Hard alloy steel containing chromium, tungsten or vanadium are used for the cutting corners, edges and the faces of the drilling bits. There are many kinds of bits for rotary drilling and high technical skill and judgement come into play in the selection of the precise type that would yield the best results. The type of bit being used in Burdwan is called the tri-cone rock bit or roller bit and is generally used for hard rock formations, whereas the fish tail type is used where soft formations are encountered. The third type is called the diamond bit and is usually used for what is known as core drilling. As the diamond bit bores in, it cuts a core of the rock which is left in the centre of the diamond drill. These cores, ranging between 1½" to 3" in diameter tells the oil technicians and oil scientists a great deal about the formation of the rock layers, specially if they are the type which are usually associated with the presence of oil.

As the drill grinds its way downwards, additional lengths of drill pipe—which are 29 to 31 feet long—are added at the top. Specially threaded joints facilitate the coupling or uncoupling of the lengths of drill pipes.

Among the most vital part of the drilling rig is the draw-works which raises and lowers and controls all the tools and implements used in actual drilling. The unit can be cited as an outstanding example of how oilmen fit the proper instrument for a particular job. Weighing about twenty tons the draw works has all the controls which guide the drilling operation mounted on just one panel, so that one man is enough to oversee the work during drilling operations.

The unit is powered by three twin engine diesel units each capable of developing 400 h.p. As a measure two extra engines are kept ready for emergencies.

The integral part of the equipment are the specially built tanks for mixing and storing drilling fluid, commonly referred to as 'mud'. Compounded of water, special kind of mud and chemicals, drilling mud, it is so complex and important that engineers have to be on duty 24 hours to maintain a constant quality control check on the fluid. Drilling mud which is pumped into the well thru the drill pipe cools and lubricates the bit. The fluid is then forced upward through the drill hole to the surface. Here the drill cuttings which had been washed away by the fluid is separated from the mud and is examined to determine the kind of strata which is being grounded thru.

As the drill eats deeper, the well may be lined with successive lengths of steel pipes called "casing". The purpose is to prevent the well from caving in as well as keeping out unwelcome water. Each string of casing with a decreasing diameter slides down the previous one so that ultimately the casing extends from top to the bottom of the hole. The result is something like a telescope with the large end at the top and the small end at the bottom. Finally to firm up the casing, cement is pumped between the casing and the sides of the well.

As can be imagined, every phase of the operation,—from the rigging to drilling—calls for men of specialized skills and wide experience backed by expensive machinery

Budget Depresses Markets in May

The stock markets began the month on a steady note sentiment having been somewhat favourably influenced by the publication of the Jarring Report on Kashmir and by reports that an agreement in regard to World Bank Loan for Indian Railways would be reached by the end of the month. An undercurrent of caution was, however, noticeable as most operators were reluctant to extend their commitments to any appreciable extent in view of the several uncertainties in the investment situation obtaining at that juncture. In the first place, the Budget proposals which the Finance Minister was expected to present to the new Parliament by the middle of the month had engendered mixed feelings. While a section believed that though more taxes were inevitable in the context of the huge outlay envisaged under the Second plan, there would be sufficient incentives to promote capital formation, another section considered it prudent to wait till the Budget was safely out of the way. The continued stringency in the money market and apprehensions of adverse repercussions on stock market business of the recent Reserve Bank circular to Banks on the question of advances that might be used for cornering shares further restrained activity.

Despite settlement considerations, the Calcutta Stock Exchange ruled steadier with the more speculative counters meeting with some support. Selected Engineering and Miscellaneous scrips were also in moderate request. Indian Irons opened at Rs 19.87 and made further headway to close higher at Rs 19.93. Though dull conditions prevailed due to the settlement, the undertone in Dalal Street had also been steadier with Tata Iron closing fractionally better at Rs 168.50. In the textile section Bombay Dyeing gained a point to Rs 543.

2 & 3

Though Indian Irons crossed the Rs 20 mark in earlier dealings, the Calcutta Stock market presented a dull appearance in later dealings in the absence of fresh support. The scrip after having been done upto Rs 20.06 closed at Rs 19.90. End of account coupled with budget uncertainties kept enthusiasm at a low ebb in Bombay where Tata Iron receded to Rs 167.75 from Rs 168.50. Bombay Dyeing also declined to Rs 539.00 from Rs 543.00.

4, 5 & 6

Dr B. C. Roy, Chief Minister of West Bengal suggested that tea companies should curtail their dividends to shareholders to not more than 7 per cent. The suggestion was made by him while inaugurating the first annual meeting of the Tea Association of India. It was his opinion that the economy thus brought about would help companies to build up their reserve funds for expansion. He further characterised the tendency to have a fairly high profit with limited capital as disastrous to the industry in the long run.

The stock markets opened the week on a cheerful note with the pivotal scrips recording sizable gains. Steel shares were especially very active both in Bombay and Calcutta. The improvement in sentiment had stemmed from rumours that the Central Budget in the coming week would not bring any nasty surprises for the stock markets. Under the leadership of the speculatives, selected scrips in other sections also made some gains. Indian Irons in Calcutta once again crossed the Rs 20 mark to open at Rs 20.30. After having been done upto Rs 20.63, the scrip closed at Rs 20.57. Hectic activity was noticeable in Dalal Street where Tata Iron moved up from Rs 167.75 to Rs 170.75.

7

Though conditions continued to be fully steady in the opening stages, the market developed a sagging tendency later on as buyers were generally reluctant to follow-through the previous day's support. As a consequence, prices at close were at the day's lowest level. Indian Irons after opening at Rs. 20.69 moved up to Rs 20.75 but was again pushed down to close at Rs 20.54. Profit-taking was noticeable all along the list in Dalal Street and equities closed on a quiet note. Tata Iron lost half a point to Rs. 170.25 as did Bombay Dyeing at Rs 545.00.

8

The stock markets were in a depressed state with prices drifting to lower levels in the absence of support. Both operators and investors were in no mood to enter into commitments either way as forecasts on and discussions about the Budget showed widely divergent opinions held in the country regarding the scope and method of taxation for obtaining funds for the execution of the Second Five Year Plan. Indian Irons on overnight selling pressure opened lower at Rs 20.45 and by close had lost another 15 nP to be finally placed at Rs 20.30. Tata Irons lost one point to Rs 169.75. Among Textiles, Bombay Dyeing receded by Rs 2.50 to come back to Rs 542.50.

9

Mr T. T. Krishnamachari, Union Finance Minister, announced in Bombay a general upward revision in the pay scales and dearness allowance of 21,000 clerical and lower-grade employees of the Life Insurance Corporation of India. The revision would involve an increase of Rs 4½ lakhs to Rs 5 lakhs per month in the pay bill of the Corporation.

Sentiment continued depressed in the country's stock Exchanges as current thought on the central Budget seemed to point unmistakably to heavier taxes. Indian Irons in Calcutta opened lower at Rs 20.24 and closed easier at Rs 20.09. The Bombay Stock Exchange remained closed on account of local municipal elections.

10

A reactionary tendency continued to persist in the stock markets as rumours about the budget were very much discouraging. In Calcutta, paper mill shares were particularly under selling pressure as rumour had it that excise duty on paper would be substantially increased. Orient paper was hammered down to Rs 27.95. Elsewhere Indian Irons eased to Rs 19.27. In Bombay Tata Iron lost more than 4 points to be finally placed at Rs 165. In the Textiles section, Bombay Dyeing eased to Rs 531 from Rs 542.50.

11

Irregular price movements characterised trading in the Bombay Stock Exchange with higher levels attracting profit taking and lower levels meeting with bear covering. Indian Irons met with buying support from Calcutta interests. Closing prices showed slight gains. Tata Iron was done at Rs 165.50 while Indian Irons was placed at Rs 19.40. Textiles continued to lose ground with Bombay dyeing reacting to Rs 528 from Rs 531.

12 & 13

The Government of India announced the setting up of an ad hoc committee to consider such amendments to the Companies Act 1956 as might be found essential to remove defects or deficiencies in its working if any which might have come to light in the course of its working and also solve such practical difficulties as might have been experienced by businessmen in complying with its provisions.

The stock markets were in a hesitant mood as most operators were very cautious in view of the Budget proposals to be announced two days hence. The volume of business passing was on a low ebb and price movements were insignificant. Indian Irons opened at Rs 19.21 and lost further ground to close at Rs 19.12. In Bombay Tata Iron receded to Rs 164.25 from Rs 165.50 while Bombay Dyeing dropped five points to come back to Rs 523.

14

The Calcutta Stock Exchange remained closed on account of Lunar Eclipse.

Introducing the Railway Budget in the Lok Sabha, Mr Jagjivan Ram said "I have not made any changes in passenger fares as my colleague, the Finance Minister is considering the matter." That was taken as an indication that passenger fares would be increased. The net surplus in the Railway Budget was estimated by the Union Railway Minister at Rs 30.83 crores as against the earlier estimate of Rs 21.43 crores.

In Bombay prices in early dealings displayed a sagging tendency on overnight selling pressure but toward close regained most of the lost ground. As against its previous day's closing of Rs 164.25. Tata Iron closed the day at Rs 165.50. Among Textiles, Bombay Dyeing also gained one point to quote Rs 524.

15

Pre-Budget trading reflected the general hope that the tax proposals which would be announced later in the evening would not cause much surprise to the stock markets. Though transactions were few and far between prices were generally well held around previous levels. Indian Irons in Calcutta were however, subjected to alternate bouts of buying and selling with its rate as a consequence fluctuating widely. The scrip opened at Rs 19.33 moved up to Rs 19.60 only to come back to Rs 19.15. Some short covering was noticeable in Dalal Street also in the pre-Budget session with the result prices attained slightly higher levels as compared to the previous day. Tata Iron gained quarter point to be placed at Rs 165.75. Among Textiles Bombay Dyeing moved to Rs 531.

After announcement of the Budget proposals in the special session, sentiment was very much depressed and the more speculatives declined sharply. Indian Irons opened at Rs 19.42 and after moving up to Rs 19.75 fell back precipitously and by the end of the session

(Continued from page 1025)

was placed at Rs 18.03. In kerb trading that night the scrip lost further substantial ground to be marked down to Rs 17.62. There was panicky selling in Bombay where Tata Iron was hammered down to Rs 154.

It was evident that the long list of taxes, two of them entirely new, had swept marketmen completely off their feet. To those who had confidently expected that new imposts however heavy they might be, would not adversely affect the working of enterprises in the private sector, seemed to have received a severe shock when they found that the Finance Minister had increased the tax on Bonus issues from 12½ per cent to 30 per cent, enhanced the income and corporation taxes on companies. The tax on wealth and the tax on expenditure were considered quite detriment to the interests of joint stock enterprise. The long list of articles on which export duties had been imposed would have also serious repercussions on the working of companies as most of them would in effect amount to a sizable increase in the cost of production.

Earlier in the day the Reserve Bank announced that the Bank Rate had been raised to 4 per cent with effect from May 16.

16

The stunning blow administered to the stock markets was fully in evidence during the day's trading which was mainly confined to the more speculative counters. Indian Irons in Calcutta met with unabated selling pressure. After opening at Rs 16.78 the scrip was pushed down further to Rs 16.63. Even so it looked as though it would touch further low levels. At that juncture the Committee of the Calcutta Stock Exchange intervened and took some emergency measures. They announced an interim settlement in the clearing shares at the following rates: Indian Irons 17.00; Burrakur 22.00; National Jute 19.00; Texmaco 16.50; Indian Copper 3.20; Orient Paper 25.50. Other conditions imposed were: no jobbing business in Indian Irons until further notice; any fresh sale in Indian Irons to be accompanied by a margin of Rs 3 per share. The measures brought about some immediate improvement and for the time being atleast the downtrend seemed to have been with Indian Irons closing at Rs 16.90. In Dalal Street there was unmistakable evidence that both operators and investors had lost confidence in the stock markets. Prices continued to drift lower all along the list. Toward the close there was a slight improvement as few buyers appeared at the lower levels. Tata Iron closed at Rs 153.50, while Bombay Dyeing was placed at Rs 509.

17

Second thoughts on the Budget seemed to have revived confidence somewhat as the more speculative counters met with bear covering. Turnover, however, continued to be on a moderate level. Quite unexpectedly badla charges in Bombay were normal and consequently sentiment there also showed sizable improvement in later dealings. Indian Irons in Calcutta opened at Rs 17.36 and closed at Rs 17.78. In Dalal Street Tata Iron in kerb trading was done upto Rs 154.25 as against the day's official closing of Rs 151.50. Bombay Dyeing was placed at Rs 506.00.

18, 19 & 20

An easier trend prevailed in the stock markets with the volume of business passing at a meagre level. The more speculatives lacking support were idling around previous levels largely because of the severe restrictions imposed on blank sales by the Committee of the Calcutta Stock Exchange. There were indications that the new tax proposals were encountering stiff opposition even from Congressmen. Consequently it was generally believed that the Finance Minister would be obliged to modify or withdraw some of his proposals. In the meantime, marketmen seemed to have come to the conclusion that if all the new taxes were imposed there would be no incentive left for investors to put their savings in equities. For, it was certain that the various direct and indirect taxes together with the increased Corporation tax would make it difficult for companies to maintain even current levels of dividends. The tax on wealth would take away a portion of the reserves while the increase on bonus issues would make equity shares less attractive to investors.

Conditions in the Calcutta Stock Exchange on the 20th were easy on lower advices from Dalal Street Indian Irons opened at Rs 17.90 and after moving within a narrow margin closed quiet at Rs 17.72. Tata Iron in Bombay was placed at Rs 152.50. Textiles were somewhat better with Bombay Dyeing moving to Rs 514.50 from Rs 506.00.

21

Interest was at a low ebb as buyers were conspicuous by their absence. In Calcutta prices drifted to further lower levels in the absence of support. Bombay shares were quietly steady with interest centring on Bombay Dyeing which met with investment support. Indian Irons opened in Calcutta at Rs 17.63 and steadily declined to close at Rs 17.42. Tata Iron in Bombay closed quiet at Rs 151.50 while Bombay Dyeing also turned quiet toward close at Rs 513.

22

In view of the fairly steady trend in Indian Irons during the past few days, the Committee of the Calcutta Stock Exchange decided to withdraw the emergency measures imposed on dealings in scrips in the clearing soon after the budget. However, the rest of the market in Calcutta continued to rule depressed on scattered liquidation and absence of fresh buying. Indian Irons opened at Rs 17.78 and further shaded to close at Rs 17.48. Apprehensions about settlement difficulties imparted a subdued tendency to the Bombay Stock Exchange in earlier dealings. Toward close prices made some modest recovery. Tata Iron at close was better on balance at Rs 153.25 while Bombay Dyeing recorded a margin of nearly four points to Rs 517.

In a telegram to the Finance Minister, the Bombay Shareholders Association said: "Equity values have already slumped by 30 per cent in the past eight months and unless substantial relief is granted capital formation and industrial expansion may receive irreparable setback." Hence it urged him to abandon the Budget proposals regarding wealth tax on companies and the increase in bonus tax.

23

At a meeting of the Board of Directors of the Indian Iron and Steel Company, Ltd., 51,83,708 fully paid ordinary shares of Rs 10 each in the company, offered on the 12th March, 1957 to the Ordinary Shareholders as on the 11th March, 1957 at a price of Rs 13.50 per share were allotted to the shareholders or their nominees, who accepted the offer and to those who applied for additional shares over and above the shares to which they were entitled by Rights, subject to the approval of the Reserve Bank of India to the allotment of additional shares to non-resident shareholders and Rights shares to non-resident renouncees.

Out of 51,83,708 Ordinary shares offered, the shareholders or their nominees accepted 50,27,765 shares to which they were entitled or 97 per cent of the shares, and applied for 2,78,993 additional shares, the offer being accordingly over-subscribed to the extent of 1,23,050 shares. Applications for 15,050 additional shares had to be excluded for non-compliance with the issue conditions and allotment in respect of the remaining valid applications for 263,943 additional shares was made by the Board of Directors on the basis of a formula approved by the Controller of Capital Issues according to which

(1) applications for not more than 150 shares each received their allotment in full and,

(2) applications for more than 150 shares received allotment on the basis of an allocation of 150 shares in each case plus 20 per cent of the excess of the shares applied for over 150, and

(3) the allotment on the above basis being subject in each individual case to a limit of 20 times the existing shareholding.

The company announced that it had started posting Allotment Letters to shareholders and expected to complete their despatch within a period of one week.

The fact that Indian Iron's Rights Issue had been oversubscribed imparted some strength to the scrip which ruled fairly steady, opening at Rs 17.63 and closing at Rs 17.60. Otherwise the Calcutta Stock Exchange presented a dull appearance with price movements confined to a narrow margin. In Bombay the undertone was steady, thanks to continued interest shown in textiles and some pivotal miscellaneous scrips. Tata Iron closed fractionally better at Rs 154 on fresh buying Bombay Dyeing made further headway to close Rs 2½ higher at Rs 520.

24

Largely in view of the announcement of the Finance Minister that the proposals regarding the imposition of a wealth-tax and expenditure tax would be referred to a select committee, stock market sentiment showed signs of some improvement. Hopes were also entertained that there would be some concessions as a result of the mounting opposition to the new tax proposals within the Congress Party itself. In Calcutta, the speculatives were more active with the day's closing rates recording moderate gains. Indian Irons opened at Rs 17.72 and closed better at Rs 17.84. Despite profit-taking at higher levels Bombay shares were generally steady with the pivotal scrips showing sizable gains on balance. Tata Iron gained three points to Rs 157 while Bombay Dyeing made further headway to be finally placed at Rs 524.

25

Though sentiment continued to be steady in Bombay closing prices were slightly lower than previous levels. Tata Iron closed half a point lower at Rs 156.50 while Bombay Dyeing dropped two points to come back to Rs 522.

26 & 27

With Indian Irons encountering buying support in later dealings, the stock market in Calcutta ruled steadier Indian Irons opened firm at Rs 18.18. After receding to Rs 18.03 the scrip recovered sharply to close at Rs 18.42. In Bombay sentiment improved on higher advices from Calcutta. Tata Iron advanced to Rs 158.25 from Rs 156.50. Bombay Dyeing also moved up to Rs 527.00 from Rs 522.00.

28

Stock markets were rather subdued both in Bombay and Calcutta. In the latter centre, the more speculatives met with selling pressure while the rest of the list was generally unchanged with prices where marked hovering around previous levels. Indian Irons opened at Rs 18.51 and closed lower at Rs 18.30. In Dalal Street Tata Iron reacted to Rs 156.25 from Rs 158.25 Bombay Dyeing dropped five points to come down to Rs 522.50.

29

While Settlement considerations restricted trading in Calcutta, Dalal Street presented a steadier trend, sentiment having been helped by institutional support for Bombay Dyeing and keen interest shown in Indian Irons by Calcutta. In Calcutta Indian Irons opened Rs 18.33 and closed better at Rs 18.48. Tata Irons in Bombay was, however, shaded at Rs 156. Bombay Dyeing recovered lost ground and moved up further to close at Rs 524.

30

While the Calcutta Stock Exchange remained practically closed on account of a hartal in the city, Dalal Street ruled dull due to lack of support. Tata Iron shaded to Rs 155.75 as did Bombay Dyeing to Rs 523.50.

31

Dull but steady conditions prevailed in the Stock markets. Indian Irons opened Rs 18.30 and closed better at Rs 18.42, Tata Iron was fractionally better at Rs 156. Bombay Dyeing closed one point higher at Rs 524.50.

For the Investor

Flash Mentality

***Investment Gossip*:**

WHEN, two weeks ago, a friend called on me and complained bitterly about the steep fall in share values consequent on the bear view held of the Budget proposals, I tried to suggest to him that the Budget was not so black as it had been painted, that prices should improve, that Indian Irons should recover to the Rs 18.50 mark. (The reader, incidentally, can in justice ask why I did not offer this viewpoint in these columns; my answer is, that I have for several months avoided specific predictions, not because it is an impossible enterprise, but because the extraneous considerations—mainly, the market's tendency to take flash decisions on the basis of flash news—can upset the most carefully reasoned calculations).

My friend laughed it off. Watch, he said, what you have so far seen is as nothing to what you will shortly witness: a further sharp debacle.

Of course, it is true that I am by nature of optimistic and cheerful bent. To me, what were evident were not so much the new tax proposals for an aggregate of Rs 78 crores, but the reliefs that had been granted and the conditions as they were evolving for brighter prospects all round.

For example: I welcomed the fact that the amount sought to be obtained by the new Budget was as high as Rs 78 crores. It was clear to me that the 1957-58 proposals in a sense completed the quantum of new taxes necessary for raising resources for the Second Plan; and, by inference, the silver lining of considerable importance was that, presumably, Government would not need to impose new taxes in the last three years of the Plan for revenue purposes.

In the matter of reliefs, and considered apart from any new forms of taxation, it has not been realised that Mr T. T. Krishnamachari has been quite, quite generous. First, the rate of super-tax has been brought down from the maximum of 62 per cent to 45 per cent. Second, the limit of life insurance premia and employee's contributions to recognised provident funds, qualifying for rebate of income-tax, has been raised to one-fourth from one-fifth, although the maxima are unchanged. Third, the employer's contribution to provident funds and interest are both excluded from the total income. Fourth, the dividends taxes payable by companies have been cut. Fifth, the rigours affecting Section 23A Companies have been considerably relaxed, and in particular in respect of industrial companies. Last, the Budget's intention is that incentive be provided for savings, and incentive as well for larger earnings.

It is, however, far from strange that the markets should be incapable of recognising any bull factors. The new flat for Stock Exchanges is that they should continually mope about the values that, in the recent past, have been wiped off investors' shareholdings. I admit that the paper loss is of stupendous size. I will go a step further, and concur in the view that Government are partly to blame for having allowed such debacle in prices without taking suitable action. But I cannot accept the proposition that Government alone are to blame.

It is the flash mentality that underlines and underscores every market reaction to news of allegedly bear import. And this mentality has so overpowered every thinking action on the part of market operators, that they have today forgotten how to respond to news of favourable significance.

Coming back to my friend, of whom I have spoken at the beginning of this Gossip, he not only laughed outright at my views, he for a few days had the pleasure of gloating (over the phone) each day that the Stock Exchange continued to present a far from cheerful appearance. I have not, it need scarcely be said, heard from him since the Rs 18.50 mark for Indian Irons has been attained.

I do not wish to prophesy. It is not my intention to conjure up a future that is wholly cheerful and devoid completely of storm clouds. All that I wish my readers would do, is to remember that the storm clouds of today have a brighter silver lining to them than any we have had before. In a word, while I do not advocate all-out optimism, I should warn against the fate that might overtake he who, in concentrating his attention on the dark clouds, misses the silver linings altogether.

£R$

Apropos Stock Exchange reaction to the Budget, I feel impelled to draw fresh attention to the Wealth Tax as applicable to companies. In the Special Study on the Budget, brought out last week by Indian Finance, it was stated emphatically that the Wealth Tax should not be applied to companies. I myself wrote that it ought to be opposed. I now find that the Bombay Shareholders' Association, which justly claims to vouchsafe the interests of the myriad middle class investors, has passed a resolution to this effect.

The resolution calls upon the Association to convey to the Government the view that "the proposed levy of Wealth Tax on companies is unjustified and inequitable because it is a tax on savings of middle class investors who constitute an overwhelming majority of the total number of shareholders."

Mr K. R. P. Shroff, than whom no one is more highly respected by investors, was in no mood to mince words. He said that shareholders' confidence had been utterly destroyed; and the bone of contention is the Wealth Tax.

My own view is that the Wealth Tax as such cannot be objected to; it is its applicability to companies that, quite rightly, evokes opposition.

Thus, while I do not share Mr Shroff's opinion, that the Plan ought to be stretched over a longer period or that taxes should be cut, I am in agreement with him that the Wealth Tax, for companies, must go. And, to this, I would add a plea, not for Government reduction of taxes, but for Government categorically stating that no new taxes need be apprehended over the rest of the Second Plan period.

Equally obviously, the present plight must not be permitted to lead to paralysing despondency.

If the Second Plan is to be saved from the shoals of foreign exchange shortage, what is necessary is energetic action.

The energetic action suggested by Indian Finance is for the negotiation with the IMF of standby arrangements on a massive scale.

HIGHLIGHTS

For what purposes will the International Monetary Fund permit purchases of currency by a member?

Normally, what is the maximum that may be purchased by a member?

What exactly are the facilities available from the IMF?

What is a standby arrangement, and how much does it cost?

Finally, how does all this affect India?

These are all questions that are sought to be answered by this week's World of Finance article.

In drawing fresh attention to our present foreign exchange position, it is suggested that the IMF can be impressed upon to approve purchase by India of currency for an amount exceeding our quota.

Obviously, our foreign exchange reserves are at a level that cannot allow complacency.

Investment Notes:

DESPITE the general sluggishness in the stock market, Guest, Keen, Williams Limited have been in good demand, having forged ahead to Rs 28/50 from 27/25 quoted a week ago. The main inspiration has been derived from the excellent results for 1956; and these are now reinforced by a fairly optimistic statement made by the company's Chairman regarding the future outlook.

The Metal Box Company of India Limited is said to have finalised the programme for the manufacture of plastic containers out of refinery waste. In this connection, it is understood, that the company has concluded an agreement with the Standard Vacuum Oil Company.

Dalmia Cement (Bharat) Limited has decided to consolidate 60 lakh Ordinary shares of Rs 2/50 each in the existing authorised capital of the company into 15 lakh Ordinary shares of Rs 10 each by consolidating four such Rs 2/50 paid shares into one share of Rs 10 each. In this connection, the company has convened a meeting on the 4th July, 1957.

In Bombay, Associated Cement Companies Limited has decided to accept calls in advance in respect of the payment of the balance amount of Rs 60 per share, on account of the new issue, from the shareholders as may desire to pay the same. Interest at the rate of 4 per cent will be allowed on such payments from the date of payment until the last date when the actual call becomes due.

The working results of the New India Assurance Company Limited, for the year 1956, are encouraging, showing a rise of Rs 66.3 lakhs in premium income to Rs 5.64 crores. All the three departments have participated in this improvement, but the major share has gone to the Miscellaneous department. The Fire Department has made the largest contribution to the earnings of the company, with profits of this department rising up to Rs 47.7 lakhs from Rs 43.1 lakhs in 1955. The company's progress has been good despite a downward revision in premium rates in 1955 and 1956, and nationalisation of Life business early in the year. The directors have recommended a dividend of Rs 3 against Rs 2/50 per share paid for last two years.

In Madras, Travancore Rayons Limited, it is understood, has made an agreement with a Continental firm for manufacturing cellulose film adhesive tape in India. After obtaining the necessary sanction from the Government of India, the factory is expected to go into production by the end of the year. Meanwhile, the company has proposed to increase the authorised capital to Rs 10 crores by the creation of 80 lakh new equity shares of Rs 10 each.

Coimbatore Murugan Mills have proposed to capitalise Rs 6.05 lakhs out of Reserves for the issue of 6,050 bonus shares in the proportion of 1:2.

Investment Briefs:

In F. W. Heilgers Coal group, Sendra has maintained the dividend at 2½ per cent and Churulia at 6 nP for 1956. Ondal has, however, reduced the dividend from 10 to 7½ per cent.

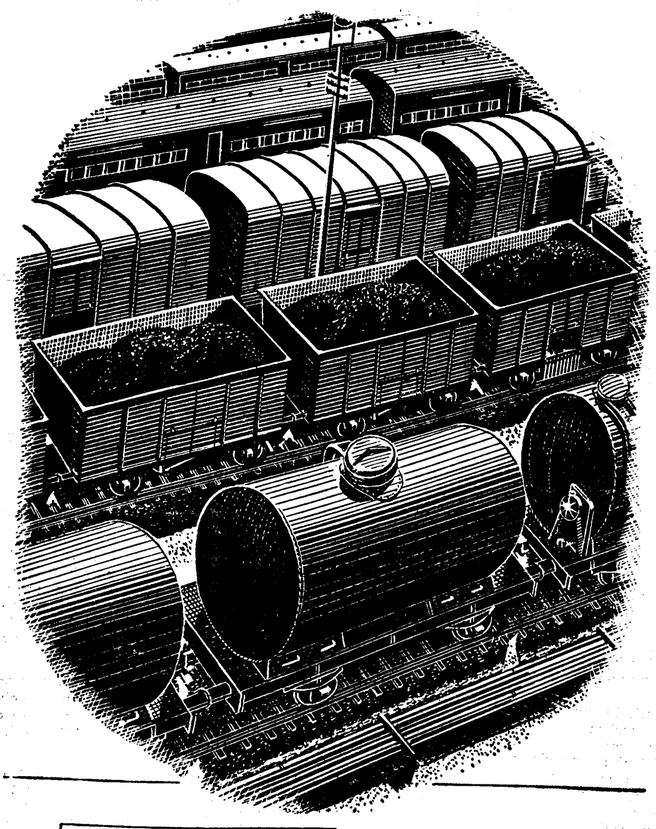
Bengal Bonded Warehouse Association has maintained the dividend at 5 per cent for the half-year ended 30.4.1957.

Sutna Stone & Lime Company has raised the dividend from Rs 1/19 to Rs 1/37 per share for 1956.

Bhurangya Coal has again passed over the dividend for the year ended 31.3.1956.

Bengal Potteries have maintained the dividend at 10 per cent for 1956.

In Bombay, Alcock Ashdown Company has raised the dividend from 12/50 to Rs 15 per share for 1956.



Larsen & Toubro Limited has recommended a dividend of Re 1 per share for 1956. The proportionate dividend on the new shares will be 25 nP per share.

In Madras, Mettur Industries have reduced the dividend from 42½ to 20 per cent for the year ended 31.3.1957.

Balanoor Tea has reduced the dividend from 25 to 17½ per cent for the year ended 31.3.1957.

Peermade Tea has reduced the dividend from 37½ to 35 per cent for 1956.

Manar Estates have reduced the dividend from 15 to 9 per cent for the year ended 31.3.1957.

Balance-Sheet Reviews:

THANKS to increased earnings, the British India Corporation Limited has recommended a dividend of 10 nP per share for the year ended 31st December 1956, as against nil in the previous year. The accounts have disclosed a profit of Rs 28.05 lakhs, after including the income from Investments, and after making all the usual allowances including the sum of Rs 11.52 lakhs for depreciation. To this has been added the sum of Rs 50 lakhs previously reserved for Taxation, which sum is not now required for that purpose. As a result, the sum available, after providing Rs 20 lakhs for future taxation and deducting the debit balance brought forward from last year amounting to Rs 27.36 lakhs, is Rs 30.68 lakhs.

In respect of other allocations, Reserve for Bad and Doubtful Debts has claimed Rs 5 lakhs and a similar amount has been transferred to Rehabilitation Reserve. After paying the Ordinary dividend at 10 nP per share, the amount carried forward is Rs 1.22 lakhs.

Sales for the year are satisfactory, showing an improvement over those of the two preceding years, when losses were sustained. A favourable development, during the year, was the receipt of orders for a substantial quantity of footwear for export. Although this development came too late to offset the effects of other unfavourable factors on the trading for 1956, the directors hope that it will prove possible to increase exports during the current and future years, with a beneficial effect on the results of the leather and footwear branches.

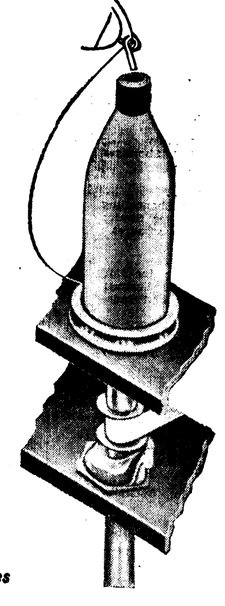
Bengal Coal

The working results of the Bengal Coal Company, for the year ended 31st October, 1956, compare unfavourably with the previous year, reflecting difficult conditions generally experienced by the industry. Raisings are lower at 2.32 million tons against 2.51 million tons and despatches at 2.56 million tons against 2.81 million tons. Sales have declined to Rs 4.31 crores from Rs 6.62 crores.

The net profit, after Taxation and Depreciation, amounts only to Rs 36.29 lakhs as against Rs 32.64 lakhs in the previous year. Apart from setting aside a sum of Rs 8.00 lakhs for Reserve against revaluation of stores and stocks, Depreciation has been reduced to Rs 25.00 lakhs from Rs 26.27 lakhs; Taxation to Rs 18.00 lakhs from Rs 26.50 lakhs and General Reserve to Rs 2.00 lakhs from Rs 13.00 lakhs. A final dividend of Rs 10 has been recommended, making a total of Rs 17.50 per share of Rs 100 each for the year as against Rs 35 per share of Rs 200 each in 1955.

The directors have, in their report, stated that the Labour Appellate Tribunal has given its decision and the issues are now before the Supreme Court. It is hoped that, once these issues are settled and the Committee, recently constituted by the Government to revise coal prices, complete their work, the industry will be placed on a sounder footing so as to be able to discharge its responsibilities under the Second Five-Year Plan.

Bengal Flour



Thanks to the installation of a new milling plant with increased overall capacity, the Bengal Flour Mills Company has earned a net profit, after Taxation and Depreciation, of as much as Rs 6.6 for 1956 lakhs as against only Rs 3.54 lakhs lakhs in the previous year. After providing Rs 1.46 lakhs for Tax Contingency Reserve, the Depreciation amount has been raised to Rs 1.66 lakhs from Rs 1.41 lakhs and Taxation to Rs 4.52 lakhs from Rs 2.90 lakhs. General Reserve is maintained at Rs 2.00 lakhs. The directors have recommended a final dividend of 13¾ per cent, making a total of 25 per cent for the year as against 22½ per cent in 1955.

Assam Saw Mills

The Assam Saw Mill and Timber Company, Limited has shown a small profit of Rs 19,015 for the year ended 30th September, 1956 as against a loss of Rs 97,045 incurred in the previous year. Sales have declined from 493,483 sets to 448,173 sets, while the amount realised has totalled only Rs 34.53 lakhs against as much as Rs 41.48 lakhs. A sum of Rs 1.55 lakhs (Rs 1.78 lakhs) has been set apart for Depreciation. The dividend is passed over again. The debit balance carried forward

FACTS BEHIND FIGURES

Revolving over 10,000 times a minute

Round and round whirl the spindles in the spinning frames of India's 419 cotton mills. Averaging a speed of over 10,000 revolutions to the minute, these spindles wind yarn for 5,000 million yards of cloth each year. Under the Second Five Year Plan this output will increase by 3,500 million yards. Ten years ago the Indian textile industry imported almost all their machines; today, Indian machinery manufacturers are increasingly meeting their needs. Texmaco, pioneer manufacturer of cotton textile machinery in India, supplies the complete range of spinning machinery for cotton and staple fibre, designed and built to established international standards in technical collaboration with the world renowned Howa Machinery Limited of Japan.

to next year's accounts is as much as Rs 4.96 lakhs.

Tide Water Oil

Although sales have shown a substantial rise to Rs 49.60 lakhs for the year ended 31st October, 1956 from Rs 42.85 lakhs, the company's earnings are only slightly higher at Rs 2.34 lakhs against Rs 1.59 lakhs. This is mainly due to the fact that the improvement in gross sales has been largely offset by the higher prices paid for imported lubricants, consequent on increases in world prices and ocean freight rates. The directors have recommended a final dividend of 75 nP, making a total of Rs 1.25 per share for the year as against Rs 1 for the previous year.

Bengal Assam Steamship

Although conditions of trade by inland water transport between India and Pakistan were not unsatisfactory, earnings reported by the Bengal Assam Steamship Company, Limited are substantially lower for the year ended 31st October, 1956. Freight income is shown at only Rs 32.90 lakhs against as much as Rs 43.07 lakhs. The net profit, after Taxation and Depreciation, amounts to Rs 2.25 lakhs against Rs 2.91 lakhs. In respect of allocation to funds, Depreciation is raised to Rs 2.73 lakhs from Rs 2.63 lakhs, while Taxation is reduced to Rs 3.00 lakhs from Rs 8.30 lakhs. No provision is made for Capital Reserve as in the previous year, when a sum of Rs 1.39 lakhs was allocated to this item. The dividend on the Ordinary shares is maintained at Rs 7.50 per share.

According to the Directors' report, since the closing of accounts, jute exports to India were disappointing and showed little sign of future improvement. The possibility of extending the company's services elsewhere is, therefore, under consideration.

Jenson & Nicholson

Jenson & Nicholson (India), Limited has fared well during the year 1956. The net profit shows a rise from Rs 4.57 lakhs to Rs 5.14 lakhs after providing Rs 2.42 lakhs for Depreciation against Rs 2.55 lakhs; Rs 3.33 lakhs for Taxation against Rs 3.23 lakhs and nil for managing agents' allowance and commission against Rs 45,606. The dividend is proposed to be maintained at 6 per cent after providing Rs 2 lakhs for General Reserve against Rs 1.5 lakhs.

Sales have improved from Rs 1.62 crores to Rs 1.88 crores. Referring to the outlook, the company's Chairman says that there is no reason to assume that the current year will not be a successful trading year for the company. However, he has added that the Government are restricting the import of raw materials which may have a serious effect on the company's trade.

Marsden Spinning

The working of the Marsden Spinning and Manufacturing Company has resulted in a profit of Rs 7.48 lakhs for the year 1956, after providing Rs 2.27 lakhs for Depreciation and Rs 4.5 lakhs for Taxation. A sum of Rs 5 lakhs has been transferred to General Reserve. The directors have recommended a dividend of Rs 12 and a bonus of Rs 2 per share.

Monogram Mills

The Monogram Mills Company, Limited has earned a profit of Rs 7.79 lakhs for 1956 after providing Rs 1.72 lakhs for Depreciation and Rs 4.5 lakhs for Taxation. Sales of cloth, yarn and waste have risen from Rs 1.58 crores to Rs 1.72 crores. A sum of Rs 5.00 lakhs has been transferred to General Reserve. The directors have recommended a dividend of Rs 12 and a bonus of Rs 2 per share.

Sarangpur Cotton

The Sarangpur Cotton Manufacturing Company has shown a gross profit of Rs 53.04 lakhs for 1956 after providing Rs 5.09 lakhs for managing agents' remuneration. The directors have, after providing Rs 14.16 lakhs (Rs 1.42 lakhs) for Depreciation; Rs 4.33 lakhs (nil) for Rehabilitation Reserve; Rs 16.00 lakhs (Rs 17.00 lakhs) for Taxation; Rs 5.00 lakhs (Rs 20.00 lakhs) for General Reserve; Rs 5.00 lakhs (nil) for Contingency Reserve and Rs 5.00 lakhs (Rs 4.00 lakhs) for Dividend Reserve, recommended a dividend of Rs 75 per Ordinary share on the increased capital.

The mills are now equipped with the latest up-to-date machineries. There were 64,536 spindles and 1,473 looms at the end of the year with requisite bleaching, printing, dyeing, mercerising and sanforising plants.

West Bengal Budget

Indian Finance
Established 1928
June 8, 1957

The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THE West Bengal Budget, which was presented to the Assembly within a week of a State-wide hartal against Union taxes, is wisely content with the reaffirmation of an expectation to raise Rs 4.5 crores by way of additional taxation. Presumably, the Government also have not had time to scrutinise new tax prospects within the brief interval which has elapsed since the announcement of the Union budget.

As against Rs 60,69 lakhs tentatively estimated in March as revenue for the year, the present budget estimate is Rs 61,89 lakhs, the additional amount representing two items of Central assistance, one for a model village scheme and the other for gratuitous relief and test relief operations. The expenditure on revenue account is higher at Rs 72,18 lakhs as against Rs 71,42 lakhs in the March estimates. The revenue deficit is consequently lower at Rs 10,29 lakhs against Rs 10,73 lakhs. Receipts outside the revenue account are estimated at Rs 115,25 lakhs and the expenditure at Rs 117,13 lakhs, leaving a deficit of Rs 1,88 lakhs. The total budgetary deficit amounts to Rs 12,17 lakhs.

The total expenditure on the Plan for the year will be Rs 28,49 lakhs out of which Rs 12,88 lakhs will be met through Central assistance. The State Government expect to put in Rs 11.80 lakhs. There is a gap of about 4,00 lakhs. It is proposed to raise Rs 5,50 lakhs through public loan and another Rs 88 lakhs is expected from the Reserve Bank of India. The latter amount is intended to finance investment in cooperative central banks, central land mortgage banks and large-sized primary credit societies.

From Dr B. C. Roy's statement, it would appear that the State Government hope to augment their financial resources through larger allotments from the divisible pool of revenues. This and the subject of Central assistance generally have been under discussion for long, already yielding some results in favour of West Bengal.

With all that, the State Government are still avowedly dissatisfied with the fiscal arrangement in which industrial taxation belongs to the Centre and only agricultural taxation is left to the State. In Dr Roy's speech, the chronic problems of the State economy, notably refugee influx and middle class unemployment, received the greatest emphasis. He is happy that first class students and otherwise competent persons easily secure jobs. Indirectly, he has analysed the problem of unemployment in the State as largely one of outlook and education.

Shortages and Idle Resources

THE process of introspection stimulated in the Congress Party by some of the results of the general elections found its appropriate culmination in the AICC meeting at New Delhi. It was but natural that, in the chastened post-election mood and after having seen the rather undisciplined attitude of some of the party members in Parliament during the discussion on the Budget, Pandit Nehru felt impelled to administer a stern rebuke to the elements which were functioning listlessly and without grip or attachment. He pointed to the sad paradox of the Congress Party having as many as two crores of members on its rolls and at the same time having lost its moral influence in many important centres, and in a few, virtually not functioning at all.

His analysis of the reasons contains little that is new. Even the manner of his chastisement is familiar. But this time, he is moved by a sense of extraordinary urgency and a determination to see that adequate steps are taken to wrest the organisation from what is a state of existence devoid of morale, enthusiasm and grit.

The task of reinvigoration of the party is to proceed mainly on two lines. One is through changes in the organisational set-up. The other is through prescribing for the active members specific and regular day-to-day functions in spheres which are closely linked with the material well-being and outlook of the people. Organisational changes are important, but as every leader will readily admit, it is the sincerity, purposefulness and integrity of the individual member who functions in constant liaison with the rest of the population which will ultimately determine the prestige and pull of the party.

The AICC has, therefore, given due weight to economic aims and functions. In defining them, it has also taken care to lay down the broad framework of ideas which should prove the immediate inspiration and guidance to the active members of the party. The AICC recommendations on the economic situation embody the party's determination to implement the Second Five-Year Plan within the allotted period, allowing for only such readjustments as are totally consistent with the paramount aim of the achievement of a socialist society and the building up of of an economic structure on a progressively egalitarian basis.

The Committee's insistence that the Second Plan should be a five year Plan and not a six or seven year one is most heartening. The Parliamentary discussion on the new Budget proposals revealed how fickle and soft-hearted some of our politicians could be. The least sign of public irritation over some of the taxation proposals was enough to raise the cry that the Plan should be curtailed, lengthened or mutilated. It is very necessary that the Congress Government should not incur the displeasure of the voters. Everything possible must be done to ensure that the Government's policies calculated to increase national wealth and thereby to raise the standards of living of the masses are clearly understood and appreciated by the public. Any attempt to cut the Plan will mean a corresponding deprivation of the needed improvement in standards, and thus be suicidal even from the narrow standpoint of party interests.

If a minority opinion in the Congress were to argue against the new taxation, it can only mean that the financial implications of the Plan are not understood. The problem therefore is, not one of changing the Plan but educating its ultimate beneficiaries, where they continue to be insufficiently aware of its implications. The AICC has given a confident and courageous lead through its insistence that the Plan should be stuck to.

Once the broad structure and the tenure of the Plan are accepted as inviolable, the door is open to a complete understanding of the major ingredients of the tasks involved. Of these, food production claims immediate and principal attention. The AICC has drawn up an eighteen-point programme for imparting to the rural economy the vitality it badly needs. Some of the items in the AICC programme are more or less of a long-range character, and a few largely controversial.

We are inclined to give the highest priority to two among the fifteen items. These are that the Community Development Projects and the National Extension Service should make agricultural production their primary aim and that existing resources such as irrigation canals, tube wells, etc., should be utilised to the full. The Community Projects invariably suffer from a dissipation of energy and the material yield on the expenditure incurred is seldom amenable to accounting even of a generous kind. If in the alternative, there is a general bias toward concentration on some particular aspect of work—just now agriculture is pressing its claim—the results would be more impressive.

As the entire purpose of the Community Projects is a reorientation of the rural economy and the rural outlook, and as a regular and sufficient food supply forms the basic test and condition of progress in this direction, there can be no confusion as to where the Projects should concentrate. There are ample funds available. A nucleus of trained and paid workers exists. Much propaganda is also being spread to enlist the cooperation of the public.

If an organisation having these advantages bestirs itself and brings to bear on food production all the zeal and energy in the villages which is now being wasted for lack of opportunity, the national food shortage will have been largely solved. A by-product of a broad-based organisation like the Community Projects taking directly into its charge the all-round improvement in agricultural production will be the spread of a general consciousness of self-help and active Government sympathy, which nothing else in India has hitherto been found capable of achieving. The AICC directive to the Congress primary bodies and the Community Projects in this respect is therefore of enormous importance.

Equally, if not more, important is the need to put the new irrigation facilities to full use. In his reply to the Budget debate, the Union Finance Minister referred to this subject and

Editorial Notes

The Arms Budget

To the rather light-hearted criticism in Parliament that the defence expenditure was mounting up and had to be curtailed, the Prime Minister gave the firm and resolute reply that the Government were not going to take risks, whatever the burdens. In fact, in well-informed quarters, there seems to exist a feeling that the dimensions of the budget are no indication of the measure of the country's military strength.

Two members of the Lok Sabha pointed to the need to revise defence expenditure and strategy in a manner calculated to accommodate the most up-to-date requirements. While it is admitted that US military aid to Pakistan has a direct bearing on the pattern of defence expenditure in India, full assurance is still lacking as to the comparative superiority of India in point of equipment.

The anxiety with which the Prime Minister sought to affirm that India had neither asked for nor has been offered arms from Soviet Russia is somewhat puzzling. The Prime Minister obviously does not like the Western Powers to gain the impression that US aid to Pakistan is being countered in India by a corresponding dependence on the Communist bloc. In the light of India's avowed neutrality, the Prime Minister is obliged to make this point categorically clear.

But at the same time, there should be no room left for anyone to feel that India is morally committed to have its arms purchases limited to any region. Unfortunately, Parliamentary discussion of the military budget does not go beyond a few generalities. Much is and ought to remain forbidden ground even for open discussion in the sovereign body. Scope for legitimate apprehensions arises from the fact that there is a vast dependence on foreign supplies and these are vulnerable to the unpredictable impacts of international political vicissitudes.

*

Channelling Rural Credit

The representatives of the Apex Co-operative Banks are reported to have voiced disapproval of the contemplated transfer of the rural credit functions of the Reserve Bank to the State Bank of India. At an all-India Conference presided over by Mr K. D. Malaviya, Union Minister of State, has expressed the faith that only a federated co-operative rural credit set up strengthened by State participation and nourished by the Reserve Bank of India would offer a complete and perfect solution to the problem of rural finance.

According to Mr K. Nanjundayya, Director of the Madras State Co-operative Bank, the State Bank's commercial outlook would disable it from carrying out a function which the Reserve Bank was doing successfully and that at a time, when the flow of co-operative credit is going to be doubled, a disturbance in the administrative mechanism is detrimental. Mr Nanjundayya describes the proposed transfer as ill-timed and retrograde.

There is some force in the objection against a sudden disturbance in the administrative set-up. This, however, could be avoided, if, as we have explained in the Gateway Gossip of the previous issue, the entire personnel of the Department is taken over by the State Bank and the traditions and techniques developed by the Reserve Bank respected. The Co-operative Banks then will scarcely feel the impact of the change of control.

The management of the State Bank will also be sufficiently imaginative to recognise the need of an appropriate change in outlook when the focus falls on agriculture and the media for the absorption of credit are co-operative societies. As the State Bank has already taken steps to extend its organisation, particularly with a view to develop rural credit, it can well turn out to be the most appropriate organisation to meet the growing demands in that sphere for the immediate future. We are sure that the apprehensions of the leaders of the co-operative movement will be falsified.

*

Set for Strain

It is a novel experience in India that a State Government are trying virtually openly to challenge the taxation policy of the Union Government. The official hand-out of the Plenum of the Kerala Communist Party discloses a Resolution intended to accelerate the agitation against the Union taxation measures. That the State Government encourage this agitation is not disguised. In this situation it remains to be seen how far Union cooperation with and equal treatment for this State Government would be sustained.

The embarrassment of the Union Government is all the deeper, when widely divergent ideas of the emoluments of Ministers and other high State dignitaries are put forth by the Prime Minister and colleagues on the one side and members of the Kerala Government on the other. It is not merely fiscal homogeneity which stands the risk of being impaired. It is an extension of the fight between two ideologies, the product of a complex situation in which parties wedded to irreconcilable aims and methods have to cooperate in the administration and simultaneously carry on the struggle for political power.

That both sides are not equally keen about the latter purpose is immaterial. Unless the challenge involved is fully understood and tackled with the utmost deftness, the Union Government and the Congress Party may have to pay dearly in the process.

*

Social Economy

A poor country seeking to improve its living standards through State and individual initiative cannot afford to take a fastidiously hostile attitude to expenditure on religious and social ceremonies. The sheer pressure of a high cost of living is sufficient to keep expenditure under check in all those groups to whom a little free spending once in a way is the only avenue of emotional exuberance or social distinction. Bereft of these, life, for these classes, becomes dull and insipid, which is not a desirable condition, even from the standpoint of political stability and orderliness.

Communal marriages are already being resorted to without any persuasion from the State. Extravagance on ceremonies is no longer generally practised. These trends are the outcome of the financial stringency which individuals and families as a rule have come to face under post-war conditions of life in India.

It was reported that a meeting of the Development Commissioners at Mussoorie has framed a programme of social education calculated to curb extravagance in spending by the rural population. The Panchayats and other semi-official bodies are to be the instrument for this education. It is bad enough that a State which is capable of enlisting all the indirect methods of enforcing social economy should think of applying direct pressure.

It is worse that such pressure should be exerted through elected bodies, which very often are the hotbeds of feud and intrigue and personal jealousies. A new form of social tension may thus develop and life in rural areas may become most unhappy for those who do not care to tear up their social roots all too suddenly.

Land and fiscal legislation has already gone a very long way toward demolishing rural wealth and compared to the opportunities and the scope for urban spending, the evil, if at all it is one, is no more than in a fugitive state among the rural population. If on the top of this, the State chooses to make an economy drive, it may represent a measure of interference with the freedom of the individual, quite repugnant to the contemporary national outlook and superfluous too.

*

Orissa Budget

The Budget estimates of Orissa for 1957-58, presented to the Orissa Assembly by Dr Harekrushna Mahtab, reveal a revenue deficit of Rs 3.18 crores. While the total revenue for 1957-58 is estimated at Rs 21.89 crores, the expenditure charged to revenue is expected to be Rs 25.07 crores. Further, the balance of Rs 23.02 lakhs with which the year opened was turned into a minus figure of Rs 80.54 lakhs.

The revenue deficit has been a characteristic feature of the State's Budget for the past few years. The cumulative revenue deficit by the end of 1955-56 amounted to Rs 10.23 crores and was further increased to Rs 16.77 crores by the end of last year. Against the background of continued deficits,

India's Strong Case for IMF Aid

FOREIGN exchange came in for its due and emphatic share of attention at this week's deliberations of the National Development Council. Refreshingly, while the general tenor of public comment has tended to be in woeful and plaintive terms, Mr T. T. Krishnamachari places the problem of foreign exchange in its proper perspective and, while realistically aware of the situation now obtaining today, he has refused to be touched by the contagion of pessimism in this regard. True, at their present level, the foreign exchange holdings of the Reserve Bank are barely Rs 70 crores higher than the statutory minimum needed as cover for currency. It is also true that the "working capital" in regard to foreign exchange is around Rs 40 crores. Thus, the extent of further depletion that we can afford, before it becomes mandatory to take effective measures in this behalf, is Rs 30 crores, more or less. In considering the pace at which India has been losing foreign exchange resources, this amount will suffice for meeting the import surplus for hardly three weeks. There is, consequently, little doubt that the Finance Ministry would already have carried to an advanced stage its preparations for meeting any emergency.

The preparations in this respect have manifold forms. One measure, which is always advocated by orthodox economists, is one that we may safely dismiss. The Pundit's approach to such foreign trade imbalance would be to suggest the corrective of devaluation of currency. No lengthy discussion is here necessary, because the disadvantages accruing from and fresh problems raised by devaluation are patent enough. India, in the throes of a development programme which depends upon largescale import of capital machinery, cannot afford devaluation. Secondly, the present strength of the Indian rupee by no means bespeaks a lack of stability in exchange markets such that devaluation may be forced on us. If not devaluation, what, then, are the other measures open to Government?

The second obvious line of action is for Government to discourage non-essential imports to the best of their ability and to effect a drastic curtailment of the import of such non-essential goods. Both the discouragement and the restriction were aimed at by Government last year, when import duties were raised and cuts were made in the import policy for January/June. But, possibly because licences which remained unused were pressed into service in January/June or possibly because commitments already entered into could not be broken, the experience of the first half of 1957 has been that the process of abatement in foreign exchange depletion has made no appreciable headway. Presumably, the authorities themselves are none too sure of the value of licences long since granted, which have not been utilised and which are presently in the course of being utilised. If, then, import restrictions and higher duties have yet to prove effective, what else is there that Government can do?

What is open to Government is to seek emergent aid from the International Monetary Fund. This they have already done in the first week of February this year. Since it seems to us that further recourse to IMF aid is overwhelmingly likely, it would serve a useful purpose for studying the various aspects of the terms and conditions under which aid is available from that international financial organisation.

The purposes of the International Monetary Fund, as stated in the Articles of Agreement, include the following:

> To promote exchange stability, to maintain orderly exchange arrangements among members, and to avoid competitive exchange depreciation;
>
> To give confidence to members by making the Fund's resources available to them under adequate safeguards, thus providing them with opportunity to correct maladjustments in their balance of payments without resorting to measures destructive of national or international prosperity.

It could be seen at once that IMF aid is available so that a competitive exchange depreciation is avoided. It is fair to suggest that the IMF resources should also be available to prevent such depreciation as is derived from transitory causes. Secondly, the resources are to be made available so that maladjustments can be corrected without resorting to measures destructive of national and international prosperity. This is a condition that, also, is fulfilled by India's peesent requirements.

We may, however, add a word of caution. As we have already remarked, the orthodox remedy, in the circumstances of a country plagued by unremitting import surpluses, is devaluation. The IMF view is that devaluation itself is never "a solution to the economic disorders that manifest themselves as a payment's problem". Devaluation can no more than prepare the way for an improvement in a country's balance of payments; and "whether the improvement will be realised to the maximum will ultimately be determined by the policies applied on bank credit and investment, on wages and subsidies, on Government expenditures and taxes". India can claim that, in all these respects, we are energetically tackling the problem of inflation; and, in our view, devaluation is not only not necessarily a prerequisite condition but, in India's circumstances, devaluation would be harmful to the national prosperity and the international prosperity that the Fund seeks to promote.

The resources of the IMF are, in general, available "to help a member meeting a deficit in its balance of payments on current account". Current account transactions are defined to include "all payments in connection with foreign trade, other current business including services, and normal short term banking and credit facilities". They moreover include "interest on loans and net income from other investments, and payments of moderate amount for amortization of loans or for depreciation of direct investments".

A member country seeking aid, through its treasury, central bank or other appointed fiscal agency, obtains assistance from the IMF by purchasing from the Fund with its own currency whatever currency it may need. The maximum amount that may be purchased is normally based on the quota of a member country, which represents the dollar equivalent of its subscription to the Fund in gold and its own currency. (India's quota is $ 400 million; and we shall henceforth speak specifically of what is within India's capacity to get as aid from the IMF). India can buy up to a maximum of 25 per cent of its quota, or $ 100 million, of other currencies during any 12-month period. But an important fact of vital significance that is not generally known is that the quota limitations of the maximum for a member country being placed at one hundred per cent of the quota "do not preclude a member from securing additional assistance from the Fund if that is required, since the Fund may waive the quota limitations specified in the Fund Agreement, and has frequently done so". The interest payable is on a graduated scale that depends upon the duration for which the purchase of other currencies is outstanding. There is, first, a service charge of half per cent. There is, next, a rate of interest starting at 2 per cent per annum and rising "with the amount of the balance relative to the member's quota and with the period of continuous use of the Fund's resources". If India should repurchase within a period of three months, no charge additional to the service charge of half per cent is made. Secondly, if any other country should purchase Indian rupees, so that the Fund's holdings of Indian rupees do not exceed one hundred per cent of India's quota, India is not liable to any interest.

Another important facility available from the IMF is the standby arrangement under which "a member is assured that during an agreed period an agreed amount of resources will be available whenever the member requests a transaction". The charge for standby arrangements is quarter per cent per annum.

Normally, the re-purchase by India would be expected to be completed within three to five years. It has been found that the average duration of exchange transactions is around 3½ years. The IMF is particular that "the essential test of the propriety of use of the Fund's resources is.. whether the prospective balance of payments position of the country concerned will be such that its use of the Fund's resources will be of relatively short duration".

A member purchasing currency undertakes certain commitments in respect of re-purchase in the event that, in each succeeding year, its foreign exchange reserves show an increase. The procedure or obligation in this respect is as follows:

> At the end of each financial year, members report to the Fund their monetary reserves held in the form of gold and convertible currencies. If a member's monetary reserves have increased during the year, and if the Fund's holdings of the member's currency exceed 75 per cent of its quota, the member is obligated to use half of the increase in its gold and half of the increase in its convertible currency reserves to repurchase its currency from the Fund. If a member's monetary reserves have decreased during the year, and if the decrease is less than the amount by which the Fund's holdings of the member's currency have increased, the member must repurchase from the Fund an amount of its currency equal to one half of the difference. These repurchase provisions do not apply when a member's monetary reserves are less than the amount of its quota.

There are two other points about aid from the IMF that we may note. Firstly, the Fund does not withhold use of its resources solely because of risk considerations. This was explicitly stated by the Executive Directors in their first annual report, when it was pointed out that some of the Fund's resources may be used for other than temporary assistance. Secondly, the IMF seems to be somewhat perturbed that "countries which allow inflationary pressures to arise from over-ambitious plans for investment or from excessive expectations for consumption will continue to have payments problems". The applicability of these two viewpoints on the part of the IMF as far as India

is concerned is a matter that we shall now deal with.

We would like to point out that the extent of aid available from the IMF is not necessarily restricted to India's quota. Provided that the IMF is reasonably satisfied that the Indian authorities are taking adequate monetary steps to keep inflation at bay, and provided that the IMF considers that India's foreign exchange difficulties are of a temporary character, India can hope to receive IMF aid for an amount exceeding its quota. It is in this background that we may study India's foreign exchange position as at present.

In February this year, negotiations were concluded with the IMF for the drawal of $ 127.5 million—representing the first tranche of $ 100 million and the gold tranche of $ 27.5 million—and for standby arrangements in respect of another $ 72.5 million. We may take it that the drawal of the amount under standby arrangements is imminent. But, since this will provide roughly only an additional Rs 35 crores, and since it is possible that Government may consider it both prudent and safe to have reserves for a larger amount, we have to consider whether India will approach the IMF for further aid.

It seems to us that, at the highest level possible, it must be impressed upon the IMF that it is in the interests of India's national prosperity, no less than of international prosperity, that the Second Plan is not threatened with failure, that the Second Plan should not be in danger of non-fulfilment because of difficulties in the foreign exchange position. It must be impressed upon the IMF that the rupee is internally strong and internationally stable; but that, nevertheless, we are presently in need of adding to our foreign exchange reserves. It must be impressed upon the IMF that, just as the Fund found it necessary to conclude transactions, in the immediate post-war period, even though it knew that such transactions were not strictly within the orbit or scope of the Fund's operations, even so, the Fund must now take risks that, in its own words, "would not be justified under normal circumstances". The fact of the matter is that, if the Western world in the latter half of the 1940's stood in need of gigantic amounts of foreign exchange, in order that post-war recovery and reconstruction could be facilitated, it is no less an imperative task for the Eastern world, at this stage of the world economy, to proceed with such development plans as will keep safe the countries in this area from the blandishments of Communism. All that it should be important for the Fund to feel confident in is that such aid as it makes available is not rendered futile by the dissipating effects of internal inflation.

Indeed, we would make bold to suggest that India must ask for and the IMF must give foreign currencies for an amount substantially exceeding India's quota. It is not as if the Fund does not have resources. The resources of the IMF, at the end of April 1956, were of the order of $ 8 billion. Of this amount, $ 1.8 billion is in gold, and the balance, which is in the form of national currency, includes US dollars, comprising America's subscription, to the tune of $ 2.75 billion. As against such resources, the total transactions in the first nine years of the IMF's existence have amounted to just $ 1.2 billion. Of these, again, repayments have already exceeded one billion dollars. The balance outstanding is less than 200 million dollars. (All these figures relate to the position of the IMF as at the end of April 1956). Thus, if the Fund has such resources, it seems to us that they are meant to be used when the need arises. In India's case, and, if we may say so, in the interests of the free world, that need has now arisen. We put it to the authorities in India that they must prepare their case to the IMF on the basis that the total amount sought to be obtained from the IMF is no less than $ 800 million.

Government Loans and Inflation

By PAUL EINZIG

ALTHOUGH the sharp decline in the prices of British Government securities towards the middle of May was followed by a partial recovery before the end of the month the yield of irredeemable stocks remained around 5 per cent; the level of Stock Exchange quotation remained remarkably low. And the unexpected fall provided a sharp reminder of the truth that in the long run it is not possible to inflate with impunity. For there can be no doubt that the underlying cause of the weakness of Government loans is the growing realisation of the prospects of continued creeping inflation.

Admittedly, other influences have contributed towards depressing the the market of fixed interest-bearing securities. Disappointment over the absence of a further lowering of the Bank rate figured prominently among them. The continued decline of the Conservative vote at by-elections and local elections had a depressing effect on Government securities. On the other hand, the prospects of an improvement of the international political situation, the recent tax commissions and the prospects of further tax reductions and the resumption of the use of Suez Canal, should have been sufficient to offset these influences, had it not been for the all-important influence of inflation fears. The relative ease with which one large trade union after another succeeds in securing wages increases that are entirely unwarranted in the absence of any corresponding increase in the output has given rise to fears that, so far from stopping, inflation tends to become accelerated.

The realisation of the fact that inflation has come to stay has induced a large and increasing number of investors to change from Government loans to equities. Such investors include insurance companies, charitable trusts and various other trust funds, Lloyds underwriters, and even Church funds. In face of such a trend it will become increasingly difficult to keep down the yield of Government loans even at its present abnormally high level, unless the Government should revert to Dr. Dalton's expedient of bolstering up the giltedged market by means of inflation. And such a device would only postpone the day of reckoning, for, as the experience of the Socialist Government in the 'forties has shown, it cannot be continued indefinitely.

The depreciation of Government loans might prove to be a blessing in disguise, if it should lead to the realisation of the fact that there is no such thing as inflation without tears. It was one of the miracles of World War II that, in spite of the inflation it had entailed, the Treasury was able to finance it on the basis of borrowing at low interest rates. While this was due in part to the adoption of the Keynesian system of short-term borrowing, to a large degree it was due to the assumption that inflation would come to an end after the war, as it did after the end of World War I. Instead, inflation has been going on unabated ever since the end of the war, apart from a few brief intervals. Until comparatively recently this did not appear to have affected the level of Government securities to any noteworthy extent. As a result it has come to be widely assumed that even if inflation were to continue for the rest of the twentieth century the Treasury would encounter no difficulties in financing its borrowing and its conversion operations at reasonable rates.

This optimistic assumption has been largely responsible for the inadequacy of the Government's efforts to check inflation. There has been relatively little inducement to incur unpopularity by adopting sufficiently drastic disinflationary measures. It is true. inflation endangered from time to time the gold reserve, but this effect could be reduced through securing dollar loans, through selling out overseas investments, or through accumulating short term indebtedness in relation to colonies and other overseas countries.

Should the Government come to realise that there is a real danger of being unable to finance its loan operations except at ruinous costs, it might be more inclined to face the unpopularity of a really effective disinflationary policy. But in order that there should be adequate pressure to that effect on the part of public opinion it would be necessary that the weakness of Government loans should become much more dramatic than it has hitherto been. A really sharp slump in the gilt-edged market might go a long way towards bringing home the need for resisting inflation.

A shock of that kind might produce a salutary effect in the long run, even though its immediate effects would be highly damaging. Unless the Government comes to realise that it simply must take steps to check the wages spiral, that spiral will continue to rise on an increasing scale. A further fall in Government loans might make the Government and the country aware of the cost of inflation in the form of an increased burden of the public debt and a deterioration of the Government's credit.

Once this has come to be realised the Government is no longer likely to maintain its present supreme impartiality in face of unwarranted wages demands. And it would become easier to mobilise public opinion against the greed and selfishness of the trade unions, each one of which is only concerned with securing the maximum of immediate benefit for its members, without the slightest regard for the overriding public interest.

World of Business

World Bank Loan

With the agreement that has been signed by the Tatas with the World Bank, for a loan of $9.8 million for the expansion of the thermal electric plant, at Trombay near Bombay, an end of the threatened shortage of power for the various industries that operate in the area, served by this plant, such as engineering and chemical plants, a rayon plant, a fertilizer Plant, railways and atomic energy laboratory, is definitely in sight, when the new Unit and the Koyna Plant go into operation.

Expansion of the Trombay Plant, by the addition of a third unit for which the loan from the World Bank has been negotiated, is expected to cost the equivalent of $14 million. While the World Bank loan of $9.8 million will be utilised for importing such machinery as boiler plant, turbine generator, condensing equipment, accessory electrical equipment, transmission extensions, coal handling, coal crushing and ash disposal equipment, the balance of $4.2 million would be met by the borrowers from their own resources.

While the two existing units are using by-products from an adjacent refinery as fuel, the new unit is expected to use coal from central India for fuel, and therefore will be equipped with coal crushing and handling equipment. The unit when completed in April 1960, will produce power at an earlier date than could be obtained from any alternative source. The maximum capacity of the new unit will be 62,500 kilowatts, while the combined maximum capacity of the existing two units is 125,000 kilowatts.

The loan is for a term of 18 years and bears interest of 5 to 5-8 per cent including the 1 per cnt commission which is allocated to the Bank's special Reserve. The loan is guaranteed by India Government, and is secured by a Trust Deed with Baring Broters and Company Limited London as trustees. Incidentally this is the second loan made by the World Bank for the Trombay Plant the first one having been made in 1954 for the construction of the two units, the amount being $16.2 millions.

*

Antimony Industry

The antimony industry, which has been enjoying protection for a period of ten years, beginning with 1947 has been given protection at enhanced rates, till 31st December 1958. While the existing rates of protective duty are 31 per cent ad valorum on antimony and 21 per cent ad valorum on crude antimony, the rates, have been raised to 60 per cent ad valorum and 25 per cent ad valorum respectively. The rate of protection on antimony was fixed at 60 per cent ad valorum on the basis of the difference between the fair selling price of antimony in Bombay and Calcutta, which was estimated at Rs 166 per cwt and the landed cost ex-duty of the product estimated at Rs 105-13.

The decision to enhance the rates of protective duty, was taken by the Government, in preference to the alternative recommendation made by the Tariff Commission, to the effect that imports of antimony should be canalised through the State Trading Corporation, which should also endeavour to secure imports of ore or crude antimony from foreign sources at economic prices. Though implementation of this proposal would have entailed no increase in protective duties, this was not found acceptable by the Government for reasons of financial and administrative difficulties.

Production of this important metal has been on the upgrade with the granting of protection in 1947, and has increased from 130.18 tons in 1953 to 539.07 tons in 1954. The current level of production is above 500 tons. Production is confined to a single unit, namely the Star Metal Refinery which has a rated capacity of nearly 1,000 tons per annum.

While production is below 600 tons, the actual demand has been in excess of 700 tons per annum. But imports in recent years, have not been on a scale to fill up the gap between production and consumption with the result that there is in the country a pent up demand for this metal. Under the import policy between July-December 1955 to July-December 1956 licences were granted to established importers upto 10 per cent of one-half of their best year's imports and applications from actual users were considered ad hoc in consultation with the Development Wing. Consequently imports in 1955-56 were only to the tune of 43 tons, while in 1954-55, it was 57 tons. The Tariff Commission, had therefore suggested liberalisation of the import policy.

Reasons for the present low production are to be found in difficulties experienced by the Star Metal Refinery in procuring the necessary ore at reasonable prices, the chief source of imports at present being Latin America, where prices are higher, than elsewhere. But prospects of nearer sources of supply at cheap rates from China and Russia as also of indigenous sources are in sight, and when this materialises, the burden on the consumer will also be substantially reduced.

World of Jute

Jute Markets Rule Steady

THOUGH, at one time during the past week, it appeared that raw jute prices would develop a definitely downward trend consequent on reports of rainfall in almost all jute growing areas, sellers had generally managed to retain their dominant position. Apart from the fact that the coming jute crop will be delayed, the rather tight raw material supply position of some units in the industry will continue to work in favour of the raw jute holder till atleast the weight of the new crop makes itself felt in the market. Any sizable foreign enquiry in the goods section is also bound to accentuate this firm trend.

The high price levels that have obtained in raw jute during the current year have had serious repercussions on the world jute industry with the possible exception of that section of it which is situated in Pakistan. In our own country, jute mills have sustained heavy losses as they have been obliged to sell their products at lower than cost price which has steeply gone up as a result of the high price paid for the raw material. Thanks to the rapid progress made in the country toward self-sufficiency in raw jute, no serious difficulties have been encountered by the industry in obtaining its requirements of raw jute.

The position of such of those sections of the world jute industry as are wholly dependent on Pakistan for the supply of their raw material, however, has become quite unenviable. Both the Dundee and the Continental mills have not only lost considerable ground in foreign markets, but have also begun to experience difficulties in their home markets as well. In the United Kingdom, for instance, the paper sack trade is steadily gaining ground as the price of jute bags is kept well above the world price in order to protect Dundee. Owing to the prevailing high price of raw jute, European jute manufacturers' output in the first months of 1957 has declined considerably.

*

Despite heavy speculative activity, generally steady conditions prevailed in the jute goods market during the week under review. A steady trend was noticeable on the opening day largely on account of due date settlement. Selling pressure, however, was encountered throughout the day in the Fatka. Hessian 40" x 10 oz Ready was placed at Rs 43.10 with B Twills Ready quoting Rs 116.70. In the forward positions, Hession 40" x 10 oz June was placed at Rs 43.35, July September at Rs 43.65 and October-December at Rs 43.15. In the Sacking section B Twills June was quoted at Rs 116.90 with July-September at Rs 117.15 and October-December at Rs 116.80.

With the raw jute section ruling easier on reports of rainfall in most jute growing areas, the goods section also developed a sagging tendency on liquidation of holdings by speculators. Toward close, however, sentiment improved somewhat as buyers appeared at the lower levels. Hessian 40" x 10 oz Ready reacted to Rs 42.95. Quotations in the forward positions, however, were not much affected. June delivery was shaded at Rs 43.20 with July-September and October-December placed at Rs 43.55 and Rs 43.10 respectively. In the Sacking section, B Twills Ready declined to Rs 115.60 with June at Rs 116.00, July-September at Rs 116.10 and October December at Rs 115.75.

Though business passing had been at a meagre level on Tuesday, sentiment showed considerable improvement consequent on speculative activity in the Fatka. The quotations for the Ready position recovered lost ground. Hessian 40" x 10 oz Ready advanced to Rs 43 while the June position was placed at Rs 43.25. July September was fractionally lower at Rs 43.50, but October-December recorded a slight gain at Rs 43.15. The improvement in Sacking quotations in the ready and near positions was well pronounced. B Twills Ready gained 50 nP to be finally placed at Rs 116.10, with June placed at Rs 116.35, July-September at Rs 116.40 and October-December at Rs 115.75.

Prices especially in the Sacking section made further headway on Wednesday on reports of a number of fresh orders. While there was an enquiry from the Government of India for 15,000 bales of B Twills June delivery, there were also reports that enquiries for sacking had been received from Ghana, Indonesia and Sudan. Prices in the hessian section were marked up in sympathy. Hessian 40"×10 zo ready was placed at Rs 43.06 with June position quoted at Rs 43.30. July-September and October-December were done at Rs 43.70 and Rs 43.20 respectively. In the heavy goods section prices made sizable gains in all positions. B Twills Ready gained 40 nP to be placed at Rs 116.50. June position was up by 35 nP at Rs 116.70 with the July-September position marked up by 50 nP to Rs 116.85. October-December which was earstwhile rather neglected also moved up to Rs 116.35 from previous closing of Rs 115.75.

Conditions continued to be firm in the sacking section on Thursday. Hessian also made some headway in earlier dealings but toward close developed a sagging tendency due to speculative selling. Hessian 40"×10 oz. Ready shaded to Rs 43 with June at Rs 43.25, July-September at Rs 43.55 and October-December at Rs 43.15. Prices in the sacking section closed higher on balance as follows: B Twills Ready Rs 116.85, June Rs 117.00; July-September Rs 117.25 and October Rs 116.85.

The following table shows price movements during the week:

	Week's opening Rs.	Week's closing Rs.
Hessian:		
40" × 10 oz.		
Ready ..	42.44	43.00
October-Dec. ...	43.06	117.00
40" × 8 oz. ...	34.50	34.50
40" × 7½ oz. ...	32.06	32.50
Sackings:		
B Twills:		
Ready ..	116.15	117-12
October-Dec. ...	116.50	117.00
Hy. Cees Green ..	117.25	118.50
Cornsacks ...	116.75	117.35
Cubans ..	139.00	140.00
A Twills ...	140.00	140.00
L Twills ...	128.50	129.25
D. W. Flour ...	137.50	138.75
Sugar Bags ...	129.00	129.50

The raw jute market after a steady opening developed a sagging tendency round about mid-week on reports that rainfall had been experienced in most jute growing areas. With the improvement in the goods section later on, sentiment here also strengthened with sellers adopting a reserved attitude. Assam Upper Bottoms which opened at Rs 31.50 per maund receded to Rs 31 on Monday. In the next two days the market remained unchanged but toward close prices again hardened on mill interest at lower levels with Assam Upper Bottoms regaining lost ground to be done at Rs 31.50 per maund.

World of Tea

Old Season Closes Well

THE last Internal Sale of Old Season's teas was held this week, when offerings amounted to 20,394 packages of Dusts. There was a fairly good general demand, which improved as the sale progressed. Medium Assam CTC teas opened at firm to slightly dearer rates; but, at the close, were as much as 10 nP per pound dearer and sometimes more. The limited orthodox offerings from Assam with clean leaf and bright liquors were slightly easier when the sale opened; but, at the close, were firm and occasionally dearer.

The remainder of the offerings was generally easier and there was little or no interest for clean black leaf teas. Following rates were quoted per pound:—Medium Dooars Dust Rs 1.40 to Rs 1.45; Medium Assam Grainy Dust Rs 1.50 to Rs 1.55; Medium Assam CTC Dust Rs 1.60 to Rs 1.70 and Best CTC Assam Dust not quotable. There was no Leaf sale. The first Export Sale of the New Season's teas will be started on Monday next.

In the Export Quota section, business was reported done in New Season's teas at 23 nP per pound.

Buyers, on the London Tea market, have continued to show a good deal of discrimination where quality is concerned. Thus, any invoice possessing useful characteristics is well competed for at firm to dearer prices. In contrast, plain descriptions are irregular and easier in prices, resulting in further widening in spread between top and bottom qualities. Plain Broken Pekoe is now quoted around 35½d per pound as compared with 37d in the previous week. On the whole, the price of plain tea is now back to the level which prevailed in June last year.

Trade quarters in London do not envisage any marked upturn in the price of plain tea for the time being, because of preponderance of supplies of this type. Most of the old crop of Northern India teas will have been cleared by the end of July; but, during the interim, weekly offerings of all grades will be in the region of 6,500 packages.

In the auction held this week, a total of 24,018 packages, including 14,355 packages of Northern India teas, was offered. Demand was strong and well-distributed, resulting in a general advance in prices for all, but the poorest qualities. Colourly Fannings and all bright liquoring teas were in particularly good request and prices were often 2d to 3d per pound above last week's rates. The lower kinds were also well competed for and often registered advances of 1d to 1½d per pound. For Dooars teas, the market was irregular and only the best were dearer. Clean Common Broken Pekoe was quoted at 3sh per pound.

Tea stocks in London, as on the 24th May, were 156.82 million pounds as compared to 153.43 million pounds in the previous week. The total amount to be landed on the same date was 13.14 million pounds. Deliveries during the week totalled 11.01 millions and landings 3.40 million pounds. Total afloat was 30.28 million pounds including 12.98 million pounds from Calcutta; nil from Chittagong; 2.72 million pounds from Cochin, 12.51 million pounds from Colombo and 2.07 million pounds from other Ports. Average price realised during the week was 43.87d per pound as compared to 44.53d in the previous week and 51.87d a year ago.

During the last few weeks, tea prices in Colombo have been showing a declining trend and many producers are reported to have been selling teas below their cost of production, which is estimated at Rs 1.50 per pound. But the latest decision by Russia to buy Ceylon tea will provide a much-needed relief to the industry. Trade circles believe that

Industrial Information

Movement of Commodity Prices

Review for 1956-57

The official index of wholesale prices in India (with year ended August 1939=100), which had exhibited an upward trend during 1955-56, continued to rise further during the year under review till December 1956.

The rate of increases was, however, less than in 1955-56. The index after rising from 345.4 in April, 1955, to 387.4 in March, 1956, advanced further to 423.8 in December, 1956, after which, however, it declined to 421.3 at the end of the year showing a net increase of 7.7 per cent during 1956-57 as compared with 12.2 per cent during 1955-56.

The annual average index for 1956-57 worked out to 414.0 revealing a rise of 15 per cent over the last year's average of 360.4. This advance in the general index was contributed by all the five constituent groups. The highest rise was in 'Food Articles' which moved up by 24 per cent to 388.5; 'Industrial Raw Materials' increased by 20 per cent to 501.9; 'Semi-Manufactures' by 19 per cent to 402.3; 'Manufactures' by 3 per cent to 384.6 and the 'Miscellaneous' group by 2 per cent to 559.3.

FOOD ARTICLES.

Food articles showed a further rise during the year. The index continued to move up from 360.9 in April, 1956, to 337.0 in August, 1956, but after a fall during the next two months to 392.5 advanced again to 413.9 in December, 1956. At the end of the year, however, it stood at 402.7. 'Cereals' exhibited a sharp increase, the index having risen from 461 in April, 1956, to 532 in December, 1956, came down to 491 in January, 1957 to rise again to 528 in March, 1957.

The index for Rice advanced from 547 in the beginning of the year to 609 in November, 1956. Thereafter, it witnessed a sharp seasonal fall to the level of 562 in January, 1957, but moved up equally sharply to 610 in the following two months

Wheat, which stood at 501 in April, 1956, went down to 475 in the next month, but, thereafter, rose gradually to 607 at the close of the year.

Jowar also increased sharply from 235 in April, 1956, to 328 in the beginning of December, 1956. But due to the arrival of the new crop in the first week of January, 1957, the average index for that month came down to 229, although, it later advanced to 261 by March, 1957.

Like other cereals, Bajra too continued to rise, its index going up from 248 in April, 1956, to 376 in January, 1957, after which it declined to 349 at the end of the year.

Both Gram and Dal Arhar witnessed substantial increases, and the index for 'Pulses' showed an advance from 357.1 to 439.6 during the twelve months. Gram, with an upward trend, moved both ways during the first half of the year, but in the latter half it rose continually and the index stood at 372 in March, 1957, against 292 in April, 1956. Dal Arhar increased from 476 in April, 1956 to 618 in December, 1956, but came down to 582 at the close of the year.

Among 'Other Food Articles', Tea recorded steep rises following the Suez crisis and in December, 1956, the index reached the level of 507 as compared with 343 in April, 1956, but by the end of the year it fell sharply to 397. Coffee and Sugar remained steady round about 620 and 265 respectively. Gur went down, the index being 181 at the beginning and 167 at the close of the year, and Salt moved up from 96 to 117 during the period. The index for this sub-group, which was 234.2 in April, 1956, moved up to 242.4 in March, 1957.

The annual average for 'Cereals' was 34 per cent higher at 499 in 1956-57 as compared with 372 in the previous year; 'Pulses' rose by 37 per cent to 397 against 289 in 1955-56 and other Food Articles advanced by 5 per cent to 247 as compared with 235 last year.

INDUSTRIAL RAW MATERIALS.

The index for 'Cotton Raw' which has 471 in April, 1956, moved upto 493 in July, 1956, and after remaining steady for the next two months went down to 463 in December, 1956. By March, 1957, however, it again rose to 487. Its average level for 1956-57 was higher by 16 per cent at 481 than in the previous year. 'Raw Jute' recorded a sharp rise from 427 in April, 1956, to 542 in January, 1957, but in the following months it receded to 519 in March, 1957. During the year under review the average level of raw jute was about 16 per cent above the level in the preceding year. 'Silk Raw' also registered an increase of 25 per cent during the course of this year, the index having risen from 484 in April, 1956, to 604 in March, 1957. 'Raw Wool' was steady in most part of the year although the level in the later half was higher than in the first half. The index for the sub-group 'Fibres' increased by 10 per cent from 459 to 505 during the twelve months.

'Oilseeds' continued to rise right upto January, 1957, when the index for this sub-group stood at 589 in January, 1957, as against 529 in April, 1956. By March, however, the index receded to 559. The average level at 538 during the year under review was higher by 40 per cent than the preceding year's average.

In 'Groundnuts' although the net increase during the twelve months was not marked, but the average for the year 1956-57 was higher by 40 per cent as compared with the average for the previous year. 'Linseed had shown a rise of about 14 per cent at one time of the year (December 1956) as compared with April, 1956, but ultimately the index at 426 in March, 1957, was about 6 per cent lower when compared with the beginning of the year.

Of all the oilseeds, castorseed witnessed the most significant advances; the net gain at the end of the year, when the index stood at 612 against 463 in the beginning, was of the order of 32 per cent. The index for Groundnut increased from 578 in April, 1956, to 632 in March, 1957, and that for Rape seed from 511 to 602 in the same period. With the exception of a lower level in the 3rd quarter, cottonseed remained steady around 500, but in line with other Oilseeds Copra rose from 620 to 738 in the twelve months period under review. The annual average for 'Minerals' registered an increase of 19 per cent to 508 against 427 in the preceding year due to advances in Manganese ore (average export prices) (+35%), Iron Ore (+32%), Coal (+14%) and Mic (+4%).

In the case of the residual subgroup, Raw Hides, with a rising trend till December, 1956, was 13 per cent below the annual average for last year; lac showed a fall of 18 per cent but skins raw and Rubber were respectively 23 per cent and 4 per cent higher than in the preceding year. In the result the annual index for this sub-group declined by 2 per cent to 421 in 1956-57.

SEMI-MANUFACTURES.

Leather indicated decline till September 1956, and its index came down from 409 in April to 373 in September, 1956. In the following 3 months, however, there was a sharp rise and the index reached the level of 443 in December, 1956, and stood at 410 in March, 1957. The annual

World Overseas

US Notes

A BRIGHT future is seen for non-ferrous metals in the United States despite the temporary softening of demand for some materials. This was the encouraging conclusion drawn at the 42nd annual convention of the National Association of Purchasing Agents here this week. And it was drawn by experts whose closeness to the business scene puts them in good position to judge the metals' outlook.

Perhaps the most comprehensive review of the non-ferrous situation was offered by George Stuart Brady, Materials Consultant for the Purchasers' Association. It is his contention—not seriously challenged—that the distinctive and valuable characteristics of all non-ferrous metals are such as to assure their continued industrial demand in the expanding economy of the United States.

Of course, with industrial requirements and production methods changing rapidly these days, any estimates of future needs cannot be made purely on the basis of past statistics. They must take new trends into account. Thus, some metals are being and will continue to be replaced in specific uses at the same time. However, industrial research and development will be finding other uses for them. Aluminium is one metal that has gained as a substitute for others such as copper, lead and zinc. Mr Brady sees no let up in the rising demand for aluminium and he believes that planned increases in productive capacity are fully justified. But, in line with his major thesis, he does not anticipate that this will lead to a serious curtailment of demand for other metals. Aluminium's growing use in electrical equipment, he notes, has not damaged the underlying demand for copper. In fact, he asserts, the availability of aluminium in recent years has helped to offset a possible shortage of copper supplies which otherwise might have been inadequate to meet the needs of the growing US economy.

Nor does he envisage the rising use of aluminium and magnesium in die casting as destroying this traditional market for zinc. Actually with the US economy expanding, the use of slab zinc in die casting now is nearly double what it was before World War II. In addition, many new zinc uses have been developed in chemicals and industrial alloys.

Lead, in Mr Brady's opinion, faces a somewhat more uncertain future. The present trend in storage batteries and high octane fuels, both large traditional uses, seems to be away from lead; but he maintains that lead like copper and zinc, has so many potential avenues for development that, with some effort and ingenuity, producers can find and hold sound and well balanced markets for the output.

With regard to tin, Mr Brady echoes the optimistic view of many other experts. It is that this relatively scarce metal, peculiarly adapted for a variety of important uses, should continue to have a substantial market in the United States as long as supplies are available at reasonable prices. Even if it should lose some of its market as a coating and soldering material, it faces a growing demand in other fields such as the electrical and electronic industries.

Titanum, often described as "The Metal of the Future", has not yet been able to fulfil its promise. It still is suffering from relatively uneconomic methods of extraction and product manufacture. But in the offing, says Mr Brady, is a tremendous demand for this versatile material once these costs can be brought down to more reasonable levels.

This general confidence appears to hold for the shortterm as well as the longterm trends. Another expert, for instance, advised purchasing officials to buy needed supplies of metals while they are more or less easily available. According to Thomas Campbell, Editor of the Magazine **Iron Age**, rising business demand in the United States may well begin tightening the markets for copper, aluminium, nickel and other nonferrous metals before the end of this year. As for the factors behind this prospective rise in demand, Campbell looks to an increase in automobile and appliance output, some pick-up in residential construction, a probable end to inventory cutbacks, high rate of government spending for defense and public works and a continuing rise in consumer income and outlays.

*

Britain

India. with purchases totalling £701,728, was the second largest buyer of British aircraft and aeronautical equipment during April. Britain's total sales for the month—valued at £8,474,779—were the fifth highest ever recorded in a single month and almost £750,000 up on April 1956. The largest buyer was Sweden.

British exports of aeronautical equipment in the first four months of this year totalled nearly £33,000,000, of which aero-engines accounted for over a third.

The London banking firm of Baring Bros & Co Ltd are trustees of a loan to India of nearly $10,000,000 which has been advanced by the International Bank for Reconstruction and Development for the expansion of a thermal electric power plant at Trombay, near Bombay. The additional power will help to alleviate the shortage of power in the Bombay area, one of India's most important industrial centres. The loan is guaranteed by the Indian Government, and is secured by trust deed.

This is the second International Bank loan for the Trombay thermal plant. A loan of $16,200,000 in 1954 assisted in the construction of the plant with two generating units having a combined maximum capacity of 125,000 kW. The new loan will help to pay for the installation of a third unit with a maximum capacity of 62,500 kW.

Total cost of the expansion scheme will be equivalent to $14,000,000. The World Bank loan is for a term of 18 years, and bears interest at 5¾ per cent, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortization will begin on April 15, 1960.

The index number of United Kingdom industrial production (1948 equals 100) is estimated provisionally at 143 for March 1957, it is announced by the Central Statistical Office in London. The revised figure for February 1957 is 142.

The figures for the corresponding months a year ago were 140 for March and 141 for February.

On the basis of information so far received, the index for all industries for April this year is expected to be 133-134. The index for April 1956 was 136. In the first four months of this year the index averaged 139—the same as in the corresponding period a year ago.

It is worth noting, with reference to the March index number of 143, which covers all industries, that the index for manufacturing industries only is estimated at 147, compared with 146 in February and 145 a year ago. This, it is pointed out in London, suggests that the beginning of a upward trend in industrial activity may be at hand, and it would not be surprising in view of the high level of industrial investment which has been taking place over a period of two years or so.

Moreover, index numbers of this type do not tell the full story of what is happening to production. From other sources comes evidence of such factors as shortening of delivery dates and improvements in the quality of various lines.

The above figures are also unadjustted for seasonal variations. With such adjustments to take account of regularly recurring seasonal factors, the March figure becomes 136 and the April figure 136-137, compared with 137 and 136 respectively for March and April, 1956.

*

Australia

The National Bank of Australia Limited, in a recent review of business conditions in Australia, states that the present is a time for steadiness in finance

Pointing to the firmness of wool prices, and the increased earnings from primary production, the Bank says that these factors are not without their risks, and fears are being expressed in some quarters that they may give rise to the emergence once again of inflationary pressure. Instancing some moderating features, the Bank points out that although retail turnovers are rising slowly, selling conditions remain competitive. The building industry, although meeting a buoyant demand for industrial and commercial projects, is experiencing some difficulty in the sphere of home construction.

Demand for motor vehicles has not reached the level attained in 1955. As far as could be deduced from the relatively moderate approaches to the new issue market by public companies, a degree of caution in private capital expansion prevails, the Bank says.

Since release of the survey, trade reports indicate that hire purchase has shown a slight decline. Three of the States, New South Wales, Victoria and Tasmania, are planning legislation to limit hire purchase interest charges. New South Wales has banned the no-deposit system of selling and this is certain to effect the volume of sales.

The Australian Financial Review states that the volume of new business done by finance companies has fallen in 1957, and the level of the balances outstanding to finance companies is no longer rising as the repayments are exceeding advances. There has been a sharp fall in the value of household and personal goods bought on hire purchase.

Factors such as these are in line with the opinion of the Bank that Australia must look to improving productivity and efficiency and to a stable cost and price structure, with increased exports.

Capital expenditure of £8,000,000 will be involved in a plan for zinc smelting and development of sulphuric acid and superphosphate projects at Cockle Creek, New South Wales. The plans are by Sulphide Corporation Pty Ltd (a member of the Consolidated Zinc group of companies).

A new smelter will use a process developed in Britain by the Imperial Smelting Corporation.

Extensions to existing plant will increase output to 47,000 tons of zinc metal per year, and superphosphate production capacity will be more than doubled to give a potential output of 430,000 tons per annum.

An important feature of the project is that it will permit utilisation of the sulphur content of some concentrates which would otherwise be exported.

Strong overseas demand for steel had enabled Australian Iron and Steel Ltd to export surplus production at a satisfactory price, the Chairman, Mr C. J. Syme told Shareholders.

Surplus production of flat steel products was being exported at prices from 50 to 75 per cent higher than local prices.

Mr Syme said that plant extension at Port Kembla, New South Wales, had made possible the record production of ingot steel amounting to 1,237,000 tons, and the record output of 1,148,000 tons

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

I DO not know how you feel, but I have about had enough for the present of Budgets and Plans, of inflation and the economic situation. For weeks now, I have lived in their company, and plain honesty impels me to own up that they are not the cheeriest companions one could choose. In fact, somewhere midway during the last week, I got quite fed up: and, what was worse, I was shocked to catch myself entertaining, by association, treasonable thoughts on an ancient love: writing. For one horrid moment, I found myself in surreptitious sympathy with Hilaire Belloc's famous avowal. Remember the lines?

"Would that I had thirty
thousand pounds,
Invested in some strong security,
A Midland country house with
formal grounds,
A Town house, a house beside
the sea,
And one in Spain and one in
Normandy,
And friends innumerable at my
call
And youth serene—and underneath it all
One steadfast passionate flame
to nurture me.
Then would I chuck for good my
stinking trade
Of writing tosh at 1sh. 6d a
quire!
And soar like young Bellerophon
arrayed
High to the filmy heavens of my
desire....
But all that is over. Here is the
world again.
Bring me the blotter. Fill the
fountain-pen."

*

Despite this momentary aberration, the writer's itch (no less than the absence of those gracious felicities conjured up by him) has sent me, like Belloc, back to my job, and here I am. But, in between has been a week-end of the most delicious truancy in which the quill lay uncared for. It was George Moore, I think, who once listed his preferences in this order; talking, reading and writing. I cannot claim that this week-end had offered me particular temptations by way of good talk: but, after quite some while, I have been left with books. So, I decided to rummage my modest library to get some books that would keep company that would exhilarate without inebriating. But my troubles started almost immediately on my reaching such a decision.

*

Have you ever tried to choose a book in an idle spirit of finding something to read? Have you found it an easy task? If so, you certainly are a happy and uncomplicated being. My problems of choice became so burdensome that, at one moment, I began to wonder whether it would not be better to give it up and settle down with Mr Thingummybob's view of Higginbotham's view of the devaluation of the Indian Rupee, reported at such length in the papers. For, consider the difficulties: I reach for the first shelf, where a whole row of gleaming Pelicans looks at me in mute reproach. In a fairly long career of dissipation among books, I have encountered, as you may imagine, several kinds of temptresses. But I do not think that there has been any one so cold and moonlike, like the Pelican. It is so like the nordic types we hear so much about, who dispense their love in supercilious disdain. And to think that I was led on, almost diabolically, to it by the most warmhearted and affectionate of bookish lovers —the Penguins! It breaks my heart.

*

Anyway, there they are, the austere Pelicans staring at you in a way that turns your cultural entrails with guilt. My earliest attempt to silence the importunities of a self-improving mind by buying the ruddy things does not avail me now. Even as I try to pretend not to notice that particular shelf, and pass on to that containing the detective stories, my cultural conscience starts nagging: "What about that volume, The Sacred Books of the World, which you promised to read the day you bought it? Shouldn't we catch up with the latest on comparative religion? And that volume there, Father Copleston's St. Thomas Aquinas? Are you not practically an illiterate, not knowing about the Summa Theologica? And, if it comes to that, what about A. J. Ayer's volumes on logical positivism and Weldon on the Vocabulary of Politics?" It was here that I got my word in edgeways, and said austerely, "But I have read Weldon, and that is enough lip from you for a week. Let us pass on."

So, on to a shelf containing assorted fiction, strictly highbrow, plays, poetry, art, history picked up in Dharamtalla. A shelf further on, humiliating evidence of my trying to become a linguist; sundry primers and self-instructors that give treacherous promise to make you the poet laureate in that language in three months. And, most shattering of all to my self-esteem, a volume of Bhandarkar's First Book of Sanskrit. I shall never live down that last indignity of never getting beyond the third conjugation of present indefinite Parasmipada verbs.

*

By this time, I have been reduced to the most abject humility about my cultural pretensions, and would have been reverential to a volume of Peter Cheyney, had any one kindly placed it in my hands. But these battles of the soul have to be fought by your self alone, and so it is that I pass on to the shelf containing detective stories. Here, some of the old self-esteem revives, since I am rather proud of my discrimination in detective fiction. My taste is strictly orthodox highbrow in this line. For, I swear by Simenon and Dorothy Sayers, and the portals of my detective fiction sanctum have not been darkened by the peddlers of mere violence. (My friends tell me that I am a fool since, this way, I miss all the fun, and maybe they are right, but culture shall have from me the tribute of self-denial in this case). I thumb a volume a while, but decide against detective fiction and get on to the shelf with the dictionaries. And here it is that I spend nearly two hours, for, I have stumbled on the Dictionary of Quotations.

*

Oh! What a delight! How comforting to one's self-esteem! As luck would have it, I could recognise straightaway all the first five quotations I spotted! And, as you doubtless know, there is nothing that delights a "cultured man" as his superior knowledgeableness: and that, over a Dictionary! (I may mention in passing that my opening the Dictionary at the Shakespeare entry was pure accident. None but an ignoramus would open a Dictionary of Quotations in English at any other place). All my earlier feeling that I was a cultural pariah was lifting, and I settled down to a two-hour session with it. After Shakespeare, Dickens; and then to Johnson, and then on to that most prolific of authors, Mr Anon. And then, hunting of old favourites, like for instance Raleigh's (Professor, not the discoverer of tobacco) Wishes of an Elderly Man:

"I wish I loved the human race;
I wish I loved its silly face;
I wish I liked the way it walks;
I wish I liked the way it talks;
And when I am introduced to one
I wish I thought, **What Jolly Fun!**"

*

And then doing it backwards from the index. Did you know that "sleep" had an index of two columns of a quarto volume, and "love" (no sniggers, please), not counting "loved" or "lovers", ten columns of the same size? And "man" had seven columns, and "God", eight? Are inferences permissible from this? It may perhaps help if I pointed out that the "devil" (not counting "Satan", who has a measly 16 entries) has less than a column? I checked up on "good" and "evil", but no firm conclusions are possible: for one thing "good" may list "a good hat", and, evil may be apostrophised: "Evil, be thou my good." Again, "bad" may include "not a bad sort" and "a thoroughly bad hat."

*

And even as I was letting my mind wander over these and other things, I was amazed at the range and depth of the human mind, the nuances of the human heart and imagination. A sublime passage from Shakespeare, and then you stumble on the astonishing and shrewd naivete of a six-year old, Marjorie Fleming (1803-11): "The

most devilish thing is 8 times 8, and 7 times 7 is what nature itself can't endure." (I hope no advertising copywriter would pinch this for popularising the decimal coinage!) What a wise and witty person was denied the world, when this child died at the age of eight! And of men and affairs, from Sam Weller's down-to-earth equipment to deal with puissant evil to the most complicated despair and hopes of mankind. And laughter! The index on the subject is, naturally, misleading, having only half a column; only dyspeptics write on "laughter"; the healthy in mind do the laughing. There is plenty of it for those who would look for it.

*

There is hardly any doubt that Milton was absolutely right when he said, "A good book is the precious life-blood of a master spirit." No, I did not lift it from the dictonary, but am quoting from memory. And as far as we are concerned, the only certain source of wisdom these days is through knowledge gained from books. For, modern life has corroded those grass roots of instinctive wisdom that comes from individual life that had a place and significance in a community. There is practically nothing that the communal life teaches us intrinsically these days, and our family life, alas, is also going the same way. The cinema has, in the words of the advertiser, an "impact on you." When you want to dine in joy, you dine out. There is about our community singing (even when it is there) nothing of the emotional cohesion, a sense of participation in an almost palpable collective emotional life that ritualistic singing of folk songs is acknowledged to give. The very existence of a Dictionary of Quotations implies the silting of the channel of memory that flushed into individual life the collective wisdom of the race. And so, books, first; and, when books become too many, a Dictionary of Quotations.

*

Which brings me on to the problem of too many books and on too many subjects. You will recall my somewhat facetious groaning over the embarras de richesse of even my pitiful library. But, seriously, who but an Aldous Huxley can manage to keep afloat safely on this tidal wave of ceaseless publications on all subjects under the sun? Mind you, I am not complaining about the bad books, the books that you need never read, which form (let us say) 90 per cent of production. But, what of the rest, the remaining ten per cent? I once compiled some statistics on this subject, but they must be hopelessly out of date; but, even so, I have no doubt that there are more books being published today than at any time before. And what of that solid phalanx of the classics? I once read a most amusing essay by Gilbert Norwood, in which he cogently argued that the only way to deal with this menace was to burn three-quarters of the stuff and have a moratorium for about five to ten years. He even had an elaborate scheme for putting it through. Certain subjects were taboo (War was, I remember, one of them). He envisaged a Committee (of whom a goodly proportion should be women, since they have a keener and more undeceived eye for intellectual lumber than men) who would publish a catalogue of books to be banned along with the New Year Honours list. This, he argued, would not put the bibliophile out of a job, since his thrill was in the chase. (A man who tracks down the first edition of Chaucer does not sit down impatiently to read it through: he probably prefers his Chaucer in a modern English rendering, if at all; so, after tracking down a rare volume, all he has to do is to yield it up to Authority, who would, considering the

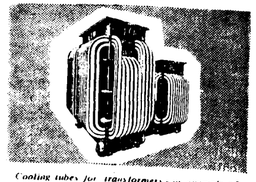
Announcing the opening of the

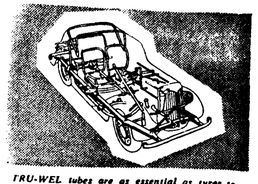
TUBE PRODUCTS OF INDIA LTD.



factory at Avadi, Madras

Production has begun of the world famous TRU-WEL Electric Resistance Welded steel tubes

Promoted as a joint venture between Messrs Murugappa and Sons, Madras, and Tube Investments Limited, Birmingham, U.K. (through their subsidiary, Tube Products Limited, Oldbury, Birmingham), Tube Products of India's factory marks an important milestone in the progressive industrialisation of our country.



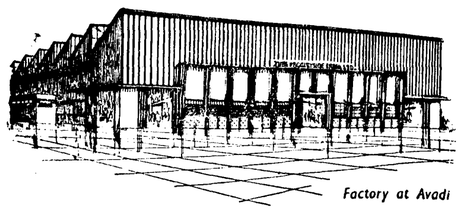
TRU-WEL steel tubes have played a decisive part in the evolution of the slim, light and immensely strong cycle of today.

Cooling tubes for transformers — an example of electrical equipment to which TRU-WEL tubes provide a foundation of dependability.

Flawless accuracy and uniform finish make TRU-WEL tubes ideal for locomotive boilers

TRU-WEL tubes are as essential as tyres to the modern motor vehicle. Their applications range from small tubes for radiator overflow pipes to outsize tubes for rear axle casings.

Planned and developed as a specialised unit to produce ERW steel tubes, Tube Products of India Limited have commenced production of the world famous TRU-WEL Electric Resistance Welded steel tubes.



TRU-WEL—a familiar name: TRU-WEL is a familiar name in India. For nearly thirty years Tube Products Limited, Oldbury, our associates, have been the principal suppliers of ERW steel tubes to India. TRU-WEL tubes therefore, enjoy an established reputation for high quality and unrivalled service.

A versatile tube: TRU-WEL tubes combine great strength with exceptional lightness. By skilful manipulation TRU-WEL steel tubes can be made to serve a variety of our developing needs in the home and in industry. The bicycle industry is entirely dependent on it. Motor cars, locomotive boilers and transformers are some of the highly specialised industries which require ERW steel tubes in large quantities.

Tubular seat frames, handrails, struts, support and guard rails, which are in extensive use in bodybuilding and interior furnishings in buses, trains and ships, are other familiar uses. Its use in home and office furniture is becoming increasingly popular.

We are happy that Tube Products of India Ltd. will play a complementary role in Indian industry in that it will serve many of our existing engineering industries and also help to promote many more in the years to come.

Board of Directors: Sir A. Ramaswamy Mudaliar is the Chairman. The other directors include: Sir Ivan A. R. Stedeford, K.B.E., Chairman of Tube Investments Limited, Birmingham, Mr. A. M. M. Murugappa Chettiar, and Mr. A. M. M. Arunachalam, Partners, Murugappa & Sons, F. W. Martin, Managing Director, Tube Products Limited, Oldbury, Birmingham and Hon'ble Mr. G. R. Macdonald, Director of T. I. (Export) Limited.

Bombay Review

"Expansionist Revenue"

According to the Revised Estimates for 1956-57, the overall deficit of the Central Government was to be met by an expansion of Treasury Bills for Rs 270 crores. This compares with the figure of Rs 356 crores budgeted by Sir Chintaman Deshmukh in February 1956. Thereafter, however, the increase in cloth excise duty and the mid-year Budget, both announced by Mr T. T. Krishnamachari, had the effect of improving revenues. This fact, combined with a lag in expenditure, was expected to bring down the level of deficit financing to Rs 270 crores. Subsequently, from figures published by the Reserve Bank in its monthly bulletin, it is clear that the net expansion in Treasury Bills is only for an amount of Rs 240 crores. It is, therefore, clear that the improvement in revenues has exceeded even the anticipations when the Revised Estimates were drawn up. Some testimony in this last respect was made available this week with the publication of figures by the Department of Commercial Intelligence and Statistics of Customs and Excise Revenues.

According to the Budget for 1956-57, the revenue from Customs was placed at Rs 150 crores and that from Union excise duties at Rs 170 crores. The Revised Estimates for 1956-57 placed the yield from Customs at Rs 171 crores and from Union excise duties at Rs 188.73 crores. The figures just released, which may be taken to be the Actuals, show that there is a negligible shortfall in respect of the Union excise duties, but an appreciable increase in regard to Customs. The revenue from Union excise duties is Rs 0.17 crores less than the Revised Estimates at Rs 188.56 crores. Import duties have yielded Rs 143.18 crores against Rs 138.50 crores in the Revised Estimates. The export duties have improved upon the Revised Estimates by Rs 2.37 crores to be placed at Rs 30.07 crores, but are, nevertheless, short of the original Budget figure of Rs 30.70 crores. Land Customs and Miscellaneous have fetched Rs 3.79 crores against Rs 3.50 crores in the Revised Estimates. However, the figure neither for air customs nor for refunds is available; the former is shown at Rs 3.30 crores and the latter at a debit of Rs 2 crores in the Revised Estimates. Thus, the total of Customs, but excluding air customs and refunds, is Rs 177.04 crores, or over Rs 6 crores in excess of the Revised Estimates.

Since the Actuals in deficit financing are Rs 30 crores short of the Revised Estimates, it is to be presumed that some improvement has also been registered under other revenue heads.

*

I have thus far presented the bare facts—or rather, the figures—as they are given in the Government communique. But it is their significance which is important, particularly in the context of the additional taxes imposed during the year and in the context of resources to be raised for the Second Plan by way of taxes. First, we may examine the trends in central budgeting, that is, the trends in the revenue budget surplus as comparable between the original estimates, the Revised Estimates and the Actuals. The following table gives the revenue surpluses of the Government of India since the beginning of the First Plan:

REVENUE SURPLUS.

(In Rs Crores)

Year	Budget Estimates	Revised Estimates	Actuals
1951-52 ..	25.61	92.61	128.09
1952-53 ...	3.73	— 8.79	38.93
1953-54 ..	0.45	—15.96	8.50
1954-55 ...	—15.36	— 5.00	33.51
1955-56 ...	—17.35	12.31	40.45
1956-57 ..	—18.04	37.94	...
1957-58 ...	44.78	..	...

It will be seen that, except in 1953-54, the Actuals are more favourable than the Budget estimates by a minimum of Rs 40 crores, and extending to over Rs 150 crores in 1951-52. It is a debatable point whether policy of Government has been deliberately evolved on the basis that revenues should be underestimated, and that expenditure should be overestimated. For, one possible explanation is that the Finance Ministry has been repeatedly erring in this respect, only because it has not been sufficiently mindful of the expansionist impetus given to revenues by the expansionist nature of the economy. Each year has possibly seen an improvement on the performance of the previous year in the matter of higher yields even on the basis of the formerly obtaining levels of taxes. It may not, therefore, be altogether wrong to suggest that the surplus from current revenues at the "existing" taxes is yielding every year, say, Rs 40 crores

As applied to 1956-57, the what I might term "expansionist revenue" has been superimposed on higher collections as a result of fresh imposts during the year. It is the latter that largely account for the transformation of the revenue deficit of Rs 18.04 crores to a surplus of Rs 37.94 crores in the Revised Estimates for that year. It is here that we have to take account of this element of "expansionist revenue". As we have already seen, the income from Customs was, for 1956-57, placed higher than the Revised Estimates by Rs 6 crores; we have also seen that deficit financing turned out to be Rs 240 crores, or Rs 30 crores less than the Revised Estimates. The other revenue heads—and mainly, may I suggest, taxation—have obviously contributed the balance of Rs 24 crores, less any shortfall of expenditure as compared with the Revised Estimates. I am disposed to think that the Actuals for 1956-57 may reveal a revenue surplus of as much as Rs 70-80 crores.

I am not suggesting that an Indian Finance Minister can afford to include in his calculations the unknown element relating to the expansionist revenue; nor is it necessary for him to plan tax proposals after allowing for such improvement in revenue. But what I think the financial authorities should do, is to have a proper realisation of the import of such expansionist revenue to the larger problem of resources for the Second Plan. In particular, it is vital to realise that the enhanced target for revenue from taxes has, with the 1957-58 tax proposals, been realised in full. It is, I am sure, quite unnecessary to go over in detail all the relevant figures in this regard. But a brief recapitulation is helpful.

According to the original estimates of the Second Plan, the target from taxation (or the surplus from current revenues) was to be Rs 800 crores; this was to comprise Rs 350 crores from existing (1955-56) rates of taxation and Rs 450 crores from additional taxation; moreover, the responsibility for raising Rs 225 crores from new taxes was laid upon the State Governments: and, finally, there was an uncovered gap of Rs 400 crores.

Since then, it has become apparent, firstly, that the tax target had to be raised to around Rs 1,200 crores; and secondly, that the State Governments were unlikely to be able to fulfil their quota. Even if we were to effect no upward correction in the target of collections from existing rates of taxation, the amount sought by new taxation is only Rs 850 crores. Against this, Sir Chintaman Deshmukh's Budget raised Rs 175 crores (for the plan period). Mr T. T. Krishnamachari's September excise duties on cotton textiles were to fetch Rs 100 crores; the mid-year Budget was to yield Rs 100 crores; the Budget for 1957-58 is estimated to bring in Rs 73 crores, and the 1957-58 taxes, in the last three years of the Plan, are calculated to raise Rs 261 crores. All these total Rs 709 crores.

But it has been this journal's view—and this is amply borne out by the recurrent sharp improvements in the Actuals as contrasted with the Budget figures of revenue surplus—that "expansionist revenue" is for a considerable amount. That is to say, Indian Finance believes that the surplus from the existing (1955-56) taxes will work out to Rs 500 crores rather than the Rs 350 crores taken credit for by the Second Plan. In this view, the target for revenue from new taxes is just Rs 700 crores;

Problems of Cotton Textile Industry

WHILE it is inevitable that there will be some variation between the reports of the working of particular industries by Government spokesmen and those of the spokesmen of the enterprises concerned, such divergence is of a fundamental nature in the case of the cotton textile industry. Ever since the Planning Commission decided that the bulk of the anticipated increase in the demand for cloth during the Second Plan period should be allotted to the handloom sector, the mill sector has come to entertain a feeling that its interests have not been given the attention they deserve. With so many other considerations besides the problems of the mill industry equally clamouring for attention, Authority has perforce to view the problem as a whole. In this view it has been deemed necessary to keep a constant watch on production and consumption. During the past year for instance, it has been found that the demand for cloth has kept pace with and sometimes outstripped, the rise in supply. In order to meet the situation, Authority has taken various fiscal and other measures from time to time.

The increase in the excise duty on cloth last September had been made with a view to reducing internal demand and consumption. The sudden imposition of the heavy burden brought in its wake serious repercussions in the industry and trade. Stocks accumulated in mills godowns as traders were not able to lift their quota partly due to the stringency in the money market and partly due to lack of sufficient demand.

In the course of the next two months, the position seemed to have become critical and it was generally believed that the Finance Minister would announce a reduction in the excise duty in his mid-year budget. That hope had been falsified. That the increase in excises had come to stay became clear when Mr Morarji Desai stated in Bombay that there was no early prospect of a revision in that regard.

It has been pointed out by the industry that the increase in excise duties together with the numerous other taxes and concessions that it has been obliged to grant to labour in recent years, has brought it to the verge of collapse. The recent closure of some mills in Ahmedabad is said to be the direct outcome of the crushing financial burdens imposed on the industry.

Referring to the closures, Mr N. H. Tata said in the course of his speech at the annual meeting of the shareholders of the Swadeshi Mills that it would be wrong on the part of Government to approach the problem merely as one involving the loss of employment to a number of workers. In his opinion the matter merited a thorough examination. "It would be an interesting and thought-provoking investigation for Government to find out how far such units were unfortunate victims of an economic crisis caused by sudden dislocations in cloth and money markets." A point to be noted in this connection is the closure of some more units even after the promulgation of the ordinance requiring employers to pay retrenchment compensation to workers.

*

Development of Education

Speaking in Poona last week Mr C. D. Deshmukh, Chairman of the University Grants Commission drew attention to two recent developments in University education. On the one hand, new universities were being established and, on the other, many existing universities were finding it difficult to spend the funds provided to them. The State Governments who were responsible for the former started thinking about the University Grants Commission only after the Universities came into being though the University Grants Commission Act required them to consult the Commission prior to the setting up of every new university.

Mr Deshmukh pointed out that the need of the hour was not more universities but was an improvement of technological, scientific and liberal education. That could very well be achieved through the existing universities. It was also wrong to think that unless plenty of money was made available, no real improvement could be achieved. For, good management and an imaginative educational policy could make available funds go a long way.

Mr Deshmukh, however, hastened to add that Government would be doing a great disservice to the nation as a whole if they concluded, as they seemed to have done in their latest budget, that the outlay on education could be reduced on the plea of paucity of funds at their disposal. In view of the rapid progress envisaged in other directions in the coming years, it would be utter folly to reduce the allotment for education because any development which was not accompanied by a comparable improvement in the level of education in the country would not give the desired result.

Turning to the problem of medium of instruction, Mr Deshmukh pointed out that it was time it was realised that the regional languages were the proper medium of instruction. Efforts should, therefore, be directed toward the smooth transition from English to the regional languages. In the meantime the teaching of scientific subjects could be made sufficiently efficient by familiarising students with technical terms in English itself. Even after the full substitution of the regional languages as medium of instruction in schools, scientific terms in the English language could continue to be used.

GATEWAY MARKETS

Mixed Trend in Metal Prices

PRICES on the Bombay Metal market have shown a mixed trend during the week under review. While Copper has steadied up from the recent low levels and Zinc continues to rule very firm, the markets for Lead and Tin have remained quiet.

Due to the uncertainties in the import policy for the July/December period, traders in Copper are not generally inclined to sell at low rates. There are also rumours that imports of non-ferrous metals may be slashed though some circles believe that the Government will have to think twice before doing so. Buying price at the present level, however, does not appear to be attractive as landed costs work out to prices lower than the ruling price.

Meanwhile, reports have come to the effect that the two most prominent groups of copper producers in Africa—The Rhodesian Selection Trust and the Anglo-American Corporation—have signed an agreement, which provides for a common selling policy for their output. Importers in Bombay have attached considerable significance to this agreement in view of its stabilising influence on world prices of the metal. The agreement assumes importance also in view of the fact that both the groups are major suppliers to the UK and the Continent. With the result, the ready rate for the metal has improved to Rs 177 from the recent low of Rs 174 per cwt.

Zinc continues to rule very firm around Rs 83 per cwt, thanks to the delay in the arrivals of Australian steamer. Lead is ruling quiet at Rs 82 per cwt and Tin at Rs 130 per quarter.

On the London Metal Exchange, the rates for Copper are moving narrowly between £235⅛ and £236⅛ per ton, following the conclusion of the discussion on copper pricing by the Rhodesian Selection Trust and the Anglo-American Corporation. Zinc rules somewhat quiet at £79⅛ as against £83½ quoted a week ago, following rumours of restrictions on imports of the metal into the USA. Lead is quoted around £98⅛. In view of the prevailing low prices for the metal, it is reported that the US Government will increase its domestic purchases in the current month for stock-pile. Tin is quoted at £763; and the market for the metal is quiet in the absence of fresh development.

*

Gold & Silver

In contrast to the previous week, there was a slight reaction in the Gold section due not only to profit-taking, but also due to a tapering off in spot demand. With the marriage season now practically over, spot houses offered heavily. Arrivals and offtake were balanced at 3,000 tolas. Forward delivery opened lower around Rs 105-4, but hardened to Rs 106 in the absence of fresh offerings. The closing rate was Rs 105-14. The highest and the lowest touched were 106 and Rs 105-4 respectively. The new delivery was quoted at Rs 105-7.

The Silver section was quiet in slow dealings. Arrivals and offtake were estimated around 25 and 15 bars respectively. Forward delivery opened at 182-4 and, after improving to Rs 182-10, finished the week at Rs 182-8. The new delivery was quoted at Rs 180-14.

In the spot section, Silver was quoted at Rs 184-4 to Rs 184-8; Gold at Rs 105-10 to Rs 106-2 and Sovereign at Rs 70-12 to Rs 71-2.

*

Oils & Oilseeds

Divergent trends were in evidence in the Oils and Oilseeds markets. While Castorseed developed a reactionary tendency, Groundnut presented a somewhat cheerful appearance after early quietness. Linseed and Cottonseed showed modest gains on balance.

In the Castorseed futures section, September delivery opened higher at Rs 178 and advanced to Rs 180 on short-covering following the reports of some business done with Eastern European countries, to recede again towards the close to Rs 177-25. The lowest level touched was Rs 175.50. Ready was quoted at Rs 35.25 and Castor Oil, commercial quality, at Rs 19.50.

In the Groundnut section, August delivery opened at Rs 174.25 and, after improving to Rs 175.25, receded gradually to Rs 172.00, to finish the week better at Rs 173.37. In the ready section, bold quality was quoted at Rs 34.87 and Groundnut Oil at Rs 20.00

Bombay Review

World of Cotton

New Cotton Policy Awaited

THE attention of the traders in the Bombay Cotton market is now focussed on the cotton policy of the Government for the next season. An announcement of the new "floor" and "ceiling" prices is expected to be made shortly. It is generally believed that the floor prices will be enhanced by Rs 50 over the present price of Rs 496 per candy as recommended by the Cotton Advisory Committee.

Meanwhile, the Board of the East India Cotton Association has decided to determine the rates of the non-transferable delivery contracts in cotton not absolutely; but in relation to the new hedge contract—the Indian Cotton Contract—on the basis of "on" calls. It is also decided to introduce clearing at every difference of 25 points in the ready delivery contract.

The members of the Board have also met the Chairman of the Forward Markets Commission and placed before him their view that the cotton trade has been dwindling in volume as a sequel to the frequent interference from the government in the day-to-day working of the market. But the Chairman has justified the Government action on the ground that the forward business in cotton, as conducted at present, has created conditions which prevent the healthy functioning of the ready market and thus adversely affect cotton trade in particular and the economy of the country in general.

×

FUTURES MARKET:

For obvious reasons, trading in the futures market was patchy and the rates slipped back on scattered selling, the turnover being hardly 500 bales. Vijay June delivery opened lower at Rs 814 and remained virtually stagnant for the most part of the week before sagging near the close, under scattered liquidation, to Rs 803, the highest touched being Rs 820.

×

SPOT MARKET:

Fairly good business was reported done in the Spot section, thanks to brisk demand from mills. Spinners' attention was concentrated on Kalyan, Kala, Wagad and Jharilla varieties prices of which advanced sharply. Shippers' enquiries were fair and were restricted to Saurashtra cottons.

In foreign cottons, some business in Americans in ready and forward shipment was reported. Sudans also came in for some enquiry. Following rates were quoted:—Hubli Jaydhar Rs 965; Porbunder CO|2 Rs 1,175; Ganganagar Rs 780 and Dhulia Rs 850.

×

CROP REPORT:

Reports from the Punjab indicate that sowings are in full swing and about 60 per cent is completed. In about a week's time, the entire area is expected to be completed. Germination of the early-sown crop is satisfactory and plants are 6" to 15" high.

×

NEW YORK COTTON MARKET:

General caution among traders resulted in a quiet trading on the New York cotton market. Numerous showers were reported over the western part of the cotton belt but this news had little influence on the market.

The outcome of the new long-range cotton programme, sponsored by the American Cotton Producers' Association, is anxiously awaited; but the general opinion in Washington is, that no action will be taken by the Congress to change the existing Farm Law during the present session. Middling spot was quoted at 35.40 cents per pound.

×

LIVERPOOL COTTON MARKET:

A somewhat easier tone developed on the Liverpool Cotton market. Professional realising caused prices to ease a little with offtake limited to scattered mill-fixation. Enquiries for ready cotton were mainly for the high grade and long-stapled varieties of USA cotton of which there is now very little unsold stock lying in Liverpool. The Sudan contract remained unchanged. The near-month declined under prospective tender offers, while other deliveries remained inactive.

×

KARACHI COTTON MARKET:

According to a Press release from Karachi, fourth estimate of area under cotton crop in Pakis-

Olympus

A Third Party

TO judge by the deliberations of the All India Congress Committee over the week-end here, the Congress, as a political party, appears to be in the grip of a profound ennui and weariness of spirit. The usual resolutions, including one on the need for banning nuclear tests, were passed after the usual hortatory speeches, some of them distressingly long-winded. But it was clear that the heart of those present was not in the proceedings, with the exception of the changes in the constitution of the party sought to be introduced by a resolution of the Working Committee. As not unusual when energies are sapped by lack of purpose, preoccupation with trivialities loomed large. Thus, incredible as it may sound, there was persistent attempt at proving that the salaries of Ministers were unconscionably high. Mr Nehru had actually to spend considerable time in proving (by giving facts and figures) that this was a wrong impression. It is fantastic to say that Mr Nehru's wage at Rs 1,600 after taxes a month is an over-payment for the work he puts in and for the responsibility he bears. The same is true of all the other Ministers to a greater or lesser extent, with the added factor that they have probably personal responsibilities of a more burdensome sort than does Mr Nehru. (This was pointed out by Mr Nehru himself). And what is the saving that is sought to be effected by reducing a measly five hundred rupees from the salaries of Ministers? It is only a profound unwillingness to turn one's minds to the real problems that stare you in the face that can explain such shocking waste of time on such inanities.

Another piece of evidence that underlined the desire on the part of Congressmen to get away from the real tasks before them was their absorption in the subject of Mr Nehru's retirement. The arguments advanced take all kinds of forms. Some of these were, of course, sincere, though, on balance, fatuous: others were less so, the unavowed motivation verging on the disingenuous. "Mr Nehru should get back to the task of 'revitalising the Congress', leaving the Government to some one else." "Mr Nehru has been too long in the seat of power and should take himself away from the cares of office and not allow himself to get stale", and so on. (The professors of this latter view had an unexpected champion in the Manchester Guardian, which said much the same thing on no other evidence than the fact that Mr Nehru does not see eye to eye with the paper on the Kashmir issue!)

Now, it seems that there are very many contradictions in the arguments asking Mr Nehru to get out of the Government, into all of which it is impossible and unnecessary to go here. But there is surely some confusion in a point of view which says that Mr Nehru must make way for others and, at the same time, request him to take over the task of rejuvenating the party. Secondly, if there is a choice between two tasks before Mr Nehru, then, surely, the choice of staying in Government and directing the Second Five-Year Plan—whose rigours are responsible for all this unmanly despair—is automatic. In any case, to debate at this juncture whether Mr Nehru is indispensable or not, and if he is, for the party or for the country, shows not so much a certain savoire faire in the face of difficulties, but an irresistible impulse to run away from real problems.

The one discussion that did engage the attention of those present was that relating to reorganisation of the party. The rather unexpected opposition encountered by the official resolution on the subject necessitated closed-door discussion for nearly two hours and a subsequent decision to have the matter referred to a sub-committee of the AICC. This committee is to report to the next session of the AICC on the proposals officially sponsored by the Working Committee.

The principal changes suggested by the Working Committee were three: The first was the introduction of a system of indirect elections to the various authorities at all levels. Secondly, besides members elected by primary members and "active members", District and Pradesh Congress Committees should accommodate what are called "representatives of functional units working the productive or developmental activities". The third change suggested was that provision should be made for representation of party officials on the parliamentary and legislative wings of the party and vice versa. This is to be done at all levels.

The debate, or such of it as was open to the public, brought up a good deal of clash of interests, though, of course, plausible arguments were produced on both sides. Mr Nehru's contribution to the discussion was a characteristically introspective analysis of the weaknesses of the party, in which he castigated the Congressmen for their "provincialism, casteism and communalism and isolation from the people" which the last elections had shown up to a "scandalous and shameful degree". He compared the Congress to a kind of religious order headed by a Mahant and said that new blood, even when introduced, congealed into futility, in view of lack of scope under the present organisational setup. It is this defect that the functional orientation of the committees sought to remedy. People who are in on a job of work should have a say in the counsels of the party. Opposition to the idea stems, as far as could be gathered, from a fear that all manner of busy-bodies will be smuggled in on the committee. Of course, no rule-making will avail the Congress, if its partymen do not make the genuine rearrangement of their lives in the spirit of Mr Nehru's exhortation. The reason why the Congress has been excessively preoccupied with its constitution since independence is precisely the absence of the spirit that animated the organisation before 1947. The staggering machinery of election boards and appellate authorities inside the organisation (which the present proposals desire to replace) and the continual preoccupation with disputes among factions show an organisation can get caught in the very machinery it proliferates and finds no time for its primary tasks.

The other resolutions passed by the AICC related to economic situation, food production and the banning of nuclear tests. Practically nothing that had not been heard on the subject in the last few days was repeated on these subjects. Truth to tell, the debates were dreary to the point of tears. On the economic situation, Mr Nanda pledged the support of the Congress to the pursuit of the Second Plan and, therefore, to the Budget proposals. The only new point made was certain factual information regarding the extent of unutilised facilities provided by the First Plan. For instance, it was pointed out by several members that, out of six million acres for which irrigation facilities have been provided, only four million have been brought under cultivation. Likewise, in Bihar, 800 tube wells sunk at enormous costs are not being used, because of a dispute between the cultivators and the State Government over the extra levy to be imposed for the new facility. These charges, uncontradicted by any Minister present, show how the food situation is almost gratuitously being made difficult. Surely, it should not be beyond the wits of a government to arrive at a modus vivendi that would make it possible for the use of the tube wells while the matter of the extra levy was being thrashed out. It is examples such as these that underline the view of this journal from the beginning that it is administrative incompetence and not inadequacy of resources that will prove the insuperable danger to the Plan.

On the food situation, an eighteen-point programme has been commended to party members as a basis for action. These include speedy land reforms; full utilisation of all facilities; intensive effort at increasing production by Panchayats, community project organisation, and groups of Congressmen; and change in food habits and avoidance of waste. It was also suggested during the debate that minimum prices for products should be fixed to make the agriculturist put forth his best. It was also suggested that maximum price at which hoarded grains would be acquired by Government should be indicated in order to discourage hoarding. Mr Nehru, Mr Krishnamachari and Mr Pant spoke of the centrality of food production to the success of the Plan. Whether they were preaching to the converted or to the indifferent, only the coming months will show.

North Indian Notes

Land Reforms

The written statement of Mr S. N. Mishra, Deputy Minister for Planning, in the Lok Sabha and reviewing the progress of land reforms in the different States of the Union revealed the fact that there is noteworthy disparity in the progress as between the various States, Thus, while Jammu and Kashmir enacted for fixation of ceiling on land holdings as early as 1950, most of the States have yet to pass similar legislation. Assam and West Bengal have laws for fixing the ceiling for both existing holdings and future acquisitions, whereas laws in the UP, Delhi and in former Hyderabad, Madhya Bharat and Pepsu provided for future acquisitions only. In some States, Bills are now pending before the Legislatures for fixing ceilings on both existing holdings and future acquisitions.

Tenancy Reforms Acts and laws for the stay of ejectments of tenants also show similar divergent progress. There arre wide differences in the legislation for rent reduction in the different States, and the provisions for security of tenure take a variety of forms. In some parts of the country, particularly in the South, actual conferment of tenancy rights has not yet been done. In some States, like Kerala, Madhya Pradesh and Mysore, comprehensive land reforms to bring about the objectives and the suggestions of the Planning Commission's Reports on the First and the Second Plan are still the subject matter of study by Committees.

The Planning Commission's objectives as set out in the Report for the First Plan recommended that land policy should be such as would reduce disparities in wealth and income, eliminate exploitation, provide security for tenants and workers and promise equality of status and opportunity to different sections of the rural population.

How far have these objectives been achieved? Mr Mishra's statement shows that, while one of the main recommendations, namely, the elimination of intermediaries, has more or less been carried out, the other important recommendations—for farreaching tenancy reforms, for fixation of ceiling on holdings, for a radical reorganisation of agriculture—have not yet been given effect to by most of the States.

The Planning Commission, evaluating the results achieved at the end of the First Plan period, found that the distribution of land even after the elimination of intermediaries and the operation of the various State Tenancy Reforms Acts, was considerably uneven, and the disparity in land holdings familywise was still wide. In drafting the programme for the Second Plan, the Planning Commission have sought to remedy these and other defects and have incorporated most of the farreaching recommendations of the Panel of Land Reforms.

The programme provides for reduction of rents, ceilings on existing holdings, securing of firm tenancy rights and a largescale development of co-operative farming. The carrying out of this programme is not only necessary for achieving the objectives set out in the First Plan, but is also essential for the sustenance of the vast programme of industrialisation embodied in the Second Plan. There is nothing in Mr Mishra's statement to show that this programme is being carried out by the different States as vigorously as the urgency of the times demands.

*

Family Planning Publicity

In his inaugural speech before the second meeting of the Family Planning Board in New Delhi last week, Mr Nehru laid stress on an important aspect of the work of population control. He emphasised the need, in the dissemination of knowledge about family planning, for using language easily understood by the common people and said that, "in all our activities, especially activities relating to social problems or to influencing mass opinion, we have always to bear in mind that we must speak in a language which promotes definite images in the people's minds."

Family planning is always and everywhere a most difficult subject for the publicity campaigners to tackle. The directness which is essential, if advocacy for controlling births artificially is to be effective, is difficult to achieve while imparting information about a controversial subject like this. There is besides the danger of the propaganda providing a handle to those who are always on the look out for any stick to beat the Government with. It is the easiest of things to suggest that publicity advocating family planning is against the tenets of religion—and feelings, once roused in the name of religion, may undo the patient and good work of months.

In India, fortunately, there has been no manifestation of any organised or widespread opposition to the idea of family planning. Mr Nehru, in his speech, referred to this fortunate feature. It is best to remember, however, that, till now, the work done by the Government or by bodies concerned with propagating knowledge in the field has been on a very limited scale. Even the fringe of the problem of conducting a sustained publicity campaign covering the entire colony has not been touched. A large part of the provisions allotted for family planning in the Second Plan (Rs 4 crores at the Centre and Rs 97 lakhs in the States) will necessarily have to be spent in and through organisations for carrying on the vital work of propaganda. It may not be a safe assumption that, when the propaganda is undertaken on a national scale, there will not be any resistance or opposition to the idea from any section of the public.

India is one of the few countries—it was perhaps the only country till recently—which has decided to tackle the problem of growth of population on a governmental level. The decision has undoubtedly been wise. There was no organisation in India which could have taken upon itself the role of grappling with the problem and providing a solution.

About the nature and enormity of the problem, there are no two opinions. Nearly every one agrees about the necessity of keeping in check the alarming rise in the growth of population in recent years. As the Planning Commission put it, "given the overall shortage of land and of capital equipment relatively to population as in India, the conclusion is inescapable that an effective curb on population growth is an important condition for rapid improvement in incomes and in levels of living." Mr Nehru, in the meeting he was inaugurating, also said the same thing, and even went further by adding that all problems—political, economic and social—drove one to the conclusion that the question of family planning should be taken up and pressed forward with vigour and intelligence.

Unfortunately, the methods and organisational machinery needed to do it is still not there. The Second Plan envisages the opening up of 2,500 family planning clinics. The First Plan also mentioned the desirability of opening such clinics as fast and in as large a number as possible. Now, six years after, there are hardly 200 in the country. The State Governments have been lukewarm and, in several instances, even the meagre funds allocated to the States were not spent.

But, even if the target figure is somehow reached, and a smooth organisation built up to make available to the public at large contraceptives which are harmless and cheap, the problem will still defy solution unless the greatest single obstacle—the communication of the idea to the masses—is overcome. As yet, there is no evidence that sufficient thought is being devoted on this admittedly difficult aspect of the problem. The charts and pictorial representations published by the different agencies of the Government are unimaginative. The booklets are full of jargon and unfamiliar terms.

If Mr Nehru's speech helps in drawing attention to the correct approach to the media of propagating knowledge about family planning and population control, it will have rendered valuable service in helping to deal with a problem which may yet nullify our efforts to raise the standard of living in the country.

*

Development in the States

A new scheme for disbursement of loans to the States is on the anvil and will, in all probability, be tried in place of the present scheme, dissatisfaction with the working of which has been expressed by Dr B. C. Roy, the Chief Minister of West Bengal, as tending to retard the development schemes of the various states. The specific points raised by Dr Roy relate to the strict approach of the Finance Ministry in giving its consent to the issue of market loans by the State Governments, as also its insistence on detailed inquiries into the particulars of assisted projects which, it was pointed out, represented a trespass into the domain of State responsibilities.

According to the new scheme, instead of earmarking funds for each State for a given developmental activity, allocations would be made for the various regions by the Planning Commission and would be administered by the State Bank for financing individual schemes in that development field as and when the various State Governments bring forward such schemes. The new scheme is an alternative to the one suggested by Dr Roy, who wanted that the Centre should take responsibility for borrowing on behalf of the State Governments the amounts the latter may require over and above the sums permitted for State Loans.

The new scheme has the merit of ensuring an impartial assessment of the soundness of the propositions presented by Governments and would make for more efficient planning and execution of development projects by State Governments. Further, this will also enable the more active or efficient State Governments with sound programmes to utilise development funds which may go unused if rigidly set apart for other State Governments which may not be in a position to make use of them. Thus, the new scheme is characterised by a measure of flexibility which was absent in the old scheme, and is calculated to meet the demands of Dr Roy for a more liberal and sympathetic attitude in regard to the development schemes of the States.

Madras Review

The Peninsula

Topics in the Forefront

I have a complaint to make of this Peninsular city of ours from which I am sending this dispatch. And yet, I suppose, it is indirectly a compliment to the matters presently agitating the minds of those who live in this part of the country. The complaint, briefly stated, is that no startlingly interesting developments have taken place during—and this I should like to emphasise—the recent past. The compliment lies in the fact that this partly arises from the quiet work of consolidation, if we may call it that, that is proceeding in respect of 3 distinctly different topics which, however, were significant enough when they first hit the newspaper headlines.

The first of these is, from the point of the importance I would attach to it, the Neyveli project. Since the formal inauguration by the Prime Minister, Neyveli has been relatively neglected by the press. But the fact remains that, whenever businessmen or industrialists or the thinking classes (they are not necessarily mutually exclusive!) get together, they inevitably begin immediately to discuss the prospects of the Peninsula as they would evolve once the Neyveli project is translated from blue-prints to reality. The undercurrent of hope is something that I have not before sensed in such ample measure in the denizens of the South.

No sooner do they have their heart's fill of hopes, than the conversationalists turn to the elder statesman. Reference is made to his past crusades, and notably to his H. Bomb and BCG campaigns; but you can discern some disquietude when the Budget criticism is discussed. While it is true that there is some doleful shaking of heads, that it should have fallen to TTK's lot to impose onerous taxes, I should think that the opposition to the imposts has been exaggerated by an all too interested press.

If, thereafter, there still remains some time to while away, one begins to hear of what I might call Keralan developments. One hears that the Communist Government do not have anything like the smooth sailing they had expected. Indeed, difficulties have cropped up; some charge that confusion is rampant in such vast proportions, that it will take Kerala three years merely to clear up the mess of the recent weeks. Debate waxes furious, whether the Communist Government democratically elected is foredoomed to failure.

Lest it should be thought that nothing, but nothing, has transpired in the Peninsula in the last week, let me now turn to the so called "current" information.

✱

When the Summer Session of the Mysore Legislative Assembly opens on June 10, it will be called upon to discuss a few Resolutions which at least in their wording are somewhat novel. One such seeks to limit and control the income of the different strata of society. The sponsor wants to fix the minimum and maximum of a person's income at Rs 3 and Rs 33 respectively per day.

These limits and the range they represent would be a covetable thing, from the egalitarian point of view, even in Soviet Russia. The same demand with a slight variation is expressed in another non-official Resolution. Here the monthly limits vary from Rs 1000 to Rs 100, but the sponsor, presumably not content with this much of reduction in inequality, regards it only as a preliminary and essential step toward establishing socialism in Mysore.

Another enterprising Member wants an investigation into the movable and immovable properties of Ministers who have been in office since the advent of independence and their relatives. This is to be done through a committee of non-official Members of the House, having full powers to find out the sources of such wealth. Prohibition attracts wide interest but this time, more against than for. While one Member would like to have total prohibition in his District, at least three have asked for either a thorough check-up of the results of the present policy or for the outright scrapping of prohibition. A representative from Devanagere has demanded the total abolition of prohibition in view of the evil effects arising out of its enforcement in some parts of the State.

That opinion in the State is not yet wholly reconciled to the State going by the name of Mysore is evidenced by three separate Resolutions, embodying requests to the Government to recommend to the Government of India that the name be changed to Karnataka.

✱

The Mysore Tenancy Land Laws Committee, set up by the Government to study the state land revenue system, as a preliminary for legislation on the subject, has started collecting evidence from representatives of land owners and tenants in the various Districts. From the representations received hitherto from the South Kanara, the opinion on the subject of fair rent varies from 33-1|3 per cent to 50 per cent of the gross yield. In Madras 40 per cent of the gross yield is suggested as land-lord's share.

As for ceilings, the range varies from 10 acres of first class wet land per head and 35 acres of first class wet land for family of five members to 15 acres of first class wet land, 22½ acres of second class wet land and 30 acres of third class wet land. As far as South Kanara is concerned, it is argued by some who gave evidence that land legislation already brought into effect by the Madras Government was quite sufficient and there was no need for any further law on the subject.

SHORTAGES AND IDLE RESOURCES

(Continued from page 1075)

gave certain figures. The First Plan laid a target of 8.5 million acres to be brought under cultivation with the aid of the irrigation projects. The Progress Reports of the State Governments for 1956-57 show that only about 4 million acres have actually been brought under cultivation. Mr Krishnamachari recalls how similar things have happened before and instances like the Krishnarajasagar Dam built by Sir M. Visweswarayya, for the utilisation of whose waters it took another 15 to 20 years.

Mr Krishnamachari could not have cited this case as an agreeable precedent. Public awareness of needs and potentialities is much wider and deeper today. The responsibilities of the State are much heavier and failure to fulfil them carry graver risks. In these circumstances, there is scarcely any excuse for neglecting for long periods of time productive potentialities which are already at our door. It will be found that in areas accustomed to irrigated cultivation, the new facilities are automatically and promptly being used. It is where the irrigation consciousness is lacking that the canal waters largely run to waste.

If even the acute pressure of food shortage does not wake up the neighbouring landowners concerned to the opportunities and benefits awaiting them, the only alternative is for the Government either directly or through the example of cultivators brought from other areas to demonstrate how the waters will have to be utilised. Whatever be the method, it is time that this question is tackled with a true sense of urgency, we can even say, on an emergency basis. It is ridiculous to have 4 million acres of cultivable land with the necessary water and manure alongside and still sit quiet and complain of food shortage. But that is just what is happening.

It is also somewhat distressing to see the leaders harping incessantly on difficulties, when the difficulties they think of are nothing more than the outcome of public inertia and lack of understanding. At the AICC meeting, Mr Nehru stated that India was passing through a crisis and that the country had to pay the price to meet it courageously. Again, at the National Development Council session, he pointed out that there was a very difficult situation financially, economically and in many other ways, and even went to the extent of welcoming these difficulties because "no one can wake up to a big task unless they have to face the difficulties".

In many other countries, appeals dressed in such language will have the effect of bracing up the spirit and reinforcing the determination of the people to face and resolve their problems. In India, the reaction, more often than not, is far less sturdy. What is worse, the Opposition leaders are ever eager to pounce upon every morsel of "difficulty" advertised by the Government and to serve it, perhaps not without a tinge of sadistic pleasure, to the public as a full and sumptuous meal. The analogy of Churchill's historic promise to the British people of "flood, sweat, toil and tears" as the price of victory may not hold good under all circumstances. It certainly does not, under present conditions in India.

Whatever difficulties come up from time to time should surely have to be recognised, studied, analysed and solutions sought and pushed through with realism and vigour. But in trying to explain these difficulties to the people and stressing them every now and then, the national leaders, instead of adding to their stature, seem to be only complicating their tasks. A psychology of smooth sailing is apparently one of the conditions of success, though to admit it might be a little hurting to national pride. Once the concrete economic steps suggested herein are taken, and the Congress party, whose membership still runs in crores, shakes off its inertia and lends its gigantic hands to genuine reconstruction and development, there will be very little left of the difficulties in the way of the Plan.

Madras Review

South Indian Notes

Finance for the Plan

The success of the Second Five-Year Plan has now come to be identified more or less with Government's ability to find satisfactory solutions to two problems: foreign exchange and internal finance. The emphasis on industrial development has already resulted in heavy imports of steel, plant and machinery. This trend is bound to continue to manifest itself in coming months if the programme of development is to be followed as scheduled. The adverse effect of these imports together with the continued sizable imports of foodgrains on the country's foreign exchange resources has become evident sooner than anticipated. Government, however, have lost no time in applying corrective measures. Severe restrictions have now been imposed on imports and it has been made clear by Authority that only the most essential materials will be allowed to be imported. Private enterprise has been told that for its expansion programme and new projects, it has to make its own arrangements with foreign manufacturers for the supply of machinery under some sort of deferred payment scheme.

The manner in which Government propose to obtain the requisite internal finance has been made known by the Finance Minister in his Budget in the middle of last month. Mr T. T. Krishnamachari has made no secret of the fact that for the successful implementation of the Second Plan, there is no other alternative but to ask everybody in the country, the poor, the middle-class and the rich, to contribute his mite to the Exchequer. It is in this view that various indirect taxes have been imposed. Some new methods have also been adopted with the twin purpose of augmenting resources and paving the way for the establishment of a socialistic pattern of society.

The problem of foreign exchange is sought to be tackled from the direction of exports as well. The urgent need for stepping up exports has been fully realised and Government are taking systematic steps to obtain maximum results. In this connection they have appointed an Export Promotion Committee to go into the problem in all its aspects and to recommend suitable measures for promotion of exports.

Delivering the presidential address at the recent annual general meeting of the Southern India Chamber of Commerce, Madras, Mr M. A. Chidambaram said that though the business community were second to none in their enthusiasm for implementing the Second Five-Year Plan, they found it rather difficult to accord their wholehearted support to the measures proposed to be taken by Government to finance the Plan. In their opinion Government had totally ignored certain patent facts. Referring to the taxation proposals, he pointed out that the cumulative effect of the new imposts would retard the growth of industries in the private sector. The wealth tax and the increase in bonus tax would have a depressing effect on investment which, in the absence of proper monetary agencies capable of affording finance for the private sector, played a vital role in the development of private enterprise. The excise on a variety of consumer goods would ultimately lead to widespread demand for higher wages. That together with increased constructional cost as a result of increases in excises on such commodities as steel and cement would place the industries in a very difficult position.

It is rather difficult to agree with Mr Chidambaram when he says that the increases in excises, instead of curbing inflationary forces, will further accentuate them. For, while referring to the vast expansion programmes of the steel, cement and sugar industries, he argues that those who sponsor expansion schemes in these industries should view the excise duties with anxiety as they are likely to develop consumer resistance. The same argument holds good in the case of other consumer articles on which excise duties have been imposed.

✱

Sales Tax in Andhra

SALES tax has been one of the prolific sources of revenue to the States, besides being the only elastic source as well. The proportion of it to the total state revenue has ranged between 1/4th and 1/3rd.

With the States Reorganisation Scheme, and the formation of new States, it has been found necessary to re-enact the Sales Tax Act, with revised rules in the States which have been either newly formed or which have grown bigger by accession of new territories.

Speaking at a Press conference, Mr B. Gopala Reddi, the Finance Minister of Andhra Pradesh, announced that the Government had finalised the sales tax rules under the new Andhra Pradesh Sales Tax Act.

The yield from Sales Tax is not only a variant of the rules governing it but also is a matter of efficiency of the collection machinery. Scope for increasing the yield from sales tax by tightening the collection machinery was indicated by the Finance Minister when he said that he would convene a conference of officers of the Finance and Revenue Departments to discuss ways and means of stepping up the collections by tightening the collection machinery. For this purpose, appointment of Sales Tax officers has been proposed.

The reorganisation of the Sales Tax Department and the successful working of the new Act are expected to increase the yield from sales tax in the State from Rs 7 crores to about Rs 10 crores in the current year; and, with this, the total revenue will increase by an equivalent amount from Rs 27 crores to Rs 30 crores in 1957-58.

The Andhra Government are also immediately concerned with the disposal of the large number of pending sales tax appeals which have accumulated because of the post of the Deputy Commissioner of Sales Tax being left unfilled for the last 9 months.

✱

Wild Life Protection

While inaugurating the meeting of the State Wild Life Board at Ootacamund last week Mr M. Bhaktavatsalam, the Minister for Agriculture and Forests, Madras was understandably indignant at those who, in the name of sport, thought nothing of shooting down indiscriminately wild animals at long range.

There are few countries in the world as every schoolboy is taught—which possess the infinitely rich and varied fauna that India can boast of. Yet the consciousness that this invaluable treasure needs proper watching and careful guarding is not deep or active enough to create a strong public opinion against wanton killing of animals in areas outside the reserved regions. Valuable species of animals species which are only found in India—are dying out.

The Minister in his speech referred particularly to one such animal, the Black Buck, which he also held up as an illustration of the difficulties which the Government encounter in enforcing the existing Game Laws. The Black Buck, a beautiful animal of the deer family is not found outside India and like the spotted deer, the four-horned antelope and the Nilgai it is a notable example of wild life of the evergreen forests of Deccan. The Black Buck's habit of straying out into the open and thus making itself even more vulnerable to the blood thirst of the poachers makes its preservation a particularly difficult job, since laws for the protection of wild life do not operate in the case of animals shot in the open areas.

The Black Buck's case is perhaps an extreme example in which the animal unfortunately contributes in some measures to its own gradual extinction. But where there is no such contributory cause, as, for instance, in the cases of lions, rhinos, Nilgiri laugurs, Kashmiri stags etc. —there also the species are slowly vanishing from the Indian forests. Broadly speaking, unrestricted shooting and catching by persons who know little and careless about the rules of the game, carried on over years has been one of the main causes in bringing about the present sad state of affairs.

Mr Bhaktavatsalam in his address outlined the measures which he proposed introducing in the state to stop this process of extinction. They fall into two categories of remedies which need simultaneous application for tackling the problem of preservation of life.

The first is for tightening up of the existing laws and devising new ones. Exhorting the Forest Department to be as zealous in protecting wild game as it is in protecting trees, the Minister assured his audience that offenders against Game Laws, whoever they may be, would be seriously dealt with. He also indicated that the drafting of a comprehensive Bill for protection of

Madras Review

South Indian Markets

Coffee Prospects

IN a communique issued by the Coffee Board this week, the estimate of the 1956/57 Coffee crop has been placed at 41,565 tons, made up of 21,845 tons of Arabica Plantation; 7 010 tons of Arabica Cherry and 12,710 tons of Robusta variety. Preliminary estimate for the next season's crop is placed at 35,750 tons, made up of 2,370 tons of Arabica and 12,580 tons of Robusta.

In this connection, the Chairman of the Coffee Board has stated that the 1956-57 crop is again a record although the extra heavy crop has created some difficulties in respect of storage, curing and export sales. He adds further that, though, in general, the trend for the future is above the 40,000 ton-mark, the prospects for 1957-58 year crop are not as bright as one hopes. The seasonal conditions have not been very satisfactory and the blossom showers have been patchy or inadequate at places and, in some areas, totally absent.

While last year India was able to secure fairly high prices on exports, this year the prices are definitely low and has continued to fall every month. It is true that there has been a fall in the prices of mild coffees on the world market too; but the fall in prices of the coffee sold for export has been far steeper than warranted by the decline in world prices. In order to prevaint panel of experts has been set up, to complaints regarding the quality, a enforce strict quality control on lots set aside for exports

Meanwhile, deliveries of Robusta to the Export Pool, so far, established a surplus for export of 1,450 tons. The Coffee Board has, therefore, decided to recommend for export a further quantity of 1,500 tons, provided anticipated Pool receipts are realised in full The Board has appointed a Committee to investigate the various steps to be adopted to ensure that there is a steady flow of coffee into the Pool.

*

Groundnut

The Groundnut market in Madras continued to rule quiet with prices showing an easier tendency Arrivals last week averaged 30 to 40 tons a day. Except for some buying by "chekku" crushers, there was no buying worth mentioning by big crushers. The rate for superior oil-quality seeds was quoted around Rs 161 per candy, while the bold variety was done at Rs 158.

According to the latest reports, summer crop arrivals in South Arcot are fair. Reports from Pollachi are, however, discouraging. It is stated that, due to the failure of the rains for the early-sown crop, the plants have been attacked by pests. As a matter of fact, there are reports that there will be no yield from the early-sown crop areas.

In the Groundnut Oil section, the rate for the ready position declined to Rs 332 from Rs 340 per candy on weaker Bombay advices although there was an improvement by two points at the close.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals were fair with a moderate clearance. Enquiries from the UK were better and there was a good demand for light weights. Although there was a good demand for 8/8½ lbs. runs and fourths, fifths were more difficult to sell. The local demand for inferiors still continued.

Arrivals of Buff hides were as usual, but the clearances were on a small scale on account of poor demand from the UK and USA. Clearances of Cow Calf were steady without any change in prices. In the Buff Calf section, arrivals were gradually getting less, while prices showed no important changes over the previous week.

In Tanned Skins section, prices of Goat skins were unchanged, while those of Sheep skins remained very firm, showing an improvement of 12 nP per pound over the previous week. On the export front, one or or two marks of Goat skins 8/9 lbs thirds and fourths were reported to have been sold at 15sh 3d. As regards Continental operators, buyers were suggesting lower prices and, in some cases, counter-bids were done at irregular levels. In Sheep skins, primes and semi-primes continued to be in good demand. Moderate business was reported to have been done with Japan at current prices.

The markets for Raw Hides and Skins ruled steady. At Bangalore, goat skins were quoted Rs 10 higher and sheep skins Rs 20 to Rs 25 higher. In Bezwada, goat skins showed no change, while sheep skins were quoted Rs 15 to Rs 20 per 100 skins higher.

*

Pepper

In the absence of any fresh incentive, conditions in Pepper markets have remained quiet. In the Alleppey market, the rate is quoted around Rs 591.25 per candy at which level some exporters have taken up small quantities. There is practically no enquiry in the Kozhikode market, where Wynaad quality is quoted at Rs 675 and the Country variety at Rs 640 per candy.

The outlook for the commodity is, however, considered to be better. Interest from New York is giving pepper improved market. There are reports that Indonesian crops have been affected by pests. Another strengthening factor is the interruption of shipments from Indonesia.

NORTH INDIAN MARKETS

Grains Markets Quiet

FOLLOWING the important measures adopted by the Government of India to check the upward trend in prices, quiet conditions were witnessed in the Foodgrains markets during the week under review. Requisitioning of stocks at average prices for the last three months instead of at the current price has already been decided by the Government. Secondly, the possibility of tightening the credit squeeze to make it difficult for traders to earn undue profits is also under examination. As traders view these moves with serious apprehensions on account of their far-reaching implications, they are now unwilling to go under long commitments.

In the Hapur market, Wheat prices remained mostly unchanged. Total arrivals of the commodity, from the beginning of the season, are put at 80,000 maunds, the corresponding figure for last year being 68,000 maunds. Rice prices continued to rule steady. The Government apprehends that substantial stocks have passed out of the producers' hands to those of the traders. When the Government requisition them, rice will be the first grain to be requisitioned.

Despite fall in prices in the most producing areas of the Punjab, Gram continued to rule steady due to loading restrictions from the Punjab. Barley prices recorded modest gains due to paucity of stocks. Jowar prices remained almost unchanged, while Peas ruled steady following good buying enquiry from main consuming areas of Assam and Bihar.

The Delhi grains market also ruled quiet. Wheat prices, however, recorded a rise of about Rs 1.50 per maund owing to paucity of stocks and restricted arrivals. Gram was quoted lower by about 50 nP per maund on reports of a fall in rates in Bihar. A loss of about Rs 2 per maund in the price of Rice was attributed to lack of enquiry following easier advices from other centres. Following reports of decrease in stocks, the rates for Bajra and Maize improved by about 50 nP. Urad lost about a rupee due to better arrivals. There was good demand for Guwar in producing centres for sowing purposes and the rates were slightly better.

After the recent consistent firmness, sentiment in the Bombay grains market tended to soften on account of apprehensions regarding the Government's move to amend the Essential Commodities Act. The general tendency was, therefore, to lighten commitments. Prices of indigenous Rice declined by about Rs 5 per candy, partly due to lack of consumer interest. Trading in indigenous Wheat continued to be irregular. There was little business in Jowar, prices of which moved down by about Rs 5 per candy. Bajra, however, revealed a steady tendency on reports of a shortage of the grain in Deccan. Trading in Pulses was highlighted by a sharp fall of about Rs 10 per candy in the prices of Masoor.

*

Sugar

Sugar prices continued to rule firm although trading was small. Some of the factories and traders were following a "wait and watch" policy. With the result, some of the ex-mill delivery prices are not yet quoted.

The Government of India have released a further quantity of 1.65 lakh tons of sugar for free sale. It is expected that, with this release, prices of sugar will stabilise in the market. Latest ex-mill delivery prices are:—Amroha Rs 33; Bijnore Rs 32.75; Rampur special Rs 34.87 and Mansoorpur Rs 33.81 to Rs 35.25.

On May 6, mills had a balance of free stocks of some 60,000 tons which, together with the release made that day, amounted to nearly 2.23 lakh tons. Free stocks with the factories, on May 15, 1957, were 1.27 lakh tons; and this quantity will bear the increased duty.

*

Gur

At Hapur, the Gur market ruled steady. Traders were still holding stocks in expectation of better prices in the fag-end of the season.

Stocks were estimated around 80,000 maunds, the corresponding figure for last year being 51,000 maunds. Total arrivals, from the beginning of the season, are estimated at 4.6 lakh maunds.

Arrivals have slightly increased as the producers, who are not in a position to retain their stocks in the coming months of rain, are now bringing their produce to the market. Selected quality was quoted at Rs 12.15; average quality Rs 11.50 to Rs 12.00 and Kotha wet quality Rs 11.12 (all rates per maund).

WORLD OF FINANCE

(Continued from page 1078)

by making an application to the Reserve Bank of India either at the time of the purchase of the certificates or otherwise, to the effect that the annual interest or monthly payment in respect of the certificates be made to them through their Post Office Savings Bank accounts.

+

Slack Season Indicators

Indications of deficit financing and of the States replenishing their balances are revealed in the returns of the Reserve Bank for the week ended May 31. Active Notes have declined by another Rs 8.40 crores to Rs 1570.00 crores, a level that is lower than the April 12 figure. Rupee Coin is more or less unchanged at Rs 125.85 crores. Since the Reserve Bank's cash in the till was at a comfortable figure, currency has been contracted against Rupee Securities by transfer of Rs 10 crores to Investments in the Banking Department; and the Reserve Bank's Notes Held is lower by Rs 1.58 crores at Rs 26.00 crores.

In the Banking Department, Investments have mounted by Rs 27.35 crores to Rs 164.39 crores; and, of this rise, Rs 10 crores is represented by the transfer from the Issue Department. The balance of the rise, Rs 17.35 crores, is presumably due to a combination of deficit financing and of sales of marketable securities by State Governments. It is also possible that some part of the rise in Investments is due to Scheduled Banks selling some securities to the Reserve Bank.

The Centre's Deposits are lower by Rs 0.57 crores at Rs 53.65 crores; deficit financing may, therefore, have been for an amount around Rs 10 crores. State Governments have added to their balances by Rs 1.17 crores; and they have besides reduced their indebtedness to the Reserve Bank by Rs 0.89 crores to Rs 19.00 crores. Possibly, this has partly been enabled by sales of marketable securities by the States.

The position of member banks with the Reserve Bank has improved considerably. Banks' Deposits have mounted by nearly Rs 6 crores to Rs 68.24 crores from Rs 62.36 crores; and there would also appear to be a sizeable reduction in banks' indebtedness to the Reserve Bank, as the latter's Other Loans and Advances have declined by Rs 4.72 crores to Rs 106.55 crores. Banks' borrowings against usance bills have gone down by Rs 1.48 crores to Rs 58.17 crores.

+

Deposits of the State Bank rose by Rs 2.81 crores to Rs 306.90 crores in the week ended May 31.

Since the total of Advances is negligibly changed, the higher Deposits are reflected in an increase of Rs 4.29 crores to Rs 29.89 crores in cash balances. It can thus be seen that the bulk of the improvement in Deposits of member banks with the Reserve Bank is accountable by the State Bank.

+

The statement of Scheduled Banks for May 24 discloses a sharp rise of Rs 13.74 crores to a new high of Rs 1,247.68 crores in Deposits. This has been utilised to reduce indebtedness to the State Bank by Rs 2.36 crores to Rs 9.59 crores, and to the Reserve Bank by Rs 9.01 crores to Rs 86.27 crores. At the same time, however, the total of Advances has registered a rise of Rs 3.24 crores, which has necessitated a drawing down of cash balances by Rs 1.78 crores to Rs 125.80 crores.

+

During the week ended the 31st May 1957 Government of India Treasury Bills for Rs 22,55,00,000/- were sold in favour of the Reserve Bank of India.

*

WORLD OF TEA

(Continued from page 1080)

Russia will use Ceylon teas for mixing with other teas and use the blends for re-export to the East European countries. Russian purchases will be restricted to Ceylon common teas and medium-grown varieties. The purchases will be made weekly with payment in sterling.

Meanwhile, a message from Karachi states that Pakistan will export 30 million pounds during the 1957-58 season. This export target has been fixed after consultation with the Pakistan Tea Licensing Committee.

A total of just under one million pounds of tea was offered in the Cochin market. Quality was about maintained. A good demand prevailed throughout at rates which were fully firm for all kinds except stalky, thin liquoring sorts. The main support again came from internal buyers. The best Nilgiris were well supported at generally firm to dearer rates; but the lesser descriptions eased slightly following quality. Good Medium Brokens ruled firm; but their Fannings came to a lower market. Medium and Low Medium Brokens were about steady, but similar Fannings shed 5 to 10 nP per pound.

Black Leaf Brokens met with keen competition at firm to dearer rates; but Middle East type Fannings met with only fair support at barely steady levels. Whole Leaf grades met with keen and active competition at generally dearer prices. Following rates were quoted:—Plain BP Rs 1.52. Low Medium BOP Rs 1 55; Medium BOP Rs 1.70. Good BOP Rs 2.00 to Rs 2.05 and Well-made OP Rs 2.45.

At the auction held in Colombo, offerings were 7,023,122 pounds for which there was an improved demand. Demand was fair for Nuwara Eliya teas; but prices were lower following quality for all grades. Among high-grown teas, demand was good for the better liquoring Brokens at firm rates; but thin liquoring sorts were again easier. Among medium-grown teas, there was improved demand for Broken grades, which advanced by 5 to 8 cents per pound.

Demand was fair for low-grown teas: but prices for small Leaf Brokens and Leafy kinds were 5 to 10 cents per pound lower. There was rather less demand for high and medium-grown Fannings descriptions at a decline of about 15 cents per pound. There was, however, very strong demand for off-grades and all descriptions were about 10 cents per pound dearer.

*

GATEWAY GOSSIP

(Continued from page 1085)

and this figure, as we have seen, has already been vouchsafed by the new taxes imposed since the beginning of the Second Plan.

Indeed, even if the States should fail to raise a single naya paisa by way of new taxes, the tax target would nevertheless be attained—and even surpassed. So, I should like to take this opportunity of suggesting to authority in New Delhi that a public statement to this effect would appreciably tone up sentiment in the private sector. For, what it means is that (at least for revenue purposes) further taxes for the Second Plan are unnecessary. It seems to me that it would be very much in the interests of the success of the Second Plan that Government should categorically state that the tax target has been attained, and that, consequently, they do not intend to broach new taxes (for revenue purposes) in the last three years of the Second Plan.

It is time that Government realise the great damage done to national morale by the recurrent emphasis on the gaps in resources. The damage has been equally grave with regard to foreign opinion on the success of the Plan. Government cannot be unaware that, in certain vital sections in foreign countries, the impression has thus been fostered that India has bitten off more than it can chew. This impression must be nipped in the bud. Otherwise, India's efforts to raise loans from the World Bank and to secure medium term credits for import of machinery are doomed to be jeopardised. This constant airing of difficulties in public may have moral values, but is a serious blunder in practical terms. It is admitted and recognised that the Second Plan is encountering difficulties. But we knew that they would occur. We embarked on the Plan in the confidence that we can and shall surmount the difficulties.

It will do real good to the Plan if we tell the world, not of our difficulties, but of how we are overcoming them. It is possible now to tell the world that, in the unpopular task of levying new taxes, the Indian Government have acted with such courage and expedition that the target in this respect for the Plan period has already been achieved.

There are a few friends at home, and many friends abroad, who would gloat at any reverses for the Plan. They now have no cause to gloat so far as that part of the resources programme that hinges on new taxes is concerned.

SOUTH EASTERN RLY. TENDERS

The General Manager, Garden Reach, Calcutta-23, invites sealed tenders for supply of the following materials:

Tender No. CON/GM/19/WP/CE/P & M1/58/Gb1 for supply of 1,20,000 Nos. Galvanised Hook Bolts with Nuts and Washers as per sketch which may be seen in the office of the Controller of Stores, S. E. Railway, Garden Reach, Calcutta-23. Earnest money is Rs 1,000/-.

Tenders will be opened on June 27, 1957 at 12.00 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

The tenders should be accompanied by a receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta-23, for amounts towards earnest money as above without which the tender is liable to be rejected. Approved Contractors who have already made a permanent deposit or Rs 1,000/- with the Controller of Stores need not pay the earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S 24 GENERAL MANAGER.

SOUTH EASTERN RLY. TENDERS

The Controller of Stores, Garden Reach, Calcutta-23, invites sealed tenders for supply of the following materials:

1. Tender No. CON/COS/15/ENC/BSP/WP/3890/30/Gb1 for supply of 3,30,000 Nos. Hex Head bolts IG 1¼"×¼" with nuts. Earnest money is Rs 396/-.

2. Tender No. CON/COS/16/ENC/BSP/WP/3891/31/Gb1 for supply of 10.000 Nos. Holding down bolts MS ¾"×1'-6" long with nuts and washers. Earnest money is Rs 250/-.

3. Tender No. CON/COS/17/ENC/BSP/WP/3583/25/Gb1 for supply of 20.000 Nos. Holding down bolts MS ¾"×1'-6" long with nuts and washers. Earnest money is Rs 340/-.

Tenders will be opened on 21-6-57 at 12-00 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs 2/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

The tenders should accompany a receipt from the Chief Cashier, S. E. Rly., Garden Reach, for amounts towards earnest money as above without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1,000/- with the Controller of Stores need not pay the Earnest Money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S 22 CONTROLLER OF STORES.

SWADESHI COTTON MILLS COMPANY LIMITED.
KANPUR

NOTICE

NOTICE is hereby given that the 36th Annual General Meeting of the shareholders of the Swadeshi Cotton Mills Company Limited will be held at the Registered Office of the Company at Swadeshi House, Civil Lines, Kanpur on 24th day of June, 1957 at 3 p.m. to transact the following business:—

1. To receive and consider the Audited Profit & Loss Account for the year ended 31st December, 1956 and the Balance Sheet as on that date, and Reports of the Directors and of the Auditors thereon.

2. To elect a Director in the place of Mr. G. D. Kehmani who retires by rotation but who offers himself for re-election, and to consider and if thought fit to pass the following resolution as a Special Resolution in respect of which a Special Notice has been received by the Company, as required by Section 261 of the Companies Act, 1956. (The reasons making the resolution necessary are being set out in the explanatory statement under Section 173 of the Companies Act annexed hereto).

RESOLVED that Shri G. D. Kehmani who retires by rotation from his office as a Director and who is an Associate of the Managing Agents, Messrs. Jaipuria Bros. Limited, be and is hereby appointed a Director of the Company.

3. To appoint Auditors in place of those retiring and to fix their remuneration.

4. To sanction the declaration of dividend.

SPECIAL BUSINESS

5. To approve pursuant to Section 261 of the Companies Act, 1956, the continued appointment as a Director of Shri M. L. Bazaz who was appointed a Director of the Ordinary General Meeting held on 30th September, 1955 and to consider and if thought fit to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the said Act has been received by the Company. (The reasons making the Resolution necessary are being set out in the explanatory statement under Section 173 of the Companies Act annexed hereto).

"RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956, the continued appointment of Shri M. L. Bazaz, as a Director of the Company who is also an associate of the Managing Agents of the Company be and is hereby approved".

6. To approve pursuant to Section 261 of the Companies Act, 1956, the continued appointment as a Director of Shri S. Jaipuria who was appointed a Director at the Ordinary General Meeting held on 30th September, 1954 and to consider and if thought fit to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the said Act has been received by the Company. (The reasons making the resolution necessary are being set out in the explanatory statement under Section 173 of the Companies Act annexed here to).

"RESOLVED that pursuant to the provisions of the Section 261 of the Companies Act, the continued appointment of Shri S. Jaipuria as a Director of the Company who is also an associate of the Managing Agents of the Company be and is hereby approved".

7. To consider, and if thought fit approve the draft new articles which will be submitted to the meeting and in the event of the approval thereof, with or without modifications, to consider and if thought fit to pass the following resolution as a Special Resolution:—

"Resolved that pursuant to Section 31 of the Companies Act, 1956, the new articles as already approved by this meeting and for the purpose of identification subscribed by the Chairman thereof, be and is hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association thereof".

8. To consider and if thought fit to pass the following resolution with or without modification as a Special Resolution:—

"Resolved that pursuant to Section 16(3) of the Companies Act, 1956, the Memorandum of Association of the Company be and is hereby altered in the manner following:—

"Clause 5 of the said Memorandum of Association be deleted and the following be approved and adopted as clause 5 in substitution for and to the exclusion of the existing clause 5:—

"The capital of the Company is Rs. 2,10,00,000/- divided into—

(a) Preference Share Capital:
35,000 Preference Shares of Rs. 100/- each.
15,75,000 Preferred Ordinary Shares of Rs. 10/- each.

(b) Equity Share Capital:
1,75,000 Ordinary Shares of Rs. 10/- each.,

with power to increase and reduce the Capital of the Company and to divide the same into different classes and to attach thereto respectively such preferential, qualified or special rights, privileges or conditions as may be determined by or be in accordance with the regulations of the Company and to vary, modify or abrogate any such rights, privileges or concessions in such manner as may for the time being be provided by the regulations of the Company".

Notice is also hereby given that Transfer Books and the Register of Members of the Company will be closed from the 17th June to the 24th June, 1957 both days inclusive.

By Order of the Board,
For JAIPURIA BROS. LIMITED,
MUNGTURAM JAIPURIA,
Director,
Managing Agents.

Kanpur,
25th May, 1957.

ANNEXURE TO THE NOTICE DATED 25th MAY, 1957 CONVENING THE 36th ANNUAL GENERAL MEETING ON 24th JUNE, 1957.

EXPLANATORY STATEMENTS AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

1. Re. Item No. 2: Shri G. D. Kehmani retires by rotation from the office as a Director of the Company but offers himself for re-election. As Mr. G. D. Kehmani is an Associate of the Managing Agents, he can be appointed a Director only by means of a Special Resolution under Section 261 and, accordingly the Special Resolution under item 2 above, of which special notice has been received by Company, is commended for acceptance. Shri Kehmani has been long associated with this Company and is a businessman of repute. It is desirable that the Company should continue to be benefitted by his experience and knowledge.

2. Re: Item No. 6. Shri S. Jaipuria is an Associate of the Managing Agents of the Company. His appointment as a Director can only be continued by a Special Resolution of the Company under the provisions of Section 261. A Special Notice has been received by the Company as required by Section 261 of the Companies Act, 1956, proposing that the appointment of Shri S. Jaipuria as Director be approved in accordance with the provisions of the said Section. As it is in the interest of the Company that it should continue to receive the benefit of his valuable guidance it is desirable that his continuance as a Director be approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

3. Re: Item No. 5: Shri M. L. Bazaz is an Associate of the Managing Agents of the Company. His appointment as a Director can only be continued by a Special Resolution of the Company under the provisions of Section 261. A Special Notice has been received by the Company as required by Section 261 of the Companies Act, 1956, proposing that the appointment of Shri M. L. Bazaz as Director be approved in accordance with the provisions of the said Section. As it is in the interest of the Company that it should continue to receive the benefit of his valuable guidance it is desirable that his continuance as a Director be approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

4. Re: Item No. 7: The existing Articles of Association of the Company were adopted at the time of the incorporation of the Company and from time to time have been amended in certain respects by special resolutions. The Companies Act, 1956 (hereinafter called the new Act) came into force as from 1st April, 1956, and has effected considerable changes in the law and procedure relating to companies. Reference to the Act herein made are to the Companies Act, 1956.

Several of the changes which came into force as a result of the new Act override or affect various provisions in the present Articles of Association of the Company which consequently require amendment to bring them into line with the amended provisions of the new Act, and certain new provisions in the Act for the regulation of companies, need to be incorporated in the Articles.

As the alterations are numerous, it has been considered desirable to substitute a new set of Articles for the present Articles of Association of the Company. The proposed alterations fall into the following categories:—

(a) alterations made to comply with the porvisions of the new Act where the present Articles are in direct conflict with such provisions.
(b) alterations which, though not essential for removal of a conflict between the present Articles and the provisions of the new Act, have been rendered necessary or desirable as a result of or to comply with such provisions.
(c) alterations resulting in either improvement of language used, or made with a view to bringing existing Articles into line with modern practice.
(d) deletion of obsolete Articles, and
(e) a few alterations not falling under any of the above categories but considered desirable.

5. Re: Item No. 8: The change in clause 5 of the Memorandum of Association with respect to Capital has become necessary because of the existing capital structure of the Company.

Draft of the proposed new Articles of Association initialled by the Chairman and a copy of the existing Articles of Association may be inspected at the registered Office of the Company between the hours of 2 p.m. to 4 p.m. on any working day.

Company Meeting

The Travancore Cements Ltd.

Speech delivered by the Chairman Sri C. S. Loganathan, at the Tenth Ordinary General Meeting held on 27th May 1957

Gentlemen,

It is my privilege to extend to you a cordial welcome to the tenth annual general meeting of the Company. The Directors' Report and Audited Accounts for the year 1956 have been in your hands for some time, and with your permission, I will take them as read.

You will recall that in my speech last year, reference was made to our representations to the Government of India regarding full restoration of our selling price, to the level that was prevailing prior to November, 1955. I am pleased to inform you that the Central Government sanctioned an increase of Rs 4/- per ton in our selling price from 22-9-1956. Even though the increase granted fell short of our expectations, it is gratifying to note that the Government do appreciate the special features in the set-up of this factory. Again, in response to our representations to restore the original price, we have been informed that the question of cement prices has been referred to the Tariff Commission, and I have no doubt, the Commission will take into consideration the special factors relating to this factory in making their recommendations.

The year 1956 has been a record one to your Company, both in production and sales. We have produced 53,560 tons of cement and sold 55,209 tons. Out of this 34,365 tons have been supplied to Government and quasi-government departments and 20,844 tons to the private sector.

The constant efforts of the Company to improve the efficiency of operation are being offset by the rise in prices of essential materials like coal, spare parts etc. During the past year, we have had to meet with a steep rise in the price of coal, by Rs. 3/8/- per ton, and an increase in freight of Rs. 1/9/- per ton. It must, therefore, be a matter of satisfaction to you that, in spite of these handicaps, the company has been able to show a reasonable profit.

In my speech year-before-last, I had mentioned to you of our proposal for the manufacture of White Cement. I am glad to inform you that the requisite machinery has now been shipped and is expected to arrive at our site sometime in July this year. It is hoped that production of White Cement will commence by the end of the year or early next year.

Under the State Trading Scheme in cement introduced by the Government of India with effect from 1st July, 1956, your Company has been allowed a fixed price of Rs. 73 per ton from 22-9-1956 excluding packing charges. The production of the Company is being marketed by the S. T. C., and as their selling agents, we are getting a remuneration of Rs. 1/8/- per ton.

The net profit for the year, after providing for depreciation, is Rs. 4,71,299 and after taking into account the balance brought forward from the previous year, the amount available for disposal is Rs. 10,08,101. The Directors recommend a dividend of 6% free of Income tax, leaving a balance of Rs. 7,08,101 to be carried forward.

During the year under review, our relationship with labour and staff has been cordial. I should like to express, on your behalf and mine, our appreciation of the services rendered by them.

Note: This does not purport to be a record of the proceedings of the annual general meeting.

WORLD OVERSEAS

(Continued from page 1082)

from the blooming mill. A large slabbing mill was scheduled for completion by the end of the year. Satisfactory progress was also being made with the establishment of the tinplate plant.

It was expected to begin supplying hot rolled strip for this process during the latter half of the year.

The hot strip mill of Broken Hill Proprietory Co Ltd at Port Kembla is the largest in the world, and cost £9,000,000. The Company's research laboratories at Shortland, New South Wales are carrying out original research into raw materials and the quality of the finished product.

SHREE GOPAL PAPER MILLS LTD.

NOTICE

NOTICE IS HEREBY GIVEN that the next Ordinary General Meeting of the Shareholders of Shree Gopal Paper Mills Ltd., will be held at its registered office at 5, India Exchange Place, Calcutta, on Friday, the 28th June, 1957, at 10-30 A.M., for the purpose of passing and adopting the audited Accounts of the Company, together with the Directors' Report for the half-year ended 31st December, 1956, declaring dividend,—electing Dirctors, appointing Auditors and transacting any other business that may be brought forward with the permission of the Chairman.

The Share Transfer Books of the Company will be closed from 15th June to 28th June, 1957, both days inclusive.

NOTE:—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy, who need not to be a member, to attend and vote instead of himself.

By Order of the Board,
Karamchand Thapar & Bros.
Private Ltd.
Managing Agents.

Calcutta.
Dated 4th June, 1957.

Yarn

Trading in the Bombay Yarn market continued to be dull although the controversy in respect of payment of Sales Tax by the commission agents was amicably settled. The slight improvement in the prices of Art Silk yarn, noticed towards the end of the week, was mainly due to fears of a further cut in import quota for the July-December licensing period. Prices in the Staple-Fibre Yarn section showed an irregular trend, moving between Rs 570 and Rs 580 per bale for 2/40 June delivery It was reported that the consumption of 2/40s grey bright yarn was declining and these reports made operators rather nervous. The ready market also showed dull conditions.

The Cotton yarn market continued to rule easy following the reports that the electricity-cut in Salem district was restored and the demand for handloom cloth had come down.

GATEWAY MARKETS

(Continued from page 1086)

Linseed September delivery touched a high of Rs 30.62 and a low of Rs 30.19, to finish at Rs 30.31. Similarly, Cottonseed September delivery touched a high of Rs 111.50 and a low of Rs 109.00, to finish at Rs 110.00.

WORLD OF COTTON

(Continued from page 1087)

tan for 1956-57 is 3,569,000 acres (American and Deshi varieties around 2,991,000 acres and 560,000 acres respectively) as against 3,537,000 acres in the previous year. Production for the year is estimated at 1,708,000 bales of 392 lbs each as against 1,670,000 bales reported in the corresponding estimate for the previous year. There has been an increase in production of the crop in West Pakistan. This increase is attributed to favourable season during the period of the growth of the crop.

Meanwhile, the cotton market in Karachi continued to rule quiet with the following rates quoted:—Sind Deshi Rs 84-8; Punjab Rs 80-4; 4F Roller Rs 75-13; 289F NT Sind Saw Gin Rs 85-13 and 289F Punjab Saw Gin Rs 88-13.

×

CLOTH AND PIECEGOODS:

The recent improvement, noticed in the Piecegoods market, proved short-lived and, with the commission agents restraining from entering into fresh business following the Sales Tax trouble, business conditions were more or less stagnant. Another factor contributing to the low level of trading was the prevalence of "flu in the City. Demand from upcountry centres was also said to be subdued at the moment.

Also, on the export front, conditions were not encouraging due to slack enquiries from overseas buyers. Fears were also expressed that exports of cloth would suffer a sharp setback unless licensing authorities restored the status quo in regard to the business on f.o.b. contracts. Shippers pointed out that there was no need to prevent business on f.o.b. contracts since cloth exports were now under free licensing system.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED
(Incorporated in England)

5% RUPEE DEBENTURE STOCK 1970 INTEREST FOR THE HALF-YEAR ENDED 30TH JUNE, 1957.

Notice is hereby given that interest at the rate of Rs 25 (less Indian Income Tax) per Rs. 1,000 of Stock will be paid on 1st July, 1957 to Debenture Stockholders registered in the books of the Company on 23rd June, 1957. Applications for transfers received at the Company's Office at Victoria House, Post Box 304, Chowringhee Sq., Calcutta, upto 23rd June, 1957 will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 24th June, 1957 to 30th June, 1957 both dates inclusive.

By Order of the Board,
I. A. MACPHERSON
AGENT.

Victoria House,
Calcutta, 3rd June, 1957.

Stock Exchanges

BARGAIN-HUNTING BY INVESTORS

Watch-Dog Writes:

ALTHOUGH trading in stock markets continues to be restricted with irregular price movements, selected scrips have continued to edge forward from the recent low levels. No doubt, a good part of the improvement in prices must be attributed to the continued support from the Life Insurance Corporation. There has also been some bargain-hunting by several investors.

Operators are, however, still cautious in their commitments as there is a general feeling that the concessions, announced recently by the Finance Minister, will not change the market outlook much for the better. A clearer picture will emerge only when the Select Committee's findings are announced.

Except for Indian Irons and selected Miscellaneous scrips showing a marked recovery from the recent low levels, trading on the Calcutta Stock Exchange continued to be generally dull.

A gradual improvement in equities, due to scattered bear-covering, was discernible on the Bombay Stock Exchange.

On the Madras Stock Exchange, selected scrips continued to receive support around quoted levels.

Business on the London Stock Exchange was restricted as there was a disposition to await the gold and dollar figures for May.

Wall Street closed barely steady with a fair distribution of mainly fractional gains.

*

Calcutta

Calcutta, Friday Evening.

EXCEPT for a marked recovery in Indian Irons and some enquiry from investors for selected Miscellaneous issues, conditions on the local Stock Exchange remained generally dull last week. In the absence of fresh incentives, price movements were confined to narrow limits.

The general feeling was one of "wait and watch" in view of the fact that the bulls had suffered heavy reverses during recent weeks. Fears were entertained in certain quarters that hopes for any more alteration in the tax proposals in favour of investors would not be fulfilled. Above all, there was an inclination to await the findings of the Select Committee.

Once again, the Giltedged market turned dull. Except for the short-dated issues which met with some support, conditions remained generally inactive with institutional support on a reduced scale. Against the week-end closing of Rs 73.25, 3 per cent 1986 Conversion Loan opened lower at Rs 72.87, to improve steadily towards the close to Rs 73.21.

Bank shares, however, ruled steady with price movements confined to a narrow range. Punjab National were taken upto Rs 54.50 from Rs 50.00 and United Commercial upto Rs 54.00 from Rs 53.50.

The continued anxiety with regard to the raw jute supply position was mainly responsible for the limited interest shown in the Jute section. Even the firmer advices from the jute goods market had no effect on sentiment. Except National and Megna which met with sustained speculative support upto Rs 19.80 and Rs 66.50, other scrips ruled quiet. Howrah were offered at as low as Rs 14.00 against Rs 14.44, while Lawrence were nearly maintained at Rs 91. Anglo-India moved between Rs 133.50 and Rs 134.50 with Belvedere marked down to Rs 80 from Rs 89. 50.

Sentiment in the Coal section continued to remain depressed in view of the anxiety with regard to the outcome of the enquiry by the Coal Price Committee. Even Burrakur, which had been ruling very firm around Rs 22.37, eased off to Rs 22.12 on lack of follow up support, while Bengal were rather quiet at Rs 213 against Rs 214. The announcement of a reduced dividend caused New Beerbhoom to slip down to Rs 13.53 from Rs 14.37. Western Bengal were offered at Rs 5.12 against Rs 5.24. The only steady feature was Central India which received support upto Rs 6.00 from Rs 5.87.

Textile scrips lacked any support on the feeling that the industry was now passing through an anxious time owing to heavy imposts. Lower advices from the piecegoods market were another contributory factor. Dunbar were marked down to Rs 167 from Rs 176; Cawnpore to Rs 5.50 from Rs 5.81 and Elgins to Rs 17.75 from Rs 20.25. Kesoram, after touching a new low of Rs 13.00 from Rs 13.31, closed better at Rs 13.12. New Victoria moved between Rs 1.56 and Rs 1.65.

Dealings in the Tea section were few and far between. The discouraging results of auctions held during the past few weeks, fears of over-production and a shrinkage in the volume of domestic demand, and the anxiety with regard to the profitability of the gardens, especially of those situated in Cachar and Dooars in view of the recent bonus agreement with the workers —all these factors had a depressing effect on sentiment. The withdrawal of the increased excise duty had, therefore, no effect on the market where sellers predominated in all issues. Brooke Bond changed hands at Rs 16.50 to Rs 17.13 against Rs 16.88 in the previous week. Bishnauth at Rs 18.44 to Rs 18.56 against Rs 18.50. Hasimara at Rs 20.37 to Rs 20.50 against Rs 21.00 and Tukvar at Rs 11.31 against Rs 11.37. Hantapara and Jayshree were nearly maintained at Rs 157 and Rs 9.93 respectively

Sugar shares came in for limited enquiry as operators had the feeling that profit-margins might be affected if the mills had to share a portion of the increased impost in view of the consumer resistance at the prevailing rates for the commodity. Belsund ware on offer at Rs 10.31 against Rs 16.75. Carew were a shade better at Rs 7.31 against Rs 7.25 with SKG moving narrowly between Rs 9.87 and Rs 10.00.

Engineering shares had a mixed reception. There was a good deal of investment buying in Indian Irons, resulting in the scrip showing a further recovery from the recent low levels. Against the week-end closing of Rs 18.42, Indian Irons opened higher at Rs 18.51 and, after touching a low of Rs 18.45, advanced again to Rs 18.93, to finish the week at Rs 18.68 on profit-taking. New shares touched a low of Rs 17.30 and a high of Rs 17.60 to close at Rs 17.39.

Among other Engineerings, the Mundra group of shares came in for heavy liquidation, Jessop being offered further down to Rs 21.50 from Rs 24.06 and Richardson to Rs 12.81 from Rs 15.06. TEXMACO were at one time taken upto Rs 17.60 from a low of Rs 17.20, to finish at Rs 17.15. Marshalls changed hands at Rs 4.56 to Rs 4.65; Indian Galvanizing at Rs 19.62 to Rs 19.93 and Braithwaite at Rs 25.00 to Rs 25.25. G. K. Williams, after recording a new high of Rs 28.50 from Rs 27.25 on renewed investment demand, eased off at the close to Rs 28.00 on modest profit-taking.

Thanks to investment enquiry, the Miscellaneous section provided a few firm spots. Prominent amongst these were Alkali Chemicals having forged ahead to Rs 13.69 from Rs 12.06. Indian Copper to Rs 3.43 from Rs 3.37; Dunlop Rubber to Rs 18.90 from Rs 18.62 x.d.x.r.; Indian Aluminium to Rs 13.00 from Rs 12.87 and NICCO to Rs 20.25 from Rs 20.12. National Carbon hovered idly around Rs 23.50. Rohtas around Rs 17.56 and Indian Cable around Rs 22.87. India Steamship were a narrow market around Rs 9.81 with BIC offered further lower at Rs 5.80 from Rs 6.33. In the Paper section, Orient fluctuated rather erratically between Rs 25.60 Rs 25.25, while Titaghur week at shade better at Rs 33.50 against Rs 33.37. Bengal, after a long time, came in business at Rs 75 against Rs 100. Shree Gopal were nominally quoted at Rs 14.75.

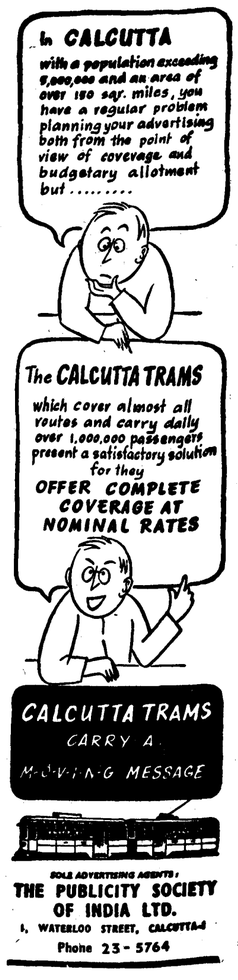
*

EDITORIAL NOTES

(Continued from page 1076)

the problem of meeting the expenditure in connection with the Second Five-Year Plan has become rather difficult. While the overall target of expenditure in the State during the Second Plan period was fixed at Rs 99.97 crores, the total expenditure envisaged within the State sector itself was about Rs 60 crores. But ways of raising additional tax and non-tax revenue are being explored by a Committee of Cabinet constituted for that purpose.

CLIVE STREET GOSSIP



(Continued from page 1084)

importance of it as a book, pay him as handsomely as the "collector"). And what opportunities for heroism, especially for those who claim that they "revel" in certain books! Since severe penalties would be imposed on people who keep with them copies of books that have been banned, a brave soul may be seen poring over the banned volume in great secrecy and in acute discomfort. If that does not cure him of his passion for his book, well, he is entitled to keep it. If, on the other hand, he is caught in the act by Authority, and a heavy fine is imposed, well, that would straightaway boost the book up, and it will be allowed to come back into general circulation. And so on....

INDUSTRIAL INFORMATION

(Continued from page 1081)

average for this sub-group showed an increase of 8 per cent at 403 over the preceding year.

In 'Mineral Oils', Petrol did not show any change, but in Kerosene there was a slight rise in October, 1956, due to which the sub-group index for the year 1956-57, stood at 209 against 207 in 1955-56. All 'Vegetable Oils' except Linseed oil continued their previous year's upward trend. It was only in the last quarter that their prices began to decline; the sub-group index rose from 528 in the beginning of the year to 632 in December, 1956, but at the end it stood at 577 showing a net gain of 9 per cent in the year.

The average for 1956-57 worked out to 582 which was 50 per cent higher than the average for the preceding year. During the course of the twelve months, Coconut oil advanced by 16 per cent, Groundnut oil by 2 per cent, Mustard oil by 16 per cent, Castor Oil by 21 per cent, Gingelly oil by 5 per cent, but Linseed oil declined by 23 per cent. The annual average for Cotton yarn moved up by 15 per cent to 487. 'Metals' witnessed a rise of 20 per cent to 318 in the year under review. 'Oil cakes' also recorded an advance of 32 per cent to 447 in the year. Both coir yarn and timber showed higher levels due to which the average index for the residual sub-group went up by 9 per cent to 363 in 1956-57.

MANUFACTURES

The annual average for Jute Manufactures' was 416 in the year under review against 418 in the preceding year. 'Cotton Manufactures' showed a rise of 4 per cent to 420 but 'Rayon and Silk Manufactures' and 'Woollen Monufactures both witnessed a fall of 6 per cent and 7 per cent respectively to 455 and 265. Higher prices of Iron and Steel, machinery and vehicles raised the index for 'Metal Products' by 8 per cent to 386 during the year under review.

The index for the sub-group 'Other Manufactures' also moved up by 3 per cent to 294. Foot wear, Cement, Paper, Glass, Soap, Paints and Liquors showed increases while Tyres and Tubes witnessed a fall.

MISCELLANEOUS.

This sub-group, which includes Vanaspati (Dalda), Spices and Condiments, Betelnuts, bricks and tiles, and tobacco leaf also advanced from 496.7 in April, 1956, to 592.7 in January, 1957, but declined to 569.6 March, 1957. The annual average for the year under review showed a rise of 2 per cent to 559.3 as compared with 546.4 in the preceding year. The effect of increases in the average levels of Vanaspati (Dalda), Chillies, Betelnuts, Bricks and Tiles and Tobacco leaf was greatly offset by declines in Black pepper, Turmeric, Cummin and Cashewnuts during the year under review.

The attached statement brings out the comparative movements of individual groups and sub-groups during 1956-57.

CUSTOMS ADMINISTRATION

The Customs Reorganization Committee recently appointed by the Government of India to review the working of the Customs administration in this country, has issued its Questionnaire. Copies are being supplied to the various Chambers of Commerce, Trade Associations, firms, etc., who had furnished the Committee with material for the framing of the Questionnaire. The Committee now invites all other interests concerned to obtain their requirements of the copies of the Questionnaire from the Secretary, Customs Reorganization Committee, Central Revenues Building, Near Hardinge Bridge, Mathura Road, New Delhi.

CUSTOMS AND EXCISE REVENUE COLLECTED IN THE INDIAN UNION STATEMENT FOR THE MONTH OF MARCH, 1957.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross Sea and Land Customs Revenue collected in the Indian Union during the month of March, 1957, amounted to Rs. 1,767 lakhs as compared with Rs. 1,742 lakhs in the corresponding month of the previous year.

The comparison in the subsequent paragraphs should be taken to refer to that of the current figures with those of the corresponding period of the preceding year.

Of the total customs revenue collections, import duties accounted for Rs. 1,550 lakhs as against Rs. 1,427 lakhs, export duties for Rs. 169 lakhs as against Rs. 303 lakhs and land customs and miscellaneous for Rs. 48 lakhs as against Rs. 12 lakhs.

The total gross collection of Union Excise duties amounted to Rs. 1,765 lakhs as compared with Rs. 1,254 lakhs.

During the twelve months, April 1956 to March 1957, the grand total of gross Customs and Union Excise Revenue realised was Rs. 36,560 lakhs as compared with Rs. 32,019 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 14,318 lakhs as against Rs. 13,083 lakhs, export duties for Rs. 3,007 lakhs as against Rs. 3,750 lakhs, land customs and miscellaneous for Rs. 379 lakhs as against Rs. 200 lakhs and Union Excise duties for Rs. 12,856 lakhs as against Rs. 14,986 lakhs.

RECORD PRODUCTION AT MACHINE TOOLS FACTORY

The Hindustan Machine Tools Factory surpassed all previous production records by turning out a record number of 36 machine tools during May 1957. These machines include:

(i) 29 standard 1000 MM lathes,
(ii) Two lathes of 1500 MM produced for the first time in the factory, and
(iii) Five horizontal milling machines also produced for the first time in the factory.

The previous best performance of the factory was 25 lathes in January 1957.

With the factory touching the production rate of 36 machine tools per month, it has not only achieved, but far surpassed its target production rate, envisaged under the original programme, four years ahead of schedule. Under its original production programme, the factory was scheduled to reach an output of 400 machine tools per annum by 1960-61.

The project has made a remarkable recovery during the last one year. The first machine manufactured in the factory came off the production lines on May 31, 1956. Since then, production has been steadily stepped up to 25 machines per month by January 1957 and 36 machines per month by May 1957. Definite orders for over 200 machines have already been booked for delivery during 1957-58 and more orders are in the process of booking.

Rapid Indianization of the technical personnel of the factory has also been achieved during the year, the number of foreign technicians which stood at 85 in 1956 being reduced to 39 by May 1957.

CAST IRON RAINWATER PIPES AND FITTINGS

The Indian Standards Institution has circulated, for eliciting comments a draft standard specification for cast iron rainwater pipes and fittings. The standard water pipes of 50,75,100,125, covers the requirements for rain- and 150 mm. nominal bore, together with fittings and accessories.

In view of the Government of India's decision to introduce in the country the metric system of weights and measures, all values appearing in this standard have been given in the metric units.

Comments on this draft may be sent by August 10, 1957, to the Indian Standards Institution, 19 University Road, Delhi-8 or its branch offices in Bombay and Calcutta

TIN ORE DEPOSITS IN BIHAR

Shri K. D. Malaviya, Union Minister for Mines and Oil, gave out, in the Rajya Sabha the areas where occurrences of tin ore were known to exist in Bihar.

The areas were: Paharsingh hill in Ranchi District: Nurgo, in Hazaribagh District; and Dharas Pahar and Chhakarband Simratanri; Pihra and Chappatand in Gaya district

The Minister added that the Geological Survey of India was investigating Paharsingh area for tin ore deposits.

The Minister however, added that no tin mine had been discovered by Government in Bihar.

CORRUGATED ALUMINIUM SHEET DRAFT STANDARD CIRCULATED

The Indian Standards Institution has circulated, for eliciting comments, a draft Indian standard specification for corrugated aluminium sheet.

This standard covers requirements for general purpose sheet, industrial sheet and building sheet.

Corrugated aluminium sheet finds extensive application where use of aluminium is advantageous due to its inherent corrosion resistance, lightness and thermal efficiency.

The standard is divided into two parts. Part I includes clauses on general requirements, while Part II covers specific requirements such as profile, dimensions, finish, etc.

Comments on this draft standard may be sent by August 15, 1957, to the Indian Standards Institution, 19 University Road, Delhi-8, or its branch offices, in Bombay, and Calcutta.

*

SOUTH INDIAN NOTES

(Continued from page 1091)

wild life was under the active consideration of the State Government. So long as the Bill was not ready, stringent regulations for the control of firearms and for enforcement of the existing game laws would be issued and the Government would see to it that they were observed.

But laws and regulations are not enough. As the Minister himself said, "what was needed more was that the attention of the public should be focussed on the protection of fauna outside the Reserved area which are free from Game Laws". The wild life week celebrations every year is a valuable idea, which given wider publicity, should go a long way to draw the attention of the public to the national need for the protection of wild life.

The second set of measures aim at the opening of more sanctuaries and extension of facilities in the present ones. Most of the states in India have sanctuaries and game preserves and in some there are National Parks like the famous Ramganga National Park in U.P. Madras until recently lagged badly behind the other states in this respect. Mr Bhaktavatsalam's speech showed that the State Government were conscious of this drawback and were taking steps to improve and extend the existing sanctuaries. According to him, prior attention would be given to the Mudumalai Wild Game Sanctuaries the development of which was part of the Second Five-Year Plan. It is expected that the construction of roads and rest houses will be taken up before the end of the year. The Government also proposed introducing measures for improvement of the Bird Sanctuary at Vendanthangal. The question of opening of more sanctuaries was also being examined by the State Forest Department

The Minister's speech at the meeting conveyed the impression that there was no lack of earnestness and understanding about the problem of preservation of wild life amongst the officials of the Forest Department. What is lacking and without which the laws for wild life protection cannot be effective is a sufficiently large body of informed public opinion which will operate as a sort of authority strong enough to prevent the wilful and extensive breach of forest laws. It might help matters a lot in creating this public opinion if the publicity and the publications departments of the Government were asked to devote some time in drawing up a programme for sustained publicity explaining how unfortunate it would be if the national asset of having a rich wild life was thoughtlessly wasted.

This may shrink

This will not shrink

That's why people look for 'Sanforized' on the label!

The Trade Mark 'Sanforized' inspires such confidence that people all over the world pick fabrics trade marked 'Sanforized'—knowing they bear this assurance:
This garment will not shrink out of fit—even after many, many washings!

It adds value and prestige to your own label—enables you to sell with confidence—and assures the public that you take trouble to give them value.

People rely on you to serve them well—so serve them cloth labelled 'Sanforized'.

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2

For the Investor

"Slow Nationalisation"

Investment Gossip:

(THE friend of whom I wrote last week, was provoked into coming and seeing me. There followed what some might call a heated argument; but, to me, it was the epitome of what a humourous dialogue should be. I do not want to deprive readers of the rich pleasure to be found in perusing the views of this friend who, however, wishes to be anonymous. Therefore, I have tried to reconstruct the conversation as it took place; and what I said, and what he said, will be (I think) quite clear from the context. On, then, to the charge of 'slow nationalisation').

'You are right in saying that I have not got into touch with you. after Indian Irons crossed the Rs 18.50 mark; but that was due to purchases by the Life Insurance Corporation; and no other shares have improved. So, the market will continue to be steady so long as LIC is a buyer, and then, again, prices will fall."

'I admit that the LIC has stepped in like the proverbial friend in need. My own information is that the purchases in ACC, Tata Ordinaries and Indian Irons, have been for Rs 50 lakhs. But, surely, this is just what the market wanted. Their complaint so far has been that Government have done nothing to stabilise prices of equities. Now, not only has the LIC filled a lacuna, but also plans seem to be in the process of being drawn up for 'policy investment' in equities, with a body being formed consisting of the Reserve Bank Governor, the State Bank Chairman and the LIC Chairman. This body is regularly to invest a portion of the snowballing insurance funds in equities. Isn't this a bull factor?'

"On the contrary. TTK is a very clever man. He has stopped talking of nationalisation. Government have stopped referring to nationalisation. Nobody today even envisages nationalisation. But TTK is a clever man. All that he has to do is to ask the LIC gradually to purchase shares in the open market. As it is, the LIC holding in ACC is 26 per cent, and 18 per cent in Tata Ordinaries. So, TTK can bring about de facto nationalisation by buying steadily."

"This is extremely interesting! Over the last year and a half, your complaint has been that insurance funds, which in the past used to be regularly invested in equities, were idling away. Now, when the LIC recommences purchases, you object to it, and call it slow nationalisation! What is it you want Government to do?"

"I should say that they could help the market as much by purchase of preference shares. Why should Government concentrate on ordinary shares? Another thing. It is easy for TTK to come out with a strong speech—if I were the Finance Minister, that is what I myself would do—and then, when the prices fell, I would order purchases to be made. It is not by purchases of shares alone that prices can improve or the market can be helped. As you know, the most important thing for the stock exchange is the 'hawa'. And the hawa has been most unfavourable to purchases for so long a time. All the time, the talk is about taxes—Dividends Tax, Bonus Tax, Wealth Tax, Expenditure Tax. Inevitably, then, share prices fall. Inevitably, also, the LIC proceeds with slow nationalisation at cheaper cost."

"Why do you keep harping on slow nationalisation? Government have indicated categorically, more than once, that they do not have an ideological bias in favour of nationalisation. Tell me, are you really worried about the prospect of all industry in this country becoming state-owned?"

"No. All I say is that, on the basis of current prices, Government could buy over Indian Irons for something like Rs 7 crores net of the reserves of the company. Since the Indian Irons' profit is of the order of Rs 7 crores annually, that means that Government's purchase price could be just a year's profits."

"Look here, I think you are taking rather an extreme view. After all, if prices have fallen sharply—in the 24 hours after the Budget, it is estimated that the loss in the values of Tata Ordinaries, ACC and Indian Irons has totalled Rs 6.33 crores—it is the market that is largely to blame. Surely, you will agree with me that the Budget is by no means as black as it has been painted. For example, what do you think of the Expenditure Tax?"

"Frankly, the Expenditure Tax will affect only the fixed income earners with incomes exceeding Rs 60,000. No businessman will attract it; no businessman today earns Rs 60,000, just as almost every businessman (because of Estate Duty) dies a pauper. I think it is a good tax—but, confidentially, as Shakespeare might have put it, let the galled jade wince."

"I suspected as much. I suppose the position is no different in respect of the so called onerous burden of Wealth Tax."

"Certainly. Only fools and honest men have a net wealth in excess of Rs 2 lakhs."

"Why do you then say that the Budget has depressed prices?"

"Because, due to the Budget, it is more advantageous to have lower prices. Supposing share prices come down: then, there will be a capital loss, instead of capital gains—and this can be carried forward: the value of the net wealth will be lower; Estate Duty will be on a smaller quantum. In every way, thus, the Budget encourages lower prices."

"All right. I can see that, at least from the point of view of certain interests, it is more worthwhile for them to mark down share prices. But this is nothing new, since the stock exchange rules have always placed a premium on bear operations. The system of blank sales—with no commitments for giving delivery; the system of extraction of satta, whether or not the purchaser desires to take delivery; the system whereby the blank seller is given a present, for doing nothing at all, of Rs 3 in a year—surely, this is active encouragement of bear operations. In this view, it is clear, of course, that the first thing to be done is to eliminate this disability from stock exchange working. But, thereafter, do you have any suggestions as to the manner whereby the tone and tenor of the share market can be so improved as to bring into being a healthy investment climate in which there will be inducement For the Investor increasingly to support new equity issues?"

"Why, yes. Government policy so far, especially in the attitude that they have taken to the Indian Iron dividends, has scarcely been conducive to genuine shareholders' interests. If a request is made for an increase in the dividend, the answer blandly comes from Government that it would not be in the interests of shareholders to increase the dividend, because every available rupee of [illegible] must be used to reduce the inde[illegible]ompany. If the ques[illegible]posed that shareholders do not benefit at all, the complacent reply is that shareholders are more than repaid in terms of capital appreciation. If, in this context, shareholders hold out some hopes of a bonus issue, their hopes are quenched by a penal bonus tax of 30 per cent. If shareholders entertain the view that the company at least would be benefiting, bang! comes the imposition of Wealth Tax. In a word, the only entities that have really suffered are the investors. This cannot possibly be the intention of Government—but there it is."

"I am afraid that I am unable to find any fault in your line of argument. It is, I think, imperative for Government to show their bona fides by concrete action in the matter of their solicitude For the Investor. I cannot think of a better way in which markets can be toned up, investment health revived, and the shareholders' confidence regained than by Government approval of not a pettifogging but a substantial increase in the Indian Iron dividends. For what it is worth, I say to Authority: Give the shareholder his just due."

£ R$

Investment Notes:

IN a dull market, Metal Box shares have been ruling very firm around Rs 24.37, thanks to reports of an increase in profits from Rs 62.83 lakhs to Rs 66.05 lakhs for the year ended 31st March, 1957. The directors have recommended a final dividend of 11¼ per cent, making a total of 17½ per cent against 16¼ per cent for the previous year.

In this connection, we may add that the report in these columns, that the company has finalised arrangements for the manufacture of plastic containers, has been officially denied. According to the Metal Box Company of India Limited, this report is 'baseless.' Nevertheless, of course, on the announcement of the increased dividend and profits, there has been good cause for a rise in the Metal Box scrip.

It is understood that Gillanders Arbuthnot & Company has resigned the managing agencyship of the Lackatoorah Tea Company—a Pakistani garden in Sylhet. The new directors have offered to buy shares at Rs 20—the current market rate—at sellers' option.

Hindusthan Motors are now quoted around Rs 6.75. There is a prospective agreement between the company and the General Motors for the manufacture of a variety of General Motors' products in India. The company's existing ar-

HIGHLIGHTS

Let us imagine that there is a bank, newly formed, which is out to build up a good and thriving business.

Let us then say, that the bank attempts to attract Deposits by the crore.

For this purpose, the bank could widely publicise its intention of paying 10 per cent interest on Deposits.

Would such a bank get any business at all?

The answer, of course, is No. For, the depositor immediately suspects that there must be something wrong with a bank that needs to pay 10 per cent on its Deposits.

There is no reason to think that the analogy does not extend to cases where borrowings are on a larger scale.

Surely, the confidence commanded by a Government which is compelled to raise its borrowing needs at ascending interest rates must be feeble.

What is worse, ascending interest rates make for depreciation in existing giltedged outstanding.

So, what the investor might gain by higher interest is more often than not wiped out by capital loss.

This vicious circle must end, says the World of Finance article, in analysing Government's borrowing programme under the Second Plan.

Excellent Results of Shree Gopal Paper

THANKS to a high level of efficiency being kept up and manufacture of high standard paper, the Shree Gopal Mills Limited has reported increased earnings for the half-year ended 31st December, 1956. Production is higher at 7,041 tons as compared to 6,358 tons in the previous half-year.

The net profit for the year, after poviding for Depreciation and Taxation, amounts to Rs 10.29 lakhs against Rs 9.77 lakhs. In respect of allocations to Funds, the Depreciation amount has been raised to Rs 4.96 lakhs from Rs 4.65 lakhs, while Taxation amount is slightly lower at Rs 9.75 lakhs against Rs 9.90 lakhs. No provision is made for General Reserve against Rs 1.5 lakhs. Dividend is maintained at As 10 per share. The amount carried forward is substantially higher at Rs 3.18 lakhs against only Rs 1.18 lakhs brought forward.

The directors, in their report, have stated that, while all items of work required to be completed during the first phase of the scheme have not been fully completed, the work on Machine Nos. 1 and 2 has been completed, bringing the effective production capacity of the three machines to 53 to 54 tons per day, i.e., the target figure for the first phase.

The company's vanaspati factory remained closed for most period under review.

The directors have stated that, up to the time of the release of this report, the company had crushed as much as 26.77 lakh maunds.

£ R$

Shree Sitaram Sugar

The substantial rise in sales from only Rs 35 lakhs to as much as Rs 83.1 lakhs is fully reflected in the earnings of the Shree Sitaram Sugar Company, Limited for the year ended 31st August, 1956. The quantity of cane crushed is shown at 26.1 lakh maunds against 29.67 lakh maunds, while sugar manufactured is 2.76 lakh maunds.

The net profit, after Taxation and Depreciation, amounts to Rs 2.96 lakhs against only Rs 1.79 lakhs in the previous year. Allocations to all Funds have been increased; Depreciation from Rs 1.2 lakhs to Rs 1.32 lakhs; Taxation from Rs 1.2 lakhs to Rs 2.25 lakhs; General Reserve from Rs 75,000 to Rs 1.00 lakh and Development Rebate Reserve from Rs 20,038 to Rs 27,423. The dividend is however, maintained at 10 per cent.

£ R$

Bharatia Electric Steel

The working of the Bhartia Electric Steel Company, during the year ended 31st December, 1956, is satisfactory. This is reflected in the iucrease in production of Steel from 14,580 tons to 15,851 tons; Steel Castings from 4,264 tons to 5,412 tons and Rods and Bars from 17,505 tons to 19,830 tons. Sales have shown a substantial rise to Rs 1.85 crores from Rs 1.29 crores.

Net profit for the year, after Depreciation and Taxation, however, amounts to only Rs 3.27 lakhs against as much as Rs 8.17 lakhs in the previous year, mainly due not only a rise in "Salaries and Wages" from Rs 33.76 lakhs to Rs 41.13 lakhs; but also due to increased allocations to Funds. Depreciation amount being more than doubled to Rs 15 lakhs from Rs 7 lakhs and Taxation to Rs 10 lakhs from Rs 3.5 lakhs. The dividend is, however, reduced to Rs 1.25 from Rs 1.50 per share.

The directors have stated that some of the latest foundry technique have been introduced in the Works and they look forward to the future with hope and confidence.

£ R$

New Beerbhoom Coal

The difficult conditions generally experienced by the coal industry, during last year, are fully reflected in the working results of the New Beerbhoom Coal Company, Limited. Raisings for the year ended 31st October, 1956, are lower at 4.48 lakh tons against 4.79 lakh tons; and these would have been substantially higher, but for a strike for a period of four weeks. Despatches are also lower at 4.56 lakh tons against 4.72 lakh tons. Sales have consequently dropped down to Rs 75.62 lakhs from Rs 78.48 lakhs.

The net profit, after Depreciation and Taxation, amounts to only Rs 1.05 lakhs against Rs 3.18 lakhs in the previous year. Depreciation amount has been slightly raised to Rs 3.31 lakhs from Rs 3.24 lakhs, while taxation provision is lower at Rs 1.17 lakhs against Rs 3.2 lakhs.

Foreign Trade Opportunities

IT would be ungenerous to regard the periodical meetings of the Export and Import Advisory Councils as mere rituals, though the Commerce and Industry Minister seems to feel that hitherto there has been more of speeches and resolutions than concrete action. In recent years, alongside the growth of a foreign exchange consciousness, there has been increasing coordination between the Government and the business community in the matter of stimulating exports. The Advisory Councils, therefore have developed into a useful media for the exchange of problems and suggestions and the formulation of policies.

The series of Export Promotion Councils, some of which have lately been sending trade delegations and study groups to foreign countries, function as a real asset on the side of both the Government and private business. The Indian Consulates and Trade Commissioners abroad are also known to display greater vigour and vigilance in collecting helpful data. On the whole, the organisational set-up for export promotion and the manner in which it is now functioning does not leave very much to be desired. Mr Morarji Desai seeks to give the finishing touch to this organisation by setting up a Foreign Trade Board and appointing a Director of Export Promotion. Besides, the Export Insurance Corporation will soon come into being.

This striving for organisational perfection is praiseworthy; but it cannot yield the expected results, unless the Government bodies and the organisations of private business function in complete mutual understanding and trust. The State Trading Corporation claims that the recent expansion of ore trade is mostly due to its efforts. The established shippers and private trade generally challenge the claim and retort that the Corporation has entered fields where markets are assured and profits alluring. Mr Desai too regrets that there is still some resistance to the Corporation's activities.

This resistance is understandable, because private trade fears that the Corporation is encroaching on its field and is most anxious to take over the softer items. In this atmosphere of suspicion and complaint, the coordination sought for will not so smoothly be obtained. The recent announcement that the State Trading Corporation is going to take over in gradual steps the entire ore export is undoubtedly damping to private trade. It is exclaimed that ore exports have not been exploited to the full and that powerful importers were dictating terms to the private shippers from India.

These are circumstances which favour a monopoly and the Corporation, already having a lion's share of the trade, can well turn out to be more than a match for the foreign buyers. For a long time to come, the prevailing sellers' market in ores is likely to last. At the same time the Government are obliged to assure private business that the Corporation will not extend its activities for another specific period of time; and when it does propose to annex new items, established trade will be given sufficient notice. Without some such assurance the relations between the State Trading Corporation and private business in commerce will never be cordial. Mr Desai wants "the job to be done by the business community".

Private business, does not have its hands clean, either; it faces the charge of activities defeating universally accepted national aims, whenever opportunity arises. Considerable damage has been done to the prestige and popularity of Indian goods through wanton neglect of quality or unabashed adulteration. Sometimes, it is the exaggerated official concern for the small industries which does harm; for certain light engineering goods, toys etc, we gather, the small producers have earned a bad name in neighbouring countries.

The callousness of private trade is least excusable, when it concerns the distribution and supply of goods whose exports are curtailed. The remote anticipation of import restrictions invariably bolsters up the domestic prices. The usual exhortations from the Government against the practice is repeated this time too by Mr Desai and representatives of the Federation of Indian Chambers of Commerce have guaranteed good behaviour. The proof of the pudding is in the eating.

When both import and export policies are dictated primarily by considerations of foreign exchange, the nation cannot be too fastidious about what it should have and on what it could do without. A hefty cut in imports is in prospect; it is inevitable, as exports are not as resilient as we would wish.

A fierce scrutiny of imports is now going on. Shorter films need not be a privation. On the contrary, for sophisticated picture-goers they are a relief. Newsprint is likely to be spared any immediate slashing. But drugs, which the Commerce Minister is inclined to put among non-essentials face the threat. How far indigenous production will hold the fort is a matter to be seen and experienced. Let us hope that the charge of prejudice against indigenous medicinal products is genuine.

In cutting imports to the bare bone, the Government are taking another big risk in the direction of price increases. It should also be not overlooked that food has a great deal to do with the aggravation of the foreign exchange situation. There should be no room for the fond hope that a merciless axe on imports will be enough to stabilise the economy. The ultimate answer will have to be sought in assured domestic food production amidst an all-round increase in the output of agricultural commodities generally.

Indian Finance
Established 1928
June 15, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

On the export side too, it is the more important agricultural commodities which have disappointed severely, with tea forming the single exception. While in 1956, fruits and vegetables yielded Rs 4 crores more than in 1955, Cashew-nut Rs 3½ crores more and coffee another tidy sum over the previous years' yield, the yields from cotton, from pulses and grains, from ground-nut oil-cake and pepper registered a total set back of the order of Rs 40 crores. The fall in the export of agricultural commodities and the food imports around Rs 50 crores thus account for nearly half of the total trade deficit for 1956.

In striking contrast is the performance of mineral ores and a number of manufactured items. The ascendency of the latter group amidst the set-back in agricultural commodities in export trade is one of the inevitable manifestations of the changing character of economy. If the pressure of foreign exchange difficulties is not taken into account, this will be seen to be an altogether healthy trend, containing the clue for the direction of export promotion efforts in the future. It is stressing the obvious to say that the ore trade which has lately turned out to be so promising must be pushed up with reinforced vigour. Iron ore, in which India's resources are virtually inexhaustible and manganese ore in which the domestic demand is relatively negligible, are two outstanding items among prospective foreign exchange earners. The State Trading Corporation has a great opportunity before it.

In analysing the country-wise fortunes of India's export trade certain regions are seen to offer more resistance than others. The Commerce Minister referred to East and West Asia as areas where our effort to build up trade has yielded no significant results. In both these regions, the traditional market for Indian products such as lungis and other cotton piece-goods and tea does not seem to have suffered any conspicuous decline. It is new products which are finding it difficult to make headway. The reason is simple. The more industrialised nations are all there and spurred by determined political aims, they compete for the goodwill of these areas by dumping goods, extending aid, and even putting up with a considerable amount of local antipathy and abuse. Against such rivals, grim patience and superior business methods alone can succeed.

British Trade with China

ON May 30, the British Government took the decision to bring controls on trade with China on an equal footing with those on trade with the Soviet bloc. Till now, British exports to China were limited to a much smaller range of goods than exports permitted to the Soviet bloc. The relaxation of controls on the China trade has received uniform and unstinted approval in the British Press. The spokesman of the British Government, commenting on this decision, explained how it was just a return to reality, a step which could, in due course, bring more money into Britain and rescue the average Britisher's understanding of Anglo-US relations from one of its most unfriendly inhibitions. There is scarcely any doubt that the decision has been taken on the clear view that it could be beneficial to Britain in every way.

But the matter does not rest there. As a member of the Atlantic Community Britain is obliged to respect the wishes of its colleagues, particularly, the United States. US Press comment is critical. One Journal angrily describes this step as trading with an enemy.

What the US Government think of it has not been made clear. Mr Dulles said in a Press Conference in May 1956 that the British items controlled for China and left free for

the Soviet bloc were not of a strategic character, otherwise, they would not have found a place in the Soviet list. It is incredible that Britain would choose to flout US wishes if the matter remained so important in US eyes. Quite possibly, the US Government were properly informed before the British Government took the decision. President Eisenhower could not be insensitive to the manifest support which the British public has given to this step. More than all these, understanding must come from the very state of the circumstances in which Britain chose to act.

In fact, it is surprising that the relaxation was not attempted earlier. For the last four years. Britain was supplying Soviet Russia and Eastern Europe nearly 300 items which were being denied to China. It has all along remained obvious that whatever China required from among these exclusively prohibited items could be secured from the Soviet purchases from Britain. Actually, Britain and other Atlantic Powers were also aware of the transit of British goods to China via Russia. As far as China was concerned, the embargo was thus a fake, an illusion for those who did not know. It probably suited diplomatic form among the members of the Atlantic Community, to preserve this illusion.

The present over-due restoration of reality in Anglo-Chinese trade can have more than one explanation. A step which Britain could have taken at any time was postponed to a stage at which the Western Powers could regard China's political and economic independence of Russia as feasible. It would be ridiculous to force China to purchase British goods from Russia, paying more for it and involving greater delay in the whole process. The Manchester Guardian says, "The British are doing no more than bow to reality. The goods hitherto prohibited for trade with China have been able to reach there across the Soviet Union, and China's trade with Western Europe and other places has merely been forced into an abnormal pattern of dependence on Russian transhipment." This analysis should impress US opinion too.

Then there is the gentle pressure of necessity. Lately, Britain has been losing ground in the sterling area trade. While total imports into the overseas sterling area from the manufacturing countries showed a considerable increase in 1956, Britain's share was slightly on the decline. Germany, Japan and the United States were found to be gaining. Britain is compelled to seek fresh commercial pastures. Immediately, there is not likely to be any material change in the over-all British exports to Communist countries, as China may not be anxious to take directly from Britain what it was not indirectly taking through Soviet Russia.

But once the stigma of a discriminatory embargo is removed, there is bound to be greater appreciation of the scope for mutual trade. According to a Peking report, China may go in for large-scale purchases of machinery, precision instruments, steel mining and refining equipment etc., from Britain. The possibility of a British trade mission visiting China cannot be ruled out. A British manufacturing group is now erecting a complete industrial plant in Russia. Similar services can be extended to China. The partial lifting of the Chinese embargo automatically covers North Korea, North Vietnam, Tibet and Macao.

That the economic compulsions in Western Europe are breaking the restraints originally imposed on the Atlantic Community is a fact which can no longer be disguised. The UN Economic Survey for Europe for 1956 points out that both the Eastern European countries and the Soviet Union expanded their trade with Western Europe considerably in 1956. A big increase in this trade had already taken place in 1955. Western Germany sold to and bought from Eastern Europe goods worth about $250 million more than what it did in 1955. The embargo on strategic goods is there. The increase in the total volume of trade even outside the embargo is an unmistakable indication of the urge for as free an exchange of goods as possible between two regions, which, barring the post-war political frontier have little as a permanent dividing line.

The impetus for the removal of trade restrictions between Commuist countries and others has gathered force elsewhere too. Russia has agreed in principle to a Japanese proposal for the opening up of preliminary negotiations for a trade and payments agreement. Japan knows what the effect on China will be of a regular flow of Japanese goods into Russia. The British experience will be repeated. Neither does Japan seem unwilling to trade directly with China.

Trade between India and China has risen from Rs 1.8 crores in value in 1953-54 to Rs 9.2 crores during the first ten months of 1956-57. In India, there is the firm hope that freedom of trade between China and the Western countries will gradually undermine the political factors in the way of complete international recognition of China as a sovereign State. It is not too much to expect that the example set by Britain will be followed by a number of other Western European countries.

*

Letter to the Editor

Compensation on Closure of Business

Sir,

Those who are against the Bill now before the Parliament for payment of compensation to workers on the closure of business fail to appreciate that the Government has been obliged to take this step after being informed of some prosperous companies having changed hands, and the Purchasers having closed down business. Not only have workers lost their jobs without any cogent reasons but the Government has lost substantial taxes. Why should a group holding a big slice of shares of a profitable Company sell this block much below the break-up value? And why should the purchasers close down business under flimsy excuses? The reason is not far to seek.

These anti-social capitalists, to add a few more lakhs to their crores, have uprooted the lives of many middle-class families. Somehow, they escape punishment. The Bill in its present form may cause hardship in genuine cases. But something has to be done to protect not only the workers within the meaning of the Industrial Disputes Act, but all those officers and entrepreneurs who have given the best part of their life for the promotion and profitable working of joint stock companies which change hands, and the business is then closed down.

It is high time that people in power realise the changing social order. Honesty is expected not only from the working class, but also from the capitalists who must appreciate the fact that they cannot continue to amass fortunes all the time.

Yours etc;
Phiroz P. Ginwalla
F.C.I.I. (Lond)

BALANCE-SHEET REVIEWS

(Continued from page 1104)

The directors have recommended a final dividend of 37 nP, making a total of 75 nP for the year as against 87 nP in 1955.

£ R$

Sutna Stone & Lime

Increased demand and satisfactory wagon position have enabled the Sutna Stone & Lime Company, Limited to report an increase in sales from Rs 7.98 lakhs to Rs 9.71 lakhs for the year 1956. The net profit is slightly higher at Rs 68,259 against Rs 65,177 in the previous year. After setting apart a sum of Rs 18,344 for Depreciation, Taxation provision is raised to Rs 67,000 from Rs 48,000. The directors have recommended a final dividend of 75 nP making a total of Rs 1.37 per share as against Rs 1.19 in 1955.

£ R$

Bhurangya Coal

The Bhurangya Coal Company, Limited has reported a slight rise in raisings from 36,895 tons to 40,009 tons and in despatches to 34,599 tons from 32,916 tons for the year ended 31st March, 1956. Sales have improved to Rs 5.32 lakhs from Rs 4.68 lakhs. The year's accounts show a loss of only Rs 1.28 lakhs against Rs 1.62 lakhs in the previout year. A sum of Rs 98,884 against Rs 75,155 has been set aside for Depreciation. The dividend is passed over again.

£ R$

Mettur Industries

The maintenance of selling prices for the products of Mettur Industries Limited at the 1955 56 levels in spite of higher raw cotton prices, and the decrease in production on account of power-cuts, resulted in a slightly lower level of profits in the year ended 31st March. 1957. Sales are not, however, much changed at Rs 1.52 crores. But, for reasons stated above, the net profit, before providing for Depreciation and Taxation, has declined to Rs 39.44 lakhs from Rs 50.33 lakhs in the previous year.

In respect of allocations, the Depreciation amount is raised to Rs 1.91 lakhs from Rs 1.88 lakhs and Taxation to Rs 23.50 lakhs from Rs 21.77 lakhs. The directors have found it necessary to allocate Rs 2.44 lakhs out of the profits in addition to the amount of Rs 9.2 lakhs provided earlier for the payment of bonus in respect of 1954-55 and 1955-56. The Ordinary dividend is, therefore, lower at 20 per cent agains 42½ per cent.

£ R$

Peermade Tea

The Peermade Tea Company, Limited has made a net profit, before providing for Depreciation and Taxation, of Rs 11.77 lakhs for the year ended 31st December, 1956 as against Rs 10.09 lakhs in the previous year. The directors have set apart Rs 1.01 lakhs (Rs 68,206) for Depreciation and Rs 4.91 lakhs (Rs 4 53 lakhs) for Taxation. The directors have recommended a final dividend of 27½ per cent, making a total of 37½ per cent for the year as against 35 per cent.

The outturn of tea is 18.87 lakh pounds as against 18.55 lakh pounds in 1955. The average price realised is 202.28 cents per pound against 185.03 cents, while the all-in cost is 174.49 cents against 162.52 cents per pound. The estimates for 1957 provide for a crop of 19 lakh pounds.

£ R$

Coonoor Tea

The Coonoor Tea Company Limited has reported a decline in earnings on account of a lower outturn for the year ended 30th September. 1956. The net profit amounts to only Rs 1.37 lakhs as against Rs 1.56 lakhs in the previous year. The amount set aside for Depreciation is raised to Rs 21,386 from Rs 15,329, while the Taxation amount is reduced to Rs 35,000 from Rs 50,000. The directors have recommended a final dividend of 7½ per cent, making a total of 17½ per cent for the year as against 25 per cent in 1955.

The tea crop of Coonoor is 226,077 pounds against 270,403 pounds in 1955 and of Adar 65,602 pounds against 50,898 pounds.

Editorial Notes

Penny Pinching

Has Kerala's precept so influenced the Centre, that it needs to be expeditiously followed? Or is it that Government wish to impress upon the people their bona fides in the matter of securing economy in administrative expenditure? Whichever of the two is the motivating factor, we fail to be convinced that a reduction in the emoluments of Cabinet Ministers was either desirable or necessary.

If it is the Kerala example that has been the persuasive factor, we should hasten to point out that that State's Communist Government have presumably decided to effect a cut of Rs 250 in the salaries of their Ministers with a view, not to economy, but securing approbation for what is in the nature of a circus stunt. For, even in Russia, the divergences, if not in the earnings, at least in the facilities commanded are substantially wide as between the worker and the executive or administrator. Secondly, if the Centre's decision has been taken independently and in pursuance of the objective of a socialist society, it cannot be (and it should not be) the Government's intention to foster egalitarian ideals merely by bringing down earnings at the higher levels. Indeed, a Minister's salary is at a figure that can by no means be described as falling into this category.

If economy is the aim, this penny pinching is even more difficult to rationalise. For, the savings accruing to the national exchequer are scarcely of the order of Rs 1 lakh a year. Unless it is Government's intention to extend the salary cuts to the whole of the administrative personnel in the public sector, the present action is fruitless; and we, for one, do not have any sympathy with a suggestion of this sort, since the loss in incentive and capacity or willingness for hard work will be far more than any so called gain from a lower salary bill for administration.

The decision is not without its bemusing aspects. So short a while ago as the session of the AICC, Mr Nehru came out with a reasoned case for the maintenance of ministerial salaries at the present levels; and, in order to prove his case, he vouchsafed the information that India's Prime Minister was, after taxes, making do with Rs 1600 a month (were it not for the royalties from his books, his personal Budget might not have balanced:) Why, then, this sudden reversal? The only rational explanation is that India wishes to impress the West (which, in orthodox style, is averse to high level of governmental expenditure) that, in tackling the problem of inflation, it is also turning its attention to the factor of Government disbursements.

*

Troubled Nepal

It is a pity that Indian influence in Nepal threatens to wane at a time when it could be most beneficial. It is highly embarrassing to ask which other country is pushing in. Outwardly, there is a fastidiously maintained neutrality among Nepal's neighbours. But beneath the surface, one Nepalese leader tells us that Chou En Lai is winning.

Recently, South Nepal was the scene of an abortive coup d'etat. The Government of Nepal succeeded in putting it down. But the manner in which the revolt was organised reveals the presence of master-minds behind. It is a challenge which is much more than an outburst of infuriated local discontent. Nepal is soon going to have a Constituent Assembly which is expected to draw a fully democratic Constitution. No one can forecast whether it will be a democracy of the type prevailing on this side of the border or on the opposite.

Innumerable political parties are in existence, with no common aims other than the pursuit of petty individual and group ambitions. Any development which undermines the prestige and authority of the monarchy, which for the time being appears to be the only consolidating element and rallying point for undistracted nationalism, can well turn out to be a factor for chaos domestically and for concern for India. Both Indian public opinion and the Government of India are therefore obliged to assess events in Nepal without bias or illusion, and to seek expression in a manner calculated to ensure the real independence of this small buffer State.

*

Workers in Management

The Study Group which visited European countries surveying workers' participation in industrial management, has advised a guarded and phased programme for India and permissive legislation for that purpose. Its Report is guided as much by the hope of creating a genuine industrial democracy in India as by the complexity of the present industrial set-up and the lee-way yet to be made in the direction of workers' organisation and education. Workers' education and training for active participation in the different aspects of industrial management are emphasised as indispensable preliminaries and the State, employers and trade unions are called upon to take a joint initiative in this matter.

Though in the recommended legislation, joint councils of management are sought to be provided for, the Report insists that for a considerable length of time such councils should be content with no more than consultative functions. Always they have to exist alongside well organised trade unions. The only two representatives of employers in the private sector, who belonged to the Group, somehow could not proceed on the tour.

Their absence, however, does not appear to affect the essential soundness of the Report, which quite realistically asks the State to experiment with workers' participation in its own industries before the private sector introduces it on a wide scale. The Group attaches supreme importance to the sense of identity of interests between employers and workers. It is rather doubtful if this sense could be fostered by any step short of enabling large numbers of workers to get access into the managerial class. The creation of a managerial class, normally open to those who begin life in the humbler ranks of service, could alone ensure the development of a sense of common interest, without which no external apparatus for joint participation would adequately meet the ends in view.

*

The National Income

The total increase in national income during the First Plan Period has agreeably exceeded expectations. Against a target of 11 per cent increase in real terms, national income rose by 17.7 per cent. The growth of population neutralised a part of this increase but was not large enough to limit the increase of per capita income to less than 10.5 per cent.

While the increase over the five years is not unsatisfactory, the unevenness in its pace is disquieting. The bulk of the increase took place in the first three years, the net national income under stable prices, rising from Rs 80,850 crores in 1950-51 to Rs 10,030 crores in 1953-54. In 1954-55. the national output was equivalent to Rs 10,280 crores and in the succeeding year it was Rs 10,420 crores.

Agriculture was the principal source of the relative set-back in these two years. The figures underline both the importance and the undependability of agricultural output for the economy.

*

Cut in US Foreign Aid

The two major pieces of news, received this week from the American Continent, are both of a rather disquieting kind. The Conservative victory in Canada, though the leaders assure, will not influence the Dominion's international policies, has to be assessed in the light of future events.

More serious is the decision of the US Senate's Foreign Relations Committee to cut the foreign aid programme by 2,525,320,000 dollars from what was originally requested by President Eisenhower. There are some conditional clauses to the Draft approved by the Committee; aid to Yugoslavia could continue under certain circumstances. In any event, the damage done to the President's requested figure is colossal. Let us hope that at least part of the cut will be restored.

World of Finance

New Loan Grooming

THE Centre's prospective New Loan for 1957-58 has begun to be a subject matter of more compelling interest, particularly since it is now anticipated that its issue may take place somewhat earlier than it had been originally estimated. At this stage, all that can be said is that Government are being egged on to a 4 per cent borrowing rate. With the raising of Bank Rate a month ago, and with the index of Government securities declining to 89.6 from 90.0 (1949-50=100), the evidence seems to be fairly conclusive either for the planning by Government of the New Loan at a higher rate of interest or for the New Loan being issued at a discount. We may state here that it is our considered view that this ascending pattern of interest offered or the ostensibly increasing favourable terms for the investor constitutes a giltedged policy which far from guarantees the success of the borrowing programme of the Government. Before, in this regard, we enter into a detailed discussion, we should be clear in our mind as to the target that, in terms of the Second Plan, is to be achieved by the Central Government in their borrowing programme.

According to the Second Plan, the resources to be raised by borrowings from the public were put down at Rs 1,200 crores. Of this, Rs 700 crores represented the target for market loans, and Rs 500 crores the anticipated yield from small savings. Taking the former,—for the purposes of this article, we need not deal with the latter—we have to add to the figure of Rs 700 crores an amount of Rs 430 crores representing maturing loans over the period of the Second Plan. This target of gross borrowings of Rs 1130 crores was described in the Second Plan as being a task that "cannot be regarded as easy of fulfilment".

Since the publication of the Second Plan, it has become obvious that the targets of resources had to be revised in respect of a number of essential heads. The paramount alteration was derived from the necessity to reduce the dependence on deficit financing from Rs 1200 crores to a figure around Rs 800 crores. Consistent with this reduction in the reliance on deficit financing, it became necessary—this has been the Indian Finance view—to raise the target for market borrowings to Rs 1500 crores gross.

We need, at this stage, to make it clear that this is a target for both Central and State Governments loans. On the basis of this target, the annual average gross subscriptions for both Central and State loans need to be around Rs 300 crores. In the first year of the Second Plan, the Centre's New Loan realised Rs 158 crores; and the State Government loans brought in Rs 68 crores. In other words, in the first year of the Second Plan, the total obtained by way of market borrowings was Rs 226 crores. This figure, while fulfilling the annual target as laid down in the Second Plan, falls short of Indian Finance's revised target by something like Rs 74 crores. This, however, need not cause undue concern since, normally, realisations from New Loans would, in the circumstances of an expanding economy, increase year by year. In order that the optimum benefit is derived from such favourable circumstances, a prerequisite is a sound giltedged policy. Unfortunately, such a sound giltedged policy is yet to be evolved.

3	per cent Victory Loan 1957	...
2½	per cent Bhopal War Bonds 1957	
4½	per cent 1958-68	... ...
3	per cent 1958	.. ...
3	per cent Second Victory Loan 1959-61	... ...
2½	per cent Hyderabad Development Loan	.. ..
2½	per cent 1960	... ...
4	per cent 1960-70	.. ...

Reverting to the theme of the borrowing programme of the Centre, it is to be noted that, in 1956-57, roughly one-fifth of the liability against maturing loans has been met. The other outstanding loans, due to mature in the Plan period, are as follows:

Earliest Date of Maturity.	Estimated Amount on 31-3-1957. Rs. 34.77 Crores
1-9-1957	
1-11-1957	0.26
1-6-1958	5.96
16-8-1958	50.36
15-8-1959	113.66
16-10-1959	7.55
15-7-1960	45.63
15-9-1960	63.30
	321.39

It is to be noted that three of the loans have a later redemption date that falls after the Second Plan period. It seems reasonable to suggest that, where the terms of the existing loan are more favourable to Government than would be the terms of a redemption or conversion loan, Government should choose the later date of maturity. In this light, it is possible that Government should choose to redeem the 3 per cent 1959-61 on the later date of maturity of 15th August 1961; the amount involved is Rs 114 crores. Similarly, the 4 per cent 1960-70, although the rate of interest is higher, may not be redeemed because Government might seek to avoid re-financing for Rs 63 crores during the Plan period. Thus, it is possible that the gross target for market borrowings could be cut down by Rs 177 crores in behalf of these two loans. In round figures, it may mean that the target of market borrowings could be brought down to Rs 1300 crores gross instead of Rs 1500 crores gross suggested in Indian Finance's revised estimates.

This, however, would presuppose that Government's borrowing rate by September 1960 will rise to 4 per cent; for, otherwise, it would be strategically impossible for Government not to redeem the 4 per cent 1960-70 at the earlier date of maturity. For our part, we cannot envisage a successful Second Plan borrowing programme wherein the rate of interest offered steadily rises. Since our presumption must be that Government giltedged policy will be so revised as to fulfil the programme of borrowing, it follows that the 4 per cent 1960-70 will be redeemed on the earlier date of maturity. Nor, may we suggest, need there be faintheartedness about the attaining of the higher targets of borrowing that we have indicated.

Inevitably, we have to look to the experience in borrowing during the war in order to discover whether, even in the circumstances of Bank Rate having been raised to 4 per cent, a descending rate of interest on New Loans cannot be built up. First, it needs to be realised that the magnitude of borrowing in the period 1940-41 to 1944-45, though not quite of the size of the target for the Second Plan, is still large enough to allow of comparison. In the course of these five years, Defence loans brought in a total of Rs 834 crores. What, we may ask ourselves at this juncture, was the essential attribute of such a successful borrowing programme? The answer is pithily given in the Report on Currency and Finance for 1944-45:

"While Government have financed the war mainly on a 3 per cent basis, improvement in the terms of borrowing has been secured through raising the periods of maturity of successive fresh issues. ....Government's ability to float loans on progressively favourable terms has contributed to the steadiness of the giltedged market and reinforced the policy of cheap money."

The crowning achievement under the head of wartime borrowing was the decision by Sir Archibald Rowlands, in April 1946, to redeem 3½ per cent undated stock, and to offer 3 per cent 1986 in conversion thereagainst. In the face of gloomy predictions on every side, the conversion was a colossal success, with Rs 282 crores opting for the new stock out of the total 3½ per cent paper outstanding of Rs 288 crores.

The relevance of the foregoing to the Second Plan's borrowing programme is quite obvious. Firstly, the target is not an impossible one; not even a task that is not "easy of fulfilment"—provided Government can float loans on progressively favourable terms, not to investors, but to themselves. Secondly, it is imperative for Government to decide upon a pattern of yields offered on successive loans that will be progressively favourable to them. Thirdly, New Loan realisations can be stepped up quite substantially each year, as the following table, in respect of Government borrowings during 1940-41 to 1944-45, discloses:

		crores
1940-41	.. Rs	112.22
1941-42	.. Rs	77.86
1942-43	.. Rs	103.47
1943-44	.. Rs	315.82
1944-45	.. Rs	224.90

Applying the lessons to be learnt from wartime borrowing, it will be seen that a lag in realisations in the second year need not cause undue concern. We repeat that the revised target of Indian Finance for market borrowings was Rs 1500 crores gross; and, from this, we may deduct Rs 100 crores (in round figures) in respect of the 3 per cent Second Victory Loan 1959-61, which could be redeemed after the Second Plan period; so, the new target that we suggest for the Second Plan is Rs 1400 crores gross. Except in 1960, maturing loans are for a sum not exceeding Rs 60 crores in any single year. It is, consequently, unnecessary to make an extra allowance in the New Loan targets for each year for meeting the maturing liabilities. We would suggest that the gross targets for New Loan realisations could be somewhat on the following lines:

		crores
1956-57	.. Rs	226
1957-58	.. Rs	150
1958-59	.. Rs	324
1959-60	.. Rs	400
1960-61	.. Rs	300

We would like to make a final suggestion. It may not be possible for Government to have a 3 per cent Second Plan; but it must be their aim to make the Third Plan a 3 per cent plan. This, however, is not capable of being accomplished by reduction of the interest offered; unfortunately, the 3½ per cent to 4 per cent interest rates for Government borrowings have come to stay. But the manner in which Government should gradually rectify this is by issuing each successive loan at a premium: that is to say, from the starting point of a 3½ per cent medium-term loan issued at a discount (in 1956-57) Government should, by 1960-61, be issuing New Loans of longer maturity, offered at rates such that the yield is, say, 3½ per cent.

The conclusion, thus, is that Government cannot expect to realise subscriptions in any substantial amount in 1957-58; but it is already time for them to prepare the groundwork for evolving a giltedged policy which can ensure the attainment of the target of Rs 1400 crores gross from market borrowings during the Second Plan. One last word: the State Governments should prudently abstain from New Loans this year.

Selective Control on Foodgrains Advances

Government would appear to be certain in their minds that part at least of the upward spiral in foodgrains is derived from speculative activity which, in turn, was indulged in and enabled only after bank accommodation therefor was obtained. In this light, swift action in consonance with the Government's policy of selective monetary control was announced last week.

In a communique issued by the Reserve Bank, Scheduled Banks have been called upon to impose a margin of not less than 40 per cent on foodgrains and to reduce the level of their advances to certain proportions by July 12.

Stating that bank advances against rice and paddy, at Rs 22 crores, were 97 per cent higher than the level in the corresponding period of 1955, the Reserve Bank has also issued a directive that no fresh credits exceeding Rs 50,000 against rice and paddy and Rs 50,000 against other foodgrains should be given.

Explaining that bank advances, 'at a high level', may be aggravating the price situation in foodgrains, the Reserve Bank has directed that, as from July 12, the advances against rice and paddy should not exceed 66-2/3 per cent of the level in the corresponding week of 1956; similarly, accommodation against other foodgrains should be below 75 per cent of the level in the corresponding week of last year.

That Government may be more than partly right is suggested by the fall in foodgrains prices in South Indian Markets since it was announced that confiscated stocks of hoarded rice would be paid for at an 'average' price.

It is interesting to note that the current Reserve Bank action is the second time in thirteen months that selective monetary control has had to be applied in respect of foodgrains. Since it is not improbable that the balance between supply and demand in foodgrains will be close, we may take it as certain that the Reserve Bank may be called upon recurrently to impose restrictions on advances in this sphere.

+

The Chartered Bank

The following announcement was issued early this week by The Chartered Bank and by the Eastern Bank Limited jointly:

The Directors of The Chartered Bank and The Eastern Bank Limited announce that following discussions between them The Chartered Bank proposes to make an offer to acquire the whole of the issued share capital of The Eastern Bank Limited on the basis of £9 fully paid stock of The Chartered Bank for every 2 shares of £10 each (£5 paid) of The Eastern Bank Limited.

Full particulars relating to the offer will be set out in a Circular Letter from The Chartered Bank to the Shareholders of The Eastern Bank Limited which will be sent to them not later than 22nd June 1957 under cover of a Circular Letter from the Chairman of The Eastern Bank Limited.

The offer will be expressed to be conditional upon (inter alia) its acceptance by the Holders of 90 per cent of the issued shares of The Eastern Bank Limited or of such smaller percentage as The Chartered Bank may agree to accept.

The Directors of The Eastern Bank Limited intend to accept the offer in respect of their own beneficial shareholdings and will unanimously recommend the shareholders of The Eastern Bank Limited to do the same.

The main advantages expected to result from the proposed merger of the two Banks are improved opportunities of expansion and the establishment of a combined organisation to operate throughout the Middle East and the Far East.

The Directors of the two Banks particularly desire to emphasise that the proposed merger will in no way adversely affect the conditions of service (including pension rights) of their staffs and is not expected to involve any redundancy.

+

Lower Bank Advances

THERE are indications that the Reserve Bank has set in motion the first phase in the preparations for the issue of the New Loan. The active grooming in this regard has taken the form of purchases of giltedged, not, as it has happened during the past busy season, for rendering apposite help to such Scheduled Banks as needed to replenish their resources, but with a view to lending stability to prices and, perhaps, also to augment the Reserve Bank's holdings of the loans that lend themselves for conversion operations. These open market operations are, of course, reflected in an increase in Investments in the Banking Department; but the magnitude of the purchases cannot be accurately gauged for the reason that the Reserve Bank's holding of Rupee Securities has also been rising due to two other causes. What exactly has been happening in this regard is typically brought out in the Reserve Bank's returns for the week-ended June 7.

In the first place, month-early disbursements would seem to have necessitated deficit financing by the Central Government, on the one hand, and sales of giltedged by the State Governments to the Reserve Bank, on the other. At the same time, the month-early demand for money has also been responsible for a sharp increase in Active Notes.

Thus, there has been expansion of currency against Rupee Securities for Rs 9.94 crores; and the proceeds thereagainst, representing deficit financing, have presumably been credited to the account of the Central Government. Rupee Coin has gone out into circulation for the substantial amount of Rs 1.70 crores. Active Notes have shot up by Rs 17.94 crores to Rs 1587.94 crores. The Reserve Bank's cash in the till has been reduced by Rs 9.70 crores at Rs 16.30 crores.

In the Banking Department, it is to be observed that Investments have risen by Rs 6.10 crores. The significance of this rise will be better understood if we study the trends in the balances of the Central and State Governments.

The Centre's balances, despite deficit financing for Rs 10 crores, have risen only by Rs 1.00 crore to Rs 54.65 crores. State Governments have run down their balances by Rs 5.42 crores to Rs 1.41 crores in spite of increasing their borrowings from the Reserve Bank by Rs 5.30 crores to Rs 24.30 crores. The rise of Rs 2.37 crores to Rs 4.64 crores in Government Treasury Bills Purchased and Discounted suggests the sale by State Governments of some of their ad hoc holdings in order to replenish their balances.

The rise of Rs 6.10 crores in Investments may, consequently, be due either to purchase of marketable securities from State Governments or to outright purchases of giltedged in the course of open market operations. We are disposed to think that the latter hypothesis is more likely. However, such open market purchases need not necessarily wholly relate to giltedged bought from Scheduled Banks. The magnitude of open market operations may appear to be somewhat large. But, presumably, Government may intend this year to offer conversion facilities for the 3 per cent 1958 and the 4½ per cent 1958-68, just as, last year, conversion facilities were offered a year in advance for the 3 per cent Victory Loan 1957.

We may note here that, in 1956, the Centre's New Loan realised Rs 79 crores by conversion of the 3 per cent 1957 and Rs 78 crores by cash. According to the Finance Minister's Budget for 1957-58, credit has been taken for a new loan of Rs 100 crores, with Rs 31.50 crores provided for the discharge of debt relating to the balance of the 3 per cent 1957 Loan falling due for redemption. The two 1958 loans that we have mentioned involve a total of Rs 56 crores. On the basis that conversion and cash subscriptions in 1957 will be on the lines of the realisations in 1956, it is not improbable that Government should decide, as we have indicated, to offer conversion facilities for the 1958 loans. In that contingency, the Centre's gross borrowings (including conversions) for 1957 will be the same as in 1956.

Reverting to the returns of the Reserve Bank for June 7, it is to be noted that month-early disbursements have, at least as far as concerns the position vis-a-vis the central banking institution, negligibly affected the balances of Scheduled Banks. In fact, Deposits of member banks rose by Rs 0.38 crores to Rs 68.62 crores. However, their borrowings from the Reserve Bank appear to have risen somewhat, since the Reserve Bank's Other Loans and Advances have registered a rise of Rs 2.56 crores to Rs 109.11 crores.

Advances to Scheduled Banks against Usance Bills are more or less unchanged at Rs 58.42 crores. Finally, with a drop of Rs 8.60 crores to Rs 33.95 crores, Balances Held Abroad have reached a level when action of some sort by Government—almost certainly in the form of fresh purchases of currency from the International Monetary Fund—has become peremptory. (It has since been announced that the standby arrangement for $72.5 million has been drawn from the IMF).

+

The return of the State Bank for June 7 also confirms our view that month-early disbursements have not greatly strained Scheduled Banks. Deposits of the State Bank fell only by Rs 0.51 crores to Rs 306.39 crores; and cash balances have been run down by Rs 0.86 crores to Rs 29.03 crores. Advances have actually shown a decline of Rs 1.07 crores to Rs 188.12 crores.

+

The statement of Scheduled Banks for May 31 discloses another increase of Rs 6.21 crores to Rs 1253.89 crores in Deposits; in the relevant week, the augmentation in State Bank Deposits was Rs 2.81 crores. Borrowings from the State Bank have been diminished by Rs 0.54 crores to Rs 9.05 crores; and indebtedness to the Reserve Bank has been cut sharply by Rs 5.48 crores to Rs 80.79 crores. Cash balances have improved by Rs 5.75 crores, this being largely accounted for by the State Bank which, in the relevant week, had added to its cash balances by Rs 4.29 crores. Investments have been marked down by Rs 2.71 crores to Rs 340.63 crores; this is in confirmation of our suggestion last week that some part of the rise in Investments held by the Reserve Bank "is due to Scheduled Banks selling some securities to the Reserve Bank". We may take it that this forms part of Reserve Bank grooming for the 1957 New Loan.

Lastly, we may note that, for the first time since the week ended April 19, Advances have shown a decline. The total of Advances is sharply lower by Rs 7.43 crores at Rs 932.44 crores. Since, in the week ended May 31, Advances of the State Bank had remained unchanged, it is clear that the diminution is due entirely to a reduction in the Advances of the other Scheduled Banks.

Unseasonal Weakness of Sterling

By PAUL EINZIG

THE seasonal factor is usually in favour of Britain this time of the year. Yet sterling developed a distinctly weaker tendency towards the end of May and the beginning of June. This in spite of the fact that the resumption of Middle East oil shipments through the Suez Canal has brought considerable relief to the balance of payments, and the international political situation appears to have improved. The amount of gold and dollars that the Treasury was able to acquire during May was disappointingly small. As it is usually during the spring that the gold reserve is replenished, there is some concern about the probable effect of the autumn pressure on the gold position.

There is of course no cause for immediate anxiety. Owing to the additional dollar facilities secured by the Treasury, the reserve is not likely to decline below danger point. Even so, the outlook is far from happy. The by-election results towards the end of May made it clear that the Government is still as unpopular as ever. Even though there is no early possibility of the advent of a Socialist Government, the psychological effect of the increase in the percentage of votes cast for Socialists at by-elections is bound to influence the tendency of sterling. All the more so since recent Socialist proposals and pronouncements have been far from confidence-inspiring.

More important than the political factor is the fear of an accentuation of inflation. The National Coal Board's decision to depart from the policy of price stability and raise the price of coal in accordance with the higher cost has produced a very unfavourable impression. All efforts to keep prices down have been unable to induce the trade unions to abstain from pressing for further wages increases. Should there be a rise in the cost of living the wages demands are bound to become further accentuated.

There is an endless argument proceeding in Britain on the question whether the wages demands are the cause or the effect of the rise in prices. Yet it is a matter of simple arithmetic to see that, since wages have risen more than prices, the former must be the cause rather than the effect. The increase of wages has been distinctly ahead of that of prices, whether we take the last pre-war year or the first post-war year or the year of the advent of the Conservative Government for the basis of our comparison. That fact in itself should be accepted as conclusive. But those who argue that the rise in wages is a consequence of the higher cost of living simply choose to ignore this obvious fact.

In any case, even during periods when the rise in prices exceeded for a few months the rise in wages, it was the higher wages that consolidated the rise in prices. For, had wages been maintained stable, the rising trend of prices would have become reversed in due course. In the absence of an increase in consumer purchasing power through wages increases, there would have been no adequate demand for the goods at their higher prices, so that producers and merchants, in order to be able to sell their goods, would have had to lower their prices. But as each time they raised their prices a corresponding, and more than corresponding, increase in wages enabled consumers to buy the goods at the higher prices, there could be no end to the rising trend.

A similar situation exists also in other countries, not excluding the United States. The difference is merely one of degree. But for this, wages inflation in Britain would have affected the balance of payments to a much higher degree. If inflation proceeded approximately to the same extent in most countries, it could proceed with impunity as far as its effect on exchanges and balances of payments is concerned. It is mainly because there is a difference in degree to Britain's disadvantage that sterling has been under intermittent pressure since the end of the war.

We in Britain must thank our lucky stars for the frequently recurrent balance of payments crises. If it had not been for these crises, inflation would have been allowed to proceed unabated, and by now the internal depreciation of sterling would have attained an even more advanced stage. In itself the rising trend of domestic prices might not have induced the Socialist Government, or even the Conservative Government, to adopt disinflationary measures. They resorted to such measures from time to time solely for fear that, should inflation be allowed to proceed un-

(Continued on page 1136)

YOU SHOULD KNOW

HOW THE RECENT INCREASE IN EXCISE DUTIES AFFECT YOU

When you buy ***SUGAR***, remember that the increase in duty is 5 nP per lb. or 10 nP per seer.

VEGETABLE OILS produced by ghanis or by small producers are exempt from duty and should not, therefore cost more. Eeven for vegetable oils from large mills the increase in duty is only 2 nP per lb. This small increase may very well be absorbed by the trade in view of the 10 to 2o nP per lb. rise in price during the last year.

If you smoke, please note that you need not pay more on any brand of cigarettes other than those manufactured exclusively from Indian ***TOBACCO*** such as "Char Minar" or "Shah-i-Deccan". On these the effect of the rise is between ½ to 1 nP per packet of 10. 100 biris will cost only 1 nP more. The price of hukka tobacco should not in any case increase by more than 13 nP per lb.

For your ***MATCHES,*** do not pay more than 4 nP per box of 40 sticks and 6 nP per box of 60 sticks. This includes reasonable profits for trade as well as increase in duty.

A quire of Ordinary Writing ***PAPER*** (8 lbs.) should, if at all, cost only 1¼ nP more.

Cotton & Hair Belting Industry

THE present position of the cotton and hair belting industry, even after ten years of protection has not been found to be such as would justify either scaling down of protection or its total withdrawal. Consequently on the recommendations of the Tariff Commission, the Government of India have extended protection to the industry for a period of two years, i.e., till 31st December 1959 at the rate of 10 per cent ad valorem. This has been done with a view to enable the industry to withstand internal competition from the rubber ply belting industry.

It has been found that while the production of hair belting has been steadily increasing from 1951, a reversal in the progressive production trend of cotton belting has occurred since 1955 the actual production having declined, from 409 tons in 1954 to 348 tons in 1955. The reduction and ultimate withdrawal of the demand for solid woven belting by the Indian Railways largely explains the falling off in the production of cotton beltings.

While the cotton belting industry is hit on the demand side, the hair belting industry is hit on the raw material side. This wing of the industry is dependent on imports of hair yarn, the indigenous production of which is inadequate to meet the full demand. Production of hair yarn in the country is confined to two factories, namely the Jayshree. Textiles and the British India Corporation, though there are four other factories equipped for this production. But the import control of hair belting was administered on the assumption that all factories were in the active list of production, with the result that imports allowed were far short of the balance of requirements of the industry after subtracting the amount supplied by the two indigenous factories. The shortage of hair yarn calculated on this basis was as much as 112658 lbs in 1955. The tariff Commission has therefore recommended liberalisation of the import control in regard to hair yarn.

At present there are 10 units in the industry of which two are yet to start production. Eight of these Units are situated in and around Serampore, near Calcutta. The rated capacity of the Units on the basis of single shift is estimated at 1569 tons. But combined production of both cotton and hair belting is below 900 tons, so that there is large unutilised capacity in the industry.

Finally the existence of preference for foreign belting as well as internal competition from rubber ply belting, points to the need for improving the quality of the products turned out by the industry. The Tariff Commission has, in this connection, suggested, that the manufacturers of belting should approach the Indian Standards Institution for application of the Certification Marking Scheme to their products.

*

Telephone Industry

One aspect of the low level of industrialisation of India has been the very low density of telephones in the country as compared with the industrially advanced countries, such as USA and UK. While the number of telephones per 100 people is about 34 in the USA, 25 in New Zealand, 13 in UK and 3.5 in Japan, the density of telephones in India in 1956 is 0.78 per 100 people. This is far below the world average of 3.9 per 100 population. Absence of an indigenous telephone manufacturing industry until 1950 was one of the reasons, for the low density of telephones.

One of the fields of State enterprise in the First Five Year Plan was in respect of the starting of a factory for the purpose of manufacturing telephones. The Indian Telephone factory was started at Bangalore, and the total number of telephones provided between 1951 and 1956 was 110,000. This increase notwithstanding, the entire demand is far from being met, the shortfall in supply being to the tune of 120,000 telephones at the end of the First Plan.

The additional number of new telephones that would be required to meet the internal demand in full, at the end of the Second Five Year Plan is estimated at 250,000. But, the outlay of Rs 29 crores provided for the development of local telephone under the Second Plan, would permit of an increase of only 180,000 telephones.

In the trunk telephone service also, the number of calls increased from about 7 million at the beginning of the First Five Year Plan to 18.6 million at its end. The main problem in regard to trunk telephone service is the reductions of the delays in the trunk calls. The laying of co-axial cable between Delhi, Calcutta and Bombay, which would be completed in the course of the Second Plan is expected to give great relief.

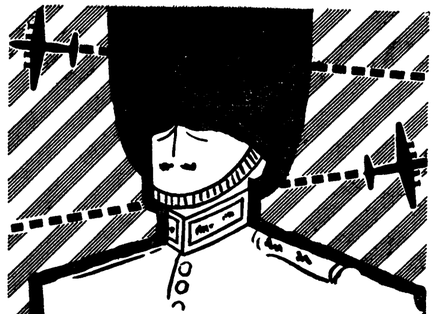
Extension of tele-communication facilities to rural areas is also a very urgent problem. Under the First Plan 1465 new telegraph offices were opened bringing the total of such offices to 5057 at the end of the Plan. Still there are areas lacking such facilities. Under the Second Plan telegraphic facilities would be extended to 700 more administrative centres. In addition about 400 towns with a population of 5000 and above are to be provided with telegraph offices. In all, about 14,00 new telegraph offices would be opened under the Second Plan raising the total to nearly 6500.

(Continued on page 1137)

SOUTH EASTERN RLY. TENDERS.

The General Manager, Garden Reach, Calcutta—23, invites tenders in the prescribed forms for supply of the following items:—

(1) Tender No. PB/1/57/GM/WS/455A/EA1(57) for (a) 11,000 Nos. of Cast Iron Brake Block for WP & WG Class Engines (coupled wheel) to IRS Drg. L/BG-894, Alt. 2 and to Specn. IS-210 (grade 10C). (b) 6,000 Nos. of Cast Iron Brake Block for Engines and Tenders to the Railway's Drg. LW-BG-138 and to Specn. IS-210 (grade 10C). (c) 13,000 Nos. of Cast Iron Brake Block for WP & WG Class Tenders to IRS Drg. L/BG-604, 606 and 607 and to Specn. IS-210 (grade 10C) and M5 Class II.



(2) Tender No. PB/2/57/GM/WS/753B/EB1(57) for 12,000 Nos. of Cast Iron Block Vac. Brake for Carr. and Wagon to IRS. Drg. W900, Alt. 3.

(3) Tender No. PB/3/57/GM/16/52TLR(56) for 1,122 Nos. of Carlines Flat (material M5/II 1.3/4 × 1/2") to Drg. 493 C & W/KPA.

(4) Tender No. PB/4/57/GM/12349R/EB2(55) for (a) 40 Nos. of Door sliding L.H. to IRS. drg. B.B.50/12 complete with Louvre ventilators, Top Runners, Latch door sliding and Exterior Locking Pin to IRS drgs. 2085/64, CA2013 alt. 2, CA1077 and CA1091 respectively. (b) 40 Nos. of door sliding R.H. to IRS drg. CB-50/12 complete with Louvr Ventilators, Top Runners, Latch door sliding and Exterior Locking Pin to IRS drg. 2085/64, CA2013 alt. 2, CA1082 and CA1091 respectively.

Tender Forms are obtainable from the Controller of Stores, Garden Reach, Calcutta—23 (P.B. Section) on remittance of Rs. 5/- per copy per tender (not refundable) by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, Garden Reach, Calcutta, by local firms. Closing date for all tenders is 10-7-1957 at 12 noon. Firms not on the Railway's list of approved contractors must deposit in cash Rs 3,000/- against Tender (1), Rs. 600/- against Tenders 2, 3 and 4 each as Earnest Money with the Chief Cashier, Garden Reach, Calcutta, and enclose his Receipts together with valid Income-tax Clearance Certificate with the tenders.

World of Jute

Increase in Hessian Stocks

Stocks of jute goods at the end of May at 108,700 tons show an increase of 4,500 tons over those of the previous month. Of the three categories making up the total, hessians have been solely responsible for the overall increase, having been placed at 40,400 tons as against 35,100 tons at the end of April. Thus stocks of hessian have increased by 5,300 tons. Both Sackings and other varieties have recorded small declines at 57,700 tons against 58,300 tons and 10,600 tons against 10,800 tons respectively.

At the corresponding date of last year, total stocks had stood at 119,700 tons with hessians accounting for 40,600 tons, sackings for 71,700 tons and others for 7,400 tons. Taking the eleven months of 1955-56 and comparing them with the 11 months of 1956-57, it will be seen that month-end stocks in the two periods disclose different patterns. During the last jute year, total stocks showed a steady decline beginning from July upto the end of October. From November stocks rose, the upward tendency becoming more marked from January 1956. In the current year, the trend has been quite irregular. The opening month has recorded the largest stocks in the previous 13 months at 137,900 tons. A sizeable decline in August has been followed by a small increase in September. The next three months have shown steady decline but in January 1957 the trend has been reversed. February and March have closed with comparatively smaller stocks though the latter has recorded a slight increase over the former. The upward trend has reasserted itself in April and May.

A detailed study of the two sets of figures pertaining to the month-end stocks for the first 11 months of the two years shows that the high level of the total stocks during most of the period in the current year is due to the high level of sacking stocks. Whereas during the 11 months of the previous year, sacking stocks have stood below the 50,000 ton mark on seven occasions, they have been substantially above that level at the end of all the 11 months of the current year.

It is however to be noted that sacking stocks in the past five months have been showing a steadily declining trend, while in the corresponding period of the previous year the movement had been in an opposite direction. In January sacking stocks stood at 45,300 tons. In the subsequent months they rose steadily to be placed at 71,700 tons, at the end of May 1956. During the current year, such stocks which have been placed at 67,700 tons in January have steadily come down to be placed at the end of May at 57,700 tons.

Output of jute goods in May has been placed at 87,300 tons comprising 35,600 tons hessian 45,000 tons sacking and 6,700 tons other varieties. During the month, mills have worked for 209 hours, same as in the previous month. Total production in May is only slightly higher than in April when it was placed at 86,800 tons. A significant feature is that while hessian output has declined from 36,200 tons to 35,600 tons, that of sacking has increased from 44,800 tons to 45,000 tons. Production of other varieties of goods has also recorded an increase from 5,800 tons to 6,700 tons. Yet another interesting feature will be noticeable when the production figures for May this year are compared with those for the corresponding month of last year. Total production in May 1956 amounted to 101,700 tons with mills working for 212 hours. Output of hessian stood at practically the same level as during the last month, at 35,800 tons. Production of sackings had been, however, considerably higher at 59,600 tons. One may not be far wrong if one concludes that resealing of looms that had taken place since May 1956 has affected sacking output only. This is also brought out clearly by the figures for the first 11 months of the current and previous jute years. While total production during the 11 months ending May 1957 stands at 945,100 tons as compared with 996,100 tons in corresponding period of the previous year, production of hessian during July-May 1957 is higher at 396,000 tons as against 368,000 tons in July-May 1956. The output of sacking during the 11 months of the current year has declined to 484,500 tons from 565,600 tons in the corresponding period of the previous year.

*

The jute goods market opened the week on an easier undertone due to speculative activity. As mills did not evince any interest in the proceedings, prices closed generally unchanged with Hessian 40"×10 oz Ready at Rs 43.06 and October-December delivery at Rs 43.25. In the heavy goods section, B Twills Ready was quoted at Rs 116.65 and October-December position at Rs 116.90. Conditions continued to be steady on Saturday despite the fact that jute

(Continued on page 1137)

World of Tea

Disappointing Start of the New Season's Sale

TEA market circles have suffered a big disappointment with the beginning of the new marketing season. The results of the first Export sale of the New Season's teas were decidedly poor. Offerings were 27,390 packages for which there was a poor demand. The main support came only from internal operators although a few exporters were active. Buying was generally very selective and teas without quality were difficult of sale.

The only strong features of the sale were Whole Leaf grades and stylish BPSs, which were well supported. Fannings grades were neglected and withdrawals, as a result, were rather heavy. The few flavoury Darjeelings, on offer, were sold well; but the more ordinary kinds from this district followed the general trend of the market. Plain Broken Pekoe was nominally quoted at Rs 1.75 per pound. Owing to the lack of representative teas, further rates are not given.

The Dust sale, held on Tuesday, also produced rather dismal results. Offerings amounted to 19,782 packages of which only 6,116 packages were of New Season's manufacture. The quality of the Old Season's teas continued to be of an ordinary description and, with rather less demand than in the last week's sale, the majority of descriptions showed a decline. The very few New Season's Darjeelings, on offer, and the best CTC Assams were sold well; but the remaining New Season's teas were generally sold below valuations. Medium Dooars Dust was nominally quoted at Rs 1.45 to Rs 1.50 per pound. Also, the market for 229 chests of Leaf grades was irregular and prices ruled generally easier.

It seems that the big worry, which is affecting the outlook for tea, is over-production. Operators fear that, as matters stand, world supplies this year may once again be fairly in excess of demand. There is no international agreement under which exports can be regulated. It is, therefore, felt that some restraint on production is immediately necessary.

According to the annual review of a leading firm of tea brokers in Cochin, heavy stocks of 'low tea' are now lying in the UK, while crops for the quarter of this year are well ahead of the previous year. The review adds that increased production is not itself a bad thing; but increased production, which disregards world demand, can only result in a general lowering of prices.

Meanwhile, production in North-East India gardens has shown a rise from 19.3 million pounds in April to 26.4 million pounds in May; but it is substantially lower than 34.97 million pounds in the corresponding month of last year, mainly due to bad weather. Total outturn during the current season upto May, amounts to only 45.68 million pounds as compared to 54.76 in the corresponding period of last year.

The South Indian tea crop has forged ahead during April, 1957 when production totalled 13.1 million pounds as compared to 10.1 million pounds in the corresponding month of last year. Total production, during the current year, up to the end of April, amounted to 40.4 million pounds as against 32.9 million pounds in the corresponding period of last year.

Production in Ceylon, which was running 21.5 million pounds ahead of last year in the first quarter, has received a severe setback in in April. Outturn, during the month under review, was only 37.2 million pounds as compared to 45.7 million pounds in March 1957 and 49.8 million pounds in April last year.

For obvious reasons, buyers have now become more cautious and selective in their purchases in view of their bitter experience of 1955. It must, therefore, be in the interest of all producers to maintain their standard of manufacture at the highest possible level.

In the Cochin market, about 9½ lakh pounds of Leaf tea were offered for export sale. There was a strong and general demand, mainly from internal operators. Best liquoring teas were easier, while all others were irregularly 5 to 10 nP per pound dearer. Whole Leaf grades were, however, very strong.

At the auction held in Colombo, offerings were 6,973,036 pounds. Although there was good demand, prices were rather irregular. The quality of Nuwara Eliya teas continued to decline and prices were generally lower. There was a falling off in the quality of high-grown teas also. Medium-grown teas, however, met with some improved demand. Among low-grown teas, Tippy sorts were again dearer. There was also good demand for off-grades at fully firm rates for Broken Mixeds, while Dusts and Fannings tended dearer.

In the Mining Line, a better tone prevailed from this week although buyers were again discriminating regarding quality. The plainer descriptions came in for more attention. Plain Broken Pekoe was quoted unchanged at 35½d per pound.

Trade quarters in London have stated that the better tone is partly due to the improved statistical position. In addition, it is felt that demand has been stimulated by the approach of the traditional break in auction next week due to the Whitsun holiday.

World Overseas

US Notes

A widow in New York City this week became the 10 millionth person to receive monthly payments from the United States Government under its social security programme.

In celebration of this event, she received her initial check directly from the US Secretary of Health, Education, and Welfare, up from Washington for the occasion. It is in a way a striking coincidence that the man, who now holds this important government post is Marion B. Folsom, noted both as a businessman and public servant. As a member of the President's Advisory Committee on Economic Security, he helped draft the original social security legislation back in 1935.

In presenting the government check to 36-year-old Mrs Jane Gavin at Regional Social Security Headquarters here, Mr Folsom recalled the misgivings that attended the adoption of this significant piece of social legislation more than 20 years ago. But today, he observed, no one questions its desirability or effectiveness.

The value of the federal social security system has been amply demonstrated. It has shown that an enlightened free enterprise system in this modern world, in Mr Folsom's words, "does not have to accept economic distress as inevitable." Beyond that, by providing regular incomes to those retired or too old to work, or to surviving members of their families, it has contributed to the health and stability of the American economy.

As attitudes toward it have changed, so has the programme itself. It has been amended by Congress and its benefits expanded a number of times since 1935. Today, its provisions for retirement benefits at age 65 apply to more than 90 per cent of all persons in the United States, who work for a living. In addition, it protects the rights of workers, who are disabled, and pays benefits to totally disabled persons 50 years of age or older.

Other provisions, not directly related to retirement pensions, include certain types of public assistance and child welfare activities.

Originally, 26 million persons were covered under the programmes pension provisions. Today, including those already retired and those still working, 73 million are insured. Back in 1940, when the first pension checks were sent out, the average payment for a married couple was $41 a month. Today, it is $106 a month. As widow of an insured worker with two minor children, Mrs Gavin is receiving the maximum family benefit of $200 a month.

Estimates are that the government's old age and survivors insurance payments to beneficiaries this year will aggregate approximately $7,000 million, while new disability payments, scheduled to begin in August are expected to come to $75 million. Of the 10 million persons now receiving benefits, more than 7.4 million are retired workers and dependents, nearly 2.6 million are survivors of insured workers.

In keeping with American economic and political philosophy, the system is financed on a contributory basis. Each payday, every insured worker pays a percentage of his wages into a special old age and survivors insurance trust fund, with his employer making an equal contribution. Last year, workers and their employers put a total of $6,200 million in social security taxes into the trust fund, which now has assets of more than $22,500 million dollars. At present, the social security tax rate is 2.25 per cent, but it is scheduled to rise at regular intervals, reaching 4.25 per cent by 1975. The reason for the increase is that with the passing of the years and the prolongation of life, the drain on the system will be getting heavier. According to some estimates, annual payments to beneficiaries under the present law could amount to nearly $26,000 million by the year 2020.

As beneficial as it has been, the government's social security system does not, nor was it intended to, meet every individual need for economic security in every circumstance. But as Secretary Folsom emphasised this week, it has helped "provide a base for protection upon which workers and their employers may build additional security through private efforts and individual thrift."

*

Germany

DK BONN.—No budget introduced by the German Federal Government since 1949 has shown as considerable an expansion as the 1957 budget. In its ordinary budget part it has been increased from 33.19 to 35.44 billion Marks, and in its extraordinary part from 1.15 to 1.86 billion Marks. This is not due to any appropriation mania on the part of parliament but to government commitments resulting from past legislation and to other inevitable causes, at least as far as two-thirds of the increases are concerned. Chief among the additional appropriations that became necessary between the introduction of the budget bill and its second reading in the Bundestag are the following: increases of over 600 million Marks for agriculture, of 500 million for war victims, 330 million for restitution payments, almost 250 million for charges consequental on the occupation and for support costs, 100 million for research including aid to young scholars and scientists, 165 million for housing, 70 million for Schleswig-Holstein, and 30 million for districts bordering on the Soviet-occupied Zone of Germany.

Whoever compares the present budget with the Government programme as announced in 1953, will have to recognize that the Federal Government and the parliamentary coalition supporting it have fulfilled the three chief promises they then made to the voters, namely, by a pension reform to provide social security for old people in accordance with their productive achievements during the working part of their lives, to promote housing on a large scale, and to put agriculture on a sound footing.

In addition to these really great accomplishments, the Government succeeded in raising very considerable means for an appropriate German defence contribution in accordance with the treaties of 1955, and this is perhaps the most remarkable financial result of the 1957 and, incidentally, also the 1956 budgets. Any government concluding international treaties must also meet the financial commitments they involve. This holds good for the opposition just as much as it does for the Government if they want to be taken serious at the international level. Yet, almost all the motions regarding further budgetary increases submitted by the Social Democratic opposition contemplated reductions in defence expenditure in order to cover the additional cost implied by those proposals. The Government parties in Parliament rejected opposition demands involving several billion Marks, thus up-holding also in this year's budget the principle of maintaining an equitable balance between social and external security.

Six Billion Marks Worth of Cash Assets:

Although tax reductions amounting to a total of nearly 4 billion Marks were voted in 1957, there was constant clamour for further decreases. Only one such decrease occurred, however, and this was due to a judgement of the Federal Constitutional Court, which set aside existing legislation concerning the joint assessment of husband and wife, thus changing the income-tax law in a manner involving a further tax reduction for the persons concerned of 170 to 200 million Marks.

The Federal Ministry of Finance commenced the budgetary year of 1957 on 1st April with unexpended cash balances amounting over 6 billion Marks, but this should be viewed in the light of similar budgetary situations in other countries during times of prosperity, as, for instance, the United States which paid back no less than 4 billion dollars worth of debts from unexpended cash balances, or the United Kingdom which last showed a budgetary surplus of 400 million pounds. Recognized financial experts agree that State budgets may well wind up with surpluses in times of business booms. As a matter of fact, fully 5.8 billion Marks of the German 1957 budget will be covered from means available in the Federal treasury. The Federal Minister of Finance has, however, taken the precaution of inserting a clause in this year's budget law raising his credit ceiling with the Bank Deutscher Laender from 3 to 4 billion Marks. It is true that there are computations from interested quarters which anticipate another cash surplus at the end of the 1957 budgetary year, but they are based on assumptions and suppositions which cannot possibly be corroborated at this early date with any amount of certainty. It should be added that it is by no means a crime for modern financial policies to achieve a cash surplus. And can any one maintain that it is sound finance to resort to credits from the bank of issue as a matter of course.

Sharp Rise in Consumption Successfully Absorbed:

The remarkable financial results of the second Adenauer aCministration could not have been achieved without a consistent economic policy. Notwithstanding the many predictions of impending disaster, the German economy was able on the whole to meet without disturbance the jump in consumption that occurred about Easter 1957 due to increases in old age pensions and wages.

The 1957 budget together with the uncontestably beneficial changes of the income-tax law in favour of the building of houses guarantee a volume of new construction of homes that will equal the record figure of 1956. This will be supplemented for the first time this year by the construction and rehabilitations of soldiers' barracks.

Nor will the large sums appropriated for the development and consolidation of German agriculture remain without fruitful effects. In addition, science and research are given powerful financial impulses in the new federal budget, a stimulation which will be enhanced by similar efforts made by the laender. Experts estimate that the means thus appropriated will be sufficient to aid not only needy students but also students who without being in need are exceptionally gifted.

No budget can meet all the wishes expressed. Every budget always constitutes a compromise between more or less justified demands and the hard reality of limited tax returns. But no one looking at the present budget of over 37 billion Marks can honestly say that the Government and the coalition supporting it have been slack in their endeavours to satisfy the main concerns of the nation.

*

Britain

Britain's coal miners were working more efficiently now under better conditions and for higher pay than ever before, and had pushed their industry's output up by 17 per cent in its 10 years of nationalisation, Lord Mills, Minister of Power, reported to Parliament yesterday (June 5).

These were among the major points in the National Coal Board's annual report for 1956, which the Minister was presenting to Parliament. The report summarized the industry's progress not only for the year, but also for its 10 years of nationalization.

It pointed out that the coal output of 222,000,000 tons last year, apart from being higher than the previous year's, compared with an output of only 196,800,000 tons in 1947, the first year of nationalization. Aided by mechanization and new techniques, the coal-face worker's individual output rose during the same period from 2.8 to 3.3 tons per man-shift, and the industry's tonnage per man-year from 262 to 298.

The average weekly earnings of all adult males in the industry almost doubled, from £8 16sh to more than £16 in the same period.

Although manpower had decreased slightly over the whole period, it was increasing again, and stood at 703,000 at the end of 1956.

The industry was hoping to hold new recruits with better working conditions, which included better welfare facilities, much greater safety, and more medical attention. For instance, £16,000,000 had been spent on new pithead bath facilities, making them available to 90 per cent of the miners, while the older bath installations were being modernized. The yearly total of men killed and injured in accidents had been reduced.

Progress had also been reported in all directions on the technical side. Mechanization at the coal face had increased the total tonnage of power-loaded coal from about 4,000,000 tons in 1946 to more than 36,000,000 in 1956. Four hundred miles of tunnels had been driven, and plans were under way for 3,000 miles of tunnelling in the next 15 years.

New and safer mining techniques being introduced included the blasting of coal under water pressure, and experiments on breaking coal by high-pressure blasting were in progress. A new central engineering establishment was virtually completed in 1956. Many new techniques were being introduced on the management side, too.

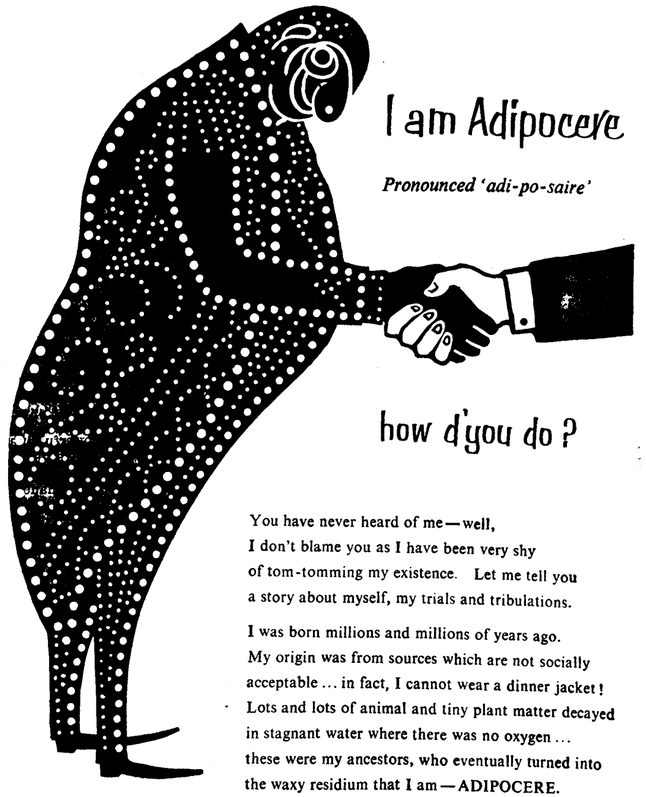
The Sterling Area's gold and dollar reserves rose by $25,000,000 in May and stood at $2,345 million on May 31. A sum of $34,000,000 was received from the European Payments Union (EPU) in respect of April, and $3,000,000 was paid to the creditors of the Union in bilateral settlements.

The provisional EPU result for May shows that the United Kingdom had a deficit of £7,000,000 with the European Payments Union. This will fall to be settled in June, as to 75 per cent in gold or dollars and as to 25 per cent by an increase of the debt to the Union.

It is pointed out in London that no particular conclusion can be drawn from the marginal change in the residual figure as a result of the May figures, and there seems to have been no substantial movement in the reserves either way in the course of the month. Dollar oil expenditure is still high (though not as high as in the earlier months of this year), and continuance of this expenditure may have prevented that appreciable movement upward in the reserves which had been expected in some quarters.

With respect to the European Payments Union result, seasonal influences are generally now acting in favour of Continental countries, but the deficit in May was, in particular, due to the transfer to the French official account of large French commercial holdings of sterling.

✱



FOR THE INVESTOR

(Continued from page 1103)

rangement with the British Motor Corporation for the manufacture of Landmasters will also continue to operate. Thus, with the expansion of its manufacturing activity, investors are now inclined to think that the company will be able to give a better account hereafter.

The Dunbar Mills Limited has decided to issue 6 per cent Debenture Stock 1967-72 at par for Rs 25 lakhs. The subscription list will open on June 17 and will be closed at any time by the discretion of the directors. The company has no mortgages, Debentures or other loan capital outstanding other than the stock now offered. The proceeds of the issue will be used for the modernisation of machinery.

The Madras Stock Exchange Association has decided that the minimum prices of all Ordinary shares of Planting companies will be fixed at the opening rates as on the 10th June last; and these minimum prices will continue until further notice. This step is taken to avoid a further fall in prices in view of the steep increase in taxation affecting plantation companies in Kerala.

I am Adipocere

Pronounced 'adi-po-saire'

how d'you do?

You have never heard of me—well,
I don't blame you as I have been very shy
of tom-tomming my existence. Let me tell you
a story about myself, my trials and tribulations.

I was born millions and millions of years ago.
My origin was from sources which are not socially
acceptable ... in fact, I cannot wear a dinner jacket!
Lots and lots of animal and tiny plant matter decayed
in stagnant water where there was no oxygen ...
these were my ancestors, who eventually turned into
the waxy residium that I am—ADIPOCERE.
I have no ancestral wealth, and I could never own a
castle—but I am fabulously rich in fatty acids,
and I don't think you could do without me.
I am flabby, shapeless and ungainly—
all the same I am quite happy.

That's me—ADIPOCERE, the ancestor
of that Prime Mover—Oil.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

I HAVE just emerged from a session with the Fourth Evaluation Report of the Programme Evaluation Organisation on the working of the Community Projects and National Development Blocks. It may be recalled that, some time last month, the daily press carried a summary of this Report in a capsule form: the summary and the headlines that introduced it gave the impression that the Report was compounded of one quarter of condescending and grudging praise and three quarters of offhand condemnation of rural clumsiness by slick city backroom boys. This is an impression that is wholly unjust to a detailed and conscientious inquiry which is both searching and sympathetic. The final impression left by the Report, despite its criticism on details, is that the community project experiment is still the most unconventional and creative enterprise that is going on in the country. Its administrative tasks have no precedent either in this country or elsewhere, and they are being manfully and resourcefully attempted. Its permanent consequences are not capable of being measured in short intervals: and, indeed, one of the criticisms of the Report is that, in some places, the desire for achieving shortterm physical targets of an obvious sort makes the Project authorities attempt short cuts that are likely to do great damage to the central aims of the community development idea. On the other hand, the accretion in social purposiveness, the lighting up inside even one rural heart of the value of cooperative meliorative effort, cannot be measured accurately in short intervals.

✱

What does the community project attempt? An answer to this question in comprehensive terms is easy enough: it attempts nothing less than the creation of a virile and vital rural life in which the villager as an individual and as a member of a community will have a certain measure of individual happiness and a sense of function and social usefulness. Put this way, it has the naivete of all rural Utopias, of Colin Clouts coming home again and Amaryllises sporting in the shade. But its implications in the context of a modern and (willy nilly) industrial society and in the context of our moribund rural life are unnerving to a man about to engage himself on this endeavour. Take, for example, the simplest and apparently easy task of assembling the necessary administrative apparatus and of cutting the channels through which funds are to be deployed. This, if you will think about it, will turn out to be a most complicated task. The present Report itself gives a telling example of this problem in its account of the administrative set up of certain pilot projects for development of cottage industries.

✱

"The objectives of these pilot projects were to set up an integrated regional plan for the development of small and cottage industries in the rural areas, provide an extension service for the artisans and workers engaged in these occupations, help in organising the supplies and credit needed, take up an immediate programme for their benefit. The field machinery proposed was a community project Officer for Industries—CPO (I)—having jurisdiction over an area of approximately the old community project areas. Under him there are to be three block level officers. The rest of the staff, who will assist him in individual industrial programmes, were to be financed by the different All-India Boards for assisting small-scale industries and attached to the individual programme approved and financed by these Boards. In effect, the CPO (I) was to service a number of All India Boards for small-scale and cottage industries. In order to give him coordinated direction as well as to secure coordination in the administration of his programme, the CPO (I) was to work directly under the Development Commissioner. The Development Commissioner was placed at the head of a State Action Committee, which included representatives of the concerned State department, and Regional Small-Scale Industries Service Institutions as also of the All India Boards, with the CPO (I) as secretary. At the Centre is an Action Committee with the Minister for Community Development as chairman with objective of guidance and effective coordination of the various agencies in the pilot project areas. There are to be, in addition, Action Committees for the project areas, and for the village group areas for which the village industrial workers are to be appointed . . . Assisting the CPO (I)s in their task of devising long range integrated programmes were special survey teams set up by the Union Ministry of Industry and Commerce . . . In addition to the Industries Departments in the States, there were also available ....four regional Small-Scale Industries Service Institutes with their branches and centres in the different parts of the country for purposes of research and technical guidance."

✱

Doesn't that make dizzy reading? What multiplicity of authorities! What complicated routing of funds! How many "Action Committee," ironically so called, since their function seems to be merely supervisory and advisory! On the face of it, it looks all too typical an example of doing a simple thing in a complicated way —a present for the satirical talents of a Dickens or a Gogol. And yet, we may exonerate authority of wilfully making things complicated for themselves. There is doubtless room for pruning a great deal of this administrative proliferation; but, if funds are to be deployed on an All India Basis through independent statutory bodies rather than through Government, this particular set up becomes unavoidable. The alternative of making the district officer the sole authority in all matters of development and letting him have the voted funds and judging him by results has all the attractive simplicity of totalitarian ideas, but cannot be adopted by us.

✱

At all events, this example gives you some measure of the amount of fundamental thinking involved in even the comparatively simple task of devising an administrative machinery for the purpose of a single item of community development. And yet, it is not even the beginning of the job, since it is only the first task of the creation of agency that is to act as the lever of development. And then the personnel, their recruitment and training; training, first in their physical tasks and then, more importantly, in orientations to their new and formidable jobs. They have all to be minor platonic philosopher kings with the further complication of a political set up that is democratic. And when we have assembled these folks, we have still not touched the problems arising out of the attitudes of the people whose lives we seek to change. This task is even more difficult than the earlier one of drawing up a scheme for an administrative set up, since we have to reckon with the minds and hearts of men. Some of the successes and failures in this task are discussed in the Report.

✱

One of the most interesting chapters is that which deals with some aspects of the social changes that have taken place as a result of the working of the community development projects. Ultimately, the community development projects will have to justify themselves by the permanent changes, effected by the operation of the various programmes, in the attitude of the rural folk. If even a single village, family or individual is made to reorient its or his thinking along lines of a harmonious and creative rural life of a certain standard of human comfort, the entire effort would have been worth while.

✱

The PEO's inquiry was conducted in 17 evaluation centres with certain very limited terms of reference. The criteria that have been adopted are themselves unexceptionable within limits. These are: (1) Awareness of possibilities of improvement through adoption of scientific methods in agriculture, etc. (2) Confidence in their own ability to adopt these practices. (3) Realisation of advantages of cooperative action. (4) Community life. (5) Understanding and cooperation between officials and nonofficials. (6) Awareness of possibilities of development through programmes and a feeling of participation in these among the underprivileged people.

✱

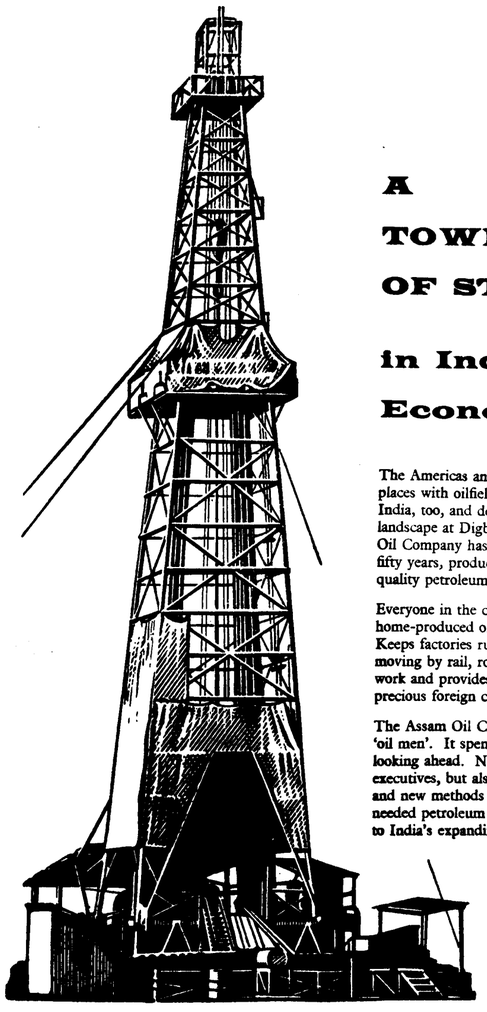
The results of these investigations are stated to be discussed at length in the Reports on individual projects under study, and these are not before me. But this Report makes a point, that it is necessary to study the changes in stages, since there are endless gradations in the quality of the change. I doubt whether these gradations can be subjected to any kind of quantitative reckoning, however refined your gradations of change may be. The broad question that

ATLAS
WEIGHING MACHINES
PLATFORM, CART, TRUCK, LORRY
&
WAGON WEIGHBRIDGES

Makers:
THE INDIA MACHINERY COMPANY LIMITED
Dasnagar, Howrah.

the layman will ask is whether or no there has been a change in the "atmosphere". Nothing electrical or breathtaking, mind you, but a quiet change in the lives of the members of the communuity. A farmer rejecting the Japanese method may do so either because he does not care or because he resists the idea: now, he may resist the idea because of traditional prejudices (whose power we city folks sometimes overestimate) or because he has his technical objections to it. It it is the latter, then, I think that is a qualitative change for the better, even though the farmer may conceivably be wrong in his technical premises and conclusions. The important thing is, he has started to think independently about his problems.

Likewise, a good many of the changes that we want to measure require institutional appurtenances: take, for instance, cooperative effort, which is the third criterion listed by the PEO. With the best will in the world, a villager who wants to cooperate cannot do so to any significant extent if there are no institutional outlets for his desire. It is all very well to perform Shramdhan for a day, or put up a community centre by gift of labour. But there is, in the nature of those things, nothing that normalises the impulses of cooperation. And the real test of the community project idea is not whether, once in a while, you can get together a sufficient number of people for a particular communal task, but the creation of a habit of such endeavours. In so attempting, it would be Utopian to expect a persistent and uniform functioning of the impulses of altruism or even longterm self interest. The spirit of cooperation should entwine itself closely with immediate self interest, and only then would there be an automatic and instinctive turning of rural thoughts toward cooperation with others. And these need institutional aids.



*

The difficulty about the criterion of the vigour of community life is that, in most projects, the mainspring of such impulses has not been touched. A club house is repeatedly mentioned as a failure throughout the Report, and no wonder. A club is essentially an urban idea, since a club is a community within a community. In a village, especially in an Indian village, the club house is the peepul tree; and the youth centre, the mango grove. The sensible way of judging communal life would be to see how the community acts on a traditional communal occasion. People who have seen South Indian temple festivals would understand how a rural community comes alive on such occasions of joy in the widest commanality spread. It is in devising occasions of this sort, where tradition helps progress, that the ingenuity of the community project worker should be employed. A club house with a broken down radio set tells its story of lack of imagination as much as the provisions of a frigidaire for a man with nothing to keep therein.

*

You see, thus, how much of a continual endeavour community development is, and how difficult it is to evaluate the real progress made. There are so many imponderables: the relative backwardness of the area; the relative progressiveness among the various classes of beneficiaries; the idealism, intelligence and capacity for unconventional thinking among the project staff; and so on, endlessly. Once physical targets are ruled out as an exclusive measure of success, it is the intangible changes in attitudes that we have to take into account. Everywhere in the Report, you find some heartening example or other of a striking change in some respect or in some place. That the progress is not uniform, is undeniable. However, there is also evidence of changes of which we have but dim intimations, but which are nevertheless there. Their measurement must await another five years. It will then be time to pass final judgment on the community projects as an instrument of social change.

EAVESDROPPER

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields ! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

Gateway Gossip

Bank Deposits versus Bank Credits

BANKING circles in the Gateway City profess themselves to be greatly satisfied with some of the points that have been made in an article published in the latest **Reserve Bank of India Bulletin** on "Trends in Deposits, Advances and Investments of Scheduled Banks". For, the unambiguous conclusion that it is thought to indicate is that the expansion in bank Deposits has not kept pace with the increase in the accommodation given by the banks.

This is a conclusion which, I am afraid, has been mistakenly inferred. For, the scope of the article in question is essentially factual; and, what is more, it is the trends of the last three years which alone have received a comprehensive analysis. The article does not attempt to project conditions into the future or to suggest what the banking situation may be in the next few years. We shall, therefore, first take note of the facts and figures as they have been given.

With industrial production rising by 8 per cent, foreign trade by 11 per cent and railway traffic by 8 per cent in 1956, and with prices moreover recording an increase of 13 per cent, there arose a persistent demand for scheduled bank credit, which rose by 23 per cent over the end of 1955 figure of Rs 645 crores to Rs 794 crores at the end of December 1956. During this time, Deposits of scheduled banks rose only by 8 per cent to Rs 1071 crores from Rs 994 crores. The smaller rise in Deposits—this, despite the deficit financing of substantial proportions—is attributed to the contractionist influences of a balance of payment deficit. It consequently became necessary for banks to augment their resources, firstly, by borrowings from the Reserve Bank and, secondly, by sales of giltedged. The increase in borrowings from the Reserve Bank which, strangely, is a figure that the article has omitted to give, was of the order of Rs 49 crores. In addition, disinvestment in Government securities was for Rs 18 crores, this being offset by fresh purchases of other categories of investments such that the total investments of scheduled banks declined by only Rs 11 crores to Rs 442 crores.

Of the expansion in advances of Rs 149 crores in 1956, what are described as "genuine needs of industry and commerce" accounted for Rs 139 crores. It has been stated that, with the rising level of prices, there was "a tendency to speculative hoarding in essential commodities such as foodgrains and cloth". It may be recalled that the Reserve Bank issued directives in May and September last year to the effect that scheduled banks should reduce their advances against foodgrains and cotton textiles to a more reasonable level.

The distribution of scheduled banks' advances by purpose is interestingly brought out in the following table:

(Lakhs of Rupees)

	1953	1954	1955	1956
Industry ..	166,53	190,89	220,96	305,53
Commerce ...	249,97	277,87	323,17	376,81
Agriculture	11,90	4,52	11,30	13,85
Personal & Professional ...	43,44	47,56	55,38	67,49
All others ...	25,83	36,15	34,12	29,85
Total	497,67	556,97	644,94	793,55

It will be seep that the demands of Industry have practically doubled themselves between 1953 and 1956, while advances to Commerce have improved by 50 per cent over the same period. On the other hand, accommodation in respect of Agriculture shows an insignificant increase. I should like at this juncture to suggest that the usefulness of this table is limited. While, no doubt, the sharp rise under Industry and Commerce can be understood as indicating the expansionist trend in the economy, and while, moreover, this persistent expansionary trend may be said to account for the blurring of the distinction between the busy and slack seasons, the figure under Agriculture —as at December end—serves no useful purpose at all. For, it is only at this stage that the busy season as such has got into its stride; and four to five months remain before it reaches its peak. It is the level of advances against Agriculture at the peak of the busy season which is important as an index of bank credit in financing agriculture.

Of the increase in Industry, the largest rises are recorded by advances to the textile group and to the engineering group. Obviously, the expansion in advances to Industry is to be "attributed in the main to the larger production, increased stocks of raw materials and finished goods which had to be stored at higher prices". Secondly, in respect of advances to Commerce, the entire rise was accounted for by wholesalers. The rise in regard to non-agricultural commodities, at Rs 42 crores, was three times the rise of Rs 14 crores in agricultural commodities.

Next, we will consider the breakdown of ownership of Deposits of scheduled banks. It shows that the classification of Business Deposits declined by Rs 15 crores to Rs 338 crores. In particular, the Deposits of financial concerns fell by Rs 9 crores. But, in this regard, it has to be remembered that, with the nationalisation of life insurance, the Deposits of the Life Insurance Corporation are shown not in the Business Deposits, but under Deposits of Government and quasi-government agencies. Since, under the latter head, there is a rise of Rs 35.5 crores, it may be stated that Business Deposits, in the light of this development, may actually have shown an increase.

Another point made is that, while the improvement in Deposits is shared by all Indian scheduled banks, the exchange banks have lost 'both absolutely (by Rs 4 crores) and relatively (by two percentage points), reflecting mainly the impact of balance of payments deficits on the Deposits of their constituents.'

Finally, the article deals with investments of scheduled banks; but this, I presume, is a preserve of the World of Finance section that I should not poach upon.

I should like, if I may, to revert to the fallacious conclusion derived in some quarters that the experience of the scheduled banks vis-a-vis Deposits and advances has been unfavourable. In the World of Finance section, statistics have on many occasions been presented to show that, while, undoubtedly, there has been an aggravation of the increase in demand for advances, the recent trend in Deposits is one to suggest that the rise under this head, steadily improving, is now of satisfactory size. As I have already stated, a comparison of figures at the end of a calendar year does not offer any firm conclusions for the simple reason that the important factor of busy season is omitted from the purview of its survey. I have, therefore, drawn up a table of bank advances and Deposits as at the peak of each busy season since 1951-52. This I reproduce below:

SCHEDULED BANKS
(In Rs Crores)

	Deposits	Advances
May 12, 1951 ..	903.86	585.61
April 12, 1952 ...	857.00	581.98
Change ...	— 46.86	— 3.63
May 9, 1953 ..	845.90	539.86
Change ..	— 11.10	— 42.12
May 8, 1954 ...	857.49	567.26
Change ...	+ 11.54	+ 27.36
May 7, 1955 ..	964.75	626.49
Change ...	+107.26	+ 59.23
May 11, 1956 ...	1064.24	769.20
Change ..	+ 99.49	+142.71
May 10, 1957 ...	1236.75	935.88
Change ...	+172.51	+166.68

It will be seen that the upsurge in advances is of huge proportions. It is important to recognise that the expansion in Deposits is today tending to be of comparable and corresponding size. Indeed, between May 11, 1956 and May 10, 1957, the expansion in Deposits has outstripped the increase in advances. I admit that the December end figures suggest otherwise; but, any inference based on these data is surely hasty and incorrect. All that I have done is to present a more realistic picture of the banking situation, by taking figures for busy season peaks; and their implication is unambiguous, that, at last, the augmentation in Deposits outpaces the increase in advances.

Gateway Notes

Rehabilitation of the Handicapped

THE rehabilitation of the orthopaedically handicapped, raises special problems, in connection with their education, training and placement and would require, the establishment of special institutions for these purposes. The recommendations of the conference of the representatives of the institions of the orthopaedically handicapped, which met in Bombay last week run along lines calculated to solve the various problems connected with the rehabilitation of the orthopaedically handicapped in a thoroughly effective and successful way.

The education of the orthopaedically handicapped is a task, for which, the ordinary teacher, is ill-equipped and can only be solved by special institutions and specialised personnel. As a starting point, the conference has recommended to the Government of India, to establish a model school at a suitable place, and expressed the hope that the State Governments would also open schools for these children in their states. The special schools it was pointed out, should maintain well-equipped physio-therapy and occupational therapy departments. The Montessori and other apparatus, would need special adaptation in the case of the orthopaedically handicapped children. Facilities for higher education for these handicapped could be increased by awarding scholarships at the university level and for professional and technical education.

In regard to the placement of these people in various occupations, the conference, though in favour of encouragement being given to them to go into open employment, wanted provision of facilities for sheltered employment for the severely handicapped persons.

The proper rehabilitation of the orthopaedically handicapped, though largely a matter of Governmental policy and outlay, would also require the cooperation of the public and the parents. Since films offer the best means to educate the parents and focus public interest, the conference has recommended that every possible effort should be made by official as well as non-official agencies to produce films dealing with all aspects of education, training and rehabilitation of the orthopaedically handicapped.

*

Bombay State Financial Corporation

THE establishment of State Financial Corporations is an important step taken by Government in their effort toward the orientation of the financial and credit mechanism to the needs of the development envisaged in coming years in the country. As far as the industrial sphere is concerned, Government have set up the Industrial Finance Corporation and the Industrial Credit and Investment Corporation with a view to meet the special needs of the private sector. State Financial Corporations are designed to meet the needs of small businesses.

The fact that almost all industrial groups have shown increased output in the past year including textile, metal, chemical and general engineering industries to which a large number of medium and small scale units belong indicates that small manufacturing firms are working well. In Bombay, the State Financial Corporation has rendered considerable assistance to a number of industriees in this category. The processing of textile fabrics, manufacture of textile and sugar machinery, forged tools, paints and varnishes, collapsible tubes and rigid wall containers, wire-healds, pharmaceutical preparations and spun pipes have all been able to make sizeble headway with the loan accommodation from the Corporation.

The Bombay State Financial Corporation considers applications from small and medium scale industries for financial accommodation from Rs 75,000 to Rs 10 lakhs. The loans are advanced mainly for acquiring fixed assets and also partly for working capital. The Corporation offers assistance to all forms of management including private and public limited companies, cooperative Societies, partnerships and proprietory concerns. During the year ending March 1957, 37 industrial concerns received loans out of a total of 97 applications. In the course of the past three years, the Corporation granted (including the previous Saurashtra Financial Corporation) an aggregate loan of Rs 264,15,000 to 129 concerns. Adding the sum of Rs 3,75,000 representing the amount subscribed to debentures of one concern by the former Saurashtra Financial Corporation, the Bombay State Financial Corporation, and the Corporation as reconstituted upto 31st March 1957, the aggregate loan comes to Rs 2,67,90,000. Out of this, a sum of Rs 1,61,69,700 has been disbursed while a sum of Rs 41,33,300 will be disbursed from time to time to meet the requirements of industrial concerns for implementing their respective programmes of expansion as arranged by them. Thus there is an aggregate firm commitment of Rs 2,03,03,000. It is however expected that a sum of Rs 34,17,000 will not be availed of and will lapse. Out of the aggregate sum of Rs 1,61,69,700 disbursed, a sum of Rs 10,67,200 has been recovered by way of repayment of loans bringing the outstanding amount to Rs 1,51,02,500. As the total amount of loans sanctioned by the Corporation has exceeded its paid up capital, the question of raising additional resources as early as possible is under active consideration of the Board of Directors.

A welcome feature of the working of the Corporation is the steps taken to establish personal contacts with the representatives of medium and small scale industries with a view to bringing about close cooperation between them and the Corporation. As the development of village and small industries is a task to be undertaken largely by the States, the State Financial Corporations will be increasingly called upon to render financial assistance to a wide variety of concerns in coming years. The record of the Bombay Financial Corporation in the past three years is clear indication that no workable scheme in the State falling under the category of medium and small-scale industries need remain unfulfilled for want of financial assistance.

GATEWAY MARKETS

Mixed Trend in Oils and Oilseed Prices

THE markets for Oils and Oilseeds gave a mixed performance during the week under report. In the absence of any fresh overseas enquiry, the announcement over free exports of castor oil had virtually no effect on the Castorseed section where values declined under persistent liquidation. Sentiment in the Groundnut section, however, ruled better due to demand from vanaspati manufacturers. Trading in the Linseed and Cottonseed sections was dull and featureless.

Sentiment in the Castorseed section was better early in the week although the volume of business continued to be smaller than usual on account of the partial attendance. The initial rally was attributed mainly to reports of a fresh export business in castor oil. It was stated that Soviet Russia, once again, came to the rescue of the bull operators by making fresh purchases of BSS castor oil at £152 per ton, in drums on f.o.b. There were also reports that Germany had made substantial purchases during the past few days. The attitude of the US buyers continued, however, discouraging with the rate quoted around 19 cents per pound.

Castor September delivery started higher at Rs 178.75 and, after improving further to Rs 179.00, receded gradually to Rs 173.25, to finish the week better at Rs 174.25. Ready was quoted at Rs 34.50 and Castor Oil, Commercial quality, at Rs 19.25.

In the Groundnut section, August delivery opened at Rs 180.37 and, after receding to Rs 178.00 due to some liquidation on fears that no export of oil would be allowed until the seeds and oils prices substantially come down, recovered partially at the close to Rs 178.87. In the ready section, bold quality was quoted at Rs 36 and Groundnut Oil at Rs 20.37.

Linseed September started at Rs 30.56 and, after touching a low of Rs 30.25, improved at the close to Rs 30.44.

Cottonseed September delivery commenced at Rs 112.50 and, after improving to Rs 113.50, finished slightly lower at Rs 112.00.

*

Gold & Silver

The downward trend on the Bullion Exchange gathered momentum during the week under long liquidation. Reports of heavy arrivals of Tibetan coins were mainly responsible for initial losses in Silver. Gold was subdued under increased arrivals and weakness of the counter part; but the decline in prices was eventually halted by short-covering.

Silver Jeth delivery started weak at Rs 182.81 and, after improving fractionally to Rs 182.87, retreated again to Rs 181.87, to finish at Rs 182.06. Similarly, Ashad delivery opened at Rs 181.31 and, after touching a high of Rs 181.37, finished at Rs 180.44. Ready rates moved between Rs 182.31 and Rs 182.50.

In the Gold section, Jeth delivery started at Rs 105.69 and, after improving to Rs 105.87, fell

Bombay Review

World of Cotton

Restricted Trading

ONCE again, very thin and meagre trading was recorded in the Bombay Cotton futures market as traders kept sidelines, awaiting the opening of the new contract. In order to check speculative activity in the ready market, changes are contemplated in the method of trading in delivery contracts. In this connection, the East India Cotton Association has circulated an outline of the scheme for the regulation of delivery contracts to its members for inviting suggestions.

The main features of the scheme are as follows:—

(1) Trading only in the following types of delivery contracts is permitted: (a) Sales and purchases between members or between a member and non-member on private types or sealed samples or on stamped bales either on "on call" or "fixed price" basis in respect of all varieties tenderable under the hedge contract and|or included in the Textile Commissioner's schedule. No settlement clearings are allowed in respect of these types of business; (b) Sales or purchases between members or between a member and a non-member or description in respect of the various tenderable varieties under the hedge contract which may be permitted by the Board, either on "on call" or "fixed price" basis. Pay-of differences through the clearing house as envisaged hereunder shall not apply to such transactions in which one of the parties is a mill, but the transactions should not be cancelled. Delivery orders should not be passed on from party to party. Delivery should be taken by the buyer from his immediate seller and then given to the mill or the next party. Transactions on description shall be for the particular staple stipulation as may be permitted by the Board from time to time. Such transactions, however, may be settled if the parties mutually agree;

(2) No purchase or sale in delivery contracts other than on the above-mentioned terms and conditions, shall be allowed under the bye-laws of the Association;

(3) There shall, however, be no restriction of business in respect of cotton having a staple more than 1" as well as those which are not included in any of the abovementioned two schedules; and

(4) Transactions in respect of Bengal, Assam Commilla, Oomra Deshi, Mathia, Mungari and other varieties not included in the hedge schedule or in the Textile Commissioner's schedule may be on "fixed price".

It is felt that the regulations in respect of delivery contracts can be effectively enforced, only if these regulations are made uniformly applicable to all transactions in delivery contracts whether either of the parties thereto is a member of the Association or not. It will, therefore, be necessary for the Government to apply the provisions of Chapter III and IV of the Forward Contracts (Regulation) Act 1952 throughout Indian Union to transactions in non-transferable specific delivery contracts also in order to regulate and control such transactions.

[At the time of going to Press, it was learnt that the Government of India had decided to maintain the "floor" and "ceiling" prices for the 1957-58 season. In the present context of the all-out effort to increase exports, the Government's reluctance to raise the price of the essential raw material of an important export industry is not without justification.]

In the meanwhile, it is hoped that trading under a single contract system for future will commence some time in July. Efforts are made to persuade the Government to open the new contract before the expiry of the current contract, Vijay June. The new hedge contract, which will be ICC March Moglai contract, is nominally placed around Rs 710. The total tenders issued so far against the Vijay contract amount to 3,300 bales. The contract opened at the previous closing level of Rs 812 and improved, on shortcovering, to the week's high level of Rs 820 following reports of strict survey, to finish at Rs 817.

In the ready section, a leading spot house sold a fairly big lot of Surat AG mark at Rs 1,100. Business was also done in Kalyan varieties. Scarcity of good quality lots are now being gradually experienced by high-count spinners. Prominent local as also Ahmedabad mills have been buying in Surat and Ahmedabad.

In the foreign section, there was very little activity. A few spot lots of Americans and Sudanese changed hands.

In the current cotton season, during the period from September 1, 1956 to May 15, 1957, actual arrivals of foreign cotton into India were slightly higher at 455,416 bales as against 444,716 bales during the corresponding period of the previous season. Imports of Americans rose sharply, during the period, to 292,811 bales from a mere 12,051 bales. Imports of East Africans, which were at 128,901 bales in the 1955-56 season, sharply declined to 75,993 bales in the current season so far. So also, there was a sharp decline in the arrivals of Egyptians from 200,688 bales in the 1955-56 season upto May 15, 1956 to 36,700 bales in the current season.

Olympus

The "Cooperative" Controversy

LAST week was released here the official report of the delegation that visited China and Japan last July to study the agrarian co-operatives in those countries. This has given the cue once again to familiar controversies. Special interest attaches to this particular report and its instrumentality in the controversy, because there have been some odd features about the manner in which the public came to know of the views of this delegation. Long before the report itself was last week made public, the internecine squabbles between the 'majority' and the minority' in the delegation have become public knowledge. Soon after the return of the delegation in September last, the daily press was reporting the rival viewpoints from the members of the delegation themselves. This appears, from any manner of reckoning, a very unedifying way of letting the public know an expert body's views on a very important subject. It is not suggested that members of a delegation should not differ from one another, but the differences should be presented to the public in as decorous a way as possible. As it turned out, long before the report reached the hands of the public, there has been heated ideological clashes over what the delegation found in China.

The differences and the subsequent ideological sniping that these set off have their further points of irony: It was because there was a great deal of variation (to put it euphemistically) among previous individual appraisals of the Chinese experiments in organisation of agricultural production, that the delegation was sent to find out the real state of affairs. In the simplicity nurtured by doctrines of Benthamite liberalism, it was assumed that a committee would be immune from ideological viruses and be able to report objectively on the lessons to be learnt from the experiments. Apparently, it was a mistaken presumption, since both the controversy that has preceded the publication of the report and the report itself have shown that the real differences *are* ideological.

Such prior ideological commitments betray themselves in many places in the report. For instance, referring to the Japanese co-operatives (which are service co-operatives assisting family farming, unlike the Chinese which are agrarian co-operatives), the majority report says: "The climate in Japan is not conducive to the development of agrarian co-operatives. Unlike the Chinese, the Japanese economy is based on the system of free enterprise and individual initiative. One of the impelling factors for the development of agrarian co-operatives e.g., the desire to proceed towards socialism in the agrarian sector is absent."

Now, it seems very queer logic that settles the value of service co-operatives by referring to the fact that agrarian co-operatives are absent in Japan because the Japanese are not ideological Socialists. And what is particularly laissez faire about service co-operatives? And then, is the only argument in favour of agrarian co-operatives that "it is impelled by a desire for proceeding towards socialism?" In that last assumption are hidden unnamed horrors. "Proceeding towards socialism"? What happens when we arrive? Does co-operation disappear and collectivisation start? It is precisely against ultimate proletarianisation of the peasant, implied in that careless phrase, that the minority has rightly protested.

Let me add at once that I am not suggesting that the majority hold the view that agrarian co-operatives are consciously desirable because they lead you to collectivisation. But their unconscious assumptions have made them forget that what we wanted of the delegation was a factual appraisal, firstly, of the achievements of the agrarian and service co-operatives, in the matter of increased agricultural production; of their value as a form of productive organisation and from the point of view of their effect on the quality of the lives of the people; of the accretion to the sum of human happiness they generate; and of their ability to foster healthy personal relationships between man and man. This last, be it noted, is no "ideological consideration," but a recognisable, though not possibly measurable, condition. And, finally, since the inquiry was not merely academic, we should like a finding on how far the Chinese and Japanese experience is capable of helping us in our efforts to reorganise rural life.

On all these questions, there have been deep differences between the majority and the minority. On the question of increase in production, the majority report says that the increase (of which there is no controversy) is mainly due to the creation of agrarian co-operatives. This is vigorously disputed by the minority report. The note of dissent says: "It is an utterly unwarranted assumption that the increase in agricultural production can be ascribed wholly or even mainly to co-operativisation. . . . The real cause for the improvement of Chinese agriculture is their capacity for hard labour, and this now pays higher dividend because it is supported by credit, improved seeds, better implements, etc., and the advantage of peace and security."

On the question of social harmony, there is also striking difference of opinion. The dissenting members dissociate themselves from the view of their majority colleagues that the Chinese co-operatives both in their organisation and working are voluntary and democratic: "The election of the executive committee and the office bearers is not democratic because these must be elected from names given by the Communist party . . The system of norms reduced the peasants to automatons and take away from agricultural work the spontaneity which is its chief characteristic." (The last objection, one must add, is rather specious, for, fixation of norms is not necessarily tyrannous. I also suspect that the members have romantic illusions about the spontaneity of agricultural operations, bred, perhaps, by Wordsworth's Solitary Reaper!).

And, finally, about the usefulness of the Chinese example for us. The majority has made out a fairly convincing case for its plea for an experimental programme of about 10,000 co-operative farming societies or one for every group of 50 villages. One argument alvanced is that there is a great deal of work of a communal sort waiting to be done in the villages which does get done because it is nobody's business. A co-operative set-up would make possible the organisation of these tasks. The dissenting members consider that a co-operative is not necessary for this purpose and quote the example of collective enthusiasm for common tasks under community development projects. But such enthusiasm is not directly related to immediate self-interest and it is always better to temper idealism with a little blandishment. The second point made by the majority is that the pressure on land can be relieved by detailing idle man power on work of this kind under co-operative auspices.

The best solution seems to be to see that the extreme extinction of ownership is not attempted, even when co-operatives for farming are organised. According to the delegation, they have two kinds of co-operatives in China. one is called the primary co-operatives, in which 30 per cent of the rural households are members and the other is called the 'advanced type' in which 62 per cent are members. The distinction between the two types consists in the fact that, in the former, individual ownership is retained and, in the latter, it is not, and you get only a return for labour. We need not go into

Labour Legislation

THE report of the Ministry of Labour and Employment for 1956-57 reveals all-round progress in fields like, provision of employment and training facilities labour welfare etc.

During the year, the administrative control of the Employment Exchanges and Craftsmen Training Centres was transferred to the State Governments. A pilot project under the supervision of an ILO Expert was started in Delhi to collect employment market information.

A scheme to provide employment assistance to surplus and retrenched personnel of Defence installations and certain river valley projects was introduced in September 1956. Further a scheme to provide vocational guidance and youth employment service and employment counselling is under way.

The employment situation also reflected a slight improvement. The number of vacancies made available to the exchanges was generally greater than during the previous year, as also the number of employers utilising the employment exchanges.

During the year the Employees' State Insurance Scheme was extended to more areas, bringing the total number of employees covered to about 11 lakhs. This is more than half of the total insurable population in the country. Likewise the Employees' Provident Fund Act which initially applied only to 6 industries was extended to 17 more industries.

In the field of industrial relations the man days lost through stoppage of work from January to October 1956 were 62,14,583, as compared with 52,80,186 for the corresponding period in 1955. But Works Committees were helpful in developing mutual cooperation and understanding between the employers and employees.

The important labour laws enacted during this period were (1) the Industrial Disputes (Amendment and Miscellaneous Provisions) Act 1956 which provided for, among other things, replacement of the system of Tribunals by a three-tier system of Labour Courts and Labour Tribunals and National Tribunals manned by personnel of appropriate qualification and (2) The Employees Provident Fund Act.

The Union Ministry of Labour and Employment have now under consideration proposals to amend Legislation relating to payment of wages, workmen's compensation, coal mines labour welfare fund, mines, maternity benefits and coal mines providend fund and bonus schemes.

*

Industrial Production in 1956

Though it is rather too early to embark on an assessment of the progress of the Second Five Year Plan, it is nevertheless possible to glean some broad indications from the general pattern of industrial production that has become apparent in the course of the past year.

Industrial prduction in 1956 has maintained the annual rate of increase of 7 to 8 per cent achieved toward the end of the First Plan. The rise in production is mainly accounted for by most major industries. Steel production has reached the figure of 13.4 tons as against 12.6 lakh tons in 1955 and 12.4 lakh tons in 1954, while cement production for 1956 is 4.9 million tons as against 4.5 million tons in 1955.

The fact that the year has been one of the busiest for engineering industries as a whole indicates that the priorities and the programme of industrial development laid down for the Second Five Year Plan are beginning to yield the desired results. The demand for the products of the Engineering industries has shown sizeable increase and thanks to the increased availability of steel, many of these units are working on a multiple shift basis. A large number of applications under the Industries (Development and Regulation) Act of 1951 have been received by Government during the year for setting up new undertakings in this field or expanding existing units.

There has been a substantial increase in the production of sulphuric acid which is required mainly for meeting the demands of steel, fertilizers, rayon and staple fibre industries. The sizeable increase in the output of automobiles, tyres, diesel engines and electric motors is bound to show corresponding improvement in the fields of agriculture, transport and small-scale industries.

The production of cloth, both by the mill and handlooms, and of yarn has registered a further increase in 1956 while the production of jute textiles has been maintained at the previous year's level. The production of tea, coffee and rubber has also been satisfactory.

A significant development during the year has been the manufacture of a number of new articles in the country for the first time. These include some important dyes and drugs and certain types of tools.

*

Permanent Body to Review Resources Position

Addressing the meeting of the State Planning Secretaries in Delhi, Mr V. T. Krishnamachari, Deputy Chairman, Planning Commission urged that the States must work out details of the resources that would be available to them for implementing their plans over the next four years and suggested that a permanent high-powered body should be set up in each State to keep under constant review its resources position and to watch its non-plan and non-developmental expenditure with a view to keeping it down.

Mr Krishnamachari said that each State must decide upon a target to be achieved in Small Savings which were hereafter going to be a more important item in the States' resources than before.

At the meeting it was also agreed that the preparation of the annual plans for the States should be linked with the preparation of their annual budgets.

NORTH INDIAN MARKETS

Quiet Trend in Foodgrains

CONDITIONS in the Foodgrains market have continued to remain quiet, thanks to the directive issued by the Reserve Bank of India to banks to bring down substantially their present advances. In a circular letter to the banks, the Reserve Bank has stipulated that, in respect of each credit limit and advances against the security of foodgrains, a margin of not more than 40 per cent of the value of the foodgrains should be maintained. The banks should maintain an aggregate level of credit against foodgrains in such a way that, by July 12 and in every week thereafter, the level will be in respect of paddy and rice not more than 66 2/3 per cent, and, in regard to other foodgrains, not more than 75 per cent of the level obtaining in the corresponding week of 1956.

For obvious reasons, stockists are unnerved, while the consumers have welcomed the proposals. In the Hapur market, Wheat prices are mostly unchanged, being quoted at Rs 14.50 per maund for the average quality and at Rs 16.50 for the farm quality. Total arrivals from the beginning of the season are put at 72,000 maunds, the corresponding figure for last year being 62,000 maunds.

Rice prices have continued to rule steady. In fact, the Government seem to be worried more on account of rising trend of prices of this commodity than of wheat. With the start of the monsoon, however, prices are likely to decline. Despite increase in the arrivals of the new Gram crop in the Punjab markets, prices of this commodity are ruling steady as loading from the Punjab is restricted. Barley prices have recorded modest gains due to poor stocks.

Peas have turned somewheat quiet on slack stockists' support although buying from Bihar continues to be evidence. Arhar prices have fallen by 25 nP per maund on poor outside buying enquiry and increasing stocks.

According to an official estimate of the progress of agricultural production in the country, average annual production of foodgrains was higher by 13.1 million tons in the five-year period ending 1956/57 as compared to that in the quinquennium 1947/48 to 1951/52. As regards imports and exports, the estimate shows that the country had been importing not less than 30 lakh tons in each year from 1947 to 1953. In 1956, only 8.08 lakh tons were imported and, in 1955, 7 lakh tons. Imports in 1956 amounted to 14 lakh tons. The total imports, during the last three years, have not, however, reached the average annual imports of previous years.

The Bombay grains market presented an easy appearance with prices of Rice and Jowar declining moderately in the absence of consumer demand. The overall tendency in Wheat is downward, while there is a limited turnover in Bajra and Pulses.

*

Sugar

Thanks to the recent release of 1.65 tons for free sale, Sugar markets ruled quiet. Following mill-delivery prices (per maund) were quoted in the Hapur market:—Amroha Rs 33; Bijnore Rs 32.75 and Mansoorpur Rs 33.62 to Rs 35. Production, upto May 15, amounted to 19.13 lakh tons. Stocks with the factories, on that date, were estimated at 12.7 lakh tons as against 12.61 lakh tons last year.

It is reported that Czechoslovakia is building three more sugar refineries in India. The works will bring to four the number of refineries contributed by Czechoslovakia factories for India's Five-Year

The Peninsula

The Kerala Budget

The Finance Minister of Kerala has not strayed very far from his Chief's declared intention to produce a budget in which the rich would be taxed more and the poor less or nil. Through an extension of the wealth tax, an addition to the super-tax on agricultural incomes and the unification of land revenue and agricultural income tax, the State Government expect to secure an yield of over Rs 1½ crores.

Outside agriculture, there are a few levies; there is a surcharge on sales tax on turn-over of Rs 30,000 and over, and another on professional tax on incomes of Rs 250 and over per month. The extension of taxes on travellers and parcels in buses prevailing in Malabar area to the whole of Kerala promises Rs 20 lakhs. An equal amount is in sight, through the unification of the sales tax.

The pursuit of new sources of income is remarkably skillful. There is not a single new levy on the comparatively poorer sections. The agricultural wealth tax is only a new leaf added to the Union Finance Minister's book. The adjustments in the super-tax and the imposition of new surcharges also belong to the same pattern. For the rest, it is mostly a matter of equalisation of burdens between the old and new areas of the State. It can even be claimed that without this equalisation, there would have been glaring discrimination. The Finance Minister also claims credit for producing a surplus budget, conscientiously taking to heart the Prime Minister's strictures against deficit budgets for the States.

The Budget represents in a measure fulfilment of the election promises of the Communist Party in Kerala. At the same time, it also reflects the Ministry's desire not to overstep the clear limitations laid down by the Constitution. Admittedly, the State Cabinet has no desire to have any straight fight with the Centre over Constitutional issues. It has, however, to be understood that the raising of the professional tax minimum is a borderline case.

An important feature which seems to have impressed even the Opposition Parties is the diversion of substantially larger amounts out of the new proceeds for productive purposes than for administrative expenditure. The reforms proposed concerning the services of the private school teachers and primary teachers generally, should be a matter of universal approval in the State. Knowing as one does the extremely active role which school teachers play in the elections, the raise in salary and its mode of payment announced by the Finance Minister are not without vital political significance.

As I have mentioned earlier, the budget is largely inspired by some of the new Central taxes. As one Congress Member says, it also puts the seal of approval on some of the policies of the Central Government. Perhaps it would be unjust to say that the Communist Party has eaten some of its principles. Anyway, the sales tax is now no longer so 'immoral' as before and a discriminatory increase is accepted as a sufficiently progressive measure, when the party has come to shoulder responsibilities of office.

Neither do some of the other new tax proposals, as benevolently conceived from the standpoint of the common man, as they are made out to be. There is point in the criticism that a professional income over Rs 255 does not put a man in the affluent category, nor does the tax even bring to the Exchequer any worthwhile income. The tax on passenger fares and parcels in buses will hit the poor as much as it does the rich. In fact, the percentage of poor passengers may be much more than that of the well to-do.

Both inside and outside the legislature, the taxation proposals are being viewed in terms of their impact on particular areas and sections. It is inevitable that when parts of two different states are integrated and a uniform tax system is being applied, the regional impacts differ. The new system of land tax benefits Malabar; it is calculated that land-owners in Malabar would now have to pay one-fourth of what they had to pay to the Madras State.

The higher ranks of Government officers can feel aggrieved that the increased emoluments they expected through integration and which were actually given to them by the Governor before the Ministry took office, have not materialised. If the Party in power is to have its way, there is possibility of some reductions even from the existing levels of pay.

The budget leakage is certainly not a complement to the compet-

SOUTH EASTERN RLY. TENDERS.

The General Manager invites sealed tenders for supply of the following materials:

1. Tender No. CON/GM/17/STOCK/F1/60 for supply of 2,500 Nos. Flap door latrine 2'-0" × 1'-6". Earnest money is Rs 1,000/-

2. Tender No. CON/GM/18/STOCK/Gbl/58-CS for supply of 50 tons signal wire IG 8 SWG. Earnest money is Rs 1,000/-.

Tenders will be opened on June 27, 1957 at 12-00 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

The tenders should be accompanied by a receipt from the Chief Cashier, S. E. Rly., Garden Reach for amounts towards earnest money as above without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1,000/- with the Controller of Stores need not pay the earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

South Indian Notes

Food Position in Southern States

Amidst the general apprehension about the worsening food situation in the country, it is gratifying to hear the Union Food Minister, declare firmly at Madras that there will be no return to food controls.

The Food Minister's confidence in the Government's ability to meet the food situation is based on the measures adopted and intended to be adopted by the Government to check the rise in prices. They are zonal restriction on the movement of food grains, limitation of advances by banks on credit, the recent notification empowering the State Governments to require any stockist to sell his stocks at the average prices of the past three months and maintenance of stocks of imported rice and opening of fair price shops.

At least so far as the Madras State is concerned, the first and third measures should prove effective in making available sufficient supplies of food at reasonable prices because the present food situation in the South is one of artificial scarcity created by a dislocation of the normal flow of food grains in and out of the State. It is really strange that the surplus rice of Tanjore District as also that of Andhra which usually finds a market in Madras should be diverted to Kerala, and other Northern States. This is only a reflection of the disparity in prices as between the various regions.

In this context, the constitution of a food zone, comprising the States of Madras, Andhra Pradesh and Mysore, has been, suggested and favoured for implementation by the Madras Ministers. Such a zone, it has been held, would be self-sufficient in regard to its food needs. The Union Government are in favour of including Kerala also in this zone. But the Madras ministers are not enthusiastic about admitting Kerala, since it is feared, that besides making the zone deficit in the matter of food and therefore dependent on the Centre for supply of additional foodgrains, it would also be necessary to regulate the movement of food grains, within the zone in order to ensure even supply all over the zone and to prevent the highly deficit areas draining off the available supply from the surplus areas.

The formation of such a zone is dependent on the consent, and agreement of all the Units. While agreement of the Mysore State to the scheme has been expressed by Mr Nijalingappa, Chief Minister of the State, the views of the Andhra Government are yet to be known. Kerala will be reconciled to her exclusion only if there is a Central guarantee of responsibility for supplying her entire needs. According to Mr K. C. George, the Kerala Food Minister, this could be done by diverting the Burma rice to Kerala or in the alternative the Centre should divert to Kerala part of the surplus Orissa rice which normally goes to West Bengal.

*

Manufacture of Heavy Duty Commercial Vehicles

Two factors are mainly responsible for the slow progress of the automobile industry in our country. In the first place, no large increase in the demand for motor cars is possible until a considerable improvement is achieved in the standard of living of the people. Secondly, there should be a well-laid out system of roadways for the different types of vehicles to move about throughout the country. At the present juncture both these prerequisites are conspicuous by their absence. It is no wonder, therefore, that in spite of active Government help the indigenous industry has not been able to make much headway.

It may be pointed out that with the greatly increased demand for transport facilities, the manufacturers of heavy motor vehicles should find no difficulty in disposing of their products. But here also the second of the two factors noted above constitutes an effective check on rapid progress. The conditions of road transport are such that the number and types of vehicles that can be put into commission is severely restricted. This drawback in our road system is particularly disadvantageous to manufacturers of heavier types of motor vehicles as the type of roads which are needed for vehicles in this category are by no means a common feature of our landscape.

The Government of India have themselves not been quite confident of the prospects, at least in the immediate future, of industrial units which elect to engage in the manufacture of heavy duty diesel power commercial vehicles only. That is why they have decided to give a virtual monopoly to any company which would produce such heavy duty commercial vehicles.

Ashok Leylands which has accepted the offer, however, has found that in actual practice the virtual monopoly allowed to be enjoyed by it by Government has been rendered largely ineffectual by the improper use to which lighter vehicles are subjected in contravention of rules. Despite this unexpected handicap, the company has been able to achieve considerable progress, thanks to the active interest evinced in its technical management by its English collaborators, Messrs Leyland Ltd.

There is no doubt that Ashok Leylands will make orderly progress toward the goal of full manufacture of heavy duty commercial vehicles in India as Messrs Leyland Ltd have agreed to supply all equipment which has to be purchased abroad in exchange of shares of the company.

SOUTH INDIAN MARKETS

Hides and Skins Steady

THE markets for Hides and Skins ruled generally steady last week. Arrivals of Cow hides were normal with fair clearances. There was no change in Buff and Calf hides.

On the export front, trading was on the same level as in the previous week; and enquiry was mainly for runs and fourths. Middle and heavy weights ruled quiet. Although buyers from London were making out bids, these failed to creat any interest. There was very little change in inferior fifth cow hides.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were on the same level as in the previous week and there was moderate clearance with no change in prices, although a few lots of better tannage were reported to have been done at rates 12 nP per pound higher.

In the export section, price movements in the Goat section were rather erratic. One or two marks of 8/9 lbs aveage were sold at 15sh 6d. In general, foreign buyers did not show much interest at the ruling high level of prices. In the Sheep skins section, there was fair demand for prime and middle classes for European and Japanese markets.

Raw hides ruled very steady. Prices in the Raw Skins section ruled somewhat higher, goat and sheep skins being quoted Rs 20 and Rs 10 per 100 skins higher.

*

Groundnuts

Trading in the Madras Groundnut market was quiet with rates being nominally quoted around last levels. Arrivals averaged 25 to 30 tons a day and out of these only small quantities were taken up by Chekku and rotary crushers. Superior oil-quality seed was quoted at Rs 163 and the bold variety at Rs 156 per candy.

In the Groundnut Oil section, the rate for the ready position was quoted around Rs 330 per candy. Business done was generally poor as buyers did not show interest. Due to accumulated stocks and the difficulty in getting shipping space, Calcutta parties were not able to take sufficient quantities.

*

Gingelly

According to the fourth and final forecast report issued by the Andhra Pradesh Government, the area sown with Gingelly in Andhra Pradesh during 1956/57 is estimated at 675,300 acres. Compared with the final area of 654,300 acres for the previous year and the average area of 759,600 acres calculated for the previous five years, the present estimate shows an increase of 3 per cent and a decrease of 11 per cent respectively.

The total yield works out to 55,700 tons as against 49,000 tons estimated for the previous year, representing an increase of 13.6 per cent. Compared with the average estimated yield of 63,200 tons calculated for the previous five years, this estimate shows a decrease of 12 per cent.

*

Lemongrass Oil

The market for Lemongrass Oil is going through one of its periodical flutters, the reason for the present phase being the report that a factory in New Jersey has been able to produce ionones from sources other than lemongrass oil. This has made the London market nervous; and purchases nave suddenly been suspended.

Meanwhile, the Indian crop promises to be a heavier one than last year's, one estimate being 1,350 to 1,400 tons.

*

Coffee

According to latest reports from Britain, African farmers in the Kamba district of Machkos will shortly harvest their first coffee crop for processing at a new factory, built by a newly-formed Coffee Growers' Co-operative Society. Steps are being taken to work hard to produce coffee of a good quality.

*

Tobacco

The US Department of Agriculture has announced issuance of an authorisation to India to finance purchase of $3,052,000 worth of Tobacco from US supplies under Public Law 480. The price will include certain ocean transportation

THE BOMBAY GAS COMPANY LIMITED

Production Goes Up At Increased Cost - Revision in Price Necessary

Chairman, Sri B. L. Jalan's Statement.

The following is an Extract of the speech of the Chairman, Sri B. L. Jalan which was delivered to the shareholders of the Company at the Annual General meeting held in Bombay on the 11th June, 1957:—

Since we assembled here last, the international relations have witnessed many convulsions. The nationalisation of the Suez Canal once threatened a large scale conflagration. Thanks to the efforts of our Prime Minister and President Eisenhower, a reassuring calm has returned. The Middle East, however, continues to be in turmoil at one centre or the other. The world tension has increased also with renewed activity in the development of nuclear weapons. A race for ever new achievements is under way, one power trying to outstrip the other. But let us hope that in a not very distant future, more lasting peace will be established.

Nearer home, the Kashmir question was revived. The Jarring Commission Report, which also referred to 'the changed context', is yet to be debated by the Security Council. In the meanwhile, it has brought about further deterioration in the relations with our neighbour and also affected our economic operations in that country. The visa problem between the two countries has worsened beyond recognition. Notwithstanding a lack of full realisation, it has been demonstrated once more that good and neighbourly relations are absolutely essential for mutual benefit of both the countries.

In the midst of these none-too-happy developments abroad, India has crossed another milestone in her advance towards more effective democracy, by completing the second general elections.

The progress of industrial programmes during the last few years has been fairly encouraging. It is contemplated that the production of several important industries will be increased manifold during the Second Plan.

ECONOMIC STABILITY

The fulfilment of the ambitious industrial programmes requires both economic stability and favourable investment climate. You will recall that commenting on the Second Plan, I had observed in my last address to you, that I was afraid "the investment potentialities and needs of the country have been exaggerated; the outlay in the public sector is far too excessive; and some real risks involved in the heavy doses of deficit financing have been ignored". The first year of the Plan was out only last month and it appears that the new strains developed by the economy have not belied my fears.

The Economic Advisor's general index of wholesale prices stood at 421.3 for the week ending 4th May, 1957. This represents an increase of about 8 per cent over the level a year ago. The rise has not been spread over uniformly on all groups of commodities so that new imbalances have been created, all of which are, unfortunately, unfavourable to the industrial sector. Between March, 1956 and March, 1957, the prices of raw materials increased by about 9 per cent and of food articles by 14.5 per cent but the index of manufactured goods advanced only by 2.5 per cent. In other words, the costs of industry have increased without a corresponding increase in the revenues of industry.

A very serious deterioration in the balance of payments position has been a still more disquieting feature during the first year of the Second Plan. Our external payments suffered a deficit of Rs. 300 crores. India's sterling balances have already touched a level which has to be maintained as minimum currency reserve. We have also drawn a credit of Rs. 60 crores from the International Monetary Fund and the solution of the problem is not yet in sight.

The money market appears to be passing through a drought of capital and the stock market through a crisis of confidence.

There is one stream of national income and savings from which both the sectors have to draw their funds. Having planned for an extremely bold programme with undue emphasis on the State sector, very meagre resources have been left at the disposal of the private industry. The sources of revenues of the State are rigid and claim the first priority. Whether one likes or not, taxes have to be paid. The private industry, however, has to draw on the residue of resources, and the means which it can employ are definitely voluntary. The entire brunt, therefore, of the inadequacy of resources to fulfil a given plan has to be borne by private industry.

HEAVY TAXATION

Heavy taxation is a two-fold evil. It dries up the capital fund available to industry. It creates disincentive for investment. The situation becomes worse if, as in the present case, taxation is levied beyond the taxable capacity of different sections of the people and the form of taxes is biassed against savings and investments.

In the name of the Plans the last few budgets imposed several new and enhanced taxes. Some taxes were justified on grounds of restraining consumption, others on fighting inflation, reducing inequalities of incomes or foreign exchange deficits, and still others on raising adequate revenues for the Plan. The piece-meal approach to different items of taxation has not served the basic objectives of our economy as the one object offsets the other.

Since Taxation Enquiry Commission and Prof. Kaldor reports have been published, the Government have found an easy pretext for several new taxes. In an attempt at comprehensive tax reform, the two-expert reports naturally suggested such untapped resources but they made it unequivocally clear that these suggestions formed an integral part of their new taxation pattern and any tax suggested by them lost all its vitality of a system of reliefs and concessions recommended by them was not adopted. Whereas the Government have found it convenient to swear by these expert opinions, the second integral part of reliefs and concessions has been completely ignored.

I do not wish to dwell at length on individual budget proposals but I must observe that the wealth and expenditure taxes do not serve the interests of our planned economy. They are likely to increase the harassment of the assessees and jeopardise the basis and privacy of our family life. The wealth tax will, of course, liquidate existing capital and act as disincentive to the formation of fresh capital, but even the expenditure tax will militate against the objective of increased savings and investments. The ultimate object of incomes is expenditure and if tax payer is effectively restrained from expenditure even in futre, he will as well not save at all.

Those who still believe that some of the proposals of the budget will promote capital formation—as the highest rate of income tax-super tax has been reduced from 92% to 84%—must be squarely told that at certain levels of income the assessees will pay more than 100 per cent tax of their incomes, by whatever name we will call it, income tax, super tax, expenditure tax, or wealth tax. One cannot understand how we can promote savings and investments if we must tell the assessee that if he earns 100 units of income we will take away, say, 105 units or even more. From this practical point of view one can easily follow how reduction in the income tax—super tax rates is only illusory.

The direct effect of expenditure tax will be that a car purchased at say, Rs. 20,000 will cost the assessee Rs. 40,000 (tax of Rs. 20,000 being payable in 5 years) if his spending exceeds a certain specified income, which is not very high either. This will also seriously distort the relationship between 'cost to producer' and 'price to consumer' and inter-commodity price relationship within the economy. Thus a radio priced at Rs. 500 will cost Rs. 500 to one man, Rs. 600, Rs. 700 or even Rs. 1,000 to others. These are far reaching changes in the basic pattern and economic life of our society and should not have been disposed off so lightly.

But this is only one side of the picture. It was contended that more reliance will be placed on institutional and corporate savings than on individual savings in future. But the burden of taxes on companies has been increasing at no mean a pace. Thus the corporation and income taxes have been increased, Section 23A has been retained, excess dividend tax and bonus taxes have been imposed and wealth tax on companies has been introduced. To this array of taxes, has been added the new scheme for compulsory deposits of accumulated and retained profits and depreciation allowances.

A SUGGESTION

In this connection I may suggest that the deposits of profits and depreciation should be constituted as a current fund for industry. The surplus funds should be lent to industry irrespective of the quantum of such deposits of individual units for legitimate industrial needs, medium and short term. This will at least check the loss of capital resources in a tight money market by this new scheme of deposits.

I will also suggest that the Government can introduce compulsory loans. Thus, the amount payable by the assessees in respect of expenditure tax and wealth tax may as well be collected in the form of loans. The basis of computation and collection will remain the same. That is, the assessees (including companies in case of wealth tax) will declare their expenditures and wealth and compute the tax payable on them. But they will pay this amount as loan subscribed to the Government against appropriate securities and not as tax.

This will have a tremendous psychological effect on the investment climate in the country. It will also give an opportunity to the tax-payers to borrow further capital against these securities and thus they will not be handicapped for lack of funds which is so essential for the fulfillment of the Second Plan.

COMPANY'S AFFAIRS

Coming to the affairs of the Company, the working results of the company, show that the steady improvement in production, which has been the keynote ever since this company came to the present management, has been maintained during the year under review. Gas Production has been raised to 1529.2 million cubic ft. from 1511.8 million cubic ft. in 1955 or an increase of 1.15%. The year's production was 37% higher than what it was in 1946. In order to refresh your memory I would like to quote the yearly production statistics for 1946 and the recent years:—

Year	Total Gas Production (Cu. ft.)	increase over 1946
1946	1,115,949,000	
1955	1,511,849,000	35.5%
1956	1,529,221,000	37.0%

Last year I had told you that the scheme for the expansion of the retort house had been taken in hand. I am now glad to report that this expansion has been completed within the scheduled period. Gas making on the new retort beds started in last December. With this increase in the capacity the production will reach a figure equal to about 60% higher than the production in 1946 after the new gas connections have been fully installed.

The Government were advised that the company was in a position to provide gas connection to additional 2,500 consumers. We have so far received sanction from the Government to give 960 connections as at 31st May, 1957.

FINANCIAL POSITION

In spite of this improvement in the working of the company, I am sorry to say that the financial results are rather disappointing. The surplus shown by the revenue account of the company has dropped to Rs. 1,16,227.00 from Rs. 10,98,667.00 in 1955. The main reasons for this steep fall in profits are not far to seek. The price of coal was raised by Rs. 3/- per ton from the 1st July, 1956, which alone accounts for an increase in the expenditure by Rs. 1,04,481/- in six months. Another sum of Rs. 1,06,302/- is accounted for by the increase in the surcharge in freight at Rs. 1-6-0 per ton of coal from April, 1956, higher terminal tax at twelve annas per ton of coal from 15th October, 1956, and change in the rate of provident fund contribution under the Act passed by the Central Government from 8-1|3% on basic salary to 6¼% on basic salary and D.A. from October, 1956. Moreover, the company had to pay during 1956 bonus for the years 1952 to 1955 and this took away another big slice of Rs. 5,92,331.00.

A major portion of the increase in the expenditure during 1956 is of a recurring nature and its full impact will be reflected only in the accounts for the current year, as they have not been applicable to the full year in 1956. It has been estimated that the full effect of the additional burden on the yearly accounts when compared with the actuals in 1955 would amount to an approximate sum of Rs. 9,32,000.00.

Besides there would be additional expenditure on coal freight, diesel fuel, cement and sales-tax on imports, estimated at about Rs. 1,80,000 annually, as a result of the budget proposals this year. A further increase in the price of coal at the rate of Rs. 2/- per ton is under active consideration on account of the impact of additional expenditure resulting from the Labour Appellate Tribunal's decision. The situation will, therefore, be all the more bleak for the current year, unless relief is granted to the company by a corresponding increase in the price of gas.

SLUDGE GAS

We made an application to Government on the 12th September, 1956 for the appointment of a gas advisory committee to revise the price in accordance with the recommendations of First Gas Advisory Committee and in spite of our best endeavours it was not uptil the first week of May this year that we could get an assurance of the Government in the course of personal discussions at the highest state level that instructions had been issued to appoint the committee and the names of the personnel had been finalised. After about three weeks a complication has been brought in by making it a condition that the price at which we are prepared to accept the Sludge gas from the Municipal Corporation should be finalised. The question of Sludge gas has been under consideration and negotiation for a long time. The Sludge gas in the form, in which it is proposed to be supplied to us, will have to be reformed so that it can be mixed with the existing gas supply of the company. The capital investment involved is about 29 lakhs of rupees and this gas will be available to us partly by September, 1958 and fully not before December, 1960.

Gentlemen, the price of gas after the utilisation of Sludge gas and the price of gas as produced today are two different issues and cannot be mixed up at this stage, as the Sludge gas will not be available to us until late next year. While the price for Sludge gas is under negotiation, I am unable to see the correlation between the two, as our costs actually started going up about a year back. The appointment of the committee on our specific application against increase in costs, which cannot be disputed, ought to be a matter of routine, but it has already taken nine months. The committee itself has not yet been constituted and it may take a lot of time for such committee when apointed, to consider the issues before it and make the recommendations. This complication will further delay the whole matter for quite a considerable time and in the meantime the company will continue to lose heavily—loss which will not be compensated in any way as the gas price, when and if revised, cannot possibly be put into effect retrospectively. We are continuing our efforts to make the Government agree to appoint the committee with instructions to recommend an interim increase in the price which is now overdue by about a year.

REVISION OF PRICE

In the course of a meeting with the Minister in charge last year in February, 1956, we had been advised that the company should undertake expansion and then the question of revision of price of gas would be considered. Apart from the fact that its costs have since increased tremendously through no fault of ours, we have also carried out the advice given to us last year. The revision of price, however, is still an issue and the matter is apparently being dealt with too lightly without consideration to the reasonable demands of the company and the effect on its finances resulting from their non-acceptance. This is evident from the fact that even the demand to appoint the Gas Advisory Committee to consider revision of price is not readily acceptable to the Government without attaching to it conditions which have no immediate relevance to the application of company for revision of price of gas on the increased costs which are being incurred for a year. I am really unable to understand the reasons for this. By having secured the control of the company, the Indian Management has caused no harm to anybody, but on the contrary it has saved an amount of Rs. 94,49,373 which was remitted during the ten years immediately prior to the transfer of control to India and which, in fact, would have now amounted to a much higher figure.

The Oil refineries in Bombay are now selling Burshane gas at an approximate price of Rs. 3.78 per therm as against Rs. 0.905 per therm which is the price of our gas. Thus on the one hand the Government of Bombay are so cautious and in fact extremely reluctant to revise our price in relation to the actual costs, they appear to have no objection to allow others to sell the gas at practically four times the prices allowed to us which in its tune is today lower than the price in 1926. Besides, the marketing of Burshane is being allowed in spite of tremendous foreign exchange cost of the cylinders, at a time when foreign exchange is so scarce that it is not being made available even for the urgent needs of capital equipment for various industries.

I sincerely hope that the Government would take all these factors into account and now appoint the Gas Advisory Committee and revise the price in relation to costs so as to save this company from serious financial losses and thereby retard its further development.

THE COMMISSIONERS FOR THE PORT OF CALCUTTA

NOTICE

Repayment of the 5% Calcutta Port Trust Debenture Loan 1927-57-87 issued on the 1st September 1927.

In continuation of the advertisement notifying the Commissioners' intention to repay the above loan on the 1st September 1957 which appeared in this paper on the 23rd February 1957 it is now notified that as 1st of September 1957 falls on a Sunday, the loan will be repaid on the preceding business day i.e. the 31st August 1957. The interest for the half-year ending 31st August 1957 will also be paid on the 31st August 1957.

By order of the Commissioners

P. C. Mitter,
Secretary.

15 Strand Road,
Calcutta dated the
6th June 1957.

THE INDO-BURMA PETROLEUM COMPANY LIMITED

NOTICE is hereby given that the Preference Register of Members of the Company will be closed from the 24th June 1957 to 1st July 1957 both days inclusive for the purpose of payment of the dividend for the half year ending 30th June 1957 on 2nd July 1957.

By Order of The Board,
STEEL BROTHERS & CO., LTD.
MANAGING AGENTS.

Gillander House
Netaji Subhas Road
Calcutta.
10th June, 1957.

THE EQUITABLE COAL CO., LTD

Notice is hereby given that the payment of Interest for the period from 1st January to 30th June, 1957, on the 5½% Registered Debenture Stock 1963-68 of the Company will be made to those Stockholders whose names appear on the Company's Register on the 30th June, 1957 or in accordance with their instructions.

For The Equitable Coal Co., Ltd.,
MACNEILL & BARRY LTD.

J. H. G. Whitfield
Acting Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta-1, 10th June, 1957.

BENGAL JUTE MILL COMPANY LIMITED

NOTICE

NOTICE is hereby given that the 26th Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company at 8, Dalhousie Square East, Calcutta on Monday, the 8th July, 1957 at 4-30 p.m. for the purpose of receiving the Directors' Report, passing the Audited Accounts, declaring the Dividend recommended by the Directors for th year ended 30th June, 1956, electing Directors in place of the retiring Directors, appointing Auditors and for transacting any other business of the Company that may be transacted thereat.

1. To appoint and/or approve the appointment of Sri M. L. Jalan pursuant to Section 261 of the Companies Act 1956 who was appointed a Director at the Board Meeting held on 17th December, 1940 and if thought fit to pass the following resolution as Special Resolution. The relative explanatory Statement concerning which as required by Section 173 of the said Act is annexed hereto.

"Resolved that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Sri M. L. Jalan a Director of the Company, who is also a Partner of Messrs. Soorajmull Nagarmull the Managing Agents of the Company, be and is hereby made and/or approved as required by the provisions of the said Section."

2. To appoint and/or approve the appointment of Sri N. K. Jalan pursuant to Section 261 of the Companies Act, 1956, who was appointed a Director at a Meeting held on 10th May, 1954 and if thought fit to pass the following resolution as Special Resolution. The relative explanatory Statement concerning which as required by Section 173 of the said Act is annexed hereto.

"Resolved that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Sri N. K. Jalan a Director of the Company, who is also a partner of Messrs. Soorajmull Nagarmull the Managing Agents of Company, be and is hereby made and/or approved as required by the provisions of the said Section".

3. To appoint and/or approve the appointment of Sri B. L. Jalan pursuant to Section 261 of the Companies Act, 1956 who was appointed a Director at a Meeting held on 20th April 1955 and if thought fit to pass the following resolution as Special Resolution. The relative explanatory Statement concerning which as required by Section 173 of the said Act is annexed hereto.

"Resolved that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Sri B. L. Jalan a Director of the Company, who is also a Partner of Messrs. Soorajmull Nagarmull the Managing Agents of the Company, be and is hereby made and/or approved as required by the provisions of the said Section.

4. To consider and if thought fit to pass the following resolution as a Special Resolution, the relative Explanatory Statement in respect of which as required by Section 173 of the Companies Act, 1956 is annexed hereto:

"Resolved that the provisions of the Memorandum of Association of the Company with respect to the objects of the Company be altered in the manner following:—

(i) That the existing sub-clause (25) of clause (3) of the said Memorandum be deleted and the following sub-clause be added after the existing sub-clause (25) of clause (3) of the said Memorandum as sub-Clause (25) and (25A)—

(25) To provide for the welfare of Directors or employees or ex-employees of the Company or its predecessors in business and the wives, widows and families or the dependents or connection of such persons by building or contributing to the building of houses or dwellings or quarters or by grants of money, pensions, gratuitities, allowances, bonuses profits sharing bonuses, or benefits or any other payments or by creating and from time to time subscribing or contributing to provident and other associations, institutions, funds, profits sharing or other schemes, or trusts and by providing or subscribing or contributing towards places of instruction and recreation, hospitals and dispensaries, medical and other attendance and other assistance as the Company shall think fit.

(25A) "To subscribe or contribute or otherwise to assist or to guarantee money to charitable, benevolent, religious, scientific, national, public, political or any institutions, objects or purposes or for any exhibitions.

5. To consider and if thought fit to pass with or without modification the following resolutions and the relative Explanatory Statements concerning which per annexed hereto as required by Section 173 of the said Act:—

(i) AS AN ORDINARY RESOLUTION:

"Resolved that consent of the Company be and is hereby given to the Board of Directors with effect from the date of commencement of the Companies Act, 1956, to contribute and/or subscribe from time to time any national political charitable, benevolent, public or general and other funds not directly relating to the business of the Company or the Welfare of its employees, such amounts as may be considered proper by it not withstanding that such amounts in any financial year may exceed Rs. 25,000 or 5 per cent of the Company's average net profits, as determined in accordance with the provisions of the Companies Act, 1956, during the three financial years immediately preceding, whichever is greater".

(ii) AS AN ORDINARY RESOLUTION:

"Resolved that pursuant to Sub-Section (I) (b) of Section 293 of the Companies Act 1956 the Company hereby consents with effect from the commencement of the Companies Act 1956 to the Board of Directors of the Company borrowing moneys for the purpose of the Company from time to time notwithstanding that the moneys so to be borrowed together with the moneys already borrowed by the Company (apart from the temporary loans, if any, obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid up capital of the Company and its free reserves, that is to say,—reserves not set apart for any specific purpose".

6. Any other business that may be brought forward.

EXPLANATORY NOTE:

Item No. (2) of the Notice, Section 261 (1) (f) of the Companies Act 1956 read with sub-section 7 (4) of the same Section of Companies Act 1956 requires the reappointment of any Director retiring by rotation who is an associate of the Managing Agents to be made by a Special Resolution.

And since it is desirable for the benefit of the Company to avail of the valuable advices of Mr. M. L. Jalan at present a Director of the Company who is an associate of the Mnaging Agents by retaining him as a member of the Board of Directors of your Company it will be desirable that the above proposed Special Resolution, Special Notice of which has been received by the Company, be passed.

In respect of Item No. (2) of the Notice Section 261 (1) (f) read with sub-Section (4) of the same section of the Companies Act, 1956 requires the appointment of any Director who is an associate of the Managing Agents to be made by Special Resolution.

And since it is desirable for the benefit of the Company to avail of the valuable advices of Mr. N. K. Jalan at present a Director of the Company who is an associate of the Managing Agents by retaining him as a member of the Board of Directors of your Company it will be desirable that the above proposed Special Resolution, Special Notice of which has been received by the Company, be passed.

In respect of Item No. (3) of the Notice Section 261 (I) (f) read with sub-Section (4) of the Sub-Section of the Companies Act, 1956 requires the appointment of any Director who is an Associate of the Managing Agents to be made by Special Resolution.

And since it is desirable for the benefit of the Company to avail of the valuable advices of Mr. B. L. Jalan at present a Director of the Company who is an associate of the Managing Agents by retaining him as a member of the Board of Directors of your Company it will be desirable that the above proposed Special Resolutions, Special Notices of which has been received by the Company, be passed.

In respect of Item No. 4 & 5 of the Notice Sub-Clause (25) of Clause 3 of the Memorandum of Association of the Company runs as follows:—

To establish and support, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit employees or ex-employees of the Company or its predecessors in business or the dependents or connections of such persons and to grant pensions and allowances and to make payments towards insurance and to subscribe or guarantee money for charitable or benevolent objects or for any exhibition for any public, general or useful objects.

This sub-clause deals with two different classes of objects to which the company may contribute funds; one to charitable and public objects and institutions of benefit to the Company, and the other relates to the grant of pensions and benefits to employees and their relatives. As these are two distinct objects, it it desirable that they should be set out separately. It is also felt that the clause, in so far as it relates to support of and subscriptions to charitable, public and beneficial objects and institution is stated in a form which is rather restricted not to suit modern conditions. The industrial policy of Government under conditions today is of vital importance to most industries, and particulauarly to a key industry like the Jute industry. It is therefore, in the interests of the Company to be able to contribute to the funds of political parties also which in the Company's opinion will serve the interests of industry in general and of the Jute industry in particular.

Section 293 (I) (e) of the Companies Act, 1956, clearly recognises the right of a Company to contribute to funds not directly relating to its business or the welfare of its employees by providing that the contribution of the company in such cases shall not exceed 5 per cent of its average net profits or Rs 25,000 whichever is the higher. In the discussion in the Lok Sabha on this subject it was recognised that this provision covered contributions to political funds and purposes.

It is believed that the existing clause in the Memorandum might enable the Company to make contributions to a political fund, but it is desirable to eliminate any doubt on the subject by a specific provision in the Memorandum of Association enabling the Company to contribute to such political objects and purposes.

It is, therefore, proposed, in place of the present sub-clause (25) to provide two sub-clauses, one for the grant of benefits to employees and their families, and another for subscription or contribution to charitable and other objects (including political objects).

In respect of Item No. 5 (ii) the Company has occasionally to borrow money from Banks which may on occasions, exceed the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purposes under section 293 of the Companies Act 1956, the Board of Directors of a Public Company cannot except with the consent of the Shareholders in General Meeting, borrow moneys after the commencement of the Act, where the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose.

Although the Directors of the Company are of the opinion that the borrowings of the Company fall within the category of temporary loans which do not require the consent of the Company in General Meeting they are advised that it would be better for the Company to place the matter beyond reasonable doubt and to secure the consent of the Shareholders of the Company for the borrwing of moneys in excess of the aggregate of the paid up capital of the Company and its free reserves.

The Share Transfer Registers of the Company will remain closed from the 1st July 1957 to the 8th July 1957 both days inclusive.

By Order of the Board,
For & on behalf of
Bengal Jute Mill Co. Ld.
Soorajmull Nagarmull
Managing Agents.

8, Dalhousie Square East,
Calcutta,
Dated the 4th June, 1957.

N.B. You are entitled to attend and vote at the Meeting by a Proxy who need not be a shareholder of the Company. If it is desired to use the Proxy the same should be completed in manner prescribed Section 176(5) of the Companies Act 1956 and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

THE PENINSULA

(Continued from page 1122)

ence of the new team. Even so, one should admire the resourcefulness of the Finance Minister who dismissed it as unimportant and at the same time has been taking very rigorous steps to discover and punish the offenders. The affair was handled with dignity and skill.

Stock Exchanges

GENERAL TONE REMAINS DEPRESSED

Watch-Dog Writes:

TRADING in stock markets, during the week under report, has been devoid of interest with prices tending to ease on stale liquidation. The stalemate, especially in Steel shares, has become conspicuous with the slowing down of the special support from the Life Insurance Corporation.

In general, except for a moderate recovery recorded by a few selected scrips on presented a listless front. Serious concern is now expressed over the prospects of a drastic cut in imports which, it is felt, will hamper the working of various Industries by the shortage of equipment. The renewed tightness of the money market is also a contributory factor.

Quietly steady conditions characterised the week's trading on the Calcutta Stock Exchange.

Although prices on the Bombay Stock Exchange rallied in early dealings, they reacted towards the close due to profit-taking, induced by settlemen considerations.

Following the fixation of minimum prices, some business was possible in the Planting shares on the Madras Stock Exchange. Textiles, however, continued to rule weak.

Wall Street closed heavy with a fair distribution of losses, ranging mostly to one dollar.

*

Calcutta

Calcutta, Friday Evening.

IN the absence of any fresh incentive, conditions on the local Stock Exchange remained extremely dull and quiet last week. Apart from a slight recovery in a few selected scrips, price movements elsewhere were confined to narrow limits. In general, activity dwindled considerably on account of the misgivings following the taxation policy of the Government. There was a tendency to await the findings of the Select Committee.

A few bargain-hunting investors were, however, making discriminating purchases in view of the attractive yields obtained at the current low level of prices. There was still a lingering hope that the Finance Minister might argee to suitable adjustments in the Wealth Tax on companies in order to avoid double taxation.

The main factors, that were still affecting sentiment in the market, were the serious concern expressed over the prospects of a drastic cut in imports, the inclination to await the decision of the Coal Price Committee, fears of over-production and the uncertain outlook for the tea industry, and the delay in the tariff enquiry for the determination of revised retention prices of cement. With the result, there was a general disposition to cash profits and lighten commitments.

A notable development during the week's trading was the sharp marking down of prices of shares in Mundhra group, although there was a marked recovery towards the close. The initial setback was mainly due to a cheque, issued to one of the Stock Exchange Members by the above party, returned unpaid by the bankers. Thanks to an amicable settlement between the parties concerned, the "returned cheque" has now become a matter of past history; and prices have since recovered from the worst levels touched early in the week, as will be clear from the following table:—

	June 1 Rs	June 10 Rs	Week's Closing Rs
Jessop	24.06	19.75	22.00
Richardson ...	15.06	11.75	12.69
B.I.C. ..	6.33	4.93	5.60
Osler Electric ...	3.06	2.75	2.81
F. & C. Osler ...	5.87	4.00	4.06

The Gilteded market was dull and inactive with prices, especially of medium and long-dated issues, being marked down further from last levels on lack of investment support. 3 per cent 1986 Conversion opened at Rs 72.90 and, after being pushed down to Rs 72.15 in midweek, finished better at Rs 73.00.

In sympathy, Bank shares were quiet with United Commercial easing off to Rs 53.75 from Rs 54.00.

Despite firmer advices from the jute goods market, little or no interest was shown in the Jute section in view of the anxiety with regard to the raw jute supply position. The disappointing results reported by a few companies, and the rise in production as well as stocks of jute goods in May also contributed to the depressed sentiment in the section. The only three steady features were Megna, National and Ganges having sustained support upto Rs 66.50; Rs 19.70 and Rs 47.00 from Rs 64.50; Rs 19.50 and Rs 46.50 respectively. Nuddea were, however, offered at Rs 31.00 to Rs 31.75 against Rs 32.25; Reliance at Rs 6.31 to Rs 6.37 against Rs 7.00; Gourepore at Rs 227 to Rs 228 against Rs 234; Barnagore at Rs 74 to Rs 77 against Rs 83.00 and Anglo-India at Rs 132 against Rs 134.50.

Except Union which advanced further to Rs 21.25 from Rs 18.50 on renewed support from interested quarters, Coal shares were generaly listless as operators were inclined to await the decision of the Coal Price Committee with regard to the selling price of the commodity. Burrakur, after touching a high of Rs 22.25 from Rs 22.12, receded again at the close to the latter level. Bengal were offered at Rs 206 against Rs 213; Central India at Rs 5.87 against Rs 6.06 and Western Bengal at Rs 5.00 against Rs 5.12.

In the Tea section, dealings were few and far between with prices developing a sagging tendency due to the predominance of sellers. Fears of over-production, the uncertain outlook for the industry and the disappointing results of the first Export Sale of the new season's teas—all these factors had a depressing effect on sentiment. Amongst the few transactions recorded were Brooke Bond chaning hands at as low as Rs 17-13 to Rs 17.37; Bishnauth at Rs 18.56 to Rs 18.69; Hasimara at Rs 19.50 to Rs 19.75; Hattikhira at Rs 12.50 to Rs 12.75; Jayshree at Rs 8.44 to Rs 9.69 and Sapoi at Rs 29.00 to Rs 29.06. Tukvar were nearly maintained at Rs 11.37 with Gobpur a shade better at Rs 21.00 against Rs 20.87. Hansqua were marked down further to Rs 25.50 from Rs 27.00.

Activity in the Sugar section was restricted as operators were generally inclined to await further developments on the sugar front. The only firm feature was Carew which had sustained support upto Rs 7.31 from Rs 7.22. Belsund were cheaper at Rs 10.06 against Rs 10.50; Ramnugger Cane at Rs 23.68 against Rs 24.00 despite the dividend beng maintained and SKG at Rs 9.50 against Rs 9.94.

Textiles were quiet, sentiment being adversely affected by the reports of a fresh stalemate in the piecegoods market. Kesoram were offered further lower at Rs 12.50 from Rs 13.12 quoted last week and Bowreah at Rs 104 to Rs 107 against Rs 112. The announcement of a Debenture issue caused Dunbar to recede to Rs 151 from Rs 167.

Apart from a sharp setback experienced by Mundhra group of shares for reasons stated earlier, price movements in other Engineering shares were mostly influenced by the speculative activity in Indian Irons which, in turn, were sub-

(Continued on page 1137)

RAJNAGAR TEA COMPANY, LIMITED

NOTICE is hereby given that the Sixty-fourth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Wednesday the 10th July, 1957, at 12 noon, for the following purposes:—

GATEWAY MARKETS

(Continued from page 1118)

down to Rs 105,44, to finish at Rs 105.62. Ashad delivery began at 105.34 and, after touching a low of Rs 105.00, finished better at Rs 105.16. Ready changed hands at Rs 105.62, while Sovereign was quoted at Rs 70.75.

*

Yarn

Conditions in the Bombay Yarn market ruled better, thanks to fears that imports of Art Silk Yarn would be curtailed in the next licensing period. The Government's decision to permit exports was responsible for a slight improvement in the prices of Staple-Fibre Yarns. The turnover, however, did not show nay expansion due to sluggishness in the rayon piecegoods market.

Meanwhile, it is announced that yarn export quotas, that remain unutilised in a particular quarter will be freely licensed to exporters on first-cum-first-served basis in the following quarter. This is to enable the country to earn more foreign exchange in view of the present exchange position.

Shippers feel that prospects for any large-scale business are not, however, bright unless the Government provide the necessary incentives in the shape of refund of excise duty on raw staple-fibre as well as on yarn, besides granting the drawback of import duty where applicable.

In the Cotton Yarn section, trading continued to be dull; but dealers felt that demand would revive on an improved scale in the near future. The Government have taken steps to boost the exports of cotton yarn by making available to exporters the unutilised export quotas of mills.

*

Metals

Prices in the Non-Ferrous Metal market in Bombay developed a firmer tendency on rumours of copper, zinc, lead and tin being transferred to the licensing sphere. Traders were, therefore, reluctant to dispose of their stocks. The rate for ready Copper was quoted at Rs 174 per cwt; and North Indian buyers continued to be the main buyers. Zinc remained very steady at Rs 82 despite very weak advices from London and the USA. This was mainly due to reports that the Australian Steamer had not yet arrived and the resultant paucity of stocks. Lead was quoted at Rs 82. Stocks of this metal were reported to be low, while demand was insignificant. The uncertainties of future import policy kept Tin firm at Rs 131 per quarter.

On the London Metal Exchange, Copper was quoted around £ 233¼ per ton. It is reported that the Rhodesian Selection Trust is to cut the production of copper by about 18,000 tons a year and this cut will be for an indefinite period. Zinc was quoted around £ 79½ per ton. Consumer interest in this metal was reported to be extremely limited to meet immediate requirements. Lead was quoted at £ 92½ per ton. Uncertainties as to the extent of operations under the US barter programme was the main reason for the weak tendency. Tin ruled remarkably steady at £ 764 per ton. The general situation with regard to this metal is reported to be unchanged. Consumer demand outside the USA is quite good.

*

WORLD OF COTTON

(Continued from Page 1119)

made by the crop in some parts of the cotton belt.

×

LIVERPOOL COTTON MARKET:

Quiet conditions prevailed on the Liverpool Cotton market. Enquiries for ready cotton were again principally for high-grade long-stapled qualities; but the turnover was relatively small due to scarcity of local stocks.

In the futures section, prices declined slightly due to a fair volume of sales. These sales were reported to be hedges on account of American shippers against consignments expected to be made to this market to fulfil their obligations with the CCC to export purchases against the old programme before August 15 next.

×

KARACHI COTTON MARKET:

Conditions in the Karachi cotton market remained rather dull. Good demand for mills and prospects of Pakistani-Japanese trade pact were offset by speculators selling and little foreign business doing. NT Roller ready was quoted at Rs 75-14; Sind Deshi at Rs 84 and Punjab Deshi at Rs 81 to Rs 82-8.

×

CLOTH AND PIECEGOODS:

Trading in the Bombay Piecegoods market remained subdued on account of large-scale absenteeism caused by the prevalence of 'flu' in the City. Prices, however, ruled steady. Selective demand was noticed in respect of coarse, medium and super-fine categories. Some mills were reported to have effected sales in medium crepes.

On the export front, trading conditions remained more or less unchanged. Modest business was done with Burma and Australia. Although better enquiries came from the UK, the actual business materialising with this country had not been large, because of the price factor. Sudan showed interest only at lower prices.

Meanwhile, the performance of cloth exports, during the current year, has been satisfactory. Shipments of piecegoods in January, February and March this year are placed at 95.14 million yards; 76.16 million yards and 88.95 million yards as against 56.7 million yards; 72.12 million yards and 64.35 million yards respectively in the corresponding period of last year.

SOUTH INDIAN MARKETS

(Continued from page 1123)

costs. The authorisation provides for purchase of about 13,360 metric tons of unmanufactured tobacco which is grown in the United States.

The all-India second estimate of Tobacco for 1956-57 puts the current year's area at 900,000 acres as against the adjusted second estimate of 847,000 acres for 1955/56, showing an increase of 53,000 acres. The increase in area has been shared by Andhra Pradesh, Bombay, Bihar, Madras, Uttar Pradesh and Rajasthan and has been attributed generally to favourable climatic conditions at the time of sowing.

A Press Note, issued by the Government of India, has clarified the varieties of air-cured Tobacco, which are assessable to excise duty at the rate of 50 nP per pound under the Budget proposals. No change in the rates of duty in respect of flue-cured tobacco has been made; but the air-cured tobacco, used in the manufacture of cigarettes, will not be assessed at the rate of 75 nP per pound. In addition to this, the cigarettes will bear an additional excise duty in finished form.

*

OLYMPUS

(Continued from page 1120)

the question of whether or not this indicates the real preferences of the Chinese peasants, since we are concerned with the preferences of Indian peasants. It seems to me that the sensible thing in our set up would be, not to divorce ownership from agricultural production. Such a divorce, whatever may be its attractions from the point of view of increased production (on which there is room for differences), would gravely jeopardise traditional satisfactions from association with land. Since we are avowedly trying to achieve a kind of society in which the sociological lessons of the last two centuries will not be forgotten, it is of the essence that the primary satisfaction in rural life is related as much to ownership of land as to working on it.

One final comment. By a coincidence, shortly before the release of this report, the Programme Evaluation Organisation's report on the working of some of the agrarian co-operatives in the country was published. It was not a very cheering document; though it mentioned some co-operatives that have done well, it also had revelations of an unsavoury sort: These were mainly unscrupulous perversion of the co-operative idea by interested parties. For instance, bogus members hired by landlords converted a co-operative into a mere Zamindari. These and other deficiencies noted in the report show how complicated is the task of implementing the ideal of co-operation in farming in India.

*

UNSEASONAL WEAKNESS OF STERLING

(Continued from page 1110)

hampered, its effect on the balance of payments would deplete the gold reserve. From this point of view the balance of payments crises must be regarded as having been blessings in disguise—very much disguised, it is true, but blessings all the same.

The effect of inflation in the balance of payments can be disguised or mitigated for a long time through borrowing abroad, or the sale of foreign investments, or artificial controls, or devaluation. All these devices have been resorted to by Britain one time or other since the end of the war. Borrowing is the latest palliative. If it had not been for the dollar facilities secured at the end of last year and early this year, the gold reserve would have declined by now to crisis level. If the device of borrowing had been resorted to for the purpose of strengthening the reserve in anticipation of a showdown with the trade unions there would have been every justification for it. But having secured emergency support to sterling, the Government took the line of least resistance in face of excessive wages demands. This may mean that the emergency resources will be used up, so that Britain will not be able to afford to face a major strike. The realisation of this is likely to encourage further excessive wages demands.—(Copyright).

THE HOWRAH-AMTA LIGHT RAILWAY CO. LTD.

NOTICE is hereby given that the Board of Directors has sanctioned payment of dividend on 5% Cumulative Preference Share Capital of the Company for the half-year ending 30th June, 1957. Payment will be made on or after 1st July, 1957 to those Preference Shareholders whose names appear on the Company's Register on the 30th June, 1957 or to their mandatees.

By Order of the Board,

WORLD OF BUSINESS

(Continued from page 1111)

Bombay Gas

It is generally assumed that an enterprise which enjoys a good demand for its products and whose output shows a steadily increasing trend, will automatically record a satisfactory margin of profit. Broadly speaking, such an assumption may be said to be the main source from which private enterprise derives its motive power. In this view, the conclusion is inescapable that some adverse factor over which the industry concerned has little control has come into play when it finds itself in an unenviable position in spite of the fact that production and sales have continued to show a steady upward curve.

Speaking at the recent annual meeting of the Bombay Gas Company Limited, Mr B. L. Jalan, the Chairman, revealed that in spite of a steady improvement in its working, his company's financial results were rather disappointing. During the year ended 1956, the Bombay Gas Company's production amounted to 1529.2 million cubic feet as against 1511.8 million cubic feet in 1955. This represents an increase of 37 per cent over 1946 when production stood at 1115.9 million cubic feet. Last year the company successfully completed the expansion of the retort house and it is estimated that when the new gas connections are fully installed, production will increase by about 60 per cent over 1946.

The financial results of the company, however, show that after meeting all commitments only a very small amount of money is left in the shape of net profit. The surplus in the revenue account in 1956 has declined sharply to Rs 1,16,227 from Rs 10,98,667 recorded in 1955. A major portion of the increase in expenditure is accounted for by the outlay on coal due to the increase in the price of coal, increased freight and higher terminal tax on coal. It is to be anticipated that the company's coal bill will record a further sizeable increase in coming years in view of the impending upward revision of the selling price of coal.

It may be wondered why the company's financial position has had only the adverse repercussions of the higher price levels prevailing in the country. The answer is to be found in the fact that the company cannot increase the price of gas without the prior sanction of the Government.

It would appear that the persistent efforts made by the company to impress upon the State Government the urgent need for revising the price of gas in relation to costs have not met with much success. It is to be hoped that in view of the sharp increase in the cost of production, Government will give the matter the attention it deserves at an early date.

*

WORLD OF JUTE

(Continued from page 1112)

goods stocks at the end of May had recorded an increase of 4,400 tons over the previous months. It would appear that marketmen had expected an increase of more or less of the size announced. Throughout the day prices moved within a narrow margin to close as follows. 40″×10 oz hessian Ready Rs 43.10; October-December Rs 43.35, B Twills Ready Rs 116.35; October-December Rs 116.45.

Erratic price movements characterised trading on Monday when the market witnessed intense activity by bulls and bears. The undertone at close was steady. Hessian 40″×10 oz Ready was fractionally lower at Rs 43.06 while the quotation for October-December position remained unchanged at Rs 43.35. In the sacking section, B Twills Ready and October-December were done at Rs 116.10 and Rs 116.66 respectively.

Firm conditions developed on Tuesday especially in the forward section as bulls continued to lend effective support in the Fatka. The limited interest shown by mills at the higher levels was easily absorbed and the market closed the day on a firm undertone. The advance in prices, however, had been well pronounced in the Sacking section. Hessian 40″×10 oz Ready improved to Rs 43.67 with October-December placed at Rs 43.75. B Twills Ready gained more than a point to be done at Rs 117.15 while October-December moved up to Rs 117.25.

In the absence of foreign interest, speculators exerted slight selling pressure in the ready position and as a consequence the closing tone was easier in the Sacking section. Closing rates were: Hessian 40″×10 oz Ready Rs 43.86, October-December Rs 44, B Twills Ready Rs 116.10 and October-December Rs 117.75.

Due to continued speculative activity conditions firmed up considerably especially in the hessian section where Hessian 40″×10 oz Ready advanced to Rs 44.14 with October-December placed at Rs 44.31. In the sacking section B Twills Ready was placed at Rs 117.51 with October-December done at Rs 118.21.

The following table shows the week's opening and closing prices:

	Week's Opening Rs.	Week's Closing Rs
Hessian:		
40″ × 10 oz.		
Ready ...	43.06	44.14
October/Dec. ..	43.25	44.31
Sackings:		
B. Twills:		
Ready ...	116.65	117.51
October/Dec. ...	116.90	118.21

A. Twills ...	140.00	141.00
L. Twills ...	129.00	129.56
D. W. Flour ..	136.25	138.50
Sugar Bags ...	129.00	131.50

NORTH INDIAN MARKETS

(Continued from page 1121)

economic development plan. One of the new refineries at Panipat has already begun partial production. It will refine 1,000 to 1,200 tons a day. The other refineries, one in Madras and another ordered by the Assam Sugar Mill Company, will each process 800 tons a day. The fourth will be in the State of Punjab with a processing capacity of up to 1,250 tons of cane sugar in 24 hours.

×

Gur

In the Hapur market, ready Gur prices declined due to poor outside enquiry as most of the demand was met by Muzaffarnagar and Agra-Mathura side where prices were comparatively lower. Daily arrivals averaged 250 maunds. Stocks were estimated at 78,500 maunds, the corresponding figure for last year being 45,000 maunds.

×

Shellac

An Export Promotion Council for Shellac has been set up to maintain and promote the exports of this commodity. This is the ninth Council sponsored by the Government to maintain and develop export markets for Indian products.

The above decision has come at a more opportune moment. Apart from the need to secure foreign exchange, the necessity to boost exports has become urgent, especially as the shellac market has been languishing during the past few months and prices have fallen to unremunerative levels. The price of shellac, for instance, has fallen steadily to Rs 75 per maund as against Rs 100. There is still considerable scope for stepping up exports despite the existence of competition from substitutes and supplies from Siam.

*

STOCK EXCHANGES

(Continued from page 1127)

fected to settlement adjustments. Against the week-end closing of Rs 18.66, Indian Irons opened lower at Rs 18.45 and, after improving to Rs 18.54, receded again to Rs 18.18 on selling pressure, to finish the week better at Rs 18.36. New shares touched a high of Rs 17.39 and a low of Rs 16.82, to close at Rs 17.09. The settlement rate was fixed at Rs 18.36 as against last settlement of Rs 18.48. TEXMACO changed hands on the ex-dividend (Rs 1.25) basis at Rs 15.80 to Rs 16.15 (the last dividend is Re 1 per share). Braithwaite moved between Rs 24.69 and Rs 24.87; G. K. Williams between Rs 26.37 and Rs 27.25 and Kumardhubi between Rs 8.62 and Rs 8.69.

Trading in the Miscellaneous section was dull and featureless with prices shedding ground on general liquidation. Orient Paper were subjected to heavy speculative selling, being marked down further to Rs 29.30 from Rs 25.00 Titaghur also lost ground, being quoted as low as Rs 31 to Rs 31.25 against Rs 33.50. Indian Cable were offered at Rs 21.56 against Rs 22-50; India Steamship at Rs 9.81 against Rs 9.93; Rohtas at Rs 16.56 against Rs 17.50; Angelo Brothers at Rs 16.81 against Rs 17.25; Dunlop Rubber at Rs 17.62 against Rs 18.45; Indian Copper at Rs 3.30 against Rs 3.38; Martin-Burn at Rs 22.75 against Rs 23.12; National Carbon at Rs 22.50 against Rs 23.37; NICCO at Rs 20.00 against Rs 20.12 and Indian Aluminium at Rs 12.62 against Rs 13.06. The only two firm spots were Alkali Chemicals having forged ahead to Rs 14.06 from Rs 13.81 due to renewed investment demand and Metal Box having buyers at Rs 24.25 to Rs 24.37 following increased dividend for the year ended 31st March, 1957.

*

Investment Briefs

In Andrew Yule Jute group, National has maintained the dividend at 37 nP per share for the half-year ended 31-10-1956, while Budge-Budge has again passed over the dividend.

Bararee Coke has reduced the dividend from 6 to 5 per cent for the half-year ended 30.9.1956.

In Madras, Anaparai Estates have recommended an interim dividend of 15 per cent for the year ended 30.6.1957.

Peermade Tea has raised the dividend from 35 to 37½ per cent for 1956, and not reduced dividend as stated in these columns last week.

*

(Continued from next page)

of mine-owners to participate in the export of their produce.

Export of low grade manganese ore from Garividi/Srikakulam, Bobbili, Salur and Raigada areas will continue to be licensed freely on production of foreign sale contracts as hitherto.

All shipments effected on or after July 1, 1957 will be debited to the quota for the year 1957-58.

*

DRAFT STANDARD FOR FOUNTAIN PEN INKS:

The Indian Standards Institution has circulated, for a period of three months, a draft Indian standard specification for coloured fountain pen inks, (Blue, Green, Violet and Red) for eliciting comments.

Fountain pen inks, especially blue, green, violet and red, are becoming more and more popular and the production of these inks in India is now increasing rapidly. The ISI has already published a standard (IS:220-1950) for fountain pen inks, blue-black and red. The requirements for red ink are covered in this new draft standard while IS:220-1950 is under revision to include other permanent inks such as blue, black, etc.

This draft standard gives instructions about collecting samples and prescribes requirements for sediment, dye content, keeping quality and performance.

*

RAILWAY PERFORMANCE IN APRIL:

The Indian Railways loaded an average of 25,807 wagons daily during April 1957, as compared to 23,429 wagons daily during the corresponding month last year.

On the metre gauge system, the April 1957 loadings of 9,009 wagons daily represented an increase of 12.3 per cent over the figure of April last year. The increase on the Northern Railway alone was 1.3 per cent and on the Western Railway 13.6 per cent.

On the broad gauge, the overall increase on the Indian Railways was of the order of 8.82 per cent. The Central and South-Eastern Railways showed increases of 13.4 and 13 per cent respectively, while the Western Railway showed an increase of 11.3 per cent.

Industrial Information

EXPORT OF ORES BY S.T.C.:

The Minister for Commerce, Shri Nityanand Kanungo, said in the Lok Sabha that the State Trading Corporation was endeavouring to export large quantities of low grades of iron and manganese ores. Less than one-thirds of the S.T.C's exports of manganese ores were of the high grade variety. Only small quantities of high grade iron ore were being exported. A very large proportion of exports consisted of medium grades.

Shri Kanungo said that the Corporation proposed to diversify markets and stimulate exports to all potential consumers. It did not propose to export manganes ead iron ores to a particular country or countries.

In a separate Trade Notice the State Trade Corporation has announced that it has already concluded targets for the export of a little over 2 million tons of iron ore during 1957-58 and expects to achieve thee tadget of 2.5 million tons set by the Liaison Committee.

The Corporation has already procured some quantities of iron ore. To implement the Government's didective that the existing trading channels should be utilised to the maximum extent possible, the Corporation also proposes to procure iron ore from shippeds and mine-owners who have exported orin ore during the basic years 1953-54-55 and 56 to the extent of 50 per cent of their average exports. Allotments of each individual supplier will be calculated separately for three groups of ports, namely, Calcutta port, Vizagapatam, Kakinada, Bhavnagar ports.

The Corporation will buy on an FOBT basis from supplies whose individual allotment is 20,000 tons or more. Allottees with less than 20,000 tons each will be free to bulk their individual allotment and nominate anyone among them to operate on their behalf. The Corporation would also buy on FOBT basis from associations or co-operatives of allottees registered as a corporation body, provided the membership is 15 or more.

The Corporation will buy on FOR basis from suppliers whose individual allotments fall below 20,000 tons and who have not been able to bulk their allotments with others. It will not, however, purchase directly from any individual whose allotment is less than 100 tons.

The Codporation will also be prepared to buy ready stocks from persons holding stocks at ports which are moved before June 30 and not covered by the ovedseas sales contracts.

The Corporation are negotiating for the sale of low grade ores to Japan and Eudope; and hope to conclude contracts shortly for substantial quantities. Ores originating from Redi, Hanover and Naydupetah areas will also be expodted by the STC. The STC will b willing to make its purchases of these low grade ores from mine-owners and shippers at a negotiated price.

*

EXPORT OF MANGANESE ORE QUOTA LICENSING SYSTEM TO CONTINUE:

On a review of the procedures which have been in force for regulating the exports of manganese ore, Government have decided to continue in force the system of quota licensing for the period July 1957 to June 1958. Movement and shipment quotas will be given to shippers and mine-owners equal to 60 per cent of their exports made in 1955 or 1956 to be selected by them.

Quota-holders will be required to utilise at least 60 per cent of the quotas issued to them for export of manganese cre containing 42 per cent manganese and below. This restriction will not apply to mine-owners, who establish to the satisfaction of Export Trade Controllers that their mines do not produce manganese ore containing less than 42 per cent manganese and to those shippers and mine-owner exporters, who have outstanding commitments for higher grades.

The Government of India trust that commitments made by shippers and mine-owner exporters to foreign importers for the export of manganese ore prior to June 1957 will be honoured to the maximum extent practicable. It is hoped that quota-holders will utilise their quotas for the fulfilment of their outstanding commitments in the first instance. The State Trading Corporation are also being advised to make available a portion of their quota, where convenient to assist shippers/mine-owners, whose quota allotments fall short of their genuine commitments to meet their obligations on a basis acceptable to the parties concerned.

Quotas will be valid for movement facilities only on sectors on which quota-holders have been operating during the period July 1956 to June 1957.

The State Trading Corporation will be allotted an adequate quota to enable them to maximise the exports of manganese ore. The Corporation are being advised to seek the Co-operation of established trading and mining interests to make this effort a success. In particular, the Corporation will be expected to encourage co-operatives

"Where now the city stands,
there was once naught but the city's site." OVID

Delhi

It was eight centuries before the birth of Rome. On the banks of the Jamuna, where the Purana Qila stands, the Aryans built the ancient city of Indraprastha, with their bare hands and primitive tools. Over the centuries, from amidst the brick and mortar ruins of ancient glory, has arisen a city of modern splendour woven round a framework of STEEL—thousands of tons of it.

The newly built National Physical Laboratory, New Delhi

Purana Qila, built in the 16th century

For the Investor

The *Hawa* Improves

Investment Gossip:

HAS the bear phase ended? Is the Second Plan's bull market in the process of getting into stride? These are the questions that one hears amidst the newly revived buzz and bustle of Stock Exchange activity.

Mr T. T. Krishnamachari appears to have done it again. Last year's cries of desperate money market stringency foreshadowed for the 1956-57 busy season were examined by TTK; and, by taking the proper steps, the anticipated crisis was averted.

As I have often remarked in this column For the Investor, it was necessary for TTK to turn his attention to the Stock Exchanges which, truth to tell, have been in a pitiable plight. The Finance Minister has apparently thought his direct intervention in Stock Exchange affairs as such could be avoided. So, in recognition of the thesis that what the investment climate thrives on is atmosphere, the Finance Minister has been in the process of eliminating the overdone pessimism from the Stock Exchange hawa.

This he has done, firstly, by meeting leaders of industry in Calcutta. There was, for once, no suggestion that the Finance Minister should reduce taxes; instead, the plea has been that there should be some assurance that the tax programme having been completed, no new levies (save for minor adjustments) would be forthcoming in the last three years of the Second Plan. Some who claim to be in the know asseverate that the assurance was received.

To be sure there would have been requests for some concessions which would induce an improvement in share prices. For example, it is almost certain that the elimination of bonus share tax and of Wealth Tax on companies would have been asked for. It is difficult to envisage any action being taken on the former, as Mr Krishnamachari might very well think the bonus share tax to be part of the integrated tax structure that he has just brought into being. In the matter of the Wealth Tax, as in the Expenditure Tax, alterations in favour of assessees (and in particular the nonapplication of Wealth Tax to companies) may be suggested when the Select Committee in Parliament examines the taxes further.

It is also being freely mentioned in Stock Exchanges that one avenue in which the Finance Minister may give relief in future Budgets of the Second Plan could be in the Dividends Tax. When I come to think of it, this hypothesis may have some basis in truth, although it is a mere market rumour. For, let us recognise that the Dividends Tax was imposed, not so much for revenue purposes, but for discouraging the dissipation of company profits by distribution. In other words, the Dividends Tax sought to encourage profits being ploughed back. With Capital Gains and Wealth Tax being added to the Statute book, it is reasonable to suppose that TTK might decide to reduce the rates of Dividends Tax as and when he feels satisfied with the pace of capital formation in companies.

The Stock Exchange hawa is expected to be further improved when TTK betakes himself to Bombay. The discussions there may be expected to be as frank and as cordial as the talks in Calcutta.

A further encouragement to Stock Exchange activity has been provided by the sustained support received from the Life Insurance Corporation. Scrip purchased by the LIC include the formidable list of ACC, Tata Ordinaries, Indian Irons, Bombay Burmahs, Bombay Dyeings, Century Spinning, Scindias and Dunlops—and this list relates only to transactions of the last two months.

One more item of good news is that the present system of LIC purchases by tender will soon be replaced. The information freely exchanged on Dalal Street is that LIC investments will become the responsibility of a special wing of the Reserve Bank, with overall direction from the Reserve Bank Governor, the State Bank Chairman and LIC Chairman, and with advisory councils in Bombay and Calcutta.

What, however, is not known is whether the LIC will be a persistent buyer, and never a seller. Since continuing purchases may result in "slow nationalisation", there is a growing feeling (especially in view of the improved atmosphere) that the LIC should make it known that, at the appropriate times, it will also figure as a seller of equities.

The result of all this has been that the badla rates are no longer so favourable to the bears. The Tata Ordinary badla at the last week's settlement was only 25nP; in the case of ACC, it was nil; the Bombay Dyeing badla was reduced from Rs 1.00/Rs 1.25 to a nominal 25nP; the Bombay Burmah badla was at a low of Rs 1.00/Rs 1.25; and, in the case of some other forward counters, ulta badla rates also made their appearance.

In Calcutta, in spite of the larger volume of clearing in Indian Irons as a result of inclusion of new shares, the badla ranged between 4nP and 6nP as against recent rates of 2½nP to 6nP; in TEXMACO, the closing of transfer books took up the rate to 22nP; in Burrakur, there was ulta badla to the extent of 6nP.

The decline in badla charges as well as the cases of ulta badla may be taken to indicate a condition in the market in which there is an oversold position, but where there is an anxiety on the part of sellers to cover. Certainly, the decline in badla rates is in some measure due to LIC taking up deliveries of the shares that it purchases; for, this reduces the floating stocks.

So long as something horribly adverse does not happen in the next few weeks, it is certain that the Investment Outlook is one of ascending prices partly induced by a rush to cover blank sales and partly as a result of the improving investment climate.

I am thus tempted, after too long an interval, to write a few words of Investment Outlook.

Investment Outlook:

Investors should seriously consider adding to their bluechip holdings. Rights were never more attractive. Prospects before companies were never more sure. What is more, they will be helped in their purchases by the open market operations of the LIC; the scrip picked-up by the LIC must surely appreciate, and must undoubtedly be a good buy For the Investor.

£ R$

Investment Notes:

The accounts of the United Industrial Bank Ltd for the year ended 31st December 1956 reveal the allround progress made by the Bank during the past year. Deposits have recorded a substantial improvement, having been placed at Rs 120.00 lakhs as against Rs 105.84 lakhs in the previous year. A break-up of this figure shows that while fixed deposits at Rs 43.45 lakhs are slightly lower, Savings Bank Deposits at Rs 28.53 lakhs are nearly Rs 4 lakhs higher. There has been a substantial increase in Current Accounts, Contingency Accounts etc. to Rs 48.03 lakhs. Cash Balances are up by nearly Rs 3 lakhs at Rs 17.67 lakhs. The Bank's investments are placed nearly Rs 2 lakhs higher at Rs 58.93 lakhs. Advances are substantially higher at Rs 99.03 lakhs as against Rs 87.34 lakhs in 1955.

The Bank's earnings during the year have improved to Rs 8.16 lakhs. A major portion of the increase has been contributed by receipts on account of interest and discount which amount to Rs 7.21 lakhs as against Rs 6.74 lakhs in the previous year. Major items on the expenditure side have taken a larger slice. Interest paid has gone up to Rs 3.04 lakhs while the relevant figure last year had been placed at Rs 2.94 lakhs. Salaries

Andrew Yule Jute Group Results

Balance-Sheet Reviews:

THE difficult conditions generally experienced by the jute industry, owing to the disparity between the prices of raw jute and those of manufactured goods, during the second half of 1956, are fully reflected in the working results of the Andrew Yule group of jute mills. Out of the seven mills—Budge-Budge, Caledonian, Cheviot, National, Belvedere, Delta and Orient—six have reported losses and the directors have recommended payments of dividends, in four cases, after transferring from Reserves.

Budge-Budge Jute Mills Company Limited has reported a decline in sales from Rs 78.07 lakhs to Rs 74.20 lakhs for the half-year

HIGHLIGHTS

The inclusion of the figures relating to foreign exchange reserves in the statement of the Reserve Bank weekly draws attention to a fresh deterioration.

The result is that one is all the time surrounded by an aura of crisis in the foreign exchange position.

So far, the only corrective steps that have been thought of are negative; or, of course, they are measures that avoid the attribute of self help.

It is in this light that we have made the emergency purchase of currency from the International Monetary Fund.

It is from this standpoint that one hears tell of a possible suspension of the minimum of Rs 400 crores of Foreign Securities as cover for currency.

It is toward this end that the import list was drastically cut and import duties were raised.

Negative measures: No self help. When is constructive action going to be taken, so that the foreign exchange problem will be solved?

Indian Finance suggests that self help can go a long way in resolving the external resources part of the Second Plan.

This self help consists in drawing up a realistic—and, yes, ambitious—but nonetheless practical and practicable—plan for exports.

The Export Plan offered in this week's Leading Article suggests that, of the balance of payments deficit of Rs 1500 crores for the Second Plan period, Rs 500 crores can be earned.

The Planning Commission's target of exports for the Second Plan period is by no means ambitious—it is lower even than the actuals for 1955.

Given the effort and drive and initiative and energy, the Export Plan can be fulfilled.

Indeed, for the implementation of the Second Plan, one may go so far as to suggest that the successful execution of the Export Plan is a prerequisite.

Read this week's Leading Article to find out the particular spheres in which we can expect our export earnings to make better showing.

ended 31st October, 1956. The accounts, before providing for Depreciation, show a loss of Rs 3,30,715 against a loss of Rs 1,76,556 in the previous half-year. A sum of Rs 1.10 lakhs (Rs 70,000) is set aside for Depreciation. The Ordinary dividend is passed over again.

Caledonian Jute Mills Company Limited has also reported a loss of Rs 49,521 for the half-year ended 30th November 1956 against a loss of Rs 13,238, while sales are shown at Rs 47.35 lakhs against Rs 51.58 lakhs. The Depreciation amount is maintained at Rs 1.80 lakhs. The Ordinary dividend is passed over again.

Cheviot Mills Company Limited has incurred a loss of Rs 1,60,099 for the half-year ended 30th November 1956 against a loss of Rs 1,31,112, while sales are lower at Rs 38.12 lakhs against Rs 42.48 lakhs. The Depreciation amount is raised to Rs 60,000 from Rs 50,000. The directors have found it possible to recommend an Ordinary dividend of Rs 2 per share against nil by transferring 50,000 from Dividend Equalisation Reserve.

Orient Jute Mills Company Limited has reported sales at Rs 42.41 lakhs for the half-year ended 30th November 1956 as against Rs 43.96 lakhs, while the accounts show a loss of Rs 46,750 against a loss of Rs 53,140 in the previous half-year. Thanks to the provision of Rs 1.82 lakhs against anticipated loss on raw jute stock and on jute contracted for, now no longer required, the directors have been able to recommend a payment of Rs 2 per share on the Ordinary shares as against Re 1 in the previous half-year.

In the case of Belvedere Jute Mills Company, sales have declined from Rs 59.18 lakhs to Rs 54.31 lakhs for the half-year ended 31st December 1956. The accounts, before providing for Depreciation, reveal a loss of Rs 2,49,062 against a loss of Rs 1,41,867 in the previous half-year. The sum set apart for Depreciation is raised to Rs 79,000 from Rs 77,000. The Ordinary dividend is passed over again. The directors have found it possible to declare dividends on the Preference shares only after transferring a sum of Rs 2.89 lakhs from provisions made previously and now no longer required, and Rs 1.45 lakhs from various Reserves.

The Delta Jute Mills Company has reported a loss, before Depreciation, of Rs 1,22,562 for the half-year ended 30th November 1956 as against a loss of Rs 1,08,873, while sales are lower at Rs 55.22 lakhs against Rs 56.24 lakhs in the previous half-year. The Depreciation amount is raised from Rs 30,000 to Rs 36,000. After transferring a sum of Rs 3.08 lakhs from provisions made previously and now no longer required, and Rs 20,000 from Dividend Equalisation Reserve, the directors have recommended a dividend of Rs 5 on the Ordinary shares as against nil.

Unlike other mills in the group, National Company Limited has shown a net profit of Rs 57,302 for the half-year ended 31st October 1956 as against Rs 2,16,678 in the previous half-year. Sales are lower at Rs 57.78 lakhs against Rs 65.68 lakhs. The Depreciation amount is raised from Rs 26,000 to Rs 35,000. The Ordinary dividend is maintained at 37 nP per share.

Heilgers Coal Group Results

Churulia, Ondal and Sendra, in the Heilgers Coal group, have presented their reports and accounts for the year ended 31st December 1956. The first two companies have maintained their dividends, while the last one has reduced the dividend from 10 to 7½ per cent. According to the Directors of these companies, the coal manufactured by these companies was downgraded in quality by the Coal Board. They, therefore, felt that it was in the best interest of the proprietors that the raising and selling of the coal be placed in the hands of a managing contractor. The Karanpura Mining Syndicate has raised, during the year, 155,692 tons of coal and despatched 155,830 tons.

Churulia Coal Company has reported a net profit of Rs 11,111 as against a loss of Rs 2,149 in the previous year. The dividend is maintained at 6 nP per share.

Ondal Coal Company has earned a net profit of Rs 69,848 against Rs 95,996 in the previous year. A sum of Rs 20,000 (Rs 27,000) is set apart for Taxation. The divi-

The Export Plan

Indian Finance
Established 1928
June 22, 1957

The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THE first year of the Second Plan has already proved useful in indicating that, under a number of important heads, revisions and rethinking have become necessary. By far the most important lesson to be learnt is that the foreign exchange deficit over the course of the Second Plan period is likely quite substantially to exceed the original estimate of Rs 1100 crores. The foreign trade figures for 1956 disclose unambiguously that, while the level of exports is already near the target figure of Rs 593 crores annually, the import bill will turn out to be much larger than we bargained for.

The Second Plan in its estimate put down imports at an annual average of Rs 870 crores. But, with the Suez Canal closure adding somewhat to costs of imports; with some new projects added to the Second Plan; and with upward revisions of the cost of some other projects, it is certain now that the balance of payment gap over the period of the Second Plan will be of the order of Rs 1500 crores. Indeed, in the year ended March 1957, India's foreign reserves fell by Rs 219 crores even after Rs 60 crores of foreign currency were purchased from the International Monetary Fund. This means that the effective balance of payment deficit in 1956-57 was around Rs 280 crores. For the Plan period, thus, even at the 1956-57 pattern of trade, the balance of payment deficit would be Rs 1400 crores. In recognition of such difficulties in foreign exchange, Government have directed that, wherever possible, imports of machinery must be arranged on credit terms for a period around seven years. While foreign aid in the form of loans from Governments or international financial institutions can help India to tide over the foreign exchange difficulties of the Second Plan, it must not be forgotten that, ultimately, such loans will have to be repaid. Repayment of loans can only be on the basis of such improvement in our foreign trade that we achieve a surplus in our balance of payment. Obviously, there are two ways of setting about transforming the deficit into a surplus. The first manner, simple enough, is to curtail imports, so that our exports exceed the value of the products that we buy abroad. But this is an avenue that has only limited scope, since the Second Plan programme of industrialisation will inevitably depend on large scale imports of capital machinery. In other words, the level of our imports must be said more or less to be static. It is true that the industry thus set up will, on the one hand, reduce the magnitude of our import needs in the future; and, on the other hand, it is also conceivable that the products so manufactured will turn out to be exchange earners as well. But all this relates, not to the immediate future, but, say, to the Third Plan or the Fourth Plan period. It is vital, therefore, that more serious and constructive thought be paid to the other means of achieving a balance in our favour.

We refer here, of course, to augmenting our export earnings. The Second Plan takes credit for Rs 2965 crores of exports during the quinquennium. We would like to point out that this is one of the least ambitious of the Second Plan targets. The actuals for exports in 1954 were placed at Rs 563 crores; and, in 1955, exports were of the order of Rs 596 crores. The annual average that the Second Plan is taking credit for, at Rs 593 crores, is less than the actuals for 1955. We must confess to a sense of wonder that export promotion should have received such scant attention at the hands of the planners. Our own view is that the time has come when the foreign exchange aspect of the Second Plan must be radically revised. In furtherance of this view, and particularly in the belief that there is insufficient realisation of the extent to which export targets can be increased, it has seemed to us both proper and necessary that a study be made of export prospects and export targets of Indian commodities.

While the charge of over-ambition has been levelled at the Planning Commission in respect of many other targets under the Second Plan, it is significant that there has so far been scarcely any criticism or questioning of what may be called the Export Plan. And yet, the Export Plan may be said in many ways to be central to the successful implementation of the planned endeavours. While we are in agreement with the proposition that the foreign exchange element of the Second Plan has risen; while, therefore, we concur with the view that the import bill for the five years will be larger than the Rs 4340 crores laid down in the Second Plan; and while, finally, we would admit that the covering of the foreign exchange gap will be a difficult, but not impossible, task, we are disposed to think that, in projecting targets for exports, the planners have shown themselves to be lacking in ambition. Certainly, the idea is preposterous that the export target for the Second Plan should be at a figure lower than in the last year of the First Plan.

First, let us study the table of exports contained in the Second Plan. Elsewhere on this page, this table has been reproduced together with an addendum representing the actuals for 1956, the annual average for the Second Plan as we think it should be revised, and the total for the five-year period as we envisage it to be. Indian Finance's revised target exceeds the Planning Commission's projection by Rs 500 crores over the Plan period. We may now explain the logic underlying the revisions we have herein suggested.

In the matter of tea, it seems to us that the actuals for 1956, at Rs 142 crores, should be well within our capacity to maintain over the whole of the Plan period. If, in recent years, tea prices and export earnings have been subject to very sharp fluctuations, it is entirely due to the fact that world production has alternately exceeded demand and, in other years, been barely able to meet it. Our view is that disciplined production can ensure for India the maintenance of such earnings at the 1956 level. What has happened in the past is that the favourable prices of the previous season conduced to such over production subsequently that prices thereafter receded. Far from reaping any extra profit on the additional outturn, it has been general experience that, with labour costs (if anything) showing an increase, the profit margin fell and exchange earnings declined. We consider it to be a matter of vital importance in tea that a very careful watch be kept over production; coarse plucking should on no account be allowed. On the part of the tea growers, all that is called for is a modicum of self discipline which is not without its aspect of enlightened self interest. For, controlled production will ensure that prices are stable; and in a market of stable prices, good quality teas will command a premium. If it is necessary, Government could directly intervene and vouchsafe the production conditions which will guarantee export earnings from tea at Rs 142 crores.

Turning now to jute goods, we find that the actuals in 1956 are Rs 9 crores lower than the annual average indicated by the Second Plan. As against this, we have put down the exchange earnings from jute goods at the higher annual average of Rs 143 crores. The extra export involved by a rise of such magnitude in earnings is, roughly, 100,000 tons. That is to say, against the Second Plan expectation of

THE EXPORT PLAN.

*Includes sugar Rs 16 crores.

**Includes sugar Rs 80 crores.

875,000 tons a year, our supposition is that jute goods exports would rise to just under 1,000,000 tons. But there are cogent reasons why we may expect such an increase in export of jute goods. Our information is that firstly, there is increasing industrial use of jute goods in America. Secondly, with world economy expanding in every way, it seems to us not at all unreasonable that the demand for jute goods should also rise. Thirdly, we gather that the IJMA is offering every help in repairing used burlap bags. This reconditioning facility has tended to make burlap much more competitive as against other packaging materials. Fourthly, and most importantly, there are certain developments in America which augur for the opening up of a new market of vast dimensions. We understand that experiments have been conducted for the utilisation of tarsoaked hessian as temporary foundation for small irrigational canals and drains. It has been American practice hitherto to use cement for this purpose. But, with these experiments in jute goods proving a success and with jute goods very much less expensive than cement, there is reasonable prospect of a new and large demand arising for burlap from America. Thus, as a result of these four factors, and given the drive and initiative in holding onto and capturing fresh markets in jute goods that the IJMA has recently been displaying, we feel confident that a target of Rs 143 crores from jute goods is well within our reach.

It will be seen that 1956 exports of both cotton textiles and tobacco are placed at a figure lower than the annual average envisaged by the Second Plan. We have nevertheless stuck to higher targets. These can be better and more surely achieved if some action is taken which will make Indian cotton textiles and tobacco more competitive in world markets. While we do not know how much, if any, of the excise duties on these two commodities is allowed as drawback on exports, we wish to suggest that an impetus could be given to exports by the total withdrawal of excises on exports. After all, Government have now reached the stage when the target of resources from taxation has been attained; and so it should be possible for them to afford the revenue loss entailed by this suggestion. It needs to be remembered that the danger to the Second Plan lies in a shortfall, not so much of internal resources, but of foreign exchange. When the West European countries were beset by similar difficulties, in view of the colossal dollar gap disclosed in their balance of payments after the end of the Second World War, and in particular when their economies had recovered somewhat from the ravages of war, Governments actively encouraged exports to the dollar area by subsidising them if necessary; at one time, Continental jute mills were underquoting the Indian industry, not because their costs of production were lower, but because a Government subsidy was introduced to earn the precious dollars. India is today in that position; and exports have to be encouraged by the nonapplication of excise duties subject, however, to countervailing export duties in cases where Indian prices are far below world prices. We suggest that it is a matter of importance for Government to encourage exports in this manner. Action on these lines can vouchsafe the Second Plan export targets in this behalf.

As far as oils are concerned, 1956 exports are considerably lower than the record level of 1955. But they already exceed the annual target of Rs 22 crores. In the light of the reiterated emphasis on increasing agricultural production in this country, and especially since every facility is being offered for achieving expansion in output without increase in area, we would suggest that the target for oil exports should be raised to an average of Rs 30 crores a year for the Plan period. Similarly, the research being done on the growth of longer staple cotton in this country should enable not only reduction in our import needs of long staple cotton, but also an augmentation of the surplus of short staple varieties for export. The 1956 exports of raw cotton and waste at Rs 25 crores already exceed the annual average by Rs 3 crores. It should be the aim of the Government to attain an annual average of Rs 30 crores from raw cotton and waste.

While on the subject of agricultural production, we may point out that the Second Plan anticipates sugar imports as costing Rs 35 crores for the quinquennium. The 1956 experience has shown that India can produce more sugar than it needs. What is more, it is obviously desirable that, say, 10 per cent of the high level of production that we have achieved should be diverted to export. It is in the pursuance of this desideratum that the excise duty on sugar has been increased. It is to be hoped that the higher excise will have the desired effect of inhibiting consumption. Thus, it is not impossible that India should strive for the export of at least 200,000 tons a year of sugar; and this, over the Plan period, may be relied upon to fetch in Rs 80 crores of foreign exchange.

Finally, we would draw attention to the fact that the earnings from metallic ore and scrap iron have already bettered the annual target by Rs 2 crores. What is more, the State Trading Corporation's attempts at securing contracts for sale of iron ore have proved successful and may be expected in future to achieve like success. But the planners have taken credit for merely two million tons of exports of iron ore in the last year of the Second Plan. It is now known that the offtake of iron ore from India may be expected to be larger, much larger. While, in this context, we will not press our suggestion of a target for iron ore exports at ten million tons annually, it is nothing more than realism that we may expect iron ore exports to be placed at five million tons by the end of the Second Plan. In line with this higher export of iron ore, we may put down the exchange earnings under this head at an annual average of Rs 50 crores.

The Export Plan that we have suggested should bring in additional foreign exchange earnings to the tune of Rs 500 crores. This means that the revised gap of Rs 1500 crores can be reduced by a third. Since drawals on sterling balances were planned for an amount of Rs 300 crores, the uncovered gap is brought down to Rs 700 crores. This, as we shall show, is no gap at all. The Foreign Exchange Plan of Rs 1500 crores can be said to be somewhat as follows:

	Crores
Drawing on sterling balances ..	300
Export Plan (as indicated in this article)	500
Spillover from First Plan of unutilised foreign aid credits ..	100
Foreign exchange saving consequent to Indo-US Surplus Commodities Agreement	137
Gross amount available on steel credits	83
World Bank aid for Railway projects	300
American aid	150
Assistance from Colombo Plan countries and others	80
Russian credits	60
Total ..	1710

There is apparently a surplus of Rs 210 crores. But there is a commitment with the International Monetary Fund for the repurchase of Rs 100 crores during the Plan period; secondly, instalments will have to be begun in respect of some of the foreign credits, especially the loans from Russia; and, thirdly, India will need to make repayment of instalments toward loans obtained from other agencies and entities such as the World Bank and the American Government.

The point to emphasise is that the Foreign Exchange Plan can succeed only if the Export Plan is expeditiously and energetically implemented. The Export Promotion Councils may in their own way be contributing to an improvement in exchange earnings. But the Export Plan needs to be tackled by all methods open to us; and we have offered the suggestions in this article not only because we believe them to be practical, but because we think their implementation is vital to the overall success of the Second Plan.

UK's Share in Sterling Area Dollar Earnings

By ROBERT COLLIN

A SURPRISING but important point about the pattern of sterling area trade last year is that, in general, Britain did rather better than its partners. In 1956, Britain managed to keep imports down, while those of other sterling area countries tended to rise. It managed to increase the value of its exports sharply, while those of several other sterling area countries were affected by the weakening of commodity prices in the first half of the year. The United Kingdom balance improved: that of several other sterling countries worsened.

The outlines of this picture are, however, familiar enough. It is the details—particularly where trade with the dollar area is concerned—which are rather surprising. Britain normally imports more from the dollar area than it can pay for with visible exports. It meets the gap partly by earning a sizeable surplus on invisible dollar trade, partly by bringing into the accounts its trade surplus with the rest of the sterling area.

But Britain's exports to the dollar area last year were greater than those of all other sterling area countries put together. The deficit in its own balance of payments current account with the dollar area was only some £20,000,000.

One is drawn to this conclusion by the latest balance of payments statistics, which suggest that, while dollar exports by other sterling countries remained fairly constant last year, Britain's dollar exports jumped sharply. These payments figures, of course, are only estimates, and estimates on a different basis from the trade statistics.

But the trade statistics—the latest ones now make it possible to compare the whole year 1956 with the year 1955—have the same story to tell. Over this period, the value of British exports to the dollar area rose by 24* per cent, while those of other sterling area countries rose hardly at all. In money terms, Britain's dollar exports rose from £417,000,000 to

(Continued on page 1181)

*The figures in this article exclude repayments of silver bullion by Britain to the USA, amounting to £22,500,000 in 1956, against a war-time Lend-Lease borrowing.

Editorial Notes

Red Tape and Red Flags

It has long been traditional for the viewpoint of the coal industry to find expression at the annual general meetings of the Bengal Coal Company Limited; if memory serves us right, even in recent years, the sessions of the Indian Mining Association and of the other coal organisations usually follow, and do not precede, Bengal Coal's annual get together of shareholders. This preeminence is no doubt in part due to the fact that the company accounts for more than 5 per cent of India's coal production; but this itself was a position that was brought about over the years, with the company seizing every opportunity it could of serving the national economy by undertaking new development. If for these reasons alone, therefore, the Chairman's address is keenly perused each year by the student of Indian economic affairs. But, thanks to the stature and ability of the Chairmen that Bengal Coal has had, each address has been a fluent reading example of, shall we say, the King's English. True, the primary purpose of the Chairman's speech is to assess the coal industry generally, to indicate the problems that face it and to suggest how these difficulties could be resolved. Since these are served up with a tittilating sense of humour, the annual meeting is even looked forward to with pleasurable anticipation.

Mr D. F. Macmillan, who presided over this week's annual general meeting, has proved himself abundantly to possess the attributes of Bengal Coal's Chairman. With no mincing of words he states what is surely the logical viewpoint on coal. As far as the year that has passed is concerned, the main thing to note is that coal output has not shown the improvement that it should have in the first year of the Second Plan. This is attributed, quite correctly, to two reasons. One is the outbreak of Labour unrest which was utilised by rival trade union organisations to provoke a strike. In Bengal Coal's case, but for the strike which affected production for four weeks, raisings would have, in Mr Macmillan's opinion, surely outstripped the previous year's figure. The other reason for the slowness in increasing production was the delay by Government in clarifying their policy in respect of the private sector's role in attaining the Second Plan target. While the industry submitted plans for development early last year, in response to Government requests to this effect, clarification in this regard was forthcoming only in the latter half of the year. As Mr Macmillan dryly remarks, "Your company's productive efforts during 1956 thus got enmeshed in a tangle of red flags on one side and red tape on the other."

The Bengal Coal Chairman with good reason has not dealt at length with the question of coal prices. He contents himself with pointing out that, whereas the price of steel has risen by 90 per cent since 1950, coal has gone up by only 18 per cent. Thus, "a revision of Government's price policy is urgently called for so that the coal industry can receive a fair return on its enterprise and be able to revitalise its financial reserves." He has welcomed the fact that the question is now being considered by the Coal Prices Revision Committee.

While Mr Macmillan has taken scrupulous care to avoid controversy—there is no mention either of the Budget or of taxation—he has felt it necessary forcefully to suggest that the complementary role of the private and public sectors in coal is not being clearly understood at all levels. His particular apprehension is that Government representatives at lower levels, occupied "in such mundane matters as allotment of wagons", may not be fulfilling this aspect of Government policy. While there are assurances from time to time that there is no discrimination, Mr Macmillan points out that "one of the fundamental tenets of the administration of justice is that not only should justice be done, but it should appear to be done." He asks for the full facts to be made known periodically, so that "the corroding effects of doubts and hesitations may not be allowed to detract in any way from the combined efforts of all to attain a new momentum in producion."

Bengal Coal plans to increase its output by one million tons over the Second Plan period; and the zest with which this target is being worked to is representative of the keenness of the private sector in coal to fulfil the additional 10 million tons of coal production assigned to it. All it wants is reasonable help, in the form of supply of cement, steel and wagons, for attaining its target.

*

Pak Foreign Policy

If the vote of confidence which Mr H. S. Suhrawardy secured for his pro-Western foreign policy at the recent session of the Awami League Council demonstrated his amazing dexterity in positional party manoeuvring, it also underlined the sad truth that, in his anxiety to retain his office of authority, he paid scant regard to democratic conventions.

One of the ladders which Mr Suhrawardy used for his climb to power was fashioned out from sticks with which he was beating the then Government's foreign policy relentlessly. When he formed the United Front to fight the Muslim League and made the Awami League its chief participating member, he appeared to be the foremost amongst the spokesmen of the Front to oppose a foreign policy of identification with the Western Bloc of powers and formation of regional military pacts. It was mainly on the two planks of a neutral foreign policy and autonomy for East Pakistan that the United Front fought and routed the Muslim League in East Bengal, a victory which cleared the way for Mr Suhrawardy's rise to power.

In the speech on assumption of office after Mr Suhrawardy became the Prime Minister of Pakistan and also in his speeches after his return from China, he was promising a neutral foreign policy for the new Government. But even as he was speaking, he started his preparations for bringing the Kashmir issue before the UN and for conducting the debate in a manner which was bound to muddy the waters of Indo-Pakistan relations; and it was not many months before Mr Suhrawardy came out as a champion of the same foreign policy he had so loudly and so persistently attacked while electioneering for votes in East Pakistan.

The reasons for so sudden a volte face—how far it was dictated by purely personal factors and how far by the shifting alignment in the world balance of Powers is debatable— can, at best, be a matter of surprise. The fact, however, that the policy now being pursued is just the opposite of what the voters voted for, can only depress those who wish to see the foundations of democracy firmly laid in the newly independent countries of Asia. That an endorsement was obtained from the Council of the Awami League does not alter the picture on any material point.

It is not clear from the reports about the Awami League Council session how the almost total obliteration of the Bhasani group was actually brought about. One may be pardoned if one wonders if Mr Suhrawardy's supporters used the methods of logic and persuasion only in the best democratic manner. With the date of a general election still uncertain and the allegiance and strength of parties in Western Pakistan daily changing, the atmosphere in which the Council session was held was clearly not congenial for a calm and judicious judgment of issues. It will be surprising if the nearly unanimous decision of the Council supporting Mr Suhrawardy's foreign policy reflected, as it should in a country with established democratic conventions, the will of the people.

When Mr Suhrawardy became the Prime Minister of Pakistan, the Indian Press without exception expressed the hope that dmocracy will take root in Pakistan and that Indo-Pak relations will show an improvement. It is a matter of deep regret that the hope on both the counts appears to have been belied. If Mr Suhrawardy shares the regret, his splenetic outbursts against India at the Council session afforded no proof ot it.

What Next?

The drawal of the $72.5 million provided in the standby arrangement with the International Monetary Fund has been accompanied by a decline, in that week, of Rs 7 to Rs 8 crores in foreign balances. Thus, as at June 14, India's foreign exchange reserves, totalling Rs 473.71 crores, are exactly Rs 73.71 crores higher than the statutory minimum for currency cover at Rs 400 crores. In practical terms, however, since Rs 20 crores odd are required for "working capital", the sum available for meeting future import surplus is hardly Rs 50 crores. That is to say, on the basis of the recent weekly average of foreign exchange depletion, the present reserves should last six to seven weeks. If, in the event, the unfavourable trend in balance of payments is not halted and reversed, India will need to seek fresh avenues whereby foreign exchange resources can be found for meeting exchange commitments. So, it may be stated that the utilisation of the IMF standby arrangement raises the vital question: What next?

It is scarcely to be doubted that the authorities would have reached an advanced stage of preparations, if they have not already completed them. The fact of the matter is that, in spite of the measures taken in December last year to correct the foreign trade imbalance, the import surplus is proving to be rather longer than shortterm in character. It is true that the higher import duties and the drastic reduction in the import list are both expected to achieve a balance in our foreign trade; and so, indeed, they were intended. But the authorities must be prepared for the contingency that the drain on foreign exchange resources will continue till, say, the end of 1957. As it is, Rs 100 crores of emergent aid have been obtained from the IMF; but prospects are that we will need more.

We cannot gauge with any accuracy the extent of foreign exchange liability that has, as it were, been "incurred" by the fact of import licences already having been issued. Purchases of goods and commodities against such licences are likely to materialise until as late as the end of this year. How much more of a drain these will be on the foreign exchange reserves, not even the financial authorities seem to know. For a working basis, it may be presumed that the size of the import surplus will dwindle to around Rs 4 crores a week, or Rs 100 crores for the rest of 1957. On this assumption, the financial authorities may have it in mind to secure fresh resources for, say, another Rs 50 crores. But the question to be answered is: How best can this be arranged?

There is, we suggest, no need for haste. At any rate, the present surplus over the statutory minimum should last until the end of July or so. Meantime, it is also likely that US aid appropriations for India for the fiscal year ending June 1957 will be paid in in the course of the next two weeks. Thus, to the extent of aid received from this quarter, India's foreign exchange position will be easier. This windfall, and another in respect of payments by the UK against British sterling annuity adjustments, may both be of timely help. Beyond these, there are two avenues open to Government.

The first of these is to negotiate a standby arrangement with the IMF for the balance of India's quota. It may be recalled that a precedent already exists, with the UK arranging for drawals and standby to the full extent of its quota of $1,300 million. In line with this precedent, India could impress upon the IMF its need for emergency aid for the balance of $200 million. The standby arrangement involves a cost of only ¼ per cent, until such time as it is actually drawn upon. Since it is possible that India's foreign exchange position might stabilise, before its reserves reach the statutory minimum, this is a procedure that should be attractive to Government. We may presume that such negotiations would already have been conducted with the IMF; but the possibility of the IMF being unable to entertain the proposal is not to be ruled out. In that event, the Indian monetary authorities would have one other avenue for releasing foreign exchange resources.

We may note here that the minimum of Rs 400 crores of Foreign Securities for currency cover is not sacrosanct. Just as the former practice of indicating a minimum ratio of bullion and sterling securities to total notes was replaced by the new minimum of Rs 400 crores, Government could issue a notification that the minimum will not, until further notice, be applicable. However, there is one prerequisite step. In the sterling balances agreements with the UK, India undertook to keep its securities in this behalf at a level not below Rs 400 crores. So, the drawing down of these balances will require prior consultation with the British monetary authorities. We may take it for granted that Britain will not stand in the way of any drawing on these balances, and that, therefore, it will acquiesce in any Indian proposal to use a further portion of the sterling balances. Thus, the consultation with Britain may be no more than a formality.

In our view, it would be preferable to avoid any suspension of the statutory minimum. But prudence requires that, if necessary, such a step could be taken; and, for this reason, all prior arrangements have to be concluded. It would not be incorrect to suggest that Government will have actively considered the questions both of a fresh standby arrangement with the IMF and of consultations with Britain. It is, therefore, safe to presume that the Indian monetary authorities have suitably forearmed themselves against the contingency of our foreign exchange reserves again reaching a point when they have to be replenished.

We may add, in conclusion, that both these are measures which may not need to be implemented this year; but they are, again, measures which could be pressed into service at any time in the future when, for some reason or other, our foreign exchange position might cause some anxiety.

Significant Slack Season Signs

A sharp increase has been registered in Scheduled Banks' Time Liabilities; and this, as revealed in the return of member banks for the week ended June 7, has been accompanied by a decline of somewhat larger size in Demand Liabilities. The rise in Time Liabilities is one of Rs 15.08 crores to Rs 538.11 crores, while Demand Liabilities have gone down by Rs 13.17 crores to Rs 711.69 crores. This is a turn of events which spells reduction in profit margins for member banks. The greater disposition to Time Liabilities as compared to Demand Liabilities is brought out in the fact that, between June 8, 1956 and June 7, 1957, the rise under the former head is Rs 93.90 crores whereas, under the latter head, the increase is Rs 75.33 crores. The ratio of Demand Liabilities to total Deposits has, over the period, declined from 59.0 per cent to 56.9 per cent. This is a trend which was wholly to be expected and which is the making of the banks themselves. For, the bidding for Deposits has brought about such an atmosphere of competition, that interest rates for term Deposits are at unconscionably high levels. The inducement of the interest available on term money inevitably encourages a diversion from current accounts to fixed Deposits. Thus, the war for Deposits is proving suicidal to banking companies, since interest has now to be paid on balances which formerly were in the form of current accounts. It is difficult to predict the lengths to which this trend may go, unless corrective steps are taken in respect of interest paid on Deposits.

The returns of the Reserve Bank for the week ended June 14 bear the impress of the purchase of currency from the IMF under terms of the standby arrangement with that organisation; and they also disclose what are apparently definite slack season indicators.

Active Notes have declined by Rs 7.38 crores to Rs 1580.56 crores. Rupee Coin has returned from circulation for Rs 0.25 crores. With Rupee Securities and Foreign Securities unchanged, the Reserve Bank's notes held have risen by Rs 7.63 crores to Rs 23.93 crores.

The Centre's Deposits are marked lower by Rs 2.19 crores at Rs 52.46 crores; those of State Governments are slightly lower at Rs 1.19 crores. It would appear that, firstly, the State Governments have sold some marketable securities as well as ad hoc Treasury Bills to the Reserve Bank; and secondly, the Reserve Bank has made some other open market purchases. These are to be inferred from the rise of Rs 1.19 crores in Government Treasury Bills Purchased and Discounted and from the increase of Rs 8.16 crores to Rs 178.65 crores in Investments.

Balances Held Abroad, by dint of the purchase of foreign currency from the IMF, are notably higher; since the standby arrangement was for, roughly, Rs 34-35 crores, the figure under Balances Held Abroad should have risen by this amount. But the rise is one only of Rs 27.24 crores. The inference is that the outgo on account of import surplus has amounted to Rs 7 to Rs 8 crores during the week. On the other side of the ledger, Other Deposits have gone up by Rs 33.82 crores; this would represent the payment for the currency purchased from the IMF and kept on deposit by the IMF with the Reserve Bank.

Finally, the slack season conditions, which were reflected in the decline in Active Notes, are also evidenced in the figures relating to member banks. Though Deposits of Scheduled Banks with the Reserve Bank have declined by Rs 3.80 crores to Rs 64.82 crores, it would appear that the member banks have considerably reduced their borrowings from the central banking institution. For, the Other Loans and Advances of the Reserve Bank have registered a sharp decline of Rs 11.05 crores to Rs 98.06 crores, which is the lowest figure since the end of April.

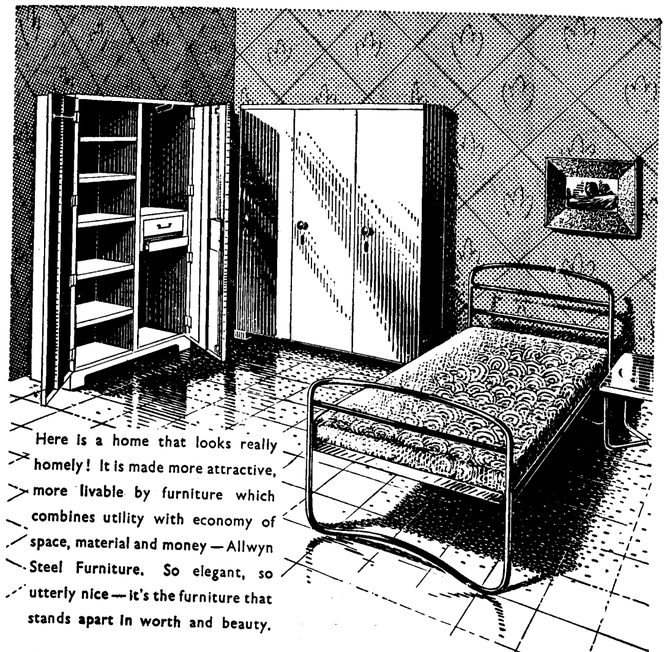
According to the statement of the State Bank for June 14, there is no material change in Deposits at Rs 306.53 crores. Because of a rise in Other Assets from Rs 4.42 crores to Rs 7.84 crores, cash balances have been drawn upon, although the level of Advances has declined. Cash balances are lower by Rs 2.34 crores at Rs 26.69 crores; and since this is largely under the head of cash in hand and with the Reserve Bank, the decline in Deposits of member banks with the Reserve Bank may be said to be mainly

(Continued on page 1168)

More Economic Troubles in Britain

By PAUL EINZIG

THE first half of the year is practically at an end, and there is a growing volume of pessimism in Britain about autumn prospects. It is always during the first half that the Treasury is able to reinforce its gold reserve, and thus becomes able to face seasonal losses during the second half. This year the inflow during the first five months has been disappointingly small. The preliminary trade figures for May give some indication of the reason why the gold inflow was negligible last month. There was a sharp increase in imports, and the adverse trade balance was considerably larger than during the corresponding month in 1956. There are indications that once more Britain is consuming too much. As a result of the increase in wages and the disappearance of fears of unemployment, consumer demand is increasing. Once more producers can rely safely on the absorbing capacity of the domestic markets, so that there is not the same inducement for them to concentrate on export drive as there was until a few months ago.



In the circumstances the possibility of a strong adverse pressure on sterling in the autumn is widely envisaged. Thanks to the arrangement of dollar facilities with the International Monetary Fund, the authorities will be able to withstand the pressure. But the dollar facilities will have to be repaid eventually, so that their use will amount to mortgaging the future for the sake of immediate relief.

There will be an important difference between the coming period of pressure on sterling and similar previous periods. In the meantime confidence in British Government loans has weakened considerably. On the occasions of previous runs on sterling most investors in fixed interest bearing securities were not particularly conscious of the erosion of the purchasing power of their holdings. There is growing evidence that in the course of the last few months investors, big and small, have become much more inflation-conscious. Any additional adverse influence, such as a weakness of sterling, is liable to accentuate the prevailing fears that the real value of Government loans is doomed to slow but non-top decline.

To some extent equities were inclined to move in sympathy with Government loans in recent months, owing to the temptation offered by the rising yield of the latter, and the declining trend of profits of industrial firms. But there are indications that attempts to hold down prices through financing higher wages out of profits are abandoned. For one thing, the increase in costs resulting from the recently granted or impending wages increases are far too heavy to be financed out of profit margins. Moreover, since the Government itself has given up the struggle against rising prices by authorising the National Coal Board to increase its prices, industrial firms see no reason why they should try to be more royalist than the King or more catholic than the Pope.

So it seems probable that industrial profits will show a recovery during the next twelve months. This will reinforce the trend to switch over from gilt-edged stocks to equities. Indeed since it is becoming increasingly clear that the Government intends to pursue its policy of overfull employment, the investors' preference for equities is bound to become accentuated. What the Government's attitude amounts to is a virtual guarantee of the purchasing power of equities, without any similar guarantee for Government loans. It is an attitude which will not make Treasury financing any easier.

There is of course a possibility that a far-reaching international agreement on disarmament may bring welcome relief to sterling and to British government loans, both through its psychological effect and through making possible drastic cuts in military expenditure. But the underlying trend would remain, even if its effects would become somewhat mitigated and deferred. There are no indications of any change in the attitude of the trade unions for the better, so that the wages spiral is expected to continue

Here is a home that looks really homely! It is made more attractive, more livable by furniture which combines utility with economy of space, material and money — Allwyn Steel Furniture. So elegant, so utterly nice — it's the furniture that stands apart in worth and beauty.

HOMELIER LOOKS FOR MODERN HOMES

ALLWYN'S quality Steel Furniture can make *your* home attractive too! Wide choice includes Wardrobes, Almirahs, Beds, Tables, Chairs, Sofas and Nursery items.

to rise relentlessly. The latest move in that direction is the new demand of the Amalgamated Engineering Unions for the 40 hour week and for increased paid holidays. Having just agreed, in return for a substantial increase of wages, to abstain from claiming further wages increases for 12 months, they immediately dishonoured the spirit of the agreement by claiming more pay indirectly through a reduction of working hours and an increase of holidays. This attitude clearly indicated what is wrong with Britain. It is the demoralisation of organised industrial labour. Its post-war attitude is guided by moral standards similar to those of Hitler and of the Communist Governments—to grasp at any advantages that can be secured by concluding agreements, and to evade obligations arising from the agreements before the ink of their signatures is dry. Again and again wages increases were granted in return for promises of increased efficiency or the abandonment of restrictive practices. Very few of such undertakings were honoured to any noteworthy extent, if at all.

This attitude of British labour has not prevented an increase in the output after the war, and has not led so far to a major crisis. This is because the demoralisation of the working classes was accompanied by a rise in the moral standards of the middle classes. In spite of the narrowing of income differentials and the confiscatory taxation, the middle classes today are working much harder than before the war. Their inventive genius has survived the reduction of the financial incentive resulting from egalitarianism run mad. Britain's progress in the sphere of the production of atomic energy and in many other industrial spheres indicate that in spite of the utmost discouragement they have to face, the middle classes more than hold their own. British industrial modernisation is making good progress in spite of the inadequacy of depreciation allowances for taxation purposes. Indeed it is probably correct to sum up the situation by saying that Britain's economic future depends on whether the increasing contribution of the middle classes to the economy can offset and more than offset the declining contribution of the working classes.—(Copyright).

for saving India's foreign currency

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

dend on the Ordinary shares is reduced from 10 to 7½ per cent.

Sendra Coal Company has incurred a loss of Rs 7,337 against a loss of Rs 40,940. After transferring a sum of Rs 25,000 from General Reserve during the year under review and Rs 30,000 in the previous year, the dividend is maintained at 2½ per cent on the Ordinary shares.

£ R$

Kamani Engineering

The working of the Kamani Engineering Corporation Limited, during the year ended 30th September 1956, has resulted in a slight decline in earnings, mainly due to the company's difficulties in securing orders for towers and other structures at very much reduced rates. With the result, sales have declined to Rs 1.65 crores from Rs 2.34 crores, while the net profit, before providing for Depreciation, amounts to Rs 4,03,119 against Rs 5,02,179 in the previous year. The Depreciation amount is reduced to Rs 2.90 lakhs from Rs 3.21 lakhs, while the sum set apart for Bad and Doubts Reserve is maintained at Rs 10,000. The directors have recommended a dividend only on the Preference shares.

According to the directors' report, the company has, during the year under review, secured orders for transmission line towers for Koyna, Korba-Bhilai, Chambal and Rihand Hydel schemes, aggregating to 12,880 tons. They hope that this encouraging factor will ensure the company's prospects for development and bring satisfactory results.

World of Business

Inland Waterways

THE talk of a Master Plan for developing and interlinking inland waterways in the entire country from east to west and north to south has been in the air for a few years now. It is known that the plan is being prepared under the auspices of the Union Transport Ministry and that its object is to link all major rivers of the country by means of a network of canals and various reservoirs and to make them navigable so that small ships and craft could ply from one end of the country to another. What is not precisely known is at what stage the preparation of the Master Plan is at the moment.

From newspaper reports about the meeting of the Inland Water Transport Committee held last week in Poona, one, however, gathers the impression that the preparation is well under way and the details of the Master Plan may soon be published.

The importance of transport in the developing economy of our country can hardly be exaggerated. According to some who have studied the Second Five Year Plan carefully, transport, even more than foreign exchange or technical personnel or food production, will be the greatest obstacle in the path of the Plan's successful completion. In fact, one does not need to be an expert to see that a development programme which visualises an increase, in five years, of 15 per cent in foodgrains, of 22 per cent in other crops, of 58 per cent in the overall index of industrial production, of 50 per cent in the output of minerals and of 300 per cent in the output of heavy industry, calls for a phenomenal increase in the transport capacity of the country.

The Railways and the Roads claim and have received in some measure the attention of the country and of the authorities as being vital parts of the foundation on which the edifice of an industrialised India will have to be built. In the schemes formulated for increasing the transport capacity of the country, the development of Inland Waterways has not been given any similar place of importance. The reason, perhaps, is that development of the transport potentialities of rivers and canals is necessarily a long term affair and there cannot be any expectation of quick results.

Moreover, inland water transport, because of geographical and physical limitations, is confined to certain areas of the country only. In the context of an All India Plan, its development has to be viewed from an angle altogether different from the approach toward the development of the railways and the roadways.

But, whatever the reasons are and whatever the justification be for according development of internal waterways a comparatively unimportant place in the Plan, the part that inland water transport is ultimately going to play will by no means be unimportant. Even on a short term view, that is, judged by its ability to relieve the mounting pressure on the Railways and the Roads, water transport's role is not negligible, and the present capacity of inland waterways in India for bearing traffic, confined though the rivers and canals are to the States of Assam, West Bengal, Bihar, UP, Andhra, Madras and Kerala, is considerable.

The total length of waterways affording perennial navigation to small steamers and country boats is nearly 6,000 miles. The Ganga Brahmaputra river system affords navigation for steamers for 1,500 miles. The navigable canals and backwaters in Kerala and in the Krishna Delta cover more than a thousand miles on which country boats transport men and cargo throughout the year. Exact figures of the annual capacity of water transport are not readily availble, but one estimate puts the fiure of annual steamer traffic in the Ganga Brahmaputra system at 625 million ton miles and that of country boat traffic in the same area at 1,250 million ton miles. The all India figure for the latter could not be less than 3,000 million ton miles per year.

It should be clear from these figures that, even if the potentialities of the existing inland water systems are fully exploited, water transport can, without an extension in mileage, be made to help greatly in easing the strain on the railways —in some areas at least.

One obstacle in the way of such exploitation is the uncertain supply of boats. It should not be difficult to remove this obstacle. In fact, boat building can be organised in a manner to become an ideal small scale and village industry, providing employment to thousands besides ensuring a regular supply of boats.

As far as the steamer traffic is concerned, the difficulties which are standing now in the way of increasing the ton mileage are mostly confined to two major heads. The first is the difficulty experienced by steamer companies in getting coal and the second is the lack of adequate repair and berthing facilities for inland steamers in Calcutta. An additional difficulty has recently cropped up on account of the Government's intention of implementing the Foreigners' Act strictly. The great majority of the crew employed by steamer companies are Pakistanis and, if greater impediments are put in the way of their employment, an unfortunate situation may suddenly arise.

But none of these difficulties is insuperable or need wait years for their removal. The Master Plan, it is reported, envisages (1) the linking of Calcutta on the east with Cochin on the west, via Cuttack and Madras by a network of canals connecting some of the minor rivers of Orissa, Andhra and Madras; (2) the continuous waterway from the west coast to the east coast through the hinterlands of Bombay, MP and Andhra, and (3) a continuous water-way from Western India to Northern and North East India via Central India.

Obviously, it will take decades before the whole thing is completed Most of the major canal excavation projects now under execution will also take five or six years before they are ready for use. Neither the Master Plan nor the running projects will thus be of help in relieving the pressure on the other modes of transport during the current Plan.

But the point is that the existing waterways and canals can be made to do precisely that, and their usefulness need not depend on the completion of the Master Plan. All that is necessary is to pay proper and immediate attention to the difficulties—already mentioned and thereafter to remove them.

Titanium Dioxide Industry

If titanium dioxide has established itself in important industries like paint, rubber, vitreous enamel, printing ink, rayon, linoleum, soap and textiles, it was mainly because of the fillip given to the indigenous industry by the grant of protection. For at the time when the claim of the industry was first referred to the Tariff Commission in 1952, the Travancore Titanium Products Limited, which was the only firm manufacturing titanium dioxide, in the country had stopped production for want of demand for its product.

But thanks to protection which was granted in 1953 at the rate of 25.2 per cent ad valorem preferential and 35.2 per cent ad valorem standard, the industry has not

RESERVE BANK OF INDIA

Applications are invited for the posts of Research Officers in the Bank's Department of Research and Statistics at Bombay.

SCALE OF PAY: Rs. 375-55-815 E.B. 55-925-60-1045. In addition to pay, the selected candidates will be eligible to draw Local Pay, House Rent Allowance and Dearness Allowance at the rates prescribed by the Bank from time to time.

Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scale.

Appointments to the above posts will be made on a temporary basis in the first instance but are likely to be made permanent.

Candidates should not ordinarily be over 30 years of age as on 1st June 1957. The age limit may be extended upto 35 years in the case of candidates with exceptionally good qualifications and|or research experience of value to the Bank.

QUALIFICATIONS: First or high second class Master's degree in Economics or Commerce of an Indian or Foreign University or a Doctorate degree in Economics of an Indian or Foreign University, **AND** a period of research work in one or more of the following subjects: (a) Monetary Economics, (b) Banking theory and practice, (c) International Finance and (d) Agricultural Economics. A period of practical banking training will be an additional qualification in respect of applicants with specialisation in (a) and (b) above.

Applications should be in a special form obtainable from any office of the Reserve Bank of India. All the applications should be accompanied by copies of certificates regarding age and educational qualifications and two testimonials (originals should not be sent, the Bank does **NOT** accept responsibility for returning the originals if sent through oversight) and should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay, so as to reach him on or before Saturday the 13th July 1957. **Candidates already in service must submit their applications through their employers.** Candidates belonging to the Scheduled Castes|Scheduled Tribes should mention this fact prominently on their applications and also enclose a copy of certificate to that effect from a competent authority.

Applicants must remit along with their applications an application fee of Rs. 7.50 (Rs. 1.75 in the case of Scheduled Castes'|Scheduled Tribes' Candidates) by **Postal** Order, **Cheque or Bank Draft on a Scheduled Bank payable at Bombay.** The application fee is in no case refundable. Bonafide **unemployed** Refugee candidates applying through any of the Government Employment Exchanges are exempted from payment of the application fee.

Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them.

Canvassing in any form will be regarded as a disqualification.

World of Jute

Increase in US Burlap Consumption: Stocks also Higher

THE jute goods market has ruled quietly steady during the past week while the raw jute section has continued to remain firm. In the absence of any sizable increase in genuine business, goods prices have been mostly under speculative influences, fluctuating according to the prevailing sentiment in the fatka. Though there have been sellers in new crop, conditions in the raw jute market have remained firm because of the delay in the onset of the monsoon.

The US burlap consumption and stock figures released during the week have had little effect on market sentiment. US burlap consumption during May totalled 71,900,000 yards compared with 62,000,000 yards in April. Stocks had also risen from 257,300,000 yards at the end of April to 260,500,000 yards at the end of May. The fact that the rise in burlap consumption in US has been accompanied by a corresponding increase in stocks has evidently been responsible for the absence of any perceptible reaction to the figures in the Calcutta market. An encouraging feature, however, is that burlap consumption in US has been higher so far during the year 1956-57 than in the comparable period of 1955-56. In the 11 months ending May 1957, burlap consumption has totalled 813 million yards as compared with the corresponding period of the previous year when it amounted to 770 million yards.

With the release of the figures relating to despatches of jute goods in May, it is now possible to obtain a tentative idea of the demand for jute goods during 1956-57. During the last month, total despatches amounted to 82,600 tons bringing the total for the 11 months ending May 1957 to 958,700 tons as against 956,500 tons recorded during the 11 months ending May 1956. The total comprises 789,900 tons on export account and 168,800 tons for internal consumption. During the previous year, exports amounted to 779,800 tons while despatches on internal consumption account were placed at 176,700 tons.

It is evident, therefore, that in the current year exports have been running at a higher level than in the previous year. A further analysis of the figures will disclose that there has been a sizable fall in internal consumption which has amounted to only 168,800 tons in the 11 months ending May 1957 whereas such consumption stood at 176,700 tons during the comparable period of the previous year. A significant point to be noted is that hessian has been mainly responsible for the better showing of jute goods this year. For, exports of sacking this year have fallen to 383,600 tons from 401,200 tons in the previous year.

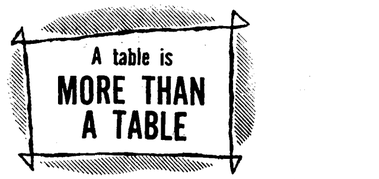
*

Conditions in the jute goods market were firm on the opening day of the week under review consequent on heavy speculative buying. Toward close prices, however, developed a sagging tendency due to profittaking at higher levels. Hessian 40" x 10 oz Ready was done at Rs 44.25 with July-September at Rs 44.55 and October-December at Rs 44.20. In the Sacking section, B. Twills Ready was done at Rs 117.70, July-September at Rs 118.00 and October-December at Rs 117.85.

The reactionary tendency noticeable toward the close of the previous day became more pronounced on Saturday with a predominance of sellers in the forward positions. Hessian 40" x 10 oz Ready receded by 13 nP to be finally placed at Rs 44.12. The decline was steeper in July-September and October-December which were placed at Rs. 44.20 and Rs 43.90 respectively. A similar trend was in evidence in the sacking section also with the closing prices as follows: B Twills ready Rs 117.40, July-September Rs 117.75 and October-December Rs 117.50.

Though the market opened quiet on Monday, firm conditions developed in later dealings in response to speculative buying all along the line. A contributory factor had been the buying of sackings by a prominent shipper against his sales overseas. With mills showing no interest at prevailing levels, the market closed fully steady, Hessian 40" x 10 oz Ready recovered lost ground and moved up further to Rs 44.50 while B Twills Ready gained 45 nP to be done at Rs 117.85. In the forward delivery positions. Hessian 40" x 10 oz July-September moved up to Rs 44.65 with October-December quoted at Rs 44.30. Among sackings, B Twills July-September advanced half a point to Rs 118.25 while October-December was even better at Rs 118.05.

Tuesday found the market open on a firm note with prices both in the hessian and sacking sections making further headway on bull support. In later dealings, the higher levels attracted some profittaking but the market closed on a firm undertone. Hessian 40" x 10 oz Ready was done at Rs 44.60 with July-September at Rs 44.75 and October-December at Rs 44.40. In the sacking section B Twills was marked at Rs 117.90 with July-September at Rs 118.40 and October-December at Rs 118.15.



The market closed the week on a quietly steady note as on Wednesday prices were somewhat depressed by selling pressure from bulls due to settlement considerations. Hessian 40" x 10 oz Ready closed at Rs 44.36 with July-September at Rs 44.50 and October-December at Rs 44.10. In the sacking section, B Twills Ready was quoted at Rs 117.70 with July-September, at Rs 118.05 and October-December at Rs 117.70.

*

The raw jute market ruled firm during the past week. Though there had been some offers for new crop at around the prices for the old crop, sellers were generally unwilling to discount prices. This tendency became well pronounced toward the close when discussions turned from the possibility of a delayed crop to the possible repercussions on the size of the new crop of the unusual delay in onset of the monsoon.

The market opened the week on a steady note. The fact that little business was put through failed to

World of Tea

Prospects for Tea Prices

ONCE again, the results of the second Export Sale of the new season's teas, held in Calcutta this week, are discouraging. The majority of support has come only from internal operators although some exporters are operating. The future trend of the market, therefore, depends on the price fluctuations at the auctions in the weeks to come.

Looking to the statistical position of the commodity, tea supplies this year bid fair to outstrip demand considerably in the absence of some restraint on production. It looks as though world tea output is nearing towards over-production.

Increased production is not of itself a bad thing; but increased production, which disregards demand, can only result in a general lowering, of prices. It is as yet difficult to forecast what the sale pattern will be this year; because a proper assessment of the crop can be made only in last week of August or early September. With the bitter experience of 1955 still fresh, buyers are naturally very cautious and selective in their purchases.

In the export sale held in Calcutta this week offerings were 15,614 packages for which there was a better demand than in Sale No. 1. This demand weakened towards the end of the sale. Bright liquoring teas and flavoury Darjeelings were the strongest features of the sale, while stylish well-twisted Leaf grades were well supported and were up to 20 nP per pound dearer. Plain Dooars BPs advanced by 5 nP per pound; but the Pekoe Fannings were again a weak feature and many lines were withdrawn. The very few Tippy sorts, on offer, were sold well. Following rates were quoted:—Clean Black Pekoe Rs 2.30 to Rs 2.40; Plain Broken Pekoe Rs 1.75 to Rs 1.80 and Plain Fannings Rs 1.60 to Rs 1.64. These rates should be considered as nominal. Other rates are not given as there is a lack of representative teas on offer.

In the Internal Sale, offerings were 5,070 packages of Dusts of which 755 packages were of Old Season's manufacture. There was a fairly good general demand for the comparatively small number of chests on offer. Flavoury Darjeelings and the few invoices of CTC Assams were again a popular feature and the prices of the latter rose appreciably. Leafy orthodox types from all districts were generally easier; but the smaller ones were firm and occasionally dearer. Medium Dooars Dust was nominally quoted at Rs 1.45 to Rs 1.50 per pound. Also, 116 packages of Leaf grades were offered for internal consumption.

In the Export Quota section, the rate, after touching a high of 20 nP per pound, eased off to 18 nP. At the close, there were many buyers at 18 nP with only few sellers at 19 nP per pound.

A total of about 960,000 pounds was offered in the Cochin market. Only a slight falling away in quality was noticeable. The sale was again characterised by a good internal demand, but at irregularly easier rates. The few best liquoring Nilgiris, on offer, met with fair enquiry around last levels, while the lesser highgrowns were sometimes dearer. Medium and Low Medium Brokens found useful competition at a drop of up to 5 nP, while similar Fannings shed 5 to 10 nP per pound. Low-growns were barely steady.

Black Leaf Brokens and Fannings came to a queter market and eased up to 10 nP. Whole Leaf grades were again a strong feature, selling at generally dearer rates. Following rates were quoted.—Plain BP Rs 1.48; Low Medium BOP Rs 1.50 to Rs 1.55; Medium BOP Rs 1.65 to Rs 1.70; Good BOP Rs 1.90 to Rs 2.00 and well-made OP Rs 2.55.

The first sale of the new season's teas was held in Chittagong towards the end of last week. Owing to slow arrivals, the quantity, on offer, was very small. Leaf offerings consisted of 2,888 chests and Dust offerings 347 chests. The very limited quantity of Leaf grades met with a strong market with practically all lots selling at 4 to 6 annas per pound above valuation. The exceptions were Whole Leaf grades, which were but a half anna per pound dearer. The quality of the offerings was disappointing, there being many teas with very thin liquors.

Not much interest was shown in the Dust section. Many lots were sold at a full anna per pound below valuation. Plain Sylhet Dust was quoted at Rs 1-12. Although arrivals in the warehouse continue to be below expectations, the next sale will be held on the 26th June.

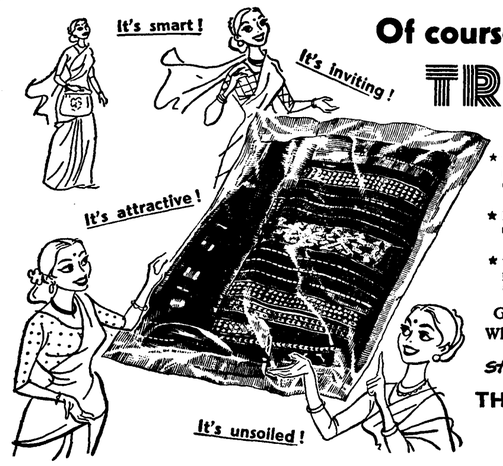
The Amsterdam tea market ruled very steady with prices about 5 cents per half kilo higher than in the previous auction, varying from 178 to 247 cents per half kilo. Good interest was shown by tea packers, buying for home consumption. There was brisk demand for Tippy sorts with prices higher at 10.70 guilders per half kilo. The next auction will be held on the 4th July.

In Djakarta, offerings were 1,500 packages. Demand for Brokens improved; but was still far below normal. Selective demand was reported for good medium and medium Broken Orange Pekoes at lower rates. Medium and Good Medium Pekoe Fannings found new buyers at satisfactory rates. Orange Pekoes were practically neglected. Dusts were the weakest feature of the sale.

After a week's recess, the auction was held in London this week when about 26,795 packages (including 21,905 packages of Northern India teas) were offered. Average price realised for Northern India teas will be about 3sh 9d per pound. Commons were dearer by 1 to 2d and bright liquoring BOPs by 2d per pound. Prices for other descriptions remained steady. Plain Broken Pekoe was quoted at 3sh; Medium Assam BP 3sh 3½d and Good Assam BP 3sh 10d.

*

WORLD OF BUSINESS



(Continued from page 1151)

only captured a large part of the internal demand, but has also begun to export on a small scale to United Kingdom. The exports of titanium dioxide in 1954 and 1955 stood at 437 tons and 663 tons respectively, as against imports averaging nearly 250 tons for the same period.

Production of titanium dioxide is still confined to one unit, namely Travancore Titanium Products Ltd. Its production has increased from 1,369 tons in 1954 to near capacity at 1,800 tons in the next two years. But current demand is estimated at above 2,000 tons. In view of the growing demand for titanium dioxide, the Travancore Titanium Products Ltd., has plans to raise its capacity to 3,600 tons a year, which will eventually enable it to produce 1,800 tons each of anatase and rutile. The expansion plans also include the installation of a sulphuric acid plant with a capacity of 50 tons a day. The expansion works are expected to be completed by the second half of 1959.

The protective duty of 44 per cent ad valorem standard and 34 per cent ad valorem preferential is due to expire on the 31st December 1957 and the industry is at present facing a new tariff inquiry.

US Notes

ALONG with the growth of Governmental social security programmes in the past two decades has come a remarkable expansion of private pension and welfare plans in the United States. Thousands of companies now have such plans and according to the best estimates available some 14 million American workers and their families are covered by them.

The rapidity of this expansion particularly through labour-management contracts in the past ten years, has led to some interesting new developments. The amount of 'fringe benefits'—benefits received in addition to the regular wage and aimed at providing the worker and his family with economic security—is constantaly growing.

One expert who has taken a close look at private social security plans is Fred P. McKenzie, Vice-President of the Hanover Bank here. In an article published this week in the newspaper, Journal of Commerce, he analyzes the present trends in private pension and welfare programmes and their future prospects. In nearly all company plans today, all employees are covered by some kind of hospitalization and medical insurance that pays most and, in many cases, all of their ordinary medical expenses during sickness.

In addition, there has come to the fore in recent years a new type of policy for major medical expenses. One that covers each family member for a length of serious illness. Farreaching too is the protection afforded the working man against loss of income from disability.

Indeed, if present trends in private programmes continue, Mr McKenzie notes, a disabled worker ten years from now will be paid for as long as he lives all the pension benefits which have accrued to his account under his company's retirement plan. These payments would begin with disablement rather than at the normal retirement age and would be supplemented by the new disability benefits now being made available under the Government's social security system.

A fairly new field for private fringe benefit plans is in unemployment. Within the past few years companies in the automotive, can, glass, steel, electrical and other industries have ageed to set up supplemental unemployment benefit funds for laidoff workers. As these funds grow in number and size, payments from them could constitute important additions to state unemployment benefits. As a result, an employee who might find himself out of a job temporarily would still be able to provide, adequately for his family until he returns to work.

There was a time when the death of the breadwinner meant serious economic difficulty for many families. But today companies in virtually all US industries carry life insurance policies for their employees. Some even arrange for insurance benefits to the families of deceased workers who had already retired. Benefits under these policies are being increased all the time. Some firms now pay up to three yearly salaries to an employee's survivors. One plan that seems to be gaining in popularity provides for half of an employee's accumulated pension benefits. In addition to the regular life insurance benefit to be paid to his widow in the event of his death, as far as retirement goes, most American workers are well covered, with the prospect that the benefits will increase over the year. Even now an employee with a wife of his own age can expect in many instances to receive retirement allowances close to 75 per cent of his last wage including both his company and his government social security payments.

Many companies also are embarking on, or enlarging special thrift or stock purchase plans for their workers, such as are prevalent today in the petroleum industry. This means that at retirement more and more workers will be receiving additional lump sum payments either in cash, bonds or company stock. Thus to an increasing degree, in McKenzie's words the American worker is being 'taken care of if disabled, laid off, or retired and his family will be provided for if he dies.' Already many companies are contributing more than 30 per cent of their total payrolls for these benefits.

Industrial Information

WEATHER REPORTS IN METRIC UNITS

Metric units are now used in weather reports issued by the India Meteorological Department, giving rainfall in millimetres, temperature in degrees Centigrade and cloud heights and distances of visibility in metres. Wind speed is expressed in kilometres per hour except for navigational purposes, in which case it is reported in knots as before.

Following the change-over on January 1, 1957, an inch of rainfall at any station is reported as 25.4 millimetres of rainfall. In the case of temperatures, however, the conversion factor is not as simple.

To convert degrees Fahrenheit to degrees Centigrade; one has to subtract 32 from the degrees Fahrenheit and multiply the result by five-ninths. Conversely, degrees Centigrade can be converted to degrees Fahrenheit by multiplying the degrees Centigrade by one and four-fifth and adding 32 to the result.

The following tables give some equivalents:

Degrees Fahrenheit		Degrees Centigrade
100	...	37.73
80	...	26.67
60	...	15.56
50	...	10.00
40	...	4.44
30	...	— 1.11
20	...	— 6.67
14	...	—10
32	...	0
50	...	10
68	...	20
86	...	30
104	..	40

In the case of distances the conversion factors are:

1 inch	...	2.54 centimetres
1 yard	...	91.4 centimetres
1 mile	...	1.6 kilometres

The change-over to the Metric system had been given effect to in weather reports issued by the Indian Meteorological Department from the beginning of 1957. It was considered desirable to make the change in units of measurement in meteorological observations before world-wide observations for the International Geophysical Year began in August, 1957, so that observations for the whole of the International Geophysical Year are in the same units. Change-over in August, 1957, would have affected the preparation of annual totals and averages for 1957, and it was, therefore, decided to introduce it at the beginning of the year itself.

*

EASTERN SHIPPING CORPORATION

The working of the Eastern Shipping Corporation Limited in 1955-56 has shown a net profit of Rs 31,71,038. Out of this, the Corporation has repaid to Government of India a sum of Rs. 17.11 lakhs which it had received from them during the previous year to cover the loss incurred by it, under the term of the indemnity agreement between it and the Government.

One of the vessels, for which the Corporation had placed orders with the Hindustan Shipyard, has been delivered during 1955-56 bringing the total number of the vessels of the Corporation's fleet to seven. This vessel, 'the State of Kutch', is the largest ship built in the shipyard so far. It has an overall length of 488 feet, a gross tonnage of 5296 tons and a trial speed of 14.9 knots. 'The State of Kutch' has been put on the India-East Asia-Japan route.

The Eastern Shipping Corporation has also placed orders with the Hindustan Shipyard for three overseas vessels of 9,500 DWT each and one cargo-cum-passenger vessel of about 4,000 DWT.

The management of the second-hand passenger-cum-cargo ship 'Nicobar', acquired by the Ministry of Home Affairs, has been entrusted with the Eastern Shipping Corporation. The ship is employed on the India-Andamans route.

EXPORT OF IRON ORE TO BE CANALISED THROUGH S.T.C.

On a review of the procedures adopted from half-year to half-year since 1953 for regulating exports of iron ore and having regard also to the pattern of the trade abroad, Government have come to the conclusion that if the exports of iron ore are to be maximised it will be necessary to canalise its exports through a single agency to be nominated by Government. This would prevent fragmentation of quotas, facilitate bulk movements, help co-ordination of rail movements with shipping programmes and above all make it possible for the development of mining to be synchronised with the availability of transport.

It has accordingly been decided to entrust the responsibility for canalising the exports of iron ore to the State Trading Corporation of India (Private) Ltd. with effect from July 1, 1957.

Government are at the same time keen to ensure that established trading and mining interests participate fully in the business. The State Trading Corporation of India (Private) Ltd. have accordingly been directed to utilise the existing channels of trade and give effect to the maximum extent practicable to the recommendations made by the Liaison Committee in this behalf.

In particular, the Corporation will ensure that every established shipper and mineowner-exporter is given an opportunity to participate in the business relative to his performance during the four year period ending December 1956, and that the interests of mine-owners who are not shippers are duly safeguarded.

Export Trade Controllers have been instructed to give ad hoc permission to shippers and mine-owner exporters to facilitate the shipment of iron ore moved against current quotas to the ports before June 30, 1957, provided such shipments are intended to be made against contracts concluded before March 31, 1957.

*

ELECTRICITY OUTPUT

During January, 1957, 765 public electricity supply undertakings generated 866.7 million kilowatt hours (kwh), of which 711.7 million kwh. were sold to ultimate consumers. Power production during December, 1956, was 879.5 million kwh.

Four undertakings having their own generating plant and four undertakings purchasing power in bulk were the new additions during the month. The generating undertakings are at Markapur and Renigunta in Andhra, Kasaragod in Kerala and Bina in Madhya Pradesh and the purchasing undertakings are at Ahmedpur, Basirhat, Durgapur and Kaliguni in West Bengal.

The figures of output and sale of power during January, 1956, were 755.6 million kwh. and 621.8 million kwh and during January, 1939, 210.9 million kwh and 176.6 million kwh respectively.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

THE heat, I am afraid, has been telling on me this year. I am not sure that it is the mere passage of time which thus makes Calcutta's summer intolerable. For, there are many who I see about me younger than I who are, I find, equally hot and bothered. But the target of the aggrieved complaint from the younger generation is, not the heat, but the humidity. Heat or humidity, this is one of the most uncomfortable summers I have spent ever since, forty years ago, I emigrated from the South. It has happened, not surprisingly, that the overture to every conversation has generally been the weather. Even more interestingly, the subject of weather is now being dealt with more academically. If, for example, Phatkaram Pagla calls on me, he does not rest content with wiping his florid, dripping face with a handkerchief that one would suspect of spreading the influenza virus (is that the correct word, I wonder?). No, he needs must call upon the heavens to pass judgment on the callous nations that, by their unceasing and suicidal testing of super weapons, pollute the air that man breathes. Phatkaram argues that the colossal heat generated by the explosion of a hydrogen bomb inevitably adds to the temperature. If he has futilely attempted to mop up some more perspiration off his face, but succeeding only in transferring some of the moistness from the handkerchief; only after he has quaffed a bottle or so of cold water; and only after he has again cursed the atom bomb et al, and implored the rain gods not to delay the monsoon any longer, that he has sufficiently composed himself to "discuss" the economic situation.

*

Or take Pandit Barabar Khushi. Even he belies his name, and does not feel too happy about the weather. But the Pandit is a rational man; and he therefore will not readily accept the proposition that there is any link between hotter summers and atom bomb explosions. (That the heat comprised in setting off a hydrogen bomb is comparable to the raging flame and scorching heat of hell would, according to the Pandit, be mere coincidence). He has instead his "rational" explanation. Until last year, whenever the mercury crossed the 100 degree (Fahrenheit) mark, one knew that one should take the precautionary steps of (a) not going out during the day; (b) taking a siesta; (c) imbibing large quantities of lemon crush or buttermilk or beer; and (d) wearing (consistent with canons of decency) a minimum of clothes. Today, what with the high taxes, the Pandit says (a) in order to earn a living, one cannot be a stay at home; (b) siestas are luxuries beyond the capacity of most people; (c) it is physically impossible often to bend the elbow with lemon crush or buttermilk, and it is pecuniarily impossible so to do with beer; and (d) if not an Air France plane, you might quite easily miss the bus if you are underdressed. What really complicates matters, reasons Mr Khushi, is the fact that we no longer know what the temperature is. The newfangled way of expressing the weather in terms of Centigrade may be scientifically desirable; but one does not mentally reconcile oneself to or prepare oneself for a hot day, when the temperature is said to be, say, 42 degrees Centigrade whereas, formerly, 100 degrees Fahrenheit did transmit a mental message; the result is, the body does not adjust itself as easily because the mind has not been forewarned.

*

Babu Rupeemull Moneylall does not subscribe to either of the theories on heat that I have just described. Not for him any far fetched interconnection between weather and the world's hyper explosives. Nor for him any highfalutin talk about Centigrade or Fahrenheit. (When I chanced to report these two earlier conversations to him, Rupeemull had one pertinent question to ask: Who are they?) No, physical heat is the least part of the troubles that beset this acquaintance of mine. "The heat is on," he told me, but he was referring to the 1957-58 Budget. All attempts that had been made to force the hands of Mr T. T. Krishnamachari had failed, he told me; and there was not much prospect of any substantial reduction in taxes, though he allowed that a conciliatory concession was not to be ruled out. Rupeemull made it clear that he had ordered his affairs in such a way, that neither Wealth Tax nor Expenditure Tax held any terrors for him; and he boasted, somewhat naively I thought, that his properties would not attract any Estate Duty. Where the heat was on was in respect of the strengthening of the income-tax department which, said Rupeemull, was imminent. To this fearsome prospect was added the by no means empty threat of TTK that he would seek a more effective enforcement of the Incometax Act. And both these were further aggravated by the bringing into being of TTK's integrated tax structure. The sum of these, for Rupeemull, meant that things would be getting hot for him. In quoting the Finance Minister's statement that he expected to improve tax revenues by Rs 5 crores as a result of closing loopholes to evasion, Rupeemull moaned that he would willy nilly and in spite of his best efforts in the contrary direction be contributing his mite toward the achievement of this target. Yes, our wily friend complained about the heat; but his grouse was not about the weather.

*

Talking to Watchdog the other day, I was appraised of yet another hypothesis. But, before I proceed with his views on the weather, I need to forewarn you, gentle reader, of what you should expect. First, I will ask you to bear in mind the fact that Stock Exchanges have been in the doldrums almost without respite for more than a year. Next, I should point out that Watchdog is essentially a scribe with his eye on silver linings; the dark clouds, he usually chooses to avoid gazing at. So, I have lately been finding him to be more and more bemused. With share prices depressed, he does less of writing work. The less he writes, the more he thinks. Sometimes, he exercises his mind with fantastic thoughts. Paradoxes interest him; and he seeks to explain them. As an instance, just follow his thinking process: "Hhhm. The Tata Trusts are reported to be sellers of Tata Ordinaries. Why? Not because they are a bad investment. Why, then? Of course, I've got it. They haven't the funds to take up their rights shares; and a parcel is being sold to raise the wherewithal." I now offer, without comment, his explanation for the weather: "Bears hibernate in winter. So, they are active in summer. They are active today. So it must be summer. They are, this year, feverishly active. So the heat has taken on terrific proportions."

Each man that you meet has his own recipe for outwitting the weather gods. Some have an easy enough solution, but I think it is cheating. For, these people advocate, simply, that you should air-condition your office room; and stir not at all from it during the office hours; secondly, instal a unit in your bedroom, and spend the rest of your time at home in it. When I chided a friend in such fortunate position, by suggesting that he would doubtless be the recipient of numerous invitations for lunches, dinners and cocktails; and when I added that these were social occasions that he could not avoid, his answer showed that airconditioned comfort had made his brain even more cool and calculating. That does not bother me a bit, he chuckled; he usually gives the alibi of the influenza epidemic for such of those functions as do not mandatorily require his presence; and, as for the others, his hosts usually have a Carrier (Voltas, please note!) in their room. Shuttling back and forth between office and home in an airconditioned Studebaker (Hindusthan Motors would surely like this), our friend has practically a 24 hour airconditioned existence.

*

But that, as I said, is cheating. It is not only that the capital cost involved is forbidding. I understand that airconditioning equipment (like Fiat Elegants and Tata Mercedez Trucks) is hard to come by. I am afraid that, for me personally, this luxury must remain somewhat of a distant ambition. With the bosses luxuriating at one extreme, I have learnt of a rather intriguing manner in which lesser fry cheat the weather. This mode is particularly attractive to salesmen and such other professional men who do not have to account for every hour of the day. Normally, you would expect that salesmen have a tough time of it during a heat wave, and that they would stay put at their office desks. You wouldn't think that the hardiest among the breed would venture into the murderous midafternoon heat. But that is exactly what the salesmen do. In the mornings, they don't go out much, except for a foray here and a skirmish there. In the afternoons, usually around half past two, you will not find them in any establishment of

ATLAS
WEIGHING MACHINES
PLATFORM, CART, TRUCK, LORRY
&
WAGON WEIGHBRIDGES
Makers:
THE INDIA MACHINERY COMPANY LIMITED
Dasnagar, Howrah.

work. The queues at the cinema houses will tell you how the salesman licks the heat problem.

✱

Unfortunately, I have also to deny myself the "every seat that is a cool retreat." On the other hand, necessity is the spur to invention. I have (to my satisfaction) found a way of insulating my room from heat. At nine o'clock in the morning, all the wooden doors and glass windows are closed; and as I am lucky enough to have a high ceilinged house, the room stays surprisingly cool. Indeed, as Mr Davies from the British Information Services remarked the other day, when he called on me, my room was as cool as, if not cooler than, his airconditioned office. So, to physical comfort has been added the mental satisfaction of coolness at no extra cost. However, the midafternoon is a bit of a trial. How much of a trial it could be, I found out this week, I attended the Reserve Bank lunch. The bush shirt sharkskin trouser combination helps a bit; but the journey to and fro certainly exposed one to the full strength of the sun's rays, and this was no pleasant experience.

✱

So, I am in the process of toying actively with the idea of airconditioned comfort for next year's summer. One problem, however, that I am faced with is that we are in a DC electric area; and I have been told that electrical equipment generally is less effective in DC. By now, many of my readers would have had some personal experience in this respect. I would be grateful for hints, as to the quality, price and effectiveness of the various equipment now available. If the price is right, and the quality good, I could then perhaps anticipate more frequent visits from Pandit Barabar Khushi, Phatkaram Pagla and Babu Rupeemull Moneylall; but this is a disadvantage that I would overlook, if I could gain summer comfort.

✱

Ah, well. True, the South-West Monsoon (1957 vintage) has been reported missing in The Statesman's personal columns. But it shouldn't be too long a wait before refreshing rains exorcise summer's stifling heat.

WORLD OF JUTE

(Continued form page 1152)

induce any weakness on sellers who continued to be reserved. Assam Bottoms was placed at Rs 32.50 per maund at the close of the day. With the goods section turning quieter on Saturday, prices developed a sagging tendency in the continued absence of mill interest. Assam Bottoms receded to Rs 32 per maund. Prices regained lost ground on Monday in sympathy with the goods section where rates firmed up in later dealings on speculative interest. Assam Bottoms recovered to Rs 32.50 per maund. In the next two days the undertone continued to remain fully steady with Assam Bottoms well maintained at Rs 32.50.

Arrivals of raw jute into Calcutta and Mill stations during May 1957 amounted to 4,13,000 bales of which 3,86,000 bales were of Indian origin and 27,000 bales Pakistani. In April, total arrivals were only 376,000 bales comporising 341,000 bales of Indian origin jute and 35,000 bales Pakistani. It is evident that unusually large quantities of Indian jute have moved into the mill stations last month attracted by the prevailing high prices. A clue to the continued firmness of the raw jute market is to be found in the fact that arrivals of raw jute in the 11 months of the current jute year have totalled only 53,97,000 bales as against 60,58,000 bales received during the corresponding period of the previous year. A significant point to be noted is that of this quantity all but 5,85,000 bales which came from Pakistan, have been obtained from sources within the country. As against 46,34,000 bales which reached mill stations during the 11 months ending May 1956, this year during the same period raw jute of Indian Origin has amounted to 53,12,000 bales.

Bombay Review

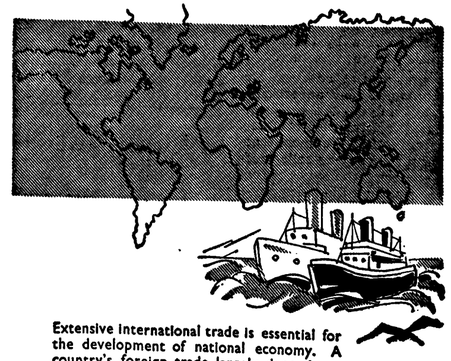
Infant Prodigy

I have been gently chided by a Gateway reader for having neglected to draw attention to the performance of an Indian Managing Agency House of which the Gateway City is justifiably proud. I needs must plead guilty to the charge, and the amends that I can offer is to rectify the omission. By way of reparation, I would like to give some background of Mahindra & Mahindra Limited which, even to the Gateway citizens, might be news.

The shareholder looking through the accounts of M&M would find it difficult to believe that a mere ten years have elapsed since the company was founded. There is a sense of maturity to be perceived; there is the balance sheet strength revealed; there is the bold planning evidenced, all of which lend lustre and brilliance to the M&M accounts. How, you might ask me, has the company achieved such signal progress in so short a space of time?

The answer lies in the fact that the two brothers, K.C. and J.C., who started the company, prepared themselves for high responsibility over a period of two decades. Culture, breeding, and a certain joie de vivre were the distinguishing marks of the Mahindra brothers; and, from the early 30's, I have known them steadfastly and surely to equip themselves for achieving what I might call industrial success. The two brothers were complementary in their attitude and in the talents that they could contribute to the successful functioning of M&M. J.C., who, alas is no more, was a man of ineffable charm; and to meet him was to fall under his spell. This charm, combined with the dynamic zest for activity in K.C., had inevitably to find expression in the formation and building up of an industrial house. Mind you, M&M interests are yet to take on the character of great diffusion. The primary interest is engineering, and specifically automobile engineering, but the gradual ramifications are revealed in such enterprises as Turner Hoare & Co Private Ltd., a trading company; Otis Elevator Co (India) Ltd, which, in English parlance, means lifts; and a new undertaking, Dr Beck & Co. India (Private) Ltd., for the manufacture of electrical insulations.

But, as I said, the main interest is in automobile engineering. The total sales of M&M during 1955-56 amounted to Rs 14.03 crores against Rs 5.75 crores in the previous year. Of this, sales of Willys Jeeps—for which M&M is in the process of a phased programme of assembly and production—improved from Rs 2.64 crores to Rs 3.65 crores. Similarly, the sales of David Brown Tractors—for whose manufacture a project has been prepared and is under consideration of the Government—nearly trebled themselves from Rs 13.8 lakhs to Rs 38.2 lakhs. However, as far as the 1955-56 performance is concerned, the bulk of the increased sales was derived from, as it were, windfall sources. M&M, who had built up a good reputation for themselves in steel imports, were given the responsibility for being one of the principal importers during the last year. Sales of steel have shot up from Rs 2.72 crores to Rs 9.62 crcores. In the result, the net profit for 1955-56 at Rs 39.30 lakhs is nearly double the 1954-55 figure of Rs 20.24 lakhs. The appropriations include a much larger provision for taxation at Rs 16 lakhs against Rs 9.50 lakhs; a transfer of Rs 10 lakhs to the reserve fund against nil in the previous year; the provision of Rs 2.15 lakhs against Rs 1.52 lakhs for depreciation; and transfers to other funds aggregating Rs 1.52 lakhs against Rs 6.00 lakhs. The ordinary dividend has been increased by 2 per cent to 12 per cent.



What of the future? At the annual general meeting, Mr K.C. Mahindra has pointed out that, in respect of manufacture of jeep components, "while the progress so far made is in accordance with the progressive phases of manufacture presented to Government in 1955, it is early to say whether the restrictions in force in respect of import of capital goods and tooling would seriously disturb the schedule of timing". The M&M Chairman states that he has a duty not to gloss over the "great difficulties" which manufacturing organisations face today. In his words these are, "difficulties principally in the matter of foreign exchange but also connected with scarcity of steel and cement, shortages of appropriate raw materials of industry and the continuously rising costs. Problems of this nature will surely retard, if not bring to a halt, our expansion programmes".

But Mr Mahindra himself provides the answer as to how this problem of foreign exchange can be met. As noted in the Directors' Report, the great demand last year for Jeeps was, with the approval of the Indian Government, satisfied by arranging with the Willys Overland Export Corporation for the shipment of a large consignment under extended credit terms. The amount involved is $1 million. While I do not know what the foreign exchange component of setting up of a production plant is, I am sure that Mr K. C. Mahindra will not find it unduly difficult to arrange to get the capital machinery in this behalf from the Kaiser interests, who now own the Willys organisation, on extended credit terms. After all, it is self evident that the Jeep, as an all purpose vehicle and one especially that is suited to rough terrain, has a most promising future in India. Indeed, the Tariff Commission, which last year reported upon the automobile industry, have suggested that demand for Jeeps will rise to 5,000 units by 1961, as against the original plans of M&M for the manufacture of 2,500 to 3,000 units. So, it is to the interests of the Kaiser organisation to conclude this sort of extended credit arrangements in respect of capital machinery. I am sure, also, that Government, in recognition of the value of Jeeps to Indian transport, would approve a scheme of this nature.

Thus, I should think that the prospects before M&M are better than they were ever before. As it is, a new Trailer Factory has been commissioned at Pimpri and M&M is "now in a position to embark on the manufacture of heavy trailers". Secondly, the jeep manufacturing division has made substantial progress "with the acquisition of built up factory areas at Worli and Ghatkopar". Thirdly, a modern well equipped tool room, machine shop and cutting shop commenced operations last year. Fourthly, it is expected that the foundry and gear shop "will be in operation by the end of the current year". If to this we add the definite prospect of an increase in M&M outturn of jeeps to 5,000 units, it is clear that shareholders can look forward to even better performances from M&M.

One last word. It is now up to Mr K. C. Mahindra to put his best foot forward and see to it that the necessary credit arrangements for the capital machinery are completed with the Kaiser interests.

FOREIGN TRADE...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.
With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Importance of Advertising

Advertising occupies an important place in the lives of people in all advanced countries of the world. In the UK for instance, the nation's advertising bill comes to about £300 million a year. In other words, the UK spends about 2 per cent of its national income on advertising. In the USA, as is to be expected, advertising gets a bigger share. The national expenditure on advertising in this country in 1956 amounted to 9 billion dollar or about 2½ per cent of the national income

Judged by these standards, advertising in India is yet to reach sizable proportions. It is, therefore, gratifying to find that in recent years manufacturers and producers in our country have become increasingly aware of its importance. Addressing the annual meeting of the Indian Society of Advertisers in Bombay last week, Mr Morarji Desai, Union Minister for Commerce and Industry, said that the Government also recognised the importance of advertising because it was not only a necessary expenditure but it was also a good and vital investment. Mr Desai, however, emphasised the need for conforming to the highest ethical standards by advertisers. Another equally important factor which was to be constantly kept in view by them, was the interests of the consumer.

In his presidential address, Mr Khatau explained how advertising did good not only to the producer but also to the consumer. "Other things being equal, the more one advertises, the more one sells, and the more one sells, the lower is the production cost, and the price payable by the consumer". Without the help of advertising manufacturers would not be able to ensure the smooth flow of goods from the factory to the consumer and without efficient distribution production would tend to diminish. It was essential that producers paid special attention to distribution as well.

A significant development in Indian advertising is the coming into being of the Indian Society of Advertisers. The ISA represents the biggest group of national advertisers in the country, covering nearly 60 per cent of them. Its aim is to promote maintain and uphold sound economic principles of advertising. The Society stands for the highest ethical standards. In short the ISA functions as an efficient force in promoting sound, good and clean advertising in the country.

*

Deoiled Meal Export

The earning of foreign exchange is now one of the main preoccupations of Government. For, the Second Plan's success depends to a considerable extent on our ability to earn enough foreign exchange to pay for the increased quantum of capital goods imports which are essential prerequisites for the expansion of existing units and for the establishment of new industries. It is gratifying to note that Authority is sparing no effort to maximise exports in all directions. It is to be expected, therefore, that they will be only too glad to implement any workable scheme provided that it goes to augment the country's foreign exchange resources.

The Solvent Oil Extractors Association has a suggestion to make. It is pointed out that by exporting solvent extractions or deoiled meal, we can earn foreign exchange worth Rs 2.5 crores. This is a tidy sum indeed and it is to be hoped that Government will examine the matter of deoiled meal export in detail. The solvent oil extractors say that at present this valuable commodity is practically out of the foreign markets due to the export duty of Rs 175 per ton imposed by Government. It would appear that since the Indian product has to compete with a powerful country as the US in this trade it has little chance of making much headway in foreign markets laden with the weight of the export duty.

The Association, therefore, pleads for the withdrawal of the duty so as to enable this commodity to establish itself in markets overseas. It is pointed out that Government need not unduly worry about the loss in excise revenue because they will be getting a much bigger amount in the shape of foreign exchange. Government may find the suggestion quite practicable if, as is claimed, the deoiled meal is unsalable with the export duty.

GATEWAY MARKETS

Groundnut Steady: Castor Irregular

PRICES in the Bombay Oils and Oilseeds markets showed a mixed trend during the past week. Castorseed commenced lower, reflecting easier spot advices. As the session progressed, however, values took a definite turn for the better on sustained short-covering, mainly on technical grounds. Groundnuts were aided in the recovery by improved upcountry advices. Other seeds were more or less unchanged.

The initial weakness of the Castorseeds section was mainly attributed to the depressing attitude of the US buyers, who were stated to be quoting successively lower prices. Indian commercial oil was reported to have declined from 19½ to 18½ cents, while buyers were not willing to pay more than 18 cents per pound. The market, however, showed signs of returning confidence towards the close of the week due to sustained short-covering, mainly on technical grounds. September delivery opened at Rs 166-50 and, after touching a low of Rs 161.50, recovered to Rs 166 at the close. Ready was quoted at Rs 32.50 and Castor Oil, commercial quality, at Rs 18.62.

Although the Groundnut section generally displayed an easy tendency early in the week, prices showed a remarkable recovery towards the close on reports of shortage of ready supplies, resulting from smaller arrivals. Producers were inclined to get themselves reasonably assured of the weather outlook before they liquidated their holdings. The general opinion was, that this attitude of growers might adversely affect the inflow till the monsoon got into stride. August delivery opened at Rs 174.25 and, after touching a low of Rs 182.75, finished the week at Rs 175. In the ready section, bold quality was was quoted at Rs 35 and Groundnut oil at Rs 20.25.

Trading in the Linseed section was devoid of any interest. September delivery opened at Rs 30.36 and, after touching a high of Rs 30.62 and a low of Rs 30.25, finished at Rs 30.44.

Cottonseed futures lacked strength of their own and moved in line with the rates of other oilseeds. September delivery opened at Rs 108.75 and, after touching a high of Rs 110.00, receded again to Rs 107.50, to finish at Rs 108.75.

*

Gold & Silver

An easier feeling was observed on the Bombay Bullion Exchange. Absence of fresh news of particular importance caused the operators to take a slack attitude with the volume of business dwindling. The price variations were, therefore, narrow.

Reports of unauthorised arrivals caused an early moderate erosion in Gold; but profit-covering eventually helped to regain part of the lost ground. Moreover, reports that gold production at Kolar Mines had declined since nationalisation together with rumours of seizure of huge gold at an upcountry centre caused a buying spree in spot where values advanced briskly. At the same time, demand from South India also showed a tendency to expand. The rate for forward delivery hovered around Rs 104.50, while ready was quoted at Rs 105.75. Sovereign was quoted around Rs 70-25.

Silver commenced somewhat lower, reflecting discouraging communications from Calcutta; but the downward trend was halted by short-covering. Forward rates moved between Rs 178.75 and Rs 179.12, while ready was quoted at Rs 181.50 to Rs 182.00.

*

Yarn

The Government of India have decided to allow export of Cotton yarn upto 78 counts freely within a ceiling of 5,000 bales on "first-come-first-served" basis to all permissible destinations. Licensing will be done on shipping bills which will be made valid for a period not exceeding 15 days from the date of passing or till September 30, 1957, whichever is earlier. Exporters are also warned that they should not enter into long-term commitments, as licensing will be stopped as soon as the ceiling is reached.

A better trend was noticed in the Art Silk Yarn market on fears that the import quota would be drastically cut for the July/December 1957 period. Prices, however, did not show much improvement.

Also, there was a slight improvement in Staple-Fibre Yarn prices on reports about a further cut in indigenous production and the

(Continued on next page)

Bombay Review

World *of* Cotton

Status Quo

LISTLESS conditions have continued to prevail on the forward section of the Bombay Cotton Exchange during the week under report. A wait-and-watch policy seems to have been adopted by the operators, and lack of interest has naturally caused only small variations in prices. Moreover, the extent of apathy on the part of dealers is evident in the small turnover.

Meanwhile, the three-week old controversy over the settlement rate for Jharilla May contract has ended. The Board of the EICA has, after lengthy discussions, decided to square up open position in Jharilla May contract at Rs 715. It may be mentioned here that the matter was under dispute as business on the last trading day was done at prices ranging from Rs 680 to Rs 730 and the Board had expressed its inability to do the needful. The matter was then referred to the Forward Markets Commission which, once again, directed the Board to fix the rate at which open position in the contract could be squared up. Clearing rate for Vijay June was fixed at Rs 818; and there was not much business in this contract, the closing rate for the week being quoted better at Rs 820.

Contrary to the dull conditions witnessed in the futures section, trading pattern in the Spot market has been fairly active with keen buying from mills. Popular varieties have continued to rule firm as quality cotton is gradually getting scarce. Some of the descriptions of cotton are quoted as followers:—Gadag Luxmi Rs 950; Porbandar Rs 710; Amaraavati Rs 770; Surat Rs 1,100; Akola Rs 750 and Akot Rs 800.

On the export front, Oomra Deshi was in good demand. Trade circles are hoping to get a fresh export quota for Bengal Deshi cottan ranging from 20,000 to 25,000 bales. This hope is based on the assumption that the statistical position with regard to this variety, during the year, is comfortable. The crop, during the present season, has finally been placed at 2.7 lakh bales, while the mill consumption is placed around 1.44 lakh bales. Thus, the surplus, which will be left over at the end of the season, would be around 87,000 bales as the Government had banned further export sales.

On the import front, business has again come to a stand-still following the general reluctance on the part of mills to augment their stocks of foreign varieties, as many of them have already bought sufficient quantities. Some of them, as a matter of fact, have preferred to wait for a further reduction in the prices of Egyptian and other sterling-area cottons. No progress in respect of American-aid cotton has been made since the Government have not yet announced the details of the import plan.

The total quantity licensed for import, till the 8th June this season, is estimated at 4.22 lakh bales of which 2.40 lakh bales are from the sterling area. So far, Sudan has been the largest supplier among soft-currency countries, the import licences granted from that country being estimated around 96,000 bales. East Africa and Egypt are the next with about 67,000 bales each, while licences from the dollar area countries have exceeded 1.80 lakh bales.

×

KARACHI COTTON MARKET:

Prices in the Karachi cotton futures market presented an easy trend despite smaller arrivals. Export demand was not bright, while advices from Tokyo were particularly unhelpful. There were also reports of unsold stocks. Ready demand, too, was poor. NT Roller ready was quoted at Rs 77-4; Sind Deshi at Rs 84; Punjab Deshi at Rs 80-8 and New Crop NT January at Rs 76-11.

×

NEW YORK COTTON MARKET:

Prices in the New York cotton futures market ruled firm, thanks to active commission house and New Orleans buying of distant months. The growing conviction that high price-supports and the fully Soil Bank programme would apply to the 1958 cotton crop accounted for the demand in distant months. The 1957 crop deliveries, except nearby July, made new seasonal highs on the advance. Spot was quoted around 34.10 cents per pound.

×

LIVEPOOL COTTON MARKET:

Prices in the Liverpool cotton futures market, after shedding further ground from last levels, recovered partially at the close when the hedging pressure ceased. The Sudan contract opened quiet at nominally 25 points lower and had further loss under pressure by a local spot house.

At the auction held towards the end of last week, the Sudan Gezira Board sold around 9,000 bales of various grades at reserve prices. Purchases were believed to be on French account with a wide gap between buying and selling ideas.

×

CLOTH AND PIECEGOODS:

Activity in the Bombay Piecegoods market continued to be restricted. Prices, however, remained generally unchanged. The consensus of opinion among trade circles was that, unless the offtake broadened appreciably in the course of the next few days, the trade would be put to serious difficulties in the disposal of goods.

The situation concerning mills is, however, reported to be better. The quantity of unsold stocks has been declining, while production has continued to rise. The quantity of unsold stocks with the mills, as at the end of May, is provisionally estimated at 2.61 lakh bales as compared to 2.92 lakh bales at the end of April. The production of cloth, for the first five months of the current year, is placed at 2,285 million yards as against 2,132 million yards in the corresponding period of last year. The output of yarn has also moved up, during this period, from 665 million yards to 753 million yards.

On the export front, trading conditions have remained unchanged with practically no enquiries. To sum up, conditions in the export sector cannot be said to be satisfactory. This is partly due to the financial stringency and also partly to earlier heavy brookings by some of the overseas territories. But present prices are low enough and ought to attract buying on a large scale.

*

GATEWAY MARKETS

(Continued from previous page)

Government's permission for export. It was also reported that the ban an import of rayon textiles would continue.

*

Metals

Prices on the Bombay Metal Exchange showed a mixed trend. While Copper, Lead and Tin displayed steady to firm conditions, Zinc suffered a sharp setback on reports of arrivals of stocks.

Despite weak advices from London and New York, the Copper market continued to rule steady with the ready rate quoting around Rs 172 per cwt. Although Zinc enjoyed steady conditions early in the week, prices suffered a sharp setback at the close on reports of arrival of stocks. The ready rate was quoted at Rs 74 against Rs 80 quoted in the previous week. According to latest reports, stocks of this metal are much at present and may prove sufficient for about 15 days until shipments of 3 to 4 tons arrive from Belgian Congo by the end of this month.

With no substantial stocks and moderate demand, Lead ruled steady with the rate hovering around Rs 80 per cwt. Tin was quoted at Rs 130. Stocks of this metal are reported to be moderate and the demand from North Indian centres is likely to improve.

Olympus

Roving "Ambassador"

ONCE again, Mr Nehru has utilised the Conference of Commonwealth Prime Ministers to pay friendly visits to a new batch of countries; and I am tempted to think that it is the consequential visits which are more important and which achieve more immediately favourable results than the primary occasion of the Conference as such. This year, if anything, such a reading of the situation may be even more apt. For, the Commonwealth Prime Ministers will not be represented in full strength. While the absence of Mr Strijdom is not likely to handicap the deliberations, there can be no denying that the New Zealand Prime Minister will be missed. Similarly, with the recent landslide ousting of the Liberal party from power in Canada, it is still a matter of doubt whether the prospective Prime Minister will be able to attend. If the Canadian leader of the Conservative Party does find time to come to London, the usefulness of the Conference will greatly gain therefrom. This is a matter to which I shall refer later.

Mr Nehru is proving himself to be the ideal world hero the adulation for whom is not restricted to the nation that gave birth to him. At Damascus, for example, the Indian Prime Minister was given the honorary citizenship of that City. It is fitting that Mr Nehru should be the second foreigner to receive this signal honour. For, the first was General Edward Spears who, as a man of war, helped the Syrian peoples to drive out Vichy troops in 1945. Mr Nehru may also be reckoned to be a man of war, if we can describe him as an indefatigable soldier for peace.

As was to be expected, crowds thronged the streets to see Mr Nehru, who was described by Syrian President Kuwatli as a "sincere friend of the freedom and dignity of peoples." But the trip to Damascus was not free of intrigue; our good neighbour, Pakistan, effectively saw to that. Possibly nurturing a resentment against Mr Kuwatli who, it may be recalled, appeared to slight Pakistan in his visit to that country last year; and apparently trying to regain part at least of its greatly damaged prestige in the Islamic world, the Pakistani Embassy in Damascus has been distributing propaganda pamphlets calculated to ridicule Mr Nehru as a man of peace. This, of course, is not in the least surprising, since the Pakistan Government's main activity seems to lie in discrediting and calumniating India. What, however, is most heartening to record is that the Syrian press should have taken strong exception to such scurrilous propaganda. The Arab paper, Barada, stated that Pakistan has lost its reputation in the Middle East and described the present attempts as an example of "Pakistan's ability to falsify facts." The encomiums that have been paid to Mr Nehru could quite fill up this despatch; but that is a manner of completing a despatch that, in spite of Delhi's heat, I will not stoop to!

The key point to note, in respect of the sojourn in Damascus, is that the third power bloc, aligned neither with the West nor with Communism, is almost unconsciously being strengthened. The citation in respect of the conferment of Damascus citizenship on Mr Nehru recognises the Indian Prime Minister's "great service in evolving a policy of positive neutrality adopted by Syria and outlining a practical programme for India's international relations". It looks as though the power bloc comprised in the Asian, African and Arab areas has matter of factly accepted Indian leadership in the conception and execution of a policy of dynamic neutralism.

In this context, the Hussein-Saud joint declaration must have come as a pronounced shock to the American administration. On the one hand, King Hussein's denouncement of Communism had raised US hopes of wooing Jordan into the explicitly Western fold. On the other hand, the discussions with King Saud when he visited America almost certainly were suggestive of Saudi Arabia dissociating itself from the other Arab countries. Why has there been such sudden volte face? My personal view is that the hands of King Saud and King Hussein have been forced. Arab nationalism is not something that can today be curbed by monarchic dictates. I presume the Jordan and Saudi Arabian Kings found that they could not implement their earlier decisions to align themselves more openly with the West. All that is clear is that American hopes of filling the vacuum created by the removal of British influence have been rudely shattered. It is strange that Middle East politics should refuse to respond to any Western overtures.

Pakistan was originally thought to be a country which would be the bridge between the Bagdad Pact and SEATO. Pakistan's loss of face in the Middle East, following its inept diplomacy in the Anglo-French imbroglio in Egypt, has effectively eliminated any ambitions that Pakistan might have had as leader of the Islamic world.

Arab sentiment is forcefully described by Mr Kuwatli: "We wish ill to no one, not even the people of Europe who dominated us so long. However, we want to be free and protected from servitude." It is far from India's desire to bring into being this third bloc of which I have spoken. But I am afraid that the evolution of that bloc has been inevitable. So long as the cold war lasts—and it is still raging—the uncommitted countries have to tread warily. On the one hand, I am sure, there are in none of them any specific leanings toward Communism. On the other hand, however, the still fresh memories of European colonialism make American overtures suspect. So, the obvious solution was to maintain the status quo of noncommitted nations. But the apprehension in the past had been that, as a noncommitted nation, one would receive technical help and financial aid from neither source. Today, it is clear that dynamic neutralism is a practical policy. India, as the originator of this thesis, is proving to the world that nonalignment need not necessarily mean a continuance of industrial backwardness. I fail to understand why the American administration has not realised that the strengthening of the noncommitted nations is exactly the objective of its foreign policy. After all, the intention is that South East Asia should not fall prey to Communist blandishments.

But I am digressing. As expected, Mr Nehru took Damascus by storm, and so, on to the land of Hans Christian Andersen. Copenhagen, which had but recently played host to Queen Elizabeth II and the Duke of Edinburgh, has thought it fit to extend to Mr Nehru the courtesies usually reserved to royalty. The Scandinavian countries were in keen anticipation of Mr Nehru's arrival; and the occasion was used to quote from Glimpses of World History, in which Norway, Sweden and Denmark were described as a class apart from the power greedy larger countries. Foreign office spokesmen in Copenhagen took the trouble to explain that Denmark's participation in military treaties and alliances did not prevent its appreciation of India's unique foreign policy. For India's part, Mr Nehru referred to the fact that, like Denmark, we in India "valued the freedom of the individual."

The Indian Prime Minister has found the cooperative methods in Denmark of absorbing interest; and this was what, he said, he particularly wanted to see. While Denmark favours cooperative methods, it is more than a little anxious about security which, its statesmen feel, can be ensured only by military alliances. The dread of Communism is indicated by the following sentiment of a conservative newspaper: "Mr Nehru has tried to personify dynamic neutrality so far that his partiality for compromise has brought him dangerously close to partiality for Communism." We cannot expect the Scandinavian countries to veer round to a policy of nonalignment; but it is certain that Mr Nehru's visit will have enabled a better understanding of the rationale of the foreign policy that we have adopted.

Having done much good at Damascus and in Denmark, Mr Nehru's next destination is Finland; and, ultimately, to London. I suppose that he will seek to ensure that the ties between the new Canadian Government and India will be as close as they had been in the past. Time will show whether Canada's peculiar genius for compromise will as heretofore be combined with India's respected neutrality so that world tensions could be smoothened by their joint efforts.

SOUTH EASTERN RLY. TENDERS.

The General Manager invites sealed tenders for supply of the following materials.

Tender, No. CON/GM/22/WP/52-C/GDI for supply of 12000 Nos. Cotter Universal (E. P. Lock), for wagon as per E.I.R. Sketch No. JMP3/28 to be seen in the office of the Controller of Stores (construction), South Eastern Railway, Garden Reach, Calcutta.

Earnest money to be deposited is Rs 1,000/-. Tender will be opened on July 4, 1957 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta by local firms.

The tenders should be accompanied by a receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta for amounts towards earnest money as above without which the tender is liable to be rejected. Approved Contractors who have already made a permanent deposit of Rs. 1,000/- with the Controller of Stores need not pay the Earnest Money.

Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax clearance certificate with the Tender.

GENERAL MANAGER.

North Indian Notes

Delhi Review

Cottage Industries

The Report for Cottage Industries for the year 1956-57 discloses steady progress in the implementation of schemes for the development of khadi and village industries, handicrafts and sericulture during 1956-57.

Production of traditional khadi (i.e. non-Ambar khadi) during 1956-57 was slightly over 24 million yards valued at Rs 4.93 crores. The total sales of khadi amounted to Rs 5.95 crores as against Rs 4.26 crores in the previous year. In addition khadi cloth worth Rs 1.26 crores was produced by those who spin for their own consumption.

The number of people employed in the production of khadi increased to 13.83 lakhs. This marks an increase of 4.29 lakhs over 1955-56. Further the Ambar Charka Programme provided employment to about 53,000 people.

The various village industries like oil industry, leather, match, etc made notable strides. During the year, 45 model production centres for oil were set up, and 550 sale agencies were established for village oil. For the village leather industry 142 flaying centres were established. Similarly 186 'D' class factories for the cottage match industry and 160 different soap making units were also established.

In regard to handicrafts, the All India Handicrafts Board undertook a number of activities like research, marketing, including exhibitions in India and abroad, training in handicrafts and promotion of handicrafts exports. The Board had organised 18 pilot centres until the end of 1956-57. Promotion of exports received particular attention and Indian handicrafts were displayed at international exhibitions at Prague, Zagrele, London and Paris etc.

For the development of the sericulture industry, three major schemes were sanctioned during the year namely formation of raw silk marketing co-operative society in Mysore, modernisation of silk reeling in West Bengal, and the establishment of a foreign race seeding station in Jammu and Kashmir. Further as part of the scheme, the staff of the State Government Departments is being strengthened with the Centre bearing 50 per cent of the extra expenditure.

Such an all-round progress would not have been possible but for increased financial assistance from the Centre. The khadi industry received as grants in 1956-57 a sum of Rs 6.35 crores against Rs 5.14 crores in 1955-56 and Rs 4.82 crores as loans against 1.87 crores in 1955-56. The total amount sanctioned to the village industries was slightly above Rs 4 crores. For the development of handicrafts grants amounting to more than Rs 34.4 lakhs and loans of more than Rs 16.6 lakhs were given to State Governments during the year.

*

Conservation of Foreign Exchange

The present paucity of foreign exchange in the country has focussed attention on ways and means of augmenting its supply by increased exports. It is, however, to be borne in mind that in the present stage of development of our country, it is idle to expect a big increase in export earnings in the immediate future though there is no gainsaying the vast potentialities in this direction. It would appear that considerable relief can be had by makig a strenuous search for every item in our import list in the country itself before thinking of getting it from abroad.

At a recent meeting between him and the Chief Ministers and representatives of States, Mr Jagjivan Ram, Minister for Railways, asked for the co-operation of the State Governments in increasing the availability of wooden sleepers for the Railways from within the country. He revealed that at present about two-thirds of the Railways' requirements of sleepers in the form of wooden sleepers were being met from out of imports.

It is evident that in the opinion of the Minister for Railways, the Railways' dependence on imports for their requirements of wooden sleepers can be greatly reduced if the State Governments take up the matter seriously. A suggestion put forth in the meeting is that the Railway Ministry should fix quotas of sleepers to be supplied by the various States and that the States should try and work to these quotas.

While it is true that considerable leeway remains to be made up in the management of our forests, there is no doubt that even as they are now, they can be made to yield a large number of valuable products, including many kinds of timber with varied technical properties. The First Five Year Plan provided Rs 9 crores for forest development and during the period, State Governments carried out a number of schemes relating to afforestation, development of forest communication, strengthening of forest administration and formation of village and small scale plantation. It should not be difficult, therefore, for State Governments to take active steps toward meeting the wooden sleeper requirements of the Railways.

River Navigation

A welcome result of the energetic effort toward meeting the transport needs under the Second Plan has been the increased attention that has come to be bestowed on modes of transport other than the Railway. It is now found that by constructing multiple structures on the various rivers, a network of waterways passing through different regions of the country connecting the east coast with the west can be obtained and the Central Water and Power Commission has prepared a Master Plan in this regard. It is to be noted, however, that extensive surveys and investigations costing large sums of money have to be conducted before reaching a firm decision in the matter.

While admitting that the Master Plan should no doubt be considered on a long term basis, knowledgeable circles point out that a sizable addition to the country's transport facilities can be obtained within a measurable period of time by developing the known navigation potentials of rivers as well as by rehabilitating existing routes which have fallen into disuse due to various reasons.

At present there are only about 5760 miles of navigable river routes in our country. Of these only about 3000 miles represent navigable routes, the rest being made up of canals and backwaters along the Malabar coast. Further, only 1522 miles of the 3000 miles are navigable by steamers. It is also to be noted that organised river navigation is practically confined to the Ganga and Brahmaputra rivers.

It would appear that in recent years the steamer companies operating these routes are finding it increasingly difficult to make both ends meet. At a recent conference between representatives of shipping companies and Chambers of Commerce of the Eastern Region and Mr Humayun Kabir, Union Minister of State for Transport and Communications, it was pointed out by representatives of the Steamer Companies that they were seriously handicapped by a variety of adverse factors. The large sums they had to spend every year for dredging, the higher price of and the delay in obtaining coal, scarcity of spare parts due to import restrictions and higher labour costs were posing urgent problems.

It may be recalled that the steamer companies have already submitted a memorandum to Government explaining how the developments since partition have rendered their working unprofitable. It would be unfortunate if even the remaining river routes are rendered ineffective. It is to be hoped that Government will do their utmost not only to keep the river routes open but to take active steps to reopen routes that have been closed in the recent past.

NORTH INDIAN MARKETS

Sustained Strength in Sugar

SUGAR markets have continued to present a firm front as mills are reserved in selling in view of the expectation of more export quota. It is pointed out that several units have been charging prices in excess of those warranted by the increase in excise duty. For instance, mill-delivery rate for 'D' grade is quoted at Rs 33 to Rs 33.50 per maund as compared with the pre-Budget rate of Rs 27.75 to Rs 28.00, while the excise duty has been increased by only Rs 4.75 per maund.

The firmer tendency in prices has been aided by the shortage of supplies resulting from the changed attitude of the mills, the current stocks with the trade being estimated at only 20 to 25 thousand bags as against the normal figure of about 40,000 bags. Besides, the sentiment has been influenced by the strong rumours that the Government have permitted exports of one lakh tons more in view of the encouraging response from overseas buyers.

It is also reported that the last quota of 1.65 lakh tons has been mostly sold out. Representations are understood to have been made to the Government from trade quarters drawing the attention of the mills' attitude and for releasing a larger quota for the domestic market. The wagon movement also needs to be speeded up so as to ensure adequate supplies.

It is generally felt that, in the present conditions, that the Government should be very cautious in their export policy and should announce the actual quantity they intend to send abroad, keeping in view the increasing domestic consumption. Government desire sugar consumption to go down with a view to encourage exports; but they have also to ensure that prices do not move up much further than the increased burden of excise duty.

Production and despatches of indigenous sugar amounted to 19.75 lakh and 12.27 lakh tons up to the end of May during the current season as against 17.86 lakh and 9.54 lakh tons respectively in the corresponding period of last year.

Auditors' Report to the Shareholders

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit and have found them to be satisfactory. In our opinion proper books of account have been kept by the Bank as required by law so far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from the Branches, which have not been visited by us.

We have examined the Balance Sheet of the United Industrial Bank Ltd., as at 31st December, 1956, and the annexed Profit and Loss Account for the year ended on that date, which are in agreement with the books of account and returns.

The transactions of the Bank which have come to our notice have been within the powers of the Bank.

In our opinion and to the best of our information and according to the explanations given to us, the accounts of the Bank are properly drawn up so as to disclose, in the case of Balance Sheet, the state of the Bank's affairs as at 31st December, 1956, and in the case of the Profit and Loss Account, a true balance of Profit for the year ended on that date, so far as is required by the provisions of the Companies Act, 1956, and the Banking Companies Act, 1949.

28th March, 1957.

The Peninsula

Mysore Finances

A balanced budget, which the Finance Commission, the Government of India and the Planning Commission have laid down as a principal obligation on the part of the State Governments, is satisfied in Mysore in hope instead of in achievement. In his budget statement, Mr T. Mariappa, Finance Minister, explains how it has not been possible to make both ends meet in the existing conditions of the State. He gives assurance of determination to continue efforts in the direction of economy and in exploring "other avenues" to find resources.

In its first financial year, the enlarged Mysore State has to contend with a number of circumstances which somewhat obscure its long-range financial strength. Under the tentative estimates of assets and liabilities, consequent on Reorganisation, the State has acquired a total debt obligation of nearly Rs 77½ crores out of which about Rs 33 crores from public debt and the balance Government of India loans.

As against this, the State has received cash balance on the basis of population in the newly transferred areas; the share of book value of permanent assets built out of the loans in the respective areas, has not been determined yet. As the assets like irrigation projects and electric undertakings transferred will become productive only in course of time, immediately the obligations are more real. The Minister hopes that the Finance Commission will offer some relief.

The State's financial position is temporarily weakened, also through the expenditure of large sums of money on distress relief work. The food situation in the Northern Districts is far from agreeable; the crop has suffered considerably. But for the offer of assistance by the Government of India through subsidised supplies, the introduction of zonal restrictions on movements of food grains and the authority the Central Government are now vested with for chasing hoarded stocks, the food situation in the State would have deteriorated to an intolerable level.

The State Government have also had to give priority attention to creating a uniform system out of the disparate structures obtaining in the five integrated areas, each with its own level of receipts and expenditure. Obviously, fiscal integration has been something of a hard task and Mr Mariappa admits that the estimates indicate nothing more than a fairly accurate position of anticipated receipts and expenditure both on revenue and capital account. Subject to these limitations, the revised budget for 1957-58 shows a revenue deficit of Rs 936 lakhs against a deficit of Rs 1,198 lakhs in the interim budget. The total revenues are placed at Rs 5,093 lakhs and total expenditure at Rs 6,029 lakhs, including a sum of Rs 823 lakhs intended for expenditure under the Plan. No new taxation is resorted to. It is hoped that the deficit will be largely covered through the accrual of Rs 2 crores in the current year, as a result of the uniform taxation laws to be enacted.

On the Second Five Year Plan, Mysore will be spending Rs 145 crores, besides a tidy amount which would go to meet the revision of scales of pay for school teachers. In 1957-58, the budgeted expenditure is in the neighbourhood of Rs 30 crores; a slight reduction is possible in view of what the minister describes as the foreign exchange and other difficulties.

There is an undercurrent of doubt in the Finance Minister's speech about the complete fulfilment of the targets according to schedule. He seems worried about finances. Even if 80 per cent of the Plan is implemented, he calculates, the revenue deficit at the end of the period might exceed Rs 13 crores. It is rather surprising that while envisaging all-round industrial development, to which the development of the major port of Malpe will make a significant contribution, Mr Mariappa puts his hopes more on the Finance Commission's recommendations and Central grants than the new tax potential within the State.

Among the schemes scheduled for the Second Plan, there is provision for direct road communications between the Capital City and important towns involving the construction of bridges across major rivers; a number of big and small irrigation projects in Bombay, Karnataka and Hyderabad Karnataka. With the acquisition of 200 miles of fishing coast-line, the State intends to launch a comprehensive fishery development scheme which will include mechanising crafts, training of fisher-men boys, exploration of new fishing grounds, improvement of harbour facilities, establishment of cold-storage, ice plants, marketing and assistance to fishermen's co-operatives.

The Department of Geology and Mines has an ambitious programme of prospecting for manganese in North Kanara, lime-stone in Bijapur and Belgaum and similar work in Bellary and Chitaldroog. A number of industrial estates will be set up. The expansion of the Government electric factory is under way. The electricity undertakings in the newly added Districts have been transferred to the control of the Mysore Government and shortly a State Electricity Board will be set up.

The Capital Budget for the year provides for Rs 316 lakhs under Civil Works; Rs 792 lakhs for Irrigation; Rs 469 lakhs under Electricity; Rs 60 lakhs under Road Transport; and Rs 50 lakhs under other State Works; Capital Expenditure under electricity provides Rs 150 lakhs for Sharavati Project, Rs 59 lakhs for Tungabhadra and Rs 15 lakhs for Bhadra. A little over Rs 262 lakhs is allotted for expansion schemes for iron and steel works, a porcelain factory, a soap factory and an electricity factory. A Central industrial workshop and implements factory are also on schedule.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi ; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

Madras Review

South Indian Notes

Road Transport

The anticipated development of railways in the course of the Second Five Year Plan notwithstanding, the transport deficit in respect of goods requiring long distance traffic is expected to be of the order of nearly 30 million tons, at the end of the Second Plan period. The railways are expected to cover only about 162 million tons out of a total of nearly 200 million tons of goods, which would require long distance traffic at the end of the Plan. This has served to focuss attention on the scope for improving road transport in the country.

The amendment of the Motor Vehicles Act of 1939 had set the motor trucks free to ply on long distance routes. But beyond the removal of this legal restriction, nothing positive has so far been done to encourage this kind of transport. The attitude of the authorities is still characterised by a lack of understanding in regard to the potentialities of truck transport. In consequence, though legally free, they are economically hampered in developing to the full, the long distance traffic. The chief impediments in the rapid development of the long distance truck transport have been the excessive burden imposed by the Central and State taxes on the one hand and on the other, the low limit placed in some states, on the permissible laden weights of trucks. The combined effect of these two has been to make the cost of transport by truck uneconomical and non competitive in comparison with that of rail transport Taxation of vehicles has been carried to an extent, where the tax alone per ton mile is equal to and in many cases even exceeds the average freight charge of the railways.

Speaking at a Press Conference in Madras Mr C. S. Nair Secretary of the Indian Roads and Transport Association and Mr M. Venkatraman, Chairman of the Madras Branch, pointed out that there was scope for reducing taxation by at least 20 per cent and that far from reducing Government's revenue such a measure would actually increase it by means of the fillip it would give to road transport. Further raising of the permissible laden weight, would also have the effect of reducing the cost of road transport. The road permits issued in Madras enforce a gross vehicle weight of 8 tons even for articulated vehicles with 3 axles, while the general minimum limit in other countries, is an axle weight of 8.9 tons involving a gross vehicle weight of over 12/14 tons for 2-axled vehicles and 20/24 tons for 3-axles vehicles. A further reduction in cost could be secured by allowing trucks to carry trailers. Such trailers are economical in that they would require additional capital investment of just one third, while they can carry an additional load of 75 to 80 per cent of the conventional truck.

Double taxation of vehicles, engaged in inter-State services has been another grievance of operators. Vehicles plying between Madras and Mysore and between Madras and Kerala are called upon to pay full taxes to both Governments. The Transport Advisory Council has suggested that a vehicle should be taxed only in the State in which it is registered. Some such reciprocal arrangement is called for if inter-State services are not to be hampered unduly.

*

Andhra Pradesh State Financial Corporation

By virtue of their position as the premier industrial credit institutions of the States, the State Financial Corporations have evolved into a reliable guide to the pace of progress of industrialisation in the States. In Andhra, a wide variety of industries have received substantial loan assistance from the State Financial Corporation. Upto 31st March 1957, the Andhra Pradesh Financial Corporation has sanctioned loans aggregating Rs 70.71 lakhs. More than one-third of this amount has been granted to the oil mill industry indicating thereby that the prospects for this category of industry are rated higher than for other types of industrial enterprises. Substantial amounts have been taken by the chemical, textile, cigarette tobacco redrying and light engineering industries. Solvent extraction, laminated products, starch products printing tanneries, ceramics, and rice milling industries are also coming up in the State in a modest way with the loan assistance of the Corporation.

During the year ended 31st March 1957. 30 applications from 14 industries for a total loan of Rs 44.25 lakhs have been received. These together with 16 applications for a total amount of Rs 47.40 lakhs, pending as on March 31, 1956, have brought the total number of applications to 46 with the total loan sought to Rs 91.65 lakhs. Of these the Corporation has sanctioned loans totalling Rs 44.55 lakhs on 22 applications. Seventeen applications have either been rejected, withdrawn or deferred, leaving 7 applications pending consideration.

The total amount of loan disbursed by the Corporation up to March 31, 1957 amounts to Rs 33.02 lakhs. Referring to the wide disparity in the amounts sanctioned and the amounts disbursed, the Annual Report of the Corporation says that this is due to the fact that the industrial concerns generally do not desire to avail themselves of the entire amounts of the loans all at once, but draw them in instalments as and when commitments mature. Other contributory causes are the considerable delay in complying with the terms and conditions of the sanction by the applicants in some cases and the postponement or abandonment of the scheme, in others. The report notes that in many cases the applicants fight shy of furnishing full information concerning vital matters necessitating close scrutiny and interrogation by the officers of the Corporation before actual disbursements are made.

In coming years the Andhra Pradesh State Financial Corporation will be called upon to cater to the credit needs of a considerably large number of industries falling under the category of medium and small scale industries as a result of the inclusion of new areas in its jurisdiction due to States Reorganisation. It is, therefore, of utmost importance that it takes early steps to remove the cause or causes for the low level of disbursements. For, so long as the amounts sanctioned are not put to productive purposes expeditiously, the main objective of rapid industrialisation will continue to remain as distant as ever. One way that will enable the Corporation to play its rightful part is to make the aims and objects well-known in the region. The Bombay State Financial Corporation has achieved commendable success by bringing about close contact between the industries and the Corporation. The method can be followed with equal success in other areas as well.

SOUTH INDIAN MARKETS

Pepper Prospects

AFTER a period of stonewalling for more than a month, Pepper markets are now ruling steady, thanks to reports of acceptance of all offers by New York buyers from 28 to 29½ cents per pound. Some brokers have circulated reports that Sarawak crop for the current year will not be more than 10,000 tons. In the Kozhikode market, Wynaad quality is quoted around Rs 670 and the Country variety at Rs 650, per candy.

The future of the market, however, depends upon the final size of the Sarawak crop. If the crop really turns out to be smaller as is now rumoured in New York, there are chances of further improvement in prices, in view of approaching consuming season in the USA and Europe and comparative shortage of supply in both India and Singapore. Much, of course, depends upon the buying policy of New York. Any aggressive demand is sure to push up the prices.

Meanwhile, the third and final forecast report, issued by the Madras State Government, states that the area under pepper in 1956-57 is estimated at 440 acres (270 acres in Kanyakumari district and 170 acres in the Nilgiris district). Compared with the estimated area of 420 acres (270 acres in Kanyakumari district and 150 acres in the Nilgiris district) for the previous year, the present estimate shows an increase of 4.8 per cent.

In the New York market, there was very limited enquiry. Trade interests attributed renewed resistance among grinders and dealers to the recent softening in values. Nearby-needs of many buyers appeared to be temporarily covered by much improved buying earlier this month. Prices were unchanged. In the London market, Black Sarawak was quoted at 19½d and White Sarawak at 27¼d per pound.

*

Coffee

According to the report issued this week, the Coffee Board has sold 7,250 tons of coffee for export till the end of May. Apart from this, a quantity of 725 tons of Plantation 'A' was sold to Russia through the State Trading Corporation. One thousand tons of Plantation variety has been reserved for export to Sweden, Finland and Australia; 500 tons of Robusta to the USA and 600 tons of Cherry for monsooning.

The report adds that the Marketing Committee has recommended for export a further quantity of 1,500 tons, consisting of 1,000 tons of Plantation and 500 tons of Arabica, Cherry, provided anticipations into the Pool were released. The total Pool receipts, up to the end of May, amounted to 40,654 tons, consisting of 21,828 tons of Plantation; 6,908 tons of Cherry and 12,918 tons of Robusta. These receipts are just 911 tons short of the season's estimate; but it looks as if the total will exceed 42,000 tons. The Board seems to have agreed upon progressive monthly sales for export throughout the year as long as surplus is available, so that the disadvantage of crowded offers can be avoided.

The next crop, due to adverse weather conditions in certain parts of Coorg, is estimated at 35,750 tons which, though lower than this year's,

Bengal Coal Company Limited

A Difficult Year for the Coal Industry

Mr D. F. Macmillan, the Chairman, Reveals Company's 2nd Plan Target

Addressing the annual meeting of the shareholders of the Bengal Coal Company Ltd., held in Calcutta on June 20, 1957, Mr D. F. Macmillan, the Chairman of the Company, said:

Gentlemen,

It is over a year and a half since members were addressed from this Chair when my predecessor reviewed the Company's affairs for the half year ended April, 1955. With the introduction of the new Companies Act, the Accounts before you are for the year ended 31st October, 1956, and my review today will cover that period. You will see that the Accounts have been compiled in the form prescribed by the new Companies Act. It is for shareholders to judge whether the new form gives them a clearer picture than the form to which they have been accustomed in the past, and perhaps this will be revealed by any questions which may be put by shareholders on these Accounts and my ability to explain.

The year under review was a difficult one for the coal industry and your company had also to bear its share of the troubles. These have been referred to in the Directors' Report and I shall develop on them this morning. The trading results of the company for the year consequently compare somewhat unfavourably with those for the previous year, and it is an indication of the inherent strength of your company that your Board, after careful consideration, have been able to recommend final dividends which make the distribution for the year the same as that for the year ended October, 1955. Since the end of the accounting period, the ordinary shares of the company, which stood at Rs. 200 nominal, have been divided into twice that number of shares of Rs. 100 nominal. Consequently, while the interim dividend was declared on the two hundred rupee shares, the final dividend will be paid on the one hundred rupee shares and I hope it is clear to shareholders that the total distribution for the year on the ordinary shares is at the rate of 17½ per cent. As there appears to be a good deal of confusion of thought in otherwise well-informed quarters about dividends expressed as a percentage of nominal capital, it may be well for me to point out that shareholders have received a return of exactly 6 per cent on the capital employed in this company's business.

Raisings during the year ended 31st October, 1956, totalled 2.32 million tons which fell short of production in the previous year by 189,000 tons. I have no doubt however that we would have been able to outstrip the preceding year's figure had not the company's collieries in West Bengal been affected by a strike which lasted for a period of about four weeks from the middle of September, 1956.

THE TRIBUNAL AWARD

The All India Industrial Tribunal (Colliery Disputes) which had been set up as long ago as 1954 and had been reconstituted a year later, after protracted deliberations and detailed examination of all the issues involved, finally published its Award on the 26th May, 1956, and its terms became operative as from that date. Whilst the employers in the coal industry did not agree with all the conclusions arrived at in the Award, to promote general stability in the industry, they decided not to go on appeal and their decision was shared by a large section of the labour organisations operating in the coalfields. Some of the smaller Trade Unions however decided to appeal and, once they had done this, the other Unions also thought it advisable to join in. Consequently they also participated in the proceedings before the Appellate Tribunal.

Whilst the appeals were being heard and the entire subject was being argued afresh, production in a vital section of the Raneegunge field was brought to a standstill by a strike which was totally unwarranted and unnecessary. In addition to your company's collieries other large pits were affected, and it is estimated that as a result, the loss in output amounted to 300,000 tons at a time when every ton was needed to meet the growing industrial requirements of the country. Some of the repercussions of this ill-conceived strike are still in evidence about eight months after its termination. During the strike for instance, heavy rain caused the water level to rise rapidly in one of your collieries, and efforts to rush additional pumping machinery to the pit were largely frustrated by the heat and passions of the prevailing situation. As a result the colliery workings were completely inundated. The process of rehabilitation which is now going on is a slow and laborious task, and it will still take some time before normal production levels can be attained again at that colliery.

I wish to pay a well deserved tribute to the company's staff who, from the most senior to the most junior, bore the strain of this strike, often under conditions of personal danger, with cheerfulness and absolute loyalty—may I say very simply that they served the company and the country well under most trying conditions.

RED TAPE AND RED FLAGS

It is unfortunate that at a time when the efforts of all should have been concentrated on increasing production, the emotions of labour were exploited in such a reckless manner. The Communist elements took full advantage of the situation and tried to utilise it for their avowed purpose of infiltrating into an area which, with its collieries, steel works, other industries and the growing industrial complex at Durgapur, is one of the most important industrial regions in the whole country. In view of this, it is particularly important that the responsible elements in the Trade Union movement should rise above their factional struggles for power, which have been such a marked feature in this area for many years, so that industrial stability can be achieved in this vital sector of the nation's economy.

The first year of the current Plan did not witness any dramatic spurt in raisings from the country as a whole, and against 38.2 million tons produced in 1955, the total output in 1956 amounted to 39.4 million tons. This was not due to any lethargy on the part of the producers. The strike which seriously dislocated production in the Raneegunge field was a contributory factor but an important reason was the fact that many valuable months were allowed to drift by before a clear indication of Government's policy was made known to individual producers who had been most urgently asked to submit their plans for increased raisings as early as January, 1956. Only in the second half of the year was it known that Government did not contemplate according specific approval to individual plans, and that the producers could take all such plans as having general approval, except when specific approval was required under law as, for instance, in the case of opening of new mines. Your company's productive efforts during 1956 thus got enmeshed in a tangle of red flags on one side and red tape on the other.

Just when the uncertainties had been resolved, a new element of doubt appears to have crept in regarding the field within which the private sector can work. Parliament has recently passed the Coal Bearing Areas (Acquisition and Development) Bill. In the Statement of Objects and Reasons attached to the Bill it was explained that since the use of the Land Acquisition Act, 1894, was no longer appropriate, this Bill was necessary for the acquisition of the rights of private lessees over unworked coal bearing areas which were found surplus to the requirements of the private sector. The statement went on to explain in this connection that out of the additional production of 22 million tons per year envisaged in the Plan, the public sector was required to produce 12 million tons, the balance being allocated to private industry for production from existing collieries and immediately contiguous areas.

This statement of Objects and Reasons does not however appear to have been reflected in the operative part of the Bill which empowers the Government, should it so desire, to take over any land falling within the scope of the Bill except land in which coal mining operations or any process ancillary thereto are actually being carried on. The protection offered to private producers would therefore seem to exclude coal bearing lands contiguous to working collieries in which no work is being carried on at present, that is to say, land constituting a reserve area for subsequent development. This might considerably restrict the capacity of private collieries to expand into contiguous areas.

PRIVATE SECTOR'S ROLE

It was after prolonged discussions throughout 1955 and the early months of 1956 that the private sector was given a definite place in the Plan, and it was clear that the success of the Plan would depend on full facilities being given to both the sectors so that each could attain its allotted target. It is unfortunate therefore that this new legislative measure should appear to restrict further the scope of collieries under private ownership which have such a responsible role to perform, and I hope an early opportunity will be taken to clarify the position.

It is vital that the mutually complementary roles of the two sectors should be fully accepted not only at the top where policy is formulated, but by Government representatives at all levels. The success of a policy is ultimately measured by its application in ordinary day to day decisions which have to be taken in such mundane matters as allotment of wagons as between State and private collieries, or in the allocation of steel and cement which are both in short supply. We are assured from time to time that no discrimination is made in such matters against the private collieries, but this is not always apparent. I have always understood that one of the fundamental tenets of the administration of justice is that not only should justice be done, but that it should appear to be done. I would suggest therefore that full facts on matters of importance to the coal industry should be made known to all sections of it periodically so that the corroding effects of doubts and hesitations may not be allowed to detract in any way from the combined efforts of all to attain a new momentum in production.

Your company has for over a century been engaged in a continuous process of development—development to increase production and development to replace the wasting asset. It has today, as it has had in the past, the technical management, the experienced administration, and the resources to continue this tradition and to accelerate the process. The plans for increased production which we submitted to Government in January, 1956, included the opening up of four new collieries in our reserve coal bearing areas to produce new production of some half a million tons per annum from 1960, as well as increased production of just under one million tons from more intensive development of areas already being worked. Government have refused permission to the company to open up the proposed four new collieries because the areas to be developed do not conform with Government's interpretation of contiguous areas. They are, however, agreeable that we should accelerate exhaustion of our existing working areas by increasing production from them by nearly one million tons a year and this we shall do. Bearing in mind that the entire private sector is limited to an additional production ceiling of 10 million tons a year by the end of the present Plan, this company's plans to raise output by one million tons without breaking new ground bear testimony to our eagerness to participate at least as much as we are permitted in the industrial growth of the country. Shareholders of this company need not be concerned at the prospect of early exhaustion of existing workings, as I am able to tell you that the company's most recent developments alone—the new Girimint and Chinakuri collieries—are designed and equipped to raise between them 100,000 tons per month for at least the next fifty years.

BASIC MATERIALS

The past year has seen almost a continuous state of anxiety regarding availability of materials which are essential for coal production. On the basis of figures obtained from 125 of its members the Indian Mining Association has calculated that in 1956 against 41,000 tons of cement applied for, only about 6 per cent were actually received at the collieries. The situation has improved somewhat this year, but there is still a dangerous gap between requirements and supplies. The position regarding iron and steel is very similar and items like rails for tram lines are hardly available at all. In this connection the setting up of the Progress Review Committee a few months ago has been a move in the right direction. This Committee can render valuable service by keeping under constant scrutiny these and other allied matters such as the problems connected with Government's licensing policy. In a basic industry like coal there exists a strong case for relaxing the provisions governing imports, particularly in respect of essential items required for normal production. As regards additional items made necessary by new mining regulations, Government should consider postponing the implementation of such of these regulations as involve the use of foreign exchange.

Among your company's records there is a telegram sent to Calcutta by its representative at Raneegunge which reads "You say send coal I say send wagons—only seventeen arrived". This telegram, gentlemen, was sent on the 18th of June, 1857—almost exactly 100 years ago today! The fact that I have to refer now to the transport question bears a special testimony to the tenacity of a problem with which the coal industry has had to contend throughout its history in India.

Speaking the other day in the Lok Sabha when introducing the Railway Budget, the Railway Minister said that there was general recognition of the fact that transport capacity could not lag behind other developments envisaged in the Plan, and that the very success of the Plan would depend on the timely creation of the additional capacity required.

THE TRANSPORT PROBLEM

When the current Plan was drawn up it was estimated that by 1960-61 goods traffic would increase by about 61 million tons to a total of 180.8 million tons. To cope with this, as well as with the anticipated growth in passenger services, it was thought that an outlay of Rs. 1,480 crores would be needed. Provision could however only be made for Rs. 1,125 crores which was sufficient for an additional 42 million tons of traffic only. Of these 42 million tons, 25 million tons would be absorbed by the movement of coal and other raw materials for the new Steel Plants, 6 million by coal for all other purposes and 4 million tons for cement, leaving only 7 million tons for the general industrial and agricultural production of the country.

The first year of the current Plan has seen a significant increase in traffic and it is clear that the impact of the Plan has already made itself felt. The view is widely held that transport and communications should have been the prime objective of this Plan and that the allocation of finance to transport in the Plan is inadequate. Even given the full finance required, there is another limiting factor, namely Time. In this view there is a real danger that a steadily deteriorating transport situation will develop, which will assume serious proportions after 1958 when traffic arising from the new Steel Plants is expected to increase rapidly. Such a contingency will naturally react adversely on the Plan as a whole, and, in particular, on its coal segment which hinges so precariously on transport availability.

Within these overall limitations, however, the Railways are making commendable efforts to tackle the problems confronting them. Amongst these I would mention the remodelling of the Moghalsarai Yard which, over the years, had assumed a special notoriety as an embodiment of frustrated hopes in coal transportation; the electrification of 800 route miles including the Calcutta suburban area and the Main Line section from Burdwan to Gomoh; the possibility of further extending electrification from Gomoh to Moghalsarai and from Asansol to Rourkela; and the doubling of lines on many difficult sections including about 370 miles on the South Eastern Railway. The completion of these and other projects will materially assist in the movement of coal but in the meantime many urgent transport problems remain with us.

The proceedings before the Tribunals to which I have referred earlier were closely concerned with the cost of labour since it constitutes the largest single element of cost in the coal industry. This naturally raises the general question of the industry's total cost of production in relation to its selling prices which are statutorily fixed.

COAL PRICES

For a considerable time now this industry has been called upon to bear increased costs of production from within these fixed prices. As regards the labour element in cost, a price increase of Rs 3 per ton was allowed in the case of the West Bengal and Bihar collieries following the Award of the All India Industrial Tribunal (Colliery Disputes) in May, 1956. The price increase did not however become effective until the first week in July, and for a period of about five weeks the full impact of the Award had to be shouldered by the industry without any adjustment in prices. Since then the Appellate Tribunal has further increased the amounts payable to workers, and the issues are now pending before the Supreme Court. When these issues are finally resolved, the price structure will have to be examined afresh to ascertain the extent to which it corresponds to the labour costs ultimately fixed.

Apart from labour however, pressures on production costs have been exercised in an increasing degree by various other factors such as enhanced prices of steel, cement, machinery and timber and the implementation of new rules governing the operation of mines. As a result, the long standing problem of prices in relation to costs has now attained new proportions of gravity and urgency.

Any mention of the need to increase coal prices gives rise in certain circles to a somewhat undefined apprehension that it will have violent effects on industrial economy by distorting the structure of industrial costs. Similar apprehensions do not seem to be voiced when prices of steel and cement go up although they are of as basic importance as coal. Between 1950 and 1956 the price of pig iron has increased by over 100 per cent, of steel by over 90 per cent, and of cement by over 50 per cent, whilst the price of coal has gone up by only about 18 per cent. Indian coal is said to be the cheapest in the world and a revision of Government's price policy is urgently called for so that the coal industry can receive a fair return on its enterprise and be able to revitalise its financial reserves. These reserves have to play a most important part in financing new developments not only to attain the target of 60 million tons under the Second Plan, but to pave the way for the more exacting demands of the Third Plan which some consider will call for substantially over 100 million tons. I am glad to see that this question is now under examination by the Coal Prices Revision Committee recently constituted to report on this particular problem. Its findings will be awaited with the utmost interest.

TRIBUTE TO STAFF

I have already paid a well merited tribute to your staff during the period of the strike. This crisis came upon the company at a time when your Chief Mining Engineer, Mr. Rosser, was on leave, and the top responsibility in the coalfields devolved upon Mr. Massmann, the Deputy Chief Mining Engineer, who worked tirelessly to overcome the special problems which the strike brought in its wake. Mr. Rosser is with us today and I would like to congratulate him and his staff on the speed with which production was brought back to normal after the problems immediately following the strike had been dealt with. Apart from the technical efficiency apparent in the working of the collieries themselves, I was impressed, on a recent visit, with the further advance in promotion of the measures for the education, training, housing, hygiene, health and general welfare of the workers to which the company has always attached great importance. In Mr. Rosser and his senior staff you have very able administrators and most capable technicians and our thanks are due to them for their sterling work on behalf of the company.

HERCULES INSURANCE COMPANY LIMITED

NOTICE IS HEREBY GIVEN that the TWENTY-SECOND ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta on Tuesday, the 16th July, 1957 at 3-30 P.M. for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1956.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring.
4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. Sanctioning the payment of Rs 31,644 to the Directors as their fees for services rendered during the year ended 31st December, 1956.

The Share Transfer Books will be closed from the 1st July to the 16th July, 1957, inclusive.

By order of the Board,
G. RAMABADRAN,
Secretary.

Calcutta, 14th June, 1957.

Note.—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 16th July, 1957.

EXPLANATORY STATEMENT REGARDING ITEM 5.

Under Section 309(1) of the Companies Act, 1956, shareholders' sanction is necessary for payment of fees to the Directors. The sum of Rs. 31,644 is computed on the same scale as in previous years, namely:

	Rs.
At Rs. 200 p.m. per Director for 12 Directors of whom for part of December, 1956 only for Mr. Indradaman Amritlal Shah	26,536
Extra for the Chairman and Deputy Chairman @ Rs. 2,000 each per annum ..	4,000
Extra for Investment Committee constituted by the Chairman, Deputy Chairman and Rai Bahadur M. L. Tapuriah upto 20-3-56 and thereafter the Chairman and Deputy Chairman @ Rs. 500 each per annum ..	1,108
Total ..	31,644

(Continued from page 1148)

accounted for by the State Bank. Advances have gone down by another Rs 1.73 crores to Rs 186.39 crores.

The statement of Scheduled Banks for June 7 discloses readjustments in the composition of Deposits as between Time Liabilities and Demand Liabilities. Overall, due to month early disbursements, Deposits are marked lower by Rs 4.09 crores at Rs 1249.80 crores. Borrowings from both the State Bank and the Reserve Bank have increased, the former by Rs 0.72 crores to Rs 9.77 crores and the latter by Rs 1.49 crores to Rs 82.23 crores. Cash balances show an improvement of Rs 1.51 crores to Rs 133.06 crores. Lastly, the total of Advances is higher by Rs 3.04 crores at Rs 935.48 crores. The small size of the decline in Deposits, the negligible rise in Borrowings, the increase in cash balances and the expansion in Advances of only Rs 3 crores, all in the first week of a month, are clearly suggestive of slack season conditions.

THE BENGAL PAPER MILL COMPANY, LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the Fifteenth day of July, 1957, at 11 o'clock in the forenoon, to consider and, if thought fit, to pass the following resolutions, namely:—

1. (As a Special Resolution)—"That the requirements of Article 124 of the Articles of Association of the Company be not complied with in respect of the half-year ended 30th June, 1956."
2. (As a Special Resolution)—"That the Articles of Association of the Company be altered in the manner following:—

(a) That Articles 54 and 55 shall be deleted and the following new Article 54 substituted therefor:

'In addition to any other meetings, general meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Board of Directors. Such general meetings shall be styled "Annual General Meetings" and shall be specified as such in the notices convening these meetings. All other meetings of the Company shall be styled Extraordinary General Meetings."

(b) That Article 62 shall be deleted and the following new Article 62 substituted therefor:

'The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Board of Directors and of the Auditors, to appoint Directors in place of those retiring by rotation, to appoint Auditors and determine the manner in which they shall be remunerated, and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.'

(c) That Article 124 shall be deleted and the following new Article 124 substituted therefor:

'At every Annual General Meeting the Board of Directors shall lay before the Company a Profit and Loss Account made up to the 31st December in the preceding year and a Balance Sheet as at that date and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company, but save as aforesaid, the Board of Directors shall not be bound to disclose greater details of the result or extent of the trading and transactions of the Company than they may deem expedient.'

(d) That Article 128 shall be deleted and the following new Article 128 substituted therefor:

'The Company at each Annual General Meeting shall appoint an Auditor or Auditors to hold office until the next Annual General Meeting and their appointment, remuneration, rights and duties shall be regulated by Sections 224 to 227 of the Companies Act, 1956.'

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary.

Calcutta, 15th June, 1957.

Note.—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

SHAW WALLACE & COMPANY LIMITED

Dividend on Preference Shares

The Directors have declared an Interim Dividend of 3 per cent, less Income Tax, on the Company's Preference Shares in respect of the year 1957, payable to Members whose names appear in the Preference Share Register on the 15th July 1957. Warrants will be posted on or after that date to the addresses or in accordance with the instructions, recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 8th to the 15th July 1957, both days inclusive.

By Order of the Board.
SHAW WALLACE & COMPANY LIMITED
D. A. Houghton
Secretary.

4, Bankshall Street.
Calcutta. 19th June, 1957

MINERVA MILLS, LIMITED

Notice of 22nd Dividend

NOTICE is hereby given that a Dividend of Rs. 6 per share of Rs. 100 for the year ended 31st December 1956 sanctioned by the Shareholders at the Thirtyseventh Annual General Meeting held on the 17th June 1957 is made payable at the State Bank of India, Bombay, on and after Monday, the 24th June 1957 to those shareholders whose names stood on the Register of Members on the 13th May 1957 and who have paid all dues to the Company whether in respect of calls on their shares, interest thereon or otherwise.

By Order of the Board,
N. Sirur & Co. Private Ltd.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Registered Office:—
Temple Bar Building,
70, Forbes Street,
Fort, Bombay, 17th June 1957.

STATE BANK OF INDIA

NOTICE

In pursuance of Regulation 40(1) of the State Bank of India General Regulations, 1955, it is hereby notified that Shri Suresh Chandra Roy of 36, New Road, Alipore, Calcutta 27, being the only person validly nominated for election shall be deemed to be elected as a Member of the Calcutta Local Board of the State Bank of India on the 26th June 1957, with effect on and from the 1st July 1957, and that the Local Meeting of Shareholders which was to be held on Wednesday, the 26th June 1957, in terms of the Bank's Notice of the 22nd May 1957, solely for the purpose of the aforesaid election, stands cancelled.

S. P. PURI
Secretary,
Calcutta Local Board.

Calcutta, 12th June 1957.

(Continued from page 1161)

Stocks with the factories, as on the 31st May, were 12.71 lakh tons as compared with 12.41 lakh tons on the corresponding date of last year.

Meanwhile, steady conditions have continued to prevail in the Hapur market. Although normal crushing season is over, about a dozen sugar factories in Uttar Pradesh are reported to be still crushing cane. So far, 10.30 lakh tons of sugar has been produced in the State out of a total of a little over 20 lakh tons in the country.

The standing crop in the State is reported to have been adversely affected by 'salai' pest and is now in need of rains. Wholesale prices are quoted at Rs 33 to Rs 35 per maund, according to quality.

✱

Gur

In contrast, sentiment in the Hapur Gur market remained depressed despite a fall in daily arrivals to an average of 75 maunds. Outside demand is very slack and local stocks, mostly in 'kotha' quality, are put at 75,000 maunds, the corresponding figure for last year being 35,000 maunds. Outside buying enquiry is being met from Agra where prices are move favourable for the purchasers. Dry quality is quoted at Rs 10.50 to Rs 11.50 per maund, while 'kotha' quality dry-wet is quoted at Rs 10.50 per maund.

✱

Foodgrains

Quietly steady conditions have prevailed in the Hapur Foodgrains market. Wheat is quoted at Rs 14.50 per maund for average quality and Rs 16.75 for farm quality. The formation of Uttar Pradesh as a separate wheat zone is likely to check the rising trend of prices as outside demand from the deficit Bihar will disappear. Rice prices have continued to rule steady.

The market for Grams also rules steady, thanks to the State Government's purchases. The State Government is also purchasing Barley and Bejher, which accounts for a steady trend in the prices of all Coarse grains. Peas prices have, however, declined as outside buying enquiry is practically dormant. Arrivals average 1,000 maunds daily and the total, since the beginning of the season, is put at 1.20 lakh maunds. Arhar prices rule quiet as demand is poor in the face of increasing stocks, which are being built up by imports from nearby centres by rail and road. Other Pulses are mostly unchanged.

Prices in the Delhi grains showed a mixed trend. Wheat prices are marked down considerably owing to removal of restrictions on movement of the commodity from the Punjab, while Gram has eased in sympathy. Rice prices have recorded small losses, mainly induced by the steps taken by the Union Government to check the rise in prices. Among Coarse grains, Maize, Jowar and Guwar are in good demand for sowing purposes due to which the rates have hardened a little.

The grains market in Bombay has presented an easy appearance with cereals and Pulses losing small initial gains on account of the general disposition on the part of stockists to unload supplies before the start of the monsoon. The formation of three zones for the purpose of regulating wheat movement in the country had little effect on Wheat prices in view of the ban on imports into Bombay. In the Rice section, prices of qualities coming from Andhra have looked up modestly. In the Coarse grains section, prices of Jowar and Bajra have declined by about Rs 5 per candy on lower upcountry advices and due to poor demand. In the Pulses section, price movements are confined to a narrow range.

✱

(Continued from page 1147)

Indian fishing boats should be gratifying to those who have helped and are helping in the process of such mechanisation. After a 18 months study and survey in India on a FAO technical assistance assignment Mr Bjuke said that mechanisation of fishing boats was proceeding at a remarkable rate in India. By way of illustration, he further said that, "in the Bombay area alone, there are now almost 1,000 mechanised boats, a development which has taken place mostly in the past 10 years". In other parts of India, he added, there was also considerable progress in mechanisation.

The urgent necessity of rapid mechanisation of boats for sea fishing in India is, of course, obvious. With a coastline of 3,500 miles, India can have an inexhaustible supply of fish. But sea fishing in India is carried on, for the most part, in primitive fashion. With crafts having a displacement of under five tons, it is confined generally to coastal waters from five to seven miles from the shore and within a depth of 10 fathoms. With a few exceptions, very few fishermen make voyages which entail staying in the open sea for more than 12 hours at a time. Night fishing is practically unknown. The equipment in use consists mostly of small boats, canoes, catamarans and of small nets and tackles which are quite unsuitable for the requirements of offshore and deep sea fishing.

If the fishing industry in India is to be developed along modern lines, a large number of things will have to be done, but the primary requisite is the rapid introduction of mechanisation of the fishing craft.

Mechanisation of boats involves providing for proper harbour facilities, which are absent now. The programme in the Second Plan in this respect envisages the establishment of fishing harbours in three or four places on the coastline where fishing vessels can berth and land their catch. It was to examine this particular aspect of the matter that Mr Bjuke came out to India. His studies were confined to exploration of the shore facilities in Bombay, Saurashtra and Madras.

Mr Bjuke's report, when it is sumitted and communicated by the FAO to the Government of India, will be a valuable document. The details of the plans, programmes and recommendations which it is likely to contain are not known yet; but, the interview which Mr Bjuke gave on his return to Rome indicated the lines along which his final recommendations will lie.

He stated that he worked on the general idea that, wherever possible, developments should take place in existing harbours. Plans for development of fishing harbours at four sites have been drawn up, the most important among which are the Veruval and the Sassoon Dock, Bombay. The plans for Veruval are for the development of a fishing harbour big enough to be used by all types of fishing vessels including trawlers. Plans for the development of the other sites are on a similarly big scale and provide not only for the construction of fishing harbours but also for the building up of a modern fihsing industry, with ice plants, cold storage facilities, fish processing plants, etc.

All this is encouraging news. India, according to the FAO Surveys, belongs to a low fish consuming category country. The per capita consumption of fish in India is below five kilograms, which compares unfavourably with the 20 kilograms per capita consumption which the nutrition experts think to be necessary for a balanced diet and which India's neighbour Burma has. The Government through provision in the Second Plan and with the generous assistance from foreign countries are trying to increase the yield and supply of fish, which forms the only nutritious item in the diet for large sections of the people living by the side of seas and rivers. If the rate of progress in the modernisation of boats and equipment for sea fishing, described by Mr Bjuke as remarkable, is maintained, it will not be long before India possesses a modern and mechanised fishing industry.

(Continued from page 1165)

is above the crop of 1955-56. The coffee districts in Madras State have not yet had a bumper crop and when that occurs, even with a normal crop from Mysore and Kerala, the total may be over 50,000 tons.

✱

Rubber

In the Cochin market, a little over 16,000 pounds of Sole Crepe Rubber were offered at the auction held towards the end of last week. The sale opened against a strong general demand for all types. One-quarter inch grades were firm; but 3/16 inch and 1/8 inch sole crope were 10 to 15 nP per pound dearer. The highest price realised was Rs 2.30 for No. 1-1/8 inch sole crepe.

✱

Meanwhile, the Ceylon Rubber Commission has announced a price-cut of 10 cents per pound on all grades of Sheet rubber, effective from the 18th June.

The new price for RSS NO. 1 will be Rs 1.15 cents with a premium of one cent per pound for local shippers. This revision follows the general decline in the world market and consequent revision of prices paid to Ceylon by China under the long-term agreement between the two countries. This is the second price reduction made this year. Earlier, the price was brought down to Rs 1.25 cents from Rs 1.40 cents.

✱

Cashew

According to reports from Cochin, about 60,000 tons of African Cashewnuts have been received this year and processors are faced with a big problem. Most of the nuts are off-quality and some of the nuts cannot be utilised at all. Indian nut season is over and, therefore, the raw nut market rules relatively high.

Compared to 4½ lakh cases of kernels shipped in the first five months of last year, only 3½ lakh cases have gone this year. Prices are lower than last year by 6 to 9 cents (US) per pound even after a recent recovery from 53 to 48 cents. Despite a record crop, both in India and Africa, the cashew year may not prove to be a prosperous one.

✱

Groundnuts

Steady conditions prevailed in the Madras Groundnut market. Daily arrivals averaged 25 to 30 tons per candy and these were taken up by Chekku and rotary crushers. Superior oil-quality seed was quoted around Rs 165 per candy and the bold variety at Rs 160.

In the Groundnut Oil section, the rate for the ready position moved narrowly between Rs 333 and Rs 336 per candy. With the Calcutta buyers showing limited interest, there was a general tendency to mark down prices.

✱

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate and there was a steady clearance of all weights. There was no change in the Buff and Calf sections. On the export front, some business was done in light weight runs, fourths and fifths at varrying rates upto 52d for market quality. The market for Calf hides was rather stale with enquiries dominating mostly for single tannage marks.

In Tanned Skins section, arrivals of both Goat and Sheep skins were moderate and there was a moderate clearance at steady prices. On the export front, trading was practically dull. In the Goat skins section, UK was not showing any interest as the Dressers were not able to pay the current prices. The only market of immediate interest was Germany. In the Sheep skins section, trading with foreign countries was reported to be in a healthier position and business was reported done at steady prices.

Stock Exchanges

A SIGNIFICANT RECOVERY

Watch-Dog Writes:

QUITE in contrast to the past three weeks, stock markets have staged a significant recovery during the week under report. This marked change in sentiment is mainly due to the fact that leaders of business and industry seem to have been satisfied with the outcome of the discussions they had with the Union Finance Minister.

There is a general belief that certain concessions are likely to be given in the case of Wealth Tax and the Expenditure Tax. Another bullish aspect is the reported hint given by Mr T. T. Krishnamachari that the impact of the current tax on dividends will be progressively lightened. Sentiment is also aided by the substantial purchases that are still being made by the Life Insurance Corporation.

With the result, cheerful conditions were noticed on the Calcutta Stock Exchange where, under the lead of speculative issues handsome gains were recorded in most sections.

Equities on the Bombay Stock Exchange displayed buoyant conditions on continued speculative buying coupled with bear-covering being influenced by the Finance Minister's speech at Calcutta.

On the Madras Stock Exchange, mild buoyancy in Planting issues continued, while better enquiries were seen in Textiles, resulting in a further improvement in prices.

Although the London Stock Exchange provided many bright features, the trend of prices was rather irregular.

*

Calcutta

Calcutta, Friday Evening.

BRISK trading was noticed on the local Stock Exchange during the past week when, under the influence of speculative scrips handsome gains were recorded in almost all sections. The main inspiration was provided by the sustained investment support from the Life Insurance Corporation and a certain measure of revision of ideas about the outlook for equities in the light of the discussions that the business community had with the Union Finance Minister.

From the course of discussions, three important points were considered bullish. The first related to the emphasis made by the Finance Minister that there had been no change in the Government's policy towards the private sector. The second factor related to some adjustments in the tax structure from year to year, which would be relatively small. The third factor was the hint given that the impact of the current tax on dividends would be progressively lightened. For obvious reasons, prices in all sections were marked up although higher levels could not be retained till the close due to profit-taking.

The Giltedged section continued to rule weak due to a predominance of sellers. No substantial support was forthcoming either from the Reserve Bank or from the Life Insurance Corporation. With the result, prices, especially of medium and long-dated issues, were marked down sharply. 3 per cent 1986 Conversion Loan opened lower at Rs 72.60 and, after improving to Rs 73.25, receded again at the close to Rs 72.95.

Despite weakness in giltedged, Bank shares depicted a steady tendency with business generally remaining on small lines. Punjab National changed hands at Rs 54.50 to Rs 55.00 and United Commercial at Rs 53.50 to Rs 53.75.

The growing anxiety with regard to the raw jute supply position and the renewed firmness of raw material prices had an adverse effect on the Jute section where transactions were only few. The only exception to the general trend was National which met with renewed speculative buying upto Rs 19.90 from Rs 19.40. Howrah moved up to Rs 14.50 from Rs 13.25 in sympathy with the general trend of the market, while Nuddea were nearly maintained at Rs 31.00. Delta were, however, on offer at as low as Rs 115 against Rs 123.50; Kamarhatty at Rs 67.50 against Rs 88; Lansdowne at Rs 59 against Rs 80 and Standard at Rs 59 against Rs 61.

Although Coal shares continued to remain dull in view of the anxiety on the part of operators with regard to the Coal Price Committee's decision, selected ones scored some gains at the close following the support lent at the recent low levels. Prominent were Bengal having improved to Rs 219 from a low of Rs 203; East Indian to Rs 22.37 from Rs 20.27; Equitable to Rs 21.00 from Rs 20.12; Central India to Rs 6.09 from Rs 5.87 and Western Bengal to Rs 5.43 to Rs 5.06.

Tea shares, which remained neglected so far, came in for selective support, being influenced by better auction results obtained during this week. Turnover, however, continued to be restricted as operators were still entertaining fears with regard to over-production. Brooke Bond improved to Rs 18.75 from a low of Rs 17.12; Bishnauth to Rs 19.12 from Rs 18.62; Dhelakhat to Rs 21.37 from Rs 21.25; Jayshree to 9.00 from Rs 8.44 and Patrakola to Rs 136 from Rs 130. Hasimara, after being marked down to Rs 18.37 from Rs 19.25, recovered at the close to Rs 19.56. Killcott were offered further lower at Rs 16.25 from Rs 17.25.

Textile scrips were oppressed by the prospects of the dividends

(Continued on page 1182)

THE CALCUTTA STEAM NAVIGATION COMPANY, LIMITED

Notice is hereby given that the 149th Annual General Meeting of the members of the above-named Company will be held at the Registered Office, No. 5, Fairlie Place, Calcutta, on Tuesday, the 23rd July, 1957, at 11-30 A.M. to transact the following business:—

1. To consider and adopt the Profit & Loss Account for the half year ended 31st December, 1956, together with the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors.
2. To declare a dividend (The Directors recommend the payment of a dividend @ 65 Naye Paise per share or 6½ per cent).
3. To appoint Directors.
4. To appoint Auditors and to fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit, to pass, with or without modification the following resolutions namely:—

5. (As an Ordinary Resolution)—"That as from the 1st day of April, 1956, Hoare Miller & Co., Limited, the Managing Agents of the Company shall hold such office upon the terms and subject to the conditions contained in the draft agreement submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement with Hoare Miller & Co. Ltd., in terms of the said draft which has been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."
6. (As a Special Resolution)—"That the regulation contained in the printed document submitted to this meeting and for the purposes of identification subscribed by the Chairman thereof be and are hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing articles thereof."
7. (As an Ordinary Resolution)—"That as provided in Clause 9 of the Agreement referred to in Article 133 of the Articles of Association of the Company, Hoare Miller & Co., Ltd., and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and treasurers, manager, agent, secretary or selling or buying agent of any firm, body, corporate, or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable".
8. (As a Special Resolution)—"That as provided in Clause 12 of the Agreement referred to in Article 133 of the Articles of Association of the Company, Hoare Miller & Co., Limited be and they are hereby authorised to provide the Company with suitable office accommodation at Calcutta and also, if so required by the Company, at any other place or places in which Hoare Miller & Co., Limited may be able to provide such accommodation and the Company shall pay to the Managing Agents such portion of the rent and outgoings payable by Hoare Miller & Co., Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided".

NOTICE IS FURTHER GIVEN THAT THE SHARE TRANSFER BOOKS OF THE COMPANY WILL BE CLOSED FROM 10TH JULY TO 23RD JULY, 1957, BOTH DAYS INCLUSIVE.

By Order of the Board,
HOARE MILLER & CO., LTD.,
Managing Agents.

5, Fairlie Place,
Calcutta,
Dated 14-6-1957.

Note:—A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

UK's SHARE IN STERLING AREA DOLLAR EARNINGS

(Continued from page 1146)

£519,000,000; those of other sterling countries showed little change. Thus, Britain took the lead.

The relatively disappointing performance of exports from the other sterling area countries to the dollar area was due partly to price falls in copper, rubber and cocoa. Thus, cocoa earnings only rose slightly, although the quantity sold to the dollar countries increased by 19 per cent. Again, rubber and copper earnings fell proportionately more than the quantity sold. Despite a reduction in earnings from wool sales to the dollar area, total earnings from wool increased, as did also the total earnings from exports of copper, lead, dairy products, wheat, tea and coffee. But only in the relatively unimportant case of lead was this general improvement noticeable in the sphere of dollar trade.

On the other hand, Britain was able to increase its dollar exports very considerably, in terms both of value and quantity. The increase—except for whisky, which is classified as a food—was almost entirely concentrated on exports of manufactured goods, which rose during 1956 by £104,000,000.

The increase was very widely spread: even textiles (mainly woollen textiles) did well, with a rise of nearly £3,000,000. The bulk of it, of course, consisted of engineering products. Shipments of all kinds of machinery rose strongly, and there was a sharp jump in deliveries of aircraft to the United States market and of ships to Canada, and to the dollar countries—Liberia and Panama—which brandish flags of convenience. On top of this, there was a good increase in the export of steel manufactures to Canada, a general improvement in the export of nonferrous metal goods, and a widespread increase (amounting to £36,000,000 over the year) in exports of miscellaneous manufactured goods.

In short, Britain's dollar exports are still booming, and the United States is once again Britain's largest single export market—a position which it last held in 1895.

INDEX NUMBER OF WHOLESALE PRICES IN INDIA.

Review for the week ended May 25, 1957.

The official wholesale price index (with the year ended August 1939 as 100) advanced further by 0.6 per cent to 437.3 during the week ended May 25, 1957, as compared with 434.7 (revised) for the earlier week. The index was higher by 3.3 and 11.8 per cent respectively when compared with the corresponding week of the previous month and that of a year ago. The average for May, 1957, worked out to 430.9 as compared with 422.1 for April, 1957, and 390.3 for May, 1956.

During the week under review, the index for 'Food Articles' advanced by 1.7 per cent to 430.9 due to the re-appearance of Sugar at a higher rate supported by an increase in the prices of Gram (+3%) and Wheat (+2%) both at Hapur notwithstanding a fall in the prices of Coffee Native Flat at Mangalore (—8%) and Rice in Calcutta and Wheat at Amritsar (—1% each).

Lower prices of Manganese Ore (average export price) (—8%), Linseed and Raw Hides (—2% each) and Raw Jute and Rapeseed (—1% each) brought down the index for 'Industrial Raw Materials' by 0.3 per cent to 539.2 although the prices of Castorseed Gingellyseed and Copra (+3% each), Lac (+2%) and Groundnuts (+1%) witnessed advances.

The index for 'Semi-Manufactures' went up by 0.6 per cent to 412.3. Items which showed noticeable variations during the week were: Kerosene Oil (+10%), Zinc (+7%), Castor Oil in Madras (+6%), Coconut Oil at Cochin and Mustard Oil in Calcutta (+3% each), Groundnut Oil in Bombay (+2%), Linseed Oil and Groundnut cake (—3% each) and Castor Oil in Calcutta (—2%).

An increase in the price of Jute Manufactures (+1%) raised the index for 'Manufactures' from 390.4 (revised) to 390.7 during the week under review; the price of Glass (—1%) was, however, marked down.

The index for the 'Miscellaneous' group moved down by 0.2 per cent to 571.6 (estimated) as compared with 572.9 (estimated) for the earlier week as a result of a fall in the price of Turmeric in Calcutta (—9%) despite an increase in the prices of Betelnuts and Vanaspati (Dalda) (+3% each) and Cashewnuts at Quilon (+1%).

Index Number of Wholesale Prices by Group and Sub-group of Commodities.
(Base: Year Ended August 1939=100).

MOVEMENT FOR COMMODITY PRICES.
Review for April, 1957.

Wholesale prices as measured by the official index (with the year ended August, 1939, as 100) advanced by 0.2 per cent to 422.1 during April, 1957, as compared with 421.3 (revised) for March, 1957. The index was higher by 7.9 per cent when compared with 391.3 for April, 1956.

During the month under review, 'Food Articles' moved up by 1.4 per cent to 408.3, while 'Industrial Raw Materials' declined by 0.7 per cent to 514.7, 'Semi-Manufactures' by 0.8 per cent to 400.0 and 'Miscellaneous' by 0.4 per cent to 567.1. The index for 'Manufactures', however, remained almost unchanged at 384.3.

FOR THE INVESTOR

(Continued from page 1143)

and wages are also higher at Rs 3.43 lakhs. The larger earnings have, however, resulted in a balance of profit amounting to Rs 47,197 as against nil last year when there was a loss of Rs 22,622. After transferring Rs 10,000 to Statutory Reserve Fund, there is left a balance of Rs 37,196-7-3 at credit of Profit and Loss Account. This together with Rs 6,639 brought forward from the previous year, making a total of Rs 43,836, has been carried forward to the next year's accounts.

£ R$

Details of the Rights issue of the Dunlop Rubber Company (India) Limited are contained in a circular letter issued to the shareholders. The shareholders are given the right to renounce all or any part of the shares in favour of any other person. The new shares will rank in all respects pari passu with the existing shares except that they will not participate in the interim dividend for the year 1957, declared on May 16, 1957. It is also decided that any new shares not taken up by the Ordinary shareholders or their renouncees will be available for subscription by ordinary shareholders who take up their "rights" and also apply for additional shares. The right to apply for additional shares cannot be renounced by shareholders and, in the event of applications for additional shares exceeding the number of shares available, allotment will be made in such manner as the directors may determine.

Dalmia Cement (Bharat) Limited has decided to convert the 10 lakh Deferred shares of Re 1 each into one lakh Ordinary shares of Rs 10 each. It is proposed to convert the Deferred shares by the issue in lieu of every four Deferred shares of Re 1 each for one Ordinary share of Rs 10, subject to the approval of the Controller of Capital Issues.

Vickers Limited, London, has decided to start a new company in India in collaboration with the Associated Cement Companies Limited, and Babcox and Wilcox. A new factory will be constructed in West Bengal. It is anticipated that, in about 1959/60, cement-making machinery, boilers, pressure vessels and other heavy engineering products, will be manufactured.

It is understood that the threat of closure by Cawnpore Textile Mills has been averted for another six weeks. The directors of the British India Corporation Limited have decided to utilise the intervening period for exploring the possibility of securing State assistance for running the concern and avoiding further losses.

On the Madras Stock Exchange, Planting shares have taken a slight turn for the better. With the Madras State Budget due to be presented at the end of the month, anticipations are that there would be additional imposts on Planting companies. It is, therefore, likely that the minimum prices will be continued till the end of the month when the situation will be reviewed in the light of fresh taxation and its effect on share values.

£ R$

Investment Briefs

Walford Transport has maintained the dividends at 14 and 12 per cent on the Ordinary and Preferred Ordinary shares respectively for 1956.

Rajnagar Tea has recommended a dividend of 10 per cent for 1956 as against nil in 1955.

In Madras, Kirlampudi Sugar has passed over the dividend again for the year ended 30-6-1956.

Travancore Chemical & Manufacturing Company has halved the dividend to 10 per cent for the year ended 31-3-1957.

Highland Produce Tea has maintained the dividend at 20 per cent for 1956.

✱

STOCK EXCHANGES

(Continued from page 1170)

being lowered, while the prospective buyers were unable to derive any comfort from the reported improvement in the cloth market. The only two bright spots were Kesoram and New Victoria being enquired upto Rs 13.38 and Rs 1.75 from Rs 12.50 and Rs 1.53 respectively. Bowreah lost another Rs 2 at Rs 105.

Except Champarun which were pushed up to Rs 22.12 from Rs 16.62 due to cornering activity, Sugar shares ruled generally quiet. Belsund changed hands at Rs 10.31 to Rs 10.50, while SKG improved to Rs 10.00 from Rs 9.50.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons. There was a good deal of buying in this scrip, resulting in a marked recovery from the recent low levels. Against the week-end closing of Rs 18.36, Indian Irons opened higher at Rs 18.63 and advanced further to Rs 19.57, to recede again towards the close to Rs 18.45 on profit-taking. In sympathy, new shares were taken upto Rs 18.32 from Rs 17.12.

Among other Engineering scrips, TEXMACO were pushed up at one time to Rs 17.35 from Rs 16.20; Indian Galvanizing to Rs 19.50 from Rs 19.25 and Marshalls to Rs 4.90 from Rs 4.72, to ease off at the close to Rs 17.15; Rs 19.31 and Rs 4.75 respectively. G. K. Williams hardened to Rs 27.06 from Rs 25.94, while Jessop recovered further to Rs 23.68 from Rs 22.12 and Richardson to Rs 13.75 from Rs 12.87. Kumardhubi were, however, quiet at Rs 8.56 against Rs 8.69.

Miscellaneous issues shared the general trend of the market although enquiry was selective. Scrips, which showed a substantial recovery from the recent low levels, were Indian Copper having buyers upto Rs 3.63 from Rs 3.30; Dunlop Rubber upto Rs 20.31 from Rs 17.25; National Carbon upto Rs 24.12 from Rs 22.50; Rohtas upto Rs 17.44 from Rs 16.50; India Steamship upto Rs 10.15 from Rs 9.75 and Orient Paper upto Rs 25.30 from Rs 22.30. Price movements in other scrips were as follows:—

INDUSTRIAL INFORMATION

(Continued from page 1154)

ADMINISTRATION OF COMPANIES ACT IN NORTHERN REGION

Twentyfour Private Companies with an authorised capital of Rs 70,95,000 were incorporated in the Northern Region in April 1957. During this period, no Public Company was registered in the Northern Region.

Forty Private Companies increased their authorised capital by Rs. 7,34,000, subscribed capital by Rs. 28,50,215, and paid up capital by Rs 15,21,660. During the same period, seventeen Public Companies increased their authorised capital by Rs 16,50,000, subscribed capital by Rs 19,08,484 and paid up capital by Rs 10,97,733.

Eight companies—one Public and seven Private—went into liquidation in April 1957. The names of 15 Public and 40 Private Companies were struck off the Register under Section 560 of the Companies Act, 1956.

Prosecution was launched against 6 Public and 4 Private Companies during the month for default in filing returns with the Registrars. Of the cases pending, court decisions were taken in respect of six Public and three Private Companies.

AN ENCYCLOPAEDIA OF INVESTMENT

CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1957

MORE COMPREHENSIVE THAN OTHERS

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.

The information given about each company relates to its date of registration, nature of business carried on, managing agents and their remuneration, Directors and their share qualification, details of capital and shares, capital history, share registration fee, name of Auditors, period to which accounts close, date of meetings, summary balance sheet, and progress statement containing provisions for taxation, depreciation, allocation to Reserves, net profit, amount carried forward, dividends, and highest and lowest prices etc. for ten periods. Also contains information of general interest to investors and particulars relating to Government and Public Bodies Loans.

Price Rs. 12.50. Postage Rs. 2.75. Add 50 Naye Paise to outstation cheques.

Instructing here, supervising there, checking everywhere — the engineer needs a Royal Enfield Motor-cycle to travel quickly between sites and office.

For men who must be on the spot
—there's nothing like a
ROYAL ENFIELD ENSIGN 150

Large wheels help you go fast, safe. Less wear and tear because of fewer revolutions per mile

Powerful head lamp attached to the front fork floods light along the way you turn. Makes night riding safe

TRAVEL AROUND on your own ROYAL ENFIELD Motor-cycle! It's *the* way to save time—no delays waiting for crowded trains and buses, no fear of missed appointments. You save money, too ... ROYAL ENFIELD ENSIGN 150 gives you as much as 130 miles to the gallon!

And look at all the advantages a real, full-sized motor-cycle brings you: greater sturdiness, smoother pick-up, better shock absorption, higher road clearance, larger wheels for better stability, better traction, more efficient braking ... and a far, far higher resale value!

You'll agree that for a man who must go places, there's nothing like a ROYAL ENFIELD ENSIGN 150.

ROYAL ENFIELD takes fatigue out of travel

RE/3

For the Investor

Progressive Prosperity?

Investment Gossip:

ALMOST exactly six weeks to the day after Mr T. T. Krishnamachari's Budget for 1957-58 induced a flood of selling orders on the Stock Exchanges, the status quo ante in prices has been achieved. A comparison of preBudget, post-Budget and present quotations, which I publish at the end of this Gossip in the form of a table, clearly indicates this fact.

It has been a difficult period, this past month and a half. On every side, you heard that the debacle was not anything to wonder at; and, on every side, the dire prophecy was repeated that rockbottom was still to be touched.

Mind you, it was not as if the Budget proposals had been confidently expected to be much less severe than they were. The fact is, that in anticipation of a 'tax' Budget share prices had already been 'adjusted' beforehand. In the immediate days before the Budget, passing business was small; prudence demanded the squaring of commitments; and such, indeed, was the position.

The Stock Exchange hawa even in the preBudget days was, therefore conducive to bear trends. All that happened when TTK made his proposals was that the hawa was construed by some as confirmedly bearish. Suiting action to the thought, the selling pressure thus resulting immediately brought down prices.

Today, suddenly, the hawa is cheerful. And yet, the intrinsic considerations on which share movements should be based obtained in the preBudget era to the same extent as they obtain today. These considerations are, briefly, that industries are doing surpassing well, sales are remarkably good, profit margins are satisfactorily high, dividends are reasonably better. But Stock Exchanges did not, or were not allowed to, respond to these influences.

The question For the Investor to answer is whether, thanks to the improved investment climate, he can set proper store by the real considerations and whether TTK's objective of progressive prosperity is in train of being achieved.

I will not go out on a limb, and say that the way has been paved for a sustained ascendant trend in Stock Exchange prices. For, Stock Exchange hawa is an intangible thing. Even Wall Street is known to react sharply to such news as Mr Eisenhower's stomach upset. The Stock Exchange hawa is delicate and fragile; confidence can be destroyed by one unguarded ministerial statement.

If we are to interpret recent trends aright, the conclusion that we must reach is that the Stock Exchange doldrums did not have the tax proposals as the prime motivating cause. If that were so, then, there would be no justification for the improved sentiment of the present time, when quotations have recovered to their pre-Budget levels. It was not the fear of high taxes—after all, the taxes are a reality—but confidence sapping uncertainty which was responsible for share prices sliding back.

The uncertainty, of course, lay in the apprehension that the 1957-58 tax proposals would be the forerunner of even grimmer Budgets to come. How much more would the Finance Minister seek by way of new taxes? What were the further sacrifices that the people would be asked to undergo? The uncertainty meant that the worst had to be feared; and the view on which Stock Exchange transactions were based was that the end of new tax proposals was still not in sight.

It would appear that TTK has read the position correctly. In his Calcutta and Bombay confabulations, he did not yield on fundamentals; there was no prospect of any taxes being repealed, save those which did not form part of his integrated tax structure.

Then, he went on to suggest that Government did not have it in mind to raise new taxes for the rest of the Plan period, but that they would seek to complete their requirements of resources by way of domestic savings, borrowings and foreign aid. He gave the definite indication that we could expect a holiday or respite (except for minor adjustments) from new taxes for the rest of the Plan period; and he added, significantly, that Government would also, doubtless, be thinking in terms of providing incentive and encouragement for the private sector to develop.

How such encouragement and incentive can be provided, is a question that requires careful study. There is bound to be a difference of opinion as to the lengths to which incentive should go. But, on one thing, there can be no doubt. TTK's clarifications have vitally contributed to the revolutionary improvement in the Stock Exchange hawa; and TTK has all too clearly himself taken the first step in creating the conditions in which the future of the Stock Exchanges could be one of progressive prosperity.

If the investor agrees with the view that TTK would display his usual drive and initiative to ensure this progressive prosperity, then, this is the time to buy bluechips at favourable prices.

Investment Notes:

The shares of Indian Copper, which had been gradually pushed up during the past few days on expectation of a higher dividend, have suffered a sharp setback following the disappointment over the final dividend announcement. The shares, after being done upto Rs 3.70, receded to Rs 3.30 on Monday following the announcement of a final dividend of only 17.7777 nP per unit of stock, i.e. 13 1/3 per cent. With the interim of 6 2/3 per cent, the total for 1956 amounts to 20 per cent as against 45 per cent (including a bonus of 25 per cent) in the previous year.

According to a short report issued by the company, the net profit for the year is lower at £272,157 against £416,758 for the previous year. In respect of allocations, Depreciation is maintained at £175,000, while General Reserve is lower at £175,000 against £200,000. Taxation provision is raised to £885,027 from £683,046. The balance available is only £382,240 against £528,475. In this connection, it may be recalled that the company increased its capital last year by the issue of bonus shares in the ratio of 1:2 through the capitalisation of Reserves. With the result, the present dividend of 20 per cent is on the increased capital. This may probably be the reason that the shares have subsequently improved to Rs 3.40.

It is learnt that the directors of the British India Corporation have proposed to sell, lease or otherwise dispose of the Cawnpore Cotton Mills, the working of which, in recent years, has not been remunerative. It is not yet known whether the Corporation has been successful to find out someone to purchase the mill or take it over on a lease. In this connection, a meeting has been convened on July 10. Meanwhile, shares are now being offered at as low as Rs 5.44.

On the Ahmedabad Stock Exchange, the shares of the Arvind Mills have shot up to Rs 1,205 from Rs 1,140, while those of Ashok have recorded a rise of 90 points to Rs 1,000. It is understood that Arvind and Raipur have proposed to issue bonus shares in the ratio of 1:2; Ashok 2:3 and Arun 1:3, all subject to the sanction of the Controller of Capital Issues.

Rajalakshmi Mills, Coimbatore, have obtained the sanction from the Government of India to increase the authorised capital from Rs 18 lakhs to Rs 48 lakhs by the issue of 60,000 equity shares of Rs 50 each, at par, in the proportion of 2:1.

£ R$

Investment Briefs:

Cochin Malabar Estates, Madras, have maintained the dividend at 15 per cent for the year end 28-2-1957.

Lakshmi Mills, Coimbatore, have recommended a dividend of 20 per cent on the increased capital as against 25 per cent on the original capital.

Ajit Mills, Ahmedabad, have declared a dividend of Rs 28 plus a bonus of Rs 4 per share for 1956.

HIGHLIGHTS

What did the Madras Government's New Loan in 1952 prove?

Apparently, that State loan targets could be stepped up considerably.

Is this a correct reading?

Not quite, because the only basic fact revealed was that there was a sufficiency of resources to be mopped up in the mofussil.

But these could surely be absorbed by the medium of State Government loans?

The answer, again, is no: mofussil resources are outside of the money market proper, and the approach has to be different.

Would ths solution lie in offering a higher interest?

Yes, mofussil resources would be attracted by an increased interest, but Authority could not afford to offer market loans at higher rates of interest.

Surely a higher interest offered on State loans is the orthodox thing to do, to attract larger subscriptions?

No, this is faulty reasoning. An ascending rates of interest on successive New Loans induces investor resistance.

Why is this so?

Because the capital depreciation on existing loans more than offsets the higher current income in the form of interest.

How, then, are rural resources to be tapped?

By the technique of small savings.

Could higher interest be offered on these?

Yes, because the structure of rates in the mofussil money market is higher than in the money market proper.

In a word, State Governments should seek their development finance through small savings rather than market loans?

Exactly. This is the point made out in this week's World of Finance article.

Tea Results

Balance-Sheet Reviews:

THREE Tea companies — Rajnagar, Balanoor and Devon — have presented their latest reports and accounts and the working results are satisfactory.

Although the crop reported by Rajnagar Tea Company is higher at 5,127 maunds against 4,760 maunds, the average price realised for tea is only Rs 1.77 per pound against Rs 1.92 in the previous year. This is reflected in sales, which are lower at Rs 6.12 lakhs against Rs 8.99 lakhs. Net profit, after Taxation and Depreciation, amounts to only Rs 1,874 against as much as Rs 2.09 lakhs. The Depreciation amount is lowered from Rs 10,598 to Rs 5,475 and Taxation from Rs 65,834 to Rs 41,000. The directors have, however, recommended a dividend of 10 per cent against nil in the previous year. The estimate for 1957 provides for a crop of 4,800 maunds.

A lower Coffee crop has resulted in a decline in earnings of the Balafoor Tea and Rubber Company Limited for the year ended 31st March, 1957. The tea crop realised is slightly higher at 429,554 pounds as against 428,700 pounds in the previous year, while coffee crop is 1,578 cwts against 2,882½ cwts and rubber 38,555 pounds against 42,069 pounds. The net profit, before providing for Taxation and Depreciation, amounts to only Rs 4.12 lakhs against Rs 5.2 lakhs. In respect of allocations, the Depreciation amount is raised to Rs 44,099 from Rs 33,125. As the Agricultural Income-Tax for two seasons, 1954-55 and 1955-56, has to be paid, the provision on this account is as much as Rs 1.5 lakhs (nil). There was a transfer of Rs 2 lakhs to General Reserve on the last occasion. A dividend of 17½ per cent is recommended on the increased ordinary capital; and this works out to 23-1/3 per cent on the old capital against 25 per cent for 1955/56.

Despite a lower coffee crop, the Devon Tea and Produce Company has been able to report satisfactory results for the year ended 31st March, 1957. The outturn of tea is slightly higher at 278,379 pounds against 275,623 pounds and coffee 598 cwts against 1,229½ cwts. The net profit, before providing for Taxation and Depreciation, is higher at Rs 2.29 lakhs against Rs 2.25 lakhs in the previous year. After setting apart a sum of Rs 90,000 for Taxation, the directors have raised the Depreciation amount to Rs 26,107 from Rs 23,371. There is no transfer to General Reserve against Rs 1 lakh. The directors have recommended a dividend of 17½ per cent on the increased ordinary capital. This works out to 26¼ per cent against 25 per cent for the previous year.

£R$

Walford Transport

Thanks to a substantial rise in sales from Rs 1.2 crores to Rs 1.99 crores, the Walford Transport Limited has reported increased earnings for the year ended 31st December, 1956. Net profit, after Taxation and Depreciation, is, however, only slightly higher at Rs 2.75 lakhs against Rs 2.43 lakhs in the previous year, mainly due to low margin and competition.

In respect of allocations, the Depreciation amount is raised to Rs 74,808 from Rs 59,839 and Taxation to as much as Rs 5.04 lakhs from only Rs 1.86 lakhs. Contingency Reserve is maintained at Rs 1 lakh. Dividends, both on the Ordinary and Preferred Ordinary shares, are maintained at 14 and 12 per cent respectively.

According to the directors' report, profit ratio will further get reduced during the current year due to restrictions imposed by the Government on dealer commission. Moreover, Mahindra & Mahindra Limited is making arrangements for the sale of jeeps in Bihar. This territory is, therefore, lost to the company. Again production of Desoto Franchise, which was made till the middle of 1956, has been discontinued.

£R$

Port Shipping

Thanks to the increase in earnings from imports through the Calcutta Port, freight income of the Port Shipping Company has been as much as Rs 39.08 lakhs for the year ended 31st December, 1956 as against only Rs 34.32 lakhs in the previous year. The net profit, after Taxation and Depreciation, is higher at Rs 2.89 lakhs against Rs 1.75 lakhs. In respect of allocations, the Depreciation amount is raised to Rs 1.23 lakhs from Rs 62,978 and Taxation to Rs 2.65 lakhs from Rs 2.14 lakhs. In addition, a sum of Rs 58,745 has been set apart for Fleet Depreciation Reserve. The dividend is, however, maintained at Rs 1.50 per share.

The Import Plan

Indian Finance
Established 1928
June 29, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

AS the Planning Commission have stated in the Second Plan, the accent of policy must be on "economising to the utmost in imports". At the same time, the planners could not afford to err on the side of underestimates in their projection of import needs. Rather, it may have devolved upon them to be more than liberal in their assessment of import needs; for, the danger inherent in an underestimate was that, when the import bill turned out to be higher than anticipated, the inadequacy of foreign exchange would be more keenly felt, because there would have been neither sufficient forewarning nor ample forearming. Generally, it would appear that, where ascertainable with any degree of precision, the Planning Commission have provided for the anticipated extent of expenditure. Where, however, such precision in assessment was not possible, they have been largely content to base their projections on the actuals of the immediate past that served as data for their estimates. The first year of the Second Plan, with its particular tightness in foreign exchange, has brought into clearer focus what might be called the Import Plan. It is now possible, consequently, to make some revisions of the Second Plan figures and to formulate an import policy that will leave greater room for manoeuvring and flexibility. It is in this light that we propose this week to complement the Leading Article in the last issue on the Export Plan with a study of the Import Plan.

We should point out that reappraisal of exports was a task which could be approached from an essentially constructive viewpoint. Where, for particular reasons, there was a reasonable possibility of improving our exports, we could make our suggestions known in that behalf by pointing to fairly unambiguous data on more encouraging export prospects. At first glance, it would appear that a reappraisal of the Import Plan cannot be constructive and that, indeed, it would need to be negative in its approach by merely offering suggestions as to the heads under which—in view of the shortage of foreign exchange—cuts in targets could be made. But this is to disregard the thesis that the Planning Commission could not possibly have been guilty of flagrant underestimates. As we have already stated, it is not at all improbable that the planners should actually have provided more liberally than was necessary. Secondly, it requires a constructive attitude to recognise where, by dint of additional indigenous production, import requirements have been reduced. Thirdly, there is the impact of socio-economic measures upon the Import Plan. Lastly, it must also be borne in mind that, in the revised Import Plan, sufficient room must be left for flexibility. It is from these four standpoints that this study has been undertaken.

The Import Plan—which is published elsewhere on this page—envisaged in the Second Plan puts down the annual average of imports at Rs 868 crores. This was some Rs 213 crores higher than the actuals for 1955. The bulk of the increase was accountable by a higher provision for machinery and vehicles, iron and steel, and other metals. The Planning Commission's Second Plan annual average needs, at the outset, to be compared with the actuals for 1956. The first thing to note is that machinery and vehicles turned out to be Rs 81 crores lower in 1956 at Rs 219 crores. On the other hand, the import of iron and steel at Rs 124 crores absorbed Rs 38 crores more than the annual average. Grains, pulses and flour were placed at only Rs 4 crores against the Planning Commission's figure of Rs 48 crores. Imports of sugar were Rs 1 crore against Rs 7 crores. Chemicals, drugs and medicines exceeded the annual average by Rs 10 crores; paper, pasteboard and stationery by Rs 5 crores; and cutlery, hardware and other consumer goods by Rs 18 crores. The net result is that 1956 imports are shown to be Rs 790 crores against the annual average of Rs 868 crores.

It is clear, of course, that the tempo of imports will be higher in 1957 and 1958, and that, thereafter, the import figure will decline. As a matter of fact, the Planning Commission's estimate of imports in 1960-61 is Rs 786 crores, or Rs 82 crores lower than the annual average. The 1956 actuals, thus, point to two significant facts. The first fact is that pressure on foreign exchange from imports will be more greatly felt in 1957 and 1958. The second fact is that many of the Planning Commission's figures need to be revised.

We may now proceed to the reappraisal of figures under specific heads. The most important imports deal with machinery and vehicles, which account for more than one third of total imports during the Plan period. But, since the publication of the Second Plan, there has been a revision in the total cost of the Plan, which is now put down Rs 400 crores higher at Rs 5200 crores. We should think that the bulk of the increase in the cost of the Plan will relate to foreign exchange expenditure and will, consequently, be reflected in the Import Plan. The first revision we suggest, therefore, is that the annual average for machinery and vehicles should be raised to Rs 360 crores. While the arrangements for purchase of machinery may increasingly be on credit terms, the fact will nevertheless remain that the value of machinery and vehicles imported will go up by Rs 300 crores over the Plan period to Rs 1800 crores.

Imports of iron and steel were estimated to be for 7 million tons during the Second Plan. Imports in 1956 amounted to over 1.5 million tons. As a result, the import bill for iron and steel was placed Rs 38 crores higher than the annual average. Although the Planning Commission anticipated that the bulk of iron and steel imports would be completed within the first four years of the Plan, it is clear that the 1956 imports are somewhat higher than the Planning Commission bargained for. It is true, the tightness in the foreign exchange position—which we feel to be shortterm—has influenced Government drastically to restrict steel imports since the beginning of 1957. But we think it is inevitable that the demand for steel in terms of the developing economy will necessitate, in the near future, a revival of imports on the 1956 scale. Allowing for the short period during 1957 when steel imports have been lower, we feel that the annual average for steel should be around Rs 100 crores.

In the case of other metals, we do not think that the Planning Commission's figure of Rs 44 crores needs to be changed.

However, we are disposed to believe that caution has induced a fairly liberal estimate in the case of grains, pulses and flour. While the actuals for 1956 do not include some Government transactions, the figure of Rs 4 crores is a far cry from the annual average of Rs 48 crores estimated by the Planning Commission. The Planning Commission stressed that the Government's stocks were low and that these needed to be "replenished early." This replenishment has largely been accomplished by the purchase of foodgrains from America under the Indo-USA Surplus Commodities Agreement. There is also the prospect that, at a pinch, we should be successful in negotiating similar agreements with America. Secondly, a new factor has emerged in the reiterated emphasis on increasing agricultural production. Thus, except for what we would term emergency requirements and imports of foodgrains, the import bill for grains, pulses and flour may turn out to be much smaller than suggested by the Planning Commission. Subject to the Flexibility Reserve, which is described later in the course of this article, we would put down grains, pulses and flour at an annual average of Rs 6 crores.

The disappearance of sugar from the Import Plan follows logically from the inclusion of sugar in the Export Plan. It is reasonable to suppose that, far from imports being needed,

sugar will turn out to be an exportable commodity during the Second Plan.

We do not suggest any change under oils, dyes and colours and paper, pasteboard and stationery. The actuals for 1956 and the planned expansion in internal production both suggest that the Planning Commission's figures will turn out to be largely correct.

It may be recalled that Government recently indicated their view that chemicals, drugs and medicines need not be considered as essential imports. Thus, there has already been the hint that some reduction in such imports is in the offing. Moreover, it would appear that indigenous production has been improving at a satisfactory rate. It follows that the import bill in this regard should be cut down to Rs 125 crores during the Second Plan period against the Planning Commission's estimate of Rs 160 crores.

The revision in cutlery, hardware and other consumer goods is nominal. It is inescapable that articles under this head should bear the brunt of import restrictions. However, the need to avoid inflationary tendencies in such consumer goods will require the provision to be more or less unchanged at Rs 30 crores annually.

With respect to raw cotton, we would refer to our statement last week that "the research being done in this country should enable not only reduction in our import needs of long staple cotton, but also an augmentation of the surplus of short staple varieties for export". The improvement in output of cotton textiles has not required an increase in the import of raw cotton. Since we anticipate that, by the end of the Second Plan, some substantial improvement will be recorded in Indian production of longer staples, we have put down the import bill for raw cotton at Rs 70 crores less at Rs 200 crores.

With regard to another basic raw material, raw jute, the authorities have at long last come to share the Indian Finance view that the target for production must be nothing less than self sufficiency. We are hopeful that India's performance since 1949 is confirmatory of India's ability to attain such self sufficiency. So, in anticipation of much higher production of raw jute, we envisage the Indian reliance on Pakistani jute to be placed at Rs 30 crores rather than Rs 90 crores over the Plan period as estimated by the Planning Commission.

Finally, all other imports are estimated by the Planning Commission at Rs 140 crores annually. Since then, however, drastic import restrictions have been imposed. These restrictions are likely to be reflected mostly on the category of other imports. We, therefore, think that the figure under this head can safely be reduced to Rs 500 crores over the Plan period against Rs 700 crores.

Summing up, it will be found that Indian Finance's annual average of imports is Rs 821 crores against the Planning Commission's figure of Rs 868 crores. Over the Plan period, the total saving is Rs 235 crores. But this should not be taken to mean either that we envisage the import bill to be Rs 235 crores less or that we suggest that the revised budgeting of the Import Plan should be for an amount not exceeding Rs 4105 crores. On the contrary, it is our view that the anticipated import bill should be at the Planning Commission's estimate of Rs 4340 crores. We think that the surplus of Rs 235 crores needs to be kept apart as a Flexibility Reserve. For, an essential tenet of our Import Plan is that the figures under the various heads are kept at the lowest possible under normal conditions.

But we have to provide for the possibility that there will be periods when conditions will be far from normal. For instance, crop failure is not to be ruled out; and this may entail much larger imports of foodgrains than we have provided for. Taking another instance, it is quite likely that inflationary tendencies should emerge in respect of particular consumer commodities. In both cases, expeditious imports will obviously be called for. In our view, the only manner in which provision can be made for an emergency is to include in the Import Plan a new head to be styled as the Flexibility Reserve; and, in planned economies, provision has to be made even for emergencies. To this reserve would be allocated, initially, the Rs 235 crores that we have shown to be the surplus over the Second Plan estimates. If, as a result of fortunate circumstances, other heads of imports should in the future reveal surpluses, these also could be transferred to the Flexibility Reserve.

While it is not the scope of this article to show whether or not an import bill of this magnitude can be met, we would like to draw attention to the concluding paragraphs of the last week's Leading Article. As far as the Import Plan is concerned, the estimates that we have given appear to us to be more realistic and as taking account of the developments that have taken place in the country since the formulation of the Second Plan. However, as we have seen, the setting up of a Flexibility Reserve will mean that the import bill must not be expected to be lower. But, as we tried to prove last week, the Foreign Exchange Plan provides for expenditure being incurred on capital purchases from abroad on the higher scale envisaged in Indian Finance's Import Plan.

*

Tea Prospects

The tea trade awaits each year, with keen interest and pleasurable anticipation, the analysis published by J. Thomas & Co Private Limited. The interest lies in the fact that the Report is concise and comprehnsive; and no better summation of the crop year just past is forthcoming from any other quarter. The anticipation consists in the fact that present trends are ably projected to render possible a most reliable guide for the future. In the current year, the Thomas Annual Report has taken on a particular importance, because there is a general feeling that Tea is at the crossroads. The International Tea Agreement is yet to be ratified, and the countrywise quotas are under dispute; the balance between overall supply and demand seems to be in danger of favouring the consumer at the cost of the industry; and there is even some apprehension that Tea's role as an exchange earner for India will become a diminished one.

These apprehensions are laid to rest by the Report. Indian production in 1956 was more or less on the same scale as in the previous year though, at one stage, it appeared as if the Indian crop was destined to be much bigger. The Calcutta Tea Regulation Committee took the expeditious step of recommending that plucking should cease three to four weeks earlier. This selfdiscipline, combined with the greater demand for tea arising from the closure of the Suez Canal, enabled prices to improve.

With Britain accounting for a "heavy offtake", India benefited by an increase of 110 million lbs in shipments to this most important customer. Similarly, shipments to the other outmarkets also rose; and, at 127.6 million lbs, these constituted "a record in recent years." Moreover, internal consumption has also been showing strident evidence of improving, with the estimate of absorption placed at 210 million lbs.

Nevertheless, the Thomas Report emphasises the importance of the International Tea Agreement, and hopes that "the Government of India will persevere in their endeavours to obtain a revival of the Agreement which would provide the extremely useful machinery for the regulation of the bulk of the world's exports."

The suggestion is offered that a five year Plan for tea production should be drawn up. Such regulation would take the form of planning for an increase in production only to the extent of the anticipated increase in internal consumption.

As for the future, the Report does not draw a pessimistic inference from the fact that most consuming countries are holding heavier stocks than has been the case in recent years. On the contrary, this could be welcomed as "a satisfactory cushion on which world markets may again stabilise themselves." A second cushion that India has is, we repeat, that internal consumption should be rising by some 10 million lbs annually. Thus, "the longterm outlook for Indian tea must remain good." The conclusion arrived at by the J. Thomas analysis is:

"Foresight by all producers in their production, the sympathy of Union and State Governments in India in assisting to keep down costs and the understanding of the Labour in moderating their demands, should enable the Industry to operate on a basis economical and satisfactory to all for several years to come."

The Indian Bank

celebrates its

GOLDEN JUBILEE

Next August

Started in 1907, in a modest way by men of courage and vision, its present stability and strength have been reached by a policy of prudent management and discriminating participation in trade and commerce. With a paid-up capital of Rs. 64,70,045; deposits of Rs. 32.26 crores and working funds of Rs. 54.91 crores and its network of branches in important areas, the Bank is fully equipped to render its constituents every kind of banking service.

Food Price Committee

As announced by the Union Food Minister in Parliament, the Government have appointed a Committee to investigate the rise in food prices since the middle of 1955 and to suggest a price policy which would properly balance the interests of the producers and consumers. At the outset, we must congratulate the Government for having chosen Mr Ashoke Mehta as Chairman. With his erudite and intimate knowledge of Indian economic conditions and his uninhibited and sober approach to national issues, Mr Mehta is habituated to putting his finger on the genuine core of problems. He has a representative body of associates.

The absence of any one from the Planning Commission in the Committee can lead to unpleasant reflections. The Planning Commission are a repository of the most authoritative statistical data, and also of the expert knowledge on which the data could be interpreted for purposes of framing policies from time to time. The Food and Agriculture Ministry has also a well organised Department, whose function it is to keep a vigilant eye on current trends and to advise Government on correctives, wherever they are necessary.

In the investigation of food prices over the last two years, the Committee may not need to appeal for facts and figures not already in possession of Government. The Committee's main task will, under this assumption, be to discover a policy for the future. Even by itself, this is an arduous business. The economics of Indian agriculture now hangs between an unsettled past and an uncertain future. The old structure has very nearly disappeared. The shape of the new is still a matter of controversy.

In such a situation, the concept of the average producer or of a reasonable and satisfactory price level becomes highly elusive. Mr Ashoke Mehta himself knows the danger of introducing the incipient discord between the urban and rural economies into any thesis of a national cost structure. Regional disparities are no less baffling. If the Committee is to intrepret its task liberally, it must take into its sweep all the major facts of the national economic situation.

In any event, food prices cannot be discussed in isolation from the prices of other agricultural crops, industrial wages and even the requirements of the export trade to some extent. It is good that an independent Committee with a non-Congress Chairman and assisted by a body of top ranking economic experts is to go into these matters. But let there be no illusion that this or, for that matter, any Committee will be in a position to suggest an enduring solution for a problem which, even in simpler economies, remains extremely complex and largely intractable.

Short of the ideal, the Committee can do a great deal to indicate how the administrative machinery should be geared to the special requirements of India's as yet undependable food situation and how certain broad principles could be kept in view in the adjustments of prices between producers in the different sectors. In all these, a mechanism of control is implied.

Editorial Notes

Nationalisation in Kerala

Remarkable ingenuity is displayed by the Kerala Ministry in the wording of the announcement of policy on nationalisation. What is said is not what will be taken over by the State, but what will not be. The residual third category of industries in the Industrial Policy Resolution alone will not be touched, except, of course, in the presence of compelling circumstances. The negative description of the scope of intention does not imply that whatever is not excluded is likely to pass into State hands. The Schedules A and B of the Industrial Policy Resolution are normally open to State ownership, but it is not obligatory on the part of the State to take charge of any unit even within these Schedules.

Thus elaborated, the announcement only stretches the policy outlined by the Resolution to the extreme. According to the Resolution, the future development of industries in Schedule A is the exclusive responsibility of the State. Schedule B represents a coexistence, in which the State has complete freedom to choose its limits. When the Resolution also insists that the public sector has to be enlarged so as to include "all industries of basic and strategic importance or in the nature of public utility services," the dividing line between the two sectors nearly disappears.

The Kerala Government may now lay their hands on the aluminium and fertilizer industries and the electric supply units still under private management. Private road transport is already on its last legs. Among major industries, there is scarcely anything else to attract attention. The process, even if undertaken with unusual zeal, will only put the State on a par with many others, where one or more of all these industries have passed into the public sector. As plantations do not fall in the first two Schedules, and have been burdened with new taxes, they can hope to survive under existing ownership, as long as the managements "behave."

*

Disarmament Green Signals

The meeting of the UN Disarmament subCommittee in London may well turn out to be a bright turning point in human history. For the first time, the US and USSR seem to be generally agreed that disarmament can make a definite start at some point and can gradually be carried to a stage at which mankind can heave a sigh of relief from the threat of wholesale atomic destruction. It is tempting for the ingrained pessimist to stifle hopes by recalling the innumerable occasions on which unworkable proposals have been made or workable ones withdrawn at the point of mutual acceptance.

The new situation presents two encouraging features. Neither the US nor the USSR is inclined to stipulate preliminary political conditions for agreement on reduction of arms. The initiative for positive proposals is also shared by both these powers. Such roadblocks as the security or the divided existence of Germany, as used to stand in the way before, are reported to have been discarded. In other words, the principal issue is not being sought to be obscured or evaded by the demonstration of extraneous considerations.

No less salutary is the fact that the formula now being canvassed at London is a joint product. The Soviet Union proposed partial disarmament and the establishment of control points, besides parity in the armed strength of the two countries. These are accepted by the US. In return, the USSR has approved the idea of control cum inspection, and both seem willing to give up nuclear tests, temporarily at first, and later on for ever. These are extremely heartening beginnings. It is not likely that any power will make any proposal calculated to obstruct the negotiations.

*

Agreed Rationalisation

The draft model agreement prepared by the Union Ministry of Labour, for rationalisation in industrial units, will shortly be presented for a tripartite discussion. In many respects, the draft agreement represents an improvement on the Delhi Agreement of 1951, which, provided general guidance for the period of the First Plan. The 1951 Agreement proved to be inadequate, and on a number of vital points differences between managements and workers arose and have persisted.

Th new draft provides for reasonable notice with full information of the reasons for retrenchment, joint discussion of the proposal and the formal expression of views by the workers' union concerned as to whether it is agreeable or not. Detailed directives are laid down for the retention of workers in the same establishment, if possible. An agreement between the management and workers is necessary before rationalisation is effected. There is also provision for arbitration on the interpretation of the details of an agreement.

But, despite all the sincerity and care embodied in the preparation of the draft, there is obvious room for disagreement and discord. At every stage, the interest of the two parties can collide; as long as there is no statutory obligation thrown on either side even

World of Finance

TTK Tackles New Loan Conundrum

THE suggestion by Mr T. T. Krishnamachari in Bombay early this week that State Governments would be well advised to seek their requirements of development finance through the instrument of small savings rather than by the medium of market loans is of vital and compelling import for the giltedged market and for Government's borrowing programme for the Second Plan. The significance of this suggestion and the manner in which it will be of all round benefit need to be stated in their logical order and will consist of an analysis of:

(a) State loan technique as applied to small savings;

(b) the impact of States abstinence from market loans upon giltedged prices and interest rates;

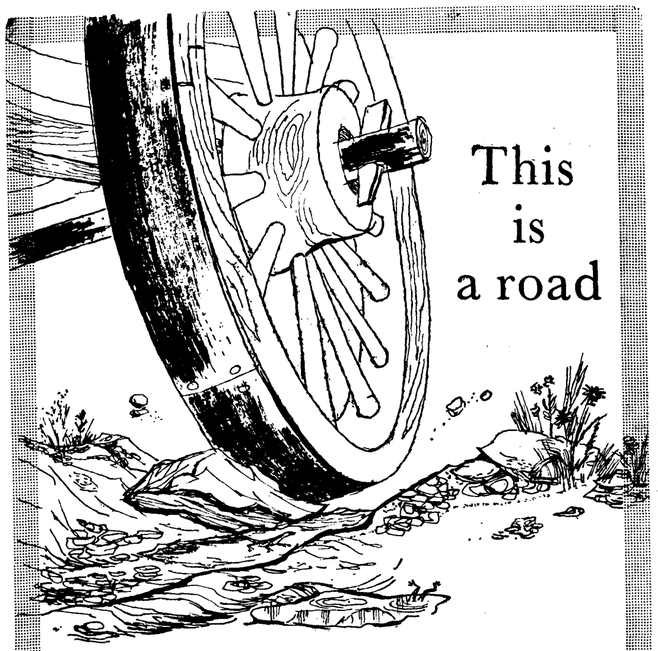
(c) the consequential capacity of the money market proper for taking up giltedged, by which would be meant Central Government loans;

(d) in this view, the Centre's New Loan for 1957; and

(e) the repercussions flowing from all these upon the borrowing programme for the Second Plan.

In the first place, we need to appreciate that the borrowing needs of State Governments have risen considerably. Normally speaking, it should have been within the capacity of the money market proper to cater to enlarged requirements both of the Central and the State Governments. Unfortunately, as we shall show in a later paragraph, State borrowings have had the deplorable consequence of disrupting the giltedged market in such a fashion as to render all governmental borrowings more difficult. This is the lesson to be learnt from the 1956 loans of State Governments. In order to appreciate Mr Krishnamachari's suggestion that the States should concentrate on small savings, it is necessary to understand how it came about that the target for States' borrowings at Rs 68 crores was feasible last year. The pioneer in this respect was Mr C. Rajagopalachari in 1952; the Madras Government announced a 4 per cent 1962 loan at Rs 99/8 for Rs 5 crores. It was to be a cash and conversion loan, and the conversions amounted to nearly Rs 1 crore. The elder statesman conceived the idea of intensifying subscriptions from the rural areas and from the fringes of the money market proper. This drive instituted at the district level produced remarkable results. The total subscriptions to the Madras loan of Rs 5 crores was Rs 10.3 crores. With special permission obtained from the Central Government, Madras retained the entire oversubscription. This colossal success opened the eyes of State Finance Ministers to the possibility of stepping up their realisations from market borrowings. So, the amount sought in 1956 rose to Rs 64 crores, with State Governments reserving the right to retain 10 per cent of oversubscriptions. Clearly, it was the rural mopping up of resources by Mr Rajagopalachari in 1952 which emboldened State Governments as a whole to institute similar borrowing policies. Unfortunately, the interest offered for the rural areas has to be high; and these terms, in their impact upon the money market, could result only in the disruption of the pattern of giltedged prices. Rajaji's 1952 experiment was, we are afraid, mistakenly interpreted as signifying the opening up of vast new vistas for State market borrowings. On the contrary, the 1952 experience of Madras should merely have indicated that plentiful resources were available in the districts for mopping up. But the technique to be applied toward this end is not State loans. A vigorous campaign at the district level, aided and supported by a somewhat higher rate of interest, is an essential factor of small saving collections—not of market borrowings. We may also note that more attractive terms offered for small savings do not disturb the money market. For, the higher interest on small savings is compatible with the higher structure of interest rates to be found in the rural districts. So, we would urge that the lesson to be drawn from Mr Rajagopalachari's experiment and which, on Mr Krishnamachari's suggestion, needs now to be implemented by the States is that rural resources must be tapped by State Governments through the technique of small savings.

In the second place, it needs to be recognised that the criticism of last year that large scale borrowings by State Governments upset the giltedged market was, undoubtedly, partly justified. However, the reason was not that the State loan collections were for too large an amount and, therefore, constituted a grievous burden for the money market. For, the total of the 1956 New Loans, both of the Centre and of the States, amounted to Rs 226 crores; and, of this total, over Rs 80 crores were accounted for by conversions. Of the balance of approximately Rs 140 crores, it is known that the Reserve Bank took up a parcel of Rs 50 crores of the Centre's New Loan against cash subscriptions. The balance, thus, in cash subscriptions was of the order of Rs 90 crores. As we shall see in a later context, a New Loan of Rs 90 crores in cash hardly touches the capacity to subscribe of the nongovernmental agencies and institutions. Indeed, the impact of the 1956 New Loans upon the banking system was restricted to some small extent of drain upon Deposits as well as direct subscriptions from member banks. But direct subscription from member banks was for an amount which was by no means proportionate to increases registered in recent years in the Deposits of banks. While, therefore, it is arguable that Government borrowings to the tune of Rs 226 crores did not seriously deplete the resources of member banks, the fact nevertheless remained that the giltedged market was adversely affected. Although the State loans were triumphant in the sense that almost every single of the issues was oversubscribed, it would appear that subscriptions derived from persuasion and pressure were very quickly tossed back onto the open market. This accounts for the selling pressure that was witnessed immediately after the States' borrowing programme had been completed. So, in spite of the higher interest offered by State Governments, there was neither eagerness nor desire to hold on to the new issues. We may add that some Scheduled Banks considered their State loan holdings as temporary investments; these were gradually, and over a short period of time, sold by Scheduled Banks to the proper repositories of State loans, the Provident Funds. But, in the event, the selling pressure in State loans inevitably meant that the yield offered on them had risen. Thus, the harm done to the giltedged market by State loans lay in the disruption of the structure of giltedged prices. Because the differential between the yield on Central loans and State loans could not unduly widen, the indirect result was that the Centre's loans also suffered some depreciation.



In the third place, we must now assume that the State Finance Ministers will find Mr Krishnamachari's suggestion acceptable. If so, money market resources will not stand in need of being applied to State Government loans. At this juncture, we would do well briefly to assess the probable capacity of the money market for subscriptions to Government loans. Firstly, there are the Life Insurance funds. We understand that the Life Insurance Corporation has prepared itself for a substantial participation in the New Loan for 1957. The showballing Life funds will allow of anything between Rs 30 and Rs 35 crores being reserved for investment in Government securities. It is important to note that the falling off of new business during 1956 will not in any way have affected the Life funds. Rather, the premium income during 1956 will have been much higher than in 1955, for the simple reason that the new business written in in 1955 was for a stupendous amount. The impact of the smaller volume of business done in 1956 will be felt in 1957 only to the extent that the receipts during this year from premium income will not greatly exceed the receipts during 1956. It is in this view that the LIC must be expected to subscribe for anything like Rs 30 crores to Rs 35 crores for Government loans. Secondly, Provident Funds under Government auspices need giltedged for investment. Moreover, there are the Employees State Insurance Corporations whose funds have also been accumulating in snowballing fashion. No official figures are available in these two respects, but an estimate of Rs 20 crores would not be far wrong. Thirdly, there are the industries which by statute are required to set up Provident Funds for their employees. Here, too, with new lists of industries being added from time to time, the experience is one of a gathering volume of resources. We would place funds under this head seeking investment in giltedged at anything like Rs 25 crores. Fourthly, the State Bank of India may be relied upon to take a more active interest in giltedged. In the course of the last two years or so, the State Bank has improved its Deposits by more than Rs 70 crores. During the same period, its Government investments have actually declined by Rs 13 crores. It is a safe assumption that the State Bank should this year intend to set an example for Indian Scheduled Banks by subscribing in a handsome manner to Government loans. We would put the State Bank appropriation for this purpose at, say, Rs 10 crores. The heads of resources that we have hereinbefore described account for a total of Rs 85 crores to Rs 90 crores. It is noteworthy that all these funds are, strictly speaking, available for investment only in Government securities. There is, thus, no diversion of funds from the private sector to the public sector; and there is, moreover, no consideration of the other sources available for giltedged investments. Since we have presumed that State Governments would abstain from market loans, it will be seen that the minimum capacity of the money market, that is to say, taking into account only those resources which in any event would be reserved for Government securities, is of the order of Rs 85-90 crores.

In the fourth place, it follows that the 1957 New Loan will constitute no problem at all. Indeed, the target of Rs 100 crores may be too low. For, of this target, Rs 32 crores relate to conversion of the 3 per cent Victory 1957 loan. It has been the deliberate policy of the Reserve Bank to purchase all early maturing securities with a view to building up large parcels of these. The Reserve Bank's holding of the 1957 loan may be around Rs 20 crores. The public's holdings are, thus, of the order of Rs 10 crores. So, even if all public holders should choose not to convert, the target for cash subscriptions is only Rs 80 crores. As we have already seen, this is more than covered by subscriptions that are, so to say, guaranteed. It is not unlikely, in this reading, that the Reserve Bank will be called upon to satisfy the demand for securities by sales though the tap. The fact that the Centre's New Loan will be independent of "public" support for its success is important for two or three reasons. Firstly, it means that the Reserve Bank will have very much less to do in the way of traditional grooming of the market. Secondly, the New Loan announcement need not wait upon the state of monetary conditions—whether they are slack season or tight money in character does not, for this purpose at least, matter. Thirdly, and importantly, the nonreliance on the public will mean that the Indian monetary authorities need not be swayed by the academic reasonings of economic pundits and advisers. In the present context, the advice usually forthcoming is that, for the 1957 New Loan to be a success, the terms offered to investors must be made more attractive. A 4 per cent loan is freely canvassed. Even a 3½ per cent offered at a discount is widely deprecated. We do not find this argument convincing. On the contrary, we think that any increase in the interest rate is detrimental to the giltedged market. But, as we have already shown, all discussion of the terms to be offered for the 1957 New Loan is now obviated by the fact that the Centre will not have to depend upon the public. So, we feel that this situation should be advantageously seized to tone up the giltedged market. This toning up is to be accomplished by inducing an improvement in giltedged prices; and the giltedged market will derive strength only if the terms of successive loan issues are less favourable to the investor. For example, we would suggest that the 1957 New Loan could consist of reissues of the 1956 New Loans; but the terms would be made favourable to Government by raising the issue price of the 3½ per cent 1962 to Rs 99, of the 3½ per cent 1967 to Rs 99.50 and of the 3½ per cent 1974 to Rs 99.50. There need be no apprehension on the part of the Government that the effective reduction in the terms of the loans

Call it what you will—a kutcha track, a cattle-path. It is a *road*. It leads somewhere. It is a vital line of communication. Perhaps, where you live, roads stretch out straight and firm on every hand. Perhaps you take roads for granted. But it is not so everywhere. Over large tracts of India, there is a crying need for more roads, safer roads, faster roads. Roads are the arteries of civilised life. Without roads, the modern world couldn't tick. And without *bitumen* the road engineer of to-day would lose a tough ally. *Bitumen*, a petroleum product, is of immense value in road-making. It provides a smooth but tremendously durable surface. Water rolls off it. Scorching sun and biting cold have little effect on it. Under the increasing loads and speeds of modern vehicles, *bitumen* flexes invisibly and recovers itself time after time after time. It is one of the world's most economical and practical construction materials. We make available many tons of *bitumen* each year to P.W.D. authorities and contractors up and down the country. We also make available the skill and experience of our *bitumen* engineers. Wherever you travel in India, you are pretty sure to be travelling at some time or other on *bitumen* supplied by Burmah-Shell.

BURMAH-SHELL... *in India's life and part of it.*

to the investor would affect realisations. For, we repeat, the 1957 New Loan does not depend on the public for its success.

In the fifth place, what we have just suggested would be of immeasurable benefit to all aspects of the national economy. If a consequence of higher interest offered on a New Loan is to cause depreciation in existing issues so that the yields fall into conformity with the new pattern of interest rates, a reduction in the interest rate offered should act in the exactly opposite manner. That is to say, the existing loans must appreciate in value so that the yields offered on them will conform to the new structure of interest rates. Such downward adjustments in the structure of interest rates are, as we have often remarked in this column, a prerequisite to a successful borrowing programme for the Second Plan. While there are some other measures that need to be taken up by Government — especially firm action in respect of interest rates at the level of Scheduled Banks finances—we should point out that, by issuing the 1957 New Loan at slightly less advantageous terms to the investor, a beginning will have been made toward the triumphant implementation of Government's borrowing programme during the Second Plan.

Slack Season Gathers Momentum

Monetary indicators, as revealed in the bank statements, are suggestive of a gathering momentum in the slack season forces and influences. The returns of the Reserve Bank for June 21 disclose a steep decline of Rs 21.32 crores to Rs 1559.24 crores in Active Notes. Rupee coin has returned from circulation for the large amount of Rs 1.56 crores. With currency contracted against Rupee Securities for Rs 10 crores by transfer to Investments in the Banking Department, the Reserve Bank's cash in the till has risen considerably by Rs 12.48 crores to Rs 36.41 crores, this being the highest level since the weekended September 28. 1956. It may be suggested that the substantial currency contraction that is taking place this year —the decline since May 10 is of the order of Rs 46 crores — is due to the continuing import surplus as measured by the drain upon India's foreign exchange reserves. We may note that the money market experienced a similar contraction after the end of the busy season in 1956 directly as a result of the contractionist influences of the balance of payment deficit. Thus, so long as the import surplus continues to be a feature of the Indian economy, it is to be anticipated that this will have a restraining effect upon currency circulation.

For the first time in some weeks, the Reserve Bank's open market operations would appear to have consisted of sales rather than purchases. For, in spite of the transfer of Rs 10 crores from the Issue Department, Investments in the Banking Department show a rise of only Rs 8.82 crores.

Deposits both of the Central Government and other Governments have improved, the former by a shade under Rs 1 crore to Rs 53.45 crores and the latter by Rs 1.11 crores to Rs 2.30 crores. Improvement in balances of State Govern-

(Continued on page 1207)

Steadier tone on British Stock Exchange

By PAUL EINZIG

TOWARD the middle of June the downward trend on the market for British Government securities appears to have come to a halt and the general tone on the Stock Exchange as a whole became steadier in sympathy with the gilt-edged market. Sterling, too, became somewhat firmer, even though it remained below its parity with the dollar. This improvement was all the more unexpected as the wave of pessimism about the prospects of Government securities was increasing almost daily. Even on days when the Stock Exchange as a whole was firm there was no demand for Government loans, and the financial press came to refer to the gilt-edged market with increasing frequency as the "friendless section" of the Stock Exchange.

Nor was there any betterment in respect of the main cause of the weakness of Government issues, the relentless wages inflation. Competitive plundering of the community by trade unions continued unabated. There was no sign of any willingness on the part of employers or of the Government to make a stand against this inflationary pressure. Indeed the majority of commentators—whether politicians, economists, financial journalists or businessmen —continues to refuse to admit that the inflationary trend in Britain has three causes: wages, more wages, and still more wages. So it must be taken for granted that the wages spiral will continue to rise.

The "plateau" of prices, which Mr Macmillan sought to achieve when he was Chancellor of the Exchequer, is being abandoned right, left and centre. The trade unions never showed any willingness to co-operate in the effort to halt the rise in prices. The Government-controlled nationalised industries are raising their charges, having realised that their twelve months' "self-denial" has not prevented an increase of their costs. And many industrial firms which abstained from raising their dividend even though their profits would have justified in paying out more have now decided to give up the hopeless attempt to mitigate the greed of their employees by their example of self-restraint.

Admittedly the Government continues to pursue a policy of credit restraint. Its latest effort in that direction is the discouragement of long-term financing by banks. By preventing banks from granting credits to industrial firms for capital expenditure the Government may keep down the volume of investment, because the capital market is unable to cope with the demand for funds for that purpose. But this only means that the increase of the output is kept down, while consumer demand continued to receive fresh stimulus from the wages increases.

Above all, the Government has now committed itself more than ever to the maintenance of overfull employment at all costs. This has been done by the recent decision to close down a large number of Labour Exchanges for reasons of economy. The network of these

(Continued on page 1218)

World Overseas

US Notes

INVESTMENT of external private capital, often from the United States, has long been regarded as an important stimulus to the economic advancement of developing nations. Recent years have seen a number of studies on just how this type of investment, undertaken in partnership with the host country, has worked out. One of the most significant of these studies was made public this week by the National Planning Association, a leading US research organization. It deals specifically with the operations in Indonesia of the American-owned Standard Vacuum Oil Company (STANVAC). Its conclusion that both Indonesia and the company have benefitted from their association parallels the general findings of similar reports dealing with other U.S. enterprises in other lands.

In 118 careful documented pages, the study—titled "Stanvac In Indonesia"—spells out the contributions the company has made to Indonesian life. Most obviously, of course, it has helped build up Indonesia's important petroleum industry. And through the taxes it pays to the Indonesian Government and the foreign exchange it earns for Indonesia from the sale of oil abroad, it augments that country's financial resources. But Indonesia has gained in other ways, as well. For instance, through its development of oil fields, Stanvac has helped open up new areas for settlement. It has cleared previously uninhabited jungle areas, constructed road, installed communications systems. In addition, it has provided gainful employment for 13,000 Indonesian workers, who comprise 96 per cent of its work force. It has helped improve the skills of these workers. The proportion of Indonesians in technical, supervisory and administrative positions has increased some 28 per cent in the past half-dozen years. It also has provided a number of basic social services for its employees and their families. Among these are free medical programmes, and free housing or substantial housing allowances. Its housing projects incorporate recreational, educational, religious and other community facilities.

Stanvac's present operations in Indonesia go back to a key decision made in 1946. At that time, while the Indonesians were still engaged in winning their independence, the company went ahead with a $65 million programme to restore war-torn petroleum facilities. This decision required faith in the political future of the Indonesians and in their ability to achieve an economy in which a company with foreign capital could operate successfully.

In 1954, the company undertook another large investment programme that is expected to cost between $70 million and $80 million by the end of 1958. This programme is designed to maintain crude oil output, build a new pipeline, modernize refinery operations, and enlarge company-sponsored social services. Stanvac is doing this despite a serious problem of dwindling reserves.

As the National Planning Association study points out, the company must find new oil fields if it is to meet future Far Eastern needs. According to industry spokesmen, these needs are growing at a rate of 10 per cent a year. Even today, Stanvac, which has its principal producing facilities in Indonesia, must buy much of its crude oil in other parts of the world to help supply its Far Eastern markets. The National Planning Association experts are optimistic over the possibilities of finding new oil reserves in Indonesia. But they observe, this may require more than the company's willingness to invest, which it has already demonstrated. It also may require some encouragement on the part of the Indonesian Government, which in 1951 set certain restrictions on new exploration and development rights. Heartening in this regard have been the continued good relations between Stanvac and the Indonesian Government. In the words of the National Planning Association report, "The Stanvac management has earnestly striven to maintain friendly and understanding relations with the Indonesian Government and to demonstrate the company's interest in Indonesia. The response of a young nation to these efforts has been, under the circumstances, exceptionally good." As the report notes, this "atmosphere of mutual goodwill" enhances the positive contributions American enterprise can make to the economic and social development of other countries.

World of Jute

Declining Trend in Raw Jute Prices

PRICES in the jute markets have been steadily declining throughout last week. In the raw jute section, Assam Bottoms which were quoting at Rs 32 per maund a week ago, are now on offer at Rs 31 per maund, with sellers eager to conclude business at this level both for the old and new crop. Mills, however, are evincing little interest at current levels presumably due to a belief that prices are bound to decline further in the immediate future. The lack of ready response from mills even to the lower offers of raw jute sellers seems to have stemmed from reports about the progress of the new crop. It has been reported that weather had been quite favourable for the standing crop during the past week in almost all jute growing areas. The crop is said to be making good progress in Assam and Northern areas and low-land harvesting is reported from Assam.

A contributory factor has perhaps been the increase in the arrivals of raw jute of Indian origin during the past month. Of the total arrivals of raw jute into Calcutta and Mill stations during May as much as 3,86,000 bales have come from Indian centres. Such arrivals during April had been to the tune of only 3,41,000 bales. In the 11 months ending May 1957, arrivals of Indian jute have totalled 53,12,000 bales. It will be evident, therefore, that there is still a considerable quantity of the 1956-57 Indian crop to reach the mill stations. Now that sellers are freely offering new crop for July-August delivery it will be a safe inference that sellers in old crop will not find it profitable to maintain a reserved attitude for long.

*

The jute goods market ruled easier with prices in both hessians and sackings marked down. The reactionary tendency had been brought about by persistent selling by speculators. Hessian 40″×10 oz Ready which opened the week at Rs 44.31 reacted to Rs 43.05 by close while B Twills Ready declined sharply from Rs 117.85 to Rs 114.

Steady conditions were noticeable in the market when the week's transactions began. But in later dealings a reactionary tendency set in due to heavy selling by bear operators. Hessian 40″×10 oz Ready which was done up to Rs 44.31 on the previous day closed the day at Rs 43.90 while B Twills Ready declined from Rs 117.85 to Rs 116.80. In the forward positions, July-September Hessian 40″×10 oz and October-December were however steady at Rs 44.25 and Rs 43.90 respectively. In the Sacking section, B Twills July-September and October-December were both easier at Rs 117.40.

On Saturday the market witnessed increased activity toward close following the buying interest shown by both speculators and shippers. Of the two sections, Hessians were found to be steadier. Prices generally recorded modest gains. Hessian 40″×10 oz Ready recovered to Rs 44.10 while B Twills Ready gained 20 nP to be finally placed at Rs 117. Elsewhere, Hessian 40″×10 oz July-September advanced to Rs 44.35 with the October-December position slightly higher at Rs 43.95. Among heavy goods, B Twills July-Septr. reacted to Rs 117.35 while the October-December position eased to Rs 117.15.

The intervening holiday seemed to have instilled a feeling of pessimism among the generality of speculators. For, on Monday sellers predominated the market. As bull operators had also started unloading, the reactionary tendency became well pronounced. Though toward close there had been some buying by shippers at lower levels, closing prices were lower on balance. Hessian 40″×10 oz Ready declined to Rs 43.85 while B Twills ready fell sharply to Rs 116.35. A similar trend was noticeable in the forward positions also. 40″×10 oz July-September dropped 25 nP to be placed at Rs 44.10 with October-December declining by 30 nP to Rs 43.65. B Twills July-September dropped 40 nP to quote Rs 116.85 with October-December declined by 45 nP to Rs 116.60.

The downward trend gained further momentum in the subsequent days and the market closed the week on an easier note. On Tuesday sellers again outnumbered buyers. With one prominent bull operator coming out as a seller, prices declined sharply all along the list. Hessian 40″×10 oz Ready closed at Rs 43.40 with B Twills Ready reacting to Rs 115.40. Hessian 40″×10 oz July-September and October-December were placed at Rs 43.65 and Rs 43.15 respectively. B Twills July-September and October-December were quoted at Rs 116.20 and Rs 115.90 respectively. Prices declined further on Wednesday due to nervous liquidation by bulls. At one time during the day conditions akin to panic prevailed as selling pressure continued unabated. Both Hessian 40″×10 oz ready and B Twills Ready touched new low levels but

WHO said cats can't fly?
Why only last week, I flew all the way from Bombay to London and enjoyed every minute of it.
My exclusive berth was most comfortable; the attendants extremely courteous and helpful; the food excellent.
I arrived feeling fresh and happy.
I only had one complaint — there wasn't a mouse in sight! A-I.I. will have to do something about that if they want more cats to fly.
When you have cargo for Europe or U.K., send it by A-I.I.

World of Tea

Outlook for 1957

TEA production in India and all the world over has been generally running at high levels this year and it is feared that, if there is no effort to curb output to keep pace with demand, prices may decline sizably to the detriment of the industry. Already, the results of the first Export Sale of the New Season's teas in Calcutta were not encouraging although the subsequent sales gave better results as buyers were selective in their purchases. Good quality teas are, however, keenly sought after at firm prices; and this should serve as a pointer to the industry to concentrate on improving the quality of the tea produced.

Producers, particularly in the North, are giving early thought to what measures are to be adopted again excess supply this year. The South, as usual, holds to the idea that its method of fine plucking will exercise adequate control over production and that any arbitrary reduction in production will upset the economy of the South Indian tea Industry.

As for the resurrection of internal tea regulation, the chances are not very bright. The stalemate in this regard still continues, while the relative allocation of quotas between various producing countries remains under dispute. Although the effectiveness of any agreement without the participation of all the producing countries in the world is questioned in certain quarters, there is no doubt that an agreement between India, Ceylon and Indonesia will prove of considerable mutual advantage to the three major producing countries.

The overall supply position of tea in the world market cannot, however, be considered very high as judged from the production figures available up to May. There is an excess of 12 million pounds, due largely to the increase in Ceylon's output. But, Russia has entered the Colombo market with the reported intention of buying 39 million pounds with the assurance that this will not affect her relatively smaller buying from the Indian market. While the over-all picture of the tea market may be reassuring, producers of Common teas appear to be in for a bad time with production cost mounting as in common with all teas.

At this stage, it will be interesting to study the annual report, issued by Messrs J. Thomas & Company, the well-known firm of tea brokers in Calcutta:

"The outlook for the immediate future of the Indian Tea industry resembles that of last year in that the bullish factors, which will affect the market, are conspicuous by their absence. Although this is so, the supply and demand position is not quite so depressing as it might seem at first glance. Stocks of tea held by consumers should prevent a fluctuating market and a rational production policy, coupled with a rising internal consumption, can guide the industry safely through the present threatening stormy seas to safe and calm waters in the future.

The United Kingdom, the world's largest consumer, presently holds heavier stocks than has been the case for several years. However, it is unlikely that any country holds more than four or five months' unconsumed stock, which is certainly not an amount large enough to cause a slump; but is rather a satisfactory cushion on which world markets may again stabilise themselves. The existence of these stocks, therefore, should not be solely considered a bearish factor as it must create a sound basis on which to start the coming season. It can only be at a time like the present, when adequate but not excessive stocks are held in the consuming countries, that the tea market will show signs of settling down to a stable price-level and permit Labour Unions, Governments and Tea Associations in the producing countries to unite in establishing manufacturing costs at a level fair and satisfactory to all concerned.

The North-Indian crop, to the end of May, is 9 million pounds lower than last year; but this is more than offset by the increased crops in Ceylon and South India. It is unlikely that Ceylon will be able to advance her crop to any great extent. The prospects of increased production in East Africa, however, are not matter for complacency as far as India is concerned. Assuming that Africa may produce not more than 85 to 90 million pounds in 1957 and the other producing countries together do not exceed their last year's production figures, the responsibility of ensuring that the world markets are not flooded must remain in India's hands; and here her internal market will render her responsible task possible.

It is thought that absorption in India is rising by about 10 million pounds per year and, as long as this increase continues, the long-term outlook for Indian tea must remain good. With the possible exception of Africa, the extent of whose internal absorption is virtually unplumbed, India has the great advantage over other major producing countries in having a live and rapidly increasing home market and not being entirely reliant on the world out-markets for the offtake of her produce. India, therefore, does not seem to

I REPRODUCE below—in a somewhat shortened form—a letter from a correspondent who appears to be a regular reader of this journal:

*

"I consider myself lucky that I get an opportunity to read your Indian Finance, a rich man's weekly and the only thing I share with him.

"What a lone battle you are waging for justifying the Second Five Year Plan and TTK's crippling budget!..You may see in the Second Plan the coming of a millennium to socialism of special Avadi brand though how far or near we are to the fanfared fairy-land of the First Plan is yet to be discovered. As far as the middle class is concerned, these grandiose schemes spell its extermination. In countries which are less obsessed with such chimerical dreams, it is considered the backbone of the society and allowed to live. In our country, it has been given no place in the structure of new society our Congress ma bap are trying to raise....I myself am a middle class beast of burden and I know how my standard of my life has been steadily dragged down year after year these ten years of illusory independence. In the bygone days, I could look to the future with confidence because the future I was building was with hard work and harder self denials. The nest egg I built therefrom, I believed would secure a cosy retirement. Today, my confidence in the future is undermined and badly shaken because my nest egg can be 'robbed'. I am taxed by the Central and State Governments and local municipality and what little savings I had made by sweating for thirty three years are dwindling away and that too alarmingly fast. The taxes must be paid and the cost of living is so high that I am perforce to fall back on my reserves made in those happy days when the motto of the rulers was 'to live and let live'....

"I have two small hutments in a poor locality in a suburb of Bombay for which I am paying Rs 600 annually to the municipality for taxes. And these taxes have been increased out of all proportions because of maintaining prohibition.....

"When Rajkumari Amrit Kaur told the Parliament to remove this mad prohibition and levy salt tax to give some relief in taxation to the groaning population, TTK only whimpered that it was Gandhiji's wish and nothing could be done in the matter....And it is this prohibition that has brought this cursed property tax on small property holders. I would not grumble if I have the wherewithal to pay from. Very often, I do not collect sufficient rent to pay the tax because my tenants do not pay their rents regularly and there is the rent act to protect them.... the hutments are naturally in bad shape needing repairs and the cost of building materials is sky rocketing—I sit helplessly and watch with pain in my heart the dilapidation of the hutments brick by brick. I want to sell them though I know they won't fetch me even ¼ of the money spent on them but no buyers are forthcoming.

"Years ago, I invested some money in company shares the interest from which I used to meet my medical bills and other sundry expenses, my salary being hardly sufficient to meet my expenses.... Dividends will be less because of further imposts on companies and my salary will be less because of increase in income tax...."

*

As I said at the beginning, I have abridged the letter somewhat, but I have kept the argument intact. As you see, it is a letter obviously written under the stress of powerful emotion: it breathes not only bitter frustration, but extreme desperation. And, as in all such states of mind, the logic is somewhat cockeyed. "A rich man's journal that preaches utopian socialism"? I should like to quote my correspondent's own example (which naturally gratifies me) to repudiate the suggestion that we hold the brief exclusively for the rich or that our only readers are the capitalists. Secondly, I have no doubt in my mind that he is as reasonably patriotic an individual as the next man he encounters in the street, and yet he refers to the "last ten years' illusory independence"! I have every sympathy for his present predicament that compels him to live on his painfully acquired capital, but surely it is an odd judgment that talks of the "happy days when the motto of the then rulers was to 'live and let live'." Obviously, my correspondent does not realise that if the "then rulers" had done their duty by this country in the two hundred odd years they were here, he would not have now found himself under compulsion to pay for the foundations of a prosperity that ought to have been firmly laid a hundred years ago. Again while there is a valid case of reconsideration of the present policies on prohibition, a direct causal relationship between it (a State policy) and the Municipal tax on houses is an argument that jumps too many middle terms.

*

And yet, there is a real validity in the central objection voiced in the letter: the middle class as such does not get a recognised place in the scheme of things envisaged by the planners. In a sense, there is nothing particularly Indian about the social and economic pressures that are apparently squeezing the middle classes out of existence. Complaints similar to the one voiced by my correspondent are voiced by members of the middle classes all over the world. In that extremely readable account of the English Middle Classes by Roy Lewis and Angus Maude, you can find countless numbers of instances. For example, Lewis and Maude quote a typical letter from the Daily Mail in 1947: "The bills are pouring in and I am at my wits' end." Another letter, written in 1951, "we wear ourselves out making ridiculous economies....It used to be a struggle to save a little to buy some item for the home. Now, it is simply a fight to keep solvent. Of course we have both given up smoking and beer. We never go to pictures." Voicing what is perhaps the chief anxiety of the lower and upper middle classes, my correspondent talks harriedly of his dwindling reserves that he had hoped would give him his security in his old age. Almost in the same words, and certainly in the same intonation, is a letter that appeared in the Sunday Times in 1948 that has been quoted by Lewis and Maude: "Having spent a life time of hard work, thrift and economy and self sacrifice in order to save and invest sufficiently for a self reliant old age, I find myself reviled, abused and sneered at by the socialist party as a capitalist; and having been fool enough to invest in the great industries of the country, I suffer penal taxation and restrictions and am expected to be content with, at the most, the same dividends as pre-war.. and meet the substantial increase in the cost of living as best I may." The middle classes whose values centre round the hearth find it difficult under present conditions to cultivate the domestic virtues dear to their heart. According to a correspondent to the Mass Observation in 1948, "The rising cost of living is compelling me to live a shabbier home life and is reducing my business efficiency. Money that would be spent on replacing household wants goes to extra food and clothing and yet even

these are below the standard to which I was formerly accustomed. The general effect is depressing and irritating."

✱

Indian middle classes must be feeling these disabilities even more keenly than their counterparts elsewhere for two reasons. Firstly, in the West, "keeping up with the Jones" is essentially a social dictate. In India, more exacting compulsions operate. There is a whole range of religious and ritualistic obligations that the middle class (which is the most cowardly when it comes to defying convention) dare not evade. An expensive marriage is not always a piece of vulgar exhibition or even a craven submission to extortionism by the bridegroom. Secondly, the family ties are still strong enough in India to make demands on the slender purse of a single individual by a whole host of poor relations a normal concomitant of comparative affluence. Likewise, hospitality is no mere social habit to be shed when it is unnecessary or economically impossible: it is to cultivate an unevadable dictate of Dharma at its best or an inconvenient conventional duty at its worst. These things, I agree, are becoming less and less the rule and in a sense its disappearance is precisely what makes the present state of affairs so shabby. In any event, the middle classes do feel that social pressures, which they only half understand, are corroding the bases of their pieties and the secret shame they feel at their own shifty evasion is more galling than the privations of honest-to-god poverty.

✱

What, then, is the remedy? Are the middle classes doomed? Will the demands of egalitarianism lead inexorably to the extinction of a class that has, admittedly, provided such impulses toward progress as the world has witnessed? (For, make no mistake, even socialist leadership, including the present Congress leadership in this country, has been unmistakably middle class). To come to any such conclusion would be to be blind to the endless resourcefulness of the middle classes. For, the middle classes represent not only an income bracket, a social group, an attitude but also a congeries of skills. The income may become exiguous in real terms (incidentally, it is not so much taxes but inflation that is the real enemy of middle classes, especially of the fixed income group) and the social ties may become loose. Even attitudes may become modified, if only by the difference in the jargon that one is obliged to employ. But the skills and the fund of centuries of experience will still be there and will be needed as long as mankind lives. And therein lies the real immortality of the middle class. The doctor and the engineer, the lawyer and the schoolmaster, the official and the executive will have to run the world, whether it is Communist or Capitalist. To be sure, these folks will have to give in future a greater share of national wealth to those who have been making do with less in the past, but if your own share is adequate to your needs, you can hardly complain with justice. And, as I see it, the middle classes of the future, whose satisfactions will be more in terms of enjoyment of power than of money, will not mind it.

✱

My correspondent will perhaps complain at this stage that there I go with my vision of a millennium, while the municipal tax gatherer is at his door bothering him for the annual tax on his hutments that is more than the amount of rent he receives therefrom. What should he do? Of course, he finds legal remedies too expensive and uncertain in results. Would an organised party that would represent middle class interests meet the situation since the greatest disability of the middle classes is that they have no direct political power at the moment? Experience elsewhere has not been too encouraging. The idea has obvious dangers, especially when the middle classes to be so organised consist, as they must in the nature of things, mostly of the numerically large lower middle class. It is so easy for such efforts to degenerate into midwifery of fascist charlatanism. Hitler in the twenties and Poujade in the fifties are grim and ridiculous examples.

✱

Even when this extreme situation does not arise, the difficulties of organising a third party that would pit its strength against organised capital and organised labour are very real. In Britain, for instance, the creation of such parties has often been canvassed but not with much conviction of its practicality. In 1948, the Economist set the ball rolling in a discussion on this subject. The sad conclusion was that, "if the country is to await a generation to be saved by a new Centre Party. it may well be past saving. The more practical thing would be for the

My life *by Adipocere*

Pronounced 'adi-po-saire'

What a life I have had. To add to my troubles, I keep being attacked by little microscopic things which you call bacteria, but which I call a curse. Little do they know that I am immortal, as in spite of this terrific onslaught I continue to live, albeit in different forms.

When the bacteria attack me, my body releases hydrocarbons—light, medium and heavy. The corresponding physical states of these are gas, liquid petroleum and wax. The petroleum part of me is squeezed into any contiguous porous material, usually sand or limestone, where it remains until some crazy geologist from an oil company decides to look for me.

Gateway Gossip

Bombay Review

TTK's Tete-a-tete

Mr T. T. KRISHNAMACHARI'S brief but extremely fruitful visit to this Gateway City has served the important purposes of clarifying (a) Government's attitude on taxes; (b) Government's approach to market borrowings and small savings and (c) the impact of these two on stock exchange behaviour. While the impression has been fostered that TTK deliberately undertook these yatras to the Eastern and Western commercial capitals, and while earlier anticipations were that the Finance Minister would be found in a mood amenable to persuasion in respect of tax concessions, something has been gained in this frank interchange of views with industrial leaders that is much more important than gestures relating to tax reliefs. The gain from the interchange lies in a clarification beyond doubt of Government intentions and plans, particularly in respect of taxation. I do not think it was seriously expected in any circles that the Finance Minister would be prevailed upon to beat a hasty retreat from tax measures constituting the integrated structure that he has created. Perhaps, there was a wistful hope that repetition would succeed in persuading the Finance Minister to offer some more concessions. But this would not have been anything more than wishful thinking. Rather, there is sufficient evidence to warrant the view that Indian industry desired from the Finance Minister nothing more than an affirmation that Government do not intend to levy new taxes for the remainder of the Plan period. That, at both Calcutta and in Bombay, assurance of this nature was forthcoming from TTK must be heralded as an event which will foster the sustained confidence of the private sector.

I gather that, before TTK reached Calcutta, one was wont to hear that the meeting with industrialists would be infructuous. The despondent view was that the Finance Minister, with three tax-filled "Budgets" to his credit, had already done his worst. Strange as it may seem, there even appeared to be no desire on the part of some to press for assurances or concessions from Mr Krishnamachari. The attitude seemed to be, "He has done his worst—if the private sector is to develop, it will be in spite of, and not because of, Government policy". It is a feather in the Finance Minister's cap that he overcame the initial obstacles inherent in such a cynical attitude and that, instead, he infused an atmosphere that vouchsafed for the private sector all help and assistance that Government could give.

Not that, I might add, TTK went out of his way to retract his tax policy. On the contrary, the burden of his theme at Calcutta was, I understand, that the tax structure had come to stay. But, consistent with that tax structure, there were some levies which did not fit in and which had been imposed for certain specific purposes which, in the near future, may be fulfilled. As an instance, I gather that the Finance Minister referred to dividends tax as a measure calculated to inhibit distribution and encourage —perhaps, the better word is enforce —the ploughing back of profits. In such a view, once the Finance Minister was satisfied that the private sector was taking sufficient care to build up internal reserves, he would relax—and may be even eliminate —the dividends tax. He was not, in Calcutta, as specific as one would have wished. There was, however, the indication that, save for minor adjustments, there would be no changes in taxation for the remainder of the Plan period.

Vague though all this might have been, the psychological change wrought was substantial in its favourable impact upon the attitudes and posture of the leaders of industry. It thus happened that the Finance Minister journeyed to the Gateway City when, already, the atmosphere was conducive to the generation of even geater confidence. The discussions here have been much more detailed; and, so, TTK's utterances have been much more precise. For, example, the Finance Minister made it clear that the tax structure, as evolved, was for the Plan period. With the present scheme of taxation succeeding, TTK added that Government were bound to think in terms of providing fresh and more incentives. Thus, in the matter of resources for the Plan, Government's endeavour would be to bridge the gap as far as possible by loans, foreign aid and domestic savings; and it was possible to avoid fresh taxation by generating additional savings.

There is, thus, an iteration of the view that, far from more taxes being in store for the Plan period, Government's attention would be concentrated on the provision of fresh and more incentives. Secondly, Mr Krishnamachari has also indicated specific taxation measures which do not form part of the integrated structure and which, therefore, may gradually be eliminated. As he specifically mentioned that dividends tax and the compulsory deposit scheme are 'temporary expedients', it is to be inferred that the incentive measures envisaged by Mr Krishnamachari will be gradual relaxation in the terms of these levies — and, perhaps, even their repeal altogether. It is fair to suggest that Mr Krishnamachari's assessment of Government's taxation policy is acceptable and satisfactory to Indian industry. For, it is not seriously urged in any responsible circles that the implementation of the Second Plan will not have to be paid for by the industry in the form of higher taxes. Generally speaking, I may add that industry's apprehension and complaint have been that it has so far been kept in suspense as to the extent to which it would be called upon to bear fresh burdens or undergo more sacrifices. So, the removal of this apprehension—which Mr Krishnamachari has succeeded in doing—constitutes a potent bull factor for renewed confidence on the part of the private sector.

As I have said in the beginning of this despatch, the second of Mr Krishnamachari's clarifications has been on borrowings. TTK has indulged in some plain speaking on state loans; and he has been noncommittal on Central borrowings. However, it is possible to read in his views an awareness of the conflict between State borrowings and Central borrowings. The State Governments have perforce to offer a higher interest rate than the Central Government; and, secondly, they need at present to approach the same sources for support and subscriptions. Such vying for institutional support has merely made it more difficult for both Central and State Governments to evolve anything like a rational borrowing policy. Moreover, State Government borrowing has been rendered a much more complicated business by the fact that their needs have risen substantially. Mr Krishnamachari has come to the firm conviction—at any rate, for at least the current year—that State Governments should not approach the market for loans.

The solution offered by the Finance Minister is that the money market proper should be tapped by the Central Government alone, and not by State Governments. In the awareness that the resources available in the money market may not be of such size as to support or absorb both Central and State Government loans; and in the knowledge that the fringes of the money market and the nonmonetary sector are both capable of providing the funds required by the States, Mr Krishnamachari has suggested that State Governments could usefully help themselves in helping the Central Government by concentrating their attention upon small savings. If the States were to abstain from market loans, that would leave the money market unsullied and receptive to Central borrowings; that is to say, States' abstinence may very well prove to be a factor helping the borrowing programme of the Central Government. Furthermore, I should point out that State loans, offered as they are at a higher rate of interest, inevitably weaken giltedged prices and destroy chances of the emergence of a healthy pattern of giltedged prices. Once again, States' abstinence will cure this particular malady in the giltedged market. Lastly, the money market proper cannot afford an ascendent trend in the terms of borrowing, which was, so to say, forced upon the Government by the interest that had to be offered by State Governments.

Mr Krishnamachari's suggestion is that the States should energetically set about their campaign for small savings. Indeed, I must say that this is the proper responsibility of State Governments. For, if Mr Rajagopalachari, a few years ago, made a colossal success of the Madras Government's State Loan, it was because, for the first time, the rural and non money market proper sources were tapped for subscription. The fact that rural subscriptions were so large was significant—but I am afraid its significance has been misread as suggesting that this pointed to the ability of State Governments to obtain increasingly larger subscriptions for their loans. The significance lay, simply, in that resources in the non money market sector were available in sufficient measure. The lesson that should have been learnt by the monetary authorities was that these resources should be mopped up. But the instrument of State Government loans for this purpose has proved to be wrong because it has upset the giltedged market as such. On the other hand, the same endeavours could more profitably be utilised in a vigorous small savings campaign; and such a campaign would not conflict with giltedged policy. It is, therefore, entirely logical for the Finance Minister to make the suggestion that States' needs must be met by small savings rather than by market loans. The scheme given by TTK is that, if the State Governments were to abstain from market loans, their share of small savings would be raised to two thirds; the present arrangement is that the States get 25 per cent of the past year's average and 50 per cent of any excess. That Mr Krishnamachari is fully alive to the scope in maximising the generation of small savings, is indicated by his view that a vigorous campaign by State Governments could raise the figure obtained from small savings from Rs 62.7 crores last year to Rs 120 crores.

I should hasten to point out that all these viewpoints on States borrowings were presented at a

(Continued on page 1218)

Bombay Review

Gateway Notes

Governor's Address

The Address presented by Mr Sri Prakasa, Governor of Bombay, to the Joint Session of the Legislature contains a list of the problems facing the State as also the programmes figuring for implementation under the Second Five-Year Plan.

While some of the problems figuring in the list are common to all the states, there are a few which are peculiar to Bombay being mainly the result of the reorganisation of states and the consequent creation of a bigger bilingual Bombay. One such is the administrative problem of integrating the services of the enlarged state, while another has to do with the integration of laws as administered in the various component parts of the State.

In the economic field the immediate problem is that of ensuring sufficient supplies of food grains at reasonable prices. The Governor referred to the steps taken by the State Government to bring the food situation under control, such as opening of fair-price shops as also the Essential Commodities (Amendment) Act, and said that systematic working plans for increased production, specially of foodgrains had been included in the Development Programme for 1957-58.

In regard to industrial Development the Governor announced that the Government would draw up a master plan for the development of industries and further said that a Department of Mining would also be set up to intensify the development of mineral resources. To assist the industrial development, a large body of skilled workers is being built up by extension of specialised and technical training facilities. The Governor expressed the hope that industrialisation would offer special opportunities of gainful employment to displaced persons.

For the industrial centre which Bombay is, there are other problems of equal urgency and magnitude such as housing and slum clearance. It was pointed out that though about 12 schemes had been recommended to the Government of India for sanction during the current year, the Central Government had sanctioned loans only for seven schemes. At the same time he assured that the housing problem was receiving special attention of the Government. In regard to slum clearance it was pointed out that in view of the heavy outlay involved a beginning could be made only in the worst affected areas.

*

Businessmen and Agriculture

Inaugurating the annual general meeting of the Mahratta Chamber of Commerce and Industries in Poona last week, Mr Baliram Bhagat, Union Deputy Minister of Finance, said that there were three things which stood in the way of continuing and accelerating the tempo of development which had been built up during the last three or four years, namely, the comparatively slow increase in food production, the shortage of internal resources and the shortage of foreign exchange.

Referring to the food situation in the country, he said that the current prices of rice and wheat were nearly 20 per cent higher than a year ago. High food prices had obtained because production had not increased to the extent anticipated and also because the pressure of demand on the economy had increased. The people in the rural areas in our country are today better-fed than a few years ago. The fact that there has been a perceptible improvement in the economic conditions of the rural population, thanks to the energetic steps taken by Government, has been a powerful contributory influence in the movement of foodgrains from the producing areas. It is also to be noted that just as in the case of some cash crops, notably raw jute, in the case of food grains also such of those agriculturists as have a surplus may be keeping back their excess stocks in anticipation of higher prices for the simple reason that their improved economic condition has given them better staying power than ever before. It would appear, however, that Government are disposed to attribute the present difficulties in the food front largely to hoarding facilitated by bank finance. It is in this view that further restrictions have been imposed on bank advances on foodgrains.

It is evident that the food problem is not going to be amenable to an easy solution. But it is of utmost importance to the rapid progress of the country that the food problem is found a satisfactory solution as quickly as practicable. It is, therefore, interesting to hear Mr Bhagat say that "Indian agriculture needs badly a little influence of the business spirit, the spirit of calculated risks and investments for striking new paths of higher productivity and profits." The business community may be wondering how they can take seriously the call for their active participation in the regeneration of agriculture while the ownership of land is increasingly becoming a highly risky investment. It is no secret that the landowners all over the country are finding themselves daily harassed by measures in the name of land reform. It is to be hoped that Government will not stop with suggesting that it is in the interests of the business community itself to help increase agricultural production but will take active steps to create conditions conducive to such active participation.

GATEWAY MARKETS

Oils and Oilseeds Quiet

THE markets for Oils and Oilseeds ruled generally quiet last week and most of the gains, registered early in the week, were erased at the close. Favourable weather forecast indicating strengthening of monsoon created a bearish feeling among the speculators. Barring Groundnut futures which remained comparatively steady, futures in other sections ruled easy on liquidation by tired longs and selling by shippers.

The weakness in the Linseed section was more pronounced; and the Government's decision to allow free exports of Linseed Oil up to the end of December 1957 had little effect on sentiment. The absence of interest was attributed to the current unfavourable outlook for exports of linseed oil. There had been little fresh business in the commodity in recent weeks on account of the persisting disparity between domestic and overseas rates. The rate in the UK has been unremunerative at £95 per ton compared with the Indian price of about £105.

The weakness in the UK and the Continent has resulted mainly from consistent selling by the Argentine and Canada, both of which are said to be faced with a larger output. The recent release of about one lakh tons of linseed by the Commercial Credit Corporation in the USA has also contributed to the downward trend in the commodity.

The continued strength in domestic prices, which has been responsible for the loss of the export trade, is attributed largely to the fact that linseed oil is mixed with rapeseed oil, which is quoted at higher prices, presumably on account of the large-scale smuggling into East Pakistan. In these circumstances, shippers are not hopeful of exports in the near future unless the demand from East European countries revives. Meanwhile, Linseed September delivery started at Rs 30.50 and finished at Rs 30.25. Ready was quoted at Rs 29.50 and Linseed Oil at Rs 15.12.

In the Groundnut section, prices improved after a short spell of initial hesitancy on spot demand from crushers. This had a bullish effect on futures, which moved higher from the earlier low levels. August delivery after touching a high of Rs 176.25 and a low of Rs 174.62, finished the week at Rs 175.25. Ready Bold was quoted at Rs 36.50 and Groundnut Oil at Rs 20.50.

Prices in the Castorseed section declined heavily under selling pressure. Reports of beneficial rainfall and the talk of rejection of Indian offers by American buyers accentuated the downward trend. September delivery opened at Rs 167.50 and, after being pushed down to Rs 163.25, closed better at Rs 163.50. Ready was done at Rs 32.25 and Castor Oil, commercial quality, at Rs 18.50.

Trading in the Cottonseed section was featureless. September delivery began at Rs 109.75 and ended at Rs 108.25.

*

Gold & Silver

With the spot sections giving a disappointing performance, futures values in the bullion market receded mildly. While Gold subsequently rallied on profit-covering, Silver failed to recover the lost ground.

Gold arrivals amounted to 4,000 tolas against a poor off-take of 2,000 tolas. Unrefined metal receipts were also heavy at 5,000 tolas. Moreover, tender for 1,500 tolas of Mysore Gold was offered for sale. Ashad delivery started at Rs 104.87 and, after dipping to Rs 104.56, finished better at Rs 104.69. Shravan delivery started at Rs 104.31 and, after touching a low of Rs 104.06, closed better at Rs 104.19. Ready changed hands at Rs 105.19 to Rs 105.87 to finish at Rs 105.31.

Arrivals of Silver amounted to 10 bars against an offtake of 5 bars. Unrefined metal receipts totalled 11 bars. Ashad delivery opened at Rs 180.69 and after touching a low of Rs 180.56, finished better at Rs 180.69. Similarly, Shravan delivery, after starting at Rs 179.19 and touching a low of Rs 178.94, finished at the former level. Spot was quoted at Rs 181.87 to Rs 182.19.

World *of* Cotton

Resumption of Trading in March 1958 Contract

THE Forward Markets Commission, at long last, gave permission to the East India Cotton Association for commencing trading in the Indian Cotton Contract for March 1958 delivery with effect from June 22. In this connection, it may be recalled that, since the expectations of a larger cotton crop this year were not fulfilled, the Forward Markets Commission had requested the EICA to formulate proposals for the revision of the hedge contract for the 1957-58 season. The Board of Directors of the EICA accordingly submitted its proposals after consultation with all concerned interests and discussed them with the Commission. As a result, several amendments have been effected to the bye-laws of the Association.

The main terms of the new contract are: There will be a single hedge contract known as the Indian Cotton Contract in place of the two hedge contracts traded during the previous year. The basis of the ICC will be fine Moglai Jharilla 25-32" staple. To make the hedge contract more realistic and to establish a proper link between the future and the spot prices, the tendering differences will be fixed on the basis of spot prices instead of future price as in the past. The margin system has been tightened up and will come into operation whenever prices of the hedge contract ruled above Rs 750 per candy. Trading in the hedge contract will not be permitted above Rs 790 per candy, viz., Rs 30 below the statutory ceiling, so that the futures market should no longer be able to push up the spot market.

Although there is at present anxiety about the new crop on account of the delay in the monsoon, it is generally believed that the 1957-58 crop will be around 50 lakh bales and that the carry-over for the new season will be 15 lakh bales. There is, therefore, the threat of prices moving up again next season. It is, however, pointed out that the new changes in the bye-laws regarding hedge trading will check speculative activity. The change-over from two contracts to one contract, heavy margin and "ceilings within ceilings" are expected to impart a bearish character to the contract. Besides, speculative activity in delivery contracts will be checked.

In the "moorat" trading on Sunday, the new Jharilla March contract found supporters around Rs 690 per candy. At the close of the day, the rate was nominally quoted at Rs 693 to Rs 695. In the dealings on Monday and Tuesday, prices could not maintain their high levels on reports of favourable rainfall in the cotton-producing tracts. With the result, the rate eased off gradually to Rs 689.25. Meanwhile, the Forward Markets Commission has notified the EICA that the Vijay June 1957 contract would be closed out at the close of business on June 24. The contract closed at Rs 873.

In the Spot section, a little slackening of spinner demand was visible following the news of all-round rains in cotton districts. Mills, however, continued to buy Jharilla, Surti, Jaydhar and Kalyan varieties, although they were reluctant to augment their stocks.

In the export section, some enquiry continued for Bengal and Oomra Deshi cottons.

In the foreign section, moderate business was reported in spot lots of American cotton on news that the new crop was about three week's late. Ahmedabad and Southern mills enquired for Sudan cotton. Prices, however, remained unchanged.

With regard to the announcement made by the Government of India on May 22 in respect of imports of American cotton, it is now reported that imports can be made with immediate effect. Staple lengths of cotton will be 1-1|16" and above. The liability of the importer is to pay for the cotton at a fixed rate of Rs 480.25 per 100 US dollars. Application forms should clearly state the contracting and shipping period on the following basis: cotton to be contracted for by May 31, 1958 (inclusive) for shipment between May 26, 1957 and June 30, 1958 (inclusive).

Following were some of the rates quoted:—Porbunder and Manavader Rs 785; Ganganagar and Raisinagar Rs 780 to Rs 795;

We do business with the nicest people...

And we are deeply interested in these nice people: in *you*! That's why we have a special Market Research Department that devotes itself to finding out what you like and don't like, why you buy—or don't buy.

Our teams of interviewers travel all over the country, calling on families in city, town and village, and noting your growing needs and changing preferences. This fact-finding process enables us to introduce new products like Rinso, or change a familiar one in some way—the perfume of Lux Toilet Soap, for instance.

Many of our products are, perhaps, already your household friends, and you appear on the charts and reports compiled by our interviewers. But you are more, much more, to us than facts and figures ... you are the very people we do business with.
We spare no trouble in trying to meet your needs, in offering you the very best value for your money.

"A Great Tragedy of Our Time"

RECEPTION in political circles in the Capital to the findings of the UN Investigating Committee on the Hungarian Revolution of last autumn has been somewhat mixed. There is no effort, except in Communist and fellowtravelling circles, to minimise the seriousness of the charges against the Soviet Union: but there is evidence of some uneasiness about the timing of the release of the Report to the public. The argument is somewhat on the following lines: Cold war politics has, after the confusion introduced by the Suez interlude (in which members of the Western alliance were apparently at cross purposes with one another), slowly settled down in the familiar pattern of hard bargaining on specific issues. And these efforts at "horse trading" were, by all accounts, beginning to yield results. Over the issue of disarmament, for instance, the narrowing of differences has made it impossible for either side to resile into earlier sullen postures. Similarly, there has been recent evidence of desire on both sides to arrive at an understanding on the question of thermo nuclear tests. Therefore, the publication of this Report is, it is feared in some quarters, likely to exacerbate feelings once again, and hard political sense may be displayed by wounded amour propre as a motive of international behaviour. Even more sinister interpretations are put on this publication by people who read in a series of recent events a pattern of sabotage of efforts at reducing world tension. For instance, the increased military buildup in South Korea, on the one hand, and the shelling of offshore islands by the Chinese of the mainland, on the other, are seen as ominous signs of a desire, on both sides, to stir the placid waters of the Far East. Seen thus, it would appear to some that there is at least a depressing fatality (if not something worse) about the timing of the publication of the Report on Hungary.

All this gloomy and somewhat highstrung diagnosis of international wickedness (or evil fatality) is the result of "nerves"—international politics has a hard core of basic inhumanity even when it is conducted by the best of men: for, such are the inescapable demands of the power game. It does not need the adventitious aid of cloak and dagger melodrama of sabotage or of the naiver tricks of political astrology to make it an unprepossessing thing. In any case, the compulsions that have driven the chief participants in the cold war toward a more reasonable attitude to each other are overriding. The final impotence of supreme power, so forcefully demonstrated by the stalemate in nuclear superiority, has made agreement to live and let live unevadable. The Soviet Union, therefore, will not allow itself to be deflected from its task of arranging a modus vivendi that would make possible some kind of coexistence with the US. This does not mean that the floodgates of vituperative eloquence will not be let loose on those who produced the Report. But it would be a safe guess that the deluge of angry denunciation will be allowed to become a mere trickle at the shortest possible moment consistent with appearances.

One of the sidelights of the publication of this Report has caused much amusement here. It is the way the Daily Mail of London has made use of this story in order to cause petty annoyance to Mr Nehru. Employing its own tortured logic based on insufficient acquaintance with facts, it has made out that Mr Nehru's eyes were opened to reality only on his seeing this Report. And attributing to him an international good faith that it carefully denies him at other times, it has suggested tendentiously that Mr Nehru will sponsor a move to condemn Soviet action in Hungary in the Commonwealth Prime Ministers' conference. This characteristic performance has not caused any surprise here, nor has it particularly annoyed any one. It is pointed out with justice that the politically literate do not appraise themselves of Mr Nehru's views (or for that matter, of any political facts) from the pages of the Daily Mail.

But another aspect of Mr Nehru's categorical statement at Oslo is worth noting. It has been well known to us in this country that Mr Nehru has never had any doubt about the spontaneity of the revolutionary impulses of last October's events in Hungary and that the intervention of Russian forces in what was a national rising was inexcusable. Despite frequent assertions by Mr Nehru himself of these convictions, the Western press has been repeating the charge of double standards that India and Mr Nehru apply to international conduct. In more extreme circles that openly identify us with the Communist bloc, the suggestion that we dare not criticise Russia was quite frequent. And now, when Mr Nehru says in so many words that the Hungarian Revolution of last August was a general national rising, and that there was no doubt that it was suppressed by Soviet troops, the press in the West does not seem to think it necessary to make amends for attributing to Mr Nehru a species of hypocrisy.

The Report itself contains no finding that has not been widely canvassed before. There is evidence that the Committee consisting of representatives of Denmark, Ceylon, Tunisia, Uruguay and Australia went to considerable trouble to have the data checked and authenticated. In any case, it does not lie in the mouth of either the present Hungarian Government or the Soviet Union to say that the Report is one sided: for, it was precisely they who made a more complete appraisal impossible by refusing to allow the Committee to go to Hungary to hear the other point of view.

The broad fact that has emerged out of the enquiry is that the revolt was a genuine national upsurge led by 'students, workers, soldiers and intellectuals', many of whom were Communists or former Communists. It is untrue that 'the uprising was fomented by reactionary circles in Hungary or that it drew its strength from imperialist circles in the West.' Its timing was connected with 'Poland's successful move for greater independence' and, when expectations of similar relaxation in Hungary failed, there was a general rising. There was evidence that this development was anticipated, and Soviet troops were in readiness as early as 20th October (two days before certain demands were put forward by Hungarian students). On 23rd October, there was a demonstration which at first was entirely peaceful. The change in the attitude of the crowd was due to the firing by AVH (the State security police) on the crowd just before the Radio Building and the 'appearance of the Russian soldiers in Budapest as enemies in combat.' Then, the situation developed rapidly, with a pitched battle for five days, in which the AVH and the Russians (some of whom disliked their new duties) were on one side and the people and the police and some units of the Hungarian Army (the others disintegrating as such) on the other. There was another serious firing by Soviet tanks guarding the Parliament building on unarmed demonstrators on the 25th October, which led to terrible carnage. There was then the replacement of Gero by Kadar as first secretary of the party; and, on 27th October, Imre Nagy formed the Government consisting of Communists and nonCommunists. On 29th October, Nagy abolished the AVH, and initiated a whole series of efforts to restore normalcy. Meantime, negotiations with the Russians for the withdrawal of Russian troops were going on and everything seemed set for satisfactory conclusion when things went wrong once again. On the evening of the 3rd of November, a four man Hungarian delegation dined at the headquarters of the Soviet Military Command to settle the final details. About midnight, the party was interrupted by the arrival of General Serov, chief of the Soviet Security Police, 'who entered the room accompanied by officers and ordered the arrest of the Hungarian delegation'. Then followed the second Soviet intervention in which 'Soviet forces in battle formation steadily advanced to Budapest'. About 2,500 tanks with supporting vehicles were in Hungary by 3rd November and all strategic points had been occupied by Soviet authorities. Mr Nagy had still some hopes left of negotiating settlement, and had ordered that no Russian troops should be fired on. But Kadar had been busy meantime: he had been to Moscow in early November and, on the 7th of November, was back in Budapest and announced himself as the head of the Government of Hungary. Once again, there was fighting, Nagy having rescinded his former instructions not to fight the Russian troops.

These facts clearly bring out the deliberate attempt of the Soviet Union not to allow Hungary to get away with the concessions it was forced to give to Poland. The determination to crush the spontaneous national desire to see the last of the occupying forces was carried out with cold and ruthless disregard of international decencies. No wonder Mr Nehru described this event as 'one of the greatest tragedies of our time'.

One other aspect of the Report is worth commenting upon. It was the role of the Radio Free Europe, the broadcasting net work in Europe sponsored by the United States. It would appear that some of the broadcasts by these stations 'helped to create the impression that support would be forthcoming for the Hungarians.' In the event, such help was not forthcoming and the Hungarian insurgents were fed with hopes that were cruelly falsified. What was worse, these broadcasts lent plausibility to the charge that outsiders were aiding and abetting the reactionaries at home. The Committee puts the matter mildly when it draws the lesson from these inopportune broadcasts in the following words: 'In such circumstances, the greatest restraint and circumspection were called for in international broadcasting'. Though, of course, in this particular case, the responsibility in the matter was that of Radio Free Europe, this piece of clumsiness is part of the confusion in the US foreign policy itself, which sometimes talks wistfully of liberating East European countries by force.

Delhi Review

North Indian Notes

Cooperative Movement in 1955-56

Significant developments have taken place in the cooperative movement in the country last year. The fact that agricultural credit societies have recorded a larger increase, compared with all other types of societies, augurs well for the programme of development envisaged by Government for the rural sector of the economy.

Cooperative societies of all types have increased from 2,19,288 at the end of the preceding year to 2,40,395 at the end of 1955-56. Thus there has been an increase of 9.6 per cent. The working capital of all types of societies went up from Rs 390.52 crores to Rs 468.82 crores, recording an increase of as much as 20.1 per cent as against a rise of 11 per cent in the course of the previous year.

Other salient features of the movement are an increase of nearly 10 per cent in the membership of primary societies, an increase in the quantum of financial accommodation provided by the Reserve Bank to State cooperative banks, a sizeable drop in the advances to individuals by central banks and a significant expansion in the non-credit structure.

While it is gratifying to note that the number of agricultural credit societies, which constitute the base of the cooperative credit structure in the country, increased from 1,43,320 to 1,59,939, their working discloses that in one essential aspect progress has not been satisfactory. This is evident from the fact that deposits at Rs 7.05 crores constituted only 8.9 per cent of the working capital, indicating thereby that the primary agricultural credit societies have laid inadequate emphasis on the promotion of thrift and savings. Their membership and working capital increased from 65,65,416 and Rs 62.93 crores to 77,90,850 and Rs 79.10 crores. The amount of loans advanced by them increased from Rs 35.48 crores to Rs 49.62 crores during the year.

The non-agricultural credit societies also increased in their number and membership from 9,348 and 28,47,944 in 1954-55 to 10,003 and 30,72,600. Their working capital rose from Rs 78.32 crores to Rs 85.74 crores during the same period. They advanced loans to the extent of Rs 72.06 crores as against Rs 62.12 crores during the previous year.

The working of the non-credit societies indicates that conditions in the country now are quite conducive to the rapid growth of this sector of the cooperative movement. The number of state non-credit societies rose to 82 from 60, and that of central non-credit societies to 2,764 from 2,599. At the primary level, agricultural non-credit societies and non-agricultural non-credit societies also recorded a general rise in their number, membership and business.

The "Statistical Statement relating to the Cooperative Movement in India for the year 1955-56", published by the Reserve Bank of India, which provides a statistical assessment of the cooperative movement in its various aspects in the country, sounds a note of warning in regard to two important features observed in the working of the cooperative movement during the past year. It points out that if cooperative institutions are to function as strong, economic units, they will have to make greater efforts to build up their owned funds and attract deposits. So far the increase in the owned funds and deposits of all types of cooperative institutions has not been commensurate with the increase in their borrowings other than deposits. The other feature observed in the case of all primary societies is an increase in the absolute figure of their overdues at the end of the year, which shows the need for making advances after due scrutiny of each case.

*

Assam Budget

The budget for 1957-58 presented to the Assam State Assembly by Mr Debeswar Sarma, Finance Minister, reveals a deficit of Rs 460.93 lakhs and thus reflects in his own words a disquieting picture of the State's economy in the forthcoming year. The receipts on revenue account during 1957-58 were estimated at Rs 2428.82 lakhs and revenue expenditure at Rs 2889.75 lakhs.

Another disquieting feature of the budget is the expected falling off in the cash balances from Rs 177 lakhs to Rs 27 lakhs and this is explained by the heavy commitments of the order of nearly 1,999 lakhs (including the revenue deficit) on the capital side for 1957-58 against which the total available resources are only Rs 2026 lakhs made up of public borrowing at Rs 200 lakhs, loan from Central Government at 1556 lakhs net income from deposits etc., at Rs 93 lakhs and opening cash balance at Rs 177 lakhs.

Describing the budget as "poor man's budget" the Minister said, that more emphasis had been laid on panchayats, cottage industries, land reform measures, and cooperation. Further it was explained that no new taxation had been proposed to make up the deficit in view of the feeling that Central taxation was falling heavily on the middle class and the poorer sections of the people.

The Minister referred in his speech to the anti-Naga operations, which he said was a source of increasing expenditure to the State Government. Though Central assurance to bear part of the expenses has been given, the actual proportion is yet to be fixed.

The Minister also disclosed having submitted a memorandum to the Finance Commission, claiming a larger share of the Centrally collected taxes like the income tax and Union Excise duties, as also a substantial grant under Article 275(1) of the Constitution.

NORTH INDIAN MARKETS

Recovery in Shellac Prices

THE Calcutta Shellac market, which had been ruling somewhat quiet during the past two weeks, has turned active during the week under report, thanks to a better trade enquiry which has been brought about by the recent decline in prices. Pure TN quality, after being quoted down to Rs 74, moved up again to Rs 78 per maund.

It is learnt that buyers from a number of countries are now active. The USA took some more seedlac, while Chinese bought shellac. There was also a rumour that drought might damage the two remaining crops of lac that will come forward this season; and this contributed to the marked recovery in prices.

Reports from London state that more business has been done. Consumers seem to be buying for their immediate needs while neglecting Calcutta. The bigger consumers in Britain and on the Continent seem to have stocked up well from the Board of Trade lac release.

On the London market, June delivery shellac is quoted around 201 shillings buyers with sellers at 206 shillings.

According to the reports of the Calcutta Shellac Trade Association, shipments, during June until the 19th, were 23,255 packages comprising shellac 13,991 packages; seedlac 7,198 packages; buttonlac 550 packages and other varieties 1,516 packages. Shipments, during the corresponding period of last month, were about 20,380 packages.

Sugar

According to the report issued by the Government of India, supply position of Sugar will continue to be comfortable. It is estimated that the total availability of sugar, during the 1956-57 season, will be about 25.58 lakh tons, including 5.3 lakh tons carried over from the previous season. Production in 1956-57 is estimated at 20.5 lakh tons, the highest since 1947. Production in 1955-56 was 18.6 lakh tons.

Commitment for export, upto June 17, 1957, amounted to 1.42 lakh tons, of which about 50,000 tons have already been shipped. The impression in the market that exports might be as much as 3 lakh tons is, therefore, not warranted. The actual exports are expected to be much less. It is estimated that the year will close with a carryover of more than 4 lakh tons.

As internal consumption is estimated at 18 to 19 lakh tons, further exports can be allowed, especially as a UN Survey placed the production of sugar for 1955-56 around 20 lakh tons. There is, therefore, no justification for any abnormal rise in prices such as has been reported to have come about in particular regions of the country.

Meanwhile, sugar markets have continued to rule firm despite the reports of a record production. Following rates (per maund) are quoted in Hapur market:—Meerut Rs 34.37; Amroha Rs 33.87; Bijnore Rs 33.62; Mansoorpur Rs 34.50 to Rs 36; Daurala Rs 35.89 and wholesale Rs 33 to Rs 36.

The Khandsari market also rules firm in sympathy. Prevailing rates are Rs 26 to Rs 31 per maund, according to quality.

*

Foodgrains

Steady conditions are being witnessed in the Foodgrains markets. At Hapur, Wheat prices have recorded modest advance although prices have tended to go down in other centres of the State after the formation of Uttar Pradesh as a separate wheat zone from which no exports are to be allowed except under permit. The improvement in prices is mainly due to the fact that the Bihar Government have purchased substantial quantities of wheat through the Government-sponsored Marketing Society. Rates are quoted at Rs 14.75 to Rs 15.50 per maund for the average quality and Rs 16.25 to Rs 17.00 for farm variety.

The market for Rice continues to rule steady. The Uttar Pradesh Government is reported to have purchased heavy quantities of Gram, aggregating over 2 lakh maunds. This has accounted for a steady

The Peninsula

Steel Tube Industry

A theme that often saves opposition party speakers in Madras from facing empty benches is the industrial backwardness of the State in particular and of the South in general. It is not to be understood, however, that the people who hear them expatiate on the subject are convinced by the reasons adduced. It only goes to demonstrate the intense interest that the generality of the people of the State have in the rapid industrialisation of this region which, in comparison with some other parts of the country, pales into insignificance on the industrial map of India.

In this region, as elsewhere, it is realised that its economy has little chance of becoming strong without the establishment of a large number of industries. This realisation, when it percolates to the masses, sometimes emerges as demands for siting all sorts of industries in the region all at once and overnight, as it were, as though all that is required is just an announcement from the Central Government to that effect.

Persons in authority both in the States and at the Centre cannot afford to ignore the realities of the situation, although they, too, devoutly wish to see the various regions and the country as a whole take rapid strides toward industrialisation. Taking Madras, for instance, the absence of coal within easy reach is the biggest obstacle in the way of the rapid progress toward industrialisation. With regard to the implementation of some of the projects, reliable data have to be collected before embarking upon them with reasonable chances of success. Authority, however, has not been idle. A major project has already been inaugurated. The lignite from Neiveli is bound to quicken the pace of development.

In the meantime, the landscape around Madras is undergoing a steady transformation. Where only a few years ago waste lands greeted the eye, there are today a number of factory buildings. The T. I. Cycles, the Universal Carborundum, Ashok Leylands and Tube Products of India now symbolise the new urge of the people in this part of the country.

There are some unique features in the organisation of these units. All of them are the outcome of the cooperation between Indian and foreign industrialists. In three of these—T. I. Cycles, Universal Carborandum and Tube Products of India—the Indian interests are represented by one and the same firm, Messrs Murugappa and Sons. The foreign collaborators in T. I. Cycles and Tube Investments are the Hercules Cycle and Motor Company Ltd and Tube Investments Limited England. Carborandum Universal Limited has been formed in collaboration with the Carborandum Company of Niagara Falls, USA and Universal Grinding Wheel Co of the UK.

The Tube Products of India Limited is the latest to go into production in this chain of joint enterprises. It was declared open early this month by His Highness Maharaja Sri Jaya Chamaraja Wadiyar Bahadur, Governor of Mysore. The factory is situated in Avadi, which has become a household word by virtue of the historic resolution on the Socialist pattern of society adopted by the Indian National Congress at its session here in 1955.

The new factory manufactures TRU-WEL ERW (Electric Resistance Welded) steel tubes which are extensively used in the home and in industry. They are essential raw materials for the bicycle industry. Motor cars, locomotive boilers and transformers are some of the highly specialised industries which require ERW steel tubes in large quantities. Initially, this factory will concentrate mainly on the production of tubing for the cycle industry. With the rapid industrialisation of the country, the demand for precision steel tubes, which are a basic product for industry, is bound to increase. The close association of the company with the world's leading pioneers in the precision steel tube industry, Tube Investments Ltd, Birmingham, will keep it in the forefront of precision steel tube manufacturers in the country.

The establishment of yet another venture under Indo-British collaboration at this juncture is a matter of great significance for the country as a whole. The new factory is situated on the very spot that the famous Avadi Session of the Indian National Congress was held. Referring to this coincidence, Sir A Ramaswami Mudaliar, Chairman of the company, pointed out that the entrepreneurs of the unit had come forward to establish the factory in the full knowledge of the fact that a socialist pattern of society was the goal of the Government of India. But they had the confidence that, in India, honest capitalists "who have not got overwhelmingly that sense of profit making as their only urge but who take a pride in establishing these industrial units" would continue for ever.

Sir Ramaswami Mudaliar's optimism should have stemmed partly from the great interest shown by both the Central and State Governments in bringing the Tube Products of India Limited into being. The Government of India have given the promoters of the company all the necessary facilities as expeditiously as practicable while the Madras Government have met their requests readily and promptly.

It is evident that entrepreneurs both in our country and abroad who have correctly understood the Industrial Policy of the Government of India will find that, when they take up any new venture, they will receive the unstinted cooperation of the Government of India. This has been repeatedly proved in this part of the country, where there are a number of enterprises which have been established by the joint efforts of Indian and foreign capitalists.

In the course of his speech, the Governor of Mysore referred to the happy results of the joint collaboration between Indian and British Industrialists. The knowledge of local conditions of the Indian partners combined with the technical knowhow of the foreign collaborators ensured the successful operation of the units. The Governor rightly drew attention to the fact that the joint collaboration produced a result much more than profitable working of a company. "The understanding that is promoted between two nations and the confidence that results from such collaboration are gains not to a particular industry or unit but to a country as a whole".

The establishment of several units one after another in collaboration with foreign industrialists in this part of the country is a tribute to the patriotism of the entrepreneurs responsible for these ventures. The Indian industrialists evidently have been able to convince their foreign partners that there is nothing to get scared about the Industrial Policy of the Government of India. They could not have succeeded in their endeavour unless they are themselves firmly convinced of the bright future for private enterprise in this country.

The British collaborators have also come to an independent judgment of the prospects of private enterprise in India. Mr P. G. Carew, Director, Tube Investments Ltd., in the course of his speech expressed his company's confidence in the role which private enterprise and private investment could play in the shaping of a bright economic future for India. He pointed out that the fact that something like 40 per cent of the huge capital investment programme in the Second Five Year Plan was to be provided by private enterprise was a tacit recognition of the abundant vitality of the private sector. Mr Martin, however, said that the rate at which funds could be attracted to India would be a crucial factor in deciding the pace of its development. A thoroughly sound atmosphere of mutual confidence was necessary for the smooth flow of technical knowledge and private capital from abroad. In this connection, he said "We live in a capital-hungry world. Many countries are now doing their utmost to encourage the expansion of industry and

South Indian Notes

Socialist Pattern of Society

Despite repeated assurances from Government Spokesmen that it can always expect the utmost co-operation from Authority in the vital task allotted to it under the Second Plan, private enterprise in our country has continued to be somewhat apprehensive about its future. This uneasiness of mind has mainly stemmed from the fact that the aim of the Government is a socialist pattern of society. It has been found that there is considerable amount of confusion about what is exactly meant by a socialist pattern of society. Recently a prominent industrialist frankly confessed that he had not been able to get a correct idea in this regard.

The speech of Mr Morarji Desai, Union Minister for Industries and Commerce, at the opening ceremony of the expansion project of the Transformer Division of the Kirloskar Electric Company in Bangalore, contains answers to some of the questions that the business community may like to ask. The aim of the socialist pattern of society, said Mr Desai, was that every individual in the country should be happy. It was the responsibility of society and the Government to see that suitable conditions were generated and secured, whereby any individual who had a healthy mind, could, with his labour and talents, become happy. The Government however wanted to achieve the goal by adopting peaceful and persuasive methods, and Mr Desai pointed out that "we must first of all become human in our approach to the problems."

An essential prerequisite to making everyone happy is that poverty must be banished as quickly as possible. This can be achieved only by sizably increasing the wealth of the nation as a whole. It is here that private enterprise has a vital role to play. By virtue of its long experience in industry, it is especially equipped to help in the rapid industrialisation of the country. But the business of producing more wealth must bear a close relation to the main aim of the nation. In other words increased production of wealth will have meaning only when it goes to promote the good of the country. In the present critical times no responsible Government can afford to move at a leisurely pace. Mr Desai has given another compelling reason why the task should be accomplished as quickly as possible. The vast majority of the people in the country are understandably impatient to taste the fruits of freedom which are still as elusive as ever as far as they are concerned. It is, therefore, incumbent on Government to convince them that active steps are being taken to bring about a sizable improvement in their economic condition within a measurable period of time.

*

Foreign Exchange & Projects

The repercussions of the shortage of foreign exchange are being felt in delayed executions of the various projects, now under implementation in the various States. The adverse impact of the foreign exchange shortage must naturally fall on those projects, which depend for their final completion, on large-scale imports of capital and machinery, and the first sufferers naturally are the railways and the various power and irrigation projects.

Progress of the work under Ramagundam project in Andhra, is reported to have been affected by the difficult foreign exchange position and the State Government are put to the necessity of improvising local material such as wooden poles and locally fabricated towers. Similarly in the case of Nagarjunasagar project also while foreign exchange of the value of Rs 50 lakhs was needed during the current year only Rs 20 lakhs had been sanctioned. This must naturally delay the completion of the projects.

The foreign exchange requirements of Andhra Pradesh for the implementation of the power schemes under the Second Five Year Plan are of the order of Rs 144.95 lakhs and those for the irrigation schemes of the order of Rs 156 lakhs. But the Central Government had allotted foreign exchange to the value of Rs 50 lakhs only for the power schemes in Andhra, though an allotment of Rs 30 lakhs for Telengana is awaited.

The Andhra Pradesh Government, are having many other projects for implementation. The flood control schemes numbering about 8 are expected to cost nearly Rs 25 crores, though actual allotment has been only Rs 3.5 crores. Of the 17 medium-sized projects taken up in the First Year of the Second Plan, only four had been completed. Further the Krishna Barrage project is also yet to be completed. Progress of the project has been hampered due to lack of adequate supply of steel. The tight situation in regard to the foreign exchange needed for the early and successful completion of these various projects is bound to react adversely on their speedy implementation.

SOUTH INDIAN MARKETS

Three-Pronged Drive for Cashew Development

A three-pronged drive for production, development and marketing of Cashew has been decided upon by the Government of India to make the country self-sufficient in the matter of this commodity and to tap alternative markets for its products abroad. A great importance is attached by the Indian Council of Agricultural Research to the development of this commodity in view of the fact that it is a potential dollar earning crop.

Three important research stations have been established in Mangalore (Mysore State), Kottarakara (Kerala) and Bapatla (Andhra Pradesh) for the development of new varieties of the crop, scientific cultural practices and better propagation methods. On the extension field, the States, which can grow cashew successfully, have been requested to forward schemes to the ICAR for the development of the commodity, both in the public and private enterprise. In the public sector, the uncultivated wastes and forests can be exploited through departmental agencies like the Forest Departments of the State Governments, while private growers, who take to new cultivation, are being offered loans for this purpose. Thus, all sources will be exploited for its increased cultivation and production.

*

Turmeric

The sharp setback in Turmeric prices has upset growers as also the authorities in the Andhra State. Prices, which some time back were around Rs 500 per candy, now range around a mere Rs 70 per candy. In the Alleppey market, the rate is quoted at Rs 100 per candy. The commodity is mainly used in the manufacture of paints, with West Bengal being the main consumer.

The present trouble has been the result of paint manufacturer's increasing dependence on synthetic materials. It is understood that the Andhra Government have asked its marketing officer to enquire into the reasons for the veritable landslide in the value of the commodity and suggest effective measures to ensure reasonable return to growers in the State.

Cinnamon and Cloves

There has been a sharp rise in the prices of Cinnamon and Cloves during the past few weeks. Cinnamon has spurted to Rs 98 from Rs 70 per Bengal maund. This sustained strength is attributed to consistent demand from upcountry centres in the face of paucity of stocks. Traders apprehend drastic cuts in the next half-year's import quota and have become cautious sellers. Shortage of ready goods in China, the chief exporter of this commodity to India, has also aided sentiment.

Price increase in the case of Cloves has been more spectacular, the rate having risen sharply from Rs 290 to Rs 387 per Bengal maund.

*

Groundnut

The Madras Groundnut market ruled quiet with price movements confined to a narrow range. Arrivals last week averaged 20 to 30 tons a day, rotary and chekku crushers being the main buyers. Business was reported done in superior oil-quality seeds at Rs 165 and bold variety at Rs 160 per candy.

Arrivals of "summer" crop in the Southern district centres are reported to be good with prices showing a slight upward tendency due to good buying support from crushers.

In the Groundnut Oil section, the rate for the ready position improved to Rs 338 per candy from Rs 332. There was fair buying by Calcutta interests.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate with good clearances. In spite of the poorer assortment of lots, prices for light weights were still very firm. There was very little demand for 10-12 lbs, resulting in a slight decline in prices. Enquiries from the UK were less except for light weight runs and fourths.

Arrivals of Buff hides were less and here again selections were very poor. The clearances were, however, good and prices ruled unchanged. In Cow Calf and Buff Calf, clearances were steady at unchanged prices.

In the Tanned Skins section, market quality Goat and Sheep skins showed no changes in prices. Heavily-adulterated sheep of lighter averages showed an increase of 9 to 10 nP per pound.

On the export front, trading continued to be difficult with buyers' ideas considerably lower than Madras asking prices. Although there was very little support from overseas buyers at current prices, Madras sellers did not show any anxiety to sell and cause any reduction in prices due to the well-sold position. The general opinion is, however, that prices will decline ere long in view of the behaviour of the Continental market which has shown an 'attitude of neglect".

THE NEW INDIA ASSURANCE COMPANY LTD.

A Difficult Year for General Insurance

*

Need for Integrated Market

*

Statement of Mr Ambalal Sarabhai

Speech by Mr. Ambalal Sarabhai at the 38th Annual General Meeting held on 26th June, 1957.

Addressing the Shareholders at the Thirty-Eighth Annual General Meeting of the New India Assurance Company Limited, on 26th June, 1957, Mr. Ambalal Sarabhai said that 1956 had been a very difficult year for the Indian General Insurance business. Nationalisation of Life Assurance gave a rude jolt to the base of every composite company leading to a severe dislocation of the entire organisational set-up. A complete reshuffle of the organisation and realignment of the administrative patterns was an uphill task for all the units, but particularly so for those with a large Life portfolio—like the New India.

Mr. Ambalal Sarabhai observed that in order to explore and utilise the vast potential which existed in the field of General Insurance in India, it was absolutely imperative to have a well-organised and integrated General Insurance Market, composed of strong indigenous units, having high administrative standards and capable of rendering efficient service. The procuration cost had also to be brought down so that premium rates could be made more attractive. The Industry had made vigorous efforts, through self-discipline and self-denial, to eliminate wasteful competition. Till now, reliance was mainly placed on publicity and fear of public criticism but without satisfactory results.

The Executive Committee of the General Insurance Council, therefore, introduced a revised Code of Conduct, earlier this year. Mr. Ambalal Sarabhai thought that if the Code were properly supported by the members and enforced by the Executive Committee, it should put the General Insurance Industry in India on a sound and healthy basis.

The basic idea behind the Code is that rebates should stop, and procuration and administrative costs should be reasonable and within legal limits.

Reviewing the working of the Company, Mr. Ambalal Sarabhai expressed his satisfaction that the Premium income of the Company touched a new high at Rs. 5.64 crores in 1956, representing a marked improvement of about Rs. 66 lacs over the previous year. This, he felt, was particularly commendable in view of the fact that operations of the Company were adversely affected by the nationalisation of Life business, which completely disrupted its organisational set-up, and other factors like the reduction in premium rates for two consecutive years, and loss of more and more business to the Pool and Syndicates. The Miscellaneous Department played an outstanding part in stepping up the Premium income of the Company in 1956. Its Premium income, at Rs. 1.44 crores, showed a marked rise of Rs. 35 lacs, as compared to a rise of about Rs. 15 lacs recorded by both the Fire and Marine Departments.

On the disbursement side, claims increased by 1.7 per cent to 50.6 per cent, while Commission, Expenses and Tax Ratio remained constant at 38.0 per cent. The profits, inclusive of interest earnings of the Departmental Funds, amounted to Rs. 43.9 lacs, maintaining the level reached in 1955. As a result of the year's operations, the Departmental Funds stood at Rs. 4.45 crores as against Rs. 4.11 crores in the preceding year.

The overall result of the operations in 1956 led to a further strengthening of the financial resources by Rs. 52.9 lacs. The Capital and Reserves stood at Rs. 7.60 crores.

Referring to the compensation available to the Company under the Life Insurance Corporation Act Rs. 48,72,443 and under the Life Insurance (Emergency Provisions) Act, Rs. 1,50,983, Mr. Ambalal Sarabhai said that the Company had referred the compensation under the Life Insurance Corporation Act to the Tribunal constituted under the said Act. He felt that the Company was also entitled to higher compensation under the Life Insurance (Emergency Provisions) Act. Regarding the issue of one fully paid-up bonus share of Rs. 15/- for every three shares held, he informed the Shareholders that the Directors were pursuing the matter with Government.

Note:—This does not purport to be a record of the proceeding of the annual general meeting.

EDITORIAL NOTES

(Continued from page 1191)

the prospect of individual agreements remains uncertain. Unless more precision is imparted to the obligations on both sides and a climate provided in which the advantages and difficulties arising from rationalisation could be understood all-round, the technical changes which are considered indispensable for some of our major industries cannot be pushed through smoothly.

NORTH INDIAN MARKETS

(Continued from page 1161)

trend in Gram prices. Prices of other Coarse grains are also steady.

Pulses have been ruling quiet as demand has subsided. Moreover, outside support is slack. Arhar stocks are reported to be heavy, with the result the rate for this commadity has come down to Rs 11.62 per maund.

Mixed conditions are noticed in the Delhi grains market. Wheat prices have softened, while Gram improved slightly as a result of slack arrivals against better buying interest. Owing to decreased buying activity, the market for Barley rules quiet. Maize has declined by about 50 nP per maund on account of better arrivals, while Urad and Masoor have shown small gains, induced by short supply.

The Bombay grains market exhibited a slightly steadier tendency with prices of rice and a few Pulses recording modest improvement. The limited rally in prices is attributed mainly to better advices from terminal centres in Madhya Pradesh and Andhra. The general feeling in the market is, that prices may record a further modest improvement with the broadening of consumer interest in the beginning of next month.

COMPANY NOTICE

INDIAN COPPER CORPORATION LIMITED

(Incorporated in England)

Dividend No. 31 (Final)

NOTICE IS HEREBY GIVEN that at the Thirtythird Ordinary General Meeting to be held at the Royal Exchange Hall, Royal Exchange, Calcutta, on Wednesday, the 11th September, 1957 at 11-30 A.M. the Directors will recommend payment of a Final Dividend (No. 31) for the year ended 31st December, 1956 of 13-1/3% (3.2 pence i.e. 17.7777 Naye Paise per unit of stock) free of Income Tax payable by the Company in respect of the Issued Capital of £1,371,300/. Subject to confirmation of members, the dividend will be paid on the 20th September, 1957 to all members registered in the books of the Company at the close of business on the 20th July, 1957.

The Registers of Members will be closed from the 21st July to the 5th August, 1957 both days inclusive.

The net profit for the year ended 31st December, 1956 was £272,157/- (against £416,758/- for previous year), after providing £175,000/- for Depreciation (£175,000/- last year), £885,027/- for Taxation (against £683,046/-), £175,000/- for General Reserve (against £200,000/-.) With £117,083/- brought in from 1955, there is an available balance of £389,240/- (against £528,473/-). After providing £274,260/- for Interim Dividend (No. 30 of 6-2/3% already paid on 15th April, 1957 and for proposed Final Dividend of 13-1/3%, free of Income Tax payable by the Company (Dividends No. 28% Int.) of 10% and No. 29 of 10% and Bonus of 25% free of tax last year—£411,390/-) the balance carried forward is £114,980/- (against £117,083/- brought in from previous year).

BY ORDER OF THE BOARD,
G. A. Carver,
Secretary.

Gillander House,
Netaji Subhas Road,
CALCUTTA.
Dated the 24th June, 1957.

SOUTH EASTERN RLY. TENDERS

The Controller of Stores, invites tender for supply of the following items:—

(1) Tender No. PD|CS(R)|5|F1 of 57 for supply of M.S. Pale Fencing 5'-3"×10 ft. complete to our Chief Engineer's Drag No. 15889-2300 Rft.

The Share Transfer Books and the Register of Members of the Company will be closed from 9th July 1957 to 16th July 1957 both days inclusive.

By Order of the Board,
S. B. INDUSTRIAL
DEVELOPMENT CO. Private Ltd.
Managing Agents.

The 21st June, 1957.

Stock Exchanges

Improvement in Sentiment Well Maintained

Watch-Dog Writes:

THE improvement in sentiment that was noticed in stock markets last week, has been well maintained during the week under review. The talks between the Union Finance Minister and leading industrialists in Bombay has contributed to a growing optimism about the outlook for the markets. The sustained support from the Life Insurance Corporation and the encouraging corporate results have also imparted a healthy tone.

Equities on the Calcutta Stock Exchange, after forging ahead to fresh high levels, lost some ground towards the close due to clearing adjustments in the speculative issues.

The Bombay Stock Exchange exhibited a cheerful sentiment, being aidded by the assurances from the Finance Minister that the tax proposals would not hamper business in the private sector. Relief at the absence of any fresh imposts in the Bombay Budget was another contributory factor.

On the Madras Stock Exchange, Plantings met with better support and prices generally looked up. Textiles were also in better demand.

Although there was some reluctance to extend commitments, the London Stock Exchange maintained a firm undertone. Interest was mainly confined to industrial equities, several bright features being recorded.

Wall Street closed barely steady. The inclination to buy stocks was dampened by the firmness of money rates.

*

Calcutta

Calcutta, Thursday Evening.

STEADY to firm conditions prevailed on the local Stock Exchange during last week. Apart from the broadening support lent by the Life Insurance Corporation, the Finance Minister's statement in Bombay appeared to have impressed the operators. His assurance in respect of the role of the private sector and the hint that taxes would not hamper business activity caused hectic buying. It was also felt that corporate working was fairly satisfactory and that the Finance Minister might take necessary steps to deal with the stringency in the money market and the foreign exchange. Prices, therefore, forged ahead to fresh higher levels; but the slightly easier tendency, noticed towards the close, was mainly due to profit-taking and clearing adjustments in the speculative issues. The market finished the week with handsome gains on balance.

Conditions in the Giltedged market remained unchanged due to continued absence of investment support—either from the Life Insurance Corporation or from the Reserve Bank of India. The volume of business was very limited. 3 per cent 1986 Conversion Loan, after touching a low of Rs 72.50 and a high of Rs 73.10, finished at Rs 73.00.

In the Banking section, prices changes were nominal. The only bright spot was United Commercial, which were enquired upto Rs 54.50 from Rs 53.75. Punjab National were quoted at Rs 55.

Jute shares continued to be a neglected counter. Operators were generally reluctant to enter into any commitments in view of the firmer tendency of raw material prices. Howrah, National and Megna were the only bright spots having support upto Rs 15-50; Rs 19.60 and Rs 67.00 respectively. Delta turned ex-dividend and changed hands at Rs 108 to Rs 111, while Champdany recovered partially to Rs 100 from Rs 06.

Sentiment in the Coal section, remained generally depressed in view of the anxiety with regard to the Coal Price Committee's decision and the reports about the unsatisfactory progress of production in the private sector of the industry. It was felt that, if the progress continued to be as such, it would be difficult for the producers to raise even 42m tons as against the target of 45m tons. Thanks to a remarkable improvement in general sentiment, selected scrips recorded substantial recovery from the recent low levels. Bengal were taken upto Rs 220 from Rs 206.50; Equitable upto Rs 21.52 from Rs 21.00 and Western Bengal upto Rs 5.56 from Rs 5.44. Burrakur, after touching a low of Rs 21.44 from Rs 21.87, recovered to Rs 21.87 on the emergence of speculative support. Central India hovered narrowly around Rs 6.06.

In contrast to past many weeks, Tea shares were more active and there was a broadening of enquiry at improved levels, thanks to better results obtained in the auctions for the second week in succession. Operators were, however, found to be cautious in following the rise in prices due to fears still entertained with regard over-production. Most active scrips were Bateli being taken upto Rs 26.00 from Rs 24.12; Brooke Band upto Rs 18.94 from Rs 18.75: Bishnauth upto Rs 21.69 from Rs 19.75; Dhelakhat upto Rs 21.50 from Rs 21.63; Gohpur upto Rs 21.50 from Rs 21.00; Grob "A" upto Rs 26.37 from Rs 23.37; Hasimara upto Rs 21.12 from Rs 20.00; Huldibari upto Rs 19.25 from Rs 18.56; Jayshree upto Rs 10.12 from Rs 9.12 and Tezpore upto Rs 21.12 from Rs 18.62.

Trading in the Textiles section, was subdued. There was a general feeling that several mills might be obliged to prune the distribution for 1957 in view of the sharp fall in earnings following the slack conditions still prevailing in the piecegoods market. The only bright spot was Kesoram, which met with some support upto Rs 13.62 from Rs 13.50. New Victoria, after touching a high of Rs 1.75, receded at the close to Rs 1.67, while Cawnpore were neglected around Rs 5.44 following the reports of the decision to sell or dispose of the company's mill.

Sugar shares came in for selective support. Operators were generally inclined to wait for further developments on the sugar front before extending their commitmens. Cawnpore met with business at Rs 14 to Rs 15.00; Carew at Rs 7.25 to Rs 7.37; Champarun at Rs 22.44 to Rs 25.00 and SKG at Rs 9.87 to Rs 9.94. Ramnugger were, however, offered at as low as Rs 21.26 against Rs 23.77.

In the week's dealings, Engineering shares took the pride of place in leading the rise in the market. There was a good deal of speculative buying in Indian Irons although higher levels could not be retained till the close due to settlement adjustments and general profit-taking. Indian Irons opened at Rs 20.06 and, after touching a low of Rs 19.93 and a high of Rs 20.42, finished the week at Rs 20.09. Similarly, new shares touched a high of Rs 19.27 and a low of Rs 18.75, to finish at Rs 18.90. The settlement rate was fixed at Rs 20.06 as against last settlement of Rs 18.36. The carry-over charge for next settlement was 5 nP.

Among other engineering scrips, TEXMACO, after being taken upto Rs 17.75 from Rs 17.15, finished the week at Rs 17.35. Thanks to the support lent by the LIC in the Mundhra group, Jessop were taken upto Rs 25.50 from Rs 24.47 and Richardson upto Rs 14.50 from Rs 13.50. Burn came in for some business upto Rs 314 from Rs 296 and Braithwaite upto Rs 25.50 from Rs 24.62. Kumardhubi changed hands at Rs 8.94 to Rs 9.06 and Marshalls at Rs 5.06 to Rs 5.25.

The Miscellaneous section, provided many bright features on investment considerations. Prominent were Metal Box having buyers upto Rs 25.62 from Rs 24.62; NICCO upto Rs 20.44 from Rs 20.19; National Carton upto Rs 24.12; Indian Aluminium upto Rs 13.94 from Rs 13.40 and Dunlop Rubber upto Rs 20.62 from Rs 20.31. Orient Paper, after foreign ahead to Rs 25.55 from Rs 25.00, receded at the close to Rs 25.15 on profit-taking. Titaghur were aken upto Rs 33.12 from Rs 31.56 with Shree Gopal well maintained at Rs 15.06. India Pulp moved narrowly between Rs 19.94 and Rs 20.00. Some buying on Bombay account caused BIC to spurt to Rs 6.75 from Rs 5.96. India Steamship hardened further to Rs 10.15 from Rs 10.06; BBP to Rs 2.56 from Rs 2.44 and Ballis to Rs 32.00 from Rs 31.50. Hindustan Motors changed hands at Rs 6.94 to Rs 7.12 Indian Cable at Rs 24.75 to Rs 25.56; Karanpura Development at Rs 11.50 to Rs 12.25 and Osler at Rs 4.37 to Rs 5.50. Indian Copper, after touching a fresh higher level of Rs 3.71 from Rs 3.57, receded at one time to Rs 3.30 on selling pressure following the disappointing final dividend announcement, to improve towards the close to Rs 3.40 on some replacement buying.

*

WORLD OF FINANCE

(Continued from page 1194)

ments must have been more marked, since their borrowings from the Reserve Bank have also declined by Rs 2.03 crores to Rs 23.95 crores.

The slack season conditions are particularly brought out in the position of Scheduled Banks vis-a-vis the central banking institution. Deposits of member banks have risen substantially by Rs 6.69 crores to Rs 71.51 crores; at the same time, their indebteness to the Reserve Bank would appear to have been reduced considerably, since the Reserve Bank's Other Loans and Advances have been marked down by Rs 4.60 crores to Rs 93.46 crores—this being the lowest level since the week ended December 14, 1956. Finally, as we have already remarked, the drain on the foreign exchange reserves continues, with Balances Held Abroad showing another drop of Rs 9.33 crores to Rs 51.86 crores.

The return of the State Bank for June 21 shows a rise of Rs 1.14 crores to Rs 307.64 crores in Deposits. With Advances, in proper slack season manner, showing a decline—for the fourth successive week—of Rs 2.59 crores to Rs 183.80 crores, and with Other Assets also registering a fall of Rs 1.90 crores to Rs 5.94 crores, cash balances are sharply higher by Rs 5.71 crores at Rs 32.40 crores. It may thus be noted that the rise in balances of member banks with the Reserve Bank, as shown in the latter's returns for June 21, is largely accounted for by the State Bank.

The Scheduled Bank figures for June 14 show further evidence of the accretions to Time Liabilities at, perhaps, the cost of Demand Liabilities. The total of Deposits has risen by Rs 7 crores to a new high of Rs 1256.80 crores; and, of this rise, Rs 6.02 crores have been registered under Time Liabilities. Since, in the relevant week, the State Bank Deposits were more or less unchanged, it is clear that it is the other Scheduled Banks which have benefited by the whole of this improvement in Deposits.

Slack season conditions are indicated by the fresh declines under borrowings. Borrowings from the State Bank are down by Rs 2.81 crores at Rs 6.96 crores, which is the lowest such level since the week ended August 24, 1956. Similarly, borrowings from the Reserve Bank stand reduced by Rs 10.25 crores at Rs 72.03 crores, this being the lowest figure since the week ended December 21, 1956. Cash balances apparently disclose a contrary trend with a fall of Rs 2.48 crores to Rs 130.58 crores; but, since the State Bank showed a decline in cash balances in that week of Rs 2.34 crores, it is clear that the cash position of the other Scheduled Banks has been largely unchanged. Investments are rather sharply down by Rs 5.34 crores to Rs 334.88 crores. This is the largest decline registered in any single week since the week ended March 9, 1956. Read with the returns of the Reserve Bank for June 14 this fall in Investments would indicate the sale of giltedged by Scheduled Banks to the Reserve Bank during that period. Total of Advances shows a slack season fall of Rs 5.31 crores to Rs 930.35 crores.

SOUTH EASTERN RLY. TENDERS

The General Manager, Garden Reach, Calcutta-23 invites Tender No. CS|PC|57|20|2513|B for supply of 2 Sets High Lift Pumps (Centrifugal turbine or any suitable type)

Tender Forms are obtainable from the Controller of Stores, Garden Reach, Calcutta-23 on remittance of Rs. 5/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of cash Receipt from the Chief Cashier, Garden Reach, Calcutta by local firms. Closing date is 15-7-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax clearance certificate with the Tender. Earnest Money is Rs. 250/-.

WORLD OF COTTON

(Continued from page 1201)

Ganganagar 320F Rs 936; Buniana Rs 745 and Pali 216F Rs 825.

×

CROP REPORT:

Traders have heaved a sigh of relief at the start of the monsoon in many cotton areas. The monsoon is a little late in the Oomra tract. Although there are reports of rains in Marathawada, Khandesh and Berar, they are not sufficient for the commencement of sowing operations. Punjab has also reported scattered showers. Germination there is satisfactory and early-sown fields are reported to have shown considerable progress.

×

MILL CONSUMPTION:

Cotton consumption in India, during the first eight months of the current season, has been 2 lakh bales more than the corresponding period of last season. The monthly average consumption of Indian cotton shows an improvement at 3.92 lakh bales. Consumption, during the present season, bids fair to exceed 46.50 lakh bales, assuming that the monthly average will be maintained during the remaining four months.

In contract, consumption of foreign cotton shows a decline, the figure for the first eight months at 3.80 lakh bales registering a drop of about 11,000 bales over the figure for the previous period. The monthly average works out to 47,480 bales. American cotton consumption has recorded a sharp rise—more than five times the previous season's figure—and it is expected that the pace will be kept up during the remaining months. Intake of Egyptian varieties has declined from 1.26 lakh bales to 69,292 bales. Consumption of African and Sudanese varieties has also been lower.

×

KARACHI COTTON MARKET:

The Karachi cotton futures market presented a firm trend during the past week, being induced by active mill buying and purchases by East Pakistan shippers. Better cable advices from New York imparted further strength to the market. Sind Deshi was quoted at Rs 84-12; Punjab Deshi at Rs 80-8; 4F Punjab at Rs 74-8; LSS Punjab Roller at Rs 83 and 289F Punjab Roller at Rs 83-0.

×

NEW YORK COTTON MARKET:

Apart from the near-July position, prices on the New York cotton market gradually declined. Favourable weather reports from the cotton belt prompted some of the selling. However, prospect of a higher support-price for the new crop and the growing belief that no unfavourable farm legislation was likely in the foreseeable future, evoked support at scale-down.

×

LIVERPOOL COTTON MARKET:

Values on the Liverpool cotton market showed a remarkable improvement due to trade buying, while mill-fixations provoked short-covering. These stressed the shortage of contracts. The Sudan contract remained unchanged. Enquiries for ready cotton were principally for USA descriptions, mainly in the high-grade and long-staple range.

×

CLOTH AND PIECEGOODS:

Conditions in the Bombay Piecegoods market remained practically unchanged. The offtake was moderate and demand was confined to immediate requirements. It is reported that some of the mills have been able to effect sales of seasonal goods at reasonable prices. As there are reports that supplies in upcountry markets are not adequate, dealers are hopeful that the offtake will broaden in the coming weeks.

On the export front, conditions remained more or less unchanged. Ceylon was reported to have booked some orders, while the Burmese Joint Venture Corporations had concluded satisfactory business. There were also moderate enquiries from East Africa, while fresh enquiries from Sudan were negligible. Although enquiries from the UK were satisfactory, the actual business materialised was only moderate. Business with Iraq was restricted to small lots of grey sheetings and bleached long-cloth.

✱

WORLD OF TEA

(Continued from page 1196)

be over-stocked with tea at present and the internal operators are likely to enter the market after the first few sales of the New Season, when a larger weight of tea begins to be offered in the Calcutta auctions.

To sum up, when the better quality teas from Assam and Darjeeling arrive on the market, high prices will be paid. Indications are that, from the small amount of private buying that has taken place from overseas, the world buyers are prepared to pay generously for quality teas and that these prices are likely to be comparable with those paid in 1956. The majority of better Assam gardens have little to fear from overseas competition, as no country in the world can match the quality produced from this district. The Dooars, Teral, Cachar and Lower Assam districts, however, are not so fortunate as some of their overseas competitors are able to produce comparable teas at a much cheaper cost and these gardens will have to be particularly careful to keep their quality at a peak level. The fate of Darjeeling seems to depend very largely on the size of the possible Russian purchases. If this country supports the Calcutta market to the same extent as last year, not only Darjeeling but producers of medium and better quality teas will also benefit greatly."

Meanwhile, in the Export Sale, held in Calcutta this week, offerings amounted to 17,362 packages. There was a stronger and more general demand than in last week's sale; but any green First Flush teas tended to be easier. Bright liquoring CTC sorts and Medium Assams were the strongest features of the sale and were dearer by as much as 4p nP per pound. There was more demand for Plain and Medium BPs, which were 5 to 10 nP per pound dearer. Fannings in these categories received better support than in the previous week and were firm and sometimes dearer.

Stylish Leaf grades were again dearer, while Tippy sorts and flavoury Darjeelings were well supported. Following rates were quoted: —Clean Black Pekoe Rs 2.40 to Rs 2.50; Plain BP Rs 1.65; Plain Fannings Rs 1.65; Medium BP Rs 2.00 to Rs 2.20 (nominal); Medium Fannings Rs 2.10 to Rs 2.30 (nominal); Best Assam CTC BP Rs 3.20 to Rs 3.50 (nominal) and Best Assam CTC Fannings Rs 3.40 to Rs 3.80 (nominal).

Offerings in the Internal Sale amounted to 5,045 packages of Dusts which included 665 packages of Old Season's manufacture. There was a greatly improved demand for all descriptions, CTC Assams with bright liquors being keenly competed for. Earlier teas with ordinary liquors were, however, barely steady. Orthodox Assams with bright liquors were a popular feature, while plain teas, Dooars and the remaining Orthodox Assams were dearer by sometimes as much as 10 nP per pound.

Once again, the smaller powdery descriptions were sold at higher rates than the leafier types and there was only a limited enquiry for the flavoury invoices from Darjeeling. Following rates were quoted:—Medium Dooars at Rs 1.50 to Rs 1.55; Medium Assam Grainy Dust Rs 1.60 to Rs 1.65 (nominal); Medium Assam CTC Dust not quotable and Best CTC Assam Dust Rs 2.70 to Rs 2.90 (nominal). Also, 150 packages of Leaf grades were offered for internal consumption out of which 34 packages were of Old Season's manufacture.

In the Export Quota section, business was reported done at 21 to 22 nP per pound. At the close of the week, there were sellers at only 22 nP.

At the sale held in Cochin last week, offerings were about 9 million pounds. There was a slight improvement in quality and some medium and high-grown teas were a little brighter in cup; and exporters showed more interest. Commonest kinds were steady; but low medium and medium teas declined by 5 to 10 nP per pound. Black Leaf Brokens, however, remained in good demand and prices were fully firm.

There was useful enquiry for the improved quality high-grown teas, and these were quoted dearer. Whole Leaf grades met with keen competition and again advanced in price. Following rates were quoted:—Plain BP Rs 1.48; Low Medium BOP Rs 1.50 to Rs 1.55; Medium BOP Rs 1.60 to Rs 1.65; Good BOP Rs 2.00 to Rs 2.10 and well-made Black Leaf OP Rs 2.65.

Although outturn of tea in South India, during May, is lower at 19.08 million pounds as compared to 20.22 million pounds in the corresponding month of last year, total production, during the first five months of the current year, is higher at 59.13 million pounds as against 53.11 million pounds in the corresponding period of last year.

Reports from London indicate that tea stocks there, on June 14th, are only slightly higher at 153.22 million pounds as compared to 152.48 million pounds in the previous week. The total amount, to be landed on the same date, was 10.50 million pounds. Deliveries, during the week ended June 14, were 8.48 million pounds. Total afloats were 25.26 million pounds, including 7.83 million pounds from Calcutta; nil from Chittagong; 2.63 million pounds from Cochin; 13.51 million pounds from Colombo and 1.29 million pounds from other Ports.

Meanwhile, a firm to dearer tendency generally characterised this week's auction in London. Offerings were 46,980 packages. There was a strong demand, best liquoring teas, especially Fannings grades, being distinctly dearer. Other descriptions, which met with good competition, often advanced by ½d to 1d per pound on last rates. Plain Fannings were quoted at 2sh 2½d per pound.

Trade quarters in London say, that the reasons for the steadier tone of the lower-priced teas are not clearly defined. It is true that the UK stocks have continued to decline; but, on the credit side, it can be put the reversal of the downward trend in the quantity of tea afloat to the UK from the main producing countries, largely because of bigger shipments from Ceylon.

✱

WORLD OF JUTE

(Continued from page 1195)

thanks to moderate buying enquiries at the lower levels toward close, the market managed to end the day on a quietly steady note with Hessian 40″×10 oz Ready quoting at Rs 43.05 with July-September and October-December marked at Rs 43.35 and Rs 42.80. In the Sacking section, B Twills Ready was finally placed at Rs 114.50 after having been done down to Rs 113.35, B Twills July-September and October-December were Rs 115.20 and Rs 115.00 respectively.

The following table shows price trends during the week.

	Week's opening	Week's closing

STEADIER TONE ON BRITISH STOCK EXCHANGE

(Continued from page 1194)

offices through which unemployed workers could seek employment was built up during the period of mass employment in the 'thirties. The Government has come to the conclusion that, in the almost complete absence of unemployment, there is no need for maintaining nearly as many offices as before the war. By reducing the number of the Labour Exchanges the Government may, it is true, save a few millions of pounds of public money. But there is another side to it.

As a result of this decision it will become even more difficult politically to pursue disinflationary policies which, in order to be successful, would necessarily cause some unemployment. It is easy to imagine the outcry that would arise from a moderate increase in the number of unemployed now that the Government has reduced the facilities through which they could find alternative employment. Even before the decision it was politically difficult for the Government to face the unpopularity of a rise in unemployment. Now it has become practically a political impossibility.

In the circumstances the saving effected through the closing of Labour Exchanges is bound to prove to be a false economy. The Government will have to tolerate even more inflation before it feels impelled to intervene by means of effective disinflationary measures.

The explanation of the improvement on the Stock Exchange and on the foreign exchange market in spite of the complete absence of any improvement in the inflationary position lies mainly in the increase in disarmament hopes. An international agreement that would enable the Government to make really substantial cuts in military expenditure would lead to a noteworthy mitigation of inflation, not only through a reduction in public spending, but also through the development of a certain amount of unemployment in the arms industries. Owing to the scarcity of labour in the engineering industry as a whole, the unemployed would easily find jobs. Nevertheless, there would be a transitional unemployment which would moderate consumer demand for some time. The release of a number of young men from the armed services, too, would mitigate the scarcity of labour, and this might lead to a temporary moderation in the insatiable appetite of the trade unions for higher wages.

Disarmament discussions have now reached a decisive stage, and investors and speculators are marking time to see which way they will develop. Should the talks break down, or should their result be disappointing, the Stock Exchange in general and the gilt-edged market in particular would resume their downward course. On the other hand, a reasonably satisfactory agreement, through both its material and psychological effect, would ensure a moderate boom during the coming months.—(Copyright).

CLIVE STREET GOSSIP

(Continued from page 1198)

middle classes to organise a 'pressure group' which in each constituency would barter its votes to the candidate who made specific promises on matters of policy".

*

Something similar to this can be done in our country also. But let us fully understand the implications of this effort to get a hearing for the middle classes at the hands of organised parties. The middle class, especially its inteligentsia, has to live by its wits and to pit its strength against the strength of money on the hand and the strength of numbers on the other. A species of mild political horse trading at the time of elections, such as the one suggested, will not by itself get all that they want, unless the ideas they represent are clear, coherent and unmistakably conducive of the commonweal. In other words, the pressure brought on the political parties should be the pressure of a valid social programme that will promote the welfare of all and not of a particular class. Secondly, the organised middle class should be wary enough not to be trapped by specious demagogues; and, even here, it is not seductive blandishments of these people that we should guard ourselves against. More deadly than these are the unashamed overtures to political unreason that these people are sure to make in order to get you to vote for them. Take, for instance, a question like States reorganisation. Vast numbers of Maharashtrian and Gujerati middle classes voted linguistic chauvinists solely on the ground that they did not get their separate linguistic states. An organised middle class cannot afford to respond in this fashion, for, by hypothesis, the whole raison d'etre of the middle classes as a political power is its political rationalism.

*

Having lectured my correspondent long enough, I should like to give one word of caution to authority. In its self absorbed and somewhat self righteous certitude of the rightness of its plans for ameliorating the country, it is apparently unaware of the real strength and justice of the desperation like that of my correspondent. I do not share my correspondent's view that it is out to eliminate the middle class, but I do believe that it does not bestow enough thought on the way the Plan is impinging on this class. A shabby middle class, as history has proved at least once, is a prelude to Fascism as surely as a seedy proletariat is to Communism.

EAVESDROPPER

*

GATEWAY GOSSIP

(Continued from page 1199)

conference of State Finance Ministers. Both Mr H. V. R. Iengar, Governor of the Reserve Bank, and Mr P. C. Bhattacharyya, the Chairman of the State Bank, were present. And both of them, I am sure, would welcome an intensification of the drive for small savings.

As to the Central Government's loan, TTK did not have anything new to say. The Budget envisaged a loan of Rs 100 crores, of which Rs 32 crores would be from conversion and Rs 68 crores from cash. It looks as though the Finance Minister has yet to consider whether or not conversion facilities for loans maturing in 1958 should be offered this year. Finally, the Finance Minister also said that the timing of the 1957 New Loan would be late July/early August.

All this has been favourably received in stock exchanges. As he said when he spoke to the delegation under the auspices of the Indian Merchants Chamber, the Finance Minister is in favour of a period of progressive prosperity rather than alternating booms and slumps. I should think that the reclarification of what I might call Government economic policy is indeed to ensure that the equity market is now headed for a period—a long period, I would say— of prosperity.

The Indian Merchants Chamber deputation included such notable Gateway citizens as Mr G. P. Kapadia, Mr Babubhai Chinai, Mr C. H. Bhabha, Mr M. A. Master, Mr Ramnath A. Podar, Sir Chunilal B. Mehta, Mr R. G. Saraiya, Mr Ramdas Kilachand, Mr G. D. Somani, Mr S. P. Jain, Mr M. R. Ruia and Mr M. H. H. Premji.

A second deputation also met the Finance Minister and this consisted of Sir Homi Mody, Mr Neville Wadia, Mr E. Parker, Mr Dharamsey Khatau, Mr Krishnaraj Thackersey, Mr Arvind Mafatlal, Mr C. H. Bhabha, Mr M. A. Master, Mr Murarji Valdya and Mr Dhirajlal Maganlal.

A rather intriguing point with which I might conclude is that the deliberations at the second conference are enshrouded by a veil of vagueness. There is also the mystery, which nobody has bothered to plumb or tried to explain, as to why there should have been a second deputation.

*

THE PENINSULA

(Continued from page 1204)

develop themselves quickly, and there is great competition for the available funds. I am sure that the Government of India is conscious of this and appreciate that private investment should be actively encouraged if it is to help give a planned economy greater strength and a robust heart."

While it is undeniable that the Government of India have been doing their best to encourage foreign investment as is evidenced by the number of joint ventures that have come up in recent years, it is to be noted, however, that there are still lingering doubts in the minds not only of foreign investors but also of investors within the country. It is to be hoped that Authority will take early steps to dispel the misgivings so that private enterprise can go ahead full steam with a feeling of security and confidence in the future.

GATEWAY MARKETS

(Continued from page 1200)

import quotas for the July-December period would be drastically cut due to the shortage of foreign exchange. There was a general tendency to wait and watch the situation till the outcome of the import policy. A large majority of weavers were, therefore, reluctant to augment their stocks. In the ready section, all varieties improved by about half an anna per pound.

The Cotton Yarn section ruled quiet despite the Government's permission to export yarn upto a ceiling of 5,000 bales. It was stated that exports were difficult on account of increasing competition in the trade by Pakistan.

*

Metals

The market for Non-Ferrous Metals continued to present a remarkably steady front despite a generally bearish tendency in London. The resistance displayed by these metals is attributed mainly to the mounting anxiety in the market in respect of the future import policy. The Bombay Metal Exchange has promptly drawn the attention of the Government to the present critical situation and has urged that the OGL should be extended immediately as the country is largely dependent on foreign supplies.

It is stated that supplies are contracted for several months ahead of requirements to secure a regular inflow from natural markets and that it is always beyond the capacity of the trade to stockpile these metals in view of the huge capital investment it would involve.

Despite the persistent decline in London prices, Copper continued to rule steady with the rate quoted around Rs 170.50 per cwt.

BALANCE-SHEET REVIEWS

(Continued from page 1188)

Kirlampudi Sugar

Despite additional levy of cess at Rs 2 per ton of sugar cane by the Andhra Government and increased burden consequent on the levy of additional Sales Tax by Madras and Andhra Governments, the Kirlampudi Sugar Company Limited has made a substantial profit for the year ended 30th June, 1956, thanks to increase in the quantity of cane crushed from 91,667 tons to 1.29 lakh tons and in sugar manufactured from 8,263 tons to 10,738 tons.

Consequently, sales have risen to Rs 69.51 lakhs from Rs 42.29 lakhs, while the net profit, after Depreciation, amounts to Rs 3.09 lakhs against Rs 2.08 lakhs in the previous year. A sum of Rs 3.42 lakhs against Rs 3.59 lakhs is provided for Depreciation. The whole profits earned have been set apart for Debenture Sinking Funds. With the result, no dividend is recommended and there is no carry-over for next year. Debit balance of as much as Rs 19.96 lakhs brought forward from 1955, therefore, remains unchanged.

BINNYS have been making friends for more than three generations, and they make a new friend every time a satisfied customer takes home his purchase of Binny's cloth. A real friend is one on whom you can rely implicitly and Binnys are making friends because people find the quality of their cloth completely reliable. That is because Binnys never allow a yard of inferior cloth to leave their Mills.
