to the private sector composed of both Indian and foreign interests; in fact, the distinction between national and non-national capital did not impress him and he did not think in terms of the nationalisation of foreign enterprises. To those who plead for the Government taking over foreign enterprises, he pointed out the risk of the country's own investments abroad getting frozen in retaliation; India's foreign assets were much more than the Rs 400 crores worth of foreign investment in India.

Nor had he any intention of nationalising banks, general insurance or other industries 'just for the sake of nationalisation'. The latter phrase would have jeopardised the precision in the commitment, but for the accompanying statement that he hoped to see the number of banks and commercial houses increasing, providing more employment. He also reiterated the fact that the Government were looking to the private sector to help increase employment opportunities.

In the latter respect, all that he could vouchsafe for was that at the end of the Second Plan, no person technically trained or even with some technical training needed to remain unemployed. The attainment of full employment was not conceivable at all; the Government were not thinking in terms of the regimentation required to achieve such an objective. But optimum employment was being striven for.

This estimation of expectations is somewhat disabling for Opposition leaders; because, as long as no alluring picture was drawn by Congress spokesmen of the prospects under the Second Plan, the Opposition leaders would miss serious targets of attack.

On one thing, Mr T. T. Krishnamachari was firm. The Second Plan would not only be altered from time to time, but the alterations would always be in the direction of improved targets, particularly for consumer goods. The Plan, instead of stifling the private sector would give it vaster opportunities; in his conception, the State at no time would take complete charge of trade and industry in the country.

At the Madras Christian College, and again at a meeting of the Indian Council of World Affairs, Mr Krishnamachari returned to the subject of the private sector vis-a-vis the Second Plan. Two points received special emphasis. When the Government went ahead with legislation meant to benefit the common man, the interests affected naturally took objection to it; the private sector clamoured for freedom to do whatever it liked. This was a difficulty, according to Mr Krishnamachari, which could not be escaped in the process of democratic planning unless they had a very enlightened body of public opinion.

In explaining his position, he was indirectly making an appeal to the informed and disinterested public to exercise its voice more effectively for dissemination of a correct and constructive attitude to economic problems. In this connection, "the people in the academic world" came in for mild criticism. Emphasising that the present changing phase of the economy called for a lot of understanding, he felt sorry that the academic world had not tried to understand it.

Secondly, whatever might be thought by the private sector of Government's policies, he was sure that the increase in industial production achieved in recent years would not have been possible if the Government had not pursued an alert and imaginative policy in respect of import control, investment and assistance to industries. Private industry had always welcomed measures wholly favourable to it.

The admonition he gave to trade unionists must surely be pleasing to the private sector. One wonders why official spokesmen have not cared to press the fact that trade unionism was not compatible with a socialist State pledged to nationalisation. Nationalisation meant that there would be no collective bargaining. He also drew attention to the differences among socialists on the desirability of nationalisation. Drawing on the experience of Britain since the first World War, Mr Krishnamachari stressed how difficult it was to implement socialistic principles in a democratic country. As the Indian situation was even more complicated than that of Britain, he wanted everyone to think more of current problems and to strive for a judicial balance between planning and democracy.

South Indian Notes

Technical Personnel

WITH the commencement of the Second Five Year Plan, the problem of technical personnel for the various fields of economic activity has assumed added importance. Paucity of technical personnel was keenly felt in many spheres even during the first Five Year Plan, and therefore the problem is to be tackled urgently if the tempo of developmental activity as envisaged in the Second Plan is to be sustained. Two important categories of technical personnel are engineers and craftsmen. The aim should be the training of sufficient numbers of these so that no bottleneck in the supply shall hamper the smooth progress of the Plan. With this aim, the Second Five Year Plan has earmarked a sum of Rs 50 crores for the expansion and development of technical education as against Rs 28 crores allotted under that head in the first Plan. But even with this increased expenditure, a shortfall of 1690 graduate engineers and 5750 diploma holders is expected at the end of the Second Five Year Plan.

To this problem of equating supply with demand, Sir Jehangir Ghandy, Chairman of the Eastern Regional Committee of the All India Council of Technical Education has suggested a three-way solution namely (1) opening of new engineering colleges and schools (2) increasing the capacity of existing institutions and (3) calling upon existing industries to start night technical classes for imparting part-time technical training of a fairly high standard.

He further pointed out that the problem was one of regional disparity of engineering colleges, with the Eastern Region where 80 per cent of the engineering industry in India was located having only 10 engineering colleges as against 20 in the Southern region. It is worth recalling in this connection that the Engineering Personnel Committee has recommended that the capacity of the existing engineering colleges should be increased by 20 per cent and of diploma institutions by 25 per cent and that steps should be taken to establish 15 more engineering colleges and 62 more engineering schools in the country. Implementation of the recommendations is expected to help the nation to tide over any shortage of engineering personnel.

Coming under the second important category of technical personnel, are craftsmen, a steady supply of whom must be ensured at all costs. It is gratifying that several new schemes for increasing the training facilities of craftsmen are afoot, and so far sanction has been given for opening 8 new institutions one each at Indore, Jamnagar, Bhuvaneswar, Rewa, Bhali, Darbhanga, Kodarma and Jamunanagar. These schemes are expected to increase the supply of craftsmen to 30,000 by the end of the Second Plan. Added to this the Apprenticeship Training Scheme, which is proposed to be given a start at Calcutta, Bombay and Gwalior is expected to give training to 5,000 persons. To coordinate the training policy, the Government of India, is setting up a National Council for Training in Vocational Trades, which will lay down standards for craftsmen training, award trade certificates and advise Government in framing its training policy. The schemes are in the nature of a joint endeavour between central and state Governments, with the Government of India bearing 60 per cent of the cost of organisation while the responsibility in regard to the administration of the institutes would rest on the State Governments. In the light of the above schemes, together with what foreign aid in the form of supply of stores can do, the future in regard to the availability of craftsmen looks assuring.

★

Budget Gaps of States

Among the several problems, confronting the Finance Commission, the question of filling the budget gaps of the States is an important one and at the same time very intricate. The extent to which the budget gaps can be filled will necessarily depend on the amount which the Central Government could be able to spare. Its allocation as between states which have undergone alteration in boundaries following the States Reorganisation will be a tough task. An idea of how the Commission intend to tackle this matter is indicated in the confabulations which the Chairman and the members of the Commission had with non-official representatives at Hyderabad. It was pointed out that so far as Andhra was concerned, the approach would be based on the budget gap of the former Andhra State and the budget deficit created by the formation of Andhra Pradesh.

While in the matter of filling states' budget gaps the Chairman was inclined to be sympathetic, when the issue of Central subvention to offset the effects of introduction of prohibition was raised he ruled out the hope of Central aid. Giving his views on the basis for distribution of revenues, the Chairman said that it should follow lines calculated to help industrial development and encourage capital investment in under-developed states. If this is to be achieved a redefinition of the basis for the division of income tax as well as excise duties is called for.

SOUTH INDIAN MARKETS

Outlook for Rubber

IT is a known fact that production and consumption of Rubber touched new peaks last year. While the output of about 23,500 tons was roughly 1,000 tons higher than in 1955, purchases by manufacturers rose to about 29,000 tons from 27,500 tons in the previous year.

The Rubber Board has estimated the output at 27,000 tons in the current year, while the manufacturers require very nearly 40,000 tons or 11,000 tons more than they consumed in 1956. Although their anticipation is based on the fact that the production capacity of a number of existing units has been raised, many doubt whether consumption will make such a long leap this year. This may probably be one of the reasons for the Board in not making any specific recommendations as to how much should be imported during the current year.

An increase of nearly 100 per cent in the consumption of Rubber by the manufacturing industry during the next five years is envisaged by the Chairman of the Association of Rubber Manufacturers in India. He observes that, a few months ago, the requirements of raw rubber by the industry were placed at 40,000 tons by 1961; but he thinks that consumption will be 60,000 tons as compared to about 29,000 tons last year.

Prospects for 1957 are, therefore, considered a little confusing by trade circles. While the USA may require more rubber this year in view of the increased rate of automobile manufacture, petrol rationing is likely to restrict consumption in Britain and the Continental Europe. Again, Russian and Chinese buying, which was largely responsible for the recovery during the latter half of 1956, is unpreditable. Although political instability, especially in the Middle East is expected to induce consumers to keep adequate stocks, the market is likely to face an exact reversal when the situation improves and the Suez Canal is reopened for regular goods traffic.

★

Coffee

The recently revised Coffee crop estimate stands at just under 38,000 tons—an all-time record for India. The prospects for 1957-58, at the moment, are stated to be bright though rains in some parts are reported to have hindered the picking of the crop, resulting in dropping of fruits to a slight extent.

In the light of the recently revised estimate for the 1956-57 crop, the exportable surplus out of this crop is now placed at 1,100 tons. The export sales out of the new crop, which had been programmed late last year, are stated to have already started and the programme is being kept up. In January last, 591 tons of Plantation coffee were sold and tenders have been called for another 2,079 tons of Plantation and 85 tons of Arabica Cherry during this month.

Reports from Latin American countries suggest that 50 per cent of their coffee stock has been sold. Since the beginning of the year, they have not been pressing sales as they did before Christmas. Two-thirds of Kenya's current season's coffee have been sold already. The balance is expected to be sold before the end of March. Kenya's crop, this time, is slightly higher than the original estimate; but Tanganyika's crop is reported to be smaller.

★

Pepper

Pepper markets have continued to rule weak in the absence of demand. Arrivals of Russian steamers at Malabar Ports having been delayed, those traders, who were in the market for purchasing long forward as a hedge, stood back. The necessary support is, therefore, lacking. In the Kozhikode market, Wynaad quality is quoted around Rs 630 and the Country variety at Rs 615 per candy.

The reports regarding the size of the new crop Sarawak are conflicting. Some Chinese firms are more emphatic that the new crop will be small during the season. Traders are, however, treating all estimates, whether small or large, with reserve.

In the New York market, the strike remains a feature. Demand is very restricted with buyers content to await developments. On the other hand, sellers are less confident and some price shading has developed. Malabar "awaiting release" is quoted at 26 cents and February delivery at 25½ cents per pound.

(Continued on page 324)

Industrial Information

Working of the New Companies Act

Review of Progress in the Eastern Region

Thirty public companies with an authorised capital of Rs 50,64,60,000 and 221 private companies with an authorised capital of Rs 57,14,53,500 were registered in the eastern region comprising West Bengal, Assam, Bihar and Orissa under the New Companies Act during the first nine months after the Act came into force on April 1, 1956, according to a review made by the Regional Director, Eastern Region, Company Law Administration, Calcutta. During the same period, 106 companies went into liquidation in this region.

Following is the detailed review of the working of the New Companies Act in the eastern region:—

WEST BENGAL

The total number of registrations of public companies in West Bengal was 25 with a total authorised capital of Rs 50,39,60,000. The number of private companies incorporated during the same period was 199 with a total authorised capital of Rs 6,07,33,500.

The above new floatations include the following five big concerns: (i) East Anglia Plastics (India) Ltd.—Authorised capital Rs 1,00,00,000; (ii) Indo-Asahi Glass Co. Ltd.—Authorised capital Rs 65,00,000; (iii) Bengal Sugar Mills Ltd.—Authorised capital Rs 50,00,000; (iv) Parbati Cotton Mills Ltd.—Authorised capital Rs 50,00,000; and (v) Techno Products Ltd.—Authorised capital Rs 30,00,000.

The corresponding figures of public and private company registrations with their authorised capital for the first nine months period of 1955-1956 were 45 public companies with authorised capital of Rs 13,90,05,000 and 332 private companies with authorised capital of Rs 9,78,25,864.

The number of companies that went into liquidation during the said period were 47 public limited companies, 51 private limited companies and one company limited by guarantee.

Nineteen public limited companies with a total authorised capital of Rs 3,06,33,200 and 11 private limited companies with a total capital of Rs 35,50,000 were finally dissolved during the said period.

224 COMPLAINTS FILED

Two hundred and twenty-four complaints were filed against companies and directors involving 16 companies during the aforesaid period out of which 69 cases were for not filing annual returns as required under Section 32 of the Indian Companies Act, 1913, 74 cases were made out for not filing the Balance Sheets as required by Section 131-134 and 67 cases under Section 91A(4) for not maintaining the registers of contracts, four under Section 31B(2) for voting by interested directors, one under Section 282 for falsification of accounts and one under Section 283 for using the term 'Limited' without being duly incorporated under the Indian Companies Act, 1913. Apart from these, two cases under Section 631 of the Companies Act, 1956 for using the term 'Limited' without being duly incorporated, three cases under Section 282 read with Section 133(3) of the Indian Companies Act, 1913, one under Section 282 of the Indian Companies Act, 1913 read with Section 477A, 403 and 406 I.P.C., and one under Section 409 and 409-114 I.P.C. were also instituted. A large number of the above cases are still pending and out of 72 cases so far disposed of, 68 cases, 33 against companies and 35 against directors, have resulted in conviction.

BIHAR

In Bihar, three public companies with a total authorised capital of Rs 15,00,000 and 12 private companies with a total authorised capital of Rs 50,28,20,000 were incorporated while two public companies and two private companies with authorised capital respectively of Rs 35,00,000 and Rs 3,00,000 went into liquidation. The one giant floatation during this period in Bihar was Hindusthan Collieries Private Limited with an authorised capital of Rs 50,00,00,000.

ASSAM

In Assam, six private companies with a total authorised capital of Rs 22,00,000 were registered during this period.

ORISSA

In Orissa, two public companies with an authorised capital of Rs 10,00,000 and four private companies with an authorised capital of Rs 5,70,00,000 were incorporated during this period while two public companies and one private company with authorised capital of Rs 10,00,000 and Rs 2,00,000 respectively have gone into liquidation.

TRANSFER OF BANK ACCOUNTS FROM WEST PAKISTAN

In accordance with the Agreement on transfer of bank accounts, reached between the Governments of India and Pakistan in March-April, 1955, the balances in the accounts of the following categories of Account-holders as on February 27, 1951 (less any subsequent withdrawals) were to be considered by the Pakistan Government for transfer to India on application by the depositors:

(i) Individual evacuees (including minors not under the guardianship of courts) having accounts with banks in Karachi, Sind, Khairpur State, Baluchistan and N.W.F.P., in Pakistan.

(ii) Provident Fund accounts in the names of individual evacuee teachers of private institutions in West Pakistan.

(iii) Companies, firms and partnerships, which are 'evacuee concerns', having accounts with banks in West Pakistan.

Applications in the prescribed form obtainable from the Reserve Bank of India were invited from the account-holders concerned by June 30, 1956.

It has now been decided that such applications may be received by the Deputy Chief Officer, Department of Banking Operations, Reserve Bank of India, New Delhi, up to February 28, 1957.

AVOIDANCE OF DOUBLE TAXATION ON INCOME

The Indo-Ceylon agreement on the avoidance of double taxation of income between the two countries has been notified in an Extraordinary issue of the Gazette of India published yesterday. With this notification all legal formalities for giving the agreement the force of law in India and Ceylon are complete.

It will be recalled that talks between official delegations of the two countries took place in India in January 1956. The agreement, which was signed in Colombo in September 1956, was approved by both the Houses of the Ceylon Parliament. The Ceylon Government have notified the agreement in the Ceylon Government Gazette of January 18, 1957.

Assessments for the years ending March 31, 1953 and for subsequent years will be governed by this new agreement. For the two previous assessment years viz. the years ending on March 31, 1952 and March 31, 1951, relief will be available in accordance with the Income-tax (Double Taxation Relief) Rules, 1942, which held the field till January 26, 1950.

NEW OFFICE OF CHIEF CONTROLLER OF IMPORTS AND EXPORTS

The office of the Chief Controller of Imports and Exports, at present located in the Church Road Huts, New Delhi, will shortly move into the Multi-Storeyed Building on King Edward Road, New Delhi. The move will commence on Wednesday, February 13, 1957 and will be completed on Friday, February 15, 1957.

All communications from the public etc. will be received in the Church Road Hutments upto 3 p.m. on February 15, 1957, and with effect from the morning of February 16, 1957, in the Multi-Storeyed Building in room No. 12 on the ground floor.

DRAFT SPECIFICATION FOR OIL PASTE FOR PAINTS

The Indian Standards Institution has issued, for eliciting comments, a draft Indian standard specification for oil paste for paints, yellow ochre.

This draft standard prescribes the requirements and the methods of test for yellow ochre for oil paste for paints used in the manufacture of ready mixed paints.

Comments on this draft standard may be sent to the Indian Standards Institution 19, University Road, Delhi-8 before April 29, 1957.

INTRODUCTION OF DECIMAL COINAGE

Facilities for the exchange of the existing coins for decimal coins with effect from April 1, 1957, will be available at all treasuries, sub-treasuries, offices of the Reserve Bank of India, branches of the State Bank of India, the State Bank of Hyderabad and the Bank of Mysore.

Arrangements have been made for reasonably adequate stocks of ten, five, two and one naya paisa coins to be kept at these places for the purpose of issue to the public in exchange.

The public can, however, continue to use the existing one pice, half, one and two anna coins which will continue to be legal tender for three years to come.

There need not be any rush to the treasuries and banks for exchanging their holdings of small coins into the equivalent decimal coins; nor need there be any disappointment if some of the treasuries or banks run short of the stocks of new coins.

Exchange will, however, be allowed for four annas worth of existing coins or multiples thereof only, at a time. This will avoid any loss accruing to either party by the exchange.

The rupee will retain its present value, but it will be divided into 100 naya paisa, as against the existing division of rupee into 192 pies or 64 pice.

The existing eight anna and four anna pieces will also retain their value as half rupee and quarter rupee respectively and will continue to be used as the exact equivalent of fifty and twenty-five naya paisa respectively. New coins specifying their equivalent in terms of naya paisa will be minted and put into circulation only gradually.

N.P.C.C.'S BOARD OF DIRECTORS

The Government of India have decided that the number of Directors of the National Projects Construction Corporation Private Ltd., which was registered recently, will for the present be nine.

The following will be members of the Board of Directors: Chairman—Shri T. Sivasankar, ICS, Secretary, Union Ministry of Irrigation and Power; Members—Shri Kanwar Sain, Chairman, Central Water and Power Commission; Shri R. Narayanaswami, Joint Secretary, Union Ministry of Finance; Shri S. Venkataraman, Deputy Secretary, Union Ministry of Irrigation and Power; Shri N. P. Dikshit, Secretary, Public Works Department, Madhya Pradesh; Shri Harikrishna Nivas, Cheif Engineer (Irrigation), Bihar; Shri K. K. Kartha, Chief Engineer, Public Works Department, Kerala; and Shri D. N. Gupta, Chief Engineer, Public Works Department, Jammu and Kashmir; and Managing Director Shri R. K. Gupta, Officer on Special Duty, Union Ministry of Irrigation and Power.

The registered address of the Corporation will be: Block No. E, Plot No. 2, Jhandewala Estate, off Jhansi-ki-Rani Road, New Delhi.

DETERRING PROSPECTS OF INDUSTRIAL WORKERS

The Government of India have decided to introduce evening classes at important centres to help industrial workers better their prospects. In these classes, the workers will be taught shop arithmetic, blue-print reading and trade theory. About 10,000 workers are expected to benefit under the scheme during the Second Five-Year Plan period.

The scheme will be operated in centres like Bangalore, Bombay, Calcutta and Kanpur under the administrative control of the State Governments and in close collaboration with the industry.

The syllabuses for the training will be approved by the National Council for Training in Vocational Trades recently set up by the Government of India. The courses will be of two years' duration and classes will be held for two hours thrice a week.

A fee of Rs 2 per month will be charged from each worker attending the course.

Any industrial worker, who has been sponsored by his employer and who is sufficiently literate to follow the classes will be eligible for training under the scheme. At the end of the course there will be a trade test and successful trainees will be awarded certificates of training.

The Technical Education Committee of the Central Advisory Board on Education has pointed out in its report that the many, who occupy positions of responsibility in industry all over the world, owe their success to the evening classes.

EXPORT OF CHROME ORE

According to a trade notice issued by the office of the Joint Chief Controller of Imports and Exports, Government of India, Calcutta, export of chrome ore during 1957 through shippers and mineowners to whom allotments were made during 1956 will be allowed. Quotas will be released to them for quantity equal to the total of the quotas released to them during 1956. Export through the State Trading Corporation of India (Private) Limited, New Delhi, against contracts concluded by it will also be allowed, the trade notice adds.

*

WORLD OVERSEAS

(Continued from page 312)

influence on the building in oversea territories of new universities and training centres, notably in East and West Africa, the West Indies, Malaya, Singapore, and Hong Kong. Next to schools, buildings for health services were high in importance. These buildings ranged from big hospitals in the Gold Coast, Trinidad, Hong Kong and Aden to small rural dispensaries.

Consequent on the demand for more and better buildings, the governments of oversea territories were taking increasing interest in housing schemes. For example, Hong Kong was sponsoring co-operative housing schemes for locally recruited civil servants, and was undertaking large resettlement schemes for "squatters" who had crossed over from Communist China. Malaya had established a non-profit-making housing trust, and the Colonial Development Corporation had provided the initial finance for building societies in Singapore, Malaya, and Borneo.

*

WORLD OF FINANCE

(Continued from page 308)

and the balance is seen in augmentation of cash.

+

The statement of the State Bank of India for the week ended February 15 reveals a rise of Rs 4.51 crores in deposits to Rs 265.01 crores. Borrowings from other banks are shown at Rs 21.08 crores against Rs 21.15 crores and other liabilities, including inter-office adjustments, at Rs 1.14 crores against Rs 2.12 crores.

On the assets side, cash balances are higher by Rs 2.10 crores at Rs 18.03 crores. Investments remain almost unchanged at Rs 106.85 crores. Advances show a rise of Rs 1.05 crores to Rs 173.51 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 4.46 crores and "Bills Discounted and Purchased" for a decline of Rs 3.41 crores.

According to the returns of the Scheduled Banks for the week ended February 8, both demand and time liabilities have declined, the former by Rs 3.51 crores to Rs 676.24 crores and the latter by Rs 0.58 crores to Rs 463.82 crores. Borrowings from the State Bank are higher by Rs 2.53 crores at Rs 16.68 crores, while those from the Reserve Bank have shown a sharp rise of Rs 15.88 crores to Rs 96.39 crores. Cash and balances with the Reserve Bank are lower by Rs 1.30 crores at Rs 84.69 crores. Investments have moved down from Rs 361.27 crores to Rs 360.94 crores. Advances are shown at Rs 686.39 crores against Rs 669.14 crores; Inland Bills at Rs 114.42 crores against Rs 118.45 crores and Foreign Bills at Rs 53.44 crores against Rs 53.13 crores. Money at call and short notice stands at Rs 9.84 crores against Rs 10.35 crores.

+

During the week ended the 15th February 1957 Government of India Treasury Bills for Rs 15,25,25,000/- were sold in favour of the Reserve Bank of India.

BALANCE-SHEET REVIEWS

(Continued from page 304)

come-Tax Act in respect of new ships, commissioned during the year, will reduce the company's tax liability to the extent of about Rs 67 lakhs. This amount, together with Rs 11 lakhs written back from the Development Reserve created last year, has been provided, during the year, by way of special Depreciation amounting to Rs 78 lakhs.

The agency agreement between the company and Narottam Morarjee & Company expired on January 15, 1957. The question of the future managing agency of the company has been under discussion and an agreement on the broad outlines of a scheme for the new managing agency is said to have been reached. The proposed scheme provides for the managing agency of the company to be taken over by a private limited company, to be styled the Narottam Morarjee & Company (Private) Limited. The necessary arrangements, in this connection, are being finalised. Pending the appointment of the new managing agents, the administration of the company will be carried on by a Committee of Directors appointed in accordance with the company's Articles of Association.

£ R$

Rallis India

Rallis India Limited has again passed over the dividends on the Ordinary and Preference shares for the year ended 31st August. The result of the year's working, after charging all expenses and after providing Rs 7.56 lakhs for Depreciation, is a profit of Rs 13,16,241. As the form of accounts for the year varies from that adopted in previous years, the individual figures thereon are not directly comparable with those of the previous year. Because certain receipts (storage charges and factory services are examples) previously treated as reductions of the charges on the company's own goods, are now shown as separate items of revenue, the gross expenses appearing on the other side of the account.

It will be recalled that no Depreciation was charged in the accounts of the two previous years. While one year's depreciation has been charged on this occasion, there remain arrears of depreciation to the extent of Rs 13.39 lakhs.

According to the Directors' report, the formalities of the sale of the Calcutta office building are still not fully completed and the value of the building still appears in the balance-sheet under Fixed Assets.

£ R$

Rewa Coalfields

The rise in the working costs and the non-satisfactory supply of wagons are fully reflected in the working results of Rewa Coalfields Limited for the half-year ended 30th June, 1956. Both raisings and despatches have declined, the former from 183,555 tons to 176,705 tons and the latter to 180,614 tons from 186,060 tons. Although sales are higher at Rs 26.33 lakhs against Rs 23.55 lakhs, the net profit, before providing for Depreciation and Taxation, amounts to only Rs 3,36,080 against Rs 3,98,565 in the previous year. Apart from raising the Depreciation amount to Rs 1.13 lakhs from Rs 89,549, Taxation has been reduced to Rs 1.02 lakhs from Rs 1.35 lakhs and Development Reserve to Rs 30,000 from Rs 50,000. The dividend is reduced from 12½ to 7½ per cent.

£ R$

Talcher Coalfield

Despite a rise in raisings from 53,217 tons to 55,469 tons and in despatches from 53,673 tons to 55,651 tons, the Talcher Coalfield Limited has reported a decline in net profit from Rs 22,689 to Rs 14,635 for the year ended 30th September, 1955. After making sundry adjustments, there is still a debit balance of Rs 3.70 lakhs, which is carried forward.

According to the Directors' report, difficulties in obtaining supplies of sand have not made it possible to undertake stowing operations in the company's colliery. Possibilities of increasing output by other means are being explored.

£ R$

Thirumbadi and Kil Kotagiri Results

Both Thirumbadi Rubber and Kil Kotagiri Tea & Coffee Estates have maintained their dividends at 12½ and 20 per cent respectively for last year.

Thanks to the purchase of the Calicut Estate, the rubber crop harvested by the Thirumbadi Rubber Company is substantially higher at 813,698 pounds for the year ended 30th September 1956 as against only 323,000 pounds in the previous year. The average price realised is 148.12 cents against 137.62 cents For obvious reasons, sales have risen to as much as Rs 11.09 lakhs from Rs 3.64 lakhs. The net profit, before Taxation and Depreciation, amounts to Rs 3,63,172 against only Rs 1,79,433 in the previous year.

In view of increased profit, the directors have raised the Depreciation amount to Rs 1.14 lakhs from Rs 56,800; Taxation to Rs 32,321 from Rs 14,269 and General Reserve to Rs 99,995 from Rs 25,000. The crop for the current year is estimated at 715,000 pounds, to be produced at a cost of 80.03 cents per pound.

The Kil Kotagiri Tea & Coffee Estates have reported a crop of 342,560 pounds of tea and 223 tons of coffee as against 374,800 pounds and 2 tons respectively in the previous year. The tea crop realised an average price of 262.69 cents per pound against 252.08 cents, while the coffee crop fetched Rs 2-8 per point or Rs 192.31 per cwt. The net profit shows a smart rise to Rs 9,20,655 from Rs 4,07,303. Allocation to Depreciation has been raised to Rs 49,496 from Rs 28,293; Taxation to Rs 3.48 lakhs from Rs 1.47 lakhs and General Reserve to Rs 3.25 lakhs from Rs 1.00 lakh. The estimate for the 1956-57 tea crop is 680,000 pounds and for the coffee crop 115 tons.

Stock Exchanges

NOSE-DIVE

Watch-Dog Writes:

TRADING in stock markets has been characterised by a state of uncertainty during the week under review. Various doubts and fears, partly political and partly economic, have induced operators to be chary of taking a bullish view of the markets. Thus, in the absence of real support, markets have relapsed into their sagging tendency.

Sentiment on the Calcutta Stock Exchange continued to remain depressed and price movements were narrowly irregular.

Except a few selected scrips which continued to harden, the Bombay Stock Exchange presented rather another dull week.

The general pattern of trading on the Madras Stock Exchange remained dull. There was a tendency to lighten commitments at higher levels on the part of investors.

The London Stock Exchange presented rather an irregular appearance. The only feature was, that selective buying brought firm conditions in Industrial scrips.

On Wall Street, the Middle East uncertainty caused buying caution. Some quarters pointed out that business news at present was something less than bullish on balance

✱

Calcutta

Calcutta, Thursday Evening.

NERVOUS conditions were again in evidence on the local Stock Exchange during the past week when price movements were narrowly irregular in the absence of any sustained support. Although the market tried to look up occasionally, higher levels attracted renewed offerings; and the position was aggravated by the scramble for funds.

Various other factors also contributed to the depressed sentiment in the market. Mainly amongst these were, the news of the Securities Contracts Regulation Act coming into force with effect from the 20th February, fears entertained in some quarters with regard to the success of the forthcoming right issue by Indian Irons and the continued delay by the Controller of Capital Issues in giving permission to applications from companies for issuing bonus shares. Thus, with buyers few and far between, only redeeming feature of the week's prices registered an all-round fall. The only redeeming feature of the week's trading was the comparative steadiness of Tea shares although the turnover continued to be restricted.

The Giltedged market displayed a measure of steadiness. Though there was no marked expansion in business, the tone improved perceptibly, thanks to purchases by the Reserve Bank and the support extended by the Life Insurance Corporation to some of the long-dated issues. 3 per cent 1986 Conversion, after opening at Rs 73-12, improved toward the close to Rs 74-2.

Bank shares were more or less steady. United Commercial changed hands at Rs 56-4 to Rs 56-12, while United Bank of India "D" hovered around Rs 4-11.

The steady enquiry for Jute shares, that was noticed during the past few weeks, seemed to have been satisfied, probably due to the weakness of the jute goods market following the rise in production as well as stocks and the substantial decline in exports in January. There was a general inclination to book at the recent high levels. Howrah were marked down to Rs 18-8 from Rs 19-6; National to Rs 19-8 from Rs 20-Dalhousie to Rs 96 from Rs 99; Budge-Budge to Rs 105 from Rs 113 and Anglo-India to Rs 136 from Rs 139.

Coal shares continued to be listless as operators were reluctant to enter into commitments on fears of increase in the working costs of the mines following the recent award of the Appellate Tribunal. Burrakur met with some speculative buying upto Rs 21-5 from Rs 21-2 while Raneegunj were enquired upto Rs 11-5 from Rs 11. Bengal were a steady feature at Rs 462 with East Indian turning quiet at Rs 27 against Rs 27-4.

The continued absence of any definite improvement in the conditions of the piecegoods market adversely affected sentiment in the Textiles section where enquiry was limited. Kesoram were marked down to Rs 14-8 from Rs 15-14, while New Victoria hovered idly around Rs 1-15. Dunbar, after a long time, came in for business at Rs 191 against Rs 199.

Thanks to the announcement of the increase in the export quota allotment for 1956/57, Tea shares ruled comparatively steady although higher levels could not be retained till the close due to profit-taking. Turnover, however, continued to be restricted. Bateli changed hands at Rs 27-12 to Rs 28; Betjan at Rs 25-5 to Rs 25-8; Bishnauth at Rs 20-12 to Rs 21-4; Gohpur at Rs 23-2 to Rs 23-10; Hansqua at Rs 28-14 to Rs 29; Hasimara at Rs 28-4 to Rs 29 and Tezpore at Rs 20-4 to Rs 21.

After the lapse of a few weeks, Sugar shares came in for selective enquiry on expectation of better working results during the current season. Most prominent were Balrampore which were taken upto Rs 6-14 from Rs 6-8 and Ramnugger Cane upto Rs 25-8 from Rs 25-4. Champarun changed hands on the ex-dividend basis at Rs 21-8 to Rs 21-12, while SKG moved narrowly between Rs 11-2 and Rs 11-4.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons. Apart from settlement considerations, the announcement with regard to the Securities Contracts Regulation Act coming into force with effect from the 20th February caused nervous liquidation, resulting in the price of Indian Irons dropping down sharply to Rs 25-12 from Rs 28-8 quoted in the previous week, to finish the week at Rs 25-14. In sympathy, TEXMACO were marked down to Rs 18-14 from Rs 20-5; Jessop at Rs 26-9 from Rs 27-14; Braithwaite to Rs 28 from Rs 28-3 and G. K. Williams to Rs 23-15 from Rs 24-7. Indian Galvanizing were, however, a steady feature at Rs 19-7 with Kumardhubi at Rs 9-13.

Trading in the Miscellaneous was generally dull and featureless. Despite a slight recovery in the metal price, Indian Copper shed another two annas at Rs 3-5 due to renewed profit-taking. India Steamship received good support at Rs 10-2 to Rs 10-4. NICCO were well maintained at Rs 20-9 and so also Gillanders at Rs 11-4 and Shaw Wallace at Rs 11-7.

Among Paper shares, Orient fluctuated rather erratically between Rs 33-2 and Rs 31-9 due to alternate buying and selling, to finish the week at Rs 30 Titaghur were marked back to Rs 38-2 from 38-12 with India Pulp easing off to Rs 22-10 from Rs 22-12.

Elsewhere, Indian Cable lost further ground, to quote Rs 29-2 against Rs 29-10 due to renewed selling pressure. Metal Box were cheaper at Rs 27-8 against Rs 29; Martin Burns at Rs 23-10 against Rs 25; Dunlop Rubber at Rs 25 against Rs 25-8; National Carbon at Rs 25-13 against Rs 26-6; Indian Aluminium at Rs 13-10 against Rs 14 and Osler at Rs 7-12 against Rs 8-2. BBP were nearly maintained at Rs 2-12, while IBP changed hands at Rs 34-6 to Rs 34-12.

SOUTH INDIAN MARKETS

(Continued from page 321)

Consequently, the demand for Indian Oil has declined.

In sympathy, Groundnuts quietened. May delivery opened at Rs 164 and, after touching a high of Rs 166-6, eased off at the close to Rs 163. Similarly, February delivery started at Rs 169 and closed at Rs 167. Ready Bold was quoted at Rs 34 and Groundnut Oil at Rs 18-8.

Trading in the Linseed section was dull. May delivery began at Rs 29 and, after touching a low of Rs 28-4, finished at Rs 28-5. Ready was quoted at Rs 29-14 and Linseed Oil at Rs 15-14. The all-India first estimate of Linseed for 1956-57 puts the current year's area at 2,728,000 acres as against the adjusted corresponding estimate of 2,461,000 acres for 1955-56. This shows and increase of 267,000 acres.

In the Cottonseeds section, February delivery started at Rs 97-8 and finished at Rs 97-12. Similarly, May opened at Rs 98-8 and finished at Rs 98-12.

✱

Gold & Silver

In the bullion market, Silver rallied fully after a discouraging start, while Gold was more or less maintained, partly in the absence of Kolar Gold offerings.

Arrivals and offtake of silver were estimated around 11 and 17 bars respectively. The rate for forward delivery moved between Rs 185-1 and Rs 186-0 during most part of the week, to finish the week lower at Rs 184-14. Ready, after touching a high of Rs 187-4 from Rs 185-5, finished at Rs 185-10.

Arrivals and offtake of Gold were balanced around 3,000 tolas. The rate for forward delivery moved between Rs 108-6 and Rs 108-9-6, to finish the week at Rs 108-3. Ready was quoted at Rs 108-13—the highest touched being Rs 109-4. Sovereign ruled firm at Rs 69-12.

✱

Yarn

The Yarn market remained inactive with only a moderate business passing. The stringency in the money market and the sluggish conditions in the rayon cloth market were the main contributory factors. Prices, as a result, declined further in the absence of support. Operators were generally inclined to wait and watch further developments.

In sympathy, prices in the Staple-Fibre yarn section declined further from last week's levels.

The Cotton Yarn section also ruled quiet despite a marked improvement in raw cotton during the past few days.

✱

GATEWAY MARKETS

(Continued from page 316)

Ginger

Heavy arrivals have told adversely on the price of Ginger, the rate in Kozhikode having declined to Rs 340 per candy from Rs 352. Although almost half the crop, i.e. about 7,000 tons, have been marketed in the past three months, daily arrivals continue to be heavy in the South. Consequently, there is a general reluctance to augment stocks.

Export enquiries as well as internal demand for ginger are, however, excellent, the main buyers being Aden, USA and the Middle East. Jamaica, Formosa and China continued to be India's competitors in the trade.

✱

Groundnuts

Steady conditions have continued to prevail in the Madras Groundnut market. The rate for superior oil-quality seeds is quoted around Rs 161 and the bold variety at Rs 155 per candy. Small crushers continue to be the main buyers although they are taking only small quantities. Arrivals, last week, were estimated around 200 tons.

In the Groundnut Oil section, the rate for the ready position fluctuated between Rs 317 and Rs 320 per candy. Activity is restricted in the forward section.

✱

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides continued to be moderate, but prices remained unchanged. The Buff Hides section ruled quiet with no change in prices. There were moderate arrivals of Cow Calf and Buff calf, but there was very little change in clearances and prices.

In the export section, trading became difficult as buyers in the UK were making all possible efforts to bring down pices.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were fair and there was a steady clearance. Prices were unchanged.

On the export front, only small business was reported done. There was a slightly better tone in light weights. In the Sheep skins section, conditions were quiet and, prices were about 6d less than those ruling at the beginning of the year in better class varieties

The market for Raw Hides ruled steady.

Prices in the Raw Skins market were unchanged to slightly lower.

★

THE PERSONALITY OF INDIA'S MIXED ECONOMY—X

(Continued from page 306)

more of the total national income without any thought for its size nor of the other claims upon it. It is not easy in these conditions to instil a proper sense of what is essential for welfare or what is practicable in a given set of circumstances. There is also the fact that the problem is appreciably different as between rural workers and industrial workers.

It is possible that the people in rural areas would be able to readjust their ideas of what is possible, once the present schemes of land reforms and development of cottage industries have been carried out. For, these schemes, unlike the labour policy in the urban areas, will give the village folk a scheme of life, instead of mere work and wages; and, against the background of want of experience in the past, they would be better able to judge whether it satisfies their real needs. But the case of the urban worker is different, since money wages blot all other matters out of the picture. There has not been time enough for the Indian individual worker even to understand the limits of his wage demands, let alone the question of their place in his life as a whole. But much can be done toward a reorientation of his thoughts if he can be told by influential labour leaders that the trend of modern socialist thought is to reduce the emphasis on the money income and increase the importance of what are misleadingly described as the non-economic satisfactions of life. The new movement, which will be examined in detail in the next article, is the result of the contradictions between socialism, on the one side, and, on the other, the trade unionism which is the sheet anchor of the socialist movement. India must benefit from this movement without having to go through the travail of it.

WORLD OF COTTON

(Continued from page 317)

met with good interest although buyers appeared cautious in their commitments, reflecting the dull trend in the textile market. Enquiries were mainly for 197/3, 0394, 320F and the new crop Vijay and Surti styles.

On the export front, enquiries were mostly confined to Oomra Deshi and Bengals, while other varieties were neglected due to the prevailing high prices.

In foreign cottons, some business was reported done in spot lots of American cotton. Egyptian and Sudanese varieties ruled steady, but neglected.

Following rates were quoted:— Bengal Rs 680 to Rs 750; Oomra Rs 780 to Rs 800; Dhollera Rs 730 to Rs 750; Jharilla Rs 790 to Rs 810; Karnak Rs 3,050 to Rs 3,200 and American 1 1/8" Rs 1,350 to Rs 1,375.

×

CROP REPORTS:

The pace of the new crop arrivals is reported to have considerably declined in Khandesh, the Punjab and Vidharba, as almost 70 per cent of the crop in these areas has been marketed. Arrivals are also less in Madhya Bharat. The season has ended in the Punjab, while it has yet to start in Gujerat and in many places in Saurashtra. The season will start in Karnatak in April. It appears that about 23 lakh bales have so far been marketed and about 15 lakh bales more will be marketed in the coming two months.

×

STATISTICS:

Exports by rail from 1st September 1956 to 14 February 1957 were 153,610 bales. Estimated mill consumption in Bombay during the same period were 600,559 bales as against 538,987 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 14th Februray 1957, were 527,154 bales as compared to 493,242 bales on the corresponding date of last year.

×

KARACHI COTTON:

The Karachi Cotton market ruled quiet with prices showing an easier tendency. The easiness was due to the recent release of cotton for export by the Government of India. It was feared that foreign countries like China and Japan, which had lately been in the market, would now buy less of Pakistan cotton. There were, besides, reports that Hong Kong, which usually purchases a sizable portion of Pakistan cotton, had contracted to buy 60,000 bales of American cotton. These factors let loose a selling spree which brought down prices.

×

NEW YORK COTTON:

In the New York cotton market, futures declined under the leadership of nearbys where increased liquidation and hedging encountered only trade buying at scaledown limits. Expectations of further increase in certified cotton stocks was a depressing factor in March with switching from that position to near-May fairly extensive. Middling Spot was quoted at 35.35 cents per pound.

×

CLOTH AND PIECEGOODS:

The Bombay Piecegoods market took a slight turn for the better during the past week. Demand for superfine varieties, poplins etc., was more pronounced, while the offtake of medium and coarse qualities also improved. Prices, however, remained unchanged. In view of the adequacy of supplies in the consuming centres, dealers are confident that the offtake will improve further in another fortnight.

On the export front, scattered enquiries were reported. Sudan evinced fresh interest, while East Africa also accounted for modest business. The UK accounted for some business in grey goods. Enquiries were also reported from Hong Kong. Fresh offers are also reported from Burma. In view of the export commitments with Burma, shipments to that country until June next, are expected to be of the order of 6 million yards a month. On the whole, there are indications that the export performance, during the current year, will be better.

✱

OLYMPUS

(Continued from page 318)

and why go beyond that. The answer is, firstly, if we are going to dig up the past, ignoring present reality, why should we not begin at the beginning so that the question of aggression by Pakistan is well and truly thrashed out? Secondly, it is all very well for somebody to say: let us take the threads where we left them and make Pakistan remove its troops now, (troops it ought never have sent there and troops which, in any case, it should have removed long ago) and then let us get a move on. This is what The Manchester Guardian suggests, condescendingly conceding that India's case is "strong". India cannot be made to keep its part sponsoring the January resolution of the bargain if Pakistan does not keep its part for eight years and finally says that it is now willing to consider it. Mr Urutia, who seems to have done some research of his own about the dispute after —it would have been better if he had done it earlier—now concedes that the desire to hold a plebiscite is not an obligation. If this piece of enlightenment had come to him in January, he could not have been a signatory to the resolution he sponsored with others. Secondly, and more importantly, he now says that the Security Council and the UNCIP recognised the "de facto sovereignty of India over Kashmir and had never accepted the legality of the presence of Pakistani troops in Kashmir". It is no mere quibbling to ask that the Security Council should enforce on Pakistan the consequences provided in the character for such acts of violation of sovereignty of another country. It is of the essence of the principles on which the UN stands for that this should be done.

So, the first alternative that India would suggest is that, following Mr Urutia's own logic, we should go back to the root of the matter. Much damage has been done by trying to bypass the UN's plain duty in the matter, in a misconceived effort at solving the issue politically on grounds of expediency. It cannot be denied that India shares the responsibility for the issue thus getting out of focus, but in extenuation it may be pleaded that our desire for a settlement made us yield ground where we ought not to have yielded any. But, alternatively, India is prepared to consider new ideas. India agrees that there is an element of inconsistency in the latest resolution that at once pre-

✱

BRITAIN'S ADVERSE TRADE BALANCE

(Continued from page 309)

from these defensive measures offset to some degree the effect of the adverse balance on the gold reserve, so that the outflow of gold during January was relatively moderate. The rate remained in the close vicinity of its parity of $2.80, and forward rates moved in favour of Britain. Had it not been for the dollar facilities, sterling would have been distinctly weak under the combined influence of the adverse trade balance and an increase in distrust. Gratifying as the steadiness of sterling is from more than one point of view, it would be a dearly-bought blessing if it were to generate a false feeling of security. Possibly a further decline of the gold reserve in the absence of the dollar facilities might have administered to Britain a much-needed shock, of the kind that on more than one past occasion stirred the British people into a supreme effort in face of an acute danger. Now the danger is camouflaged behind the screen of the International Monetary Fund dollar facilities. So the British Trade Unions think they can afford to continue to their "everybody for himself" attitude.

Official spokesmen and Press commentators are confronted with dilemma. In order to prevent the development of a false feeling of security, they ought to take every opportunity to emphasise that the gold reserve has now declined below the danger line, even if the published figures are artificially raised by borrowed dollars. Possibly by taking this line they might mitigate the pressure for higher wages by making the workers realise that the fundamental position remains precarious. On the other hand, such a display of pessimism might accentuate distrust in sterling, as a result of which foreign holders of sterling would remain reluctant to replenish their holdings and foreign importers might hesitate before placing orders.

In reality there is no need for indulging in double-talk in face of this dilemma. The dollar facilities have removed the immediate danger to sterling. Foreign holders are perfectly safe in replenishing their balances, and foreign importers are perfectly safe in ordering British goods, because sterling may be considered safe at any rate during the spring and the summer of this year. On the other hand, it is wrong to pretend that the fundamental position is sound. The warning that the improvement brought about by the dollar facilities is essentially on the surface could not be repeated too often or with too much emphasis. The fact that, taking the long view, sterling remains vulnerable need not worry either foreign holders of sterling or foreign importers of goods, because they are well in a position to liquidate their commitments before the advent of the next acute sterling crisis. On the other hand, the realisation in Britain of the long-term dangers might go some way towards bringing about a much-needed improvement of the fundamental situation, or at any rate a prevention of its further deterioration.—(Copyright).

tends to stay within the terms of previous resolutions and goes out of it. What India would, therefore, welcome would be the reconsideration of the whole question on a political level in the light of present day reality. In other words, the milestone round Mr Jarring's neck would be not new ideas, but the intolerably distorted past history. Despite all that has happened in the last two months, something could yet be salvaged if Mr Jarring is sent to India and Pakistan with untied hands, with full freedom to negotiate a settlement between the two countries, taking all facts into account. But that is possible only if the Security Council does not start on the assumption that India's sovereignty can be treated as a matter of no consequence, first by the condonation of Pakistan's aggression and, secondly, and more provokingly, by suggesting stationing foreign troops on our soil. There is a way out of the Kashmir problem which the moderate elements in both countries would accept. And that way out can be found only if Mr Jarring comes to India with free hands and with no time limits and other factors likely to restrain his initiative in considering other solutions and room for manoeuvre in negotiations.

The Call To Save

As citizens of India, you are called upon "to work wholeheartedly for the full and timely realisation of the tasks, targets and aims of the Second Five Year Plan."

The Plan has been embarked upon. Its success depends upon your providing capital for its working. In this effort no amount is too small—the man who saves a rupee and the man who saves hundreds—both are rendering national service.

Save as much as you can and entrust your savings to the nearest office of your Bank. In doing so you will help to build a new India and also create a valuable estate for yourself and your family.

The State Bank's local head office at Calcutta, one of the more than five hundred offices waiting to take care of your savings throughout India.

EDUCATION FOR OUR CHILDREN

The Second Five Year Plan affirms that "by the end of the Second Plan, no village with a population of 500 or more should be without its own school". Thus India prepares to tackle its overbearing problem of illiteracy.

Of the sum of Rs. 330 crores allocated to Education in the Second Five Year Plan, no less than Rs. 82.6 crores have been assigned to the development of primary education.

Within ten years, it is expected, there will be free compulsory education for all children under 14 years of age.

In the spread of education to our numerous villages, paper will play an important part. In schools all over the country paper will provide the means for communication and instruction.

Share Market's Slant on TTK

***Investment Gossip*:**

A share-broker, who scrupulously confines himself to genuine investment business, wished to know of me what Mr T. T. Krishnamachari's chances are at next week's election. He is sure to get elected by an overwhelming majority, I replied.

My confident forecast did not seem to cheer him. So, I asked him: "why, are you not pleased"?

He evaded my question and posed another on his own account: "Don't you think that T.T.K. would lose a large number of middle-class votes in his constituency? The middle-class investors preponderate in the present state of the capital market. And they find, for no fault of their own and no fault of the concerned companies, their hard-earned money laid out in carefully chosen shares has been wiped out at least to the extent of 25 per cent."

I asked my friend if he considered that T.T.K. was to blame for the doldrums in the share markets.

"I cannot help thinking so", he replied timorously. And, after a moment, he continued with marked assertiveness:

"Everybody—that is, anybody who has a share-holding—blames T.T.K.'s mid-year budget as the beginning of the rot. His subsequent speeches are considered even more blameworthy. Why should a finance minister speak so much and so often and with so little thought of its effect on the sensitive share market and on the shy capital market?"

"Don't forget that this is election time?" I argued.

But my friend butted in with the remark that a finance minister has such heavy responsibilities that he must keep under control the politician in him.

"I agree with you there", I continued. "Have you, however, read the full reports of his speeches? Is not the burden of his song one of determination and optimism for the success of the Second Plan? Is it not part of the Finance Minister's duty to arouse popular enthusiasm for Government's constructive programme? Is it not incumbent on him to show that the Second Plan is ambitious but practicable? Is it wrong to point out the difficulties with regard to the resources and then to convince the public that, given cooperation from every side, the country would mobilise the requisite resources?"

I concluded that T.T.K. had been doing just this. "If, incidentally, he had to expound the Congress's concept of a socialistic pattern of society, this was also what was expected of the Finance Minister."

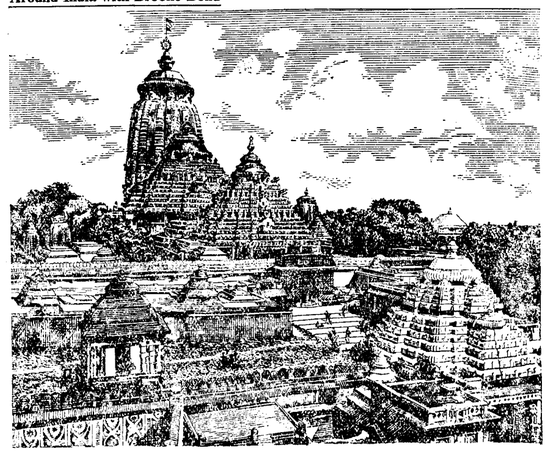
I do not think that my words provided any sort of reassurance to my friend. He left mumbling that the Finance Minister's references to the Reserve Bank and the Imperial Bank were not in good taste; that this kind of thing was not done; and that talk of three and four budgets year was sheer petulence.

On second thoughts, he returned and said: "The business community were looking upon T. T. K. as their friend and godfather. So, his recent utterances have been the most unkindest cut to them. But I agree with what you have been saying in this column about the necessity to distinguish between the interests of Big Business and those of the investors."

£ R$

***Investment Notes*:**

The Government of India are reported to have turned down the terms proposed by the Metal Corporation of India for the conversion of Deferred shares into Ordinray stock in the ratio of 3:1. They feel that the rate of conversion of 5 deferred shares for one Ordinary share is fair and reasonable on consideration of the relative values of both classes of shares.



It is learnt that Shivrajpur will not take a decision on the bonus issue until the Budget, expected in May.

Lakshmi Mills, Coimbatore, have agreed to accept letters of renunciation in respect of the new issue till March 23, 1957.

Sri Sarada Mills have proposed to issue 1,152 equity shares and 1,500-7 per cent Cumulative preference shares, both of Rs 100 each, to existing ordinary shareholders

Around India with Brooke Bond

The Temple of Jagannath—Puri

Puri is famed for the temple of Jagannath—the Lord of the Universe. Built some time in the 12th century A.D., the temple consists of a main shrine—200 ft. high—and a number of accessory temples. Legend has it that the temple is the handiwork of Viswakarma—the divine architect. The Puri temple attracts a stream of pious Hindus throughout the year. But the climax comes in July every year when lakhs of people from all parts of India gather to witness the great chariot festival.

Around here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop. Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Textile and Sugar Results

***Balance-Sheet Reviews*:**

THREE textile mills from Bombay —New Great, New City and Empire—have presented their reports and accounts for the year ended 31st December, 1956. All the companies have maintained their dividends, New Great and New City at Rs 10 per share and Empire at Rs 3 per share.

Despite an increase in sales from Rs 1.77 crores to Rs 1.93 crores, the New Great Eastern Spinning and Weaving Company has shown a slight decline in profits to Rs 5.68 lakhs from Rs 6.31 lakhs in the previous year. This is mainly due to the fact that the working of the company has been affected by the increase in excise duty, taking effect from 1st March, 1956 and a further heavy incidence from 1st September, 1956, leading to a widespread disruption of trade and rapid lowering of prices, not withstanding the company's willingness to accept a part of the increase on their own account.

Out of the profits, no provision for Taxation has been made as it is not required on account of the

HIGHLIGHTS

Not long ago, the Centre and the States paid no more than 3 per cent on the loans they raised.

Recently, however, the Centre has been offering 3½ per cent (even 3¾ per cent); and the States 4 per cent.

Of what avail is interest at 4 per cent if a moiety of this is wiped out by the loss on capital through depreciation in the market quotation of the loan?

Year after year, the thousands of people who trust the Government with their moneys find themselves in this unhappy predicament.

All of which is bad business and poor salesmanship.

Government must have robust faith in their credit and firm determination to cherish and uphold that credit as expressed in the prices of Government securities.

There are tried and proved techniques whereby this faith and this determination can be demonstrated to the benefit of Government and investors alike.

Such techniques are appropriate in the context of the new policy which should, once and for all, banish defeatism and opportunism.

The signs and omens, the manifestations and repercussions of the new policy are examined in this week's Leading Article.

unabsorbed depreciation allowances of the past years. Depreciation provision has been made at Rs 99,100 as against Rs 95,000. Allocation to Reserve Fund is reduced by Rs 25,000 to Rs 75,000 and that for Pension and Gratuity from Rs 25,000 to Rs 11,700. Capital expenditure to the extent of Rs 2.50 lakhs was incurred during the year in the progressive modernisation of the spinning machinery of the mill and on building charges.

The working results of the New City of Bombay Manufacturing Company Limited, for the same year, are somewhat encouraging. The gross profit has improved from Rs 5.11 lakhs to Rs 7.44 lakhs. The directors have provided Rs 1.30 lakhs for Depreciation as against Rs 1.35 lakhs. Allocation to General Reserve is increased by Rs 1 lakh to Rs 2 lakhs. As in the case of the New Great, no provision for Taxation has been made from the year's profit. Capital expenditure of Rs 1.57 lakhs was made during the year, of which Rs 1.20 lakhs was spent on installation of spinning machinery, the Government of India having approved the installation of 48 further looms.

The Empire Dyeing and Manufacturing Company has made a gross profit of Rs 3.68 lakhs during the year as against Rs 3.86 lakhs in 1955. Appropriations are as follows (figures in lakhs Rs):—

	1956	1955
Mg. Agents' Commission	0.37	0.38
Depreciation	0.35	0.35
Taxation	0.87	1.00
Reserve Fund	0.20	0.20
Gratuity	0.10	0.10
Carry-over	0.08	0.05

The directors have, in their report, stated that the year 1956 was a period of increase in production costs; but the plant was fully occupied for the greater part of the year.

£ R$

Bhopal Sugar

The Bhopal Sugar Industries Limited has reported excellent results for the year ended 30th September, 1956. The net profit for the year amounts to Rs 8.66 lakhs after providing Rs 96,279 for managing agents' commission and Rs 1.33 lakhs for Depreciation, including extra depreciation and Development Rebate on machinery. After transferring Rs 12,406 from the Investment Reserve Fund and Rs 25,000 from Doubtful Debts Reserve, the directors have provided a sum of Rs 5.50 lakhs for Taxation, which includes the estimated provision for previous years, the assessment and appeals of which are pending. The Ordinary dividend has been stepped up from Re 1 to Rs 1-8 per share.

The total quantity of cane crushed was 2,031,425 maunds, producing 68,581 bags of sugar. Sales total Rs 48.27 lakhs. As against the paid-up capital of Rs 30 lakhs, Reserves stand at Rs 9.20 lakhs.

£ R$

Changdeo Sugar

Shree Changdeo Sugar Mills Limited has reported a substantial decline in earnings for the year ended 30th September, 1956. After providing for full Depreciation and Development Rebate aggregating Rs 12.45 lakhs on the new machinery installed, the net profit is only Rs 1.49 lakhs as compared with as much as Rs 11.35 lakhs in the previous year. The dividend is, however, raised from Rs 2 to Rs 5 per share.

Sales of sugar and molasses have totalled Rs 57.51 lakhs as against Rs 56.81 lakhs.

£ R$

New Swadeshi Sugar

Afte providing Rs 1.49 lakhs (Rs 53,000) by way of managing agents' commission; Rs 2.50 lakhs (Rs 1.15 lakhs) for Depreciation; Rs 3.02 lakhs (Rs 1.43 lakhs) for Taxation and Rs 20,000 (same) for Welfare and Charities, the profit of the New Swadeshi Sugar Mills Limited has amounted to Rs 2.72 lakhs for the year ended 30th June 1956 as against Rs 2.51 lakhs in the previous year. The dividend is maintained at Rs 20 on the Ordinary share of Rs 100 each.

Sales have fetched Rs 76.90 lakhs as against Rs 37.44 lakhs. Total quantity of cane crushed amounts to 39,30,875 maunds—a record figure in the company's history. The company has obtained a licence from the Government of India for increasing the crushing capacity to 1,300 tons of cane per day.

Authority's Attitude to Giltedged: Exit Defeatism and Opportunism

Indian Finance
Established 1928
March 2, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

WHILE, under the impetus and inspiration of Mr T. T. Krishnamachari, the Reserve Bank has, in connection with the bill market scheme, effected such liberalisation as has endowed the banking system with the potential resources, which can be converted into actual resources in response and in proportion to the demands, there are abundant and gratifying omens that analogous changes of a favourable kind, in compliance with pressure and advice from the same source, are being carried out in respect of giltedged policy and open market strategy. There is an element of relationship between the new policy vis-a-vis the banking system and the new policy vis-a-vis open market operations. The link is that both the policies are calculated to augment the availability of central bank credit to the scheduled banks.

The difference in purpose is even more significant. The liberalisation of the bill market scheme is designed in the interest and for the benefit of the private sector. The liberalisation of the open market strategy is designed in the interest of the public sector. The first has to do with the working capital requirements of industry and trade in the realm of free enterprise. The second is concerned with the capital needs of the projects promoted in the sphere of State ownership.

The Leading Article in the last issue examined the first question with special reference to the implications and likely effects of the new policy and advanced a suggestion for ensuring the materialisation of the expected result. A similar study is now called for with regard to the significance of the new open market policy.

The new policy may, in brief, be described as the reversal of that which had held sway for over five years. On November 15, 1951, to be exact, the Reserve Bank announced a rise in the Bank Rate and coupled it with a declaration which amounted to a virtual cessation of open market purchases of securities. In the Bank Rate Supplement issued by Indian Finance at that time, we questioned the competence, and doubted the wisdom, of the Reserve Bank in thus setting an openly proclaimed limitation on the wide charter of open market strategy conferred by the Reserve Bank of India Act.

The limitation has remained in force till recently. The immediate effect of that policy was a disatrous disruption of giltedged values. During all this period, the Reserve Bank was mainly a seller of securities in its open market operations; and, as and when it did buy securities, it insisted that the seller should buy from it other categories of securities for a correponding amount. Soon after the initial landslide, the Reserve Bank indicated that prices had declined low enough, and that stabilisation at such low levels was desirable. 3 per cent 1986 conversion loan, the barometer of the giltedged market, suffered a fall from Rs 96 to Rs 81 and was stabilised roundabout the latter price. Over a year ago, it suffered another calamitous fall until the Reserve Bank indicated its readiness to support the price at Rs 73. Of the many vicissitudes through which giltedged in India had passed since the first World War, the period between mid-November 1951 and end-December 1956 constitutes the cruellest era for the investor in government securities.

During the few days when the list for a new loan remains open, the investor is coaxed and cajoled; he is called upon to subscribe in the name of patriotism; and even an appeal from the universally admired and loved Prime Minister is pressed into service. Once the list for the loan is closed; official attitude to the investor is: "Let him wince. How is that our concern?" This blend of defeatism and opportunism was the giltedged policy on which was based the open market strategy of 1952-56.

We have reasons to think that Mr Krishnamachari will not countenance, in the Reserve Bank's open market policy, any outlook of defeatism or any attitude of opportunism. He realises that the worst sufferer in such a regime is the Government; and that, if the large market loans needed for the implementation of the Second Plan were to be successfully pilotted, Government's policy with regard to giltedged should be self-confident and confidence-inspiring; that, in this view, what benefits the investor can alone benefit the Government; and that, conversely, what hurts the investor must be greatly damaging to the Government.

Of this change from defeatism to optimism, and of Authority's awareness of the mutual ties between the investors and the Government, there has been convincing testimony in the last three months.

The first emphatic evidence of such a new attitude was the support given to State Loans which, in spite (and, in some cases, because of) their spectacular success, performed a nose-dive and, for a few days, had all the look of being utterly orphaned. Mr C. Subramaniam, Finance Minister of Madras, took the initiative in this matter and approached the Finance Minister for permission to divert to open market purchases such amount as was in excess of the target originally fixed for the State Loan. The example of Madras was quickly followed by other States; and those who had subscribed for the Loans were soon able to feel reassured that Government support for the maintenance of prices would be forth-coming when needed. Not all the State Finance Ministers are verst in the rites and schooled in the virtues of open market strategy; and it is up to the Reserve Bank and the Finance Ministry to put them wise in this respect so that, in regard to future State loans, the Reserve Bank could, without delaying formality, take timely steps to implement open market strategy.

The next significant evidence of the new giltedged attitude is the Reserve Bank's declaration of its willingness to buy securities maturing up to 1961 without the seller being obliged, as hitherto, to buy back aught else in return. This was soon followed by unofficial hints that the Central banking institution would be prepared to buy, without conditions, also securities of any maturity. That the Reserve Bank has, in fact, bought large parcels of securities, is indicated by the substantial rise in the Bank's Investments in the weeks ended February 15, and 22.

The same solicitude for the well-being of giltedged is discernible in the limited character of the higher cost of Central bank credit. The four per cent interest applies only to scheduled banks and definitely excludes the credit extended to the Government on the one hand and to co-operatives on the other. The recognition of the likely effects of such a selective and flexible control of interest is responsible for the brave showing which giltedged securities have made throughout February.

The new policy has, thus, the following facets: (1) It is recognised that open market strategy can no longer be confined to Central Loans, but must also embrace State Loans; (2) State Finance Ministers are being educated in the uses and techniques of such a strategy; (3) Open market strategy has to abandon the thesis that the Reserve Bank will buy securities only on the basis of a "swap"; (4) Likewise the thesis that the Reserve Bank will buy only very short-dated securities has to be discarded; and (5) If open market strategy is to be effective, it must be set in motion at the right time, in vigorous style and on an impressive scale. The aim, the way and the goal of such a strategy is robust confidence in the credit of the Government and determination to cherish, defend, uphold and support that credit.

This confidence and this determination must not waver or falter or be fitful. Both must have an abiding quality and must remain unaffected by foul weather. The faith that the morrow will surely bring the fair weather must come natural to those who have made a close study of the trends and developments in this respect during World War II.

Monetary authorities, so imbued with this faith, will soon find, to their advantage, that open market strategy designed to uphold and support giltedged prices does not necessarily or in all circumstances mean only open market purchases. Readers of Indian Finance will be able to recall the occasion when and the circumstances on account of which giltedged prices were not only supported, but greatly improved upon, by open market sales of securities. That is to say, if Authority evinces readiness to buy securities to the extent required to make its policy effective, this very intention, on being suitably publicised, will greatly reduce the magnitude of the purchases that need to be made.

Operating from this position of strength, the stage is soon reached when the investors' confidence is so reinforcd that they emerge as buyers on a steadily increasingly scale. The pressure of buying must be fostered to become more broad-based. Then is the time to offer a suitable type of security through the tap. The sales through the tap should be closely watched; and, when conditions are propitious, the tap-rate must be stepped up. This would soon bring about conditions warranting a further increase in the tap-rate. Tap sales will snowball by this process; and, in appropriate stages and by appropriate margins, the stepping-up of the tap-rate must continue.

Those who are now in the Finance Ministry and at the Reserve Bank at the level of policy decisions may not be aware of details of the two experiments carried out in the first half of the forties with striking results and on a vast scale. The credit for the first goes to Sir Jeremy Raisman who applied this techni-

que to 3½ per cent undated stock; and that for the second goes to Sir Archibald Rowlands who applied the same technique to 3 per cent 1970-75 loans, the prices in both cases being stepped up from Rs 96 to Rs 100, and the tap sales accounting for the disposal of considerable parcels of these stocks.

It is not as generally known as it should be that the sums received through tap sales on the basis of this ascending grade of rates form a significant proportion of the total amount which Government succeeded in mobilising from the market first for defence loan purposes and later as part of the anti-inflationary programme.

Conditions as created by the new outlook on giltedged and by the new concept of open market strategy are, we believe, favourable to the successful revival of techniques of tried and proved worth. As our main argument for success attending the formulation of confident policies and the execution of confident operations, we should say that Mr T. T. Krishnamachari is not the kind of Finance Minister who will in any way associate himself with anything that is faint-hearted or half-hearted.

Sober Counsel

Mr O. T. Jenkins' Presidential speech at the Bengal Chamber meeting must have left an unusually pleasant impression on the listeners. It certainly does on us. There are a few highly controversial issues. These are bound to be there, for the attention of businessmen and Government, and to the extent references to these stimulate constructive thinking and self-criticism in others, they always add content and flavour to a responsible speech. This time the very range of Mr Jenkins' coverage is enough to produce an inviting picture of the economic future of West Bengal. He is not averse to staff and labour amenities on the scale of Sindri and Chittaranjan, which foreign visitors praise and regard as the best investment against the spread of communism. Only, the ascent to these levels must be accompanied by a corresponding rise in productivity. No one can quarrel with the plea that after a certain stage, wage rises must serve as incentives to production and offer special benefits to the more competent and hardworking.

Equally praiseworthy is the Chamber President's concern for efficiency. No general survey seems to have yet been made of the comparative efficiency of office and manual workers between different parts of India; for the present, we have to accept the findings of one who has ample opportunities to form reliable impressions. And comparative output is invariably an unmistakable clue. This problem of efficiency among workers cannot be presented in a more appealing fashion: the large presence of the inefficient is the measure of the exclusion and frequently starvation, of the efficient; this non-wastage of inefficients certainly does not fit in with any scheme of genuine social justice. We do see the beginnings of a better allocation of talent; but the social limitations of this counry and the transitional weaknesses of an infant democracy cannot be wholly overlooked, by men of affairs.

While not omitting to refer to the role of the Chamber as an interpreter of the view-point of the foreign investor, Mr Jenkins' speech concentrates equally on the relatively more domestic problems of jute, coal, transport and sport. The thought that within a few years of partition, the Indian Union can grow raw jute in sizable quantities, is indeed inspiring. There are quite realistic methods suggested, and the importance of increase in yields strongly pressed. Recent experience in other crops is reassuring. The warning that if certain steps are not taken, there may soon be an awkward shortage of coal is heard from other quarters as well, from businessmen and technical experts alike. As all these commodities should also reach their appointed destinations in proper time, transport is of paramount importance; for Eastern India, the Calcutta port is pivotal. Mr Jenkins has no doubt that what has now become the wrong side of the Hooghly has to be "righted".

Amidst these tenacious preoccupations of a businessman, the love of beauty—or is it of mere fresh air?—and of sport dictates a gesture on behalf of the much in-roaded Calcutta maidan and a special plea for one of the in-roaders, the stadium.

Hardy But Safe

It is not difficult to imagine the agony of those who are obliged to view contemporary economic events and developments, when they look out for something off the beaten track. The search becomes all the more arduous when the person concerned has to espouse a fairly rigid set of views, often also in the background of an equally rigid tradition and outlook. Indian economy does throw up new problems and permits new angles of approach from time to time; but just now these concern more matters of detail than fundamental policies or the basic structure of development. For this reason, even the most ingenious critic of events often fails to bring to the national pool of ideas any significant new contribution. In the meanwhile, if the estimate of the general perspective or some of its major ingredients suffers from a little distortion here or exaggeration there, it is quite understandable. The editorial commentator also may welcome such mild deviations, for the relief they afford to a picture which would otherwise be wholly tedious and stale.

Mr R. L. Powell's Presidential Address at the Sixty-Ninth General Meeting of the Upper India Chamber of Commerce is, as far as we can see, free from the deviations indicated above, but in spite of it, far from unlively. Uttar Pradesh, though not a front-ranker among the industrial States of India, has seldom lagged behind in the matter of exciting management-labour relations. The "misdirected" issue of rationalisation led to one of the most disastrous strikes in recent years. Thanks to the 25 per cent duty charged by the State Government, electrical energy for UP industries remains costliest in India. For the cotton mills in the State, there are a few other disabilities as well, which undermine their competitive power, particularly in the export market. There is the locational handicap which raises the cost of raw materials and of finished products alike. As producers mainly of coarse and medium varieties, the UP mills have to bear the impact of a relatively higher fiscal burden.

These conditions justify Mr Powell's description of the cotton textile industry of the State as "the Cinderella of India, with a number of unattractive step-sisters and not a fairy godmother in sight." What is even more deserving of sympathy is that there are too many candidates for the role of step-mother. Despite its many handicaps and the red signal raised against rationalisation, the industry was holding its own, for the major part of the last year. The increase of excise duties in April was also weathered. Since September, however, when further increases in excise duty accentuated the relative price disadvantage of coarse and medium cloth, unsold stocks started piling up and soon reached a choking point, despite efforts toward sales at embarrassingly low prices. Amidst the attendant strain on finances, the mills had to yearn for more capital from outside.

In this situation, Mr Powell is amply justified in feeling diffident about the "auto-financing" of industry in the old measure. The diffidence is all the more, when what ought to be employed as working capital gets blocked up in fixed assets. New equity capital is also not found to be sufficiently responsive as seen from the experience of recent months. Excepting when the issues are exceptionally attractive, a ready response was lacking.

For this deterioration in the health of the traditional equity capital market, Mr Powell himself indicates the tonic. The Industrial Finance Corporation, the National Industrial Development Corporation, the various State Finance Corporations and similar bodies are expected to play a larger part in financing industrial development. It is not too much to suppose that these quasi-government institutions, where private industry can have its voice effectively heard, will display the resilience and adaptability called for by the changing requirements of the time. When the companies for which Stock Exchanges have played so useful a part are not going to disappear in the foreseable future, it is rather premature to think of these Corporations as a complete alternative. Their role may be conceived as fundamentally complementary.

The President of the Upper India Chamber is more pessimistic on the question of foreign exchange for the Second Plan. While conceding that the Government of India are now taking a more realistic attitude toward the problem, still he thinks that some of the major steps taken during the last year, such as the nationalisation of insurance and the Kolar gold mines and the restraint placed on mill cloth production have queered the pitch for the potential foreign investor; he is equally concerned over the issue of the "label-Public Sector or Private Sector, borne by the agency that gathers foreign exchange."

We are afraid that on both these points, Mr Powell's address can create a slightly misleading impression. If the quantum and sources of foreign investments under the First Plan and in the first year of the Second, are taken into consideration, it will be seen that the bulk of these have come from the Western democracies, which are among the most ardent defenders of the non-socialist economy. The US has put in about Rs 450 crores into various enterprises in India during the last six years. Inspite of all kinds of international political vicissitudes, the Government of India's policy toward foreign investment has remained firm and unaltered; where adjustments have been made, it was with an eye to benefit the investor. It is non-debatable that among the under-developed economies seeking foreign investment, India's is the most trust-worthy, on any showing.

Mr Powell himself is pleased over some of the recent trends in policy. A Government ready to rectify their mistakes immediately these are detected cannot be branded as insensitive to public needs. Unfortunately, the economic problems of India are somewhat unique; many of them do not conform to the traditional Western pattern. Some of them appear all the more glaring, when they are sought to be tackled with the aid of a political system which conforms in all essential details to the orthodox Western

(Continued on page 376)

Editorial Notes

In Political Loneliness ?

The Indonesian President has proposed a new constitutional set-up for his country, in answer to a situation symbolising temporarily at least the failure of parliamentary government on the traditional pattern. The two principal elements of the proposed Constitution are a Cabinet representing all parties and a National Council. The composition of the Council is strikingly novel; in it will sit representatives of farmers, labourers, intellectuals, national enterprises, scholars, the different religions and denominations, the provinces, military and police chiefs and senior members of the Cabinet.

Dr Soekarno believes that this combination would be suitable to the ideals of the Indonesian people while the Western type of democracy is not. Without probing too deep into the special national ideals which he speaks of, it is apparent that Indonesia suffers mainly from a criss-cross of parties and personalities, which renders a strong Central government nearly impossible. Among the political forces, the federal urge is also tenacious and strong. The new experiment would surely be interesting.

The neighbouring State of Malaya is also agitated by a similar problem with the aggravating factor of race thrown in. The Reid Commission, entrusted with the task of framing a Constitution for Malaya have recommended a strong Central government at the head of a federation, with a princely head of the State and a common nationality for all permanent residents. These ideas are on principle excellent, but the first reaction of the Malays does not seem to be cordial. The presence of nine hereditary chieftains, a multi-racial population and a powerful communist group engaged in open war with the Government combine to make a formidable set of obstacles to parliamentary government in Malaya.

Even Ceylon, hitherto regarded as safe for a tiny democracy, is showing up fierce divisions on linguistic lines, one of the worst results of self-rule. Nor does Pakistan, inheriting the parliamentary traditions of British rule appear to shape well. President Iskander Mirza has discovered a lovely phrase in "controlled democracy"; but he is not able to ensure stable control. It is not the territorial division alone which afflicts Pakistan's politics.

That of all the newly liberated countries in Asia, the Indian Union alone has managed to get on well with the Western type of democracy, while all the others are groping for alternatives, is not altogether a pleasing phenomenon. An objective enquirer into comparative conditions may come to conclusions flattering to the Indian Union. But if other systems emerge all around, Indian democracy will be confronted with fresh problems.

*

Fuel Habits

Dr A. Lahiri, Director of the Fuel Research Institute, Dhanbad, points to the immediate urgency of the Railways overhauling their fuel consumption pattern. He points out that if this is not done, the Railways may find starved of fuel, in another four years. The exhortation proceeds from the fact that the supply of coking coal will become increasingly inadequate if the present pattern of demand is maintained.

By 1970, it is estimated that the Railways will have to go in for an annual supply of about 30 million tons of coal of the required quality; which would leave behind about three times as much of slack and middlings. Even on the present rate of 12 million tons absorbed by the Railways, of which coking coal forms a good proportion, the disposal of the non-coking slack has become somewhat unmanageable. At 30 million tons of railway demand, this problem will become insuperable. The utilisation of inferior coals also undermines operative efficiency.

In Dr Lahiri's scheme the Railways would be using electricity for the entire rail-track sections between the Ganga and the Mahanadi, including the coast in between. The energy requirements of the Railways in terms of coal equivalent at the end of another fifteen years will have to be equally distributed between coal, diesel oil and electricity. Correspondingly, a change in the pattern of energy production is also envisaged; in the current pattern, coal represents 25 per cent, oil 5 per cent, hydro-power 1 per cent and wood and farm waste, the remaining 69 per cent. Against these, coal should improve to 50 to 60 per cent, oil to 8 to 10 per cent and hydro-power to 3 per cent.

*

EUROFIMA

In 1953, ten European countries joined together in a common effort to rationalise the use of and rehabilitate the railway rolling stock, very much overworked since the end of the Second World War. The pool was known as Europ, one of the less-known post-war international abbreviations. The first step taken was the utilisation of trucks which normally used to return empty from one country to another. Loadings were centralised. The effort proved inadequate, but showed the way to a fuller solution.

This came after another three years, when in November 1956, the Railway Administrations of fourteen countries set up a joint-stock company to finance the purchase of and organise the rolling-stock of all their railway systems. The participants are Austria, Belgium, Denmark, Spain, Sweden, Switzerland and Yugoslavia. It is hoped that sooner or later, Great Britain, Greece and Turkey will also join this pool.

A recent article by the Zurich Correspondent of the Statist explains how this pool, entitled Eurofima, will operate. That virtually all the railways of Europe are State-owned has facilitated a great deal the establishment of this international enterprise.

With headquarters in Sweden, the Company has started with a national capital of 50 million francs, consisting of 5 thousand shares, each having a nominal value of 10,000 francs. The shares are of two kinds, one to be paid in cash and the other in the form of railway trucks. National proportions of subscription roughly correspond to their truck requirements. The trucks procured by the company from time to time will be sold to the individual States on hire-purchase system, payment to be completed within ten years. When another country's truck is used for international traffic, the country using it will be paying a rent on it. For inland transport, self-sufficiency is dictated.

The company hopes to float international loans. As railway earnings are always in cash, defaults are ruled out. Many initial administrative hurdles have already been overcome; for instance, the question of the law according to which disputes are to be settled found a ready and agreed answer. The company, being registered in Switzerland, Swiss law will rule.

One of the incidental advantages of the Eurofima, is that manufacturers of trucks, passenger cars and locomotives throughout Europe will be obliged to rationalise production. As preferential treatment between the States is now impossible, production of rolling-stock can be standardised on a wider basis and competitive efficiency improved.

*

Income & Fertility

The notion of a more or less inviolable link between economic status and size of the family once held as axiomatic, no longer holds the field. Demographic experts in the West have found that this link has no sanctity and can by no means be established as a general rule. Property laws, education of women and similar factors are known to have influenced fertility trends, irrespective of the level of income. In Britain, the decline in the size of middle class families started with the women going for careers and coming to look upon maternity as a controllable obligation, if not an avoidable nuisance.

A recent survey conducted by the Anthropological Department of the Lucknow University, under the auspices of the Planning Commission also vetoes the belief that there is a direct inverse relation between fertility and income. The survey covered about fifteen hundred married women of different age-groups in a predominantly low income area. A clear decline in birth-rate is noticed between families with less than Rs 50 per month and those within the range of Rs 50 to Rs 100. But in the next higher income group, fertility has reached a higher level.

Banks' Allergy to Giltedged

IN a busy season which began amidst forebodings of unprecedented stringency, the phrase "easier tendency in credits" would be out of use during the entire currency of the season. But there was, in the last few days, a marked relaxation in pressure for funds, a welcome alleviation in the monetary stringency. Rates for call money showed a slight decline; and, as lenders emerged, the interbank call money market accounted for a modest turnover. The customary indicators provided confirmatory evidence. Active note circulation, as on February 22, showed a sharp decline for the second week in succession. Rupee coin in moderate volume returned from circulation. Deposits of member banks with the Reserve Bank recorded a rise in spite of a substantial reduction in their indebtedness to the central banking institution. The Reserve Bank's Investment portfolio discloses further expansion, possibly betokening continuing purchases of securities directly from the scheduled banks with a view to help the latter augment their loanable funds. In the week ended 15th February, the deposits of member banks register a welcome increase.

How has this relaxation in stringency come about? It is not through increased utilisation of central bank credit; for there is actually a contraction of this credit. It is not, at any rate upto the middle of February, through a lesser tempo of demand for bank accommodation; for, in that week, banks' loans and advances record a rise. We are led to the conclusion that banks have been helped by the new policy of the Reserve Bank to buy securities on an outright basis. Exact confirmation in this respect is not forthcoming; but it is known that banks are greatly pleased with the new policy which has received full publicity and much favourable comment.

The timely gesture, and its practical implementation where needed are to be welcomed in the context of the current busy season. But, we cannot help feeling that this flight from giltedged investments on the part of scheduled banks is far from wholesome from the long-term point of view. In the bank's balance sheet for 1956, some institutions are found to have thinned their giltedged portfolios considerably. In fact, a conspicuous feature is that no portion of the deposits additionally received in the last year has found its way into giltedged. Ordinarily, 30 to 35 per cent of the new deposits would have been earmarked for government securities. Of course, there was, in the last year, ample justification for utilising all the new money for satisfying the persistent demand for bank credit. Even so, it is undeniable that banks have developed an allergy for giltedged investments. This tendency has grown out of disgust with having to set aside a moiety of the profits against depreciation in investments year after year. The five-year spell of ascending borrowing rates on the part of Governments has undermined the giltedged values and disrupted the giltedged outlook. A banker would, in present circumstances, avoid any expansion in the total volume of giltedged holdings. How, then, are the large requirements of market loans for the Second Plan to be secured? The answer is furnished in the leading article this week. The suicidal policy of defeatism and the unedifying policy of opportunism must be replaced by a confident and confidence-inspiring technique.

+

Variation from Norm

The Reserve Bank returns for the week ended February 22nd disclose figures and trends which are at variance from the seasonal norm. Foreign Securities and Rupee Securities held in the Issue Department are unchanged. The changes recorded in the week under review are connected with the return of currency and rupee coin from circulation. Active Note circulation at Rs 1506.25 crores shows a decline of Rs 9.37 crores. Rupee Coin at Rs 122.01 crores discloses a return of Rs 0.42 crores from circulation. In the result, Notes in the Banking Department are higher by Rs 9.80 crores at Rs 21.08 crores.

In the Banking Department, Central Governments's Deposits have increased by Rs 1.73 crores to Rs 53.98 crores, while those of State Governments have decreased by Rs 1.24 crores to Rs 11.48 crores. Banks' balances are higher by Rs 4.89 crores at Rs 56.48 crores; and it is to be added that the decline of Rs 7.77 crores to Rs 112.66 crores in Other Loans and Advances indicates substantial repayment by scheduled banks during the week. Foreign Balances have again declined by Rs 7.08 crores to Rs 106.35 crores. Investments show another sharp rise of Rs 7.63 crores, suggesting further open market purchases of giltedged from scheduled banks. Finally, it is to be noted that advances of the Reserve Bank against usance bills are almost unchanged at Rs 58.85 crores against Rs 59.18 crores, in spite of the steep fall in Other Loans and Advances.

The return of the State Bank for the week-ended February 22 reveals that deposits have gone up by another Rs 6.54 crores to Rs 271.55 crores. Since the beginning of the current busy season, whose date may be placed at 26th October 1956, the augmentation of deposits in the case of the State Bank has been of the order of Rs 42 crores. The higher deposits have been utilised in increasing the cash portfolio; Cash and Balances have risen by nearly Rs 5 crores to Rs 23.60 crores from Rs 18.84 crores. For the first time since the week-ended November 23, there has been a decline in advances, although this is of small proportions. Altogether, the expansion in advances since October 26 has totalled just under Rs 41 crores.

The statement of Scheduled Banks for February 15 shows that deposits have again risen by a shade under Rs 7 crores to Rs 1147.04 crores. The accretions to deposits during the current busy season have so far amounted to Rs 43 crores. The total of advances has staged another rise of Rs 4.57 crores to Rs 860.82 crores—the rise since October 26 having just passed the Rs 100 crore mark. There is a sharp decline of Rs 4.74 crores to Rs 356.20 crores in investments; and this suggests that the increase in Investments in the Reserve Bank's statement for the corresponding week would have related to purchases of giltedged for Rs 4 crores odd from Scheduled Banks.

+

The statement of the State Bank of India for the week ended 22nd February, reveals a sharp rise of Rs 6.54 crores in deposits to Rs 271.55 crores. Borrowings from other banks have declined by Rs 4.17 crores to Rs 16.91 crores while other liabilities, including inter-office adjustments, are shown at Rs 1.22 crores against Rs 1.14 crores.

On the assets side, cash balances are higher by Rs 4.71 crores at Rs 22.74 crores, while Investments are lower by Rs 0.19 crores at Rs 106.66 crores. Advances have moved down by Rs 2.84 crores to Rs 170.67 crores—"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 1.09 crores and "Bills Discounted and Purchased" for Rs 1.75 crores.

+

According to the returns of the Scheduled Banks for the week ended 15th February, both demand and time liabilities have risen, the former by as much as Rs 6.51 crores to Rs 682.75 crores and the latter by only Rs 0.47 crores to Rs 464.29 crores. Borrowings from the Reserve Bank have declined by Rs 3.91 crores to Rs 92.48 crores, while those from the State Bank are lower by only Rs 0.54 crores at Rs 16.14 crores. Cash and balances with the Reserve Bank have improved by Rs 1.10 crores to Rs 35.79 crores. Investments have declined by Rs 4.74 crores to Rs 356.20 crores. Advances in India are shown at Rs 696.85 crores against Rs 688.39 crores; Inland Bills at Rs 107.70 crores against Rs 114.42 crores and Foreign Bills at Rs 56.27 crores against Rs 53.44 crores. Money at call and short notice stands at Rs 10.29 crores against Rs 9.84 crores.

+

Bank of India

A substantial rise in Advances and a significant increase in profits are the most notable features in the balance-sheet of The Bank of India Limited as at the end of 1956. The capital is shown higher by Rs 50 lakhs as a result of the bonus issue during the year. Deposits have staged a rise of Rs 2 crores to Rs 69.55 crores. Since the demand for accommodation was at consistently high tempo, the Bank of India found it necessary to replenish its resources by way of borrowings from the Reserve Bank. But the manner in which it has been done is novel.

The total of advances has shot up by over Rs 11 crores to Rs 57.21 crores; and the ratio of advances to deposits is placed at 82.26 per cent. But, in recognition of the fact that a new approach was necessary in the matter of advances, the Bank of India has, very correctly, shown a preference for giving the accommodation by way of bills discounted and purchased. Thus, Loans, Cash Credits and Overdrafts are shown to have gone up from Rs 37.49 crores to Rs 42.10 crores; and the increase under Bills is sharper, with the figure moving up from Rs 8.60 crores to Rs 15.11 crores. This enlargement of the bills portfolio has been utilised in taking recourse to the Reserve Bank's bill market scheme. For, the liabilities side of the ledger discloses that borrowings against Bills are for an amount of Rs 7.35 crores against total indebtedness of Rs 7.85 crores. If we may consider the bills discounted and the borrowings against them as contra items, the Net Advances are of the order of Rs 49.86 crores; and, on this basis, the Net Advances-Deposits ratio is 71.69 per cent, the relative figure at the end of 1955 being 68.25 per cent.

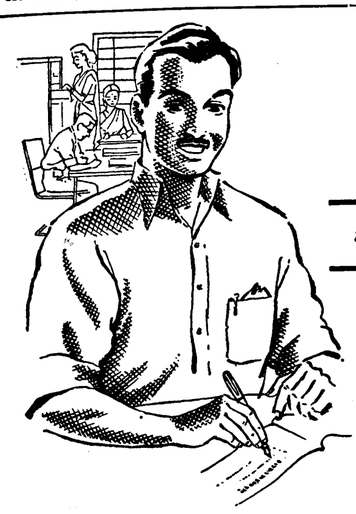
The considerable increase in advances made it necessary for the Bank to run down its cash balances from Rs 9.70 crores to Rs 8.00 crores; and to reduce its holdings of giltedged by Rs 2.12 crores to Rs 16.81 crores.

The income by interest and discount is higher by Rs 0.54 crores at Rs 2.72 crores; and commission, exchange and brokerage have brought in Rs 0.17 crores more at Rs 0.71 crores. At the same time, interest paid has mounted to Rs 1.10 crores from Rs 0.72 crores; salaries and allowances have absorbed Rs 0.19 crores more at Rs 1.08 crores. In the result, the balance of profit makes better showing to the extent of Rs 7.13 lakhs at Rs 92.03 lakhs.

The profit has been utilised as to Rs 28 lakhs for tax; Rs 13.75 lakhs for Bonus to Staff; Rs 8 lakhs as transfer to Reserve Fund; and Rs 40 lakhs in the payment of dividend at 16 per cent for the year.

The Economics of British Disarmament

By PAUL EINZIG



CRITICISM among Britain's Allies of the recent announcement of drastic cuts in the armed forces is shared to some degree in many British quarters. To a large extent the present reduction has become a political necessity, owing to Germany's reluctance to assume a fair share in the financial burden of the British forces stationed on her territory. Together with the slow pace of German rearmament, this has created in Britain an atmosphere amidst which the Government would have found it difficult to justify the maintenance of its present military strength on the continent.

The main reason why the cuts are subject to criticism is that many thinking British people entertain serious doubt whether the weakening of Britain's military strength will really be offset by a corresponding increase of her economic strength. The Government's argument to that effect is viewed with much scepticism. There is a widespread feeling in Britain that, amidst prevailing conditions, anything that is saved through arms cuts, is liable to be given away in the form of higher social service benefits or higher wages, so that the economic benefit on balance will be nil.

Admittedly, the Government made a gesture, simultaneously with the announcement of the arms cuts, by reducing some social service benefits. as a result of the impending increase of some social service contributions by the beneficiaries, the deficit on the social services concerned, which has to be covered out of taxation, will be reduced slightly. But if the long-suffering taxpayer is inclined to be grateful for such small mercies, he only has to remember of the pressure that is in operation in favour of substantial increase in retirement pensions. The savings effected by the recent measures are a bare drop in the ocean compared with the cost of this planned increase. The idea is that employees should be entitled to a pension equal to half their wages at the time of their retirement. It was first put forward by the Socialist Opposition, but there is every reason to believe that the Government too is also considering it seriously.

Even the Socialist plan does not go so far as to suggest that the taxpayer should contribute towards the current charges of the new scheme. The proposal provides for an equal contribution by employers and employees. But if, as is probable, employees should become qualified to full benefits after having contributed towards the scheme for something like two years, then the scheme would entail a gigantic actuarial deficit that may well reach thousands of millions of pounds per annum. Obviously, the State would be called upon sooner or later to shoulder the burdens of such a deficit. "The Economist", when commenting on the Socialist proposal, remarked that its author must have worked out its arithmetics while having his bath. Yet within fortyeight hours after this scathing condemnation of the plan, it became known that the Government, anxious not to lose ground among the electorate, is seriously considering the idea of stealing the Opposition's electoral thunder by adopting its scheme.

The cost of such a scheme to the Treasury would be so heavy that even if Britain were to disarm stark naked the savings effected would not cover it. Nor is this the whole story. Amidst prevailing conditions of employment the workers would be in a position to pass on to the employers their share in the new superannuation contributions, and the employers would be in a position to pass on to the consumer, in the form of higher prices, the total cost of the scheme. So there would be no question of financing the scheme by saving part of the wages and profits earned by employees and employers. Indeed the extent of small savings would fall sharply if old age pensions, which amount to £2 a week at present, were to be raised to a multiple of that figure. Today most workers feel the need of supplementing their prospective incomes after retirement, by saving up some of their high earnings. If, however,, the retirement benefits are raised to a figure which ensures reasonably comfortable existence, the chances are that most people would live right to the limit of their incomes while in employment. And the resulting sharp fall in savings would produce a

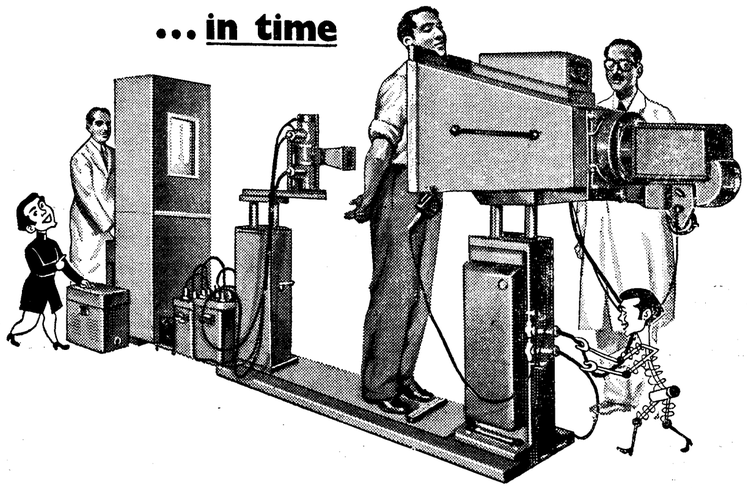
very strong inflationary effect, as a result of which employees and employers would find no difficulty in passing on to the consumer the total cost of the new scheme.

The adoption of the scheme is well within the realm of possibility. The Government's present intention is to make the scheme entirely self-supporting by confining it to employees who will have paid an adequate number of contributions before reaching retiring age. But if the Socialists should come out with a scheme under which employees would qualify after a short period, its appeal to the electorate might induce the Government to follow the example. In that case a heavy deficit, in addition to the very substantial actuarial deficit of the existing old age pensions system that is expected to develop in a few years, would be inevitable. The more will be saved on national defence the stronger will be the temptation to cut down the period of contribution payments that would qualify employees to full benefit. Even if the Government's present intentions are to keep the scheme genuinely self-supporting, political pressure in favour of spending on it the money saved through defence cuts might well become irresistible.



There are also strong reasons for fearing that any improvement in the economic situation that would be achieved through the effect of the cuts on the balance of payments would be offset by increased wages

the detection of

the threat of disease...

...in time

X-Rays are an indispensable adjunct to modern medical practice. With the help of X-Rays the presence of disease or illness is detected, its nature and extent assessed instantly and exactly. Treatment then becomes more definite and direct, cure more certain and rapid.

Today the eyes of X-Ray watch over the health of the nation. They probe and seek for signs of illness and infection, give warning to doctors to mobilise the means of meeting and overcoming the threat of disease as it appears.

Philips take pride in the fact that many of Philips X-Ray units are helping to cope with this great task in many parts of India. These units, already installed in hospitals and clinics, are giving true and valued service in the constant fight against disease and illness.

World *of* Business

Preserved Fruits Industry

THAT the preserved fruits industry is asking for continuance of preferential treatment clearly shows that it has not been able to make much headway even after ten years of protection. With the per capita consumption of fruit and vegetable products in India placed at only 2 oz, it is no matter for surprise that the pace of progress of the industry has been slow.

Apart from the major inhibitory factor of poor demand, the small size of the units and their wide distribution have rendered it difficult to obtain data essential for the formulation of a co-ordinated programme for the healthy development of the industry.

According to the Union Ministry of Food and Agriculture, there were 720 units licensed under the Fruit Products Order in 1956 as against 654 in 1955, 622 in 1954 and 602 in 1953. Of the 720 units, only 121 were engaged in the manufacture of protected categories of preserved fruits, of those again, 22 were large scale units with a production of over Rs 1 lakh a year, 55 were small scale units with a production of over Rs 10,000 but less than Rs 1 lakh and 44 were cottage scale units with a production of less than Rs 10,000 per year.

The Agricultural Marketing Adviser's estimate puts the capacity of the mechanised units at 14,000 per year for canned fruits and vegetables of which the capacity for preserved fruits of the protected categories is estimated at about 5,600 tons. The same authority has estimated the total production of preserved fruits in 1953, 1954 and 1955 at 14,226 tons, 11,541 tons and 14,601 tons respectively, of which the production of protected categories in 1,245 tons, 1,397 tons and 1,674 tons respectively. The production of protected categories during the first six months of 1956 is 627 tons. The estimate of current demand for protected categories of preserved fruits is 1,650 tons going up to 3,600 tons by 1960-61. In this regard, the Tariff Commission had observed that it was not possible to assess the future demand as it depended on a number of factors, including a change in the consumption habits of the people which could come about only very gradually and could be stimulated only by a reduction in the prices and by a stricter enforcement of the Fruit Products Order.

Opening the public inquiry into the question of continuance of protection of the preserved fruits industry in Bombay last week, Mr K. R. Damle, Chairman of the Tariff Commission, indicated that the industry had a bright future as the demand for preserved fruits was bound to increase in the country in coming years. The development of the industry on proper lines was also essential for the economy of the country as fruits were a seasonal product.

While it is true that the low per capita consumption of preserved fruits in the country is the big stumbling block in the path of progress of the industry, there are other serious drawbacks which also play a prominent role in retarding its growth. It is common knowledge that sub-standard products are also allowed to find their way to the markets alongside with good quality products. Moreover the prejudice against indigenous products still seems to persist. It would appear that the blame is to be shared by the raw materials and stores that are used by the industry. As regards fruits, stricter control seems to be necessary in the matter of grading. In regard to sugar though no difficulty seems to have been experienced by the manufacturers in obtaining adequate supplies, the industry has complained that the sulphur content affects the quality of the preserved fruits. In the matter of the supply of cans also the complaint is in regard to quality and prices. Mr Damle in this regard refers to the view of the industry that while cans manufactured out of indigenous tinplate are not upto the required standard, those manufactured out of the imported tinplate are satisfactory. A similar difficulty is reported with regard to the bottles used by the industry.

It is gratifying to note that commendable progress has been made during the past few years in modernisation by several units. Though there has consequently been some improvement in the quality of the indigenous products, the consumers are generally of the opinion that the indigenous products are not as good as imported ones.

With the increased allotment of Rs 8 crores for horticultural development under the Second Plan and in view of the fact that Government have appointed a Panel for preparing the development programme for the fruit and vegetable preservation industry, it is to be expected that the Indian preserved fruits industry will be enabled to make rapid progress in the course of the next five years. In the meantime, it is upto the industries and the various other industries supplying its raw materials to take effective measures to maintain the required high quality for their products by taking advantage of the facilities offered by Institutions like the Indian Standards Institution and the Central Food Technological Research Institute, Mysore.

Palm Gur Industry

The claims of the palm gur industry for the fostering care and sympathetic treatment of the State Governments, have so far been receiving inadequate attention, while the strength of these claims has been heightened by prohibition. While the number of palm trees in existence in the country is legion, the number commercially exploited is a mere fraction of it. The states mostly affected by the policy of letting the palm trees run to waste are those where they are in abundance namely, Andhra, Madras and Kerala and West Bengal. Prohibition which was introduced in the South, was so far as the tappers who form a part of the rural population of these states, were

World of Jute

Forward Trading in Jute Goods

THOUGH Government's decision to allow Forward Trading in raw jute and jute goods within the city of Calcutta has been generally welcomed, the manner in which it has been sought to be effected has not met with approval from a large section of the jute goods trade. In a memorandum submitted to the Union Ministry of Commerce and Consumer Industries, the Gunny Trades Association, which represents the gunny traders in Calcutta, has pointed out that Government's decision to recognise only the East India Jute and Hessian Exchange Ltd for Forward Trading in all varieties of jute and jute goods in Transferable Specific Delivery Contracts will vitally affect the interest of genuine traders, shippers and manufacturers engaged in jute goods trade apart from causing incalculable damage to the export trade in jute goods.

As the Association has all along been under the impression that the Forward Contracts (Regulation) Act is not concerned with genuine forward dealings in jute goods, it has not applied for recognition under the Act. In this view it has found no difficulty in recommending the East India Jute and Hessian Exchange Ltd for Futures Trading only. To its great dismay it has found that Government have combined Futures Trading in Jute Goods and Forward Trading in Jute Goods in Transferable Specific Delivery Contracts under the EIJHE under one and the same set of Articles of Association.

The memorandum has, therefore, requested Government either to exclude the IJMA Gunny Contracts from the operation of Forward Contracts (Regulation) Act or to recognise the Gunny Trades Association for Forward Trading in Transferable Specific Delivery Contracts in jute goods. It is gratifying to note the Association's representation in this regard is receiving the sympathetic consideration of Government. The fact that the West Bengal Government's ban on Futures Trading in jute goods in 1950 had not included dealings on IJMA Gunny Contract Forms provides a powerful argument in favour of the stand taken by the Gunny Trades Association.

*

The jute goods market displayed an irregular trend during the past week. After opening on a quiet note, the market steadied up somewhat mainly in sympathy with the raw jute section where sellers were reserved on continued mill interest. In the continued absence of foreign enquiries, prices developed a sagging tendency and the market closed the week on a weak undertone.

Reporting on burlap trading during January 1957, the Jute Bulletin of the Indian Central Jute Committee says that conditions had been rather quiet in New York. "Demand was on a much reduced scale with consumers content to buy their immediate requirements only. After the heavy buying in the past three months as a result of the Middle East crisis, the slow-down of business during January did not take the market by surprise. Trade observers were of the view that the market undertone in the first quarter of 1357 would reflect the restraining influence of the over-bought position of consumers at all levels.

Lack of movement in burlap notwithstanding, prices for spots and afloats for practically all constructions commanded a substantial premium over early shipment prices. The single exception was 40″ 7½oz which continued on offer at about the same rate as, and often somewhat below, early shipment.

Calcutta shipments of burlap to the U.S.A. in December showed a decline from the previous month and amounted to 72.4m yds, which put the total for 1956 at 768.6m yds, a rise of 15.8m yds over shipments in 1955."

Erratic fluctuations characterised trading during the earlier part of the opening day due to contradictory reports. With no genuine business passing the market turned quiet towards close. Hessian 40″×10 oz reacted from previous closing of Rs 41-2 to Rs 40-3. B Twills Ready, however, was only slightly lower at Rs 108-4. On Friday after a quiet opening, prices were marked up on reports of firm raw jute prices in Pakistan. Despite mills' selling in April-June Hessian and B Twills, the market closed steady with Hessian 40″×10 oz Ready quoting Rs 40-4 and B Twills Ready Rs 108-8. The recovery movement was carried a stage further on Saturday under the influence of the report that some foreign business had been done. Prices all along the list recorded moderate gains. Hessian 40″×10 oz Ready gained four annas to Rs 40-12 while B Twills Ready recorded a gain of 14 annas to be finally placed at Rs 109-6.

Steady conditions continued to prevail on Monday. Despite the report that a moderate quantity business had been done in B Twills with West Africa, prices moved within narrow limits in the Sacking section. Hessian on the other hand was well maintained. At close of the day Hessian 40″×10 oz Ready was done at Rs 40-13 with B Twills placed at Rs 108-14. Rates declined further on Tuesday as no fresh business had been reported throughout that day. Hessian 40″×10 oz receded to Rs 40-4 and B Twills Ready to Rs 108-4. Heavy selling pressure was in evidence especially in the Sacking section on Wednesday and rates suffered a sharp setback. Hessian 40″×10 oz Ready was placed at Rs 40-6 but B Twills Ready was hammered down to Rs 107-10.

The following table shows the opening and closing prices of the week.

	Week's Opening	Week's Closing
Hessian:	Rs. a.	Rs. a.
40″×10 oz Ready ...	40 3	40 6
40″×10 oz April-June ...	39 14	40 4
Sackings:		
B Twills Ready ...	108 4	107 10
B Twills April-June ...	109 8	108 14
Hy. Cees Green ...	112 8	110 6
Corn Sacks ...	111 8	111 6
Cubans ...	134 0	132 14
A Twills ...	133 8	132 14
L Twills ...	127 8	126 14
D. W. Flour ...	133 8	132 14
Sugar Bags ...	125 0	122 6

The raw jute market opened the week on a quietly steady note with mills evincing interest at current levels. On the opening day moderate business was reported done in Assam Bottoms at Rs 27-8 per maund. Presumably on news of firm conditions in the Pakistani raw jute markets, sellers in India became reserved in anticipation of higher rates. The fact that at that juncture mills showed some considerable interest imparted a steadier tendency to the market. Toward close, however, a downward trend was noticeable as mills showed no further inclination for business. Assam Bottoms closed unchanged at Rs 27-8 per maund.

World of Tea

Outlook for Tea

ACCORDING to final estimates, the Tea crop in India has totalled 663.7 million pounds in 1956 as compared to 663.2 million pounds in 1955. This minor increase of 500,000 pounds is considered to be significant in view of the fact that the tea crop in North India was curtailed to adjust supply to demand and that, in South India, it was adversely affected by bad weather in the early part of last year. Out of the total outturn, North India has accounted for 536.7 million pounds and South India for 127 million pounds, the corresponding figures for 1955 being 534.2 million pounds and 129 million pounds.

It is satisfactory to note that tea exports in 1956 more than covered the ground lost in 1955. The total quantity exported as well as the value of exports are an all-time record. Exports amounted to 516 million pounds as against only 363.8 million pounds in 1955, while the value of exports was about Rs 140.6 crores against Rs 112.7 crores. The increase in the exports was shared by all the principal markets for Indian tea.

Meanwhile, the Government of India's decision to increase the 1956/57 export quota by 10 million pounds to 453.3 million pounds is welcomed by trade circles although some appear to be anxious to ascertain the precise nature of the Government's intention. It is, however, hoped that the move will improve the marketing of the commodity by facilitating exports. From the recession in tea prices which has taken place over the past month or so, it appears that increased exports may relieve the pressure of excessive supplies. Most of our customers abroad, however, remain well-stocked, mainly due to the extra quantity imported last year. Whether production will be adjusted to the demand or not, it is too early to predict.

There has lately been a big fall in prices at the London auction. Some better qualities have recorded declines again though this was due to the continued fall in quality. Trade advances a number of reasons for generally stiffer tone of the market. Trade quarters say that action by Sales Regulation Committee in spreading available supplies over long period undoubtedly did much to check the fall in prices. They also feel that prices might, in any case, have tended to react after such a sharp drop as one shilling per pound and more.

Moreover, it is considered to be a smaller quantity of tea which India Government are to permit for export from the 1956/57 season. This season's lower allotment will not, however, affect weight of tea passing through London as this has already been limited to 100 million pounds. There seems to be a growing recognition that surplus between world production and consumption may not be as big as hitherto anticipated. Some quarters reckon that excess of production over consumption may not now be more than 10 million pounds. Consumption in the UK is said to have been very well maintained, while, in India, it still shows signs of steadily expanding.

In the Export Sale held in Calcutta this week, offerings consisted of 61,500 packages for which there was a strong and active demand. Broken grades received more support than Fannings. Clean Commons and Low Mediums were generally one and sometimes two annas per pound dearer. Any teas with bright liquors were well supported at one to two annas above last rates. "Teas for price" were also a strong feature, being up to As 2 per

World Overseas

US Notes

Washington:—For the past 10 years, the Caribbean Island of Puerto Rico has been engaged in a highly successful effort to raise its production and standards of living. Many American economists and businessmen regard the Puerto Rican accomplishments as a kind of case study in economic development. Largely with the aid of American private capital, for example, about 400 new industrial plants, employing some 30,000 persons, have been established in Puerto Rico. Construction is booming. Manufacturing now takes at least an equal place with farming in what once was primarily an agricultural land. Puerto Rico's total output of goods and services has grown by about 58 per cent in real terms since 1947, a rate of growth exceeding even that of the United States. What have been the principal factors behind this phenomenal growth? One cannot dismiss, of course, the advantages of Puerto Rico's relationship with the United States. While its government now is in effect autonomous, Puerto Rico receives the benefit of certain types of financial aid from the US Government in Washington. With but few exceptions, moreover, its products have had free access to the American market. But since Puerto Ricans have their own Constitution and, by and large, run their own affairs, the indigenous factors in economic growth are by far the more significant. Chief among these has been Puerto Rico's own industrialisation programme known as 'operation bootstrap' because of its emphasis on self-help. The Puerto Rican economic development administration has taken effective measures to attract, and indeed to seek out, external investment capital on a non-discriminatory basis. investment was financed by exter- About half of Puerto Rico's gross investment was financed by external private capital in 1955. Nearly all the outside investments have been coming from the United States, but there have been recent signs of growing European interest. To stimulate capital investment in Puerto Rico, tax concessions are available for certain types of new enterprise, chiefly plants turning out items not in local commercial production 10 years ago. New enterprises must, of course, comply with Puerto Rican regulations, including enlightened zoning and labour laws. All this reflects an underlying receptivity toward private enterprise in general. Indeed while outside private investment has contributed much to Puerto Rico's economic advancement, locally owned and managed industries are increasingly evident. Among these are iron works, cement plants, tile and bottle factories. Puerto Rico's planners also are aware of the need for balanced development. Not only manufacturing, but also public utilities, transportation and service industries have been growing in size and importance. The Government of Puerto Rico recognizes, too, that the operation of a modern economy requires social and humanitarian advances. Last year, for instance, 48 per cent of the total Puerto Rican budget went into public education and public health. Finally, there are these other elements, political stability, and protection. These factors, in particular, have engendered the kind of confidence required for constructive capital investment.

* * *

The US is searching for new and more efficient ways to utilize its supply of natural resources, but at the same time is conserving those resources to assure future generations of abundant supplies, according to the Department of Interior's annual report.

In the report, Interior Secretary Fred A. Seaton said: "Each succeeding generation has the everpresent rsponsibility to put natural resources to their most beneficial use, all the while employing conservation practices. The manner in which the Department of Interior pursues the search for new and more efficient ways to utilise resource supplies, the diligence of its exploitation for fresh reserves, the vigilance to resist wasteful processes, and the safeguarding of irreplaceable features of scenic beauty—all men contribute to our nation's natural wealth and to the well-being of tomorrow's citizens."

The report said the Interior Department is engaged in a "broad basic rsearch programme" aimed at more efficient mining and higher recovery of coal and ore, is actively supporting efforts to solve water resource problems by encouraging responsibility for water resource development at the state and local level, and is developing a balanced programme for the proper management or disposal of public lands in the US.

On Indian affairs, the report continued, "conservation activities and practices now being applied on Indian lands are transforming them into some of the most productive lands in their respective localities."

The report also summarized progress being made in preserving the wilderness qualities and primitive settings of America's national parks, in conserving and developing fish and wildlife resources, and in conservation programmes in US territories such as Pacific areas and Alaska.

*

Australia

Important changes in Australian import licensing have been announced by the Minister for Trade, Mr McEwen.

The most significant changes, said McEwen, were in regard to textiles. New administrative measures would ensure that the needs of manufacturers and imports for the retail trade were looked at separately in the future. The increase in manufacturers' quotas represented an increase of 60 per cent over the amount allocated for this item in July, and the increase to other traders was an increase of 20 per cent. In addition, changes in a number of category "A" quotas had also been made to meet pressing shortages.

Total cost of these relaxations, said Mr McEwen, was likely to be about £ 10 million per annum. In addition to changes in quotas. Mr McEwen said that substantial increases, some on a non-recurring basis, had been made in the licensing level of non-quota goods such as capital plant and machinery and agricultural implements.

Careful consideration had also been given to the possibility of increasing the licensing period from three to six months. It had not been found possible to make this change, but the Government had decided to move from three monthly to four monthly periods—that is, to have three licensing periods a year instead of four. The new period will come into force as from the beginning of April next

* * *

The capital market in Australia may not be subject to the same pressure in 1957 as in 1955-56, according to the National Bank of Australasia Ltd.

In the course of an economic survey, the Bank states that present interest rates, coupled with a swing to a more favourable overseas balance, should provide some increase in funds available for investment. In the Government loan field, the upward adjustment of interest rates which took effect in May of last year, has restored a degree of confidence among investors. The investing public has responded with full subscriptions of about £30,000,000 to each of the Federal Government's Loans raised in the first half of 1956-57 financial year.

The Bank states that solution of the capital finance problems of the semi-governmental authorities is not in sight.

Referring to public companies, the Bank notes that issues of fixed interest securities by companies reached high level late in 1955, and during the early months of 1956. There was then a sharp decline, probably influenced by the steadying in the tempo of business associated with tighter credit and higher interest rates.

The initial effects of the tightening of bank credit in 1955-56 induced more companies to seek fresh capital in the form of new issues of various kinds.

But higher indirect taxation in March of last year has caused easing of public demand fo[illegible] in a number of categories, such as clothing and drapery, footwear and many electrical products and fancy goods. This may well be reflected in some quietening in the demand for new capital in the traders and industries affected.

In this connection a recent survey by the Federal Statistician revealed a slackening in the rate of increase of the planned levels of expenditure on capital equipment. Nevertheless, large industries producing basic materials, are continuing to expand, and require substantial amounts of fresh capital.

* * *

Provision of capital to finance the current rate of Australia's national development remains one of the country's greatest problems, the Chairman of the Australia and New Zealand Bank Ltd., Sir Geoffrey C. Gibbs, told shareholders at their recent annual meeting.

He said that the problem was closely linked with inflation. It stressed the need for appropriate measures to reduce expenditure on current consumption, and stimulate savings at home, while steps are taken to borrow abroad as much capital as can be obtained on reasonable terms. Capital available on the Australian market, though substantial, is small in relation to the magnitude of development work to be financed.

Recent Government fiscal measures, if fully effective, held out hope of checking the excessive spending, and the heavy demand for imports. This would enable import restrictions to be eased before their worst effects were transmitted to Australia's industrial structure.

Sir Geoffrey Gibbs said that the selective policy of the banks was towards endeavouring to channel advances, particularly to those industries which would help to correct the adverse balance of payments by expanding exports or reducing imports. In addition, every efforts was being made to direct long-term borrowing to sources of finance outside the banking system.

* * *

Sir Malcolm Darling,formerly a member of the Indian Civil Service and Chairman of the British Federation of Agricultural Co-operatives from 1949-51, has arrived in India at the request of the Government of India, under the Technical Co-operation Scheme of the Colombo Plan.

He is expected to be in India for three months as Consultant to the Planning Commission to review recent developments in the field of Co-operation with reference to programmes in the Second Five Year Plan. He will also make recommendations for strengthening the co-operative departments in different States and for training programmes for co-operative personnel.

* * *

The total value of new b[illegible] increased [illegible]

This is nearly seven times the financial volume of building in 1948. Most significant features of this expansion were the new peaks of monetary volume in commercial and industrial building, and a record volume of non-residential buildings.

At the same time the number of houses built and commenced fell slightly. Official statistics show that the number of non-residential buildings recorded throughout Australia rose from £126,142,000 in 1954-55 to £164,836,000 in 1955-56.

Between 50 and 60 commercial and industrial buildings of significant size were under way at the end of 1956 in Melbourne.

* * *

Australia's largest life assurance office, the Australian Mutual Provident Society, wrote record new business of £152,600,000 for the year to December 31 last. This is an increase of about £9,000,000 over the previous peak of £143,602,630 established in 1955.

The ordinary department issued 94,251 policies for a total of £141,779,213 and the industrial department 55,090 policies for £ 10,914,520.

Continued growth of the business is ascribed to enhanced taxation concessions, greater insurance cover required to provide for death duties on the increased capital values of farm properties, and other fixed assets, and the continued growth of staff superannuation schemes effected by companies.

WHAT HAS HE TO DO WITH CEMENT ?

Cement builds his home. It is in the pavement on which he walks, the school in which he learns the arts of man, the hospital which he may need, the swimming pool, sports track and gymnasium that build his team spirit and his muscle. It is in the dams, power houses, factories, grain silos . . .

CEMENT — more and yet more cement — is the need of his future. The Associated Cement Companies Limited, which has doubled its output between 1948 and 1955, will double its production again during the next five years. The success of the Second Five-Year Plan and the future of India's youth both depend upon Free Enterprise.

The ACC is helping to build his India of tomorrow.

Industrial Information

Decimal Coinage from April 1, 1957

In about four weeks' time the country will switch over to decimal system of Coinage, under which the rupee will retain its present value but will be divided into 100 Naya Paisa, instead of the present 64 pice.

The existing eight anna and four anna pieces will also retain their value as half rupee and quarter rupee respectively and will continue to be used as the exact equivalents of fifty and twenty-five Naya Paisa respectively. For the coins of two annas and below, however, there are no exact equivalents in Naya Paisa.

Two tables for conversion of the existing coins to be the decimal system are being distributed by the Government and have also appeared in the newspapers and periodicals. They will be repeated during March and the public will be well advised to cut out and keep the tables for reference.

According to the rate of exchange prescribed in the Indian Coinage Act, as amended, the exact equivalent of the present one pice coin would be 1-9/16 Naya Paisa. But in actual transactions, fractions of a Naya Paisa are to be rounded off by ignoring fractions of ½ Naya Paisa and below and treating more than ½ Naya Paisa as 1 Naya Paisa. So in any transaction in which the tender of only a single pice coin is to be made, the equivalent will be 2 Naya Paisa.

Some people appear to be worried that the exchange of the existing coins of 2 annas and below, individually or in combination with other coins, will result in a small profit or loss to either of the two parties exchanging the coins. In actual practice, the percentage of loss will be very small, since the exchange value as rounded off in the conversion table is to be applied only to the total amount of all the annas/pice coins tendered in a single transaction. The loss or gain will be very little if the aggregate of all transactions is taken into account.

If one were to purchase a dozen articles and had only the Naya Paisa coins and if each article cost 1½ annas, the total cost should not be calculated by using the conversion table to find the rounded off equivalent of Naya Paisa of 1½ annas, that is, 9 Naya Paisa and multiplying it by 12.

The correct procedure will be to calculate the total cost of the dozen articles in terms of the existing coins. Thus the cost of 12 articles at the rate of 1½ annas each will come to 18 annas, that is, one rupee and two annas. You have then to convert the odd fraction of the rupee, namely two annas into Naya Paisa in accordance with the conversion table. The equivalent in terms of Naya Paisa for two annas is 12. Thus you would pay Rupee 1 and 12 Naya Paisa.

The exact difference in respect of this transaction accruing as payment in existing or new coins is 0.5 Naya Paisa in a transaction involving 112 Naya Paisa.

The insignificant gain or loss of half a Naya Paisa to the parties in this transaction will be easily counter-balanced by some other transaction in which there is a corresponding loss or gain. It would be very odd indeed if it should happen that any one party gained or incurred losses continuously in the course of a series of transactions.

637 COMPANIES REGISTERED DURING APRIL-DECEMBER, 1956

During the first three quarters of the current fiscal year 1956-57, 637 companies have been incorporated all over India. Of these, 65 companies are public and the remaining 572 companies private.

The annual rate of new incorporations during the current year is running around 850 companies, as against 1448 companies registered during 1955-56. The monthly average of registrations works out to 70 companies, as against 110 during the corresponding period of 1955-56.

Statewise distribution of new registrations during the period under review shows that out of 637 companies registered during the period, 244,113,85 and 81 have been registered in the States of West Bengal, Bombay, Delhi and Madras, respectively. These four States together account for nearly five-sixths of the total registrations all over the country.

Due to heavy registrations in the State of West Bengal, the total number of new registrations in the Eastern Region exceeds those in other regions by 100 to 140 companies.

During the first 9 months of the current financial year, 33 companies have been registered with an authorised capital of Rs 50 lakhs and above.

The total authorised capital of the 33 big companies is Rs 161.85 crores, accounting for about 87 per cent of the total authorised capital of the 637 companies registered during the last nine months.

Out of 637 companies so far registered during the year, 347 companies have been incorporated with an authorised capital under Rs 5 lakhs and 187 companies with an authorised capital between Rs 5 lakhs and under Rs 10 lakhs. The number of companies formed with an authorised capital between Rs 10 lakhs and under Rs 50 lakhs is 70.

In contrast to fall in new registations recorded during the current year over those of the corresponding period of last year, the net increase in paid up capital of companies, old and new together, is higher than effected by companies last year.

There are seven Government companies registered during the current fiscal year. Out of these, 5 companies have an authorised capital of Rs 10 crores and above. Among the notable registrations is the National Coal Development Corporation, registered in the State of Bihar having an authorised capital of Rs 50 crores.

ICI REDUCES WROUGHT TITANIUM PRICES

Imperial Chemical Industries Ltd., the largest producer of titanium in Great Britain, recently announced substantial reductions in the price of its wrought titanium and titanium alloy products. While continuing to vary according to the form of wrought product and the grade or alloy of titanium used, prices will in general be lowered by 10 per cent.

Two factors have contributed to this important development. First, the steadily expanding range of applications for titanium in the aircraft industry, coupled with increasing production efficiency. Second, the continuing decline in the price of ICI raw titanium metal, which for the past year has been below that of equivalent American material. At 19/6d. per lb., ICI raw titanium metal is selling at the lowest published price in the world.

INDEX NUMBER OF WHOLESALE PRICES IN INDIA:

REVIEW FOR THE WEEK ENDED FEBRUARY 9, 1957.

The official wholesale price index (with the year ended August 1939 as 100) declined by 0.2 per cent to 426.2 during the week ended February 9, 1957 as compared with 427.2 (revised) for the earlier week. The index was higher by 1.2 and 13.3 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

A fall of 0.4 per cent to 405.2 in the index for 'Food Articles' was brought about by a decline in the prices of Gur (−6%), Tea for internal consumption (−5%), Dal Arhar and Salt (—2% each) and Rice in Calcutta, Wheat at Hapur and Bajra (−1% each) although prices of Rice at Patna (+3%) and Gram and Jowar (+2% each) exhibited advances.

The index for 'Industrial Raw Materials' moved down by 0.5 per cent to 523.7 as compared with 526.1 (revised) as a result of a decrease in the prices of Cottonseed and Lac (−6% each) Linseed and Castorseed (−4% each), raw Jute and Rapeseed (−3% each), and raw Silk at Malda and Groundnuts (−2% each); the prices of Manganese ore (average export price) (+31%), row Cotton (—2%) and Copra (+1%) were, however, marked up.

Prices of Gingellyoli and Linseedoil (—4% each), Copra cake (+3%), Groundnutoil (−2%) and Coconut oil, Zinc and Copper (—1% each) went down while Groundnut cake (+3%) witnessed a rise and the index for 'Semi Manufactures' fell by 0.1 per cent to 412.5 as compared with 412.9 for the earlier week.

A decline in the price of Jute manufactures (−1%) was neutrallised by an advance in the prices of Chemicals (+2%) and Dyestuffs (+7%) and the index for 'Manufactures' remained stationary at 386.9 during the week under review.

Higher prices of Turmeric (+8%), Cashewnuts (+3%) and Betelnuts (+2%) raised the 'Miscellaneous' group index by 0.3 per cent to 592.9 as compared with 391.0 (revised) for the previous week despite a decline in the prices of Tobacco leaf and Pepper, Black (−1% each).

INCREASED OUTPUT OF IRON ORE IN INDIA

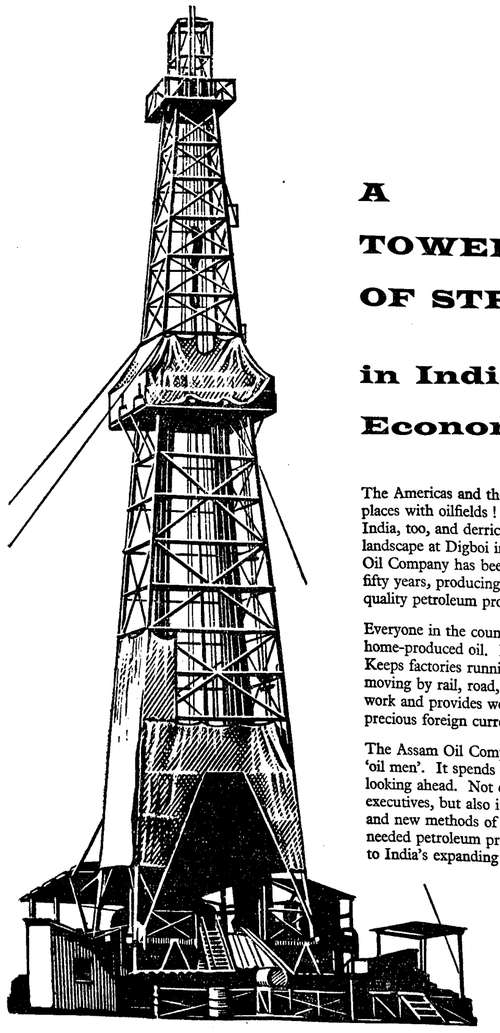
The estimated total output of iron ore in India increased to 418,198 tons in December, 1956 as against 376,789 tons in November, according to official statistics released by the Chief Inspector of Mines.

Returns received from 123 mines for the month of December, 1956, show despatches totalling 290,726 tons to the iron and steel plants and 96,978 tons to the export market.

The reported stocks as at the end of the month amounted to 1,521,635 tons.

INCREASED OUTPUT OF COAL IN INDIA

The output of coal in India increased to 3,678,262 tons in December, 1956 from 3,324,236 tons in the preceding month, according to official statistics released by the Chief Inspector of Mines, Government of India.



Despatches of coal amounted to 3,038,222 tons in December, 1956 as against 3,025,890 tons in November, 1956.

Coal stocks at pitheads amounted to 2,766,459 tons at the close of the month as against 2 564,697 tons at the beginning of the month.

During the period 838 collieries were reported to be working with an average daily employment of 342,759 workers. Output per man-shift was estimated at 1.18 tons for miners and loaders, 0.62 ton for all workers underground and in open-workings and 0.41 ton for all persons employed including surface workers.

The percentage of absenteeism was of the order of 12.72.

Nine coke plants at collieries and elsewhere produced 353,360 tons of hard, soft and other kinds of coke during the month and despatched 173,943 tons.

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields ! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

ASSAM OIL COMPANY

REDUCTION IN PRICES OF CARS AND TRUCKS BY PREMIER AUTOMOBILES

Effective from 11th February 1957 The Premier Automobiles Ltd., have reduced the prices of their Cars and Trucks to a great extent. In case of Dodge and Plymouth Cars there is a reduction of about Rs 1000/- per car; while the price of Fiat Elegant is reduced by about Rs 591/-. The current prices are Dodge car Rs 20,371/- Plymouth car Rs 20,270/- Dodge suburban Rs 22.899/- Plymouth suburban Rs 22.646/- Fiat car Rs 8,847/-

There is a heavier reduction in the prices of all ranges of trucks. The maximum reduction in case of KEW 165" Diesel Trucks is about Rs 3000/-.

MORE ACREAGE UNDER LINSEED

The All-India First Estimate of Linseed for 1956-57 puts the current year's area at 2,728,000 acres as against the adjusted corresponding estimate of 2,461,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Ministry of Agriculture. This shows an increase of 267,000 acres or 10.8 per cent in area during the current year as compared to last year.

The overall increase in area during the current year has been shared mainly by Madhya Pradesh, Uttar Pradesh and Rajasthan and has been attributed to favourable climatic conditions at the sowing time.

The information given in this Estimate relates generally to the period upto the middle of December, 1956. Till then the condition of the crop was reported to be generally satisfactory.

This Estimate does not cover the entire area sown to the linseed crop during 1956-57. Past experience has shown that the area at the first Estimate stage forms roughly 80 per cent of the area under the crop finally reported.

Information given in this Estimate relates to the set up of States after their re-organization on November 1, 1956.

EMPLOYMENT SITUATION DURING DECEMBER, 1956

The number of job seekers registered at Employment Exchanges in India declined by 2,002 during December, 1956. On the

AS often before, I have been watching with wonder and delighted admiration Mr Nehru's perfect at-homeness in a pace of work that would have killed lesser men long ago. Familiarity has not succeeded in blunting the edge of the phenomenality of this apparently inexhaustible reserve of energy and of his ability to renew himself, as it were, by more and more work. In the course of the last fortnight or so, he has been literally all over the country, campaigning on behalf of his party and addressing hundreds of meetings. Apart from the strain of travel and speech-making (at which he is conscientious and unsparing to himself), there is the incessant organisational worry that dogs him even when he is not the nominal chief. There are local disputes among Congressmen, local grievances of erstwhile Congressmen some of whom go to him to have them redressed. Even independent candidates go to him, as recently happened in Delhi, asking him whether or not they should contest the election. And every local Congress unit wants to bring Mr Nehru to their constituency to tell the voters to support the Congress and will not apparently hear of a refusal. Thus, Mr Nehru finds himself today in Patna, tomorrow at Cuttack, the day after at Mangalore and on the fourth day at Chandigarh or Simla.

✱

And, during all these days, he was perhaps the most anxious man in India. The security council, disregarding our hint that the Kashmir discussion may be taken up after the elections, decided upon a long drawn-out, acrimonious and extremely one-sided debate on the question. Big powers, for reasons best known to themselves, but not difficult to guess at, introduced a series of resolutions with the apparently deliberate intention of embarrassing and hustling India into untenable and unacceptable positions. There was, besides, a concerted and calculated chorus of adverse comment from abroad, especially from the United Kingdom, which was getting a bit of its own back for our stand on the Suez crisis. Across the border in Pakistan, irresponsibility reached new heights and there was every danger of a new situation in the Kashmir Valley by Pakistanis taking the law into their own hands. In India, feelings were being sorely tried by all these happenings abroad; and Mr Nehru was, more than any one else, anxious that we must not do anything that would even appear to put us in the wrong.

✱

Being a mature and responsible statesman, he did not wish to jeopardise relationships with other countries, especially Britain, despite grave provocation and despite great pressure from other parties who were apparently in a position to say, "I told you so".

✱

Influential opinion in the country, Mr Rajagopalachari's for instance, was urging our leaving the Commonwealth. But Mr Nehru knew that this was precisely the most inopportune moment to take a decision on the subject.

✱

Throughout this period, therefore, Mr Nehru was obliged, as Prime Minister and Foreign Minister, to take important and difficult decisions almost hourly. He had besides to keep his countrymen satisfied that he was not yielding any ground and to keep more extreme suggestions of retaliatory actions under firm control. And yet, during all these strenuous days, he was electioneering as any other party leader, with every appearance of having no particular other pre-occupation than that of putting his party back in power. This amazing inexhaustibility of physical, intellectual and moral energy is something that I for one shall never cease to wonder at. It is a sign of character which is as rare as it is indispensable in a leader of men and for which I feel I can never feel grateful enough.

✱

It is possible that, in the heat of electioneering, we shall be forgetting this aspect of the matter. There has been a great deal of discussion about the need for an opposition party in the country. Men of such diverse views as Rajaji, Jayaprakash Narayan and Dr Lohia have spoken of it during the current election campaign. Influential public men and organs of opinion of no particular affiliation have urged on theoretical grounds that a country that has no effective opposition in the form of an organised party in Parliament is sure to drift slowly toward totalitarianism. Some of these have felt that essential liberties like the right to property and genuine scope for personal effort and initiative have been abridged by the Congress Government during the last ten years. These people would like to see a party with a recognisable economic programme different from that of the Congress (which they find to be too much to the left-of-centre), to succeed at least as a powerful opposition party. These neo-conservatives are as yet unorganised and perhaps will never become so: for, they belong mostly to what might be called the intellectual right—a dwindling body of middle-aged men. The others who ask for an opposition to the Congress are people who find the Congress not socialistic enough. Thus, beyond agreeing on the need for an opposition, there is practically nothing in common between these two sets of people.

✱

Among the various leftist parties themselves, there is such absolute confusion in objectives that the chances of any of them, except the Communist party, emerging as a definable opposition party seem rather remote. Moreover, the blurring of political and economic distinctions between policies by election-eve-alliances has been fatal to the good faith of the parties that pay lip service to the need for an effective opposition. The Praja Socialist party, whose credentials in the matter of patriotism and integrity are the best on balance among the many contestants to the honour of an opposition, is confused in its aim and divided in leadership. Mr Jayaprakash Narayan, who belongs nominally to this party, makes periodical incursions into the political arena with unexceptionable sentiments—but retires when anyone asks him to stay there and carry out his suggestions. Mr Ashok Mehta is too intellectually honest to approve of aspects of his party's programme which are clearly dangerous to national unity. If only the Praja Socialist party would define its economic programme in clearer terms and avoid the temptation to compromise its political identity by temporary marriages of convenience with other parties, it can grow into a real opposition in course of time.

✱

Moreover, it seems to me a queer request to ask the voter to exercise his franchise, not on considerations of what any particular party has to say of its programme, but on theoretical considerations of the need for an opposition. Thus, Mr Jayaprakash Narayan would seem to be unconcerned as to whom the people give their votes so long as they do not give it to the Congress. If the advice was taken to heart, would that bring about the state of affairs desired by him? To be sure, there will be an opposition, (namely, the Congress)—but there will be no Government. For, no one party other than the Congress would be strong enough to form a Government that would stay in power for any length of time; and a coalition among them is out of the question in view of the absence of any real identity in basic policies. People who have not been able to combine before elections are less likely to be so after elections. The consequence will be that, within a short time, the Congress will be back in power, perhaps more firmly than in the past because of public disillusionment with the performance of others.

✱

What is the moral? It is that you cannot have an opposition party merely by wishing for it. The constitutional theory regarding Her Majesty's Opposition is to this extent absurd, in that it expects the opposition, at least in theory, to oppose for opposition's sake. (In practice, however, the absurdity is never carried to laughable lengths). Logically, there is need for an opposition only when there is something that deserves to be opposed and when there is a real alternative to the thing opposed. Where there is no real alternative offered, to say that there must be an opposition merely because the man in power has been there too long, is to put the cart

before the horse. If we must have an opposition, the first requisite is to acquire a clear and definable alternative policy and persuade at least a section of the people to accept it. Rajaji, who would like to have an opposition, would not accept the Communists as a legitimate opposition. If the need for an opposition is over-ridingly important, there is no reason why he should jib at this contingency.

*

The truth is that a two party system is a political phenomenon that is to an extent evolutionary and organic. It is also something of a rarity, a fact we tend to forget because of our long association with Anglo-Saxon Parliamentary forms. Elsewhere, either of two things obtain: There is a one-party totalitarian regime as in Communist countries, or you have many parties and a somewhat uneasy political life. In the latter case, there is usually a hard core of extreme right and an equally well-defined extreme left. There is constant political instability in which the middle of the road parties find the pitch constantly queered by extremists of either the left or the right. France is a typical example of this state of affairs. If the wishes of those who desire an opposition at any cost are now realised, the result would be, in my view, a parliamentary life which would not be of the decorous parlour-game variety that obtains in Great Britain, but of the bitter feud-and-intrigue-ridden French kind.

*

Even worse may be in store for us, though our comparative political maturity may save us against such a disaster. One has only to see what is happening in Indonesia to shudder away from the kind of multi-party confusion in which apparently everybody is at the mercy of army chiefs, since the parties themselves have not enough political influence with the people. In the present context in the country, the paramount need is for national unity. Internally, our sense of national cohesion is far from certain. There are deep-rooted tendencies in our national character which have not completely lost their capacity for mischief. Our Indianness where it exists is still self-conscious; our clannishness, on the other hand, is unself-conscious; and, even when it is overcome, it has to be done by conscious effort. Until such time as we don't think of ourselves as Indians first, no one with any sense of responsibility can give up his efforts to cement unity. Externally, the Kashmir question has brought to clear focus the fact that the supreme need of the hour is a strong Government at the Centre with a leadership that will lead us all wisely in the troubled times ahead. Desire for an effective opposition does argue a certain democratic health. But, in our present state, we cannot presume too much on it. There are other dangers to our political health. To guard against them, we need a leadership that is wise and courageous, a leadership that sees everything steadily and sees it whole and never shirks difficult decisions even when opposed by the whole world. It is a leadership that, by common consent, only Mr Nehru can give. Hence it is that I wish more power to his elbow.

*

Consequent on Mr Bhattacharyya's assignment with the State Bank of India, and consequent to the new ramifications of the old Finance Department into 4 ministries, some important changes have been found necessary in the personnel of the portfolios under the care of Mr T. T. Krishnamachari. The first to be noted in this context is the appointment of Mr Ratnam as Secretary, Ministry of Expenditure. The next is Mr B. K. Nehru taking the place of Mr H. M. Patel as Secretary, Ministry of Economic Affairs, thereby relieving Mr Patel to function as Principal Secretary entrusted with the task of coordination and overall guidance. Arising from these, other consequential changes follow. Mr Jayashanker succeeds Mr Ratnam as Financial Adviser, Defence. Mr Kamath is now the Vice-chairman of the State Life Insurance Corporation. It remains to be seen whether Mr Patel continues to spend the week-ends in Bombay in a programme of intensive work connected with the LIC or whether Mr Kamath is to take over the bulk of the work, with Mr Nehru taking the Chairmanship and delegating much of the detailed responsibility to the Vice-Chairman. Apart from the stupendous attention claimed by existing business,

Can your car make a split-second stop ?

As a responsible motorist you know that it should be able to. An emergency may arise any moment...it comes unannounced. So play safe. Among other things, see that you have a really reliable braking system.

Wise motorists all over the world have their brakes tested regularly and have them fitted with FERODO—the brake linings that make motoring safe. FERODO Brake Linings are made with asbestos because they have a tough job to do. In an emergency, their unfailing efficiency can prevent disaster.

There are FERODO Brake and Clutch Linings for every type of vehicle in the country—but these are only a part of the wide range of technical asbestos products which we make at AM & FM to meet the needs of Indian industry. The increasing use of asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

AM & FM

We supply:
- 'FERODO' BRAKE AND CLUTCH LININGS
- 'FIREFLY' ASBESTOS PRODUCTS
- SPRAYED 'LIMPET' ASBESTOS
- 'NEWALLS' INSULATION MATERIALS
- 'PATTINSON'S' BRAND MAGNESIA CHEMICALS
- 'SINDANYO' ELECTRICAL INSULATING BOARDS

The Private Sector Controversy

THERE have been distinct phases in the what I might call private sector controversy. It all began, of course, with the Avadi resolution and the draft Plan-frame as it emerged some time in 1955. The first manifestation of what in the event has proved to be an acrimonious debate was in the form of an almost hysterical insistence that the private sector was being squeezed out and that it would be allocated a pitifully small role in the emerging economy of India. I can understand that, toward the end of the First Plan, we should have had this element of doubt and diffidence on the part of the private sector. The formal declaration that India was to have as its objective a socialistic pattern of society; the nationalisation of the Imperial Bank; the mutter and threat and actual materialisation of the nationalisation of life insurance; the controversy over the future of the gold mining companies; the continued focus on the public sector of national activity —these inevitably engendered, if not loss of confidence, at least substantial doubt on the part of the private sector. One can understand, therefore, that the private sector should have taken particular pains to clarify what, in Indian circumstances, should be the concept of mixed economy. Hence, it was proper that emphasis should have been laid on the necessity to provide greater scope for development in the private sector and to elicit from Government an assurance that the private sector would be encouraged and enabled to fulfil the tasks allotted to it for its implementation.

In effect, however, the first wave of criticism disclosed that the approach was essentially negative. The draft Plan-frame was loudly criticised; and no Government announcement was allowed to pass by without the benefit of caustic comment. This was surely a pity, because such destructive criticism could scarcely have been expected to achieve the desired ends of a revision of planning policy to such effect as would de-emphasise the State sector and instead give greater prominence to the private sector.

Time passed; and we had the somewhat strange spectacle of spokesmen for authority being lax as to responsibility in their public utterances. I wonder whether such a policy was deliberately decided upon on the reasoning that, as the Bible exhorts us, an eye should be exacted for an eye. Be that as it may, this second phase was, thankfully, short-lived. The third phase began with the appreciation by the private sector of the fact that the projects in the public sector would release prosperity for and enjoin greater production upon the private sector. We had the diffusion of the feeling that India's mixed economy would be on the basis of the co-operative co-existence of the public and the private sectors. But, even at this stage, the theoretical separation between the private and the public sectors continued.

Which, of course, is quite the wrong approach. National activity does not differentiate between the endeavours undertaken by the State and the enterprises under the aegis of the private sector. Indeed, to some extent and in some spheres, there must be a deliberate blurring of such distinction. This was forcefully brought out in the revised Industrial Policy Statement, the important rider to which asserts that Government are not to be precluded from seeking or obtaining the co-operation of the private sector for those fields which, according to the policy statement, are to be reserved to the State. In other words, the co-operative co-existence in India does not lie merely in the efforts of the State and of the private sector being complementary; or merely in the State and private sectors being competitively engaged in certain branches of the industry; but much more importantly, in the prospect of State and private sectors being jointly responsible in and for particular projects. At least, this is my understanding of what the revised policy statement means.

I find that there is today a tendency on the part of our responsible leaders in Government and in the industry to draw pointed attention to the need for such new understanding. For example, the annual general meeting of the Indian Merchants Chamber was held in this city last week; and, on the occasion, both the Government spokesman, Mr Manubhai M. Shah, and the spokesman for free enterprise, Mr Murarji J. Vaidya, showed an admirable appreciation of India's mixed economy as it must be in the next few years.

Mr Shah, the Union Minister for Heavy Industries, got off to a good start by stating that the achievements of the immediate past were derived from the joint efforts of both the private and public sectors. Then, he referred to the fact that time and effort have been dissipated in a futile debate on the responsiblities of the two sectors. Instead, he said, "what is required is talking to each other rather than talking at each other". On Government's part, the intention was to build the strategic industries without which India would not have the foundation to embark on speedy industrialisation. By implication, the challenge to the private sector was to make up the leeway comprised by production needs in the ancillary industry.

The Government's taxation policy was by no means designed to retard the growth of the economy. On the contrary, development rebate is an inducement to expansion that few other countries possess on their statute books. Moreover, even the compulsory deposit scheme proposed by Mr T. T. Krishnamachari in his mid-year budget is intended primarily to ensure that the unappropriated profits of a company are canalised into the productive endeavours of expansion and yet more expansion. In the light of these facts, Mr Shah said: "If we can pool our cumulative experience and wisdom and work shoulder to shoulder we shall surmount all these difficulties facing this country."

It would not be wrong to describe Mr Shah's speech as an exhortation to the private sector to co-operate fully with Government and to participate actively in the speedy industrialisation of India.

Mr Vaidya, who spoke on the occasion in his capacity as President of the Chamber, also expressed the correct sentiments in admirable words. India has a far way to go, if we are to achieve a standard of living that can at all be termed satisfactory; along this path of development, there will be the need for all sections of the country to march hand in hand "with as complete a unanimity as possible" in respect of the goals

Role of Handicrafts in Second Plan

SPEAKING in Bombay last week, Sir Chintaman Deshmukh has pointed out that though, by and large, the Second Plan has managed to steer clear of "flagrant or widespred intrusion of ideology or pressure of politics", it has, nevertheless, not escaped their "furtive" influence in parts . In support of this thesis, he points to the role assigned to handicrafts, particularly in the production of yarn and cloth. While admitting that simple machines like the Ambar Charka are certainly efficacious in reducing the weight of unemployment and underemployment in the country, Sir Chintaman declares that the mistake lies in putting such a heavy responsibility as supplying a considerable portion of a basic need of the population on the handloom sector. The criteria of development of village industries should be economic viability and beneficent social effects.

Opinion in the country is by no means unanimous on the effectiveness of the Ambar Charka both as to its capacity to play the big role assigned to it during the Second Plan in the matter of cloth production and to its continuance in the future set-up in the country. It is still a moot question if the handloom sector will be able to provide the entire estimated increase in the demand for cloth. It is no wonder, therefore, that there is no wide acceptance in the country of Government's cotton textile policy under the Second Five-Year Plan.

A similar subordination of the wider and long-term interests of the nation to those of a section of the community, according to Sir Chintaman, is the theory propounded by the Planning Commission that the wages of organised labour should move in line with the increase in national income. With the State emerging as one of the biggest employers, this encouragement to labour is bound to act as a boomerang. The inflationary effect of a wage spiral will also add its quota to an already long list of problems awaiting solution.

In the course of his speech, Mr Deshmukh has analysed the Second Plan in terms of the financial resources required for its implementation. The gap in resources, not covered by foreign aid, will have to be filled internally by curtailment of consumption. In this connection he has suggested that a measure of restraint in the case of some important consumer products and where consumption has crossed subsistence leel, will go some way in finding part of the finances required. In the matter of taxation, regard and preference for particular modes and methods, must be foresworn.

Sir Chintaman has also pointed to some other weakness of the Plan, especially the inadequate date which have been found to be slipshod and unreliable and has emphasized the importance of maintaining co-operation and co-ordination of interests between five sets of persons—politicians, administrators, technicians, statisticians and economists.

*

Development of Dental Science

It is only in recent years that the need for a proper development of dental science has been fully realised in India. That dental education has not been given the attention it deserves is borne out by the fact that today there are only seven dental colleges in the whole of the country. Among the Universities, only the Bombay University has so far set up a Faculty of Dentistry.

It is, however, gratifying to note that of late both the Central and State Governments have begun to evince keen interest in the progress of dental education. The realisation that the neglect of teeth ailments in the early stages is responsible for many a serious ailment to the human organism has imparted a new urgency to the problem of development of dental science in the country. The Planning Commission has allotted Rs 2 crores for dentistry under the Second Five Year Plan.

Referring to the present position of dental education and dental services, the Commission has pointed out that since there are only 600 to 700 qualified dental surgeons in the country, there is urgent need for increasing substantially the facilities for training dental personnel. A start should be made in this direction by bringing the existing dental colleges to the required standards of efficient functioning and by doubling the number of admissions. In this regard the Commission has revealed that during the Second Plan, five states propose to open new dental colleges while West Bengal and Punjab have provided for the expansion of existing colleges. The Commission has also suggested that in order to expand dental services, medical men attached to rural dispensaries should be trained for emesgency dental treatment. It has also emphasised the need for making necessary provision during the plan period for the training of adequate numbers of dental hygienists, dental mechanics and dental technicians so that the efficiency of the limited dental services at present available may be increased.

Mr Salebhoy Abul Kader, Mayor of Bombay, in his inaugural address to the 12th All India Dental Conference has rightly pointed out that the real work of the dentists lies in the rural areas where the majority of the population lives. In view of its preventive aspect, dental care should be given high priority in public health work. According to Dr V. M. Desai, President, All India Dental Association, dental education should be considered as part of general education, and not technical or vocational training.

GATEWAY MARKETS

Downward Trend in Bullion Prices

BEARISH sentiment was in evidence on the Bullion Exchange during the past week. Sentiment was mostly influenced by the news of heavy arrivals and waning demand in spot. News were current that a duty of about Rs 3 lakhs was paid on the import of silver coins from Tibet. This coupled with reduced offtake, both in gold and silver, chilled enterprise.

The downward movement in prices was led by the Silver section where the sharp break in values was ascribed to weaker upcountry advices and expectations of increased inflow of Tibetan coins. Arrivals and offtake balanced 16 bars. Phagun delivery, after starting week at Rs 180-5, improved at one time to Rs 180-14. Increased bear selling, however, depressed the price at the close to Rs 179-2. Ready was quoted around Rs 179-14—the highest touched being Rs 181-1.

Gold also opened substantially lower in unison with the counterpart and remained depressed for the most part of the week due to lack of fresh interest and narrowing spot premium. Arrivals and offtake were estimated around 3,000 and 2,000 tolas respectively. Phagun delivery started at Rs 106-10 and, after improving to Rs 106-13, succumbed to bear pressure, to close at Rs 105-13. In sympathy, the rate for the ready position was pushed down to Rs 105-12 from a high of Rs 106-9. Sovereign lost nearly a point at Rs 69-0.

Oils and Oilseeds

The markets for Oils and Oilseeds, after ruling quiet during the initial stages of the week, steadied up a little toward the close. The Castorseeds section presented a generally bearish appearance with sellers predominating. The continued absence of demand from the UK and USA and the steady pace of the marketing of the new crop in Hyderabad exercised a restraining influence on the market. Castor May delivery opened at Rs 153 and moved between Rs 153-12 and Rs 151-12, to finish the week at Rs 153. Ready was quoted at Rs 33-0 and Castor Oil, commercial, at Rs 17-14.

Despite the continued shortage of spot goods, the Groundnut section continued to rule quiet. Groundnut February started at Rs 167-8 and, after touching a high of Rs 168-8, finished the week at Rs 168. May delivery began higher at Rs 162 and, after being marked down to Rs 161-6, steadied up at the close to Rs 162-4. Ready Bold was quoted at Rs 33 and Groundnut Oil at Rs 18-0.

The Linseed section was practically neglected, and prices were gradually marked down from last week's levels, mainly due to bull unloading inspired by reports of inireasing arrivals of the new crop in Hyderabad. The downward trend was accelerated by the absence of demand for linseed oil from overseas buyers. Linseed May delivery opened at Rs 27-12 to close at the lowest level of Rs 27-9. Ready was quoted at Rs 27-12 and Linseed Oil at Rs 14-12.

Prices in the Cottonseed section showed a sympathetic movement. May delivery begain at Rs 96-4 to finish lower at Rs 95-12.

*

Yarn

The Yarn market continued listless with only meagre business passing. The financial stringency and the general reluctance on the part of weavers to augment their stocks told adversely on the daily business. Prices of all yarns ruled weak as a section of the trade was inclined to dispose of its stocks even at below replacement costs.

In the ready section, Art Silk Yarn declined further by half an anna per pound; but Staple Fibre yarn ruled comparatively steady despite the reports that South Indian mills were inclined to dispose of their production even at reduced rates.

Prices in the Cotton Yarn section remained almost unchanged following the absence of any improvement in the daily offtake.

*

Metals

Prices in the Bombay Metal market ruled generally steady. Copper moved between Rs 183 and 185 per

(Continued on page 378)

Bombay Review

World *of* Cotton

Buoyancy Persists

THE Cotton market is again in a state of flutter. Despite the recent introduction of a margin system, prices of both the Jharilla and Vijay contracts have broken the safety cordon and shot up to new high levels for the season on renewed speculative support. Sentiment has gathered fresh momentum from the fixation of room rates, which are construed bullish. The consequent bull buying and bear-covering have lifted the rates to fresh heights. It is only the fears of additional margin which has checked the bulls at high levels.

Since the quasi-ceilings have been pierced, bulls are obliged to pay a margin of Rs 25 per bale on their outstanding commitments above Rs 700 per candy. Leading bulls have, however, preferred payment of margin to withdrawing from the market since they feel that the cotton economy is in their favour. There is no payment of margin in Vijay contract since it is below the limit.

Meanwhile, the long-awaited permission for trading in Jharilla May and Vijay June contracts has been greeted with relief by the cotton trade. Bears have specially welcomed the announcements as they can now switch over from Jharilla March to May contract and can avoid tendering cotton against the maturing contract.

Trading in the new contracts started on Monday. Bears appeared to have been selling short in the new Jharilla May, which resulted in a drop. Owing to small turnover, Vijay new contract moved narrowly and closed steady. Jharilla March opened at Rs 719 and, after touching a high of Rs 726-8 and a low of Rs 721-8, finished at Rs 723-8. Similarly, May contract closed at Rs 675 after touching a high of Rs 678-8 and a low of Rs 674.

Vijay April opened at Rs 817 and, after touching a high of Rs 839, finished at Rs 833-8. June contract finished at Rs 800—the highest touched being Rs 802 and the lowest Rs 790.

×

SPOT MARKET:

The Spot market ruled steady and most staple varieties continued to attract good demand from local mills. This was mainly due to fears that the crop would be only in the neighbourhood of 50 lakh bales this season as against 54 lakh bales estimated before and reports of falling arrivals from Madhya Pradesh, Vidharbha and Khandesh. Since bears could not tender cotton against the Jharilla contract maturing this month, some of them tried to cover their position even at rising prices.

In the export section, some enquiries were noted from Japan for Dhollera and Oomra Deshi varieties.

In the foreign cotton section, spot lots of American cotton were in demand, while other varieties maintained their previous levels. Although there was demand for Egyptian cotton, the volume of business done was limited, largely due to the fact that current prices were out of tune with Indian mills' buying ideas. Meanwhile, chances of an Indo-Egyptian barter agreement seem to have brightened up. The basis for the barter agreement may be Indian tea, spices, consumers' articles and cotton textiles in exchange for Egyptian cotton.

The Egyptian Ministry of Agriculture, in their third estimate of the 1956/57 crop, have placed production at 6,942,813 kantars as against their second estimate of 7,037,000 kantars and the first estimate of 7,201,000 kantars. It is understood that they will announce the fourth and final estimate of the crop on the 15th April, 1957.

Following rates were quoted:—Bengal Rs 690 to Rs 740; Oomra Rs 795 to Rs 820; Jharilla Rs 810 to Rs 820; Dhollera Rs 750 to Rs 760; Vijay Rs 935 to Rs 940 and Karnak Rs 3,050 to Rs 3,200.

×

COTTON STATISTICS:

Exports by rail from 1st September 1956 to 21st February 1957 were 158,860 bales. Estimated mill consumption in Bombay, during the same period, was 626,319 bales as against 616,208 bales in the corresponding of the previous year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 21st February 1957, was 536,248 bales as compared to 456,877 bales on the corresponding date of last year.

×

KARACHI COTTON:

In contrast to the easy trend noted last week, the Karachi market ruled firm during the week under review. There was speculative buying induced by continued large purchases of cotton by overseas interests. Consequently, prices were pushed higher. Following rates were quoted:—Roller ready Rs 84-14; Sind Deshi Rs 90 to Rs 91 and Punjab Deshi Rs 80 to Rs 82.

×

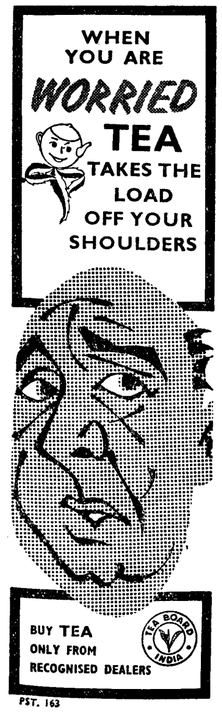
NEW YORK COTTON:

Cotton futures in the New York market moved rather irregularly on liquidation in the near position. A little trade buying was more than offset by selling from local speculative interests. New crop was hesitant, pending further crop news.

The US Department of Agricultural has announced that its export programme for this and next season will continue along the same lines as last season. Sales of CCC cotton on a competitive basis will start in March on the six-million bales of 1955 Loan Cotton. Delivery will be allowed to exporters, but they will not be permitted to ship the cotton until August 15.

×

LIVERPOOL COTTON:



Values in the Liverpool cotton market eased slightly in dull trading. Some previously higher hedging limits were reduced and the volume of mill-fixations was disappointing. Both the Egyptian and Sudan contracts continued inactive.

×

CLOTH AND PIECEGOODS:

The Bombay Piecegoods market ruled steady last week. The price trend remained unchanged on account of renewal of demand from the consuming centres, but offtake did not improve to any appreciable extent. Dealers were, however, hopeful that better demand would be forthcoming in the ensuing weeks on account of paucity of stocks in the upcountry markets.

On the export front, enquiry was limited. There was a moderate demand from Hongkong for grey sheetings, bleached long cloth and dyed poplins. The semi-Government Corporations, established by the Burmese Government, are reported to have invited offers for certain qualities. It is, therefore, hoped that a satisfactory business will result in the course of the next few weeks. Inquiries from Sudan were regular for qualities like grey sheetings, voiles, dhoties and sarees.

Olympus

Foreign Exchange Prospects

ELECTION-EVE politics have provided politicians a plausible escape from the teasing problems connected with the Second Plan. Such holidaying away from basic economic realities is a luxury denied to permanent officials here who have to plug away at their jobs, elections or no elections. During the last fort-night, much anxious thinking has been done to devise means to overcome temporary and not so temporary difficulties created by shortage of foreign exchange resources for importing capital goods and other essential commodities. Devices are being thought out by which the foreign exchange component would be arranged for without any immediate strain on the country's resources in this regard. The most vigorously canvassed device is the one that involves long-term credits from abroad; and, in this, the private sector also has shown commendable initiative. Government's desire that the foreign exchange needs of programmes of industrial expansion should be arranged for either by long term credits or by increased financial participation of collaborating foreign firms has, it is learnt, met with encouraging response. The proceedings of the Bengal Chamber of Commerce sometime ago in Calcutta are pointed out as a piece of evidence that the private sector is willing to consider the suggestion of Government in this connection.

Meantime, encouraging news are to be had from various foreign countries who are showing great willingness to help India in easing its foreign exchange situation by giving long term credit facilities. Among the more recent offers is the one from East Germany. Favourable response has also come from France, and official sources are confident at least about the approved projects of National Industrial Development Corporation. A West German trade mission is expected in New Delhi early in April which will presumably discuss many of the projects in which West German firms have already shown some interest, particularly those approved by the National Industrial Development Corporation like foundry-forge projects, heavy machine tools, wagon building industries, dyestuffs, fertilisers etc. And lastly and importantly, a trade mission sponsored by the US Department of Commerce has arrived in India this week and will tour the country for more than six weeks in order to find out for themselves the scope for expanding Indo-US trade. The mission will hold talks with officials of the Government of India during this week. Mr Preston Forbes, the leader of the mission, was naturally reluctant to anticipate the course of the talks, but he confirmed that supply of capital goods on a long term basis would undoubtedly be one of the subjects to be discussed.

Particular interest attaches to this mission which has arrived close on the heels of the visit of Mr John B. Hollister, Director of the US International Cooperation Administration, who has been in India for some time and has had discussions with the Government, the Planning Commission and the Prime Minister on the subject of India's Second Plan. At a press conference here last week, Mr Hollister stated that India's Second Plan was a "well-thought-out one and the US would help India substantially" in the carrying out of the Plan. Some of Mr Hollister's observations of last week are particularly interesting in the context of the arrival of the trade mission. Mr Hollister said, "American capital is not interested generally in very big quick profit. It is interested in settling down for a long period in the country and is perfectly willing to plough back in the country substantial amount of the profit. Ultimately, India should be a place where substantial amount of American capital could be used". There is no doubt that the trade mission now in India would be interested in this finding of one of their own experts.

Yet another satisfactory piece of evidence of our success in tackling the foreign exchange problems connected with the Plan is the conclusion of the tour of the team of consulting Engineers sent out by the World Bank to study the projects of Indian Railways for which they had promised aid. Mr Slater, the leader of the team, stated in New Delhi that the Indian Railways were "headed in the right direction" and, though he was naturally cagey about giving direct assurances on the matter, it was clear that he was satisfied about the technical soundness of the schemes undertaken by the railways. The World Bank has already considered favourably India's request for aid in railway projects, and a quick and favourable decision on the receipt of the report of the present team of experts can be confidently expected.

Apart from these encouraging factors, there is the prospect of development assistance from the US about which Mr Hollister spoke at length at a press conference. I have already referred to some of Mr Hollister's observations at the press conference, but the most important things he said concerned the future pattern of US assistance to India's Second Plan. According to the latest available figures, the total assistance programme from July 1 1951 to June 1957 amounts to Rs 168.97 crores. This does not include technical assistance in the form of remuneration and travelling expenses of experts sent to India, nor does it include the cost of training Indian Nationals abroad. (The number of such experts sent to India and trainees abroad are 315 and 505 respectively. The aid on this account has been averaging about 5.5 million dollars every year.) It would appear that the bulk of the aid would average about Rs 30 crores a year. As is well known, owing to a variety of factors, the rate of using up of the appropriation was rather disappointing in the first two or three years. But this has been stepped up considerably in the last two years with the result that the actual annual rate of expenditure has been far higher than the annual appropriations. In fact, in the year 1956-57, the actuals are expected to be nearly double of the appropriation of Rs 27.14 crores for the year. Even so, there is an unspent back log of appropriation of about Rs 46.62 crores as at the end of 1956-57.

These appropriations are covered by a total of 63 operational agreements covering various projects big and small. Most of these appropriations are in the form of long-term loans—a form much preferred by India. These loans, amounting so far to 122.5 million dollars, are repayable in rupees over forty years with 4 per cent interest.

Against the background of these facts, it would be easy to see that the US assistance in the coming years will not be less than about Rs 30 crores a year. It might quite conceivably be more, in view of the fact that the US is satisfied that the aid given to India is well spent and there is no waste. Mr Hollister was quite definite on the last point and this finding is interesting for the reason that a similar assurance of maximum return from aid given to Pakistan is not, on their own findings, available to the US Government. Mr Hollister did not, naturally, like to commit himself and the US Government on the extent of the help that would be forthcoming in the coming years as a result of his studies and discussion with Indian leaders. But he expressed himself as deeply impressed by the work being done in India and by the "strength and vigour" of our leaders.

But, despite his reticence, certain tentative conclusions seem permissible. Firstly, it is not overoptimism to expect that "substantial aid" would be forthcoming from the US for India's Second Five-Year Plan and that this aid would relieve considerably the pressure on India's foreign exchange resources. Secondly, the assistance will have to be on annual basis and not on quinquennial basis, in view of the natural disinclination of the American Congress to commit itself to long-term obligations of this sort. Thirdly, the current rate of aid is likely to be substantially stepped up in the coming year and this stepping up is likely to be maintained in the subsequent years also.

Mr Hollister's task, on getting back to Washington on the 1st of March, would be to work out the

SOUTH EASTERN RAILWAY TENDERS.

The Controller of Stores, Garden Reach, Calcutta—23 invites the following tenders:—

1. Tender No. CS5/57/3543B(56) for supply of 237-Cwts. of Nut Hex M. S. Forged Black 1.1/2" to BSS. 916-1953.
2. Tender No. CS6/57/3206B(56) for supply of 157-Cwts. of Nut Hex M. S. Forged Black 7/8" to BSS. 916-1953.
3. Tender No. CS7/57/17182-R(56) for supply of 1-No. Dodge Truck Chassis 153" wheel-base, 5-ton capacity Petrol Driven complete with water-tender for Fire Service.
4. Tender No. CS8/57/2233B(56) for supply of 102 Nos. Pan Lavatory to IRS. Drg. C. 1880, Alt: 1 and IRS. Specn. R-28 (current).
5. Tender No. CS9/57/5330-R(56) for supply of 16-tons Lead Wool to ISD. Specn. G/Misc/36/C (current).
6. Tender No. CS10/57/2087-R(56) for supply of the following sizes of Chain Iron Tested having a tensile strength of 25 to 27 Tons per sq. inch manufactured from Puddled W. I. to IRS. M1-1953 as per dimensions shown in IRS.H3-1953.

(a) 1/2"=3-tons.
(b) 5/8"=2-tons.
(c) 3/4"=2-tons.
(d) 7/8"=2-tons.

Tender forms are obtainable from his Office (I. B. Section) on remittance of Rs. 2/- per copy per tender (not returnable) by money order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach, Calcutta—23 by local firms. Earnest money is Rs. 500/- each against tenders 1 and 3, Rs. 300/- each against tenders 2, 4 and 6 and Rs. 600/- against tender 5. Closing date of tenders 1, 2 and 3 is 20-3-1957 at 12 noon and that of tenders 4, 5 and 6 is 22-3-1957 at 12 noon. Firms not on the Railway's list of approved contractors must deposit the earnest money with the Chief Cashier Garden Reach and enclose his Receipt together with a valid Income Tax Clearance Certificate with the tenders.

North Indian Notes

Cattle Wealth

THE problem with regard to cattle wealth in India had been admirably and succinctly stated by the Royal Commission on Agriculture when it said that Indian cattle lack everything except numbers. This statement is as true today as it was when the Commission first made it with this difference that there is greater awareness in the country of the need for an improvement in this regard now.

Speaking on the occasion of the Fifth Annual General Meeting of the Central Council of Gosambardhana, Mr A. P. Jain, Union Minister for Food and Agriculture, referred to the various schemes of cattle development such as the key village, gosadan ganshal Development, nomadic cattle breed etc., which are being implemented under the Second Five Year Plan. The Minister also explained the various aspects of the scheme taken on hand by Government to conserve and preserve the cattle-wealth of the country, such as elimination of scrub bulls, establishment of Goradam as well as Gosalas. While elimination of undesirable specimens of cattle was done by process of segregation and removal to forest areas and other waste lands, the improvement of the rest was sought to be achieved by the augmentation of feeds and fodder resources as well as by the technique of artificial insemination.

A measure of the efforts of the Government in that direction, was the establishment during the current year, of 47 artificial insemination centres, 291 key village units, and 7 extension centres. The other schemes, adopted by Government related to the setting up of Gosalas for increasing the supply of milk to urban areas, the starting of a training course to fill the gap in technical personnel required by the Gosalas and organisation of milk yield competition. The Minister finally referred to the plans lying ahead as part of the Second Five Year Plan, such as the establishment of 125 artificial insemination centres, about 750 key villages, setting up of 50 key village centres for coordinating cattle breeding and milk production plans, pursuit of a grow-more fodder campaign in rural areas, the establishment of 60 gosadans and intensive development of 350 gosalas.

The schemes indicate that the Government are on right lines in regard to the problem presented by the undernourished and low yielding cattle of India. The correct measure of the success of the Government in tackling this problem will not be the materialisation of the above schemes, but an actual increase in the yield of milk and the schemes are important only as they will considerably contribute toward such a result. Considering that the present per capita consumption of milk in India is very low, being only 5.02 as against 40.02 in Denmark and 56.02 in Canada, the efforts required to catch up with these countries appear to be stupendous, and the programmes for cattle wealth contained in the Second Plan are only in the nature of a beginning toward the tackling of the problem in a scientific way.

*

Indian Railways

In a radio interview Mr J. E. Slater, leader of the team of railway consulting engineers sent by the World Bank remarked that the problems confronting the Indian railways were essentially those arising out of a change in the type of operation which the changing character of the country's economy demanded. The type of operation suited to an agricultural economy was different from that which was necessary for an economy which wanted to progress industrially.

The basic problem with regard to the Indian railways was the question of line capacity which depended upon three factors; namely-adequate locomotive power and wagons, capacity of the crossing loops and yard capacity. Mr Slater expressed satisfaction at the care and thought given by the Indian planners to this aspect of the problem.

The electrification scheme had the advantage of reducing expenses and of adding to the capacity of a line. India could, with advantage, embark on a scheme of extension of electrification of railways, especially in view of the expanding availability of large amount of cheap hydro-electric power. As for the use of diesel electric power which was widely prevalent in various countries including the USA, prospects of a similar development in India were not very promising in view of the scarcity of petroleum in the country.

In the matter of the extent of aid which would be available for India from the World Bank for railway development in the Second Five Year Plan, Mr Slater pointed out, that it was related to and depended upon demands in India for certain types of steel or rail for which the capacity in India was not quite up to the needs of a very rapidly expanding programme as well as upon the demands for additional locomotives which might be required to build up the supply more rapidly. But he cautiously added that it was for the Bank itself to make a decision in this matter.

NORTH INDIAN MARKETS

Sugarcane Prices Maintained

AFTER a review of all factors relating to fixation of Sugarcane prices for the 1957/58 crop, the Government of India have decided to maintain prices at their existing levels, i.e. Rs 1-7 per maund for sugarcane delivered at factory gates and Rs 1-5 for delivery at outstation rail centres.

It is understood that any reduction in the price of sugarcane is not feasible on account of comparatively high prices of other agricultural produce. At the same time, even the existing prices of Rs 1-7 and Rs 1-5 for gate and outstation deliveries respectively have resulted in a substantial increase in the production of sugarcane, particularly in areas supplying cane to sugar mills. It is, therefore, felt that further increase is likely to have the effect of diverting more land from food crops. The maintenance of the old rates is thus considered equitable inter se between growers of cane and other farmers, as also in the general interest of the economy of the country in order to avoid any imbalance between production of food and other crops.

The all-India second estimate of sugarcane puts the area and production for 1956-57 at 4,532,000 acres and 58,914,000 tons of cane as against 3,945,000 acres and 50,455,000 tons respectively for 1955-56. This shows an increase of 14.9 per cent in area and 16.8 per cent in production.

*

Sugar

According to the Indian Sugar Mills Association, the sugar production, during the month of January 1957, was 3.64 tons, bringing the total production during the first three months of the season 1956-57 to 8.16 lakh tons. The corresponding figures during the last season were 3.55 lakh tons and 7.12 lakh tons respectively.

The offtake of sugar from factories, during January 1957, was 1.42 lakh tons as against 1.23 lakh tons during the corresponding period of last season. The total offtake of indigenous sugar, during the first three months of the current season, comes to 4.58 lakh tons as against 3.66 lakh tons during the same period last season. Closing stock of indigenous sugar, on the 31st January 1957, was 8.77 lakh tons as against 7.58 lakh tons on the same date last season.

The Government of India have released a further quantity of 1.65 lakh tons of sugar for free sale. This brings up the total release, so far made out of the 1956-57 season, to 3.96 lakh tons, which include 0.35 lakh tons released for export.

Meanwhile, sugar markets have continued to rule quiet with prices showing an easier tendency following a further release for free sale. Following rates (per maund) are quoted in Hapur market:—Jaswant Rs 28-11; Simbhauli Rs 28-12; Mowana Rs 28-0 to Rs 28-12; Daurala Rs 29-0 to Rs 29-12; Amroha Rs 28-2; Bijnore Rs 28-2; Mansoorpur Rs 29-0 to Rs 29-12 and Rampur Rs 31-6.

The Meerut market also ruled weak. Demand was very poor. Rajasthan was the only buyer of some importance. Small grain was quoted at Rs 28-9; Medium at Rs 29-12 and big grain at Rs 31-0, all per maund.

The Khandsari market continued to rule depressed in view of increasing stocks and slack outside buying enquiry. Rates moved between Rs 22-0 and Rs 25-8 per maund, according to quality.

*

Gur

Thanks to better outside buying enquiry, a halt was cried to the easier tendency in prices that was noticed in the Gur market till the end of last week. In the Hapur market, the rate improved to Rs 9-13 from Rs 9-8 per maund. Arrivals were at an average of 2,500 maunds daily, while stocks were estimated around 75,000 maunds.

*

Foodgrains

Prices in the Foodgrains markets, after recording the highest levels early in the week, declined toward the close on bright crop prospects. The following table shows the crop estimates for the 1956-57 season as compared to the previous season (figures in thousands):—

		1956-57	1955-56
Area (in acres):			
Rice	...	72,512	71,986
Wheat	...	30,502	27,756
Barley	...	8,270	8,259
Gram	...	22,937	22,269
Production (in tons):			
Rice	...	23,900	23,515

Election Prospects in Madras and Kerala

BY the end of this week, elections will have commenced in a number of areas in South India. The last-minute appeals of Pandit Nehru, Pandit Pant and other leaders must have some effect on those who have not made up their minds yet. The percentage of this undecided section is very difficult to gauge. Because indecision often leads to practical neutrality. One is aware of several middle-class pockets, where those who would like to abstain from voting are nearly as many as those who have lined up on one side of the other, through conviction, persuasion or, as frequently happens, fear of the consequences of estranging certain individuals or groups.

This is why it is rather difficult to estimate the impact of the electoral tours of all-India leaders. The vast crowds which a Nehru-meeting always gathers are seldom a dependable clue to the political opinions or preferences of the listeners; people come for these meetings as much out of curiosity as out of active loyalty to the leaders or organisation they represent. Otherwise, in constituencies where non-Congress candidates have a sure if not overwhelming hold, the meetings organised in connection with Pandit Nehru's visit would not have been so largely attended.

There is also another trend in political behaviour, which no sincere observer can fail to understand or afford to minimise. A considerable and possibly growing section of opinion has developed what one might call a three-tier loyalty to the Congress and its leaders. It gives the highest and unalloyed respect to Pandit Nehru. There is less emotional appreciation of the Congress. Local leaders about whom too many personal details are known receive a relatively meagre measure of esteem.

This is perhaps one of the many reasons why many people have found it possible to reconcile the personal esteem they give to Nehru with the vote they may be giving to a non-Congress candidate. One has to think that the visits of all-India leaders do not have the same effect on those who have yet to make up their minds. That these visits cannot be barren of results goes without saying. Pandit Nehru's severe thrashing of the Communists as those who thrive in hatred and violence and his ridiculing references to some of the other parties who have chosen to combine for the election have come so close to the event to be devoid of persuasive value.

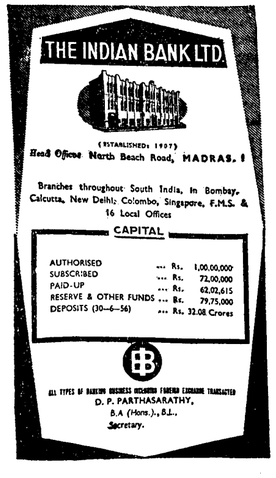
In Kerala, he repeated the question several times as to whether they were again going to make the mistake they made on two previous occasions, the mistake of disabling a stable government through an elected majority. In fact this is the one argument which could clinch individual decisions and it is not alone the educated voters who feel disgusted with the situations which have arisen in the past, culminating in the clamping down of Presidential rule.

One becomes less confident, at the thought of the loyalties and trends which have already hardened. The only area where the Congress had won nearly all the seats in previous elections is South Travancore; but it was then a disaffiliated organisation and is now part of the Madras Provincial Congress. The entire coastal strip from Trivandrum to Ernakulam representing the industrial belt of the old Travancore State is a fairly unassailable stronghold of the leftists, and here the Congress will have to be content with "minority" results. In the Trivandrum District, the recent agitation over the withdrawal of the High Court Bench has resulted in a further landslide of opinion against the Congress.

North Malabar is dominated by the League, the Communists and the Congress, in descending order of influence. Where the Congress expectations range highest is in the more or less compact Central Kerala, consisting of portions of South Malabar, the old Cochin State and the Kottayam District. Here leftism faces a powerful challenge in Christianity and to some extent affluence.

In this rough alignment of party strength, it is certainly impossible for any single non-Congress group or combination of groups to secure a working majority. If at all, any one party can hope to secure a majority it is the Congress. The RSP standing alone is one source of strength in South Kerala; but this is more than offset by the PSP alliance with the Muslim League in the North.

This alliance is regarded as monstrous, especially when the League leader goes to the extent of demanding that India should withdraw Mr Krishna Menon from the UN Delegation and accept a UN force in Kashmir. All the same, neither the PSP nor the League seems to feel embarrassed. The Congress Party's defensive tactics in North Kerala and the Congress-Akali merger in the Punjab have somewhat shaken the force of the party's criticism of the PSP-League comradeship.



A strikingly new trend in Madras is the growing volume of newspaper comment unsympathetic to the local Congress leadership. Some of the most influential Journals have chosen to take a line which can be damaging to the Congress prospects. This line is justifiable by some of the political facts obtaining in the State, most conspicuously the unsolicited and and vociferous support extended by the Dravida Kazhakam leader to the present Chief Minister.

Notwithstanding the new accession of strength which the Opposition groups are having this way, the prospect of a decisive majority for the Congress is not likely to be affected. Nor can it put into the local legislature a compact, well-knit Opposition. Even in the event of the Congress losing a few more seats the Opposition will remain a divided babel. There is scarcely any common ground between the National Welfare Union of the land-lords, the DMK with its slogan of a separate Dravida State and the Communist party, disliking both with equal sincerity and fervour.

There are a few common points in the manifestoes, but these have found a place, only on the assumption that none of the parties concerned will be in a position to be called upon to implement the promises. The Congress Reform Committee, in point of interests, has affinity to the Independents not supported by the leftists and to the National Welfare Union, but even if the successful candidates of all the three groups were to join hands, they are not likely to acquire a collective strength needed for a respectably-sized Opposition.

The State-wide agreement between the PSP and the Communists, a master-stroke of tactical inconsistency, is a sure indication that the hopes of both are low. Together they have put in 82 candidates for the Assembly against 114 by the DMK. Even supposing that many of the latter are frivolous contestants, the PSP and the Communist alliance is not expected to secure a larger number of seats than the DMK and the Independents associated with it. All these parties together have withdrawn about 50 candidates in the course of the last three weeks.

If a prediction is to be ventured for Kerala and Madras, it will be more or less like this: in Kerala, the Congress will be able to win about 40 to 45 per cent of the seats and may be obliged to accept the support of some group with which it now practises tactical neutrality, to form a Government. Any other combination in power can be ruled out. In Madras, the Congress Party will have 60 to 70 per cent of the seats in its hands, with an Opposition hopelessly divided.

Population Problems

ON one occasion earlier this month in Madras, the Union Finance Minister, Mr T. T. Krishnamachari, spoke on a subject which was not directly concerned with matters of finance but which deserve the attention of all who engage themselves with thoughts about the future of our country. In a speech, while inaugurating the journal 'Population Review' published by the Indian Institute for Population Studies, the Union Finance Minister spoke about the crucial, if baffling, problem of the rapid and enormous growth of population in India in recent years. He illustrated how important that problem was by stating that even though a thirty per cent increase in the production of foodgrains as envisaged by the Planning Commission was fully achieved, the surplus would be marginal due to the fast growth of population and the simultaneous and paradoxical depopulation of the villages. He added that some sort of a long term programme for population control was essential and he felt that some form of 'healthy and moral limitation' of the family should be encouraged.

In expressing himself thus, Mr Krishnamachari was of course giving expression to what all thinking people feel to be the right and correct thing to do. For, it is an undeniable fact that the pressure of growing numbers will be one of the greatest factors of strain which the Second Five-Year Plan, depending as it does, greatly if not primarily, on the production of food and the rejuvenation of agriculture will have to endure before it achieves its objectives and its ultimate aim of raising the standard of living in the country. And this goes for a few succeeding Plans as well.

It may be recalled that the census authorities expressed the view in the last census report that except in the event of a serious breakdown in food supply, population in India will increase at a faster rate during 1951-80 than during 1921-50. A sober forecast is that by 1981 population in India will exceed 52 crores. It is quite evident that even with the aid of large import of foodgrains, Indian agriculture will be hard put to feed adequately so many mouths. The conclusion is, therefore, inescapable that some form of limitation is the only way out if major disasters in the form of famines are to be avoided.

Family planning, however, is one of the trickiest of problems, not the least difficulty in tackling which is the paucity of knowledge regarding the laws governing the growth and distribution of population. The Planning Commission in their recommendation for a more active drive to promote family planning laid stress on the need for research and study and the accumulation of data in this respect. The Union Finance Minister in his speech in Madras also made a plea for further specialised studies in the subject, stating that it was essential 'to know the correct idea of population growth'.

The formation of the Family Planning Board in October last year which replaced in one organizational frame work the earlier Family Planning Research and Programmes Committee, its Sub-Committees and the Grants Committee, has been an important step in the direction of a country-wide effort to control in some measure the growth of population. And, although no spectacular result can be expected early—in fact no campaign of education in family planning can possibly show results before 20 years—there are good reasons to hope for ultimate success. The immediate necessity is to acquire and then spread scientific and correct knowledge about the theoretical bases of demography and about the practical uses of hygienic methods of artificially controlling births.

Till recently, however, except for the pioneering and admirable work done over years by Dr S. Chandrasekhar and his team, nothing very much was done in the matter of proper study of the problem of population in India. Even now the Indian Institute of Population Studies, of which Dr Chandrasekhar is the Director is almost the solitary centre in the country where research work on demographic problems exclusively, is being carried on in a proper and scientific manner. Thanks to the joint grant of Canada and America, the Institute has been able lately to extend its fields of activity considerably.

It is a matter of congratulation that, as evidenced by the Rs 65 lakhs programme of the Health Ministry, the Government show both awareness of the need for study and research, and determination to satisfy the need. The Institute of Demography started recently in Bombay in collaboration with the Tata Trust for Social Services is expected to become an international centre for studies of the problem of population in India. It is to be hoped that before long the boundaries of knowledge in this respect will be sufficiently enlarged for the Government to be able to take more determined steps in the matter than they can do at present, on account of lack of agreed and authoritative views in this branch of science.

SOUTH INDIAN MARKETS

Prospects for Cashew Kernels

THE Secretary of the Cashew and Pepper Export Promotion Council has announced, this week, that he has received information that the ban in Italy on the use of Cashew kernels for the preparation of foodstuffs, other than chocolates, has been removed. The removal is, however, subject to the provision that the cashewnuts should be completely shelled and accompanied by certificates of the Indian health authorities, guaranteeing their edibility.

During the first nine months of 1956, India exported to Italy as much as 187.6 tons of cashew kernels as against only 5.1 tons in the corresponding period of the previous year. Prospects for larger exports to Italy, this year, are stated to be excellent, while the present scarcity of almonds in Itlay can be immediately exploited. The Secretary of the Council also feels that, with suitable propaganda, a good and permanent market for Indian cashew kernels can be established in Italy.

American import of this spice, during the first nine months of 1956, was practically the same as during 1955, at 29.9 million pounds. Import of cashew shell liquid, which is mostly from India, reached 6 million pounds for the same period. Although cashew imports dropped by nearly 6 million pounds in quantum, earings were more, thereby establishing itself as a larger earner of dollars than tea during last year.

*

Coffee

The Government of India have decided to allocate 11,050 tons of Coffee for export out of the 1956-57 crop. Earlier, an allocation of 7,900 tons was announced; and now an additional quantity of 3,150 tons of coffee is made available for export.

The production of coffee, during the 1956-57 season, is estimated at 37,800 tons. After providing for consumption in the internal market during 1957 and for a suitable carry-over for 1958, Government of India have decided to allocate 11,050 tons for export out of the 1956-57 crop.

At the Pool auction held in Mysore this week, 101 tons of Plantation, 214 tons of Cherry and 624 tons of Robusta were exposed for sale. Following were the range of prices (per cwt):— Plantation Peaberry Rs 223-1 to Rs 232-6; Plantation "A" Rs 225-9 to Rs 232-6; Arabica Cherry Rs 192-2 to Rs 202; Arabica Cherry Flats Rs 170-15 to Rs 202-2; Robusta Flats Rs 158-11 to Rs 163-0 and Robusta Peaberry Rs 157-9 to Rs 160-15.

*

Pepper

Although rumours of a lower crop in Indonesia and the dislocation of transport arising from the recent unrest are helpful to prevent a rapid decline in Pepper prices this year, signs of general weakness are still evident. The terminal markets in North Malabar remain comparatively steady, thanks to limited arrivals in view of poor crop in that area. In the Kozhikode market, Wynaad quality is quoted around Rs 622-8 and the Country variety at Rs 610 per candy.

The newly-organised futures market at Cochin has not begun to function smoothly. In general, sentiment is largely governed by the American market, which has been pressing for lower prices.

Sinc the beginning of the month, exporters have become scarce buyers as orders from the USA, Russia, Europe and the UK are few and far between. The position is considered to be obscure and the general sentiment is veering round a bear side despite present low prices since demand from New York has failed to develop and arrivals continue to be satisfactory. As Russia is reported to have almost covered their annual requirement, they may not be interested in buying further unless at reduced prices.

The future is regarded as uncertain and prices are likely to work lower unless there is a good demand from the USA during the coming months as, with the passing of time, growers will be more anxious to liquidate as they generally fear keen competition from Sarawak from April onwards. Everything depends on the size of the new Sarawak crop.

*

Groundnuts

The Madras Groundnut market ruled quiet with prices showing a sizable fall from the previous week's levels. Except for some buying interest from small-scale crushers, there was no activity worth mentioning. Arrivals averaged only 15 to 20 tons a day. The rate for superior oil-quality seeds was quoted at Rs 158 and the bold variety at Rs 152 per candy.

In the Groundnut Oil section, the rate for the ready position declined from Rs 318 to Rs 308 per candy. With both Bombay and Calcutta markets ruling weak, there was a general tendency to wait and see the course of prices.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA,

We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1956.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretary and Treasurer of the Local Head Office at Madras and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Office at Madras and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

S. B. BILLIMORIA & CO.,
RAY & RAY.
Auditors.

NORTH INDIAN MARKETS

(Continued from page 359)

In the Hapur market, Wheat average quality was quoted at Rs 16-2 and the farm quality at Rs 17-4 per maund as against Rs 16-8 and Rs 17-12 respectively quoted in the previous week. Some outside buying enquiry for the commodity was received, while sales through fair-price shops were regular. The weather continues to be favourable for the coming "rabi" crop. Rice prices also eased slightly.

Gram prices recorded a fall of As 8 per maund on good crop prospects in Uttar Pradesh as well as in the Punjab. Barley and Bejhar prices, however, continued to rule steady due to poor stocks. The new crop arrivals are expected in the third week of March. Falling consumers' demand accounted for a decline in the prices of Maize and Bajra. Prices of Peas recorded a decline, while Arhar prices also registered a slight fall due to slack outside demand.

Barring Wheat which ruled steady, the Delhi grains market continued easy following favourable crop reports.

An all-round decline in the prices of cereals and Pulses provided the main feature of trading in the Bombay grains market. The easy tendency in indigenous Rice strengthened during the week with the prices of several varieties registering a fall of Rs 5 to Rs 7 per candy. Indigenous Wheat continued to present a steady front with the dealers disposings of supplies. The Coarse grains section, however, revealed a significant weakness with the prices of Jowar registering a decline, ranging from Rs 10 to Rs 15 per candy. The Pulses section displayed a bearish atmosphere with the traders being inclined to dispose of their stocks before the inflow of the new crop.

✱

OLYMPUS

(Continued from page 358)

exact figure to be allocated for the next fiscal year. There is some scope for reallocation and readjustment within the global and regional allotments made already by the Congress and there are, besides, discretionary funds at the disposal of the President to the extent of about 250 million dollars. Since there are so many countries to whom, for one reason or the other, the US feels obliged to extend a helping hand, readjustments are not always easy. But the distinct impression given by Mr Hollister was that India, both by virtue of the intrinsic importance of what it is doing and by virtue of the assistance given, is sure to receive the maximum aid that the US can give us under the circumstances.

THE BANK OF INDIA LIMITED

(ESTABLISHED 7th SEPTEMBER, 1906).

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-First Annual General Meeting to be held at the Registered Office of the company at Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 7th day of March, 1957, at 4 o'clock in the afternoon.

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1956

The Directors submit to the Shareholders the BALANCE-SHEET AND PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1956. The Auditors' Report is also annexed.

	Rs.	a.	p.
The transactions for the past year, including the balance brought forward from the previous year, Rs. 13,26,630-3-5, have resulted in a profit of	1,05,29,924	7	2
An interim dividend was paid for the half-year ended 30th June, 1956, at the rate of 6 per cent, free of Income-tax on the Paid-up Capital of Rs. 2,50,00,000, which absorbed ..	15,00,000	0	0
Provision made for Income-tax and Super-tax for the year ...	28,00,000	0	0
Bonus to Staff	13,75,000	0	0
The Directors now propose:—			
To pay a final dividend for the half-year ended 31st December, 1956, at the rate of 10 per cent, free of Income tax, making 16 per cent for the year, on the Paid-up Capital of Rs. 2,50,00,000, which will absorb	25,00,000	0	0
To place to the Bank's Reserve Fund	8,00,000	0	0
To carry forward to the next account	15,54,924	7	2
Total Rs. ...	1,05,29,924	7	2

The Bank's business continued to function satisfactorily.
The Official Bank Rate remained stationary at 3½ per cent.

During the year the Bank celebrated its Golden Jubilee. To mark the event, the Paid-up Capital was increased from Rs. 250 lacs to Rs. 300 lacs by making a bonus issue to the Shareholders of 1,00,000 "A" fully paid shares of Rs. 50 each from that part of the Reserve Fund representing premiums received on past issues of shares.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election:—

Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E.
Mr. Bhagvandas Chunilal Mehta.
Mr. A. D. Shroff.

Under the provisions of Section 260 of the Companies Act, 1956, the undernoted Directors, who have been appointed as additional Directors during the year 1956, will hold office up to the date of the Annual General Meeting, namely, up to 7th March, 1957. They stand for election in the manner provided by the Act.

Mr. Madanmohan Mangaldas.
Mr. N. K. Petigara.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, ... Jhairman.
AMBALAL SARABHAI,
JOSEPH KAY,
DINSHA K. DAJI,
RAMNIWAS RAMNARAIN,
BHAGVANDAS C. MEHTA,
K. M. D. THACKERSEY,
A. D. SHROFF,
MADANMOHAN MANGALDAS,
N. K. PETIGARA,
V. N. CHANDAVARKAR, } Directors.

H. A. CURRIMBHOY, Chief Accountant.

D. R. THOM, General Manager.

Bombay, 31st January, 1957.

THE BANK OF INDIA LIMITED, BALANCE SHEET—(Contd.)

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance-Sheet of The Bank of India Limited, as at 31st December, 1956, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-section (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Statement pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Limited for the year ended 31st December, 1956, does not include any profit or loss of its subsidiary, the Bank of India (U.K.) Nominees Limited (a Nominee Company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by the Bank of India Limited. The shares of the subsidiary are wholly owned by the Bank.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

BALANCE-SHEET 31st DECEMBER, 1956

Capital Authorised and Fully Paid-up:		Cash at Bankers	£ 100
100 Ordinary Shares of £1 each	£ 100		
	£ 100		£ 100

Signed on behalf of the Board,

J. DONALDSON,
S. H. BRADFORD,
Directors.

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion such Balance-Sheet gives the information required by the Companies Act, 1948; in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1956, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

INDUSTRIAL INFORMATION

(Continued from page 362)

last day of the month they numbered 7,58,503. Of these, 9,057 including 255 women were known to have some employment.

The Exchanges placed 13,656 applicants in jobs during the month. The number of applicants submitted for selection to employers was 89,901 as against 81,415 during November, 1956.

Of the total number of placements, 4,879 were secured under the Central Government, 5,522 under State Government 1,200 under quasi-government establishments and local bodies and the remaining 2,055 with other employers.

The number of vacancies notified to the Exchanges during December was 21,814. Of these, 7,388 were by the Central Government, 9,303 by State Governments, 1,646 by quasi Government establishments and local bodies and the remaining 3,477 by other employers.

There was, however, a decrease of 1,380 vacancies in the public sector and of 1,312 in the private sector as compared to the previous month.

During the month fresh registrations marked an increase of 5,891 over the figures for the previous month. The number of registrations was 1,29,867 as against 1,23,976 during November, 1956.

RIVET BARS FOR STRUCTURAL PURPOSES DRAFT STANDARD ISSUED

The Indian Standards Institution has issued, for eliciting comments, a draft Indian standard specification for rivet bars for structural purposes.

The requirements for this material had been covered hitherto by the Indian standard specification for structural steel (IS: 226-1955). The Committee responsible for this standard felt that the provisions applicable to rivet bars should be excluded from IS: 226-1955 and issued as a separate specification. The draft, therefore, prescribes requirements for rivet bars for structural purposes made from plain carbon steel.

The standard has been divided into two parts; part I covers clauses on general requirement while part II includes clauses on specific requirements such as chemical composition, tolerances, etc.

All values appearing in this draft are given in metric units. In order to help the industry to familiarize itself with the metric system, equivalents in the inch system are also given.

In preparing this draft standard, the committee has taken into consideration, the manufacturing and trade practices at present followed in the country.

Comments on this draft standard may be sent to the Indian Standards Institution, 19 University Road, Delhi-8 before April 22, 1957.

MORE AREA UNDER GRAM ALL-INDIA FIRST ESTIMATE FOR 1956-57

The all India First Estimate of Gram for 1956-57, puts the current year's area under the crop at 22,937,000 acres as against the corresponding adjusted estimate of 22,269,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Ministry of Agriculture. This shows an increase of 668,000 acres or 3.0 per cent in area during the current year as compared to last year.

The increase in area during the current year has been shared mainly by Andhra Pradesh, Madhya Pradesh, Punjab, West Bengal, Rajasthan and Delhi and has been attributed to favourable climatic conditions at the time of sowing. However, Bihar and Uttar Pradesh have recorded decrease in area due to adverse weather conditions at the time of sowing.

This Estimate generally covers the period up to the beginning of January, 1957. Till then, the condition of the crop was generally reported to be satisfactory except in some parts of Muzaffarpur district of Bihar, where the crop was reported to have been affected to some extent by unfavourable seasonal conditions.

This estimate does not cover the entire area sown to the Gram crop during 1956-57. Past experience has shown that the area at the First estimate stage forms roughly 95 per cent of the area finally reported.

EXPORT OF COMMODITIES

The office of the Joint Chief Controller of Imports and Exports, Government of India, Calcutta, announces:

Export of soft wood—Fir (Abies) and spruce (Picea morinda) in all forms (logs and sleepers, etc.) and sizes (including railway sleepers' sizes) as well as Deodar (Cedrus deodara), Chir (Pinus longifolia) and Kail (Pinus excelsa) in all forms and sizes except sleepers of certain sizes—to Pakistan by the river Chenab direct from Jammu and Kashmir will continue to be licensed freely during the period ending March 31, 1957.

Export of (i) dead, dried and borer-attacked Sal and (ii) other Sal round timber below 3½" in mid-girth will be permitted freely to East Pakistan against passes issued by the Assam Forest Officers concerned. Export of green Sal wood, other than logs below 3½" in mid-girth, will not be permitted.

Export of veneers of all types of wood will be licensed freely.

The following figures of jute goods were licensed for shipment during January 1957:—

Hessian 30,464 tons; Sack 25,410 tons; and others 6,365 tons.

EXPORT OF GUAR GUM BANNED

The Government of India have reviewed the export policy of guar husk or guar hull (also known as guar gum) export of which was being allowed freely hitherto as an uncontrolled item, and have decided to ban its export with immediate effect.

WORLD OF TEA

(Continued from page 348)

pound dearer. Stylish and well-made Whole Leaf grades and the better BPS grades were keenly competed for, but the poorer grades in these categories were easier.

Medium Assam teas with declining quality were a weak feature of the sale and these were sold up to As 2 per pound below valuations. The cheaper CTC teas were sold well, but the best were again As 2 easier. Many of these types had to be withdrawn without a bid. Following rates were quoted: Clean Black Pekoe Rs 2-2-0 to Rs 2-3-0; Plain BP Rs 1-14-0; Medium Assam BP Rs 1-15-0 to Rs 1-15-6 and Best CTC Assam BP Rs 2-6-0 (nominal).

In the Internal Sale, offerings were 17,009 packages of Dusts for which there was a good demand although prices for the majority of teas showed a decline. The few lines of bright liquoring CTC Assams with improving quality were the strongest feature of the sale and these were keenly competed for at prices which were often as much as As 3 to As 4 per pound above valuations. The remaining CTC teas, however, again tended to be easier.

Once again, powdery kinds were more popular than the leafy types. Commons, Dooars and orthodox Assams opened irregularly easier; but eased further as the sale progressed and, at the close, were up to As 1¼ per pound lower. Following rates were quoted:—Medium Dooars Dust Rs 1-12; Medium Assam Grainy Dust Rs 1-12-6 to Rs 1-13; Medium Assam CTC Dust Rs 2-1 to Rs 2-3 and Best CTC Assam Dust Rs 2-10 to Rs 2-12.

Also, 2,049 packages of other grades were offered for internal consumption. There was a good demand and the majority of the offerings were dearer by one anna per pound and sometimes more.

Despite the announcement of the increase in the export quota allotment for 1956-57 and the fall in tea prices, the Export Quota price, after opening at 45 pies, shot up to 60 pies at the close due to strong demand. There was even a suggestion for the stoppage of export sales for the first two weeks in March and allowing the 1956 crop tea to be exported without export licence during April and May next. It was believed that the above step might have the double effect of arresting the fall in the prices and lowering the Export Quota price.

In the Cochin market, a total of 1,662,000 pounds was offered in Sale No. 4. Demand was somewhat restricted although Brokens met with quite fair support. Fannings were a weak feature. Best high-grown Brokens were irregular, but often dearer following quality. The lesser high-grown Brokens ruled lower, while their Fannings were inclined to be difficult of sale. Good Medium descriptions eased by one to two annas per pound despite improved quality. Medium and Low Medium Brokens met with good demand at firm to dearer rates.

Black Leaf Brokens advanced by one to two annas per pound, but their Fannings met with only limited demand at lower rates. Whole Leaf grades were fully firm. Following rates were quoted:—Plain BP Rs 2-1-0; Low Medium BOP Rs 2-7-0; Medium BOP Rs 2-8-0; Good BOP Rs 2-11-0 and Well-made OP Rs 2-8-0.

In the Colombo market, offerings totalled 7,093,029 pounds. A small section of improved flavoury Dimbula Dickoya teas met with active competition at dearer rates. Otherwise, there was less demand at lower rates. Interest was evident from Britain and Australia, while little demand was noticed from America and other centres. Broken Pekoes and Leaf grades were slightly easier, while Fannings showed a sharp drop. At the close of the sale, low-growns and Medium Brokens were fully 10 cents lower, while poorer high-grown sorts declined by 20 to 40 cents per pound.

aimed for and in the methods to be used. Thus, the primary consideration for all activity must be whether it is in the national interest. Therefore, the notion of immediate gain had to be subordinated to ambitious target. Naturally, such subordination of gain would be tantamount to sacrifice. In this context, Mr Vaidya asserted:

"I, for one, feel that the private sector is capable of making the sacrifice and can be counted upon to discharge fully its responsibilities if the approach of those in authority is based on a proper understanding of the psychological factors and on an appreciation of the difficulties which trade and industry in our country have to face, from time to time, owing to the limited resources at our disposal."

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LTD.

NOTICE TO MEMBERS.

NOTICE IS HEREBY GIVEN that the Twentieth Ordinary General Meeting of the Members of The Alkali & Chemical Corporation of India, Ltd., will be held on Thursday, 28th March 1957, at 3-30 P.M. at the Registered Office, 34 Chowringhee, Calcutta, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1956.

(2) To declare a Dividend on the Ordinary Shares.

(3) To elect Directors.

(4) To appoint Auditors for the current year and to fix their remuneration.

The Ordinary Share Registers of the Company will be closed from the 20th March 1957 to the 28th March 1957, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LIMITED,
Secretaries.

Calcutta,
12th February 1957.

NOTE—If the Dividend as recommended by the Directors is sanctioned at the Meeting, it will be paid on or after the 28th March 1957, to those Shareholders whose names are on the Company's Register on the 19th March 1957.

To

The Shareholders of the Alkali & Chemical Corporation of India, Limited, and in particular to:—

Guest, Mr. P. H. Guest, Mr. B. R. Goodfellow, Mr. W. A. T. Hollingbery & Mrs. E. M. Hollingberry, Commdg. Genl. Mohun S. S. Jung B. R., and Major Genl. Bijaya S. S. Jung B. R., Genl. Sir Baber S. S. Jung B. R., and Major Genl. Mrigendra S. S. Jung B. R., Mr. A. Y. Kadwa, Mr. F. J. C. Melhuish, Mrs. C. V. Pandit, Mr. A. R. Sahasranam, Mrs. E. E. Thompson & Mr. W. B. Joiner, Mr. S. P. Upadhya, Mr. C. R. Witcher.

Stock Exchanges

CRISIS OF CONFIDENCE

Watch-Dog Writes:

DESPITE the release of good corporate news, stock markets are still engulfed in the crisis of confidence. While professional operators are unable to take a definite view of the future, investors, too, have been showing little or no interest in spite of the attractive price levels.

The main depressing factor continues to be the growing stringency in the money market. Among other factors, there is a growing anxiety about the ultimate outcome of the Kashmir issue. The gloomy talks of tax increases and the coming into force of the Securities Contracts (Regulation) Act have also contributed to the depressed sentiment in the markets.

Although conditions on the Calcutta Stock Exchange were less panicky following the measures taken by the Stock Exchange Committee, trading continued to be on a reduced scale due to lack of any support.

On the Bombay Stock Exchange, distressed selling continued and prices moved down sharply to finish at or near the lowest levels for the week.

The outstanding feature of the week's trading on the Madras Stock Exchange was the buoyancy that developed in the Planting section following the reports of settlement of the wage dispute.

Wall Street closed barely steady with a predominance of losses ranging to one point or so.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN that the Directors have decided to declare a second Interim Dividend on 11th March 1957 (additional to the Interim Dividend of 2%, free of income tax, declared on 9th August 1956) in respect of the Company's financial year ending 31st March 1957, of 2%, free of income tax, payable on or after 28th March 1957 to registered shareholders whose names appear in the Register on 11th March 1957 or to their mandatees.

Transfers received at the Company's Registered Office before 12.30 p.m. on 9th March 1957 will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board,
J. R. BLAIKIE,
Secretary.

Virginia House,
37 Chowringhee,
Calcutta.
27th February 1957.

N.B. Shareholders should inform the Registrar of any changes in their registered addresses.

Calcutta

Calcutta, Thursday Evening.

NERVOUS conditions were again witnessed on the local Stock Exchange during the past week. Confidence was thoroughly shaken by the prevailing uncertainties on the economic and political fronts. In a market bereft of support and, with the speculative issues giving way on renewed liquidation, prices in all sections showed a further sharp decine.

The growing stringency in the money market, anxiety about the ultimate outcome of the Kashmir issue, the coming into force of the Securities Contracts (Regulation) Act, the inordinate delay in giving permission to companies to issue bonus shares, fears with regard to the possibility of any fresh tax proposal in the forthcoming Budget and the discouraging advices from the industrial front—all these factors depressed sentiment in the market. Even a string of good news, such as the increase in the tea export quota allotment and the Government decision to raise the selling price of coal, failed to enthuse operators. Thanks to the measures taken by the Stock Exchange Committee to check a further fall in prices, conditions were less panicky at the close of the week, although trading continued to be restricted.

The recent improvement, noticed in the Giltedged market, made further progress during the week on bear-covering. Business, however, continued to be restricted, interest being confined to a limited number of Loans. 3 per cent 1986 Conversion Loan changed hands upto Rs 74-9 from Rs 74-5.

Bank shares were quiet with United Commercial changing hands at Rs 56 to Rs 56-8 and Punjab National at Rs 54-4.

Jute shares recorded only few dealings on lack of enquiry and prices were marked back due to profit-taking on the feeling that the decline in raw jute prices had been offset by the weakness of the manufactured goods section. Howrah were marked down further to Rs 17-9 from Rs 18-8; National to Rs 18-8 from Rs 19-2; Hooghly to Rs 18-0 from Rs 19-12 and Ganges to Rs 47-8 from Rs 52-8. Among higher-priced scrips, Barnagore lost five points at Rs 97 with Anglo-India quoting around Rs 138.

Coal shares remained depressed and turnover continued to be restricted. It was generally felt that the proposed increase of Rs 1-8 per ton in the selling price of coal would meet only partially the demand put forward by various Mining Associations. Burrakur, after easing off to Rs 20-13 from Rs 21-0, steadied up at the close to the latter level on speculative support. Raneegunge changed hands at Rs 11-4 to Rs 11-6 with South Karanpura unchanged at Rs 9-4 and Bengal at Rs 446.

Uncertainty regarding the profit outlook for the industry and the absence of any definite improvement in the conditions of the cloth market had a depressing effect on the Textiles section. Kesoram moved narrowly between Rs 14-8 and Rs 14-12, while New Victoria shed As 2 at Rs 1-13.

Tea scrips shared the general trend of the market; but scrips of those gardens producing best quality tea continued to attract attention. Although the prices obtained at both the export and internal auctions during the past few weeks were not considered to be encouraging, some of the operators felt that the additional allotment of the export quota for 1956-57 would improve the marketing of the commodity by facilitating exports and thus relieve the pressure of supplies in the market. Trading, however, continued to be restricted in view of the sharp rise in the export quota price to 60 pies from 45 pies per pound. Most prominent scrips were Bateli changing hands at Rs 26-10 to Rs 26-14; Dhelakhat at Rs 21-4 to Rs 21-10; East India at Rs 25-2 to Rs 25-4; Hantapara at Rs 184 to Rs 186; Methoni at Rs 19-0 to Rs 19-5 and Patrakola at Rs 160-8 to Rs 162-0.

Except Balrampore which met with some enquiry upto Rs 6-14 from Rs 6-12 from special quarters, conditions in the Sugar section remained generally quiet. Operators showed reluctance to enter into commitments, pending the announcement of any decision by the Government with regeard to the release of a further quota for exports. Darbhanga shed half a point at Rs 20-8 and Belsund As 10 at Rs 10-12. SKG moved narrowly around Rs 11-2.

Of all the sections, the worst affected was the Engineering where prices suffered a further setback due to heavy liquidation by nervous holders. The decline in prices would have been more sharp, but for the measures taken by the Stock Exchange Committee to fix up an interim clearing rate for Indian Irons and the imposition of a margien system. The interim clearing rate was fixed at Rs 25-0 in order to minimise the loss for operators in view of the final settlement on next Wednesday. It was also decided that a seller in Indian Irons should deposit a margin of Rs 3 per share if the price of the scrip fell below Rs 24-12.

With the result, no more panic selling in Indian Irons was noticed toward the close of the week. The scrip opened at Rs 26-3 and gradually receded to Rs 24-12, to finish the week at Rs 25-1. In sympathy, TEXMACO was pushed down to Rs 19-3 from a high of Rs 19-10 and Jessop to Rs 24-14 from Rs 26-2. Richardson, after touching a low of Rs 17-7 from Rs 18-7, finished better at Rs 18-0. Indian Galvanizing, however, ruled remarkably steady at Rs 19-7. Britannia Engineering changed hands at Rs 13-9 to 13-13.

Trading in the Miscellaneous section was dull and featureless. The only redeeming feature was a slight recovery recorded by a few scrips from the lowest levels touched in mid-week. Proment amongst these were Orient Paper which, after being marked down further to Rs 30-0 from Rs 30-14, finished at Rs 30-6. Titaghur lost another point at Rs 36-7. Dunlop Rubber touched a low of Rs 25 from Rs 25-4; NICCO Rs 19-9 from Rs 20-6; Rohtas Rs 18-0 from Rs 18-8 and India Stamship Rs 9-15 from Rs 10-1, to close better at Rs 25-3; Rs 19-12; 18-2 and Rs 10-1 respectively. Indian Copper shed another As 2 at Rs 3-3 and BIC As 4 Rs 7-6. Despite the publication of satisfactory working results and the maintenance of the dividend, Anglo Brothers recorded a fall of more than a point to Rs 20-8. Indian Cable changed hands at Rs 28-4 to Rs 28-8; Jardine Henderson at Rs 75-12 to Rs 76-0 and Hoare Miller at Rs 7-15 to Rs 8-9. Alkali Chemicals were nearly maintained at Rs 18-4 with Indian Aluminium hovering idly around Rs 13-4.

*

Bombay

THERE are signs that the worst phase on the Bombay ttock market is about to end. The question may be asked as to when things will try to brighten up. It is very difficult to point the finger on timing. It may be in a couple of days or a week at the most. What is wanted at the moment is the arrest of the downward trend which gained momentum during the week ended 27th February. New low levels were recorded in almost all industrial counters but the market has met with some resistance. It is generally felt that prices of blue chips have reached attractive levels for buying by bargain hunters but these prospective buyers have been scared away due to the uncertainty of the fiscal measures which may be still embarked by the Finance Minister. Though a few banks have already increased their interest rates on overdrafts of their constituents following the Reserve Bank's action in stepping up its lending rates under cover of Government and other eligible securities, the general impression is that the remaining banks may also follow suit from 1st March. This has induced a feeling of caution. What is wanted is the positive measures on behalf of the Finance Minister to revive the markets. However the most heartening news of the week has been provided by an amicable settlement between the plantation industry of Madras and the labour representatives on the question of wages in the light of the Appellate Tribunal's Award of last October 24. The scheme will not be a retrospective one as was envisaged in the Award. Moreover, there will be a cut in the maximum rate of the wages and this will be implemented as from the date of the Award. Thus the plantation industry of the South, which was facing a bleak future on account of the Award, will be considerably relieved. As a result of this, Bombay Burmah which was sold down to Rs 655 on Tuesday were

(Continued on page 378)

(Continued from page 342)

democracy. It is nobody's fault or inadequacy that in this rather novel position, certain relations appear incongruous or unsound. The concern Mr Powell shows for large-scale *industry* in a set-up in which small industries are made to thrive with their assistance, direct or indirect, is widely shared. But the alternative of leaving the small industries to their fate will be very much more harmful. It is the extension of the principle of distributive justice to another region.

What obtains today in India is an economic picture which is by no means perfect, in relation to the standards imbibed and held aloft by the free economies of the West. There are compromises on many points; these compromises, far from being the soft spots of the structure, are its main adhesives and props. It is certainly not necessary for the prosperity of the cottage industry that large-scale industry should be weakened, as Mr Powell somehow suspects, is being done now. We wonder if anybody in responsible quarters is thinking in terms of a conflict between these two sections of industry; on the contrary, current thinking aims at a synthesis between the two. What might be apparently damaging to the one or other can be only an element in the general balance, without which a sound national economy can scarcely be thought of.

Mr Powell is also afraid that "democratic planning" as is being attempted in India may come to mean a growing concentration of economic power in the hands of the ruling few, involving the negation of "individual independence, enterprise, self-reliance and personal liberty which is probably a nation's best safeguard of democracy". If it is conceded that India is striving for an equitable social order, no one can quarrel with the basic methods adopted for achieving it. The methods can be assailed, only if the aims are unjust or unreal. They are neither.

If free elections, vigilant legislatures in the Centre and the States, which are prevented from developing cold feet by the presence of well-informed and fervent Opposition parties and the complete lack of official restraint on the expression of personal and group opinions cannot ensure a stable democracy in this country, it is to be wondered what else can. The political apprehensions voiced by Mr Powell probably spring from a bias for a particular form of economic organisation which in the circumstances of India can have only limited scope. Current taxation rates on the higher income groups do not compare unfavourably with, say, those of Britain. Instead of the present methods of economic planning jeopardising the future of democracy in India, it must be the general hope that they will stabilise a social order which will function as a powerful bulwark against totalitarianism of any kind.

GATEWAY MARKETS

(Continued from page 356)

cwt. Demand for this metal continues to be good.

The international supply position continues to be easy and there are no indications yet that demand will pick up substantially in the near future. Moreover, the Rhodesian Selecion Trust group of companies have again lowered their price by £10 to £240 per ton to bring it in line with the London Metal Exchange price—£242 per ton. It is also believed that Custom Smelters might also bring their quotations down to 30 cents per pound. The position of copper at the present rate is, however, strengthened by the fact that the use of substitutes will be discouraged.

Zinc is quoted at Rs 80 per cwt; Lead at Rs 82-0 per cwt and Tin at Rs 130 (per quarter). These metals are also meeting with good demand. Stocks of Tin are believed to be inadequate. It is generally felt that the tight supply position is unlikely to be relieved unless imports are increased substantially.

✱

FOR THE INVESTOR

(Continued from page 339)

as on March 31 in the proportion of one equity and one Preference share for every 5 equity shares held.

Rane (Madras) Limited has decided to issue 91,920 Ordinary shares of Rs 5 each, at par. These will rank for dividend as and from the date of allotment.

Investment Briefs:

£ R$

Martin Burn Limited has, in addition to maintaining the dividend at Rs 1-8-0 per share, doubled the Cash Bonus to As 10 per share for the year ended 30-9-1956, payable on or after the 30th April, 1957.

Braithwaite & Company has recommended a dividend of Rs 2 per share for 1956 as against Rs 1-12 in the previous year.

Kohinoor Mills, Bombay, have maintained the dividend at Rse 18 per share for 1956.

Ouchterlony Valley Estates, Madras, have halved the dividend to 10 per cent for the year ended 31st October 1956.

Mercara Rubber has announced a final dividend of 15 per cent, making a total of 22½ per cent for the year ended 30-6-1956 as against 15 per cent in the previous year.

Anaparai Estates have raised the dividend to 25 per cent for the year ended 30-6-1956 from 16½ per cent in the previous year.

✱

EDITORIAL NOTES

(Continued from page 343)

Perhaps at the top levels of income, the smallest families will be the rule. Lord Dalhousie made the fruitful discovery that more often than not the Princes were impotent! Factual data are still scarce. At any rate, in India, family planning cannot proceed on the assumption of a recognisable relation between income and fertility. If vague impressions of conditions in several other parts of India could be relied on, the findings of the Lucknow Survey can be held to be quite representative.

STOCK EXCHANGES

(Continued from Page 368)

taken up to Rs 680. The rest of the market has showed signs of subsidence of offerings at lower levels but the performance of the Calcutta market has acted as a great damper. The Calcutta stock exchange authorities should have listed Indian Iron ex-right straight away before the transfer books were closed for right issue. That would have straightened the matter instead of imposing a special margin of Rs 3 from the bears if the price went down below Rs 24-12. This is the general impression in Dalal Street. It appears that business was thought to be continued on cum right basis with a view to avoid additional margins in the event of the lower rate which would have followed if the shares were listed ex-right. But strange as it may seem, nature deemed otherwise and what was tried to be avoided became a reality. The partinent question that is asked in Dalal Street is this. The Calcutta Stock Exchange is always very anxious to put the shares on Ex-dividend or Ex-Right basis even much before the actual disbursement of dividend on right shares and then how is it that in the case of Indian Iron, its listing of Ex-Right has been unduly postponed?

The giltedged market has put up a steady show. Bank shares were featureless. In public utilities, Hydro-Electrics were subdued as their dividends for 9 months ending 31st March 1957 would be disbursed some time in July. Among Insurance, New India was a shade easy, while Oriental found buyers at Rs 3730 in view of the higher amount of compensation. Cotton mill shares slumped badly. Bombay Dyeing dropped down to Rs 531-4 to recover to Rs 540. Century dropped to Rs 459 to terminate at Rs 464. Kohinoor were well maintained around Rs 325 following the bull grip though with the final dividend of Rs 12, the total dividend for the year 1956 remains unchanged at Rs 18. Swadeshi turned weak at Rs 211 despite expectations of maintenance of dividend at Rs 12. Tata Steels came down to a new low level of Rs 166 before being placed at Rs 168. Scindia Steam were relatively steady around Rs 19, while Great Eastern drifted lower at Rs 18. Bharat Lines were reported around Rs 80: Sugar shares were quietly steady. National Ryons were sold down to Rs 222 before staging a small improvement to Rs 226. Tata Locomotive eased but resisted the downward trend around Rs 239. Chemicals came down to Rs 15. Port Canning were marked to Rs 6-12.

✱

Ahmedabad

In consonance with the conditions in Bombay market, the Ahmedabad share market also depicted nervous conditions and prices slumped to new low levels. Calico mills receded to Rs 527 from Rs 540, while Arvind Mills dropped down to Rs 1065 from Rs 1110 to terminate at Rs 1070. Ambica were sold down to Rs 570 from Rs 585. While New Shorrock resisted the downward trend around Rs 810 on expectation of higher dividend of Rs 42 as against Rs 35. Arun were reported at Rs 625, Jupiter Rs 252-8, Saraspur Rs 475, Shorrock Rs 490 and Anil Starch Rs 202-8.

✱

THE ECONOMICS OF BRITISH DISARMAMENT

(Continued from page 346)

demands. As and when domestic inflation and the resulting outflow of gold abates, wages demands tend to become bigger and bolder. So it may well be that, long before the amounts saved on military expenditure are expended on increased social service benefits, they are expended several times over on higher wages. The fact that it is not the Government, but industry that will pay the additional amounts will make no difference to the inflationary effect of this expenditure.

In the circumstances one cannot help feeling that it is short-sighted to jeopardise the security of the country and of the free world by an untimely weakening of Britain's military defences for the sake of an illusory strengthening of Britain's economic defences. But this is a very unpopular line to take, because almost every section of the public hopes to derive benefit from the lowering of defence costs.

✱

WORLD OF BUSINESS

(Continued from page 347)

concerned an unmitigated evil in that it opened out, in the absence of encouragement and assistance to turn to plam gur production, only prospects of unemployment. Though efforts have been made by the State Governments, to give relief to the tappers by organising co-operatives for the commercial production of palm gur, the efforts have not been on a scale to ensure complete success.

The potentialities of palm gur production to stabilize the rural economy of these states from the side of income as well as employment are great. The distinguishing feature of palm gur production is that it requires little capital investment on the part of the tapper. Financial considerations are thus no bar to the full exploitation of the palm trees existing in the country. Further, they enjoy an advantage over sugar cane, in that their source is perennial and unlike sugar cane is in no need of yearly replanting. This suggests that a profitable exploitation of the existing palm trees of various kinds such as palmyra palm, date palm and sago palm, in the way of gur production will release part of the fertile areas now under sugar cane for the production of other crops. The matter is one which must receive the serious consideration of the Government.

CLIVE STREET GOSSIP

(Continued from page 354)

both with regard to administrative tasks and investment of accruing funds, the Corporation is planning a number of new schemes in respect of which close study, wide outlook and high policy decisions are necessary. It will be satisfactory if Mr Patel is at the helm of affairs at least until administrative and policy matters are assured of smooth and progressive function. I may add a last sentence: all these changes are calculated to serve the admirable purpose of streamlining the Finance Ministry, which has grown with amazing rapidity and which has undertaken a variety of crucial tasks.

✱

Shakespeare in his time could have asserted that a name did not much matter, so long as the rose smelled as sweet. But in the twentieth century it does count for a great deal: it has to be catchy enough to impress itself upon the public; and, at the same time, it in its description cannot afford to be a misrepresentation of fact. BOAC have, in inaugurating Bristol Britannia services, hit upon an admirable phrase that is imaginative in its wording and truthful as to its description. One has but to see the Bristol Britannia to appreciate that it is a veritable Giant. And, once you are seated in the plane, you find that the noise outside is barely a whisper. There can hardly be any doubt about it: The Whispering Giant will attract the fancy of the air-minded public; and, in so doing, it is sure to lure the passenger who, in the twentieth century, does most of his international travelling by air.

EAVESDROPPER.

✱

SOUTH INDIAN MARKETS

(Continued from page 361)

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate with prices ruling unchanged. Arrivals of Buff hides were fair, but the market for the same was dull. The markets for Buff Calf and Cow calf also remained dull.

In the export section, trading with the UK became more difficult than in the previous week. London buyers were reported to be making counter-bids of 2d per pound under Madras prices and contracts were becoming exceedingly difficult to negotiate. Prospects for Buff Calf were not encouraging with the possibility of further reductions in the top marks.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were fair. There was a steady clearance at unchanged prices.

On the export front, the demand was mainly centred around prime class goat skins. The sheep skins section continued to rule firm though business with the UK remained restricted.

The market for Raw Hides ruled fairly steady, while that for Raw Skins remained quietly steady.

Sharp Recession in February

The stock markets began the month on a subdued note as the investment outlook had been confused by several adverse developments. Firstly, the Kashmir situation was causing considerable anxiety as it was feared that any further deterioration in the relation between India and Pakistan would seriously upset the programme of industrial development in India. Secondly, the Reserve Bank's decision to raise the rate of interest on advances to scheduled banks against Government and other eligible securities to 4 per cent per annum was generally considered as a virtual raising of the Bank Rate. Thirdly, operators had been disappointed over the terms and conditions of the Indian Irons rights issue. Fourthly, the Appellate Tribunals Award as regards wages of coal mine workers, would, it was apprehended,, considerably increase the fuel cost of industries.

In the Calcutta stock exchange, Indian Irons was, however, rather steady, having been well maintained around Rs 29. The improvement in the market's undertone had been helped by the support forthcoming for selected jute and tea shares. In Bombay, sentiment was subdued on account of end-of-account profit-taking. Tata Iron closed 8 annas lower at Rs 179-4. Textiles were quiet on discouraging advices from the cloth market. Bombay Dyeing receded to Rs 568-4 from Rs 570.

2 & 3

The Bombay and Calcutta stock markets remained closed. The State Bank of India announced that the rate of interest on advances had been raised from 4 per cent to 4½ per cent with effect from February 1, 1957.

4

The Committee of the Calcutta Stock Exchange at an emergency meeting resolved that business in Indian Irons shares would continue on cum right basis until further notice. The delivery of Indian Iron Shares in Clearing No. 232 on Feb. ruary 20 would be compulsorily carried over to Clearing No. 233 on March 6 at the fixed carryover charge of one anna nine pies, in modification of the provisions contained in Rule 15 of existing by-laws regarding the clearing system.

Selling pressure was encountered in the stock exchanges both in Bombay and Calcutta due to continued apprehensions about Kashmir and the discouraging reports from the cloth market. In Calcutta Indian Irons idled around Rs 28-13 most of the time and toward close on encountering bull liquidation was placed lower at Rs 28-11. The rest of the market except the Giltedged and tea sections, was depressed. The reactionary tendency was much more pronounced in Bombay where values suffered a setback on continuous bull liquidation. Tata Iron shaded three points to come back to Rs 176-4. Textiles had to bear the brunt of the selling pressure and Bombay Dyeing reacted sharply to Rs 553-12 from previous closing of Rs. 566-4.

5

While the Calcutta stock exchange remained closed on account of Sri Panchami, Dalal Street developed a steadier trend in late dealings on fresh support in Tata Iron and short-covering in textiles. Tata Iron gained Rs 1-4 to be placed at Rs 177-8, while Bombay Dyeing recovered to Rs 558-2 from Rs 553-12.

6

Reports that Reserve Bank of India had advised the banks in the country to relax restrictions imposed on advances by them against textiles failed to instil confidence in the stock markets where prices continued to drift lower. Indian Irons after opening at Rs 28-15 closed easier at Rs 28-10. In Bombay turnover was disappointing and the undertone was quiet. Tata Iron was done at Rs 178 with Bombay Dyeing placed at Rs 561-14.

7

According to a Finance Ministry Press Note, the Government of India had negotiated with the International Monetary Fund to draw $127.5 million. Of this amount $60 million would be drawn immediately and the remaining $67.5 million after a month.

In Calcutta rates generally remained unchanged with Indian Irons moving within narrow limits around Rs 29-6. Dull conditions prevailed i Dalal Street with Tata Iron quoted at Rs 178-12 and Bombay Dyeing at Rs 562-8.

8

With operators somewhat worried about the budget day which was drawing near despite earlier assurance from the Finance Minister that the yearly budget would be a lame-duck affair, activity in the stock markets had been rather dull as few could be found to extend their commitments. Even so, the undertone was steady in view of the revised general expectation that the interest-rate increase by the Reserve Bank would not adversely affect the money market. Moreover it was believed from the trend of official endeavours that there would be a substantial improvement in the money market conditions. The reduction of the UK Bank Rate by ½ per cent to 5 per cent had, however, no effect on stock market sentiment in India.

In Calcutta the only bright feature had been the sustained interest evinced in selected tea shares by investors. Indian Iron opened at Rs 29-8 and shaded to Rs 29-4 by close. Dalal street suffered a setback due to lack of fresh buying support with Tata Iron shading to Rs 178-8. With no great hopes entertained regarding an early relief in excise duty on superfine cloth, textiles were also easier with Bombay Dyeing hammered down to Rs 554 from Rs 562-8.

9

The Calcutta stock exchange remained closed. In Bombay trading had been characterised by total lack of buying enthusiasm. The budget, the Kashmir issue and the continuing tight money conditions constituted the inhibitory factors. The reactionary tendency was somewhat accelerated by heavy outside liquidation in Bombay Burma. Tata Iron reacted to Rs 175-12 from Rs 176-8. Textiles were generally unchanged with Bombay Dyeing done at Rs 555.

10

Mr Jagjivan Ram, Union Railway Minister, announced a new deal to the 17,000 non-gazetted railwaymen at a conference of representatives of the National Federation of Indian Railwaymen and recognised zonal unions. The scheme which would have retrospective effect from April, 1956 would benefit workers belonging to 16 major categories of the non-gazetted cadre.

11

Dalal Street especially was in a confident mood following the reported assurance of the Finance Minister in his speech in Guntur that the private sector would be given all encouragement to forge ahead. He was reported to have said that so long as Government were satisfied that funds reserved for development purposes were put to proper use, there would be a radical change in recent regulation regarding compulsory deposits. As it had been held that the compulsory deposits would seriously interfere with the day to day working of joint-stock enterprises, the reported assurance was considered as a welcome concession. Toward close of the day, however, sentiment was rather subdued due to lack of follow-through support. Tata Irons was unchanged at Rs 175-12 but Bombay Dyeing was shaded at Rs 533-12. In Calcutta conditions remained quiet in the absence of support. Indian Irons after opening at Rs 29-4 closed at Rs 29-1.

12

The undertone in the Stock markets turned easier on tired bull liquidation coupled with speculation about the Securities Contracts (Regulation) Act. Except for some steadiness noticeable in teas, Calcutta shares were generally depressed with Indian Irons receding to Rs 28-13. Tata Iron in Bombay was on offer at Rs 173-12. with Bombay Dyeing marked down to Rs 550.

13

In the absence of fresh support the Calcutta Stock Exchange continued to rule easier with Indian Irons opened lower at Rs 28-7. Toward close the scrip slightly recovered to Rs 28-11. Hopes of a reduction in the excise duty on cloth imparted a steadier undertone to the Bombay Stock Exchange where prices recorded sizable improvement under the lead of Bombay Dyeing which gained more than four points to quote Rs 554-6. Tata Iron ruled steady in sympathy at Rs 173-12.

14

Reports of enquiries for first class equities by the Life Insurance Corporation imparted a steadier undertone to the stock markets and during the day's trading the more speculatives staged a slight recovery. Indian Irons in Calcutta was well maintained around Rs 28-12 while in Bombay Tata Iron advanced to Rs. 175 from Rs 173-12. In the textile section Bombay Dyeing was unchanged at Rs 554-6.

15

The Finance Ministers statement in Madras that his Guntur speech wherein he was reported to have said that the regulation regarding compulsory deposit would be modified under certain circumstances, had been wrongly reported in the press coupled with his subsequent speech in the same city in which he had declared that he was not prepared to tone down, elongate or postpone the Second Plan just because of its possible effect on the share market imparted nervousness to the stock markets. The report that the Securities Contracts (Regulation) Act would come into force

(a) After writing back Rs 40,000 from General Reserve,

(b) After transferring Rs one lakhs from General and Dividend Reserve,

(c) After transferring Rs 4,07,975 from General Reserve and Rs 55,000 from provision for taxation.

(d) After transferring Rs 36,518 from General Reserve; Rs 10,000 from Jute Stock Reserve and Rs 40,000 from provision for taxation.

(e) After transferring Rs. 1,25,000 from Dividend Equalisation Reserve and Rs. 1,00,000 from Taxation Reserve.

(f) After transferring Rs 1,00,000 from General Reserve and Rs 3,00,000 from Machinery Renewal Reserve,

(g) After transferring Rs. 3,00,000 from Reserve for Machinery Renewal and Replacement.

(h) After transferring Rs 2,00,000 from General Reserve,

(i) After writing back Rs. 1,00,000 from provision for taxation and Rs. 25,000 from provision against anticipated loss on forward contracts.

(j) After transferring Rs 4,25,000 from Reserve and writing back Rs 30,000 from Workers' Provident Fund shown in excess in previous half-year and Rs 61,000 from provision for possible loss on forward contracts.

(k) After transferring Rs. 1,00,000 from Dividend Equalisation Reserve.

(l) After transferring Rs. 4,00,000 from General Reserve.

(m) After writing back Rs. 2,39,696 from Reserve for Exchange Losses.

(n) After transferring Rs 61,806 from General Reserve

(o) After transferring Rs. 2,00,934 from General Reserve.

(p) After transferring Rs. 2,65,555 from General Reserve, Rs. 70,555 from Dividend Equalisation Reserve and Rs. 25,000 from Taxation Reserve.

(q) After transferring Rs 5,00,000 from General Reserve.

(r) After including Rs. 69,535 being refund of E.P.T. and after writing back Rs. 40,000 from provision against difference between cost of Raw Jute Stock and estimated value.

(s) After transferring Rs. 1,30,784 from General Reserve and Rs. 1,25,000 from provision for taxation.

(t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(u) After providing Rs 1,60,179 for further taxation of previous years and transferring Rs. 1,52,000 from Tax Contingencies Rs 75,000 from Jute Stock Reserve and Rs 33,365 from General Reserve.

(v) After transferring Rs. 1,21,421 from General Reserve and writing back Rs. 1,46,256 from provision for difference in exchange on Agency Fixed Assets.

(w) After transferring Rs. 1,00,000 from Dividend Equalisation Fund and Rs 75,000 from General Reserve and writing back Rs. 15,000 being excess provision for taxation.

(x) After transferring Rs 1,00,000 from Dividend Equalisation Reserve.

(y) After transferring Rs 5,94,144 from Capital Reserve.

(z) For five half-years ended 30-9-54 at 4 per cent per half-year.

(a1) After transferring Rs 1,25,000 from provisions for taxation; Rs 1,75,000 from Emergency Reserve; Rs 50,000 from General Reserve and Rs 94,500 from Dividend Equalisation Reserve

(r) After transftrring Rs. 4.41,000 from Div. Equal. Reserve.

(u) After transferring Rs 4,00,000 from General Reserve.

(v) After transferring Rs 5,45,597, from Reserve Fund.

(w) After transferring Rs. 1,50,00[illegible] from contingencies reserve; Rs. 50,000 from General Reserve, and after writing back Rs. 1,20,000 from provision for taxation and Rs. 3,00,000 from cotton stocks in previous periods written off.

(x) After transferring Rs. 12,56,384 from Reserve Fund.

(y) After transferring Rs. 2,00,000 from General Reserve and Rs. 1,25,000 from Contingencies Reserve.

(z) After transferring Rs. 25,000 from Dividend Equalisation Fund.

(a1) Includes Rs 3,89,645 being Refund of E.P.T.

(a2) After transferring Rs. 6,20,000 from General Reserve.

(a3) After transferring Rs. 1,50,000 from provision for taxation not required.

(a4) After transferring Rs. 5,25,000 from General Reserve.

(a5) After transferring Rs. 1,75,000 from Dividend Equalisation Fund.

(a6) After transferring Rs. 4 lakhs from Reserve for fall in prices.

(a9) After writing back Rs 95,665 being balance of bonus provided in previous years.

(Continued from page 381)

from next week caused the speculatives to slump heavily. Evidently it should have been apprehended that after coming into effect of the Act the speculative shares could not be traded except on the recognised stock exchanges. As trading in Indian Irons was in vogue in two or three other markets in Calcutta, the scrip was particularly found to be in a vulnerable position. Though in Bombay the news about the Act had been comparatively received calmly, other factors like delay in announcing their decision as regards bonus issues for which applications were pending with them by Government and Finance Minister's discouraging remarks about stock markets were pressed into service by bears to depress prices. Indian Irons receded from Rs 28-12 to Rs 28-8 Tata Iron likewise dropped twelve annas to Rs 174-4. Bombay Dyeing declined from Rs 554-6 to Rs 551-14.

16 & 17

The stock exchanges remained closed.

18

The reaction of the colliery owners to the award of the Appellate Tribunal was explained to the press by Mr R. Moulik, Chairman of the Indian Mining Association. It was revealed by him that a deputation of his Association, the Indian Mining Federation and the Indian Colliery Owners Association would be meeting representatives of the Union Production Ministry with a view to explain the difficulties which the industry faced as a result of the award of the Appellate Tribunal.. According to Mr Moulik the coal industry would have to pay to labour Rs 4.25 crores merely to comply with the retrospective aspect of the decision. Other concessions would further increase production costs of coal by about Rs 1-12 per ton.

With the Kashmir question in a delicate stage in the UN and with a number of uncertainties in the investment situation like the budget and the elections, the stock market attracted little attention and those who showed some interest in them seemed to be anxious to lighten their commitments. In Calcutta, Indian Irons after opening at Rs 28-3 reacted to close at Rs 27-13 to be pushed down to a low of Rs 27-8 after hours. Tata Iron in Dalal Street lost four points to be finally placed at Rs 170-4. Among Textiles, Bombay Dyeing declined to Rs 543-12 from Rs 551-14.

19

An extraordinary issue of the Gazette of India announced that the Securities Contracts (Regulation) Act 1956 would come into force on February 20. The Act was to ensure fair dealings in the Stock Exchanges and protect investors.

20

The Soviet Union vetoed the Four Power resolution on Kashmir proposing that Mr Gunnar Jarring be sent to India and Pakistan to discuss the question of demilitarisation of Kashmir and suggesting that the Pakistani proposal of sending a temporary UN Force to Kashmir be examined.

After initial steadiness prices in the Calcutta stock exchange declined on renewed selling pressure.

Indian Irons opened at Rs 27-4 and closed 4 annas lower at Rs 27. In Bombay, Tata Iron receded to Rs 171 with Bombay Dyeing backing away to Rs 545.

21

Though one major uncertainty had been relegated to the background consequent on the Russian veto of the four power resolution on Kashmir, both investors and operators continued to be chary of entering into fresh commitments People falling under the latter category were especially concerned about the repercussions of the coming into effect of the Securities Contracts (Regulation) Act. Though only two provisions had immediately come into force, (one banning option dealings and the other relating to shares sold with the option to retain the dividend) it was considered important to get the position as regards the recognition of stock exchanges.

The Act empowers the Central Government to grant recognition to stock exchanges and withdraw such recognition if necessary in the interest of trade or in public interest. It also empowers the Government to inquire into the affairs of the governing body of a stock exchange or the affairs of any member of the stock exchange and even supersede the governing body of a recognised stock exchange. The Act further seeks to prevent "undesirable transactions" in securities by regulating dealings in securities.

Values declined sharply under the lead of Indian Irons in the stock exchanges both in Bombay and Calcutta. In the latter centre Indian Irons opened quiet at Rs 26-7 and receded further to Rs 25-7 to close somewhat better at Rs 25-14. In Bombay Tata Iron encountered heavy selling pressure and as a consequence declined to Rs 168-4 from Rs 171. Among textiles Bombay Dyeing also met with realizing pressure and moved back to Rs 538-12 from Rs 545.

22

The UN Security Council voted to send its President Mr Gunnar Jarring of Sweden to India and Pakistan to examine with the Governments of the two countries any proposals which in his opinion would help in the settlement of the Kashmir problem, having regard to previous resolutions of the Security Council and of the UN Commission for India and Pakistan.

As buyers were conspicuous by their absence bear operators dominated the Calcutta stock market where the forthcoming Indian Irons rights issue seemed to constitute an insurmountable obstacle in the way in the context of the tight money conditions. It was apprehended that the additional funds could not come by easily. The fact that the budget day was drawing near. It was also exercising an inhibitory influence. In the absence of any sort of encouragement and in view of persistent propheSies regarding increased taxation bulls were completely unnerved.

The serious deterioration in sentiment was clearly in evidence in Calcutta where Indian Irons was hammered down to Rs 25-15. The Bombay Stock Exchange was, however, steadier recording modest gains. Tata Iron recovered to Rs 170-4 from Rs 168-4 while Bombay Dyeing recorded a gain of more than 10 points to Rs 544-6.

23

It was reported that the Government of India had decided to increase the selling price of coal by Rs 1-8 per ton.

The Calcutta Stock Exchange remained closed. In Bombay prices drifted to lower levels in the absence of fresh buying interest. Tata Iron receded to Rs 169-8 from Rs 170-4 while among textiles Bombay Dyeing shed nearly three points to come back to Rs 541-4.

24

The Second General Election commenced with voters in parts of Orissa and the Punjab going to polls.

25

Extreme nervousness characterised trading both in Calcutta and Bombay. The more speculative issues encountered sustained heavy selling pressure throughout the day and in Calcutta Indian Irons after opening at Rs 25-5 closed four annas lower at Rs 25-1. The scrip was reported after hours as low as Rs 24-10. Tata Iron in Bombay declined to Rs 167-4 from Rs 169-8 with Bombay Dyeing pushed down to Rs 536-4 from Rs 541-4.

26

Though Indian Irons in Calcutta opened somewhat better at Rs 24-15, the scrip soon after developed renewed weakness on heavy bear pressure. Finding that the bears, taking advantage of the weakness of the market, were depressing the market, the committee of the Calcutta Stock Exchange decided to impose a margin of Rs 3 per share on sales below Rs 24-12. They also at the same time ordained an interim clearing in Indian Irons at Rs 25. The steps had the desired effect and the rate recovered to Rs 25. In Bombay also easy conditions prevailed most of the time duing the day's session. Toward close there was some replacement buying at the lower levels and that helped Tata Iron and Bombay Dyeing to close even on balance at Rs 167-4 and Rs 536-4 respectively.

27

The Calcutta and the Bombay Stock Exchanges remained closed on account of Shivarathri.

The United Planters Association of South India and various plantation workers' unions representing 90,000 workers in 228 estates signed an agreement settling their disputes over the implementation of the Award of the special Tribunal published on October 25, 1956.

28

Presumably due to the emergency measures taken by the committee of the Calcutta Stock Exchange and in response to the UPASI—Plantation workers' agreement, a slight improvement in sentiment was recorded in the stock markets under the lead of the more speculative scrips. Indian Irons in Calcutta was done upto Rs 25-3 before closing at Rs 25-1. In Bombay Tata Iron improved from Rs 167-4 to Rs 168-8 with Bombay Dyeing moving up to Rs 541-14 from Rs 536-4.

INDEX NUMBER OF WHOLESALE PRICES.

PLYMOUTH
with Aerodynamic styling

The 1956 Plymouth has the advanced FORWARD LOOK. It's a better-looking car with many new performance features.
Here are its most important features:
★ New 12-volt electrical system gives quicker, easier starting, longer spark plug life, plenty of current
★ Independent hand brake provides real emergency brake function
★ Maximum vision with new horizon windshield wrapped around top and bottom
★ Safety-rim wheels, tubeless tyres and many other features
★ New safety door latch for passenger protection
★ Redesigned sealed beam headlights extend zone of lighting on left side by 80 feet

More Economical Performance *The 6-cylinder engine is dependable and economical. You will like its new pep with increased horsepower.*

New High-Sweep rear fenders contribute to impression of motion and speed

Investment Gossip:

THE Stock Exchanges have left behind the spasm of jitters; and present indications are that they will now experience a spell of buoyancy.

The reversal of sentiment could be traced to kerb trading in Bombay at the week-end. Monday's session in Dalal Street opened in confident style; and activity, spread over a wide front, lifted prices by something like 7 to 10 per cent. Rises of this magnitude in a single day's trading have not been known for a considerable time. And, wonder of wonders, Tuesday, too, witnessed lively conditions and advancing prices. In the first two days of the week, stocks have recorded gains of an average of 10 to 15 per cent.

Commentators in the Western Capital have hailed these developments as a "boomlet". In Calcutta, too, bullish fervour has affected most scrips; and the price-advance in the sensitive Indian Irons is over 10 per cent. Other popular counters like TEXMACO, Orient Paper, Jessop and India Steamship have responded equally stridently to the better and bright sentiment.

Whence came the forces which, thus, transformed headlong retrogression into confident progression? What is the favourable concert of news that has, thus, turned the psychology of the operators?

It is futile to seek ultimate causes in circumstances in which the caprice of the few dominates the fortunes of the many. The bear can, at any time and in any weather, draw up an impressive catalogue of the reasons warranting a heavy landslide in share prices. Likewise, the bull can produce as many valid reasons to prove that prices should make strong headway. When bear operators are successful, we hear a great deal of the first list; and when bulls get markets headed in their favour, there will be great stress on the second list.

If, without predilections, a proper estimate of share prospects were made, three outstanding circumstances should receive special emphasis. Firstly, since Indian Industry became a distinctive entity, it has never enjoyed such solicitude for its advancement from the Government of the day as it has, in the last nine years, from the Nehru Government. While even the bitterest critic on the side of Big Business will admit that Government have, by financial assistance, import policy and stores purchase, helped industrial progress and expansion, there is yet but dim appreciation of the magnitude and many-sideness of Government's help and sympathetic understanding.

Secondly, Indian industry is being helped and induced to expand its capacity and increase its output in every sector. Be it steel or cement, cloth or sugar, paper or light engineering; be it organised industry or small industry; be it the production of heavy or durable or consumer goods; be it agriculture or mining or industry; be it foodgrains or industrial raw materials; be it coal or be it power generation—in each and every one of these respects, Government have taken active, positive and dynamic steps to inspire and accelerate the tempo of expansion. Every industrial concern is, thus, producing to its full capacity and is being exhorted and assisted to step up its capacity.

Thirdly, Government's objective in planning is to raise the per capita income and to provide employment. In terms of industry, this means more purchasing power in the hands of the public.

Thus, Government provide finance and requisite facilities for the stability and continued expansion of every industrial concern; and Government plans are, likewise, designed to guarantee an assured market for the increased production of industry and agriculture.

All this is conceded by the spokesmen of Big Business. I wish, however that their admission of the bounties conferred by the Government is grateful, and not grudging as it is now.

Whether Big Business appreciates all this in a grudging spirit or in a grateful spirit, is not of much consequence to my present theme. My theme is that, so far as investors are concerned, they should be pleased and grateful that every one of the worth-while industrial concerns in this country is being helped by Government to produce to full capacity and, at the same time, to instal further capacity; and to dispose of its output in an expanding market at attractive margins of profit.

The basic factors of industry are superlatively favourable; and that is all an investor needs to know.

While, in the present context, it will be inappropriate to examine the pros and cons of Big Business's grievances, real or fancied, I should take due notice of the grievances of investors.

The first grievance of the investors is that popular Ministers, with their predilections for the socialistic pattern of society, do not realise that this pattern is to be achieved on the basis of mixed economy. Mixed economy cannot function in the absence of well-designed and properly functioning Stock Exchanges. Most Ministers seem to think that our national economy can jolly well get along without the help of stock exchanges; that, in fact, stock exchanges are little better than gambling dens.

Such obiter dicta may have the fortuitous aid of authority, but they are far from the verities and practicalities of national economy in actual working.

Whether it is the public sector that is to be financed by loans raised on a long-term basis, or the private sector to be financed in a variety of ways such as risk capital, working capital, etc., it is the stock exchanges which constitute the only reliable agency for the securing of each and every category of capital.

If you let the stock exchanges pursue an uneven career of ups and downs, and if stock exchanges fail in their function as the barometer of the nation's economy, the investors as a recognisable community will soon disappear. Who will, then, subscribe for the new loans, take up shares of industrial enterprises, and provide deposits for banks?

Authority's present attitude to the investor has suicidal elements. In its own interests, it must be moved by genuine solicitude that investors get a fair deal.

Stock Exchange Committees must, on their part, ensure that the interests of investors are interpreted as an entity distinguished from that of Big Business; that the few giant operators are not favoured to the neglect of the many small investors; that speculation does not exceed the bounds of decency or safety; that rules and bye-laws do not, as admittedly they do now, furnish an initial advantage to the bears and thus tilt the scale against those who buy shares with confidence in their present working and with hope for their future prospects.

Note: A letter received from the Vice-President, Calcutta Stock Exchange, on the factors agitating stock exchange behaviour is held over for publication next week).

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policy-holders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business in the best ORIENTAL tradition, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

HIGHLIGHTS

More in sorrow than in anger, Eavesdropper bewails the present unfriendly attitude of Britain to India. In effect, he says: They know not what they do.

He sets out the true significance of Indo-British relations; and, with his customary understanding, he stresses the importance of a reappraisal.

The restoration of goodwill should be easy if there is appreciation of the mutuality of interests, and of the vital role of this friendship in the historical bringing together of the East and the West.

Indian Finance has a stake in future developments taking this course. For, on India's attainment of independence in 1947, it had the vision and the temerity to proclaim: "British rule is dead; long live Indo-British friendship".

Investment Notes:

The Calcutta Exchange Committee, at a meeting held this week, decided to add Letters of Right of Indian Irons as a seperate item to the clearing schedule on and from the 7th March from when dealings in the scrip will be done on ex-right basis. There will be seperate dealings in Letters of Right. For Clearing No. 234 ending on the 20th March, clearing rates for all clearing scrips, including Letters of Rights, will be fixed; and deliveries will be effected as usual for all shares except Letters of Rights. Deliveries of such Letters of Rights will be given by the selling member to the Clearing House on 2nd April and will be receivable by the buying member on 3rd April.

Alkali Chemicals have sharply declined to Rs 13-10 from Rs 18-4 quoted a week ago. This setback in price is mainly due to the company's decision to issue 4 Right shares for one held, at par. Considering the present stringency of the money market, it is feared that a large number of holders will fail to subscribe to the full quota.

Imperial Tobacco has recommended a second interim dividend of 2 per cent for the year ended 31.3.1957. The first interim dividend was declared on the 9th August, 1956. The dividend is payable on or after 28th March.

Bombay Dyeing & Manufacturing Company has decided to split the shares of Rs 250 each into 10 shares of Rs 25 each. The directors have, it is understood, fixed up October 1, '57 as the date for sub-division of the shares. The above decision is made to enable a much larger section of the public to become shareholders of the company.

The National Bank of India will be amalgamated with the Grindlays Bank with effect from 1st January, 1958.

Bangalore Woollen, Cotton & Silk Mills, Madras, have decided to capitalise a sum of Rs 81 lakhs from Reserves and issue 81,000 Ordinary shares as bonus in the ratio of 2:1. These bonus shares will not participate in any dividend payable for 1956.

£ R$

Angelo Bros. Maintain Dividend

Balance-Sheet Reviews:

THANKS to the firmer tendency in the prices of shellac in which the company is mainly dealing, Angelo Bros., Limited has reported increased earnings for the year ended 31st August, 1956. Production and sales are well maintained; and trading profits have shown a satisfactory improvement. This would have been reflected to a greater extent in the final profit figure, but for the introduction of a tax on dividends with retrospective effect.

Sales for the year have risen to Rs 2.85 crores from Rs 2.56 crores, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 16,24,034 as against only Rs 14,77,302 in the previous year. Except General Reserve which is reduced to Rs 1.50 lakhs from Rs 1.75 lakhs, the amount set aside for Depreciation has been raised to Rs 1.09 lakhs from Rs 1.03 lakhs and Taxation to Rs 7.73 lakhs from Rs 4.95 lakhs. The dividend is maintained at 20 per cent.

The directors have, in their reports, stated that the De-waxing Plant has been modernised and extended, while other factory plant has been maintained at a high level of efficiency and economy.

£ R$

Orissa Minerals

Despite an increase in sales, the Orissa Minerals Development Company Limited has reported a decline in earnings for the half-year ended 30th June, 1956. Althougt the market for the company's products continued to improve and the prices at which the various grades could be sold were satisfactory, full advantage could not be taken due to shortage of wagons and the cessation of work. Moreover, the progress made in the proving of the Manganese area was interrupted by the strike and the culminating lock-out.

Sales are shown at Rs 28.23 lakhs against Rs 28.18 lakhs, while the net profit, before Depreciation and Taxation, is lower at Rs 4,80,261 as against Rs 5,28,357 in the previous half-year. The directors have, after setting apart Rs 82,805 (Rs 88,323) for Depreciation; Rs 1.80 lakhs (Rs 1.00 lakh) for Taxation; Rs 232 (nil) for General Reserve; Rs 29,600 (Rs 44,600) for Taxation Contingency Reserve and Rs 5,800 (Rs 6,540) for Development Rebate Reserve, maintained the dividend at 10 per cent.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THE attitude on the part of Authority toward the Second Plan quite rightly and fortunately has regard to the fact that there are certain vital endeavours whose implementation is in the nature of a prerequisite for the successful attainment of Second Plan targets as a whole. In the first place, there has been the realisation that it was necessary for Government so to strengthen the administrative cadres and to train up fresh batches in this behalf as would ensure that specific projects would not fail for lack of supervisory staff, attention or efficiency. The second important realisation has been that the sector in which India can least afford to pare the size of allocations is Railways. For, there is the real danger that progress of the Plan may be adversely affected by insufficient availability of wagon space. In the third place, Government have shown themselves to be aware of the need for husbanding as well as they can the resources of foreign exchange. What is surprising is that the fourth basic requirement in term of the Second Plan has been allowed to be obscured—at any rate, this is the conclusion that is to be inferred from the relative neglect by Authority of matters relating to coal production. Steel output must rise to 6 million ingot tons; cement and aluminium are scheduled for substantial expansion in production; the various ancillary industries will have to utilise the extra production so brought about; but all this—not least, an increase in mileage covered and tons carried by the railways—presupposes that, over the Second Plan-period, raisings of coal in this country are to go up from 38 million tons to 60 million tons.

It may be assumed that it could not have escaped the knowledge of Government that the higher output of coal should have a top priority among the Plan endeavours. If, however, this assumption is correct, it is difficult to understand why Government policy in coal has been on the lines that we have known it to be in the last two years.

At last week's annual general meeting of the Indian Mining Association, Mr Maulik, the Chairman, has succeeded admirably in placing coal in the perspective of the Second Plan. In so doing, he has had the unenviable job of having to draw attention to a number of factors operating against the successful achievement of targets in coal production. This is, to say the least, both disturbing and disquieting. What the IMA Chairman implies can be boiled down to a few words of unpalatable truth: on the basis of current coal policy the Second Plan may end in failure, because the coal industry will be unable to achieve the production necessary in this context.

There can be no mistaking Mr Maulik's genuine solicitude for coal in the Second Plan. He makes it clear that coal is a commodity that belongs to the national sector; and his arguments in favour of a policy calculated to foster, encourage, enable and ensure that development is proceeded with are applicable, not as relating to the private sector or the public sector but as affecting coal in the national sector. It is, therefore, proper that New Delhi should examine, accept and implement the suggestions advanced by Mr Maulik, so that the industry may receive the green signal for coal development.

The starting point for all discussion in this regard must be that coal, whether as compared to other fuels or as contrasted with prices in other countries, is cheapest available in India. The conclusion is that, without coal, the Second Plan may flounder. So it becomes necessary for us to pay heed to Mr Maulik's views, which are intended to vouchsafe the adequate and necessary development in coal.

The present position is, we repeat, that Indian coal is among the cheapest in the world. It follows that, if it can be seen to be necessary in the national interest, the consumer should and must be called upon to pay a trifle more for his coal. Mr Maulik's suggestion is that Government should not hesitate to permit, nor long defer, an upward revision in selling prices such as will render unto the coal industry the internal resources for utilisation in the financing of development projects. In citing the examples of steel and cement, in both of which (as in coal) prices are fixed by Government, the IMA Chairman points out that the producers are given a special element in the price paid to them in order that they may be enabled to find the extra resources necessary for proceeding with their expansion projects. But, in coal, unlike as in cement or steel, the prices derived by the producers scarcely leave a margin by way of unappropriated profits that could be applied to development projects. Mr Maulik asks that the criterion in determining prices to be paid in case of steel and cement should also be extended to the coal industry.

The second suggestion made by Mr Maulik is that the central authority for coal as at present constituted is so over-burdened with work as to make it inevitable that there should be an element of delay, and perhaps even inefficiency, in its disposal of work. As the IMA Chairman points out, the Production Ministry has the twin responsibilities of drawing up, approving and implementing plans in the public sector, on the one hand, and examining, scrutinising and sanctioning the schemes of development submitted by the private sector, on the other hand. These, the IMA Chairman points out, "are responsibilities which one Ministry and one Minister cannot alone shoulder". As a case in instance, he has stated that it has taken the Ministry almost a year in dealing with the applications received from the coal industry for expansion in production. In asserting that a division of responsibility "at the Government level as between private and public sectors will do incalculable good", Mr Maulik says:

> "In the first place, it would free the existing Ministry to give their undivided time and energy to the furtherance of the State projects. In the second place, a proposed new Ministry for coal in the private sector and for the overall policy as we have suggested would enable development in the private sector to proceed at a brisk pace."

It is not so much that the coal industry wants action urgently to be taken, but that the national economy demands a revision of coal policy. The argument cannot be rebutted that the targetted increase in coal production would be served by the adoption by Government of two specific measures. Firstly, from the point of view of the finances required by the industry for implementing its development work, Government need to review their selling price policy to the extent that they should "take note of the basic consideration that the margin available to the producer must be sufficient and adequate to finance the 10 million tons of additional coal production" allocated for the private sector in coal. Secondly, the creation of a new Ministry primarily to attend to the private sector in coal is a measure that Government must seriously consider; since, in implementation of the Second Plan, time is of the essence, the desirability of such a new Ministry becomes the greater because such a division of responsibility would enable expeditious decisions to replace the now obtaining dilatoriness.

A Satisfactory Record

A new chapter has opened for the Indian economy. The performance of the Railways will largely determine how smooth it will run. The first impressions of the World Bank team are pleasantly complimentary. Mr J. E. Slater, its leader, is very much impressed with the effort and care taken by the Railway Board, the General Managers and their staff toward the problems of future development. These impressions are of great practical value, as the World Bank is expected to provide substantial assistance to the expansion programme ahead.

A record occurrence of a grave accident, over-crowding on certain lines and other inconveniences for lower class passengers focus public attention on the less satisfactory aspects of railway working. It is also likely that amidst the hostile general reaction, the colossal tasks of the Railway Administration are lightly viewed. The Annual Report for 1955-56 reveals a record most reassuring, from the standpoint of the heavy calls which a surging economy will make on the Railways in the next few decades. This Annual Report derives extra significance from the fact that it deals with the last year of the first Five Year Plan.

During the year, 3,550,000 passengers representing nearly 1 per cent of the population of the Indian Union were carried daily by the Railways. This number was about 1 per cent more than that of the previous year. The daily mileage of train journeys exceeded 100 million. Between passenger trains and goods trains, 542,000 miles was covered every day, lifting on an average 148,000 people and 315,000 tons of goods; 21,500 loaded wagons left stations and yards daily.

A record volume of goods and passenger traffic was handled during the year. Between 1953-54 and 1955-56 goods traffic expressed in net tons miles increased by 13.6 per cent. It is a special source of satisfaction to industry and trade that toward the end of the year under report, wagon usage touched a new peak of intensity, breaking all previous records. This was achieved by advance planning of movement over difficult routes and junctions, more economic choice of routes and ampler movements of certain commodities by block trains, the operation of the preferential

traffic schedule, framed two years before, and the vigilance exercised by the flying squad attached to the Indian Railway Conference Association Office. Detentions of wagons and engines were reduced through improvements in marshalling and other yards. More express goods trains were introduced and the frequency of services increased on many routes. A small further decline in the speed of goods trains found compensation in the increase of the average net load. Total engine miles on both the broad and metre gauges registered an increase though on the broad gauge, the percentage of increase showed a drop from the previous year.

That in these circumstances, coal consumption would go up is inevitable. Comparative figures for the two years, 1954-55 and 1955-56 show an increase in total consumption of the order of 460,000 tons. That the consumption of grade 1 coal has gone up by a much higher proportion poses a serious problem. The element of vagueness in classifications for the first year, however, makes the position somewhat obscure. Rather grudgingly, the Ministry of Railways has agreed to the progressive replacement by April, 1959 of the entire quantity of coking coal by non-coking coal. The Ministry is also having a vigilant eye on developments bearing on coal output.

On the side of amenities to passengers, there was scarcely anything to report, beyond the extension of facilities for paid sleeping accommodation in third class and the maintenance of the drive toward the supply of adequate and wholesome drinking water. These are of course, bare necessities, and should be more welcome than air conditioning and mirrors in bath-rooms. As survival is the most precious need for man, the work of the Railway Protection Force is of paramount importance. The Report records an appreciable drop in the incidence of crime all round. Facilities for training the Railway Protection Force were extended. An armed wing for the provision of cash guards and escorts for goods trains were created in each railway and the administrative rules for the Force were improved.

Complaints received and dealt with by the Railway Administration were much more numerous than in the previous year. We are told that this increase is the outcome of the wide publicity given by the Railways about their Complaints and Amenities Organisations and the greater attention paid to the complaints—a baffling argument which it is possible neither to refute nor to endorse!

Staff relations were on the whole satisfactory. Among new amenities, provision for the sick and the convalescent figured most conspicuously; to this category belong rest homes for non-gazetted staff at hill stations and sea-side centres, a convalescent home at Ranchi and the provision of more tuberculosis beds in various centres. That for an organisation with a total of more than a million employees the number of man-days lost through legal strikes was no more than 10,746 is a matter for congratulation. This loss was confined to the South-Eastern Railway. Illegal strikes, however, cost 227,218 man-days.

A development which is not likely to be seen with the same degree of enthusiasm all over India is the headway which Hindi is making as a railway medium. In the year under report, steps were taken for the Hindi rendering of railway codes, manuals, etc. Hindi shared an almost equal place with English in the documents presented to Parliament and made further progress as the language of railway terminology, of notices and sign-boards exhibited on railway premises and carriages, of news letters, important notices and notifications and telegrams. Alongside, the study of Hindi among new entrants to railway service received further encouragement through the appointment of Hindi instructors, in Railway training schools and through special Hindi classes in several places.

The increases in passenger and goods traffic were reflected in gross earnings. Against Rs 288.59 crores in the previous year the Indian Railways earned Rs 317.51 crores in 1955-56. Passenger earnings were higher by Rs 502 lakhs or 4.84 per cent; goods earnings rose by Rs 21.47 crores or 13.7 per cent. The gross traffic receipts of the Government Railways amounted to Rs 316.29 crores. The net revenue, after deducting depreciation and interest charges stood at Rs 14.22 crores, which was divided between the Development Fund and the Railway Revenue Reserve Fund, Rs 7.08 crores going for the first and Rs 7.14 crores for the second.

During the first Plan period, there was hardly any extension of railway mileage in India. The increase in gross earnings over this period from Rs 265 crores to Rs 316 crores should therefore have indicated a net financial gain, but for the fact that working expenses were also moving up correspondingly. The increase in traffic load is praise-worthy.

The Personality of India's Mixed Economy—XI

A VALID concept of welfare which, like a working theory of economic growth, is an essential requirement of fruitful planning, involves too many presuppositions to permit a direct attack on the problem of its formulation. When the aim is stated as "welfare", it has a highly deceptive look of being carefully confined to the material requisites of well-being without treading on the indefinable conditions and ingredients of individual happiness. For, nearly every one thinks that, while happiness implies a mental, moral and even spiritual quality in the individual, welfare depends only on material conditions. But the fallacy of this idea can be brought home by a simple reductio ad absurdum, namely, that, if this assumption is correct, it is possible for welfare and unhappiness to co-exist without prejudice to each other. This suggestion is not altogether fanciful. Reports of increase in mental diseases or the most extreme instances of hypochondria or even suicide in highly prosperous countries suggest that welfare and unhappiness on a large scale can exist side by side. This embarrassing juxtaposition may not disturb the Government of a country pledged to free enterprise, even though it may devote more energies to the removal of the evils than other countries. But the authorities in a regime of planned economic development cannot affect unconcern either in theory or practice. In India, the emphasis on the Welfare State is derived from the anxiety to make economic development yield its natural and legitimate fruit of individual happiness and social harmony. It is intended to make clear that the Government are not tied too closely to any doctrinaire commitments and that they would regard the welfare of the people as the proper end of official policy and would give priority to it over the means which are supposed to serve that end.

But there are many to whom the means are, if anything, more important than the end itself. No less a person than Mr G. D. H. Cole has declared that the Welfare State is no acceptable substitute for the Socialist State. The spirit behind it is very much like that which prompted the saying that good government is no substitute for self-government. But both these sayings underrate the possibility that the price of their preference may sometimes be unconscionable. Behind both there is the same anxiety that the shining ideal should not be displaced by a tawdry substitute. But the relation between the two rivals in each of these competitive pairs is not the same. There can be systems of good government without an element of self-government; though some may even dispute this. But it is fairly certain that there can be no Welfare State without the acceptance of broadly Socialist ideals, if not methods. While experience of good government, if it is possible without self-government, can kill the hunger for the latter and may help the emergence of new forms of tyranny, no Welfare State can achieve conditions of well-being in which the majority of people will cease to care for the Socialist ideals of equality and social justice.

And yet, the fear that Welfare State might spell danger to Socialism in its doctrinaire as distinct from its practical aspect is keen and strong in the minds of most socialists. The present movement in Britain for re-thinking the bases of Socialism, which is led by Mr Cole, has only brought out the difficulty of keeping together in one system of thought and reasoning the fervour for revolutionary change, the popular appeal necessary for any practical political programme and the loyalty of large sections of the working class.

The resulting discords in British Socialist thought are best observed by a foreigner who is equally entitled to call himself a Socialist on the ground that "Professor Tawney is as much a part of my heritage as anybody's." Mr Paul T. Homan, writing in the New Statesman and Nation, declares: "At least in the short run, the only feasible programmes appear to consist mainly in reforms which are consistent with the continuance of the system. To the extent that they are successful in improving the state of economic well-being, the more remote is the possibility of ultimate subversion. The inference suggests itself that the Socialism which can be made part of a Labour Party programme will have only a minor resemblance to Socialism in any of its accepted meanings."

Even more significant is his reading that Professor Cole has largely abandoned hope that the Labour Party will make acceptable progress toward Socialism. Mr Homan's diagnosis of the present situation of the intellectuals in British Socialism is that, "on the one hand, the run of the facts is breaking up the ideological stereotypes, while, on the other, an emotional attachment to the stereotypes presents a formidable barrier to formulating programmes in terms of defensible means to practical ends."

The crucial distinction between Communism and Socialism lies in the emphasis which the latter puts on defensible means which, in practical terms, means the due processes of democratic governance. And the difficulty which modern Socialism experiences is the difficulty which the Communist has forestalled by his insistence on proletarian dictatorship, namely, that the masses of workers, when they experience actual improvement in their wages and conditions of work, will have little enthusiasm for the abstract ideals of their doctrinaire leaders. This fact has long been evident in the state of mind of the American workers and their decided aversion for the trade unions

(Continued on page 454)

Editorial Notes

The Macdonald Mission

Never has Indo-British relations since the transfer of power ebbed so low as now. Leftist opinion in India has consistently been demanding the severance of the Commonwealth connection. When Britain marched its forces into Egypt, even a conservative statesman like C. Rajagopalachari felt impelled to argue that it was no more ethical for India to remain a member of the Commonwealth.

The Prime Minister was clear-minded enough to rule out the wisdom of any such drastic step. At the time of Sir Anthony Eden's retirement, Mr V. K. Krishna Menon paid him the most handsome personal tributes. Pandit Nehru and his associates in power have thus demonstrated that they could keep their heads above the passing moods of a crisis and keep completely disentangled their attitude to a passing situation from the judgment of the advantages of an abiding association.

As such, it is a pity that Britain has chosen to take sides against India and play the sponsor of a Resolution, which it could well have been foreseen would receive unanimous and stern disapproval in India. That there should be some political issues pending between some members of the Commonwealth is bad enough. It is far worse that those who could afford to remain neutral should openly back up one disputant against the other. It is quite possible that the British Government have started regretting their conduct on the recent U. N. discussion of the Kashmir issue.

Mr Malcolm Macdonald, Britain's High Commissioner in India, who can claim to know this country's feelings and the justice and propriety of its stand on Kashmir much deeper than any other top-ranking British politician or official, is now on the delicate mission of trying to convince his Government of the utter folly of having estranged India for nothing.

During recent weeks, there have been suggestions that the territorial structure of the Commonwealth can contract or alter, without serious deteriment to the political or economic interests of Britain. Mr Macdonald may have to fight this silly attitude too. It may be hoped that his visit will have the result of veering his Government round to a more constructive evaluation of the importance of Indo-British friendship and the value of a Commonwealth in which the biggest non-English-speaking parliamentary democracy can function without torment.

*

Rural Credit

Both the State Bank of India and the Travancore-Cochin Banking Enquiry Commission are agreed on the imperative need to develop rural credit facilities at a rapid pace. One of the principal aims of the nationalisation of the Imperial Bank was the dispersal of banking facilities over areas, where the private money-lender had been holding sway.

Within the first eighteen months of the Imperial Bank's transformation into the State Bank, sixty-six new branches were opened. This is not altogether an unsatisfactory measure of progress, in relation to the target of four hundred new branches scheduled for the first five years. Rural Banking being a comparatively unfamiliar sphere, calling for considerable spade-work, a cautious pace at the beginning is no cause for disappointment.

In Travancore-Cochin, where the lay-out of the population is such that the distinction between urban and rural areas is invariably blurred, the small bank, either proprietorial or the branch of a joint-stock parent, largely meets the need of rural finance. Inspite of the weaknesses of these institutions, most notably, the relatively high interest rates received and paid, they are functioning as a much cheaper substitute for the private money-lender. The latter has not been completely replaced, but his scope has tended to dwindle and his rates for accommodation are certainly lower than in most other parts of India.

The Travancore-Cochin Banking Commission envisages a future in which the small banks would amalgamate and cooperative credit societies would take up more and more of the small lending which commercial banks find generally unprofitable. Now that rural ware-housing is also being undertaken on a national scale, the recommendations of the Commission have a chance of being implemented with greater ease and facility.

*

Regional Economic Co-operation

Few will disagree with the statement made by Dr Gunnar Myrdal recently at Delhi that there is very little of practical economic co-operation in the ECAFE region, and not even a sound basis for developing it. The UN Economic Commission for Asia and Far East is the most suitable organisation which can work up this basis. It has already done some work in the field of academic exploration; more might be done in that direction.

The practical beginnings lie with the Governments. In the two regions, where economic co-operation has been conspicuous and successful, it is closely interlinked with common political ends. Soviet Russia has been assisting the agricultural and industrial development of other communist countries in the neighbourhood, on a basis of give-and-take. Marshall Aid and the Inter-European Organisations which came up in its wake represent largely a joint endeavour to stem the tide of communism. The Benelux, Euratom and Eurofima are other developments, devoid of equal political implications.

In South-East Asia, similar endeavours are conceivable. For the time being, however, there are powerful political and economic impediments. Most of the newly emancipated countries have not found their feet yet. Some of them are obliged to look upon foreign economic assistance and military support as inseparable. For all, a phase of agricultural development has necessarily to precede industrial planning on a systematic scale. In agriculture, except on the commercial side, there is not much room for mutual collaboration between the ECAFE countries, except by way of information of some practices, here and there.

It may take sometime before the majority of these countries started thinking of a coordinated regional economic programme on the basis of agreed specialisation as Dr Myrdal suggests. The region, as a whole, is vitally deficient in finance and in technical know-how. As things stand today, Japan and India are the two countries entitled to assume a position of leadership and lend a helping hand to their more backward neighbours. Before this happens, many vestigal national obsessions and fears will have to be cleared. There can be no doubt that a broad division of functions in production and distribution is the most desirable for a fairly well-integrated regional development in this area.

Election Tour Study

Mr Loke Darshan, the Principal Private Secretary to the King of Nepal, has commenced a world-tour on a study of constitutional methods, particularly, those concerned with administration and elections. His itinerary does not seem to include Communist countries, but covers, besides many European countries, Saudi Arabia, Arabia, Afganistan and Iran.

Persumably some visits are no more than a matter of curiosity. Britain will be a special object of study, from his particular angle, as it has the most striking similarity with his own country, a monarchical democracy. Nepal will surely be watching the present elections in India and will study the details of its conduct with more than ordinary zeal. Mr Loke Darshan's investigations may have to be conducted in some hurry, as Nepal's elections are scheduled to take place before the end of the year.

Even so, sufficient material will have been gathered, which Nepal can utilise to the best advantage, and more experienced democracies can also look to for possible guidance. In the present state of political affairs in Nepal, no concern will be too great to ensure that the elections are conducted free of fraud and violence.

*

Ghana

This week, the Commonwealth welcomes Ghana, as a full-grown member, and the only one from non-white Africa. The transformation of the Gold Coast Colony into the self-Governing State of Ghana was not without travail. This polyglot, held together by British arms and diplomacy, came very near partition. Britain, in-

World of Finance

With Competence: Without Complacency

IN the US now, as in the UK for nearly two years, financial commentators are not sure whether they should be more afeared of prosperity or more horrified of recession. While, by every criterion, prosperity has reached a high altitude, the doubt creeps in and one wonders if it is not all too good to be true, at any rate to last long. So, the warning is uttered that prosperity may be all right, but that inflation is all wrong. The complete terror which inflation has always inspired makes one feel that one would be content with a lesser measure of prosperity, if that was the condition for making the economy inflation-free. But, when the wished-for lowering of the tempo of prosperity does actually take place, one begins to imagine the worst, and to conclude that the lessened economic activity is but the beginning of the Great Depression. This phrase, "Great Depression", has a devastatingly psychological effect on general sentiment by recalling the terrible conditions of unemployment and deflation which raged in the first half of the thirties. So, the question is posed: What should we dread more, inflation or deflation?

Wall Street has, for weeks, suffered from nerves, because it has convinced itself that reaction is round the corner. Will the reaction be just a mild readjustment? Or a drastic readjustment? Or a recession? Or a retrogression? Or a wide-fronted depression? With the aid of statistics and graphs, answers are being eagerly sought; and, realising the advantage of being equivocal, continuance of economic activity at peak levels is foreshadowed for the first half of the current year, and a process of readjustment, being a necessary force for healthy consolidation, is considered likely in the second half of the year. Common folks are rather unconcerned with all this abstruse discussion and, for them, sufficient unto the day is the prosperity thereof.

We in India have much to be grateful for. The Congress is assured of a return to power at the Centre and in most of the States. The Second Plan will, therefore, be pursued with vigour and fervour; and the difficulties now being encountered are no more and no severer than we bargained for when we as a nation resolved to implement an ambitious Plan. We may take heart from the last four months' experience in the money market with special reference to the banking situation. On the eve of the 1956-57 busy season, there was a realistic (but not panicky) appraisal of the exceptionally onerous strain that the impending busy season was expected to impose on bank credit. The magnitude of the resources that would be needed was carefully estimated; and with business-like thoroughness and without any fuss, arrangements were made for the banking system being equipped with the additional resources in response and in proportion to the demand. The situation today is under perfect control; and, as and when the season ends, every one should feel grateful not only for the adequacy of the steps taken, but for the new spirit of understanding and co-operation between the public sector as represented by the Finance Ministry and the Reserve Bank on the one hand and the private sector as represented by the commercial banks on the other. We have every reason to hope that the problems caused by the foreign exchange gap will be solved in an equally satisfactory way. The task of raising market loans will be, likewise, accomplished with confidence and success. All of which adds up to a heartening outlook for every interest connected with the money market.

We have, doubtless, our problems. But we have, too, our solutions, and we propose to achieve them with competence and without complacency.

A Friend in Need

BY all tokens, the Reserve Bank is going all out to equip the banking system with resources adequate for meeting the mounting seasonal demand. The credit limits sanctioned by the Reserve Bank for advances to scheduled banks against usance bills are of the order of Rs 150 crores. In this regard, the unutilitised margin is anything like Rs 90 crores. By way of further facilities, the central banking institution has been purchasing securities directly from member banks, whose portfolios in this respect show a ecline of Rs 9.36 crores in the fortnight ended February 22. The Reserve Bank's return for the week-ended March 1 shows a substantial addition to its holdings of securities; and the corresponding return of the scheduled banks, which will be available only next week, must contain confirmatory evidence. In the course of February, the loanable funds in the hands of the commercial banks have been augmented by nearly Rs 15 crores through a lightening of their investment portfolios. Whether the sales of giltedged, as thus disclosed in the returns of the Reserve Bank and in the consolidated statement of member banks, represent outright purchases by the Reserve Bank or are in the nature of budlee transactions (that is, the Reserve Bank accepts two simultaneous contracts, one being a note of sale in its favour for ready delivery and another being a note of purchase from it for delivery four or five months later), cannot be known; but, in view of the importance of banks maintaining a reasonable proportion of securities, we hope that a moiety of the Reserve Bank's present purchases will be on the basis of later resale to the same banks. We cannot help insisting that positive steps should be taken to reinstate government securities in the affections and portfolios of the member banks.

In the week-ended March 1, there has been a small sized rise of Rs 4.71 crores in note circulation to Rs 1,506.25 crores. Rupee coin has gone out in circulation for Rs 0.87 crores. In the result, the Reserve Bank's cash in the till, now placed at Rs 15.58 crores, has been drawn upon to the extent of Rs 5.50 crores. Rupee Securities and Foreign Securities are unchanged.

While the Central Government's Deposits have been marked up by Rs 1.12 crores at Rs 55.10 crores, those of State Governments are sharply reduced by Rs 7.54 crores at Rs 3.70 crores. It may be suggested that the fall in balances of State Governments may be derived partly from month-early disbursements and partly from possible payments to the Central Government. Banks' Deposits have, as at the end of the week under review, fallen by Rs 3.21 crores to Rs 53.25 crores. This, however, would appear to have been accompanied by the net repayment to the Reserve Bank of borrowings taken by scheduled banks. For, the Other Loans and Advances of the Reserve Bank are marked Rs 4.54 crores lower at Rs 108.12 crores. The outstanding advances against usance bills are placed at Rs 56.84 crores against Rs 58.85 crores.

The return of the State Bank for March 1 discloses that Deposits have risen for the third week in succession; the rise during the week has amounted to Rs 4.46 crores, with Deposits placed at Rs 276.01 crores. Such augmentation of resources has been utilised by the State Bank partly to reduce its indebtedness; and Borrowings have declined sharply by Rs 9.45 crores to Rs 7.46 crores. But, in order to meet the increased demand for Advances, and also partly to finance the repayment of loans, cash balances have been drawn on to the extent of Rs 5.61 crores. Advances are shown Rs 1.99 crores higher at Rs 172.66 crores.

Pandyan Bank

A sharp increase in its deposits by over 25 per cent has enabled the Pandyan Bank Limited to continue its custom of showing further and remarkable improvement in its balance-sheet from year to year.

Deposits of Pandyan Bank rose from Rs 1.95 crores to Rs 2.44 crores. The bulk of these increased resources has been utilised in an expansion of the advances portfolio, which goes up from Rs 1.01 crores to Rs 1.35 crores. Secondly, cash and bank balances are placed higher by over Rs 13 lakhs at Rs 54.78 lakhs.

The income of the bank has risen satisfactorily. Interest and discount are placed at Rs 12.81 lakhs against Rs 9.27 lakhs in 1955. The income by commission, exchange and brokerage is placed Rs ½ lakh higher at Rs 2.97 lakhs.

The expenses of the bank, however, have also registered a rise during 1956. Interest paid is put down at Rs 6.29 lakhs against Rs 4.14 lakhs; and salaries and allowances have absorbed Rs 4.49 lakhs as compared with Rs 3.21 lakhs in 1955. In the result, the balance of profit is shown to have increased from Rs 3.22 lakhs to Rs 3.47 lakhs.

The dividend proposed is maintained at 7½ per cent and would absorb Rs 0.75 lakhs. From the current year's profit, it is proposed to transfer Rs 0.75 lakhs to general reserves, raising the figure under this head to Rs 10.25 lakhs as against the capital of Rs 10 lakhs. Moreover, the contingency account is to receive Rs 50,000. The carry-forward is placed at Rs 0.98 lakhs against Rs 0.12 lakhs brought in.

The extent to which the Pandyan Bank Limited is responsible for mopping up the potential deposits in the South India region is indicated by the fact that, while the number of its branches has risen from 12 in 1951 to 43 in 1956, the deposits of the bank have almost trebled themselves from Rs 0.84 crores to Rs 2.44 crores.

Is the World's Monetary Gold Stocks Inadequate?

By PAUL EINZIG

DISCUSSION of the inadequacy of the world's monetary stocks of gold and of the official American buying price of gold, which faded into the background during the last year or two, has come to the fore once more. It has received publicity in connection with the figures published in the annual review of Samuel Montagu & Co., the well-known London bullion dealers. That review points out that in 1956, out of the gold output of the non-Communist world amounting to $980 million, some $455 million was absorbed by hoarding and industrial requirements, leaving only some $525 million for the monetary reserves. Even allowing for the sale of Soviet gold in London and other markets, part of which found its way into official gold holdings, the increase of the world's monetary stocks of gold, the addition of the monetary reserves during last year could not have been more than 2 per cent.

The increase in the volume of currency and credit during 1956 was in most countries distinctly in excess of 2 per cent, so that the proportion of the world's monetary stocks to the world's total volume of money actually declined last year. This aspect of the problem need not cause undue concern, having regard to the fact that most countries have long abandoned any pretence of trying to maintain a minimum ratio of gold to monetary circulation. What is much more important is that during 1956 prices in most countries rose by considerably more than 2 per cent, so that on that basis it may be claimed that the commodity value of the total monetary stocks actually declined. Nor was 1956 an exceptional year from this point of view during the post-war period. Although the nominal amount of the gold stocks has been rising, their real value has been declining.

The importance of this tendency lies in the fact that the money value of foreign trade, and the amount of balances which may have to be settled in gold, increases in sympathy with the price level. Unless the monetary stocks of gold can be increased to a roughly corresponding extent they are apt to become inadequate for meeting requirements arising from international trade and finance. From the point of view of the domestic financial structure of most countries it may be of small importance if the gold reserve declines to a fraction of the volume of currency and credit. But from the point of view of the settlement of trade balances the relative decline of gold reserves is a matter of considerable importance.

Admittedly, gold reserves are supplemented by foreign exchange reserves. Their proportion to the combined total of gold and foreign exchange reserves has increased considerably since before the war. In normal conditions international trade balances can be settled with the aid of hard currencies. But the situation is not without an element of potential instability. During the early 'thirties the extensive operation of the gold exchange standard became a source of weakness when a wave of distrust developed in one hard currency after another. Even though the repetition of that particular piece of history seems unlikely, a further considerable increase in the proportion of foreign exchange reserves would be a distinctly unsound development. Yet so long as the increase in the monetary stocks of gold does not keep pace with the increase of requirements arising from international trade and finance, the tendency of increasing proportion of foreign exchange reserves is likely to continue.

This, and not the increasing volume of currency and credit is the main argument in support of the case for a higher dollar price of gold. But it would be unduly optimistic to expect that American opinion would allow itself to be convinced by a revived campaign in favour of raising the official gold price. For one thing, the United States is not affected directly by the failure of the world's gold stock to keep pace with the rise in international requirements resulting from the rise in the price level. The Ame-

World of Jute

Sackings Stocks Decline

IN the jute goods market on Thursday, B. Twills Ready firmed up to Rs 111-4 from the previous closing of Rs 109-4. The improvement in sentiment in the sacking section has been brought about by the news that sackings stocks at the end of February were sizably lower compared with those at the end of the previous month.

The total stocks of jute goods at the end of February at 97,600 were lower by 5600 tons compared with those at the end of previous month. Sacking stocks at 61,800 tons were lower by 5,900 tons while hessian stocks at 25,200 tons were higher by 1,400 tons.

*

The jute good market staged a recovery during the past week with prices all along the line recording gains from 8 annas to 3 rupees. The improvement was particularly prominent in the sacking section, where B Twills ready which opened the week at Fs 106-6 was quoting at Rs 109-4 at the end of week after having been done upto Rs 709-8. Hessian was also steadier in sympathy with Hessian 40"×10 oz rallying from Rs 39-10 to Rs 40-2.

On the opening day of the week under review, the market ruled quiet due to heavy bear pressure. In the Due Date tussle between the bulls and bears, the latter emerged successful as bulls were unable to accept delivery orders. Consequently rates were hammered down to new lows. Hessian 40"×10 oz declined sharply from Rs 40-6 to Rs 39-10 while B Twills ready fell back to Rs 106-6 from Rs 107-10.

Thanks to reports of business concluded with Australia in wool packs and corn sacks sentiment rallied the next day. The fact that a prominent shipper came out as buyer of a good quantity of B Twills and Hessian for near shipment also aided the recovery movement. In subsequent days fresh incentives were provided in the shape of news that West Africa and bought heavy goods for shipment and that one ship with a cargo of gunny had obtained permission to pass through Suez. With mills, however, coming out as sellers prices could record only a small improvement. Hessian 40"×10 oz moved upto Rs 39-13 while B Twills was done upto Rs 107-12.

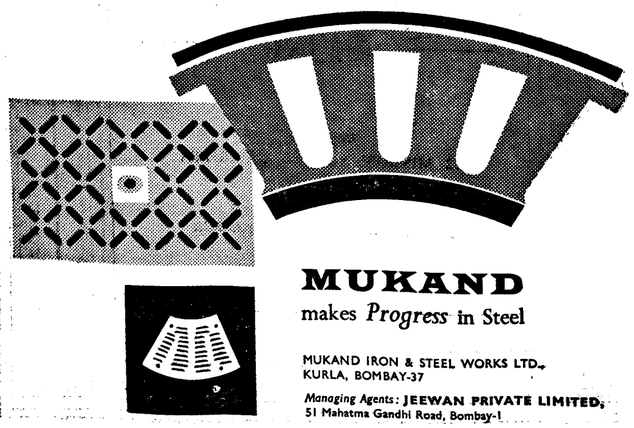
Though on Tuesday also mills sold at the higher levels the market continued to forge ahead due to keen bullish activity in the Fatka. Shippers also evinced keen interest in ready positions. Reports of Government tender for about 15,000 bales of B. Twills resulted in a sharp uptrend in prices in the Sacking section. Hessian also steadied up in sympathy. At the close of transactions Hessian 40"×10 oz Ready was placed at Rs 40-4 while B Twills gained Rs 1-12 to be finally quoted at Rs 109-8.

Wide fluctuations charecterised trading in Wednesday due to alternate bouts of buying and selling. Though buyers outnumbered sellers, profit-taking at the higher levels pared off part of the gain and the days' closing prices were lower on balance, with Hessian 40"×10 oz marked down by two annas at Rs 40-2 and B Twills quarter point down at Rs 109-4 from previous closing.

The following table shows the week's opening and closing prices:—

	Week's Opening	Week's Closing
Hessians:	Rs. a.	Rs. a.
40"×10 oz.:		
Ready ...	39 10	40 2
July-Sept. ..	39 2	40 10
40"×8 oz. ...	32 8	33 12
40"×7½ oz. ...	30 12	31 0
Sacking:		
B. Twills—		
Ready ...	106 6	109 4
July-Sept. ..	106 10	110 14
Hy. Cees Green ..	109 6	112 8
Cornsacks ...	109 8	113 0
Cubans ...	132 0	134 0
A Twills ..	130 8	134 0
L Twills ...	126 8	127 0
D. W. Flour ...	132 8	133 0
Sugar Bags ...	121 0	123 0

The raw jute market ruled rather dull during the first half of the week; but in the latter half it displayed a steadier tendency as mills began to evience keen interest in the proceedings. Assam Bottoms which was idling around Rs. 27-8 at the beginning of the week, was wanted upto Rs 28-8 per maund by Wednesday.



more homes every day...

Today India needs more homes—better homes—for her millions, calling for *more* cement and *more* steel. For the maintenance and expansion of cement production, components such as lining plates and grate plates are essential. Until recently these tough castings made of manganese steel were imported, but now they are made in India—by Mukand.

We are equipped to manufacture, in increasing quantities, reinforced mild steel bars and rods, too, so vitally needed for the construction of buildings.

With our expansion programme taking shape, we at Mukand, will help meet the nation's growing needs in Steel and Steel Castings.

World of Tea

Strong and Active Demand for Export

THANKS to the retention of the existing rate of export duty, offerings in the export sale continue to meet with a strong and active demand. The main contributory factor is the Egyptian offtake, which is expected to continue at a high level in view of payment difficulties with Ceylon. The efforts of Egypt to pay Ceylon in Japanese yen by increasing cotton exports to that country seemed to have met with little success.

Egypt has also a sizable trade deficit with India; but negotiations are afoot to solve the problem by the grant of a loan of Rs 10 crores to that country. In the alternative, a barter trade agreement between the two countries is contemplated. Egypt is willing to export cement to this country. As soon as a satisfactory settlement has been reached, Egypt is expected to enter the market for 12 million pounds of much-needed tea to relieve the acute shortage of this commodity in that country.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 63,000 packages for which there was a strong and active demand. "Tea for price" was again the strongest feature of the sale and advanced by as much as As 2 per pound. Clean Commons and Low Mediums were generally one anna per pound dearer, while Medium BPs shared in the general advance and were selling at half to one anna above valuations. Stylish, well-made and Whole Leaf grades were keenly competed for and sold well; but the more ordinary descriptions were about steady at last week's rates.

Fannings grades were generally not as strong as Brokens and were at times slightly easier. CTC teas were generally of a poor quality, but received good demand and were often dearer. Following rates were quoted:—Clean Black Pekoe Rs 2-2-0 to Rs 2-3-0; Plain BP Rs 1-15-0; Medium Assam BP Rs 2-0-0 and Best CTC Assam BP Rs 2-4-0 (nominal).

In the Internal Sale, offerings consisted of 18,993 packages of Dusts. At the start of the sale, there was a good general demand and prices were about firm on last rates. As the sale progressed, however, the demand weakened. At the close, the market was about one anna per pound easier.

Once again, the few lines of bright liquoring CTC Assams were a very strong feature, while the remaining offerings in this category were easier. Orthodox descriptions from Assam showed a further improvement in quality and opened at about last rates. Toward the close, prices were half to one anna per pound lower.

Commons and Dooars were barely steady early in the sale and closed a full one anna lower. Powdery kinds were once again more popular than the leafy types. A few lines of flavoury Darjeelings were sold very well. Following rates were quoted:—Medium Dooars Dust Rs 1-11; Medium Assam Grainy Dust Rs 1-12 to Rs 1-12-6; Medium Assam CTC Dust Rs 2-1 to Rs 2-3 and Best CTC Assam Dust Rs 2-12.

Also, 4,080 packages of other grades were offered for internal consumption. An easier tone prevailed and most kinds were sold upto As 2 per pound below last rates.

In the Export Quota section, the rate, after developing a hardening tendency to 60 pies, eased off at one time to 55 pies, to finish the week better at Rs 57 pies per pound. Business was reported done between these levels.

A total of nearly 350,000 pounds were on offer in the Cochin market. A good general demand prevailed throughout the sale. Best liquoring high-growns came to a very irregular market, but generally tended one to two annas per pound easier. Good mediums met with less enquiry and declined up to one anna. Mediums from Travancore were half to one anna easier, there being good demand at the drop. Teas from the Wynaad were well supported and sometimes dearer. Milled and Residual descriptions were the strongest feature of the sale and advanced by one to two annas per pound. Black Leaf teas were fully firm on last rates.

In the Colombo market, demand was generally good with Britain, South Africa and America active, while fair equiries were seen from other centres. Limited selection of best Dimbula-Dickoya tyes were dearer, particularly BOP Fannings.

In the Sale No. 18, held at Chittagong, Leaf offerings consisted of 13,118 packages and Dust offerings 4,740 packages. The market opened steady to occasionally dearer. With strong demand developing, prices showed an all-round advance. There was always very keen enquiry for the Best Liquoring Brokens and many of these were sold at or about Rs 3 per pound. Plain Liquoring types were occasionally easier; but "price teas" were always dearer under bazar pressures.

There was a very strong demand for Dusts, CTC types being keenly sought after. The market was better by As 3 to As 4 per pound. Plain Sylhet Dust was quoted at Rs 2-7 to Rs 2-8 per pound.

In London auction, the stiffer tone discernible last week has not been maintained. Plain Broken Pekoes were quoted at 49d as compared to 49½ per pound previously. It is understood that buyers are unwilling to support the market at the previous rates in recognition of the fact that supplies are steadily mounting. Moreover, the quantity of tea afloat from the main producing countries totalled about 70.10 million pounds against about 62.30 million pounds a week earlier.

At the auction held this week, about 25,388 packages, including 23,383 packages of Northern India teas, were offered this week. The market opened with a quiet tone and prices were decidedly lower, which worsened as the sale progressed. All grades were generally 4d to 6d per pound lower than last week. Withdrawals were fairly heavy. Clean Common Broken Pekoe is quoted at 3sh 9d per pound.

Tea stocks in London, as on the 22nd February 1957, were 98.03 million pounds as against 83.48 million pounds in the previous week and 98.99 million pounds a year ago. Landed between 16th and 22nd February 1957 were 24.19 million pounds while deliveries during the same period were 9.64 million pounds.

Total afloat, on February 22, was 70.12 million pounds—44.97 million pounds from Calcutta; 5.20 million pounds from Chittagong; 3.45 million pounds from Cochin; 13.08 million pounds from Colombo and 3.41 million pounds from other Ports.

Average price realised at the auction, during the week ended February 22, was 54.33d per pound as compared with 55.25d in the previous week and 48.74d a year ago.

World Overseas

US Notes

Examination of final figures for '56 shows that other countries gained another $1,000 million in gold and dollar reserves as a result of their transactions with the United States. This was the fifth straight year in which foreign reserve increased. They now stand, in the aggregate, at a post-war high of $28,300 million. Actually, other countries ran up a deficit of some $4,700 million in their merchandise trade with the United States last year. But this gap was more than overcome by substantial increase in such other balance-of-payments factors as US Government aid outlays, private American investment abroad, and American tourist activity.

US expenditures abroad for all purposes last year came to a record $25,400 million, a gain of $3,000 million over 1955. Foreign expenditures reached a peak of $24,400 million, a gain of $3,700 million. The largest balance-of-payments element, of course,is the international exchange of goods. In this category, both US exports and imports reached record levels last year surpassing by wide margins the previous records set in 1955.

In line with the improving economic position of other free nations and their larger holdings of gold and dollars, commercial exports from the United States, exclusive of government aid shipments, rose by fully 20 per cent over the 1955 total to $17.300 million.

The United States also bought considerably more goods from other lands to meet the increasing demands of its own producers and consumers. US merchandise imports, at $12,600 million were 10 per cent greater than in 1355. Much of the US export gain last year stemmed from larger sales of manufactured goods, which comprise about two-thirds of all US Commercial shipments abroad. The most notable advances were registered in producers equipment, as many other countries bought capital goods needed to speed their economic development. Shipments of constructing, excavating and mining equipment burgeoned to nearly one and a half times the previous years total, while those of other industrial machinery rose nearly one-fourth.

Export of US consumer goods showed somewhat mixed trends. Foreign sales of US trucks were up, but those of passengers cars lagged. Small gains appeared in shipments of household appliances. Export of producers materials, both crude and manufactured, showed significant gains, industrial activity mounted in most areas of the world. Shipments of US Coal, scrap iron and steel rose 50 per cent. Import gains also were registered in shipments of many chemical products.

Export of raw materials also increased with agricultural shipments up some 30 per cent above 1955. On the import side, US purchases of finished producers and consumers manufacturers scored the strongest advances, continuing a post-war trend. These purchases increased about one-fourth reflecting gains particularly in aircraft, passengers cars, machinery and textile manufactures. Imports of materials for industrial use-about two-fifths of all US foreign purchases—rose some 5 per cent, about matching the gain in US manufacturing output. Within this category noteworthy gains were registered in the importation

Industrial Information

TAX ON INTER-STATE SALES

The Central Sales Tax Act, 1956, with the exception of Section 15 thereof, was brought into force with effect from January 5, 1957. According to a notification separately issued, Section 15 comes into force from May 1, 1957 and tax payable under the Act shall be levied also on and from this date.

The Act mainly provides for the levy of tax on sales which take place in the course of inter-State trade or commerce, hereinafter called inter-State sales, and requires the dealers who are liable to pay such tax to register themselves with the authorities named by the Central Government in an order separately published. The dealers who are not so liable but are liable to pay tax under any sales tax law of the State in which they carry on the business of selling goods, may also, if they so like, obtain registration.

Subject to the conditions imposed under the Act, inter-State sales to dealers who are registered are liable to be taxed generally at the preferential rate of one per cent of the sale price of the goods whereas an inter-State sale to other dealers is liable to be taxed in the same manner and to the same extent as it would be under the sales tax law of the State from which it is effected if the sale had, in fact, been made inside such State.

Detailed information on the important provisions of the Act relating to registration, rates of tax, etc., will be published in a brief note available at the offices of the sales tax authorities of all States.

Further, the Act formulates the principles for determining whether a sale or purchase of goods takes place outside a State, or in the course of inter-State trade or commerce, or in the course of import of the goods into and export of the goods out of India; it also declares certain goods to be of special importance in inter-State trade or commerce and lays down that no State is authorised to levy tax on the inter-State sale or purchase of such goods at a rate exceeding 2 per cent and at more than one point in the series of successive sales. The goods so declared are: coal, including coke in all its forms, cotton, hides and skins, iron and steel, jute and oilseeds.

ALL-INDIA THIRD ESTATES OF SESAMUM (TIL OR GINGELLY) 1956-57

The all-India third estimate of sesamum, 1956-57 puts the current year's area and production at 4,996,000 acres and 417,000 tons as against the adjusted third estimate of 5,423,000 acres and 434,000 tons respectively for 1955-56, according to the Directorate of Economics and Statistics, Ministry of Agriculture. This shows a decline of 427,000 acres or 7.9 per cent in area and 17,000 tons or 3.9 per cent in production during the current year as compared to last year.

The decline in acreage during the current year has been shared mainly by Madhya Pradesh, Bombay, Rajasthan, Andhra Pradesh and Uttar Pradesh and has been attributed to unfavourable climatic conditions at the time of sowing.

The decrease in production has been shared mainly by Madhya Pradesh, Bombay and Rajasthan and has been attributed partly to decline in acreage and partly to unfavourable weather during the growing period. The decrease in production has, however, been offset to some extent by increases reported by U.P., Madras, Andhra Pradesh and Tripura.

The information given in this estimate relates generally to the period up to the end of December, 1956.

This estimate does not cover the entire area sown to this crop during 1956-57. Past experience has shown that the area at the third estimate stage forms roughly 95 per cent of the crop finally reported.

Information given in this estimate relates to the set-up of States after their re-organisation on November 1, 1956.

INDEX NUMBER OF WHOLESALE PRICES IN INDIA REVIEW FOR THE WEEK ENDED FEBRUARY 16, 1957

The official wholesale price index (with the year ended August 1939 as 100) declined by 0.4 per cent to 424.4 during the week ended February 16, 1957 as compared with 426.2 for the earlier week. At this level the index showed almost no change when compared with the corresponding week of the last month but was higher by 12.1 per cent when compared with that of the last year.

During the week under review, the index for 'Food Articles' advanced by 0.6 per cent to 407.7 as a result of an increase in the prices of Wheat at Hapur (+3%), and Rice and Tea for internal consumption (+2% each) notwithstanding a decline in the prices of Tea for Export (—3%), Wheat at Amritsar, Bajra; Dal Arhar, Coffee —Plantation P.B. and Gur (—1%).

Prices of Lac (—10%), Rapeseed (—7%), Linseed (—4%), raw Jute (—3%) and Gingellyseed at Jhansi and Groundnuts (—1% each) exhibited a fall while those of Gingellyseed in Bombay (+2%) and Castorseed in Bombay and Copra (+1% each) witnessed an advance and in consequence, the index for 'Industrial Raw Materials' went down by 1.2 per cent to 517.5 as compared with 528.7 for the earlier week.

The index for 'Semi-Manufactures' also fell by 1.2 per cent to 407.6 owing to lower prices of Gingelly cake (—13%), Cow hides (—8%), Mustard oil in Calcutta (—7%) and at Kanpur (—2%), Linseed oil (—5%), Goat skins (—4%), Buff hides, sheep skins and Copra cake (—3% each) and Ground nut oil, Zinc and Cotton Yarn (—1% each); prices of Groundnut cake (+3%), Coconut oil (+2%), Castor oil in Calcutta and Mustard oil at Patna (+1% each) were, however, marked up.

Lower prices of Jute Manufactures (—3%) and chemicals (—1%) brought down the index for 'Manufactures' by 0.3 per cent to 385.6 although prices of Glass and Dyestuffs moved up by 1 per cent each.

A decline of 2.7 per cent to 576.5 as compared with 592.8 (revised) for the previous week in the index for the 'Miscellaneous' group was caused by a decrease in the prices of Chillies (—6%), Tobacco leaf (—5%), Turmeric (—4%) and Pepper, Black (—8%). The price of Cashewnuts (+2%), however, showed an increase.

INDEX NUMBER OF WHOLESALE PRICES by GROUP AND SUB-GROUP OF COMMODITIES (BASE: YEAR ENDED AUGUST 1939=100).

INCREASE IN SUGAR PRODUCTION

The production and despatches of sugar from indigenous factories amounted to 10.03 and 5.50 lakh tons upto February 15, 1957 in the current season as against 8.96 and 4.48 lakh tons respectively in the corresponding period of the last year.

EXPORT OF WOOD AND TIMBER TO PAKISTAN

The office of the Joint Chief Controller of Imports and Exports, Government of India, Calcutta, announces:

The following quantities of wood and timber will be allowed export to Pakistan during the year ending January 31, 1958:

Hard wood—Sal and Teak—2,000 cubic tons; Gurjan 1,000 cubic tons; Soft wood—Kail—2,000 cubic tons to West Pakistan by the river Chenab only.

CALTEX REFINERY POWER PLANT GOES TO WORK

The Power Plant of the Caltex Oil Refinery at Visakhapatnam is now ready after a series of successful tests in the month of February. The Plant is responsible for adequate steam and compressed air supplies for the major units of the Refinery.

The Plant, whose operation is a necessary prelude to the overall functioning of the Refinery, has other uses. It treats fresh water for drinking purposes, and houses power pumps such as the emergency fire pump. The Power Plant also possesses a generator which can serve as a stand by in an emergency.

While the Caltex Oil Refinery at Visakhapatnam will use its Power Plant for specialised purposes, it will derive its chief supplies of electric and water power from the Government Machkund Hydro-electric Scheme and the Gosthani River Project.

The Caltex Oil Refinery will be ready by the middle of this year, for full operation.

NO CHANGE IN TEA EXPORT DUTY

The Government of India have issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs 3-6-1 per pound as against Rs 3-15-0 per pound in force from February 1, 1957. There is no change in the existing rate of export duty of annas six per pound.

IRON & STEEL MINISTRY SHIFTS TO NEW BUILDING

The Office of the Ministry of Iron & Steel has shifted to the King Edward Road Multi-storeyed building. All letters, telegrams and communications intended for the Ministry should be delivered at the new premises with effect from March 4, 1957, in room No. 30. The Minister for Iron and Steel will continue to sit in the North Block. Members of Public or others desiring further information may kindly ring up Receptionist, Ministry of Iron & Steel, on Tel. No. 34766.

WORLD OVERSEAS

(Continued from previous page)

of crude and fuel oil, iron ore and steel mill products, nonferroul metals and ferro-alloys, and paper paper mill products.

Imports of foreign foodstuffs rose slightly last year, led by coffee, cocoa and sugar. Every part of the world participated in the US trade increase in 1956. US exports to Western Europe and the Far East were up one-fifth, and shipments also were significantly high to Latin America and the Near and Middle East. US imports from Western Europe rose 50 per cent, while imports from other parts of the world registered somewhat smaller, but nonetheless important, gains.

NOT the least consequence of the recent ballyhoo over Kashmir in the Security Council has been the sharp deterioration of Indo-British relations. For the first time since 1947, bitter memories of ancient wrongs stirred in hearts that had schooled themselves to forget them. So successful had this exercise in magnanimity been that, when recent British hostility forced itself on us, the unpleasant shock was due as much to its intrinsic unfriendliness as to the sudden access it gave to remembrance of ancient hurts that we had forgotten all about. As a matter of fact, there was a certain bewilderment and perplexity at the startling outburst of rancour and malice from almost all sections of British opinion. But this did not last long. Soon enough, forgotten humiliations, obliterated insults and mortifications that had deliberately been put out of mind rushed back; and the immediacy of the pain was provided with historic dimensions by recognition therein of old injuries. Wounds that one had fancied healed stirred in dull ache and yesterday's cruelties came back in a vivid shock of recognition.

*

That this should have been so gives a measure of what Britain was throwing away, or was nearly throwing away, in a sudden access of pique. For, what Britain was throwing away was something that many have considered one of the most remarkable political facts of our times—the unique absence of bitterness in the parting of the ways of two peoples who had so much in their common past that could not be easily forgiven or forgotten. And yet, this result was achieved much to the astonishment of the whole world. It owed much to the quality of the two peoples, to the nature of the struggle that preceded the moment and to the leadership that guided the destiny of this country. It was not merely that everybody was on his best behaviour at the solemn moment of the passing away of a historic empire. The last ten years have shown substantial evidence that this mutual goodwill at the end of bitter struggle was no theatrical gesture on the historical stage, but a conscious political decision by two mature peoples. The most important confirmation of this desire for continuity was India's decision to stay in the Commonwealth despite much in our past that made it a psychological, if not a political, wrench. The second confirmation of this was seen in the increasing Indo-British co-operation in many a crucial international crisis, notably over Indo-China. And lastly, but more immediately, the striking improvement in personal relationships between the two peoples was remarkable in any manner of reckoning. One recalls the words of Aziz, in Forster's A Passage to India—almost the last words of the novel, "If it's fifty five hundred years, we shall get rid of you, yes, we shall drive every blasted Englishman into the sea and then, you and I shall be friends." It was a prophetic utterance and, once the great injury of political servility was removed, some basis for a satisfactory personal relationship was possible despite the many other almost insuperable divides. There are more Englishmen in India and more Indians in England today than at any previous time and there is greater mutual respect—at any rate there was, until the recent months—than at any time before. And all this is now in great jeopardy and Britain does not seem to care. At least, it didn't seem to until two weeks ago. Why?

*

It is not an easy question to answer. But one reason seems to me to be obvious. Like some folks in unself-conscious possession of a gift for happiness, both countries had presumed too much on their good fortunes. What struck most other people as unique and even odd was taken so much for granted that neither India nor Britain seemed grateful enough for it. There was a certain smugness about this ability to forget the past and bury the hatchet, and praise from abroad did nothing to diminish this priggishness about their moral and political superiority. (It is, by the way, a sin that comes easily and naturally to both these peoples). When Mr Malcolm Macdonald pointed out, in a meeting of the Rotary Club a year or so ago, that such complacency over our relationships was dangerous, I remember that many an eyebrow was raised in quizzical scorn. But, in the event, he has been proved correct. The somewhat synthetic heartiness of Commonwealth conferences, the primly cultural back-chat of British Council get-togethers, and the whisky-induced euphoria at the end of successful business deals had in their various ways clouded the fact that political relationships find their testing times in moments of crisis and that it is wise to find ourselves not surprised at such moments by having taken too much for granted. Indo-British goodwill needs as much conscious nurturing as that between any other nations and, in some respects, needs far more careful handling in view of our common past.

*

The immediate reason for this sudden outburst against India in the British press is undoubtedly our stand over the Suez crisis. This hypothesis is not vitiated by the fact that journals who criticise us now have also been the bitterest critics of the British Government for their ill-fated venture in Egypt. On the other hand, it is they who would unconsciously find vicarious outlets for their unvented moral spleen. Moral masochism, like physical self-flaggellation, is a frustrating experience; and, since masochism is merely sadism on the rebound, a suitable object for unrequited moral spleen is something of a godsend. Coming as it did close on the heels of the Suez crisis,—Pakistan saw to it that it did—the Kashmir issue provided the most acceptable sacrificial scapegoat. And no wonder they went for India with gusto, especially since they fancied that India was insufferably superior in its moral stances.

*

It is not, mind you, that I resent criticism of India, especially on the Kashmir issue. Even when appallingly misinformed, as the British public is over Kashmir, I concede them the right to say what they like. What has really alarmed me is the inescapable and pervasive air of a desire to hurt and humiliate. My grievance that the English press did not understand Mr Nehru's objections to a plebiscite now is nothing compared to my grievance that they should be twisted and presented as bad faith. Such a large-hearted and perceptive commentator as Low, to whom many of us owe our first lessons in political science, thought it proper to put his name under a cartoon that first imputes to Mr Nehru an overweening moral arrogance that he never claims for himself, and then grossly insults him by implying that he once had a right to it but has ceased to deserve it and, therefore, will be denied it. It is not that they have misunderstood our point that has distressed me but that they have done so perversely and in the process have lost much of their celebrated good humour and fair play for which they, the Liberal press in England, have always been famous.

*

I hope no Englishman will think that I am being insufferably priggish when I ask my countrymen to judge the English kindly in view of the fact that they have been through much in recent months. As Mr Aneurin Bevan put it some time ago, never since the days of Lord North has Great Britain found itself in such an equivocal political and moral predicament as in the days following the Anglo-French venture in Egypt. And, however just criticism of such action may be, one needs an unhuman amount of charity not to resent it when it comes from an outsider. Secondly, such Indian criticism stands in conspicuous contrast to the equivocal and temporising non-committal attitude of Pakistan. Add to this, the ostentatious aloofness of India from involvement in the Middle East and the contrasting ardour of Pakistan for precisely such involvement. Then, you cannot fail to think of Pakistan as your friend, though you may disapprove of the whole notion of getting mixed up in the Middle East. In the moral confusion that follows your being caught in an act of aggression, no exercise either in remorseful introspection or in rational ordering of political facts is possible. The desire to stand by your "friend" and, what is more, the desire to

hurt your friend's enemy is irrational but hard to be resisted.

✱

Many in India feel that behind all this sudden eruption of hostility is the deep-seated resentment against the compulsion of events that led to the liquidation of the British Empire. This, I believe, is not true. I think that, except for the conscious and conscientious imperialists like Kipling and Rhodes; the unimaginative businessmen who preferred exploitation to enterprise; and the quite literally stupid administrators like Linlithgow, the British Empire was a marginal fact in British consciousness. Its passing away did not, therefore, wring many British hearts. But there is another aspect to the question which makes plausible this hypothesis of such an ulterior source of resentment. It is the rather curious fact that Englishmen as a rule have found themselves in greater instinctive sympathy with the Muslims than with the Hindus. I am chary of generalising on the subject; and, in any case, an absolute preference for the Muslims by Englishmen would, in my view, be wholly untenable. If such were the case, there would be no trouble over Egypt at the moment and the rather interesting fact of much Left-wing emotional involvement in the Jewish cause would be difficult to explain. Nor can any theory of the hebraic ethos in the English character accounting for such a preference be considered wholly satisfactory. For, no less a humanist and platonist than Lowes Dickinson confessed himself out of sympathy with the Hindu mind and art. In a celebrated passage in his letters from John Chinaman, he propounded what I can only call the perverse hypothesis that the real contrast was not between the East and the West, but between India and the rest of the world. Such a view is particularly surprising, coming as it does from an admirer of Plato some of whose ideas have basic affinities with early Hindu thought.

State Bank

IT would not be wrong to say that the State Bank started off with initial disadvantages. The first of these was the public opinion conjured up by those who had a stake in the matter that nationalisation of the Imperial Bank was neither necessary nor desirable. Secondly, it was asserted that the nationalised Imperial Bank would forfeit the high eminence in Indian banking to which it had attained. Thirdly, doubts were cast as to the ability of Government to run an enterprise that was intended to serve commercial interests. Fourthly, it was also suggested that the very working of the State Bank of India would be crippled by Government interference in its day-to-day activities.

All these apprehensions have now been falsified; not one of them has materialised. But, again at the beginning, as Mr H.V.R. Iengar has pointed out at the second annual general meeting of the State Bank of India, the State Bank did lose some business. In response to or as a result of the assertion by some sections that the role of the State Bank "would be somehow distorted by the intervention of Government", the State Bank found that its "volume of deposits decreased, possibly by transfer to other scheduled banks'.'

It has devolved upon both Dr John Matthai and Mr H.V.R. Iengar to restore confidence on the part of the public in the State Bank of India. Mr Iengar has categorically stated that assurances given by Government and embodied in the State Bank of India Act are "being scrupulously observed". There has been no interference by Government; State enterprises had applied to the bank for advances; while all these have been accepted in full, they have been on the basis of normal commercial terms. At the same time, the State Bank continues to serve enterprises in the private sector as indicated by the fact that the bank's advances in this behalf have risen from Rs 72 crores in December 1955 to Rs 100 crores a year later.

It needs hardly to be said that the State Bank has been exceedingly fortunate in the choice of the first two Chairmen to guide its destinies. With the restoration of confidence, the State Bank more than made up its erstwhile loss of deposits. During 1956, the deposits of scheduled banks rose by 7.8 per cent; in the case of State Bank, the rise has worked out to to 8.8 per cent. What renders this fact even more remarkable is that, for the first 11 months of the year, while the interest rates paid on deposits by scheduled banks were put up, the State Bank had maintained its old rates.

In his short and pithy speech, Mr Iengar has next given a reassurance as to the role of the State Bank in the perspective of Indian banking. In dealing with the criticism that, as a State Bank operating in the commercial field, "it has certain inherent advantages over the other scheduled banks and that it is using its privileged position to attract business to itself", Mr Iengar points out that it could have been an easy matter for the State Bank so to have increased its rates as to entice deposits away from other scheduled banks. But Mr Iengar says, "as a matter of deliberate policy, the State Bank has declined to pursue such a step".

Mr Iengar looks upon the State Bank's role as that of a steadying influence "by pursuing a policy of moderation in our rates both for deposits and advances.....more particularly during a period of great stringency when runaway conditions are so easy".

Mr Iengar referred to two new activities of the State Bank which are exploratory and experimental in nature. Firstly, the State Bank is intended to draw up and implement a programme of assistance to the small-scale industries. The present difficulty, however, is that for a Bank "with our traditions it has been a big step to break away from the concept of security of property as the main criterion for making an advance and to be prepared to give credit on the basis of mere capacity to produce and sell".

Secondly, in respect of the interconnection between the State Bank and Co-operative Institutions, Mr Iengar has stated that the bank would "always be ready to play a helpful and constructive part in the development of such institutions". Here, again, "the exact form and pace of such assistance as well as the structure of the relations between co-operative banking and the State Bank are a matter requiring further thought and perhaps experimentation as we go along."

We may now turn to the report of the Central Board of Directors of the State Bank of India for 1956. The bank's advances rose from Rs 102.9 crores in January 1956 to Rs 136.3 crores late in May of the same year. In the result, the advances-deposits ratio rose from 50.5 per cent to 65.3 per cent, whereas, in the case of the other scheduled banks, the increase in the ratio was from 67.5 per cent to 73.5 per cent. It has been pointed out that, just as the advances of the State Bank rose at a faster tempo than the accommodation given by other scheduled banks, the decline in the portfolio also followed the same pattern of a quicker tempo for the State Bank and a slower one for the other scheduled banks.

The deposits of the State Bank went up from Rs 203.6 crores to Rs 221.5 crores. But, in order to meet the increasing demand for advances, since the rise in deposits was not sufficient, the State Bank had to draw upon investments by a reduction in the portfolio from Rs 104.8 crores to Rs 92.6 crores. Moreover, borrowings from the Reserve Bank were placed at Rs 8 crores at the end of December after having touched Rs 20.5 crores at the peak of the busy season. Thirdly, cash balances were also drawn upon for accommodating the demand for advances.

With regard to the State Bank's branch expansion programme, which requires that 400 new branches should be established within five years, it has been noted that serious difficulties are being faced. In the 18 months of existence of the State Bank, 66 branches have been opened. The shortfall is, therefore, substantial. But it would appear that suitable accommodation is not easily available; and, as for the programme of building construction and repair, the shortages of steel and cement have had an adverse effect. There is, however, the asseveration that "every effort will be made to increase the momentum so as to enable the bank to discharge its statutory obligation within the prescribed time."

Thus, it can be seen that the State Bank has proved beyond question, in these last eighteen months, that a Government-owned commercial bank is a practicable proposition. But the real test for the State Bank will be when it seeks to fulfil targets in respect of new branches, and when it also undertakes the new responsibilities consistent with the State Bank's role of extending aid to small-scale industry and to co-operative institutions. For these reasons, the career of the State Bank should be both interesting and exciting in the next few years.

✱

WORLD OF FINANCE

(Continued from page 432)

The return of Scheduled Banks for February 22 reveals a sharp increase of Rs 14.57 crores in deposits to Rs 1161.61 crores. Moreover, there has been disinvestment in Government securities by scheduled banks during the week for an amount of Rs 4.62 crores. For the first time since the week-ended 16th November 1956, the total of Advances has shown a decline. During the week under review, the total of Advances fell from Rs 860.82 crores to Rs 857.46 crores.

+

Deficit financing in the first ten months of the 1956-57 financial year has, as indicated in a table published in the Reserve Bank of India Bulletin, totalled Rs 111.99 crores.

NATIONAL BANK OF INDIA LTD. AND GRINDLAYS BANK LTD.

The Boards of Directors of the National Bank of India Ltd. and of Grindlays Bank Ltd. have decided it is in the interests of both Banks that the two institutions should be amalgamated. They have accordingly taken preliminary steps to give effect to this unanimous decision. Both concerns have a long history in overseas banking, the National Bank of India Ltd. having been founded in 1863 and Grindlays Bank Ltd. in 1828. The entire share capital of Grindlays Bank Ltd. has been owned by the National Bank of India Ltd. since 1948.

The necessary legal procedure may take some time to complete but unless unforeseen difficulties arise it is hoped to make the merger effective as from 1st January 1958. Thereafter the amalgamated Bank will operate under a new name which will be announced in due course.

THE UNITED COMMERCIAL BANK LIMITED

NOTICE

Closing of Share Register & Transfer Books

Notice is hereby given that Register of Members and Transfer Books of The United Commercial Bank Limited will be closed from Monday, the 25th day of March to Thursday, the 18th day of April 1957, both days inclusive.

By Order of the Board

S. T. SADASIVAN
General Manager.

Calcutta,
March 7, 1957.

Gateway Notes

Progress of Indian Machine Tool Industry

Like many other indigenous industries, the Indian machine tool industry also reached recognisable proportions only during World War II. With the active assistance of Government, the industry made rapid strides and in 1945 production expanded to 3639 graded machine tools valued at Rs 1,11,66,000. Its prosperity, however, proved a short-lived one, for, after 1948, due to various reasons, such as liberalisation of imports, general slackening of business in the country, the release of a large number of machine tools from War Reparations' stocks, etc., demand for indigenous machine tools declined sharply. Activity in the industry was at a low ebb by 1950 when only 1,130 machine tools valued at Rs 28,59,000 were produced. Beginning from 1951 when production recorded a sizable increase, the industry has been having a comparatively smooth sailing. During 1955 the value of graded machine tools produced by the private sector showed an increase of 44 per cent over that of the previous year. It is estimated that the industry's production in 1956 has reached a record level in post-war years of over Rs 70 lakhs.

A significant fact in the recent history of the industry is that though indigenous production has been steadily increasing during the past three years, the percentage production of graded machine tools to imported machine tools has not recorded a comparable increase. This means that imports of machine tools have been increasing at a faster pace than the increase in indigenous production. It is estimated that during the last year machine tools to the value of Rs 8 crores have been purchased. With the value of indigenous production of machine tools in both sectors placed at only Rs 1 crore, it is evident that machine tools worth Rs 7 crores have come from imports. The revealing fact here is that during the past year industrial activity has touched a high pitch. With the Second Five Year Plan which lays the emphasis on the development of basic industries getting into its stride, the demand for machine tools is bound to show further sizable increase in coming years.

Latest estimates of future consumption place the demand for machine tools of various types worth about Rs 17 crores per annum by 1960-61. The Second Plan, however, has planned for a production of Rs 10 crores machine tools in value. Of this public sector is allotted Rs 5 crores worth of machine tools leaving machine tools worth Rs 5 crores to be produced by the private sector.

While it cannot be denied that Government are taking active steps to encourage production of machine tools to the maximum extent possible within the country itself, it would appear that much closer attention than is at present given to the problems of the indigenous industry will go a long way in reducing considerably the dependance on imports much sooner than is considered possible now.

The directions in which Government can extend their cooperation with profit to themselves and the indigenous industry have been recently outlined by Mr S. L. Kirloskar, President of the Indian Machine Tool Manufacturers' Association. In the first instance, Government must direct the users of machine tools to find out how they can utilise the machine tools that are already being manufactured in the country. Secondly, if users need a machine tool different from the specifications of any existing manufacturers' specifications, the purchasing organisation should find out the possibilities of utilising the Indian made machines. Thirdly, Government must make available periodically to the Association the actual purchases made by Government departments of the various machine tools by classified and coded numbers. An important step toward checking the accelerated rate of imports of machine tools will be the setting up of an Import Advisory Council for machine tools to review Government's import policy from time to time and recommend measures for restricting imports of machine tools comparable to the types manufactured in the country.

*

Vanaspati Industry

The present position of the Vanaspati industry seems to be such that, while it has been asked to work toward an increase in production from 260,000 tons in '55-56 to 400,000 tons by the end of the Second Five Year Plan, it is left without any guarantee of adequate supplies of the essential raw materials, especially ground-nut oil. Attention to this drawback in the programme of development for the industry was drawn by Mr A. J. C. Hoskyns-Abrahall, at the annual general meeting of the Vanaspati Manufacturers' Association held in Bombay. He pointed out that even though the Planning Commission had provided in the Second Plan for an increase in the output of all oilseeds to 7.6 million tons by 1960-61, the target fell far below even the minimum requirements of the oil industry.

Though this view may not find ready favour with Authority, there are indications to believe that Government is no less anxious than the Vanaspati and the oil industries to increase yield. For some time now the emphasis is on intensive cultivation and Government have not

GATEWAY MARKETS

Mixed Trend in Oils and Oilseeds Prices

THE markets for Oils and Oilseeds gave a mixed performance in irregular dealings during the past week. Castorseed lost some ground on balance due to continued reports of arrivals at the terminal markets, while Groundnuts recorded modest gains under demand from millers. Linseed ruled steady, whereas Cottonseed turned quiet.

The Groundnut section reasserted its intrinsic strength once again during the week with prices registering a gradual improvement. This was attributed to several factors. Mainly amongst these were, the dwindling arrivals in the terminal markets, rumours that groundnut (H.P.) export quota would be granted shortly and buying by crushers as well as exporters in the ready section. Turnover was about 15,000 candies. Groundnut May delivery, after starting at Rs 167-10, firmed up to Rs 170 at the close. In the ready section, Bold variety was quoted around Rs 35-12, and Groundnut Oil at Rs 18-12 for R/R.

The Groundnut crop is now estimated lower at 21 lakh tons. According to well-informed market circles, more than half of the crop has already reached the markets and the major portion has been consumed by crushers and vanaspati interests. Arrivals in the terminal markets have now been showing a declining tendency. This condition has prompted traders, especially in Hyderabad, to hold on their stocks.

Although prices in the Castorseed section attempted to make further advance, profit-taking at higher levels erased some of the gains at the close. The initial firmness was attributed to the encouraging turn in the spot situation as revealed by smaller arrivals of ready castorseed at lower prices. Advices from the growing areas in Hyderabad also indicated that the producers were reluctant to offer supplies without an improvement in prices. However, the absence of a substantial overseas demand for castor oil, induced a quieter feeling at the close. Castor May delivery opened at Rs 161-12 and after touching a high of Rs 162-8, receded at the close to Rs 161-8. In the the ready section, Madras quality was available at Rs 33-12. Castor Oil, commercial quality, was quoted around Rs 18-12.

In the Linseed section, May delivery started at Rs 28-15 and finished at Rs 29-4. Cottonseed May began at Rs 100-8 and finished at Rs 100-4. Linseed ready was quoted at Rs 29-4 and Linseed Oil at Rs 15-12.

*

Gold & Silver

Divergent trends were seen on the Bullion Exchange. While Silver dropped further on consistent selling, Gold was better on broadening offtake.

Silver made a cheerful start, but the upward movement was halted for some time owing to increased arrivals. Moreover, reports of heavy payment of duty on import of silver coins from Tibet and fears of further arrivals sapped the morale of the bulls, who virtually hurried to liquidate their holdings. Arrivals and Offtake were 57 and 7 bars respectively. Falgun delivery started at Rs 176-7 and, after touching a high of Rs 176-9 and a low of Rs 175-9, finished at Rs 175-13. Chaitra delivery started at Rs 176-1 and finished at Rs 175-11 after touching a high of Rs 176-3. Ready silver was quoted around Rs 177-8.

Gold, however, was well held under improved spot demand and the absence of Kolar gold offerings. Arrivals and offtake were estimated at 3,000 and 5,000 tolas respectively. Falgun delivery was quoted at Rs 105 to Rs 105-6 while Chaitra delivery was quoted at par. Ready gold moved between Rs 105 4 and Rs 105-8, to finish at Rs 105-6. Sovereign changed hands at Rs 68-12 to Rs 69

*

Metals

Conditions in the Bombay Metal market ruled generally steady. Ready Copper moved narrowly between Rs 182-8 and Rs 183-0 per cwt. Offtake was comparatively less due to lower prices ruling in Calcutta.

With stocks concentrated in the hands of a few merchants, Zinc ruled firm at Rs 75 per cwt. There is, however, a general feeling that the present firmness will not last long. Lead rules very steady at Rs 82 per cwt. No fresh arrivals of the metal are reported and there has been no change in demand. Tin remains quiet at Rs 130 per quarter on reports of persistent arrivals.

On the London Metal Exchange, Copper is quoted at £243 per ton. The trend of the market continues

Bombay Review

World of Cotton

Cotton Vs Cloth

WHILE the raw Cotton market has been ruling buoyant with a sharp rise in futures and higher prices in spot, the cotton Piecegoods market continues to remain in doldrums. It is very difficult to explain this contrast in relation, except by indicating that the crop ideas had to be revised downward with the latest cold chill affecting the quality of Vijay crop, while the recent exports have also helped to improve raw cotton position.

Trading in futures, despite heavy liquidation from bulls, continues to display a bullish trend. The reasons for this trend are: (1) Japan's decision to increase the sterling area allotment for cotton purchases which should give a fillip to our exports; (2) the scaling down of crop estimates by about 3 lakh bales to 51 lakh bales; (3) the tendering differences fixed for the maturing Jharilla contract being considered to be fair; and (4) reports of higher mill consumption in December.

On the other hand, the cotton piecegoods market has been passing through anxious days. Trading conditions remain apathetic, while domestic demand continues from hand to mouth. It is learnt that as much as 96,000 bales of cloth worth about Rs 12 crores have been accumulated in the Ahmedabad market due to the absence of any demand, while monthly production is about 65,000 bales which is being added every month. Naturally, the trade is watching the situation with anxiety as to how long the present state of affairs will last and whether there is any hope of a genuine revival of business at least during the remaining months of the buying season. On the export front, too, trading conditions cannot be said to be satisfactory.

Meanwhile, there are rumours that the Government of India may revise the excise duty levied on cloth. This rumour has affected the markets as merchants are not showing any intesest in purchasing. They are adopting a "wait and see" policy. The mounting stocks with the mills and the trade only show that there has been a disruption in the distributive channels. It is felt that any relief granted in the excise duty will go a long way in improving the market sentiment.

FUTURES MARKET:

Prices in the Futures section, after recording fresh high levels for the season, suffered a slight setback toward the close on rumours that all the tenders were passed in survey and that there would be more tenders on the second notice day. Turnover approximated 25,000 bales.

Vijay near-delivery staged a sharp rally under heavy replacement buying, prompted by technical considerations. Other deliveries responded modestly. Jharilla March delivery was done at Rs 712 to Rs 734 and closed at Rs 717, while Vijay April contract was asked at Rs 827 to Rs 843, to finish at Rs 827-8. Jharilla May delivery was negotiated at Rs 662-8 to Rs 673-8 and Vijay June at Rs 790 to Rs 810.

×

SPOT MARKET:

The Spot section continued to rule steady with mills evincing interest in staple varieties. Traders were found to be reluctant to reduce their prices for popular varieties. Premia for many growths remained unchanged in spite of a low turnover.

In the export section, some business was reported done in Bengal and Oomra Deshi. Shippers are eagerly awaiting business enquiries from Japan and some of them are inclined to augment their stocks of short-staple growths. But, it is felt that Japanese enquiries are at present held up as current prices are considered to be too high by many of them.

In the foreign cotton section, Americans continued to attract attention. In general, business in this section has come to a standstill following the Government announcement not to entertain any application for the import of sterling area cottons from February 28 onwards. The monetary ceiling fixed for those cottons for the current half-year has been reached, while no fresh quota for the import of American Aid cotton has yet been announced.

Rumours are current that the Government will succeed in reducing the prices of Egyptian cotton as the current high price is the only reason for less import of that cotton this year. Some stray transactions have taken place in spot lots of Sudans and East Africans. It is felt that Sudan's decision to raise the export duty on cotton by 2.49d per pound (about Rs 110 per candy) may tell adversely on imports from that country.

Olympus

Good Work by CTO

LAST week took place in Delhi an event that characteristically nad little publicity in the daily press. It was the payment by the Central Tractor Organisation of the Union Ministry of Food and Agriculture of the final instalment of loan it took from the World Bank toward the end of 1949. In the best of times, this would not have been newsy enough by certain standards of measurement; it is not, therefore, surprising that it should have made no impact at all, with the elections to distract every one. Still, one recalls that there was a time when the Central Tractor Organisation was "big news". That was in its early days, when its teething troubles were publicised with much gusto. Now that the CTO has settled down to obscure usefulness, its capacity for providing sensational news has been lost. Consequently, as far as a certain type of journalism is concerned, it may as well not be there.

But the event was important in more than one respect. In the first place, it is the first of the nine loans granted by the World Bank to India, and was for a period of seven years, and has now been fully repaid. In the context of the recent scrutiny by World Bank experts of, among other things, India's credit-worthiness, this is a fact of some significance. As often argued in these columns, it is not every country that has honoured its commitments in regard to international loans and done so punctually. India is perhaps the one country whose record in this respect has been unique. Therefore, the occasion deserved some kind of an appreciative salute from the public at least on this score.

Secondly, the occasion commemorated the end of the first phase of the organisation's life. Started in 1949, under conditions of extreme difficulties caused by food scarcity and the need for providing fresh scope for displaced agriculturists from Pakistan, the CTO had more than its share of problems that attend on new and unprecedented experiments. Criticism, probably deserved, of its enforced idleness, of frequent breakdown with no adequate repairng service, technical inadequacies of both personnel and experience—such criticism was very vocal in the first two years of its existence. It was also feared that, in some parts of Madhya Bharat, the ploughing done to eradicate the Kans grass was so unsatisfactory that the weed grew with even more celerity after the operations. But with the gradual accumulation of experience, the usefulness of the CTO also grew.

At the beginning of the First Plan, the Organisation was already two years old. Its performance during the First Five Year Plan has exceeded expectations both in targets and in economy of outlay. As against a target of 11.1 lakhs of acres of reclamation, the CTO reached in actuality a figure of 11.86 lakhs of acres. In terms of cost, it performed more than its allotted tasks on an outlay that was less by Rs 1.63 crores than what was estimated under the Plan. This figure, which included the capital cost of tractors and other equipment like giant ploughs and prime movers, was placed at Rs 10.02 crores.

The working economy of the Organisation has shown a steady improvement as it grew in life and experience. For instance, it has been providing for a Repairs Reserve which has been shown by experience to be on the generous side. This result has been due not so much to bad estimates as to increase in technical efficiency in the later years. The Repairs Reserve now stands at the impressive figure of Rs 1 crore, which argues a progressively diminishing draft on it. The consequence has been that this Reserve can now be treated as a Capital Reserve for purposes of expansion though, of course, it can provide for only a very minor part of such a programme.

Operational efficiency has also shown striking improvement over the years. The Central Water and Power Commission had estimated a 20 per cent loss of working hours owing to mechanical break-downs. In actuality, the CTO claims that such loss has only been of the order of 13.3 per cent. Moreover, handling has been so expert and careful that the lives of the machines have been prolonged for periods beyond the guaranteed minimum. All the machines, except those acquired in 1953, have already done 10,000 hours, but they are in condition to work for another two seasons.

The operational cost has been somewhat high in spite of its not being a profit-making organisation. This has been because of its being a some-what narrow base Organisation and due to the comparative lack of enthusiasm for the services of the CTO in large parts of the country. So far, the field of activity of the Organisation has been limited mostly to Uttar Pradesh and the area that now constitutes Madhya Pradesh. Assam and Bihar have lately come under the Organisation's purview. (An interesting departure in work in Bihar has been the use the tractors have been put to, namely, land development based on contour bunding). Southern states, it has been noted with disappointment, have been rather backward in availing the services of the CTO. The reasons are probably that there is not much virgin land to reclaim in that part of the country, and that the smallness of individual holdings has not made tractor cultivation as attractive as it would otherwise have been. However, there is a programme for 1957-58 season (November to June) for reclaiming about 4,800 acres in the Shimoga district allotted by the Mysore Government for settling displaced persons.

Another interesting assignment of the Organisation for the next season is work in the North-East Frontier Agency, where agricultural prosperity may go a long way in mitigating the violent propensities of the tribesmen.

One of the factors that have gone to increase the apparent operational cost of the Organisation has been the somewhat excessive depreciation and Repair Reserves that have been provided for in the past. The average annual cost of the establishment and field operation of the CTO has been about Rs 2 crores, including depreciation and charge to Repairs Reserve. The authorities have decided that no further depreciation need be provided for and no further charge for Repair Reserves need be made for the coming season. This will bring down the operational cost to nearly half (about Rs 25 per hour); and is sure to make use of the CTO's services more popular.

Such increased popularity of the tractor should come in timely, now that we are planning to increase agricultural output as part of our basic strategy to keep inflation under control during the Second Plan period. One of the disturbing things about the increasing irrigational facilities supplied by river valley projects has been the misgiving that they are not being utilised to the maximum extent possible. This is a misgiving that is well founded, though the actual extent of the "waste" involved in all the projects is yet to be estimated. I have no doubt that it is considerable. Some time ago, there were complaints that the new canals that have been dug to carry water from the Tungabhadra have not been utilised as much as they should have been. Such throwing away of benefits that have been conferred at great cost and privation to the tax-payer seems tragic. Moreover, no one can deny that the current enthusiasm for the return of the soil to the tiller is operating as a force for fragmentation.

It is necessary, in the interests of efficient agriculture, that there should be large-scale holdings and improved methods of cultivation by the use of modern implements and machinery. The Planning Commission have recognised this, and have advocated co-operative farming and other methods of enlarging the individual units for maximisation of social efficiency. Lands that are the first beneficiaries of new irrigation schemes and to which cultivators are unwilling to go on their own initiative for one reason or another deserve to be cultivated on a large-scale basis by agencies to be suitably devised for the purpose. The CTO's services under such schemes of expansion of area under cultivation should be invaluable.

There are many obstacles in our country to the popularisation of the tractor for ordinary agricultural purposes. But the paramount need for increasing agricultural efficiency would make the tractor a legitimate agricultural adjunct in the long run. Though the CTO is not directly concerned with popularisation of the tractor, its experience has been freely drawn upon by other sections of the Government and trade that are directly interested in increased agricultural production.

Some of the lessons learnt have also a relevance in the over-all agricultural context. These lessons are, principally, the need for medium sized tractors at a low price, and the necessity for a comparatively uncomplicated mechanism. The comparative technical backwardness and the absence of repair and service facilities in the rural areas make these requirements from a tractor inevitable. Moreover, because of the relatively heavy capital outlay it involves, the cultivator would like the tractor to do certain other things like, for instance, haulage and transport. He would, in other words, like it to be his traditional bullock. In the circumstances prevailing, that does not appear to be too unreasonable a demand.

Whatever the fate of "tractorisation" of the country as such, there is enough work for the CTO in respect of areas that the private sector in agriculture would not venture into. As far into the future as one can foresee, the time is not likely to arrive when the Organisation will find itself without work to do. Its past record has been, despite initial mistakes, encouraging. In fact, the World Bank has spoken appreciatively of the pioneering efforts of the CTO and its significance to other countries; such appreciation was expressed in its communication to the Government of India on the occasion of the repayment of the final instalment of the loan. There is, therefore, every reason to hope that the CTO will continue its good and indispensable work in the years to come.

Delhi Review

North Indian Notes

Warehousing Corporation

The fact that 70 per cent of the total population in India is dependent wholly or mainly on agriculture for its livelihood has inevitably been a dominant consideration in our national programmes of development and it was anticipated in the First Five Year Plan that the largest addition to national output would come from the agricultural sector. The Report of the Committee of Direction of the All India Rural Credit Survey has pointed out that in order to achieve the large increase in agricultural production it is essential to chalk out a dynamic programme of agricultural credit. In this regard it has formulated the following three main lines of development: (1) the development of cooperative credits; (2) the development of storage, warehousing, marketing and processing; and (3) the development of facilities for rural and cooperative banking. The Report has, however, made it clear that in view of the great importance of the need to obtain the wholehearted cooperation of the cultivator in the national endeavour, the second line of development "is even more fundamental than credit itself".

Though the First Five Year Plan had emphasised the importance of warehouses in the scheme of agricultural marketing and though legislative measures had been passed in the States of Bombay, Bihar, Madras, Madhya Pradesh and Travancore-Cochin to facilitate the establishment of warehouses, such facilities continue to be of negligible proportions in the country. The problem is now sought to be tackled from a new angle, and instead of depending on State Governments to open warehouses, an organisation known as the Central Warehousing Corporation has been set up, under the Agricultural Produce (Development and Warehousing) Act. There will be 14 directors composed of six representatives of the Government of India, one representative each of the State Bank of India and the Reserve Bank of India and six non-officials four of whom will be representatives of the Scheduled Banks, Cooperative Societies, the Insurance Corporation, Investment Trusts and other financial institutions, recognised institutions and joint stock banks dealing in agricultural produce.

The main functions of the corporation will be the setting up of a chain of about 100 warehouses during the Second Five Year Plan period spread all over the country. It will also promote the formation of State Warehousing Corporations in each State which in turn will establish about 250 warehouses at important centres within its territory. The authorized capital of the Corporation is Rs 20 crores divided into two lakhs shares of the face value of Rs 1000 each.

The coming into being of the Warehousing Corporation is the first step in the direction of removing one of the gravest economic handicaps of the cultivator. As the constitution of Corporation has been drawn up on the broad lines indicated by the Rural Credit Survey Committee, having adequate financial and other resources to implement a system of storage and warehousing for the country as a whole, it may be confidently expected that the time is not far off when the cultivator in this country will be enabled to get an equitable price for his produce.

✱

Scientist and Cultivator

The vital role of research in agriculture has not only been long realised in India but considerable attention has also been paid to its progress. But the activity in this regard has been all along accompanied by a fundamental defect which has been responsible for placing the fruits of research beyond the reach of the tillers of the soil.

There is no doubt that the research so far undertaken in the country has enriched agricultural science but until recently there has been a hiatus between agricultural research and the purpose for which it is practised and encouraged. To a certain extent the lack of coordination between research and the actual tiller of the soil is explained by the peculiar conditions in which research is carried on. Apart from the mysterious air surrounding research, the administrative machinery entrusted with the task of helping agriculturists has been maintained in such a manner as to render it incapable of bridging the gulf between the cultivator and the research laboratory even if it wants. In recent years and especially since the nation embarked upon the First Five Year Plan, it has been increasingly realised that agricultural research is in dire need of reorientation both in regard to its programmes and in respect of the manner in which its fruits are to be made available to the cultivator. That Authority is fully aware of the urgent need for coordinating research with the practice of agriculture is evident from the trend of discussions at the first meeting at secretariat level of the Coordination Committee of the Ministry of Agriculture and the Ministry of Community Development.

In the course of the discussions it has been found that the advantages of agricultural improvement can best be brought home to the cultivator by ocular demonstration on his land. It has, therefore, been agreed that demonstration centres should be established on the holdings of farmers. Organisation of model agricultural projects is also suggested as a means of bringing to cultivators the results of agricultural research. To ensure that research is appraised of the cultivator's problems, holding of annual conferences of senior research workers, district agricultural staff and other specialists has been suggested. These measures bid fair in bridging the gulf that now separates the research worker from the cultivator.

NORTH INDIAN MARKETS

Sugar Exports

THANKS to the satisfactory stock position in the country, the Government of India have, it is learnt, decided to allow another 50,000 tons of sugar for export this year. Thus, total exports will amount to 1 lakh tons.

It is also encouraging to note that Ceylon has concluded a deal for the purchase of 8,000 tons of Indian sugar. This is the first time Indian sugar will be offered in Ceylon. First shipment is expected to be made in April.

Production and despatches of sugar from indigenous factories amounted to 10.03 lakh tons and 5.50 lakh tons up to 15th February 1957 in the current season as against 8.96 lakh tons and 4.48 lakh tons respectively in the corresponding period of the previous season.

Meanwhile, sugar markets are ruling steady with prices hovering around last week's levels. In the Hapur market, demand for the sweet commodity from the consuming centres is rather slack. Following mill-delivery rates (per maund) are quoted:—Jaswant Rs 28-2; Simbhauli Rs 28-13; Mowana Rs 28-0 to Rs 28-12; Daurala Rs 29-4 to Rs 29-13; Amroha Rs 28-2; Bijnore Rs 28-3; Mansoorpur Rs 29 to Rs 30 and Rampur Rs 31-6.

✱

Gur

Gur prices have recorded a further improvement from last levels. In the Hapur market, the rate for ready gur is quoted around Rs 10-6 per maund. Offtake, last week, aggregated 23 wagon-loads, mostly to Gujerat and Rajasthan. Arrivals averaged 2,000 maunds daily, while stocks were estimated around 90,000 maunds as against one lakh maunds in the previous week. Total arrivals, from the beginning of the season, were estimated at 4.12 lakh maunds.

✱

Foodgrains

Foodgrains markets have ruled quiet, thanks to the Government efforts to check the rising trend of prices by arranging increased sales of wheat through fair-price shops. The United Nations Food and Agriculture Organisation has reported that world wheat production for the current crop year of 1956/57 is likely to be about 121 million metric tons—some two million tons below production for 1955/56. These figures do not include production in Eastern Europe, the Soviet Union and China. With present stocks of 28 million tons, supplies for 1956/57 will reach the all-time record of 55.10 million tons

In the Hapur market, Wheat recorded a decline of As 4 to As 6 per maund as the supply position was further supplemented by increased sales. Rice prices also recorded a fall due to better supply position. Gram prices were, however, unchanged despite good crop reports. Barley and Bejher ruled steady due to paucity of stocks. Maize and Bajra prices remained depressed due to falling seasonal demand. Although stocks left were very poor, the market for Peas ruled quiet. Arhar prices ran down slightly due to slack outside demand.

The Delhi grains market showed a mixed trend. Wheat farm quality lost about As 8 per maund due to decreased buying activity, while Rice prices ruled steady. Also, Coare grains steadied up slightly on account of good buying interest. Among Pulses, Moong moved up modestly following increased demand.

The Bombay grains market reflected a steady undertone with Cereals and Pulses attempting a modest rally from the previous week's levels . Rice prices revealed a measure of stability, mainly attributed to smaller arrivals from the growing areas. Trading in Wheat was devoid of any fresh features with the turnover remaining restricted. In the Course grains section, Jowar prices recorded a nominal improvement of Rs 2 to Rs 3 per candy. Trading in Bajra reflected a quietly steady trend as demand was very limited. Among Pulses, Gram was a good feature with prices recovering to the extent of Rs 5 per candy.

Madras Review

The Peninsula

A Welcome Settlement

THE agreement arrived at between plantation managements and labour in Madras over future wage rates, represents a notable triumph of mediation. Mr Bhaktavatsalam, Minister for Industry and Labour, has been trying since October last to settle the dispute out of court. The Industrial Tribunal to which the dispute was first referred gave an award for increased wages with retrospective effect, along with some other benefits. Against this award, the managements filed an appeal in the Supreme Court. At the time of the settlement, this appeal was pending. It would automatically be withdrawn.

The present settlement is remarkable for the reason that it embodies a genuine compromise. More often than not, the term 'compromise' in an industrial dispute means nothing more than a face-saving formula with the aid of which the workers' demands are almost totally conceded. In this case it is not so. The plantation workers have accepted rates of wages which are higher than what the managements had offered and lower than what the Tribunal thought would be justifiable.

For all the plantation crops in Southern India the principal problem is replanting. The Enquiry Committee found that irrespective of the profits made by the estates, replanting has consistently suffered neglect. Several steps have been suggested to conserve finance for this purpose. The employers had been contending that costs have risen in various ways and that the Tribunals have frequently been inconsiderate to them, in the matter of awarding increases in wages. There is, of course, scope for exaggeration in these contentions, but they are not without foundation.

The very fact that the workers have agreed to surrender voluntarily a part of the wage increases, which the Tribunal awarded to them, shows that they also are convinced of the need for larger internal finance for development, with which their own long-term future is inseparably bound.

It is heartening to see that in Madras, the tradition of private arbitration for labour disputes is gaining ground. Less recently, the Buckingham and Carnatic Mills referred to arbitration thirteen major demands of the workers including wages, dearness allowance and bonus. It was a rather daring step and the Chairman of the Employers Federation of Southern India properly feels encouraged by such experiments.

It is highly significant that Mr Bhaktavatsalam was persuaded to take the initiative, on the request of a group of workers. Under the settlement, the workers will be receiving certain increases in wages with retrospective effect from October 24, 1956, which was the date of the Tribunal Award. Various jobs like pruning and weeding will be paid extra emoluments on the same differentials as are now obtaining in respect of such work.

The increased rates will be for class A tea estates, i.e. plantations of 200 planted acres or more, Rs 1-11-6 for grade 1 worker, Rs 1-5 for grade 2 worker; Re 1 for adolescent and As 11-6 for a child worker. For class B estates i.e., those with less than 200 planted acre the rates will be Rs 1-9, Rs 1-2-6, As 15 and As 11-6. The same rates will apply to coffee estates of 300 planted acres; In the case of planted areas of less than 300 acres as well as estates in the Shervaroys, Madurai and Tirunelveli Districts, irrespective of acreage Rs 1-6, Rs 1-2-6, As 15 and As 11-6 will be paid.

In rubber plantations, Class A estates consisting of 400 acres or more, the rates will be Rs 1-11-6 Rs 1-5, Re 1 and As 11-6. In the Class B estates with an area of less than 400 acres, it will be Rs 1-9, Rs 1-2-6 As 15, and As 11-6. Mixed tea and coffee estates, where more than 200 planted acres are tea and this area is more than two-fifths of the entire planted acreage, will be treated as Class A tea estates and the workers paid accordingly. In other cases, the workers will be paid according to the rates applicable to Class B tea estates.

Viewed in the general background of events concerning the plantation industry in Southern India, this settlement is a green signal to a phase of planned development, in which the workers and the managements alike understand each other's role. If the dispute were to have dragged on, it would have meant not only a waste of effort and money for both sides, but a blocking of progress, undermining the very basis of increased prosperity for every factor of production.

For coffee, export prospects tend to widen along with expansion in output. For rubber, the prospect of a new big-scale factory and the friendly attention of the Government on every aspect of development are highly encouraging features. Free from the torments of an intractable labour dispute, the managements can now devote their attention to finance, research and marketing.

There is one party, the consumer, who will continue to murmur against the price levels of plantation products. Once the factors of production are secure on an orderly mutual relation, it may be possible to consider the consumers' point of view also with greater sympathy. The principal yardstick of progress is just now conceived as output. Sooner or later, a bias for cheapness will also have to develop. General mass satisfaction on the emergence of industrial peace frequently springs from the calculation it will have at least a remote bearing on price.

*

IS THE WORLD'S MONETARY GOLD STOCKS INADEQUATE?

(Continued from page 433)

rican gold reserve is more than sufficient to meet American requirements. But the accumulation of foreign official dollar balances resulting from the inadequacy of the monetary supplies of gold may become a source of trouble.

It is to be feared that the United States Administration is now less likely than ever to consider the idea of raising the official price of gold, owing to the revival of sales of Soviet gold. The annual report of Samuel Montagu & Co. estimates the total sales from that source in 1956 at 4,300,000 ounces the largest amount in any single year since the war. A higher dollar price would mean that the Soviet Government would receive more dollars for the gold unloaded outside the Communist bloc. Even if all the gold does not find its way to the United States, the market price in London and elsewhere is based on the official American price, so that a higher dollar price means an increase in the foreign exchange proceeds of these gold sales.

Another argument that is likely to be used against a higher dollar price of gold is that it would produce inflationary effects. Although there is no longer any rigid ratio between the volume of the gold reserve and that of currency and credit, psychologically a higher dollar price of gold might operate in favour of inflation. This may of course become a strong argument in favour of a higher gold price, if the deflation fears which are now widely entertained in the United States would materialise. Likewise, if inflation should proceed further, the inadequacy of the world's monetary gold stocks will become more pronounced, and the argument in favour of a revaluation of gold would become stronger in consequence.

KANKNARRAH COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Forty-seventh Annual General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 11-0 a.m. on Saturday, the 30th March, 1957, for the following purposes:—

(1) To receive and consider the Audited Accounts for the half-year ended 30th June, 1956, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To appoint a Director in place of one retiring.

(3) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 22nd March to 30th March, 1957, both days inclusive.

By Order of the Board,
JARDINE HENDERSON,LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, Clive Row,
CALCUTTA—1.
1st March, 1957.

NOTE:
A member entitled to attend and vote at the Meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

SOUTH EASTERN RLY TENDERS

The Controller of Stores, Garden Reach, Calcutta—23 invites the following tenders:—

1. Tender No. CS 11/57/161 CS(57) for supply of 120 cwts. of Nut Hex M.S. ¼" dia forged black to BSS 916-1953.

2. Tender No. CS12/57/3965R(56) for supply of 4,000 Rft. of M.S. Pale Fencing 5'-0" high × 18G complete as per CE's Drg. 15889.

3. Tender No. CS13/57/2126B(56) for supply of 3718 Pouches Token pin type as per DCE(Sig)'s Drg. SE/T/95A.

Tender forms are obtainable from his office (I. B. Section) on remittance of Rs 2/- per copy per tender (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Earnest Money is Rs 300/- against tender (1) and (3) and Rs 500/- against tender (2). Closing date of both tenders is 26-3-57, at 12 noon. Firms not on the Railway's list of approved contractors must deposit the Earnest Money with the Chief Cashier, Garden Reach and enclose his receipt together with a valid Income Tax Clearance Certificate with the tenders.

Madras Review

South Indian Notes

Capital and Labour

Addressing the annual general meeting of the Employers' Federation of Southern India, Mr E. F. G. Hunter, complained that labour legislation enacted in recent months in India such as the Industrial Disputes (Amendment and Miscellaneous Provisions) Act and the abolition of the Labour Appellate Tribunal had revealed an unmistakable tendency on the part of Government to tilt the scales in favour of labour. Responsible leaders have averred equally emphatically that industrial workers in this country, though comparatively much better off now than they had been till recenly, are yet to get wages commensurate with the size of their contribution. In this view it would appear that Government are partial to the employers.

Leaving aside his accusation regarding Authority's failure to bring to bear an impartial attitude while dealing with industrial disputes, there is much food for thought in Mr Hunter's speech. The difficulties catalogued by him have to be faced by Government also as they are themselves today the biggest employers in the country.

For instance, Government's intransigence in enforcing the amended Section 33 of the Industrial Disputes Act is rather puzzling. This measure is essential for maintaining discipline in factories, For, at present the taking of disciplinary action against erring workers is a tortuous process. Similarly, it is disquieting to find that Authority sometimes does not hesitate even to undo the judgments of the Supreme Court Labour's unhelpful attitude to rationalisation is another obstacle in the path leading to rapid industrialisation of the country. One is also at a loss to know what exactly is meant when it is contended by Government in one and the same breath that wages as well as Providend Fund contribution should be increased.

But both employers and employees atleast in this part of the country have recently demonstrated that in spite of the various difficuties, they can work together amicably. The agreements between the employers and workers in the Coimbatore textile industry, the UPASI and plantation workers and a number of other such agreements in other industries in the Madras State indicate that mutual goodwill is a much more potent instrument in forging unity between workers and employers than a whole statute book filled with labour legislation.

*

Community Projects

That the Community Projects Programme has been able to obtain contributions by way of cash and labour to the tune of Rs 72.2 lakhs during 1955-56 is a clear indication of its increasing popularity among the rural population in the Madras State. The programme which covers an area of 15,901 square miles and comprises 59 blocks has so far been responsible for the construction of 16 dams, 2 major anicuts, 3 miles of canals, besides the bringing under improved methods of cultivation about 3.34 lakh acres of land. Besides these, hundreds of miles of roads have been laid.

The fact that the value of contributions during the past year is double that of the previous year shows that the message of the programme is being spread to an ever widening area. It is evident that the superiority of the method of voluntary and cooperative endeavour is now being better understood by the rural folk than a year ago.

The progress recorded include the adoption of improved and scientific methods toward improving the cattle wealth. The movement has succeeded in cutting through the traditional inertia of the villagers in dealing with scrub bulls. The cooperative movement in all its aspects has also spread widely in the areas covered by the Community Development projects. Apart from schemes of a purely developmental nature, matters of public health and education are also being taken up with earnestness by the people themselves in the project areas. More than 10 lakhs of patients were treated during the period under review in the hospitals, clinics and dispensaries run by the Community Development areas of the State. The all-round progress made testify to the enthusiasm of the people in the project areas in the scheme as also to their will to promote and fashion out a better life in every sense of the term.

The most important element in the new life that is being steadily developed in the project areas is economic security. In the case of India comprising as it does a vast number of rural population dependent on agriculture, material well-being is inevitably and intrinsically linked with agricultural development. It is no matter for surprise that the Community Development programme, therefore, lays the emphasis on the improvement in the agriculture sector.

SOUTH INDIAN MARKETS

Hides & Skins Markets Quiet

CONDITIONS in the Madras Tanned Hides market have remained quiet with prices ruling almost unchanged. This is mainly due to little or no interest shown by overseas buyers, who are trying to push down prices still further. Although Madras dealers have reduced their prices by ½d to 1d per pound, fresh bids from London are at still lower levels.

Reports from London stated that business was done at prices which were 1d to 2d per pound lower than the current Madras rates and that good supplies were available on spot. In inferior fifths Cow hides, Madras prices continued to be unworkable for business with London. In the Cow Calf section, however, there was some enquiry for inferior fifths, but "fourths" were difficult to sell. The market for Buff Calf was quiet with plenty of offers of middle class marks

In the Tanned Skins section, arrivals of both goat and sheep skins were fair; but prices remained unchanged. In the export section, there was some demand for primc quality goat skins; but there were no buyers at the ruling prices. There were some enquiries for 8-9 lbs at 13½sh to 13⅝sh for "runs" alone, but sellers were prepared to offer, provided they were combined with lower grades. In the Sheep skins section, there was not much change in primes and semi-primes.

The market for Raw Hides ruled very steady.

The total quantities of both goat and sheep skins, that will be offered in London auction, beginning on March 18, are expected to be more than one million skins. The bulk of these offerings are of middle to common varieties.

*

Groundnuts

The Madras Groundnut market ruled generally firm although price movements were rather erratic. Arrivals averaged 25 to 30 tons a day. Local small crushers were the only buyers. The rate for superior oil-quality seeds was quoted around Rs 160 and the bold variety at Rs 154 to Rs 156 per candy.

In the Groundnut Oil section, the rate for the ready position hovered around Rs 318 per candy. Calcutta interests were reported to have taken up sizeable quantities.

*

Rubber

According to figures released by the Rubber Board, production of Rubber has shown a drop of 724 tons in January as compared to the previous month. Consumption has, however, risen by 32 tons. Production and consumption, during January, were 2,190 tons and 2,679 tons, those for the previous month being 2,914 tons and 2,647 tons respectively.

Consumption of imported rubber was 335 tons, while stocks with the estates, dealers and manufacturers amounted to 8,982 tons of synthetic rubber. A quantity of 423 tons of rubber of all grades were imported, while Sole Crepe rubber weighing about 14 tons were exported.

*

Pepper

Pepper markets have continued to rule weak with prices showing a downward trend in the absence of any enquiry from overseas buyers. In the Alleppey market, the rate for superior Palai variety is quoted at Rs 518-12 per candy and Rs 12-8 per candy lower for inferior Thekkan variety. In the Kozhikode market, Wynaad quality is quoted around Rs 610 and the Country variety at Rs 590, all per candy.

In the New York market, prices displayed soft undertone due to selling pressure from dealers in face of continued lack of grinder demand. Malabar and Lampong spot were quoted at 24 cents per pound and Sarawak spot at 23½ cents. In London, prices quoted by shippers were about steady; but dealers reduced their limits in face of continued slow demand.

*

Cashew

It would be recalled that a large number of cashew factories in and around Quilon suspended their work toward the end of last year owing to shortage of raw nuts. In this connection, the Kerala Government have announced that the proprietors of these factories have agreed to reopen their factories. The factories will start working with immediate effect.

Indian Mining Association

Need for Revision of Selling Price Policy

The Method of Financing Development Costs

The Prerequisites for Attainment of Targets

Mr R. Maulik, the Chairman, Analyses Problems Facing the Coal Industry

The annual general meeting of the Indian Mining Association was held on 1st March, 1957 at 11 A.M. at the Bengal Chamber of Commerce and Industry. The following is the speech delivered by Mr R. Maulik, Chairman of the Indian Mining Association, at the meeting so held:

Gentlemen:

As we meet here today, votes are being cast throughout the country to elect the Government representing the people's choice. There is none among us who is in doubt as to the results; we can confidently count upon a political stability in India which few other nations in the world could claim for themselves. We can realise how fortunate we are in this respect only if we recognise how ambitiously we have charted out economic targets for achievement. Economic progress cannot be attained without the prior condition of political stability. What is even more important, individual advancement, whether morally or materially, is best—and perhaps only—served by a democratically elected Government. For this reason, we must make allowance for the fact that, in recent months, the Second Plan endeavours at Government level should have been obscured by the election campaign. In the result, however, we have had the regrettable consequence that valuable time, which could profitably have been utilised in furthering the Second Plan, has been lost. If we are to make sure that the Second Plan is to be fully implemented, the primary responsibility for under-writing its success will devolve upon all of us who are gathered here. Coal is the very basis for development, it is coal which has to feed and fire industries as they develop in this country. In terms of the Second Plan. we have been called upon to increase production from 38 million tons to 60 million tons. Of the anticipated increase in production of 22 million tons, 10 million tons must come from the private sector in coal.

There are few of us here who would think that such a target is not within the ability of the Industry. I venture to suggest that, provided we are permitted to do so and so long as there is sufficient inducement and incentive, it is within the capacity of the private sector in coal to deliver the full 22 million tons of additional production. Unfortunately, this past year has. for a number of reasons, not witnessed any substantial progress in respect of the coal plan.

I shall not at this stage refer to the increase in costs arising from the Tribunal's Award last May; nor, I think, is it germane to the issue for me to point out that the Appellate Tribunal's findings have further increased the costs of production for the coal industry. For, the simple fact of the matter is that we must be prepared, as we have experienced in these past few years, for steadily mounting costs of production. But what I think it is my duty as Chairman of your Association is emphatically to draw attention to the need for Government realistically to revise their coal selling price policy.

HIGHER COSTS

It has happened that we in the coal industry have been called upon to bear steadily increasing operational costs; this, we could have done without difficulty except for the fact that our representations to Government as regards coal selling prices have not had the desired results. Now, let me pose the question: what is the basis on which, in the case of a controlled industry, Government should determine the selling price? The first consideration is, perhaps, one of ensuring that, in the light of India's objective of a socialistic pattern of society, the return to the industry is reasonable and just —and not extortionate. In the second place, as affecting a vital consumer product, there will doubtless be solicitude for keeping in check as far as practicable an increase in the price. I need, however, to point out that price policy has to be attuned to a third consideration which, in the circumstances of India's ambitious planning policy, has been rendered the most basically important. I refer to the inter-connection between the selling price for a commodity and the development of that industry. In this context, I may point out that Government are alive to this new and basic concept of a link between development endeavours and selling prices. There are two other industries wherein selling prices are determined by Government on this basis. These are steel and cement. In both, Government have accepted the proposition that, in the price paid to the industry for its products, there should be a special element which is intended to contribute to the industry's internal resources with which and on which it could proceed with development plans. It may be noted that steel, cement and coal form the triumvirate of the fundamental raw materials on which alone a country can plan ambitiously for industrial development. In regard both to cement and steel, not only the decisions but the policy as it has evolved has been such as to suggest, if not altogether ensure, that the targets of production will be attained.

In coal, it is a different story, it is a somewhat dismal story. While the general index of wholesale prices has risen from 297 in 1947 to 427 in February 1957, the rise in the price of coal has scarcely been of the order of 15 to 16 per cent. The additional costs that, therefore, the coal industry has had to shoulder, over and above the labour cost arising from the Tribunal Awards include the higher prices of machinery and stores as well. It is no secret that the resulting higher costs were, on the basis of the selling prices, wholly beyond the ability of the industry to afford. Nor could there possibly be any margin by way of unappropriated profits which could be ploughed back for purposes of development. It has been and is our painful duty to draw the attention of Government to this vital fact. Especially in these days when money is so tight, capital for expansion has largely to be found in the internal resources of a company. And this brings me to another basic fact.

RESERVE DEPOSITS

The Finance Minister, Shri T. T. Krishnamachari, has proposed that a moiety of the reserves of a company should be deposited with Government. His intention is to ensure that there is no dissipation of unappropriated profits; the intention may also be that these should be canalised into productive endeavours in the national interest. I agree that all available money should be pressed into service on behalf of the Second Plan. But, of course, we need to make it clear that, in the case of companies where the reserves on the liabilities side of the Balance Sheet are matched by money ploughed back into the business appearing on the assets side whether in the form of additions to block or as increased working capital the past reserves will not attract the new statutory requirement. In the case of the coal industry, the financing of development in the past has almost exclusively been done by utilisation of profits ploughed back. That is to say, in the coal industry, the reserves represent moneys which have long since been transformed into expanded block or which are being used to finance increased output. We of this industry would, therefore, welcome a categorical assurance that, in cases where reserves have clearly been utilised in or been set apart for development work, the new deposit regulations will not be enforced.

SELLING PRICE POLICY

Now if I may, I should like to revert to this all important question of selling price policy. We in this industry only ask that the basic criterion for determining such prices, as it already exists in steel and cement, should also be extended to coal. As I have already stated, capital is hard to come by in these difficult tight money days. The bulk of the financial requirements for expansion and development has necessarily to be found in the internal resources of the industry. Such internal reserves can only be built up by the provision of a special element in the selling price which in the customary way, could expressly be set apart for such purpose. Moreover, in these days, when the increase in prices for a wide range of commodities has been sharp, is coal to be the only industry which is to have status quo prices?

Let it also be recognised that Government do not believe, nor will they find an answer to, inflation by merely keeping coal prices in check. On the contrary, such an intention on the part of the Government will, as I shall presently show, be self-defeating. The inevitable consequences of a selling price which makes no allowance for the demand of development, will be to retard development. In other words, the inevitable consequence is that coal production will not go up to the extent and at the rate envisaged by the Second Plan. I need hardly say that, in the result, a vital raw material will be in short supply. Need I add that, thereafter, inflationary conditions will be fostered in every industry that, for lack of coal, is unable to attain targets of production?

I trust that I have not altogether failed in the task that I have set out for myself. That task is to inform Authority, with all the emphasis that this Association has at its command, that Government's selling price policy must immediately and without delay take note of the basic consideration that the margin available to the producer must be sufficient and adequate to finance the 10 million tons of additional coal production that we, as an industry, are expected to achieve by the end of 1960-61.

"WASTING ASSET"

It is, I am sure, not out of place for me here to stress that the selling price for coal, in so far as it affects the return to the investor and therefore to the producer, has to take account of the very nature of coal mining—the fact that it is a wasting asset. I can in this context do no better than to quote from an eminent authority, who defines the principle of depleting reserves in the following words:

"Most industries and enterprises have an intermediate life apparently perpetual and therefore are not called upon to replace the original investment. This does not mean that such industries (railroads, utilities, manufacturing, wholesale and retail houses, etc.), will continue for ever; it means merely that, except for competition, nothing is apparent which will cause a termination. Mining, however, differs from an ordinary industry in this respect; when the ore bodies are mined out, there is nothing left. The original capital investment must, therefore, be returned to the investor by the time that the profitable life of the enterprise is ended. When the operating company does not make any provision for perpetuating its life by investing a portion of its earnings in other properties, the usual procedure is to remit periodically to the investor a dividend sufficiently larger than the risk return on his investment to enable him, if he re-invests this overplus at a safe rate of compound interest, to replace his original capital at the expiration of the life of the mines. This overplus constitutes a return on the invested capital."

OVERBURDENED MINISTRY

The second duty that I have is to express this industry's view that Government should, in the national interest, pay to the coal industry the attention that it deserves. As at presently constituted, we have in Delhi a Ministry to look after coal which is being over-burdened with work. On the one hand, the Minister for Production, Shri K. C. Reddy, who is also the Chairman of the National Coal Development Corporation Ltd., is expected to draw up, approve and implement the series of plans and projects which will increase production of coal in the public sector by 12 million tons. On the other hand, it also devolves upon Shri Reddy to examine, scrutinise and sanction the schemes for development in the private sector of coal production. These are responsibilities which one Ministry and one Minister cannot alone shoulder. This is patently clear, if we look at the events of the last year as affecting coal. The Ministry has been hard put to it to register the necessary progress in the State projects. But, preoccupied as the Ministry has been with this work, it has also happened that there has been untoward delay in the disposal of the matters relating to the private sector in coal. The fact is, that it is nearly a year since plans and blue prints were submitted to the Ministry for the expansion in production to the tune of 30 million tons. Naturally, the private sector in coal has sought to make available production in advance of the country's expanding demand. But the fact is that nearly a year has elapsed before the first sanctions are being received for proceeding with development work. The division of responsibility at the Government level as between private and public sectors will do incalculable good. In the first place, it would free the existing Ministry to give their undivided time and energy to the furtherance of the State projects. In the second place, a proposed new Ministry for coal in the private sector and for the overall policy as we have suggested would enable development in the private sector to proceed at a brisk pace.

NATIONAL SECTOR

I should make another point clear; and that is, that coal cannot properly be thought of as belonging to the private sector or to the public sector. It is a national asset which the country as a whole has to work with all available means and at optimum efficiency. There is no room for, and no need for, controversy as to the targets of production that ought to be set for either sector. What matters is total production. If the one sector, due to unavoidable reasons, is unable to achieve targets, it is the duty of the other to make good any shortfall in production. For our part, the Indian Mining Association is determined that the Second Plan should not fail because coal production has not achieved the target set. This determination on the part of the private sector as a whole is evidenced in the fact that the plans submitted to Government for expansion involve a total of not 10 million tons as allotted under the Plan, but 30 million tons. The coal industry will pledge itself to the proposition that neither doctrinaire politics nor ideological dogmatism will be permitted to prevent the coal production target from being attained. In the notion that, in India's mixed economy, there is to be co-operative co-existence as between Government endeavours, on the one hand, and efforts by the private sector on the other, the Indian Mining Association assures the country that every effort will be made not only to attain but to exceed targets.

While expressing the confidence that there appears to be the possibility of better appreciation of our difficulties and earlier solution of our problems, if the Planning Commission's greater interest and Shri K. C. Neogy's recent visit to the coalfields are taken to be suggestive, it is necessary for me in some detail to describe the events of the past year as affecting the Mining Industry.

COAL PRICE HISTORY

Recent history in the matter of coal prices proves to be extremely interesting. In July 1947, a rise in coal prices was permitted so that the wage increase of workers could be met; but scarcely 2½ years later, in November 1949, coal prices were revised slightly downward. Since then, although the cost of production has steadily been mounting, there has scarcely been any compensatory revision of prices. The only increase allowed was during 1956; and this was intended partially to meet the additional labour costs arising from the Award of the All India Industrial Tribunal (Colliery Disputes) in May 1956. It is important to recognise that the sole instance of a price increase being granted, was not for affording any increased margin to the industry but only so that the industry could be compensated for the enhanced wages of labour; in fact, it was pointed out at the time that the rise of Rs 3 allowed was insufficient to cover the additional financial burden which the industry, by terms of the Award, had to bear.

Besides the higher cost of labour, prices of other essential equipment and stores have also risen substantially since 1947. Steel today costs 130 per cent more than it used to in 1947; one has to pay 50 per cent more for cement as compared to the price a decade ago.

The prices of coal, however, continue to remain at an uneconomic level. Surely these prices can bear to be upgraded a trifle. They would even then be the lowest in the world. The cost of coal expressed as a ratio of the gross ex-factory value of various products and bye-products is, on average, 1.96 per cent; in the case of other fuels and electricity, the relevant ratio is 3.45 per cent. Coal and coke work out to 11.25 per cent of the cost of steel as against 12.70 per cent in the case of other fuels. The apposite figure in the case of cement is 14.32 per cent for coal and 18.28 per cent for other fuels. Another pointer to the inexpensiveness of Indian coal is brought out in the fact that the cost element of coal in UK-produced steel is 41 per cent as against 11.25 per cent in India; for cement, coal works out to 38 per cent in the U.K. as contrasted with 14.32 per cent in India. I trust that the conclusion is clear that whether on the basis of world prices or whether on the basis of the cost of coal as compared to other fuels, the nation should comfortably be able to take in its stride some increase in the coal selling price.

LABOUR POSITION

I should now like to describe at some length the labour position. You are aware that, as a result of agitation by Trade Union leaders in the coalfields, a special Tribunal was appointed by Government in February 1954 to go into the matter of wages and amenities of colliery workers.

One year later, the Tribunal was reconstituted and the proceedings started anew. The award of this Tribunal was published on 26th May 1956 and became effective from that date. The Association in consultation with other producer organisations, decided not to appeal against the Award. This, however, did not mean that we agreed with all the findings of the Award.

Certainly, we did not agree that the minimum wage should be Rs 69-1 inclusive of bonus for the unskilled surface worker. Besides, there were some anomalies to be noticed in the Award; but, taking into consideration the prevailing circumstances and mainly as a gesture of goodwill to the workers—who had been engaged in litigation for over two years—the decision was taken not to prefer an appeal. Furthermore, the Association of its own accord rectified some of the anomalies which existed in the Award. Workers were evidently satisfied with the new dispensation. Nevertheless, some of the minor trade union organisations participated in the proceedings of the appeal and in attacking the lower tribunal's Award. Ultimately, the employers found that, in spite of their efforts, they could not avoid litigation. It may be noted that they were placed in a position of considerable disadvantage because, in extending their gesture of goodwill, they had implemented the lower tribunal's Award.

The decision of the Appellate Tribunal was announced on 29th January 1957. The wages of workers were further increased; and other major modifications of far reaching consequence were made. The decision, moreover, has been given with retrospective effect from the date of the original Award; and, in the result, the industry is immediately burdened with the awesome liability of over Rs 4.25 crores. Where this money is to come from, the industry does not know. In fact, the retrospective aspect of the decision strikes at the very root of the industry.

Undoubtedly, it will have serious repercussions on the progress of the development plans now in hand.

PRODUCTIVITY: NO BETTER

Wages have been substantially increased; other facilities and amenities have been granted on a very liberal scale. Obviously, these must and will be reflected fully in the price of coal since as much as 70 per cent of the production cost is accounted for by labour charges. Unfortunately, the rise in the level of wages for labour and an improvement in working conditions have not been accompanied by a better showing in productivity figures.

Perhaps, it would be wise on our part to remember that productivity will not increase and the standard of living of colliery workers will not improve unless steps are taken to educate the workers that they themselves must take an effort at improving their living conditions. In this regard, the trade union organisations have done nothing in the diffusion of such education and whatever has been done by the Coal Mines Welfare Organisation has failed to elicit the desired results.

This lack of improvement in productivity, however, does not deter the constant agitation for wage increases. At its last annual conference, the INTUC has put forward a demand for a blanket increase of 30 per cent in wages for the workers of major industries; and, if the decision in regard to the justifiability or otherwise of such demand depends upon the discretion of outside bodies, prices of coal are bound to rise since the producers will have little to say in the matter. It is strange that the employer should have the dubious distinction of having a say neither in the wage increase to labour nor in the selling prices of his product. As far as the consumers are concerned, they need to appreciate that they cannot hope to continue to get coal at the present low prices. On the one hand, some benefit might accrue to the consumers when, in due course, productivity in the industry improves. On the other hand, however, there has to be dissemination of information as to the efficient use of coal and prevention of waste. Secondly, in so far as the workers are concerned, we must note with regret that the coal industry continues to be affected by the power politics of rival groups of trade union leaders. That the workers are mere pawns in the political game of the leaders has been amply demonstrated by the illegal, unjustified and unwarranted strike made last year in the West Bengal coalfields. It may be recalled that two of the largest groups of employers were affected; and the consequent loss in output amounted to 3 lakh tons. The Association places on record its appreciation of the action taken by the employers concerned in holding out against the strike threat; in the alternative, if the unreasonable demands had been met due to pressure, the coal industry would have been thrown into chaos.

SAFETY MEASURES

Great stress is being laid these days on more rigorous safety measures. The Mines Act and the Coal Mines Regulations are in the process of being amended. The provisions are most drastic; and as was pointed out at the Fifth Session of the Industrial Committee on Coal Mining held last year, considerable modification of the draft provisions is called for. What is required is advice as to the manner whereby safety measures can be improved—not rigid enforcement of drastic rules. Furthermore, if the mine manager is held personally responsible for every act of omission or commission in the mine, it will be impossible for him to function. He will always be in a state of uncertainty and apprehension; and this will affect the overall supervision of the mine and hamper his initiative as principal person responsible for the production of coal. We have also to realise what the regulations, if they become enforceable as envisaged by Government, will mean to the Industry. In monetary terms, we shall have to incur immediate expenditure to the tune of several crores of rupees; of this, I understand about two crores of rupees will be in the form of foreign exchange. There is no doubt that the Labour Ministry should take all possible precautions for the safety of workers in the mines; but there should be the realisation that in view of the very nature of mining operations, it is impossible to have 100% safety—which is what appears to be aimed at. Cent per cent safety can be vouchsafed only if no mining operations take place at all. I would suggest that all concerned in this connection give this matter their serious thought so that a satisfactory solution can be reached. While on the subject of safety, I would point out that the overlapping jurisdiction of the Coal Board under the Production Ministry and the Mines Inspectorate under the Labour Ministry is likely to hamper production.

WAGON SUPPLY

The transport position has continued to improve but, as has been always the case in the Coal Industry, wagon supply is still not sufficient to meet the demand of the coal consumers. Considering the condition of the Railways during and after World War II and also the post-Partition period, our Railways are to be congratulated on their achievements. The fact, however, remains that rail transport will be the limiting factor to all industrial production in the Second Five Year Plan. This is especially applicable to the Coal Industry. The requirements of wagons of the Coal Industry during the Second Plan period are as follows:

For 1957/58	..	4,860 wagons
,, 1958/59	..	6,159 ,,
,, 1959/60	..	6,481 ,,
,, 1960/61	..	6,804 ,,

Out of these, the requirements of West Bengal and Bihar will be 3,778 wagons; 4,603 wagons; 4,810 wagons; and 5,016 wagons respectively. The present guaranteed supply of wagons for the West Bengal and Bihar coalfields is 3,500 wagons a day, of which 950 wagons are from the South Eastern Railway. The actual demand for the current year is 3,778 wagons a day. The daily requirement of the consumer is, therefore, not met to the extent of about 278 wagons a day. At the same time the requirements of the Railways themselves have also increased. Therefore, although the daily supply of wagons has improved, there is a shortfall in the minimum requirements in comparison to the total demand of the country as a whole; consequently, a general overall shortage of coal supply, particularly domestic fuel, continues to be experienced. It is essential, therefore, that immediate steps should be taken to increase the minimum guaranteed supply of wagons during the current year with a view to reaching the target of 3,778 wagons. From the general trend of discussions in the Coal Transport Advisory Committee it appears that little improvement can be expected over the South Eastern Railway for the next few years. Thus, the Collieries in West Bengal and Bihar, who are served by the South Eastern Railway, will be handicapped so far as increased output is concerned. I would like to suggest that, since the Railways are anxious to improve the wagon position, it may be of advantage to hand over the control of that portion of the South Eastern Railway which serves the West Bengal and Bihar coalfields to the Eastern Railway. One of the essential pre-requisites in order to reach the target of increased production and expansion envisaged during the current Plan period is an increase in siding facilities and relaxation of indent limitation. The Industry has been drawing the attention of all the authorities concerned to this matter; and we trust that we can count upon the co-operation of the Railways in this regard.

SWEEPING CONTROL

The scope of Government control over the Coal Industry is incredibly sweeping. Production, selling prices, distribution, method of mining, workers' wages, and workers' amenities—practically all aspects of normal business are controlled. The Ministry through which the Industry is controlled is mainly the Ministry of Production. The system of controls has been in force for the last decade and a half. In my opinion, it is totally outmoded. The system of controls should be thoroughly reviewed by a committee in which the coal producers should be adequately represented. Such a revision and reorientation of policy are, in the light of the present trend of events and the need for a quick increase in output, surely imperative.

The Coal Board, which was formed in 1952 under the Coal Mines Conservation and Safety Act, has been unable to do much besides pegging the output of coking coal. The policy of the Coal Board has till recently been incongruous; while what is required is increased production of coal, the Board's policy seemed to be to obstruct it, with its restrictive policy. I am, however, glad to say that the Board lately seems to have altered this policy and is realising the urgency of coal development.

SAND STOWING

I may now refer to developments in sand stowing. We have now reached such a pass that it is doubtful whether sufficient sand will be available for carrying out stowing in the Jharia coalfields. As early as 1953, Shri Michelmore in addressing you from this Chair had reached this conclusion:

> "I feel I must raise once again the doubt which has long been in my mind whether adequate supplies of sand will continue to be available after the completion of the Damodar Valley Corporation".

He also expressed grave doubts as to the future availability of sand and requested that this problem should engage the serious attention of Government. It was only less than a year ago when a Committee was appointed to go into the matter of the availability of sand, and we still await information as regards the Committee's findings.

UNREPRESENTED

This Association, along with other coal producers' organisations, has been repeatedly requesting Government for granting adequate representation of the private sector on the Coal Board. Unfortunately, however, this request has not yet been acted upon by Government. The present constitution of the Coal Board is practically departmental except for the Chief Inspector of Mines and Chief Mining Engineer of the National Coal Development Corporation. It is a matter of regret that, while the public sector has been given representation on the Coal Board, —and there is always the danger of its playing a dominant role in the deliberations—the private sector, which is responsible for 75% of the output of coal in the country, is denied the legitimate right of voicing its opinion in the deliberations of the Coal Board. It is essential that the Coal Board should be reconstituted on a broader basis and including the representatives of the private sector. The present position amounts to discrimination on the part of the Production Ministry in favour of the public sector. There is always the danger that the interest of the private sector may be neglected. Moreover, since the Production Ministry seems to depend completely on the advice of technical experts drawn from the public sector, it would not be an unjustified apprehension that the problem of the private sector will not get due emphasis and consideration in discussions with foreign experts or in shaping the overall policy.

The policy of import licences so far as mining equipment is concerned will have to be considerably relaxed because the Coal Industry has been called upon to produce 22 million tons more in the next four years and this can be only achieved by large-scale utilisation of machinery.

THE TASK AHEAD

Gentlemen, I would assure all concerned that my criticisms are not prompted by any factious spirit but with best of intentions. I would emphatically state that if the above difficulties are not remedied increased coal production targets will not be attainable. Moreover, it is already time that we in this industry should start thinking in terms of the Third Plan, and the target to be achieved by 1965. For, current thoughts indicate that the country will need 120 million tons by the end of the third quinquennium. A doubling of production in such manner will necessitate much effort—and, what is more important, preparations being made well ahead. Is it, therefore, too much to ask of Government, in the interest of the Second no less than the Third Plan, that their policy needs to be reorientated in order that development work is not unduly postponed?

I would be failing in my duty if I do not offer our thanks both on my personal behalf and on behalf of your Association to our Coal Controller, Shri P. M. Nayak, who has always given us a patient and sympathetic hearing. I have no doubt that he has appreciated our problems and has done everything in his power to solve them. The recent activities of the Coal Board point in this direction.

The speech of the Chairman of the Indian Mining Association will be incomplete unless a reference is made to mining interests other than coal. I will now refer to them.

MINING LEASES RULES

The Mining Leases (Modification of Terms) Rules 1956 were published on the 6th September. The object of these Rules is to bring leases granted prior to the commencement of the Mines & Minerals (Regulation and Development) Act 1948 into conformity with the Minerals Concession Rules 1949.

A Controller has now been appointed for purpose of these rules with his headquarters at Ranchi. Those with leases covering minerals other than coal, petroleum, natural gas, and minor minerals, should now have submitted their returns to the Controller. If their leases exceed 10 sq. miles area or if they are at present enjoying a low rate of royalty, they must now be awaiting the Controller's instructions.

STATE TRADING

Probably the most controversial event of the year has been the advent of the State Trading Corporation, particularly in the way in which the activities of this Corporation have expanded, not only in size, but in the variety of goods involved, ranging from tobacco to iron ore. Originally it was believed that the Corporation would restrict its activities to countries preferring to barter or sell on a Government to Government basis, and originally iron ore only appeared to be involved. Subsequent developments have shown that there would appear to be no limit either in regard to countries, quantities or commodities. At present the Corporation appears to be concentrating mainly on iron ore exports and having granted itself one fourth of the total country's export quota, rumour has it that it contemplates controlling the entire exports of iron ore by the middle of this year. I can only say, "what next?"

MANGANESE ORE DUTY

On 3rd September, the Government of India reimposed an export duty on manganese ore at rates varying from Rs. 10/- to Rs. 30/- per ton on ore with a manganese content of over 38% and with varying scales dependent on the manganese content. The manganese ore market, like many minerals, fluctuates widely. Having suffered a recent slump, prices have again been good during the year and exporters have not had great reason to complain about this duty. Their next concern will be to know if Government can, as speedily, remove the duty when prices fall as they invariably will.

One unfortunate point about this duty is that the Government machinery is ill equipped to impose such a duty as the Controller of Customs has not an adequate qualified staff, nor the laboratory facilities to carry out the necessary analyses. He is also unwilling or not prepared to accept the results of qualified, world renowned analysts, but insists on independent sampling by his own organisation. To do this work efficiently his organisation would have to be capable of doing the full amount of such work now carried out by all of the local analysts. I have just heard of cases where the Customs Authorities have now informed shippers that they must pay an increased rate of duty on parcels which were shipped five months ago and which have reached their destination, via the Cape, and have probably now been used in the manufacture of steel and for all I know may be on the way to India in the form of machinery. Under the sales contracts the Sellers will ask the foreign buyers to pay this additional duty—a request which cannot enhance India's reputation in the world's metal markets.

As in the case of coal, the severe wagon shortage has restricted the market and on some lines the volume of traffic also has been restricted by the Railways improvement and doubling programmes. Fortunately these are temporary restrictions and we look forward to increased traffic movement in the near future.

For exports from some of the Orissa mines considerable assistance has been given by the Railway permitting BOBX Hopper type wagons being used temporarily for ore traffic. Without the use of this there could have been an even greater wagon shortage and the trade is grateful for this assistance.

It is regrettable that there must often be a sting in the tail of my remarks, but the fact is there are no weighbridges capable of weighing these large wagons and their carrying capacity appears to have been rated about 5 tons in excess of what can usually be carried.

CONCLUSION

Gentlemen, since the mining industry as a whole is faced with so many problems it is only right that all organisations should work in close co-operation. I am happy to say that during the past year we have done so and for this our thanks are due to the other organisations, especially the Indian Mining Federation and the Indian Colliery Owners Association.

Before I conclude, gentlemen, I want to pay a tribute to the valuable assistance which has been given to me by your Committee, and in particular by the Vice-Chairman, in the past year.

It is sad that during the year Shri Peary Mookherjee, who was a member of your Committee, passed away. He had served the Association sincerely for a number of years and he was one of its main supports. We have missed him much during the time of crises and his loss to the Association is irreparable.

I thank the members of the Standing Coalfields Committee and the Hony. Joint Secretaries, Shri W. J. Jameson and Shri W. D. Forrest. I also wish to record my deep appreciation of the services rendered by the Secretariat of the Association, the Labour Department of the Bengal Chamber of Commerce & Industry and the Secretariat of the Joint Working Committee.

Managing Director

THE CENTRAL BANK OF INDIA LIMITED

NOTICE

NOTICE is hereby given that the Forty-sixth Annual General Meeting of the Shareholders of The Central Bank of India, Limited, will be held at the Registered Office of the Company, in the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 28th day of March, 1957, at 4 P.M. (S.T.) to transact the following business:—

1. To receive and consider and adopt the Report of the Directors and the Audited accounts for the period ended 31st Decemer 1956.
2. To declare a dividend.
3. To appoint a Director in place of Sir Jamsetjee Jejeebhoy, Bart., who vacates his seat as a Director under Articie 84 of the Articles of Association and who is eligible and offers himself for re-appointment.
4. To appoint a Director in place of His Highness Sir Jiwajirao Madhavrao Scindia, G.C.S.I., G.C.I.E., who vacates his seat as a Director under Article 84 of the Articles of Association and who is eligible and offers himself for re-appointment.
5. To appoint a Director in place of Mr. Dinshaw D. Romer who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956 and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:

   "RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Dinshaw D. Romer who has attained the age of 81 years and who retires by rotation under Article 92 of the said Articles of Association read with Section 256 of the Companies Act, 1956, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him".
6. To appoint a Director in place of Mr. Chimanlal B. Parikh, who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
7. To appoint a Director in place of Mr. Framroze J. Gazdar who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
8. To appoint Auditors and to fix their remuneration.
9. To consider and, if thought fit, to pass the following resolution required by Section 293 of the Companies Act, 1956, an explanatory statement in respect of which is annexed hereto as prescribed by Section 173 of the said Act.

   "RESOLVED that the consent of the Company under the provisions of Section 293 (1)(d) of the Companies Act, 1956, be and is hereby granted to the Board of Directors of the Company to borrow from time to time for the purposes of the Company such sum or sums of money as they may in their absolute discretion think fit notwithstanding that the moneys so borrowed may either by themselves or together with the moneys already borrowed by the Company and remaining outstanding (other than temporary loans obtained from the Company's Bankers in the ordinary course of business) may be in excess of the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose.

   "RESOLVED further that the Company hereby ratifies and confirms all borrowings made by the Board of Directors after 1st April 1956, which together with the amounts previously borrowed by the Company and remaining outstanding have been, during any period since the said date, in excess of the aggregate of the said paid up capital and free reserves of the Company".
10. To consider and, if thought fit, to pass the following resolution the relative explanatory statement concerning which is annexed hereto as prescribed by Section 173 of the Companies Act, 1956:—

    "RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301-304, 307 be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of the fees, if any, specified in the aforesaid provisions at the Registered Office of the Company between the hours of 11-30 A.M. and 1-30 P.M. (S.T.) on any working day except Saturdays and between the hours of 11-00 A.M. and 1-00 P.M. (S.T.) on Saturdays, except when the Registers and Books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company. Provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection as aforesaid of the members of the Company between the times above-mentioned during the period prescribed by sub-section 5(a) of Section 307".

By order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 1st March, 1957.

Note:—

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(a) The Transfer Books of the Bank will be closed from Wednesday, the 6th day of March 1957, to Thursday, the 28th day of March 1957 (both days inclusive).

(b) Dividend Warrants for the half-year ended 31st December 1956 will be posted to the Shareholders at their registered address on and after the 29th day of March 1957. Shareholders are requested to intimate the Bank their change of address, if any, immediately.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

To,

The Shareholders of
The Central Bank of India
Limited.

Dear Sir|Madam,

In conformity with the Companies Act, 1956, which came into force on 1st April, 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to items 5, 9 and 10 mentioned in the accompanying Notice dated the 1st March, 1957.

2. In respect of Item No. 5, it is notified that Mr. Dinshaw D. Romer who retires by rotation and is eligible for re-appointment, has attained the age of 81 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said Item No. 5. Mr. Romer has been a Director on the Board of this Company since 1931. He is an eminent Solicitor and has wide and varied experience of banking and commerce and during his long period of association with the Company he has rendered very valuable services to the Company. It is in the interest of the Company that it should continue to receive the benefit of his services as a member of the Board.

3. As to Item No. 9, it is proposed to meet the requirements of Section 293(1)(d) of the Companies Act, 1956. The Bank has had since 1st April 1956 and may hereafter have occasions to borrow in excess of the limits prescribed by the said Section and it is, therefore, necessary to ratify such previous borrowings and to give the necessary powers to the Board for such future borrowings, the same being necessary and expedient for the purposes of the Company's business.

4. In respect of item No. 10, it is notified that under the relevant Sections of the Act, the Company in General Meeting is entitled to impose reasonable restrictions on keeping the said registers and documents open for inspection by the persons entitled thereto so that not less than two hours in each day are allowed for inspection. The hours of inspection sought to be prescribed by the said Resolution are reasonable and convenient from the administrative point of view.

By order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 1st March, 1957.

NEW SAMANBAGH TEA COMPANY LIMITED

NOTICE

The Directors have declared on 28th February, 1957 an Interim Dividend for the year 1956 on the Ordinary Shares of the Company at the rate of 10% per annum without any deduction for Income-Tax paid by the Company.

Dividend Warrants will be despatched to the registered addresses of, or in accordance with instructions received from, those Members whose names appear in the Company's Register on the 28th March 1957. The Transfer Register will be closed from the 20th March, 1957 to 28th March, 1957 both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.

1st March, 1957.

TEZPORE TEA COMPANY LIMITED

NOTICE

The Directors have declared on 28th February, 1957 an Interim Dividend for the year 1956 on the Ordinary Shares of the Company at the rate of 10% per annum without any deduction for Income-Tax paid by the Company.

Dividend Warrants will be despatched to the registered addresses of, or in accordance with instructions received from, those Members whose names appear in the Company's Register on the 28th March 1957. The Transfer Register will be closed from the 20th March, 1957 to 28th March, 1957 both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.

1st March, 1957.

GILLANDERS ARBUTHNOT & COMPANY LIMITED.

NOTICE is hereby given that the above Company's Register of Members will be closed from the 18th March to the 30th March, 1957, both days inclusive, for payment on the latter date of a dividend of 16% for the year ended 31st March, 1956 on the Company's Ordinary Share Capital without any deduction in respect of Income Tax payable by the Company.

By Order of the Board,
FOR GILLANDERS ARBUTHNOT & CO. LTD.,
J.F.E.d'A. WILLIS,
Managing Director.

Clive Buildings,
Netaji Sbhas Road,
Calcutta.
The 1st March, 1957.

MARTIN BURN LIMITED

NOTICE

The Annual General Meeting (being the Eleventh Ordinary General Meeting) of the Shareholders of Martin Burn Ltd. will be held on Friday, 29th March, 1957, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:—

(1) To receive and adopt the Audited Accounts for the year ended 30th September, 1956, and Directors' and Auditors' Reports thereon.

(2) To declare a Dividend and Cash Bonus.

(3) To appoint Directors in place of those retiring.

(4) To appoint Auditors and to fix their remuneration.

(5) As special business to consider and if thought fit to pass the following resolution, namely:

"That the Books, Registers and other documents required to be maintained by the Company and kept open for inspection under the provisions of The Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the person entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10 a.m. and 12 noon on each business day. Provided, however, that the Register required to be maintained under Section 307 of the Act, shall be open for inspection of the members or holders of debentures of the Company between the times above mentioned only during the period prescribed by sub-section 5(a) of Section 307."

The Ordinary Share Registers of the Company will be closed from 22nd to 29th March, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LTD.,
A. G. GIDLEY,
Secretary.

Calcutta,
4th March, 1957.

NOTE—The Dividend and Cash Bonus, if sanctioned, will be paid on or after 30th April, 1957, to those Shareholders so entitled whose names appear in the Company's books on the 29th March, 1957, or to their mandatees. No application for dividend warrants will be necessary.

Explanatory Statement as Required by Section 173 of The Companies Act, 1956.

ITEM NO. (5)

With reference to the resolution relating to inspection of Books, Registers and other documents, referred to in the accompanying notice, The Companies Act, 1956. provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is moved accordingly.

The Directors of the Company have no interest in the business represented by the foregoing resolution other than in their capacity as shareholders.

MARTIN BURN LIMITED.

NOTICE.

At a meeting of the Board of Directors of Martin Burn Ltd. held on the 27th February, 1957, the Directors have recommended the payment of a dividend at the rate of Rs. 1-8-0 and a cash bonus of Annas Ten per share both without deduction of Income Tax on the Ordinary shares of the Company ranking for dividend for the year ended 30th September, 1956. These recommendations await sanction by the Shareholders at the Annual General Meeting of the Company to be held on Friday, the 29th March, 1957.

The Ordinary Share Register of the Company will be closed from the 22nd to 29th March, 1957, both days inclusive, and the dividend and cash bonus, if sanctioned, will be paid on or after the 30th April, 1957.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary.

12, Mission Row,
Calcutta.
28th February, 1957.

SAUGAR ELECTRICITY SUPPLY CO. LTD.

NOTICE is hereby given that the Fiftieth Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at its Registered Office No. 12, Mission Row, Calcutta on Thursday, the 28th March, 1957 at 11-5 a.m. for the following purposes:—

1. To receive and adopt the Audited Accounts for the half-year ended 30th June, 1956 and the Directors' and the Auditors' reports thereon.
2. To declare a Dividend.

The Register of Ordinary shareholders of the Company and the Transfer Books will be closed from the 22nd March, 1957 to the 28th March, 1957 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE.
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta 1.
The 2nd March, 1957.

EXPLANATORY STATEMENT.

N.B.—This meeting is being convened to consider the accounts for the half-year ended 30th June, 1956, in accordance with the provisions of the Company's Articles of Association.

WORLD OF COTTON

(Continued from page 441)

Meanwhile, following rates are quoted:—Bengal Rs 690 to Rs 740; Oomra Rs 790 to Rs 820; Dhollera Rs 745 to Rs 760; Jharilla Rs 800 to Rs 820; Vijay Rs 945 to Rs 960; AR/BP/52 Rs 1710 to Rs 1735; ER/Bushoga Rs 1,535 to Rs 1,630; Karnak Rs 2,800 to Rs 3,000; Sudan Rs 2,600 to Rs 3,000 and American Good Middling spot Rs 1,460 to Rs 1,470.

×

COTTON STATISTICS:

Exports by rail from 1st September 1956 to 28th February 1957 were 162,574 bales. Estimated mill consumption in Bombay, during the period, was 652,079 bales as compared to 634,832 bales in the corresponding period of the previous season. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay on the 28th February 1957, was 564,399 bales on the corresponding date of last year.

KARACHI COTTON:

The Karachi cotton market presented an easy trend. Considerable slackness in overseas demand induced selling, which resulted in a mild fall in values. The decline in prices would have been more sharp, but for some speculative buying based on reports of further business done with Russia. Sind Deshi was quoted at Rs 78-8; PunjabDeshi at Rs 78-8; 4F Roller at Rs 83-15; 4F Saw Gin at Rs 87-7; 289F NT Roller at Rs 84-7 and 289F Punjab Saw Gin at Rs 102-7.

×

LIVERPOOL COTTON:

Fair trade calling brought a further improvement, especially in near month of both the contracts. Offerings were available only at limits and, with further inter-month switches, the market closed steady with both contracts showing moderate advance. Egyptian contract was neglected, while Sudan contract improved on Commission House bidding; but sellers were still awaiting confirmation of reported increase in the export tax. Egyptian Karnak contract March/April delivery was quoted at 60.00 and Sudan Lambert Seed Contract May/June delivery at 43.50.

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LTD.

NOTICE.

The Preference Share Registers of the Company will be closed from the 3rd April 1957 to the 12th April 1957, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (India) PRIVATE LTD.,
Secretaries.

Calcutta,
7th March 1957.

CLIVE STREET GOSSIP

(Continued from page 438)

As a matter of fact, one of the most abiding consequences of Indo-British collaboration has been the result of a common humanist interest in the thoughts of two branches of the same parent race, one that settled in Greece and the other that moved into the Indo-Gangetic plains. British orientalists like Sir William Jones were drawn to India by their passionate curiosity of the destiny of the common Indo-European ancestors. Many like Swami Vivekananda, in fact, saw in the coming of the British in India the completion of the cycle that started tens of centuries ago.

*

But, despite all this, the fact remained that the ordinary Englishman found the Hindu difficult to cultivate and difficult to establish contact with. Some of the reasons are obvious. Hindu society was a close society and intimacy was difficult in view of taboos of castes an conventions. The Muslim, on the other hand, was more easily accessible. But the deeper reasons were perhaps the Englishman's instinctive distrust of anything that smacked of the mystic, which he considered was bizarre and outlandish. The Hindu's at-homeness in the twilight that divides life and death, his complete lack of embarrassment in the penumbra of psychic and spiritual inquiry, the prodigality and opulence of his sensuous imagination that interpenetrated without impropriety into the realms of the spirit were deeply disturbing to a temperament that refuted Berkeley by striking one's foot against a large stone till he rebounded from it. (Of course, that did not refute the theory). The Muslim, on the other hand, had a deceptively simple and uncomplicated creed and this made the Englishman more comfortable in his company.

*

And, lastly, the main motive power of the opposition to the British rule in India came, largely speaking, from the Hindu intelligentsia. The Muslims, as a community, were, throughout the present century, playing a gigantic gamble that came off far beyond their expectations. They stood aloof from the main stream of political life and played throughout an equivocal role. I believe that the fashionable theory of Britain dividing and ruling India is only partially true. On the other hand, independence would have come to us long before 1947 had it not been for the astute insistence on British responsibility to minorities on the part of leaders like Jinnah. The consequence of this has been that there has never been any direct conflict between the people who now constitute the population of Pakistan and the British. There is, therefore, no resentment to overcome, no guilt complexes to resolve in dealing with the Pakistani. No sensitive Englishman can talk to Jawaharlal Nehru for ten minutes without realising with amazement that this was the man whom his Government sent repeatedly to gaol. No insensitive Englishman can think of Jawaharlal Nehru without smouldering with resentment at the fact that he drove the British out of India and was now supporting Nasser. No such difficulties arise in the case of, say, Suhrawardy.

*

But Great Britain must realise what is at stake. We are told that there is some reappraisement at Whitehall of recent policy toward India. From what I have been able to gather from the papers, the motivation of such reappraisal has been two-fold. One is the possible repercussion on Indo-British trade and the other, the familiar nightmare of the effect of any action on cold war power dispositions. These considerations, especially the first, are important from Britain's point of view. But I consider that the real stakes are far higher. To my mind, the most important consideration is that the development of bitterness between the two countries would be the throwing away of all the benefits of one of the most epochal facts of world civilisation. The encounter of the East and the West in India, which has produced modern India, is a fact of supreme moment to both India and Great Britain. All that happened in the ten years since 1947 has given strength to the view that the British withdrawal from India symbolised not the failure of the British Empire but its success, not a cutting off of losses but the beginning of a new life. People who had the vision to see beyond the immediate personal injury and insult at the hands of the British are today working out ideas that are basically English—representative government, rule of law and freedom of the individual. Nothing that Britain does or does not do is going to make any difference to the continuance of the experiment we have started on. But we should like to consider Britain our friend and, in an ultimate sense, our teacher. That is the principal reason why we remain in the Commonwealth. And that is the principal basis of much Indian admiration for Britain. Britain should consider whether it should jeopardise all this fund of friendliness by uncomprehending and malicious tartness.

EAVESDROPPER.

GATEWAY MARKETS

(Continued from page 440)

to be steadier, perhaps due to rumours of an impending cut in production by some of the big American domestic producers. Zinc is quoted at £97½ per ton for first-half March delivery. There is no improvement in the consumer demand. The tendency continues to be weak mainly due to the assumption that the USA will renew barter deals. Lead rules remarkably steady at £113 per ton, reflecting the steadiness of consumption and the reasonable availability of supplies.

*

Yarn

The Bombay Yarn market continued to be listless with only limited business passing. Both Staple-fibre and Art Silk yarns moved irregularly on alternate bouts of buying and selling. The only bullish factor was the scarcity of ready stocks in the City.

The smart rise in raw cotton prices had no effect on the Cotton Yarn section where prices declined further in the absence of support. The sluggishness in the piecegoods market, falling export enquiries and the general reluctance on the part of weavers to augment their stocks —all these factors contributed to an easy trend in prices.

UPPER GANGES VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED

NOTICE is hereby given that the Fifty-second Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at its Registered Office No. 12, Mission Row, Calcutta on Saturday, the 30th March, 1957 at 11-0 a.m. for the following purposes:—

1. To receive and adopt the Audited Accounts for the half-year ended 30th June, 1956 and the Directors' and the Auditors' reports thereon.
2. To declare a Dividend.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 25th March, 1957 to the 30th March, 1957 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

Stock Exchanges

A DRAMATIC RECOVERY

Watch-Dog Writes:

STOCK markets, which witnessed a slump early in the week, staged a dramatic recovery toward the closing stages. Both the rapidity and the magnitude of the rise in prices suggest that market circles now feel that the worst is over and that a reaction is overdue. Technically, markets are in a healthy state and this factor will assert itself.

Heavy bear-covering following firmer Bombay advices coupled with the Stock Exchange Committee's decision to include transactions in Indian Irons Renunciation forms in the clearing, resulted in a sharp recovery in the speculative issues. This, in turn, imparted a steadier trend to other scrips on the Calcutta Stock Exchange.

Widespread gains were recorded on the Bombay Stock Exchange, although prices reacted slightly toward the close due to profit-taking.

A cheerful tone and a rising trend in prices constituted the main feature of trading on the Madras Stock Exchange.

On the London Stock Exchange, the Industrial section made the best showing of the week following the more hopeful Middle-East situation.

Wall Street closed very steady, the list showing a majority of mostly fractional gains.

Calcutta

Calcutta, Thursday Evening.

CONDITIONS bordering on panic were witnessed on the local Stock Exchange on the opening day of the week. Even the Stock Exchange Committee's imposition of a margin for blank sales in Indian Irons proved to be of little avail, as traders outside the official market succeeded in foiling the objective of their resolution in thumping down the price of Indian Irons to as low as Rs 23-10 as any requirements of margin deposit did not apply to them.

But the sharp recovery in prices, that started from Monday, was attributed to the Committee's decision to place also Right shares on the clearing list along with the old shares. This decision led to heavy bear-covering, as holders of old shares were able to sell Right shares before paying the call money on new shares. Moreover, the Committee's resolution to repeal the emergent rule, passed on the 26th February, requesting members to deposit a margin of Rs 3 per share on any fresh sale of Indian Irons, was also a contributory factor. Thus, a revival of bull interest aided sentiment, while bears had to rush in to cover their sales in an advancng market. Towards the close, however, profit-taking at higher levels erased some of the initial gains. The undertone remained fully steady.

Although business in the Giltedged section, continued to be restricted, prices were consolidated and even improved. Enquiry was confined to a few popular issues. 3½ per cent 1986 Conversion Loan, after opening at Rs 74-8, improved at the close to Rs 75-0.

Bank shares ruled quiet; but the underlying tendency was steady. United Commercial lost half a point at Rs 55-12, while Hindusthan Commercial was quoted around Rs 10-0.

Despite firmer advices from the jute goods market, dealings in the Jute section continued to be restricted with prices showing an easier tendency due to firmness of raw jute section. Only bright spots were Howrah which recovered to Rs 18-4 from a low of Rs 17-9; National to Rs 19-4 from Rs 18-0 and Barnagore to Rs 96 from Rs 94-0. Belvedere were nearly maintained at Rs 105, while Budge-Budge were cheaper at Rs 101 against Rs 103; Delta at Rs 132-8 against Rs 145 and Kankinarrah at Rs 64-8 against Rs 71-8.

Coal shares lacked any support, although a few selected ones managed to maintain their previous levels. The general feeling, that the recent increase of Rs 1-8 per ton in the selling price of coal would hardly cover the increase in costs, depressed sentiment in this section. Burrakur, after improving to Rs 21-7 from Rs 21, eased off to Rs 21-1, while South Karanpura were in enquiry at Rs 9-4 to Rs 9-6. Equitable, were however, marked back to Rs 23-14 from Rs 25-4 with Bengal well maintained around Rs 443. Central India came in for some support upto Rs 6-12 from Rs 6-8.

Sentiment in the Textiles section, remained depressed in view of the sluggish conditions prevailing in the cloth market, accumulation of stocks and the fears with regard to the profit outlook for the industry. The only steady feature was Kesoram, which hovered turned quiet at Rs 7-12 against Rs 7-15 narrowly around Rs 14-15. Cawnpore with New Victoria moving narrowly between Rs 1-14 and Rs 2 and Jayshree between Rs 5-12 and Rs 5-14.

Although Tea scrips shared the general trend of the market, operators continued to lend support only to a few selected ones on quieter advices from the London tea market. There was, however, a general feeling that the outlook for the commodity would be brighter in the new season; and this imparted a steadier feeling in the section. Most prominent scrips were Brooke Bond changing hands at Rs 20-5 to Rs 20-8; Bishnauth at Rs 21-2 to Rs 21-3; Dhalakhat at Rs 21-4 to Rs 21-8; East India at Rs 25-14 to Rs 29 and Hantapara at Rs 188 to Rs 198. Tukvar were a steady feature at Rs 11-8.

The announcement with regard to a further export quota caused a steadier tendency in the Sugar section, where a few scrips scored small gains over last levels. Most prominent was Balrampore, which forged ahead to Rs 8-1 from Rs 6-13. Carew scored As 6 at Rs 7-10; Darbhanga As 2 at Rs 21 and SKG As 4 at Rs 11-1.

The Stock Exchange Committee's decision to place Letters of Right on the clearing list as the seventh scrip was the main contributory factor for a sharp recovery in Indian Irons which, in turn, imparted a steadier tendency to other scrips in the Engineering section. The Committee has fixed Rs 5-12 for Letters of Right. In other words, the value of the Right shares shall be Rs 19-4 (including the issue price of Rs 13-8) as against the ex-right price of old shares at Rs 20-12. Allowing a dividend of one rupee per share on the old shares, there is allowed to remain a difference of As 8 in value between the old and the new shares.

Meanwhile, Indian Irons, after opening at Rs 23-13, gradually advanced to Rs 26-11 due to heavy bear-covering on Tuesday. Price movements on Wednesday were, however, subjected to settlement adjustments. With the result, the scrip was marked back to Rs 26-3 to finish better, on Wednesday, at Rs 26-8 at which level the settlement rate was fixed. From Thursday onward, the scrip changed hands on ex-right basis at Rs 20-6 to Rs 20-8. Letter of Right was quoted at Rs 5-12. TEXMACO recovered to Rs 20-0 from Rs 18-14; Richardson to Rs 19-5 from Rs 17-7; Jessop to Rs 26-4 from Rs 24-8 and Marshalls to Rs 5 from Rs 4-12. Indian Galvanizing remained very steady at Rs 19-8 and so also Burn & Company at Rs 313.

The Miscellaneous section, provided a few bright spots on dividend considerations. Prominent amongst these were Martin-Burn having buyers upto Rs 26 from Rs 25 following the increased dividend from Rs 1-13 to Rs 2-2 per share. Gillanders Arbuthnot were taken upto Rs 13-5 from Rs 12-6 following the increase in dividend from 14 to 16 per cent. Indian Aluminium scored more than a point at Rs 14-4 in view of the increase in dividend from 9 to 10 per cent. Imperial Tobacco were a very firm feature at Rs 14-7, thanks to the announcement of a second interim dividend of 2 per cent for 1957.

Among other scrips, Orient Paper recovered to Rs 32-2 from Rs 30-2; Titaghur to Rs 37-2 from Rs 36-7; India Pulp to Rs 23-2 from Rs 22-10; India Steamship to Rs 10-8 from Rs 10; BIC to Rs 8-6 from Rs 7-4; Rohtas to Rs 18-9 from Rs 17-12; Dunlop Rubber to Rs 25-12 from Rs 25-3; Jardine to Rs 78-8 from Rs 75-12; National Carbon to Rs 26-12 from Rs 25-13; NICCO to Rs 20-8 from Rs 19-11 and Hoare Miller to Rs 8-8 from Rs 8-2. Indian Cable moved narrowly between Rs 28-1 and Rs 28-5, while Alkali Chemicals were sharply marked down to Rs 13-10 from Rs 18-4 following the company's proposal to issue right shares in the ratio of 4 : 1 at par.

*

Bombay

As indicated last week in these columns, the stock market has rebounded with vengence. This is mainly due to technical factors and not that there is any fundamental change in the factors influencing the outlook. As the fall was overdone due to relentless pressure from bear quarters, certain traders got a clue that these operators had exhausted their bombardment and hence they entered the market at the right time. With sellers scarce resulting in shortage of contracts, the market rose smartly around with selected industrials receiving good attention. In view of the hectic recovery, the market may be entitled to a moderate reaction but it appears that lower levels might induce fresh support. There have been rumours that some of the prominent bear operators have not been able to cover their sales in Tata Steel Ordinary, Bombay Dyeing and Century. In the event of their showing any inclination to cover their sales, the market might receive fresh fillip. The general feeling is that the worst has been seen and with irregular movements, prices might stage further modest recovery.

It looks now almost certain that the Congress will be returned to power. The old Parliament is meeting on 18th March and White Papers on Railway as well as Central Budget will be placed before the two Houses on 19th March. The full-fledged budget will, however, be placed before the new Parliament in the month of May. However the Finance Minister may once again reveal his mind regarding fresh taxation on 19th March.

The giltedged market has been in good form though the recovery continued to be of a halting nature. The 3 per cent Conversion Loan has met with buyers at Rs 74-9. Bank shares have ruled quietly steady with spasmodic activity. New India Assurance has eased off to Rs 41-12 on absence of fresh inquiry.

Public utilities were quietly steady. In view of the electricity rules forcing all the electrical undertakings to close their financial year on 31st March, the Hydro-electric company will be declaring this time the dividends for the nine months ending 31st March, 1957 instead of the interim for the six months ending 31st December, 1956.

Shipping shares were firm on active support in Scindia which recored a new high level of Rs 20-13 after a lapse of over 2½ years before terminating at Rs 20-7. Great Eastern improved to Rs 18-12 after early sell off to Rs 17-10.

Tata Locomotive which met resistence around Rs 139 spurted to Rs 149 while Premier Automobile were quiet around Rs 100xd.

In cotton textiles, Bombay Dyeing gave a lead in the upward trend. The decision of the directors to recommend a find dividend of Rs 17-8 (total for the year Rs 25) instead of Rs 12-8 plus a bonus of Rs 5 was well received by the market which took it for granted that the earnings of the company would be well maintained. Moreover, their decision to split up the shares of Rs 250 into 10 shares of Rs 25 each with a view to enable a much larger section of the public to become shareholders of the company has created a favourable impression. The shares moved up to Rs 581-14 from Rs 540 to finish at Rs 576-4. Century were marked up to Rs 482-8 from Rs 457 to terminate at Rs 476. Khatau improved to Rs 200 from Rs 190, while Kohinoor moved up to Rs 338 from Rs 326 to finish at Rs 334. Standard which were sold down to Rs 407-8 were taken up to Rs 440. Svadeshi improved to Rs Steels:

Tata Steel Ordinary shot up to Rs 178-8 from Rs 167 to terminate at Rs 176 on hectic buying and covering. There are reports that two bear operators are credited with blank sales of about one lakh ordinaries.

Bombay Burma after keeping steady slumped heavily on liquidation by tired bulls while certain optrators were reported hedging this counter against purchase of Bombay Dyeing. The shares after being listed ex-dividend (Rs 28-12) were traded up to Rs 662-8 but dropped down to Rs 631-4 to be placed at Rs 637-8. National Rayon which was sold down to Rs 225 spurted to Rs 241 to finish at Rs 237. Premier Construction has maintained the dividend of Rs 8-8. These shares rallied to Rs 187 from Rs 174 to close at Rs 183-8. Shivrajpur were better at Rs 85. Tata Chemicals moved up briskly to Rs 16-10 from Rs 15-4 to terminate at Rs 16-6. Cement shares recorded only a modest rise. A.C.C. were marked up to Rs 170-8 from Rs 166 to finish at Rs 168-8. Tata Oils were quiet at Rs 45-8.

*

Ahmedabad

THE Ahmedabad share market was closed on 6th March on account of the election in the city. However in tune with Bombay and Calcutta, the local market also staged a recovery. Calico improved to Rs 550 from Rs 525, while Ambica improved to Rs 608 from Rs 570. New Shorrock turned higher to Rs 831 as against the recent low of Rs 805. Arvind Mills were marked up to Rs 1,100 from Rs 1,060. Atul Products advanced to Rs 177-8 from Rs 168. Jupiter were reported around Rs 260, Arun Rs 630 and Ashoka Rs 990.

*

GATEWAY NOTES

(Continued from page 440)

been slow in taking the appropriate measures toward getting a better yield from land in the case of a number of agricultural crops, like paddy jute, etc.

The problem facing the Vanaspati industry in India is, however, much more complex than simply one of coping with raw material shortage. The financial impact of the excise duty on oil purchased by the industry constitutes a heavy burden. The excise duty first enters into the price paid by the manufacturers of vanaspati for the oil they consume. Again the manufactures are made liable to a second imposition by the requirements of the Central Board of Revenue on industrial consumers either to produce evidence of payment of duty on oil purchased by them or to pay the duty again. There thus seems to be some point in the contention of Mr Hoskyns-Abrahall that the vanaspati industry is subject to double taxation, though the repetition of the impost is somewhat concealed. In view of the industry's increasing importance in the nation's economy as it primarily caters to the needs of the middle-class people who by the way form the bulk of the population in the country, it is only proper that the industry is afforded equal opportunities with other industries to function smoothly and prosper.

(Continued from page 430)

forming a political party. It is becoming evident in the state of British politics, when the Conservatives can offer better inducements to the voter to vote for them in preference to the candidates of the Labour Party. At the moment, the blunders of Sir Anthony Eden and Mr MacMillan have spoiled their chances at the polls. But there can be no question that the average worker has no evangelical zeal for Socialism as such, and would turn away from it the moment its principles seem to jeopardise his income. The inference is clear that, from the standpoint of the educated, class conscious industrial workers of today, it is wrong to underrate the importance of the concept of welfare or give any big place in it to forms of organisation and titles to ownership of industry. This attitude will become more pronounced in the case of a country like India, where ideas of standards of living are absent and the masses have been obliged to think only of the supplies of necessaries of living.

The severe jolt which recent political developments, particularly party programmes at the time of the elections, have given to the mind of the average man has, of course, to be taken into full consideration. Here, the exaggerated importance given by political leaders to changes in the distribution of the existent national income has undoubtedly created the impression that only Leftist parties, including the Congress, have anything to offer the masses. But that idea is bound to be short-lived. The emphasis that the Second Plan has laid on the provision of employment will open the eyes of the people to economic realities. It is not unlikely that, before the next elections are on, the crystallisation of opinion round the vested interests now created and the needs of the people, who will lack land and employment alike, will turn the people away from purely Leftist ideas. There will then be a chance for the concepts of welfare unrelated to the sharply opposed schools of social thought.

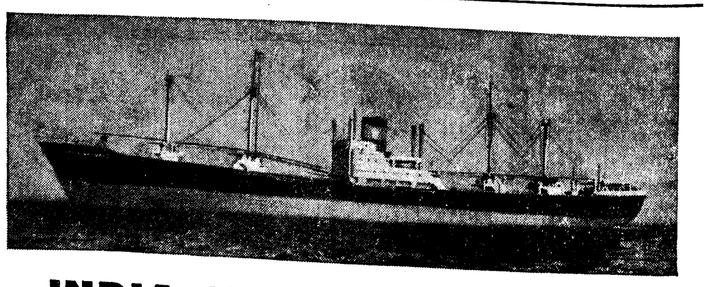
TURNING A NEW ROLL

We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray?
At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.



So what?
Merely that steel tubes pipe up water from deep inside the earth to parched fields, helping to grow a rich harvest. In the cities, countless homes receive a protected supply of water through these pipes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

For the Investor

Cheers No Less than Tears

Investment Gossip:

The strident markets in the early half of last week could not be sustained in the subsequent days either with regard to tempo or price-altitude. There is now a quieter tone, with values a shade easier. Those who visualised a boomlet in the making are not so sure now; but the phase of jutters has, for the time being, been left behind.

The news from the corporate front is encouraging. Bombay Dyeing, the favourite counter in the Textiles section, responded splendidly to the annoucement of the higher dividend and the decision of a split-up of the shares. Ambica, a stock beloved of investors in Ahmedabad, had a superlatively good performance in 1956, and declared an increased dividend.

Hindustan Lever, a recent addition to popular favourites, did much better than was foreshadowed in the published prospectus; and profits and dividend distribution exceeded expectations.

Every bank has shown bigger earnings on bigger turnovers; and, in a number of instances, dividends have been raised. There is also the assurance that 1957 will show yet further improvement. While, on the one hand, banks will account for substantial increases in their portfolios of advances (the most remunerative of a bank's assets), they are assured of central bank credit to the extent required. Rarely have banks been so fortunate as to be able to employ their credit (credit augmented in line with needs) on such a vast and such a remunerative scale. Bank shares are, once again, coming into their own as a prime investment stock.

While investors are, over a period of time, becoming selective and while they confine their preferences and purchases to shares satisfying their shrewd tests, it is noteworthy that shares qualifying for their affections and activities have steadily inceased in number—the latest addition being bank shares; and what is important is that shares thus exalted into the status of genuine investment stocks have maintained, and continued to maintain, an excellent showing.

Imperial Tobacco and National Carbon, Hindustan Lever and Dunlop, Metal Box and Guest, Keen, Williams—these are among the counters which, in recent times, have gathered a good following in investment circles. And such shares have enjoyed a kind of immunity even during the worst spell of jitters.

This is good so far as it goes. But the health of stock exchanges is judged not by the robust steadiness of a few selected scrips, but by the over-all behaviour and performance. If the stock exchanges are regarded as the barometer of national economy, the indications of the past few months are such as to cause the gravest disquietude about the state of the economy.

It is of national importance, then, to restore health and vitality to stock exchange activity and outlook. To the extent that Authority's sins of commission or omission have contributed to the impaired vitality of stock exchanges, it is meet and proper that Mr T. T. Krishnamachari should utilise the impending budget to provide a message of cheer and confidence to economic development and, thereby, to bona fide investors.

If it is true that there can be no planning without tears, it is no less true that the cheers, which the Plan is expected and intended to evoke on its fulfilment, should receive due emphasis in the official pronouncements on the tasks and efforts which the Plan calls for.

£ R$

Investment Forum:

Mr C. L. Jhunjhunwala, Vice-president, Calcutta Stock Exchange Association Limited writes:

I am so sorry to find you comment adversely on the Stock Exchange and its Committee in your issue of the 23rd ultimo. You state that the gambling interests now dominate the market and also allege that the Stock Exchange Committee render full facilities to them. In point of fact, the truth is otherwise. Stock Exchange rules never tolerate gambling, and whatever gambling takes place in stocks and shares takes place outside the official stock exchange and beyond the official hours. The Clearing System is not responsible for it, as you rather inadvertently allege. For we have only very few scrips on the clearing list, and whenever the Stock Exchange Committee perceive any unhealthy development in the prices of clearing shares, it at once takes action. The successive measures adopted by the Committee in recent weeks to stop speculative selling of shares by demanding higher and higher margin against such sales, are a proof positive of the concern of the Stock Exchange Committee to check unhealthy speculation in the market. The point that you apparently miss in this connection is: the Clearing System was also there, when the market ruled healthy and steady. This would unmistakably prove that the cause of the recent downfall of prices is elsewhere. Again how can you invoke the clearing system to account for the present crash in prices when the values of preference shares, of gilt-edged securities and the prices of hundreds of other equity shares (which are not in the clearing list) have in recent times also disastrously slumped.

In the circumstance you should tell your readers that the reasons for the current collapse of stock prices are: the Government's present adverse policies and attitude—towards the investors and the private sector. For the sake of truth, you should tell your readers the real reasons. These may be tabulated below:—

1. The nationalization of the Life Insurance Companies has withdrawn from the market one of its principal institutional support.

2. Imposition of penal taxes on investors (e.g. the supertax on dividends, the bonus tax and the capital gains tax etc) has destroyed the willingness of the investors to save and invest.

3. The current adverse outlook of the principal industries of the country like jute, coal, tea etc, and the official injunction on the company not to raise the rate of dividend on the Iron shares, have utterly annihilated the confidence of the investors in future.

4. Despite the Government's declaration to the effect that the private sector is its ally and collaborator in the execution of the Plan, actual policies and actions of the Government vis-a-vis the private sector have been anything but conducive to its smooth working and its natural growth, development and efflorescence.

With these depressing factors in front, can the investors act and lend their support to the market? Utter lack of investment support, both individual and institutional, is indeed the true cause of the current debacle in the Stock Market, and I trust and feel sure that you will be good enough to disseminate the truth through your esteemed columns.

£ R$

Investment Notes:

Indian Coppers are quoting steady at Rs 3-5. There is a general impession that the company's working results for past year will be satisfactory despite the rise in costs and the general fall in copper prices. Again, there has been no setback of a magnitude that warrants any revision of market ideas about the encouraging outlook for the company.

Hind Cycles are, it is learnt, contemplating to issue right shares in the near future. The proposal is to issue 62,140 Ordinary shares of Rs 100 each, at par, in the ratio of 2:1. There is also a proposal to issue, in one lot or more, 24,963 shares as 6 per cent Cumulative Preference shares of Rs 100 each, at par, to the existing Preference shareholders in the proportion of 2:1 and in the ratio of one new share for every two of the existing Preference shares of Rs 25 each.

£ R$

Investment Briefs:

Ryam Sugar has announced a dividend of 17½ per cent for the year ended 30-6-1956 as against nil in the previous year.

In Cotton Agents Sugar group, New India has raised the dividend from Rs 2 to Rs 2-8 per share and Upper Ganges from Rs 2-8 to Rs 3-0 per share, while Bharat has maintained the dividend at Rs 1-8 per share, all for the year ended 30-6-'56.

Modern Mills, Bombay, have maintained the dividend at Rs 8 (including a bonus of Rs 3) per share for the year ended 31-10-1956.

East India Distilleries have announced a second interim and final dividend of 10 per cent for the year ended 30-9-1956.

Modern Housing & Construction Company has passed over the dividend for the year ended 30-6-1956.

Indian Aluminium Company has recommended a final dividend of 5 per cent, making a total of 10 per cent for 1956 as against 9 per cent in 1955.

Bombay Dyeing has raised the final dividend from Rs 12-8 to Rs 17-8 per share, making a total of Rs 25 per share for 1956 as against Rs 20 in 1955.

Voltas have raised the dividend from 5½ to 9 per cent for the year ended 31.8.1956.

United Breweries, Madras, have declared an interim of 10 per cent for the year ended 31.3.1957.

HIGHLIGHTS

Forecasting of the budget was, for years, Indian Finance's speciality. The interim budget, due to be introduced on March 19, offers no scope for this indulgence.

For one thing, it is a lame duck affair. For another, the secret is out that there will be no budget secret in this interim arrangement.

All the same, a budget-speech is we must remind ourselves, as significant for its review of the state of the nation's economy as for its estimates of surplus or deficit and for its proposals of new taxes or tax remissions.

This week's World of Finance suggests the possibility that if there be modifications at all, they may be of favourable import. In the main, it will be status quo so far as taxation is concerned.

It is, therefore, suggested that the Budget statement should provide an emphatic assessment of the economic situation, present and prospective.

Such an appraisal is urgent and imperative. Urgent because the country is passing through a crisis of confidence, and no time should be lost in transforming this crisis which is paralysing into a challenge which is exhilarating.

Imperative because, if such a transformation on these lines is not effected now and here, the fountain spring of confidence in the Plan's objectives and in its success will be fouled beyond remedy.

Alkali & Chemical Corporation To Issue Right Shares

Balance-Sheet Reviews:

IT will be recalled that, at the annual general meeting held on the 7th March 1956, mention was made that, if Government's approval was given, it was the intention of the Alkali & Chemicals Corporation of India Limited to manufacture Polythene in India. Imperial Chemical Industries Limited, their technical advisers, have agreed to supply their process and continuing "know-how" on favourable terms. The company has now obtained permission for the project and the Government have also granted the necessary licence.

The plant to be installed has been so designed that its capacity can be doubled with the minimum additional expenditure. It is confidently expected that, when the plant goes into production, India's consumption of Polythene will substantially exceed production. There should, therefore, be no difficulty in selling the full rated output of the factory at a satisfactory price.

The cost of the scheme is estimated at Rs 3.93 crores. It is proposed to finance the project as follows:—By share capital issue Rs 2.48 crores and Loans from an Industrial Credit Corporation, bankers, etc., Rs 1.45 crores. The directors have, therefore, decided to issue 24.80 lakh "A" Ordinary shares of Rs 10 each at par and to offer these shares to the Ordinary shareholders in the proportion of 4 new "A" Ordinary shares for one Ordinary share held. The principal shareholders have already agreed to take up their allotment of 17,53,072 "A" Ordinary shares.

These "A" Ordinary shares will not participate in any dividend which may be paid in respect of the company's financial year ending 30th September 1957; but will otherwise carry full dividend rights as from 1st October 1957 and will rank in all other respects pari passu with the existing Ordinary shares of the company. The issue is not being underwritten, as Imperial Chemical Industries (India) Private Limited have undertaken to apply and pay for any shares which are not taken up.

A circular, issued in the above connection, states that members will have the right to renounce their allotment either wholly or in part, and full particulars will be given in the "rights" letter, to be issued early in April. Imperial Chemical Industries, the principal shareholders, will take up their allotment of Rs 1,75,30,720. Public shareholders are, therefore, being asked to subscribe Rs 72,69,280. Furthermore, ICC (India) Private Limited will take up any shares which those entitled do not apply for or renounce. The issue will result in a further foreign capital investment of Rs 1¾ crores in this country by ICI.

Meanwhile, the working of the company, during the year ended 30th September 1956, reveals encouraging results, thanks to a record production in all units of the Rishra factory. The Chlorine-Caustic Soda plant operated at full capacity in order to meet customers' requirements and the company's own demand for Chlorine used in the manufacture of other products. The extension of the Hydrochloric Acid plant was completed and output increased substantially. Further increase can be made should the demand arise. The expansion of the "Gammexane" Technical Benzene Hexachloride plant was completed and, in spite of intense competition, sales of "Gammexane" formulations again showed an improvement over the previous year.

Sales fo the year have risen to Rs 1.88 crores from Rs 1.55 crores, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 40,20,836 against only Rs 31,28,246 in the previous year. Apart from setting aside Rs 4.67 lakhs for Taxation and Rs 3.00 lakhs for General Reserve, the Depreciation amount has been raised to Rs 10.41 lakhs from Rs 9.49 lakhs and Dividend Equalisation Reserve to Rs 13.64 lakhs from Rs 2.73 lakhs. Reserve for Deferred Income-Tax Liability is, however, reduced to Rs 2.25 lakhs from Rs 12.50 lakhs. The dividend on the Ordinary shares is maintained at 8 per cent.

Trimming Tea

IN India, tea has long since come to occupy the status of the most popular drink for the masses. Lately, it has also gained recognition as the biggest earner of foreign exchange. The two claims compel interest, from the common man equally with those in authority. In recent years, the State has done much directly and indirectly to help the tea industry.

The habit of tea-drinking which spread on the crest of war-time inflation received further stimulus with the advent of prohibition. Perhaps in South India alone, coffee, in spite of its being the dearer beverage, plucked as much of the new custom as tea. In the Deccan and in North India, the erstwhile liquor-addict, when he could not turn to illicit drinking, invariably looked to tea as the only prop for the future. There is no doubt that the recent increase in the domestic consumption of tea is largely due to the official ban on liquor.

The fiscal policy of the Government, on the whole, has not been unfriendly to this industry. While some of the imposts like the Assam Carriage Tax and the Calcutta Entry of Goods Tax are resented by the producers—how far the burdens are passed over to the consumer is not fully ascertainable—it can scarcely be denied that in adjusting export duty, the Government have been consistently jealous of the industry's competitive power abroad. It is pleasing to see that even the restrictions and regulations introduced on management of tea gardens are now understood in a cordial spirit by responsible spokesmen of the industry. Mr J. P. H. Bent, Chairman of the Indian Tea Association, speaking at the annual meeting of that body in Calcutta last Friday, has realistically pointed out how these restrictions are in no way a reflection on the competence or rectitude of the tea-garden managers, but are only a stage in the progress of democracy at which all are "subjected to the regimentation required by the weakest members".

Once this basic change in the relation between State and private industry in India is understood, much of the heart-burning and fear which has crept into the outlook of private industry will automatically be shed. Mr Bent's speech is admirably proportioned, in that it lays emphasis more on the genuine domestic problems of the industry than on the controversial aspects of the industry's relations with the Government. Not that these aspects are overlooked. They do receive due attention. But they are in their place and not permitted to obscure the more vital needs on which every one has to concentrate immediately.

Foremost among these is a shift to quality production. The pressure for quality is not new. In some measure or other, it has always been there. Only, it could be overlooked with impunity as long as there obtained a sellers' market. Once South East Asia recovered from the damage of the Second World War and total world production threatened to race ahead of demand, the question of quality became insistent.

Between Ceylon and India, India produces a much larger crop and also exports much more than Ceylon does. And yet Ceylon behaves as if it has a firmer grip on the international market. There is something called daring in business and let us grant it to Ceylon. But in the present case, there is something else besides, which goes to the disadvantage of India. Indian tea stands behind Ceylon tea in point of quality for proportionate quantities. It is conceivable that India can for a considerable length of time remain unconcerned about quality, if the per capita consumption goes up by at least ½lb per head per year. Statistically the prospect looks quite alluring. And, as the Indian Association Chairman hopes, it can mop up excess production throughout the conceivable future.

But looking into this problem a little deeper, it is plain that the doubling of domestic consumption which the apparently small increase of ½ lb per head represents, is extremely difficult to achieve. Propaganda can do a great deal. Increase of population and standards of living, which a more buoyant economy must necessarily bring with it, will enlarge the market. Even with all these, the total result may not turn out to be so rosy; and calculations based on highly imaginative estimates of annual increases in domestic consumption are bound to come to grief.

Only two alternatives are left, to avoid a possible situation of glut. One is restrained production. Last year's early cessation of plucking, on the basis of a common agreement of the Producers' Associations in North-East India is an inspiring example of appropriate effort in this direction. The second is greater concentration on the improvement of quality. The very insistence on quality would automatically lead to a reduction in world output, without which the international market for tea can never be stabilised.

The fate of the Government of India's suggestion for a new international agreement involving the regulation of exports on the basis of certain national proportions, is a sad pointer. The Government of India suggested for this purpose a standard export figure of 560 million lbs for India and 400 million lbs for Ceylon. Mr Bent emphasises the wisdom of such an agreement, at least by stages, but concedes that Ceylon would be unwilling to co-operate. Unlike India, Ceylon has no potential internal market to tap. What it actually has is negligible.

Whatever be the reason for Ceylon's intransigence, it is clear that in the absence of an agreement, each country will try to produce and export more and more and in the process, all will quickly come up against a world surplus which will either deflate fortunes everywhere or will have to be thrown into the sea by common consent. Neither would be an unavoidable or profitable method of dealing with a problem which is clearly anticipated in every quarter. Being a producer of poorer qualities also, the Indian industry may stand to lose heavily. In this dilemma, India seems to have no other course but to practise some cautious self-denial in the matter of export, which after all it can well afford, being the largest producer of tea; at the same time a vigilant eye should be kept on the behaviour of other producers. As restraint on exports calls for a corresponding restriction of crop, the two will have to go together. This is Mr Bent's recipe too.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

The Personality of India's Mixed Economy—XII

IF the concept of welfare is to inform economic policy in conjunction with a working theory of economic growth, it is essential that it should be related to the various classes into which the country's population can be distinguished, instead of positing a flat equality among them all. The authorities must be content with abolishing poverty, reducing the severities of toil and, generally, introducing a ray of sunshine into people's lives and not aim at realisation of equalitarian ideals which have been formed with little or no reference to the welfare of individuals or of groups in different parts of the country. Equalitarian ideals can only satisfy the aspirations of doctrinaire Socialists or the baser instincts of mere democratic jealousy. In the advanced industrial nations of the West, these ideals have so far served to preserve the alliance between Socialism and the trade union movement. But the parting of ways has already been reached, as shown in earlier articles in this series. The interest of the working classes in their wage packet and the prospects of its increase are too substantial to let them indulge in the comparatively costly luxury of mere jealousy of the richer classes. The USA is unique in that its history has helped all classes alike to set more value on mobility and opportunity than on equality as the dynamic of social progress. Western Europe and the USA are nearly alike in that politicians have little to gain by attempts to rouse the envy of the rich. A century of industrial progress has bred generations of urban labour which knows its interests too precisely to give any room for radical ideas that may jeopardise their economic well-being.

But there has been no similar development in India which can provide ballast for the reformist or revolutionary zeal of the politician. On the other hand, instead of distinct classes each of which is in a position to see its own immediate interest and set it in the light of its long term interests and the interests of the nation as a whole, there is only an amorphous mass of common people who visualise their satisfaction only in terms of the deprivation of others. This is true, so far, of both agriculture and industry. Neither the agriculturist nor the industrialist worker has addressed himself yet to the paramount problem of increasing productivity. The latter thinks only of tribunal awards and wages and bonus payments, while the former is looking to land reforms turning over the whole of the land to him before long.

Neither has yet been enabled to appreciate the needs of the large masses who have neither a job to do nor a piece of land to till. There is some advantage in the fact that the rural agricultural workers have not been misled by any group of politicians into comparing their money incomes with those of urban industrial labour and to press for some measure of equality between the two. The artisanate in the villages, more justifiably, looks to the Government to set it up on its feet and provide the conditions in which it can eke out its livelihood. At the moment, there is great enthusiasm for the schemes which provide aids for the cottage industries. But the people concerned have not figured out exactly the income they will be enabled to make by measures which cost the Central and State Governments a pretty penny. Much less have they given a thought to the curbs on progress in other directions which have been laid in their interest or the cost which the nation will have to bear on this account. The artisans differ from the industrial labour and the cultivators in that they cannot benefit merely by a redistribution of income. But the difference vanishes if we consider that their gains can be made possible only by halting the progress of organised industry or even giving it a positive setback.

Once the possibilities of increasing the incomes of the poor by deprivation of the rich are exhausted, the pressure will be felt alike by the Government and the people to think of economic development on more constructive lines. Politicians may for their own reasons continue to think in terms of nationalisation and the policies of the socialists commonly found in all tracts on the subject. But it is by no means certain that the various sections into which the common people will be economically divided will be found ready to echo their ideas. In India, as in Britain or America, workers in prosperous old established industries like iron and steel have no reason to expect any advantage to themselves from nationalisation. The Government will be hard put to it to lay down standard wage patterns which can be applied with suitable modifications to all state enterprises. The spectacle of different state concerns having different scales and being unable to satisfy their employees is already having its effects. There are wide differences between industry and industry which militate against the principles of the welfare state as well as socialism. The recent efforts of the Government to carry out a general enquiry into the wage structure will require a surer basis of precise ideas about the norms which the country in its present state can support.

The position in the agricultural sector is, if anything, worse. Nearly all the states have carried out more or less radical land reforms which have increased the share of the tiller in the produce of the land and strengthened his right to retain his holding. But it is totally unrealistic to regard all agriculturist interests as falling nearly into two clear-cut divisions, landlords and tenants, and that every step toward eviction of the former will take us nearer to the promised land. Over large areas of fertile land, there is a class of agricultural labourers who are four times as numerous as the tenants with whose interest alone recent legislation is totally obsessed. There is no doubt that the tenants who will now be the virtual bosses of their agricultural holdings will be, if anything, more tyrannical toward their hired labour than the landlords had ever been toward the tenants. "Land for the landless" or "satisfaction of the hunger for land" are glib shallow slogans which will before long lose all the semblance of substance they had so long as there were landlords to be victimised to reformist zeal. But something will have to be done to agricultural labour if there is to be peace and contentment in the countryside. And the task will not be easy. Likewise, the workers in cottage industries will wake up to find that the incomes which they will be enabled to make will hardly be sufficient to sustain them. There is also the educated middle class whose numbers are increasing at a terrific rate because of the expansion of facilities for education. Neither the Second nor any subsequent plan can tackle the problems unless the problems are clearly envisaged in terms of particular classes instead of generalisations about Socialist objectives. The concept of welfare as a determinant of policy will obviously have to differ from class to class and from one setting to another.

Exchange Banks

ANNUAL statements by Bank Chairmen have come to be looked forward to in India as elsewhere with eagerness in as much as they provide authoritative analyses of current economic conditions in the countries in which the Banks operate. The first of the Eastern Exchange banks to publish their results for 1956 are the Mercantile Bank of India Limited and the National Bank of India Limited.

Sir Kenneth W. Mealing, the Chairman of the Mercantile Bank of India Limited, has as usual given a brief resume of the more important economic events during the year in the UK, India, Pakistan, Ceylon, Burma, the Federation of Malaya, Singapore, Indonesia, Thailand, Hongkong, Mauritius, Japan and Shanghai. In short, his review covers the UK, India and the entire Far East except China. Referring to India, Sir Kenneth points out that, as a result of the implementation of the Second Five-Year Plan, "initially it is almost inevitable that a degree of inflation and high taxation must be anticipated and indeed is already taking place". He, however, hopes that "the ultimate effects of the great production and employment that this plan is hoped to produce will justify this great undertaking."

In the portion of his statement relating to the accounts of his Bank for the year ended 31st December 1956, he notes that the Bank's general business has continued to show in 1956 the expansion recorded during the previous year. That the Bank is taking an increased share in word trade with the East is borne out by an increase of £2½ million in Deposits and an increase of over £5 million in Loans and Advances. The net profit at £236,484 is slightly higher than the previous year and the dividend is maintained at 14 per cent.

Mr J K Michie, the Chairman of the National Bank of India Ltd, turns the spotlight toward Africa after covering India, Pakistan, Ceylon and Burma. Mr Michie begins his reference to India by pointing out that all economic activity in the country is being dominated by the Second Plan. While he finds that there is general agreement that "the plan is imaginative and certainly reflects a dynamic outlook and determination on the part of the Government," he notes that there are mental reservations "as to the timing and correlation of certain sections of the Plan and some doubt, having regard to the country's apparent resources—the significant reduction in her sterling balances has to be taken into account—whether too much is being attempted too quickly."

The inevitable consequence of stretched resources has been the emergence of tight money conditions with larger calls on the banking system of the country. The banks have been confronted with the twin problems of assistance to their customers and the "mundane and paramount duty of maintaining a reasonable liquidity." There are only two ways of solving the problem: either by restricting lendings or by finding more deposits. Mr Michie says that the difficult situation has been brought about partly by Government policies and partly by circumstances. Under the latter, he lists the higher freight and other changes consequent on the closing of the Suez and the delayed payments by Government for their imports.

Turning to the affairs of the National Bank of India Limited, we are told that the time is ripe for the amalgamation of Grindlays Bank with National Bank and that it is hoped that the amalgamated unit will begin to function under a new name from 1st January 1958.

The working of the Bank has resulted in a net profit of £432,835 after full provision for taxation, bad and doubtful debts and other necessary provisions against £421,839 the previous year. The dividend is maintained at 15 per cent.

The two chairmen's statements give us a bird's eye view of the state of the economy in as many as 19 countries with almost all of whom India is already having or may be expected to have in the near future close trade connections. Most of these countries are potential markets for our manufactures the list of which may be expected to lengthen considerably in the coming years with the implementation of the Second and subsequent plans.

Food Prospects

That the domestic food situation was not permitted to yield points for Opposition election propaganda except in Bengal and Orissa is a good score for the Government. The national prospect would surely improve with the arrival of about 6,00,000 tons of wheat and 280,000 tons of rice in the course of the next three months. The wheat crop ahead is expected to be considerably better, with 25 lakhs of acres more under cultivation. The acreage under rice, according to the All-India Second Estimate, is higher by 72.5 lakhs and production by 239 lakhs tons. These figures are somewhat disappointing, in relation to the 40 per cent over-all increase in agricultural production, which the Planning Commission asks for.

Though the momentum of increase will gain in the succeeding years, it may not be sufficient to secure the desired target in full. The Government of India have called for reports from the State Governments on district-wise quotas for increases in production. This demand is persumably intended to put all ranks of authority on their toes.

Toward material incentives, the extension of Community Projects could do a great deal. Cooperative farming does not appear to catch as quickly as the Planning Commission and the Congress would like to see. Even in official circles, the enthusiasm displayed for cooperative farming immediately after the return of the Agricultural Mission to China seems to have ebbed. If cooperation could be achieved extensively only through State compulsion and mechanisation is ruled out in the interest of human labour in agriculture, it is imperative that efforts should be concentrated on better yield through more scientific manuring, the only remaining way of increasing total output.

There is no use wasting time in brooding over methods and practices which for political or economic reasons, the nation is not disposed to accommodate. Better manuring is easiest to accomplish, under the present temper of the country, though even here, some prejudices will have to be fought.

*

Burmese Economy

Insecurity of property is never inviting to productive enterprise, nor is inflation generally anything but a hindrance. In Burma both combine. A large part of the rubber area is permanently exposed to insurgent attack. Thanks to the civil war, three million acres of rich land remain lost to cultivation. Mining too is similarly afflicted. For a large number of essential articles, prices within Burma are three to four times as much as in the neighbouring countries to the West.

In these conditions, little could be done to improve the country's foreign exchange position, or to push through development programmes. A few barter deals have enabled the Government to liquidate a rice surplus which once threatened to get out of control, and the best saving feature today is that there is only a small carry-over of last year's crop. In 1956, Burma exported nearly two million tons of rice, which was a post-war record. Burma is now in the comfortable position of having more cash demand for rice than could be met.

While the Government are anxious to provide a favourable climate for investment of foreign capital, foreign economic interests in Burma are not uniformly friendly with all the economic steps taken by the Government in recent months. The Chairman of the Burma Chamber of Commerce has expressed restrained disapproval of the Joint Venture Trading Corporation, an organisation created for the purpose of bringing down domestic price levels. The State Agricultural Marketing Board has to accelerate the tempo of its work, particularly in the matter of providing contracted cargo to shippers. Last week Burma's Deputy Prime Minister who is also in charge of National Economy announced that income from plantations would be taxed.

*

Cement Target

There is alround agreement that India should produce much more cement annually than it now does. The Planning Commission estimates that an output of 16 million tons, to be attained by 1960, will just meet internal demand. There are a few who think that this much of cement will leave a large surplus.

When authoritative estimates differ widely even about current demand, the Union Ministry of Commerce and Industry putting it at roughly 10 million tons and the Sub-Committee of the Irrigation and Power Engineers' Seminar placing it at around 14 million tons, there is reasonable scope for divergence in estimates of where the demand would stand four or five years hence. A big margin has to be allowed for possible deviations in the pace of general economic development. The special point with cement is that it is a commodity which determines the pace and at the same time is influenced by it.

The Government of India stick to the target of 16 million tons for 1960, which means an additional 10 million tons from the present annual rate of production. This total increase is to be achieved through the expansion of existing units and partly through the establishment of new ones. For the next four years 36 new cement factories are envisaged. These factories will be dispersed over many States; Andhra and Bombay will be having 7 each; Madhya Pradesh and Rajasthan 3 each, Madras, West Bengal and Assam 2 each and Bihar, Orissa, Mysore, Uttar Pradesh and Pondicherry 1 each. Costs of production between the different areas are bound to show differences, as they are not equally well situated in respect of raw material supply and their transport costs. There are misgivings also about differences in quality.

But these should not cause concern, as centralised technical advice is likely to be available. The establishment of a factory in Bombay for the manufacture of cement-making machinery is a notable landmark in the progress of the industry. In the Second Plan, however, the country has to depend on imported plant. The total capital investment for the entire expansion scheme will be around Rs 100 crores which is not prohibitive when considered in relation to the basic character of the industry concerned.

*

Checking Adulteration

As President of the Bharat Sevak Samaj, Pandit Nehru has issued a fifteen-point appeal. Obviously the points chosen by him indicate glaring national weaknesses. Social regeneration is a matter as much for individual initiative as for collective action, especially at a time when organised non-official groups and the State have undertaken an overwhelming responsibility for the shaping and direction of events. The individual, even the less honest type, who finds himself a helpless victim of a cruel and despotic environment is invariably more to be pitied than condemned.

Adulteration, for instance, has become nearly universal practice and extends to all kinds of commodities. While appeals from high places may infrequently touch a sinful conscience, the total effect is not likely to be anything but negligible. Particularly in the matter of essential foodstuffs such as rice, wheat flour, milk, ghee, and edible oils, Governments can with greater determination and a more impressive show of severity, counteract the evil to a much greater extent.

In some of the bigger cities, adulteration of foodstuffs seems to be regarded as almost a matter of course. The measure of public helplessness is reflected in the amusing story of a person complaining of intestinal trouble immediately he started purchasing pure milk from a dairy farm; his system had got so thoroughly acclimatised to adulterated stuff that pure milk was found intolerable.

Supply is equally important. Why the Government did not pursue the idea of large-scale imports of foreign ghee, when there is a chronic dearth of domestic supply remains a matter of surprise. In Madras milk pays a tax. In certain matters, the authorities should not wait for a public outcry against bad conditions. Pandit Nehru's appeal must find response as much from those who run the Government as in others who personally contribute to the evil.

World *of* Finance

On the Eve of the Budget

Soon after this number of Indian Finance is in the hands of its readers, the budgets, for the Railways and for the Centre, will be presented in a necessarily brief session of the Parliament. Finance Bills will be introduced and passed, the formality being required to provide a three (or four) months extension to the life of taxes which, otherwise, will expire at the end of the fiscal year. The general impression is that, toward this end, the existing Finance Acts will be reframed in the form of bills; and that there will be no material changes. No tax changes are expected, though there is nothing to prevent the Railways Minister or the Finance Minister from utilising the opportunity for effecting such modifications as they may consider warranted by the experience of the past few months. It may, however, be assumed that, in what is essentially a formality of budgetary responsibility, anything that may raise a controversy will be avoided. It follows that, while not ruling out changes which may cause cheer, those which may be construed as adverse are most unlikely.

By the same token, reviews dealing with the progress and achievements of individual ministries will be more appropriate after the new Cabinet is formed, and the Ministers have settled down to their respective charges. The retrospect, thus to be furnished at the full budget session to be convened in the summer, may also include a prospect visualised on the basis of new policies designed by the Cabinet as appropriate for the next quinquennium which, coinciding with the vigorous implementation of the Second Plan, will naturally be regarded as a challenge to ingenuity and as an opportunity for confident leadership.

If tax changes of an unfavourable import and the customary reviews of ministerial accomplishments will, in this view, be held over for the summer session, there is no reason why the Finance Minister should have similar qualms with regard to a general and even detailed survey of economic trends and developments. We are firmly convinced that, while the other issues can and should be kept over for consideration by the newly-elected representatives of the people, an authoritative assessment of the main economic problems is both urgent and imperative, so that the public at large have a correct measure of the tasks ahead and of the range of resources which the Government, with their co-operation, hope to mobilise for the triumphant accomplishment of those tasks.

We have said that such an appraisal is imperative. It is imperative because there prevails today a crisis of confidence; and the great projects which we have embarked upon are practicable only in a climate of confidence and in an atmosphere of enthusiasm which only confidence can generate in the needed measure and at the concerned governmental and popular levels. There is a section of the business community which, with a propagandist fervour worthy of a better cause, is bent on fostering the impression that the Second Plan is too ambitious to succeed; and that the strain thereby caused will result in the gravest imaginable crisis. On the side of the Government, there has been far too much talk on the virtues of tightening the belt, the thrill of sacrifices, the patriotic implications of onerous taxes and the glory of the present generation assuming prodigious burdens with the noble intent of enriching and brightening the lives of future generations. All of which is platitudinous and what is worse, has a suicidal effect as it only strengthens the hands of the Plan's critics, while having a disturbing psychological effect on the general public, whose understanding in this respect is getting confused, instead of becoming clarified. It is forgotten that people are ready for sacrifices and deprivations, not when they are depressed and diffident, but when they are elated and full of zest. Mr T. T. Krishnamachari's survey of India's present and prospective economic situation must cure the country of the diffidence caused by grim propaganda, on the one hand, and by loose talk, on the other, and inspire in it the faith that the Second Plan, in its essentials, is the economic and social magna charta as an inevitable corollary to the attainment of political freedom; that the stability of India's independence can be maintained and sustained only by a healthy and strong national economy; and that the entire nation, by the grace of God and by the force of popular co-operation, can be animated by the resolve, and endowed with the resources, needful for the fulfilment of economic well-being conceived as a democratic objective and pursued by democratic processes.

India's freedom struggle was planned by Mahatma Gandhi as a mass movement with the emphasis, all the time, on the means as much as on the end. India's economic struggle, too, as planned by the Prime Minister, is a mass movement, with as much emphasis on community projects as on heavy industries; on cottage industries as on organised industry; on rural welfare as on urban development; on agriculture as on commerce and industry; on social as on economic objectives; on means as on ends. There is an apt blend of material and moral values, of ambition in targets and realism in details. Thus addressing ourselves to the tasks and responsibilities of the Plan, we are equally alive to the potential resources and to the practical limitations.

In the last few months, we have been foisting our attention exclusively on the limitations. This was necessary up to a point, but dangerous beyond a point. Our realism must not result in paralysis. If, by mistaken tactics or by inadvertence, the bounds of confidence have been exceeded, we have to remind ourselves that, in this great adventure, we were not so imbecile as to think that, from A to z, progress would be smooth and automatic; that, in fact, we have had, from the outset, a clear idea of the many problems that will arise and that will need all our resourcefulness and all our resources for appropriate solution; and that such problems as have been thrown up in the past few months, such as rising prices, swiftly expanding consumption, rapidly dwindling foreign assets, etc., are in no sense surprises, but developments on anticipated lines. None of the present difficulties has the quality of startling suddenness. We were prepared for them; and we were also prepared with a number of plans to meet each one of them. We are already in sight of the difficulties being competently resolved. Take the banking situation. The authors of the Plan foresaw a monetary demand accelerating in geometrical progression. On the eve of the current busy season, the omens were read aright; and Authority took the initiative in bold and vigorous style. It can now be said that the banking system is today fully equipped and ready to meet the utmost demand of accelerating economic activity. Or take the health of the giltedged market as a condition precedent to the successful securing of the large market-loans that will have to be raised in the coming years. Authority has given an impressive and inspiring demonstration of what is meant by a flexible policy of selective monetary control, and ensured the maintenance of confidence among the large body of investors in giltedged stock. What time money rates have hardened, giltedged prices have strengthened. 3 per cent Conversion Loan 1986 has firmed up from Rs 73 to Rs 74-10.

Or take the question of the heavy loss of foreign balances. A number of measures have been taken on hand. A substantial line of credit has been secured from the International Monetary Fund under the emergency aid provisions. Loans in regard to the projects in the sphere of Railways and Harbours are under negotiation with the World Bank; and consultations are proceeding briskly. It is admitted that India has made out its case with great competency; and the World Bank will, it is now reasonable to hope, give loans of such magnitude as will take care of a good part of the foreign exchange requirements of the projects embraced in the transport plan. The US Government, too, have been appraised of India's special needs and its case for special consideration; and, if political issues do not get too embittered, aid from this source on a bigger scale may be expected. Good progress is also being made in a number of transactions to secure foreign machinery on extended credit basis. By these and other means, the foreign exchange problem is now far from menacing.

Government's budgetary position continues to be satisfactory. So also the ways and means position. So comfortable is the situation in the latter respect that the actuals for deficit financing in 1956-57 may turn out to be no more than 60 per cent of the original estimate.

Finally, a word about the dreaded new taxes. Here also, Mr Krishnamachari will be able to tell the country that the proposals introduced in the current financial year will fill a good part of the gap. Tax adjustments rather than additional taxes, tax enforcement rather than more tax imposition, are the direction in which Government's tax policy is headed.

Othello won the heart of fair Desdemona by his plain, unvarnished tale. Mr T. T. Krishnamachari can win the confidence of the country, and can inspire well-spread confidence in the country, by utilising the Budget Day for a plain tale of the difficulties which the Second Plan has encountered and

Will Socialism Return in Britain?

By PAUL EINZIG

The results of recent by-elections in Britain cash gloom over those sections of the community which stand to lose a great deal as a result of a return of the Socialist regime after the next general election. Foremost among the potential losers are businessmen and investors. Hence the setback on the Stock Exchange inspite of the improvement of Suez Canal prospects. The tendency of sterling seems to indicate that pessimism about the domestic political outlook in Britain is not confined to Britain. Beyond doubt, the recent increase in the number of Socialists in the House of Commons by the two victors in recent by-elections, and the disastrous slump in Conservative majorities in three constituencies where Government supporters have retained their seats, gives much food for thought. It is widely assumed that, should the general election take place tomorrow, the Labour Party would return with a record majority. And there can be little doubt about the nature of the anticapitalist programme which the new Labour Government, headed by Mr Gaitskell, would adopt.

That programme would include among others the following legislative action:—

(1) The re-nationlisation of the iron and steel industry and of road transport services de-nationalised by the Conservative Government.

(2) The nationalisation of several other industries, including the chemical industry.

(3) The acquisition of large Government holdings in a number of privately-owned industrial firms.

(4) The withdrawal of the minor fiscal concessions made by the Conservative Chancellors of the Exchequer to medium and large income groups.

(5) The introduction of a tax on capital gains.

(6) The adoption of severe measures against the various methods of tax avoidance which are legitimate under existing laws.

(7) A drastic reduction of business expenses allowable for taxation purposes.

(8) The adoption or curtailment of free dealings in grain, cotton, metals and other international commodities.

(9) The restoration of certain physical controls, especially price fixing, building licensing, and allocation of raw materials.

(10) The reversal of the trend towards a full convertibility of sterling.

(11) The increase of Welfare State benefits involving further burdens to employers and taxpayers.

(12) The relaxation of the credit squeeze and return to cheap money regardless of its inflationay effects.

By far the most important consideration from the point of view of the foreign exchanges is whether a future Labour Government would abandon the rigid defence of the present dollar parity of $2.80. Some years ago Mr Gaitskell committed himself in print to the view that, while opposing a freely fluctuating sterling, he would favour its devaluation from time to time, whenever the level of domestic prices and costs results in a disequilibrium leading to a substantial deficit of the balance of payments. That was years ago, however, and since becoming the Leader of the Labour Party Mr Gaitskell expressed no such dangerous views. Nor is there any reason for believing that Mr Harold Wilson, who is the Socialist candidate for the post of Chancellor of the Exchequer, holds such views.

Even on the assumption that a Socialist Government would have every intention to defend sterling, it is open to doubt, however, whether on the basis of the above programme this would be practicable. It is of course arguable that physical controls would make the defence of sterling easier. There are many non-Socialists who are convinced that it was a grave mistake on the part of the Conservatives to restore the international commodity markets, to progress too rapidly towards the convertibility of sterling and towards non-discrimination in foreign trade, and to rely almost entirely on monetary controls for the defence of sterling. It is felt in many quarters that the anti-capitalist ideological dogmatism of Socialists is equalled, by Conservative ideological dogmatism against physical controls. Allowing for all this, for the favourable effect of cheap money on the Stock Exchange and also for the possibility that the trade unions may be less hostile towards a Socialist Government than they have been towards the Conservative Government, there remains enough in the above Socialist programme to make the flesh of businessmen and investors creep at the thought of a Socialist victory.

The chances of a Socialist Victory at the next general election are in reality not nearly as high as would seem from the recent by-election results. And, above all, an early general election is most unlikely. The Conservatives are having a bad time, but if they need not go to the country for another two or three years they stand a good chance of recovering most, if not all, of the ground they have lost since the last general election.

It must also be borne in mind that a great many Conservatives who abstained from suppoting the candidates of their Government at recent general elections would think twice before adopting a similar negative attitude at a general election when their abstention might bring in a Socialist Government. The middle class intelectuals, who in 1945 were largely responsible for the size of the Socialist majority, have become in the meantime thoroughly class-conscious as a result of the "persecution" of the middle classes by the Socialists. It is true, members of the middle classes have become dissatisfied with their treatment by the Conservative Government, and that is why so many of them were sulking in their tents instead of coming to the aid of their Party at the recent by-election. But they felt they could afford to express their annoyance without endangering the existence of the Conservative Government.

Even if the Government should lose a few more seats, its majority would remain safe enough for all practical purposes. The Government's Conservative critics hope that, as a result of such losses and of the decline of Conservative majorities in seats retained by Conservative candidates, the Government could be given a much-needed reminder that its existence depends on its support by the middle classes.

Barring the loss of something like thirty seats at by-elections—which is inconceivable—there is no constitutional reason why there should be a general election before 1959 or 1960. It is not unreasonable to expect that by that time public opinion will have overcome the adverse effects of the Suez crisis and the unpopularity of the de-control of rents. Moreover, it seems reasonable to suppose that the Government will heed the warning and will do something within the next

World of Jute

Outlook for Jute Goods

Production of jute goods in February at 80,200 tons is 8600 tons lower compared with the production during January. The fall in output is evidently due to the fact that February had been a short working month when mills had worked for 192 hours as against 212 hours in the previous month. During the corresponding month of the previous year production and hours worked had been higher at 92800 tons and 200.5 hours respectively. The higher production during February 1956 had been made possible by, apart from the larger number of hours worked, the larger percentage of looms that had been in commission at that time.

That the jute goods industry has achieved considerable success in implementing its programme of planned production is evident from the high proportion of hessian output. Whereas last February hessian output had been no more than 32000 tons while sackings output stood at 54700 tons, last month the production of hessian amounted to 35000 tons while sackings were no more than 39600 tons. Compared with January, output of hessian has decined by 3800 tons while that of sackings has fallen by 3900 tons. This indicates that there has not been any marked shift in the production of the two main varieties of jute goods during the month.

From the two sets of figures so far available it would appear that despatches during February cannot be described as low. For, roughly speaking despatches during last month should have been around 85,000 tons. This will compare with 78,800 tons despatched during January 1957 and 80,000 tons during February 1956.

Thus the second month of what is generally described as the slack quarter for the Jute industry has actually recorded some significant improvement. The sizable decline in Sackings stocks should be particularly welcome to the Indian World of Jute as the high level of the stocks of heavy goods has been one of the main handicaps of the industry. Writing about the immediate outlook for jute goods Messrs J. Thomas & Co Ltd., Calcutta, in their monthly report for February observe that 'there is no reason to suppose that consumer demand for Calcutta gunnies will, during 1957, fall below that of 1956; and with production at its present level the end of the year may well see mills' stocks of goods down to a very modest figure indeed'.

*

The jute goods market opened the week on a firm note especially round sackings, sentiment having been helped by the larger-than-expected decline in sackings stocks. With mills evincing little interest at prevailing rates, prices were pushed up considerably against keen speculative interest. B Twills Ready advanced sharply to Rs 111-4 from previous closing of Rs 109-4. Hessian 40"×10 oz Ready also moved up to Rs 40-8 from Rs 40-2 in sympathy with BTwills.

Trading on Friday was somewhat dull in the beginning with prices fluctuating within a narrow range; but toward close on news of a Burmese tender in B Twills, heavy goods made further substantial gains. B Twills Ready by close of the day was placed at Rs 112-14. Hessian 40"×10 oz Ready, however, closed four annas lower on balance at Rs 40-4. Saturday found the market again in a cheerful mood with prices all along the line continuing their upward movement on bear covering. B Twills Ready gained another six annas to be finally placed at Rs 113-4 while Hessian 40"×10 oz also showed a substantial improvement at Rs 41-1.

Though conditions continued to be steady in earlier dealings on Monday, the market developed a reactionary tendency due to selling pressure in Fatka. Small local enquiries in Liverpool Twills and Heavy Cees Plain were, however, reported during the day, but mills showed no interest. B Twills Ready also lost ground to come back to Rs 40-11.

The fact that jute goods production during February had totalled only 80200 helped market to regain part of the loss and B Twills Ready was again marked up to Rs 112-4 with Hessian 40"×10oz Ready done up to Rs 41. Owing to the "Holy" holiday mood of most marketmen, the market however, ruled unchanged and on Wednesday prices developed a sagging tendency in the absence of business. B Twills ready closed the week at Rs 111-12 with Hessian 40"×10 oz Ready placed at Rs 40-10.

The following table shows the week's opening and closing prices:

	Week's Opening	Week's Closing
Hessians:	Rs. a.	Rs. a.
40"×10 oz.:		
Ready ...	40 8	40 10
July-Sept. ...	40 10	40 14
40"×8 oz. ..	33 14	33 13
40"×7½ oz. ...	31 2	31 4
Sacking:		
B. Twills—		
Ready ..	111 4	111 12
July-Sept. ...	112 4	112 0
Hy. Cees Green ..	113 8	113 10
Cornsacks ...	113 8	113 0
Cubans ...	135 0	135 8
A. Twills ...	133 12	133 9
L. Twills ..	127 8	127 10
D. W. Flour ...	133 8	132 12
Sugar Bags ..	127 8	123 4

The raw jute market opened the week on a steady undertone with Assam Bottoms for March-April delivery quoting at Rs 29 per maund. Sellers continued to be reserved. The firm tendency noticeable in the goods section imparted further strength to the market on Friday and Assam Bottoms made headway to be placed at Rs 29-8 per maund. In subsequent trading the undertone was somewhat easier in sympathy with the lower goods prices. Mills also did not evince much interest at prevailing rates. However nominal quotation of Assam Bottoms was placed at Rs 29 per maund.

World of Tea

Prospects for End-of-season Teas

ACCORDING to tea sources, the recent improvement in Tea prices is unlikely to be maintained although the quantity available in auctions is very limited. Teas, that now remain to be sold in Calcutta, are of end-of-season manufacture and these types have seldom been supported by the export buyers. Owing to fairly consistent buying during the past months, the UK has built up substantial stocks, which should prove adequate during the next few months. The latest figures reveal that stocks in London have risen from 98.03 million pounds to 107.87 million pounds in the week ended March 1. The UK is not, therefore, expected to operate to any large extent during the coming month.

The USSR, having already purchased some 17 million pounds, also appears to have fulfilled her needs. It, therefore, seems unlikely that she will re-enter the Calcutta market this season. Again, there is now little of the North Indian crop remaining to be sold in the Calcutta auctions; and it is expected that the bulk of the teas will have been sold by the end of March with possibly a final clearing-up sale early in April.

In this connection, the latest monthly report, issued by Messrs J. Thomas & Company, states:

"It appears that internal operators will be providing the most support as was the case during the last sale of February when "teas for price" rallied to some extent. Moreover, it will be of peculiar advantage to the internal buyers to buy during the coming month since they will encounter less competition from out-market buyers. Also, the high price at which Export Quota has been changing hands lately should provide added incentive to them, because they will be able to procure "teas for price" for their internal sales at substantially lower rates. Taking these factors into account, we can visualise no noticeable increase in buying activity on the Calcutta market. At the same time, there are no indications that there will be any major recession in prices in the coming month".

The Chairman of the Indian Tea Association has emphasised the need for further concentration on the quality of tea to compete with other producing countries in the buyer's market. He states that circumstances in 1957 may make it impossible to correct any over-production by a last-minute agreement to an early cessation of plucking. Consumption of tea in overseas countries may increase following intensive propaganda; but there exists the danger of production outstripping demand before the effect of that increased consumption is felt and it will become difficult to sell the poorer qualities of Indian tea. It is, therefore, essential that India should prepare herself to meet this contingency.

The Chairman adds further that a new Tea Agreement, at least between India and Ceylon for regulation of exports, will be of the greatest importance. The existence of such an agreement should make it easier for these two countries to come to terms over the regulation of exports in future years. Circumstances may later make other countries see the wisdom of becoming parties to it also, especially if production increases significantly in Indonesia and Africa, and exports from China and Japan continue to expand.

Meanwhile, in the Export Sale held in Calcutta this week, there was less demand than in recent weeks. Offerings consisted of 53,857 packages and the majority of these were sold upto As 3 per pound easier at the close of sale. The strongest feature of the sale were the few bright liquoring Assam teas and stylish Whole Leaf grades, which were well supported and were at times dearer. The few Tippy sorts, on offer, were again keenly competed for. All other descriptions showed a decline of one to three anna per pound, especially the poor liquoring teas. Broken Pekoes were generally in more demand than Fannings, except in the case of clean, black Fannings suitable for the Middle East.

The majority of the CTC teas, on offer, were of poor quality and these were a very weak feature, being fully As 3 to As 4 per pound easier. Many lines of these had to be withdrawn. Following rates were quoted:—Clean Black Pekoe Rs 2-2-0; Plain Broken Rs 1-12-6; Medium Assam BP Rs 1-14-0 to Rs 1-14-6 and Best CTC Assam BP Rs 2-2-0 (nominal).

*

In the Internal Sale, offerings amounted to 17,227 packages. The market was again easier for most descriptions; but the demand improved as the sale progressed. The best bright liquoring CTC Assams were keenly competed for and were generally dearer; but the more or-

may be expected to encounter in the future; of the extent to which they are on expected lines; of the measures already taken or likely to be taken to overcome them; of the success that has attended or may be expected to attend such efforts; and, finally, of the stature of India as it emerges from the era of Planning, tested and envigorated by the trials and ordeals met in a gamely spirit and tackled with all the ardour and high resolve of young freedom.

+

Reduction in Tax Incidence?

In an earlier paragraph, we have suggested that, if at all there be any tax change in the impending Budget, they will be in the direction of reducing tax incidence. The instances we have in mind are a reduction in the excise duty on cloth and a lower stamp duty on usance bills. In both these respects, the modification can as well be effected by executive order; but the occasion of a Budget may be pressed into service. At the time when the excise duty on cloth was last stepped up, it was pointed out by the Finance Minister that the increase was not designed in the interest of revenue, but as an anti-inflationary measure; that he expected this step to stimulate consumer resistance in regard to cloth; and that he would not hesitate to lower it if the intended effect took place. The Finance Ministry's intelligence units in Bombay and Ahmedabad should have put New Delhi wise with regard to the materialisation of consumer resistance and the resultant piling-up stocks in the godowns of the mills as well as in the hands of the trade. The signal is thus vouchsafed for a lowering of the excise duty.

So far as the stamp duty on usance bills is concerned, the Act provides for a maximum of 1 per cent and leaves the actual rate to executive decision. On the Act being passed, the Reserve Bank was, presumably, consulted on the exact rate to be enforced; and the rate of ½ per cent was decided on in terms of the advice tendered by the Reserve Bank. It is generally supposed that this addition means an effective 4 per cent rate in respect of advances made by the Reserve Bank against usance bills to scheduled banks. On the experience gained in the last two months' working, the Reserve Bank could not have failed to notice that the rate, in effect, works out to more than 4 per cent. If the advances on bills are kept for the full period of three months, the incidence of the duty will work out to just ¼ per cent. Banks, however, have a flexible practice in this matter and repay the advances earlier than the maturity dates of the bills. Whenever banks find themselves with surplus balances with the central banking institution, proportionate liquidation of the central bank credit is effected. If the bills created ad hoc for the specific purpose of the loans taken from the Reserve Bank are used as security only for part of the customary three months' duration of a bill, the incidence of the stamp duty becomes correspondingly higher. Our enquiries go to show that, in actual practice, banks find that the additional impost they have to bear will be between ¾ per cent and 7/8 per cent. This, in part, explains a marked hesitance on the part of banks to take advances under the bill market scheme. It is obvious that neither the Finance Ministry nor the Reserve Bank expected that the practical effective rate in respect of advances on bills will turn out to be more onerous than 4 per cent. It is also obvious that the extra burden sought to be thus imposed was ½ per cent and no more than half per cent. In the light of the developments thus outlined, there is a clear and urgent case for reducing the stamp duty to ¼ per cent. The Budget statement is, we believe, the appropriate opportunity for announcing this welcome relief. It must also be remembered that banks who make a flexible use of the bill market scheme keep in their portfolios bills for an amount considerably exceeding the intended loans. This is another factor working for the effective rate becoming higher than the nominal rate.

+

Deficit Finance for Rs 10 Crores

In an era of deficit financing, the peak in this respect is attained in the last month of the fiscal year. The returns of the Reserve Bank for the week ended March 8 disclose deficit financing of the order of Rs 10 crores. And there is every reason to think that, in the subsequent months of March, recourse to created money will be recurrent and substantial. For, there is in the first instance, the payment by the Centre to the State of the latter's share in the income tax pool. Secondly, the year-end settlement of the loans and contributions provided for in the Centre's Budget as payable to the States will involve a considerable transfer, on account of which the Central Government will need to augment their cash. This transfer will, to some extent, be offset by payments due from the States in respect of equated instalments on the outstanding loans. Thirdly, the last-minute rush lest grants should lapse means hurried presentation of bills by contractors and suppliers and prompt payment by Government. This also involves a considerable drain on the Centre's balances. March is a month of heavy disbursements and large inter-Governmental transactions.

During the week ended March 8, the Central Government have, as shown in the latest Reserve Bank returns, had recourse to ad hocs for Rs 10 crores. Currency has been expanded for Rs 9.34 crores against Rupee Securities. Rupee coin went out into circulation for Rs. 1.02 crores. Active Note circulation, in response to and as a result of month-early disbursements, rose sharply by nearly Rs 15 crores to Rs 1525.91 crores from Rs 1510.96 crores. In the result, the Reserve Bank's cash in the till was depleted by Rs 6.03 crores and stands at Rs 9.55 crores.

The Central Government's deposits have inspite of deficit financing for Rs 10 crores, declined by Rs 3.22 crores to Rs 51.88 crores. The net expenditure of State Governments would also appear to have been heavy: their deposits fell by Rs 0.95 crores, the while that their borrowings from the Reserve Bank went up by Rs 3.77 crores to Rs 11.40 crores. Other Deposits are more or less unchanged at Rs 41.84 crores.

Member banks have not had any difficulty in meeting month-early disbursements. Their deposits have fallen by Rs 1.01 crores to Rs 52.24 crores; but this has apparently been accompanied by net repayment to the Reserve Bank, as suggested by the decline of Rs 1.54 crores in Other Loans and Advances. The amount outstanding against usance bills is slightly lower at Rs 55.92 crores against Rs 56.84 crores.

For the first time in four weeks, the Reserve Bank's Investments do not show a large increase, possibly indicating that member banks did not find it necessary to replenish their resources by sale of giltedged. Balance Held Abroad have marked a decline of just under Rs 4 crores to Rs 98.89 crores.

The return of the State Bank for March 8 discloses a small drop of Rs 0.35 crores to Rs 275.66 crores in Deposits. Borrowings have gone up by Rs 2.04 crores to Rs 9.50 crores. Cash balances have improved by Rs 1.09 crores to Rs 19.08 crores. Advances are higher by Rs 2.33 crores at Rs 174.99 crores.

Deposits of member banks have, according to the statement of Scheduled Banks for March 1, shown a further rise of Rs 1.47 crores to Rs 1163.08 crores. Borrowings from the Reserve Bank are marked down by Rs 3.54 crores at Rs 81.31 crores. Cash balances have been run down by Rs 1.96 crores at Rs 110.31 crores. There has been dis-investment in Government securities for Rs 1.33 crores, bringing the total of sales since February 1 to Rs 11.02 crores.

+

The statement of the State Bank of India for the week ended March 8 reveals a slight decline in deposits to Rs 275.66 crores from Rs 276.01 crores in the previous week. Borrowings from other banks are higher by Rs 2.04 crores at Rs 9.50 crores and other liabilities by Rs 0.88 crores at Rs 18.20 crores.

On the assets side, cash balances have improved from Rs 17.32 crores to Rs 18.20 crores. Investments are slightly lower at Rs 106.56 crores against Rs 106.82 crores. Advances have risen by Rs 2.34 crores to Rs 175.00 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 0.13 crores and "Bills Discounted and Purchased" for Rs 2.21 crores.

+

According to the returns of the Scheduled Banks for the week ended March 1, total demand liabilities have risen by Rs 6.20 crores to Rs 700.73 crores, while time liabilities have declined by Rs 4.73 crores to Rs 462.35 crores. Borrowings from the State Bank are lower by Rs 0.62 crores at Rs 10.17 crores and those from the Reserve Bank by Rs 3.54 crores at Rs 81.31 crores. Cash and balances with the Reserve Bank have moved down from Rs 88.69 crores to Rs 88.17 crores and Investments from Rs 351.58 crores to Rs 350.26 crores. Advances are shown at Rs 698.65 crores against Rs 695.57 crores; Inland Bills at Rs 106.07 crores against Rs 104.84 crores and Foreign Bills at Rs 57.54 crores against Rs 57.05 crores. Money at call and short notice stands at Rs 12.66 crores against Rs 13.67 crores.

BALANCE-SHEET REVIEWS

(Continued from page 460)

£ R$

Gillanders Arbuthnot

The working of Gillanders Arbuthnot & Company has resulted in a slight rise in earnings during the year ended 31st March, 1956. The increase in earnings would have been more pronounced, but for some loss incurred in the relinquishment of the managing agencies of many important companies, such as, Gondalpara Mill, Hooghly Mills, Arcuttipore Tea Company, Cherra-Chhatak Ropeway Company and Air-Conditioning Corporation Limited.

"Commissions and Allowances" are shown at Rs 58.59 lakhs as against Rs 56.59 lakhs and "Income from Investments" at Rs 11.79 lakhs against Rs 6.97 lakhs. Net profit, after Depreciation and Taxation, amounts to Rs 31,85,396 against Rs 31,55,346 in the previous year. The directors have, after providing Rs 1.82 lakhs (Rs 1.84 lakhs) for Depreciation; Rs 12.83 lakhs (Rs 12.44 lakhs) for Taxation and Rs 6.17 lakhs (Rs 4.00 lakhs, for Contingency Reserve, raised the dividend from 14 to 16 per cent on the Ordinary shares.

Kamarhatty and Kanknarrah

Both Kamarhatty Company and Kankarrah Company, in the managing agency of Messrs Jardine Henderson Limited, have reported losses for the half-year ended 30th June, 1956. This was mainly due to the fact that these companies found it increasingly difficult to dispose of their manufactures to advantage in view of the rise in the raw jute market more than keeping pace with finished goods. The position was aggravated by the non-delivery of raw jute by costract-due dates.

Despite an increase in sales from Rs 1.49 crores to Rs 1.53 crores, Kamarhatty Company has incurred a loss, before providing for Depreciation, of Rs 3,71,560 as against a loss of Rs 2,00,588 in the previous half-year. A sum of Rs 30,000 (Rs 50,000) has been provided for Depreciation. The dividend on the Ordinary shares has again been passed over.

Similarly, Kanknarrah Company has reported a loss of Rs 9,06,331 against Rs 3,43,116 in the previous half-year. Sales are lower at Rs 1.23 crores against Rs 1.26 crores. The Depreciation amount is doubled to Rs 1 lakh. The dividend on the Ordinary shares is passed over again

£R$

Eastern Investments

Despite a slight decline in earnings, Eastern Investments Limited have maintained the dividend on the Ordinary shares at 5 per cent for 1956. The item "Dividends and Interest on Investments" is shown at Rs 11.44 lakhs against Rs 12.85 lakhs, while the net profit, before Taxation, amounts to Rs 11,18,633 against Rs 12,83,240 in the previous year. The sum set aside for Taxation is lower at Rs 5.45 lakhs against Rs 7.37 lakhs. The total of the market value of the Investments for which quotations are available together with unquoted investments exceeds the book value by Rs 47.43 lakhs as on the 31st December, 1956.

£R$

Bengal Bhatdee Coal

Thanks to increased profits, Bengal Bhatdee Coal Company has raised the dividend from As 8 to As 10 per share for the half-year ended 30th June, 1956.

Raisings are higher at 46,616 tons against 41,259 tons; but despatches are lower at 40,221 tons against 42,715 tons. Sales are shown at Rs 5.87 lakhs against Rs 6.18 lakhs, while the net profit, before Taxation and Depreciation, amounts to Rs 93,341 against Rs 74,913 in the previous half-year. Apart from providing Rs 17,000 for Special Reserve, Taxation amount has been raised to Rs 37,000 from Rs 28,000. The Depreciation amount is, however, reduced to Rs 9,248 from Rs 11,562.

£R$

Madura Mills

Despite a substantial increase in profits, Madura Mills Company Limited has reduced the dividend from 20 to 17½ per cent for the year ended 31st December, 1956. In this connection, the directors have stated that the Dividend Taxes, introduced in the Finance Act, 1956 and the Finance Act (No. 3) 1956, have imposed a heavy burden on the Company by reason of its relatively small subscribed capital in relation to the capital employed in the business.

They add that, for example, dividends paid in excess of 18 per cent have to bear the penal rate of dividend tax of As 6 per rupee which, when added to the normal Income-Tax and Super-Tax payable on the profits, increases the total rate of taxation to about As 13 per rupee on that part of the dividend in excess of 18 per cent.

Sales for the year have risen to Rs 15.69 crores from Rs 14.83 crores, while the net profit, before Depreciation and Taxation, amounts to as much as Rs 1.14 crores as against only Rs 97.71 lakhs in the previous year. The directors have, after raising the Depreciation amount to Rs 18.79 lakhs from Rs 18.73 lakhs and Taxation to Rs 51.50 lakhs from Rs 34.78 lakhs, recommended the dividend as mentioned earlier.

The directors are contemplating the implementation of a large-scale scheme of modernisation and rehabilitation of the mills during the next few years. There is, therefore, a need to conserve and, in fact, add to the liquid assets of the company. It is for these reasons that they have recommended a lower dividend.

£R$

Anaparai Estates

The working of the Anaparai Estates Limited, during the year ended 30th June, 1956, is very satisfactory. The Coffee crop for the year is more than the estimate by 25 per cent, while the Pepper crop is triple the estimate. The average cost of coffee per cwt stood at Rs 89-2-3 as against Rs 96-9-3 during the previous year. The lowest costs are mainly due to the higher crop realised.

Sales are shown higher at Rs 7.12 lakhs against Rs 5.85 lakhs, while the net profit amounts to Rs 3,64,165 against Rs 2,11,830 in the previous year. The Depreciation amount is raised to Rs 23,378 from Rs 18,809 and Taxation to Rs 90,000 from Rs 50,000. Even after these increased allocations, the directors have found it possible to raise the dividend from 16¼ to 25 per cent for the year.

£R$

Mercara Rubbers

The Mercara Rubbers Limited, in the same managing agency of Associated Planters (Private), Limited, has also produced satisfactory working results for the same year. Rubber crop realised, during the year, is 232,178 pounds, while the estimate for the current year is placed 225,000 pounds.

Sales for the year are higher at Rs 2.87 lakhs against Rs 2.71 lakhs, while the net profit amounts to Rs 1,16,826 against Rs 1,04,586 in the previous year. The directors have, after setting aside Rs 4,284 (Rs 5,029) for Depreciation and Rs 23,000 (Rs 20,000) for Taxation, raised the dividend on the Ordinary shares from 15 to 22½ per cent.

£R$

Brady Engineering

The company's business continues to be a of general nature; but some further progress has been made during the year ended 31st December, 1956. Proceeds of engineering work have fetched Rs 8.92 lakhs as against Rs 7.52 lakhs in the previous year.

The gross profit for the year amounts to Rs 2.60 lakhs as against Rs 2.26 lakhs in 1955. The directors have, after providing Rs 0.96 lakhs (Rs 0.85 lakhs) for Depreciation; Rs 0.33 lakhs (Rs 0.05 lakhs) for Taxation and Rs 0.25 lakhs (Rs 0.40 lakhs) for General Reserve, maintained the dividend at Rs 3 per share.

*

WORLD OF TEA

(Continued from page 466)

dinary CTC descriptions eased and were sometimes as much as As 2 per pound easier.

Commons, Dooars and orthodox Assams opened at about one anna below last rates; but, as the sale progressed, advanced slightly. At the close, prices were only half anna per pound easier. The black leafy exportable kinds, suitable for the Middle East, and the small powdery types were stronger features than the remaining offerings. Following rates were quoted:—Medium Dooars Dust Rs 1-10-6 to Rs 1-11-0; Medium Assam Grainy Dust Rs 1-12-0; Medium Assam CTC Dust Rs 2-0-0 to Rs 2-3-0 and Best CTC Assam Dust Rs 2-12-0.

Also, 5,099 packages of other grades were offered for internal consumption. There was a good general demand. Prices were generally irregular. Except for CTC Fannings and the few Green teas, on offer, prices for other grades were generally dearer.

In sympathy with the general trend of the market, rates in the Export Quota section developed an easier trend. The rate opened at 36 pies and, after touching a low of 30 pies, hardened again to 36 pies per pound. At the close, there were sellers at only 39 pies per pound.

In London auction, about 22,991 packages, including 16,935 packages of Northern India teas, were offered. Although there was more bidding, the market showed further weakness for all descriptions with the exception of the best coloury Dooars which were fully firm to a shade dearer. Top quality Assams were very irregular and occasionally easier. Low Medium and Common sorts met with even less support and prices frequently showed a decline of about ½d per pound. Thin liquoring teas were the weakest feature of the market and, on many cases, were withdrawn. The rate for Clean Common Broken Pekoe was quoted at 3sh 8d per pound.

As mentioned earlier, the UK, the principal buyer of Indian tea, is not likely to operate on any worthwhile scale as she has built up substantial stocks which are considered to be adequate for 21 weeks at the present rate of consumption. Spot and afloat stocks in London, at the beginning of the current month, were over 212 million pounds as compared to 153 million pounds a year ago. Total afloat was 71.90 million pounds—44.97 million pounds from Calcutta; 5.59 million pounds from Chittagong; 4.17 million pounds from Cochin; 14.65 million pounds from Colombo and 2.53 million pounds from other Ports. Average price realised at the auction held during the week ended March 1 was 49.02d per pound as against 54.33d in the previous week and 50.39d a year ago.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It

INDIA's second general elections are about to come to an end, and already the broad pattern of political power disposition in the next five years has unmistakably emerged. As I write, not all the results even of the State Assemblies have been announced; and, as for the Lok Sabha, results announced add up to only 66 out of a total of 500. Even so, one need not be a rash prophet to assume that the Congress will get a comfortable majority at the Centre. Among the States, the Congress has so far obtained absolute or near absolute majority in nine out of the thirteen States excluding Jammu and Kashmir where the National Conference has already won an absolute majority. These are: Andhra, Assam, Bombay, Madhya Pradesh, Madras, Mysore, the Punjab, Rajasthan and Uttar Pradesh. In States where the absolute mathematical majority has not yet been obtained, the percentage of the Congress successes to the total of results announced is high enough for a safe assumption of absolute majority in the next few days, if not hours. In the four States whose results have not yet given any clear indication of assured majority for the Congress, the Congress has won the majority of seats announced so far except in Kerala. In Bihar, for instance, the Congress has won 19 out of a total of 25 seats whose results have been so far announced. In West Bengal, the position at the moment of writing is that the Congress has won 17 out of a total of 27 seats whose results have been announced. In Orissa, the position of the Congress cannot be said to be comfortable even at the moment, for, of the 67 results so far announced, the Congress has won only 29, conceding to the Ganatantra Parishad, their most formidable rival, 23 seats. In Kerala, the Congress is in a distinctly difficult position, its successes trailing well behind the Communist achievement so far. Of the 74 results so far announced, 36 have been in favour of Communists, with the Congress getting only 26 and the PSP 8. Of the three Independents, two are supporters of the Communists. The results of 52 more seats are still to be declared and these are from Trichur and parts of Malabar. Trichur is traditionally a Congress stronghold and it is expected that the present poor showing of the Congress will be redressed somewhat by anticipated successes from that district. Even so, Communist circles expect that their party will emerge at least as the largest single party and will be able to form, for the first time, a government in which they will be the major partner.

*

Some tentative conclusions are permissible from the results thus far announced. I shall deal with the Lok Sabha results next week, but for the moment, I shall confine myself to the State Assemblies. Except for Kerala, to which I shall return in a moment, the country as a whole would seem to have overwhelmingly voted for the continuance of the Congress in power. It is too early to embark upon a detailed examination of the full implications of this judgment. The data to be analysed, like the percentage of voters who actually exercised their franchise, their background, their political and social orientations, the nature of the contests, etc, are not yet fully available. But one or two broad facts seem indisputable. First, certain all too ready assumptions in sophisticated circles about the masses of our people are clearly unfounded. These circles have often maintained that a vote for the Congress is not, on the part of most people, a mature political decision based on evaluation of policy, but a fortuitous preference based on extra-political considerations. This assumption has been proved to be entirely wrong. Let me state my reasons for this conclusion.

*

Firstly, and paradoxically, the chief obstacle to Congress success was the fact of its past success at the polls. As a party in power for so long, it could not escape the odium that attaches to any long exercise of power, however disinterested such exercise might have been. For, such is the nature of power. I wonder if you have experienced a rather curious feeling that I, as a voter, in a number of capacities, have been startled to discover in myself. It is that even as I find that the candidate for whom I have voted has succeeded, I find that I have conceived a vague hostility to him and my heart goes out in sympathy for the man who is defeated. Such a feeling is even more pronounced in the case where you have actively promoted the defeat of a man, who has already had a long innings of power. Even as you see your wish realised, you are bothered by misgivings about the results you have brought about. This regret is not particularly assuaged by the recollection of the fact that the man richly deserved to be defeated. The only explanation I can think of for this curious instinctive contradiction in oneself is in terms of the intrinsic nature of power. I have no space for developing the idea here, but I suppose it will be conceded that the most abject of us resent obedience (the abjecter, the more resentful the obedience) and that the most law-abiding among us are really anarchists at heart.

*

Be that as it may, the fact that the Congress has been in power so long has definitely put it at a disadvantage vis-a-vis parties that had not "enjoyed" the fruits of office. This instinctive opposition to power as such rather than rational arguments in favour of an opposition explains the extraordinary attractiveness of the idea propounded by Jayaprakash Narain and Rajaji.

*

Secondly, during the present election campaign, opposition to the Congress has been more organised and more relentlessly propagated than on the earlier occasion. It was not only that national parties other than the Congress were out to dislodge the Congress from the seat of absolute power; it was also that there was an influential body of opinion of no particular denomination that urged, for various reasons, the need for a powerful opposition. Again, there were many who lent their support to Independent candidates in sturdy revolt against the steamroller policies of organised parties. Such individualist revolt, though foredoomed in modern conditions, succeeded in splitting the votes. Other support for Independents came from middle-of-the-road intelligentsia who feared that the Congress was taking them along the "road to serfdom" in which individual initiative would cease to be coefficient of progress. And, lastly, there were the "rebel and reformist Congressmen", who left the Congress because of real or imagined grievances against the parent body. In some parts of the country, as in Madras, theirs was a powerful voice and the dubious support that the Congress itself got from certain other parties notorious for their unashamed communal orientation added to the volume of opposition to the Congress.

*

In addition to the two factors I have mentioned, the Congress had to withstand the not inconsiderable local grievances that people of particular areas had, with or without reason, against the ruling party. To take a striking example: Both Gujeratis and Maharashtrians have been deeply stirred over the States Reorganisation decisions. One has only to recall the events of the last twelve months to realise the extent of popular feeling over the question. It was not only that the decisions themselves were disliked: it was that the memories of events in the wake of the announcement of the decisions were of the bitterest kind. Opposition parties have not been slow to seize upon these decisions and the events and exploit them in their propaganda against the ruling party.

*

And yet, the astonishing fact is that the Congress has secured the approbation of the voters in these areas. What are the conclusions that are to be drawn from this phenomenon? One inference seems to me absolutely inescapable: and that is that the hypothesis of sheepish and unthinking voting by force of habit for the Congress on the part of the electorate is entirely untenable, if not perverse. Here were people who were as recently as six months ago smouldering with such resentment against the ruling party, as to treat their chosen leaders like Morarji Desai with scant respect. And within six months, they have given

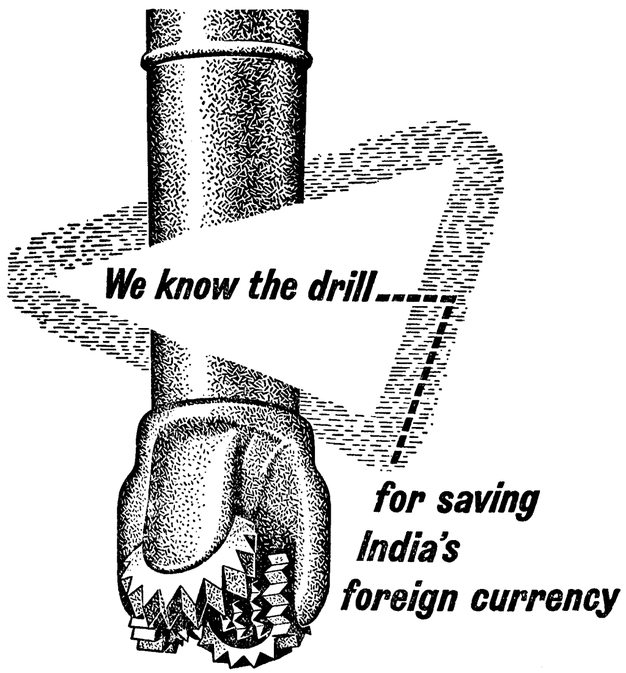
the same party a mandate for rule for another five years. Why? I think the reason is that they have given the matter the most careful consideration and their decision is a conscious and mature political act.



*

I am not saying this because they have voted for the Congress party, but because every vote cast for the Congress has not been, as probably in the past, a conditioned reflex. Since events in the last twelve months had stirred the people of these areas deeply and since much of the resentment caused by them was inevitably directed against the ruling party, this final verdict in its favour can only be the result of a conscious exercise of political intelligence. Even those who consider a vote for the Congress a disaster can at best consider the Bombay decision perverse: but what is not open to them is to say that it has been unthinking. In other words, Congress success has not been automatic, but has been the result of a wide-awake evaluation of the long term policies for which the Congress, and by implication the other parties, stand.

*

Whichever way you look at it, this development should be considered a most encouraging thing in our political life. In the first place, this basic sanity of the electorate, this absence, when it came to taking a basic decision, of political hysteria, is a most impressive piece of evidence of our political adulthood. How many countries in the world can, I wonder, boast of a comparable political sanity. Secondly, in my view, this development inters finally a snobbish notion that dies hard, but must now be definitely pronounced well and truly dead. It is the superstition that the so-called illiterate is politically immature. This sort of cant is possible only for people who have not the wits to see that knowledge of political jargon is not the same thing as political wisdom. Your city prol, fed on cheap and sensational politics dished up in the daily press, is the easiest political dupe, and any plausible demagogue can humbug him into the most absurd kinds of belief. But a peasant is a different proposition altogether. If you have had ten minutes conversation with a very ordinary peasant, nominally illiterate, you will revise a number of notions about him. The conversation may be very one-sided, especially if you are talking of things beyond his immediate experience, and in a jargon which he does not readily understand, and you would interpret his apparently uncomprehending silence as stupidity. But you would be entirely wrong. For, like the formally educated, he has not, what I may call, the equipment of a mental short-hand. His apparent slowness is not due to lack of intelligence, but to unfamiliarity with your mode of presentation. In other words, his difficulty is precisely the same as the one you and I encounter when we try to unravel the mysteries of stenography. Once the ideas are clear to him in terms he is familiar with, he will startle you by asking the one question which goes to the root of the matter. In a sense, his very unfamiliarity with the subject is his asset, because he has not yet developed the peculiar blindness that all of us have developed for objects of constant and immediate companionship. Just as you do not take any conscious notice of the bookshelf literally staring you in the face, it is likely that your glib references to inflationary pressure leave you entirely untouched. As a matter of fact, it is not very unlikely that many who talk of inflationary pressures do not recognise inflation when it actually impinges on them. But the peasant has felt from time immemorial these pressures in places where they hurt most and there is nothing that you can tell him about them that he does not know. That is what gives him a

Tight Money Conditions

DESPITE the liberalisation by the Reserve Bank of the bill market scheme, and despite the certain knowledge that the country's banking system is likely without too great a difficulty to meet the demand for accommodation anticipation to arise during the current (1956-57) busy season, the apprehension lingers, particularly among a section of bankers, that the already tight money conditions will be further aggravated. A number of factors are usually adduced to lend support to the belief thus put forward.

Typifying this section of opinion, Sir Cowasjee Jehangir, the Chairman of the Bank of India Limited, last week seized the opportunity, afforded by the bank's annual general meeting, of giving forceful expression of his views. For a starting point, Sir Cowasjee takes the mid-year Budget of Mr T. T. Krishnamachari. It may be recalled that one of the two finance acts therein contained increased rates of stamp duty on usance bills. The size of the increase has been termed large by the Bank of India Chairman; and he has stated that it will act "in restraint of trade" as far as the banking system is concerned. Good service has been rendered by the focusing of attention in this manner, since it has not been generally realised that the burden that banks have been called upon to bear has been quite onerous. This is an aspect of the matter that deserves to be subjected to a reappraisal by Government; and, as an article in the World of Finance section this week indicates, there is a good case for reduction in the rates of stamp duty.

In the second place, another of the measures proposed by the Finance Minister in his mid-year Budget refers to the requirement of a compulsory deposit with Government by companies in special circumstances. The reserve and depreciation deposit, as it may be expected popularly to be termed, is, as far as the public is concerned, yet to be amplified and clarified. If the legislation is to affect existing reserves, Sir Cowasjee is perfectly justified in his apprehension that the "legislation will also have the effect of aggravating the already very tight money conditions". In this regard, it may be noted that, by and large, the reserves as they appear in companies' balance-sheets are not by any means held as cash: for the most part, they have been expended in the purchase of new plant and machinery or in the augmentation of working capital.

It seems to me, therefore, that certain qualifications need to be made in regard to the deposit regulations. On the one hand, I should think that the Government desire to channelise undistributed profits in a manner calculated to increase production capacity is unexceptionable—but there must be the guarantee that a company, which has made such a deposit and which is to proceed with approved development plans, will be able to obtain the refund thereof with expedition. The experience in the case of the EPT refunds has not been too happy; and refund due from the tax authorities in the case of income tax has also tended to take its own time. Therefore, every care must be taken to ensure that redtape is minimised in refunds of reserve deposits. On the other hand, I cannot see how, save in a handful of companies, deposits can be made against existing reserves. Clarification is necessary to the extent and in the sense that past reserves, if already gainfully employed, will not attract the new regulations.

There is one aspect of the Banking Companies (Amendment) Act, 1956, to which Sir Cowasjee takes serious exception. The Reserve Bank has been empowered to call a general meeting of a banking company in certain circumstances, and any election of directors in such manner "shall not be called in question in any court." The Bank of India Chairman does not mince words, when he describes this as "autocratic legislation." He fears that this "is a dangerous practice to have started . . . (and) . . . a dangerous practice to develop."

Banking business in 1956 operated "under the handicap of a significant scarcity of funds." While Sir Cowasjee is undoubtedly right in emphasising the difficulties that in this wise arose, and while he has made his point by asserting that "it is a long time since a credit-worthy customer could be so doubtful of getting an advance from his bank against even real good and acceptable security", it is a pity that he should have chosen to avoid any reference to the measures taken by authority to enable the banking system to meet the needs of the situation. Indeed, a glance at the Bank of India balance-sheet shows that it has been able, thanks to the usance bill facilities available with the Reserve Bank, to replenish its resources by over Rs 7 crores with which to extend fresh accommodation to its constituents.

Except for the fact that the effective cost of borrowings against usance bills exceeds 4 per cent, the facilities in this behalf obtainable from the Reserve Bank have been and are such as to enable the banking system to equip itself with the wherewithal to expand the accommodation it is expected to provide in the course of the current busy season. As I have earlier pointed out, it is both desirable and necessary to effect a reduction in the stamp duty chargeable on usance bills. But, once this rectification is made, I should think that the banking system generally would have been relieved of its worries, at least so far as the 1956-57 busy season is concerned.

It is true that, as Sir Cowasjee has said, money conditions are tight, and they may become worse, but will by no means change for the better. This, however, is another question altogether. The solution in respect of tight money conditions can be found only after a study is made of the circumstances that have led to the present state of the banking system. Historically, it may be said that the gradual obliteration of the slack season has been derived from a number of factors. Firstly, some part of the short-term accommodation taken from the banking system has been utilised in the purchase of plant and machinery and has, consequently, been transformed into medium-term accommodation. Secondly, the difficulties of the current busy season have been greater because of the closure of the Suez Canal and because of the longer period that banks, as a result, are called upon to finance import trade. Thirdly, the import surplus has prevented an accrual of deposits in the hands of the banking system in a handsome manner and for a sizeable amount.

While the first of the three reasons given will need time before it can be resolved, the prospect is improved in the case of the other two. The Suez Canal is expected to be open once again from the middle of April. The various measures taken to achieve a greater balance in our trade are in the process of producing results. In the one case, money will (from the near future) be locked up for shorter periods, thus enabling larger turnover. In the other, it is not improbable that, with a check on imports, the deposits of the banking system will benefit more immediately and to greater extent from the expansionist economy released and made possible by the endeavours under the Second Plan.

Capital Goods Imports

Speaking in Bombay, Mr F. Preston Forbes, leader of the United States Trade Mission, which is now in the country, revealed that some US business men had agreed to sell capital goods to India on long-term credit. This new development must cause satisfaction to all, as it will result in increasing the volume of trade between the two countries. Trade with USA is vital to the economic progress of India especially when the goods coming from USA are of a capital character. Considerations of foreign exchange which the Indian businessmen are hard put to find, have detracted from the volume of capital imports on private account. The new arrangement whereby imports from America will be transacted on long-term credit basis, will alleviate the immediate liablity of Indian businessmen for payment in dollars, and the interval of time given in the matter of payment, should at the same time, enable them to plan ahead and find ways and means of acquiring the requisite amount of foreign exchange. Secondly, being a deal between businessmen, it promises to avoid the delay common in such deals transacted at Governmental levels. Dollar, being a hard currency, the gesture of American businessmen in granting long-term credit, must remove one of the big obstacles to a growing volume of Indo-US trade. Thus this is a new kind of US cooperation in Indian Economic Development, and in view of the mutual advantage which it implies, possibilities of increasing the scope, should be explored.

The meeting also afforded the opportunity for a mutual clarification of the respective stand points in matters of trade between the businessmen of the two countries and so far as Indian businessmen were concerned, enable them to appreciate the US policy with regard to exports of some items from India. For example the US Food and Drugs Act, which demands inspection of imported raw materials after these had been unloaded in the US had been critically viewed by Indian businessmen. Answering this part of the criticism, Mr Preston Forbes, explained the difficulties that were likely to arise in the event of its non-enforcement, in terms of the probable contamination of the goods in transit and as a solution suggested that Indian exporters set up inspection depots at their ports where knowledgeable persons might advise them with reasonable certitude whether such goods would be accepted in the US.

*

Import Policy

The import policy for the period January-June 1957 has been primarily governed by the urgent need for conserving foreign exchange. This fact has been readily realised by the importers themselves. But it would appear that its administration has placed unnecessary restrictions which do not have even a remote possibility of aiding the main objective in view. Speaking at the annual general meeeting of the All-India Importers' Association, Mr Shantilal M. Shah, president of the Association, has pointed out that considering the present critical position of the foreign exchange and requirements of the same in coming years, an all out drive to conserve foreign exchange is inevitable. He goes on to observe that the importers in this country expect that severe restrictions on imports will continue for atleast three or four years.

While it is thus generally agreed that Government's import policy for some years to come has got to be framed on the sole consideration of conserving foreign exchange, it is pointed out on behalf of the importers that some thought must also be bestowed on the possible effects of the severe restrictions on the price situation as well as the quality of indigenous manufactures. Mr Shah observes that high tariffs, the drastic cuts in import quotas and the face value restrictions have given the indigenous industries a three-fold proeection. A possible adverse development would be a fall in quality and an increase in price of indigenous products. The knowledge that there will be little competition for them may result in the indigenous industries becoming less watchful about the two important factors of prices and quality. Mr Shah, therefore, suggests that Government should liberalise the face value restrictions thus ensuring a healthy development of the indigenous industries.

GATEWAY MARKETS

Copper Prices Recede

ALTHOUGH demand for ready Copper has been quite good, prices have been showing a declining tendency during the past few days in sympathy with the London market and on reports that about 1,000 tons of copper will arrive very shortly. Trade circles, however, consider the present trend as temporary and attribute it to the small offtake and lower Calcutta advices. The rate for the ready position has declined to Rs 237-8 from Rs 243 per cwt quoted early in the week.

The rate for ready Zinc has also moved down to Rs 73-8 from Rs 75 per cwt. Further stocks of metalcut zinc are reported to be arriving shortly. The existing stocks of metalcut zinc and Russsian zinc are expected to last throughout the remaining period of this month.

Lead is, however, ruling very steady at Rs 82 per cwt. Stocks of Burma lead are expected to arrive shortly. With good consumption, local stocks are expected to recede to reasonable levels.

Tin is also ruling steady at Rs 129 per quarter, reflecting a good demand for the metal.

On the London Metal Exchange, Copper has declined to £237½ from £243 quoted early in the week. The tendency continues to be weak as latest reports indicate that the open market business in the USA is being transacted at less than the custom-smelters' quoted prices of 31 cents per pound.

Zinc moved between £97 and £98¼ per ton. It is reported that the USA will again resort to barter business in Continental zinc. If this materialises on fairly large scale, prices may harden further.

Lead moved between £113 and £113¾ per ton. Demand for the metal is reported to be good in the UK as well as Europe. But, still a surplus in world lead output is anticipated and may be taken over by the USA.

Tin, however, showed a decline to £756 from £773 per ton early in the week on weaker advices from Singapore. The developments, which are likely to take place in the next International Tin Council, are awaited with keen interest.

*

Gold & Silver

Prices on the Bullion Exchange, after being marked down heavily early in the week, steadied up toward the close on fresh speculative buying and bear-covering.

Silver commenced with notewothy gains and advanced further under short-covering, being influenced by higher Calcutta advices. Scattered liquidation at bulges, however, minimised extreme advantage. Arrivals and offtake ampunted to 30 and 29 bars respectively. The rate for forward delivery, after opening at Rs 177-15, improved to Rs 178-4 at the close. The rate for forward delivery moved between Rs 179-1 and Rs 179-4, while ready closed at Rs 178-13 after touching a high of Rs 179-0.

Gold followed the course of the counterpart. The turnover was moderate. Arrivals and offtake were estimated at 2,000 and 3,000 tolas respectively. Forward delivery moved narrowly around Rs 106-7, while ready was quoted at Rs 106-4 to Rs 106-8. Sovereign scored a point at Rs 70-4.

*

Oils & Oilseeds

The Oilseeds market quietened near the close after early signs of resistance. Absence of overseas enquiry for castor oil brought about some selling in Castorseed, while Groundnuts eased owing to indifferent spot advices. Linseed was maintained, while cottonseed improved in sympathy with cotton.

Turnover in the Castorseed section was small. May delivery opened at Rs 158-4 to ease off at the close to Rs 157-12. Ready Madras quality was quoted at Rs 34-0 and Castor Oil, commercial, at Rs 18-8.

In the Groundnut section, May delivery opened at Rs 169-6, to finish lower at Rs 168-2. Bold quality was quoted at Rs 34-8 and Groundnut Oil at Rs 18-14.

Prices in the Linseed section ruled generally steady. May delivery moved between Rs 28-12 and Rs 28-14, while ready was quoted around Rs 28-14 for bold quality and Linseed Oil at Rs 15-6.

Price movement in the Cottonseed section were confined to a narrow range, changing hands at Rs 99-12 to Rs 100.

*

Yarn

Price movements in the Yarn market were rather irregular due to alternate bouts of buying and selling. Offtake was limited as a majority of operators adopted a "wait and watch" policy. Rumours are current that indigenous manufacturers of artificial silk yarn are inclined to reduce the prices if offeres for substantial quantities are placed with them; but, so far, no business of importance has materialised.

In the case of Staple-Fibre yarn also, some slight improvement has been in evidence on account of reports of gradual improvement in offtake in the consuming centres, especially in the Punjab and Bengal.

The market for Cotton Yarns remained sluggish and offtake was unsatisfactory, especially due to the continued stringency in the money market. It is, however, felt that, after the Holi festival, the market may settle down. On the whole, the future outlook seems to be slightly more hopeful than for the past seveal weeks,while dealers are awaiting improvement in demand.

Bombay Review

World of Cotton

Prospects for Imports

PROSPECTS for further imports of sterling area cotton and Egyptian long-stapled cotton have brightened. It may be recalled that quite a hue and cry was raised over the recent notification, issued by the Joint Chief Controller of Imports, in respect of the import of sterling area cotton. It is now learnt that the issue, over which importers of such cotton were worried, has been amicably settled to the mutual satisfaction of the affected parties. Such of the importers as had been asked to surrender their licences—issued between February 14 and February 28—will now be benefited by the reconsideration of the whole issue by the authorities. These licences, it is now disclosed, referred to about 32,000 bales of cotton in excess of the original ceiling fixed by the authorities for import of sterling area cotton.

The total foreign cotton licensed for import up to February 23 amounts to 3.26 lakh bales, of which 2.75 lakh bales including 1.44 lakh bales from the US and 70,680 bales from East Africa have already been received. About half the import licences are for dollar areas and the remaining licences have been distributed between Sudan, Egypt and East African growths.

Again, the trade delegation from Egypt has found that Indian mills have, this season, bought a negligible quantity of cotton from Egypt on account of prohibitive prices. Falling demand for superfine varieties of cloth and heavy accumulation of stocks have also compelled the industry to restrict its purchases from this country. The delegation has, therefore, felt that the only way to improve the situation is to make the cotton a little cheaper by way of allowing discount to Indian mills.

Egypt has already offered a discount of 18 per cent on its cotton for getting dollars and 12 to 15 per cent for securing Swiss and German currencies. A section of the trade, however, opines that, despite the discount, Egyptian cotton will still be costly to Indan mills.

×

FUTURES MARKET:

Despite dullness in the cloth market, sentiment in the cotton futures section was favourably influenced by activity in spot where spinners continued to buy best qualities near the ceiling rates. The acute shortage of contracts also accelerated the upward trend in prices. The turnover was 15,000 bales. Jharilla March touched a high of Rs 770 and a low of Rs 753, to finish at Rs 756. Jharilla May, after opening at Rs 682-8, finished at Rs 685-12. Similarly, Vijay June touched a high of Rs 819 and a low of Rs 810, to finish at Rs816. Vijay April opened at Rs 857 to close higher at Rs 868-8.

×

SPOT MARKET:

The spot market continued to rule firm with a moderate revival of demand for 197/3, 320F, CO/2, CO/4 and Vijay varieties. Fairly good business was also reported done in new crop Vijay and Surti varieties. Arrivals have been moderate; and latest reports indicate that the total crop may not exceed 49 lakh bales.

In the export section, some business was done in Oomra Deshi and Bengal. Japanese buyers adopted a 'wait and watch" policy since they expected a fall in Indian cotton prices.

Conditions on the import front were listless. A few spot lots of Americans were reported to have changed hands.

Following rates were quoted:—Bengal Rs 690 to Rs 740; Oomra Rs 800 to Rs 820; Dhollera Rs 750 to Rs 765; Jharilla Rs 800 to Rs 840 and Vijay Rs 970 to Rs 980.

×

KARACHI COTTON MARKET:

The Karachi cotton market continued to rule easy, thanks to profit-taking sales and absence of trade support. Although Japan made larger sterling allocation for purchase of cotton from the sterling area, no sizeable enquiry was reported from that country. Following rates were quoted:—Sind Deshi Rs 87-0; Punjab Deshi Rs 78-0; 4F Punjab Roller Rs 83-8; LSS Punjab Rs 85-11; NT Roller Rs 84-11 and 289F Punjab Roller Rs 87-3.

×

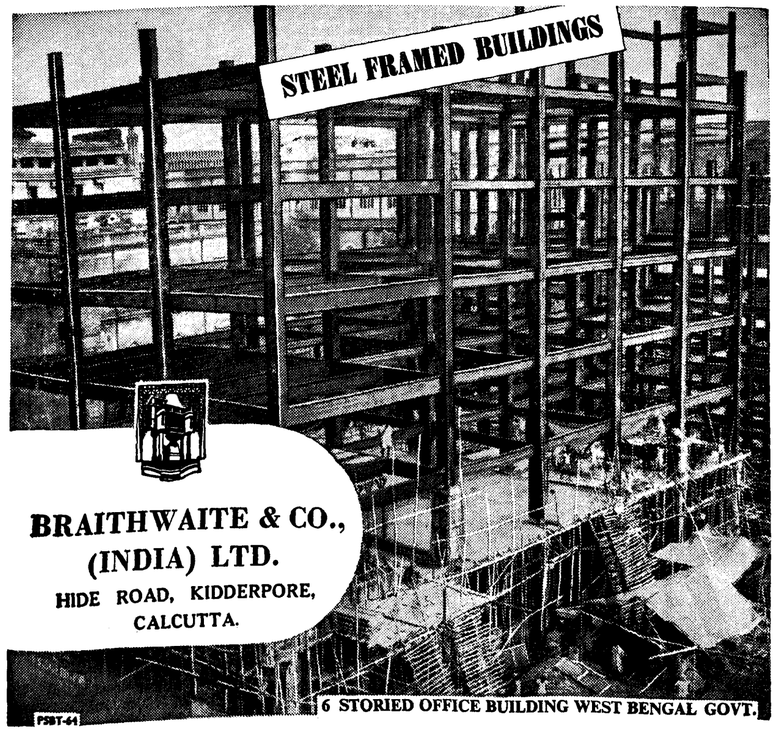
NEW YORK COTTON MARKET:

Trading in the New York futures market was centred mainly on the near-March delivery, while that in new crop had been relatively light. Slow conditions in the textile market, favourable weather and the belief that the Soil Bank would not absorb the acreage previously expected, were the main reasons advanced for the lower price trend.

Also, in the spot market, activity was slow. Although interest from abroad was good, actual export sales concluded decreased since shippers were unwilling to enlarge their commitments at the prices offered. Spot was quoted at 35.15 cents per pound.

×

ALEXANDRIA COTTON MARKET:



Prices in the futures section of the Alexandria cotton market advanced on trade buying and professional support following rumours of export demand from Eastern Europe. Total export sales for the season, till the 15th February, were 414,671 bales (730 lbs each) as against 682,162 bales during the corresponding a year ago.

×

LIVERPOOL COTTON MARKET:

In the Liverpool cotton futures market, spinners generally showed more buying interest in both ready and shipment cotton following the confirmation made by the US Department that some of the six million bales of the 1955 loan cotton would be released for shipment prior to August 16. There

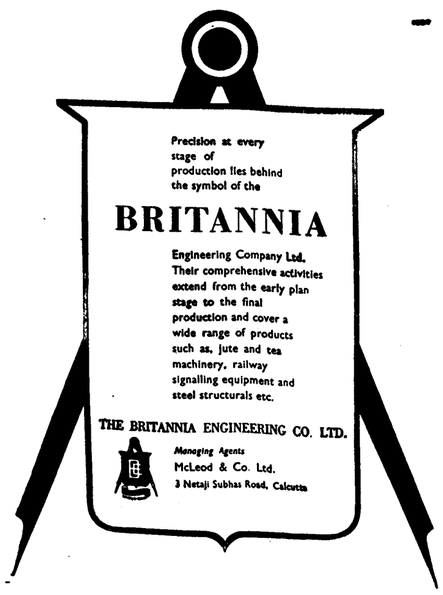
Olympus

A Hero's Welcome for Menon

MR V. K. KRISHNA MENON, who arrived here on Tuesday last from Bombay, was given a tumultuous welcome by the people who had gathered at Palam Airport in large numbers. This was Mr Menon's first visit to the capital after his marathon performance at the Security Council where he presented India's case with a pertinacity and unself-regarding purposefulness that has won the admiration of all his countrymen. Mr Menon, whose reserves of energies are apparently inexhaustible, has not allowed his physical exhaustion to interfere not only with his work at the Security Council, but also with his electioneering at Bombay. For the short while he stayed in Bombay, he campaigned strenuously and addressed many meetings in which he gave detailed exposition of India's policies in regard to a number of subjects.



Back in Delhi after a long absence and after representing India on a crucial issue, he is due to report to the cabinet on the Kashmir debate in the Security Council. Mr Nehru was not in Delhi when he arrived, having gone to Allahabad to cast his vote in his constituency. On his return from Allahabad, he will have a first-hand account of the entire background of the discussion and voting in the Security Council. Mr Menon is also expected to report to his chief on the Middle East situation, which has taken fresh turns since Israeli consent to withdraw from the Gaza area. Mr Menon, who met President Nasser at Cairo on his way back home, is sure to have some inkling of the lines along which the Egyptian leader's mind is working.

Because of the unruly enthusiasm of the crowd which had invaded the tarmac even before the plane could land and would not allow him to pass to the enclave where official and diplomatic representatives were waiting for him, no statement could be obtained from Mr Menon about Kashmir. But, perhaps, there is nothing very much that even Mr Menon could have said at this stage. As already indicated by him on the floor of the Security Council, no decision on the Jarring Mission is expected to be taken by the Government of India until after the elections are over and the final shape of the government to be is unmistakably known. This is only as it should be, not only because of the requirements of proprieties, but also because of the comparative freedom to negotiate the new government is bound to have. Moreover, though the Kashmir problem has never been far from the minds of our leaders all these days, other preoccupation has inevitably made their attention to it somewhat divided. So, on details, much closer thinking might be necessary before any useful discussion can be had with Mr Jarring. That would require some time and, therefore, though Mr Jarring is assured of a warm welcome whenever he arrives here, serious business can be discussed only in the first week of April.

Meantime, queer things are being done and said across the border in Pakistan by 'responsible' spokesmen. India has made it perfectly clear that it does not accept the position that a plebiscite is an inescapable part of any solution of the Kashmir issue. Its understanding of the last resolution of the Security Council, under which Mr Jarring is visiting India and Pakistan, is that his terms of reference are wide enough, for him to seek solutions other than what Pakistan has been demanding. The force of India's objections to a plebiscite now would be clearer to Mr Jarring when he visits the country, especially the Kashmir valley. Once he sees things for himself, he will get abundant confirmation of India's view that a plebiscite now would be a cruel and unforgivable disruption of normalcy and prosperity built up by years of patient and purposeful endeavour. In the rather unreal atmosphere of the Security Council, the force of this argument was never really appreciated; but, Mr Jarring will doubtless be able to judge for himself once he is on the spot. When this realisation is brought home, he is sure to be less enthusiastic about the plebiscite idea and would actually like to discuss other alternatives. Anticipating the inevitability of such conversion on the part of Mr Jarring, Mr Feroz Khan Noon, the Foreign Minister of Pakistan, has threatened all manner of dire consequences if the plebiscite idea was abandoned. The familiar threat of 'Jehad' to India has been improved upon, this time by a reference to the possibility 'of a war between India and Pakistan with India in the communist camp.' This fantastic proposition, apparently intended to scarify its friends in the western camp who may be inclined to abandon the plebiscite idea by the logic of circumstances, must be seriously annoying to them. After all, however hard Pakistan may try to polarise Indo-Pakistani differences as East-West differences, the Western powers themselves are anxious not to make such a gratuitous gift to the Communist bloc. In effect, Pakistan's efforts go directly counter even to the basic cold war strategy and, however anxious to help Pakistan, they may not like to have their central strategy jeopardised in this fashion.

Moreover, this thesis of Pakistan's Foreign Minister gives the most complete justification of India's strenuous objection to American arms aid to Pakistan, and American involvement in regional pacts. India does not receive military aid from any one, and certainly not from the Soviet bloc. But Pakistan does. Now, Pakistan says that the alternative to a plebiscite in Kashmir is not only a war between India and Pakistan, but a war between the east and the west. It is precisely this interpretation of American obligation to Pakistan under the regional pacts and arms aid agreement that India has been constantly warning America against and which America has always treated as unduly scarifying. The American Ambassador in Pakistan has been making equivocal pronouncements about America siding the 'victim' in the event of 'aggression' in the Kashmir valley. If he means what he says, he is in danger of being declared persona non grata by Pakistan since Pakistan has been an aggressor in the Kashmir valley for the last nine years. In any case, the US and other friends of Pakistan must realise how they are deliberately being involved by it in a dispute that is certainly not theirs principally.

As far as India is concerned, its stand has always been clear. We do not want a war with Pakistan and certainly we do not want to get involved in a war between the East and the West. Mr Jarring is perfectly free to make any suggestions he likes which we will consider on merits. But we do tell him that the only sensible and practical way to set about the business is to be free from the obsession of a plebiscite and explore other possibilities as well. In any case, we do not hold out any threats, in the event of the failure of the mission. The only interpretation we can put on Pakistan's recent outbursts is that it is gravely apprehensive that, after all the trouble it took at the Security Council, a day's visit to Kashmir would convince Mr Jarring of the absolute correctness of India's objections to a plebiscite now. As a consequence, it is afraid that Mr Jarring may be inclined to abandon the idea and think of other alternatives. This is a prospect Pakistan is most reluctant to face.

MACNEILL & BARRY, LIMITED.

Notice is hereby given that payment of the Half-yearly Interest on the 5% Debenture Stock 1966-71 of the Company will be made on 1st April, 1957 to those Stockholders whose names appear on the Company's Register on that date or in accordance with their instructions.

North Indian Notes

Progress of Electrical Industry

The present position of the Electrical Industry in India bears little relation to the importance and value that such an industry should have in the country's economy. The reason for this is to be found in the fact that the industry belongs to that category of latecomers in the industrial field, which are put to the necessity of fighting hard to get over initial difficulties. All the same, the electrical industry has made commendable progress since its inception in the several lines of production.

Speaking at the ninth Annual General Meeting of the Indian Electrical Manufacturers Association, Mr N. R. Banerjee recounted the manifold achievements registered by the industry. The transformer industry which has just completed five years of its existence has more than fulfilled the target fixed for it in the First Five-Year Plan. Similarly, production of Electric motors more than trebled since 1950-51, the total poduction during 1955-56 being 290,000 H.P. The progress in the production of other items of electrical goods such as bare copper conductors, winding wires, rubber and plastic insulated cables, storage batteries etc., has also been significant.

But behind such a flattering performance, lurk certain factors, which have prevented production from being greater. The main drawback is the unimaginative policy of the Government with regard to imports of certain items of electrical goods as well as with regard to the policy of indenting for the goods manufactured by the indigenous industry. Referring to the grievances felt by the indegenous industry, and brought about by the Government Mr N. R. Banerjee pointed out, that the Government's policy of placing huge orders all of a sudden instead of phasing them properly had the result of rendering the indegenous industry unable to meet them in full. And this was unjustifiably used as a cover by the Government to liberalise imports of such goods. This had hit the indigenous industry hard.

It has been proposed on behalf of indigenous manufacturers that if the Government place their indents 12 months in advance, this will react favourably on internal production. In much the same way, the penalty clause under which the contractor is made liable to pay the difference between the accepted price and the price of the lowest tender, in case the contractor fails to deliver the goods within the specified period of delivery, bears harshly upon the private manufacturer. Over and above this, the practice of several States in demanding registration fee or earnest money varying from Rs 5,000 to Rs 10,000 has added to the financial burdens of the manufacturers.

Electrical goods industry being one of great national importance, it stands to reason that it should be given prompt and direct help. Further, being an industry in which the State is also a direct participant, a more sympathetic attitude toward the private manufacturers will serve to inspire confidence among them and thus help increase overall production.

*

Food Production Plans

The Coordination Committee set up by the Minister for Food and Agricuture in consultation with the Minister of Community Development, has taken a decision to realise the 30 per cent increase in the country's food production in the first three years of the Second Plan. When it is remembered that the original target envisages an increase of 40 per cent to be achieved in the course of five years, the task now set by the Coordination Committee will seem to be an uphill one. The decision naturally reflects the concern of the authorities at any possible deterioration in food supply and is meant to forestall inflationary pressures, symptoms of which are not lacking even at present. The potentialities of inflation are greater in the years that lie ahead when expenditure of a capital and non-productive nature are bound to be incurred in increasing volume. The increase in food production is sought to be realised by intensive cultivation. With this object in view the Union Ministry of Agriculture has asked the various State Governments to fix for each district its quota of increased agricultural production. In the list of measures designed to achieve the object, emphasis is laid on timely distribution of fertilizers to cultivators and intensified development and distribution of organic manure such as farm-yard manure, green manure and compost.

The holding of divisional seminars of Agricultural and development officers is also recognised as being important to further the cause of intensive cultivation and the State Governments have been asked to encourage such seminars.

How far the object set by the Coordination Committee will be realised is a matter that will be keenly watched. It depends essentially on the prompt and effective action taken by State Governments and resolves itself into a matter of state outlay in the purchase of manures and seeds. That the cultivators are not wanting in energy or enthusiasm is evident from the tremendous success of the Community Development Projects in their area of operation. Intensive cultivation has succeeded only in areas which have come under the operations of Community Projects. This underlines the necessity to give an equal fillip to the Community Projects, if the target of 30 per cent increase is to be realized in the course of three years. If it succeeds, it might also enable the country to achieve a proportionate increase in food production in the rest of the Plan Period.

NORTH INDIAN MARKETS

Indian Sugar to Compete Overseas

MENTION has already been made in these columns last week with regard to the Government's permission for exporting another 50,000 tons. Deals will be put through the Indian Sugar Mills Association. The recent business was reported to have been done at prices ranging from £62 to £65 per ton.

The emergence of India as an exporter of sugar is a significant development. In spite of the initial difficulties due to fears and suspicions of the foreign buyers regarding quality and packing, etc., and keen competition from other sugar exporting countries, it has been possible for the Indian Sugar Mills Association to make sales of appreciable quantities to Malaya, Middle Eastern countries, Ceylon and Burma. A consignment of 2,217 tons has already been shipped to Basra, while small consignments have been sent from Bombay to East Africa and Persian Gulf Ports.

Meanwhile, India has reported the highest sugarcane crop for the current year and it is hoped that the sugar output, during the current season, will establish a new record. According to figures released this week, production and despatches of sugar at indigenous factories amounted to 11.69 lakh tons and 6.35 lakh tons up to February 28 in the current season as against 10.67 lakh tons and 5.98 lakh tons respectively in the corresponding period last year. Stocks with the factories, as on February 28, 1957, stood at 10.61 lakh tons as compared with 8.80 lakh tons on the corresponding date of last year.

The outlet for Indian sugar is expected to brighten as a result of the tight conditions in the world market. Already, there is a tussle in various markets for sales of Indian sugar. Following the Russian purchases in Cuba to the tune of two lakh tons, Cuba's surplus is reported to have been exhausted. Moreover, Cuba's decision to withdraw the restrictions on cane harvest suggests that the shortage is likely to continue for a long time. It is, therefore, expected that India will be in a position to compete successfully with other producing countries and, in view of the establishment of new factories and expanding production, Indian sugar will become one of the prominent foreign exchange earning commodities.

For obvious reasons, conditions in sugar markets have turned steadier with prices developing a hardening tendency. Following mill-delivery rates are quoted (per md) in the Hapur market:—Jaswant Rs 28-12; Simbhauli Rs 28-14; Mowana Rs 28-0 to Rs 28-12; Daurala Rs 29-0 to Rs 29-12; Amroha Rs 28-4; Bijnore Rs 28-4; Mansoorpur Rs 29-0 to Rs 30 and Rampur Rs 31-8.

*

Gur

In the Hapur market, Gur prices have been showing an easier tendency due to lack of demand. The rate for the ready position is quoted around Rs 9-12 per maund as against Rs 10-8 in the previous week.

Daily arrivals last week averaged 2,000 maunds, while stocks swelled to 95,000 maunds, the corresponding figure last year being 81,000 maunds. Total arrivals, from the beginning of the season, are roughly estimated at 4.20 lakh maunds.

*

Foodgrains

The market for Foodgrains continues to rule steady with prices showing a hardening tendency on reports of poor stocks and good consumer demand. In the Hapur market, Wheat is quoted at Rs 16-6 for average quality and Rs 17-12 per maund for farm quality. The standing crop is progressing under healthy conditions; but some damage is reported in East Uttar Pradesh due to hail storms.

Rice rules quiet as the supply position is satisfactory; but Gram prices have advanced by As 8 per maund due to continued demand and firm Punjab advices. Barley and Bejhar prices have also advanced in sympathy with the general bullish trend. The markets for Maize and Bajra are ruling quiet due to falling seasonal demand. Peas have recorded a slight decline in prices as arrivals of new crop in East Uttar Pradesh have begun.

Madras Review

The Peninsula

Handloom Industry

The psychological and material benefits derived by the handloom industry since the establishment of the All-India Handloom Board and the creation of the Cess Fund have not received adequate publicity. Speaking of Madras alone, one could see the rejuvenation of this industry after long years of a dull and desperate existence.

There is no longer the tormenting fear of large-scale loss of markets or innumerable pockets of unemployment suddenly emerging or of the competition from more affluent sections of the textile industry. Weavers are now given interest-free loans for joining cooperative societies, they are instinctively becoming aware of the economic advantages of cooperation; they are soliciting Government assistance in all forms and the Government in their turn are reciprocating with substantial gestures in the background of a thoroughly realistic policy.

The setting-up of the All India Handloom Fabrics and Marketing Cooperative Societies two years ago marked another turning point in the fortunes of this industry. During the two years of its existence, the Society has laid an excellent foundation for a set-up which should enable handloom fabrics manufactured in India explore and reach every possible venue of demand, internal and foreign. Indian Consulates abroad are zestfully cooperating. One will not be surprised, if the Indian sari which Western connoisseurs of both sexes have started liking and admiring, sets a new fashion and becomes a new vogue in countries, where hitherto it has remained an object of sheer curiosity. If such a wave emerges, the handloom fabrics will also ride high on it.

Whatever be the fate of hopes and dreams concerning foreign demand, domestically the future appears to be quite inviting. The All-India Handloom Fabrics Marketing Cooperative Society has decided to set up a chain of emporia in all the important towns of India and in many foreign cities. The first of these emporia was opened a few months ago in Bombay. Christened the "Handloom House", this emporium offers the public fabrics collected from every corner of India, a wide range of material on prices acceptable to the needs of various income groups.

The second Handloom House was opened in Madras at 9, Ratan Bazaar on March 6. There are already quite a few handloom shops in this area extending from Parrys Corner to Central Station; and these shops are the favourite resort of the faithful and the fastidious. The Handloom House has an ideal location. Its inauguration by Mr T. T. Krishnamachari was another happy augury. On the occasion, the Chief Minister of Madras presided and Mr V.Nanjappa, Tetxile Commissioner, Union Government, welcomed the gathering.

Mr Krishnamachari's inaugural speech is notable for many reasons. There was an under-current of suspicion in the public mind that he was not sufficiently warm in the matter of encouragement to the handloom industry. Where this suspicion was strongest, T.T.K. was even believed to be a mills' partisan, and this, nothwithstanding all the unfriendly interpretation which the mill industry had been putting on his textile policy.

Mr Nanjappa himself pointed out that the creation of the All-India Handloom Marketing Society and of the emporia in Bombay and Madras owned a great deal to the keen interest taken by T.T.K. when he was the Union Minister for Industry and Commerce. The Union Government lent the Society a working capital of Rs 11 lakhs and had sanctioned a scheme to assist the manufacturers of 'madras handkerchiefs' by purchasing the stock lying with them and disposing them at a time of favourable prices.

T.T.K. assured the industry that neither he nor any of the members of the Central or the State Governments thought of forcing the powerloom on any individual; the powerloom was to be a matter of choice for the individual or the 'cooperative' handloom weaver; the latter would be free to reject it, if it was not thought useful from the financial point of view or as a labour saving device. In any case, there would be no chance of competition emerging between the power-loom and handloom; on the first sign of any such competition, power-loom production would be screened off. He recalled how the Government were anxious to improve the condition of the handloom weaver and they were spending a great deal for that purpose; there was no idea of inflicting the power-loom on him.

Export promotion for handloom fabrics was conceived not so much as a matter of earning foreign exchange as one of help to the handloom weaver; as, in the foreign markets, many varieties would go as luxury goods, these could be pushed up with the aid of sound export promotion work. T.T.K. referred to the employment of a few foreign experts, mostly women, who had advised in regard to sale of handlooms in America and West Africa.

He then proceeded to correct the impression that the Handloom Fabrics Cooperative Society represented another piece of State trading "and therefore a folly". This type of State trading, T.T.K. said, was extremely good; it was intended to help the under-dog. Just now, in West Africa, the Madras handkercheifs are being popularised by Sindhi merchants who have branches there. While the efforts of these merchants were appreciated, T.T.K. would have a share of their profits on handloom fabrics passed over to the producers.

Perhaps, this principle might become a regular feature of the foreign trade for handloom fabrics. Where the Cooperative Societies cannot serve directly, Indian merchant houses would be called upon to surrender a part of their profits back to the weavers. The arrangement may be called by some other name, but the principle will be the same. T.T.K.'s emphasis on the manner and measure of Governmental assistance to the industry impelled him also to indicate a future in which the industry ceased to be "a feather-bedded one getting subsidy from the Government."

THE TITAGHUR JUTE FACTORY COMPANY LIMITED.

The Directors of this Company regret that they are unable to recommend payment of any dividend on the ordinary shares for the year ended 31st December 1956.

The Diectors have declared on the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1956. This dividend will be paid on 29th March 1957, less Income Tax at 8/6d. per £ and the Transfer Books will be closed from 15th to 29th March 1957, both days inclusive.

Preliminary figures for the year ended 31st December 1956 show Trading Loss £50,634 (loss £37,076), Income from Investments £29,597 (£45,563), Net loss after Taxation £53,489 (loss £11,243), Net Interim dividend on preference shares already paid £2,588, net dividend now declared £2,587, Depreciation written off £10,000 (Nil) and estimated carry forward £14,884 (£83,548).

P. WILLIAMS,
Secretary.

Dundee, 12th March 1957.

THE VICTORIA JUTE COMPANY LIMITED.

The Directors of this Company have declared:—

(1) On the ordinary shares a dividend of 3% for the year ended 31st December 1956; and

(2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1956.

These dividends will be paid on 29th March 1957, less Income Tax at 8/6d. per £ and the Transfer Books will be closed from 15th to 29th March 1957, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1956.

Preliminary figures for the year ended 31st December 1956 show Trading Profit £24,278 (Loss £16,091), Income from Investments £14,957 (£22,794), Net Profit after Taxation £14,864 (loss £5,240), net interim dividend on preference shares already paid £2,588, net dividends now declared £9,487, Depreciation written off £10,000 (Nil), and estimated carry forward £73,290 (£80,501).

P. WILLIAMS,
Secretary.

Dundee, 12th March 1957.

THE SAMNUGGUR JUTE FACTORY COMPANY LIMITED.

The Directors of this Company have declared:—

(1) On the ordinary shares a dividend of 3% for the year ended 31st December 1956; and

(2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1956.

These dividends will be paid on 29th March 1957, less Income Tax at 8/6d. per £ and the Transfer Books will be closed from 15th to 29th March 1957, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1956.

Preliminary figures for the year ended 31st December 1956 show Trading Profit £37,620 (loss £25,741), Income from Investments £20,113 (£30,045), Net Profit after Taxation £24,600 (loss £9,139), net interim dividend on preference shares already paid £2,588, net dividends now declared £12,937, Depreciation written off £10,000 (Nil) and estimated carry forward £58,069 (£58,994).

P. WILLIAMS,
Secretary.

Dundee, 12th March 1957.

Madras Review

South Indian Notes

Payscales of NGAA Service

The twenty-seventh Annual Conference of the All India Non-Gazetted Audit and Accounts Association, held in Hyderabad, provided an opportunity for a mutual exchange of views between the members of the Association and the representatives of the Central Government on the problems confronting the non-gazetted staff of the Audit and Accounts service. It was brought to the notice of the authorities that following the reorganisation of the states, some of the cities had grown in importance and population with an increase in the cost of living. This coupled with the recent upward trend in the prices, it was pointed out, had rendered the payscales fixed by the first Pay Commission rather low and out of date. The logical corollary to this was a demand for a second Pay Commission to alter the basis of the pay scales in the light of new economic conditions. The Association also demanded deletion of Rule Five of Central Civil Service (Temporary Service) Rules, which made it possible for the authorities to dismiss employees taken on temporary basis without assigning any reasons. Grant of trade Union rights to the staff, so as to enable them to overcome some of the limitations which had reduced them to 'petition submitting' bodies as well as improvement of methods and conditions of work, which might react favourably on the efficiency of work turned out were the other measures of help, which the Association looked forward to the Government to undertake.

The stand of the Government in matters concerning the non-gazetted staff of the Audit and Accounts Service, was explained by Mr A. K. Chanda Comptroller and Audit General of India in whose absence his speech was read by Mr A. K. Mukherjee Accountant General of Andhra Pradesh. It was pointed out on behalf of Government, that the strength of the demand made by any body depended on itself and had not to be brought home by agitational methods, which cut at the very roots of unity which was the need of the hour. Further, the problems facing the staff, had to be viewed against the general background of the resources of the country, which has now embarked on a scheme of economic development. In the context of the big tasks awaiting the nation under the Second Plan, demands for special care and treatment of a particular section or category of service, betokens a narrow mentality and betrays a lack of the sense of oneness with members belonging to other categories of service. The speech of the Comptroller and Auditor General, containing, as it does, an appeal, based on considerations of national unity might find a ready echo in the hearts of the people to whom it has been addressed. For, certain amount of restraint had become inevitable to ensure the full success of the Plan. But at the same time it might be expected of Government to meet some of the demands of the staff which are non-monetary in character.

*

Industrial Development of Andhra

The scheme for the industrial development of Andhra, under the Second Five Year Plan, is a many sided one, and the outlay made for industrial expansion is such as will make the state at the end of the Second Five Year Plan, an area of sufficient industrial strength. The funds allotted by the State Government is of the order of Rs 13.35 crores which is in addition to an allotment to the tune of Rs 70.25 crores made by the Central Government. The major programme in the list of industrial development is the expansion of the Singareni Collieries for which an outlay of Rs 9 crores has been earmarked. The other schemes coming in a descending order of financial outlay are expansion of Praga Tools Corporation, establishment of a Cooperative Sugar Mill and spinning Mill. These schemes, which are to be financed from the proceeds of central allocations are expected to account for Rs 75 lakhs and Rs 20 lakhs respectively.

Provision is made under the State Government's scheme, for expanding the production capacity of paper produced in the state. For this purpose purchase of machinery required for the manufacture of bleached varieties of paper and improvement of the quality of paper produced in the Government owned Paper Mill at Rajmundry, as well as establishment of an additional factory are under consideration.

The scheme drawn by the Government is on the whole a balanced one and has been so framed as to ensure the full success of it. For development of power and adequate supply of tools are the two important elements of the nucleus around which other industries can grow and expand,and in the scheme drawn by the Government provisions for these two outweigh others. The selection of the other industries has also been done with an eye on the resources of the state and this is borne out by the provision made for a cooperative sugar mill as well as the spinning mill. Finally Andhra is comfortably placed in the matter of coastal navigation, and the Vizag ship-yard which is being developed at a total cost of Rs 902.8 lakhs during the Second Plan is sure to further the process of industrialisation of the area by making cheap transport available.

Four-year Technical Course

The Madras University, has now initiated a new change in the field of technical education. A scheme providing for a four year undergraduate course leading to the degree of Bachelor of Technology has been approved by the Academic Council. This scheme replaces the present two-year post graduate course in chemical engineering and chemical technology, and thus represents a liberalisation of facilities for advanced studies in technology. Considering the fact that technical education had not made rapid strides in the country in relation to its needs, it is a welcome measure and deserves to be emulated by other states as well. Evidently the reform has been conceived so as to fulfil the requirements of technical staff under the Second Five Year Plan.

Further the scheme follows closely the lines of the changes introduced by the Madras University in other departments as sciences and humanities. It will be recalled that in the latter a three year degree course was provided in place of the old course of an intermediate course, degree course and a post graduate course. But in the revised course for technological education only the third stage is abolished and integrated into a four year course while the intermediate course has been preserved. The new scheme is to take effect two years hence.

SOUTH INDIAN MARKETS

Outlook for Pepper

PEPPER markets have continued to rule weak following lack of support from New York and selling pressure from holders and growers. In the Kozhikode market, Wynaad quality is quoted around Rs 625 and the Country variety at Rs 600 to Rs 610 per candy. There appears poor chance of any fresh buying on USSR's account. There is a general feeling that, uness the US puts in sizable buying in the coming week or two, the prices for Malabar black are likely to go lower. Owing to the present stringency in the money market, demand from local consumers has also been far from satisfactory in spite of the present low prices.

In this connection, the Chairman of the Pepper and Ginger Merchants' Association, Bombay, has stated that the difficulties facing the spice trade can be solved only with the co-operation of the American buyer. He has also referred to the problem of detention of pepper lots in US Ports for inspection. He has urged the revision of the contract relating to quality allowance of three per cent and the way it is calculated.

On the other hand, the US Trade Mission, which was in Bombay last week, advised the Indian pepper industry to secure publicity support for its product to promote its export to the USA. A member of the Mission stated: "We in America like your spices and there is evergrowing use of them in American homes. It should be reassuring for the Indian exporter to get a certificate from the Government of India entomologist regarding the quality of spice, so that it will signify that the quality is satisfactory and stands every chance of acceptance in the USA".

Dealers in the USA are, however, reported to be unwilling to do any important replacement buying unless their spot holdings are finding ready buyers in grinders and packers. The majority of the dealers have postponed their buying, awaiting new development at Singapore when new crop Sarawak starts coming in. Malabar and Lampong spot are nominally quoted at 25 cents per pound.

Meanwhile, news is to hand that output in Indonesia may be less than that originally estimated. Even then, it is over 31,000 tons and should greatly influence the buyers. Indian crop has been a failure with estimates now dropping below 20,000 tons. With the present drop in prices and disinterest in world markets, a question is now raised whether the official plan of aiming at a 36,000-ton output by 1961 is possible.

*

Cashew

According to latest reports, the crisis in the Cashew industry is not yet over. The factories are reported to be slowly beginnig to reopen for the season; but the settlement between the State Government and one of the largest processors, controlling about 25 factories, has not been finalised.

Indian production is estimated at 75,000 tons and African at 95,000 tons—the highest on record for both areas. With such a large raw nut crop in slight, the recovery of the almond crop in Europe is having a dampening effect on raw nut prices, which are now offered at Rs 185 to Rs 195 per candy.

*

Groundnuts

The Madras Groundnut market ruled fairly steady with prices moving within a narrow range. Rates were quoted at Rs 163 per candy for superior oil-quality seeds and at Rs 157 for the bold variety. Arrivals

CLIVE STREET GOSSIP

(Continued from page 470)

clarity of political vision that many others, whose own view is clouded by vaporous cliches, might well envy.

✱

I do hope, therefore, that I shall never again hear people talking superiorly about the unwisdom of giving adult franchise to a people the majority of whom are unlettered. By all means, take steps to increase literacy in the country. As one who owes almost everything he knows to books, I would be the last person to despise books. But let us not imagine in our bookish snobbery that merely because a person cannot read the newspaper, he is an ignoramus and a political moron.

✱

Another hopeful aspect of the Bombay results is the indication it gives of the waning influence of the linguistic chauvinists. But I do not wish to presume too much on this. For, as I said earlier, the mandate to the Congress may be due, not so much to change of heart or mind over linguistic loyalty, as to the feeling that the other qualifications of the Congress outweigh its "lack of comprehension" of their view on this issue. In any case, it is fair to assume that the language question has ceased to be of over-riding importance with the people of an area, where it had created the maximum mischief in the last twelve months. This is a development that augurs well for the future.

✱

"Death is but crossing the world, as friends do seas; they live in one another still."—William Penn

Shortly after I settled down in Calcutta, I met a young man who had just joined the firm that is now known as Martin Burn Limited as a chartered accountant. Pleasant mannered and swiftly efficient, he was later to be entrusted offices of responsibility, chores that required the ability to take quick decisions and correct decisions. As the years passed by, he in turn became Manager and Director until, finally in 1955, he achieved the position of Managing Directorship; and, at the same time, it devolved upon him to husband the affairs of the Indian Cable Company Limited, in the capacity of Chairman, at a period when it was embarking on expansion. Last week, his life on earth was done; but Mr S. N. Mukerjee lives on, as William Penn remarked, in his friends.

EAVESDROPPER

✱

WORLD OF COTTON

(Continued from page 473)

was, however, a feeling among market circles that there would be unlikely any marked improvement in the offtake until demand at the finishing end of the trade showed improvement.

Meanwhile, enquiries for ready cotton continued to centre mainly on the medium and lower USA qualities of short-staple cotton. A moderate trade was reported in Turkish cotton at a price range from 23.75d to 25.00d.

✱

NORTH INDIAN MARKETS

(Continued from page 475)

Arhar is quoted around Rs 12-8 per maund. The all-India second estimate for 1956-57 puts the current year's area and production of arhar at 5,581,000 acres and 1,603,000 tons as against the adjusted corresponding estimates of 5,725,000 acres and 1,705,000 tons for 1955/56.

The Delhi grains market ruled steady. Wheat prices are ruling firm on better demand. There has been a good demand for Gram from deficit centres. Barley and Maize have steadied up modestly, because of short supply.

The Bombay grains market has presented a quietly steady appearance. The steady trend in Rice is aided by a small drop in arrivals. The tendency in indigenous Wheat continues to be firm with limited supplies lying in the City. In the Coarse grains section, Jowar prices have recorded a slight improvement, mainly due to a fair replacement buying at lower levels. Gram prices have ruled steady on account of the firm trend in the growing areas.

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the annexed Balance Sheet and Profit and Loss Account which are in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated for the year ended on that date.

London, 26th February, 1957.

Further Expansion in General Business in 1956

*

A New Era of Economic Prosperity Expected

*

Analysis of World Conditions by Sir Kenneth W. Mealing, the Chairman

The following is the Statement by Sir Kenneth W. Mealing, the Chairman, relating to the accounts for the year ended 31st December, 1956, to be submitted to the annual general meeting to be held on Tuesday, 26th March, 1957.

The expansion recorded last year in the Bank's general business continued during 1956. The Balance Sheet total at nearly £75 millions is higher by £3 millions. Deposits are higher by £2½ millions whilst on the Assets side there are increases of over £5 millions in Loans and Advances and nearly £1 million in Bills Receivable. These higher figures indicate the increased share we are taking in World trade with the East and are in part responsible for the decrease in our holding of Government Securities by nearly £3 millions.

The net profit of £236,484 is slightly higher than the previous year and your Directors recommend a final dividend of 7 per cent. If this recommendation is approved the dividend for the year will be 14 per cent., the same as last year. From the balance the usual allocations have been made to the Officers' Pension Fund, Premises Account and Contingencies Reserve Account leaving the balance carried forward at £224,521 against £219,372 from the previous year.

During the year the Board authorised the transfer of £250,000 from Inner Contingencies Account to the Reserve Fund, which now stands at £2,000,000.

The two significant events of 1956 were the strain put upon Anglo-American relations and the reimposition of Stalinism throughout Communist Countries. The former resulted from the chain reaction starting with America's sudden withdrawal from the Aswan Dam project, the nationalisation of the Suez Canal Company, the attack by Israel on Egypt and the Franco-British intervention. The second resulted from the attempt by the workers and people of Hungary to secure the freedom which the new anti-Stalin policy of Russia seemed to promise.

In the former case the British and French obeyed the resolutions of the United Nations and withdrew. The Canal was blocked by the Egyptians and only the future will show whether any Nations (other than Britain and France) are willing to obey the edicts of the United Nations to which so much political lip service is rendered. So far as the Hungarians are concerned the answer is clear: that Russian imperialism is not prepared to permit United Nations observers even to investigate the facts. I can only repeat my statement of a year ago, when I said "there is little or no prospect of a real relaxation of tension or of ending the 'Cold War' until a real disarmament agreement can be brought into effect"—and this seems now, if anything, still further away.

In Britain the Government's fiscal policy was beginning to be effective without resulting in unemployment, but the events in the Middle East checked the progress anticipated and the change in Government in January, 1957 resulting from the Prime Minister's illness and the re-entry into World affairs of the U.S.A. following the Presidential Election, may be expected to open a new era of Anglo-American co-operation and economic prosperity throughout the Western World.

INDIA

One of the principal events of the year in India was the introduction of the States Reorganisation Bill which after some modification, resulting from troubles in Bombay and Bengal, came into effect throughout India on the 1st November, 1956. Under this new Act the State of Bombay becomes one of the largest in India and with the final extinction of the Princely States the map of India takes on a rational and logical appearance such as it has never had in the past. Sir Chintaman Deshmukh, the Finance Minister, disagreed with the Government over the States Reorganisation Bill, insofar as it affected Bombay, and resigned his post in the Government. After an interregnum Mr. T. T. Krishnamachari became the Finance Minister and Mr. Morarji Desai, lately the Prime Minister of Bombay, went to the Centre as Minister of Commerce and Industry.

Mr. Krishnamachari introduced a surprise Autumn Budget which among other things included the re-introduction of a Capital Gains Tax, increases both in direct and indirect taxation, a proposal to siphon off reserves in private enterprise for the benefit of the public sector, and steps to bring the banking services under closer control by the Reserve Bank of India. A motion to nationalise all Banks in India was heavily defeated in the Lok Sabha.

The Foreign Policy continued to be directed by the Prime Minister, Pandit Nehru, who continues to maintain his policy of neutrality and non-alignment. During the Suez crisis he was under much pressure to sever India's connection with the Commonwealth, but stoutly refused to do so. During the year a British Consortium signed a contract with the Government of India for the erection of a steel plant at Durgapur. This plant is designed to produce ultimately a million tons of steel per annum and is the third such plant, the other two being respectively German and Russian, to be under construction in India at this time.

The second Five Year Plan to which I referred last year is already rapidly getting under way and is estimated to have a total cost of some 5,300 crores of Rupees. Inevitably this vast project will have repercussions on many aspects of Indian life. Initially it is almost inevitable that a degree of inflation and high taxation must be anticipated and indeed is already taking place. It must be hoped that the ultimate effects of the great production and employment that this plan is hoped to produce will justify this great undertaking.

Towards the close of the year some anxiety has been caused regarding the country's economy following a continued rise in price levels, continued substantial dwindling of foreign exchange resources and the monetary stringency in the Banking system. It is unfortunate that at this time the Indian jute trade, which is one of India's principal earners of foreign exchange, is passing through a time of economic crisis and heavy losses. The tea and cotton industries have both had a fairly successful year and on the whole labour relations throughout India have been reasonably harmonious.

PAKISTAN

On the 23rd March, 1956, the new Constitution was adopted and the Islamic Republic of Pakistan with Major General Iskander Mirza, who had been Governor General, as the first President came into being. Pakistan, however, remains a member of the Commonwealth. The enactment of this new Constitution was a personal triumph for the Prime Minister, Choudury Mohamed Ali, but, as a result of political realignments, he subsequently resigned, and Mr H. S. Suhrawardy became Prime Minister in his place, heading a coalition whose principal component is the Awami League. Mr Suhrawardy is an experienced politician and capable of real statesmanship: his task is formidable but all well-wishers of Pakistan will hope for his success.

In May, 1956, a draft five-year Plan was published envisaging the expenditure of Rs. 800 crores in the public, and Rs. 360 crores in the private sectors, estimated to increase National Income by 12 per cent., food grain production by 13 per cent., provide employment for two million people and increases in electric output, irrigation, etc. The Plan relies upon foreign aid for some Rs. 300 crores of finance. It is regarded as being moderate and realistic and has been well received in the country but it has been criticised as putting far too little emphasis on agriculture and communications including port facilities.

Industrial development of East Pakistan is now receiving urgent consideration and may be greatly helped by the discovery of a gas field in Uchh. The jute industry now has some 7,750 looms and plans by 1960 to have an output of jute manufactures capable of meeting over 30 per cent. of world consumption. Pakistan's devaluation in July, 1955, has undoubtedly helped her export trade in raw and manufactured jute and cotton, but the necessity of importing and distributing very large quantities of food-stuffs particularly in East Pakistan has proved a major headache and resulted in much suffering in that State last year. No less than 883,000 tons of food were imported into East Pakistan and 600,000 to West Pakistan. The value of these food imports was in the neighbourhood of Rs. 80 crores which, had it not been for American aid would have seriously affected Pakistan's foreign exchange position. There is no doubt that Pakistan will continue to need foreign aid for some time to come notwithstanding the strenuous efforts she is making, by severe restrictions in imports at the expense of some degree of inflation, coupled with an industrial programme designed further to reduce imports and to increase her income from exports.

CEYLON

The Ceylonese General Election, held in April, 1956, resulted in the unexpected defeat of Sir John Kotelawala's United National Party

and its replacement in power by the Peoples United Front Party under the Premiership of Mr S. W. R. D. Bandaranaike.

It was believed that the policy of the P.U.F.P. included reductions in the price of rice, legislation to make Sinhalese the official language, and some degree of nationalisation including that of foreign owned estates.

Economically the year 1956 proved less prosperous for Ceylon than the preceding year. This was largely due to circumstances outside Ceylon's own control. Adverse weather conditions, including the severest drought in 50 years, caused deterioration in the quality of tea and a falling off in coconut production. Delays in Colombo due to dock labour unrest and towards the end of the year the diversion of shipping round the Cape all had adverse effects on Ceylon's balance of trade. The Port development scheme was completed and ships are now able to go alongside for loading and discharging cargo. Given freedom from labour disputes, Colombo Harbour should regain efficiency and cease to handicap the Island's trade as it has of recent years.

In May, 1956, the Development Finance Corporation of Ceylon was set up with a subscribed Capital of Rs. 6,000,000 to assist in the finance of new industrial undertakings in the private sector. The Government also attach considerable importance to agricultural development and work is to begin on two major schemes, the Giritale Extension Scheme and Huthurajawela Scheme with the object of increasing the production of paddy. As foodstuffs, particularly rice, form Ceylon's principal import it is clearly most desirable that the Island should be made less dependent on imports from overseas of this essential foodstuff.

BURMA

There is not very much change to report in regard to Burma during the past year. General Elections were held in April, 1956, as a result of which the Anti-Fascist Peoples Freedom League were overwhelmingly re-elected, a coalition of opposition parties having fallen apart before the election took place. Subsequently, the popular Premier U Nu resigned in favour of U Ba Swe in order to devote his time to the strengthening and internal re-organisation of the Anti-Fascist Peoples Freedom League of which he continued to be President. It is now reported that he will shortly be resuming the Premiership.

The problem of dealing with the insurgents has not yet been solved in Burma and until it is, the establishment of the rule of law and order throughout the land will remain unsolved.

In the financial field it is satisfactory to report that Burma's foreign exchange reserves which at the beginning of the year stood at K.405.5 million rose by the end of December, 1956, to K.569.6 million. This improvement is most welcome and is largely due to the strict limitation of imports. During the financial year which ended on the 30th September, 1956, 1,932,000 tons of rice and rice products were shipped. Out of this total 459,000 tons were on account of barter agreements despite which the total foreign exchange earnings were in the neighbourhood of the equivalent of K.96 crores and practically none of the 1956 crop has had to be carried over into the new year unsold. This in comparison with previous years when there were large carry-overs of unsold rice stocks is indeed satisfactory. On the other hand, only a fifth of the petroleum was produced in 1956 than was produced in 1939 and only a quarter of the teak and silver. Burma's potential export of her natural resources therefore is very great provided that tranquil conditions could be brought about throughout the country.

During the year loans were obtained from the World Bank, the Government of India, and the United States Government primarily to be used in the development of the Port of Rangoon and the railway system.

Disturbing features are the gradual elimination of private enterprise by State organisations and the infiltration of Communism into the Rangoon Universities Students' Union which may present the Government with serious problems in the future if it is permitted to continue.

Towards the end of the year Chou En Lai of China visited Rangoon and negotiations are continuing for withdrawal of Chinese troops who occupied Burmese territory adjacent to the Border with China.

FEDERATION OF MALAYA

The Federation of Malaya has enjoyed a successful and prosperous year in 1956. Both imports and exports made a substantial increase and the prices of Malaya's two main exports—rubber and tin —have maintained a satisfactory level averaging around 96 cents a lb. for the former and $386 a picul for the latter.

By an Agreement signed by Her Majesty's Government on 8th February, 1956, a considerable degree of self government was brought into immediate effect and it is understood that there is every probability of full independence by the end of August, 1957. The Constitutional changes effected immediately by the Agreement of February, 1956, provided for the appointment of a Chief Minister and this office was assumed by and is still held by Tengku Abdul Rahman, who also assumed responsibility for the internal security of the country under the newly created post of Minister for Internal Defence and Security. Responsibility for finance including foreign exchange was transferred to a Minister of Finance and this office was assumed by Col. H. S. Lee.

The Emergency created by Communist terrorists still continues and although it has been estimated that something like 80 per cent. of the terrorists who entered the jungle in 1948 and since, have been eliminated, it is nonetheless a fact that terrorist inspired incidents continue although they have been considerably reduced. There is no doubt that terrorism will continue to be a thorn in the side of the new Government unless firm steps continue to be taken against it.

Thus a new chapter in the history of the Federation of Malaya having begun in 1956 will presumably come to fruition in 1957. The new Government will start off with enthusiasm and expansive plans which all well-wishers of Malaya must hope will attain success and lead to increased prosperity for the Federation.

SINGAPORE

1956 proved to be another prosperous and successful trading year for Singapore. Rubber averaged about 95 cents over the year and tin was obtaining good prices. The outlook for 1957 appears also to be favourable.

The year has also been eventful in the political field. Early in the year the Chief Minister, Mr David Marshall, together with members from the other political parties, proceeded to London for constitutional talks which broke down on the question of internal security. On his return early in June Mr. Marshall resigned his position as Chief Minister and was succeeded by Mr. Lim Yew Hock.

Rioting took place in October following upon the closure by the Government of certain Chinese Middle Schools which had become a hotbed of political activities of a subversive nature. The Chief Minister's firm handling of this situation created a very good impression and was responsible in large measure for the return of confidence. Although there were a number of strikes during the year there were in fact considerably less than in 1955 and labour relations have towards the end of the year improved.

Plans have been made to set up an Industrial Promotions Board to encourage and develop local industries in the Island of Singapore. An Institution of scientific and industrial research is also being set up to investigate and give advice chiefly on the technical and economic aspects of industry and an expert has been engaged to undertake this work. Government has made it clear that it will do all it can to encourage the investment of foreign capital in the Colony and to create a suitable climate for industry. It is evident that if Singapore is to maintain its position as a great communication and trading centre and keep abreast of the times a large development programme will require to be undertaken and the means for financing such a programme are under consideration.

INDONESIA

The re-emergence of this important country to a state of fiscal integrity and domestic stability is a matter desired by all countries with whom her trade and commerce can be of mutual benefit. Teething troubles in a young country are inevitable and the recent Sumatra troubles may be the prelude to progress resulting in due course to Indonesia taking its rightful place in the trade and commerce of South East Asia.

THAILAND

Thailand continues to be one of the most prosperous and contented countries in South East Asia, under the able Premiership of Marshal Pibul Songgram. There are to be elections in February for a proportion of the seats in the existing one Chamber Parliament but the Premier recently announced that the present Constitution would be changed in order to provide for an Upper and a Lower House Parliament: a further step towards liberalisation of the Constitution.

Economically Thailand had a good year. The paddy crop is estimated by the Ministry of Agriculture to be close on 8,000,000 tons of which nearly 1,200,000 tons have been exported and the carry over into the New Year, which in the past has frequently amounted to as much as a quarter of a million tons, this year is regarded as negligible. The timber industry had a somewhat difficult year owing to an increase in costs, whilst the completion of the Chainat Dam across the Chao Thya has seriously hampered the delivery of rafts of timber to Bangkok. The tin, cement and sugar industries all show increased output the latter being expected to supply the country's entire requirements by the end of 1957. The Government controlled Cotton Mill in Bangkok is also said to be increasing its spindleage and by the end of 1957 should be capable of producing over 75 per cent of the country's estimated requirements. A new paper mill is under construction just outside Bangkok and when this is in full production it is estimated that the country's total requirements will be provided. A plant for the manufacture of gunny bags which is being reconstructed and enlarged has also been taken over by the National Economic Development Corporation and is expected to come into production during 1957 and provide 25 per cent. of local needs, roughly 5½ million bags annually.

To open up the country with a network of fine roads the 1956 Government programme of highway construction provides for an outlay of Tcs. 2,000,000,000 of which 20 per cent. was subscribed under American aid.

HONG KONG

Hong Kong has had another successful and prosperous year. Both imports and exports show increases in excess of 25 per cent. over the 1955 figures. In the case of exports the principal increases have been to Indonesia, Japan and Thailand. The principal exports to Indonesia consisted of piecegoods and enamelware. The principal increases in imports have come from Japan, China, the U.S.A. and the United Kingdom. The principal imports from China consisted of oilseeds, paper and piecegoods. Local industries in Hong Kong continued to make great strides and exports of locally-made products continued to expand. In value cotton yarn and cotton piecegoods head the list of exports but the value of enamelware shows considerable increase over the year. The variety of goods turned out by local industry is considerable and the Colony has become noted for the price, quality and range of the products of its light industries. Amongst the most important of these products apart from cotton piecegoods and cotton yarn are ready-made garments of all kinds, enamelware, torches, vacuum flasks and rubber and leather footwear also brocade, embroideries and drawn work of typically Chinese design and manufacture.

The Colony's shipbuilding repair industry continues to expand and with its modern equipment and low costs is becoming a popular repair centre for many important shipping lines. Work is proceeding on the new Airport at Kai Tak in Kowloon and it is expected to come into use in August, 1958. A new power station is also being erected at North Point. The vast problems of housing, providing work and education for the large numbers of refugees who continue to come to Hong Kong is being resolutely tackled by the Authorities with some success.

MAURITIUS

The 1956 sugar crop in Mauritius was an all time record at the figure of 571,893 metric tons produced at an average extraction rate of 12.94 per cent. which is also a record. The Commonwealth Sugar Agreement has been extended for a further year, i.e. up to and including the year 1964 and under the terms of the International Sugar Agreement the export quota for Mauritius remains the same at 470,000 long tons. Of this 335,000 tons will be purchased by the Ministry of Food at an increased price of £42 3s. 4d. per ton against £40 15s. 0d. per ton for the previous crop. The balance of 135,000 tons will therefore be offered for sale in the preferential markets in the United Kingdom and Canada.

It is estimated that the Cyclone and Drought Insurance Fund exceeded the sum of Rs. 95 million by the end of 1956.

In May, 1956, the Legislative Council adopted a new Constitution for Mautritius proposed by the Secretary of State for the Colonies. The principal changes in the Constitution include that the present electoral system should be replaced by proportional representation by means of a single transferable vote; that the Legislative Assembly shall be composed of 25 elected members after a General Election in 1958; that a member of the Executive Council shall receive the title of Minister and the responsibilities of certain services be entrusted to six unofficial members of the Executive Council.

It is to be hoped that the new Constitution will provide a workable and satisfactory form of Government until with the efflux of time there evolves some sense of common Mauritian citizenship among the various races and creeds who at present form the population of the Island.

Trading conditions generally during the year have been satisfactory although towards the close there was some inevitable disruption owing to the closure of the Suez Canal.

The small Tea Industry has continued to expand on a moderate scale. Government have approved a Scheme designed to assist the development of the industry on a substantial scale by subsidies and contributions to capital costs of establishing plantations. If the pilot scheme is successful development on a larger scale is foreshadowed and finally should provide a much needed secondary industry for the Island.

The finances of the Island continue to be sound. For the year ended 30th June there were increases both in revenue and in expenditure. Revenue exceeded expenditure by some Rs. 10 million and draft estimates for 1956/57 reveal that 35.7 per cent. of the revenue is to be derived from direct taxation with a further 23.4 per cent. accruing from Customs duties. On the expenditure side the largest items are again education and health which will account for 28.9 per cent.

Population continues to grow rapidly and it has been estimated that at the normal rate of increase the population of the Island may attain the million mark by 1972.

JAPAN

1956 has proved to be by far the best year for Japan since the war. Exports rose by a further 25 per cent., domestic trade showed a healthy expansion, productivity improved and the harvest although not quite so large as the previous year was still exceptionally good. Moreover these benefits have not been diminished by inflation, for prices remained stable and so all sections of the Nation enjoyed conditions of prosperity with better living standards than for nearly 30 years. It is estimated that industrial production as a whole increased by no less than 25 per cent. over the production of 1955. Consumption demand has increased both internally and also for exports, particularly to South East Asia and North America. The closure of the Suez Canal has undoubtedly contributed to some extent to the boom that Japan is now enjoying.

In December the Hatoyama Cabinet resigned and Mr. Tanzan Ishibashi was elected Party President and Prime Minister. The new Prime Minister is a man of considerable knowledge and experience of economic matters and it seems probable that there will be needed adjustments in Japan's taxation laws and probably closer trading relations with China.

It is good to report that Japan was admitted to the United Nations in December, 1956. The ratification on December 12th of the joint declaration between Soviet Russia and Japan re-established diplomatic relations between those two countries and virtually ended the state of war which had existed for over 11 years.

There is every reason to believe that given normal conditions the present era of prosperity for Japan should continue throughout the coming year.

SHANGHAI

Further substantial progress has been made towards the final settlement of our affairs in Shanghai. An Agreement was entered into with the Chinese Government Authorities whereby we relinquished to them our valuable local assets against the assumption of responsibility by them for settlement of all our local currency liabilities in China, as assessed against us by that Government. A further Agreement was entered into with the same Authorities for agreeing and settling the amount of our Shanghai Branch foreign currency liabilities. These latter included a substantial amount of U.S. dollars held blocked under American legislation and after protracted negotiations, and through the good offices and assistance of H.B.M.'s Embassy in Washington, a licence was obtained from the American Treasury Department under which settlement was effected by us in sterling. This materially aided in obtaining the repatriation from China of Mr. D. A. Smith, our Shanghai Manager and last British employee in China.

It was a part of the Agreement that, on receipt of the foreign currency payment from us after the departure of Mr. Smith, steps would be taken to close our books in Shanghai by effecting payments where possible and transfer of the remaining liabilities to the books of a Chinese Bank. We regret that despite the lapse of many months no progress has yet been made in fulfilling this undertaking. We trust the Chinese Authorities will now give the necessary instructions to expedite a final settlement.

During the year Agencies of the Bank were opened in The Pettah, Colombo, and in Temerloh, Pahang, Federation of Malaya.

During the year our numerous Branches and Agencies throughout South East Asia and the Far East continued to render efficient services in every department of Banking to a wide variety of industry, trade and commerce. Our thanks are due to our large staff, British and Asian for their good work. I must also express our thanks to Mr. Drake our Chief Manager, Mr. Hawkins our Deputy Chief Manager, and to the Managers and Staff in London.

K. W. MEALING,
26th February, 1957. Chairman.

JARDINE HENDERSON, LIMITED.

NOTICE is hereby given that an Interim Dividend at the rate of 2¾ per cent. less Indian Income-tax thereon, will be paid to the Registered holders as on the 6th April, 1957, of the 50,000 Cumulative Preference Shares of Rs 100 each in the Company in respect of the year ending 31st March, 1957.

The Share Transfer Books of the Preference Shares will be closed from 28th March to 6th April, 1957, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, Clive Row,
Calcutta-1, 7th March, 1957.

MARTIN BURN LIMITED.

Convertible Notes.

NOTICE is hereby given that interest for the half-year ending 31st March, 1957, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 31st March, 1957, or in accordance with their instructions.

A. G. GIDLEY
Secretary.

SOUTH INDIAN MARKETS

(Continued from page 477)

were small and averaged only 30 to 40 tons a day due to elections in various centres.

In the Groundnut Oil section, the rate for the ready position is quoted around Rs 317 per candy. Buyers were unwilling to operate at higher levels.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate, while clearances were brisk with prices firming up by one anna per pound. There was no change in arrivals, clearances and prices of Buff hides. Arrivals of Buff Calf and Cow calf were fair and there was a steady clearance.

In the export section, trading with the UK showed signs of brightening up with good enquiries for 8-8½ lbs; 10-12 lbs and 5-5½ lbs in the order of interest. There were a number of enquiries for 8-8½ runs and fourths at 48d and 44d respectively; but supplies were difficult. Enquiry for Cow Calf was selective.

In Tanned Skins section, arrivals of both Goat and Sheep skins were at previous week's levels with prices ruling unchanged. On the export front, business was reported done in one or two marks of 11-12 lbs thirds and fourths at 13sh 4d and 13sh 4½d respectively. Although the Sheep skins section ruled firm, the general tone did not seem to be as encouraging as goats.

THE NATIONAL BANK OF INDIA, LIMITED
AND TWO SUBSIDIARY COMPANIES

CONSOLIDATED Balance Sheet as at 31st December, 1956

	£	1956 £
Capital—Authorised and Subscribed—4,562,500 Shares of £1 each	4,562,500	
Paid-up 12/6d. per Share		2,851,563
Reserve Funds—Including Share Premium Account £1,128,750 (1955—£1,128,750)		3,168,579
Profit and Loss Account— Profit unappropriated		354,046
		6,374,188
Current Liabilities, Provisions and Other Accounts— Current and other Accounts, including provision for diminution in value of assets, taxation on profits to date and reserves for contingencies	117,979,702

NOTE. The aggregate amount paid in respect of Directors' fees was £19,746 of which £3,000 was borne by a subsidiary (1955—£16,917 and £500 respectively).

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on such basis, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1956.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Bank of India, Limited.

The National Bank of India Limited

Indian Economic Activity Dominated by Second Plan

Time Ripe for National-Grindlays Amalgamation

Statement by Mr J. K. Michie, the Chairman

The following is the statement by the Chairman, Mr J. K. Michie, relating to the accounts to be submitted to the annual general meeting to be held on the twenty-sixth March, 1957.

First I wish to mention certain changes in the composition of our Board and in our General Management that have happened over the past year.

In August last Mr. R. L. Hird died after a short illness. He had been a member of the Board since 1945 and previously had served the Bank for 48 years, finally as General Manager. Mr. Hird's wide and intimate knowledge of our affairs and his own qualities made him a particularly valuable member of the Board and we miss him greatly. In replacement we invited Mr. N. W. Chisholm to join the Board and this appointment now comes up for confirmation at the Annual General Meeting.

On 31st December Mr. Chisholm ended a career of nearly 50 years of distinguished service as an executive of the Bank, during the last four of which he was your General Manager. We are very glad indeed to continue to have the benefit of Mr. Chisholm's wide and up-to-date knowledge and experience.

We have also appointed to the Board the Rt. Hon. A. R. W. Low, C.B.E., D.S.O., M.P. Previous to becoming a Minister of the Crown in 1951 Mr. Low was a Director of Grindlays Bank Ltd. His family connection with that Bank goes back well over a hundred years. Mr. Low's appointment also requires your confirmation.

Mr. Kerr, previously Deputy General Manager, has succeeded Mr. Chisholm as General Manager and in turn his place as Deputy General Manager has been taken by Mr. G. T. Gillespie. Both are fully qualified by ability and experience for these positions.

Before turning to the Accounts I have another matter of more than ordinary interest to report.

Ever since we acquired from the National Provincial Bank Ltd. the total capital of Grindlays Bank Ltd. the interests and managements of Grindlays Bank and ourselves have naturally grown more closely together and it has become increasingly clear as experience accumulated that to ensure the full benefits of this association a physical fusion of resources and Staff must be the ultimate step. The Boards of both Banks have now decided that the time is ripe for an amalgamation and the necessary preliminaries have been set in motion. It is hoped that the fusion can be effected as from 1st January, 1958 and every effort will be made to achieve this. Opportunity will be taken to make a change in our name and, despite the long and honourable associations attaching to the present titles there are a number of good reasons for doing this. Until certain legal formalities are completed it is not possible to announce a name but it is hoped to preserve in the one adopted associations with both now in use.

What is important to our shareholders is that the two Boards are strongly and unanimously of the opinion that taking this action will solidify and strengthen our structure and enable us to progress both more soundly and more rapidly than would otherwise be the case. A public announcement of our intentions will be made at the earliest possible date. Any necessary resolutions will be put before you in due course.

Our consolidated Balance Sheet total at £163,635,741 shews the contraction anticipated in my last Statement, the comparable figure a year ago being £168,653,013.

Our Net Profit figure is somewhat larger and after full provisions for taxation, bad and doubtful debts and other necessary reservations comes out at £432,835 against £421,839 the previous year. Dividends declared are unchanged at 15 per cent for the year. £100,000 has been transferred to Premises Account against £75,000 and £75,000 to Contingencies Reserve Account against £85,000 in 1955. The balance carried forward is increased by £11,888.

The fall in the value of Sterling Securities was arrested before the end of 1956 and an upward movement has since taken place. As I have previously reported all temporary depreciations our holdings have been fully provided for ex interior reserves.

India. All Indian economic activity is being dominated by the Second "Five-year Plan" which has recently been widely commented on in the financial press and our own Quarterly Review published in January carried an interesting article on the subject.

Despite legitimate mental reservations as to the timing and correlation of certain sections of the plan and some doubt, having regard to the country's apparent resources—the significant reduction in her sterling balances has to be taken into account—whether too much is being attempted too quickly, it is generally agreed that the plan is imaginative and certainly reflects a dynamic outlook and determination on the part of the Government. All people of goodwill will wish the plan the greatest possible success.

In such circumstances of stretched resources it is inevitable that larger calls are made on the banking system of the country. But Banks, while assisting their customers to the greatest possible extent, have the mundane and paramount duty of maintaining a reasonable liquidity and that can be achieved only by finding more deposits or by restricting their lendings. While the total of deposits with the Banking system in India shewed a moderate rise over the year most recent figures available shew that aggregate advances stand at over 70 per cent of deposits; and in spite of an unchanged Bank rate money commands about 1 per cent per annum more than a year ago. On this shewing Banks can hardly be accused of underlending, particularly in comparison with the ratio of lendings to deposits in the United Kingdom. Perhaps both reflect exaggerations of opposite policies.

This situation has been created partly by the Government's policy and partly by circumstances. To take the second first, the blocking of the Suez Canal automatically meant and still means that shipments have to be financed for considerably longer periods than normal, while a great deal of capital imports eventually are paid for by Government departments whose machinery for so doing works slowly. Secondly there is so much pressure on the private sector of industry to expand that its reserves previously built up are rapidly being spent, plus very large additional sums, and that at a time when Government is keeping an extremely tight rein on the capital market as well as on money rates. The proposal that part of Company reserves should be deposited with the Reserve Bank would mean a depletion of ordinary banking deposits.

Commerce and industry have recently had their tax burdens materially increased and there have been official indications that these possibilities are considered not yet to be exhausted.

It is true that industrial profits are good but the atmosphere of doubt about Government's intentions towards the private sector is very adversely affecting Stock Exchange values, in other words public confidence.

India's food production is being wonderfully well maintained but it is still the largest single problem which the Government has to face and will continue to be so in the foreseeable future. Other major cash crops, e.g. jute, tea and cotton, all enjoyed reasonably good years, tea prices particularly having made a very good recovery since December 1955.

It is satisfactory to see that a fresh trade agreement between India and Pakistan has just been signed which should facilitate the natural transactions between the two countries. For the benefit of both it is to be hoped that this trade will steadily expand.

Pakistan. The recently published Budget for 1957-58 indicates that Pakistan expects to finish this financial year with a favourable trade balance of just under £1,000,000 against a surplus of £24,000,000 in the previous year.

The prime cause of this change was the food shortage in East Pakistan. Indeed as the Budget statement admits food production against the background of a rising population is the greatest weakness in the country's economy and the one perhaps which has had less than its meed of attention. Tax relief is given to the lower income groups but surtax is raisd by 6¼ per cent and a wide range of tax increases is imposed on articles of consumption including tobacco, jute, cloth and oil. In other words in the main increases in direct taxation have been eschewed.

Industrial expansion continues and during the year there was an increase of one-third in the number of looms in operation in the jute mills of East Pakistan. The target of the existing Companies is 8,500 looms which will mean an increase of nearly 60 per cent on present capacity. At 1,750,000 bales the cotton crop of West Pakistan, though larger than that of the previous year, was affected by adverse weather. The requirements of local mills are now estimated at 1,000,000 bales which is an increase of 30 per cent over the previous year.

Ceylon. Economically Ceylon's experience in 1956 was a satisfactory one and in the year ending

31st October 1956 her accumulated surplus rose by £6,500,000 to nearly £90,000,000. Money rates were easy, tea prices were good and rubber prices moderately so. Her efforts to grow more food continue to expand.

In certain respects the prospects for investors in Ceylon are in weather forecasting parlance "uncertain". Some sections of the present Government have recently advocated the nationalisation of industry and specific suggestions have been made that the tea estates could be taken over at an average valuation of £69 per acre. Those competent to know state that tea cannot be brought into production and manufactured at a cost of less than £400 per acre. Some put it much higher, so there is little reality about the figure that has been named and estate owners cannot be blamed for feeling apprehensive. A policy involving a large measure of expropriation would be damaging to Ceylon's good name and to her prospects of obtaining outside capital for new projects and I hope the idea will not be pursued.

The modernisation of Colombo port is now nearing completion but labour relations have been bad and the turnround of ships visiting the port is extremely slow in consequence.

Burma. Throughout 1956 rice prices and demand both remained very steady and previously accumulated crop balances were largely disposed of, exports reaching nearly 1,950,000 against an estimated exportable surplus of 1,500,000 tons. This year's exportable surplus is estimated at 1,575,000 tons.

In these respects the position is sound and the country's financial resources have benefited. At 31st December 1956 her sterling balances stood at £39½ against £32 millions a year earlier.

There is a welcome trend to curtail barter transactions and to sell a larger part of rice export for currency and I trust this policy will be increasingly pursued for only by that means will she have freedom of choice in placing her purchases.

Nevertheless the sanctioning of remittances to cover accumulated profits belonging to foreign investors and for leave salaries and other legitimate personal needs is still being made a matter of great difficulty and is causing natural concern as well as hardship to those affected.

The new refinery built near Rangoon by the Burma Oil Company (1954) Ltd. which is now a "joint venture" with Government is expected to go on stream in March and the economic benefit of this development will be considerable.

Teak production has improved but will not recover to any great extent until Government has achieved a greater measure of law and order throughout the forest areas.

East Africa. Since I last addressed you we have opened three Branches and sub-Branches in these territories and have closed one.

Kenya. It is good to be able to report that the Mau Mau problem has now reached the constructive stage of rehabilitation, the destructive force of the movement to all intents and purposes being exhausted. The Government of Kenya is to be congratulated on the enlightened way it has planned and is tackling the all important question of the resettlement of those who were involved in Mau Mau and even more on the success of their efforts.

Rightly much financial help has been given to Kenya by Her Majesty's Government but a remarkable feature since the unfortunate movement began has been the resilience of its economy and the rate at which the inflow of capital has continued. The success of the internal loan of £2,500,000 issued a few weeks ago is another encouraging sign.

Coffee prices have averaged about 10 per cent higher than the previous year. Tea production has reached a new record of 19,000,000 lbs. and development continues.

Uganda. The cotton yield was slightly in excess of the previous year and coffee production is expected to reach the record figure of 70,000 tons which compares with 45,000 tons for the year 1955-56.

Owing to Indian buyers holding off, the marketing of cotton is slow but the general trading situation appears to be sound and money is moving more freely than was the case last year.

The demand for electricity from the Owen Falls scheme continues to increase and the general picture in Uganda is one of a steadily expanding economy.

Through Co-operative Societies Africans are being increasingly introduced into the cotton ginning and coffee milling industries while their share in the retail trade of the country has now risen to 35 per cent. All this spells progress.

Tanganyika. Here too the production of cotton, coffee, tea and other cash crops continues to expand and exports of sisal also increased. Sisal prices have been fairly steady around £75 to £80 per ton.

Our new office at Daressalaam was recently completed and H. E. the Governor, Sir Edward Twining, kindly performed the opening ceremony. A photograph of the building which His Excellency described as "splendid and distinguished" is reproduced with the report.

Zanzibar. The backbone of the island's economy is cloves and because of drought the yield of the crop now being marketed is estimated at only 7,000 tons against 10,000 tons the previous year. The market however is firm and prices are about 25 per cent over last year's level.

Aden. The closing of the Suez Canal naturally has considerably affected Aden as a bunkering port and as tourist shopping centre, the number of vessels entering the port having fallen by 60 per cent but otherwise its trade has shewn remarkable life.

In July last we occupied our fine new office at Crater—which also houses the Currency Office—and an official opening ceremony was kindly performed by Sir Tom Hickinbotham, just prior to his retirement from the Governorship of the Colony.

We have recently sanctioned the rebuilding of our Steamer Point office, the present one being inadequate for our needs.

The oil refinery at Little Aden is being expanded and we must hope that Aden will soon have a return to normal activity and expansion.

Somaliland Protectorate. No large developments have taken place during the year and the effects of the drought in the early part of 1956 are still being felt.

The use of our banking facilities continues to grow if slowly.

Grindlays Bank Ltd. I have already dealt with our proposals for the fusion of this business with our own.

I am glad to report another successful year's operations which is reflected in the profit figure shewn in their accounts attached to this report and as you will see the growth in the volume of the Bank's deposits has been well maintained. As in our own case all necessary provisions have been internally made including any depreciation on the Bank's holding of Government securities.

During the year two further Branches have been opened in the Rhodesias and results of operations there shew a considerable improvement and are encouraging.

Our **Finance & Development Corporation** again operated at a profit which is being retained in the business.

General. When I last addressed you we had just had a rise in the Bank rate to 5½% in a further attempt to curb inflationary tendencies. The situation was apparently improving when the economic results of the Suez crisis fell upon us. By dint of calling up our reserves the critical phase has been by-passed and money has been plentiful enough to justify an adjustment of the Bank of England rate to 5%. I say adjustment advisedly for on the authority of the Governor of the Bank of England that is all it is and we shall have to work hard for any further improvement in our monetary situation, whether expressed in gold and dollar balances or interest rates, and obviously they go together.

This is no time to attempt prophecy; the imponderables are too many and certainties too few but as had been said before no one owes this country a living and it can only be through the wisdom of our Government and the efforts of all our people that our present economic difficulties will be resolved; and surely there is nothing insurmountable about them so long as we do not spend as if we still had a large unearned income behind us.

Last year I remarked on the disparity between interest rates in London and those current in certain other countries. This gap has since been narrowed but in today's relative circumstances it is in some cases still too wide. Supply and demand will doubtless have their way in due course.

As to our own prospects, given reasonable operational conditions I feel sure our forward progress will continue.

Staff. I wish again to thank our Staff throughout our widespread organisation. Banking is a service and it is in its quality that the seeds of success lie. From my observation we have nothing to fear on that score.

J. K. MICHIE,
Chairman.

*

WILL SOCIALISM RETURN IN BRITAIN?

(Continued from page 465)

year or two to mitigate the difficulties of the long-suffering middle classes. Allowing for all this, it would be a mistake to assume that the next general election would necessarily bring back a Socialist Government—though it stands to reason that the Conservatives will not remain in office forever, so that a return of a Socialist regime must be regarded as a mere question of time. What matters is that such a change is far from being imminent. Nor is it altogether unreasonable to hope that, given enough time, the British Labour Party might mature and settle down to a more responsible attitude than it has displayed both in office and out of office since the end of the war.

MARTIN BURN LIMITED.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 31st March, 1957. The Preference Share Registers will be closed from the 1st April to the 16th April, 1957, both days inclusive. Payment will be made on or after 16th April, 1957, to those Preference Shareholders whose names appear on the Company's Registers on the 31st March, 1957, or in accordance with their instructions.

By Order of the Board,
A. G. GIDLEY,
Secretary.

Banking Business Handicapped

*

Significant Scarcity of Funds

*

Analysis by the Chairman, Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E.

Speech of the Chairman to be delivered at the Fifty-first Annual General Meeting of the Shareholders of The Bank of India Limited on Thursday, 7th March, 1957.

Ladies and Gentlemen,

With your permission the balance-sheet may be taken as read.

At the time of our Annual General Meeting in 1956 the currency in circulation was Rs. 1,406 crores, whilst at the corresponding time in 1955 it was Rs. 1,241 crores. This year it is Rs. 1,515 crores. The increase on last year's figure is Rs. 109 crores. I consider that the substantial needs of the Second Five-Year Plan have tended to prevent an increase of this order from spelling material inflation.

The year 1956 saw a major event in State ownership. This was the nationalisation of life assurance business in India from 19th January, 1956. There was a transition period during which, until the inauguration of a Government corporation with legal status, Government custodians managed the life assurance business through the organisations of the old life assurance companies. A body corporate, the Life Insurance Corporation of India, was brought into being by an Act called the Life Insurance Corporation Act, 1956, and functioned from 1st September, 1956. On that date, the Corporation took over fully, the interim period ended and the operation of nationalising life assurance in India was completed. The matter of compensation to the old companies remains.

A far-reaching event in 1956 and one which intimately concerns the Bank was the coming into force from 1st April, 1956, of the Companies Act, 1956. Some of the provisions of this voluminous legislation are most complicated and not easily carried out. Your Directors have devoted much attention to meeting the requirements of the Act. The Extra-ordinary General Meeting of 11th October, 1956, for the bonus issue passed some resolutions to meet the Act. You will see further evidence of the Act's requirements in the Agenda of this Meeting.

The year has seen further taxation imposts and Government restrictions. In my speech last year, I spoke of the Finance Bill for 1956—the Budget—which had just then been introduced. It provided for substantial increases in taxation, particularly on companies. In December, 1956, supplementary Finance Acts, called Finance (No. 2) Act, 1956, and Finance (No. 3) Act, 1956, were enacted. They enhance the existing burdens on free enterprise. The No. 2 Act, amongst other things, greatly increases the rates of stamp duty on usance bills of exchange and usance promissory notes and can, therefore, be said to be "in restraint of trade" so far as the banking business is concerned. The No. 3 Act will oblige companies to make compulsory deposits with the Government in certain circumstances. If I may be permitted to use a somewhat strong expression I would say that this is the adoption of the principle of "forced loans" to the Government of the country. I do not think I am alone in this view—or in my rooted objections to the principle. This legislation will also have the effect of aggravating the already very tight money conditions to which I will refer later. The Act also resurrects the Capital Gains levy which was in force from 1946 to 1948. In the latter year it was allowed to become dormant. There was then a recession in trade. I imagine the levy ceased to produce much revenue to the tax-gatherer. In the present resurrection the impost is tightened in that the minimum amount of capital gains assessable is reduced from Rs. 15,000 to Rs. 5,000. The Act also enhances further the burden of the tax on dividends paid by companies levied by the main Finance Act of 1956, passed earlier in the year.

The Banking Companies (Amendment) Act, 1956, was enacted at the end of 1956 and came into force on 14th January, 1957. The main Banking Companies Act, 1949, gave the Authorities wide powers over banks. The amending Act enhances these powers. The Reserve Bank of India is empowered, under certain circumstances, to order that a general meeting of a banking company be held to elect fresh directors and any such election duly held "shall not be called in question in any court". This is autocratic legislation. It is not the first example we have had. To take redress out of the control of the courts is undemocratic, to say the least. It is against the canons of justice as we know them. It is a dangerous practice to have started. It is a dangerous practice to develop. The appointment or remuneration of a managing or whole-time director or manager or chief executive officer of a bank must now have the approval of the Reserve Bank of India. An officer of the Reserve Bank of India shall, in certain circumstances, be entitled to attend the board meetings of a banking company.

This is an exceptional year for the industrial and commercial life of India. The Budget is ordinarily introduced at the end of February. This year it is being postponed to a date in March or April, due, it is said, to the Elections. I do not think the Government realise the inconvenience the postponement causes to industry and commerce. The Government might have arranged the Elections in such a way as not to interfere with the usual date for the introduction of the Budget. The uncertainty that the delay causes does not strike the members of the Government who are, I fear, inclined to look to their own convenience and not always to that of the public. The anxiety due to the delay has been enhanced by rumours set afloat by irresponsible remarks. The rumours may or may not have any foundation but they cause damage by bringing about a lack of confidence in the future. Private enterprise can only thrive on credit and confidence. We are already possibly the highest taxed country in the world and rumours of still higher direct taxation shake the confidence of the public.

When will Government learn to cut their coat according to their cloth? Five-Year Plans are all very well on paper and are sometimes praised by foreigners who do not have to consider where the required money is to come from. One pertinent question about the gigantic schemes in the Second Five-Year Plan is whether we are going to get value for the money we spend. This, in my opinion, is very doubtful. Leaving aside the very high costs prevailing to-day, some money is lost by mistakes made by even the best of authorities. We cannot forget that miscalculations are almost bound to occur in all schemes, big and small. If only a portion of what one hears be correct, the amount lost in some of the schemes undertaken in this country would run into huge figures. It is earnestly to be hoped that the Government will reconsider their grandiose schemes before they are compelled to give them up after incurring losses.

During 1956 the Bank celebrated its Golden Jubilee. The Bank was established fifty years ago on 7th September 1906. It started business in November, 1906. Golden Jubilee functions were held at Bombay and at all other places where the Bank has branches. Special articles and supplements in the press were arranged. A Golden Jubilee brochure was printed and circulated. A medal was struck and distributed to shareholders and customers. The Bank's Head Office building was illuminated for some nights in November. The illuminations had, I think, the full approval of you shareholders resident in Bombay. Also, to mark the completion of fifty years of the Bank's life, the Paid-Up Capital was increased from Rs. 250 lakhs to Rs. 300 lakhs by making a bonus issue to shareholders of 1,00,000 "A" fully-paid shares of Rs. 50 each from that part of the Reserve Fund representing premium received on past issues of shares. The new issue has been made in a smooth manner, greatly assisted by you shareholders deciding that no fractional coupons should be issued but that the proceeds of fractions should be given to shareholders in cash. We have thus been saved the inconvenience of having outstanding coupons not presented.

The business of banking in 1956 operated under the handicap of a significant scarcity of funds, a condition which became more evident as the year progressed. It has been even more pronounced since the end of the year. There is an increasing unsatisfied demand for bank accommodation. It is a long time since a credit-worthy customer could be so doubtful of getting an advance from his bank against even really good and acceptable security as he is to-day. With the sustained and effective—I might almost say preferential—demands for finance for the projects of the Second Five-Year Plan, there is little likelihood of any early easing of the money situation. Rather is the reverse the case. The position is made worse by the Government's insatiable tax levies. Industrial concerns can only meet the peremptory demands of the tax-gatherer by surrendering money they need for working capital or for maintenance and renovation and development of plant. They are obliged to apply to banks for money to replace the funds they have had to pay in taxes. They find the tightness of money prevents their demands being met. Their business and their profits—and their shareholders—suffer.

As an indication of the money situation I may bring to your notice that the ratio of advances and bills discounted and purchased to the deposits of all scheduled banks is now 75 per cent. This is the highest ratio since the Reserve Bank of India started publishing the figures in 1935. Interest rates on deposits with banks have risen to levels not seen for many years. Against a Bank Rate of 3½ per cent. we have to pay more than 4 per cent. per annum for deposits fixed for some periods. The rates of interest on advances do not rise proportionately to the rise in deposit rates. I mentioned this in my speech last year and it has been particularly the case in 1956. Deposit rates go with the prevailing rates of interest and depend upon the supply of and demand for money. With very few exceptions, the rates of interest on our advances are related to the Bank Rate. If there is no change in the Bank Rate, and it has now been stationary since 15th November, 1951, our rates of interest on advances do not automatically rise. We have, of course, increased our rates of interest by notice to our customers. Notice is more provoking to them than an automatic increase due to a rise in the Bank Rate, where they do not need to receive any intimation from the Bank. They see the rise in the Bank Rate and recognise that interest on borrowings must, accordingly rise.

Because the Bank Rate has been kept at 3½ per cent. in recent years of rising money rates, it has, to some extent, lost its character as the standard of interest rates in the country. Even the Reserve Bank of India recognises this, because, from 1st February, 1957, it has raised from 3½ per cent. per annum to 4 per cent. per annum the rate at which it will grant loans to banks against Government securities. This is not the official Bank Rate. The Reserve Bank of India thus admitted the increase in interest rates but did not alter the Bank Rate.

Our foreign exchanges business turnover has developed greatly and, with it, our earnings from that side of our trading. We are not only doing a larger volume of foreign exchange business than in earlier years, but we are financing larger individual transactions. There is, I think, an assured future for India as a foreign exchange market. Amongst the currencies of Asian countries our rupee stands very high. As a counter in international exchange its use is increasing. I trust that those in authority over the management of our currency will do all they can to see that the value and reputation of the rupee in foreign markets are maintained.

I would now refer you, ladies and gentlemen, to the balance-sheet.

The total at foot of the balance-sheet is over Rs. 96 crores. The figure of the previous year was something over Rs. 89 crores. This increase of Rs. 7 crores indicates the growth during the year of the Bank's business.

The profit figure for 1956 is Rs. 92 lakhs, an increase of Rs. 7 lakhs over the figure of about Rs. 85 lakhs for 1955. Before the profit figure has been struck, usual appropriate and prudent provisions have been made. I think you shareholders will be satisfied with the profit figure. It is higher than that of any previous year and represents quite an achievement in these uncertain days.

The provision for taxation absorbs Rs. 28 lakhs against Rs. 25 lakhs last year.

Your Directors propose to place to the Bank's Reserve Fund the sum of Rs. 3 lakhs, making the Reserve Fund Rs. 310 lakhs.

A final dividend of 10 per cent., free of income-tax, is proposed, absorbing Rs. 25 lakhs, and making, with the interim dividend of 6 per cent. paid last August, a distribution of 16 per cent., per annum, or Rs 40 lakhs for the year, free of income-tax. The carry-forward is Rs. 15½ lakhs against Rs. 13 lakhs last year.

THE UNITED COMMERCIAL BANK, LIMITED

Registered Office: 2, India Exchange Place, Calcutta-1.

NOTICE

NOTICE IS HEREBY GIVEN that the FOURTEENTH ANNUAL GENERAL MEETING of the Shareholders of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Thursday, the 18th April 1957, at 4 P.M. to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1956, and Profit & Loss Account for the year ended 31st December, 1956.
2. To declare a dividend.
3. To elect four Directors in the place of
   Shri G. D. Birla
   Shri M. R. Ruia
   Shri G. D. Kothari
   Shri Yogindra N. Mafatlal
   who retire under Article 95 of the Articles of Association of the Bank, and, being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider and, if thought fit, to pass, with or without modification, the following resolution as a SPECIAL RESOLUTION:
   "That the regulations contained in the printed document submitted to this meeting, and for the purpose of identification subscribed by the Chairman thereof, be and are hereby approved and adopted as the Articles of Association of the Company, in substitution for, and to the exclusion of all the existing Articles of Association thereof."

Note

1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER. The instrument appointing the proxy shall be deposited with the Registered Office of the Bank not less than 48 hours before the time for holding the meeting.
2. (a) The transfer books of the Bank will be closed from Monday, the 25th March 1957, to Thursday, the 18th April 1957 both days inclusive.
   (b) The dividend, if sanctioned, will be payable on and after the 19th April, 1957, to those Shareholders whose names appear in the Register of Members on Thursday, the 18th April 1957.
   (c) Dividend warrants will be posted to Shareholders at their registered addresses or in accordance with their mandates. Shareholders are requested to advise change in their addresses, if any.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

(a) The item of Special Business to be transacted at the Annual General Meeting to be held on the 18th April 1957 is to consider and pass a Special Resolution adopting a new set of Articles of Association.

(b) The existing Articles of Association of the Bank were framed in 1943 when the Bank wes incorporated under the Indian Companies Act, 1913. Since then, the Companies Act, 1956, has come into force and has effected considerable changes in the law and procedure relating to Companies. Further, the Banking Companies Act, 1949, has also effected other changes.

(c) Several of the changes which came into force as a result of the new Acts affect, and are in conflict with, some of the Articles of Association of the Bank which consequently require amendment to bring them into line with the amended provisions of the Companies Act, 1956, and the provisions of the Banking Companies Act, 1949, and certain new provisions in the Acts for the regulation of companies need to be incorporated in the Articles for the guidance of members and the Directors.

(d) As the alterations are many it has been considered desirable to substitute a new set of Articles for the present Articles of Association of the Bank. The proposed alterations fall into the following categories:—

(i) Alterations made to comply with the provisions of the Companies Act, 1956 and/or Banking Companies Act, 1949 where the present Articles are in conflict with such provisions;

(ii) Alterations which, though not essential for removal of a conflict between the present Articles and the provisions of the Act, have been considered desirable as a result of such provisions.

(iii) Alterations resulting in either improvement of language used or made with a view to bringing the existing Articles into line with modern practice.

(iv) Alterations which relate to the position of Directors regarding their rights and obligations under the Act.

(v) Deletion of obsolete Articles.

(vi) A few alterations not falling under any of the above categories but considered desirable.

(e) The Directors have no interest in any of the amended Articles except Article 87 which replaces existing Article 92 and clarifies that remuneration payable to Directors for attending meetings of Committees of the Board of Directors and defines the mode of payment for travelling and other expenses for attending meetings, which is the same as the basis on which they are being paid all along.

(f) Copies of the draft of the proposed new Articles of Association and of the existing Articles of Association may be inspected by any shareholder at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, between the hours of 10 A.M. and 4 P.M. on any working day except Saturday and the hours of 10 A.M. and 12 Noon on Saturdays.

By Order of the Board
S. T. SADASIVAN
General Manager

Calcutta,
12th March, 1957.

EDITORIAL NOTES

(Continued from page 463)

World" into "Business World." The journal is now published from 67, Stephen House, Calcutta—1. Appropriate to the change in name, the coverage extends to general economics and politics, the old title being retained for a column. The quality of writing and range of material must ensure a sound future for this new entrant in the field of full-fledged economic journalism. The Union Finance Minister's self-description as an outlaw of Sherwood forest, as a bear and later on as a humble donkey has provoked an amusing comment in the Market Review of the February Issue.

Stock Exchanges

MARKETS DULL AND QUIET

Watch-Dog Writes:

IN contrast to last week, conditions in stock markets have generally turned quiet during the week under review. This is mainly due to the absence of fresh support and some realising pressure.

General expectations are that there will be no taxation proposals in the General Budget, to be presented on the 19th March; but it is considered likely that the Finance Minister may indicate the shape of things to come. The full-fledged Budget will be presented on the 19th May.

Activity on the Calcutta Stock Exchange was at a low ebb with prices showing a slightly easier tendency. Operators were in a holiday mood due to the approach of the "Holi" festival

Transactions on the Bombay Stock Exchange were mostly of a jobbing nature with fresh buyers abstaining following the approach of the settlement day.

Steady prices characterised trading on the Madras Stock Exchange.

Despite the existence of several adverse factors, the London Stock Exchange displayed steadier conditions during the week under review.

Changes on Wall Street were mostly unimportant, the list closing with a predominance of fractional gains.

*

Calcutta

Calcutta, Wednesday.

THE local Stock Exchange remained open for trading only for three days during the past week due to holidays from Thursday. Trading was, therefore, restricted and, with the approach of the 'Holi" festival, operators were in a holiday mood and inclined to book their profits at the recent high levels. Moreover, anxiety with regard to the General Budget, to be presented on Tuesday next, made them to be cautious in their dealings. The only redeeming feature of the week's trading was the remarkable steadiness of Tea shares, which continued to receive good support at improved levels. The market finished the week with minor losses on balance.

The Giltedged section continued to put up a steady show, although business remained restricted on lack of effective support. Offerings were also limited. 8 per cent 1986 Conversion Loan, after opening at Rs 74-8, improved toward the close to Rs 75.

Bank shares manifested a steady tendency. United Commercial were enquired upto Rs 57.

Despite firmer advices from the jute goods market, little or no interest was shown in the jute section. There was a feeling that, in view of the corresponding rise in raw commodity prices, mills would not be able to make much profits out of their sales of manufactured goods. Howrah were offered at Rs 17-12, while National moved narrowly between Rs 18-12 and Rs 19. Hooghly lost another half point at Rs 12-8. Kamarhatty and Kanknarrah had sellers at as low as Rs 94-8 and Rs 65-8 respectively on reports of the passing over of dividends again for /last half-year. Reliance, however, ruled better at Rs 9-3 against Rs 8-14.

Coal shares ruled a shade better following the news that the industry has asked the Supreme Court for a stay order concerning the recent award of the Labour Appellate Tribunal. Bengal recovered to Rs 450 from Rs 445, while Equitable had support upto Rs 23-14 from Rs 23-8. Amalgamated were nearly maintained at Rs 18-8 with Burrakur rather sticky at Rs 21-2.

The sluggish conditions still prevailing in the cloth market had an adverse effect on the Textiles section. Cawnpore and New Victoria hovered idly around Rs 7-11 and Rs 1-15 respectively, while Kesoram eased off to Rs 187 from Rs 191 with Bowreah quoting lower at Rs 116-8 against Rs 123.

A redeeming feature of the short week's trading was a broadening of enquiry for Tea shares at improved levels. Satisfactory prices still obtained both at the export and internal auctions, brighter outlook for the commodity in the new season and the feeling that the new selling season was likely to begin with almost no carry-over of 1956 teas—these factors imparted strength to the section, resulting in sellers becoming reserved. Dealings, however, in East India were most prominent and the scrip scored another 3½ points at Rs 32-8, thanks to renewed cornering by an interested party. Bishnauth changed hands at Rs 22-0 to Rs 22-6; Gohpur at Rs 22-10 to Rs 22-14; Hasimara at Rs 27-6 to Rs 27-8 and Hantapara at Rs 195 to Rs 197. Banarhat were, however, marked back to Rs 318 from Rs 324. Tezpore were well maintained at Rs 21-12.

The announcement of a further export quota caused a hardening tendency in the prices of Sugar shares. Cawnpore were lifted upto Rs 20-1 from Rs 17-15; Ramnugger Cane upto Rs 26-6 from Rs 25-12 and Bairampore upto Rs 8-1 from Rs 7-15. Champarun were quoted around Rs 21 with SKG easing off to Rs 10-13 from Rs 11-2.

Activity in the Engineering was rather restricted during the week as operators were generally inclined to await General Budget proposals, to be announced on Tuesday next. Indian Irons, after opening at Rs 20-10, gradually receded to Rs 20-2 on profit-taking, to finish better at Rs 20-3. Renunciation Rights changed hands at Rs 5-8 to Rs 5-14. Braithwaite, after being taken upto to Rs 28-3 from Rs 27-3 following the increased dividend, turned quiet at Rs 27-14 at the close. Similarly, Jessop closed better at Rs 25-3 after touching a low of Rs 24-14 from Rs 26-1. TEXMACO shed As 4 at Rs 19-9.

Miscellaneous issues moved in sympathy with the general trend of the market. Orient Paper, after touching a low of Rs 31-10 from Rs 32-2, finished better at Rs 31-12, while Titaghur were a steady feature at Rs 37 and Shree Gopal at Rs 16-1. Bengal, after a long time, came in for business at Rs 90 to Rs 100. Dunlop Rubber changed hands at Rs 25 to Rs 25-8; National Carbon at Rs 26-10 to Rs 27; NICCO at Rs 20-5 to Rs 20-14; Indian Aluminium at Rs 13-15 to Rs 14-1; Martin Burn at Rs 25-10 to Rs 26; India Steamship at Rs 10-6 to Rs 10-8; BIC at Rs 7-12 to Rs 7-14; Metal Box at Rs 26-4 to Rs 26-8 and Hoare Miller at Rs 8-3 to Rs 8-5. Indian Cable were marked back to Rs 27-12 from the recent high of Rs 29 on lack of fresh support. Indian Copper were a narrow market around Rs 3-5.

*

Bombay

Bombay, Thursday.

NARROW movements in prices have characterised trading in Dalal Street. After early steadiness, the market reacted modestly on realising pressure as well as quiet advices from Lyons Range, but thereafter steadied up. The market, however, lacked drive in view of the several uncertainties.

The re-election of Mr. T. T. Krishnamachari has implied that the Finance portfolio will be given to him in the new Cabinet. It is considered likely that, while presenting the White Paper on Budget for the interim period on the 19th March, he might reveal his mind regarding the shape of things to come, though the full-fledged Budget might be presented in the third week of May.

Knowing the mind of the Finance Minister so far in view of his various pronouncements, it is certain that additional taxation will be levied. It is difficult to say in what shape it will come; but as resources are to be raised up for the enlarged Second Five-Year Plan, the rich people will be asked to shoulder the additional burden, while the States will have to fall in line with the policy of additional taxation of the Centre. As the elections will be over by the end of this week, it is almost taken for granted that Congress will be returned to power.

In view of the prolonged week-end holidays, the market finished with a subdued tone. The circular issued by the Indian Iron and Steel Company for right shares and, especially with regard to dividend policy, has not enthused the shareholders despite the fact that the benefits to be derived from the expansion programmes, now being undertaken, will be such as would enable the present rate of dividend to be maintained on the increased ordinary share capital.

The Giltedged market was quietly steady.

Bank shares were featureless

Public Utilities were quiet

Among Shippings, Scindias recorded a new high level on hopes of a bonus issue.

Automobiles were stagnant, while Tata Locomotive were well-held.

In Cotton Textiles, buyers were cautious in going at higher levels though hopes are held that the incidence of excise duty on cloth may be reduced. Elphinstone Mills shot up by Rs 15. In Standard, expectations are held for a bonus share of one to every four shares.

Steel shares were quiet, but met with support at lower levels.

In the Miscellaneous section, Bombay Burmah were a shade easy, while National Rayon were also slightly lower. ACC were weak, finishing at the lowest level.

Sugar shares were quietly steady.

In Chemicals, Tata Chemicals met with some stale liquidation.

Among Engineerings, Premier Construction were marked down sharply on disappointment over the status quo dividend of Rs 8-8.

Elsewhere, WIMCO were quiet, but featureless.

*

Ahmedabad

THE Ahmedabad stock market was quiet during the week with irregular movements in prices. Calico were listed exdividend at Rs 535 on the 13th March. Arvind Mills were a shade better at Rs 1,125. New Shorrock were in good demand and rose to Rs 845 from Rs 815 on dividend expectations of Rs 42 per share. Ambica Mills rose upto Rs 615 on declaration of a dividend of Rs 25 plus a bonus of Rs 5 per share for 1956 as against Rs 25 plus a bonus of Rs 2 for 1955. Later on, however, the shares reacted to Rs 592 on lack of follow-up. New National were marked at Rs 480 and Jupiter at Rs 256-4. Atul Products ceased off to Rs 174, while Anil Starch were better at Rs 232-8.

CORRIGENDUM

In Indian Finance of March 2, in the balance-sheet of the State Bank of India, please read the figure under item 7 on the assets side as "8,21,822-3-5" and not as rendered.

A
TOWER
OF STRENGTH
in India's
Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

For the Investor

The Investor's Budget

Investment Gossip:

STOCK exchange behaviour, which unmistakably evinced a pre-budget expectancy in a hopeful mood, was more akin to a sense of resignation in the post-budget trading. For some time, it was an open secret that the Budget would have no secrets to give away. The general anticipation was that the status quo would perforce be maintained in a budget whose presentation in the present stage of pre-occupation and transition was motivated by the requirements of the Constitution. In such circumstances, it was argued, and rightly argued, that the essential purpose was to secure sanction of grants on an on-account basis.

In the two or three days preceding the budget announcement, however, this belief in a no-change budget yielded place to the wistful and wishful thought that, should there be any change, it would be in the direction of tax-alleviation. If tax-alleviation, what was more likely than a lowering of the cloth excise duty, in the light of the growing consumer resistance and the consequent piling up of stocks in the godowns of cotton mills and in the hands of cloth dealers?

The wishful thought in this respect was so pleasant to contemplate that even the scribe who writes for the World of Finance section in this journal succumbed to the alluring vision and posed the question of lower tax incidence—but his prudence provided an interrogation mark after the poser.

We now know that the budget is, from the point of view of taxation, a complete confirmation of the status quo as far as the interim period is concerned. That there is vouchsafed no relief as hoped for in some quarters, has evoked some disappointment in such quarters. But the blame lies, not with the budget, but with those circles who allowed themselves to be bemused by a pleasurable dream.

The criteria by which the excellence or otherwise of the budget is to be judged from the standpoint of the investor are far removed from the simple thesis of tax alleviation or no tax alleviation. The yard-stick by which the investor should measure the budget is thus: Does the budget foster conditions conducive to political stability and economic expansion?

Mr T. T. Krishnamachari's budget of last Tuesday satisfies this test convincingly. An increased provision for the defence budget is an insurance for India's safety and stability. Planned outlay of Rs 900 crores in the coming year, between the Centre and the States, is an assurance that the tempo of economic activity will be further strengthened and accentuated.

With such assured expansion in the economic sphere, preoccupation with taxation is pathetically primitive. Do our crore-pathis get unduly bothered that a marriage in the house costs them a good few lakhs? They are able to take ostentatious marriage expenses in their stride. The gay festivities of a wedding make them cheerfully bear the burden of ostentatious spending. The rosy prospects of expanding industry and thriving commerce must, likewise, induce a willing desire to pay a moiety of the rising incomes to the Government which make possible and guarantee those rosy prospects.

Over the past one year, we are having far too much talk of taxes, and far too little appreciation of the simple fact that taxes are justly proportionate to incomes and profits.

Purchasing power of the masses and the investing capacity of the classes are being directly stimulated by the rapidly increasing disbursements of Government both at the Central and State levels. In this context, investors will do well to ponder over the following information culled from the White Paper on the budget:

> "The combined expenditures of the Centre and the States increased from Rs 1019 crores in 1953-54 to Rs 1234 crores in 1954-55 and Rs 1430 crores in 1955-56. The budget estimates for 1956-57 placed the total outlay of the Centre and the States at Rs 1894 crores....the increase in public outlay over recent years has been considerable."

It is the public outlay of this magnitude that, in part, accounts for the higher consumption of food, of cloth, of sugar, and a number of commodities.

Agriculture and industry are assured of an ever expanding market. Production has to go up; and consumption has to be kept under check until production catches up with the demand. That means that part of the additional incomes must be directed to taxes and savings. Prosperity getting out of bounds is as dangerous as depression getting beyond limits. Taxes and saving are the safety valve whereby prosperity does not overreach itself.

The investors must learn to regard taxes as essential not only in the nation's interest, but in their own interest as well.

Investment Notes:

IT is learnt that the proposed issue of fresh capital by Hind Cycles Limited may be deferred until conditions in the money market become more favourable to such new issues.

In Bombay, the shares of Elphinstone Mill have recorded a sharp rise to Rs 66 from Rs 50, thanks to favourable reports about the working of the company during the past year. The dividend is expected to be maintained at Rs 5 per share. The mill has been implementing a large-scale renovation and extension programme and this is expected to add to its earning capacity.

Tata Locomotives are now quoted around Rs 145. According to latest news, the company has completed the manufacture of the 10,000th Tata-Mercedes-Benz truck. It may be mentioned that TELCO had in hand a five-year manufacturing programme covering four progressive stages. The first stage, which consists of the manufacture of bus and truck chasis, including all sheet metal parts, front axle and propeller shaft, was completed recently. During this phase, the value of truck components manufactured by the company substantially exceeded the target envisaged in the manufacturing programme submitted to the Government. The company's current production is 6,000 trucks a year; but it plans to step it up considerably in the near future. Last month, its output went up to 1,000 trucks.

Standard Mills have scored nearly 30 points at Rs 480. The company has decided to raise the dividend from Rs 20 to Rs 22-8 per share for 1956 and to issue bonus shares in the ratio of one share for every four shares held, subject to the sanction of the Controller of Capital Issues.

Teekoy Rubber (India) Limited has withdrawn 171 Debentures for redemption on the 12th March, 1957. These will be paid off on the 31st March from which date they will cease to carry interest.

Investment Briefs:

In Bombay, the Finlay group of mills—Finlay, Swan and Gold Mohur—have maintained their dividends at Rs 20, Rs 25 and Rs 15 per share respectively for 1956.

Gokak Mills have reduced the dividend from Rs 15 to Rs 13 per share for 1956.

Sri Ramalinga Choodambikai Mills have recommended a dividend of 20 per cent for 1956.

Sugar Results

Balance-Sheet Reviews:

FIVE Sugar Mills—Ryam, New India, Upper Ganges, Bharat and Govind—have presented their reports and accounts for the year ended 30th June, 1956; and the working results of all the companies are satisfactory, thanks to a sharp rise in sales.

The cane crushed by Ryam Sugar Company amounts to 25,77,960 maunds—the highest crush recorded in the past fifteen years. The increased production of sugarcane has contributed directly to higher national production of sugar which has reached its highest peak of 13.56 lakh tons. The net profit for the year amounts to Rs 5,17,758 as compared with a loss of Rs 21,076 incurred in the previous year. General Reserve is allocated Rs 1.25 lakhs and Rehabilitation Reserve gets Rs 50,000. The taxation provision is Rs 2.07 lakhs, while Depreciation absorbs Rs 96,266. A dividend of 17½ per cent has been recommended on the Ordinary shares as against nil in the previous year.

The Birla group of sugar mills, comprising the New India, Upper Ganges and Bharat Sugar Mills have reported excellent results. The quantity of cane crushed is generally higher, although the average recovery is lower. The New India Sugar Mills have reported a profit of Rs 5 lakhs, after providing Rs 2.95 lakhs for Depreciation. A sum of Rs 2.56 lakhs is provided for Taxation. The directors have recommended a dividend of Rs 2-8 per Ordinary share against Rs 2 in the previous year. There is a record cane crushing during the year, total quantity crushed being 45,74,333 maunds. Net sales have totalled Rs 1.04 crores against only Rs 55.33 lakhs in the previous year.

The Upper Ganges Sugar Mills have reported a profit of Rs 12.95 lakhs after providing Rs 10.54 lakhs for Depreciation. A sum of Rs 7.90 lakhs is provided for Taxation

HIGHLIGHTS

Budget week has this year come round in the middle of March; and not, as traditionally, on the last day of February.

It was Budget day when Mr Jagjivan Ram gave the relevant figures about the Railways.

It was Budget day for West Bengal, when the Chief Minister, Dr B. C. Roy offered up the figures in his capacity as Finance Minister.

It was Budget day for the country, when Mr T. T. Krishnamachari, the Finance Minister, gave the facts and figures for 1957-58.

The 1957-58 Budget, the Railways Budget and the West Bengal Budget are all covered in the Leading Articles section.

Watch-dog discusses the Investor's Budget.

World of Finance takes up the Foreign Exchange Budget and the Ways and Means Budget.

Olympus treats what the scribe calls the Lame-duck Budgets.

All in all, this issue of Indian Finance has Budget as its central theme.

and Rs 2 lakhs for General Reserve. The dividend on the Ordinary shares has been raised from Rs 2-8 to Rs 3-0 per share. Net sales have totalled to Rs 2.73 crores against Rs 1.85 crores. The total quantity of cane crushed is 1,17,47,919 maunds up to 30th June and 1.21,54,737 maunds up to July 17 when the season was over as against a crushing of 95,52,676 maunds in the previous season.

The Bharat Sugar Mills have shown a net profit of Rs 1.94 lakhs after providing Rs 70,000 for Depreciation. After transferring a sum of Rs 50,000 from Dividend Equalisation Reserve, the directors have provided a sum of Rs 12,000 for Taxation. A dividend of Rs 1-8 per share has been recommended on the Ordinary shares. Net sales have totalled Rs 60.29 lakhs as against Rs 25.86 lakhs in the previous year. The quantity of cane crushed amounts to 24,98,153 maunds against 18,79,202 maunds.

Gobind Sugar Mills, in the Cotton Agents group, have reported a net profit, after depreciation, of Rs 1,65,335. The factory has worked satisfactorily and has a record crushing. The total cane crushed is 31,50,066 maunds as against 18,89,508 maunds in the previous year. The dividend on the Ordinary shares has been passed over. After paying the dividend on the Preference shares, there is a balance of Rs 35,431 against which has to be set off the debit balance of Rs 5.74 lakhs brought forward from the previous year. Thus, there is still a debit balance of Rs 5.39 lakhs, which is carried forward to next year.

£ R$

Elgin Mills

Despite the difficult trading conditions and the uncertainty prevailing in the cotton textile industry, the working of the Elgin Mills Company has resulted in a substantial increase in earnings for the year ended 30th June, 1956. Sales have risen to Rs 3.19 crores from Rs 2.83 crores, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 54,31,868 as against only Rs 44,70,109 in the previous year. The directors have, after setting apart Rs 6.00 lakhs (Rs 8.00 lakhs) for Depreciation; Rs 22.50 lakhs (Rs 16.00 lakhs) for Taxation and Rs 2.00 lakhs (nil) for General Reserve, raised Rehabilitation Reserve from Rs 13.00 lakhs to Rs 15.00 lakhs in order to meet the cost of an extensive Capital Replacement Programme. Even after these increased allocations, they have found it possible to raise the dividend on the Vendors and Ordinary shares from Re 1 to Rs 1-4 per share.

According to the directors' report, the replacement programme has been handicapped by late delivery of new machinery. With the result, machinery valued at about Rs 8.46 lakhs, due for installation in the year ended 30th September, 1957, will have to be paid for in the following financial year. Orders for new machinery valued at about Rs 13.00 lakhs have also been placed for delivery during the financial year ending 30th September 1957.

Braithwaite & Company

Braithwaite & Company (India) Limited has presented excellent working results for the year ended 31st December, 1956. The item "Contracts Invoiced" is shown at Rs 2.23 crores as against Rs 2.15 crores, while the net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 42,79,205 (including Rs 7.00 lakhs being Sales Tax excess provision no longer required) as against only Rs 31,82,387 (including Rs 1.50 lakhs being Sales Tax excess provision) in the previous year.

Apart from providing a sum of Rs 11.98 lakhs for General Reserve, the sum set aside for Depreciation has been raised to Rs 3.56 lakhs from Rs 1.87 lakhs; Taxation to Rs 16.70 lakhs from Rs 13.00 lakhs and Development Rebate Reserve to Rs 1.72 lakhs from Rs 1.43 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend from Rs 1-12 to Rs 2-0 per share. According to their report, the company's Order Book is in a healthy condition and, in their opinion, prospects remain good.

£ R$

Hindustan Lever

It will be recalled that Lever Brothers (India) Limited was converted into a public limited company on the 27th October, 1956 and changed its name to Hindustan Lever Limited on the 1st November, 1956. Subsequently, by an offer for sale dated the 17th November 1956, Unilever Limited offered to the public in India 5,57,000 Ordinary shares of Rs 10 each. The offer was heavily oversubscribed and, although not

The 1957-58 Budget

NO fire works were expected in the Finance Minister's budget for 1957-58; and, in the event, there is little in Mr. T. T. Krishnamachari's White Paper which could stir up a controversy. But it would be wrong for that reason to conclude that "the lame duck budget" is an unexciting or dull document. On the contrary, Mr. Krishnamachari has succeeded admirably in presenting a realistic, but none the less courageous and cheerful, assessment of economic conditions. The intervention of the general elections has robbed Mr. Krishnamachari of the traditional introduction of the budget on the last day of February; it may be added that, since the current budget is an interim one, he has yet to present a full or conventional budget to the country. Thus, the budget-day speech was circumscribed by the general elections, and there has not been this year the pervading air of excitement and electricity which we were generally wont to find. In the result, it seemed not unlikely that the Finance Minister could at best render a satisfactory account of what, in any manner of reckoning, seemed doomed to be a humdrum job of work. But, as we shall see later, there is not a little in the White Paper which provides food for studious thought.

The Finance Minister's first duty was to review the economic conditions that served as a background for the budget for 1957-58. In this regard, he was in a position to serve up a mixed platter of tidings both cheerful and not so cheerful. The revised estimates for 1956-57 disclosed that revenue improved by Rs. 44.10 crores to Rs. 571.49 crores. The increase in the revenue was largely accounted for by Customs and Union Excise Duties. Firstly, the sharp import surplus during 1956-57 has had the somewhat pleasant off-shoot of enabling an increase in the revenue from Customs duties. Moreover, during the year, import duties on a number of articles were increased. In the result, the revenue from Customs duties is estimated to yield Rs 171.00 crores against the budget estimate of Rs 150.00 crores. In the case of the Excise Duties, the improvement in the revised estimates as compared with the budget figure is one of Rs 18.38 crores to Rs 188.73 crores. In this context, the raising of the Excise Duty on cloth, which Government announced in September last with a view to rectifying the supply-demand equilibrium in cotton textiles at the time, has also had the indirect beneficial effect of contributing to the national revenue by Rs 17 crores.

At the same time, the revised estimates for 1956 57 reveal that there has also been a shortfall in expenditure. Mainly, consequent on the reorganisation of States, the expenditure in respect of grants to States, etc., is lower by Rs 8.40 crores at Rs 29.60 crores. Together with sundry other shortfalls in expenditure, the revised estimates for 1956-57 place expenditure Rs 11.88 crores lower at Rs 533.55 crores. Consequently, as against the uncovered deficit of Rs 18.04 crores in the budget on revenue account, the revised estimates indicate a surplus of Rs. 37.94 crores, or a favourable change to the extent of Rs 55.98 crores.

During the year under review, the Finance Minister has remarked that, "for the first time since planned developments are under way, the economy showed evidence of some amount of strain". The general level of wholesale prices rose by 13 per cent; the foreign exchange reserves of the country declined by Rs 205 crores to Rs 530 crores by the end of 1956; the cost of living index, with 1949-50 as base, increased from 100 in March 1956 to 110 in November. The higher prices could be ascribed to a decline in agricultural production due to less favourable weather conditions. The overall index in this context fell by 2.4 per cent to 113.7 (1949-50 equals 100). Secondly, the Finance Minister has pointed out that the increase in the wholesale prices is, to some extent, "explained by external developments". Thus, the sharp rises registered in tea (58 per cent), raw jute (30 per cent) and manganese ore (37 per cent) may all be said to have derived from conditions abroad.

On the other hand, industrial production maintained its steady upward trend. The index, with 1951 as base, rose to 134.7 in 1956 against 122.1 in the previous year. Steel production rose by 4.2 per cent to 1.33 million tons; cement by 9.8 per cent to 5 million tons; diesel engines by 16.8 per cent; power-driven pumps by 32.5 per cent; electric motors by 41.8 per cent; radio receivers by 85.5 per cent; bicycles by 34.4 per cent; automobiles by 39 per cent; footwear by 5.3 per cent; mill made cloth by 3.7 per cent; cotton yarn by 2.3 per cent and sugar by 20.7 per cent. But the higher industrial production could not of itself ensure that prices generally were kept at a stable level.

In the background of increasing industrial production and a decline in the output of agricultural commodities, public expenditure has been increasing at a considerable pace. The combined expenditure of the Centre and the States rose from Rs 1,234 crores in 1954-55 to Rs 1,430 crores in 1955-56. Such expenditure has effected larger money incomes; and, in the result, there has been a steady growth of demand in the Indian economy. It is, therefore, possible to describe the increase in prices in 1956 to be "as much the result of the setback in agricultural production in 1955-56 as of the general growth of demand in the economy".

Government took steps promptly when the growing menace of imbalance in the economy made itself felt. From the fiscal point of view, the corrective measures taken were in the form of the higher Excise Duty on cotton cloth and the supplementary budget presented by Mr Krishnamachari in November last year. From the monetary point of view, Government through the Reserve Bank sought to minimise the use of bank credit for speculative purposes by means of a directive enforcing limits to advances against particular commodities in which stresses and strains were discernible. From the standpoint of foreign exchange, import policy has been drastically revised, and the import list today is practically denuded of all non-essential goods. Furthermore, Government have sought to conserve and save foreign exchange by placing a virtual ban on foreign trips except for reasons of business, education and health; and, finally, Government are encouraging the private sector to arrange for long term credits in behalf of the new plant and machinery being imported.

In respect of the foreign exchange position, the Finance Minister remarks that the drawing down of the balances was "not altogether unexpected" but that the depletion has been "on a much larger scale than was envisaged at the time of the formulation of the Plan". The strain has been aggravated partly by higher prices of imported materials and machinery and partly by the increase in the freight bill as a result of the closure of the Suez Canal. It is now clear that the foreign exchange requirements for the Second Plan "will be larger than the original estimates indicated". But, Mr Krishnamachari has been able to draw attention to the brighter aspect in the matter. Some respite has been won by the purchase of foreign currency from the International Monetary Fund; but "it has become a matter of urgency to explore every possible avenue of promoting exports, of economising on imports and of getting additional external assistance". How far the negotiations with the World Bank for assistance in the railway projects will go to mitigate the foreign exchange problems of this country, remains to be seen. It was realistic on the part of the Finance Minister to take cognisance of the higher target we need to set ourselves in the matter of foreign exchange requirements; and it would be prudent if measures are energetically adopted to maximise our export earnings. What India may expect to get under foreign aid, it is impossible to assess with any certitude. But it has to be remarked that drastic import regulations are by no means synonymous with austerity; and a considered drive for exports will indeed have the contrary effect of generating greater incomes within the country. Realistically, therefore, all that we can take note of is that, in foreign exchange, there is a short fall as between needs and resources; at the same time, it is wrong to conclude that India will be unable to secure its full quota of requirements. This, however, is an aspect of the question that Mr Krishnamachari has not dealt with at length in the White Paper, although we may point out that Indian Finance has the confidence that this country will not find it an impossible task to equate its foreign exchange resources with needs.

Where Government need to concentrate their endeavours is in the matter of containing the economic and inflationary pressures. In this regard, it is now abundantly clear that, largely speaking, the difference between price stability and inflation is spelt by a good or a bad agricultural crop. In recognition of this basic fact and with the goodwill of the United States of America, Gov-

Indian Finance
Established 1928
March 23, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

ernment have been able to take the positive step of providing buffer stocks in the country. The surplus commodities agreement with the United States Government should strengthen the hands of the Government of India in dealing with any emergent inflationary pressures as a result of poor weather or disappointing crops. Secondly, Government have decided that the agricultural targets in the Second Plan should be raised. The foodgrains target is to go up by 5.5 million tons to 80.5 million tons; oil seeds from 7.0 million tons to 7.6 million tons; sugarcane, in terms of raw gur, from 7.1 million tons to 7.8 million tons; cotton from 5.5 million bales to 6.5 million bales; and raw jute from 5.0 million bales to 5.5 million bales. Basically, therefore, the problem before the country resolves itself into one of ensuring that agricultural targets are attained while, at the same time, intensifying export earnings with a view to paying for the large scale capital imports that we will need.

We may now turn to the budget for 1957-58 as presented by the Finance Minister. On the basis of existing taxation, revenue is expected to improve upon the revised estimates for 1956-57 by Rs 64.73 crores to be placed at Rs 636.22 crores. Mainly, the improvement in revenue is expected under, firstly, excise duties—expected to yield Rs. 20.70 crores more at Rs. 209.43 crores; secondly, from civil administration, expected to be higher by Rs. 27.72 crores at Rs 43.21 crores; currency and mint, higher by Rs 11.54 crores at Rs 36.02 crores; and an increase of Rs. 8.33 crores to Rs. 27.65 crores from other sources of revenue.

The higher level of excise duties is expected because of the full year's yield of the increase in the duty on cotton cloth of September last as well as better collections on motor spirit and sugar. The Reserve Bank profit is put down at Rs 30 crores against Rs 20 crores, as a result of the higher level of earnings of the central banking institution. A total of Rs 28 crores is estimated to be received on account of the steel equalisation fund; but the balancing item on the expenditure side of the ledger has also been included.

The anticipated increase in the expenditure is even higher, the rise over the revised estimates for 1956-57 being Rs 129.54 crores to Rs. 663.09 crores. The increase in expenditure is largely under two heads. Firstly, civil administration, which includes balancing items, is put down Rs 43.86 crores higher at Rs 127.50 crores. Secondly, the expenditure on defence services is anticipated as rising by Rs 49.76 crores to Rs 255.71 crores. The higher level of expenditure on civil administration is accounted for by larger provisions for education, for medical and public health, for agriculture and allied services, and for community projects and national extension service. Defence expenditure is expected to go up mainly because of larger outlay on fresh purchase of essential stores.

The revised estimates for 1956-57 in respect of capital expenditure show that, although there is an increase of Rs. 20 crores under the head of State trading schemes, there will be a shortfall of Rs 3 crores as compared with the budget figure. This is due to the fact that the expenditure on Railways is lower by Rs 10 crores; on steel plants by Rs 9 crores; on compensation to displaced persons by Rs 5 crores; and on Defence Capital outlay by another Rs 5 crores. Secondly, the revised estimates for loans to State Governments and others are lower than the Budget figure by Rs 64 crores. The savings accruing were to the extent of Rs 50 crores under ways and means advances to State Governments and to the tune of Rs 15 crores as a result of non-drawal by Burma of a loan already arranged.

With the net proceeds from the Central and State Government loans placed at Rs 140.5 crores, and with small savings estimated to amount to Rs 65 crores, the overall deficit has been much smaller than anticipated. It needs to be borne in mind that the favourable turn in the revenue budget has been of the order of Rs 56 crores. Thus, as against Sir Chintaman Deshmukh's anticipation last year of deficit financing for Rs 356 crores, the deficit is now expected to be Rs 216 crores.

For 1957-58, capital expenditure is put at Rs 454.77 crores. This shows an increase of Rs 141.09 crores over 1955-56, and is accounted for by larger provisions for the Steel plants (Rs 156.83 crores against Rs 35 crores in 1955-56) and for the Railways (Rs 124.17 crores against Rs 103.81 crores). The provision made for loans to State Governments and others is Rs 317.44 crores as compared with Rs 322.5 crores in the revised estimates for 1956-57.

The estimates of revenue and capital expenditure for the next year allow for a total outlay by the Centre of about Rs 775 crores on the Plan schemes of the Centre and the States. Including Rs 140 crores expected to be spent by the States, total plan outlay by Governments is placed at over Rs 900 crores.

After taking account of the revenue budget deficit and the capital budget, the ways and means position of Government during 1957-58 will need to make provision for repayment of a maturing market loan for Rs 32 crores and for meeting the loan requirements of State Governments. All these total Rs 831 crores. Against this, credit is taken for a market loan to be floated during the year for Rs 100 crores; small savings are estimated to yield Rs 80 crores; foreign aid expected is to the tune of Rs 135 crores; and the receipt under miscellaneous Debt and Remittance transactionns is put at Rs 151 crores. In the result, the gap in available resources, to balance the budget, is Rs 365 crores.

The importance of the White Paper lies in a number of inferences which are offered. Firstly, the tendency of the revised estimates of revenue to exceed the Budget figures continues; secondly, the revised estimates of expenditure are also, again, lower than the budget figures; and, thirdly, the size of deficit finance is, once more, less than originally anticipated. It is fair to expect these factors to continue to operate in the future.

We may also point out that the lag in expenditure could, in 1957-58, be accentuated if some relief is not obtained in the foreign exchange position. On the other hand, if the negotiations with the World Bank bear fruit, the implementation of the Railway projects could be carried out without difficulty; and the resources therefor need not immediately be found internally. In either case, the overall deficit may turn out to be lower than Rs 365 crores.

Finally, it is worth remarking that Mr Krishnamachari has avoided any mention of the manner in which the overall deficit is to be met. By inference, it is possible to conclude that this gap will be covered by deficit financing. Another inference, however, that is possible is that the Finance Minister has yet to decide on the extent of deficit financing for 1957-58; and, if this figure is to be lower than the uncovered gap of Rs 365 crores, measures in the May budget intended to increase Government revenues may be taken as certain.

The Railway Budget

In the present national economic setting, some of the criteria for judging the performance of the Railways assume special importance. In some quarters, there is evident concern that the country's principal transport system may crack and squeal under heavy load of the Second Plan. There is the call for a substantial contribution from internal finance for development. The stress on foreign exchange accentuates the compulsion for a quicker pace toward self-sufficiency in rolling stock. The Railways are obliged to show a record of current performance as an earnest of capacity for the future.

The facts narrated in the White Paper presented by the Railway Minister in the Lok Sabha on March 19 provide a large part of the answer to these calls. The White Paper disarmingly says that while traffic is increasing as envisaged in the Plan, serious difficulties are being encountered in the execution of planned works. Some of these difficulties are being fought, but their mention amounts to a warning that if shortfalls do occur, the Railways alone should not be held responsible.

According to the figures available to the end of January 1957, total goods traffic for the current year would be 10 per cent above that of 1955-56. The total annual increase in goods traffic envisaged in the Second Plan is about 41 per cent. A 10 per cent increase in the first year is therefore not very much out of proportion. As the movement of goods is bound to gain momentum toward the latter half of the Plan period, a revision in the estimate of total increase may become necessary.

In the light of the experience of 1956-57, it is, however, surprising that the increase anticipated for 1957-58 is only of the order of 5 per cent. Expansion in national production may show an uneven tempo between one year and another. But a fall of 50 per cent in increase in goods movement in the second as against the first year of the Plan would be disturbing. Public understanding of this situation will surely be helped, if the authorities concerned would feel obliged to explain the difference in some detail. This is all the more necessary, as it is maintained that traffic is increasing as envisaged in the Plan and that the Railway Administration is coming up against difficulties in the execution of planned works.

The principal difficulty is said to be acute shortage of vital stores like steel, cement and track materials. Shortage of steel has stimulated interest in certain qualities which have hitherto been kept out of bounds. "Thomas quality" steel has been found to be acceptable for track and structural requirements and there is the possibility of its use being extended to workshop manufacture.

The rise in passenger traffic which is mainly responsible for the increase of Rs 5

crores in gross receipts in the Revised Estimates over the Budget Estimates may not be altogether wholesome, though apparently unavoidable. When total capacity is inadequate and industrial expansion receives overwhelming priority, the Railways will have to carry more and more of goods than passengers. That other indispensable social aims are being served by the expansion in passenger traffic should balance the dissatisfaction.

Completion of the Chittaranjan Locomotive Works and the Integral Coach Factory, restoration of 430 miles of dismantled lines, opening of another 380 miles of new lines and the considerably improved stock position of locomotives, wagons and coaches at the end of the First Plan have together enabled the Railways to lift an additional 12 million tons of goods in the first year of the Second Plan against the last of the First. This was possible, in spite of the fact that track renewal was still in arrears to the extent of 7,000 miles each for rails and for sleepers.

In 1956-57 several new lines were taken on hand and a few of them have been opened in part. Against 2,258 locomotives, 11,364 carriages and 107,247 wagons scheduled for procurement in the Second Plan, 557 Locomotives, 1,931 carriages and 27,184 wagons were ordered for the current year and decisions have been taken to order 411 locomotives, 2,346 carriages and 17,729 wagons for 1957-58. Together these represent a satisfactory proportion for the two years. Expansion of workshop facilities has proceeded apace.

The general improvement in traffic performance is reflected in the following figures. Against 43.3 in the previous year, wagons miles per day rose to the record figure of 45.3 on the broad guage; net ton miles per day per wagon increased from 483 to 541. Targets for further improvement for the next year range from 10 per cent to 20 per cent. Goods train miles operated rose from 70.0 million in 1954-55 to 76.5 million in 1955-56 and for the first half of 1956-57, the figure was 39.1 million goods train miles as compared to 36.9 million for the corresponding period of 1955-56.

A team of US Consultants has taken up a detailed study on the subject of heavier and more powerful steam locomotives, the designing of wagons with larger capacity, the introduction of centralised traffic control on certain busy single line sections on both gauges and the means of improving movement capacity, particularly in the coal field areas. The final report of this team is expected to open new methods of expeditiousness in traffic and general operational efficiency.

On the financial side, the Revised Estimates show gross traffic receipts at Rs 350 crores against the actuals of Rs 316.29 crores in 1955-56. In the budget for 1957-58, gross traffic receipts are estimated at Rs 368.50 crores. Working expenses have risen from Rs. 213.22 crores in the actuals for 1955-56 to Rs 229.34 crores in the revised estimates for 1956-57 and are placed at Rs 244.16 crores in the new budget. After allowing for net miscellaneous expenditure, which is also at an ascending annual rate and providing for Depreciation Reserve at the uniform rate of Rs 45 crores, the net railway revenues stand at Rs 50.34 crores in the actuals for 1955-56, at Rs 64.64 crores in the Revised Estimates for 1956-57 and at Rs 65.22 crores in the budget estimates for 1957-58.

Between the two latter years, the increase in net revenue is comparatively negligible. There is an increase of Rs. 7.1 crores in the dividend to general revenues which reflects the growth in capital investment. Consequently, the net surplus estimated for 1957-58 at Rs. 21.43 crores is lower by Rs 5.52 crores from that of 1956-57, Revised Estimates. A reduction in net surplus of this measure is obviously unflattering, but it need not mark a continuous trend, as the substantial increase in expenditure on staff announced last year is non-recurrent. For the First Plan the Railway have met from their internal resources Rs 284 crores, against a total of Rs 320 crores demanded as their contribution to total expenditure.

The West Bengal Budget

The budget statement presented by Dr. B. C. Roy at the twilight session of the present West Bengal Assembly felicitously turns to the achievements of the past more than to the hopes of the future. In the recent elections, quite a few members of this Assembly have lost; there are others who have not stood. If the current trends in election results continue to the end in the new Assembly the ruling party will be confronted with an even greater Opposition. The economic retrospect made by the Chief Minister can serve to congratulate those who are now leaving the legislative scene and inspire those who are coming in.

All told, it is not a bad record. Not everyone will agree completely with Dr. Roy that "the people are now free from a sense of frustration and have begun looking forward to a new life." West Bengal has yet to face an uphill task by way of economic reconstruction. But there is sufficient to sustain hopes of at least a distant restoration of all-round prosperity. The food situation is now far more comfortable than in 1952 when the present Assembly came into existence. The unsettlement of the Permanent Settlement did away with a system of land tenure, which was exposed to universal condemnation.

The First Five Year Plan was seen through, despite initial apprehensions of a grave financial gap. Electricity and irrigation projects and other new industries kept unemployment under check and threw open means of livelihood for thousands of people, including large numbers of displaced persons. The Chief Minister also claims with evident pride that during the last five years, an increase in annual revenue receipts to the extent of Rs 19 crores was achieved with no more than a couple of extensions to the sales tax and a new levy on the entry of tea and fruits. Aggregate revenue and capital expenditure of the State increased from Rs 52 crores to Rs 97 crores. During this period many of the State undertakings have started yielding handsome profits.

For the next financial year, the State budgets for Rs 60.69 crores revenue receipts and a revenue expenditure of Rs. 71.42 crores. With a deficit of Rs 1.44 crores on the Capital Account, the total shortfall for the year amounts to Rs 12.12 crores.

Prospects for the Jute Goods Industry

All was not well with the jute goods industry in 1956. That remains the blunt fact of the matter, even though it is possible to read into the events of the last year the emergence of a number of factors which may be relied upon to imbue the dark clouds now hovering over the industry with a silver lining. As for the circumstances which blighted the performance of the industry in 1956, they were to some extent developments that could neither be anticipated nor be foreseen. At the same time, nevertheless, the experience of the last twelve month period can, if the moral that it offers is clearly understood, be taken advantage of so that, at least for the future and as far it lies in the power of the industry, the recurrence of such conditions may be avoided. Mr D. P. Goenka's address at the annual general meeting of the Indian Jute Mills Association is, in this context, a thoughtful and penetrating study of the conditions in which the industry operates at the present moment as well as a constructive assessment of the prospects that lie ahead if steps are taken on the correct lines.

Mr Goenka's description of 1956 is terse: from the financial point of view, 1956 "has been depressingly flat and unprofitable" But, when the year started out, there was no warning of the difficult circumstances that were to make themselves felt as the year progressed. Indeed, the outlook seemed cheerful, with the stocks of jute goods, at 64,000 tons, at the lowest level in any year since the war. Moreover, there was the confident anticipation on the part of the industry that substantial business would be transacted with the Iron Curtain countries. The low level of stocks and the anticipation of large sized orders from a new market were both factors which encouraged the IJMA mills to increase their production. Looms that had remained sealed since 1949 were opened up once again. But the anticipated orders failed to materialise; stocks rose swiftly to a level of 138,000 tons; and IJMA mills, by September, had resealed "all the additional looms brought into commission earlier in the year". Judged by production and shipments, however, 1956 was quite satisfactory. Production was the best on record since 1942 at 1,092,000 tons. Total despatches fell short of production, which had shown an improvement over the previous year by 65,000 tons, by nearly 32,000 tons. Export shipments in respect of hessians showed an appreciable increase and, "for the first time for many years, exceeded 400,000 tons". It is to be noted that such a level of hessian shipments was achieved in spite of the Argentine taking a conspicuously small quantity of hessians. But sackings fared badly, with exports declining by 36,000 tons to 408,000 tons. In the result, the Indian exports of jute goods were marked lower by 25,000 tons.

Mr Goenka points out that the sharp drop in the sackings exports should be a matter of serious concern both to Government and to the industry. While it is possible that the

Editorial Notes

Foretaste of Communist Govt.

Having found his party well set for an absolute majority in the Kerala Assembly, Mr A. K. Gopalan, leader of the Communist group in Parliament, has given a preview of what his associates would do in the State, if vested with authority. Naturally he lays his hands first on economic improvement. Without committing himself too rigorously, he indicates that nationalisation of tea and rubber plantations would be one of the principal steps, but here he makes a distinction. It will be nationalisation of only plantations owned by foreigners.

During recent years, a number of estates, big and small, have passed from foreign to Indian hands. Indian companies have always owned several estates. Presumably, Mr Gopalan envisages a condition of co-existence of the State and the private sector in plantations, which will be an interesting extension of an experiment hitherto confined to the industrial sphere.

Once the foreign-owned estates are taken over by the State, especially under the auspices of a regime which is ideologically committed to such a step, it goes without saying that the marketing of the produce concerned will also pass into the hands of the State. The Communist leader gives no room for doubt; he has categorically stated that it will be so, but introduces an element of confusion into the new picture by yoking the State and the Central Governments together to form an organisation which is to take up that work.

Perhaps, he is thinking of a Corporation in which both the Government's participate. Tactically also this seems wise, because he expects a total allotment of Rs 200 crores for development of Kerala under the Second Plan, as also for the surrender by the Centre to the Kerala Government of a part of the export income from Malabar produce as is being done for jute in Bengal. In these matters, he hopes to enlist the full support of every other party in the legislature.

On the face of it, an active zeal for industrial development and relief of unemployment in the State must inspire cooperation in other parties as well, lest their popularity already extensively damaged should wane further. Mr Gopalan's assurance on adherence to the Constitution is in the best interests of every one. It would be foolish to discard a method, which has earned fine dividends, especially when there is no compensating advantage in sight. The Centre, however, cannot be quite pleased with the emergence of a Communist administration in a coastal area.

*

Where Restraint is Wise

The last few days have seen innumerble hurried diplomatic consulations in New York and Cairo. The UN Secretary-General announced his intention to visit Egypt; possibly the soujourn will be extended to Israel. These events are the consequence of a clear deterioration in the Middle East situation. On a charge that the UNEF exceeded its jurisdiction, President Nasser has taken over the civil administration of the Gaza strip. The UNEF troops had to seclude themselves behind barbed wire, when pro-Egyptian demonstrators marched shouting down the Eisenhower Doctrine. Israel has complained to the UN of renewed raids on its territory from the Gaza strip. Within Israel there is turbulent division of opinion on the Government's decision to withdraw troops from the Gaza strip.

If President Nasser were to contribute to a situation in which raids and counter-raids over the Israeli border would again be a common occurrence, all the good work done by the United Nations to restore peace in this area would surely have gone in vain. Israel can get tough again, if the "hopes and expectations" held out by American statements turned out to be devoid of substance.

It is true that the US in common with India has categorically conceded Egypt's sovereign authority over Gaza; as also over the Suez Canal. Even if the US, or for that matter any other country were to challenge this sovereign right, it can still be upheld.

But on that pretext, Egypt cannot afford to behave toward Israel as if the two countries are at war. It is undoubtedly the intention of the entire civilised world to see that the Suez Canal is kept as a free international waterway with no discrimination practised against any nation. A statement from the Indian Ambassador at Cairo says that Nasser will not be tempted to do anything militating against this intention.

Facts, however, do not bear out this statement completely. Marshal Tito would not have offered a bit of friendly, unsolicited advice to the Egyptian President counselling restraint, if the latter did not need it. Other international friends of Nasser are also reported to be rather worried. It may be a little difficult to suppress the wrath engendered by the recent hostile adventure on Egyptian soil. But in its own interest, Egypt will have to view the problem of Suez Canal and the relation with Israel in a spirit devoid of excitement or anger.

Compensation from Burma

Seldom does nationalisation go so cheap in a democratic country as that of land in Burma. A communique issued last week-end by the Burma Government describes the details of compensation payments. Every landowner will be paid at the rate of about Rs 20 per acre. For those who were owning more than 125 acres of nationalised property, immediate cash payment will be limited to Rs 2,500; the balance will be covered by 3 per cent compound interest non-negotiable non-transferable fifteen-year bonds. These bonds are to be redeemed annually at the rate of 10 per cent of the value, after a period of five years. The bond-holder will also be given the option of converting his holdings into shares in semi-official or approved private enterprises. The investments are irredeemable, as far as the Government are concerned.

The South Indian Chettiar community, which owned about 23,43,000 acres, will on this basis, be entitled to receive 4.6 million Rupees as compensation. Subject to the uncertainties in the next fifteen years, this sum represents the final salvage of several decades of well-organised business by this particular group in Burma. It was originally proposed that the compensation should be at least Rs 60 per acre.

The Chettiars failed to bring sufficient pressure either on the Government of India or on the Government of Burma, toward realising this rate of compensation. As remittance restrictions have been severely tightened, they also lost interest in continuing their traditional businesses in Burma. The deterioration in security conditions filled the cup of disincentives. The last tricles of payments which the Burma Government have promised will form the final chapter of an association which has certainly done Burma much more good than it did India. In the future, even trade relations between these two countries seem to be getting more and more on an official footing.

*

Janata Insurance

The State Life Insurance Corporation is reported to be contemplating the issue of 'Janata' policies. As the title indicates, these policies are intended to tap the small man's savings, one of the proclaimed aims of the nationalisation of life insurance. That it has taken nearly a year for the Corporation to venture into this sphere of expansion is not altogether a matter for blame.

The transformation of over 180 companies, each with its own distinctive traditions and policies, into a single integrated unit was beset with formidable difficulties, not all of which have been in the public view. Only staff integration attracted general attention. The colossal task had to be pursued through an inevitable phase of uncertainties, in which the canvassing of new policies received a setback. The Corporation has prudently omitted to publicise business figures for 1956. If they are comparatively disappointing, initial difficulties offer a ready explanation.

According to a New Delhi report, the Corporation has now overcome some of these difficulties and has settled down to work, with new business canvassed keeping to satisfactory levels. It must now

The Foreign Exchange Budget

The Finance Minister has accorded by far the lion's share of the importance to foreign exchange both in the White Paper and in his speech introducing the Budget for 1957-58. But, strangely enough, the sentiment in the former document differs somewhat from the prevailing tone in the latter. This is not, however, to suggest that Mr T. T. Krishnamachari has deliberately chosen equivocation as the answer that he should give in respect of the foreign exchange conundrum. A closer reading of the matters relating to this sphere of economic activity will indicate that the White Paper does not do any more than attempt a realistic assessment of conditions both present and prospective. On the other hand, the Finance Minister has apparently felt that his budget speech as such gave him free rein to elaborate on foreign exchange prospects; and this opportunity enables him forcefully to emphasise that it is well within this country's capacity to secure all the foreign exchange that it needs for the purpose of implementing the Second Plan.

The Second Plan as originally drawn up envisaged a foreign exchange gap or shortfall of Rs 800 crores; and, for nearly eighteen months after the publication of the Plan-Frame, no serious attempt was made to revise this figure. Where, however, the Second Plan estimates came in for revision sooner than expected was in the realm of the total targeted expenditure. It was realised that, with the inclusion of more projects and with the higher anticipated cost of some of the projects, the Second Plan's implementation was likely to cost roughly Rs 400 crores more at Rs 5,200 crores.

It was in this column, in the middle of November last year, that the higher cost of the Plan was first correlated to a reassessment of the foreign exchange gap. Indian Finance, however, preferred to term this shortfall as a target; for, we felt that the task of finding the additional resources of foreign exchange was, though not easy, not likely to be an insurmountable difficulty. As such, we offered at that time a revised set of figures in behalf of plan resources; and, under the head of foreign exchange needs, we suggested that the relevant figure would need to be stepped up from Rs 800 crores to Rs. 1,200 crores. We also indicated the manner in which we thought India would be able to come by foreign exchange of this order. The relevant table in this regard is reproduced alongside.

Later in 1956, discussions in the National Development Council confirmed the view that the foreign exchange target would need to be raised by Rs 400 crores to Rs 1,200 crores. Since then, however, no great confidence has been expressed, outside of the columns of this journal, as to the ability of India to attain this target.

We are heartened to find that the Finance Minister has utilised his Budget speech to give expression to the first authoritative dispelling of unwarranted pessimism in the matter of foreign exchange. If the economic pundits assert that it is realism that has provoked their pessimism over foreign exchange, it is possible for Mr Krishnamachari to assert that it is realism, again, which enables him to find the foreign exchange position far from gloomy. He has stated:

"The total deficit in balance of payments over the Plan period is likely to be about Rs 400 crores more than was envisaged in the Plan. Taking into account the external finance that might be available for our various projects and the balance available from the authorisations of the First Plan period, we have in hand foreign exchange of the order of Rs 450 crores to meet our requirements. With this, and assuming the continuance of aid from the USA and Colombo Plan countries more or less on the present scales and allowing for a moderate amount of private foreign investment coming in, we may take the total of resources in sight at about 50 per cent of the total requirements."

It will be seen that Mr Krishnamachari's views on foreign exchange more or less confirm the correctness of the thesis that was advanced in these columns in Indian Finance of November 17, 1956. This table, which has been published earlier in this article, may be said to consist of two sets of figures: one set relates to foreign exchange resources that are in sight, and the other to resources to be arranged, but whose manner is already decided.

Foreign exchange in sight may be said to be as follows:

	(In Crores of Rs.)
Spillover from First Plan of unutilised Foreign Aid credits	100
Foreign Exchange saving consequent to Surplus Commodities Agreement with USA	137
Gross amount available on steel credits	83
American aid	150
Assistance from Colombo Plan countries and others ..	80
Russian credits	60
Total ...	610

Mr Krishnamachari has, it may be noted, specifically mentioned spillover of First Plan aid, continuance of aid on the same scale from USA and Colombo Plan countries and external finance likely to be available for our various projects: and the total of these is said to be about 50 per cent of requirements—or Rs 610 crores.

It is to be presumed that the Finance Minister has every intention, not to say hope, of securing the balance of Rs 590 crores: but there is now available to him a third source of foreign exchange, over and above World Bank aid and earnings on intensified exports. This third source lies in arranging for deferred payment in respect of capital imports. Mr Krishnamachari has mentioned these three avenues of securing the additional foreign exchange.

The keynote of the foreign exchange position is pithily expressed by the Finance Minister in the following words:

"On the whole, the prospects of our being able to raise the foreign exchange resources for the Plan are not altogether discouraging. This, of course, is not to say that the task is by any means easy."

	(In Crores of Rs.)
Spillover from First Plan of unutilised Foreign Aid credits	100
Foreign Exchange saving consequent to Surplus Commodities Agreement with USA	137
Gross amount available on Steel credits	83
World Bank aid for Railway projects	400
American aid	150
Assistance from Colombo Plan countries and others ...	80
Russian Credits	60
Foreign Exchange earnings consequent to Export Promotion	190
Total ..	1,200

The Ways and Means Budget

The ways and means budget provides for Rs 100 crores by way of market loan and for the repayment of Rs 30 crores on the maturing Victory (1957) loan. The new money which is thus sought to be secured is Rs 70 crores. In the light of the performance of New Loans in the last three years, this target must be easy of accomplishment. In fact, there is a strong case for aiming at a far higher target. The role which market loans must play in filling the gap in financial resources has received, in the discussions on the Second Plan, a very scant attention; and the general impression has been fostered that additional and/or new taxes must take care of a good part of the deficiency in this respect.

If the matter be studied in terms of the relative roles of public borrowings and onerous taxation in respect of the securing of resources for long-term capital projects, the conclusion is unavoidable that the proper way of financing capital schemes is by predominant reliance on borrowings. Recourse to taxes in an excessive measure is tantamount to an admission that Authority lacks the skill required to keep the giltedged market in good health and to fashion loans attuned to investors' preferences and designed to strengthen the confidence in giltedged circles. From the point of view of anti-inflationary strategy, too, new loans play a no less significant part than onerous taxation. We may venture to express our considered view that success in New Loan achievements has been adversely affected, in the last six years, by Authority's mistaken and fallacious belief that a higher interest rate would stimulate subscriptions for a New Loan issue.

The new borrowings in the period 1940 to 1946 bear emphatic and conclusive testimony to the superlative effectiveness of a gradually declining borrowing rate in a programme of large-scale market loans. The conditions now prevailing in the Indian economy are comparable to those which were generated in the war years by heavy disbursements on the part of Governments and by the supply of goods and services falling short of demand. The financial stewardship of Sir Jeremy Raisman and of Sir Archibald Rowlands was distinguished for the excellent record of market loans in the context of an economy fully stressed and of an inflation that was, in the circumstances, inevitable. A detailed study of the economic conditions of the war years and of the New Loan strategy then adopted will underscore our contention that New Loan subscriptions are greatly accelerated in conditions in which a New Loan is slightly less favourable to the investor than its predecessor. We may have a later occasion to revert to this thesis, and shall content ourselves with reiterating our belief that Authority's reliance on market loans for the securing of the Plan's resources and for containing inflationary pressures must be given top priority in the ways and means budget.

+

Less Severe than Expected

The busy season has so far proceeded in a manner indicating, firstly, that its rigours are apparently less severe this year than in 1955-56 and, secondly, that the banking system has found it possible without much difficulty to handle the enlarged demand for accommodation.

Since the 1956-57 busy season started on October 26, 1956, the expansion that has taken place in the Advances of Scheduled Banks is, as at March 8, 1957, to the tune of Rs 105.67 crores; in the corresponding period of 1955-56 busy season, the increase under this

head was higher at Rs 128.74 crores.

In the task of providing an additional Rs 105.67 crores by way of Advances, the Schedule Banks were greatly helped by a noteworthy augmentation of their Deposits. Since the beginning of the current busy season, Deposits have increased by Rs 66.28 crores whereas, in the 1955-56 busy season, there was, in the corresponding period (19 weeks), actually a decline of Rs 11.51 crores. As for the balance of roughly Rs 40 crores, Scheduled Banks sought and obtained the assistance of the Reserve Bank.

Firstly, borrowings from the Reserve Bank rose from Rs 57.81 crores to Rs 79.08 crores; and the bulk of these advances was taken from the central banking institution against usance bills, the relative figure rising from Rs 40.29 crores to Rs 55.92 crores.

Secondly, the Reserve Bank in its open market operations disclosed its willingness to purchase Government securities from member banks. Consequently, Scheduled Banks chose to effect sales of giltedged and thereby to reduce somewhat their indebtedness to the Reserve Bank. The disinvestment in Government securities of member banks between the start of the busy season and the week ended March 8, 1957 is to the extent of Rs 22.13 crores. In this context, it may be noted that such sales of giltedged have been effected mostly since the beginning of February this year; and this has enabled a decline in the borrowings of member banks from the Reserve Bank from a figure of Rs 96.39 crores on February 8 to Rs 79.08 crores exactly a month later.

The busy season as recorded in the figures relating to the State Bank suggests that the State Bank has predominantly participated in the expansion as registered in the statements of Scheduled Banks. For example, the Deposits of the State Bank have gone up by Rs 46.06 crores as at March 8; and this compares with the rise of Rs 66.28 crores in the Deposits of all Scheduled Banks. Secondly, the Advances of the State Bank have expanded by Rs 45.23 crores as against Rs 105.67 crores for all Scheduled Banks.

The following tables indicate clearly the extent of the participation in the busy season of the State Bank, on the one hand, and of all other Scheduled Banks, on the other:

(Figures in Crores).

(Figures in brackets are percentages).

	26th October, 1956 State Bank of India	26th October, 1956 Other Scheduled Banks	8th March, 1957 State Bank of India	8th March, 1957 Other Scheduled Banks
Deposits	229.60	874.38	275.66	894.60
Cash	17.73	97.08	17.12	95.49
—Ratio to Deposits	(7.7)	(11.1)	(6.2)	(10.7)
Government Securities	96.15	275.38	95.01	254.39
—Ratio to Deposits	(41.9)	(31.5)	(34.5)	(28.4)
Advances Inc. Bills	129.76	630.59	174.99	691.03
—Ratio to Deposits	(56.5)	(72.1)	(63.5)	(77.2)

	26th October, 1956 Deposits	26th October, 1956 Advances	8th March, 1957 Deposits	8th March, 1957 Advances
1. All Scheduled Banks ...	1103.98	760.35	1170.26	866.02
2. State Bank of India ..	229.60	129.76	275.66	174.99
3. Ratio of 2 to 1	(20.8)	(17.1)	(23.6)	(20.2)

It will be seen that the State Bank has had no problem in the matter of finding resources with which to meet the increased demand for finance. On the other hand, the new accretions to Deposits have been of sufficient size to cover the whole of the expansion in Advances. We may emphasise that the relatively sharper rise in the Deposits of the State Bank is likely partly to have originated in the return of accounts which, on nationalisation of the Imperial Bank, had "switched" to other Scheduled Banks and partly to have derived from new quasi-Governmental accounts.

Thus, it is possible to suggest, on the basis of nearly five completed months of the 1956-57 busy season, that the remaining two/three months will not present any insuperable difficulties for the banking system. The greatly increased tempo of accruing funds to Scheduled Banks has rendered easier and much less difficult the task of financing the current busy season. Even if this pace is not kept up in the next two/three months, no grave problem is likely to be posed for the banking system since it can avail of borrowings against usance bills from the Reserve Bank.

IMF Aid—Second Tranche

That India has received the second tranche of aid from the International Monetary Fund, for an amount of $ 67.5 million, is revealed in the returns of the Reserve Bank for the week ended March 15. This accretion to foreign balances, and the inter-Governmental transactions involving deficit financing that take place at year-end, are the two noteworthy features in these returns.

Active note circulation has been marked down by Rs 1.20 crores to Rs 1524.71 crores. There has also been return of rupee coin from circulation for Rs 0.65 crores. In the result, the Reserve Bank's cash in the till has risen by Rs 1.86 crores to Rs 11.41 crores.

It is in the Banking Department that all the major changes have occurred. Balances Held Abroad have risen by Rs 31.34 crores to 130.23 crores; and this represents the receipt of foreign currency purchased by India from the IMF. The rupee currency received by the IMF has, as is customary, been deposited with the Reserve Bank, and figures under Other Deposits which have risen from Rs 41.84 crores to Rs 74.38 crores. We may note that this aid has been availed of by Government with a view to

The Economics of Wages Demands

By PAUL EINZIG

AT the time of writing there is usually ended by conceding most of acute threat of a strike of 3,000,000 engineering and shipbuilding workers in Britain. Their trade unions demand a 10 per cent increase of wages, and the employers flatly rejected the demand. Until recently most employers, confronted with excessive wages demands, were almost invariably inclined to take the line of least resistance. Although they went through the gestures of resisting the claims, they it. They cheerfully consented to wages increases because, thanks to the ease with which they were able to add the higher cost to their prices, higher wages did not prevent them from maintaining and even increasing their profits. But during the last twelve months or so many firms found themselves compelled to pay the higher wages out of their profits. There was a sharp fall in profits and dividends in a number of instances, because of the growing difficulty of putting the higher costs on the selling prices. This circumstance, together with the Government's exhortations to avoid price increases, must have been mainly responsible for the stiffening of the employers' attitude towards wages demands.

Moderation practised by many business firms during the years of voluntary dividend restraint had failed to call forth a corresponding spirit on the part of employees' organisations. This experience seems to be repeating itself once more. Until recently the rise in profits and dividends constituted the main argument with which wages demands were pressed. Although profits are now down and many dividends have been cut, wages demands are pressed nevertheless with unrelenting vigour.

Another favourite trade unionist argument in wages disputes prior to 1956 was that, since the output was expanding, substantial wages increases were imperative necessity both on moral and economic grounds. On moral grounds it was claimed to be a matter of elementary social justice that the workers should have their share in the prosperity of their industries. On economic grounds it was contended that unless the purchasing power of the masses is increased it might be impossible to find buyers for the increased output. But in 1956 industrial output remained more or less stationary. Although there are now signs of a revival of the increasing trend—especially in the motor industry—the extent of the expansion is not likely to be sufficient to justify a demand for an increase of anything like the 10 per cent claimed for the engineers. The granting of such a demand would certainly result in 'too much money chasing too few goods.'

The Government is to blame to a large extent for this resurgence of wages demands. By artificially reinforcing the gold reserve with the aid of various arrangements with the International Monetary Fund and the United States and Canadian Governments, it helped to create a false atmosphere of security amidst which trade unions feel they are entitled to press claims to the full extent of their bargaining power.

The Government, and also employers, are to blame for the excessive wages demand also because their spokesmen, in ill-advised public statements, have conveyed unwittingly a false conception about the relationship between increase of productivity and increase of wages. Every now and again a member of the Government or a prominent industrialist declares that wages increases in excess of the increase in productivity are unjustified, thereby conceding by implication that wages increases right up to the full extent of increased productivity are justified.

In connection with the present wages dispute in the engineering industry, the president of the Engineering and Allied Employers' National Federation declared quite recently that 'wages must not be allowed to outrun productivity.' Neither he nor other industrial or governmental spokesmen expressing similar views made any attempt of defining what precisely they meant. Yet the implications of their statements are open to three different interpretations. They may mean that workers in any firm are entitled to wages increases up to the extent to which productivity has increased in the firms concerned. Or they may mean that workers in any industry are entitled to the full benefit of higher productivity. Or they may mean that the total

World of Jute

Fall in US Burlap Consumption

Speaking at the annual general meeting of the Indian Jute Mills Association last Friday, the Chairman, Mr D. P. Goenka, pointed out that in spite of an increase in both production and offtake of jute goods, the past year had been "depressingly flat and unprofitable" for the Indian Jute industry. The great majority of member mills, reported Mr Goenka "have incurred huge losses which have reduced their working capital to dangerously low levels". The reason for this, Mr Goenka said, was the high price of the raw material. Proceeding, he observed: "So long as we have to depend on a foreign country for a portion of our jute requirements, this vulnerability will persist."

It may be recalled by readers that this journal has been saying ever since Partition that 100 per cent self sufficiency in raw jute is the most essential pre-requisite for the restoration of robust health to the Indian jute industry. Thanks to Pakistan's unreallable jute policy, Authority has come round to the view that so long as a sizable increase in raw jute production is not attained, other solutions to solve the problems facing the industry will be of little avail. Accordingly the target of raw jute production under the Second Five Year Plan has been increased to 5.5 million bales. The recent conference on Promotion of jute production under the auspices of the Union Ministry of Agriculture has indicated further that Government are not losing any time in translating their decisions into action. It is reported that the Ministry in an urgent communication to the State Governments in the jute growing areas has asked them to ensure that cultivators get enough fertilizers in time. The State Governments have also been informed that they can expect expeditious assistance from the Central Government in getting the required amount of fertilizers and in solving transport problems. This indicates that Government are aiming at a substantial increase in the production of raw jute in the jute season 1957-58 by intensive cultivation.

The sizable increase in domestic consumption of jute goods coupled with indications of a steadily expanding demand from this direction has opened up new vistas for the industry. The fact that considerable progress has already been made in modernisation of mills has also to be taken note of in any assessment of the prospects of the Indian Jute Industry.

The Jute Goods Market remained closed most of the time last week due to election and Holi holidays. Quiet conditions prevailed in the market when it reopened after the holidays, sentiment having been depressed by the news of a sharp fall in burlap consumption in US. As against 75 million yards in January, burlap consumption in the USA has amounted to only 61.7 million yards in February. Total stocks also continued to be at the high level of 266 million yards. They are only one million yards lower than those at the end of the previous month. At the present rate of consumption the stocks are sufficient to meet three months' requirements. It may be noted, however, that the sharp drop in consumption in February has not been altogether unexpected. For, it is common knowledge that consumers in the USA had bought far in excess of their requirements during the last quarter of 1956 in view of the Suez crisis.

The same day brought another set of figures which are quite interesting. These relate to jute goods despatches during February 1957. As indicated in these columns last week, February despatches at 85,951 tons are 7,166 tons higher compared with the previous month and 5955 tons higher compared with the corresponding month of the previous year. Almost the entire increase has occurred in sackings which are placed in February 1957 at 45,198 tons as against 39,309 in the previous month. Hessians are at 34,056 as against 34,378 tons in January. Turning to exports, it is found that almost the entire increase recorded has been contributed by this section and that sackings have contributed as much as 6,376 tons of the overall increase of 7,166 tons in despatches during the month. Total exports at 71,431 compare with 64,069 tons in January 1957 and 60,608 tons in the corresponding month of the previous year. Total domestic consumption at 14,520 tons compared with 14,716 in the previous month and 19,388 tons in February 1956.

The following table gives the week's opening and closing rates:

	Week's Opening	Week's Closing
Hessian:	Rs. a.	Rs. a.
40"×10 oz.:		
Ready ...	40 2	40 4
July-Sept. ...	40 7	40 10
40"×8 oz. ..	33 8	33 8
40"×7½ oz. ...	31 0	31 0
Sacking:		
B. Twills—		
Ready ...	109 11	109 4
July-Sept. ..	110 8	110 0
Cornsacks ..	112 0	111 12
Hy Cees Green ...	111 9	110 12
Cubans ...	134 8	134 8
A. Twills ...	132 8	132 8
L. Twills ...	126 8	126 8
D. W. Flour ..	131 8	131 0
Sugar Bags ...	124 0	124 0

The raw jute market ruled quiet. Assam Bottoms was placed nominally at Rs 29 per maund.

Arrivals of raw jute into Calcutta and Mill stations during February, 1957, totalled 561,600 bales of which 525,189 bales were of Indian and 36,411 bales of Pakistani origin. During the eight months July, 1956 to February, 1957 such arrivals totalled 4,625,486 bales made up of 4,143,909 bales of Indian origin and 481,577 bales Pakistani. As compared with the corresponding month of the previous year, arrivals in February 1957 were lower by over 120,000 bales. Of the total decline, arrivals from Pakistan accounted for as much as 112,732 bales while those of Indian origin were also lower by about 8,000 bales.

World of Tea

A Fair General Demand

ALTHOUGH foreign buying at the Calcutta auctions continues to be limited, Tea prices are fairly well maintained. The UK—the principal buyer—is not likely to operate on any worthwhile scale as she has already built up substantial stocks, which are considered adequate for twenty-one weeks at the present rate of consumption. Internal buyers are, however, expected to give most of the support in the coming auctions.

In the Export Sale, held in Calcutta this week, offerings were 51,307 packages. There was a fair general demand, Whole Leaf grades, blackleafed BOPs and Orange Fannings, and the stylish BPSs being the strong features. These were generally sold above valuations. The few lines of Tippy teas, on offer, were also sold very well.

"Tea for price" met with a good demand and was often dearer, apart from Fannings and flaky Brokens which were easier. There was only fair support for Mediums and nonwither Dooars, which declined by one to two annas per pound. The CTC teas, on offer, were from As 2 to As 3 per pound easier except for the smaller Fannings grades which were irregularly dearer. Following rates were quoted:—Clean Black Pekoe Rs 2-3-0; Plain BP Rs 1-11-0; Medium Assam BP Rs 1-12-6 to Rs 1-13-0 and Best CTC Assam BP not quotable.

In the Internal Sale, offerings were 17,230 packages of Dusts for which there was a fairly good general demand. The powdery kinds from all districts were generally about half an anna per pound easier; but the grainy kinds were a full one anna below last rates. The strongest feature of the sale continued to be the bright liquoring CTC Assams which were As 2 per pound dearer. There was more demand for the plainer liquoring CTC sorts which were, however, rather irregular.

A few flavoury invoices from Darjeeling met with keen competion, but the plainer sorts from this district shared in the general decline. Following rates were quoted:—Medium Dooars Dust Rs 1-10-0 to Rs 1-10-6; Medium Assam Grainy Dust Rs 1-11-0 to Rs 1-11-6; Medium Assam CTC Dust Rs 2-0-0 to Rs 2-3-0 and Best CTC Assam Dust Rs 2-14-0.

Also 6,379 packages of other grades were offered for internal consumption. Broken grades were one to two annas easier; but Fannings grades were a weak feature of the sale and were As 2 to As 3 per pound easier, many lines being withdrawn. The few Green teas, on offer, met with an improved demand.

In the Export Quota section, rates moved narrowly between 44 and 45 pies per pound and, between these levels, business was reported done.

Offerings in the internal Sale, held in the Cochin market, totalled about 458,000 pounds. There was a fair general demand. Better Liquoring high-grown Dusts came to a weaker market and were upto As 4 per pound easier, while Good Mediums met with less enquiry and were fully As 2 easier. Mediums from Travancore and the Wynaad were again well supported, but prices generally shed one to two annas per pound. There was active demand for Milled and Residual descriptions which were only upto one anna per pound easier. Black Leafy grainy descriptions were irregular, but generally sold at around last rates.

The final auction of the season was held in Chittagong this week. Leaf offerings consisted of 14,597 packages and Dust offerings 4,756 packages. In the Leaf sale, Orange Pekoes were irregularly steady, but the better liquoring Brokens were frequently knocked down at from As 6 to As 8 per pound below valuation. Well-made Pekoe Fannings were from one to two annas easier, but the few Tippy lots of good liquoring Orange Fannings, on offer, were in useful demand. The season closed on a steady note with Karachi buyers probably still a little short of their requirements.

There was a useful alround demand for Dusts. Plain Sylhet Dust was quoted at Rs 2-7-6 per pound. The date for the opening auction of the 1957-58 season will be announced on the 12th June.

In London auction held this week, offerings were 21,367 packages, including 15,457 packages of Northern India teas. Demand was not maintained throughout the sale and prices showed a falling tendency, especially for Low Medium, light liquoring and common kinds. Teas from the Doears also met a weaker market and were about a half penny to a penny below last rates. Clean Common Broken Pekoe quoted at 3sh 7d per pound.

Tea stocks in London, as on the 8th March 1957, were 117.20 million pounds as against 107.87 million pounds in the previous week and 96.60 million pounds a year ago. Landed between 2nd and 8th March were 18.74 million pounds, while deliveries during the same period were 9.41 million pounds.

"Standard Rate of Return"

WHEN, three months ago, the prospect before the electricity supply industry appeared to have been greatly improved by virtue of legislation taken up by Parliament with a view to the amendment of the Electricity Supply Act, it appeared quite improbable that anything should happen which would once more make for uncertain and bleak conditions for the industry. Indeed, at that time, when Mr K. G. Milne addressed the general meeting of the Federation of Electricity Undertakings of India, he particularly welcomed the linking of bank rate with the standard rate of return to the electricity industry. For, the FEU President believed that, from the orthodox point of view in economics, it was extremely unlikely that, in the near future, bank rate would be reduced in India.

But this journal did not share Mr Milne's acceptance of the linking of bank rate with standard rate as satisfactory. The scribe responsible for Gateway Gossip stated that it should be considered part of the unfinished business, to which the Federation would need to attend, to press for a delinking of bank rate from standard rate. Instead, the suggestion offered was that a certain minimum should be prescribed; and any increase in the return permissible could be made to depend upon any raising of the bank rate.

The unexpected has happened; the electricity supply industry is once more perturbed about the prospects before it. At last week's ordinary general meeting of the Ahmedabad Electricity Company Limited, Mr K. G. Milne has recorded that the industry has received a bolt from the blue. He refers to the fact that the effective rate at which the Reserve Bank lends to Scheduled Banks is 4 per cent, although bank rate continues to be 3½ per cent. Thus, although money is effectually dearer, there is no automatic adjustment in respect of the standard rate of return, since bank rate as such is unchanged. Mr Milne points out that, in conditions where the minimum rate charged by the World Bank against mortgage debentures and with the unconditional guarantee of the Government of India is 5½ per cent, it is "clearly absurd" that the inducement for intending investors should have as its upper limit 5½ per cent.

It seems to us that no amount of legislation, as to the link between bank rate and standard rate, is likely to be helpful. In the first place, we believe that Mr Milne—and the electricity supply industry—is right in pressing for a higher rate of return. Secondly, while we would not go so far as to say that the industry should be compensated for any increase in the cost of money, we do think that it is in the public interest to revise (upwards, of course) the return permissible to the industry whenever money conditions so suggest.

There are other matters which have been touched upon by Mr Milne; but these will, no doubt, receive the studious attention of our Bombay Representative. Suffice it here to emphasise that, if Government are interested in the development of the electricity supply industry, they need liberally to revise their views as to what constitutes a satisfactory return to the investor.

★

Allahabad Bank

The Allahabad Bank Limited in its balance sheet as at the end of 1956 discloses deposits totalling Rs 35.97 crores against Rs 35.91 crores at the end of 1955.

In the meanwhile, on the other side of the ledger, cash balances have risen considerably, due mainly to an increase in money at call and short notice from Rs 11 lakhs to Rs 1.77 crores. Secondly, contrary to the general tendency of banks during 1956, the Allahabad Bank's Government investments have risen while its advances have been marked lower.

In the result, the Allahabad Bank presents a balance sheet in which the ratio of investments and advances to deposits is, as compared with other Indian Banks, placed at a more orthodox level. The Bank's holdings of Government securities have risen considerably from Rs 11.02 crores to Rs 12.62 crores; and the ratio of investments to deposits works out to 35.1 per cent.

In the case of advances, the relevant figure has marked a fall of Rs 2.44 crores from Rs 22.56 crores to Rs 20.12 crores; and the ratio of advances to deposits works out to 55.9 per cent.

Nevertheless, the Bank has been able to increase its gross revenue by Rs 0.25 crores to Rs 1.96 crores. Interest and discount have yielded Rs 0.21 crores more at Rs 1.62 crores, while the income by commission, exchange and brokerage has gone up from Rs 0.28 crores to Rs 0.32 crores.

This, however, has been accompanied by an increase of over Rs 12 lakhs in the interest paid on deposits, which is placed at Rs 73.09 lakhs. Salaries and allowances are also higher by Rs 5½ lakhs at Rs 73.17 lakhs.

(Continued on page 514)

World Overseas

US Notes

Sometimes a short statement from an unexpected source throws as much—or more—light on economic trends as does the usual flood of carefully compiled statistics. Such a statement was recently filed with the US Federal Maritime Board (FMB) here by a leading American shipping company (American President Lines).

It it the company states its belief that trade between the United States and Southeast Asia will continue to expand at a rate of 3 per cent a year or more. It, therefore, asks FMB permission to about double its annual sailings from US ports on the Atlantic ocean to ports in the Far East.

The company bases its contention of a number of factors, all of them economically significant. It notes, for instance, that the economies of the United States and the countries of Asia can be expected to grow over the years. This growth alone would form the foundation for expanded trade relations. As an example, rising industrial activity in the United States obviously would tend to enlarge the American market for the abundant natural resources of Southeast Asia and the world.

The company makes a particular point of the fact that it has consulted extensively with the American rubber products industry. The outcome is that the company is satisfied the United States will be importing increasing quantities of natural rubber over the years, even though the use of synthetic rubber also will grow. This view reflects, of course, a prospective increase in demand for all types of rubber that would accompany the general economic expansion foreseen in the United States. Implicit in this view, too, is continuing strong US demand for other materials imported from Asia and elsewhere. The company, specially mentions in its brief, such products as tin, drugs, gums and resins.

To substantiate its request for more sailings, the company also points out that there already has been an average increase of 3.9 per cent a year during the past decade in the commercial traffic plying the sea routes from US Atlantic ports to South-East Asia. It goes on to note that in recent years its vessels have been carrying virtually full loads. Last year, for instance, the average free cargo space outbound to Asia was only one per cent, while on inbound voyages it was less than 10 per cent. Admittedly, economic and political uncertainties in some Asian countries could have an unsettling effect on commercial relations but the company is highly encouraged, it says, by the evident determination of the Asian peoples to achieve greater stability and to improve their living standards. It is likewise encouraged by the demonstrated willingness of the United States to assist them in their economic development progress. This brief statement, of course, incorporates the view of just one American shipping company concerning trade opportunities with one region. But it parallels views rather generally held here on prospective US trade relations with virtually every region. During the past 10 years, US merchandise trade with other countries has about doubled. Barring some unforeseen international development, there is every reason to believe that this kind of trade expansion will continue.

★

Britain

Britain plans to treble her output of electricity generated by atomic power.

A revised programme announced in Parliament on March 5 reveals that the Government has decided to adopt as the basis for present planning a range of from 5,000 to 6,000 megawatts of nuclear capacity in operation by the end of 1965. The target set in February 1955 was 1,500 MW to 2,000MW of nuclear capacity.

A full year's operation of 6,000MW generating capacity would save the nation some 18,000,000 tons of coal.

The number of nuclear-power stations, including the three already in course of erection or being planned, is now to be 19. It is expected in the present state of knowledge that all stations will be of the Calder Hall basic type, although with considerable improvements and modifications.

It is estimated that the cost of generating electricity in a modern coal-fired station and in the first commercial nuclear stations will be about the same, but it was pointed out on March 5 that it was hoped that 'as we go along, the cost of nuclear power will drop'.

★

A statement on the new atomic programme was made by the Minister of Power, Lord Mills, in the House of Lords, and by the Paymaster-General, Mr Reginald Maudling, in the House of Commons.

Lord Mills said that the Government, in conjunction with the English and Scottish electricity authorities and the Atomic Energy Authority (AEA), had now completed its re-examination of the nuclear-power outlined in the White Paper of February 1955, which set the target of some 1,500MW to 2,000MW of nuclear capacity in operation by the end of 1965. 'Since we already spend some £250,000,000 per annum on importing fuel, chiefly oil—and this burden on our balance of payments will continue to grow—the importance of our need to develop nuclear power as a source of energy cannot be in doubt. Our task has, therefore, been to consider the extent to which the 1955 programme can be accelerated, in view of the technical advances within the last two years.

'It is the considered opinion of our expert advisers that, in the light of present knowledge, the English and Scottish electricity authorities can reasonably aim at having at least 5,000MW of nuclear capacity in operation by the end of 1965; and that, if technological development continues to be favourable and the necessary physical and financial resources can be found, the figure of 6,000MW could be achieved by that date.

'The Government has accordingly decided with the full agreement of the electricity authorities and AEA', the Minister continued, to adopt as the basis for present planning a range of 5,000MW to 6,000MW of nuclear capacity in operation by the end of 1965. This means that the supply of raw materials for nuclear generation, the acquisition of sites and the planning of the transmission network will be on a scale sufficient to bring the 6,000MW of nuclear capacity into operation by the end of 1965.

'The actual amount of nuclear capacity to be installed by that date will be subject to technical experience and development as planning progresses, including the trend of capital costs, and to the availability of physical and financial resources.

'I am authorized to say that the Government of Northern Ireland is today announcing that the Electricity Board for Northern Ireland intends, at the instance of the Government, to bring into commission a 150MW nuclear station in 1963 or 1964.

'Execution of this nuclear programme would make a major contribution to our energy resources; a full year's operation of 6,000MW generating capacity would save some 18,000,000 tons of coal. But it would also mean a large increase in the annual investment programme of the electricity authorities during the early '60s and this would represent a very heavy burden on the nation's capital resources during the period when those resources are likely, in any event, to be seriously strained.

'The programme will, moreover, involve the erection of new power stations and of overhead transmission lines in parts of the country'. This programme would be carried through with the least possible interference, the Minister added.

★

Lord Mills concluded: 'I would only add that nothing said about the prospects of the nuclear-power programme in any way affects the importance of the coal industry. However rapidly we develop nuclear energy, coal will remain the basis of our economy, and the need to exploit to the full our national coal resources remains as urgent as ever'.

Lord Mills told a questioner that he had delayed his statement because he wished to satisfy himself that they had a practical programme to follow. He did not think it would be necessary to construct more than 16 stations additional to the three for which orders had been placed.

The cost of generation in the three stations ordered, he added, was confidently expected to be such that, while the conventional stations would go on growing in efficiency, the efficiency of nuclear stations would go on improving much more rapidly, so that ultimately it could be hoped that the cost of a nuclear station would be lower than that of a conventional station.

Mr. Maudling, answering questions at the end of his statement in the House of Commons, said the Government believed that technical resources would be available to carry out the programme to the full. The additional cost of having this nuclear programme with the conventional power-station programme would be between £700,000-000, and £800,000,000 by 1965.

★

Speaking at a press conference after his statement in the House of Lords, the Minister of Power disclosed that the total cost of the revised programme for 19 nuclear-power stations would be about £900,000,000, including fuel. This, however, was only part of a gigantic power development programme which by 1965 would cost £3,350 million.

Lord Mills stressed the United Kingdom's growing demand for power, which he pointed out, in the last seven years alone had risen by two-thirds. 'Power is essential to the trends of our industrial life', he went on, 'essential to greater productivity, to take the hard physical toil out of human labour, and to enable us to take our share in meeting the growing needs of the under-developed areas of the world.'

Although the cost of the nuclear programme would be substantially higher than a similar programme based on conventional power stations, it should be remembered that whereas A-stations were much more expensive to build they were cheaper to operate—in fact, running costs should be less than half those of conventional stations of the same capacity.

Moreover, the total costs of nuclear fuel would involve a very much lower expenditure of foreign exchange than the cost of equivalent amounts of energy in the form of coal or oil.

★

At present, the United Kingdom was getting most of her nuclear fuel from Australia, the Belgian Congo, and South Africa. Considerable supplies would shortly be available from Canada.

Adequate plant-manufacturing capacity should be available to meet the programme, and AEA was satisfied that there would be sufficient supplies of uranium and graphite to meet all the requirements of the 6,000MW scheme. Material should also be available to cope with any probable demands for reactors exported from the United

Prospects for the Jute Goods Industry

(Continued from page 507)

drop in shipments is temporary, the IJMA Chairman has given the clear warning that there is a serious threat to sacking exports from bulk handling in the case of Australia, and from the development of overseas manufacturing industries, as in Burma, Thailand, Indonesia and China. We need also to be clear in our mind as to the impact upon the Indian industry of the growth of the Pakistani jute goods industry. Current indications are that, even at the present stage, Pakistan is able to compete in India's traditional markets to the extent of 50,000 tons of export manufactures.

Obviously, with jute goods a predominantly export industry, a continuing care has to be taken to ensure that this packaging material is competitively priced in the world's markets. But, as the IJMA Chairman has stated, the jute mills are not in a position to "raise our prices by a conveniently pre-determined amount to cover an increase in our costs". Indeed, it was this inability which was the cause of a loss to the industry during April-October 1956; in this period, "companies representing 57 per cent of the industry incurred losses amounting to more than Rs 1¾ crores". The biggest single factor responsible for these losses is, according to Mr Goenka, the high cost of the raw material. Firstly, the financial position of the mills does not allow them to build up buffer stocks of raw jute. Secondly, this means that the mills are increasingly at the mercy of day-to-day fluctuations. Thirdly, the decision to unseal looms aggravated "the disparity between jute and gunny prices". Fourthly, while the decision to increase jute goods production weakened the finished goods market the effective demand for a larger quantity of raw jute firmed up the prices of the raw material. Fifthly, the resealing of looms did not succeed in rectifying the high raw jute prices. Sixthly, sellers failed to deliver goods against lower priced contracts previously entered into; and mills were forced to buy for short delivery at very high prices. As if all this were not enough, the Suez conflagration made the conditions in the World of Jute even more abnormal.

It is at this stage that Mr. Goenka advances the suggestion which, ever since the non-devaluation of the Pakistani rupee in 1949, has been insistently and reiteratedly demanded by this journal. If jute goods are to be assured of even a modicum of stable working, there is no doubt in our mind that a vital pre-requisite is self-sufficiency in raw jute. So long as Indian availability of raw jute is insufficient for our needs, so long do we expose the Indian industry to being browbeaten and blackmailed by Pakistan. We may point out that, when the draft Plan-frame in respect of the Second Plan was published, we made the emphatic suggestion that the target for raw jute was too chicken-hearted and dangerously low. Since then, it is clear that Authority has recognised the need to rescue the jute goods industry from the vulnerability implicit in the dependence on Pakistan for the raw material; and, as a result, the target for raw jute has been raised from 5.00 million bales to 5.54 million bales, these figures being exclusive of mesta. A high level conference since held was productive of several suggestions as to the manner by which such a target could be attained. The solution envisaged does not rely merely on bringing more area under raw jute; instead, it is hoped to improve production by means of greater yields; and, for this purpose, there would be dissemination of improved seeds, the scientific use of fertilizers, more effective cultural practices such as line-sowing by seed drills and subsequent inter-culture by wheel hoes and, finally, by adoption of proper plant protection measures. Mr. Goenka has, however, remarked that the 1957-58 season is not likely to witness any considerable increase in production.

In stating that to believe self-sufficiency in raw jute would solve all problems for the jute goods industry is naive, Mr Goenka comes to the second of his suggestions, which is also a matter to which Indian Finance over the years has been repeatedly drawing attention. This relates to price stability of jute goods. The industry may possess a number of virtues, but price stability is not one of them. For example, in the first two months of this year, hessian 10 oz has been "hammered down from Rs 46 to below Rs 40" and B. Twills have plummeted from Rs 120 to Rs 106. The IJMA Chairman says: "Speculation of this nature can do incalculable harm to the legitimate trade in jute goods and must be suppressed". Unfortunately, the jute goods market has for too long been allowed to be dominated by speculative elements; what is worse, there is no proper futures market which could provide hedging facilities for the manufacturing units. It is to be hoped that a properly functioning futures market for jute goods will not long continue to be a mere opiate dream.

Mr Goenka makes the point that the performance of the jute goods industry depends "not only on the co-operation of our workers but on the efficiency of the machines which they operate." As for the labour, it is an unfortunate fact that Leftist unions in the industry should have been at work with such zest. The majority of the workers, as the IJMA Chairman points out, welcome an opportunity to increase their output and thus earn more money. But the Leftist unions see to it that the workers are not left to themselves. As for the machinery, the long felt need for modernisation is in the process of being carried out. The National Industrial Development Corporation has been giving all possible assistance; and the IJMA Chairman expresses the gratitude of the Association to the Government in this matter.

We suggest that by far the most important development in the jute goods industry is the welcome improvement in the indigenous off-take. In the jute year 1953-54, internal consumption worked out to 12.9 per cent of total despatches. Two years later, by 1955-56, while despatches as a whole marked an increase of nearly 140,000 tons, the ratio of internal consumption to despatches went up to 18.1 per cent. For the calendar year 1956, the relevant ratio is placed slightly better at 18.3 per cent, in spite of a further increase of 8,000 tons in total despatches. That, in an industry in which some 90 per cent of despatches had formerly to find a market by way of exports, we should now be in a position wherein nearly 20 per cent is consumed at home, is a heartening development. What is even more significant is the fact that such improvement has been recorded in the relatively short period of three years. It needs hardly to be said that the improvement in the indigenous consumption is directly derived from the expansionist economy brought out by planned endeavours. Mr Goenka is undoubtedly right in envisaging an even further improvement in domestic consumption. For, in terms of the Second Plan, the production of sugar, fertilisers, cement and foodgrains is targetted to rise considerably. It is, therefore, not improbable that, by the end of the Second Plan, indigenous consumption should account for a level approaching 30 per cent of total despatches. Once such a position is attained, the debilitating dependence on exports to take care of the bulk of the production will have been removed as far as the jute goods industry is concerned.

In this light, although we agree that it is necessary to maintain and even improve the extent of publicity in the overseas markets, we would commend the attention of the Indian Jute Mills Association to the growing market in India itself. Since the expansionist economy is aiding the development of a market for jute goods within the country, there is every reason for the industry to take advantage of this fact and to intensify its efforts at increasing its sales in the domestic market.

WORLD OF BUSINESS

(Continued from page 512)

Consequently, the balance of profit marks an increase from Rs 15.62 lakhs to Rs 15.79 lakhs.

The dividend has been maintained; and so has the transfer to the staff pension fund at Rs 1 lakh. The contingencies account is credited with Rs 3.50 lakhs. The carry forward is slightly lower at Rs 10.28 lakhs against Rs 12.43 lakhs brought in.

Finally, it may be remarked that deposits of the Allahabad Bank Limited would have been placed at a higher level were it not for the fact that it was considered advisable, for reasons of a practical nature, to discontinue the Bank's business in Pakistan.

✱

Basle Watch Fair

What is probably the world's most accurate timekeeper will be shown for the first time in public at the Swiss horological industry's fair which opens in Basle, Switzerland on April 27.

According to Fair officials the recently completed tests measured this timekeeper's microscopic margin of error as 0.0001 second per day. It will take more than 1,500 years to accumulate an error of one minute.

The Basle Watch Fair is one of the major attractions of the 10-day Swiss Industries Exposition which annually attracts buyers and visitors from all parts of the world. It is here that Switzerland's precision craftsmen in the art of measuring time unveil their latest technical advances and set watch fashion trends for the coming year.

Among the new Swiss creations, it is reported, are an eight-day dashboard timepiece for airplane and automobile enthusiasts; a travelling bedside watch with two dials, including one set horizontally in the frame; and an alarm wrist watch with a date indicator.

The results of elections to the Lok Sabha (Which I am under commitment to discuss this week) confirm even more impressively than the Vidhan Sabha results the prognostications made in these columns. Not all the results have been announced at the time of writing, but, of those announced, the lion's share has gone in favour of the Congress. As I write, I have before me the results of 277 seats: of these, as many as 209 have been won by the Congress, with the Communists trailing a long, long way behind with 20 successes. Next in order of strength are, characteristically, Independents who have won a total of 15 seats. The PSP has won only 12 seats and the Jan Sangh has captured one seat. A miscellany of parties have shared among themselves a total of twenty-two seats. The results yet to be known are those from West Bengal (with 53 out of 36 results still to be announced), Uttar Pradesh (with 10 out of 86 results unannounced yet), Orissa (with 18 out of 20 results unannounced yet) and Bihar where results for 35 out of a total of 53 seats are yet to be announced. All the results from Kerala have been declared, with the Congress and the Communists getting 6 and 9 seats respectively, and the other parties taking 3. Other interesting points that emerge from the figures are that, of the results so far announced from Orissa, the Congress has not won any: on the other hand, all the results so far announced from the Punjab have gone in favour of the Congress. The only Jan Sangh success so far is, curiously, from Bombay. Communists have had no success so far in Assam, Bihar, Madhya Pradesh, Mysore, Orissa, the Punjab, and Rajasthan. Of the Union territories, Delhi's five seats have all gone to the Congress, with the Communists winning one of the two seats from Manipur, the other result being still unannounced. No results have yet been announced from either Himachal Pradesh or Tripura. Results for the six seats from Jammu and Kashmir are also yet to come.

✱

Detailed analysis of the results must, naturally, await fuller data about the actual percentage of polling, the nature of contests, the precise lines along which votes were split. But certain broad conclusions seem permissible, especially when such inferences are in consonance with those that the Vidhan Sabha results yield. Regional analysis of the results so far announced is still inadequate as a frame of reference for a final verdict about precise orientations, but such results as have already been made known conform to the pattern that emerged from the results of the Assembly. Thus, Kerala, which has voted more for Communists than for Congressmen for the Vidhan Sabha, has shown a similar preference in respect of Lok Sabha representatives. The approximation in the respective party position is almost mathematically perfect. Likewise, Orissa, where the Congress is finding a formidable rival in Ganatantra Parishad is apparently lukewarm in its support of the Congress. (This may be a somewhat mistaken conclusion since 90 per cent of the results are yet to be announced). The Punjab results so far announced, all of which have gone to the Congress, are interesting because of the immediate past of this province. The swing in favour of the Congress, especially for the Centre, argues a positive reorientation of Punjab Politics. This is not surprising, as the people of the Punjab could not help being thoroughly disgusted with the equivocal and mercurial politics of Tara Singh. His sudden volte-face during the elections, after merging the Akalis with the Congress, must have been bewildering to his erstwhile followers: and, whatever their attitude to local leaders, their desire for firm and unwavering guidance from the Centre is unmistakable. There is also no doubt that, as the State nearest a neighbour with unfriendly intentions toward India, Punjab has felt the patriotic need for emphasising national unity and determination against possible designs on the sovereignty of the country.

✱

The broad fact that emerges from the Lok Sabha results is that the generality of our people desire the continuance of the Congress at the seat of power and the pursuit of the policies it stands for. Even people who have, for various reasons, opposed the continuance of the Congress at the States, have given their preference for the Congress at the Centre. This dichotomy in attitude is not a new development, for, even in the past, the acceptance of the Congress leadership at the national level has been more enthusiastic than at the State level. This is accounted for partly by the quality of the respective leaderships and partly by the fact that Congress policy at the national level was on the whole better thought out and less objectionable otherwise than that at the State level.

✱

Apart from the general inferences that flow from the number of Congress candidates returned to the Lok Sabha, there are certain decisions of the electorate which confirm the country's endorsement of particular strands of Congress policy. In the first place, the country has reaffirmed its faith in Mr Nehru's leadership by electing him once again by a fantastic margin of votes. Many would say, perhaps with some justice, that no inference beyond personal adoration of Mr Nehru by almost all his countrymen can be drawn from this result. But his election, however automatic, is an indication of the faith that his wise and clear-sighted leadership will help the Congress on its mettle. Moreover, Mr Nehru does stand for certain policies and programmes and it is difficult to divorce them from him. Whether the people endure Mr Nehru for the policies he stands for, or whether they endure the policies because of him is irrelevant from the point of view of positive action. What is inescapable in either case is that they go together, and if a man has voted Nehru in the expectation that he would not carry out certain aspects of Congress policy he (the voter) dislikes, he is in for a disappointment. Mr Nehru himself did his best to make his position clear on many a point on which many another would have prevaricated on the ground that discretion and equivocation are the better part of electioneering valour. For instance, his opponents made an issue of cow slaughter and appealed to Hindu sentiment on the question. Mr Nehru went out of his way to state clearly his views on the subject. Some would even say that Mr Nehru was ostentatiously conscientious about this. But no one who has voted for Mr Nehru can now say that he has done so because he has misunderstood Mr Nehru's views on a subject of which his opponents had made an issue.

✱

Apart from Mr Nehru's election, there are three results that I should like to refer to as indicative of the country's faith in particular aspects of the Congress policy. These are the election to the Lok Sabha of Maulana Azad, Mr Krishna Menon an Mr T. T. Krishnamachari. As for Maulana Azad, his election by a huge majority from a Punjab constituency gives a clear indication that the country as a whole endorses the secular ideals for which our Constitution stands. As a matter of fact, confirmation of this aspect of our national thinking is available in the rest of the elections results also. The comparatively dismal performance of the Hindu Mahasabha is an indication that communal orientations do not find much favour with the electorate at the level of national politics. Again, the comparative success of the Muslim League of Malabar is, paradoxically, a further confirmation of the secular nature of the State. It shows that even where a minority community indulges in a particular area in unashamed communal politicking, the majority does not think of putting an end to it by unconstitutional means. This freedom for the Muslim league, and Maulana Azad's success at the polls, are something that inevitably invoke comparison with the state of affairs in Pakistan. Such events are unthinkable in Pakistan where the constitu-

tion itself prevents non-Muslims from aspiring for the highest office in the State.

*

Mr Krishna Menon's election from Bombay is again a crucial decision by the country. It would not be strictly accurate to call his success a vindication of the foreign policy of the Congress Government, for, the chief architect of that policy is Mr Nehru. Even so, Mr Menon's success shows that the country approves of the manner in which this particular policy is being translated into action. It is true that there is hardly any important difference over foreign policy among the parties. The PSP, which has made Mr Menon its pet abomination since the time of the Hungarian troubles, made a point of testing its strength by putting up a candidate against him. But Mr Menon's best and telling electioneering was done at the UN, where he performed his patriotic duty with magnificent purposefulness. Mr Menon's election in effect confirms the fact that the country is solidly behind Mr Nehru in his foreign policy, especially in his stand on Kashmir.

*

And lastly, Mr T. T. Krishnamachari's election from Madras is an interesting indication of the country's attitude to the economic policy of the Government and the manner in which it is being implemented. Unlike the other results I have just discussed, Mr Krishnamachari's election showed important reservations on the part of the electorate. Of course, it is possible to exaggerate the importance of the fact that the combined votes of the opponents of Mr Krishnamachari were more than those secured by him. As against that, it may be urged that the percentage of polling was not as high as it should have been considering the importance of this particular election. However that may be, it is no secret that Mr Krishnamachari's election was not assumed as automatic by anyone before the results were published. As a friend put it before the election, if Mr Krishnamachari had stood for election on the basis of his performance as a Commerce Minister, there could have been no doubts whatever about his success. But his spell of office as a Finance Minister has given rise to mixed feelings. Though his particular actions at particular moments were perfectly defensible, there was a tendency on his part to talk too often and at needless length. It was not what he did but what he said, that made many people, not all of them capitalists, wonder whether he had a proper appreciation of his tasks. Latterly, however, there was a welcome soberness in his public assessment of particular economic situations and motivations. It is to be very much hoped that he will continue to nurse confidence by the word in season instead of sapping it by the word out of season. By electing him once again, the country has shown that it approves the basic assumptions of the economic policy of the Congress. It has also shown that it has confidence in Mr Krishnamachari's ability to translate it into action, despite misgivings for which he undoubtedly gave room in the last few months. Mr Krishnamachari must take to heart what his chief is never tired of saying: It is necessary to take the whole country with you in whatever you do. Otherwise, however good and however clear-headed your plans may be, you will bring nothing but disaster by the sullen opposition of those who do not agree with you. This is particularly so in the economic sphere, where the reverberations of particular acts or even utterances are incalculable.

*

To sum up, the country has voted Congress with certain deliberations and a certain expectancy of good things to come the right way. This mandate is not without reservations; but, on the basic policy and on particular strands of it, the country is with the leadership that has guided its destiny so far. But when the time comes around for the next elections, the Congress will have to render a strict account of what it has done with the power given to it. If the Congress gets down to its tasks of the next few years with a sense of dedication and purposefulness, it should not find the audit of 1961 particularly terrifying.

Bombay Review

Foreign Exchange for Indian Shipping

ON every side, there has been a tendency to make out one's case for deserving foreign exchange allotment in terms of the Second Plan; and, in the course of the past few months, when there has been the apparent emergence of a tight foreign exchange position, there has been an intensification of pleas submitted in this regard. By and large, it has been politic to emphasise that foreign exchange expenditure is called for in a particular industry because in consequence and thereafter, the increasing production of that industry will obviate the need for imports and, therefore, save foreign exchange. In a second category of instances, the case for a priority is based on the proposition that the industry in question would then be enabled to make available for export its line of manufactures. There has been a third variety of foreign exchange seekers, those that have sought to emphasise that development of such industries is a prerequisite to the successful implementation of Second Plan endeavours; it is rare when, in the case of a single industry, all three criteria for according priority should obtain.

That, remarkable as it is, is the position relating to shipping companies; and Mr Dharamsey M. Khatau succeeded in availing himself of the opportunity offered by the ordinary general meeting of the Scindia Steam Navigation Company Limited to make out what appears to be a cast-iron case for shipping as a recipient of foreign exchange allocation.

As for the background, we need to remember that the sector of the economy in which it is difficult for progress to be recorded by any country is shipping. There are, first of all, the entrenched interests who have, if not a monopoly, at least something resembling a closed shop in the transhipment of the world's cargo. In the second place, world shipping was thrown out of gear during the Second World War; and its recovery has by no means been easy in the years since then. For, the costs of ship-building have risen so enormously, as to daunt any new incumbent in the world of shipping. In the third place, even if the finances could be arranged, we have had the demand for new tonnage far exceeding the deliveries that the world's ship-yards could effect. At the same time, no country could afford for these three reasons to neglect shipping. The mercantile fleet has the always been thought of as, the second line of defence for a country, and the sailors employed in the world's trade have been the sailors to man the ships of war in an emergency. Furthermore, the underdeveloped countries, who had newly earned their independence, were faced with the paradox of being unable to incur the foreign exchange expenditure on new tonnage, while, at the same time they could not afford to continue to lose foreign exchange by having their import and export cargoes handled almost exclusively by foreign or non-national shippers.

The Government of India have shown themselves to be keenly alive to the circumstances in this regard. As the Indian shipping industry will readily acknowledge, the aid rendered by Government has been varied and comprehensive. For example, if I remember right, a shipping company is able to obtain a loan from Government equivalent to as much as 90 per cent of the cost of a new ship at attractively low rates of interest. Moreover, at the time when the Second Plan estimates were drawn up, the allocation to shipping was, while not ambitious, entirely realistic. However, in the months since the Second Plan has got under way, much has happened which necessitates a second look at the Second Plan in terms of the shipping industry. This is an aspect of the matter to which Mr Khatau has turned his forceful attention; and he will have served the country well if Government take cognisance of the many points he has raised and if Authority, consequently, take the steps in the right direction.

At the outset, it needs to be remarked that the target by the end of the Second Plan is 900,000 tons GRT; and the financial provision is of the order of Rs 37 crores. While the Scindia Chairman is of the view that the target of 900,000 tons GRT is "inadequate", this is not an aspect of the matter which, on the present occasion, has exercised his attention. Rather, he points out that, within 9 months of the beginning of the Second Plan, orders have been placed for new tonnage covering the full amount of Rs 37 crores; but, for this amount, the extra tonnage ordered is only 175,000 GRT; and this leaves a shortfall of 125,000 GRT as compared with the target of 900,000 GRT. The next step for Mr Khatau is to emphasise, as forcefully as he can, the need for a fresh allocation so that the achievement of the target could be enabled. The impression that one gathers is that, due to the present foreign exchange position, no further allocation of foreign exchange for shipping is likely. Mr Khatau says that, in view of certain special considerations, the shipping industry must definitely receive this extra allocation. His argument may be summarised as follows:

1. Indian shipping contributes to the foreign exchange earnings of a country on the freight it carries and for which it is paid in foreign exchange.

2. It saves foreign exchange in the sense that cargo carried by Indian ships to that extent prevents the expending of foreign exchange by payment to foreign shippers.

3. In the matter of Indian exports, too, if the cargo were handled by a foreign shipper, the freight earned thereagainst would be remitted in foreign exchange; this, too, would be saved by utilising an Indian ship.

4. The contributions of Indian shipping by way of earnings of and saving in foreign exchange amount to Rs 7 to Rs 8 crores a year.

5. When the ships on order at the end of the First Plan are delivered, the earning by Indian ships in this context will rise to Rs 12 crores.

6. The foreign exchange element in the purchase of new ships "would be fully recouped in five to seven years out of her own contribution to the pool."

7. The extent of finance required for making good the shortfall of 125,000 tons is estimated to be Rs 40 crores.

8. But the whole of this Rs 40 crores would, as already pointed out, be paid for in five to seven years.

9. Thereafter, the contribution of shipping "to the foreign exchange resources of the country will then rise to about Rs 19 to Rs 20 crores by the end of the Plan-period".

In emphasising these reasons as the basis for a case for the fresh allocation of foreign exchange to shipping, Mr Khatau urges that the question "deserves the most urgent attention" since, if additional tonnage is to be procured "by the end of the Plan-period or even within a reasonable time thereafter", then it would be necessary for ship owners "to start planning their requirements and place orders for ships right now". The Scindia Chairman recognises that the foreign exchange position is difficult. But he suggests that Government, in deciding the priority that shipping should get, should realise that it must be "as high as possible".

Another matter touched by Mr Khatau relates to port conditions. The position in Bombay is apparently greatly improved. The introduction in that port of the "piece rate system of payment" to stevedoring labour has effected an enormous improvement. Mr Khatau hopes that "the contemplated introduction of the piece rate system at Calcuta and Madras will not be delayed any longer".

The Scindia Chairman has recorded that "the position in regard to loading of colliers at Calcutta has considerably worsened"; in spite of the shipping companies "vigorously pursuing this matter with the authorities concerned", it is unfortunate that "no abiding improvement has occurred so far and ships still lose vitally" by important delays in port.

Mr Khatau next deals with "the very vital question of expanding the capacity of our major ports in terms of berths, handling equipment, transit sheds, wagon supply, pilotage facilities, night navigation, etc." While the shipping companies, for their part, are providing "faster and more efficient ships", the full advantage therefrom will not be gleaned unless there is expedition in the work at the loading and despatching ports. Therefore, Mr Khatau urges that the port development schemes should be executed with the utmost despatch.

Finally, we may see how Scindia has fared during the year under review. Freight rates have been higher; more ships were in service; as a result, gross earnings rose by 18 per cent. The improved performance has enabled a dividend of one rupee per share after sizably augmenting internal resources. The debenture issue expenses of Rs 19.76 lakhs have been written off. The special depreciation reserve receives Rs 67 lakhs. A dividend equalisation reserve has been created with a transfer of Rs 13 lakhs. The annual spot survey reserve has been doubled to Rs 40 lakhs. Undistributed profits have risen, during the year, by a net figure of Rs 1.07 crores after writing off Rs 31.98 lakhs on investments from investment reserves. All in all, the gains are such as to have exceeded the most optimistic expectations of shareholders.

EDITORIAL NOTES

(Continued from page 508)

be possible for the Corporation to turn its attention devoutly to the insurance potential of small incomes. At least initially, expectations should be moderate. Even with the alluring salesmanship of private companies, India's rural population has remained mostly insensitive to the benefits of insurance. The State has a slight advantage in the matter of instilling a sense of security in the minds of policy-holders.

But, rural incomes, particularly at levels where savings are negligible, have not tended to increase in any considerable measure. For the absorption of sporadic increases here and there, constlier necessaries and small savings campaigns of the Government and the banks compete. There will have to be some coordination between the various official and semi-official agencies seeking to tap savings; at the same time, without neglecting personal salesmanship, which in the absence of State compulsion, is generally found most effective in coaxing funds off non-affluent pockets.

Bombay Review

Gateway Notes

A Good Start

The progress made by the State of Bombay in the implementation of the Second Five Year Plan in the first year of its working is commendable and gives ground for optimism about the success of the five year Plan throughout the country. A brief account of the progress made is available in the speech delivered by Mr Sri Prakasa, Governor of the State at a joint session of both Houses of the State Legislature last week.
