Reviewing the progress made in the implementation of the community Development and National Extension Service Programme, the Governor said that out of a total outlay of about Rs 350 crores, the programme for the First Year was of the order of Rs 64 crores or 1/6 of the total outlay. An expenditure of such an order made it possible for existing community Development and National Extension Service Blocks to distribute among ryots more than 15 lakh maunds of fertilizers, to reclaim about 1.3 lakh acres of land and finally to bring under irrigation about 1.5 lakh acres of land. In areas not covered by the Community Development Projects, schemes of local development works are in operation. In 1956-57 nearly 1,188 such works have been completed. The progress of some of these projects was hampered by the uncertainty that came in the wake of the State's Reorganizaion Scheme, and progress in the rest of the plan period is expected to be greater and for this purpose the administration cadre in charge of the two schemes are also being reorganized by means of investing the Divisional Officers with special powers which would enable them in consultations with their advisory bodies to sanction most of the schemes themselves.

The progress of the various power projects also has been according to schedule and the first of the four generating sets of the Koyna Project is expected to be commissioned in October 1960, while the remaining sets would be in service by 1962-63. Out of a total expenditure of Rs 38 crores sanctioned for this project Rs 125 lakhs had already been spent in 1955-56, while an outlay of Rs 278.89 lakhs and Rs 650 lakhs is expected to be incurred in the course of 1956-57 and 1957-58. Further Tata's Trombay Plant is also being developed with a view to adding to the power resources. The first set of this scheme has already been commissioned, and a second set is being erected while permission has also been given to put up a third set.

In the field of industrial development progress has been so remarkable as to leave a big gap between the number of applications for licences under the Industries (Development and Regulation) Act, and the actual number of licences granted. Out of a total receipt of nearly 500 applications licences were issued only for 113 concerns involving a capital outlay of about Rs 1811 lakhs assuring potential employment to about 11500 persons. This certainly raises hopes about the greater development of industries in the state in the future.

The new and novel feature in regard to the industrial development in the State has been the attempt to start factories producing sugar on a cooperative basis. And nearly 18 cooperative sugar factories have been registered, three of them having actually gone into production. With a view to developing the mineral deposits in the state, surveys of tracts and prospecting for minerals are intended to be got done by the Government, and preparatory steps for this are being taken by way of expanding the geological section of the Department of industries.

Other notable advances have been in the field of education and village Panchayat. Compulsory primary education to the age-group 7-11 years in all places with a population of 1000 and more and introduction of diversified courses in secondary education are the lines of progress in the field of education.

The allround progress in the implementation of the Second Five Year Plan testifies to the sound start it has made in the State and holds promise of an equal measure of success in its implementation in future Fortunately the Administrative machinery which was thrown out of gear consequent on readjustment of boundaries, is also being refitted to its task. And the major problem of integrating the services, is also being tackled with expedition and sucess while by means of ad hoc increase in personnel, the increased work load arising from the larger area is sought to be dealt with.

The only way in which the calculations of the authorities may go awry is in regard to the price levels of agricultural commodities which have recently shown an upward tendency. And in his speech the governor referred to this aspect of the problem and explained the lines on which the Government of the state intend to take action and get it under control. The Agricultural Programme has been revised so as to ensure that schemes having a direct bearing on increased production are initiated without delay and completed within a period of three years.

GATEWAY MARKETS

Gold & Silver

Although the Bombay Bullion Exchange succeeded in consolidating the initial gains, prices developed a reactionary tendency towards the close under the lead of Silver.

Prices in the Silver section developed a downward trend on rumours that heavy duty had been paid for the import of Tibetan coins. Fagun delivery started at Rs 179-12 and, after advancing to Rs 179-15, receded towards the close to Rs 179-10 on liquidation by longs. Chaitra delivery started at Rs 180-6 and, after improving to Rs 180-10, finished at Rs 180-7. Ready was quoted at Rs 178-6 to Rs 178-8.

Gold was subdued throughout the week in sympathy with the counterpart. The turnover was moderate. Arrivals and offtake were estimated at 2,000 and 3,000 tolas respectively. Chaitra delivery started at Rs 105-13 and, after firming up to Rs 105-15-6, finished at Rs 105-15. Ready moved between Rs 69 to Rs 69-4.

*

Yarn

Listless conditions continued to prevail in the Art Silk and Staple-fibre yarn markets in the absence of any demand from consumers; and prices moved within a narrow range. A section of the trade, however, expects that the demand may improve in the coming weeks.

Dealings in the Cotton yarn section also continued to be dull and uninteresting despite a firm trend in raw cotton. Some counts, particularly 60s and above from American cotton, declined to some extent in absence of satisfactory demand from the consuming centres. Exports enquiries were also negligible.

*

Metals

The Metal market continued to rule easy following discouraging advices from London. Copper ready was quoted at Rs 175-8 per cwt. As Cacutta was quoting lower than Bombay due to heavy arrivals there, more orders flowed to that centre. Zinc was quoted at Rs 73-0 per cwt. Due to higher prices ruling in Calcutta, considerable quantities of the metal were reported to have been despatched to North Indian centres. The market for Lead continued to rule dull with the rate hovering around Rs 82-0 per cwt. Demand was comparatively lower and arrivals were satisfactory. Ready Tin was quoted around Rs 128 per quarter.

On the London Metal Exchange, the undertone in the Copper section continued to remain weak, the rate being quoted around £240 per ton. Market circles believe that considerable caution is necessary until the problem of top-heavy supplies are resolved. Zinc was quoted around

(Continued on page 520)

Oilseeds Record Modest Advance

A steadier undertone was in evidence in the Bombay Oilseeds market during last week. Although price movements were rather irregular, the volume of business done was fairly good on most days of the week. Better upcountry advices, particularly in groundnut oil, and local spot demand for castorseed and grundnuts mainly aided sentiment. Linseed and Cottonseed were practically neglected.

In the Castorseed section, turnover was 5,000 candies. Latest reports have indicated that shippers in Bombay have entered into a sizable business of castor oil with East European countries and more enquiries are pouring. They are also trying to find a footing for other oils and cakes in these markets. Meanwhile, Castorseed May delivery opened around Rs 163-12 and, after improving to Rs 164-0, receded towards the close to Rs 163-8. Ready was quoted at Rs 34-0 and Castor Oil, commercial quality, at Rs 18-10.

Groundnut futures recorded a gradual improvement against the persisting background of inadequate arrivals of seeds and the resulting tendency to hold on to supplies. May delivery opened at Rs 173-12 and, after touching a high of Rs 174-0 and a low of Rs 173-6, finished the week at Rs 173-14. Ready was quoted at Rs 35-0 for the Bold variety and Groundnut Oil at Rs 19-0.

Meanwhile, the all-India final estimate of Groundnut for the year 1956-57 puts the current year's area and production at 13,101,000 acres and 4,086,000 tons of nuts in shell respectively as against the partially revised estimate of 12,692,000 acres and 2,862,000 tons of nuts in shell for 1955-56. This shows an increase of 409,000 acres in area and 224,000 tons in production.

Conditions in the Linseed section remained dull. May delivery moved narrowly between Rs 29-10 and Rs 29-12, while ready was quoted at Rs 30-0 and Linseed Oil at Rs 15-12. Shippers have pointed out that the only course to promote exports is to abolish the export duty on oilcakes and permit exports of Kardi and Nigerseed oils, which have been stopped since February 28.

Cottonseed May delivery moved between Rs 103 and Rs 104, to finish the week at Rs 103-12.

Bombay Review

World of Cotton

Sustained Buoyancy

BUOYANCY in Cotton continues unabated with fresh support forthcoming from speculative quarters following reports of scarcity of good quality cotton. With hardly a week left for the current delivery in Jharilla to go off the board, a bullish view has been given as a result of the steady scaling down of the crop estimate. Market ideas of the season's crop is much lower around 4.8 million bales as against the earlier estimate of about 5.5 million bales. On the other hand, there has been a steady rise in consumption of cotton by the textile industry, the figure for the first four months of the current cotton season being 17.26 lakh bales, including 2.61 lakh bales of imported varieties The estimated consumption during the remaining eight months is placed around 34 lakh bales, comprising 30 lakh bales of Indian cotton and 4 lakh bales of foreign cotton. All these have induced bulls to tighten their hold and the bears are forced to cover.

Meanwhile, the talks between the Egyptian trade delegation and the Indian cotton industry over the purchase of Egyptian cotton have failed to produce the desired results owing to divergent views on prices. Indian mills are reluctant to pay more than 60d per pound, while the delegation has offered supplies at a price of 66d. The centre of interest has, therefore, shifted to New Delhi, where the possibilities for a compromise may be attempted at the Government level. The current ideas suggest that both the parties should bridge the gap by meeting half way.

Again, it is of interest to note that the deal between India and Egypt, especially with reference to cotton, has provisions for India to make payments in rupees. The rupee account opened thus is expected to be utilised by the Egyptian Government for the purchase of her needs. Under the terms and conditions of the proposed Indo-Egyptian trade, the State Trading Corporation is believed to be saddled with the overall control in respect of purchases and sales between the two countries. It is, however, suggested that traders can have direct dealings for conclusion of business, which implies that the Corporation need not be approached at every stage of a particular transaction.

×

FUTURES MARKET:

Lack of tenders against the expiring Jharilla March contract and consequent short-covering led to major price advances. Although higher levels could not be maintained till the close of the week, the firm trend continued following renewed support by bulls. The turnover was 15,000 bales. Jharilla May opened at Rs 689-8 and, after touching a high of Rs 693, eased off at the close to Rs 689. March delivery opened at Rs 784 to finish at the same level. Vijay April opened at Rs 872 and, after touching a high of Rs 878, finished at Rs 874. June delivery opened at Rs 838-8, to finish at Rs 831.

×

SPOT MARKET:

The Spot market was very active with mills buying all staple varieties, particularly Surat and Vijay. In general, most of the descriptions moved to the official ceilings with the firmness in the futures section.

On the export front, enquiry for Bengals continued to be in evidence. Arrivals of Kala Gin have just commenced and the quality is reported to be quite satisfactory. Export enquiries for this variety have not yet started, with the result that only little business has been reported in the past few days.

In the foreign cotton section, a few spot lots of Americans changed hands, transactions being mostly confined to spot and afloat lots.

Following rates were quoted:—Bengal Rs 690 to Rs 740, Oomra Rs 800 to Rs 830; Dhollera Rs 770 to Rs 780; Jharilla Rs 800 to Rs 840 and Vijay Rs 975 to Rs 980.

×

KARACHI COTTON MARKET:

Despite persistent reports that China was interested in purchasing cotton, the Karachi cotton market continued to rule easy. Values were rather sticky and failed to rise.

Total arrivals of cotton into the market, since the season commenced, aggregated 5.96 lakh bales and total shipments amounted to 5.25 lakh bales. Following rates were quoted:—Sind Deshi Rs 85; Punjab Deshi Rs 78; 4F Foller Rs 83-2; Punjab Roller Rs 85-2; 289F NT Roller Rs 83-10 and 289F Punjab Saw Gin Rs 99-10.

×

NEW YORK COTTON MARKET:

In the New York cotton market, futures scored small gains in early dealings on scattered trade demand. A leading Memphis firm was buying nearby May, October and December deliveries. Dealings, however, remained slow and many traders were inclined to await Washington and new crop developments. Continued quiet conditions on the textile market were also a restricting influence. Spot was quoted around 35.25 cents per pound.

×

LIVERPOOL COTTON MARKET:

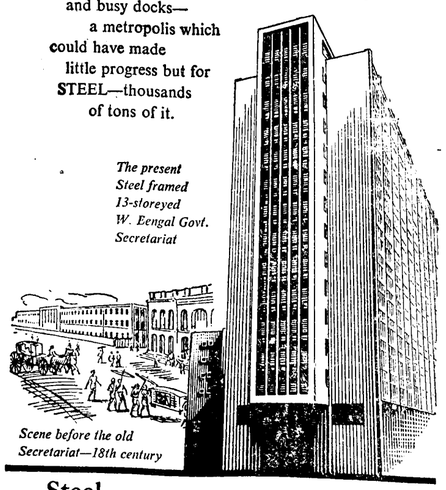
In the Liverpool futures market, prices moved within a narrow range, the undertone remaining steady for most deliveries. Sporadic hedge selling in the more distant positions was taken up by transfer dealings and occasional trade buying.

No indication has as yet been given of the base price at which the RRR will accept bids against the new release programme at the first sale, which is due to take place on the 19th March. Meanwhile, Egyption contract was quoted at 60.00d and Sudan Lambert at 42.75d.

×

CLOTH AND PIECEGOODS:

Conditions in the Piecegoods market continued to remain dull. Except for some enquiry in superfine qualities, activity was generally restricted although prices were maintained. There are, however, indications that the turnover will broaden in the coming weeks. The low level of prices prevailing now is also expected to provide a fillip to a larger offtake by the consuming centres. A clear picture will emerge after the announcement of the Central Budget.



Shippers feel that the demand from abroad will also broaden in the near future in view of the attractive price levels. Actual exports of cotton piecegoods during 1956 have totalled 744.23 million yards as against 473.82 million yards shipped by the UK. Japan was, however, able to ship as much as 1,109 million yards during the first eleven months of 1956.

The Lame Duck Budgets

ON Tuesday were presented in the Lok Sabha the Railway budget and the general budget of the Central Government for the financial year 1957-58. There was a complete absence on this occasion of the usual pre-budget tension and mildly apprehensive waiting for the zero hour when one would hear the "worst". The reason was obviously that the session of Parliament was only a formal affair to put through important and unavoidable immediate business. The most important of such business was the voting on account of the budget for the next few months until the new Government formed on the results of the general elections could make their own proposals in May. There was, therefore, no expectation of any sensational announcements whether of a heartening or a depressing kind on the occasion of the budget. This expectation, unlike many a budget expectation, has been fulfilled. Mr T. T. Krishnamachari has not levied any new taxes, and though Mr Jagjivan Ram 'threatened' revision of freight structure when he came back before Parliament in May, he has made no immediate changes.

But it would be wrong to dismiss the occasion as of no importance at all. In the first place, since the Congress is sure to be back in power and since probably the same persons will continue to be the Finance and Railways Ministers in the new cabinet, this "curtain raiser" is something that gives you a foretaste of the real play. Secondly, all the data required for the framing of a budget have been given along with this interim budget, and these give us an indication along which the budget for the whole year will be framed in May. And, lastly, the white papers accompanying the budget have given detailed evaluation of the economy of the country in the last twelve months from the official point of view. They provide, as it were, the frame of reference for particular remedies that might be sought to be applied for the malaises recorded therein. In a sense, therefore, the shape of things to come has already been made manifest to the public.

Before analysing the points made by the budget speeches and the white papers, I shall give a brief account of the budget figures themselves. Taking the Railway budget first: The original estimates for 1956-57 have been found to have been somewhat on the conservative side both in their expectation of gross traffic receipts and net surplus. As against Rs 345 crores expected from traffic earnings at the time of the last budget, the revised estimates put the gross earnings at Rs 350 crores. There has been a revision upwards of expenditure also to the extent of roughly Rs 3 crores. The net surplus after contribution to general revenues is expected to be Rs 22.99 crores. On this basis, Mr Jagjivan Ram has framed his figures for the next year. But he made it clear that the estimates must be taken as purely tentative since he is awaiting the recommendations of the Mudaliar Committee on revision of Freight Structure. But as at present advised, his estimates for the coming year are:

(In Crores of Rs.)

Gross Receipts	..	368.50
Working Expenses	..	244.10
Net Misc Expenses	...	14.12
Appropriation to Depretion Reserve	...	45.0
Dividend to General Revenue	... ...	43.79
Net Surplus	... ...	21.43

These estimates are based on an anticipated increase of 3 per cent in passenger traffic and a similar increase of 5 per cent in goods traffic. Increased expenditure is anticipated because of increase in passenger services, repairs and increased emoluments to staff. The works projects to be undertaken by the Railways in the next year include all the new lines and improvement in the line capacity to take charge of additional traffic consequent on increased production of coal and steel.

Mr Jagjivan Ram's fifteen minute speech supplemented by the detailed white paper prvided the background to the budget figures. The Railway Minister took legitimate pride in the achievements of the railways in the last few years. In particular, the overfulfilment by the Railways of the First Five-Year Plan targets is a matter for gratification. As against the allotted outlay of Rs 400 crores, the actual expenditure by the Railways amounted to Rs 423.73 crores for the five years ended 31st March, 1956. The tasks of the Second Plan as far as the Railways are concerned are very many times more onerous than under the First Plan. The outlay itself has trebled and fresh difficulties are encountered in the matter of foreign exchange resources, and the need for strict priority in the matter of imports is over-taking. This is an anxiety to which Mr Jagjivan Ram referred. But since the needs of Railways are sure to be among the very first in any rational ordering of priorities, there is perhaps no need for any undue pessimism. As a matter of fact, the World Bank Mission, which came to India recently, is due shortly to make known its final decisions on the aid the Bank is going to render us in our schemes of expansion for the Railways. By May, when the Railway Minister will present his budget, he is sure to have clearer indications of where he stands in the matter.

But, apart from finance, the Railways' tasks are formidable enough. The need for the maximum efficiency in operation, especially in view of the need for subserving the expanded production of basic commodities like steel and coal, can hardly be over-emphasised. Movements of other essential commodities like foodgrains should also have to be quick, uninterupted and regular in order to avoid artificial regional shortages and attendant evils of high prices and inflation. On the whole, Mr Jagjivan Ram's speech and the white paper make it abundantly clear that the Railway administration is aware of the immensity of the problems before it and, while certainly not complacent, it has a sober confidence that it will be equal to them.

As regards the general budget, the revised estimates for 1956-57 have again shown that the original estimates were on the conservative side. Against an anticipated deficit on revenue account of Rs 18.044 crores, there has actually been a surplus of Rs 37.94 crores. The miscalculation, if it may be so-called, has been principally in Customs and Excise receipts where the increase over budget figures is expected to be of the order of Rs 33 crores. This has been due to the increased levies during the year. Estimates of expenditure have proved, on the other hand, to have been on the excessive side since the revised estimates put the expenditure on the revenue account at Rs 533.55 crores against Rs 545.43 crores originally estimated. The figures of estimates for the coming year are as follows: Total revenue receipts are estimated at Rs 636.22 crores as against the revised estimates of Rs 571.49 crores for 1956-57. Expenditure is put at Rs 663.09 crores (against the revised estimate for 1956-57 of Rs 533.55 crores), thus leaving a deficit on revenue account of Rs 26.87 crores. The chief item of interest on the receipts side is excise duties where a massive increase over this year's revised estimate is anticipated. These levies are expected to yield Rs 209.43 crores against the revised figure for this year of Rs 188.73 crores. Customs, on the other hand, are expected to yield about Rs 9 crores less than the revised figure of Rs 171 crores for 1956-57. This is not an altogether unwelcome prospect because of the decrease in imports this partly signifies. On the expenditure side, the chief point of interest has been increased estimates of defence expenditure. This was something of a consolation to the daily press since, in a budget that was so completely devoid of headline material, here was something that could be splashed. The increase is slightly less than Rs 50 crores to Rs 252.71 crores. There is perhaps no need to read too much significance into this increase: in the first place, this is merely a budget on account and these figures are by no means final. Secondly, the increase is merely to buy essential stores for the Army and the Air Force, and has nothing to do with the war-like gestures of Pakistan. As Mr Krishnamachari indicated, the proportion of defence expenditure to the whole expenditure budget is insignificant.

As regards the capital budget, the estimates of expenditure and loans to State Governments are placed at Rs 772.21 crores against the revised estimate for the current year of Rs 636.15 crores. The increase is entirely due to higher provisions for the steel plants and for railway expansion programmes. On the receipts side, credit has been taken for market loans of Rs 100 crores, small savings of Rs 80 crores, foreign assistance of Rs 135 crores, and miscellaneous receipts of Rs 119 crores. This leaves an over all deficit of Rs 365 crores.

The white paper accompanying the budget estimates surveys the economy of the country during the first year of the Second Five-Year Plan. The points made therein about the fully extended nature of our economy, have become quite familiar to the public. On external account it discusses the difficulties over foreign exchange resources, the need for conserving them by maximising exports and rigid control of imports on a strict order of priorities and the need for getting capital goods on unorthodox methods of extended credits and direct financial participation of foreign interests. From the point of view of the internal economy, the inflationary pressure which has pushed up prices to new high levels and falling agricultural production are commented upon. The tightness of money and over-extended bank credits during the year have been discussed. The remedies suggested, too, are the familiar ones of greater production, austerity in consumption and selective credit control. In his budget speech, Mr Krishnamachari did not minimise any of the difficulties that are ahead, but he said that it would not be impossible to overcome them with determination. That is a reading with which no one can quarrel.

GATEWAY MARKETS

(Continued from page 578)

£97½ per ton. The market for this metal is entirely dependent upon the American Government support. Lead ruled weak at £113½ per ton, while Tin was quoted around £765 per ton. This metal is likely to be affected more than others if the shipping position, through the Suez Canal, becomes comfortable. The International Tin Council is expected to meet on the 20th March, 1957.

Delhi Review

North Indian Notes

Social Welfare

Improvement of the conditions of women and children in India, inevitably means the introduction of measures of social welfare. In view of the predominantly rural character of the country and the difficulties of effecting reforms through legislative and administrative machinery so as to reach the vast population, the emphasis has been mainly on cooperative self help and the work of non-official organisations. The Community Development programme sponsored by the Government to be the main vehicle of rural welfare has as its main working principle, the policy of depending on the enthusiastic cooperative and voluntary effort offered by the local people. While the activities coming under its scope are comprehensive and embrace every aspect of rural welfare, including the social welfare of women and children, its pre-eminent preoccupation is with agricultural improvement, leaving the emphasis on social welfare to be kept alive by other organisations.

The Central Social Welfare Board has as its main and exclusive object the amelioration of the social disabilities of women and children especially in the rural areas. The organisation has been able to secure the help of non-official women workers all over the country, through whom it has been able to effect some achievements. Now it has been found that the progress of the movement towards social welfare of women and children started by the organisation could be better promoted by pooling of the resources of the Central Social Welfare Board and those of the Community Projects Administration, and schemes are afoot to bring the two into closer coordination for this purpose.

According to the new scheme the Social Welfare Board will set up at each Community Development Block a Project Implementing Committee, with which the official organisation in charge of the Community Development Programme will be associated and to which the official agency will lend the services of its workers in the block as also such financial assistance from the Project Budget as may be available. Considering that the Project Implementing Committee will remain as a non-official agency, the new scheme represents an important step toward the realisation of the Central objective of the Community Development Project namely non-officialisation in the implementation of its programmes. The new scheme will be taken up for implementation in the Community Development Blocks from April. The linking of the non-official body with community development projects would in the light of the great headway that the latter has made, presage a greater measure of success in the promotion of the social welfare of women and children in the rural areas.

*

Place of Sanskrit

Delivering the convocation address of the Bihar Sanskrit Samiti in Patna, Mr V. T. Krishnamachari, made a fervent plea for encouraging the study of Sanskrit at all levels in the educational institutions of the country. Its great traditions having flowed through long periods of history, it is the major cementing force in our life and the growth of Sanskrit as a living force was necessary if it was to enable Hindi to express the most advanced thoughts in the modern life of the world. The great Sanskrit works of the past such as the Vedas and the Upanishads, also embodied the central truths, which had lent unity to India's culture, against the apparent diversity. Such fundamental truths as the dignity and worth of the human person and the possibility of his attaining perfection, as also the conviction that there were many ways of approaching the Reality, along with the ideals of broadminded sympathy and tolerance and catholicity of outlook, which such truths proclaimed were most essential to us at present as guides for conduct than at any time in our history.

Mr Krishnamachari made a reference to the vast literature in Sanskrit which has accumulated through the ages, and which has also influenced foreign literature, besides enriching the literatures of the regional languages in India. He also referred to the various schemes started by the state Governments as part of the Second Five Year Plan to improve the teaching of Sanskrit such as establishment of Sanskrit Universities, improvement of existing schools and grants-in-aid. Apart from adequate provision for its study, in the Secondary Schools general courses as well as advanced courses in the Universities were essential. But at the same time he emphasized that in whatever way it developed, it should never lose living contacts with world movements of thought which would best be done by linking up the useful features of the traditional systems of Sanskrit education with modern knowledge at all levels.

Mr Krishnamachari stressed the need for adequate provision being made in the Universities and other institutions for higher research and also assistance for aiding and publishing with critical instructions the best philosophy and other works in Sanskrit.

Small Industries

The Small Industries Organization has of late been, evincing much interest in evolving new types of economic activity which could be fitted into the pattern of small scale manufacture and operation. The researches and inquiries conducted by the Organization have already enabled it to propose new schemes which can be taken up on the basis of small scale operations. For example, plating, which has been traditionally practised to serve as a decorative finish to jewellery, and a few other restricted number of articles has now been found to be useful in all branches of industry.

While the small electro-plating unit is for articles of sizes ranging from one inch to 12 inches, the medium one is for articles of sizes ranging from one foot to three feet. Similarly a model scheme for the manufacture of brass utensils has also been prepared with improvements on the old methods of manufacture. In view of the great demand for brass utensils in the country, the scheme is meant to benefit enterprising small industries. A third scheme prepared by the Organization relates to the manufacture of radio components. It has been explained that since the cost of production will be cheaper if the work is carried on at home, it is ideally suited for women, working in spare hours in their houses.

Manufacture of radio components, has a big future in India in view of the fact that imports have been stopped. At the same time the num-

THE FUTWAH-ISLAMPUR LIGHT RAILWAY CO. LTD.

NOTICE is hereby given that the Eightieth Ordinary General Meeting of the above-named Company (being an annual general meeting within the meaning of the Companies Act, 1956) will be held at Registered Office, No. 12, Mission Row, Calcutta 1, on Friday, the 12th April, 1957, at 11-10 a..m. for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1956, and the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend on the Ordinary Shares.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—
   "That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 73 years, be and is hereby reappointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 2nd. to the 12th April 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta-1.

The 19th March, 1957.

EXPLANATORY STATEMENT.

In connection with item No. 3 of the above Notice Mr. P. N. Banerjee is an associate of the Managing Agents within the meaning of the Companies Act, 1956. Consequently it will be necessary in accordanee with Section 261 of the Companies Act, 1956, for a Special Resolution to be passed to cover his appointment as a Director of the Company. In addition since he is now 73 years of age it will be necessary under Section 281 of the Act for the resolution re-appointing him as a Director to declare that the age limit provided under Section 280 shall not apply to him. Special Notice of the intention to move this resolutin, as required by both Section 261 and Section 280 of the Act, has been received by the Company.

The Managing Agents and the Directors, including Mr. F. G. Liversedge who is also a director of the Managing Agents, other than as such and as shareholders of the Company, have no interest in the resolution to be proposed.

The Peninsula

Monumental Ostentation

MR K. HANUMANTHAIYYA as Chief Minister of Mysore thought that the Vidhan Soudha which he erected at a cost of Rs 180 lakhs would be a magnificent monument to the birth of popular rule in Mysore. He conceived this colossal structure as a dutiful and appropriate symbol of the transfer of sovereign power from the monarch to the people of Mysore. Taking it as almost a life mission, he did everything possible to make the building worthy enough (in his eyes) to 'depict the transfer of power and reflect the power and dignity of the people'. He concentrated in his own hands the portfolios of Chief Minister, Finance Minister and the Public Works Minister for Vidhan Soudha.

He personally supervised the construction, designed details, decided on and passed payments amounting to several lakhs at a time, ignored his colleagues in the Cabinet even when Constitution and conventions dictated consulting them and abrogated the powers of the executive, to ensure that his gigantic architectural dream was fulfilled without a hitch. Mr. Hanumanthaiyya is satisfied that thousands of people throng to see the Vidhan Soudha and admire it every day; eminent personages record their appreciation in the Visitors' Book. For him, the Vidhan Saudha is a work born of great devotion and sincerity.

But, alas!, there are others who think otherwise. The Committee appointed by the Mysore Government to scrutinise the expenditure on the building, to examine the state of accounts and the possibility of economies in further expenditure, has taken a thoroughly antagonistic view of the whole effort, the expenditure incurred and the manner of it and of the very need for a building of such dimensions and cost to house the legislature of a State like Mysore.

The Committee's Report is a severe indictment of Mr Hanumanthaiyya and every other important official functionary who have had any kind of responsibility in the construction of the building. The irony of it is that Mr Hanumanthaiyya himself was obliged, on the suggestion of two earlier Committees, to appoint this Enquiry Committee. Every point which the Ex-Chief Minister of Mysore thought would be remembered as a feather in his cap has been turned into a most damaging charge against him by the Committee. What appeared to him a highly inspiring and memorable monument is in the eyes of the Committee nothing more than a colossal waste, for which the people of the State have to pay dearly. The extraordinary personal zeal and enthusiasm of the man behind the Vidhan Saudha is looked upon by the Committee as a piece of monumental irresponsibility, resulting in unpardonable extravagance. Apparently Mr Hanumanthaiyya himself has some acquaintance with architecture; this too proved a bane. In the words of the Committee, he 'constituted himself the final authority in the matter of architectural features, including finalising designs, working drawings, changes and additions to the structure.'

The Government Architect, the Chief Engineer and the Special Engineer were just carrying out his orders. The plea that all the changes which he was personally ordering had the support of the Government is not found to be borne out by facts. Of the officers connected with the construction, the Committee remarks that 'there has been a sense of irresponsibility and a failure to discharge their respective duties.' There was no eye on economy at any stage. The Special Engineer has not maintained proper accounts; attempts were made to present unrealistic estimates and proposals for approval. The Committee adds that this conduct was deliberate. The Technical Committee also did not discharge its duties and was interested in irrelevant matters. The Superintending Engineer and Chief Engineer did not function at all. Over and above the waste of money, the Committee notes that major structural blunders have also been committed.

A 192-feet-dome was proposed, proceeded with and extra embellishments carried out adding to its weight, without either adequate technical examination or with appropriate sanction. The Committee is sure that in a matter of such great importance involving the safety of the structure and serious consequences arising out of a weak design, the recklessness displayed in execution could be the result only of the demoralisation caused by the interference of the Chief Minister in the day-to-day evaluation of the work. These unfriendly impressions have impelled the Committee to put forward certain concluding observations, which are undoubtedly of wider interest.

"In the context of the goal of full socialistic order of society, in our sovereign Democratic Republic the sovereignty of the people is not to be depicted in the House of Legislature by making it the biggest, most beautiful and stately structure in the State, with ostentatious architectural embellishments reminiscent of the princely order. It is not necessary to impress upon the people their own sovereignty by such display of wealth. The aim should be to make the Houses of Legislature austere, dignified and spacious with architecture appropriate to the functions of the building and embodying distinction that comes from simple outlines and good proportions rather than from ostentatious ornament. It must not be forgotten that the objective of our development plans has been to raise the standard of life of the common man and to establish equality in all respects by eliminating all disparities of wealth, social status, opportunities etc. Every available pie has to be conserved for the development of the country. Severe restrictions have been placed on the private sector of industry and the people with a view to establish this equality. In these circumstances, anything ostentatious will be looked at with disfavour.

In many circumstances, especially where considerations of the prestige and dignity of the nation or particular office or institutions are concerned, it would be rather difficult to draw the line between necessary and avoidable expenditure. whoever is in authority will be entitled to some freedom, a field of discretion. There is, however, no doubt that in the present case the Committee's strictures are fully deserved.

THE ARRAH-SASARAM LIGHT RAILWAY CO. LTD.

NOTICE is hereby given that the Ninety-third Ordinary General Meeting of the above-named Company (being an annual general meeting within the meaning of the Companies Act, 1936) will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday the 12th April 1957, at 11-5 A.M. for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1956, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend on the Ordinary Shares.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—

   "That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 73 years, be and is hereby appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 2nd to the 12th April, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy, to attend, and on a poll, to vote instead of himself. A Proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta 1,
The 19th March, 1957.

EXPLANATORY STATEMENT.

In connection with item No. 3 of the above Notice Mr. P. N. Banerjee is an associate of the Managing Agents within the meaning of the Companies Act. 1956. Consequently it will be necessary in accordance with Section 261 of the Companies Act, 1956, for a Special Resolution to be passed to cover his appointment as a Director of the Company. In addition since he is now 73 years of age it will be necessary under Section 281 of the Act for the resolution re-appointing him as a Director to declare that the age limit provided under Section 280 shall not apply to him. Special Notice of the intention to move this resolution, as required by both Section 261 and Section 280 of the Act, has been received by the Company.

The Managing Agents and the Directors, including Mr. F. G. Liversedge who is also director of the Managing Agents, other than as such and as shareholders of the Company, have no interest in the resolution to be proposed.

NOTE: The Dividend, if declared, will be paid on or after the 12th April 1957 only to those persons who are registered as the holders of Ordinary Shares as at that date, or to their Mandatees.

Agricultural Production in Mysore

Mysore which has many pioneering achievements to its credit in the industrial field, has now taken the initiative in the field of agriculture to popularize the principle of cooperation on a scale not hitherto attempted elsewhere; the aim being to bring within its fold at least 60 per cent of the rural population by the end of the Second Plan. The Cooperative Principle is to run thrugh all stages of agricultural production, from the provision of credit to the marketing of the produce in the final stage. For the latter purpose, the multipurpose societies would be converted into marketing societies and paid secretaries would be appointed in all cases where heavy financial transactions are involved. Provision of adequate warehousing facilities at the time of harvesting and construction of godowns at all Taluk headquarters are contemplated.

But, by far the most important part of the new scheme is that bearing on cooperative credit and on which the other parts of the scheme depend. The Government is hopeful of being able, by the end of the period, to provide financial assistance to needy agriculturists, from cooperative institutions for buying implements, manures, bullocks etc. And it has been further pointed out that the rate of interest on all types of loans will not exceed 6¼ per cent.

In the formulation of the scheme for cooperative credit, care has been taken to avoid the mistakes and pitfalls which have been brought to the surface in the working of the cooperative movement elsewhere. For instance, the procedure for registration of the necessary documents in the process of applying for credit has been so far so cumbersome and rigid as to dissuade members from applying for help and accordingly it has been simplified. The inclusion of a clause, in the case of short term loans insisting on the return of the loan at the harvesting period of the particular crop over which it has been issued is calculated to make the scheme workable and practicable. In the case of longterm loans the innovation is the appointment of a land inspector to investigate the issue of loans and the appointment of a case worker to work out the details of documents in order to minimize the delay in the issue of loans. Further the powers of the local branches have also been increased so that they will not have to depend on the authorization of the headquarters at Bangalore in the case of loans not exceeding Rs 1000.

On the whole the new scheme is quite an ambitious one and its success will depend in no small extent on the ability of the state Government in applying to the scheme the requisite financial resources. Even in the event of the necessary finance being made available, the scheme depends for its success on many other factors, chief of which is the very profitability of agriculture itself. In the absence of measures to add to the profitability of agriculture the insistence on return of loan in full at harvest time, will only have the effect of forcing the ryots to seek the aid of the private money lender.

Problems of Mental Health

Speaking on the occasion of the opening of the Academic wing of the All-India Institute of Mental Health Bangalore, Rajkumari Amrit Kaur, Union Health Minister, observed, that it should be the duty of the institution to give a new orientation to their approach toward the problem of mental health. A comprehensive Mental Health Service should provide not only for the care and treatment of the mentally disordered and deficient but also for the prevention and promotion of the mental health of the people as a whole. In the scheme of mental health priority should be given to care of the children. A scheme had been drawn up for the setting up of child guidance and psychiatric clinics.

The problem of mental health in India, is also made acute by the paucity of trained personnel, and therefore, an intensified scheme for training is imparted at the All India Institute of Mental health as well as the Mental Hospital at Bangalore. But it has been found that the dichotomy in the administration of the two, the former being administered by the Central Government, while the latter is under the control of the State Government, stands in the way of coordination of the different aspects of the training programme.

The Second Five Year Plan has allotted a sum of Rs 41 lakhs for the development of the All India Mental Institute. Apart from the training of the requisite number of personnel, there is also vast scope for research to be done. And Rajkumari Amrit Kaur suggested that in view of certain emotional and spiritual values which had much to do with the mental make-up peculiar to a people or a nation, there was room in India, for the institute to develop its own methods and standards.

*

Mica

The Government of Andhra had been deprived of a large sum of revenue by the unchecked practice of smuggling mica from non-royalty paying area to royalty paying areas so as to evade the payment of royalty and other taxes to the Government. The Mineral Concession Rules 1949, which was expected to check evasion of payment of royalty, failed in its object, because royalty was payable under the rules, on the mica despatched from the leased areas and when once the mica was removed from that area. the Government had no control over it or had any power to impose restrictions on the purchase, possession transport or sale of mica. Possibilities of illicit transport after it had been consigned to the factories could not be dealt with. Naturally, smuggling had become rampant, consequent on this loophole in law. The Government have, therefore, come out with legislation to rectify the mistake and make the arm of law long enough to bring to book, those who are found guilty of violating it. It is now proposed by means of legislation to control the possession, and transport of and trading in of mica, whether it is extracted from an area paying royalty or from a non-royalty paying area, introducing (a) a system of licences for controlling the possession and sale of mica, and (b) a system of permits for controlling the removal and transport of mica.

NORTH INDIAN NOTES

(Continued from page 521)

ber of radio receivers is expected to increase progressively over the years and this makes the manufacture of components a business which can be profitably taken up by small scale manufacturers. Other conditions for the success of the scheme such as availability of raw materials are also satisfied within the country. And the only item of raw material which is at present not produced in the country namely copper wire, is soon expected to go into list of indigenous production. The radio industry has so far been engaged in the assembling of radio sets with imported components. If, therefore, the new scheme is given a sound start, it would put the radio industry on a firm footing.

WORLD OVERSEAS

(Continued from page 513)

Kingdom during the period. The revised plan was not likely to reduce Britain's capacity to export complete reactors and equipment; on the contrary, the resulting expansion might well increase it.

Looking even further ahead, to the period 1965-75, the electricity authorities reckoned that they would have to bring into commission between 2,500MW and 3,000MW of new capacity every year. A large and growing part of this was expected to be nuclear.

In fact, it was reasonable to assume that by the early '70s, at least half of Britain's total requirements for electricity would be met from nuclear sources.

The cost of production per unit of electricity in the early '60s would be about the same as, or only slightly more than, from conventional sources, but as efficiency increased in both kinds of plant, the cost of production by nuclear stations might be expected to fall faster.

THE MODERN MILLS, LIMITED.

NOTICE.

NOTICE is hereby given that the Twentythird Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes St., Fort, Bombay, on Wednesday the 24th day of April 1957 at 4 P.M. to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October, 1956.
2. To declare a dividend and bonus.
3. To appoint Directors in place of those who retire but who are eligible for reappointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 27th March 1957 to the 16th April 1957, both days inclusive.

Any member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

Detailed Notice setting forth all the items of business to be transacted at the above Meeting is being published in the Press and will be posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & CO. PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Bombay, 11th March, 1957.

N.B. The dividend and bonus, when declared, will be made payable at the State Bank of India, Bombay, on and after Monday the 29th April 1957 to those shareholders whose names stand on the Register of Members on the 27th March, 1957. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

South Indian Makets

Indian Coffee for Sweden

SWEDEN is an important Coffee consuming country, with annual imports running well over 50,000 tons. Brazil is the principal supplier and accounted for 67 per cent of the total coffee imports into Sweden in 1954 followed by Columbia with 14 per cent, Central America with 11 per cent and Africa 2.5 per cent.

Sweden is now interested in obtaining a regular supply of Indian coffee which, up to now, has been very erratic. While this country was unable to obtain any Indian coffee in 1953-54, her imports in 1954-55 totalled 3,569 cwts; but fell sharply to 320 cwts in the following year. This wide variation is mainly due to the fact that there are no destinational quotas for exports and Indian shippers sell their coffee to buyers offering the best terms. It is now learnt that the Swedish delegation has suggested to the Coffee Board to make an allotment of 600 tons of coffee for export to Sweden this year. This may be increased in subsequent years, according to demand.

Meanwhile, Indian Coffee crop may touch 42,000 tons this year. The Coffee Board, in its third revision of estimates, has reached very nearly 38,000 tons, and field estimates of over 41,000 tons have been received by it. This sudden increase in crop is attributed to two reasons: the improved care of the estates and the new planting done with improved strains in the past years.

It is reported that international coffee opinion is nearing towards the view that there should be an agreement among the producers on production and export so as to prevent undue fluctuation in prices which can upset the economy of the producing countries. Overproduction by next year is anticipated in some of the countries if Brazil's output tops 21 million bags.

*

Pepper

After continuous weakness for more than a month, Pepper markets have steadied up a little, thanks to sizable buying by one of the London operators. The London buying was synchronised with the time of the arrival of steamer at Cochin for lifting the cargo sold to Russia. As a result, in the Kozhikode market, Wynaad quality has improved to Rs 620 and the Country variety to Rs 605 per candy.

The future of the market is anything but rosy. Unless there is sizable buying support from New York, prices of Malabar pepper are likely to go down further in view of the anxiety of the growers to liquidate their holdings before the arrival of new Sarawak. The new Sarawak crop is expected to arrive at the London Port at the end of the month.

In the New York market, sellers refused to grant concession in view of continued steadiness in primary centres, while buyers sidelined, indicating moderate interest about half a cent under current quoted values. In London, White Sarawak is quoted at 24½d and Black Sarawak at 19d per pound.

*

Groundnuts

The Madras Groundnut market ruled steadier during the past week. Arrivals were estimated at about 250 tons, small-scale crushers being the main buyers. Superior oil-quality seed was quoted around Rs 164 and the Bold variety at Rs 157 per candy. Good progress has been reported in the sowings of the summer crop.

In the Groundnut Oil section, the rate for the ready position was quoted at Rs 320 per candy. Dealers took up only small quantities.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate, while clearances were brisk. Prices ruled firm by six pies per pound. There was no change in Buff hides, while the arrivals of Buff Calf and Cow calf were moderate.

In the export section, trading was rather brisk with business reported done in 8-8½ lbs at 44d, 41d and 37d for runs, fourths and fifths respectively. Light weights were quoted at 57d to 59d. Selective buying continued in Cow Calf.

In the Tanned Skins section, conditions ruled firm with almost all the better-class producers reporting comfortable forward sale position. With the result, sellers were pushing up prices; but buyers were found to be resisting the advance.

On the export front, extra heavies of Goat skins were in request; but sellers' prices varied up to 6d between different shippers. Prices of Sheep skins ruled very firm.

THE CHAPARMUKH-SILGHAT RAILWAY COMPANY, LIMITED.

NOTICE is hereby given that the Seventyeighth Ordinary General Meeting of the above-named Company (being an annual general meeting within the meaning of the Companies act, 1956) will be held at the Registered Office, No. 12, Mission Row, Calcutta-1, on Friday, the 12th April 1957, at 11-15 a.m. for the following purposes:

(1) To receive and consider the audited Accounts for the year ended 31st March, 1956, the Balance Sheet as at that date, and the reports of the Board of Directors and the Auditors thereon.

(2) To declare a dividend on the Ordinary Shares.

(3) To Elect Directors.

(4) To appoint Auditors and to fix their remuneration.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 2nd. to the 12th April, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll, to vote instead of himself, and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Calcutta, the 19th March, 1957.

NOTE:—The dividend, if declared, will be paid on or after the 12th April 1957, only to those persons who are registered as holders of Ordinary Shares as at that date, or to their mandates.

THE HOWRAH-AMTA LIGHT RAILWAY COMPANY, LIMITED

NOTICE is hereby given that the One Hundred and Twenty-First Ordinary General Meeting of the above-named Company (being an annual general meeting within the meaning of the Companies Act, 1956) will be held at the Registered Office No. 12, Mission Row, Calcutta, on Friday, the 12th April 1957, at 11-20 A.M. for the following purposes:

1. To receive and consider the Audited Accounts for the year ended 31st March, 1956, and the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend on the Ordinary Shares.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—

   "That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 73 years, be and is hereby reappointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."

4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 2nd. to the 12th April 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend, and on a poll, to vote instead of himself. A Proxy need not be a member.

By Order of the Board,

Overseas Economic Survey by Mr V. A. Grantham, the Chairman

The One Hundred and Third Ordinary General Meeting of The Chartered Bank will be held on April 3 at 38, Bishopsgate, London, E.C.

The following is an extract from the statement by Mr. V. A. Grantham, the chairman, which has been circulated with the report and accounts for the year 1956:

THE CONSTITUTION OF THE BANK

Following the adjournment of the one hundred and second annual general meeting of the stockholders held on April 4 last an extraordinary general meeting was held to adopt the draft of a supplemental and consolidating Royal Charter which was the subject of a petition from the Court of Directors to her Majesty the Queen in Council. The new charter was granted by Letters Patent issued under the Great Seal on June 25, 1956, when the provisions of the charter and the annexed bye-laws and rules became effective.

Clause 3 of the new charter empowered the Bank to change its name, and advantage of this provision was taken on December 5 when a special resolution, passed by an extraordinary general meeting of the stockholders and subsequently sanctioned by the Lords Commissioners of her Majesty's Treasury, shortened the name of The Chartered Bank of India, Australia and China to The Chartered Bank. The change was brought about with a minimum of difficulty and it has been warmly welcomed by the stockholders, our customers, our banking correspondents and our friends everywhere.

THE GENERAL MANAGEMENT

Mr. David Stewart, the senior of the joint general managers, retired on January 31, 1957, and I take this opportunity of acknowleding with gratitude the valuable services he rendered to the Bank over a period of 37 years. He joined the head office executive from the eastern service in 1945 and was a trusted adviser of the Court of Directors on matters of high policy and administration, particularly with regard to the affairs of India and Pakistan, Burma, and Ceylon. We are not to lose entirely the benefit of his experience as I am glad to say that he agreed to accept a seat on the board of the C.B.I. Development Corporation Limited, in which capacity he will be able to play an active part.

Mr. G. A. Leiper, until recently manager of our branch in Manila, has been appointed an assistant general manager.

NEW BRANCHES

The Bank has purchased the goodwill of the business in Pakistan conducted by the Allahabad Bank Limited and on January 1 last the branches of the latter institution at Lahore and Lyallpur were incorporated in the branch system of The Chartered Bank. The branch of the Allahabad Bank Limited at Karachi has been merged with our own branch in that city.

To meet the growing need for banking services in North Borneo new branches have been opened during the past 12 months at Lahad Datu and Tenom. The former mercantile agency at Kudat has been replaced by a branch of the Bank.

A new branch has been opened in Ampang Road, Kuala Lumpur, to serve expanding commercial development in that district of the federal capital.

THE C.B.I. DEVELOPMENT CORPORATION LIMITED

A year ago I intimated that the Bank had promoted a wholly-owned subsidiary company, The C.B.I. Development Corporation Limited, to engage in medium-term and similar credit operations connected with economic development in the eastern countries to which the oversea representation of the Bank extends. During the first year of the corporation's eexistence much time has been spent in research, investigation and the formulation of policy. The intensification of credit control in the United Kingdom has inevitably curtailed some of the opportunities open to the Corporation for lending in sterling. This and other factors, notably the necessity in most territories for registering the corporation as a financial institution, have tended to circumscribe the framework within which the corporation can function but it is now possible to discern the pattern of future operations and I am quite sure that our new venture will fulfil a useful and creative function and bridge the gap between the short-term financing of trade and industry by overdraft and the raising of capital from the public. I would like to say that I am quite satisfied with the initial experience of our development corporation.

THE BANK'S BALANCE-SHEET

The balance-sheet total is very slightly lower than last year. Due to higher rates available in the London market, our fixed deposits are £8 million lower. This is set off by a smaller holding of bills of exchange and a reduction in our cash in hand and at call.

Owing to the insistent demand for finance in those countries where in the rapid course of their development the pressure on local resources is much in evidence our advances to customers have increased by £12 million, and this has been largely met by the non-investment of maturing government securities.

A part of the increase under the heading of advances is represented by pre-payments under American-Aid programmes.

Our acceptances now exceed £10 million and indicate the growing popularity of this form of finance by Far Eastern merchants and bankers. We continue to show our investments in government securities at market rates.

For the first time we are publishing a consolidated balance-sheet which includes the figures of our wholly owned subsidiary companies.

PROFIT AND LOSS ACCOUNT

Despite the continued upward trend of working costs, especially salaries and wages, our earning capacity improved. The Bank's policy has always been to keep a liquid money position in London and we have made full use of the higher interest earnings available in 1956. This explains the increase in our net profits from £759,340 in 1955 to £800,808.

The Bank paid an interim dividend in September last of 7½ per cent. less income tax, absorbing £150,937, and it is now proposed that out of the balance available a final dividend of 7½ per cent. be paid, costing £150,938, making a total distribution of 15 per cent.

It is proposed to repeat the allocation made in each of the past six years to Bank premises and furniture account, the pension fund and the widows' and orphans' fund of £200,000, £125,000, and £20,000 respectively. It is proposed to transfer £150,000 to contingencies account and to carry forward a balance of £409,308.

OVERSEA SURVEY

In most of the statements I have circulated to the stockholders since the end of the war I have referred to the surge of Asian nationalism and to the significance of this for the Bank. The trend continues; Malaya and Singapore are moving rapidly towards political independnce within the Commonwealth and a general election in Ceylon has returned to power a government pledged to lead the island to a more clearly defined sovereignty. The repercussions of such political movements are felt at every point in our extensive system of branches. They affect vitally our relations with our Asian employees; they influence the selection of business risks and circumscribe the deployment of our resources.

Although our representation in the Middle East does not extend west of Aden Colony there have been throughout the territories further east reactions to the crisis which arose in Egypt a few months ago. Fortunately Britain has accumulated down the years a large fund of goodwill in the minds and hearts of the peoples of Asia an it would appear that notwithstanding widespread expressions of sympathy with Egypt that fund has been drawn upon to a much smaller extent than many critics of the British Government may have feared. The inner history has yet to be written but it is clear even now that there is a greater understanding in the world of what may have been behind our country's action.

In the East our political role is obviously changing but we can take credit for having created a defensive framework within which political independence, economic freedom, personal liberty and res-

pect for human rights can take root.

Quite surely British endeavour in the East is nowhere at an end; it is everywhere in progress.

I now propose to review developments during 1956 in the territories served by our branches and to give some account of the contribution we are making to the promotion of economic interests common to East and West.

ADEN

When the Canal re-opens and given reasonable stability in the Middle East, there are grounds for hoping that the steady consolidation of our business in Aden, which has been taking place ever since the Bank opened there a few years ago, will show satisfactory results.

INDIA

Last year I commented on the draft outline of the Indian second Five Year Plan, whose major objectives are rapid industrialization—particularly the development of heavy industry—and the expansion of opportunities for employment.

Additional taxation is being imposed to help finance the plan, but it would be well to recognize that more and more penal taxation may defeat its own ends for so many limitations surround the private investor to-day in India that it is, unfortunately, no longer clear how the skill and enterprise which is so necessary can be rewarded. Without fair rewards private enterprise cannot be expected to function or to provide the very large sums of money that the plan expects from the private sector. Heavy taxation too in itself is going to do little to halt the steady inflationary tendency for although the money supply rose less in 1956 than in the previous year the wholesale price index went up 13 per cent. on the year. Continued and increasing inflation could endanger the whole plan. That the authorities are aware of this is encouraging for, commenting in the draft plan on the difficulties of financing in part such an ambitious programme by deficit financing, the sponsors admitted that the stepping up of investment might have an inflationary impact, particularly if a relatively high proportion of the expenditure were found by an increase in the creation and supply of money.

As savings are not keeping pace with industrial expenditure there is already a woeful shortage of investment capital and more and more strain is being put on the banks who, whilst unable to attract sufficient extra deposits, are being faced with demands for fresh or increased facilities, and we for one have reluctantly been unable to entertain many of the propositions placed before us. The advances of the scheduled banks in India have already reached unprecedented levels and the average ratio of advances to deposits of all the scheduled banks is now in the region of 70 per cent. This has necessitated increasing use being made of the facilities provided by the Reserve Bank of India under the Bill Market Scheme introduced by them in 1952. Discussions have recently taken place in Bombay and Calcutta between the banks and the Finance Minister to find other means of alleviating the situation but the problem is extremely difficult as the Indian authorities have stated that the tightening of bank credit is one of their anti-inflationary measures.

PAKISTAN

The predominant feature of the past year in Pakistan has been the shortage of foreign exchange and without assistance from the United States the country's position would be far from happy. Early in the year it had appeared reasonble to assume that after an extended period in which the balance of payments had been under contious pressure as a result of the industrial development programme, Pakistan had at last turned the corner.

By October, however, it was clear that the country was once again facing a severe food crisis owing to deficiencies in the rice and wheat crops. This necessitated considerable imports of food grains into both East and West Pakistan and it will clearly be necessary for the authorities to take steps to encourage an increase in food production if this is to be avoided in future. The government, however, are fully alive to this need as the recently published Five Year Plan gives priority to agriculture and to an extension of irrigation facilities, drainage and flood control, whereas in the past the emphasis has tended to be more on industrialization.

Meanwhile encouraging features have been the substantial rises in the value and volume of exports of Pakistan's raw jute and raw cotton during the past season. The country's new manufacturing industries have also expanded their sales oversea and there have been notable increases in exports of cotton yarn and cloth and jute goods. It is estimated that by 1960 Pakistan should be in a position to supply about one-third of the world's total requirements of Jute goods, and the cotton industry is already taking advantage of the absence of export duty on its cloth and yarn to widen the range of its foreign markets. On the other hand the continued restrictions on imports have led to price rises in domestic markets as stocks of imported goods have run down. The country has undoubtedly been passing through a most difficult period, but it is encouraging to learn from the Finance Minister's recent speech introducing the budget for the coming fiscal year, that there was a small surplus on the balance of payments for 1956 as a whole.

BURMA

It is pleasing to report that last year Burma succeeded in disposing of practically all its surplus stocks of rice, part of which had been carried forward from as far back as 1953. Rice exports for the year amounted to some two million tons, the highest total recorded since the war, although well below the pre-war level of shipments. Apart from increased rice shipments, exports of timber and non-ferrous metals have improved slightly, but not sufficiently to make any significant contribution to the country's exchange reserves.

Hopes were entertained that capital goods and equipment would be forthcoming from those countries of the Soviet bloc with which Burma concluded barter agreements for the disposal of its rice. So far these agreements have not proved a success and, on the whole, Burma has received in exchange for its rice goods of inferior quality, expensive in comparison with similar merchandise supplied by the free world and representing in the aggregate only part of the value of the rice supplied. In theory half Burma's exportable surplus of rice during the present year, which is expected to be much the same tonnage as in 1956, is committed for shipment on barter account, but efforts are being made to scale down this commitment in order to supply the requirements of buyers in the free world, who pay for their supplies with exchange which the Burmese authorities can use to finance their purchases in competitive international markets.

CEYLON

The latest figures available show that last year the surplus on Ceylon's oversea trade was running at a substantially lower level than in 1955. Imports were higher in aggregate value owing largely to increased purchases of capital goods, while exports declined in value, much the same volume being shipped abroad as in 1955, but in the case of tea, which accounts for the bulk of Ceylon's export earnings, at a lower average price.

Introducing the new government's first budget in July, the Finance Minister indicated that as domestic saving and investment were insufficient to ensure a progressive improvement in the population's living standards, foreign capital would be welcomed. An assurance was also given to private enterprise that it would receive full support from the government in the role assigned to it. However, the recent proposal by a member of the government to nationalize the tea plantations on what the owners consider to be harsh terms, although it has not so far been formally adopted as government policy, must inevitably impair the confidence of the potential oversea investor, and thus seriously impede the future economic development of Ceylon, on which the raising of the living standards of the population depends.

MALAYA

Once again both the Federation of Malaya and Singapore have enjoyed a prosperous year. Taking both territories together oversea trade rose in value to a level only previously exceeded in 1951 at the height of the Korean war boom. However, owing largely to the increased quantities of capital equipment and building materials purchased abroad in connexion with development schemes, imports rose at a higher rate than exports and in consequence the favourable trade balance at M$12.6 million was substantially lower than in the previous year. It also has to be recognized that although the continued improvement in the level of oversea trade is impressive, expansion in trade and industry, particularly in Singapore, has to some extent been curtailed during the year owing to political uncertainty and labour unrest.

One important matter which still gives rise to uncertainty is the question of the future of the currency. This is linked to a large extent with the recommendation, made by the World Bank mission in their report on the economic development of Malaya, that a central banking system should be established. I mentioned last year that preliminary inquiries into the project had been initiated by the two governments.

A report which was published in June, set out the advantages and disadvantages of establishing separate central banks in both Singapore and the Federation, but as might be expected it clearly favoured a joint central bank covering both territories. In the light of the report, the two governments have agreed that a "central banking mechanism" should be established but have not yet decided the form it is to take. It is possible that a final decision will await the outcome of the constitutional changes which are impending this year, but already the governments of North Borneo, Sarawak, and Brunei have decided to establish in due course a currency of their own which is to be independent of the Malayan dollar. It is to be hoped that there will be no further fragmentation of the existing currency area in which first the Straits dollar and subsequently the Malayan dollar have provided a stable and effective medium of exchange.

With the Federation of Malaya attaining political autonomy within the Commonwealth on August 31 next and with Singapore looking forward to similar independence, we are, of course, already giving serious thought to the effect upon the present banking system of the changed conditions, and to the steps which may be necessary to meet them. I believe that we shall be able to rely upon a realistic approach by the two governments to economic and political problems and the banks can draw upon their experience in other territories where independent governments have been set up. Whatever the future may bring, it will be this Bank's policy to continue its long years of service to the two countries and to assist to the greatest extent possible in their economic progress.

NORTH BORNEO

North Borneo has now fully emerged from the post-war rehabilitation period and there is evidence in many directions of a well co-ordinated policy to develop within its means a well based economy which, given continuing peaceful conditions, augurs well for the future.

The latest figures available show that North Borneo's external trade last year may well reach a record level, although the trade surplus for the year as a whole is likely to be less than in 1955.

SARAWAK

A significant step forward in political development was taken in Sarawak during the year by the grant by her Majesty the Queen of a new constitution under which the new Council Negri will have an unofficial majority and by the holding of the first municipal election in the colony in Kuching.

Last year the colony's principal exports, rubber, pepper, and timber, fetched less remunerative prices in international markets than in 1955 and, despite an increase in the volume of exports, external trade fell in aggregate value. Although imports were slightly lower, the favourable trade balance at M$12 million was substantially less than in the previous year.

INDONESIA

This time last year it seemed reasonable to take an optimistic view of the immediate future in Indonesia. There was optimistic talk in some governmental circles of moving towards a free economy, but once again hopes have been dashed by a coalition government unable or unwilling to take realistic steps to come to grips with major problems. The result has been a rapid deterioration in the economy which has finally resulted in political unrest of a magnitude which might yet prove a serious threat to the structure of the constitution.

In the general setback that Indonesia has sustained it is very difficult to separate cause and effect. Perhaps in some ways the new coalition government was unfortunate in inheriting labour problems which should have been dealt with by preceding governments, but nevertheless it did nothing to keep the demands of the labour unions, particularly the estate unions, within reasonable bounds, and the resultant unrest and strikes must seriously have affected the volume of exports. That volume too was probably even more seriously affected by the smuggling of rubber and copra and it was not surprising, therefore, that 1956 turned out to be a disastrous trading year for the Republic even at a time when high world prices for its prime exports should have produced the opposite result.

Notwithstanding all I have said I am still optimistic regarding the long-term prospects of the Republic, for we do not believe its people will allow their rich heritage to deteriorate and disintegrate, and we are going steadily on with our own business in Java and Sumatra.

THAILAND

Last year I drew attention to Thailand's return to a free economy. In a world in which governments, to solve their economic problems, appear in general to put increasing faith in exchange control and import licensing it required courage on the part of the authorities in Thailand to initiate what many regarded in the first place as a somewhat perilous experiment.

It is pleasing to report that the whole experiment has so far worked well. It was anticipated that following the lifting of import controls in September, 1955, there would be an immediate and considerable increase in imports. Such proved to be the case, and according to the latest figures available the country appeared to be running a trade deficit well into 1956. However, as a substantial proportion of Thailand's imports are shipped under American Aid and exports have been running at a higher level than in 1955, it is reasonable to assume that, except for the period immediately after the raising of import restrictions, the country's balance of trade has been favourable.

VIETNAM

Since last year, when I told you of the difficulties, both political and economic, confronting Vietnam, there has been steady progress in both fields, to an extent that allows one to be quietly optimistic about the future and perhaps the greatest encouragement in this view is the gradual strengthening of the country in relation to communist-held northern Vietnam.

That this improvement in strength has been made is largely due to the forceful personality of President Ngo Dinh Diem, whose outstanding achievement was the promulgation of the Vietnam constitution in October last.

Although the country depends almost entirely upon American Aid, which provides the greater part of the government's budgetary revenue and pays for all but 20 per cent, of the country's imports, there are signs that an early revival of exports may change drastically the extent of this dependence on external support.

CAMBODIA

Cambodia, by accepting aid from China and Soviet Russia as well as the United States, has demonstrated that it wishes to be completely independent of any international political grouping and to be free to welcome investment and assistance from any foreign source, provided that it is offered without political conditions attached to it.

The bulk of the country's imports continue to be financed by American Aid, but in order to assist its declared policy of lowering prices in the domestic market the government has released part of its own foreign exchange holdings to pay for certain specified imports. This cautious but commendable spending policy will undoubtedly assist in building up the country's economy on sound lines and we can look for further steady progress even in the absence of much needed investment capital.

THE PHILIPPINES

The Philippines would appear to have been successful in one major battle during 1956, that is defending the value of the peso. The rapid fall which took place in the Republic's international reserves during 1955 was halted and, mainly owing to drastic import control, there was a slow but steady increase in the foreign currency holdings during the year under review. As exports are tending to rise in value and American Aid has proved more than sufficient to cover the trade deficit the peso should be in no immediate danger.

The determination and realism that have played such a large part in readjusting the balance of trade and saving the peso will be needed by the administration in their second major struggle, that is the fight against inflation. If the Philippines succeed in halting inflation over the coming year a major economic victory will have been gained, but the task is not an easy one. To succeed it may be necessary to postpone some of the capital development programme and reduce deficit financing. Efforts will have to be made to see that local production is increased to offset import cuts and this would seem to indicate a temporary switch at least from industrialization to investment in indigenous activities such as mining, tobacco, desiccated coconut, and paper production, and to the purely agricultural industries of coconut-oil, sugar, hemp, and lumber.

HONG KONG

Notwithstanding Hong Kong having better trading figures for the year, due no doubt more to higher prices than to increased volume, it is becoming increasingly clear that its importance as an entrepot is decreasing and that much of that business has probably gone for ever.

That China will trade through Hong Kong when expedient was fully demonstrated by the modification of policy in the middle of the year which brought Hong Kong's merchants to an increased degree into China's pattern of trade. Unfortunately, because of China's dependence on the Soviet bloc for the bulk of its supplies, it is unlikely that an increased use of Hong Kong for inward and outward shipments will be a permanent feature.

Fortunately, industrial development in the Colony has done much to offset its loss of entrepot trade and the various industries, particularly cotton spinning, can look forward optimistically into 1957, provided there is no change in Imperial preference. The mills and other industries are fortunate in having partly through refugees, a seemingly inexhaustible reservoir of good labour which enables them to keep costs steady and competitive.

The political scene during the year was dominated by the riots commencing with the celebration of the anniversary of the foundation of the Nationalist Republic of China. Unruly elements seized their opportunity to indulge in looting, arson, stone throwing and intimidation but a reassuring feature is that a government enquiry has confirmed that political motives were to all intent and purpose absent.

CHINA

My report on China this year is in marked contrast to my remarks over the last few years inasmuch as, under encouragement from the authorities, your bank is again participating, if only to a small extent, directly in mainland China's oversea trade.

It would appear that the authorities in Peking consider that it is useful to have trade link throughout the world additional to those provided by their own Bank of China and as this change coincides with China's further progress towards normal commercial trading terms, it is hoped that we shall be in a position to handle useful and remunerative business.

JAPAN

Three main and interrelated political events took place in Japan during the latter half of 1956: firstly, the state of war with the Soviet Union was ended and normal diplomatic relations resumed; secondly, Japan was admitted to membership of the United Nations; and thirdly, the Liberal-Democratic Party in power elected a new Premier who reshuffled the more important Cabinet posts.

Possibly the greatest advantage from these developments is an addition to the country's international bargaining power, and this it may well need if it is to succeed in consolidating and ensuring the continuance of the great economic strength that it has built up over the past two or three years, for the authorities are obviously trying to hedge against the disastrous effects that a recession in the United States could have on Japan's economy. To do this they must make certain of larger participation in the China market, which involves delicate negotiation with the United States, and an increase in the country's trade with South East Asia countries and the sterl-

ing area which, too, may necessitate much hard bargaining.

It is perhaps surprising at the end of a most prosperous year when the economy expanded much more than could have been anticipated and a net gain on foreign exchange holdings was registered, that Japan should be worried about the future but, due possibly to a liberalization of its import policy, not unconnected with negotiations on exports, the terms of trade turned rather quickly against the country in the second half of the year. I do not wish to give an impression that I feel alarmed about Japan's future for, on the contrary, the country enters 1957 on a very optimistic note and the fact that the weaknesses and possible dangers I have pointed out are well known to the authorities probably means that they will be well taken care of by sound fiscal and monetary policies.

NEW YORK

In 1956 we have had the interesting spectacle of the United States' authorities in their turn resorting to credit restraint to counteract the sharp rise in the demand for loans and the excess demand for capital investment over the supply of current savings. The result has been tight money market conditions and an increase in interest rates but, notwithstanding this and a cut in profit margins, the economy looks as sound as ever at the moment. In these conditions our New York office, which progressively increases in importance in our branch system, has had perhaps more than usual demands made upon its resources.

HAMBURG

Our Hamburg agency continues to increase its business and as an active link between our branches in the East and trade and industry in West Germany it occupies a position of growing importance in our organization.

CONCLUSION

With the industrial skill, mercantile capacity and administrative ability that is at our disposal, and a proper realization of the fact that our endeavours in the East must in future be related to common economic interest rather than to politics and strategy, there is no reason for respondency.

To that I would only add that we see everywhere throughout the East a steadily increasing competition for business, which is not likely to become less as the years go by and we must realize that the selling prices of our manufactured goods will be set by the world at large and not by ourselves. We cannot expect, indefinitly, to absorb increases in the cost of living in our selling prices or to get increased prosperity without increased production, which must entail an end to restrictive practices. Our income will be related to our output and our present standard of living will only be maintained if we are prepared to match the output of other countries. If we do not do so we shall find ourselves priced out of the world's markets.

Copies of the full text of the Statement will be sent on application to the Secretary of the Bank at 38, Bishopsgate, London, E.C. 2.

HOWRAH-SHEAKHALLA LIGHT RAILWAY COMPANY LIMITED

NOTICE is hereby given that the One Hundred and Twenty First Ordinary General Meeting of the above-named Company (being an annual general meeting within the meaning of the Companies Act, 1956) will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 12th April, 1957, at 11-25 A.M. for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1956, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend on the Ordinary Shares.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—

   "That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 73 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 2nd to the 12th April, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy, to attend, and on a poll, to vote instead of himself. A Proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta 1,
The 19th March, 1957.

EXPLANATORY STATEMENT.

In connection with item No. 3 of the above Notice Mr. F. N. Banerjee is an associate of the Managing Agents within the meaning of the Companies Act, 1956. Consequently it will be necessary in accordance with Section 261 of the said Act, 1956, for a Special Resolution to be passed to cover his appointment as a Director of the Company. In addition since he is now 73 years of age it will be necessary under Section 281 of the Act for the resolution re-appointing him as a Director to declare that the age limit provided under Section 280 shall not apply to him. Special Notice of the intention to move this resolution, as required by both Section 261 and Section 280 of the Act, has been received by the Company.

The Managing Agents and the Directors, including Mr. F. G. Liversedge who is also director of the Managing Agents, other than as such and as shareholders of the Company, have no interest in the resolution to be proposed.

NOTE: The Dividend, if declared, will be paid on or after the 12th April 1957 only to those persons who are registered as the holders of Ordinary Shares as at that date, or to their Mandatees.

THE SHAHDARA (DELHI)—SAHARANPUR LIGHT RAILWAY CO. LTD.

NOTICE is hereby given that the One hundred and first Ordinary General Meeting of the abovenamed Company (being an Annual General Meeting within the meaning of the Companies Act, 1956) will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 12th April, 1957, at 11 a.m. for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1956, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend on the Ordinary Shares.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—

   "That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 73 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 2nd to the 12th April, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy, to attend, and on a poll, to vote instead of himself. A Proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta 1,
The 19th March, 1957.

EXPLANATORY STATEMENT.

In connection with item No. 3 of the above Notice Mr. F. N. Banerjee is an associate of the Managing Agents within the meaning of the Companies Act, 1956. Consequently it will be necessary in accordance with Section 261 of the said Act, for a Special Resolution to be passed to cover his appointment as a Director of the Company. In addition since he is now 73 years of age it will be necessary under Section 281 of the Act for the resolution re-appointing him as a Director to declare that the age limit provided under Section 280 shall not apply to him. Special Notice of the intention to move this resolution, as required by both Section 261 and Section 280 of the Act, has been received by the Company.

The Managing Agents and the Directors, including Mr. F. G. Liversedge who is also director of the Managing Agents, other than as such and as shareholders of the Company, have no interest in the resolution to be proposed.

NOTE: The Dividend, if declared, will be paid on or after the 12th April 1957 only to those persons who are registered as the holders of Ordinary Shares as at that date, or to their Mandatees.

The Scindia Steam Navigation Co., Ltd.

Shipping Target Under the Second Plan

The following is the Speech of the Chairman, Shri Dharamsey M. Khatau, delivered at the 37th Annual General Meeting of the Scindia Steam Navigation Co., Ltd., on Wednesday, the 13th March, 1957:—

RISE IN FREIGHTS

There has been a continuous rise in operating costs during the last few years. To cover it partially the rates of freight in the India/U.K.-Continent Service were raised by 10% in March last year. For certain items like wages, stevedoring, ship-repairs, etc., the upward trend of costs still continues. Due to the very high prices of new ships the incidence of insurance and depreciation charges in respect of additions to fleet has become very heavy. Many Overseas Conferences have, therefore, decided to increase the rates further. In the case of India/U.K.-Continent Service freight rates have been increased by 10% with effect from the 15th March 1957.

THE SUEZ CRISIS

The situation brought about by rising costs was further aggravated by the closure of the Suez Canal from the 1st November 1956. To cover additional costs due to the longer route via the Cape of Good Hope a 15% surcharge on freight rates was introduced by the Shipping Conferences hitherto operating through the Suez Canal. The Suez situation has also led to a very steep rise in the prices of fuel oil which are now about 60% higher than the prices a year ago. The result has been that in the case of India/U.K.-Continent trade the surcharge has been increased to 17½% with effect from the 1st February 1957. In addition, the lengthening of the route between Europe and India by over 4,000 miles on account of the closure of the Canal has accentuated the general shortage of shipping created by a substantial increase in the demand for movement of bulk commodities like coal and grains between far-flung countries. We are fully alive to the fact that the Suez crisis has had serious repercussions on our sea-borne forein trade especially in regard to our imports essential for the execution of various projects under the Second Plan. We are therefore anxious to see that the Canal is re-opened for traffic as early as possible with an assurance of its maintenance in good navigable condition.

SHIPPING UNDER SECOND FIVE-YEAR PLAN

Prices of ships have risen beyond all expectations. The price of a "Liberty", which is an index to the market for second-hand tonnage, rose from about Rs. 24 lakhs at the end of 1953 to an all-time high of over Rs. 89 lakhs in December 1956. During the last three years the prices for new construction have increased by over 28%. The order books of shipyards are so full that deliveries are available only after 1961 or 1962. Moreover, due to continuous rise in the costs of steel, equipment and labour, it has become impossible for the Yards to quote a fixed price or even a price subject to a ceiling on escalation. There is no knowing what the ultimate price of a ship may work out to.

In this context the provision of Rs. 37 crores made for shipping under the Second Plan, which was **insufficient ab initio,** has fallen considerably short of the amount required for attaining the target of 9 lakhs G.R.T. at the end of the Plan period. The target of 9 lakhs G.R.T. for the country's requirements is on a very modest Scale-in fact, I should say it is inadequate, but I do not wish to deal with this aspect of the Plan on this occasion. With the provision of Rs. 37 crores it has been possible to place orders for about 1,75,000 G.R.T. only, bringing the total to about 7,75,000 G.R.T. only.

It is now understood that no more provision will be made for shipping on account of the very tight foreign exchange position of the country. Actually an Indian vessel in the overseas trade contributes to our foreign exchange pool in two ways—(a) by **earning** freight in foreign currency and (b) by **saving** foreign exchange required (i) to pay freight on our imports carried by a foreign ship and (ii) for remittances of freight earned in Rupees by a foreign shipowner on our exports. Such contribution amounts to nearly 55% of the overseas freight earnings. The Indian ships now engaged in overseas trades earn and save foreign exchange for the country to the tune of Rs. 7 to 8 crores and it will go up to about Rs. 12 crores when all ships on order at the end of the First Plan are delivered. The foreign exchange spent in acquiring an additional ship would be fully recouped in five to seven years out of her own contributions to the pool. To reach the target of 9 lakhs G.R.T. a further sum of about Rs. 40 crores will be required. Not only will it be repaid during the next five to seven years, but the additional ships will contribute to the pool about Rs. 7 to 8 crores every year. The contribution of shipping to the foreign exchange resources of the country will then rise to about Rs. 19 to 20 crores by the end of the Plan period.

Since the provision of Rs. 37 crores has been fully availed of during the first nine months of the Plan period, the allotment for shipping would have to be increased by about Rs. 40 crores to finance at least the balance of the tonnage required to reach the modest target of 9 lakhs G.R.T. by March 1961. This question deserves the most urgent attention because if additional tonnage is to be procured by the end of the Plan period or even within a reasonable time thereafter, shipowners would have to start planning their requirements and place orders for ships right now.

The foreign exchange position at present is difficult and priorities to be given to essential requirements. I realise this and that is why I have tried to show how shipping can play an important part in earning and saving foreign exchange for the country. It is for the Government to decide what priority shipping can get. I would like to suggest that it should be as high as possible.

RAIL-SEA CO-ORDINATION

As I informed you last year, the proposal of the Coastal Conference to increase the freight rates was referred by Government to the Rail-Sea Co-ordination Committee that was appointed by them in June 1955. During the last year the Committee ascertained the actual costs of operation by examining the accounts of coastal companies. The Coastal Conference submitted several memoranda to the Committee dealing with the determination of economic freight rates and the overall problem of rail-sea co-ordination.

Even more important than the present costs of operation, however, is the continuous rising spiral of costs. Past experience bears testimony to this fact. While the costs have been increasing since 1951, freight rates have practically remained stationary barring small interim increases allowed in October 1955 and May 1956. These increases have been not only very inadequate but extremely slow in coming. This time lag by itself is costly. Shipping unlike other industries has not been able to offset increasing costs by raising, within a reasonable time lag, the prices for the transport service it renders. While some delay in granting increases in freight is inevitable under the regulatory system in which Coastal Shipping operates, the time lag of nearly two years since the Coastal Conference's first request in April 1955 for increase in rates cannot be viewed with equanimity by the shipowners. The effects of such delays can only undermine their financial position and detrimentally affect the expansion of coastal tonnage that is so essential. The time lag problem can be solved only if Government and the public recognise that it is essential for the regulated utilities, like other business enterprises, to make appropriate and timely price adjustments.

In connection with the main question of fixation of economic rates of freight, I would like to repeat the request of the Coastal Conference to the Committee that, besides the present costs of operation, provision will have to be made for the anticipated increase in these costs over a period of time, for the creation of a Rehabilitation Reserve besides normal depreciation, and for a fair and an equitable return on capital employed in coastal shipping. The basis urged by the Coastal Conference follows the principles accepted by the Tariff Commission for the cement, steel and other industries. In the present circumstances, I venture to think that the shipping industry is pre-eminently entitled to similar treatment.

As the Second Plan progresses transport will be the biggest bottleneck. Shipping should be utilised as fully as possible to help solve this problem. It is therefore obvious that rail-sea co-ordination must hinge on the diversion of bulk cargoes for movement from rail to sea. Of the bulk cargoes which can be diverted, coal and salt are the most important, followed by grains, cement and fertilizers. The present opportunity should be taken to define on a permanent basis the fields of transport by rail and transport by sea.

It is expected that at least 5 million tons of dry cargo will have to be moved by the coastal sea routes by the end of the Plan period. It will be necessary to expand coastal tonnage fully to the target of about four lakhs tons gross fixed by the Planning Commission. This means that, even without allowing for replacement of old ships, about 1,60,000 tons will have to be added to the present coastal tonnage. This will not be possible unless co-ordination of transport is based on the economic survival of coastal shipping and its progressive development on a permanent basis. Government have already accepted as a matter of policy that coastal shipping should be developed adequately and on sound lines in the larger and long-term interests of the country. I therefore hope that they will seriously consider these aspects of the problem in arriving at their decisions on the recommendations of the Committee.

ACCOUNTS

Last year I had informed you that the working during the year 1955-56 should be reasonably satisfactory compared with the previous year. I am happy—and, I am sure, so are all of you—that our expectations have been realized so far as the year's working results are concerned. Our gross earnings of freight have shown an increase of about 18% over the previous year. Owing to the lack of any substantial exports of rice from Burma to India and Ceylon,

it was not necessary to charter any ships with the result that comparatively lesser tonnage was employed in uneconomic or less profitable operations in the coastal and adjacent trades. We were also able to employ more owned tonnage in the India/U.K.-Continent trade where freight rates are more realistic. Another reason for the improved results was that the 10% increase in overseas rates made in February 1955 was effective throughout the financial year. The rising charter-market was yet another factor which helped us secure better rates for the carriage of bulk cargoes like ores.

The improved results have enabled your Company, in spite of enhanced costs of operation, to pay a dividend of Re. 1/- per share and to augment our resources with a view to meeting our obligations in the coming years. You will notice that, after writing off Debenture Issue expenses of Rs. 19.76 lakhs, we have added Rs. 67 lakhs to Special Depreciation Reserve and have again created a Dividend Equalization Reserve of Rs. 13 lakhs. Consequent upon modernisation of our fleet with the addition of several new ships, our repairs expenditure will be lower in the earlier years of the life of a ship. In order that the incidence of repairs expenditure may be spread, more or less, evenly over a ship's life, we have considered it advisable to reinforce the Annual and Special Survey Reserve. With the addition of Rs. 20 lakhs this year it now stands at Rs. 40 lakhs. Our Reserves and Surplus in the aggregate, after writing off the loss of Rs. 31.98 lakhs on investments from Investment Reserve, show a net increase of about Rs. 107 lakhs over the corresponding figure at the end of the previous year. These additions have enabled the Company to strengthen its finances and these will be necessary for the modernisation and expansion of our fleet.

Our Managing Agency of The Eastern Shipping Corporation Ltd. came to an end on the 15th August 1956 because of the provision in the new Companies Act to the effect that a company which has managing agents of its own cannot continue to function beyond that date as the managing agents of another company. Government have consequently agreed, at our request, to take over the shares held by us in the Corporation amounting to Rs. 1.43 crores at par. This entire sum is expected to be received during our current financial year. I wish to recall here that one of the reasons for our accepting the Managing Agency of the Corporation was to see the Flag of Indian Shipping flying in the distant seas. The measure of success achieved can be seen from the fact that the Corporation now operates cargo services on the important trade routes between India and Japan, and India and Australia and passenger services between India and Malaya, and India and East Africa. Though the operation of the new Companies Act has severed our connection with the Corporation, it will always be a pleasure for us to work in co-operation with them in future. It is a matter of great satisfaction that the cordial relations between the two Companies have been maintained throughout and, I have no doubt, will continue.

With regard to our holding of Rs. 1,04,25,000 in the share capital of Hindustan Shipyard Private Ltd., I regret to inform you that Government have turned down our request to repay this amount to us. The release of this amount, on which we earn no return at all, has become vital for our needs, as it would assist us in meeting the cost of further expansion of our tonnage. We shall therefore continue our efforts to induce Government to take over our interest in the Visakhapatnam Shipyard.

COASTAL AND ADJACENT TRADES

I informed you last year that a meagre interim increase of 5% in coal and general cargo rates on the Coast was permitted with effect from the 15th October 1955. An additional interim increase of 15% was requested by the Coastal Conference, but only a 5% increase on general cargo rates was allowed effective from May 1956. As these increases were operative during only a part of our financial year, they made negligible difference to the average rate of freight earned. Pending the outcome of Rail-Sea Co-ordination Committee's inquiry the low rate structure on the Coast continues. With regard to the carriage of bulk salt, however, the Conference has reached an agreement with the Salt Manufacturers' Association on charter-party terms and rate of freight.

OVERSEAS TRADES

The Working of our India/U.K.-Continent Service has been better this year because four additional ships were available for employment during the year and better rates for freight were earned.

Pursuant to the Trade Agreement concluded between India and the U.S.S.R., with a Bilateral Clause for shipping services, we started a service between the two countries. We have placed two ships on this service, which commenced in July 1956.

We also started in August 1956 a direct service from India to the West Coast of Africa (Nigeria, Gold Coast, etc.) via Mauritius. This is the first direct service to these countries from major Indian ports except Calcutta. We feel justified in hoping that this new service will assist in stimulating Indian exports to these countries. This service has been linked up with our Indo-Russian service, enabling us thereby to participate in the cross trade between the West African ports and the Mediterranean ports, especially the Italian ports.

We have applied again for membership of the Conferences governing the trade from the U.K. to Colombo and from Colombo to the U.K. and the Continent. I think Indian Lines have a stronger case for admission to these Conferences in view of our historical, geographical, economic and cultural ties with Ceylon. I trust that the legitimate case of Indian Lines will receive the attention it deserves.

PORT CONDITIONS

Though our ships suffered berthing delays at some ports, I am happy to say that the Port Authorities have spared no efforts to give better despatch to shipping. At Bombay the introduction of piece-rate system of payment to stevedoring labour has resulted in improvement in the handling of cargo, though delays still occur at other points in the "assembly line", e.g. supply of wagons, removal of cargo from sheds, etc. It is hoped that the contemplated introduction of the piece-rate system at Calcutta and Madras will not be delayed any longer.

I should like to point out, however, that since the beginning of the current financial year the position in regard to loading of colliers at Calcutta has considerably worsened, the main reasons being the shortage of coal wagons and the lack of co-ordination between various authorities. During the last eight months the shipping companies have been vigorously pursuing this matter with the authorities concerned, but unfortunately no abiding improvement has occurred so far and ships still lose vitally important days in port.

This brings me to the very vital question of expanding the capacity of our major ports in terms of berths, handling equipment, transit sheds, wagon supply, pilotage, facilities for night navigation, etc. This is an absolute must if the implementation of the Second Five Year Plan is not to suffer from any failure to cope effectively with the larger quantities of coastal and overseas cargoes that will have to be handled during this period. The shipping companies have provided faster and more efficient ships and would like to continue to do so. But the advantages of such ships, which have been or will be acquired at high cost, cannot be fully reaped unless, correspondingly, they get quick despatch at loading and discharging ports. I wish therefore to urge to the authorities that the port development schemes should be executed with the utmost despatch.

TONNAGE PROGRAMME

We have now a fleet of 41 vessels amounting to 2,15,435 tons gross. Out of these, 14 big cargo ships, 3 small cargo ships and 4 small passenger-cum-cargo ships of 1,01,372 tons gross in the aggregate serve the coastal and adjacent trades. The remaining 20 vessels of 1,14,063 tons gross are employed in our overseas services.

The deliveries of our four ships under construction at the Lubeck Yard in West Germany have been delayed owing to about four months' labour strike. One of them will now be delivered at the end of this month and the remaining three in June, July and August next. The two ships under construction at Visakapatnam also will be delivered towards the end of the year. All these ships will be employed on the overseas services. The average age of our entire fleet will then be about nine years.

In order to have a satisfactory fleet position, a continuous process of modernisation through disposal of old vessels and their replacement with fast and modern ships is necessary. During the next six to seven years, about twelve to fourteen of our vessels will normally be due for replacement. It has become more necessary now to have faster ships to serve the growing requirements of the trades in which we are interested and such other trades as we may decide to enter on a liner or tramping basis. Several other liner companies operating in the India/U.K.-Continent trade have planned to build ships with a speed of 17 to 20 knots.

Your Board after careful consideration decided that I should discuss the matter with the shipyards on the Continent before placing further orders. Accordingly, last September we have placed with the Lubeck Yard an order for two 9,300-d.w. ton cargo vessels with a speed of 17 knots. These ships can be operated also as closed-shelter deckers with a deadweight capacity of 12,300 tons. One of them is expected to be delivered in 1959 and the other in 1960. The escalation clause in respect of these ships is not subject to a ceiling.

PROSPECTS FOR THE CURRENT YEAR

I shall now endeavour to assess the position with regard to our operations during the year 1956-57. The freight increases made last year in the coastal and overseas trades, to which I have already referred, will be effective for the whole year. On the expenditure side the upward trend of costs continues. Especially, the prices of fuel oil have soared to about 60% more than they were about a year ago. Our colliers have suffered serious delays at Calcutta. We, however, expect to earn more freight because two additional ships, m.v. 'Jalavijaya' and m.v. 'Jalavishnu', will have been in commission for the whole year and two more ships, m.v. 'Jaladhan' and m.v. 'Jaladhruv', will have operated for about eight months each. We should therefore be able to show satisfactory results for the coming year also.

MANAGING AGENCY

As mentioned in the Directors' Report, the Agency Agreement with Messrs. Narottam Morarjee and Co. has expired and the new scheme for Managing Agency is being formulated. It will take some time yet to complete it. As soon as the requisite drafts are approved by the Board, it will be placed before the Shareholders and the Government for their approval.

THE EASTERN BANK LIMITED

Satisfactory Results in Difficult Conditions

The Effect of the Suez Crisis

Economic Review by the Chairman, Sir Evan M. Jenkins

The Forty-seventh Annual General Meeting of the Bank will be held in London on 3rd April 1957. The following is an extract from the Statement by the Chairman Sir Evan Meredith Jenkins, G.C.I.E., K.C.S.I., which has been circulated with the Report & Accounts:

The Balance Sheet for 1956 shows on the liabilities side an increase of £879,680 in Current, Deposit and other accounts and a decrease of £579,724 in Bills payable. On the assets side there is an increase of £731,922 in Cash on Hand at Call and at Bankers, and of £1,005,674 in Bills Receivable. Advances have fallen by £597,846. The Balance Sheet Total is £44,173,237 against £43,558,711 for 1955.

The considerable increase, from £720,953 to £871,521 under Bank Premises, Furniture and Equipment, is due mainly to the completion of our new premises at Baghdad, and to payments for work on the building we have acquired at Kuala Lumpur. The figure in the Balance Sheet takes into account the appropriation of £35,000 referred to below. Outstanding commitments amount to about £110,000, largely for housing; building is very expensive throughout the East, and it is unfortunately difficult in many centres to rent suitable premises and houses for staff.

The published profit is £129,940 against £132,536 for 1955. The appropriations from profit are £50,000 to Contingencies, £35,000 to Premises, and £28,750 to the final dividend of 5s. per Share, the total dividend of 8s. per Share for the year remaining unchanged. The carry forward is reduced from £112,656 to £111,596.

In spite of the reduction in profit, the results may be considered satisfactory in conditions which were in some respects specially difficult.

The year was darkened by the crisis in the Middle East. With branches in Iraq, Beirut, the Persian Gulf and the Aden Region we have had an anxious time, but thanks to the firmness of the Governments concerned our business was not interrupted, except at Bahrain where disorders caused the Banks, like all other offices, to close for about one week. Iraq in particular deserves special sympathy and respect. The cutting of the pipe-lines which connect her northern oil-fields with the Mediterranean was a grievous blow to her economy, and was the result of disputes with which she had no direct concern. That she was able to withstand the shock without serious trouble was due to the sound use of oil revenue in the past, and to the determination of her Government to prevent the emotions aroused by the crisis from being exploited for purposes damaging to the real interests of the country.

The effects of the crisis are by no means confined to the Middle East; the closure of the Suez Canal has so dislocated shipping that almost every country with which we are concerned is suffering inconvenience or worse from delays in the arrival of imports and the despatch of exports. In Aden in particular the loss of shipping opportunities must seriously affect the traditional entrepot trade.

The paragraphs which follow should be read with this background in mind.

IRAQ.

There was no change of Government during the year, which, until the occurrence of the Middle East crisis, was one of prosperity and progress. The immediate effect of the cutting of the pipe-lines in Syria was a sharp reduction of oil royalties from an estimated I.D. 80 million to an actual I.D. 68.8 million for the year. Since 30 per cent. of these royalties go to revenue and 70 per cent. to development, the budget estimates passed in February are affected. Expenditure was orginally put at I.D. 65.5 million and revenue at I.D. 61.6 million, the deficit being covered by the 1955 surplus. The deficit may now amount to as much as I.D. 8 million. From the Iraqi point of view, the early restoration of the pipe-lines is vital.

The Development Board has been exceeding active. During "Development Week" in April several important projects were officially opened—the Wadi Tharthar and Ramadi flood control and irrigation schemes, the Kufa and Hindiyah bridges, and the Hillah-Kufa-Najaf Road. Expenditure by the Board for the year ending April, 1956, amounted to I.D. 46.5 million. and the five year plan for the period ending 1960 has been revised, with Parliamentary approval, to include a total expenditure of I.D. 500 million, an increase of nearly I.D. 200 million. Industry and housing are to receive special attention. These enlarged plans depend upon the progressive increase of oil royalties, and it is satisfactory that in 1957 at least the Board will not have to curtail its activities, which for the time being can be financed from accumulated balances.

Grain harvests were better than in 1955, but some import of Australian wheat was necessary. The date crop was small, and growers in consequence got good prices.

Business was reasonably good throughout the year, though in the early months there was some overstocking. The Middle East crisis caused a sudden rise in prices in October, but Government intervention coupled with the rapid movement of goods awaiting clearance from Customs corrected this, and by the end of December conditions seemed fairly stable.

We were at last able in September to occupy our new premises in Baghdad. The sub-Branch in Rashid Street, opened in December 1955, continues to make progress, though it cannot be said that there is now any shortage of Banks in Baghdad.

LEBANON.

Our new Branch at Beirut opened for business on the 30th April, 1956, and has done as well as can be expected during an exceptionally difficult year. The competition for banking business is perhaps fiercer in Beirut than in any other City in the world.

THE PERSIAN GULF. BAHRAIN.

The activities of the Committee of National Unity continued to embarrass the Government during the year, and in November there were serious disturbances owing to which shops and business offices, including the Banks, were closed for several days. Some buildings (fortunately not ours) were attacked and badly damaged.

In spite of the somewhat discouraging conditions, development works have made progress and the new jetty at Jufair is under construction. There is also a good deal of private building.

Business was good on the whole, with imports well maintained. The tension in the Middle East naturally caused alarm in the second half of the year, and food prices rose sharply. The full effect of the stoppage of Arabian supplies to the oil refinery, and of the interruption of normal shipping arrangements, has not yet been felt.

DOHA.

Qatar continues to flourish, with hopes of increasing revenue from oil, which have not been dashed by the serious accident to a marine drilling platform which has been described in the Press in this country. The year was quiet, and the Government's arrangements for maintaining order during the acute period of the Middle East crisis were most effective.

Business was good, and the number of merchants trading is gradually increasing. As in Bahrain, there has been a rise in food prices.

Among important public works completed or in hand may be mentioned the new hospital which has been completed and is equipped on the most modern lines; the Custom House and warehouses, which are nearing completion; a telephone exchange; and the power house extension, which may take longer than was expected owing to the difficulty in present conditions of shipping the machinery.

ADEN.

During the first eight months of 1956 there were no less than 70 industrial disputes involving more than one fourth of the working population of the Colony. There was some violence and, inevitably, some dislocation of business. By September—largely owing to the efforts of a Commission of Enquiry of which an experienced British Trade Union official was a member—conditions had much improved, and the business community looked forward to a period of tranquility. Unfortunately the closure of the Suez Canal caused troubles of a different kind; the port from November onwards had little to do, and delayed deliveries—particularly of building materials—have led to some unemployment.

In spite of these difficulties, our Aden Branch had a satisfactory year. There are the usual complaints that restrictions in other countries, and especially in Ethiopia, are impairing Aden's position as a centre of entrepot trade, but for the first ten months of the year the volume of trade was well maintained.

It is not easy to give a definite opinion about the future either on the short or on the long term. While the Suez Canal is closed the number of ships calling at Aden will be very greatly reduced. This will necessarily affect the entrepot business generally, the execution of building works in the Colony, and the tourist traffic, with which our sub-Branch at Steamer Point is largely concerned. So far, markets have been remarkably steady, and the opportunity will no doubt be taken to reduce stocks of Japanese piecegoods which have been excessive and are not for the time being easy to replace. On a longer view Aden's future depends not only upon freedom of traffic through the Suez Canal, but upon internal stability and business efficiency. Aden makes a living out of the services which it provides, and it would be unfortunate if those living and working there were to lose sight of this essential fact.

MUKALLA.

His Highness Sir Saleh bin Ghalib al-Quaiti, Sultan of Shihr and Mukalla, died at the end of May, and has been succeeded by his son, His Highness Sultan Awadh bin Saleh al-Quaiti.

Our new Branch has had an uneventful year, and we are satisfied with the modest progress made.

INDIA.

India's second Five Year Plan has received adequate notice in the Press in this country. In its latest form the Plan contemplates expenditure by Government during the five year period of about Rs. 5,300 crores. If the desired expenditure of about Rs 2,400 crores in the private sector is added, it will be seen that the effort required will be more than double that of the first five year plan, the total expenditure on which is put at rather over Rs. 3,000 crores.

The national economy is already under some strain, as is shown by rising prices, an exceptionally high level of Bank Credit, and a gradual reduction in the reserves of foreign exchange. Banks, including ourselves, are making free use of the Bill Market Scheme, under which borrowing from the Reserve Bank of India is permitted against bills. The Budget, introduced in February, imposed about Rs. 34 crores of additional taxation (including Excise duties Rs. 25 crores and Income Tax and Corporation Tax Rs. 8 crores), and it is not surprising that supplementary proposales for increases in duties and taxes were introduced in Parliament in November. Among these changes were a capital gains tax, and increases in the rates of super tax on dividends in excess of 10 per cent. and on certain undistributed profits.

In the meantime India's achievement in terms of works completed and in progress is impressive. The opening of the Hirakud dam in Orissa was a great occasion. Construction has begun at the sites of the three new Steel plants at Rourkela (German), Bhilai (Russian), and Durgapur (British). The final contract for the British plant was signed at the end of October; the cost of the project is estimated at Rs. 138 crores. Many other projects are in hand, and it is probable that a very substantial loan from the International Bank will be available for further steel expansion, railways, ports, and power generation.

There were no spectacular changes in the commodity markets during the year. Exports showed some tendency to fall.

Exports of Jute manufactures and Cotton textiles decreased somewhat, and with imports generally at a high level there will be further import licensing restrictions designed to save Rs. 30 crores of foreign exchange in 1957.

The new Companies Act came into force during the year, and Acts amending the Reserve Bank Act and the Banking Companies Act were also passed.

The Life Insurance Corporation Act, which nationalises Life Insurance business, was passed in July.

India has embarked upon a period of intense economic effort, which will inevitably be accompanied by austerity.

PAKISTAN.

The new Constitution was approved by the Constituent Assembly on the last day of February, and Pakistan became a Republic on the 23rd March, with Major-General Iskander Mirza as its first President.

In September Mr. Mohammed Ali resigned, and Mr. H. S. Suhrawardy who became Prime Minister in his place formed a new Government.

The draft of a five year development plan covering the period 1955-60 was published in May, and has since been under discussion. The plan as drafted calls for a total expenditure of about Rs. 1160 crores, of which Rs. 800 crores will be in the public and Rs. 360 crores in the private sector. Finance is to be found as to Rs. 150 crores from public savings, Rs. 590 crores from private savings, and Rs. 420 crores from external sources. These figures are ambitious but not unattainable. The highest priority is given to agricultural development in the widest sense, including irrigation, land reclamation and village improvement. Industry, with power, comes next, and transport has third place. In his recent budget speech the Finance Minister has stressed the extreme importance to Pakistan of agricultural development. Not only is agriculture the basic industry of the country, but self-sufficiency in food is vital to the stability of the balance of payments.

During the year good progress was made with many important irrigation and hydro-electric projects, and there was increased production in most major industries. Cotton Textile output has been estimated at 450 million yards, with foreign exchange earnings of about Rs. 6 crores against Rs. 74 lakhs in 1955. Jute manufactures have earned about Rs. 10 crores of foreign exchange, against Rs. 1.73 crores three years ago, when the new Jute Mills first entered the market. The Sui Gas Transmission Company Limited has made satisfactory progress, and the new pipe from the field to Multan will be laid in 1957. A new gas field has been discovered at Sylhet and will no doubt be exploited before long.

A new Institution to be known as the Pakistan Industrial Credit and Investment Company, operating on the lines of the similar Indian institution, is to be established with participation from the United States and the United Kingdom.

Though Pakistan's trade was roughly in balance for the year and the volume of exports increased, special food purchases to meet shortages due to floods in East Pakistan imposed additional strain on foreign exchange resources. As a result of this, of the continuing need for raw materials and equipment for new industries, and of special problems arising from the closure of the Suez Canal, there will be further restrictions on imports during the first half of 1957.

CEYLON.

At the General Election in April the People's United Front achieved a decisive victory over the United National Party, and a new Government was formed by the Hon. Mr. S.W.R.D. Bandarnaike. The year has been one of political controversy, and feeling ran particularly high over the adoption of Sinhalese as the official language of Ceylon. There is still much uncertainty about the Government's Nationalisation programme.

Trade was good during the year, though the favourable balance of payments was considerably lower than in 1955. The production of tea was slightly lower than in 1955. The year's sales opened with an average price in Colombo of Rs 2/06 and closed at Rs. 2/45. The average price for the year as a whole was Rs. 2/16 as compared with Rs. 2/24 for 1955. London prices showed a slight improvement.

The agreement for the shipment of sheet rubber to China has been renewed for 1957. Rubber prices fluctuated considerably owing to the international situation, and finished on the whole firm.

Prices of copra showed some increase, largely owing to decreased production in the second half of the year.

From May onwards the working of Colombo Port was seriously interrupted by labour disputes. The consequent delay in the loading and unloading of cargoes is a serious matter, and several shipping companies have for the time being ceased to call at Colombo. The Government have declared the handling of cargo an "Essential industry" so that strikes without 21 days' notice are illegal, and also appointed the Hon. Mr. E. F. N. Gratiaen as a Commissioner to enquire into the working of the Port. His report was submitted early in the New Year.

A National Planning Council has been established under Statute to advise the Cabinet on the planning of agriculture, industry, commerce, education, housing, public utilities, and the social services. With the Prime Minister as Chairman and the Minister of Finance as one of the members, this should be a most important body. It will have the assistance of a special Planning Secretariat.

Progress has been made with the establishment of the Development Finance Corporation referred to in my last Statement. The Capital has been subscribed and operations have started.

MALAYA.

The year has been eventful. In February, agreement was reached between the Secretary of State for the Colonies and Tunku Abdulrahman on the outlines of a self-governing constitution for the Federation, and a Constitutional Commission was appointed. At the end of the year there were further talks on defence and mutual assistance, and though the United Kingdom Government were unable to provide a large loan for development, grants amounting to about £37 million are expected to be made during the first five years of the new Federation Government's existence, mainly for expenditure arising out of the Emergency, but partly for development. The new Constitution is expected to come into force in the second half of 1957.

Constitutional progress in Singapore has been less smooth. Discussions in London between a Singapore delegation headed by Mr. David Marshall and the Secretary of State broke down in May. In June Mr. David Marshall resigned the office of Chief Minister, and was succeeded by Mr. Lim Yew Hock, who visited London in December and resumed the negotiations. It was announced on the 21st December that a further formal discussion of Singapore's constitution would begin on the 11th March, 1957.

Industrial unrest in Singapore was rather less than in 1955, but was still serious; and during the Autumn there were serious disturbances arising from strikes by school children. These were firmly dealt with by the Government; the ringleaders were arrested and order was speedily restored. The Federation was remarkably free from labour troubles, but the Emergency continues and the Centenary Celebrations in Penang were recently marred by communal disturbances.

Trade for Malaya as a whole was good, the combined value of imports and exports being the highest since the record year, 1951. The balance was, however, less favourable than in 1955. The Tin and Rubber markets were satisfactory.

We hope shortly to move into our new premises at Kuala Lumpur.

GENERAL.

Sir Tom Hickinbotham, who has long experience of the Middle East, joined the Board on the 31st October, and in January and February 1957 visited our Branches at Beirut, in Iraq and in the Persian Gulf.

The General Manager, Mr. Barden, has also visited our Branches in Karachi, Calcutta and Bombay.

We are, as always, indebted to our Staff both at home and in the East for their good work; and special thanks are due this year to our Staff in the Middle Eastern Branches for their services during a most trying time.

The Ahmedabad Electricity Company Limited

*

Effects of Electricity (Supply) Amendment Act, 1956

*

Recent Gains Nullified by Executive Action

*

Speech of the Chairman, Mr K. G. Milne

The following is the speech delivered by Mr. K. G. Milne, the Chairman of the Ahmedabad Electricity Company Limited at the company's 44th Ordinary General Meeting:

Gentlemen,

I would like to refer first of all to the resignations of Sir Purshotamdas Thakurdas and Mr. Ambalal Sarabhai from your Board of Directors during the year. Since the Company's inception 44 years ago, Sir Purshotamdas Thakurdas has given it his invaluable guidance. So too Mr. Ambalal Sarabhai, with 38 years of active membership on your Board, has been prominent in furtherance of the Company's well-being. With their intimate knowledge of affairs, and of the City of Ahmedabad, they have each rendered untold services to this Company, and I am sure you will wish to associate yourselves with the resolutions which were passed by the Board expressing their high appreciation.

The health of a controlled Industry like Electric Supply is greatly dependent on the regulatory climate in which it functions. We have the Electricity (Supply) Act, 1948, modified by the Electricity (Supply) Amendment Act, 1956, as our chief weather-maker on the stormy shores of the general economy. Shareholders must be anxious to know how far the changes brought about by the 1956 Amendment Act are likely to affect the Company and its equity, and I will therefore attempt an analysis.

Firstly the Standard Rate of return permitted to the Industry will become linked to the Bank Rate as from 1st April, 1957, making at present levels 5½%, instead of the previous fixed figure of 5%. Internal financing has also received a slight fillip from the provision that tax savings accruing from the Development Rebate allowed under the Finance Act are to be taken to a Development Reserve, subject to the earnings of the year not thereby being made to fall short of the Reasonable Return. The Company will be allowed one half of 1% on the annual balances in the Development Reserve as a sort of handling charge or risk money, though no other direct benefit will accrue to shareholders as the Reserve is to be excluded from the Capital Base.

Against these two gains by the Industry must be set off the disallowance of interest on Loan and Debenture Capital as an item of expenditure in arriving at the Clear Profit, evidently on the ground that the Industry could always obtain a return on such monies through the inclusion of the value of the counterpart assets in the Capital Base. It is evident in the final result that the increase in the Standard Rate will not compensate fully for the resultant drop in the permissible Profit in the case of your Company, as approximately one-fifth of the Capital is in the form of Debentures.

However, as things now stand, we may reasonably expect to be able to maintain a dividend of 6½% or thereabouts. The big question is, whether this is going to be enough to restore, in the present climate for investment, the confidence and incentive to the investor which have been so rudely shaken of recent times. The answer to this question, in its widest context, is really vital to India as well as to us.

It is certain that our Government must have prominent before it the problem of carrying the people with it in the raising of extra taxes needed to finance all those tasks it has set itself—River Valley projects, Steel works, the expansion of the Railways and the like. It seems to me however that all these tasks together dwarf in comparison to those which the myriads of ordinary businessmen have to perform all over the country and in countless different spheres, if real overall progress is to be made. It is a flashing danger sign if finance for worthwhile, and even for essential, projects threatens to dry up in what we may truly call the "People's Sector".

In the case of Electricity, some 50% is still produced, and 75% distributed, by commercial undertakings in this country. It is an absolutely basic commodity whose increase all agree is a "must" for progress. There is really no argument about it. Yet you know that the shares of our Company—the largest and one of the most rapidly expanding single producers of electricity in the State—have been actually standing at a considerable discount most of this year, all because of over-severe controls.

It will be agreed that under such circumstances, we would hardly have been in a suitable position to raise more finance to promote expansion or development. Yet Electric Supply Undertakings have normally a certain stability and position of their own; and others are usually worse placed than us, rather than better. Surely therefore Government will have to evolve policies designed to carry the business people with it to a greater extent if all the people are to flourish.

It seems for these reasons especially unfortunate that Parliament's estimable attempt to encourage the investor in our Industry by making a provision for "automatic adjustment" of the Standard Rate of return to follow fluctuations in the money market, has apparently been almost instantly frustrated by executive action. Hardly had the ink used in the new legislation dried, when the announcement by the Reserve Bank came to the effect that as from 1st February, 1957, the rate of interest on advances to Scheduled Banks against Government and other eligible securities had been raised to 4%, while, at the same time, the official Bank Rate was unchanged at 3½%. For the Electricity Industry, this announcement came as a bolt from the blue, for, unless upon pressure of circumstances the Bank Rate itself is officially raised to line up with the Reserve Bank's lending rate for advances to Scheduled Banks, we are again caught by the necessity to plead for Parliamentary enactment so as to keep in line with the changes in the value of money.

The Industry has quickly reacted and approached the authorities for action, if necessary by an Ordinance. It has been pointed out that the World Bank rate of lending against Mortgage Debentures carrying the unconditional guarantee of the Government of India, is now a minimum 5½%, the same as is now available to our Industry to cover any fresh Equity investment. This is clearly absurd.

It may be added that there is still no solution in sight to the discouraging effect of the knowledge that the more rapidly you succeed in expanding Electrical Supply, the more likely the shareholders are to lose, or continue to be denied, their right to have their dividends credited as income-tax paid.

Reverting to the Electricity (Supply) Amendment Act, I will not try to decode many of the intricacies covering the wide field of regulation and powers and duties of State Electricity Boards that need not normally affect you. I will however refer to a few more points.

First, although the Act still makes no provision for meeting the deferred tax liability arising out of diverse depreciation provisions in the Electricity (Supply) Act and the Income Tax Act, Government are reported to be sympathetically disposed to introducing a clause to cover this need if a suitable formula can be found. In fact a clause permitting appropriation towards a Deferred Taxation Reserve was drafted by the Select Committee when considering the Amending Act. As worded however the clause would actually have caused considerable embarrassment to most undertakings, and at the Industry's request it was dropped for the time being. The Federation of Electricity Undertakings of India is now in correspondence with Government on a revised wording which it is hoped will satisfactorily cover all aspects of this problem.

Another amendment of major importance and interest to you concerns the question of our freedom to adjust our rates for supply to consumers. The 1956 Act has made it clear beyond doubt that the Licensee has the right to adjust his rates within the framework of the Act, including where necessary an enhancement of rates. With this has come to rest an unfortunate legal controversy which had developed, causing much confusion and loss. You will remember how a Rating Committee was formed in the case of your Company in June 1954, when we did not understand how we could have been said to have breached the law. You are not likely to forget the subsequent impasse we had to contend with and which resulted in our being denied a very necessary rate increase for about 18 months, at a cost of about Rs. 25 lacs in Revenue, necessitating one reduction of the dividend and significant withdrawals from our hardly won Reserves! This was a by-product of the defect in the law which the amending Act has now set right. Hereafter a Licensee must be served with a "show cause" notice, and the authorities must await the results of arbitration before the Central Electricity

Authority in respect of any disputes raised, before there can be any question of appointing a Rating Committee. It is a notable step forward that the law now appears to ensure that the penalty of a Rating Committee cannot be inflicted on Licensees hereafter without fully adequate cause.

We have recently been threatened with the effects of some other legislation conflicting with the mandatory provisions of the Electricity (Supply) Act; to our detriment once again. This is the Finance (No. 3) Act, with its provisions for compulsory deposit with the Reserve Bank in respect of depreciation allowances given under Section 10(2) of the Income Tax Act. Under the provisions of the Electricity (Supply) Act, we are not even permitted to earn equivalent allowances. We are hopeful that, in this instance at least, the Rules which are now under consideration by the Central Board of Revenue will recognise the fact that the Electricity (Supply) Act has already made its own provisions towards an identical end, namely the investment of depreciation allowances in the business or in Government Securities, and that consequently the Industry wil be exempted from the operation of the relevant part of Finance No. 3 Act.

I have been at some pains to point out that the difficulties incidental to dearer money, problems arising out of deferred tax, and denial of tax concessions, are of even more than usual importance to Companies such as yours which have statutory as well as moral responsibilities for large-scale expansion in the national interest. By the very nature of its franchise, an Electric Supply Undertaking must continue to expand, and it will certainly repercuss adversely on the country's economy if such Undertakings have to function in the twilight region between viability and subsistence. The Legislative intent having been firmly expressed in the Electricity (Supply) Amendment Act, 1956, for a return which should provide 'automatic adjustment with variations in the money market' it will certainly be a miscarriage of justice to say the least if the Industry is to be condemned to a further life of hand to mouth existence. I have laboured this point especially because your Company, charged with the task of making power available to the Industries and Citizens of the progressive and expanding Ahmedabad region, has to look forward to greater achievements: and political misunderstandings or legislative lethargy cannot but impede development.

With the commissioning towards the end of 1958 of the 15 MW Turbo Alternator Set ordered last year, the first half of the Company's "C" Power Station will be completed. Future power expansion in Ahmedabad is bound up with the plans of the State Electricity Board for increasing power capacity in their South Gujerat System, possible hydro-generation in the Tapti, Narbada and Mahi river systems, atomic power development, and even the prospect that natural gas might become available. Nevertheless it is not disputed that with offtake developing at an average of over 10% annually—a phenomenon which is general to most of the major power systems in the country—the Company must give serious and now urgent consideration to plans for completion of the second half of the "C" Station project, involving the installation of an ultimate 60MW of plant. How best this may be achieved and the manner in which it is to be financed is receiving your Board's earnest consideration.

The completion of this development should take care of the demand in the Ahmedabad area until about 1965. The answer to what is to happen after that must not be delayed for too long either. A modern plant takes anything up to five years from the stage of planning to commissioning. In line with the past traditions of the Company we have already taken preliminary steps to ensure that the future power needs of our area in the mid 1960's are not prejudiced by lack of timely and co-ordinated thought.

The import licence having already been received for the 15 MW plant for completing the first half of "C" Station ordered last year, your Company has so far escaped the import restrictions following the recent Foreign Exchange crisis. How far this crisis will affect the import of Heavy Electrical Plant and Capital Goods for future projects in the country, remains to be seen. In the interest of India's proclaimed need for long term credits for the purpose, however, I do hope that official spokesmen will in future find it rather more possible to display a sense of greater confidence in the business community than they have sometimes done in the past few years. Lack of confidence was never conducive to any kind of credit, least of all cheap credit for long periods; and one could hardly blame overseas lenders if they tended to assess their potential clients at the valuation of the latter's own Government. Besides it is the Government itself which has now turned to the businessmen asking them to obtain the foreign exchange of which the country has run so short.

Another important requirement is that method should be found whereby borrowers will not be left with the risk of fluctuations in the rates of exchange; a factor which, in the context of long term credit, could be much more serious than even a high rate of loan interest.

It may appear that other things remaining equal, the Electricity Supply Industry, being essential to the general economic uplift of the country, may have reason to hope its requirements of essential plant for power projects will escape drastic import cuts. In fact the need for the Electric Supply Industry to receive priority consideration in allocation of foreign exchange for import of essential plant has been the subject of a Resolution adopted at the All-India Power Engineers' Conference held in Bangalore in January this year.

Coming now to local affairs, the operation of your Company's plant during the year continued satisfactorily, while the peak demand for the year at 110,400kW recorded an increase of 10,000 kW over that of the previous year. Coal deliveries have been rather irregular mainly due to the shortage of rail transport, but the Company's Coal Agents, through their intensive efforts, have been able to help us maintain stocks at a fairly satisfactory level. The quality of coal received has, however, deteriorated to some extent due to the better qualities of coal being in greater demand.

The constant efforts of the Company to improve the efficiency of operation are being offset by the rise in the prices of materials, especially of plant and of fuel, so that in the result the cost of production continues to rise. During the last year we have had to meet an upgrading in the price of coal, which has increased by between Rs. 3/- and Rs. 3-8-0 per ton, together with a rise in freight of one anna in the rupee. It looks as if further rises in the price of coal are to be expected, if the development of this equally essential commodity is not to continue to be thwarted by lack of funds.

The Indian Electricity Rules, 1956, brought into force from the end of June, 1956, have made it obligatory for Electric Supply Undertakings to close their annual accounts as at 31st March. As you know this Company's Accounts were being closed annually as at 30th September and it has now been decided, with the approval of the State Government and the Income-tax Authorities, that the next closing of the Company's Accounts should be for a period of six months ending 31st March, 1957. Thereafter the Company's financial year will be 1st April to 31st March. This will necessitate the compiling of Accounts for the short-term period of six months—October 1956 to March 1957—which will entail the calling of a General Meeting in November to adopt the Accounts and declare a dividend for that period. With three Electricity Companies under their management, your Agents have drawn up plans to ease the administrative difficulties inherent when all three have a common closing date. These plans envisage the payments of your ad-interim and final dividends in future in April and December respectively.

The All-India Power Engineers' Conference at Bangalore referred to by me earlier has in an important Resolution recognised the necessity of imparting field training to different categories of technical personnel. In this direction your Company has for many years undertaken the training of diploma and graduate apprentices. We have also been sending selected members of the Engineering Staff abroad for training. At the moment we have in the U.K. two Charge Engineers and one Assistant Mains Engineer under training with the Central Electricity Authority. Consideration is also being given to further staff being sent abroad nearer the time when the three Engineers now in the U.K. return to India.

I should also add that the Training Within Industry Scheme initiated by the Company a few years back is progressing well. As required by Government, Unit Production Committees have been constituted in the various Departments of the Company each Committee consisting of about 6 members representing 150 employees. Four of these members are elected representatives of labour and 2 nominated by Management. In general, the functions of these Committees are to ensure proper and efficient use of machinery and adoption of precautionary measures so as to engender safety consciousness against occupational hazards. These Committees have worked well during the year under review.

In keeping with its Staff Welfare policy, the Sabarmati Primary School, which was in the past run by the local District Board, has now been taken over by the Company for the benefit of employees children. The present strength of the school is 201 children and 6 teachers. It is the intention of the Company to add higher classes to this school in the future. The kindergarten school at Sabarmati which was opened in 1955 continues to provide excellent facilities for the younger children of the employees.

The Accounts, which have been drawn up in conformity with the provisions contained in this behalf in the Companies Act, 1956, are, I believe, fully informative, taken with the explanatory notes appearing on the face of the Balance Sheet. You may however like some comment from me concerning appropriations with respect to Reserves. This is an odd matter. In essence we took Rs. 8,44,000 from the Equalisation of Dividends Reserve, and put Rs. 9,38,708 to General Reserve. In the result Reserves gained about Rs. 95,000. It all arises from an undertaking which the Company had to give to the Bombay Electricity Board during the negotiations over the 8¾% Surcharge which was made applicable to sales of energy to High Tension consumers as from October 1955. As the arrangement will come to an end with the enforcement of the amendments to the Electricity (Supply) Act from 1st April 1957, I trust we will not have cause to bother about it thereafter. The main thing is that against the overall dividend for the year 1954-55 of 5%, it has again been possible to recommend a final dividend of Rs. 4/- per share, making 6½% for the year, and to have something over for Reserve.

It now remains for me to record our appreciation of the services rendered by the Resident General Manager and all ranks of the Staff towards achieving the very satisfactory operational results during the year. This Company has always regarded the labourer as worthy of his hire and paid him accordingly—a policy which has been amply justified by the return received from its Staff in the shape of loyal and efficient service. From the consumers' point of view it may be borne in mind that they in turn receive their benefits from progressive policies in the form of minimum production costs and above all continuity of Electric service.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to Shareholders.

THE AHMEDABAD ELECTRICITY CO., LTD. Chairman's Speech—

(Continued)

THE HIND BANK LIMITED

4, BRABOURNE ROAD, CALCUTTA-1

NOTICE.

Notice is hereby given that the Fourteenth Annual General Meeting of the Shareholders of The Hind Bank Ltd., will be held at the Registered Office of the Bank at 4, Brabourne Road, Calcutta, on Wednesday, the 24th April, 1957 at 3-30 P.M. to transact the following business:—

1. To receive the Report of the Directors and the Audited Accounts for the year ended 31st December, 1956.
2. To declare a Dividend.
3. To elect Directors in place of those retiring by rotation.
4. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS:

5. To consider and, if thought fit, to pass with or without modification the following as a special Resolution:—

   "THAT the draft Articles of Association now submitted and signed by the Chairman for identification be and the same are hereby adopted as the Articles of Association of the Bank in substitution for the existing Articles of Association."

6. To consent pursuant to Section 314 of the Companies Act, 1956 to Shri L. P. Goenka who is a relative of Shri K. P. Goenka, a Director of the Company, holding and continuing to hold an office of profit under the Company as a member of the Local Advisory Committee of the Company at Bombay, and, if thought fit, to pass with or without modification the following resolution as a Special Resolution:—

   "RESOLVED that the Company consents to Shri L. P. Goenka, a relative of Shri K. P. Goenka, a Director of the Company, holding and continuing to hold an office of profit under the Company as a member of the Local Advisory Committee of the Company at Bombay."

7. To consent pursuant to Section 314 of the Companies Act, 1956 to Shri S. P. Hutheesing who is a Director of the Company, holding and continuing to hold an office of profit under the Company as a member of the Local Advisory Committee of the Company at Bombay and Ahmedabad, and, if thought fit, to pass with or without modification the following resolution as a Special Resolution:—

   "RESOLVED that the Company consents to Shri S. P. Hutheesing, Director of the Company, holding and continuing to hold an office of profit under the Company as a member of the Local Advisory Committee of the company at Bombay and Ahmedabad."

NOTE

(i) A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

(ii) The Transfer Book of the Bank will remain closed from Thursday, the 4th April, 1957 to Wednesday, the 24th April, 1957 both days inclusive.

(iii) The dividend, if sanctioned, will be payable on or after Thursday, the 25th April, 1957 to those shareholders whose names appear in the Register of Members on Wednesday, the 24th April, 1957.

(iv) Dividend warrants will be posted to shareholders at their registered addresses or in accordance with their mandates. Shareholders are requested to advise changes in their addresses, if any.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956 IN REGARD TO THE SPECIAL BUSINESS TO BE TRANSACTED AT THE MEETING.

(a) The Companies Act, 1956 came into force on the 1st April, 1956. By this Act considerable changes in the Law regarding management of Company have been made. The existing Articles of Association of the Bank were framed in 1943 when the Bank was incorporated under the Indian Companies Act, 1913. It is therefore necessary to make changes therein as required by the present Law. It has been decided, therefore, to adopt a new set of Articles in place of the existing one. The new set of Articles as also the old one is open to the inspection of the members at the Registered office of the Bank any time during office hours. The members will no doubt take advantage of this offer and compare the new set of Articles with the old one and satisfy themselves about the changes proposed to be made.

(b) In respect of item No. 6 Shri L. P. Goenka is a relative of Shri K. P. Goenka, a Director of the Company. The said Shri L. P. Goenka is a member of the Local Advisory Committee of the Company at Bombay and as such holds an office of profit. In view of the provisions of Section 314 of the Act, consent of the company accorded by a special resolution is necessary to Shri L. P. Goenka holding and continuing to hold an office or place of profit under the Company as aforesaid.

(c) In respect of item No. 7 Shri S. P. Hutheesing is a Director of the Company. The said Shri S. P. Hutheesing is a member of the Local Advisory Committee of the Company at Bombay and Ahmedabad and as such holds an office of profit. In view of the provisions of Section 314 of the Act, consent of the company accorded by a special resolution is necessary to Shri S. P. Hutheesing holding and continuing to hold an office or place of profit under the Company as aforesaid.

By Order of the Board,
S. D. PARDIWALLA,
General Manager.

Calcutta,
Dated, the 13th
day of March, 1957.

BASANTI COTTON MILLS, LTD.

NOTICE is hereby given that the Twenty-fourth Annual General Meeting of the above named Company will be held at the Registered Office 24, Netaji Subhas Road, (Top Floor), Calcutta on the 27th day of April, 1957 at 12 Noon for the following purposes:

(1) To consider and adopt the Directors' Report.

(2) To consider and adopt the statement of Accounts and Balance Sheet for the year ended 31st December, 1956.

(3) To sanction the declaration of Dividends on Preference and Ordinary Shares.

(4) To elect Directors.

Mr. P. K. Mitter an associate of the Managing Agents although is not due to retire by rotation is retiring under Sec. 256 of the Companies Act 1956 by Agreement amongst the other Directors who had been elected in the last Annual General Meeting and is seking re-election. Since it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following special resolution will be proposed a special notice of which has been received by the company and is also hereby given to the shareholders.

"Resolved that Mr. P. K. Mitter an associate of the Managing Agents under the Companies Act 1956 be and is hereby re-elected a Director of the Company."

Sir B. P. Singh Roy and Sri Devaprasanna Mukherjee Directors of the Company are retiring by rotation and being eligible they offer themselves to be re-elected Directors of the Company.

Mr. R. C. Deb and Mr. S. K. Dutt additional Directors of the Company vacate their offices with this Annual General Meeting.

Due notices in writing having been received from two members of the Company to propose each of them as candidates for Directorships and the said two Directors having consented to act as Directors and having filed their respective consent to so act with the Registrar, Joint Stock Companies their names will be proposed for election as Directors of the company in this Annual General Meeting by ordinary resolutions.

(5) To appoint Auditors and to fix their remuneration.

(6) To transact any other business that may be brought forward.

The Share Transfer Books of the Company will be closed from 30th March, 1957 to 27th April, 1957 both days inclusive.

By Order of the Board,
THE CALCUTTA AGENCY
PRIVATE LTD.
Managing Agents.

24, Netaji Subhas Road,
Calcutta-1
The 13th March, 1957.

N.B.—Payment of any dividend, if declared, will be paid to those shareholders whose names stand registered in the books of the Company on 27th April, 1957 or to their Mandatees.
A member entiled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member.

THE CENTRAL BANK OF INDIA, LIMITED

BALANCE SHEET AS AT 31st DECEMBER 1956

CAPITAL AND LIABILITIES.

	Rs.	A. P.	Rs.	A. P.
1. CAPITAL:—				
Authorised Capital—				
(a) 10,50,000 Ordinary Shares of Rs. 50/- each			5,25,00,000	0 0

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Central Bank of India, Ltd., as at the 31st day of December, 1956 and also the foregoing Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the returns of 51 branches audited by us, 21 branches audited by other auditors and the unaudited returns from 87 other branches and 124 Pay Offices not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to Sub-section(1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, give a true and fair view of the state of the affairs of the Bank as at 31st December 1956 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Bombay, 1st March, 1957.

THE ECONOMICS OF WAGES DEMANDS

(Continued from page 510)

wages bill of the nation as a whole may increase to an extent corresponding to the increase of the output.

The first of the three interpretations is clearly impracticable in industries with national wages agreements. The increase of productivity varies from firm to firm, and it would be impossible to establish wide and varying wages differentials between firms in the same industry. The second interpretation would tend to widen wages differentials between various industries. If carried to its logical conclusion it would mean that only the workers of the progressive industries would benefit by the expansion of production. On that principle the employees of static industries would have no share in the growing prosperity, either as employees or as consumers, because, if the entire benefit of higher productivity is distributed among the employees of the industries directly concerned, there would be nothing left that could be given to consumers in the form of price reductions.

In practice pressure for higher wages is not confined to progressive industries. The wages of workers in static and even declining industries must also be increased to some extent. If employees of progressive industries secure for themselves the full benefit of higher productivity then the wages increases granted in non-progressive industries must constitute additional purchasing power without any corresponding increase in the amount of goods available for purchase. In other words the application of the principle that workers in each industry are entitled to the full benefit of higher productivity would necessarily mean inflation.

Those governmental spokesmen and industrialists who were prepared to concede the principle ought to have made it plain that they apply it to relations between the productivity and the wage increase of the nation as a whole. Owing to the loose wording of their statements they conveyed the impression that they were in favour of wages increases in particular industries so long as the increases do not outrun productivity in those industries.

This attitude must have largely contributed to the spirit that has developed among the trade unions, leading to the claim for the full benefit of higher productivity achieved in their respective industries. What is worse, human nature being what it is, since employers appear to have conceded this principle, unions feel they must ask for even more than is voluntarily offered to them under that principle. They are pressing, therefore, for wages increases in excess of the increase in productivity in their respective industries, without regard to the fact that satisfaction of their claim necessarily entails inflation.

Nor is this all. If owing to the strong bargaining power of unions in Britain the whole benefit of higher productivity is given away in higher wages, British exporters may find it difficult to compete with rivals of countries where part of the increased productivity is used for lowering the selling prices of manufactures.

Insofar as increase in productivity is the result of the installation of new and costly labour-saving capital equipment, the benefit of higher productivity has already been paid out in advance in the form of wages to workers who had produced the new equipment. If the full benefit of increased productivity is distributed among workers operating the equipment before the cost of the equipment is amortised this necessarily means the distribution of those benefits twice over. The result is inflation.

Those who speak with authority on behalf of the government or of employers ought to have taken the trouble of analysing the economics of the relations between wages increases and higher productivity before committing themselves to loosely-expressed dangerous principles. Given the prevailing balance of power between employers and employees, trade unions are inclined in any case to press excessive wages demands. It is not for the government or employers to encourage them further and to provide them with ammunition by conceding too much in advance.—(Copyright).

✱

THE PENINSULA

(Continued from page 522)

The first estimate of the Vidhan Saudha was only Rs 23 lakhs even at which figure it was thought to be very much on the high side. The ultimate outlay is estimated to be well beyond Rs 180 lakhs. This huge difference is attributed entirely to Mr Hanumanthaiyya.

The building where the United States House of Representatives meets was erected in 1905-08 and enlarged subsequently at a total cost of $4,860,155, which is only slightly above the cost of the Mysore Vidhan Saudha. In 1932-33, an additional building was erected for the House of Representatives, which cost nearly $8 million. The Senate House in its enlarged form absorbed between $8 and 8½ million. US Federal revenues exceed $7 billion. Mysore budgets for an annual revenue of less than Rs 20 crores (roughly 40 million dollars).

The Report is of special value for the suggestions it gives for the proper distribution of responsibilities and for a more efficient and foolproof administrative set-up for costly construction works. The suggestions are summarized below:

(1) In the interest of the proper safeguarding of the finances of the State, the Finance portfolio should not be combined with that of any spending Department.

(2) As in pre-indenendence days, sanction for every estimate of over Rs 1 lakh should be considered by the Cabinet.

(3) The Public Works Account Code which is a complicated one at present should be simplified wherever possible .

(4) A small brochure for the guidance of officers is suggested.

(5) Recruitment and promotion in the Accounts cadre should be considered only on the criterion of efficiency, and the Accounts cadre must be under a separate department with a qualified head. The office of State Controller should be revived.

(6) Pre-audit should be substituted for post-audit, which is found to be ineffective.

(7) The expenditure of money on unproductive capital works, particularly from borrowings, should receive serious consideration by the Government and others entrusted with public funds.

Stock Exchanges

POST-BUDGET: UNCERTAIN TREND

Watch-Dog Writes:

TRADING in stock markets has been devoid of any interest during the week under report. Turnover has been small as operators have been moving cautiously, the tendency mostly being to reduce commitments.

The Central Budget, presented on Tuesday, had very little effect on the markets. Although the disappointment over the absence of any relief in the excise duty on cloth is offset by the Finance Minister's decision to levy no fresh imposts, the hint about heavier additional taxation in the May Budget to meet the estimated deficit has caused nervous liquidation and heavy selling, resulting in the prices of most scrips dropping down sharply from last week's levels.

Activity on the Calcutta Stock Exchange was restricted, and the sharp setback in speculative issues had an adverse effect on other scrips.

Values on the Bombay Stock Exchange declined substantially due to heavy selling pressure following second thoughts over the Budget speech.

Sentiment on the Madras Stock Exchange weakened and prices, especially of Planting issues, were marked down sharply on fears of nationalisation of companies in Kerala.

Wall Street closed heavy with a good representation of declines following the Middle East uncertainty.

✱

Calcutta

Calcutta, Thursday Evening.

REOPENING after the holidays for the "Holi" festival, the local Stock Exchange displayed a steadier trend and, under the lead of speculative scrips, prices recorded further gains early in the week. Operators were, however, cautious in their commitments in view of the anxiety with regard to the Central Budget, although the general impression was that there would be no tax proposals. Thus, the market presented a bright front in the pre-Budget session.

But the usual hectic activity associated with the Central Budget was conspicuous by its absence during the special one-hour session on Tuesday, evidently because there were no proposals for tax changes. The only point of interest was, however, the absence of relief in excise duty on cloth which operators had eagerly awaited. This factor coupled with the Finance Minister's hint about heavier additional taxation in the May Budget, caused a recession in prices which was carried till the end of the week in view of the clearing adjustments. The market finished at the lowest levels for the week.

The Giltedged market continued to rule quiet with business on a reduced scale. Although price changes were negligible, there were small sellers in most of the loans with buyers reserved. 3 per cent 1986 Conversion, after opening at Rs 74-2, improved at one time to Rs 74-12, to recede again toward the close to Rs 74-0.

Activity in the Banking section was at a low ebb. Hind changed hands at Rs 35-12 to Rs 36-0.

Jute shares were devoid of any interest as operators felt that the firmer tendency in raw jute prices would affect the profit margins of the mills in their sales of manufactured goods. The only two exceptions were National which met with some speculative support upto Rs 20-8 from Rs 19-0, and Hooghly recovering to Rs 15-10 from the recent low of Rs 12-8. Kamarhatty were offered at Rs 92 to Rs 95-8 on passing over of the dividend, while Barnagore changed hands at Rs 93-8 to Rs 96 and Anglo-India at Rs 131 to Rs 133.

Although enquiry in the Coal section was limited, prices ruled fairly steady, thanks to the news that the Supreme Court had granted an interim stay of the operation of the recent award of the Appellate Tribunal. Burrakur were sticky at Rs 21-2 during most part of the week, to finish better at Rs 21-6 on some speculative buying. East Indian improved to Rs 26-11 from Rs 26-4, while New Beerbhoom, after a long time, came in for business at Rs 15-6 against Rs 16. South Karanpura and Western Bengal were steady features at Rs 9-5 and Rs 5-15 respectively.

Textile shares, after initial steadiness, lost ground toward the close following the disappointment caused by the absence of expected relief in the excise duty on cloth. Kesoram, after being marked down to Rs 14-10, finished better at Rs 15, while Cawnpore were nearly maintained at Rs 7-12 and New Victoria at Rs 2. Bowreah recovered partially to Rs 120 from the recent low of Rs 116-8.

Although trading in the Tea section continued to be restricted, prices ruled fairly steady around last levels. There was a feeling that companies of the Assam gardens, in particular, would release better working results for 1956 as compared to 1955. Bormah Jan changed hands at Rs 18-14 to Rs 19; Dhelakhat at Rs 21-2 to Rs 21-8; Hantapara at Rs 194 to Rs 196 and Bishnauth at Rs 21-12 to Rs 22. The cornering activity in East India seemed to have subsided, resulting in the price being marked back to Rs 28-2 from the recent high of Rs 32-9. Brooke Bond and Hasimara were well maintained at Rs 20-10 and Rs 27-8 respectively.

Sugar shares turned quiet on rumours that the export business in sugar would hereafter be handled by the State Trading Corporation. Only steady features were Carew at Rs 7-9; Balrampore at Rs 8-1 and Champarun at Rs 21. Ramnugger, however, lost nearly a point at Rs 25-8.

Trading in the Engineering section was dull with prices developing an easier tendency due to general selling pressure on weaker advices from Bombay. Clearing adjustments were another contributory factor. Indian Irons opened at Rs 20-3 and, after improving to Rs 21-3 in the pre-Budget session, receded again to Rs 20-3 in the post-Budget session, to finish the week better at Rs 20-4. Similarly, Renunciation Rights opened at Rs 5-12 and, after touching a high of Rs 6-8, receded at the close to Rs 5-8.

Among other Engineerings, TEXMACO opened at Rs 19-9 and, after advancing to Rs 20-5, receded to Rs 19-13, to finish better at Rs 19-14. Jessop touched a high of Rs 27-4 from Rs 25-13 and Richardson Rs 19-5 from Rs 18-12, to ease off at the close to Rs 26-12 and Rs 18-13 respectively. Braithwaite changed hands on the ex-dividend basis at Rs 25-10 to Rs 25-14, while Burn received support upto Rs 325 from Rs 320.

Miscellaneous scrips followed the general trend of the market. Orient Paper moved rather irregularly between Rs 31-12 and Rs 32-11, to finish the week at Rs 32-0, while Titaghur were well maintained at Rs 37. Indian Cable changed hands at Rs 27-9 to Rs 27-15; Rohtas at Rs 18-8 to Rs 18-12; National Carbon at Rs 26-12 to Rs 26-14; NICCO at Rs 20-4 to Rs 20-8; Dunlop Rubber at Rs 25-8 to Rs 25-10; India Steamship at Rs 10-8 to Rs 10-11; BIC at Rs 8-3 to Rs 8-5 and Martin-Burn at Rs 23-3 to Rs 23-6 xd. Alkali Chemiacls and Indian Copper were steady features at Rs 15 and Rs 3-5 respectively.

✱

Bombay

Bombay, Thursday.

DALAL Street has reacted bearishly on second thoughts on the need for raising resources for filling up the overall gap of Rs 365 crores in the Budget for 1957-58 to which the Finance Minister made a reference in his speech on the Budget on Tuesday afternoon. Though none believes that this entire gap of Rs 365 crores will be covered by fresh taxation, apprehensions are held that heavier taxation will be forthcoming when the Finance Minister approaches the new Parliament in the month of May. It is difficult to say as to how much this gap will be met by new taxes but in any case, the new taxes to be raised by the Centre will not exceed Rs 40 crores. This is the general impression among well-informed quarters. It is, however, expected that the bulk of this deficit will be met through deficit financing provided the general level of prices remains fairly stable.

The market during the major part of the week moved ahead on brisk buying and covering operations. But prices tumbled down on Wednesday as recent buyers turned sellers. As the expected relief in cloth excise duty did not materialise, sentiment was subdued in the post-budget session. But reports in Wednesday morning papers about heavier burden of taxes forthcoming in the month of May unnerved the market. Though the Finance Minister had not indicated anywhere in his speech heavier taxation, the interpretation put on the observation that the objective should be to reduce the deficit to the extent possible by increasing the resources accruing to the public Exchequer had a damping effect. Buyers withdrew and there was an around setback in prices of industrial counters. It is very difficult to be dogmatic regarding the prospects for the investment market in the background of new taxation measures. The market in the course of next two months will be guided by political developments as well as taxation rumours. Investment activity is likely to contract in the meanwhile due to uncertainties and as such hopes for any spectacular recovery are ruled out, while chances for any big fall from the reduced levels are also considered remote. The market was closed on Thursday.

The giltedged market was quiet with 3 per cent Conversion Loan at Rs 74-5 ex-voucher. Bank shares were quietly steady. India was listed ex-dividend. United Commercial were a shade better on the results. Among Insurance, New India were weak at Rs 40, while Oriental recorded a deal at Rs 3775. Public Utilities ruled quiet after a modest rally.

Cotton textiles turned higher on expectations of some concession in excise duty but subsequently fell sharply as these did not materialise. Bombay Dyeing rose to Rs 590-10 to react to Rs 571-4, while Century dropped down to Rs 473 from the week's peak level of Rs 492. Standard rose to Rs 485 on the directors' decision for a bonus issue of one share for four shares and a bonus of Rs 2-8 over and above the usual dividend of Rs 20. Kohinoor were marked down to Rs 329 from Rs 336-8. Finlay has maintained the dividend at Rs 20, Swan Rs 25 and Gold Mohur Rs 15. Sassoon Cotton has stepped up the dividend to Rs 2 from Rs 1-12.

In steels, Tata Steel Ordinary after rising up to Rs 180-8 dropped down to Rs 175-8, while Indian Iron which were lifted up to Rs 21-7 declined to Rs 20-7.

Scindia Steam which shot up to Rs 21-12 xd. on hopes of bonus issue were marked down to Rs 20-11 on unloading by bulls. Expectations are that either the paid up value may be stepped up from Rs 20 to Rs 25 or a bonus share may be declared for every five shares. Bombay-Burmah recovered to Rs 641-14 from Rs 627-8 to react to Rs 620. National Rayon were taken up to Rs 245 to drop down to Rs 238 at the close. Tata Locomotive eased off to Rs 144-12 from the week's high level of Rs 149-12. A.C.C. recovered to Rs 169-12 from Rs 165 to close

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the **Allahabad Bank, Ltd.**, as at 31st December, 1956, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of Calcutta and Bombay Branches and the unaudited Returns of all other branches which have not been visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank.
(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

A. F. FERGUSON & CO.,

} Directors.

We have audited the foregoing Balance Sheet as at 31st December, 1956, of the Allahabad Bank Nominees Private Limited. We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by the law in force have been kept by the Company so far as appears from our examination of those books. The Company's Balance Sheet is in agreement with the books of account and in our opinion and to the best of our information and explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1956, in the manner so required and gives a true and fair view of the state of the Company's affairs as on 31st December, 1956.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

CALCUTTA,
The 22nd February, 1957.

A. F. FERGUSON & CO.,
Chartered Accountants.

WORLD OF FINANCE

(Continued from page 510)

meeting any balance of payments problems that may arise in the near future; and we may add that the efforts at economising in foreign exchange expenditure should shortly be bearing fruit in the form of a slowing down in the pace of the depletion in foreign exchange holdings.

The inter-Governmental transactions are reflected in three sets of figures—the Deposits of the Central and State Governments and the Reserve Bank's Investment portfolio. The Centre's balances are higher by Rs 2.99 crores at Rs 54.87 crores; those of State Governments have risen steeply by Rs 19.03 crores to Rs 22.78 crores; and Investments have gone up sharply by Rs 24.60 crores to Rs 80.82 crores.

The rise in State Government balances all too clearly suggests the receipt from the Centre of a considerable payment. Since the Centre did not have the wherewithal, it became necessary for Government to replenish their resources by sale of ad hocs in favour of the Reserve Bank. Normally, such deficit finance would be registered in the Issue Department return of the Reserve Bank under the head of Rupee Securities. But, in the week under review, currency in circulation did not rise. Thus, any increase in Rupee Securities would have needed to be matched by contraction of currency against Foreign Securities. But, again, Foreign Securities, at a level of just over Rs 400 crores, did not allow of a transfer to the Banking Department. The procedure adopted, therefore, was one of sales of ad hocs in favour of the Reserve Bank for Rs 25 crores; and the transfer thereafter of marketable securities from the Issue Department to Investments in the Banking Department. This would explain the sharp rise under Investments.

The other points to note are: firstly, there has not been any loss of foreign exchange during the week; secondly, Banks' deposits were more or less unchanged; thirdly, member banks, however, would appear to have borrowed somewhat from the Reserve Bank, as indicated by the rise of Rs 2.29 crores to Rs 108.87 crores in the latter's Other Loans and Advances; this view is reinforced by the rise of Rs 4.26 crores to Rs 60.16 crores in the outstanding against usance bills; and, finally, the fresh loans availed of against usance bills by member banks have totalled Rs 16.18 crores during the week, the running total of loans in this regard being Rs 139.06 crores as against Rs 31.91 crores in the corresponding week of last year.

+

The statement of the State Bank of India for the week ended 15th March reveals a rise of Rs. 1.92 crores in deposits to Rs 277.58 crores. Borrowings from other banks are shown at Rs 10.12 crores against Rs 9.50 crores and other liabilities, including inter-office adjustments, at Rs 2.40 crores against Rs 3.52 crores.

On the assets side, cash balances have moved down by Rs 1.61 crores to Rs 16.59 crores and Investments by Rs 0.82 crores to Rs 105.74 crores. Advances have risen by Rs 4.42 crores to Rs 179.41 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 4.49 crores and "Bills Discounted and Purchased" for Rs 0.08 crores.

+

According to the returns of the Scheduled Banks for the week ended March 3, both Demand and Time liabilities have risen, the former by as much as Rs 5.28 crores to Rs 706.01 crores and the latter by Rs 1.90 crores to Rs 464.25 crores. Borrowings from the State Bank are lower by Rs 0.97 crores at Rs 9.20 crores, and those from the Reserve Bank by Rs 2.23 crores at Rs 79.08 crores. Cash and balances with the Reserve Bank have moved down from Rs 88.17 crores to Rs 87.39 crores and Investments from Rs 350.25 crores to Rs 349.40 crores. Advances in India have risen to Rs 701.12 from Rs 57.54 crores. Inland Bills remain unchanged at Rs 106.07 crores. Money at call and short notice stands at Rs 14.76 crores against Rs 12.66 crores.

+

The printer's devil had a look into the speech of the National Bank of India Chairman published in Indian Finance last week. He omitted the word 'in' in the phrase 'all temporary depreciations in our holdings have been fully provided for'; he left out the letter 'e' in the word 'raised'; and he changed the tense of one of Mr. Michie's sentences from perfect to pluperfect by substituting 'had' for 'has'. The errors arising from the imp's efforts are regretted.

✱

BOMBAY STOCK EXCHANGE

(Continued from page 539)

lower at Rs 166. Sugar shares were quietly steady. Premier Automobiles were a shade easy while Tata Chemicals after a sharp jump to Rs 17-6 from Rs 16-3 reacted to Rs 16-10.

✱

Ahmedabad

THE Ahmedabad share market improved in the wake of Bombay, but subsequently reacted on profit-taking. The results published by Mafatlal group of mills had a better effect earlier in the week, but this was mostly nullified as no relief in excise duty came forth. Calico Mills advanced to Rs 554, to recede to Rs 540 on Wednesday. Expectations that the directors of Arvind Mills might decide for a bonus issue of one share for every four shares next week lifted up the shares to Rs 1,175 to close around Rs 1,150. New Shorrock shot up to Rs 950 from Rs 850 on bonus issue in the proportion of one share for every three shares and a dividend of Rs 35 plus a bonus of Rs 5. Shorrock Mills also appreciated on bonus of one share to two shares and a distribution of Rs 30 including a bonus of Rs 5. Mafatlal Fine were marked up following a dividend of Rs 15 and a bonus of Rs 30. Ambica Mills after advancing to Rs 617 reacted to Rs 599. Atul Products after improving to Rs 179 finished at Rs 175-8.

✱

FOR THE INVESTOR

(Continued from page 504)

all transfers of the shares sold have yet been lodged with the company for registration, the company has now more than 9,500 members.

Turnover (including that of the subsidiary United Traders Private Limited) rose from Rs 28.43 crores in 1955 to Rs 29.19 crores in 1956, increases being recorded in all the sections of the business—soaps, foods and toilet preparation. Profits before Taxation were, however, lower in 1956, being Rs 2.24 crores as compared with Rs 2.60 crores in the previous year. A loss of edible fats tonnage (despite the higher turnover), lower soap profit-margins and higher costs generally were mainly responsible. After charging Taxation in 1956 of Rs 1.20 crores as compared with Rs 1.39 crores, net profits declined from Rs 1.21 crores to Rs 1.04 crores. An interim dividend for the year to 31st December 1956 at the rate of As 8 per share was paid on 1st November, 1956. The dierctors have now recommended a final dividend of As 12 per share, payable on or after the 4th April, 1957, to those persons whose names are registered as on the 11th March, 1957.

VISIT THE **SPRING FAIR**
APRIL 13th TO APRIL 23rd, 1957

This year, the Spring Fair (which includes the Sample Fair) promises to be even bigger and better than the Spring Fair of 1956. A wide range of products will be exhibited, including handicrafts, and a special section of the Fair will be devoted to Yugoslav Craftsmanship. It is the International Fair of printing machines and equipment and consumer goods.

TAKE PART IN THE **AUTUMN FAIR**
SEPTEMBER 7th TO SEPTEMBER 22nd, 1957

Yugoslavia will again exhibit to the world non-ferrous metals, timber, glassware, textiles, agricultural engineering equipment, leather, foodstuffs, etc. at this, the INTERNATIONAL FAIR. There will be also wide participation by other countries, and you, too, are invited to exhibit. Applications for floor space will be accepted up until May 15th.

Special reduced rates for fares, transport of merchandise, and visas for holders of fair certificates. Further information and Fair certificates can be obtained from Yugoslav commercial and diplomatic representatives or direct from ZAGREBACKI VRIESAJAM, Savska Casta 25, Zagreb, Yugoslavia.

The Cloth and the Coat

Investment Gossip:

Mr Brobdingnagian bought 3 yards of cloth from a Burra Bazar shop and, taking it to his Lindsay Street tailor, said: "Make a coat for me."

The outfitter measured the width and breadth and girth of his customer. and then measured the cloth. "This cloth will not suffice. Get three yards more," he said.

"Cut the coat according to the cloth," snapped the prodigious client.

On receipt of intimation that the sartorial equipment was ready, Mr Brobdingnag an went over to the Lindsay Street premises to take delivery. He had a good look at the finished product and was pleased with its style and swank. Came the snag, when he tried to put it on—rather, to put his magnitude inside it.

Any amount of puffing and squeezing and contorting would not get Mr Brobdingnagian inside the habiliment. "This coat does not fit me," he roared in rage.

The sartorial expert assured his customer that he had done the job in obedience to instructions: "I have cut the coat according to cloth."

Both the friendly critics, and the critics not so friendly, have been vouchsafing this platitudinous advice to the Government: "This Plan is too big. We must cut our coat according to the cloth."

Such counsel of wisdom will certainly produce a coat; but will the coat fit India?

TTK, replying to the debate on the White Paper, made it clear beyond any doubt that the Plan should have the proposed magnitudes; else, it will not have the desired results.

The Finance Minister is prepared to sink with the Plan. He would not mind if he sank first. But why an inauspicious word like "sink" in connection with a Plan designed for the glory of India? So, TTK said that he and the Prime Minister and the Government were resolved to swim with the Plan, and swim to the shore of safety and success.

This categorical and emphatic declaration of faith in the practicability of the Plan and of the determination to carry it through to success must, one would have thought, evoke wide-spread elation that all the resources that the Nehru Government could mobilise and all the ingenuity that they could command will be directed to the triumphant fulfilment of the great task to which the nation has addressed itself.

Dalal Street and Lyons Range were in no mood to feel enthused and jubilant over the Finance Minister's reiteration that there would be, and there should be, no whittling of the Plan.

On the contrary. Share prices in Monday's trading tumbled down as a result of TTK's Saturday speech. The comment on Monday's stock exchange behaviour made specific reference to the adverse effect produced by Government's determination to stick to the Plan as it was.

Nothing could be more perverse. This is the kind of inverted logic which only the queer professionals in the share market could understand.

Commonsense suggests that, if the Plan's disbursements in 1957-58 are of the order of Rs 900 crores, the purchasing power in the country would be further reinforced, and the expansion of industry would be further strengthened. Commonsense would recall the identical developments of the war years. Then, as now, the extrabudgetary disbursements of the Government were on a stupendous scale. Such outpourings of money did have some unfavourable repercussions like shortages, inflation, etc. But this was mainly because the colossal expenditure was for the destructive purposes of war.

The disbursements in the context of the Plan are for the constructive purposes of development and expansion. So it is logical to infer that the wholesome effects will be in more emphatic evidence.

In the first half of the forties, the war disbursements led to (a) greatly expanded currency circulation, (b) rising tempo of bank deposits, (c) accelerated flow of savings into securities, (d) enhanced purchasing power, (e) vastly stimulated taxable capadity, (f) rapidly improving performance of industry, and (g) virtual disappearance of unemployment.

Currency in circulation increased seven-fold; bank deposits four-fold; income tax receipts nearly ten-fold; and industrial production many-many-fold.

All this, we witnessed just over a decade ago. Why have so many people forgotten such strident events? Why have the people in the stock exchanges forgotten that even a one hundred per cent excess profits tax enabled every industry to make a brave showing and to declare thumping dividends?

There are, of course, hurdles and obstacles; but whoever said that a plan of unprecedented magnitude will encounter no difficulties, will release no strains, will involve no belt tightening?

Let us not think unduly of the emerging complexities—let us not be so preoccupied with them as to have our confidence drained, our vitality sapped, and our resolve turned awry.

Let us think of what great things can happen now, as did happen in the forties in response to Govern-

The Call To Save

As citizens of India, you are called upon "to work wholeheartedly for the full and timely realisation of the tasks, targets and aims of the Second Five Year Plan."

The Plan has been embarked upon. Its success depends upon your providing capital for its working. In this effort no amount is too small—the man who saves a rupee and the man who saves hundreds—both are rendering national service.

Save as much as you can and entrust your savings to the nearest office of your Bank. In doing so you will help to build a new India and also create a valuable estate for yourself and your family.

The State Bank's local head office at Calcutta, one of the more than five hundred offices waiting to take care of your savings throughout India.

HIGHLIGHTS

The old description of penury was: Gold and silver have I none. Today's version: Cash and credits have I none.

The opposite to this would be described as prosperity. That is to say, more cash and more credits in the monetary system should spell increasing well-being of national economy.

The current state of the money market presents a poser in this context. Currency circulation is at a peak. This is another way of saying that cash is plentiful. Bank advances are at Mount Everest altitude. This is a way of saying that credits are plethoric.

Yet, everyone is complaining of monetary stringency.

The anomaly is only apparent. That money is stringent, is positive proof that business is in full stride.

Stringent money is, thus, no danger signal. It is an index of booming economic activity.

It is Authority's concern to keep stringency within bounds. And Authority has moved swiftly and competently to "contain" the stringency.

Credit lines for Rs 150 crores have been sanctioned by the Reserve Bank in favour of scheduled banks. This is, however, only short-term relief.

It is equally important to provide long-term solutions. The World of Finance explains how institutional facilities for medium-term finance are an important element of such a solution.

ment's Brobdingnagian disbursements.

In 1957-58, we shall spend Rs 900 crores on the Plan. In 1958-59 we shall spend, say, Rs 1,200 crores. That is all that we need to know. That is all that matters to the investor.

It follows that, as during the war years, the taxable capacity will quickly and substantially respond to the disbursements increasingly made by Government. If the taxable capacity increases, why grudge paying the tax? As I said, expanding business was able to take in its stride a one hundred per cent excess profits tax. Did anybody grouse about the excess profits tax of such a dimension?

If the country accepted the excess profits tax as an inevitable war measure, why should there be this hue and cry about taxes far less onerous?

Let us get this business of new taxes into the correct perspective. Taxes which seek to secure for the Government a portion of the profits generated by that very Government's policies and activities can in no sense be regarded as heavy imposts or as intolerable burdens. To pay taxes in conditions of expanding incomes involves no sacrifice—it is just an act of patriotism, a discharge of the obligation due to the State which guarantees political stability and ensures profit-making through productive activity.

Big Business had done a great disservice to the nation by promoting a wrong attitude to taxes. It has done no good to itself by this obsession. It has thereby insulated itself from public support and general sympathy.

Let not the investor fall a prey to the greed which prompts: all profits mine, all taxes yours.

Trend of Textile Profits

Balance-Sheet Reviews:

ALL the five Textile mills in the Mafatlal Gagalbhai group have produced excellent working results for 1956. This may be mainly due to most efficient management as well as the programme of modernisation. Out of the five, three concerns have announced bonus shares, subject to the sanction of the Government. Shorrock Mills have proposed one share as bonus for every two shares held; New Shorrock one share for three shares and Standard one share for four shares.

£R$

Standard Mills

The gross profit of the Standard Mills for the year amounts to as much as Rs 111.24 lakhs as against only Rs 56.14 lakhs in 1955, thanks to the scheme of modernisation and the amalgamation of the New China Mills. Sales have increased to Rs 5.70 crores from Rs 5.32 crores. The directors have, after setting apart Rs 28.10 lakhs (Rs 28.14 lakhs) for Depreciation; Rs 35.15 lakhs (Rs 10.00 lakhs) for Taxation; Rs 7.10 lakhs (nil) for Development Rebate Reserve and Rs 17.85 lakhs (nil) for Rehabilitation Reserve, recommended a bonus of Rs 2-8 per share in addition to maintaining the dividend at Rs 20 per share on the Ordinary shares.

£R$

Mafatlal Fine

The gross profit of the Mafatlal Fine Spinning & Manufacturing Company Limited amounts to Rs 43.17 lakhs as against Rs 28.08 lakhs in the previous year. Sales have increased to Rs 2.10 crores from Rs 1.90 crores. The directors have, apart from setting aside Rs 2.88 lakhs for Development Rebate Reserve; Rs 1.00 lakh for General Reserve and Rs 2.00 lakhs for Dividend Equalisation Reserve, raised the Taxation amount to Rs 14.75 lakhs from Rs 7.00 lakhs. The Depreciation amount is, how-

New Opportunities for Exchange Banks

Indian Finance
Established 1928
March 30, 1957
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THE financing of trade between the industrialised West and the under-developed or undeveloped countries east of Suez was long the monopoly of the Eastern Exchange banks. In particular, in the days when the British Empire was witnessing its most prosperous era, the trade-banking structure was established on such firm foundations as to have ensured for the exchange banks of British origin a long tenure of useful, and not to say profitable, working. But that which had taken root over a period of a century and more was swiftly upset in the brief space of three decades. The beginning of the Second World War was to mark the beginning of a new phase in the operations of exchange banks.

While the war years as such are not germane to this study, it needs to be pointed out that the war itself was significant in the impact it had upon the region in which, over the years, the exchange banks had built up their business. It is possible to suggest that the Second World War was indirectly responsible for the intensification of the struggle for freedom on the part of the colonial and subject countries east of Suez. Be that as it may, the fact is that the immediate post-war years saw the gaining of independence by a number of countries in the area. Such new-won independence has, in a variety of ways, changed the outlook for the exchange banks and transformed the role that they usefully could play in the world economy.

Firstly, one might say that the opportunity for and the prospect of trade with industrialised countries other than Britain began to open up. Although, in the event, British trade with its erstwhile colonial markets has actually increased, it remains nevertheless true that, on the part of the undeveloped countries, there is today more of a tendency to pick and choose the country from which it makes its purchases.

Secondly, indigenous banking was, in the first flush of freedom, not disposed to permitting the exchange banks solely to be responsible for the financing of foreign trade. Banks in this area began to spread out and to interest themselves in what had hitherto been an area of operations closed to them. Such banks with greater seriousness and earnestness set about the establishment of branches oversea, so that they could capture in part at least some of the banking business comprised in foreign trade.

Thirdly, the intensification of the cold war between the democracies and Soviet Russia, and the attempt by the latter to open up trade links with the undeveloped countries, were both reflected in the completion of the trade cycle: as in the days when man first began to exchange goods, the so called Iron Curtain countries were anxious to arrange barter deals. That, in fact, such deals have been put through meant that there was a diminution in the trade to be financed in the normal way by exchange banks.

Fourthly, the revolutionary change in the political composition of South-East Asia and West Asia was responsible for some areas being lost altogether to exchange banking.

Finally, Britain's continuing financial difficulties, and especially its almost unceasing battle against inflation, have rendered more troublesome the task of the exchange banks in finding additional resources within Britain.

It is in this light that we can appreciate the description by Mr V. A. Grantham, of The Chartered Bank, of its New York office as one "which progressively increases in importance in our branch system"; and also his reference to the Hamburg agency as "an active link between our branches in the East and trade and industry in West Germany". We can, moreover, expect the eastern exchange banks to establish new links in the industrialised West with which the undeveloped East is likely to do increasing business.

The challenge offered by the increasing participation in foreign trade by indigenous banking is another matter. In India, for example, the United Commercial, the Central Bank, Indian Overseas and the Bank of India are already accounting for a fair share in the financing of foreign trade; and the prospects are, if anything, that the participation will steadily increase. Mr Grantham offers a clue as to the manner in which this challenge is to be met; but, of this, later.

Sir Evan M. Jenkins, of The Eastern Bank, has referred to the renewing of "the agreement for the shipment of sheet rubber to China" by Ceylon. The Chartered Bank Chairman states that, in theory, "half Burma's exportable surplus of rice during the present year.... is committed for shipment on barter account". That the exchange banks have not been quite happy about such barter deals is to be inferred from the assertion by Mr J. K. Michie, Chairman of the National Bank of India, that "there is a welcome trend to curtail barter transactions". It is true, it may be remarked in this context, that the agreements for exchange of goods have usually been of advantage to the Communist countries, and not the other way around. To the extent that Burma, Ceylon and Pakistan have all fared disappointingly in barter deals, the prospect may be one wherein less of such arrangements will be concluded. At the same time, however, any increase in trade with the Communist countries (with one exception) will stand to reduce the scope for the exchange banks.

The one exception lies in the possibility of reopened trade ties by Communist China. Japan, of course, is anxious that normalcy should be restored in trade with China. Sir Kenneth W. Mealing, of The Mercantile Bank, has expressed the view that Japan may probably have "closer trading relations with China". Mr Grantham is even more explicit in this regard: The Japanese authorities "are obviously trying to hedge against the disastrous effects that a recession in the United States could have on Japan's economy." To this end, he states that Japan "must make certain of larger participation in the China market, which involves delicate negotiation with the United States".

Britain, too, would not be averse to increased trade with China. But, so long as the US is determined not to recognise the fait accompli in China, and so long as the cold war continues, trade with China may not much increase.

An interesting paradox is also available on China. Sir Kenneth Mealing records the "further substantial progress" toward "the final settlement of our affairs in Shanghai." The Mercantile Bank, in other words, is out of the picture in China, though Sir Kenneth complains that "no progress has yet been made" in the steps agreed to be taken with a view to closing the books. On the other hand, Mr Grantham reports that, "under encouragement from the authorities", The Chartered Bank is again participating "directly in mainland China's oversea trade". It is, therefore, open to question whether China will choose to make use of the available foreign exchange banking facilities, when its trade returns to normal levels.

The political imbroglio in West Asia hardly favoured the exchange banks. Sir Evan Jenkins has stated that "the closure of the Suez Canal has so dislocated shipping that almost every country with which we are concerned is suffering inconvenience or worse from delays in the arrival of imports and the despatch of exports". The shipping delays have meant that the exchange banks have had to finance a cargo-load for a longer period, and consequently also that the turnover of funds has been adversely affected. But, with the Suez Canal to be cleared by the middle of April, 1957 may turn out to be more favourable in this regard.

One more obstacle that was faced by the exchange banks was the disparity between bank rate in Britain and in the countries in which they operated. This rendered it relatively uneconomic for funds to be obtained in Britain for use elsewhere. The money market tightness, especially in India, is a topic touched by every Chairman. Mr Grantham remarks that "more and more strain is being put on the banks who, whilst unable to attract sufficient extra deposits, are being faced with demands for fresh or increased facilities, and we for one have reluctantly been unable to entertain many of the propositions placed before us". The manner in which this difficulty is overcome is indicated by Sir Evan Jenkins: "Banks, including ourselves, are making free use of the Bill Market Scheme, under which borrowing from the Reserve Bank of India is permitted against bills". Sir Kenneth Mealing has referred to the anxiety caused by "the monetary stringency in the Banking system", among other factors. And the difficulty faced by banks is, as Mr Michie points out, that they, "while assisting their customers to the greatest possible extent, have the mundane and paramount duty of maintaining a reasonable liquidity and that can be achieved only by finding more deposits or by restricting their lendings".

It is possible to suggest that, arising from the factors mentioned earlier in this article, the competition that will be faced by the exchange banks is likely to be aggravated in the near future. But this does not mean that fewer opportunities will be offering to them. On the contrary, there is one more development in the countries of this region which is of heartening significance. We refer to the fact that, since independence, the undeveloped countries have drawn up and are proceeding with the implementation of schemes intended to bring about a quicker tempo of industrialisation. This fact may be said in two ways to throw up what is at once a challenge to and an opportunity for the exchange banks.

Planned industrialisation will entail much larger imports on the part of the under-developed countries. That is to say, the quantum of trade to be financed by the banking system is likely to rise considerably. Furthermore, the variety of financing required is unique,

and possibly beyond the ability or capacity of indigenous banking. But the exchange banks are ideally equipped to take on hand the new business that is emerging.

Both Mr Grantham and Sir Oliver Franks of Lloyds Bank have recognised this new role of the exchange banks. The Chartered Bank some time ago promoted the CBI Development Corporation Limited, a wholly owned subsidiary; and the Corporation is intended "to engage in medium-term and similar credit operations connected with economic development in the eastern countries to which the oversea representation of the Bank extends". Sir Oliver has made a detailed study of this "relatively new form of accommodation". As the Lloyds Bank Chairman notes, although medium-term credits are not altogether new, "the way to an expansion of this method of assisting exporters" has been cleared by the authorisation of the "Export Credits Guarantee Department to provide direct guarantees to British banks for a large proportion (normally 85 per cent) of the amount in question". Exchange banks should not find it difficult increasingly to offer medium-term loans; for, Sir Oliver makes the following points: (1) "The Export Credit guarantee embraces by far the greater part of the lending"; (2) "any unguaranteed portion is covered by normal banking procedures"; (3) "these credits are actually more liquid than an investment in bonds of similar maturity, for under the terms of the contract a substantial proportion of the outstanding amount is coming back each year"; (4) "these operations combine safety and enterprise, offering a profitable use for our resources"; and (5) "it is satisfactory to have been able to play our part in developments so clearly and directly in the national interest".

Confining ourselves to India, it will be seen that industry in this country would find greatly helpful any facilities available in the form of medium-term foreign credit. In the light of our present foreign exchange position, it has become incumbent upon both Government and industry to secure all possible credits in foreign exchange. For Britain's part, its export sales to India will be facilitated. The exchange banks, by dint of their operations in this country, are in a position to judge the merits of those who apply for such credit and accommodation. Secondly, their resources would allow them to increase the level of advances. Thirdly, in Sir Oliver's words, such credit is "in the national (British) interest". The challenge before the exchange banks is, as Mr Grantham has put it, that they should realise that their "endeavours in the East must in future be related to common economic interest". The measure of the challenge met will lie in the extent to which exchange banks provide the new kind of accommodation—medium term credits.

Obsolescence of Mind

THE Indian Union presents a unique combination of socialistic planning with free democracy. There is nothing surprising in the two going together. In Britain, under the Labour Government a similar combination was attempted. But before much headway was made, the Labour Government were unseated and along with it the socialistic concept of the State was also thrown overboard. Among other countries, Sweden started a similar experiment, the results of which are only inadequately known. The limited experiment in Britain aroused theoretical opposition from eminent economists who found it impossible to reconcile the requirements of a socialistic economy with those of a democracy which genuinely respected individual freedom.

The Indian Union is therefore virtually a pioneer in the pattern of economic evolution aimed at. The uncharted route is rendered all the more thorny by the prevalence of certain contradictions peculiar to itself. Foremost among these is the pressure of population which creates an urgent demand for a quick total increase in material production, but at the same time obstructs the employment of those techniques which would ensure the maximum pace of improvement and the maximum volume of output on investment. In agriculture, cooperative farming is found to have secured quick results in many countries where the method has been extensively accepted. But the pressure of authority exerted on behalf of the method in those countries is discountenanced in India. It is these contradictions and dilemmas which lie behind the unflattering criticism which contemporary economic planning in India has evoked in many quarters within and abroad.

If in these circumstances, private business in India has taken a somewhat unfriendly view of certain aspects of State policies and some of their fundamental assumptions, the attitude need not spring wholly from self-interest. From the side of the State, the Second Plan is kept sufficiently flexible to admit of experiment and error. In fact, in the last couple of years we have seen the battle of the two sectors being fought with unequal strength and with wide variations in tempo. It is said even of big modern wars that in the ultimate result, it makes little difference whether a combatant country emerges victor or vanquished. The scars are fairly evenly laid. As has been seen as one of the most delightful consequences of the last war, it becomes the victor's inescapable obligation to help the vanquished to recoup. A happy variant of this kind of result seems to have emerged in the war between the public and the private sectors in India. Adverse criticism has chastened both and in consequence there is a new confidence, better mutual understanding and a sense of common purpose on both sides.

Mr Lakshmipat Singhania's Presidential Address at the Thirtieth Annual Session of the Federation of Indian Chambers of Commerce and Industry refreshingly reflects this new understanding. Relegating the controversy about the role and place of public and private sectors to the limbo of discarded antiquities, he pleads for undivided attention on the large and immense task of building up the economy. That this is not a mere matter of sentiment courteously expressed in the presence of the Prime Minister, could be seen from some of the concrete suggestions Mr Singhania made to remove deficiencies in the administrative set up. He proposes a small committee to go into the whole matter of import requirements for both the public and private sectors. When the railways complain of shortage of steel and cement, it would not only be undesirable but awkward for any one to speak of import restrictions as a matter of concern for the private sector alone.

We are not disposed to regard Mr Singhania's references to change as a normal feature of life and to the survival of business amidst vast economic and social changes in every country, as born of mere fatalistic resignation. For, in the same breath, he warns against obsolescence of the mind, a warning which found an immediate and warm echo in the Prime Minister's reply.

The latter was so much captivated by this phrase as to say that no truer words could have been uttered; and he gently requested the President of the Federation to inscribe these words in a prominent place wherever his organisation worked! His own clarification of the need for carrying one's mind with the time-spirit stemmed partly from the atmosphere of the elections. He pointed to the compulsion of circumstances, to the people having become the final arbiters, to the powerful voice which the poor, unemployed and under-employed had in shaping this country's destiny and to the utter irrelevance of ideas which could be related only to conditions a century ago.

The lack of rigidity in planning provided common ground for congratulation. When the Prime Minister blandly said that the ultimate decisions governing the national future were being taken not by wise men sitting somewhere or by Chambers or Committees but by the millions of people who wielded the sovereign power in India, the thesis for mental agility which the Federation President previously put up must have gained complete shape. In the light of this thesis, even the Prime Minister's refusal to do anything toward reduction of tax burdens, which he himself admitted to be heavy, could not have sounded unsympathetic.

Perhaps it was his reluctance to stir up the controversy over the sectors which impelled Mr Singhania to refrain from attributing to the State as a partner in economic activity basic weaknesses which are discernible to impartial observers. When he referred to the question of diffusion of entrepreneurship, he was beating about the bush. This is a theme on which a little more of assertion and pointedness would have been justified. Besides, there is initiative. In fact, the most serious charge that could be laid against State management of productive enterprises, in a democratic set up, is that it tends to dry up the springs of initiative. Individual initiative, except in rare instances, is stimulated only by material incentives or by the dread of penalties. It cannot be denied that under present conditions in India, neither could be depended upon to function sufficiently effectively.

Perhaps Mr Singhania was thinking only of the small group of big businessmen, when he said that enterprise and initiative for the expansion of business was confined to a limited number of families or groups. Viewed within this narrow range, he could not discover a praiseworthy record in the private sector and for that reason, the State could not be accused as conspicuously inferior or deficient. He has however laid his hand on a problem which can show itself up on a wide front. While in the private sector initiative is being undermined by the oppressive growth of legislation and administrative rules and regulations, in the public sector the same trend is generated for quite different reasons. Wherever it appears, it is pernicious and has to be countered.

Nationalisation Intelligence

Lok Sabha: Mr A. K. Gopalan moved a non-official resolution for the nationalisation forthwith of the tea industry.

In this background, the statement made by Mr Morarji Desai is greatly to be welcomed. This Government, he said, was neither for nor against nationalisation merely as a principle.

Nationalisation, in present circumstances, "instead of being useful or beneficial to our country, would be quite suicidal".

On the one hand, said Mr Desai, "We invite foreign capital to come and settle here on fair terms". And on the other, we are here asked to liquidate or buy over "capital which is already invested here and which is not doing us any harm but which is rather serving the interests of production in this country".

The Government view on this matter, in brief: "I do not see how we can be benefited by this sort of a contradictory process unless we want only to satisfy a theory and not the real interests of this country".

A New Relation Called for

Some of the statements issued by political leaders and the reports emerging from New Delhi in connection with the formation of a Communist Government in Kerala speak poorly of the state of political understanding in this country. Mr Govindan Nair has given the assurance that a Communist Government in Kerala would work within the frame-work of the Constitution. This assurance looks superfluous, because a Government which violates the Constitution will forfeit the right to govern. Likewise, certain reports from New Delhi claim to reveal the intention of the Central Government to cooperate with the Communist regime in the State.

When the election is fought just to discover which party the voters would like to put in power, there is no question of the Centre having views on whether to cooperate or not. Central cooperation becomes automatic, irrespective of the party which secures the majority.

These statements and reports, however, are not without political significance. They indicate the emotional lag in the understanding of the basic provisions of the Constitution. Unkind critics of the latter can go even to the extent of ridiculing the framers of the Constitution for having not anticipated a situation in which rival parties hold power in the Centre and the States.

There is no other federal State in the world which practises ideological neutrality and which has surrendered as much of real power to the units as the Indian Union. The States Reorganisation Commission visualised the political dangers of this daring combination of federalism with ideological detachment. Even without transgressing the Constitution by a hair's breadth a Communist State Government can become consistenly irksome to the Centre and every expedient which the latter can think of to protect its prestige or authority may be turned into a political weapon by its rival.

There is a fairly large area of directives, a no man's land, which can well be turned into a field of uncommitted feud. In this awkward setting, even a facade of good relations could be maintained only if the Centre and the Kerala Government developed a mutual liaison which cut across party feelings and the respect for form most jealously maintained by either side.

*

Workers' Education

The New Delhi Seminar, in which the future pattern of trade union movement in India was discussed by a balanced group of representatives of labour, management and academic thought, marks a happy turn in the development of the general outlook on labour. The Seminar was devoted particularly to workers' education. National trade union organisations with rival political affiliations participated. The ideas exchanged in a preliminary way represented a genuine 're-orientation of attitudes'.

The workers poised in a mode of unending agitation for rights, locked up with employers constantly resisting demands, with the Government as an uneasy mediator, which is more or less the picture today, does not cohere well with the social assumptions of a welfare State. Particularly in India, where human productivity is low, and nature is in many ways niggardly, the importance of avoiding waste in human effort and of maintaining co-ordination in productive work of every kind can scarcely be exaggerated.

The underlying notion of an inherent clash of interests between employer and employee which more often than not governs mutual relations, will have to be given up and in its place must come the emotional acceptance of a common interest and a habitual attitude sustaining it. The principal clue to the change lies in workers' education.

In Western countries trade union leaders have tended emotionally to merge with the managereal class and there is a conspicuous shift of outlook in the education and upbringing of their children. This is one of the ways in which class distinctions lose their edge and in due course get thoroughly blurred. Once independent, internal leadership for the workers is also admitted to be indispensable, the function of workers' education gains in practical value.

Editorial Notes

Naye Paise

The introduction of a new Calender on March 22 went virtually unnoticed as far as the lay public were concerned. The introduction of naye Paise does not come off so timidly. The event is celebrated by three successful holidays, including an intervening Sunday. In offices, in the bazaar, in homes, in schools and wherever people meet, the change is discussed, welcomed or ridiculed according to individual taste and fancy. The nuances in calculation are almost a general pastime.

Except in remote rural areas, where monetary dealings are few and far between, where the tax collector is unknown and even a postal message an infrequent phenomenon, the naye paise has stimulated exercises in arithmetic in the high and low alike. Naturally the more ingenious have also started discovering devices to seduce more currency into their pockets through skilful small deals, during the allotted period of co-existence for both the old and the new coins. Many have begun pleading for the abbreviation of this phase. For elderly people, every change which concerns the intimate relations of life would naturally be irksome.

The better-informed can draw comfort from the fact that eventually this particular change is going to do some social good by way of economising labour in accounting. To the poor man, for whom fractions of a rupee are the day-to-day unit of expenditure, the little increases in prices the new coins could bring about should be unwelcome. A rupee will fetch one post card less in the future. Telephone calls in many places will become dearer. Railway tickets and many taxes may also take more from the payer, without any change in rates. Accounting and exchange work will be inflated everywhere. These will have to be accommodated as a small price paid for a reform which aims at ease and simplicity in monetary calculations.

*

Middle Income Housing

In the Lok Sabha, the Minister for Production stated that on the recommendations of the Parliamentary Sub-Committee on Housing, the amount of Rs 3 crores, provided for in the Second Plan for medium income group housing scheme, is being diverted to other housing schemes. This diversion will obviously be disappointing to a class which is among the worst hit by the shortage of urban housing and the oppressive increase in post-war building costs. The Planning Commission themselves have admitted that housing investment in the private sector is biassed toward expensive structures intended to fetch high rents and that for this reason the medium income group suffers heavily.

The entire financial structure in the original middle income group housing scheme was presumably conceived on the assumption that the Life Insurance Companies would continue to function in the private sector. The main arrangement was that loans limited to 80 per cent of the cost of the houses could be advanced in the proportion of 25 per cent by the Government and 75 per cent by Insurance Companies, on the joint approval of both.

The nationalisation of life insurance intervened in the meanwhile and the original arrangement was unsettled. Mr K. C. Reddi's disclosure that the Life Insurance Corporation is examining new proposals indicates that a sphere in which the shortage is most acute will not be left to its own resources. An extension of the principles accepted for housing for Government Officers will suitably fill in the gap created by the Parliamentary Sub-Committee's recommendations and the Government's decision thereon.

SOUTH EASTERN RLY. TENDERS.

The General Manager, Garden Reach, Calcutta—23 invites tender No. GM/5/57/198-CS(57) for supply of 5800 Nos. Hand Signal Lamp Tricolour to our C.M.E.'s Drg. No. 9843. Tender forms are obtainable from the Controller of Stores, Garden Reach, Calcutta—23 on remittance of Rs 5/- per copy (not refundable) by money order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach, Calcutta—23 by local firms. Closing date is 17-4-1957 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance certificate with the tender. Earnest money is Rs. 1,000/-.

World of Finance

The Banking System's Longer-term Problem

THE monetary authorities are, at the mid-way mark of the current busy season, in a position to claim that, for their part, they have taken all possible and necessary steps to enable the banking system to meet the expanded needs of this time of the year. The bill market scheme has been liberalised; lines of credit extended and approved are, under this head, known to be of the order of Rs 150 crores; in examining any application, importance has properly been attached to the stature and repute of the bank making it; it is agreed on all hands that the Reserve Bank is proferring understanding and expeditious help; and, finally, the central banking institution has been a ready buyer of securities from such banks as feel the pinch and need to improve their cash position. The meeting of the challenge posed by the current busy season is, thus, now a matter which rests almost solely with scheduled banks. To the extent that they shed their reluctance to borrow against usance bills, and to the extent that they make full use of the facilities available and the credit lines approved, the financing of 1956-57 busy season need hold no terror.

But, as we remarked last November, and again in December, there are two aspects to the problem confronting the Indian banking system. The first one, which lay in the financing of the 1956-57 busy season, may now be said to have been largely solved. This was a short-term problem; and the reasons responsible therefor constitute the second aspect, or the longer-term problem. As yet, little has been done to come to grips with the longer-term question. It is, however, necessary not to lose further time in considering it. For, as the Leading Article in Indian Finance of November 17, 1956 pointed out, "the situation on the eve of the 1957-58 busy season may be no different from the position as it obtains today unless a longer-term solution is forthcoming."

In analysing "the root of the problems confronting the banking system", we had suggested that the inexorable pressure for funds was derived from two causes: firstly, industrial expansion has in its wake brought forth the need for enlarged working capital; and, secondly, some part of the advances "apparently obtained for working capital" is "being utilised to finance development plans of industry". That is to say, in the conditions of an expansionist economy, there is, on the one hand, increasing demand for a larger amount by way of working capital: and, with the lack of an appropriate agency for the purpose, on the other, medium term financing is found from funds obtained from banks as short-term accommodation.

Both these causes were cited by Mr T. T. Krishnamachari when he addressed the last session of the Associated Chambers of Commerce. The Finance Minister said that it was perhaps true "that business has expanded and more business now wants more money for its finance"; secondly, "quite a lot of short-term credit is really a camouflage for medium credit".

It is obvious, therefore, that banks have to find two solutions. One is to equip themselves by way of resources to satisfy the higher level of demand for working capital. The other is to liquefy the funds that are being locked up for medium term periods. It is clear that, unless such solutions can be found, the Indian banking system will have the recurrent problem of a strain on its resources; and, while an expansion in borrowings against usance bills should provide the answer in 1956-57 busy season, it is also clear that the level of such borrowings cannot be allowed to rise from year to year; for, the position would soon be reached wherein a bank's borrowings against usance bills might distort the advances deposit ratio.

We shall first take up the needs postulated by the expansionist economy. The experience of scheduled banks, during the first three years of the First Plan, was the none too happy one of a declining trend in deposits. This was the more difficult to understand in the light of the expenditure being incurred upon planned endeavours. The last two years, however, saw the reversal of the trend. In 1954-55, the declining trend was halted; and, in 1955-56, the accretions to deposits formed a respectable figure. In 1956-57, the first year of the Second Plan, new deposits have shown even greater improvement. It is important that we realise why the trend was such in bank deposits.

The Indian money market may be said to consist of two distinct spheres. The release of funds in the area that constitutes the sphere outside of the money market proper for a time is hardly felt by the latter. Thus, with the First Plan's emphasis on agriculture, the money expended undoubtedly circulated in the parallel market for some time. It was only after a time-lag of around three years that the process of the percolation of such money back into the money market proper was in evidence. It is to be suggested that the accretions to bank deposits in 1956-57 probably reflect the expenditure on planned endeavours three years earlier.

The result has been that the pace at which banks are benefiting by fresh deposits is gradually getting faster. Moreover, with the Second Plan's emphasis on industrialisation, it stands to reason that the impact of planned expenditure will be felt more immediately by the banking system. For these two reasons, it is possible to anticipate that the projected increase in bank deposits is likely to be of sufficient size to cover the higher level of demand for working capital.

In a sense, therefore, the working capital dilemma of banks is resolving itself. No such fortunate phenomenon is, however, to be anticipated as regards the liquefaction of funds locked up in medium term finance. Active steps have to be taken by Government and the interests concerned; and the sooner the better.

Sir Oliver Franks, Chairman of Lloyds Bank, has pointed out that medium term finance is on a different footing from other advances: "the traditional principle of British banking" is "that advances are repayable on demand, whereas medium term credits are repayable by instalments spread over a number of years." Presumably with this thought in view, and in the desire to make available such medium finance, The Chartered Bank has set up a subsidiary institution for this specific purpose. In India, the position of a bank is rendered even more difficult in that working capital accommodation is being utilised as medium finance, and the constituent more often than not does not undertake to make repayment by instalments. It is our view that scheduled banks should be relieved of that portfolio of their advances which are pseudo short-term accommodation and in reality medium term finance.

The manner in which such an end should be achieved is by the formation of a Re-finance Corporation. It would have as its sponsors the Industrial Credit and Investment Corporation, the State Bank of India and two or three of the larger Indian scheduled banks. Its management should be entrusted to a board of directors, consisting not of businessmen, but of the general managers of the participating institutions. For its resources, the proposed Corporation would, in addition to its paid up capital, approach the Government for a part of the Rs '6 crores which, according to the surplus commodities agreement with the USA, are to be utilised in helping the private sector. For a start, it would relieve scheduled banks of such advances as are in effect medium term loans. But such transferred loans would continue to be guaranteed by the concerned scheduled banks. Secondly, it would receive and examine direct applications for

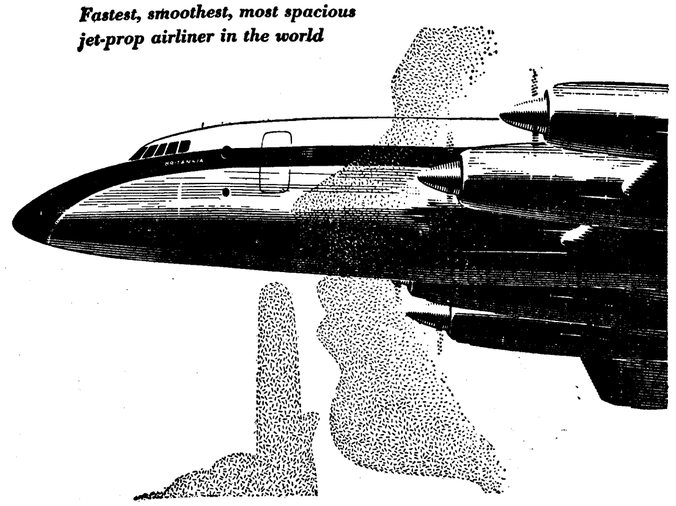
Strikes and Sterling

By PAUL EINZIG

THERE was a sharp deterioration in the labour situation in Britain towards the middle of March. A strike developed in the shipbuilding industry, and at the time of writing a strike in the engineering industry appears to be inevitable, while there seems to be a strong possibility of a railway strike. Even though these strikes have been threatening for some time, the developments during the second week of March produced a sharp impression on the Stock Exchange and on the foreign exchange market. There was a marked setback both in Stock Exchange quotations and in the sterling-dollar rate. While the effect of such grave industrial developments on equities is understandable, there seems to be less justification for the fall in Government loans and other fixed interest bearing securities, or for the depreciation of sterling.

There is no reason why the widespread strikes should lead to a rise in interest rates. On the contrary, since the Bank rate is maintained at its high figure of 5 per cent in order to prevent a relaxation of credit squeeze, the decline in the demand for credit and in the amount of public issues that the strike is liable to cause should enable the authorities to lower the Bank rate. The position is more complicated as far as sterling is concerned. There can be no material justification for an immediate sharp fall, seeing that the effect of the strikes on the balance of payment, though immediate, is not liable to affect the actual supply of foreign exchanges for some time.



Most dollars and other foreign currencies which are offered today in the market originate from exports effected some time ago, and the market will not feel the absence of the proceeds of engineering and shipbuilding exports until for some time later. The depreciation of sterling was therefore purely psychological. This appears to have been realised after a few days, and the partial recovery on the Stock Exchange was accompanied by a partial recovery of sterling.

It would of course be idle to try to minimise the gravity of the effect on sterling of a prolonged strike in Britain's most important exporting industry. Should both parties prove to be stubborn, the loss of engineering and shipbuilding exports would weaken the gold reserve considerably even before the advent of the autumn pressure. If a settlement is reached on terms favourable to the workers it must mean a substantial increase in the costs of production in the industries directly concerned, and an all-round increase in the cost of capital investment in general. If, on the other hand, the workers feel impelled to resume work on terms they consider unfair, the effect of such a settlement on their attitude might have an adverse influence on productivity. Since both industries are fully employed and have to quote long delivery dates, it will in any case be impossible to make up for lost time by stepping up the output. Any exports lost as a result of the strike constitute a dead loss and not merely a postponement of exports. Moreover, as far as shipbuilding is concerned, the delay caused by the strike is liable to divert orders to Japan and Germany, with detrimental effect on long-range prospects.

Having said all this, it is necessary to consider the other side of the picture. The strikes are liable to affect not only production but also consumption. Unless an early settlement is reached, millions of workers and their dependents will have to manage on a drastically reduced spending power. This would affect the volume of imported food, raw materials and manu-

NOW TO AUSTRALIA

Fastest, smoothest, most spacious jet-prop airliner in the world

THE B·O·A·C
Whispering Giant
Britannia

Step aboard the *Britannia*—now fastest to Australia—you reach Sydney the next day! Discover a standard of passenger comfort unparalleled in all the world. The spaciousness of the cabins is a dream of inspired planning; the service beyond comparison. This magnificent airliner is so *smooth* in flight, you'll find it hard to realise you're moving at all—you are wafted gently along at nearly 6 miles a minute without strain or travel fatigue. And the *Britannia* is equipped with the latest radar for fair-weather flying all the way. Fly B.O.A.C. *Britannia*—it's a wonderful new experience.

'De Luxe' First Class services (fully-reclining "Slumberettes") and low-fare Tourist services by *Britannia*. Also First Class and Tourist services by Qantas Super-G Constellation to Australia.

factures. It would also release more goods for an export drive by industries not affected by the strike. The difficulty of selling in the domestic market would induce these industries to concentrate on export drives. The uncertainty of the economic prospects would result in a curtailment of spending by many millions of wage-earners and others who are not involved in the strikes. In other words, the disinflation which the prolonged credit squeeze has been unable to bring about, and which was brought about only temporarily and to an inadequate extent by the economic consequences of the Suez crisis, would take place as a result of a prolonged strike.

On balance the gold reserve would necessarily be affected by the strike to a considerable extent, in spite of the mitigation of its effect by the decline in consumer demand. But it is well to bear in mind that mitigating effect when trying to assess the effect of the strike on sterling. What matters is to realise that, even if the next few months should witness a decline in the gold reserve instead of its seasonal increase, that decline is not likely to be of a magnitude that would force the Government's hand in the direction of a devaluation. Had the reserves not been reinforced by the dollar facilities arranged with the International Monetary Fund and the Export-Import Bank, and by the deferment of the instalments on the American and Canadian loans agreement of 1946, the effect of the strike and of the ensuing autumn drain might have reduced them below danger level. As it is, the reserve could stand the strain even if the strike should continue for months, and even if workers of other industries were to join the engineering and shipbuilding workers in their strike.

This means that there was no justification for the pronounced initial psychological effect of the strike on sterling. The foreign exchange market need not concern itself unduly with anything that is liable to happen beyond the next three months. And insofar as anything can be regarded as certain in this world full of uncertainties, it is that sterling will not decline below $2.78 within the next three months, or even within the next six months.

(Continued on page 576)

For every plane
– more than a hundred men!

THIS large team of very important people is behind every Indian Airlines aircraft, looking after *your* comfort, *your* safety — ensuring speedy journeys and happy landings. There's the man who pilots the plane, the man who navigates its course, the men who service the engines, the electrician — to name but a few. Every year Indian Airlines Corporation covers 20 million miles over 132 daily flights and the hundred men who keep each aircraft flying are an indispensable part of this service. They serve the wings that serve India.

World of Jute

Raw Jute Supplies

A significant fact that emerges from the trend of raw jute arrivals into Calcutta and Mill stations during the first eight months of the current jute season is that the Indian jute industry has been able to get on fairly well as far as supply of raw jute is concerned without large imports from Pakistan. During the past eight months ending February 1957 only 4.82 lakh bales of Pakistani jute have been imported into India. It may be assumed that approximately another one lakh bales will be received from this source during the remaining four months thus bringing the total receipts for the year 1956-57 to about 6 lakh bales. This compares with 14.70 lakh bales imported from Pakistan during 1955-56, 12.46 lakh bales in 1954-55 and 14.82 lakh bales in 1953-54.

The sharp decline in imports of raw jute from Pakistan has been more than offset by arrivals of raw jute of Indian origin, which in the past eight months have totalled 41.80 lakh bales as against 34.59 lakh bales during the corresponding period of 1955-56.

As the total production of raw jute (including Mesta) in India during 1956-57 is placed at 56.51 lakh bales, it is to be noted that there are only 14.71 lakh bales of raw jute still left to be moved into the market. In view of the fact that mills at the end of January had a stock of 13.54 lakh bales coupled with the fact that they will be requiring another about 20 lakh bales before the new crop moves in, it is clear that mills will have no difficulty in getting their supplies in the rest of the jute year 1956-57.

*

Generally dull conditions prevailed in the jute goods market during the past week. In the initial stages there had been some activity mainly of a speculative type and prices also displayed a steadier tendency. With mills evincing little interest despite shipper enquiries both for hessian and sackings, rates were marked higher Hessian 40"×10oz Ready was well maintained at Rs 40-10 while B Twills Ready recorded a gain of 6 annas to Rs 110-14. Wide price fluctuations characterised trading on Friday. Speculators were particularly active in the sacking section which by the close of the day displayed an easier trend with B Twills Ready dropping ten annas to Rs 110-4. Hessian was comparatively steadier at Rs 40-8. In Saturday's trading the market became further easier and in the absence of interest B Twills Ready reacted to Rs 109-14. Hessian 40"×10 oz Ready was also shaded in sympathy at Rs 40-6.

Monday found the market unchanged with little business passing Activity was at a low ebb most of the time as neither buyers nor sellers evinced any interest in the proceedings. Toward close, however, there was some covering by both speculators and shippers mainly in heavy goods. As a result B Twills Ready recorded a fractional gain of two annas to be placed at Rs 110. Hessian 40"×10 oz Ready also gained some ground to Rs 40-9 in sympathy.

Toward the close of the week the market witnessed some moderate activity with prices making slight headway on rumours about enquiries from Egypt both for hessian and sackings. Hessian 40"×10 oz Ready was done at Rs 40-7 while B Twills Ready gained another couple of annas to be finally placed at Rs 110-2.

The following table shows the week's opening and closing rates:—

	Week's Opening Rs. a.	Week's Closing Rs. a.
Hessian:		
40"×10 oz.:		
Ready ...	40 10	40 7
April-June ...	40 15	40 13
July-Sept. ...	41 1	40 15
Sackings:		
B. Twills—		
Ready ...	110 14	109 12
April-June ...	111 12	110 10
July-Sept. ...	111 14	110 12
Hy. Cees Green ...	111 0	110 4
Cornsacks ..	111 4	111 14
Cubans ..	135 0	135 0
A Twills ..	131 12	131 0
L Twills ..	126 8	126 4
D. W. Flour ...	132 4	132 0
Suar Bags ...	124 8	125 0

The raw jute market ruled steady but dull. While mills showed no great interest, sellers were also reserved. Toward close a slightly easier tendency was noticeable with Assam Bottoms recording a loss of eight annas from Rs 28-8 at the beginning of the week to Rs 28 per maund. On the opening day of the week under review the market was inactive with no mill business reported done. There had been some business in Mesta Bottoms at Rs 25 per maund on Friday. With sellers reserved the undertone remained steady. Conditions continued to be dull on Saturday and in the absence of business rates were marked down.

Except for small business reported in Mesta, Monday was generally a dull day. The business done was in Deshi Mesta at Rs 25 and Jungli Mesta at Rs 22-8 per maund basis Bottoms for Mar-April delivery. Nominal quotation for Assam Bottoms basis for Mar-April shipment was Rs 28-8 per maund. The undertone was somewhat easier on Tuesday in the continued absence of sizable mill business. During the day, small quantity mill business was reported done in Deshi Mesta and Daisee Mesta basis Bottoms at Rs 25 and Rs 24-8 per maund for March-April shipment respectively. Assam Bottoms March-April delivery continued to be quoted at Rs 28-8 per maund. The market continued to rule easier on Wednesday with Assam Bottoms March-April delivery receding to Rs 28 per maund. Small quantity mill business, however, was reported done in Daisee Mesta at Rs 24-8 to Rs 25 basis Bottoms per maund.

World of Tea

Rise in Exports

TEA exports from North-East India have recorded a marked increase in February 1957 and totalled 41.91 million pounds as compared with 32.99 million pounds in the corresponding month of the previous year. Total shipments, during the first two months of the current year, are also higher at 74.92 million pounds as compared with 72.75 million pounds in the corresponding period of the previous year.

Exports to the UK have risen from 51.47 million pounds to 53.90 million pounds and those to Egypt from 2.30 million pounds to Rs 4.14 million pounds. Exports to Canada have, however, declined to 1.78 million pounds from 2.55 million pounds; Irish Republic to 4.56 million pounds from 4.65 million pounds and the USA to 3.03 million pounds from 5.50 million pounds. A most significant feature is the quantity of as much as 4.05 million pounds taken by the USSR as against nil in the corresponding period of last year.

Meanwhile, offerings in the Export Sale, held in Calcutta this week, consisted of 59,385 packages, which were mainly end-of-the-season descriptions. There was a good general demand; but prices were generally one to two annas per pound easier except for Whole Leaf grades and the few tippy sorts, on offer, which were strong features.

Clean, black-leafed sorts were fully firm, while CTC sorts followed the general decline although the smaller Fannings grades were about firm. Owing to the poor selection of teas, on offer, only Plain Broken Pekoe was quoted this week, at Rs 1-10-6. There will be no Export Catalogue in Sale No. 40. It is expected that Export Sale No. 41, to be held on the 8th and 9th April 1957, will be closing Export Sale of the 1956/57 season. If, necessary, a small clearing-up sale will be held at a later date in April.

In the Internal Sale, offerings were 19,298 packages of Dusts. Middle East types were a strong feature and were frequently dearer, while orthodox Assams were sold well, particularly the black leafy sorts. Clean Commons and Mediums were well supported, while non-wither Dooars were about firm.

CTC sorts received, however, less support and were sometimes upto As 2 per pound easier, while the dull fibrous kinds, on offer, were a weak feature and were often neglected. Following rates were quoted:—Medium Dooars Dust Rs 1-10 to Rs 1-11; Medium Assam Grainy Dust Rs 1-11-6 to Rs 1-12; Medium Assam CTC Dust Rs 2 to Rs 2-2 and Best CTC Assam Dust Rs 2-12.

Also, 4,009 packages of other grades were offered for internal consumption. There was a fairly good demand and most descriptions were dearer.

A total of 1,487,000 pounds was offered in the Cochin market. Quality from all districts were generally barely maintained. The sale was characterised by a very weak demand and about 41 per cent had to be withdrawn. Enquiry was very limited for best liquoring Nilgiris which only sold at a drop of As 8 to As 12 per pound. Lesser high-growns were virtually neglected. Good Medium sorts met with limited support at As 5 to As 8 per pound below last prices.

Medium, Low Medium and Low-grown Brokens were irregular, selling at a discount of As 4 to As 6 per pound, while similar Fannings were generally difficult of sale. There was, however, some enquiry for plainest descriptions, which declined by As 2 to As 3 per pound. Black Leaf Brokens were in fair demand and generally shed As 2 to As 3; but their Fannings were a very weak feature. The strongest competition was seen for Whole Leaf grades which were irregular, but generally As 2 to As 3 easier. Following rates were quoted:—Plain BP Rs 1-12-0 (nominal), Low Medium BOP Rs 1-14-0; Medium BOP 2-0-0; Good BOP Rs 2-3-6 and Well-made OF Rs 2-6-6.

In the auction held at Colombo, offerings were 6,706,880 pounds for which there was good general demand. There was fair demand for the representative selection of Nuwara Eliya teas on offer, but prices of all grades were irregular following quality. Among high-grown teas, Dumbula/Dickoya type Brokens were considerably lower following the decline in quality; but corresponding Leaf grades were dearer. Coloury Uva grades were firm to dearer, but light liquoring kinds were slightly lower.

Medium-grown teas met with good demand, particularly for useful coloury sorts which were slightly dearer. Corresponding Leaf grades were firm to dearer.

WORLD OF FINANCE

(Continued from page 560)

medium term finance. Thirdly, it would accept, and largely favourably consider, such applications or proposals as are seconded by the commercial banks.

If it is Authority's hope and intention to avoid a fresh debate on the stringency of the money market on the eve of the 1957-58 busy season, it is necessary for the Finance Minister personally to take the initiative in this regard.

There is, however, a clear indication that Mr Krishnamachari is fully alive to the gravity of the situation and to the urgency of finding a solution. His references to money market stringency, and his iteration of the element of medium credit in banks' advances, may be taken to show that the Finance Minister is seriously considering how best such a situation may be rectified. In the budget White Paper, it has been stated that "part of the increase in private indebtedness to the banking system is explained by the rise in economic activity and the higher level of prices; but it is clear that a part of the finance required for expansion was provided by bank credit."

We would commend for Mr Krishnamachari's examination the proposal that, in setting up the Re-finance Corporation, Government should make the fullest use of the services of Mr P. S. Beale, General Manager of ICIC. Mr Beale has brought with him the knowledge and experience of the City of London that he has gathered over the years; but the tasks which befall to him at the ICIC are by no means so onerous as to take up all his time. If, therefore, Mr Beale could be persuaded to assume the responsibility, in addition to his present duties in the ICIC, for steering the affairs of the Re-finance Corporation, Government could have the confidence that the best available talent has been obtained for looking after a new institution with facilities and duties altogether new to this country.

+

Expansion in Bank Advances: Contraction in Active Notes

Large inter-Governmental transactions and a sharp rise in the Other Loans and Advances are the noteworthy features of the Reserve Bank returns for the week ended March 22.

Notes in circulation have declined by Rs 6.92 crores to Rs 1517.79 crores. Rupee coin has returned from circulation for Rs 1.09 crores. The resultant increase in the Reserve Bank's cash in the till moves up Notes Held in the Banking Department to Rs 19.41 crores.

There has been no deficit financing; and Foreign Securities are unchanged. The drop of Rs 5.02 crores in Balances Held Abroad, in the Banking Department, represents net loss of foreign exchange during the week.

State Governments' Deposits have risen by the sizeable amount of Rs 12.37 crores to Rs 35.15 crores; and, at the same time, they have also reduced their indebtedness by Rs 3.83 crores. This suggests that large payments have been made by the Centre to the States.

But the Centre's balances show a drop of only Rs 1.24 crores to Rs 5.63 crores; and, as already pointed out, there does not appear to have been any deficit financing. It is to be inferred, therefore, that the end of March flood of tax payments has, in the week under review, been of such dimensions as to enable the payment of substantial magnitude to State Governments without recourse to ad hocs.

The second noteworthy factor is that there has been an unusually heavy (for the fourth week of a month) increase in the borrowings of schedcled banks from the central banking institution. Normally, such sharp rise in borrowings by scheduled banks would be accompanied by an increase in note circulation. Since this has not been the case, it may be suggested that there were special reasons for the spurt in borrowings. If, for example, member banks experienced a heavy call on their resources as a result of income tax payments, an increase in borrowings from the Reserve Bank follows logically; and, since such payments would have been effected to Government, there is no rise in Active Notes. The magnitude of scheduled bank borrowings is one, certainly, of a minimum of Rs 13.02 crores. For, while Other Loans and Advances of the Reserve Bank rose by Rs 15.86 crores to a new peak of Rs 124.73 crores, the outstandings against usance bills (which represent exclusively advances to scheduled banks) have, in rising by Rs 13.02 crores, accounted for the bulk of this.

The rise in borrowings of member banks, therefore, bears out the thesis that tax payments to Government should, in the week under review, have been heavy.

The return of the State Bank for March 22 reveals a further rise of Rs 2.36 crores to Rs 279.84 crores in Deposits. Borrowings from the Reserve Bank are higher by Rs 5.29 crores at Rs 15.41 crores; and this indicates that borrowings of the other scheduled banks from the Reserve Bank would have been for an amount around Rs 8 crores during the week. Cash balances are lower by Rs 1.26 crores at Rs 15.86 crores. These increased resources have been utilised as to Rs 4.04 crores in an increase in advances, now placed at a new high of Rs 183.45 crores; and as to Rs 4.33 crores in an increase in Other Assets.

The statement of Scheduled Banks for March 15 shows that Deposits are higher by Rs 3.63 crores at Rs 1173.89 crores. Borrowings from the Reserve Bank are Rs 2.52 crores higher. There is a drop of less than half a crore in Investments. The total of advances continues stridently to rise, with an increase of Rs 10.69 crores during the week to Rs 876.71 crores.

+

The statement of the State Bank of India for the week ended March 22 reveals a rise of Rs 2.26 crores in deposits to Rs 279.84 crores. Borrowings from other banks have gone up by Rs 5.29 crores to Rs 15.41 crores, while other liabilities, including inter-office adjustments, are slightly lower at Rs 1.76 crores against Rs 2.40 crores.

On the assets side, cash balances have moved down from Rs 16.59 crores to Rs 14.79 crores with Investments remaining almost unchanged at Rs 105.70 crores. Advances show a rise of Rs 4.04 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 3.03 crores and "Bills Discounted and Purchased" for Rs 1.01 crores.

+

According to the returns of the Scheduled Banks for the week ended 15th March, both Demand and Time Liabilities have risen, the former by Rs 0.71 crores to Rs 706.72 crores and the latter by Rs 2.92 crores to Rs 467.17 crores. Borrowings from the State Bank are slightly lower at Rs 9.07 crores against Rs 9.20 crores, while those from the Reserve Bank are higher by Rs 2.52 crores at Rs 81.60 crores. Cash and balances with the Reserve Bank have moved down to Rs 87.25 crores from Rs 87.39 crores and Investments to Rs 348.96 crores from Rs 349.40 crores. Advances in India are shown at Rs 710.51 crores against Rs 701.12 crores; Inland Bills at Rs 108.28 crores against Rs 106.07 crores and Foreign Bills at Rs 57.92 crores against Rs 58.83 crores. Money at call and short notice stands at Rs 16.20 crores against Rs 14.76 crores.

+

United Commercial

TO The United Commercial Bank Limited goes the credit of bringing out what is perhaps likely to prove the best bank balance-sheet for the year. The increase in the profits is of almost incredible dimensions.

The deposits and other accounts of the Bank have risen by Rs 4.45 crores to Rs 52.15 crores—a rise not far short of 10 per cent. But, as we shall presently see, the increased resources thus available were not found sufficient for meeting the higher level of the demand for accommodation; consequently, borrowings are shown to have risen by Rs 4.25 crores to Rs 8.50 crores. It is worth noting that, of this amount, Rs 3.58 crores represents borrowings against bills.

With other sundry increases, the balance-sheet total has marked a rise of a little less than Rs 10 crores from Rs 81.69 crores to Rs 91.51 crores.

The increase in resources has been partly utilised in adding to cash balances, which are marked higher by Rs 1.30 crores at Rs 7.51 crores. At this level, cash balances work out to 14.4 per cent of deposits.

The disinvestment or non-investment of maturing securities by United Commercial has been for an amount of Rs 2.33 crores. Investments in Government securities are placed at Rs 17.22 crores.

The liquidity ratio of United Commercial, after allowing for Rs 4.91 crores of the securities against which borrowings have been taken, is placed at 42.2 per cent of deposits.

The advances of the bank have risen very sharply from Rs 27.59 crores to Rs 38.45 crores. In this portfolio, the rise under bills discounted and purchased is sharper than under loans, cash credits and overdrafts. It is to be inferred that the marking up of bills discounted from Rs 9.74 crores to Rs 15.92 crores is part of the Bank's deliberate policy so that it could take advantage of the facilities available from the Reserve Bank in respect of advances against bills. The advances-deposits ratio is placed at 73.7 per cent against 57.9 per cent in the 1955 balance-sheet. If the borrowings against bills may be said to be in the nature of a contra item, the net advances-deposits ratio is at the even more impressive figure of 66.9 per cent.

An indication of the foreign exchange business done by United Commercial is given in the note regarding the Forward Exchange Contracts Outstanding. These were at the substantial level of Rs 36.32 crores; by the first week of March, Rs 17.86 crores had been delivered.

More evidence of the Bank's foreign exchange business is available in the fact that the income by commission, exchange and brokerage has shot up steeply from 0.79 crores to Rs 1.20 crores. The income by interest and discount also shows a rise of Rs 0.18 crores to Rs 1.82 crores.

With interest paid accounting for an increase in expenditure to the extent of Rs 0.32 crores, and with salaries and allowances absorbing Rs 0.7 crores more, the balance of profit has gone up by more than 50 per cent from Rs 36.69 lakhs to Rs 56.32 lakhs.

The transfer to the reserve fund is a massive one of Rs 20 lakhs; and the reserve fund is placed at Rs 1.15 crores against the paid-up capital of Rs 2 crores. The provision for taxation is Rs 16 lakhs; the appropriation for bonus to staff is Rs 6.50 lakhs; the dividend has been raised to 7 per cent from 5½ per cent; and the carry forward is Rs 29,419 against Rs 27,761 brought in.

Altogether, the balance-sheet of The United Commercial Bank Limited discloses remarkable progress during the year; and the Bank is in sight of a Rs 100 crores total for its balance-sheet within 15 years of its incorporation.

IT is a paradox of human nature I have often wondered about, its general preference at all times for the comforts of despair rather than those of faith. This propensity is particularly manifest when the demands of positive action are most insistent, and when the importunities of the call of duty are unevadable. It is so much more facile, so much more flattering to one's self-esteem to persuade oneself and others that the demands made are impossible and the importunities inhuman in their expectations. The "grand gesture of giving in" comes easily at all times, but particularly when there is a challenge to be met, as such a gesture makes possible a lazy evasion of responsibility on grounds that are plausibly respectable. Those half-pathetic, half-grotesque "heroes" of romantic literature—Werther or the Knight at arms in hapless thrall of la belle dame sans merci, for instance—are nothing but archetypes of this particular pattern of behaviour inherent in man's nature.

*

This little excursion in psychology has been forced on me—and on you—by the persistent and relentless crisis-mongering about the present state of our economy that has been going on for some time now. I had occasion to comment on it in some detail in these columns last January. I argued at length that the tasks of the Second Plan are sure to put us all on mettle; but, unless we are made of a far baser metal than I believe we are, they are not incapable of realisation. I gave detailed reasons for believing how the husbanding and deployment of resources planned for can be achieved, provided the necessary will to work and sacrifice was forthcoming. But, apparently, such strenuous faith in one's own ability to meet a basic challenge is unwelcome to many who would much rather have the dubious comfort of easy helplessness.

*

Theoretically, the pessimism of a few, or even the many, should not make any difference to that "happy warrior" who is so firmly fortified by his sense of duty that nothing on earth can shake him from his stern tasks. But, in an endeavour which is communal and collective, and in which everyone has to march in step, this disparity in faith in our ultimate and immediate ability is a grave disadvantage. In efforts of this sort, the most important communal asset and the most valuable resource is courage. Mr T. T. Krishnamachari put the matter admirably when he said, in his note to the AICC, "Basically, a country with an under-developed economy like ours has to find its first resources in courage and leadership since by definition the material resources have yet to be developed. The problem is, therefore, not of a certain quantum of visible resources and the formulation of a plan that can be put through with that quantum. It is, on the other hand, of a small visible quantum with a much larger potential on its back and our seeking to draw out, as fully as may be, that latent potential." In other words, there is one resource and one element of cost that you will not find in the statistical tables of the Plan. They are the assets of determination for self-improvement, the grit and courage of our people, and the cost of present sacrifices in terms of immediate satisfactions foregone cheerfully.

*

In bringing to play this courage and in making the demands for this sacrifice, the most important thing to remember is to make the people believe in the essential soundness of the Plan. There is, as Mr O. T. Jenkins of the Associated Chambers of Commerce pointed out some time ago, a great deal of talk of foregoing luxuries in the interests of the Plan. The one luxury that he suggested that we may forego with no great privation to ourselves and with a great deal of gain for the Plan was the luxury of disrupting confidence by incessant chatter about resources and quarrels about sectors of economy. The persistent corrosion of confidence that we see around us may be the psychological malaise that I suggested: or it may be, as I have heard said, something more sinister on behalf of certain kinds of vested interests. Whatever it may be, the time has come to cry a halt to it and to address oneself to the resolving of the difficulties that are undoubtedly there.

*

It is, therefore, a matter for gratification that Mr Krishnamachari has given the assurance that there is no question of abandoning the Plan. Though, infected by the current mood, he put it in desperate terms of "hanging on grimly" to the Plan, the determination not to allow difficulties to overwhelm him is most heartening. There is a tacit assumption in all current discussions that the present difficulties have caught us unawares. Nothing could be farther from the truth. Both the difficulties over foreign exchange and the internal price levels, about which we hear so much, have been specifically anticipated and correctives suggested in the Plan. There are, doubtless, in the present situation, complications like the Suez crisis and consequent rise in cost that were not, and could not have been, forseen at the time the Plan was formulated. But, even here, allowance was asked to be made in the Plan for possible changes in the international situation though, by the very nature of the factors, no precise estimates could be given at the time the Plan was formulated or even now. Therefore, the present difficulties are by no means anything that have overtaken us unawares and we are not hapless victims of our own short-sightedness. If, in spite of this circumstance, we feel we are unequal to the tasks, it can only be that we have lost our nerve at the first encounter with the difficulties which we ourselves had anticipated. If such indeed were the case, then we do not deserve to succeed at all.

*

The White Paper that accompanies the budget speech has been seized upon by many commentators as an occasion for doleful intoning of gloomy prognostications. I agree it is a sombre document in which certain developments in our economy in the first year of the Second Plan have been recorded in a dispassionate effort to get at the real difficulties. But it also contains the remedies that have been applied and that are to be applied in the case of further aggravation. For instance, as far as internal prices are concerned the only real corrective is increased production, especially of agricultural commodities, and the Planning Commission have already re-

vised the targets for agricultural production. Likewise, regarding the temporary embarrassment over foreign exchange—which has been specifically anticipated in the Plan, though the actual extent has been somewhat of an underestimate because of unforeseeable factors—there has been a commendable celerity in devising methods to meet them.

But all these difficulties leave the basic assumptions of the Plan still intact. The outlay has been increased by about Rs 500 crores; and, though there has been no official indication of the precise mode of raising them, this journal itself has been indicating in its columns a reasonable approximation to possibilities in this regard. To refresh the memory of readers, I have again reproduced the table that first appeared in the World of Finance columns of 17th November, 1956.

*

It will be seen from the table that the target for the external resources has been raised to Rs 1,200 crores, a figure that is now officially accepted as the probable requirement. The decrease in the estimate of deficit finance seems not only possible but actually necessary in view of the danger of inflation in the Plan-period. As will also be recalled, I discussed each of the targets in the chart in some detail in these columns some time ago and showed how, in respect of every estimate, the chances of fulfilment are such as to give

Tangential Remarks

I HAD thought that Mr C. H. Bhabha would have utilised the opportunity offered by the tenth annual general meeting of the Indian Banks Association for advancing a set of suggestions which could reduce the strain that the banking system has been labouring under almost without respite over the past two years. But, no: beyond stating that the ratio of bank deposits to notes in circulation in this country compares unfavourably with experience elsewhere, and asserting that the increase in the stamp duty applicable to borrowings from the Reserve Bank against usance bills was bound to affect the use of this facility, it seems to me that Mr Bhabha has gone off on a tangent. He has chosen to ventilate what are undoubtedly his own views on a subject of some importance; but I am not sure that these views reflect the opinion either of the Association for which he apparently speaks or of the Indian banking system as a whole.

It was inevitable that the announcement, late in 1955, relating to the nationalisation of the Imperial Bank should have fostered both uncertainty and apprehension in banking circles. In the background of their mind, perhaps, lurked the fear that nationalisation of all banking business was herein foreshadowed. Very much in the foreground of public opinion, grave doubts were expressed as to the ability of the nationalised Imperial Bank to serve the country as it heretofore had in commercial banking activity. The assurances given at that time, that Government intended neither to interfere in the State Bank's day-to-day activities nor to diminish the Bank's role in the financing of trade and commerce to the private sector, were unavailing. It then happened that, within seven months of the announcement to nationalise the Imperial Bank, deposits and other accounts fell by Rs 37 crores.

We have thus far not touched on points that will be argued or debated. But there is considerable room for controversy engendered by remarks made by Mr Bhabha. Among other points raised by Mr Bhabha, the following are noteworthy:

1. "Apart from the substantial drop in its (the State Bank's) deposits at the start, a fairly high degree of official intervention seemed to be at work in the conduct of this Institution, despite an assurance given on the floor of the Lok Sabha".

2. "As a consequence, the resignation of the first Chairman of the State Bank was soon followed by that of the Managing Director".

3. "This....clearly proves interference of politics in this specialised business of banking".

4. "Only 8 out of the 66 places where the State Bank has opened branches did not have a branch of another bank, commercial or co-operative".

5. "....some of these branches of the State Bank have been functioning with an air of superiority and in a spirit of unhealthy competition with the branches of other banks in those places".

6. "I feel that a protest is necessary against this unhealthy rivalry set into motion by the State Bank of India, possessing special advantages, against the other banks".

7. "....direct and indirect official intervention is taking place with organisations and individuals to make them lend their support to, and to bank exclusively with, the State Bank India".

8. "I feel that (the) improvement in the deposits of the State Bank has been partly due to the forces to which I have already referred and that, had it not been for these forces, the deposits of the State Bank of India would not have improved to the extent that they have done and that the deposits of commercial banks would have increased more than they have done".

For the moment, it is unnecessary for us to consider whether it was politic, desirable or necessary for Mr Bhabha to have said these things about the State Bank. Does Mr Bhabha know it for a fact, that the resignations of Dr John Matthai and Mr S. K. Handoo were the direct result of interference from Government? As far as I know, neither Dr Matthai nor Mr Handoo has so far made a public statement to this effect.

Does Mr Bhabha express as a statement of fact, his assertion that the State Bank is utilising its special advantages to compete unfairly? I trust that he can substantiate such charges as he has levelled.

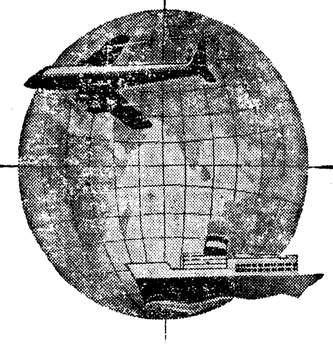
Is Mr Bhabha in a position to say categorically that official pressure is being exerted in respect of deposits? I wonder whether he will be able to give instances and cite case history.

Finally, is Mr Bhabha right in asseverating that, except for such pressure, the State Bank would not have increased its deposits so substantially, and that the other scheduled banks would have benefited to corresponding extent? The information that I have is to the contrary.

Furthermore, it is difficult to reconcile Mr Bhabha's remarks in the light of certain very definite and categorical statements by Mr H. V. R. Iengar in his speech as Chairman of the State Bank. The following excerpts have in this context a special relevance:

1. "Immediately after the announcement about the Government of India taking over the controlling interest in the Bank, the volume of deposits decreased, possibly by transfer to other scheduled banks".

2. "There has been no interference whatever by the State in the day-to-day operations of the Bank".



3. "....the public has fully realised that the (earlier) apprehensions....are unjustified. The consequence of it has been that our deposits have been steadily rising".

4. "If it were....the policy of the State Bank to operate flat out as a commercial institution irrespective of the consequences to other Scheduled Banks, it would have been quite easy to increase its interest rates still further and I have little doubt that thereby a much larger volume of deposits would have accrued to us, some of it perhaps in the form of fresh deposits but a larger proportion as diversions from other banks".

5. "It is not our intention to enter into a race, as we could easily do if we were merely concerned with swelling our profits".

If, in point of time, his speech had preceded Mr Iengar's, there may have been justification for Mr Bhabha to take the stand that he did. The fact is, however, that Mr Iengar's reassurances about the State Bank were given some three weeks prior to Mr Bhabha's charges. The monstrous inference is that Mr Bhabha does not accept as true the assertions of Mr Iengar.

Gateway Notes

Ahmedabad Electricity

While Mr K. G. Milne's references to the link between bank rate and the standard rate of return to the electricity supply industry have been commented upon in last week's Indian Finance, the other important points made by the Chairman of the Ahmedabad Electricity Co. Ltd. also deserve to be carefully examined by Government.

The Finance Minister's mid-year budget last November contains a provision relating to corporate reserves being compulsorily deposited with Government. Mr Milne in this regard points out that "the Electricity (Supply) Act has already made its own provisions towards an identical end, namely the investment of depreciation allowances in the business or in Government securities"; consequently, he suggests that "the Industry will be exempted from the operation of the relevant part of Finance No. 3 Act".

Looking to the future, the Ahmedabad Electricity Chairman states that, with the completion of the development now on hand, demand in the area would be taken care of until 1965. But, by the very nature of the industry, plans for further expansion in output have to be prepared well in advance; and "the answer to what is to happen after that must not be delayed for too long either".

Mr Milne has done in Bombay what Mr Jenkins did in Calcutta: he deplores the tendency to talk loosely; and, in particular, he suggests that "official spokesmen will in future find it rather more possible to display a sense of greater confidence in the business community than they have sometimes done in the past few years". As it is, "one could hardly blame overseas lenders if they tended to assess their potential clients at the valuation of the latter's own Government". Loose talk merely makes it more difficult for the private sector to obtain foreign help.

The electricity supply industry is basic to the development of a country; in recognition of this fact, it is to be trusted that authority will evolve an understanding and appropriate policy in this sphere.

*

Bombay Budget

The budget estimates for 1957-58 presented to the State Legislative Assembly by Dr Jivraj Mehta, Finance Minister, placed income at Rs 106.32 and expenditure at Rs 108.69, thereby showing a deficit of Rs 2.37 crores. The budget provided for a capital expenditure of Rs 40.68 crores inclusive of an amount of Rs 2.96 crores on roads which was debited to "State Road Fund" under the Debt Deposit Section. The capital section included Rs 16.98 crores for irrigation works, Rs 6.86 crores for the Koyna Project, Rs 9.21 crores for roads and buildings and Rs 86 lakhs for development of ports. The expenditure under this head is to be financed from Government of India loans and grants, withdrawal from the fund for development schemes and from other earmarked funds, the State's share in small savings and open market borrowings.

The budget estimates took credit for Rs 1.3 crores given by the Central Government as revenue gap grant conseuqent on the interim recommendations of the Second Finance Commission, and Rs 1.27 crores Central grant on account of shortfall in the receipt from incometax and Union excise duties. Rs 24.5 crores for general sales tax and Rs 14.57 crores on account of Bombay's share in Central taxes have also been included in the estimates.

The estimates have provided for an expenditure of Rs 67.91 crores during the year on Second Plan projects which as a whole envisage a total expenditure of Rs 350.14 crores. The Finance Minister dealt with at some length the methods adopted for distribution of the estate duty proceeds among the States, and the sanction of grants in aid and loans. Declaring that "continuous injustice has been done" to Bombay in those respects, Dr Mehta said that the very basis of distribution was incorrect. Arguing the case for a larger portion for Bombay from the divisible pool, he pointed out that while Bombay's contribution to incometax had gone up by 50 per cent, its share had been raised only by 1.41 per cent.

GATEWAY MARKETS

Silver Hardens: Gold Featureless

PRICES on the Bombay Bullion Exchange improved after early quieter tendency. A halt was cried to the downward trend in the Silver section as selling pressure was absent at lower levels. Gold was steady on reports of seizure of contraband gold by Customs authorities and better spot demand.

There is growing evidence that, despite larger supplies, the offtake or Silver has recorded a sharp spurt in the recent past. The additional supply has mainly come from Tibet; but the overall demand for the metal has been maintained at such a high level that, barring modest fluctuations, the prices of ready silver have more or less held their own.

In active dealings, occasional profit-taking at bugles is readily absorbed by persistent short-covering. Arrivals and offtake, are estimated around 20 bars and 30 bars respectively. Silver Chaitra delivery opened at Rs 175-8 and shot up on bull support to Rs 176-12. Ready started at Rs 174-13 and was bid up to Rs 176-6 at the close.

Meanwhile, it is interesting to note that the world consumption of silver in 1956 record d a rise of about 17 per cent to 260.4 million ounces. In this connection, the well-known firm, Messrs Handy & Harman, observes "that it is impossible to predict with any certainty what legislative action US Congress will take during the year. If the existing silver laws are to be repealed, the Treasury will no longer be obliged to buy US production and will have no authority to sell silver except at $1.29 per ounce. Under these circumstances, the market price of silver will fluctuate more widely and more frequently than it has been in the past".

Gold also gained moderate ground on unabated spot demand and in sympathy with the counterpart. Arrivals and offtake are estimated at 2,000 tolas and 5,000 tolas respectively. Gold Chaitra delivery started at Rs 105-8 and, after advancing to Rs 106-2, finished at Rs 105-14. Ready moved between Rs 105-4 and Rs 105-15, to finish at Rs 105-11, Sovereign was quoted at Rs 69-4 to Rs 69-8.

*

Oils and Oilseeds

Prices in the Oils and Oilseeds markets showed a mixed trend. In the early stages of the week, Castorseed was inclined to ease under selling prompted by apathy of overseas buyers coupled with the reports of increased arrivals at the terminals. Declines in prices were, however, checked towards the close of the week due to covering on reports of Russian enquiry for castor oil. Turnover was 20,000 candies. Castorseed May delivery opened at Rs 161 and, after touching a high of Rs 165-0 and a low of Rs 158-12, finished at Rs 159-12. Ready was quoted around Rs 32-8 and Castor Oil, commercial quality, at Rs 18-4.

Groundnuts responded well early in the week, although advance in prices was trimmed by profit-taking at the close. Turnover was 10,000 candies. Groundnut May delivery opened at Rs 171-2 and, after touching a high of Rs 173-0 and a low of Rs 169-4, finished at Rs 170-8. Groundnut Ready Bold was quoted at Rs 34-6 and Groundnut Oil at Rs 12-13 for the ready position.

*

Yarn

The Yarn market continued to rule quiet with prices showing an easier tendency in both forward and ready sections, mainly due to the absence of any demand even at lower levels. Turnover was also restricted as weavers in the main consuming centres were reluctant to augment their stocks. Conditions in the Rayon cloth market were equally discouraging.

Meanwhile, the Government of India have decided to license import of Art Silk Yarn against actual export after December 31, 1956 of Indian art silk hosiery goods This concession was extended in respect of art silk fabrics under the Government's import trade control policy for January-June, 1957.

*

GATEWAY GOSSIP

(Continued from previous page)

As I said, the reasons underlying the resignation of Dr Matthai and Mr Handoo are as yet outside of public ken.

Secondly, Mr Iengar is sure that the State Bank is not competing unfairly: Mr Bhabha contradicts him.

Thirdly, there are very special factors responsible for the upsurge in the deposits of the State Bank. In the current busy season, the accretions to the banking system by way of deposits have been of considerable size. In the first place, therefore, the State Bank, in common with other scheduled banks, has had the pleasant experience of a quicker tempo of fresh deposits. In the second place, with the return of the confidence that the State Bank continues the tradition of the Imperial Bank as a commercial bank, some of the deposits earlier lost have returned. In the third place, counterpart funds against American aid receipts are being built up in substantial amount; and these, particularly amounts representing money to be utilised by US Government agencies in India, are being lodged with the State Bank. In fact, it is this last reason which is responsible for the bulk of the State Bank's increase in deposits. I think it would have been scarcely likely for these funds to have been deposited with any other bank.

I am afraid, therefore, that Mr Bhabha has allowed himself to fall prey to the lure of generalisations. Unless he is in a position to substantiate his charges—and I doubt it—the impression fostered in banking circles may well be that Mr Bhabha's tangential remarks are rather unfortunate.

Bombay Review

World *of* Cotton

Consumption Expected to be Ahead Production

ACCORDING to the tentative estimates made by the International Cotton Advisory Committee, world consumption of cotton is expected to exceed production during the 1956-57 season. While production during the current season is placed at 38.76 million bales, consumption is likely to total 39.2 million bales, which is 1.3 million bales higher as compared to the 1955-56 season.

Notable increase in free world consumption is expected to occur in Japan, Western Europe and some other Asian countries. Consumption in India and other countries, it is estimated, will also rise to 4.4 million bales and 5.8 million bales in 1956-57 from 4.3 million bales and 5.7 million bales respectively in the previous year. US cotton consumption is, however, expected to decline from 9.2 million bales to 9 million bales during the current season. Consumption in the Communist countries is likely to increase from the last season's 9.4 million bales to 9.9 million bales in 1956-57.

In this connection, the Indian Central Cotton Committee's decision to achieve a target of 6.5 million bales of raw cotton production in the country by the end of the Second Five-Year Plan should be welcomed. For, there has been a growing stringency in the supply of good grade cotton. There has been a persistent rise in consumption—the figure being around 4.97 million bales in 1955-56 as against 4.77 million bales. Indications are, that this will be much higher in the 1956-57 season. As against this, the 1956-57 crop is placed around 5.2 million bales, while trade estimates are inclined to place it still lower around 4.9 million bales.

According to the Directorate of Economics and Statistics, Ministry of Agriculture, the all-India third estimate of cotton for 1956-57 puts the current year's area and production at 18.08 million acres and 4.08 million bales (of 392 lbs each of cotton lint) as against the adjusted third estimate of 17.55 million acres and 3.38 million bales respectively for 1955-56. This shows an increase of 531,000 acres in area and 702,000 bales in production over last year.

Meanwhile, many popular varieties of cotton have pierced the ceilings in the ready market and, consequently, mills have been compelled to complain to the authorities about not getting enough raw material at reasonable prices. Although the general tendency is to buy only those varieties which are within official limits, some needy mills are reported to have paid unofficial higher prices for popular growths.

Since the cotton supply position in the country is just adequate and not comfortable, a section of the trade and industry suggests that the Government should revise upward the present marginal levels by about Rs 100 per candy. The only alternative to the current problem is either to overlook the higher prices or to requisition cotton.

Fears about Government freezing cotton stocks have, therefore, brought a salutary effect on the market, in the sense that the unofficial premia have slightly declined in upcountry markets. Most traders are, however, reluctant to part with their ready stocks, expecting a further rise in prices.

The maturing Jharilla (March delivery) went off the Board at Rs 820—the prescribed ceiling rate. The Board, however, fixed the due-date in case of failure to tender. Total tenders issued were put at 2,150 bales. Other deliveries ceased under the leadership of the nearby Vijay, which encountered considerable profit-taking prior to fixation of room rates and proximity of the tendering period. The turnover was 15,000 bales.

Jharilla March expired at Rs 820—the highest touched being Rs 820 and the lowest Rs 818. Jharilla May opened at Rs 690 and, after touching a high of Rs 693-12 and a low of Rs 688, finished the week at Rs 693-8. Similarly, Vijay June opened at Rs 825 and, after touching a high of Rs 828-8 and a low of Rs 819, finished at the former level.

The Spot market continued to be active with good demand for all staple varieties. Mill demand was in evidence for new crop Vijay and Surti.

On the export front, demand was mostly confined to Bengals. Some stray business was reported done in Oomras stapling ⅞".

In the foreign section, fair business took place in Californians for August shipment and beyond, subject to import licence being available. Moderate interest was also shown in spot lots of US and East African cotton.

Following rates were quoted:—Dhulia Rs 750; Zoda Rs 680; Digvijay Rs 980; Punjab 216F Rs 880; Moglai Rs 750; Khamgoan Rs 810; Surat American Rs 1,090 and Amalner Rs 795.

NEW YORK COTTON MARKET:

Prices in the futures section of the New York cotton market fluctuated narrowly in slow dealings with most of the activity centring in nearby May and July deliveries. Part of the demand in May was evidently prompted by further decrease in certified cotton stocks to 10,190 bales. Reports of further beneficial rains in Texas exerted little influence on new crops, which were largely neglected and easily influenced by small orders. Spot was quoted at 35.45 cents per pound.

×

CLOTH AND PIECEGOODS:

Sentiment in the Bombay Piecegoods market ruled slightly better. Although demand had not been brisk, enquiries from some of the consuming centres revived and hopes were entertained that the offtake would improve appreciably in the next few weeks.

With the suspense in regard to the reduction in excise duty having been removed, it is felt that the consuming centres, where the supply position is tight, will enter the market on a large scale. At the moment, enquiries are more pronounced in respect of super-fine varieties. Prices have remained generally steady.

How banking helps the OILSEEDS INDUSTRY

OILSEEDS and oil-bearing nuts are grown on more than 25 million acres in India, of which almost half lie in the South. From oilseeds we get cooking oil, paints and varnishes, lubricating oil and soap.

The growing of oilseeds and the extraction of oil forms a major industry in South India. Banking has greatly helped the growth of the oilseeds industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the oilseeds industry.

We at Palai are proud that so many leading concerns connected with the industry in South India employ the *complete* banking service we offer:

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans & Overdrafts — Confidential Credit Reports, etc.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PC.784 (a)

If you have business interests in the south, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, TRAVANCORE
Branches at: Madras, Madurai, Cochin, Quilon, Trivandrum, Mangalore, Bangalore, etc. *Also at:* Delhi & New Delhi

A LEADING BANK IN SOUTH INDIA

THE UNITED COMMERCIAL BANK LIMITED

(INCORPORATED ON 6th JANUARY, 1943.)

FOURTEENTH REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit & Loss Account for the year ended, 31st December, 1956.

The net profit for the year, after providing for all known and anticipated charges and including Rs. 27,761-2-0 brought forward from the previous account, amounts to .. .. Rs. 56,79,419 10 9

The Directors have made the following appropriations out of the net profit:

Transfer to Reserve Fund ..	Rs.	20,00,000 0 0
Provision for Taxes	„	16,00,000 0 0
Provision for Bonus to Staff ..	„	6,50,000 0 0
Balance	„	14,29,419 10 9
	Rs.	56,79,419 10 9

Out of the balance of Rs. 14,29,419-10-9 the Directors recommend to the shareholders the payment of a Dividend at Rs. 3-8-0 per share, free of income-tax, which will absorb Rs. 14,00,000, leaving Rs. 29,419-10-9 to be carried forward to the next year's account.

The Bank's business continued to expand during the year and the profit showed a substantial increase as compared to the preceding year.

Demand for money continued unabated throughout the year.

The Bank Rate remained unchanged at 3½ per cent but the rate of interest on both deposits and advances rose steadily throughout the period. After the turn of the year the Reserve Bank of India raised the rate of interest to scheduled banks on advances against Government Securities from 3½ per cent to 4 per cent.

The Bank's investments appear in the balance sheet at below market value.

During the year branches of the Bank were opened at Kuala Lumpur in the Federation of Malaya and Rourkela.

The Directors are thankful to the shareholders and the clients of the bank for their continued support. They also express their gratitude to the Bank's advisers and advisory committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the officers and staff of the Bank during the year.

Under Article 95 of the Bank's Articles of Association four of your Directors—

Shri G. D. Birla
„ M. R. Ruia
„ G. D. Kothari
„ Yogindra N. Mafatlal

retire by rotation, and being eligible, offer themselves for re-election.

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

By Order of the Board,
G. D. BIRLA
Chairman.

Calcutta,
12th March, 1957.

BALANCE SHEET AS AT 31st DECEMBER, 1956.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance-Sheet of the United Commercial Bank Limited, as at 31st December, 1956 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the Branch returns audited by the Statutory or other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to Sub-sections(1) and (2) of Section 211 and Sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-Sheet and Profit and Loss Account are not required to be and are not drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949 but in conformity with Forms A and B of the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in accordance with the provisos to Sub-sections(1) and (2) of Section 211 and Sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-Sheet and Profit and Loss Account are not required to be and are not drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from the Branches of the Bank;

(d) the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the said accounts;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Delhi Review

Thirtieth Annual Session of FICC

TIME was within living memory when New Delhi was only in the fringes of the consciousness of the business and industrial community. The Capital was thought of only when some particular official intervention was considered necessary for the smooth functioning of its more serious tasks performed from Calcutta or Bombay. But the golden days when Government were merely the onlooker, lazily watching the goings on in the economic field, have gone away for ever. Decisions vital to the economy of the country are being taken hourly in New Delhi, and the remote control of the entire economic system is now more completely than ever in New Delhi. This explains the reason for the increased use of New Delhi as venue for important deliberations of industrial and commercial interests; and an important Delhi annual is the session of the Federation of Indian Chambers of Commerce and Industry, which was held here over the week end.

More than usual interest attaches to this session of the Federation in view of the juncture at which it met. There was also fortuitous circumstances that the Federation met soon after the presentation of the Budget for 1957-58 and the publication of the White Paper on the economic situation in 1956-57. The deliberations, therefore, had the advantage of having fairly precise foci of attention and the results of concentration thereof have been constructive and cautiously optimistic. The emphasis is perhaps more on caution than on optimism; but, in the context of much gloomy breast-beating in the country about difficulties encountered by the Plan, the fact that important business interests think that the Plan is capable of being worked through is a heartening piece of news.

Mr Nehru, who delivered the inaugural address of the session, gave the deliberations the much-needed broadening of the base of discussion. Mr Nehru's direct references to particular economic problems were few, but he spoke with his customary lucidity about basic principles that ought to govern any programme of economic development. He reiterated once again the assurance that the Plan was not conceived as a sacred cow, to be worshipped from afar, but as a rough working proposition in need of constant revision in the light of circumstances and experience. "Broadly speaking, we have accepted a certain pattern and certain road along which we should advance. It is laid down more or less in our Five Year Plans. These Plans are not rigid. We may vary them, we may change them, we may add to them, we may subtract from them according to circumstances, but broadly they are there and broadly the country has accepted them." This assurance was repeated in the same speech in another context where he said: "I promise you that in whatever the Government may do, we are not rigid or dogmatic. ...We have open minds but we have convictions. We do not wish to wobble and remain in a fluid condition."

Choosing a striking expression from Mr Singhania's presidential address, he suggested that, in a fast-moving world, "obsolescence of mind" is as dangerous as obsolescence of machines. He drew attention to the fact that Government's policies are not conditioned by preconceived notions drawn from other centuries and other nations. His Government's endeavour was to evolve such policies as will take root in our soil. "We have to learn from other countries and we must be humble enough to learn everything we can from every country. But we cannot learn much or with profit if we allow ourselves to be uprooted from the soil. The more I see of the world around me, whether in Europe or Asia, or anywhere, the more convinced I become that the nation which loses its roots does not prosper—it gradually fades."

These, then, are the bases of Government policy: the fundamental approach is one of evolving an economy that is free from any kind of dogmatic affiliation, an economy that is rooted in the soil and that will harmonise with our past and temperament. This ensures an open mind, a readiness to learn, a continuity with the past and an imperviousness to ideological bludgeoning of any kind. But this does not mean that there are no compulsions from the point of view of formulation of ends to be achieved. They are there and inescapably so. These are: the need for raising the standard of living of our people in the shortest possible time and giving them a much better kind of life than they have had so far. As a democracy and as a Government deriving its power from these very people, this consideration is supreme. But, in the actual execution of policies designed toward this end, the key note is flexibility, tentativeness and absence of any rigid adherence to set formulae or methods. No one can possibly quarrel with such a sensible and reasonable view of our economic tasks.

And, to judge by the subsequent deliberations of the Federation, no one in the Federation itself does. Mr Singhania echoed Mr Nehru's desire to put an end to fruitless discussion about sectors. Instead, he pleaded for concentration of the "undivided attention of the nation on the task of building up the economy without dissipating time and energy in discussions and controversies." He made a refreshing plea for enterprise and technological daring among the entrepreneurs, and for making immediate plans for increasing the technical know-how of the country.

Of the specific difficulties that are emerging in the implementation of the Second Five-Year Plan, the Federation's assessments reveal deep concern but not alarm. As a matter of fact, aboct the nature and seriousness of the difficulties there can hardly be any difference of opinion, since they are inexorable facts of economics. On the possible cures, also, the area of difference is not very large. But the mischief of the present situation lies in the possible repercussion on self-confidence of the people by any assessment that emphasises difficulties rather than available solutions. The White Paper, which has been the cue for much solemn headshaking and smug "I-told-you-so-despondency," is far from a crisismongering document. It certainly catalogues the difficulties of the current year and the possible dangers ahead, but to spell from it an argument for abandoning the Plan is to pervert its basic conclusion.

I may say at once that neither Mr Singhania's address nor the subsequent discussions among members suffers from the distortion or emphasis I have just discussed. The members are understandably concerned with the drain on foreign exchange and the rise in internal prices: but their solution is not the cutting down of the Plan, but the matching of our wits to overcoming the difficulties. In fact, their solutions differ hardly from those of the Government; increased agricultural production, conservation of foreign exchange by a rational ordering of priorities and modification of import and export policies with a view to increasing foreign exchange earnings and reducing foreign exchange spendings. For a set of people who are often accused of ostentatious spending, indeed of holding it as part of an economic theory, the stress the Federation lays on austerity in consumption is remarkable.

On the question of tax structure, the Federation renewed its plea for a more scientific basis of taxation. It pleaded for a system that would spread the burden more evenly than at present and would make it possible for enterprises to channelise resources more fruitfully in productive endeavours on a long-term basis. There can be hardly any argument, and indeed it has been often conceded by authority, that no significant increases in total revenue is possible by mere increases in rates of income tax. On the contrary, its other economic consequence may retard productive impulses from manifesting themselves. But the plea for the easing of tax burden will have greater chance of falling on sympathetic ears if the public could be surer that taxes are being properly paid and would be so paid if there was a reduction in rates. It is not so much a question of economics as ethics. The Federation should, therefore, take on itself the task of bringing moral pressure on such of its members as are making it impossible, by their antisocial acts, for their sensible pleas to get a fair hearing.

Delhi Review

North Indian Notes

Agricultural Personnel

One of the main inferences that are to be derived from the White Paper on the Budget for 1957-58 is that a sizable increase in agricultural production in the country is an essential prerequisite to the orderly progress of the Second Five Year Plan. It is, therefore, of utmost importance to the nation that the revised agricultural targets are attained in full.

The Government of India have ere long realised this fact and accordingly have already initiated necessary measures such as the building up of buffer stocks and the upward revision of the targets of production for the main agricultural crops. The revision of the provisional targets of agricultural production proposed for the period of the Second Five Year Plan has, in its turn, necessitated renewed attention being bestowed on the problem of trained agricultural personnel. The Planning Commission have now set up a twelve-member Committee on Agricultural Personnel to examine the country's future requirements of trained personnel for agriculture and allied subjects.

With the organisation of national extension and community projects and development of new programmes in agriculture and allied fields during the First Five Year Plan, the requirements of trained personnel increased rapidly and shortages were experienced in several directions. In order to obviate similar difficulties during the Second Plan period, steps were taken in 1954-55 and 1955-56 to expand training facilities in agricultural and animal husbandry. In the light of the revised targets of agricultural production and the programmes being undertaken through national extension and community projects, it is now considered that the demands for trained personnel, both in number and in quality, are likely to be larger and to increase more rapidly than was anticipated. The probable requirements in this regard for the Third Five Year Plan as well as long term proposals have also to be taken into consideration. The committee is expected to report by the end of 1957.

That the Ministry of Community Development in the meantime is planning to get a large number of persons trained for work in the rural areas has been revealed by Mr S. K. Dey, Union Minister for Community Development. Inaugurating the Second National Convention of Young Farmers at New Delhi, he said that his Ministry had drawn up an ambitious scheme which would provide training in Extension methods to nearly 14 million people in various branches of developmental work. The scheme, which is an extension of the idea conceived and sponsored by the Ministry of Agriculture for setting up Farmers' camps, will be discussed at the forthcoming Development Commissioners Conference to be held at Mussoorie from April 26 to 30.

*

Progress of Cooperation

Satisfactory progress has been recorded in the organisation of larger sized cooperative societies during the past three, four months. In many States the targets laid down have not only been largely achieved but in certain cases exceeded. In the Punjab, for instance, the target of 100 societies has been exceeded by 30 and in Assam 65 societies have been formed whereas the target set was only 56 societies. In the case of Orissa and Uttar Pradesh, the targets of 100 and 275 societies have been already fulfilled. At its second meeting early this week the National Cooperative Development and Warehousing Board approved several measures to help the development of the cooperative sector. The Board accepted the programme for cooperative development for 1957-58 with certain adjustments. Under this programme, there will be 3,030 larger sized societies, 7,255 small sized societies, 1,574 godowns for larger sized societies, 604 primary marketing societies, 376 godowns for marketing societies, eight to ten sugar factories and 45 processing societies other than sugar factories.

The decision of the Board to entrust the entire distribution of fertilizers in the States to cooperatives may go a long way in making available easily one of the essential commodities needed by the farmer on whose efficiency depends the very success of the Second Plan. Inaugurating the third meeting of the All India Farmers Council Mr V. T. Krishnamachari, Deputy Chairman of the Planning Commission emphasised the urgent need for increasing agricultural production in the country. According to him the minimum increase during the Second Plan period was not 29 per cent but 40 per cent. Allying apprehensions that a large increase in agricultural production would upset the price structure of farm products, he assured the farmers that it was a simple matter and the Government of India were quite competent to tackle it easily when the time came.

NORTH INDIAN MARKETS

Brighter Outlook for Sugar

THANKS to sound statistical position, Sugar markets have been ruling very steady during the past many weeks. While production during the first four months of the current season has been as much as 11.69 lakh tons as against 10.67 lakh tons in the corresponding period of the previous season, offtake has also been higher at 6.35 tons as against 5.98 lakh tons. Even so, stocks with the mills, as on the 28th February 1957, have risen to 16.65 lakh tons as against 8.80 lakh tons on the corresponding date of last year.

Production, during the current year, is expected to be over 20 lakh tons. The offtake is also expected to be higher, with the result that production and consumption may even out. With the permission granted to export one lakh tons, stocks at the end of the year are expected to be less by one lakh tons. The Government are closely watching the situation and it is not expected that any further export quota will be announced for about a year.

Looking back to the position that obtained in 1954-55, one cannot believe that India, who was then short of supplies and imported 7 lakh tons during that year, will, within two years, meet consumption which has gone up, and also export some sugar.

Ceylon has concluded a deal for the purchase of 8,000 tons and the first shipment is expected to be made next month. There are also possibilities of exporting fair quantities of sugar to Pakistan. It will, therefore, appear that the foundations for a flourishing export trade in sugar are being laid. But the ultimate success depends on the competitive capacity of the quality and the price of Indian sugar.

Meanwhile, following mill-delivery rates are quoted per maund in the Hapur market:—Jaswant Rs 28-12; Simbhauli Rs 28-14; Mowana Rs 28 to Rs 29-0; Daurala Rs 29 to Rs 30; Amroha Rs 28-4; Bijnore Rs 28-4; Mansoorpur Rs 29-0 to Rs 30 and Rampur Rs 31-8.

*

Gur

The market for Gur continues to remain depressed despite good offtake. In the Hapur market, the rate for the ready position is quoted lower at Rs 9 per maund. Average daily arrivals during the past week were small at 1,000 maunds due to rains, while stocks were estimated 94,000 maunds as against 65,000 maunds at this time last year. Total arrivals, from the beginning of the season, were estimated at 4.40 lakh maunds, the corresponding figure for last year being 4.30 lakh maunds.

*

Foodgrains

The Foograins market rules quietly easy due to stockists' anxiety in liquidating their stocks before the new crop arrivals. The recent rain and hailstorm are reported to have damaged slightly the standing crops. Wheat, Barley and Peas are the crops which have suffered the most. Harvesting of crops has actually begun in the eastern districts of Uttar Pradesh.

In the Hapur market, Wheat prices declined fractionally, being quoted at Rs 16-2 per maund for the average quality and Rs 17 for the farm quality. Although the stock position is very small, Gram prices have also recorded a modest decline on good crop prospects and the Punjab advices. Harvesting of Barley and Bejhar, which have begun in some areas, is now being delayed due to rains. Maize and Bajra lack seasonal demand and prices have recorded a downward trend. Jowar prices, however, rule steady. With the beginning of arrivals of new Peas in the market in parts of Uttar Pradesh, Peas prices have recorded a decline. Arhar prices have also eased in sympathy, although the new crop will not reach the markets for the next two months.

The Delhi grains market rules generally quiet. Wheat prices show a loss of one rupee per maund. Gram and Barley rates have also become easy. Arrivals are better, while buyers are lacking. Offtake of Bajra is reported to be good due to which the rates have steadied up. Urad shows a loss of As 12 per maund in the absence of any buying enquiry.

Continued strength in seasoned Rice and a modest improvement in Coarse grains and certain Pulses have provided the main features of the week's trading on the Bombay grains market. Prices of new crop Rice have kept relatively steady in view of the sustained strength displayed by centres in the producing areas. Trading in indigenous Wheat has been confined to stray deals. In the Coarse grains section, arrivals of Jowar from the Sholapur area are stated to have declined to some extent and hence prices are slightly better at Rs 140 to Rs 160 per candy. Bajra of the superior quality is also in short supply. Among Pulses, Gram has kept steady with the Madhya Pradesh quality finding buyers at Rs 124 to Rs 132 per candy, according to quality Arrivals of the new crop are stated to have increased.

Madras Review

The Peninsula

The Post-election Picture

IN the Communist ideology and organisation, there is hardly any room for communal considerations. It may even be said that a staunch communist in the conditions of India will have to be a completely transformed social being and it reflects credit on the party that at leat most of its leaders give this impression. It is therefore somewhat surprising that some newspaper reports and comments convey the impression that the success of the communist party in Kerala bears communal implications. An analysis of the voting shows that actually every community has contributed to the success of the party and some victories have been registered in constituencies where if the vote had gone by communal considerations, the party would have been completely routed. In fairness to the party, it must be said that in the selection of candidates, individual character and record has without exception been the overwhelming criterion.

Even before the election, Mr E. M. S. Namboothiripad was almost unanimously regarded as the prospective leader of the party in the State legislature. Mr Namboothiripad's record as a party leader is well-known. He is a keen student of economics and his knowledge of Indian culture is phenomenal; a good writer he can also claim a status in the literary world of Kerala. All these assets combine to make him the first choice, when the leadership question ever gets discussed. It has also happened like that.

Only, the assumption that no one would contest his claim was wrong. Mr T. V. Thomas, who had been the leader of the Communist group in the Travancore-Cochin legislature is also a leader of repute and if he pressed his claim for leadership in the enlarged State it was not politically groundless. Mr Thomas has now gracefully accepted the choice of the majority; and though he feels heavily preoccupied with his work as Chairman of the Alleppey Municipality, he may not be unamenable to the offer of an important portfolio in the State Cabinet.

What has to be guarded against is the imputation of communal considerations to the bid for leadership. There is none. In the state of discipline maintained within the party, it is inconceivable that any leader, whether he secures an office or not, will view a situation in terms of individual loss or gain or the loss or gain of this or that community.

It is now convincingly clear that the State ministry headed by Mr Namboothiripad will proceed cautiously. The economic improvement of the State would not go very far if the Central Government are liberal with grants. As improvement in material conditions is going to be the touchstone of the Ministry's record, the party leaders will think a hundred times before they estrange the Central Government, even when such estrangement is perfectly constitutional. The fate of Mr A. K. Gopalan's Resolution calling for the nationalisation of tea estates has already queered the pitch a little. Does he regret his earlier statement on behalf of taking over of foreign-owned tea plantations in Kerala?

It is certainly not to be supposed that the two Governments are already being drawn into opposite camps. At the same time, it cannot be overlooked that there are issues of a vital character, on which the two Governments cannot see eye to eye and which do call for a great deal of give-and-take, before the State Government take final decisions. It would also be better if this give-and-take business is conducted behind the scene and the results alone receive publicity. It is a mode of dealing which should do good for both parties.

Prohibition can well turn out to be another bone of contention. There is a section of opinion in the Kerala Communist Party that the half-hearted taluk-wise prohibition which is now being enforced in certain areas of Travancore-Cochin should be scrapped, along with prohibition in the Malabar District. In this matter, the State Government, if they accept this opinion, will not only be going against Central policy but against a Constitutional directive.

A Constitutional directive is, of course, unenforceable by any court. Actually, it is nothing more than an appeal to the goood sense of the State Government, in the present context. The directives are not a matter of "shall" or "shall not", "the principle therein laid down are nevertheless fundamental in the governance of the country and it shall be the duty of the State to apply these principles in making laws". If the limited prohibition obtaining in Kerala is to go, the Government can plead the beneficial consequence of more funds for the State Exchequer. Prohibition is also no longer the sturdy plank it used to be in the structure of the Congress Party's social programme.

A radical cut in Ministerial salaries is publicly contemplated. Economy will necessarily be a watch-word of the Government. The number of Ministers is likely to be more than in previous Cabinets in the state and this may to some extent cancel out the reduction in the individual Minister's emoluments. In the proposed Ministry, there is likely to be at least one woman, possibly in charge of "women"; one of the Ministers may be in charge of "culture".

The Party's invitation to the State PSP to join the Government has put the local PSP leadership in a dilemma. Mr Thanu Pillai cannot hope to function in any independent capacity. He can only be an instrument for the implementation of Communist policies. If he does not cooperate, his party will be shown up as unresponsive to the appeal for cooperation in an endeavour which the majority of the electorate has unhesitatingly approved.

For the Communists the adherence of the PSP will not be without value; because, with an extra member nominated by the Governor and one from among themselves getting lost to the Speakership, the party will have only a majority of two. There is always the risk of a catch vote against the Government.

In Madras, no new problem as such has arisen out of the present elections. The Communists have fared extremely badly. When CR returned to head the Government five years ago, the Communist Party in the legislature was talking in terms of a bid for power. CR mauled them heavily and the separation of Andhra and Malabar sealed their fate for a long time to come.

In the new legislature, The Congress Reform Committee will be the largest single group with 16 members. There is likelihood of this group functioning in friendly opposition to the Congress; if it does so, it will be a sort of milk and oil role which will gradually undermine its distinctiveness. The next biggest group, the DMK, with whom will be associated a good number of the Independents, will be the formal Opposition. As it is felt that the Congress itself has fallen from its ideals in Madras, even this Opposition may find comparatively little to oppose sincerely. The new proportions in party strength have implications which are obviously not wholly desirable.

In Mysore, the most remarkable feature of the elections is the return of women candidates in large numbers. There is not a single district which has not sent up at least one woman legislator. Mandya and Chitaldroog have elected only women candidates. Those from the opposite sex were all beaten. The Bangalore Urban constituencies elected three women candidates, all belonging to the Congress party, against well-known Independent and labour leaders. It would appear that Mysore has come nearest to meeting the Congress stipulation of a minimum percentage of women in the legislature.

OUTSTANDING PROGRESS

31st December, 1956
Deposits Exceed . . Rs. 106 Crores
Working Funds Exceed . . Rs. 140 Crores

The P. N. B. secured 20% of the additional deposits of all scheduled banks in the country during 1956.

Madras Review

South Indian Notes

Promise and Practice

Addressing the annual general meeting of the Madras Chamber of Commerce the outgoing Chairman, Mr J. R. Galloway pointed out, how in spite of the promise and provision made in the plan for encouragement to private enterprise to have full scope, such enterprise was hampered and held back by uncertainty as to its future by burdensome taxation and unrealistic fiscal policies. The recent imposition of capital gains tax and the introduction of the scheme of compulsory deposit of part of the reserves of companies with the Reserve Bank, he explained, had caused a lot of apprehension to business interests. More could be done to increase the revenue of the Government by devising effective measures to check evasion than by increasing direct taxation on a small section of the community, which was already paying more heavily than people of like means in any other country.

Mr Galloway also criticised the policy of the Government with regard to the development of ports in the country and remarked that even though a Ports Technical Committee had observed ten years ago, that planning of ports and their construction and the services which they had to provide should precede the anticipated developments and needs of transport, little has been done toward the development of ports in the State. It was a sad commentary on the attitude of the Government that the wet dock Scheme for expanding Madras Port recommended for implementation by the Committee ten years ago had been delayed by another four to five years. Shortage of finance should not be allowed to delay the expansion programme of the Madras Port and the requisite funds should be made available by the Central Government. The cost of idle time lost by ships which had to lie off the port consequent to congestion, was estimated at about Rs 18 to 20 lakhs per month. Congestion of the Madras Port could also be relieved by improving the facilities at other ports of the South such as Kakinada, Cuddalore, Nagapattinam and Tuticorin.

Touching on the question of State Trading Mr Galloway acknowledged its services in having opened new channels of trade but at the same time, he wanted the sphere of private trading to be left unencroached, where it was efficient. Finally he made a plea for a reduction of export duties as much as possible as this would react beneficially on our exports.

*

Indian Overseas

A medium bank to announce superlative results for 1956 is the Indian Overseas Bank Limited. Deposits and other accounts are placed Rs 2.07 crores higher at Rs 16.49 crores. Foreign exchange contracts outstanding are for Rs 6.42 crores.

Cash balances show a small fall; but this is more than compensated by an increase in Investments from Rs 4.84 crores to Rs 5.16 crores.

Advances are marked higher by Rs 1.76 crores at Rs 10.81 crores.

In the result, the income of Indian Overseas has shot up from Rs 0.85 crores to Rs 1.15 crores. Commission, exchange and brokerage have yielded Rs 9.36 lakhs more at Rs 48.16 lakhs; and income by interest and discount stages a rise of more than Rs 20 lakhs to Rs 66.30 lakhs.

Interest paid on deposits has also risen, by slightly less than Rs 9 lakhs, to Rs 30.62 lakhs; and salaries and allowances absorb Rs 38.82 lakhs against Rs 32.13 lakhs.

The balance of profit has jumped up to Rs 28.65 lakhs from Rs 16.56 lakhs.

Taxation receives Rs 14 lakhs against Rs 7.50 lakhs; Reserve Fund, Rs 6 lakhs as compared to Rs 4 lakhs; bonus to staff, Rs 3.50 lakhs as contrasted with Rs 1.25 lakhs; and the dividend paid has been raised to 10 per cent from 7½ per cent last year.

SOUTH INDIAN MARKETS

Pepper Markets Calm & Steady

PEPPER markets have been calm and steady during the past few weeks. There has been no demand from overseas markets and fluctuations in prices are so little that neither the seller nor the buyer has any inducement to commit himself. It is reported that some shippers, who have to ship good quantities to Russia in early April, have partly covered their requirements and are waiting for prices to come down. At the same time, producers and stockists are holding on for better prices as ungarbled pepper is in demand. In the Kozhikode market, Wynaad quality is quoted around Rs 625 and the Country variety at Rs 595 per candy.

Despite the poor demand both from inland and overseas, bulls are trying to maintain the prices artificially. It remains to be seen how far they will succeed in their attempt if, in the meantime, Sarawak begins underselling. The future of the market will, therefore, solely depend upon the buying attitude of New York and selling by Singapore.

Meanwhile, the Singapore market is reported to be ruling easy under pressure of increased arrivals. Following the news of unsettled political situation in Indonesia, bulls there are trying to exploit the market; but they have failed to raise the prices there, due to lack of any support either from the USA or from Europe.

In the New York market, dealings last week were practically at a standstill. Lack of incentive from primary markets also depressed sentiment. Scattered buying interest was, however, noted at about half a cent per pound under sellers' ideas. In the London market, White Sarawak was quoted at 23d and Black Sarawak at 18d per pound.

Coffee

According to official statistics, Coffee exports in the eight months ended November 1956 were higher at 132,043 cwts valued at Rs 4.85 crores as compared with only 44,975 cwts worth Rs 1.16 crores in the corresponding period of the previous year.

Shipments recorded an alround increase with the exception of Italy, which took only 5,476 cwts during the period under review as compared with 12,067 cwts in the eight months ended November, 1955.

Western Germany was the leading buyer, with an offtake of 39,502 cwts followed by the Netherlands and Belgium, which took 37,895 cwts and 16,705 cwts respectively during the period under review.

*

Groundnuts

Active trading was noticed in the Madras Groundnut market during last week. Arrivals showed some improvement, total being 250 tons. Local crushers were buying these stocks. The rate for superior oil-quality seeds was quoted at Rs 164 and the Bold variety at Rs 157 per candy. According to market circles, the marketing of the main winter crop from the Southern districts may be said to be practically over.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides continued to be moderate, while clearances were fair. The market for Buff hides ruled quiet and there was very little support from foreign countries. The Calf section was steady.

On the export front, business was difficult to negotiate on account of the price difference between buyers and sellers, although there was good enquiry for 8-b½ lbs.

In Tanned Skins section, arrivals of both Goat and Sheep skins were moderate. Where sales were reported, prices were As 2 to As 4 per pound higher in sheep skins.

In the export section, trading was at a standstill. Sellers quoted 12sh 9d to 14sh for 11/12 lbs; 14sh to 14sh 3d for 8/9 lbs and 14sh 6d for 5½/6 lbs. In Sheep skins, the market was firm for both prime semi-prime marks. Sellers' rates for common sheep were 3d per pound higher as compared to last sales.

It is learnt that the French Government have imposed an import duty of 15 per cent on Madras tanned skins shipped to that country, effective from March 15. Although the full effect of this new tariff may not be seen immediately, it is felt that this is bound to affect future sales to France, which country has been buying good quantities of Madras goat skins at attractive prices.

*

STRIKES AND STERLING

(Continued from page 562)

It is quite another question how sterling's prospects would be affected in the long run if, after a prolonged strike, the greater part of the 10 per cent increase demanded by the strikers were to be conceded. Many categories of British engineering goods would cease to be competitive abroad. What is perhaps even more important, the success of the wages demand would encourage the trade unions in many other industries to follow the example, and wages inflation which was kept down to a reasonable degree in 1956 would resume its full progress.

Even a partial failure of the strike would produce a salutary effect in discouraging excessive wages demands. If the unions concerned in the present strike were to spend a large proportion of their large funds without being able to achieve anything like their full demands, the cost of the strike to the nation would be offset by the beneficial effect of the failure on industries in general. The mitigation of overfull employment through the indirect effects of the strike would tend to operate in the same direction. And even if the worst came to the worst, and a prolonged strike were to deplete gravely Britain's reserves, it might possibly bring about a state of emergency in which, confronted with a major danger, the British people usually show themselves at their best. Some such shock is badly needed, and when it comes it is liable to produce a salutary effect.

THE NEW MONKHOOSHI TEA CO., LTD.

NOTICE is hereby given that a General Meeting of the members of the abovenamed Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta 1, on Tuesday, the Twenty-third day of April, 1957, at 11-00 A.M. to consider and if thought fit to pass, with or without modification, the following resolutions, namely:

1. (a) That it is desirable to capitalise a sum of Rs. 3,00,000 being part of the undivided profits of the Company standing to the credit of the Reserve Fund and accordingly that the said sum of Rs. 3,00,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are, on the 23rd day of April, 1957, holders of the 80,000 issued Ordinary Shares of the Company of Rs. 7/8/- each, in payment in full for 40,000 new Ordinary Shares of Rs. 7/8/- each and that such 40,000 new Ordinary Shares, credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of one new Ordinary Share for every two issued Ordinary Shares held on the 23rd day of April, 1957, by such persons respectively and that the said new Ordinary Shares so distributed shall rank in all respects pari passu with the existing Ordinary Shares and will participate in any dividend declared in respect of the year ended 31st December, 1956, and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.

(b) That pursuant to the above resolution and in satisfaction of the said special capital bonus the Directors be and they are hereby directed to allot and distribute 40,000 new Ordinary Shares credited as fully paid up amongst the persons who are on the 23rd day of April, 1957, holders of the 80,000 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

(c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 23rd day of April, 1957, by some person to be appointed by the Directors in that behalf under Article 168 of the Articles of Association of the Company.

The Share Transfer Books of the Company will be closed from 8th to 23rd April, 1957, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta, the 20th March, 1957.

NOTE:—A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them."

2, Fairlie Place,
Calcutta, the 20th March, 1957.

THE NEW MONKHOOSHI TEA COMPANY LIMITED.

Circular Letter to Shareholders.

EXPLANATORY STATEMENT

Dear Sir|Madam,

Your Directors consider that the present issued capital of the Company does not reflect the actual Capital position of the Company and that the Issued Capital should be increased. They recommend that a sum of Rs 3,00,000, being a part of the amount standing to the credit of General Reserve, be capitalised and that this amount be utilised as Capital Bonus to be satisfied by an issue of 40,000 Ordinay Shares of Rs. 7-8 each, credited as fully paid up, to the existing holders of Ordinary Shares on the 23rd day of April, 1957, in the proportion of one new Ordinary Share for every two issued Ordinary Shares held by them on the said 23rd day of April, 1957, the said new Ordinary Shares ranking in all respects pari passu with the existing Ordinary Shares, and participating in any dividend declared in respect of the year ended 31st December, 1956.

Your Directors recommend for your approval the resolutions which will be proposed in this connection and which are detailed in the Notice calling a General Meeting of Shareholders on the 23rd April, 1957.

The Directors and Managing Agents of the Company will be entitled to an allotment of New Shares in regard of their respective Shareholdings and to this extent they may be deemed to be interested in the above proposal.

The draft Agreement referred to in Resolution 1(c) of the annexed Notice convening the General Meeting may be inspected at the Registered Office of the Company on any working day during usual business hours, upto the date of the meeting.

Yours faithfully,
MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.

CLIVE STREET GOSSIP

(Continued from page 566)

reason for sober optimism. It is perhaps unnecessary to recall the precise arguments in this regard, but one or two conclusions that I reached then are worth recalling.

*

First, about the possibility of raising the internal resources. After indicating the possibility of stepping up receipts from taxes by merely tightening up the tax-gathering machinery and plugging loopholes in law, I said that, even on official estimates, the target of tax receipts on 1955-56 rates should be an additional Rs 500 crores. I also stated that the receipts from additional tax already levied by the Centre in the first year of the Second Plan will yield them a total of Rs 400 crores over the Plan-period. This is well over half the total of our estimate of Rs 700 crores of receipts from additional taxes. If the States do their duty enjoined on them by the Plan of raising Rs 225 crores of additional taxes, the additional tax burden by still further levies reduces itself to slightly over Rs 100 crores. Lest it should be imagined that I have merely transferred the additional tax burden to the States' level, I should like to make it clear that the Rs 225 crores to be collected by the States are, according to the Planning Commission, to be had by "a little extra effort along existing lines rather than by any far-reaching innovations in the sphere of State taxation". This, therefore, really means that, for the rest of the Plan-period, additional taxes not yet levied are only of the order of Rs 100 crores. In such circumstances, it really seems inexplicable that constant fears of possible backbreaking further taxation should be entertained. What is even more astonishing and appears almost perverse, is that spine-chilling threats of such taxation should constantly be held overtly or by implication by those in authority. Such mistaken strategy in winning confidence cannot but harm the prospects of the Plan's success.

*

Similarly, there seems to be an unaccountable diffidence about the Government's ability to raise loans. The White Paper's pessimism in this regard is quite patent. The pity of it is that such gingerly distrust in their own capacity is precisely what makes the Government's borrowing strategy foredoomed to failure. This failure, in turn, is quoted with gloomy satisfaction as evidence of one's extraordinary prescience in these matters. A well ordered financial policy is not one that takes the line of least resistance. It is easy enough, with a majority in Parliament, to impose any manner of taxes you choose. But, then, you would only be making the honest man rarer by such impositions. For, when he sees that tax evasion is something before which authority is helpless, and this very helplessness is imposing fresh strain on himself, he would hardly be human if he did not want to relieve himself of the burden by joining the ranks of those that are apparently immune. Secondly, it is far easier to expropriate than to borrow. If you levy a tax because you cannot persuade me to give my earnings to you on terms that are advantageous to both of us, it may argue your superiority in power, but not your superiority in ability to persuade.

*

It seems to me, therefore, that a great deal remains to be done in the matter of streamlining official thinking on possible resources, and of the best mode of tapping them. It is the very wooliness of thinking on the subject that makes for the vaguely enormous apprehension of our ability to carry out our tasks. To the myopic without glasses, the tree four feet away looks like a vague miasma. With clarity of vision, it becomes a manageable object. It looks as though many in the country, including some in authority, need to be handed their thinking glasses. The sooner this is done, the better are the prospects of success of the Plan.

EAVESDROPPER

*

FOR THE INVESTOR

(Continued from page 556)

the dividend at Rs 5 and the bonus at Rs 3 per share, for the year ended 30-11-1956. The directors have, it is understood, decided to postpone the consideration of the bonus issue, pending a clearer picture of the Government's policy of taxation on bonus shares.

In Ahemedabad market, the shares of Arvind Mills are ruling very firm at Rs 1,180. This firm tendency is attributed to expectations of a bonus issue in the proportion of one share for every four shares held.

Khatau Mills have recommended an additional dividend at the rate of 4.25 per cent on the Ordinary shares for the year ended 30-9-1954. Dividend is payable on or after 27th April, 1957.

It is understood that the Bombay Municipality will be shortly in the market with a Debenture stock of Rs 1 crore, carrying interest at 4 per cent, redeemable after 25 years. The issue will be in two groups of Rs 90 lakhs and Rs 10 lakhs respectively.

Stock Exchanges

NERVOUS ATMOSPHERE

Watch-Dog Writes:

CONDITIONS in stock markets continue to remain depressed. The Finance Minister's strong week-end speech reiterating Government's decision to implement the Second Plan at any cost has demoralised sentiment. Also, the announcement by the Revenue and Civil Expenditure Minister, that there will be no reduction in cloth excise duties, has induced heavy bull liquidation. Thus, with the speculative issues giving way on renewed offerings, prices in all sections have been marked down considerably due to nervous atmosphere. The markets have finished the week with sizable losses on balance.

The Calcutta Stock Exchange witnessed another depressing session last week when prices drifted to lower levels on complete lack of support.

Equities on the Bombay Stock Exchange moved indecisively.

Price movements on the Madras Stock Exchange were confined to a narrow range. Selling pressure, especially in the Textile section, made further inroads into prices.

Wall Street closed irregular as the initial rally failed to hold under profit-taking.

*

Calcutta

Calcutta, Wednesday Evening.

CONDITIONS on the local Stock Exchange remained depressed during the past week. The sense of relief felt by the operators over the absence of any fresh tax proposals proved to be short-lived. Second thoughts on the Finance Minister's speech seemed to have infused the fear that heavier tax measures were in store in the May Budget. Again, the announcement by the Reserve and Civil Expenditure Minister, that there would be no reduction in the excise duties on cloth, caused heavy selling pressure in all scrips, resulting in a sharp setback in values.

Bank shares remained quiet. Bank of Bihar came in for some enquiry upto Rs 30.

Jute shares continued to remain depressed in the absence of any support, reflecting the uneconomic working conditions generally experienced by the industry due to the growing disparity between the prices of raw jute and manufactured goods. Operators were naturally reluctant to enter into any commitments. Even the cornering activity, which had been noticed in National during the past two weeks, seemed to have subsided. This scrip, after touching a high of Rs 20-11 due to renewed interested buying, was marked down to Rs 19-13, to finish better at Rs 20. Howrah lost further ground to Rs 15-10 from Rs 16-8, to improve towards the close to Rs 16-1. Hooghly, however, recovered further to Rs 17-8 from Rs 16-4. Ganges were offered at Rs 46 to Rs 47-8 against Rs 49; Budge-Budge at Rs 90-0 against Rs 101 and Barnagore at Rs 92 against Rs 95.

Coal shares were listless, pending the announcement of the results of the application made to the Supreme Court for a stay order concerning the Labour Appellate Tribunal Award. Speculative activity in Burrakur was very limited, with the result prices moved narrowly between Rs 21-2 and Rs 21-4. Bengal showed a drop of Rs 5 at Rs 445, while South Karanpura turned quiet at Rs 9 against Rs 9-4 with Western Bengal maintained around Rs 5-10.

Tea shares ruled generally quiet in restricted trading, resulting in the price movements confined to a narrow range. Operators were generally inclined to book profits at the recent high levels in view of the easier trend in auctions prices, both in the Calcutta and London markets. Banarhat were marked back to Rs 311-8 from Rs 318; Brooke Bond to Rs 19-8 from Rs 20-10 Bishnauth to Rs 20-12 from Rs 21-12; Hantapara to Rs 191 from Rs 194 and Gohpur to Rs 22-10 from Rs 22-14. Dhelakhat, however, received sustained support upto Rs 21-7 from Rs 21-2.

Sugar shares came in for selective support on prospects of further exports; but prices developed a slightly easier tendency at the close in sympathy with the general trend of the market. The only steady feature was Carew at Rs 7-8.

Textile scrips continued to rule weak following the disappointment caused by the announcement by the Revenue and Civil Expenditure Minister to the effect that there would be no reduction in excise duties. Kesoram, after being marked down to as low as Rs 13-15 from Rs 14-8, finished better at Rs 14-4, while New Vijitoria eased off to Rs 1-14 from Rs 2. Jayshree idled around Rs 5-10.

In the week's trading, the worst affected was the Engineering section, where all scrips were subjected to renewed selling pressure on weaker advices from Bombay although the closing tone was a shade better due to some covering at lower levels. Indian Irons opened at Rs 20-3 and, after being gradually pushed down to Rs 19-9, recovered at the close to Rs 19-12. Similarly, Renunciation Rights opened at Rs 5 and, after touching a low of Rs 4-11, finished steady at Rs 4-15. Among other Engineering scrips, Jessop receded at one time to Rs 24-8 from Rs 25-12; Richardson to Rs 17-12 from Rs 18-8 and TEXMACO to Rs 19-6 from Rs 19-13, to finish better at Rs 24-11; Rs 17-13 and Rs 19-7 respectively. Braithwaite changed hands at Rs 25-2 to Rs 25-6 with Britannia hovering narrowly around Rs 13.

Trading in the Miscellaneous section was dull and featureless. Orient Paper, after opening at Rs 32, receded to Rs 31-4, while Titaghur were offered at Rs 35-8 against Rs 37. Shree Gopal were, however, maintained around Rs 16. India Steamship eased off to Rs 10-5 from Rs 10-9; BIC to Rs 7-9 from Rs 7-15; Dunlop Rubber to Rs 25 from Rs 25-8; Jardine Henderson to Rs 75-8 from Rs 80; National Carbon to Rs 26-6 from Rs 27-2; NICCO to Rs. 20-2 from Rs 20-7; Indian Aluminium to Rs 13-7 from Rs 14-1; Rohtas to Rs 17-8 from Rs 18-1 and Indian Cable to Rs 27-3 from Rs 27-6. Indian Copper were a narrow market around Rs 3-3. Alkali Chemicals changed hands on the ex-dividend ex-right basis at Rs 11-4 to Rs 11-9, while their rights, after being transacted at As 11, were quoted at as low as As 4 at the close.

*

Bombay

DESPONDENCY has once again caught hold of Dalal Street and prices have further slumped on account of nervous selling by longs as well as bear pressure. The market was trying to steady up from the post-budget low levels, but the Finance Minister's speech on Saturday in the Lok Sabha once again unnerved the market.

Conditions on the stock market have been demoralised and values have been steadily shrinking due to crisis of confidence. Despite the fact that the prices of blue chips have reached attractive levels, investors have been scared away. The market has been reduced to a crippled state and unless the political and budget uncertainties are over, the market will remain in a gloomy mood.

Apart from lethargic conditions in the giltedged market, banks and public utilities were in doldrums with the tendency remaining easier. Industrials slumped very badly. Tata Steel Ordinary dropped down to Rs 167-8 to recover to Rs 171 to come down again to Rs 168, while Indian Iron were sold down to Rs 19-8 on Wednesday afternoon as against Rs 20-8. Cotton mill shares suffered a further sharp drop on account of the difficult trading conditions in cloth market and the disappointing general outlook for the industry. Moreover, the categorical statement of the Ministers that there would be no reduction in excise duty also induced a bearish feeling. Bombay Dyeing dropped down to Rs 553-12 from Rs 571-4 to rally to Rs 570, but at the close weakened to Rs 555. Century was worst affected and recorded a new low of Rs 447 in kerb on Wednesday on heavy pressure from bears, while consideration of high carry over charges also adversely hit the scrip. Kohinoor were marked down to Rs 321. Standard which had recently gone up to Rs 485 on bonus issue announcement slumped to Rs 440. Khatau were fairly quiet around Rs 192-8 on additional dividend of Rs 4-4 for the year ended 30th June, 1954.

Scindia moved erratically with the shares dropping down to Rs 19-11 to rally to Rs 20-10, but again receded to Rs 20. The market is awaiting the directors' decision for bonus shares. Bombay Burma were hit hard and collapsed to Rs 587-8 from Rs 620 on heavy pressure from bears. National Rayon eased off to Rs 232 while Tata Locomotive were marked down to Rs 139 from Rs 145. ACC were a weak spot and came down to Rs 160-8 from Rs 166. Premier Automobiles were marked down to Rs 89-8. Premier Construction eased off further to Rs 167. Sugar shares were also lower and lacked fresh support. Tata Oil came down to Rs 42.

*

Ahmedabad

THE Ahmedabad share market ruled weak with prices suffering a further sharp setback. The disappointment caused over the failure of bonus shares in Arvind shares resulted in a sharp break to Rs 1,065 from the week's highest level of Rs 1,180. Calico Mills declined to Rs 525 from Rs 540, while New Shorrock were marked down to Rs 865 from Rs 925. Ambica Mills lost 15 points at Rs 584. Atul Products came down to Rs 165 from Rs 175-8 on account of the feeling that the dividend could not be more than Rs 6. Saraspur were marked at Rs 505 and Raipur Rs 850. Jupiter came to business at Rs 250 and Rohit Rs 170.

*

BALANCE-SHEET REVIEWS

(Continued from page 556)

ever, slightly lower at Rs 9.49 lakhs against Rs 11.00 lakhs. The directors have, in addition to maintaining the dividend at Rs 15 per share, recommended a bonus of Rs 3 per share on the Ordinary shares.

£ R $

New Shorrock

In the case of the New Shorrock Spinning & Manufacturing Company, sales have shown an increase from Rs 2.29 crores to Rs 2.52 crores. The profit amounts to Rs 62.30 lakhs as against Rs 32.57 lakhs in the previous year. Apart from providing Rs 10.00 lakhs for General Reserve and Rs 4.00 lakhs for Dividend Equalisation Reserve, the Taxation amount has been raised to Rs 23.80 lakhs from Rs 10.25 lakhs and Depreciation to Rs 9.46 lakhs from Rs 7.00 lakhs. Even after these increased allocations, the directors have found it possible to raise the distribution on the Ordinary shares from Rs 35 to Rs 45 (including a bonus of Rs 5 per share).

Shorrock Mills

The Shorrock Spinning & Manufacturing Company has earned a profit of Rs 35.11 lakhs as against Rs 19.65 lakhs in the previous year. Sales have fetched Rs 1.77 crores. The directors have, after allocating Rs 8.16 lakhs (Rs 7.00 lakhs) for Depreciation; Rs 3.84 lakhs (Rs 4.27 lakhs) for Development Rebate Reserve; Rs 11.30 lakhs (Rs 10.25 lakhs) for Taxation; Rs 3.00 lakhs (nil) for General Reserve and Rs 2.00 lakhs (nil) for Dividend Equalisation Reserve, raised the dividend from Rs 25 to Rs 30 per share (including a bonus of Rs 5 per share).

Sassoon Spinning

The profit of the Sassoon Spining and Weaving Company has amounted to Rs 39.90 lakhs after charging Rs 3.24 lakhs for managing agents' commission as against the combined profit of Rs 30.60 lakhs after providing Rs 3.06 lakhs for commission. It may be here noted that the results for the year are those of the amalgamated concern with New Union Mills and the figures for 1955 represent the combined results of the two concerns. Dividend has been raised from Rs 1-12 to Rs 2 per share. Sales have amounted to Rs 4.88 crores as against Rs 4.66 crores.

Gokak Mills

In contrast to the above mills, the gross profit of the Gokak Mills Limited has turned out to be lower by about Rs 2.58 lakhs as compared to 1955. The profit amounts to only Rs 19.13 lakhs as against Rs 21.71 lakhs in the previous year, despite a rise in sales of yarn and waste from Rs 2.32 crores to Rs 2.46 crores. The directors have set aside Rs 4.50 lakhs (Rs 4.00 lakhs) for Depreciation; Rs 5.70 lakhs (Rs 7.20 lakhs) for Taxation; Rs 1.25 lakhs (Rs 2.00 lakhs) for General Reserve and Rs 1.10 lakhs (Rs 1.20 lakhs) for Development Rebate Reserve. The dividend is reduced from Rs 15 to Rs 13 per shar.

Lakshmi Mills

The working of the Lakshmi Cotton Manufacturing Company, Coimbatore, is in line with the general trend of textile profits for the year, showing better turnover, profit and sales. The performance would have been still better, but for the heavy increase in excise duties from September 1 last. The accounts show a profit of Rs 21.76 lakhs as against Rs 21.79 lakhs in the previous year. A sum of Rs 5.58 lakhs is transferred from Engine and Machinery Fund, bringing the distributable surplus to Rs 25.90 lakhs. Of this, a sum of Rs 13.37 lakhs is provided for Depreciation; Rs 33,000 for Gratuity; Rs 4.82 lakhs for Taxation Reserve and Rs 2.74 lakhs for Engine and Machinery Fund. Sales of cloth, yarn and waste, etc., total Rs 2.29 crores against Rs 2.46 crores. The directors have recommended a final dividend of Rs 30, making a total of Rs 42-8 per share.

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields ! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

B.O.C

Markets Easy in March

The stock markets began the month of March on a nervous undertone as both operators and investors seemed to be anxious to lighten their commitments. Selling pressure was particularly prominent in Indian Irons as those scrips were shortly to participate in a rights issue by the company. In the context of the stringency of the money market, holders generally elected to get out of the obligation. In the general depression in the market where buyers were conspicuous by their absence, neither the encouraging corporate news that was received at that time nor the good tidings from the South that an agreement had been reached between the plantation workers and employers got the attention they deserved.

In Calcutta, Indian Irons opened lower at Rs 24-6 and in the course of the day's trading lost nine annas to be finally placed at Rs 23-13. Other speculative counters were also depressed in sympathy. Elsewhere jutes were listless while coals were unchanged. Engineerings were generally easier and the Miscellaneous section was featureless. Though teas continued to be steady the turnover was on a meagre level.

Dalal street was also depressed in sympathy with Calcutta. End of account considerations coupled with lack of support further accelerated the downtrend. Tata Irons sagged to Rs 167 from previous closing of Rs 168-8. Among textiles Bombay Dyeing reacted to Rs 535-10 from Rs 541-14.

2, 3 & 4

The Calcutta Stock Exchange Committee at an emergent meeting on the 4th decided to include Letters of Right of Indian Irons as a separate item to its clearing schedule on and from the 7th March when Indian Iron shares would be dealt on ex-right basis. There would be no dealings on Letters of Right until April 2 and business in them would be separately settled through the clearing house.

As the decision of the Committee of the Calcutta Stock exchange enabled holders of Indian Irons shares to renounce their rights to the new shares, sentiment, which had been depressed mainly on account of the responsibility devolving on Indian Iron scrips, markedly brightened up and the more speculative counters under the leadership of Indian Irons made smart gains. As it was generally believed that with the inclusion of the renunciation forms in the clearing list, the prospects of success of the right issue had become brighter, Indian Irons met with buying support. Simultaneously bears found it urgent to cover their sales. The cumulative effect of fresh buying and bear covering resulted in pushing up of Indian Irons to Rs 26-4 by the end of the day. Elsewhere, Orient Paper was a prominent feature moving up to Rs 32-12 from an opening level of Rs 31-2. Among Teas, East India was wanted upto Rs 26-1.

Widespread smart gains were recorded in Dalal street where also the pattern of trading was somewhat similar to that in Calcutta. Fresh buying and nervous bear covering imparted a bullish tone to the entire market and many a scrip was able to make substantial gains. Tata Iron shot up to Rs 175 from previous marking of Rs 167 while Bombay Dyeing spurted to Rs 559-6 from Rs 535-10. Century rose by 18 points to Rs 476.

5

The most important development of the day was the heavy selling pressure in Alkali & Chemical as a result of which the quotation for the scrip declined sharply from Rs 18-8 to Rs 14-4. The reason for the sudden unloading of the scrips was the announcement by Messrs Alkali & Chemical Corporation of India Limited that they proposed to issue 24,8000 new ordinary shares as right shares to existing share-holders in the proportion of four new shares to every one share held. That would mean that holders of the company's scrips would be required to find Rs 40 for every one share held by them. With the money conditions in the country being what they were, most of the holders of the scrip seemed to be unwilling to take up the new burden.

The stock market, however, continued to rule steady with recent gains well-held despite profit taking. Sentiment in Calcutta was also helped by better advices from Dalal street where a firm undertone developed consequent on the declaration of a good dividend by Bombay Dyeing coupled with the decision of the directors of the company to split the share (Rs 250) into 10 shares of Rs 25 each Indian Irons in India Exchange made further headway to close at Rs 26-14. Elsewhere the market was featureless. In Dalal street Tata Iron gained three points to Rs 178 while Bombay Dyeing was pushed up to Rs 580 from Rs 559-6.

6

Activity was at a low ebb in Calcutta; but the undertone continued to be steady. In Bombay prices gave way on heavy profit-taking consequent on realising pressure in Bombay Burmah.

The Alkali and Chemical Corporation of India Ltd., announced that members had the right to renounce their allotment if they so desired as regards the forthcoming right issue of the Company, either wholly or in part. The principal share holders namely, ICI (India) Private Ltd., would take up any shares which those entitled did not apply for or renounced.

In the Calcutta market Indian Irons opened at Rs 26-6 and closed fractionally better at Rs 26-8. Elsewhere in the market, conditions were generally unaltered, except for some interests noticeable in Guest Keen Williams in the Engineering Section, Martin Burns among miscellaneous Industrials, and East India in the Tea Section.

Sharp decline in prices, especially in pivotal counters, were noticeable in Dalal Street. Tata Iron, shed nearly 3 points to come back to Rs 175-12, while among Textiles, Bombay Dyeing receded to Rs 576-4 from Rs 580.

7

Trading on the Stock Exchanges, was generally featureless in the absence of fresh interest. Operators were inclined to await election results in Bombay while in Calcutta, apart from some interest in Tea Shares, activity was negligible. Indian Irons in the India Exchange moved within a narrow margin throughout the day. After opening at Rs 20-7 exrights, the scrip was finally placed at Rs 20-6 exrights.

There was more activity in the tea section with comparatively a large number of shares changing hands at advancing levels. East India continued to attract considerable attention, and was placed higher at Rs 29-2.

In Bombay, the underone was quiet with Tata Iron recording a loss of As 8 to Rs 175-4. Bombay Dyeing, however, was maintained around previous levels.

8

In the Calcutta Market, Indian Iron rights shares (Renunciation Form) made their appearance in the list along with other clearing shares, and was quoted at Rs 5-13 after having been done up to Rs 6. Despite the steadier undertone, the speculative counters displayed an irregular trend with their closing rates below the day's best. Selective Tea shares, however, continued to be in good request. Indian Irons moved narrowly around Rs 20-10. Among miscellaneous Industrials, Martin Burns met with enquiries up to Rs 26-9. In the Tea section, Biswanath was prominent. Presumably, due to the clarification issued by the Company, Alkali & Chemical recovered to Rs 14-8. Dull but steady conditions prevailed in Bombay, where buyers continued to be conspicuous by their absence. Scindia Steam was rather depressed on fears of reduction in freight rates, consequent on the partial reopening of the Suez for shipping. In the Steel Section, Tata Iron, gained nearly a rupee to Rs 176. Textiles were unchanged with Bombay Dyeing quoting Rs 577-8.

9

While the Calcutta market remained closed, Dalal Street displayed a quietly steady trend. In marked contrast to the previous day's selling pressure encountered by it, Scindia Steam met with speculative buying. A few favourites in the Textile Section were also in request. Elsewhere trading was uninteresting. Tata Iron closed unchanged at Rs 176, as did Bombay Dyeing at Rs 577-8. Century gained Rs 4-8 to Rs 478-8.

10 & 11

The Bombay Stock Exchange remained closed on account of the general elections. In Calcutta it was a short session and conditions were generally dull, with price movements insignificant. The volume of business passing, was at a disappointing level. Indian Iron after opening at Rs 20-0 shaded at Rs 20-7. Indian Irons rights share opened at Rs 5-14 and closed at Rs 5-12. Tea shares, were an active market, and sizeable business was put through. East India, firmed upto Rs 29-10.

12

A general desire to lighten commitments was discernible among Stock Market Operators, presumably due to the extended week-end, consequent on the intervention of the Holi Festival and the general election in Calcutta. Indian Irons opened easier at Rs 20-3. The scrip closed almost unchanged at 20-4. The rights share began at Rs 5-9, went up to Rs 5-10 and closed unchanged on balance at Rs 5-9. The most outstanding feature of the day was found in the Tea section, where, East India, spurted to Rs 31-4 from an opening level of Rs 29-14. The firmness of the scrip had been brought about by interested buying.

(Continued from page 589)

The Bombay market moved in an irregular fashion. After an easy opening, selected scrips recorded some gain on bear covering coupled with replacement buying

Toward close, they again developed a sagging tendency in the absence of follow-through support. The market closed on a quiet undertone. Tata Iron receded to Rs 175 from Rs 176 while Bombay Dyeing came back to Rs 575-10 from Rs 577-8.

13

Marketmen were now concerned about the shape of things to come on March 19, when the Finance Minister was expected to present his Interim Budget. Though it was generally believed that it would be a lame duck affair, there were persistent rumours that the cloth excise duty would be reduced. It was also thought necessary to defer action till the 19th in view of the anticipation that Mr Krishnamachari would indicate the manner in which Government proposed to tackle the difficult foreign exchange problem.

In view of the extended weekend operators were reluctant to extend their commitments and as a consequence prices drifted to lower levels. In Calcutta Indian Irons was placed finally at Rs 20-3 while the Right Share was unchanged at Rs 5-8. In Dalal street a quiet tendency prevailed with Tata Iron and Bombay Dyeing unchanged at Rs 175 and Rs 575-10 respectively.

14

The Calcutta Stock Exchange remained closed on account of the General Election. Sentiment was steadier in Bombay where equities recovered under the leadership of Scindia Steam. Speculative inquiry and short-covering accentuated the uptrend. Tata Iron gained 3 points to Rs 178 while Bombay Dyeing forged ahead to Rs 583-2 from Rs 575-10. Scindia Steam was marked up to Rs 21-9-6.

15, 16 & 17

The stock markets remained closed for the holi holidays.

18

After a quiet reopening after the holidays, the stock markets developed a steadier tendency in later dealings. The improvement was brought about by reports that the interim budget next day would not contain any unpleasant surprise for industry. Moreover it was believed by a section that in view of the mounting stocks in the cloth markets due to the unwillingness of the consumer to pay the higher prices after the imposition last November of an increased excise duty, there would be a reduction in the duty. Bull operators were keen buyers and bears were left with no other alternative but to cover their oversold positions. The cumulative result of bull interest and bear covering was reflected in the higher price levels. In Calcutta Indian Irons after opening at Rs 20-8 moved up to Rs 20-11 with the Right Share placed at Rs 5-14. In Dalal Street, Tata Iron was well maintained around previous levels. In the textile section Century was particularly in demand moving up smartly to Rs 485 from Rs 479-8.

19

The interim Budget for 1957-58 placed revenue on the basis of existing taxation at Rs 636.22 crores and expenditure at Rs 663.09 crores leaving a deficit of Rs 26.87 crores as revenue account. The overall deficit next year had been estimated at Rs 365 crores. The deficit in the revenue account and the larger provision for capital outlay and loans to State Governments for development expenditure accounted for the increase in the overall deficit. Credit had been taken for a new loan of Rs 100 crores and Small Savings had been assumed to improve to Rs 80 crores and foreign aid was expected to amount to Rs 135 crores. Allowing for other miscellaneous transactions under Debt and Remittance Heads, on those estimates the gap would be at the figure of Rs 365 crores. The revised estimates revealed a surplus on revenue account of Rs 37.94 crores as against an anticipated deficit of Rs 18.04 crores in the Budget for that year.

In the pre-Budget trading sentiment continued to be cheerful and was even buoyant with regard to the more speculative counters. Indian Irons opened at Rs 20-14 and soon crossed the Rs 21 mark to be done upto Rs 21-6. In the special Budget session that evening there was perceptible lack of enthusiasm. The fact that the Budget proved to be a lame duck affair was relegated to the background and the fact that there was no reduction in excise duty on cloth was made much of. Indian Irons opened at Rs 21-2 and after moving slightly up to Rs 21-3 reacted to close at Rs 20-15. In the post-Budget session in Dalal Street textiles were easier. Bombay Dyeing which was done upto Rs 588-2 in the pre-Budget session, reacted to Rs 585. Tata Iron, however, was unchanged at Rs 180.

20

With operators in Dalal Street in a depressed mood because of the absence of any relief as regards the excise duty on cloth, stock market sentiment became gloomy. The big gap of Rs 365 crores which had been left uncovered aroused renewed apprehensions about fresh taxation in May when the New Parliament would meet. Indian Irons in Calcutta began the day at Rs 20-10 and after earlier steadiness fell back to Rs 20-7 by close on realizing pressure. In Bombay values declined sharply on a wide front due to nervous long liquidation. Tata Iron lost Rs 4-8 to Rs 175-8 while Bombay Dyeing slumped to Rs 571-4 from Rs 585. Century lost 11 points to come back to Rs 473.

21

The Bombay stock Exchange remained closed on account of Navros festival. In Calcutta the more speculative counters continued to encounter selling pressure. The rest of the market was also quiet with prices displaying a sagging tendency. Indian Irons closed quiet at Rs 20-4.

22

Marketmen were anxious to lighten their commitments as discussions about the economic condition in the country as revealed in the White Paper generally ended on a note of pessimism as far as prospects for equities were concerned. The consensus of opinion appeared to be that fresh taxation was a certainty. The speculative counters had to bear the brunt of the selling pressure and Indian Irons after a better opening receded to close easier at Rs 20-3. Textiles continued to be depressed in Dalal Street. Bombay Dyeing declined further to Rs 565-10 from Rs 571-4. Tata Iron also eased to Rs 173-0 from Rs 175-8.

23

The Finance Minister's reiteration of Government's determination to implement the Second Plan at any cost seemed to have unnerved the marketmen in the Stock Exchanges. The categorical statement was interpreted to mean that heavy additional imposts and new restrictions were in the offing for the private sector in May. His angry remarks about the unsocial acts of a section of businessmen was taken as an indication of further stiffening in Government's attitude toward private enterprise as a whole. While the Calcutta Stock Exchange remained closed, conditions in Bombay were slightly steadier with Tata Iron at Rs 174 and Bombay Dyeing at Rs 570. Sentiment in Dalal Street had evidently been helped by Mr Morarji Desai's rejection of the demand for nationalising tea companies.

24 & 25

That operators had taken a bearish view of the Finance Minister's speech in reply to the debate on the White Paper was evident when the market opened after the weekend. Indian Iron in Calcutta slumped to Rs 19-13. Jute shares met with selling pressure. In Dalal Street Tata Iron lost four points to come down to Rs 170 while among textiles Bombay Dyeing dropped Rs 7-8 to be marked down to Rs 562-8.

26

Buyers were conspicuous by their absence in the stock markets. Even the encouraging corporate news received failed to attract attention. It would appear that both operators and investors had completely lost faith in the stock markets. Indian Irons moved within a narrow margin and closed at Rs 19-13. Tata Iron was unchanged at Rs 170. Bombay Dyeing on publication of an encouraging report was slightly better at Rs 563-2.

27

The announcement by the Revenue and Civil Expenditure Minister that there would be no reduction in the excise duty on cloth was the signal for a further marking down of rates in the textiles section in Bombay. Century came down to Rs 452-8 from Rs 458. Bombay Dyeing eased to Rs 557-8 from Rs 563-2 In Calcutta Indian Iron shaded to Rs 19-12. Elsewhere interest was at a low ebb.

28

Stock market sentiment continued to be depressed. Equities receded further due to renewed offerings and absence of support. Indian Irons was hammered down to Rs 19-3. Tata Iron reacted to Rs 168. Bombay Dyeing slumped to Rs 548-2.

29

Except for modest gains in the textile section in Dalal Street, stock markets ruled quietly steady. Indian Iron was finally placed at Rs 19-8. Tata Iron was better at Rs 169-8 with Bombay Dyeing done upto Rs 553-12.

INDEX NUMBER OF WHOLESALE PRICES.

The following table shows group and sub-group movements of the indices during the month under review, the preceding month and the corresponding month of 1956.

For the Investor

Pity the Investor!

Investment Gossip:

DAY by day, stock exchange activity gets thinner and thinner; and share prices lower and lower. In present conditions, rallies are few and far between. And they are too feeble to last.

The irony of it is that developments of every kind are the kind of stuff on which the investors should feed and flourish. Good news with regard to corporate profits makes no difference to the all-compelling dejection of spirits. Good news from the international front like the reopening of the Suez Canal passes unnoticed. The promise of disbursements on the Plan to the amount of Rs 900 crores in 1957-58 is misinterpreted as a bear factor.

Why all this unresponsiveness to every manner of favourable tidings? Why this taciturnity of behaviour?

The reason is that, in all the wide money market, the investor is the one entity who has no friend at all, whom all others conspire to injure, and whose reward is begrudged by everyone concerned.

If he has invested in Government securities, he is wooed when a new loan is on issue, and spurned the moment the list is closed. He sees the Reserve Bank watch declining giltedged prices with supine indifference. If he has invested in long-term stock, he sees the Reserve Bank proffering superior advice to banks to keep away from long-term securities.

If the investor has employed his funds in industrial shares, he finds that every interest other than himself has its guardian or god-father.

The State looks after itself exceedingly well by appropriating nearly fifty percent of the profit.

The managing agent protects himself by the terms of his agreement with the company. And even if the company suffers a loss or does not make adequate profits, the agreement provides for a minimum to the managing agent. Let me say it in your ear that, profit or loss, a good few of the managing agents contrive a number of perquisites of which the less said, the better.

Labour is protected, entrenched and pampered. Trade unions fight their cause well. Government and agencies set up by them are mostly disposed to ditto.

The consumer, too, has his rights defended, if need be, at the Parliament. In some cases, Government have stepped in by prescribing ceilings for selling prices.

It is only the shareholder who is utterly friendless; who, in fact, is surrounded by hostile elements.

The natural tendency of managing agents is to economise in the payment of dividends. And they do this under the high-sounding name of ploughing profits into the company's business. They are insensitive to the joke that the same high-sounding principle is not allowed to affect the scale or magnitude of the managing agency commission plus perquisites. In the bargain, the managing agents claim applause for a policy which, while depriving shareholders of their legitimate dues, is made out to be a praiseworthy demonstration of conservative financial policy.

Shareholders! conservatism is right. Managing agents? Liberalism is right.

For their part, Government evince no friendliness to shareholders. Freeze the dividends, say the Government in cases where they have lent monies or stood guarantee for loans. In all cases they levy a tax on dividends if they are over specified rates, they tax bonus issues unmindful of its being double taxation, and, if rumours are to be believed, are planning more imposts.

Profits are stridently rising; dividends are static and, at the best, show a modest rise.

Even the stock exchange committees are no friends of the investor, to protect whom and to advance whose interest stock exchanges are supposed to function. Suppose you have bought and paid for 100 shares of Indian Irons? You will get a dividend of Rs 100 per year, which may turn out to be a fraction of the capital loss shown in your books. On the other hand, if you had made a blank sale of 100 Indian Iron shares, you are assured of Rs 3 to Rs 4 per year in the shape of satta paid by the bull. Why lock up your money and get a doubtful return when you can make a sale and reap a certain and substantial reward?

The general public envy the dividend percentage while being ignorant of the simple fact that the price paid by you was very much more than the face value. We are in the process of perfecting the technique for making the proverbially shy investor hundred-fold more shy.

Is it any surprise that the investor gets increasingly allergic to stocks and shares!

HIGHLIGHTS

The transition from gold and silver to cash and credits was indicated in this column last week. We may now deal with another phrase, stocks and shares.

In terms less understood by laymen, the description is: Bonds and Equities.

In broad terms, Bonds comprise the securities of Government bodies, public authorities like Port Trusts, and prior charges of joint stock companies in the form of fixed interest bearing debentures or preference shares.

Equities are the ordinary shares issued by corporate enterprises.

Bonds are dealt in in the giltedged markets, and Equities in the share markets.

But giltedged markets and share markets are not distinct entities and operate as sections of the Stock Exchanges.

If the Second Plan is to attain its targets in confident style, the public sector must be assured of the resources necessary for the State projects. A good part of these resources must needs be raised as market loans. If the private sector is to discharge its allotted task, it must be assured of the needed capital mostly in the form of ordinary shares.

From these points of view, the giltedged markets and the share markets are of vital importance.

Both must be kept in good shape and stout heart.

They are, however, in poor shape and in faint heart today.

So was the banking situation four months ago. TTK took this matter on hand, and has succeeded in endowing it with adequate resources.

It is now the turn of the Stock Exchanges to claim TTK's personal attention and to spring into full vitality through his characteristic drive.

Watch-dog explains, in this issue, why the investor is feeling forlorn, dejected and friendless, while Eavesdropper urges that TTK must befriend him to such effect that confidence takes the place of the present diffidence. Where he has historically been shy, he should be made discreetly bold and discriminatingly enterprising.

The financing of the Second Plan depends, in a great measure, on the investor's boldness and enterprise.

Around India with Brooke Bond

The Murias of Madhya Pradesh
The Murias, a charming, industrious tribal people, live in Bastar in Madhya Pradesh, a land of undulating plains, Sal forests and hills. The Murias are fond of wearing feathers, glass beads and colourful clothes. A unique feature of the Murias is their Ghotul—a kind of village dormitory of which all unmarried boys and girls are members. The boy members of the Ghotul help in festivals while the girls work as bridesmaids in weddings. Their games and dances help to bring joy and gaiety into the lives of the Murias.
Around here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop. Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Shree Gopal Paper

Investment Special:

A demand for the material that I am writing this article on and on which this article is being printed, is expected to rise to 500,000 tons by 1960-61.

Over the period of the First Plan, with a view to improving the expanding demand for paper, the output of this commodity rose from 114,000 tons to 202,000 tons. But it will be obvious that the leeway made up by increased production remains considerable.

It rebounds to the credit of the paper industry that efforts are stridently in hand for such expansion in production capacity.

The latest entity to announce a substantial expansion programme is the Shree Gopal Paper Mills Limited. The scheme taken up by the company envisages an increase in the rated capacity from 13,500 tons per annum to 32,000 tons per annum.

The present schedule calls for the completion of the programme by the end of 1958.

It will be seen that the prospect for the paper industry is assured. But, of course, finance is necessary.

The total cost is estimated at Rs 3 crores. Expenditure already incurred is of the order of Rs 86 lakhs. A further Rs 70 lakhs are available from the company's liquid reserves. Thirdly, the undistributed profits and depreciation and development

More Textile Results

Balance-Sheet Reviews:

NINE more Textile mills—Bombay Dyeing, Vishnu, Lakshmi Ambica, Hind, Arun, Ashoka, New Cotton and Saraspur—have presented their reports and accounts; and working results of all these mills should be considered as satisfactory.

£ R $

Bombay Dyeing

Despite a general rise in operational costs, the Bombay Dyeing and Manufacturing Company has reported excellent working results for 1956, showing a net profit of Rs 54.1 lakhs after providing Rs 26.45 lakhs for Depreciation against Rs 26.86 lakhs and stepping up the provision for Taxation from Rs 29.5 lakhs to Rs 33.0 lakhs. Sales of cloth, yarn, waste, etc., have risen from Rs 7.25 crores to Rs 7.54 crores. Other allocations are: Rs 12.87 lakhs for Gratuities against Rs 1.5 lakhs; Rs 1.37 lakhs for purpose of "set on" for bonus in subsequent years as per agreement against Rs 7.83 lakhs and Rs 13.14 lakhs for Development Rebate against Rs 14.88 lakhs. The directors have recommended a final dividend of Rs 17-8 per share, making a total of Rs 25 for the year.

Stocks on hand at the close of the year are higher at Rs 1.92 crores as against the opening stock of Rs 1.67 crores. In this connection, the directors have stated that the stocks with the mills, at the end of the year, were the heaviest for many years.

Vishnu Cotton

The Vishnu Cotton Mill Limited has reported a smaller profit of Rs 12.90 lakhs for 1956 as against Rs 15.35 lakhs in the previous year consequent on a decline in the sales of cloth, yarn, etc. to Rs 2.24 crores from Rs 2.49 crores. A sum of Rs 4.5 lakhs has been transferred from Depreciation, Renewal and Extension Fund and Rs 2.19 lakhs from Dividend Fund, bringing the distributable surplus to Rs 18.98 lakhs. Out of this, the directors have provided a sum of Rs 14.46 lakhs for Depreciation; Rs 1.34 lakhs for Debenture Redemption Fund and Rs 45,000 for Gratutity Fund. A final dividend of Rs 5-8 has been recommended, making a total of Rs 8 per share for the year. The total amount of Depreciation to be provided for the year is Rs 16.68 lakhs; but the directors have decided to provide Rs 14.46 lakhs only in view of the profit being insufficient to cover full depreciation and other provisions..

£ R $

Lakshmi Cotton

As in the case of the Vishnu Cotton Mill, the Lakshmi Cotton Manufacturing Company has also reported a slight decline in net profit from Rs 21.79 lakhs to Rs 21.76 lakhs, mainly due to a decline in sales of cloth, yarn and waste

Inflation? Deflation!

THE world is getting increasingly befogged by the results and repercussions of the anti-inflation campaign conducted for many months now in many countries. The puzzlement has reached the point where some observers are not sure whether the current phase is one of inflation or of deflation or of both at the same time. The third alternative has found expression in a recent estimate made by Time on the state of the US economy. The Suez crisis is supposed to have wrought a similar blend in Britain. Mr T. T. Krishnamachari, too, spoke recently both of inflationary and deflationary forces.

Some weeks ago, Indian Finance posed this conundrum, and suggested that the simple answer, so far as India was concerned, was production. Everything is being done to expand production in industry and in agriculture. We, for our part, believe that we are in sight of tangible results. In commending a hopeful outlook in this respect, we may cite a few notable developments.

It was but six months ago that the country was afflicted with misgivings about the adequacy of cloth production to meet the demand stimulated by the dispersed and stepped-up purchasing power resulting from the mounting disbursements on planned projects.

What is the position with regard to cloth supplies now? Ahmedabad and Bombay have been complaining of accumulating stocks in the godowns of mills and in the hands of the dealers. The pace of outflow from held-up stocks has recently shown a welcome improvement. Exports to foreign countries are beginning to make better showing. Prices have receded from the peak levels. And there is now a realisation that the cry of a cloth famine was a false alarm. What happened last autumn was the usual ruse of traders to mulct the consumers. The latter displayed timely and firm resistance; and the move of the dealers has boomeranged on them.

The excise duty must be reduced, clamour the concerned interests. The Finance Ministry keeps an alert watch over the situation, and will, no doubt, do the needful at the appropriate time. The point to take note of in this context is that production in cloth is sufficient to keep inflation at bay in this particular sphere.

Sugar is another commodity where the record of production is reassuring. 1956-57 season is progressing favourably; and domestic output is expected to be of such magnitude as to stress the advisability of exporting at least 100,000 tons. It may well turn out that we could export even a larger quantity. Sugar will figure as a significant foreign exchange earner. We may, thus, regard this sweet article as providing much needed exchange in our foreign trade and in exorcising the ghost of inflation in the domestic sphere.

The food front may present a sudden transformation. The season coming to an end has been generally favourable; and, if supplies appear inadequate, it is less because of factors pertaining to production than of rampant propensity at all level to hoard. The ultimate consumer is not without blame in this regard; for, he, too, is disposed to keep a two months' stock where, ordinarily, he would have been content to hold a month's requirement. Such manner of hoarding has snowballed demand. There are signs that the phase of increasing the provision for the rainy day is nearing its end. When purchases will be confined to current needs, normalcy will return, with supply adequate and prices reasonable.

The golden fibre is another case where the dealers who hoarded to profiteer are now in search of buyers.

We envisage, in fact, lower levels of prices over a wide range of commodities; and, by summer, it may be the turn of the consumer to be on top of the world. Trends in the world commodities markets provide the same augury.

The Personality of India's Mixed Economy—XIII

IT WAS pointed out in the last two articles of this series that, if the concept of welfare is to serve as the basis of economic policy and help in the attainment by the individual of a sense of well-being, it must be thought out in relation to the conditions and needs of particular classes into which the country's population may be divided. That may seem to offend against the notion of economic equality which, prima facie, demands the assumption that the economic needs of all people are too much alike to permit any difference of treatment. But this assumption will not bear scrutiny. What is more, it is not capable of achievement in any foreseeable distance of time. It is inconceivable that the same standard of housing can be achieved (or is necessary) in rural and urban areas, not to speak of different classes. It is equally unthinkable that all classes will have the same high degree of general and specialised education, for, when resources are palpably inadequate even for free compulsory primary education, there is no point in pitching aims even higher. But even apart from economic feasibilities, there is no warrant for supposing that no man can be happy unless he is like every other in material possessions and other aspects of material welfare.

In considering welfare from the stand-point of the individual, one is tackling, though perhaps on a lower plane, the same problem as has been dealt with by Bertrand Russell in his Conquest of Happiness. The philosopher was considering the requirements of more educated and more sophisticated individuals belonging to the higher social strata; and much of what he said on the subject has no close application to what is examined here. But there are a few points which are of paramount importance, namely, that, to every individual, be he high or low, his work is not only a means of gaining his livelihood, but is also, potentially at least, a source of joy. Another is the importance of a reasonable degree of freedom from jealousy to the individual's ability to keep a healthy outlook on life. A third point is that the worker should be buoyed up by proper recognition from those around him and that conditions of work must be such that the hours of creative leisure can be separated from the normal economic work which, in the best of worlds, cannot be free from an element of drudgery. The points that have large social significance have been mentioned here as they alone are relevant to the question on hand. It will be seen that they are applicable to all forms of economic organisations from the vast and highly technical industrial units of the US or the USSR to the cottage industries and peasants of a backward and undeveloped economy.

Placed as India is now, no real progress in popular welfare can be achieved, if the Government do not work on the basis of precise ideas about what makes for the individual's sense of well-being. The tendency to think of welfare in terms of real or money incomes is due, not only to the social pressure in that direction, but also to the fact that, on such a basis, the problem itself is mercifully simplified. While many a foreign nation may follow the prevailing vogue and act as if relative levels of money incomes are all that mattered, the Indian Government ought to act with the full consciousness that, here in this country, social contentment and social stability had been achieved over many millenia in conditions which elsewhere might have made of revolution a chronic malady.

It is tempting to pooh-pooh this historic achievement of the Hindu race as being due to the shrewd malevolence of the upper classes or the stupid docility of the lower. In reality, it is due only to a clear grasp of the essence of individual well-being and care in securing it for the common man which left no loophole for the kind of discontent that makes for social upheavals. Doubtless, the social outlook and the individual inhibitions which Hinduism cultivated among the members of the faith were a powerful help both in maintaining the system of economic organisation and in securing its fruits of social peace and individual contentment. It may be open to question whether, in the present day, it is feasible or defensible to buttress a wise social order with something akin to religious sentiment. The Communists, for one thing, depend on principles and methods which are not far different. And it must be plain to all thinking men that social stability cannot be left to depend solely on the relative movements of wages and prices, though these are undoubtedly important. When all that can be won on the economic front has been won, there will remain some stiff engagements to be fought on the social, cultural and ethical fronts, before civilisation can claim individual welfare as its lawful captive.

In considering the problem of welfare as a basis of India's economic policy, it is necessary to consider the proper priorities for the battles just referred to. If all the resources are commensurate with the efforts involved, there must be some who, like Stalin before D-Day, would be pressing importunately for the Gov-

ernment to open a second front. This second front is not to be thought of in terms of the numbers of schools and colleges or even the output of literature of mass adult reading, but in terms of true culture and genuine education. It should be designed to gain from the average man due recognition of the imponderables of life, social and individual, so that he may frame for himself a proper attitude of tolerance and sympathetic understanding of the limitations of public policy (as for instance in the pursuit of equality) and of composure in the face of individual disappointment or even frustration in the larger sense of the term.

Contrary to popular ideas on the subject, such tolerance and composure are more easily attained in conditions of basic social justice and economic sufficiency than when indignation at the evils of an unequal society fans the flame of resentment against individual misfortune. A Government which is pledged to social justice will only make a mess of its job if it overlooks the imperfections of its achievement inevitable at any stage and omits to prepare the citizen for sympathising with such failures instead of making them a subject of grousing and the starting point of fresh social unrest.

In considering the concept of welfare, the first place has been given to the internal ingredients of individual happiness, not out of any bourgeois bias, but because, in addition to their being intrinsically important, they are most in danger of being overlooked by a government whose revolutionary zeal is apt to go to its head. Obviously, welfare has its economic as well as its cultural content. While the economic aspect will be gone into later, it should suffice now to emphasise that the Government should lose no time in starting what has been called the second front in the war against popular unhappiness. All the increase in economic production will have lost its purpose, if the masses continue to be the prey of democratic jealousy and have no powers of resistance against the irresponsible elements who will seek to play up even the smallest differences of wealth and income in a broadly socialistic society. The resistance can be developed only if people are taught to set a special value on the way of life and the texture of life more than on its material content.

Export Risks Insurance Corporation

THE Government of India have decided to set up an Export Risks Insurance Corporation to provide protection to exporters against risks in export trade as a measure for stimulating the export trade. This decision has been taken by the Government on the recommendation of the Committee which was asked to consider the scope of a scheme of export credit guarantee.

The Corporation will be registered as a company and all its shares will be owned by the Government of India.

There need be no apprehension in the minds of general insurers in the country on the score of encroachment on their trade. The Export Risks Insurance Corporation as a body will be complimentary to marine insurers. The policies of the Corporation will commence from the time that normal transit policies cease; and, even in the Warehouse to Warehous Clause, the Corporation's cover will be supplementary to covers customarily granted by marine insurers. Between marine insurers and the Corporation, the exporter will have fullest cover calculated to eliminate uncertainties. That will instill confidence and will thus act as an incentive to exports.

This is, at least, the basis on which export credit guarantee insurance is written overseas. In the UK, it is transacted commercially by private companies. Although, in India, the Corporation is going to be a Government enterprise, it can be assumed that it will take care to see that it does not encroach upon the domain of marine insurers by covering risks customarily written by marine insurers. The press report is not very clear as to the nature of the risks to be covered by the Corporation. The risks to be covered have been stated as division risk, import and export control risks with certain safeguards, insolvency and default risks, war and civil war risks, transfer risks, any other risk which is caused by factors outside the control of the exporter or buyer which arises from events occurring outside the exporters' country, CIF risks, and the inability to recoup by sale expenses incurred on market surveys, publicity, stockholding and other promotional measures for the development of a particular market.

These are somewhat vague, and comments thereon have to be reserved till the full details of the proposed policy are made public. So long, however, as the Corporation adheres to the basic principle, namely, to steer clear of the marine policies of general insurers, the Corporation will be a useful adjunct to export trade.

The authorised capital of the Corporation will be Rs 5 crores for the present, the subscribed capital being Rs 2.5 crores. The subscribed capital will be increased from time to time as the growth of business warrants.

The rules of premium have not been announced as yet. The premium will have a vital bearing on the scheme, for, the premium must be so devised that it does not act as a disincentive to export. At the same time, it must be adequate to cover the risks. It is usual in this class of insurance for the exporter to bear a part of the risk, say, 10 per cent. This is provided to ensure that the exporter takes normal care as a man of ordinary prudence would.

BALANCE-SHEET REVIEWS

(Continued from page 636)

from Rs 2.46 crores to Rs 2.30 crores. The directors have, after providing Rs 13.38 lakhs (Rs 7.82 lakhs) for Depreciation; Rs 33,000 (same) for Gratutity Fund; Rs 4.82 lakhs (Rs 7.05 lakhs) for Taxation and Rs 2.74 lakhs (Rs 61,143) for Engine & Machinery Fund, recommended a final dividend of Rs 30 per share, making Rs 42-8 per share for the year.

The directors have stated that the closing stocks for the year are more than 60 per cent larger than the opening balance and stocks of superfine cloth in particular continue to present a serious problem. Stocks of cloth would have been even larger, had not production been to a large extent switched to export before the end of the year.

£ R$

Ambica Mills

After providing Rs 9.38 lakhs for managing agents' commission as against Rs 10.68 lakhs for 1956, the gross profit of Shri Ambica Mills Limited, Ahmedabad, has amounted to Rs 98.40 lakhs as against Rs 80.91 lakhs in the previous year. Sales have fetched Rs 4.35 crores against Rs 4.13 crores. Stocks of finished goods, at the close of the year, were Rs 75.05 lakhs against Rs 69.39 lakhs. The directors have set aside Rs 11.06 lakhs (Rs 18.50 lakhs) for Depreciation; Rs 5.00 lakhs (nil) for Development and Rehabilitation Reserve; Rs 49.00 lakhs (Rs 29.00 lakhs) for Taxation; Rs 3.00 lakhs (Rs 1.50 lakhs) for Staff Grauity and Rs 13.00 lakhs (Rs 12.00 lakhs) for General Reserve. The dividend on the Ordinary share has been recommended at Rs 25 per share plus a bonus of Rs 5 as against Rs 25 plus a bonus of Rs 2 in the previous year.

£ R$

Hind Mills

The Hind Mills Limited has made a net profit of Rs 22.77 lakhs after providing Rs 2.80 lakhs for managing agents' remuneration for the year ended 30th June, 1956. The directors have provided Rs 8.17 lakhs for Depreciation and Rs 4.50 lakhs for Taxation, while Rs 4.00 lakhs has been transferred to Development Reserve and Rs 2.00 lakhs to General Reserve. A dividend of 6 per cent has been recommended on the Ordinary shares.

Prospects for the current year are not considered bright in view of higher exiise duty and the various restrictive measures. Sales for the year have fetched Rs 3 24 crores.

£ R$

Arun Mills

The Arun Mills Limited has made a profit of Rs 26.39 lakhs after deducting managing agency commission of Rs 4.25 lakhs as against Rs 21.06 lakhs after providing Rs 7.57 lakhs for commission. A dividend of Rs 25 per share has been recommended on the increased capital as against Rs 30 per share on the original capital.

£ R$

Ashoka Mills

The working of the Ashoka Mills for 1956 has resulted in a profit of Rs 37.30 lakhs after providing Rs 4 23 lakhs for managing agency commission. The profit in 1956 was Rs 31.51 lakhs after deducting Rs 7.06 lakhs for managing agency commission. The dividend has been maintained at Rs 30 per share.

£ R$

New Cotton

After providing for managing agents' commission of Rs 1.30 lakhs, the profit of the New Cotton Mills comes to Rs 15.20 lakhs as against Rs 13.92 lakhs after deducting Rs 3.91 lakhs for commission. The dividend has been reduced to Rs 20 in view of the increase in capital following bonus issues as against Rs 30 for 1955.

£ R$

Saraspur Mills

The profit of the Saraspur Mills for 1956 has amounted to Rs 26.55 lakhs after providing agency commission of Rs 2.83 lakhs as against Rs 24.41 lakhs. A dividend of Rs 20 per share has been recommended on the increased capital as against Rs 30 on the original capital.

£ R$

Purtabpore Sugar

Although the quantity of cane crushed by the company's factory is lower at 25.97 lakh maunds as against 26.16 lakh maunds in the previous year, the quantity of sugar manufactured has remained the same, at 2.66 lakh maunds, for the year ended 31st October, 1956. Sales have shown a slight rise to Rs 66 20 lakhs from Rs 66.06 lakhs, while the net profit, before providing for Taxation and Depreciation, amounts to Rs 6,76,334 against Rs 6,75,414. The directors have, after raising the Depeciation amount to Rs 1.60 lakhs from Rs 1.25 lakhs and Rehabilitation Reserve to Rs 2.50 lakhs from Rs 1.70 lakhs, reduced the Taxation amount to Rs 1.25 lakhs from Rs 2.50 lakhs. The dividend on the Ordinary shares is, however, maintained at As 12 per share.

According to the directors' report, the efficiency of factory continues at a very high level, while the company's estates continue to supply cane to the factory and seed-cane to growers to assist in improving both the quantity and the quality of the cane offered for crushing.

Editorial Notes

Dynamism—Key to Progress

At the annual session of the Bharat Chamber of Commerce President Gopikrishna Khemka, in a kind of post-script to the general survey, urged upon its members that survival depends upon adjustment; that efficiency in business arises from flexibility in policy; and that dynamism holds the key to progress. It is essential to recognise that business can thrive and function only in conditions of political stability; and that a government which provides and guarantees that stability must receive the fullest co-operation of the business community, particularly with regard to plans which seek to reinforce political stability by social justice and economic strength. In this spirit, and with this realisation, Mr Khemka hails the achievements of the Nehru Government and commits the businessmen to full support of the Second Plan, whose emphasis on the public sector is correctly seen by him as providing significant and substantial opportunities for the private sector.

What is particularly interesting is the fact that Mr Khemka is not put out by the difficulties that have been experienced in the first year of the Second Plan. On the contrary, he points out that both the incipient inflation and the drain on foreign exchange resources had been anticipated, although they have occurred slightly sooner than expected and in a slightly more aggravated form. In this regard, he has rightly emphasised increased production and foreign exchange mobilisation as the answers to the conundrums. Indeed, he sees an interconnection between the two. He makes the point that, in the long run, exchange earnings are what we should strive after, and not exchange savings. Mr Khemka has made the emphatic suggestion that we should produce more for exports. In this light he has welcomed the appointment of an Export Promotion Committee by Government. But he points out that the question of productivity "assumes special significance in any export drive for processed and manufactured goods". That is to say, "the burden of higher wages unrelated to productivity creates problems in the internal economy". And, in the result, "such shortsighted wage bargaining can only lead to disaster in the export field".

It is now recognised quite clearly that an increase in agricultural production is the best insurance against inflation. It is time that we realised that an increase, a much sharper increase, in industrial production can, by enabling larger exports, mitigate the foreign exchange problem faced by this country.

*

Kerala and Orissa

Keen students of politics could not have omitted to notice the sharp divergence in public reaction to the success of the Communist Party in Kerala on the one side and the Ganatantra Parishad in Orissa. Though the Parishad could not secure more seats than the Congress, its chances for leadership in a coalition at one stage seemed greater than those of the Congress. In comparison with the two parties' respective positions in the 1952 elections, the Parishad's gain in 1957 is more impressive than that of the Kerala Communists.

And yet, when the Communist victory is hailed as an epochmaking event full of significance even to the future of international communism, the Parishad's success is quietly dismissed as no more than part of the passing political fortunes of a State. The Parishad has received the rather uncomplimentary description of a rightist group with a leftist programme. Perhaps it is on this ground that the PSP and the Independents in the new Orissa legislature are found to favour a Ministry of Ex-rajas as against one by the Congress.

Whoever succeeds in forming a Government in Orissa, there is the emergence of the Ganatantra Parishad with nearly equal strength with the Congress. This fact does not receive the status of a political event of long-term significance. The party has no roots outside Orissa; even in Orissa, if its programme were to have been framed in accordance with the interests of the candidates as a group, support from the electorate might have been considerably less. It may also be true that the bulk of those who voted for the Parishad candidates were registering a negative preference.

A party symbolising a glaring contradiction between its material interests and its economic programme is likely to be wiped away by the very contradiction. And if this contradiction is removed, the party's extinction will only be quicker. In this reading, the possibility of a conservative economic group emerging as a powerful factor in Indian politics is ruled out once and for all. Election results in other States reinforce the impression.

*

Prodigals Abroad

The latest Report of the Public Accounts Committee of the Lok Sabha contains strictures on behalf of economy and responsible expenditure which, by their recurrent presence in similar documents tend to wear out in their appeal. The publication of the Report has coincided with the Prime Minister's post-election plea against ostentation in official conduct. Unless the Ministries concerned choose to regard the work of bodies employed for financial scrutiny as more than a periodical ritual ordained by the Constitution, practical results would not be much.

The present Report is severely critical of the tendency on the part of the spending Ministries "to err on the safe side" in estimating their annual needs. The Ministry of Finance is asked to be vigilant. The relation between a prodigal ward and a close-fisted guardian can seldom be cordial; and it is not the kind of outlook which should subsist between the Finance and other Ministries. An all-pervasive sense of economy must inhibit estimating and expenditure everywhere. When the extension of State activity into innumerable new directions, involve expenditure often intelligible only to specialists, the Finance Ministry cannot hope to function as a fully informed critic and moderator.

This is demonstrated by the fact that during 1952-53, there were 12 cases in which supplementary grants aggregating to Rs 479 lakhs proved to be eventually unnecessary. Out of a total of Rs 14.25 crores budgetted toward grants for Grow More Food. community projects etc., the actual expenditure was only Rs 7.75 crores. The Finance Ministry is disabled for any control over expenditure incurred by individual officers in other departments, over-riding the restraints imposed by rules and regulations.

There is, for instance, the case of a senior officer thrice drawing advances within a period of four years for the purchase of cars. It would appear that the time of this officer had been largely occupied by the purchase of cars one after another and their sale as second-hand products to friends or relatives. The Ministry, of course, does not approve of this form of "state trading". The officer had to explain.

The acquisition of premises on high rents and their non-utilisation for long periods of time is another recurrent evil. Occasionally there may be circumstances in extenuation, but when the practice becomes wide-spread, effective checks are called for.

*

Price of Gas

The first attempt of the Bombay Gas Company Limited to secure an upward revision in the price of gas supplied by the Company bumped back with a slight reduction in price. From Rs 4 for 1000 cub.ft., the Government reduced the rate to Rs 3-15, divided into a basic charge of Rs 3 and a surcharge of 15 annas.

At the time of announcing the reduction, the Company was comforted by the assurance that it could approach the Government for a revision of rate, when the cost of labour and materials went up. On the strength of this assurance, an effort was made in 1952, but nothing came out of it. During subsequent years, costs have risen further. The official price of coal, the main raw material for gas, has been increased more than once. An industrial Tribunal Award has inflated labour costs.

The appointment of a new Gas Advisory Committee is under the consideration of the Government. Even if the appointment were to take place immediately, considerable time will elapse before the Committee submits its report and the Government decide to act on it. The Company has now prayed for an interim increase in the rate to the extent of 12 annas. Beyond the argument concerning increase in costs, the Company also claims that it has not neglected expansion in production, inspite of a none too happy financial position. The facts marshalled by the Company in pleading for an increase in rate combine to make a strong case.

World of Finance

Wanted: More Light from Bank Chairmen

SUCH bank chairmen as have so far addressed their respective shareholders have referred to the prevailing stringency in the money market; but there is hardly any appreciative mention of the celerity shown by the Finance Minister who, forewarned about the accelerated demand for seasonal finance, proceeded effectively to forearm the banking system with resources adequate for foreseable needs. The bank chiefs were particularly competent to examine the practical aspect of the measures taken in this respect and to indicate if there was further scope for improving such techniques or for extending their applicability. They could also have usefully and constructively dwelt on the position created by a portion of short-term bank credits being made to function as a substitute for medium-term finance. It is admitted that money is stringent; but whoever expected that comfortable conditions will prevail in the current busy season? It is incorrect to discuss the money market situation as though the pressure now experienced has taken the interests concerned by surprise. The latter were anticipating just this kind of accelerated demand; and what is happening is just what was expected, on all hands, to happen. What was not expected was adequacy of supply in relation to the anticipated demand for finance. So, the important issue is: Have the measures taken by the authorities and the rising deposits shared by all banks achieved anything like near-adequacy in the supply of credits?

Our own contention is that the answer to this question is in the affirmative. The additional central bank credit available to the banking system this season is made up of liberal credit lines on usance bills plus substantial purchases of securities effected directly by the Reserve Bank from individual banks. We may say that, by these means, the scope for bank advances has been enlarged by well over Rs 100 crores as compared with the 1955-56 busy season. It is, likewise, gratifying that fresh bank deposits in recent months have exceeded earlier estimates. That there is a substantial margin in the shape of unutilised credit lines sanctioned by the Reserve Bank, is proof positive that the facilities provided through central bank credit have so far proved adequate. There is every reason to think that, should the present credit lines be fully used and should there be need for further central bank credit, the Reserve Bank will act with promptitude and effectiveness.

The addresses delivered in the current season of banks' annual general meetings disclose tardiness to utilise the occasion for telling the public how useful the liberalisation of the bill market scheme has been in actual implementation and in the materialisation of results. Has the liberalisation given around satisfaction? Has it been carried out without discrimination? Has it led to wider participation of banks in general in the benefits of the scheme? If, as the Finance Minister has recently hinted, exchange banks are availing themselves of these facilities to a far greater extent than are the Indian Scheduled banks, what should be done to stimulate increased recourse to this form of aid on the part of the latter? What are the lessons which the experience of 1956-57 has for the busy season of 1957-58? Finally, what is to be done for dealing with the diversion of bank credit to medium-term purposes? These questions deserve to find a prominent place in the chairman's addresses yet to be delivered.

State Bank Deposits—Near Rs 300 Crore Mark

The transactions pertaining to the end of the fiscal year continue to be reflected in the latest Reserve Bank returns. The statement of the State Bank is noteworthy for a very large increase in Deposits. The return of Scheduled Banks, for the week ended March 22, offers substantial confirmation of the analysis of bank returns made in this column last week.

The end of the year transactions of the Government may be said to be of two categories. The first relates to payments from the tax pool to the State Governments. The second has reference to payments to suppliers and contractors in whose behalf budget allocation has been made, but the grants whereof would lapse if the payments are not completed by the end of the fiscal year.

It has happened, these last three or four years, that Government have had, in order to meet these expenditures, to replenish their resources by sales of ad hoc Treasury Bills in favour of the Reserve Bank; and this accounts for the fact that deficit financing has normally tended to be for the largest proportions in March. In the current year, however, deficit financing in the event seems to have proved to be for an amount even smaller than the revised estimate presented two weeks ago by Mr T. T. Krishnamachari.

Thus, the first category of payments was effected by the Central Government during the week ended March 22 without the apposite aid of deficit financing. In the week under review, however, it would appear that the second category of payments has necessitated created money to the tune of Rs 40 crores.

Notes in circulation have gone up by Rs 8.30 crores to Rs 1526.09 crores. Rupee Coin has returned from circulation for Rs 0.66 crores. The Reserve Bank's cash in the till has been drawn down to the extent of Rs 7.64 crores.

Since the increase in active notes could be met by drawing on cash in the till there has been no expansion of currency against Rupee Securities. Therefore, the deficit financing during the week has to be surmised from its impress in the Banking Department. Investments have gone up sharply by Rs 40.40 crores to Rs 121.22 crores; and this appears to be the magnitude of ad hoc sales in favour of the Reserve Bank. The procedure, in respect of the deficit financing, must have taken the form of sales of ad hocs for Rs 40 crores in favour of the Reserve Bank; and the transfer of marketable securities from the Issue Department to the Banking Department for corresponding amount.

After the Centre's balances had thus been augmented, payments have presumably been made to suppliers, contractors, etc. This explains the fact that the rise in the Centre's Deposits is slightly less than Rs 11 crores to Rs 64.57 crores

Relaxation of Credit Squeeze

By PAUL EINZIG

THERE are distinct indications that tht credit squeeze that has been operating in Britain for something like two years has become relaxed during the past month. The mid-March statement of the London clearing banks showed, it is true, a seasonal fall in deposits for the month but it amounted to £28.6 million only, compared with £77.3 million for the corresponding period last year. On the other hand, advances increased by £52.9 million. Allowing for repayments of £17.7 million by the nationalised industries during the month, the expansion of borrowing by the privately-owned sector of the community from the banks was something like £70 million. Even though this increase is partly attributed to long-term export financing, it is impossible to escape the conclusion that the credit squeeze has become checked and even reversed. The expansion of advances has been proceeding now for the last four months.

Some quarters are inclined to argue that the increase in advances since the turn of the year has been due to the necessity of paying high taxes on high past profits out of lower current profits. This explanation is not convincing. That factor would have manifested itself primarily in a sharp decline in deposits, whereas in fact the decline of deposits has been unusually moderate. A much more acceptable explanation is that higher wages and higher prices have increased credit requirements. Moreover, in some industries, especially in the automobile industry, there has been a noteworthy recovery in the output. Much of this would only show its effect in the next monthly banking figures, as in several big motor works the full working week was only restored during the second half of March. On the other hand, by that time bank advances will have been affected by the strike in the engineering and shipbuilding industries, so that it is conceivable that, pending the settlement of these strikes, the rising trend in bank advances may become reversed. It would be a mistake, however, to be lulled into a feeling of security by any such temporary decline in bank advances.

Compared with the position of twelve months ago, the clearing banks have materially reduced their

World of Jute

Outlook for Jute Goods

TAKING the Indian jute industry as a whole as it obtains at the moment—from the jute cultivator to the ultimate destination of the manufactured product—one can discern some highly interesting facts. In the first place, those who are engaged in the production and distribution of raw jute have ample reason to feel satisfied about the current season. Secondly, the overseas consumer has not experienced any difficulty in getting his requirements of jute goods at prices cheaper than those of other substitute packaging materials This is evident from the satisfactory level of gunny export business during the past year. The third fact, which is also the most important one, is that the mills who convert the raw jute into goods have sustained heavy losses.

Evidently, mills have been obliged to sell their manufactured products at rates well below their cost of production. This is because mills have no effective control either over their manufacturing cost or over their selling price. While the former is determined by the cost of raw jute, the latter is controlled by extraneous factors such as world jute goods prices which are in turn determined by the prices of substitute packaging materials. The problem of the Indian jute mills industry, therefore, resolves itself into one of reducing its cost of production. As raw jute constitutes a major portion of the cost of production, it is essential that it gets its requirements of raw jute without any difficulty and at an equitable price. It is gratifying to note that steps are now being taken in the country to step up raw jute production sizeably.

The loss sustained by the Indian jute industry, has, however, not been entirely in vain. In a sense it may be considered as an investment for the nation as a whole. For, by agreeing to sell their products at lower than cost price, the industry has earned the goodwill of our foreign consumers. This is brought out clearly in the speech delivered this week by Mr N. K. Jalan, the Chairman, at the 58th Annual General Meeting of Calcutta Jute Fabrics Association. According to him "the state of overseas demand was well sustained during the past year, even if it did not come up to our expectation". Shipments to the US during 1956, the largest single market for Indian hessians, were higher at 195,800 tons as compared with 180,000 tons in the previous year. The total exports of jute goods to the UK, another important customer, increased slightly to 60,800 tons. Though the Argentine had taken considerably less in 1956, "there is some prospect of a better offtake in the coming year with the return of the trade there to private hands". The offtake by Australia, India's biggest customer for heavy goods, had undoubtedly been very disappointing; but the trade was confident that in the normal course of events there would be a substantial improvement in the current year in Australian purchases. It may be noted that Australia has recently substantially relaxed control on imports. Mr Jalan has pointed out that with the progress of the Second Plan, the domestic demand for sackings will go up further. The greatest disappointment during the year had been the poor offtake by Russia which was confidently expected both by the Government of India and the industry and trade to take a sizeable quantity. Actually that country had taken in the whole of last year only 10,000 tons. Even so, Mr Jalan is confident that "by sustained negotiation on the part of our Government, a rewarding business connection can still be established on behalf of the Indian Industry".

Summing up one will find that the prospects for jute goods in the current year are quite bright. The US which is our largest single market for hessian, is continuing to evince keen interest. The Argentine may be purchasing more this year. The UK is a steady customer. Heavy goods will meet with good demand both from Australia and our domestic consumers.

The orderly progress of our export trade in jute goods, however, will depend on our ability to ensure assured supplies of goods at reasonably stable price levels. Mr Jalan points out that while the rapid progress made toward the attainment of self-sufficiency in raw material supplies has brought the industry nearer its cherished objective than ever, there is still a major obstacle in the way. Unbridled speculation continues to wreak considerable havoc and "the recent severe depression of gunny prices, otherwise unaccountable, has shown how influential these ungoverned speculative activities can be". A properly regulated futures market can "exercise more influence than any other single factor in stabilising prices". While welcoming Government's scheme for the establishment of a futures market, Mr Jalan emphasises the need for avoiding the taking of steps that

World of Tea

Subdued Outlook

IT is expected that the current season's Tea auctions will end by the middle of this month. Interest, therefore, centres on two factors: how the garden fared last year and what is the outlook for 1957? Some circles believe that, although the new season will begin with no carry-over, next season may witness over-production in relation to demand. Due to the stoppage of plucking earlier this season, the new season will start earlier and the output in North India is expected to be a record as the replanted areas will produce substantial quantities of tea.

The prospect is, that buying is likely to be concentrated on quality, while Common teas may be difficult to sell at a margin of profit. It is, therefore, feared that the gardens in Cachar, producing mostly common qualities, will face difficulties unless the internal demand increases substantially. On the export front, too, Indian tea has lost ground in the US market due to competition from Ceylon.

The main drawback of Indian tea in the US market is attributed to its seasonal character. US importers also complain that the quality of Indian tea deteriorates after July when they find teas from other countries more attractive than Indian teas. With a view to maintain the reputation of Indian tea, it is even suggested that a minimum export standard should be maintained through co-operative efforts. The introduction of such a scheme, it is claimed, will result in increased demand for Indian tea.

Again, the gradual preference shown by Australia and New Zealand for their requirements of tea to Indonesia and a corresponding decline in their purchases from India, is a development that should be watched with anxiety by the Indian Export Promotion authorities, especially in the present context of foreign exchange shortage.

Indonesia is, no doubt, in a better position to compete with India, because of her geographical position apart from other considerations like shipping availability and freight rates. Opportunity should, therefore, be taken to discuss this particular aspect of the question.

Also, a weak tone continues to prevail in the London tea market. The only exception to the general trend were any invoices possessing attractive characteristics, which continue to rule very steady. There is now more than enough tea on spot in London to satisfy normal market requirements. This factor plays a decisive part in influencing prices in the downward direction, especially as there are still sizable quantities "afloat" to the UK from the chief producing countries.

The price of 39d per pound for plain tea is reportedly unremunerative to producers of that grade. Some quarters have stated that further weakening in future will not be unexpected although they add that the present fall in prices is likely to halt at any moment.

Meanwhile, the Government of India have fixed the price of tea, for the purpose of determining the export duty, at Rs 2.74 per pound as against Rs 3.38 per pound in force from March 1, 1957. There is no change in the existing rate of duty of nP 37.50 per pound.

As mentioned in these columns earlier, no Export Sale was held in Calcutta this week. In the Internal Sale, offerings consisted of 22,511 packages of Dusts. In the early part of the sale, most kinds, except for the exportable sorts, were up to 6 nP per pound and, as the sale progressed, prices further declined. At the close, prices were occasionally as much as 12 nP below last rates.

Clean Black exportable types opened about firm, but eased as the sale progressed. The plainer liquoring CTC Assams were the weakest feature of the sale and were as much as 20 nP per pound easier; but the few lines of good CTC sorts with bright liquors met with a good demand. Following rates were quoted:—Medium Dooars Dust Rs 1.58 to Rs 1.63; Medium Assam Grainy Dust Rs 1.70; Medium Assam CTC Dust Rs 1.94 to Rs 2.00 and Best CTC Assam Dust Rs 2.75.

Also 5,028 packages of other gards were offered for internal consumption. There was a strong general demand, but at irregular rates.

In the Export Quota section, the rate for Special Export Licence, after opening at 27 pies, eased off at the close to 24 pies per pound. For New Season's teas, the rate was quoted at 12 nP with sellers at 15 nP per pound.

In the Cochin market, offerings last week were 350,000 pounds of Dusts. The sale opened to a good general demand with commonest kinds fully firm and often dearer. Medium Dusts were sold fairly well; but the prices were half to one anna per pound easier. Best liquoring descriptions were irregular and often declined. There was some demand for Middle East types. The next Dust Sale will be held on the 15th April.

At the auction held at Colombo, the quality of tea offered was distinctly inferior and demand quieter. Prices for high-grown teas were considerably lower, particularly for Fannings grades. Medium Brokens declined by 15 to 20 cents per pound though corresponding Fannings grades were firm to dearer. Small Leafy Persian Gulf types were a

(Continued on page 648)

World of Business

Liabilities of Insolvent Companies

THE Life Insurance Corporation of India, in taking over the assets and liabilities of life companies, had necessarily to shoulder the burden of companies, which, due to mismanagement or misuse of funds, were unable to meet the policy obligations. Whether the Corporation as a wing of the Government has the moral obligation to honor contractual engagements entered into, in all good faith, by honest citizens, has been variously debated. Legally, in terms of the Act under Section 14, the Corporation has necessary powers to modify contracts. It may be recalled in this connection that Sir Chintaman Deshmukh, the then Finance Minister, spoke at first in optimistic terms about the good intentions of the Government and the increased safety and security of life policies in the hands of the Government. Later, he threw cold water on policy-holders when he said that it could not be possibly expected that the Government should underwrite the policy liabilities at full face value of ill managed insurers.

This seems to have been accepted as a matter of policy by the Corporation, as Mr M. C. Shah declared the interim decision of the Life Insurance Corporation to pay 60 per cent of matured valuation of insured policies of about 16 Life Insurance Companies. This interim decision, said Mr Shah, would enable the policyholders of these companies whose policies had matured and whose claims had not been paid to receive something in place of indefinite waiting without, perhaps, hope of getting anything.

Ruralisation of insurance was one of the tenets in the formation of the Life Insurance Corporation of India. The idea behind the concept was to make available to low income groups the facilities of life insurance. In the company regime, there were many limitations in probing deep into the heart of industrial labour. Indian conditions were not considered very favourable. There were also large technical difficulties in the matter of issue of small policies. These limitations resulted in urbanisation of life insurance as against ruralisation and thus facilities were not available to small income groups. This was one of the main stigmas attaching to company administration. The Life Insurance Corporation of India has, however, been able to rise above the morass by formulating plans of what it calls 'Janata Policies'.

The Janata Policies will be issued without the policyholder having to go through a medical examination. Each policy will be for a minimum of Rs 250 and the maximum that one can render this type of insurance will be for Rs 1000. The policy will be both with and without profits. 'With profits' policies will be entitled to any bonus that will be declared by the Corporation after every valuation.

There is nothing particularly novel about non-medical life insurance, for, in some form, non-medical insurance existed, in a limited way, with many companies. What is of importance in the proposed scheme is the approach to Industrial Life Assurance in the UK. The success of the UK scheme is due to the system of weekly collections by the Company's own paid men and to the wide appeal the scheme has amongst industrial labour. In India, what is contemplated is a cross between group life assurance and Industrial Life Assurance as in the UK. It is not intended, for the present, to moot the scheme on a compulsory basis, although it may be imagined that employers will act as collecting agencies. The success of the scheme, for industrial labour at least, will depend on the co-operation of the employers and the insurance mindedness of labour. In India, with a half educated artisan class, the success of sale will, in reality, be a success of the Corporation's field force.

For the rural sector, with hardly any organised employers, the implementation of the scheme will largely depend upon Corporation's field staff. The Corporation will have to guard against large scale lapsation for, the rural class, with uneven income, may have the temptation to discontinue policies. Furthermore, the theoretical bias for ruralisation will have to be integrated into a practical scheme so that acceptance of substandard lives may not make a large inroad on life funds. Insurance is a calculated business. Its rating is based upon an adequate compilation of statistics. The Corporation is evidently under a handicap as it has hardly any statistical material on which it can base its rates.

This payment is being made, said Mr Shah, 'on account' pending final scrutiny of the accounts of the affected companies. There is no intention to recover any amount from what would be paid under this decision even if the accounts of these companies ultimately showed the payment to be quite disproportionate. If the accounts show a better position, the Corporation, he added, would pay an additional amount.

According to the strict arithmetic of life insurance, the Corporation's decision cannot be challenged; but the Corporation, with the vast backing of the Government of India, could have relaxed in favour of innocent policyholders who, for no fault of tdeir own, are being penalised. It was again a duty of the Controller of Insurance to pull up the management of these companies if, as is now revealed, there was gross misuse of policyholders' money. He was the official who collected all manner of returns from each and every company. If he could not find out misuse of money from a scrutiny of these accounts, he was either inefficient or negligent. It seems, therefore, that it is the responsibility of the Government of India, if not the Corporation, to atone for the fault of their own officials by honouring, in full, the policy obligations of these ill managed insurers.

Announcement by Mr T. T. Krishnamachari, in the Lok Sabha on March 28, seems to be in keeping with this desire of the insuring public. He announced the Government decision to pay the policyholders of 29 insolvent companies their policy benefits in full by bearing the liabilities of these companies. This decision would benefit about 100,000 policyholders who had taken policies with these companies.

This is a welcome decision, although it is not clear whether the Finance Minister's announcement supersedes the earlier statement of Mr M. C. Shah. Presuming that it does the decision will be welcomed as proof that the Indian Government is of the people and for the people. It is all the more welcome in that the Central Government are underwriting the losses without disturbing the resources of the Corporation, thus enabling the Corporation to make correct valuations of the solvent companies in its hands. In the Corporation's view, it would be unfair to make the burden fall on the policyholders of the solvent companies, which would be the effect if the consequences of the decision to pay the policyholders of the deficit companies in full are to be borne by the Corporation.

This decision would cost the Central Exchequer about Rs 70 lakhs.

World Overseas

US Notes

THE United States Export-Import Bank, already an important contributor to the economic advancement of other lands, is undertaking new measures to broaden and improve its operations.

In testimony last week before a Congressional Committee, Samuel C. Waugh, President of the Bank disclosed that the Bank now is considering American Life Insurance Companies' pension and endowment funds as possible sources of capital for investment abroad. Unprecedented credit demands on US commercial banks in the past year have been limiting private participation in Export-Import Bank loans, which generally take the form of credits covering the shipment of American capital goods needed in other countries.

Mr Waugh was appearing before the Banking and Currency Committee of the House of Representatives in support of a bill to extend from June 30, 1958 to June 30, 1963, the period within which the Bank may make new export loans. Because so many of these loans are for economic development projects that take several years to complete, the Bank's officials believe that its lending authority should be extended well ahead of time. Not that they have any question about the Bank's legal authority to honour all loan commitments made before next year's expiration date but practice has shown that some borrowers have been hesitant to embark on new long-term projects in view of the existing statutory limitation.

A bill to extend the bank's lending authority was passed by the U.S. Senate last year, but largely because there was no immediate urgency to its final passage, it was not acted on by the House of Representatives in the legislative rush of the closing days of the session. Now, Chairman Brent Spence has indicated that his House Banking and Currency Committee will report favourably on the proposed legislation at this Congressional session.

Mr Waugh informed the Committee that in 1956 the Bank authorised 193 new credits aggregating some $1.150 million—higher than any time in the past ten years. Of these, ten credits totalling $856 million went to foreign governments to finance the shipment of U.S. industrial products, commodities and technical services. Included as a special $500 million dollar authorization to the United Kingdom following blockade of the Suez Canal. The bulk of the new credits, however, went to private borrowers. Last year's actual cash disbursements by the Bank to finance U.S. exports under approved credit authorizations totalled $233 million. Of this, $112 million went to Asia, $53 million to Latin America, $22 million to Africa, $17 million to Europe, and $13 million to other parts of the world.

A few weeks ago, the Bank took a number of steps to improve and speed up its services. It is discontinuing its usual commission charge and instituting new procedures to facilitate the processing of loan applications. To help smaller firms interested in its services, the Bank will be requesting a minimum of information when financing does not exceed $50,000. In addition, it will now consider financing of completed export sales. In the past, it has participated only if financing approval had been obtained before the sales contract had been concluded. Mr Waugh has made it clear that these new measures, in no way, change the

THE plight of the Stock Exchanges is so desperate as to the present and so menacing as to the future that it merits an on-the-spot study by Mr T. T. Krishnamachari and needs the dynamic drive which, characteristically, he can initiate. The banking situation was in a similar predicament five months ago; and, through personal assessments made speedily and decisively and followed by apposite measures launched with like celerity and firm determination, TTK is responsible for such a marvellous transformation in the banking scene that, where only three months ago everyone was fearing an intolerable strain on bank credit, there is today an unutilised reserve of credit lines for nearly Rs 100 crores which banks can avail of in proportion and in response to snow-balling demand. While the money market is halfway through the seasonal pressure, it is possible to claim that the situation is perfectly under control. My own guess is that, once the 1956-57 busy season is left behind, everyone connected with the money market generally and with banks in particular will proudly declare and gleefully proclaim that the threat of unprecedented distress has, through the Finance Minister's initiative and the money market's competency, been converted into a fulfilment of rare opportunity. What TTK wrought for the banking system, he is now duty bound to do for the Stock Exchanges.

*

I have used the phrase "duty bound" advisedly and meaningfully. TTK has made it clear beyond any doubt that he regards it as his duty and as the duty of the Nehru Government to achieve the fulfilment of the Second Plan with respect to the range of its objectives and the altitude of its target. He has promised that all available resources will be mobilised and all possible ingenuity will be employed. If financial resources adequate to needs are to be found, there is a call for the highest ingenuity to effect a restoration of stock exchange activity to full health and of investor preferences to active functioning. From the financial point of view, there are three problems facing the finance Minister: (1) Resources to fill the foreign exchange gap; (2) Resources to bridge the gulf in the field of taxes; (3A) Resources in the form of market loans for realising the Plan's estimates and, further, for reducing the magnitude of deficit financing; and (3B) Resources by way of risk and allied capital for such enterprises in the private sector as are essential to help the latter discharge its allotted task.

*

(3A) and (3B) can be neglected only at the Plan's peril. It may be argued that (1) and (2) can be realised by begging and borrowing, by coercion and authority of law. (3A) and (3B) are practicable only if Authority has the requisite skill and employs the needed ingenuity. If market loans do not exceed the target by a substantial margin, new tax imposition will have to become so onerous as to bring into full play the law of diminishing returns, and deficit financing will reach such dimensions as to stimulate inflationary forces of a variety to defy all manner of control. If private enterprise is unable to secure all the needed capital, a vital part of the Plan will remain unfulfilled, which is another way of saying that the Plan will disintegrate and fall to pieces.

*

For the success of market loans put out by Government and of new capital issues sponsored by free enterprise, well-functioning stock exchanges, with lively activity and with a favourable outlook, are indispensable. Stock exchanges, as they are situated today, are neither animated by healthy trading nor impelled by confident expectations. As they are, they are just useless for market loans, and worse than useless for new capital issues. If things do not improve, and improve radically, an essential pre-requisite for the realisation of the Second Plan may be said to be thoroughly inoperative. The seriousness of the position in this respect must compel immediate attention and constructive thinking.

*

I cannot help feeling that our popular ministers at New Delhi are not alive to the vital connection between the success of the Plan and the well-being of the stock exchanges. Most of them are disposed to think that our share markets are no better than gambling dens; and that the nation's economy is unaffected by anything that may befall the gambling dens. This is very much like giving the dog a bad name. Nothing can be a worse fallacy and, in present circumstances, a more grievous blunder. Indian Finance cannot be accused as a defender of the practices (that is to say, the malpractices) that now hold sway in stock exchanges. Many of them have been recurrently dealt with by Watchdog who has, at the same time, put forward remedial suggestions. Indian Finance has always taken a grave view of the damage caused by unbridled gambling, and insisted that this state of affairs should be firmly tackled by the authorities. It is Authority which has been dilatory to the point of apathy. If stock exchanges function as gambling dens, reform them. But there is no case for eradicating them. Reforming the degenerated stock exchanges should proceed hand in hand with the restoration of the devitalised markets to full vitality. In a regime of mixed economy, the fundamental role of stock exchanges functioning in the interest and for the promotion of genuine investment business cannot be over-emphasised.

*

Any tyro in economics knows that stock exchanges are as important a constituent of the money market as banks are. If banks are in a sorry plight, Authority rushes to their rescue and initiates suitable measures to facilitate their smooth functioning. Government have a big responsibility to intervene effectively and efficaciously when the stock exchange situation reaches a plight as desperate as has been witnessed in the last four months.

*

The reformation of stock exchanges has been proceeding in a leisurely fashion; and, if the progress so far made is any indication of the future pace, it will be many months before anything like finality is reached. Even then, I doubt if anything will be done to eliminate the present advantage gratuitously conferred on bear operators while equity no less than commonsense demands that any benefit on balance should accrue to the bonafide investor. Protracted discussions are being held at the level of the Special Officer: and there is but a dim awareness of the low depths to which share prices and investment activity have fallen. The repercussions of such low activity and low confidence are yet to be thought of by higher authorities in relation to the ways and means budget of Government from year to year and of the resources budget of the Plan for the five-year period. Just as TTK, in his brusque way, took over the banking situation in his temporary portfolio and, after doing the needful, returned it, so to say, to the routine authorities, it is now incumbent on him to make a quick and personal appraisal of the stock exchange situation and, on the basis of such a study, to issue peremptory directives for urgent implementation.

*

It is by design, not by accident, that I have avoided any detailed exposition of the causes and cures for the wasting disease which now afflicts the stock exchanges. Indian Finance has, again and again, written both on the diagnosis and on the prescription. Maybe, in a later article, I should focus attention on the salient issues in this respect for the constructive consideration of the Finance Ministry. On the present occasion, my purpose is to draw the forceful attention of the Finance Minister to a predicament in the stock exchanges which is at once a portent and a challenge; and to suggest that, now that TTK would like to use the interregnum for attending to those things where firm and predictable behaviour is of importance to his budget estimates and budget hopes, it will be of mutual benefit and in national interest, if he can visit Calcutta, Bombay and Madras for studies conducted on the spot and for consultations with those who can speak in behalf of genuine investment interests.

*

In the issue I have thus posed, there is, I venture to suggest, a

personal stake for TTK. Nothing less than the izat of the Finance Minister and of the Nehru Government is herein involved. Mr Nehru and his colleagues have firmly held that there should be no whittling down of the Second Plan. TTK has declared, categorically and unflinchingly, that there shall be no whittling down of the Plan. To those Pundits who have tendered the platitudinous advice of cutting the coat according to the cloth, TTK has retorted that he will find all the cloth necessary. He dare not fail in this quest. He must rout the critics who are preparing themselves for the day when they can taunt the Finance Minister with, "I told you so." A certain section of our business leaders have made it their business to undermine public confidence in the Plan

New Coins... From 1st APRIL '57

CONVERSION TABLE

The conversion table gives the exchange value in Naye Paise (rounded off in the manner prescribed in section 14 (2) of the Indian Coinage Act 1906 as recently amended) for amount tendered in annas/pies coins. The exact Naya Paisa equivalent of the total amount to be converted is rounded off by ignoring fractions of ½ Naya Paisa and below, and treating more than ½ Naya Paisa as 1 Naya Paisa.

Exact value in existing coins

10 Naye Paise—(1/10th of a rupee)—1 anna 7.2 pies
5 Naye Paise—(1/20th of a rupee)—9.6 pies
2 Naye Paise—(1/50th of a rupee)—3.84 pies
1 Naya Paisa—(1/100th of a rupee)—1.92 pies

The old coins, namely, 1 pice or 1/4 anna, 2 pice or 1/2 anna, 1 anna, 2 annas, 4 annas, and 8 annas, will be in circulation side by side with the new coins shown above. Four anna coins and eight anna coins are exactly equivalent to 25 Naye Paise and 50 Naye Paise respectively and may be used as such for all purposes. Both the old coins and the new coins will be legal tender in payment or on account.

CONVERSION TABLE

EQUIVALENTS IN NAYE PAISE FOR VALUE TENDERED IN ANNAS/PIES IN ANY SINGLE PAYMENT.

Old Coins Annas Pies	New Coins Naye Paise	Old Coins Annas Pies	New Coins Naye Paise	Old Coins Annas Pies	New Coins Naye Paise	Old Coins Annas Pies	New Coins Naye Paise
0 3	2	4 3	27	8 3	52	12 3	77
0 6	3	4 6	28	8 6	53	12 6	78
0 9	5	4 9	30	8 9	55	12 9	80
1 Anna	6	5 Annas	31	9 Annas	56	13 Annas	81
1 3	8	5 3	33	9 3	58	13 3	83
1 6	9	5 6	34	9 6	59	13 6	84
1 9	11	5 9	36	9 9	61	13 9	86
2 Annas	12	6 Annas	37	10 Annas	62	14 Annas	87
2 3	14	6 3	39	10 3	64	14 3	89
2 6	16	6 6	41	10 6	66	14 6	91
2 9	17	6 9	42	10 9	67	14 9	92
3 Annas	19	7 Annas	44	11 Annas	69	15 Annas	94
3 3	20	7 3	45	11 3	70	15 3	95
3 6	22	7 6	47	11 6	72	15 6	97
3 9	23	7 9	48	11 9	73	15 9	98
4 Annas	25	8 Annas	50	12 Annas	75	16 Annas	100

CONVERSION FACILITIES

CONVERSION FACILITIES WILL BE PROVIDED AT THE RESERVE BANK OFFICES, BRANCHES OF THE STATE BANK OF INDIA, OTHER AGENCY BANKS AND TREASURIES AND SUB-TREASURIES.

NEW COINS WILL BE GIVEN ONLY IN EXCHANGE FOR EXISTING COINS OF A TOTAL VALUE OF 4 ANNAS, AND MULTIPLES THEREOF e.g. 4 ANNAS, 8 ANNAS, 12 ANNAS, ONE RUPEE ETC.

Rounding off as has been done in the conversion table is necessary only at the end of a transaction when any amount due in annas and pies is to be converted into Naye Paise.

You can make payment either in new coins or in old coins or by a combination of both according to the coins available with you.

The conversion table is, therefore, to be used only at the end of a transaction when payment has to be made or change has to be given as illustrated in the examples below.

It is not necessary to convert rates or unit costs expressed in annas/pies into Naye Paise before working out the total amounts payable.

EXAMPLES :

If 50 articles are purchased at 3 annas each, first work out the total amount in rupees/annas; You have to pay nine rupees and six annas.

If you have only Naye Paise with you, you find that six annas is equivalent to 37 Naye Paise. You accordingly pay 9 Rupees and 37 Naye Paise.

The result will be the same if you took the exact equivalent of 3 annas (18½ Naye Paise) and multiplied it by 50 but it would be incorrect if you had taken the rounded off equivalent of 3 annas from the conversion table (19 Naye Paise) and then multiplied it by 50.

Similarly, if you buy from anyone a number of articles at the same time at different rates expressed in annas or pice coins, first calculate the total amount due in rupees, annas and pies. Apply the conversion table to the annas and pies in the total amount, if you want to pay in new coins.

EXAMPLES : (Where the amount due is expressed in annas/pies).

For 12 articles, costing 1¼ annas each, the total amount due is 1 Rupee and 2 annas, the purchaser may give the entire amount in old coins.

or

pay 1 Rupee and 12 Naye Paise (the equivalent of 2 annas according to the table is 12 Naye Paise).

In the above example, the purchaser may tender 2 Rupees, all in old coins, and ask for the balance. The amount to be given as change is 14 annas. This may be given wholly in anna coins or in new coins, or partly in old and partly in new coins. Let us assume that eight annas is paid in old coins and 6 annas is to be returned in new coins. Use the Conversion table to find the equivalent of 6 annas in new coins which is 37 Naye Paise.

You may simplify conversions by remembering that

4 annas .. .. 25 Naye Paise
8 annas .. .. 50 Naye Paise
12 annas .. .. 75 Naye Paise
1 Rupee .. .. 100 Naye Paise

EXAMPLES : (Where the amount due is expressed in Naye Paise).

An article costs 11 Naye Paise. One may pay this amount in new coins or in the form of 1 anna and 9 pies in old coins (the equivalent of 1 anna 9 pies according to the table is 11 Naye Paise).

If a person tenders 20 Naye Paise against 11 Naye Paise due, the change to be returned will be 9 Naye Paise or in old coins, the equivalent thereto namely 1 anna 6 pies.

For a payment of 11 Naye Paise, one may tender a 4 anna coin and ask for change. 4 annas are equivalent to 25 Naye Paise; the balance to be returned is 14 Naye Paise; this can be returned wholly in new coins, or in old coins, 2 annas and 3 pies according to the table are equal to 14 Naye Paise; one may give an anna coin (6 Naye Paise) and 8 Naye Paise in new coins.

EXAMPLES :

(1) To make payment of 10½ annas, you may first give 8 annas or 50 Naye Paise; the balance of 2½ annas is equal to 16 Naye Paise;

(2) To make payment of 36 Naye Paise, you first pay four annas or 25 Naye Paise, and then the balance of 11 Naye Paise by tendering 1 anna and nine pies.

Obligations no Less than Privileges

PRESIDING at the annual general meeting of the Central Bank of India, which enjoys the long maintained distinction of being the largest Indian joint stock bank from the point of view of deposits, Chairman Sir Homi Mody, like Vice-Chairman C. H. Bhabha in another context, referred complainingly to the competition encountered by scheduled banks from the State Bank of India's programme of branch expansion. Sir Homi repeated the contention that the bulk of the branches opened recently by the State Bank are located in places already served by a branch of a commercial bank or a co-operative bank. He also entered a plea against methods seeking to secure a monopolist position with regard to certain classes of deposits. These and other charges were examined in my last despatch: and, as it is important that banks in general should regard the State Bank more as a friend and less as a competitor, the position in these respects has to be correctly understood and properly appreciated.

It is undeniable that the State Bank has a privileged status from many points of view. For historic reasons the State Bank functions under a special act of Parliament. Prior to the Reserve Bank era, it was the sole repository of Government balances and the sole agency for the handling of Government transactions. It was in charge of the public debt not only of the Government but of the autonomous public authorities. It was the instrument for providing seasonal finance; and, in this context, the bills in its portfolio were eligible as backing for currency. The customary Bank Rate was its responsibility. The currency chests located all over the country were operated by the Bank which, thus, had the benefit of a network of remittance facilities. The controller of the currency was a member of its Central Board; and there existed co-ordination and consultation between the Treasury and the Bank at various levels. By this means, the Bank was in a position to have advance information about new loan issues, currency expansion or contraction, etc. It was, too, the bankers' bank and was in charge of the clearing house at the various centres. It provided the banks with lines of credit against government securities; and these facilities functioned as Central Bank credit useful both for special or emergency needs and for transfer of funds among bank branches.

After the setting-up of the Reserve Bank, the character of the State Bank was no longer that of a Central banking institution. But, in significant ways, there was a continuation of its privileged position. It ceased to be directly the Government's bank; but it enjoyed this status in an indirect way. It became the sole agent of the Reserve Bank in all such centres as had no branch of the latter. Thus, it continued to participate in Government balances, Treasury management and currency chests. Though the Official Minimum is determined by the Bank Rate as fixed by the Reserve Bank from time to time, the unofficial minimum is regulated by the rate for advances as prescribed by the State Bank in accordance with changing conditions. It also retained some part of its personality as a bankers' bank in the sense and to the extent that banks, especially those with extended branch-systems, find it of great help to have established credit lines with the State Bank. Of the latter's Central Board a nominee of the Government continues to be a member.

Came another important change in the State Bank two years ago. It was, till then, known as the Imperial Bank; it was rechristened the State Bank of India. The new nomenclature is designed to emphasise the considerable stake which the State has now acquired in its share capital. It is to be a vital instrument in the execution of the State's economic policy. While maintaining its services as a Commercial bank, it has to play an essential role in the provision and expansion of rural credit.

In all the three avatars I have described, the State Bank has, no doubt, been endowed with privileges; but the emphasis is equally on the obligations it has to discharge. Treasury work, while being a right, is also a liability and a responsibility. In the first avatar, the State Bank was entrusted with the statutory task of opening one hundred branches; and, in the latest, the target set by the Act is four hundred branches. Opening of branches, an activity singled out by the Chairman of the Central Bank for critical comment, is being undertaken by the State Bank not as fun or frolic, nor even as a source of profit in near prospect, but as part of a programme which has the twin object of embracing more and more Treasury Offices and of taking banking facilities to all the far-flung areas with a view to develop rural credit and to provide remittance and other aids to the institutions operating in the rural areas. If, in some of the places, where the State Bank opens branches, there is already an office of a commercial bank or a co-operative bank, its aim and purpose is, not to compete with the business of the already existing institution, but to assume responsibility for treasury work and for facilities connected with remittance and allied needs. The State Bank's programme of new branches is designed to achieve these ends, and is finalised in consultation with the Government. To regard the branch-banking activity of the State Bank as a deliberate and mischievous act of "poaching", is totally to misconceive the intent and motive of the Government, of the Reserve Bank and of the State Bank in their joint policy of providing a competent, adequate and apposite network of banking service spread evenly through the length and breadth of India.

I do not suggest that no cases of overlapping exist. But, the point to note and appreciate is that the State Bank is, in this respect, discharging a statutory obligation; that the detailed procedure ultimately put into effect is decided upon not solely by the State Bank but by the concerted consideration of the Government, the Reserve Bank and the State Bank; and that service, not profit, is the motivating force.

Viewed in this light, the target of four hundred branches which, in accordance with the task imposed by statute, the State Bank has set for itself is a vital element in the Government's declared aim endowing the banking system with such all-embracive strength as will help in the fulfilment of national economic policies and objectives. The State Bank, far from being a rival of any particular bank, is a friend of all banks. Far from using its privileges to the detriment of any bank, the obligation it has assumed is to streamline and reinforce the whole banking system. The very purpose of the State acquiring and maintaining a stake in its capital is to minimise the urge to make profit and to maximise the organisational equipment to render service.

As for the charge that the State Bank is bent upon securing a monopolist position with regard to certain categories of deposits, it is something like straining at a gnat when you swallow a camel. For over three and a half decades, it has, as part of its privileges and obligations held a monopolist position vis-a-vis Government balances. It has had a similar though not as absolute a standing as regards the deposits of quasi-Government authorities. Many of the foreign accounts such as those of Embassies are naturally attracted to the State Bank. A good part of its increased deposits in the last few months is attributable, for instance, to its receiving such proportion of US aid counterpart funds as is earmarked for the American Embassy to spend in India. The rising trend in the State Bank's deposits warrants a thesis of unfair competition only if it cannot otherwise be explained. 1956-57 records a welcome return of the funds which the State Bank lost in 1955-56 in favour of other banks owing to the initial scare caused by the nationalisation of the Imperial Bank. In the general upward movement of bank deposits, which represents a return to the money market, after a considerable time-lag, of the Plan's disbursements the State Bank, too, has participated as has every commercial bank of confidence-inspiring standing. There is, further, the special circumstance of US counterpart funds.

It is far-fetched to suggest that the State Bank has strengthened its deposits by recourse to unfair methods. On the other hand, as former Chairman Iengar has pointed out, it has refrained from any competitive race in rates for attracting deposits. Current deposits which constitute by far a preponderant proportion of its resources do not earn any interest at all; and, on fixed deposits, the rates allowed by the State Bank are definitely lower than those of other banks. As Mr Iengar has said, the State Bank could have achieved a much higher level of deposits if it had cared to make its deposit rates a little more attractive. Had it done so, and only if it had done so, the State Bank could be charged with unfair practices.

WORLD OF JUTE

(Continued from page 641)

are likely to disrupt the normal forward business for specific delivery, an arrangement which has worked very satisfactorily.

*

The jute goods market ruled steadier during the past week and prices both in the hessian and sacking sections recorded moderate improvement. Reports of a tender from Burma helped sentiment in the sacking section. Toward close speculative selling coupled with mills' interest at prevailing levels imparted a quiet undertone. Closing quotations on Wednesday are as follows: Hessian 40" x 10 oz Ready Rs 40/87, B Twills Ready Rs 111/50. The following rates are for April position. Hy Cees Green Rs 115/50; Cornsacks 113/25; Cubans Rs 135/50; A Twills Rs 135/50; L Twills Rs 127/00; Sugar Bags Rs 127/00; D. W. Flour Rs 134/00.

The raw jute market began the week on a quiet note with Assam Bottoms for April/June delivery quoting Rs 28/00. After midweek the undertone became steadier and Assam Bottoms gained half a point to Rs 28/50.

Bombay Review

Gateway Notes

Wood Screw Industry

The Indian Wood Screw Industry has made rapid strides in the course of the last seven years. From only a few thousand gross, its installed capacity is said to have increased to about 21 million gross of wood screws. During this period an uptodate plant with an annual production capacity of 500 tons has sprung up in Bombay while a large number of units have been modernised. At present there are 18 units registered with the Development Wing of the Ministry of Heavy Industries. The actual production of these units has increased from 2.5 million gross in 1953 to 7.5 million gross in 1956.

Current demand for wood screws in the country is estimated at 3500 tons or 7 million gross. As against this, the total availability i.e., the domestic production and imports in 1956 was 4,369 tons or 8 million gross. In view of the programme of housebuilding and other development projects contemplated in the Second Plan period, the demand for wood screws is expected to increase to 7,500 tons or 15 million gross a year by 1960-61.

Though the indigenous industry has reached a stage wherein it can cater to the entire needs of the country in all varieties of wood screws, imports have continued and even during the first half of 1957 when severe restrictions have been imposed on imports, it would appear that consumers who want to use certain categories of imported screws can continue to get them without much difficulty.

Despite its spectacular progress, the indigenous industry seems to be not quite confident of standing on its own legs. This is evident from the fact that it is asking for continuance of protection for a further period beyond 31st December 1957. The Wood Screw industry was first granted protection in 1946 on the recommendation of the Tariff Board for a period of three years. Protection was continued for a further period of two years in 1950 and again in 1953 it was extended for another four years. Thus the industry has been enjoying protection for about 10 years.

The main difficulty in the way of its healthy growth would appear to be the unsatisfactory position in regard to the supply of steel wire which is its principal raw material. Almost the entire quantity of the requisite steel wire has to be obtained from one source within the country. Attention to the existence of serious handicaps in this regard has been drawn by Mr V. D. Virmani in the course of his presidential address to the seventh annual general meeting of the Screw Manufacturers Association, in Bombay recently. He has pointed out that "the manufacturers do not get wire in sizes and quantities required by them immediately.... Further invariably the manufacturers do no get steel wires of exact specifications and chemical composition which is necessary for the manufacture of iron wood screws".

*

Problems of Cotton Textile Industry

The Cotton Textile Industry today is facing a serious crisis in the nature of a huge accumulation of stocks exceeding 500,000 bales. This position in which the industry finds itself now, is reminiscent of the days in 1953, when the industry found itself helpless in the face of a big accumulation of stocks of a similar order and had to be helped by the Government in liquidating the stocks. The similarities of the two situations naturally prescribe a similar remedy and it remains for the Government to pull its weight on the side of the industry and help it tide over the present crisis.

Addressing the annual general meeting of the Bombay Mill Owners' Association, Sir John Burns, the Chairman, traced the genesis of the present crisis in cotton textiles to the increase in the excise duty on cloth effected in last September. The excise duties on cloth, though they vary between 11.5 per cent and 31.9 per cent, depending upon the quality of the cloth, average 24.8 per cent and this represents an increase in duty by 11.2 per cent over that prevailing in August 1956. This increase in duty has generated consumer resistance, the impact of which on the fortunes of the industry is reflected in the present accumulation of stocks. The Chairman explained the necessity for a re-examination of the incidence of excise duty on mill cloth in the light of the communique of the Government in October 1953, in which the willingness of Government to examine its fiscal policy according to changing conditions had been endorsed.

Sir John Burns referred to another disquieting feature of the textile industry today, namely the upward tendency of the prices of cotton. This phenomenon is to be noted with serious concern in view of its likely impact on internal cost of production and consequently on exports of cloth. A policy not to issue export quotas for cotton until the final position of the crop has been ascertained, has been suggested for Governmental consideration to remedy the situation arising from the rise in the prices of cotton.

GATEWAY MARKETS

Hardening Tendency in Copper and Zinc

FOLLOWING steady advices from London, conditions in the Bombay Metal market showed signs of improvement last week. Copper, both electrolytic and fire-refined, has risen to Rs 185 per cwt from Rs 177 quoted a week ago. This sharp improvement in price is attributed to the high prices ruling in the Calcutta market, keen demand from upcountry buyers and the disappearance of offers for the metal from Rhodesia. There is still good demand for the metal, which is matched by adequate stocks. As the international supply position has improved substatially over the past few weeks, it is hoped, that fabricators will be able to get their requirements without difficulty.

Despite the absence of any improvement in foreign markets, there has been a stiffening attitude in the zinc section where the rate is quoter around Rs 75-0 per cwt. It is understood that a good part of the expected shipment of Australian zinc has been sold out on forward basis. The supply position is, however, expected to improve as substantial shipments are expected to arrive shortly.

Although the market for Lead continues to rule quiet at Rs 78-12 per cwt., the statistical position is reported to be healthy due to goods going out of weak hands to consumers.

Tin is quoted around Rs 512 per cwt. Due to comparatively heavy stocks in Bombay, there has been no rise in prices despite strong Singapore advies. The firmness in the market is, however, attributed to the recent decision made by the International Tin Council to raise the "floor" price from £640 to £730 per ton. In India, there is, at present, an adequate supply in the face of dimishing demand. Some circles state that it will not be surprising if the prices climb down to more realistic levels.

On the London Metal Exchange, the easier supply position of Copper the world over is fully reflected in the price, which is quoted around £245½ per ton. But the threatened strike in Chilean mines and a cut in production are considered to be bullish factors by the operators. Lead first-half April delivery is quoted at £112 per ton against £113½, mainly due to free availability of prompt and near deliveries. Zinc is quoted at £97¼ per ton against £98¼. It is believed that the US price support policy may maintain the present price for some time to come. Tin is quoted at £780 per ton as against £793. Informed circles believe that the Buffer Pool may await still lower prices before effecting purchases.

*

Gold & Silver

On the Bombay Bullion Exchange, Silver made further headway on active buying, which found dearth of contracts. In general, prices were mostly influenced by rumours about the possibility and the volume of imports of Tibetan coins. Owing to reports that in the new financial year imports might not be allowed to the same extent as in the current year, the rate for April settlement firmed up to Rs 180-6. Spot silver is quoted at Rs 179 to Rs 179-12. Arrivals were 3 bars, while offtake was 12 bars.

Although trading in the Gold section was of a dull character, a slightly steadier undertone was observed, thanks to better offtake and falling off in supplies. Ready Gold, after slipping down to Rs 105-8, improved toward the close to Rs 105-13. Floating stocks in the market were reported to be unchanged at 30,000 tolas, while both arrivals and offtake were said to have aveeraged about 3,000 tolas a day.

*

Yarn

Contrary to the firm trend in cotton, Yarn prices declined further during the week in the absence of support. Trading came almost to a standstill as the daily offtake did not exceed 500 cases—only 10 per cent of the activity witnessed two years ago. The falling business was attributed to the shift of the speculative activity to bullion and oilseeds, monetary stringency and the fall in the profits of rayon-weaving mills.

Trading in the Cotton Yarn section was also dull. Earlier expectations of a reduced supply, following a reported 25 per cent cut in electric supply at Salem, did not materialise and prices of 40s and 30s declined further by about As 2 per bundle.

World *of* Cotton

Bombay Review

Ban on Exports: Requisition of Stocks

IT was a known fact that most of the cotton varieties had already pierced the ceilings at Sewri and genuine business had become difficult. The margin system, introduced recently with a view to arresting the rising trend in prices did not pay any dividend. In spite of the heavy payment of margin, leading bulls continued to support the market on the belief that the cotton economy was in their favour.

The complacent attitude taken by the authorities and the trade about the supply of raw cotton to the textile industry has also undergone a radical change following a downward estimate of the indigenous crop from 54 lakh bales to 48½ lakh bales and lower imports this season in the face of increasing consumption by the industry. The annual mill consumption of about 52 lakh bales, together with exports of about 4 lakh bales and three lakh bales of extra-factory consumption, indicated that the cotton supply would be barely sufficient and not ample. With the result, mills were compelled to approach the Government for securing ready cotton at prices below the official limits since traders were reluctant to part with their stocks, save at their prices.

The Government of India have, therefore, authorised the Textile Commissioner, Bombay to requisition cotton by directing those holding cotton stocks to make sales of the commodity as specified by him. This step is taken in order to enable mills to obtain cotton at reasonable prices. According to latest reports, the rise in prices of cotton has nothing to do with the supply and demand position. It is only speculation that has created the crisis and, it is understood, that the Government will not let speculators go scot-free. It is also understood that the Government will permit shortly the import of cotton, both from dollar and sterling areas. They have also decided that, with immediate effect, no further sales of Indian raw cotton, against the licences issued in terms of Government announcements on February 6 and 7, will be allowed.

Meanwhile, the Government have decided to establish a futures market for cotton at Ahmedabad to conduct futures trading in cotton after it has framed a constitution and bye-laws conforming to the requirements of the Forward Contracts (Regulation) Act, 1952. It is understood that contracts for futures trading will be mainly based on local varieties. After Bombay and Indore, Ahmedabad will be the third centre in the country where futures trading in cotton will be conducted by a recognised association.

×

FUTURES MARKET:

Cotton futures opened lower and tried to look up on bear-covering during the initial part of the week; but fell precipitously on heavy bull liquidation following the decision made by the authorities to requisition cotton whenever necessary and at prices to be determined by the Textile Commissioner with a view to helping the textile industry. Despite better demand in the ready section, futures appeared friendless and ultimately closed at slightly above the lowest level for the week.

Turnover was 10,000 bales. Jharilla May opened at Rs 702-00 and ended at Rs 708-50. Vijay April delivery opened at Rs 846-00 and closed at at Rs 825--00 to finish at Rs 828-50.

×

SPOT MARKET:

The Spot section ruled very steady with mills evincing good interest in new crop Surti. Good business was also reported done in Kalyan and Jharilla varieties.

Export business was at a standstill following the Government's ban on exports.

In the foreign cotton section, a few spot lots of American cotton were reported to have changed hands.

Following rates were quoted:—Bengal Rs 690 to Rs 740; Oomra Rs 800 to Rs 830; Dhollera Rs 770 to Rs 780; Jharilla Rs 800 to Rs 840; Vijay Rs 975 to Rs 980; AR/BP/52 Rs 1,700 to Rs 1,720; ER/Bushoga Rs 1,585 to Rs 1,620; American 1 1/8" Rs 1,350 to Rs 1,360; Karnak Rs 2,800 to Rs 3,000 and Sudan Rs 2,600 to Rs 3,000.

×

NEW YORK COTTON MARKET:

Prices in the New York futures market moved rather irregularly with new crop positions commanding most attention. Trading was, however, fairly active with a fair amount of liquidation in old crop positions, being replaced by new crop purchases, resulting in old crop prices lagging behind. Government export sales to date at 6,981,850 bales and an increase in the recent CCC basis from 27.20 cents to 27.40 cents encouraged the firmer trend in the market. Spot closed at 35.45 cents per pound.

×

LIVERPOOL COTTON MARKET

The Liverpool cotton market appeared rather confused in view of the United States Department of Agriculture's cancellation of the nearly 130,000 bales sale at the last surplus sale of cotton. Trading was, therefore, dull. Mill fixations absorbed some American selling, while commission houses continued to give support in more forward positions.

×

CLOTH AND PIECEGOODS:

Conditions in the Piecegoods market ruled steadier with prices showing slight improvements over last levels, thanks to enquiries from the consuming centres. Demand was, however, more pronounced in respect of super-fine varieties.

Conditions on the export front have, however, not been satisfactory. As a matter of fact, shippers have reported a fall in the export quotation of some varieties.

*

RELAXATION OF CREDIT SQUEEZE

(Continued from page 640)

liquidity rations—the proportion of liquid assets to current liabilities. In Britain there is no statutory cash ratio or liquidity ratio, but 30 per cent is considered the traditional minimum liquidity ratio. All the leading banks are now in the close vicinity of that figure, and one of them is even a shade under it. In the past the banks often voiced their resentment against the Government's exhortations that they should cut credit, on the ground that, so long as their liquidity ratio are well above the traditional minimum, it is difficult for them to refuse applications for new credits. And the Government was sharply criticised on the ground that, because of the expansion of the Treasury bill issue, it was responsible for the high liquidity ratios of the banks. The Treasury was thus blamed for the inadequate progress of the credit squeeze. But now it is evident that, even though liquidity ratios are low, bank advances are expanded.

The Government is directly responsible for the expansion of the activity of the motor industry, through its recent relaxation of the official restrictions on instalment selling. This factor has more than outweighed the continued adverse effect of petrol rationing and of the higher tax on petrol on the demand for new and second-hand motor vehicles. The re-allocation of labour from the over-expanded motor industry to other industries in bad need of man power, has thus become reversed. And pressure forcing the automobile industry to concentrate on exports instead of relying on the domestic market has weakened.

The reversal of the disinflationary measures was probably based on the belief that these measures, together with the economic consequences of the Suez crisis, might generate a deflationary depression. In itself the reduction of the Bank rate by a mere ½ per cent could not have contributed much to the resumption of the expansionary trend. Indeed, if only the banks could be persuaded to play the game according to its new rules by practising self-denial in dealing with applications for credit, the Government would be able to lower the Bank rate to well below its present excessively high level of 5 per cent. By now all but the most extreme orthodox quarters have come to realise the futility of maintaining interest rates at such a high level over a period of years. Disinflation would be practicable with the Bank rate at 3 per cent or even below. And even a 6 per cent Bank rate would be of no use if the wages spiral continues to rise.

Recent developments have been far from promising from this point of view. The ease with which the Transport Commission has just conceded a 5 per cent increase of pay to employees of British Railways has encouraged the engineering and shipbuilding unions and other unions to hold out for a higher increase. Hence the rejection of the 5 per cent offered by the employers in the engineering and shipbuilding industries. The workers feel that if static industries, such as the railways undoubtedly are, can afford to give 5 per cent, dynamic industries should be able to afford to give more. In fact, there has been no increase in the productivity in the engineering industry during 1956, and the cost of living has increased by less than the 5 per cent increase offered. And profits are distinctly lower.

In the circumstances even an all-round increase by 5 per cent—for which the Transport Commission has set the fashion—would mean an inflationary expansion of purchasing power. In face of such an increase it would be necessary to apply an overdose of disinflationary devices, both conventional and unconventional, in order to prevent a further progress of the inflationary spiral. In the absence of an expansion of bank credit industrial firms may feel impelled to keep down their costs as the only means for maintaining their profits. If, however, the banks take the line of least resistance, the expansion of advances and of deposits will consolidate and accentuate the effect of expanded consumers' purchasing power.

Olympus

Parliament—A Retrospect

THE debate of the Lower House of the first Parliament of the Indian Republic covers more than 2 lakhs fullscap papers, contains nearly 6½ crores words, concerns over 300 Government Bills and 135 private Members' Bills, 74 motions moved and 204 adjournment motions received. The Upper House will have a similar story to tell.

These awe-inspiring figures are the statistical fruits of a colossal national effort, symbolising a great peaceful revolution. The revolution comprised the establishment of property marriage rights for women, where these did not obtain before laying the foundations of an expansive and modern agricultural and industrial economy, the transfer in stages from private to public hands of large blocks of banking and insurance business, the setting up of large industrial units directly under the State and the regulation and control of private economic effort at various points. Foreign policy was so fashioned as to facilitate the emergence of the nation as an effective factor toward world peace.

The first Parliament was obliged to meet social and economic obligations which were more or less pre-determined by the character and circumstances of the national struggle and the international setting which developed afterwards. That the Indian Union has not chosen to break off the Commonwealth or to take a precipitate stand on Kashmir or on Goa is an exemplary lesson in political restraint. In judging the achievement of the first Parliament of India, even the most competent foreign observers may fail to understand fully the handicaps and preplexities of those who had to guide its deliberations.

The stimuli and the restraints of action are so diffused and often so deeply buried under the surface as to obscure a large part of the perspective necessary to appreciate all the achievements of this body on the positive and negative sides. When the Prime Minister points out that Parliamentry democracy is not something which can be transplanted by some wand or some quick process and that there are not many countries in the world where it functions, he is complimenting himself and the nation for the skill and dexterity with which the institution is being nourished here.

There is admittedly a source of strength in India's traditions. That the Parliament got on its feet so smoothly and so naturally is also in no small measure due to the living inspiration, and the willing incorporation of many of the features of the British Parliament. The Prime Minister courteously referred to the debt owed between the two, in his valedictory address to the Lok Sabha. Besides, a limited Parliamentary structure was functioning for the last four decades.

In spite of these advantages, the first Parliament of the Republic might have come up against formidable difficulties, had it not been for the rather unparliamentary circumstance that the majority party had overwhelming strength. The consequence might not have been uniformly happy. But the argument in favour of a strong Opposition with sufficient strength as to inculcate the sense of responsibility of an alternative Government is to be pitted against the experience of Pakistan, Indonesia and even Ceylon.

Hitherto, the reluctance of the country to vote in a powerful Opposition was a feather in the Congress cap in more sense than one. The social and economic aims of the Congress party were so closely linked with the aspirations of the people and so promptly revised to suit the changing temper of times that even the Communists had to grope for positive and convincing alternatives. If the Congress Party had been less strong or if its programme less flexible, the record of the last five years could well have been uncomfortable in many ways. Pandit Nehru and his associates have always been aware of the ostentatious success of communism in China and the lure of this creed to neighbouring countries.

Adroitly and with unflinching faith in the constitutional set-up accepted by India, they have been trying to implement a nearly identical economic programme but jealously keeping the political methods of communism out of bounds. The attempt involves a combination of change and continuity. Dr Radhakrishnan describes it as fighting the evils of poverty within the framework of democratic orientation. The near-unanimity on broad national and international policies, displayed in Parliament was also the indubitable expression of the national will to sustain the difficult combination of a socialistically slanted economy with Parliamentary institutions.

Some of the measures passed by Parliament initially created misgivings and were branded as hasty by conservative opinion. The most outstanding among such is the Hindu Code. The recent elections have largely vindicated this piece of legislation through the utter rout of the majority of those who opposed it. An excellent legacy, rich in sound traditions and conventions, the first Parliament has handed over to its successor. Thoughts must now turn to how far the new Parliament would be capable of maintaning it.

The Congress Party has been returned in unassailable strength and the same leadership is also going to continue. Parliament, however, can no longer look for the same measure of support from the States. In one, a Communist Government is in power. In another, the Congress could secure power only through an uneasy coalition and the self-imposed neutrality of pwerful group; in a third, though the Congress commands the support of the majority the voting has demonstrated the resolute disapproval of the people against one of the most controversial political decisions taken by Parliament.

The old homogeneity in political conditions, particularly in the relations between Parliament and the State legislatures has been disturbed. There is another significant phenomenon. With one exception, it is in the States, where education is most advanced that the Congress Party has suffered its worst setbacks. These trends must stimulate new thinking on the basic drawbacks in national character and in the national economy.

One does not like to sound any jarring note of scepticism. But where faith in the institutions which have won general affection has to be sustained only through periodical doses of realism and courage, those who can do it most effectively should not hesitate or be lukewarm.

Or are they really points of strength? When even in the more conservative areas, some of the tallest State leaders, Ministers and Deputy Ministers have been out-voted in the elections, it is more a matter of democratic pride rather than of concern for this or that party. Both the first general elections of 1952 and the second, recently concluded, seem to impart to the phrase "free and fair elections" a content which it certainly does not have in some of the older democracies. Usually, people are satisfied that an election is free and fair, if there is no influence from Ministers and Government Officers.

What is not so well recognised is that the freedom and fairness thought of in relation to a popular vote do not obtain, when there is a powerful party machine which herds up votes, leaving little scope for individual judgement or discretion. The party machine is no less obnoxious than this tyranny of authority, open or surreptitious. It goes to the credit of the average voter and to a large extent, of the political parties too, that the general elections in the world's biggest parliamentary democracy have for the second time mostly reflected the genuine and uninhibited preferences of the electorate.

Otherwise, scarcely any explanation is possible for the same area choosing a candidate from one party for Parliament and the majority of candidates from another party for the State legislature. Even the personal antecedents and prestige of leaders of repute are not found to have been of help in many constituencies.

The reverses of leaders like N. C. Chatterjee, H. V. Kamath, Asok Mehta and Khandubhai Desai will surely be regretted as having deprived the new Parliament of a few brilliant and outstanding men. But at the same time, these reverses point to innumerable individual judgements where the rival considerations of personality and policy should have been carefully weighed. Broadly speaking, the Indian masses have thus vindicated the faith that the real interest of democracy would be safe in their hands. Thus viewed, the prospects are sure enough.

*

WORLD OF TEA

(Continued from page 641)

strong feature. Interest was less evident from all buyers, particularly Australia and the United States.

According to the latest reports, total tea crop in Ceylon, in the first two months of the current year, is placed at 61.3 million pounds as against 52 million pounds in the corresponding period of last year, showing an increase of 9.3 million pounds.

In London auction, good demand was in evidence at this week's sale of Ceylon teas, specially for best quality high-grown invoices and coloury medium kinds, which were mainly dearer. Other descriptions, especially Plain low-grown sorts, were irregularly easier by 1d to 3d per pound. Offerings totalled 13,989 packages. The 5,502 packages of South Indian growths met with an irregular and easier market with prices declining by 2d to 3d per per pound.

Tea stocks in London, as on the 22nd March 1957, were 127.66 million pounds as compared to 123.62 million pounds in the previous week and 95.36 million pounds a year ago. Landed between 16th and 23rd March were 14.27 million pounds, while deliveries were 10.23 million pounds.

North Indian Notes

Health Problems

The problem of health in India is of such a varied nature that it has got to be tackled from all possible angles. It is a problem not only of checking the heavy toll of human lives accounted for by such diseases as Tuberculosis but also one of improving the sanitary and environmental conditions which have a vital bearing on the health of the people. And the lines on which the central organisation charged with the responsibility of executing the scheme bearing on health—The Indian Council of Medical Research—is proceeding with the matter, are indicated in the speech dellvered by the Union Health Minister Rajkumari Amrit Kaur, at the annual meeting of the Governing body of the Council.

Referring to the health programme to be taken up by the Council under the Second Five Year Plan the Union Health Minister said a major plank during the period would be the national water supply and sanitation programme. To ensure success in this, a high degree of technical skill to adapt the methodology of sanitary science to the varied geographic climatic and cultural conditions prevailing in the country would be required. The important aspect of the health problem in industrial areas of Bengal and Bihar and UP is that of disposing of the industrial wastes. To investigate into this problem the Scientific Advisory Board had recommended the establishment of a public health engineering research unit at the All India Institute of Hygiene and Public Health.

The Health problems of the tribal people are being given special consideration and the Minister has referred to the several studies that are being initiated, such as the study of the dietary habits and nutritional status of the people of the NEFA area, an on-the-spot study of environmental hygienic conditions of the people, a study of the abnormal blood traits in the Maher community in the Madhya Pradesh etc.

The Council has also been widening its activities and has undertaken new schemes and initiated new studies with regard to specific aspects of health. Its important achievements are the setting up of a Chemo-therapy project at Madras and a trachma-pilot project at Aligarh. The latter is to be developed on a nation-wide scale for the control of communicable disease.

A pilot study for the control of dracontiasis or guinea worm disease which is endemic in certain parts of the country and a study of human reproductive phenomena, which is expected to lead to the development of acceptable methods of limiting the size of family and population growth, are in the list of future schemes of the council. The council proposes to spend about Rs 78 lakhs during 1957-58 on medical research, while the current year's expenditure on that account stands at Rs 30 lakhs.

*

Road Transport in Bihar

The big leeway that the country has to make in providing a sufficient system of road transport, is indicated in the fact that the State of Bihar will remain very backward in the matter of good roads even after the various schemes of road transport provided for in the Second Plan are successfully completed. The road development programme in Bihar under the Second Plan is expected to see the completion of about 4,486 miles of roads by the end of the Second Plan which will give about 13 6 miles per lakh of population by 1961 in the State against an average of 27 miles for All-India in 1950. The allocation of road development in the State under the Second Plan is reported to be too low to permit even all-weather communication to many important thanas, required for maintenance of law and order. With this meagre allocation, many urgently needed roads in areas rich in mineral resources, backward territories and tribal areas and roads providing interstate communication will remain unattended.

The problem of road transport in Bihar is aggravated by the delay in the execution of the road development schemes sanctioned under the First Plan. And the substantial part of the grant-in-aid for roads made by the Government of India in May 1954 is reported to remain still unspent. Lack of technical personnel and other engineering difficulties are said to be the main reasons for delay in execution of some of the programmes.

The provision for road transport in Bihar besides being low in relation to its needs, is at such a level as to preclude progress in road transport in the Second Plan at a rate comparable with that in the First Plan. The Second Plan provides for the building of 1,557 miles of roads which include a carry over of 777 miles from the first Five-Year Plan and for improvement of nearly 630 miles of roads. This looks small besides an actual achievement of 2,236 miles of roads which were improved by the end of the First Plan.

NORTH INDIAN MARKETS

New Crop Arrivals Affect Foodgrains Prices

EASY conditions have prevailed in the Foodgrains markets during the week under report. With arrivals of the new crop having begun, stockists in all centres are anxious to sell their old stocks. Harvesting of Wheat will begin after a week, while that of Coarse grains is in full swing.

In the Hapur market, Wheat prices have recorded a fall of As 4 per maund, to be quoted at Rs 16 per maund for the average quality and Rs 17 for the farm quality. As stockists in the producing centres want to liquate their holdings, arrivals from villages have now increased. Rice prices continue to rule quiet; and the various measures taken by the Government from time to time to arrest the rise in prices included stoppage of purchases from the internal market by the Government, regulation of credit by banks against rice and paddy and import of substantial quantities of rice.

With the arrivals of new Gram from Madhya Bharat coupled with lower Punjab advices on good crop prospects there, Gram prices have registered a fall of As 8 per maund. Barely and Bejher prices have sagged heavily with increased arrivals of the new crop. Jowar prices, however, rule steady due to poor local stocks and some demand for seed purposes. Maize and Bajra prices are almost unchanged.

Pressure of arrivals of new Peas in the market has accounted for a further fall in the price of this commodity. Grinders of dal are the only purchasers, while outside support is wanting. Daily arrivals average 700 to 1,000 maunds, most of which is brought from East Uttar Pradesh.

The Delhi grains market also rules quiet. Gram and Barley have lost As 10 and Rs 1-4 per maund respectively with the commencement of arrivals of the new crop in producing centres. Buyers are lacking, while traders are selling their old stocks. Following the arrivals of new harvest, demand for other grains has also dwindled.

The Bombay grains market has, however, presented a steady appearance with the prices of Cereals and Pulses moving within a narrow range. Despite sustained firmness at terminal centres in Andhra, Madhya Pradesh and Uttar Pradesh, the market exhibited a quietly steady tendency in indigenous Rice with the traders keen to reduce their load of supplies. There has been little interest in the Wheat section. Traders have reported a growing shortage of good wheat supplies in view of the continued ban on imports into the City. In the Coarse grains section, Jowar prices are ruling steady. Trading in the Pulses section has been featureless.

*

Sugar

Sugar markets are ruling quiet with prices showing a slightly easier tendency. This is mainly due to a release of a further quantity of 1.67 lakh tons for free sale, thus bringing the total releases, so far made out of the 1956-57 season, to 5.88 lakh tons. This quantity includes 46,000 tons released for exports.

Production, during the current season, is expected to touch a new high. Up to March 15, production amounted to 13.59 lakh tons as against 12.42 lakh tons during the corresponding period of last season. Stocks with the factories, as on the 15th March, stood at 11.48 lakh tons as against 10.28 lakh tons on the corresponding date of last year.

Following mill-delivery rates (per maund) are quoted in the Hapur market:—Jaswant Rs 28-10; Simbhauli Rs 28¾; Mowana Rs 28½; to Rs 29-0; Daurala Rs 29-8; Amroha Rs 28-5; Bijnore Rs 28-3; Mansoorpur Rs 28-8 to Rs 30-4 and Rampur Rs 31-0.

*

Gur

In the Hapur market, ready (for prices have improved slightly, thanks to poor arrivals. Arrivals average 800 to 1,000 maunds daily, while stocks are estimated at 97,000 maunds as against 70,000 maunds in the corresponding period of last year. Total arrivals, from the beginning of the season, are estimated at 443,600 maunds as compared to 433,700 maunds.

Sowings for the next season are reported to be in full swing. Arrivals are expected to fall further as the harvesting season is now in full swing.

The Peninsula

New Courses in Madras University

THE Centenary Celebrations of the Madras University afforded the public a peep into a glorious historical past. The organisers took care to represent in proper balance every aspect of the growth and work of the University, throwing special light on the achievements of individuals who stood as pillars of the institution from time to time. When therefore, at the annual meeting of the Senate held last saturday, the members wanted to congratulate and express their sense of gratitude to the Chancellor and his colleagues, they could do it in all conscience and with extraordinary warmth of feeling.

Dr Lakshmanaswami Mudaliar, while acknowledging the help received from every one for the celebrations of the Centenary, felt satisfied that the work of the University was made known both inside and outside the country in an impressive manner through the celebrations. He said he was receiving innumerable letters expressing appreciation of the event.

States reorganisation has made some inroads on the strength of the University. But even after the disaffiliation of colleges consequent on reorganisation, the Madras University will have nearly a hundred colleges attached to it. It was fast becoming a teaching University, besides being a research University.

Amidst the Centenary celebrations, the educated public of the State were prone to lose sight of certain important developments, which took place during the latest academic year. These developments were embodied in the hundredth Annual Report of the University, presented to the Annual Meeting of the Senate. The Pre-University Course was introduced during the year.

Regulations and syllabuses for the three year Degree Courses for Arts, Sciences, Commerce and Home Science and the pre-professional Course were reorganised. A Diploma Course in Archeology and Child Health, an MSc Degree Course in Home Science and a Degree Course for Mining Engineering were instituted during the year.

One of the main purposes of the Pre-University Course as conceived by the Study Team on General Education, was to avoid over- specialisation; this was to be met by introducing a broad general education as the basis and complement to every specialised study.

The introduction of the Course was smooth and unagitated. It could already claim a large measure of success, which, as Mr Balasubramania Iyer pointed out in moving the Report for adoption, was a result of all-round cooperation and the democratic manner in which the proposals were discussed and put through. The last word is not said on the subject. It is heartening to know that the Senate is always ready to incorporate new ideas, whenever experience emphasised their worth.

Thanks to the help rendered by the All-India Council of Technical Education and the University Grants Commission, it was possible to introduce a four-year integrated Course for BSc technology. A grant of $10,000 from the Rockfeller Foundation has enabled work on the preparation of the Catalogus Catalogorum by the Department of Sanskrit. The Department of Tamil is engaged in much outstanding work.

A new feature in University life is the acceptance of foreign scholars; these scholars are deputed to study in the University with the help of scholarships from the Government of India and the Madras Government and they are doing work in almost all the departments. A Department of Business Management has been recently introduced. Through this Department the University hopes to maintain connection with industry and trade. The Vice-Chancellor is elected President of the Business Management Association.

The expansion of the library system is in view. There is a proposal for an extension library to be established in Madura. Likewise, the University contemplates a Diploma Course in Architecture. Under the Second Five Year Plan, the development and expansion of various research departments, of facilities for post-graduate education and of research in basic sciences in affiliated colleges will go a long way further. Besides, there is a scheme for the establishment of post-graduate teaching and research in centres other than Madras, where colleges cluster.

By the side of these striking achievements and prospects, it is rather amusing to hear that for the Diploma Course in Economics last year there was only a single student; with the professor they made two. Among the prizes awarded for the submission of these there were no candidates at all for four. Perhaps, all these prizes may not belong to the Economics Department.

Even so, the lack of interest in economic studies must have its reasons. Either the Diploma Course is not inspiring from the point of view of chances of a career, or from that of the status it holds in relation to the full-fledged Degree Course. It cannot be that the average aspirant for knowledge of economics in the South feels that this particular subject has become so much the layman's forte that any special assistance from the University in the matter of acquiring proficiency in it is superfluous!

*

WORLD OVERSEAS

(Continued from page 642)

Bank's practice of extending loans. But they are expected to make even more effective the Export-Import Bank's international lending activities.

*

This is the time of the year, with the economy still in the grip of the winter lull and the seasonal spring upsurge to come, that economists generally wait to see which way economic winds blow before making new predictions about annual trends.

Early months of 1957 have been particularly difficult to assess. Unmistakable deflationary signs have begun to appear in an economy that still retains a good deal of inflationary momentum.

In this situation, experts are taking due note of the results of two government surveys, both released last week. One indicates that business investment in new plant and equipment will stay close to current levels at least through September, other that consumer outlays this year will hold at recent highs.

Conclusion can be drawn that—in line with this year's forecasts—this will be another good year for business in the United States, with moderate overall gains in sight. And, if deflationary forces should gain ascendance, any dip in general business activity—not very likely—will be rather slight.

A joint survey by US Securities and Exchange Commission and Department of Commerce estimated total shows US business spending for new plant and equipment this year at $37,400 million. This is slightly below the $38 million anticipated last autumn, but still 6.5 per cent above 1956's record.

Manufacturers expect to increase their spending by 10 per cent, railroads by 19 per cent, other transportation industries by 7 per cent, public utilities by 24 per cent. The only business groups expecting to spend less this year than last—and only little less—are in mining field and the commercial field, including retail stores and service and finance companies.

Individual industries planning sizeable investment increases include non-ferrous metals, steel machinery, chemicals, paper and rubber.

Records show that this survey has been remarkably acute over the past decade. Last year, for instance, it came within one per cent of predicting actual level of business investments. Moreover, most present investment plans were reported to government during the January-February business lull that apparently has not seriously diminished business confidence.

On consumer side, survey conducted for US Federal Reserve Board by University of Michigan Research Centre shows purchasing plans for major items just about same as a year ago.

About same number of families, for instance, expect to buy new cars. Somewhat smaller number is in market for new homes, but more expect to make home repairs and improvements and to buy furniture and household appliances.

Consumers are quite optimistic about their own economic situation. More of them report increases in wages and salaries during the past twelve months than in previous two annual surveys, and more expect further increases in incomes than in any survey of recent years. About 41 per cent now report total annual incomes $5,000 or more, compared with 36 per cent a year ago.

Importance of consumer spending in free US economy was spelled out in another report last week. The American Management Association, a private business organization, reported after survey of the leading American companies that consumer buying power is the principal economic indicator used in business forecasting. Its impact is greatest on management programme for replacement and expansion of productive facilities.

It may well be more than coincidence that businessmen expect their sales as well as their capital outlays to hit new highs this year. Utilities, for instance, estimate revenues will rise 9 per cent, manufactures 8 per cent, and retailers 4 per cent.

*

GATEWAY MARKETS

(Continued from page 646)

Oils and Oilseeds

After a quietly steady performance in recent weeks, Castorseed futures assumed a buoyant appearance once again due to predominance of buyser, reflecting prospects of overseas business. May delivery opened at Rs 171-12 and, after touching Rs 172-0, finished at Rs 171-4.

Groundnut prices hardened under keen enquiry from Saurashtra. May delivery opened at Rs 172 and closed at Rs 173-0. Despite larger arrivals, the spot section presented a steadier appearance from commission houses and consumers.

The Linseed section shared the general trend of the market with May delivery improving to Rs 29-8.

Cottonseed futures revealed a steadier tendency with Akola interests lending a sustained support to the market. May delivery began at Rs 107 and finished at the same level.

Madras Review

South Indian Notes

Land Reforms in Andhra

Against the general background of the second Five Year Plan and in the particular context of the recent tendency of the prices of food articles to move upward, the overriding task remains one of realizing the targets set for food production in the Second Plan. While intensive cultivation offers the only way to a state of greater productivity in agriculture, it breaks down before the morass of general discontent and inertia among those who directly man the various agricultural operations. One of the important planks in the agricultural policy of State Governments has, therefore, to do with the psychological and human aspects of agriculture, the impact of which on agricultural production is, though indirect, far-reaching. It has been the declared policy of State Governments in India to initiate such measures, which would redress the injustice inherent in the old systems of land tenure and thus provide the necessary incentive to actual tillers of the soil. The importance of such measures naturally varies with the particular system of land tenure prevalent in the States. But the problem everywhere has been one of abolition of intermediary tenures.

So far as the Andhra Government was concerned the question of land tenure legislation was one of abolishing the estates, which were existing in the State under the old system of Permanent Settlement. This was done by the Estate Abolition Act, which was later on supplemented by two other measures, one of which sought to abolish certain kinds of marginal inams which were not covered by the Estates Abolition Act, while the other provided for the abolition of all inams other than estates and for their conversion into ryotwari tenure. A few classes of inams have been left untouched by the above measures, and it has now been decided by the Government to bring further enactments, which by abolishing the inams that have been left intact, would mark the final stage in the process of abolition of intermediaries in the State. The progress achieved by means of the earlier measures is reflected in the fact that out of a total area of 77 lakhs standard acres included in all holdings in 1955, only seven lakhs standard acres, or about 9 per cent of the total area, was under tenancy.

*

State's Future Bright

Food production in Andhra has in the course of the First Plan period attained the level of self-sufficiency and total production of cereals in the state in 1955-56 has been in excess of the food requirements of the state. The main contributive factor for this improved state of affairs in food production is increased facilities for irrigation made possible by the various schemes under the First Plan. In the course of the last five years, the net irrigated area increased from 57.35 lakh acres to 66.77 lakh acres, showing an increase of 16.4% and is chiefly made up of an increase in the area irrigated by tanks as well as canals. While the area irrigated by tanks increased from 18.31 lakh acreas to 25.67 lakh acres, the area irrigated by canals increased from 29.73 lakh acres to 31.02 lakh acres. Increased use of chemical fertilizers has also contributed to the increase in food production and Andhra Pradesh has emerged as one of the largest consumers of chemical fertilizers in this country.

But the increased food production also reflects the shift in the pattern of agricultural production in the State. Considering the fact that the area under cereals rose from 57.3 per cent to 59.3 per cent and that under oil seeds and pulses declined from 19.2 per cent and 11.8 per cent to 16 per cent and 9 per cent respectively, the conclusion cannot be escaped, that increased acreage under cereals was partly responsible for increased production. The various crops other than cereals raised in the state, are Groundnut, Sugar cane, cotton, and tobacco. The total outturn of these crops during 1955-56 was 10.53 lakh tons 4.78 lakh tons, 1.09 lakh tons and 1.33 lakh bales respectively.

Side by side with improvement in agricutural production, industrial and mineral production has also increased. The State owes its industrial strength to its reserves of coal of which it is the traditional supplier to the South as well as to its being the chief producer of asbestos in the whole of the country. Further, two large deposits of iron ore containing an estimated reserve of 369 million tons of ore have been located in Guntur and Nellore districts. Its industrial stature will further be enhanced by the opening of a fertilizer factory as well as a number of Sugar factories. In the light of its past achievements and its programmes, the future of the Andhra Pradesh looks bright.

SOUTH INDIAN MARKETS

Groundnut Estimate for 1956-57

ACCORDING to the third and final forecast report issued this week, the area sown with Groundnut in the Madras State in 1956-57 is estimated at 1,800,800 acres as compared with 1,778,100 acres in the previous year. Compared with the average area of 1,752,100 acres, calculated for the five years ending 1955-56, this shows an increase of 2.8 per cent.

The yield in terms of unshelled nuts works out to 854,800 tons as against 821,100 tons for the previous year, representing an increase of 4.1 per cent. Compared with the average yield of 754,700 tons, calculated for the five years ending 1955-56, the present estimate is an increase of 13.3 per cent. The harvest of the winter or main crop is reported to be in progress.

The third and final forecast report on groundnut crop for 1956-57 in Andhra Pradesh estimates the area, sown up to 25th January last, at 3,109,000 acres as compored with the final area of 3,071,000 acres for the previous year. The yield is estimated at 1,095,000 tons of unshelled nuts as compared with the revised estimated yield of 1,132,000 tons in the previous year, showing a decrease of 3 per cent.

Meanwhile, trading in the Madras Groundnut market was dull last week although prices were nearly maintained at last levels. Arrivals averaged 40 tons a day; and small crushers took up this quantity. The rate for superior oil-quality seeds was quoted at Rs 163 per candy and Bold variety at Rs 157. According to the latest reports, sowings of the winter crop have been completed. Rains are now needed in many centres.

In the Groundnut Oil section, the rate for the ready position flucuated between Rs 318 to Rs 320 per candy. Operators were generally cautious in both nearby and forward positions. Calcutta vanaspati interests took up only small quantities

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were fair and there were good clearances. Prices for all weights advanced by about one anna per pound. It is reported that some business was concluded in 8/8½ lbs at 45d and in 5/5½ lbs at 51d. Small quantities of Buff hides were cleared at more or less unchanged prices. Fair quantities of Cow Calf were also cleared and prices remained firm. Arrivals of Buff Calf were fair and some clearances took place at unchanged prices.

In the Tanned Skins section, market quality Goat skins were one to two annas per pound cheaper, while Sheep skins ruled unchanged. On the export front, prices of good quality goat skins remained very firm and, though the business concluded with the UK and the Continent was small, it was at satisfactory prices.

In the Raw Skins section, prices remained almost unchanged. In Bezwada, the rates for sheep skins were reported to be higher by Rs. 20 to Rs 25 per 100 skins.

*

Rubber

According to a statement issued by the Rubber Board, the production and consumption figures for February were 1,165 tons and 2,493 tons as compared to 2,190 tons and 2,671 tons respectively in the previous month. Consumption of imported rubber during the month was 451 tons.

Stocks with the estates and dealers and stocks with the manufacturers, as on the 28th February, together amounted to 7,425 tons, excluding 887 tons of synthetic rubber in stock with the manufactures.

A quantity of 539 tons of rubber of all grades were imported and sole crepe weighing over 16 tons were exported during this period.

*

Coffee

Latest reports reveal that, out of the 11,050 tons of coffee allowed to be exported by the Government, only about 2,000 odd tons have been cleared and another 1,000 tons have been sold. The actual surplus available for export this year may exceed 16,000 tons unless the effect of weather on next season's crop is worse than what is feared.

At the Coffee Pool auction held at Mysore this week, following were the range of prices (per cwt):—Plantation Peaberry Rs 220 to Rs 232-15; Plantation A Rs 212-9 to Rs 222-2; Arabica Cherry Peaberry Rs 180 to Rs 195-4; Cherry Flats Rs 171 to Rs 191-5; Robusta Peaberry Rs 154-12 to Rs 158-0 and Robusta Flats Rs 148-6 to Rs 158-1.

*

Pepper

Pepper markets have continued to rule quiet with price movements confined to a narrow range. Scattered selling, following easier advices from Singapore, is absorbed by bulls who are reported to be trying to maintain the market despite poor overseas enquiries. In the Alleppy market, the rate is quoted around Rs 537-8 per candy. In the Kozhikode market, Wynaad quality is quoted at Rs 625 and the Country variety at Rs 595 per candy.

With the proximity of the monsoon, further price erosion in Malabar black pepper is generally expected, if no sizable buying comes forth from New York. But the general sentiment in New York is to wait and watch for new incentives. Dealers and grinders there are buying sparingly, pending Sarawak new arrivals.

THE BOMBAY DYEING & MANUFACTURING COMPANY, LIMITED.

NOTICE

The Eighty-fifth Annual General Meeting of The Bombay Dyeing & Manufacturing Co., Ltd., will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, 18th April 1957 at 4-30 P.M. to transact the following business:—

1. To adopt the Directors' Report, and the audited Balance Sheet and Profit & Loss Account for the year ended 31st December 1956.

2. To sanction the declaration of a Dividend.

3. To elect a Director in place of Mr. Maneklal Premchand who retires by rotation and is eligible for re-election and to consider and if thought fit, to pass the following resolution, of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement is annexed hereto as required by Section 173 of the said Act:—

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Maneklal Premchand who has attained the age of 67 years and who retires by rotation, be and he is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

4. To elect a Director in place of Mr. Pratapsinh Mathuradas who retires by rotation and is eligible for re-election.

5. To appoint Auditors for the current year and to fix their remuneration.

AND for the purpose of considering, and if thought fit, to pass with or without amendment as may be permissible the following Resolutions as Ordinary Resolutions and/or Special Resolutions as specified below:—

ORDINARY RESOLUTIONS

I. RESOLVED that each of the existing 1,00,392 Ordinary Shares of the face value of Rs. 250/- each in the Capital of the Company which have been issued and subscribed and each of the 2098 Shares of the face value of Rs. 250/- each in the Capital of the Company not issued so far be subdivided into ten shares of the face value of Rs. 25/ each, such subdivision to take effect as from the first day of October 1957, and that Clause 5 of the Memorandum of Association of the Company be altered accordingly.

II. RESOLVED that the Directors be and they are hereby authorised wherever deemed necessary by them to exchange fresh certificates for such Shares of Rs. 25/- each in place of the existing Share Certificates in the names of those Shareholders whose names stand on the Register of the Company as on 1st October, 1957 and that such fresh Certificates be ready for delivery within six months from 1st October, 1957.

III. RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 and Schedule VIII to the Act, be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of fees, if any, specified in the aforesaid provisions at the Registered Office of the Company between the hours of 10-30 a.m. to 1 p.m. on all working days, except when the Registers and Books are closed under the provisions of Companies Act, 1956, or the Articles of Association of the Company. Provided, however, that the Register required to be maintained under Section 307 of the Act, shall be open for inspection of the Members or holders of Debentures of the Company, if any, as aforesaid between the times abovementioned during the period prescribed by Sub-section 5(a) of Section 307.

IV. RESOLVED that the Resolutions passed at the 82nd Annual General Meeting of the Shareholders of the Company numbered 1, 2 and 3 regarding exchange of areas, surrender by the Company of land held under leases of which the Lessors were the Executors of the late Sir Ness Wadia and sale by the Company of land to National Peroxide Ltd., subject to alterations in areas and prices resulting from joint surveys and the demands of the Municipal Corporation be and they are hereby confirmed and the proposed transactions approved.

V. RESOLVED that the Directors be and they are hereby authorised to exercise the powers of exchange, sale, conveyance, lease, assignment and other powers specified in Sub-clause IX of Clause 3 of the Memorandum of Association and Article 118(VI) of the Articles of Association of the Company as the Directors may from time to time deem necessary or desirable in the interests of the Company on such terms and conditions as the Directors may fix.

SPECIAL RESOLUTIONS.

VI. RESOLVED that in place and stead of the existing Clause 3 of the Articles of Association of the Company, the following Clause be and the same is hereby substituted as from the first day of October, 1957 as Clause 3 thereof:—

3. The Capital of the Company is Rs. 2,56,00,000 (Rupees two hundred & fifty-six lacs) divided into 10,24,000 (Ten lacs twenty-four thousand) Shares of the face value of Rs. 25/- each, with power to divide the Shares in the Capital for the time being into Equity Share Capital and Preference Share Capital and to attach thereto respectively any preferential, qualified or special rights, privileges or conditions.

VII. RESOLVED that in place and stead of the existing Clause 102 of the Articles of Associations of the Company, the following Clause be and it is hereby substituted as Clause 102 thereof:—

102. Unless otherwise determined by a General Meeting the qualification of a Director shall be the holding of Shares in the Company of the total face value of Rs. 750/-.

VIII. RESOLVED that in place and stead of the existing Clause 133 of the Articles of Association of the Company, he following Clause be and the same is hereby substituted as Clause 133 thereof:

133. Every deed or other instrument to which the Seal is required to be affixed shall (except in the case of Certificates of title to Shares) be signed by two Directors, who shall sign their names at the foot of or elsewhere on the said Deed, instrument or document. Certificates of title to Shares may be so signed by one Director or by a person or persons duly authorised by the Directors in that behalf. The signature on such Certificates of the Director may be reproduced and affixed by mechanical means.

IX. RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a Contract being entered into between the Company and its Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private), Ltd., in terms of the draft placed before the meeting, and for the sake of identification, initialled by the Chairman of the Company, to be operative as from the date of this Meeting till one month after the date of the Annual General Meeting of the Company in the year 1960, in respect of purcheses, sales or supplies of goods in which the Managing Agents regularly trade or do business in such as Rings, Ring Travellers, Lubrigating Oils, Hair and Leather Beltings, and other Leather Goods such as Pickers, Picking Bands and Buffers, Shuttles, Sprinklers and Sprinkler Equipment, Machine Cloths, Ginning, Pressing and Deliintering Machinery, Floor Polishing Machines, Homogenizers, Machinery and Machinery spare parts and Mechanical Handling Equipment or in respect of which they may trade or do business in as well as in respect of sales to the Managing Agents by the Company of sundry stores, petrol, tubular banding, soap, cloth and such other ancillary items and in respect of the supply or rendering of any service by either to the other, other than that of Managing Agents, including receiving loans or deposits at interest not exceeding the State Bank of India's rate of interest from the Managing Agents, subject to the conditions that all payments to be made to the Company by the Managing Agents shall be made within one month from the date of such transactions, and that the prices charged to the Company shall be as approved or confirmed by the Board, and shall be such as are not less favourable to the Company than the market rates, or which are otherwise reasonable, and the terms and conditions of the said supplies shall be sanctioned by the Board of Directors.

X. RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a Contract being entered into between the Company and Spin-Weave Textiles an Associate of the Managing Agents in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman of the Company, to be operative as from the date of this Meeting till one month after the Annual General Meeting of the Company in the year 1960, in respect of purchases or supplies of Bobbins, Pirns, Skewers, Wood, Wooden Cases, Wooden Articles such as Sleys, Hand Tops, Rollers, Picking Sticks, Leather Goods such as Beltings, Picking Bands, Pickers, Buffers, Loom Straps, Ram Rings, Castings and Machinery spare parts and other sundry mill stores, on the terms that the rates charged to the Company shall be approved or confirmed by the Board, and shall be such as are not less favourable than the rates charged for similar items generally agreed to by other reputed firms in Bombay, or which are otherwise reasonable, and the terms and conditions of the said supplies shall be sanctioned by the Board of Directors.

XI. RESOLVED that the proposal to make available by way of Lease, License or otherwise in accordance with the law, for a period of ten years Block "Q" at the Company's Dye Works to a private limited company proposed to be floated and registered under the name of or similar to Bombay Ring Travellers Company (Private) Ltd., in which Company the Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private) Ltd., may hold more than one-third of the shares in the Capital of that Company, thus giving them not less than one-third of the total voting power in that Company and thereby making that Company Associates of Messrs. Nowrosjee Wadia & Sons (Private) Ltd., be and the same is hereby approved and the Directors be and they are hereby authorised to carry through such transaction on terms and conditions to be finally agreed upon between them and the proposed company when formed and to execute such documents and do all such acts as may be required for the purpose.

The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of items I to XI set out above is annexed to the Notice of the Annual General Meeting posted to all the Shareholders individually.

The drafts of the Contracts referred to in Special Resolutions Nos. IX and X are open for inspection by any Member at the Registered Office of the Company on working days except on Saturdays from 11 A.M. to 4 P.M.

CLIVE STREET GOSSIP

(Continued from page 644)

on the curious ground that it is over-ambitious and will break down under the stresses and strains that it creates. The latest warning-monger is Sir Homi Mody, who has urged a strong plea for a re-appraisal of targets in the name of sober realism. Some foreign observers, too, damn the Plan with faint praise by saying that it is too ambitious to succeed. Providence, in an abundant measure of mercy to this country, gave us Mahatma Gandhi to win freedom for India, has given us Pandit Jawaharlal Nehru to stabilise India's freedom, and has inspired the Second Plan in order that our freedom may, for all time, rest on the enduring foundation of social justice and economic strength. Providence helps those who help themselves; and, that we may always be deserving of Divine Grace, we must demonstrate our full capacity for self-help.

*

If stock exchanges function as the link between investors on the one hand and industrial projects on the other, indigenous enterprise can thrive and expand on indigenous capital. To facilitate unimpeded flow from savings to investment is the inescapable duty of the steward of the Plan's finances.

*

If this flow can be restored to the level of the war-time tide in volume and velocity, the success of the Plan from the point of view of internal resources is assured. Conditions generated by the Plan's disbursements are similar to those induced by defence expenditure in the first quinquennium of the forties. The giltedged market was then in good shape. New Loans met with avid response. Stock exchange performance made good showing. New capital issues were, in most cases, over-subscribed. What happened then can and should happen again. In fact, circumstances today are very much more propitious. The simple question is: How best can we avail ourselves of these favourable conditions for the benefit of the Second Plan? I have every confidence that TTK can find the answer.

EAVESDROPPER

SHREE KRISHNA GYANODAY SUGAR LIMITED

NOTICE IS HEREBY GIVEN THAT THE 22nd Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Tuesday the 30th April, 1957 at 11-30 A.M., to transact the following business.—

75,000—7%	(Income-tax free) cumulative Redeemable 2nd. Preference Shares of Rs. 100 each.	Rs. 75,00,000
12,55,625—Ordinary Shares of Rs. 10 each.	..	Rs. 1,25,56,250
		Rs. 2,08,06,250

Issued, Subscribed & Paid-up Capital:—

7,500—6%	(Income-tax free) Cumulative Participating First Preference Shares of Rs. 100 each.	Rs. 7,50,000
*12,54,907—Ordinary Shares of Rs. 10 each.	..	Rs. 1,25,49,070
		Rs. 1,32,99,070

*Note:—These include

(a) 29,938 Ordinary Shares of Rs. 10 each issued for consideration other than cash in part payment of the purchase price of the mill in 1936;

(b) 5,00,629 Ordinary Shares of Rs. 10 each issued as fully paid up to the existing shareholders, as on 1st January 1955, in proportion of one Ordinary Share for each Ordinary Share held by them on 1st January, 1955, by capitalization of Reserves.

The rest are for cash.

Debenture Loan Capital:— .. .. .. Rs. 40,00,000

(a) 5½% Registered Mortgage Debentures of Rs. Ten lacs divided into 1,000 debentures of Rs. 1,000 each secured by Trust Deed dated 14th July 1937 and supplemental Trust Deeds dated 14th August 1944 and 1st September, 1954. Rs. 10,00,000

The principal amount is repayable on 16th July 1966 with option to the Company to pay off on or after 15th July 1962 by giving six months' notice of its intention so to do.

The interest is payable half-yearly on the 15th January and 15th July each year.

(b) 3,000 6% Registered Mortgage Debentures of Rs. 1,000 each secured by Debenture Trust Deed dated 27-6-55 .. .. .. Rs. 30,00,000

Rs. 40,00,000

The interest is payable half-yearly on 16th February and 16th August each year. 600 debentures of this series will be redeemed by the Company at par on 16th February 1961 and on each 16th day of February of the years following till the whole of the said debentures shall have been redeemed or paid off. The particulars of debentures to be redeemed will be determined by draw.

Both the above series of Debentures are secured by fixed mortgage charge of the Company's lands, buildings, plant and machinery, both present and future and a floating charge on other assets (excepting raw materials, stores and stock-in-trade), such floating charge not hindering or preventing the Company from leasing, charging or otherwise disposing of or dealing with the other assets, and the Company may charge such other assets and such charge may be made specific or floating and may be made to rank in priority or pari passu with or after the floating charge in favour of the holders of these Debentures.

The mortgage charge with respect to both these series of Debentures rank pari passu.

Note:—(The Company has a Cash Credit limit etc. for Rs. 53 lacs with Allahabad Bank Ltd., secured by floating charge on moveable assets of the Company, such charge ranking in priority to floating change in favour of holders of above debentures.)

PRESENT ISSUE

75,000—7% (income-tax free) Cumulative Redeemable Preference Shares of Rs. 100 each at par .. Rs. 75,00,000

These shares carry 7% (income-tax free) cumulative preference dividend and subject to the provisions of Companies Act 1956, shall be redeemed at par on 1st of July 1972 with option to the Company to redeem them at par earlier at any time after the 30th June 1969 on giving six months previous notice of its intention so to do. A redemption fund is proposed to be created by setting apart Rs. Ten lacs every year out of the annual profits from the year 1963 onwards till full Rs. 75 lacs is made up.

The shares will rank for dividend next after paying or providing for payment of cumulative preferential dividend at 6 per cent per annum (income-tax free) on the capital for the time being paid up on the existing Preference Shares of the nominal value of Rs. 7½ lacs of the Company but in priority to the Ordinary Shares of the Company. For return of capital, these shares will rank next after the existing Preference Shares but in priority to the Ordinary Shares, but shall not be entitled to any further participation in profits or surplus assets.

This issue of 75,000 Second Cumulative Redeemable Preference Share of Rs. 100/- each is offered for public subscription.

The amount payable in respect of these shares is as follows:—

Rs. 50 per share with application, and

Rs. 50 per share on allotment.

Applications must be made for a minimum of five Preference Shares or multiples thereof.

The Company is advised that the Preference Shares now being issued are "Approved Investments" within the Meaning of Section 27A of the Indian Insurance Act, 1938.

PROSPECTUS

OBJECTS

The Company was incorporated on 5th November, 1936. Objects for which the Company was formed are as set out in the Memorandum of Association and in particular to acquire the paper mills belonging to Punjab Pulp and Paper Mills Limited (in Liquidation) with 51 acres of free-hold land, situate in Jagadhri, and to carry on business of manufacture of pulp and papers of all kinds, and articles of all kinds for manufacture of which pulp and paper is used.

The Company has since then progressively expanded, both in its volume of production and its range of products. The Company's Factory at Yamna Nagar (Jagadhri Rly. Station) now stands in an area of nearly over 350 acres of land with a fully equipped Research Laboratory and an extensive staff and labour colony. The original annual rated capacity of the Mills was 7,500 tons of finished paper inclusive of wrapper. With the additions and alterations so far made, its present annual rated capacity stands at 13,500 tons of paper including wrapper. In addition to the Paper Mills, the Company has got a Hydrogenation Factory, a Tin Can Manufacturing and Printing Plant and a mechanised Stationery Department for manufacture of stationery. The cost value of the block in 1936 when the Factory was purchased was Rs. 25,58,618-2. On 30th June, 1956, it stands at over Rs. one crore fifty lacs showing additions of about Rs. one crore twenty five lacs during this period. The present market value of block i.e. Plant and Machinery, equipments, building's land, etc., of the Company should be about Rs. 3 crores.

DEVELOPMENT

The Company is at present engaged in Expansion Renovation and Modernization Programme of about Rs. 3 crores to be completed by the end of the year 1958. It is a two-phased programme. The first phase consists of the modernization and renovation of the existing three paper machines. The major portion of the equipment has already reached the site and has been erected or is in course of erection. This first phase is expected to be completed by April 1957 when the production of the existing three machines would go up from 40 tons to 53-54 tons of paper per day i.e. the annual rated capacity would go up from 13,500 tons to 17,500 tons.

The second phase of the Programme is Expansion programme which consists of putting up a new Pulp and Paper Mill. Orders for both the new Pulp and Paper Mill Soda Recovery unit and other items of the machinery and equipment required for this programme have already been placed and advance payments of over Rs. fifty one lacs have already been made. The shipments of the new Paper Machine and the new Pulp Mill consisting of 2 streets—one for the manufacture of pulp from wood and bamboo and another for the manufacture of pulp from bagasse grass etc. are expected to be completed during the current year. The first consignment of equipment relating to the new Paper Machine has already arrived in India.

The scheme has been drawn up in consultation with Messrs Escher Wyss GmbH, Ravensburg and Messrs. Krauss-Maffei Imperial GmbH, Muenchen 13, of West Germany, both of whom are reputed manufacturers of paper and pulp machinery. The scheme envisages in addition to the installation of pulp and paper mill—

(a) setting up of a new modern soda house consisting of soda recovery boiler, recausticising unit and modern evaporator and an electrostatic precipitator, under technical supervision of Elof Hanson of Sweden.

Note: The suppliers guarantee caustic recovery of 95 per cent as against present recovery of about 65 per cent. This should result in considerable saving to the Company in cost of chemicals used in manufacture.

(b) Addition of another turbine of 6250 KW and two boilers to our existing electrical unit to provide additional load of electricity and additional process steam.

With the completion of this Expansion and Modernization programme, the Mills rated capacity would increase to 90-100 tons per day (i.e. about 32,000 tons per annum against the present rated capacity of 13,500 tons per annum) of finished paper, consisting of all kinds of writing and printing papers including Banks, Bonds, Ledgers, Airmails and Manifold etc.

OBJECT OF THIS ISSUE

The total cost of this Renovation Expansion and Modernization programme is estimated at approximately Rs. three crores, of which over Rs. 86 lacs has already been spent on renovation and modernization of existing paper machines and as advance payments against orders placed for machines and equipments for the 2nd phase of the programme, Rs. 70 lacs would become available from the Company's liquid resources in hand, including conversion of part of the investments of the Company. Rs. 65 lacs would become available from prospective resources of the Company i.e. provisions for depreciation, development rebate and undistributed profits between now and end of 1958, by which time the second and final phase of the scheme would have been completed and the new plant put into commission. This leaves an uncovered balance of about Rs. 75 lacs, which is proposed to be made up by the present issue of Second Preference share capital.

RAW MATERIALS

Raw materials so far used are Sabai grass and rags. The Company obtains its requirements of Sabai grass from Nepal, Punjab and Himachal Pradesh forests for which they are holding leases for various terms. Bamboo, spruce and other coniferous woods and bagasse will be the additional raw materials for the new Mills. Arrangements have been settled for 15 year lease of the bamboo forests of the new Punjab State. The government have also plans in hand to augment further the yield of grass and bamboo of their forests. Himachal Pradesh has also agreed to grant lease of their bamboo forests to the Company. For spruce and other coniferous woods, the Company is negotiating with the Punjab, Himachal Pradesh and U.P. Governments for leases. So far as bagasse is concerned, there are a large number of sugar factories in and around the Mills, and as such no difficulty is anticipated in obtaining sufficient quantities of bagasse as may be required.

PROSPECTS AND PROFITS

Per capita consumption of paper in India is amongst the lowest in the world, being 2 lbs. per annum as compared to 400 lbs. in U.S.A. and 100-200 lbs. in European countries and 50 lbs. in Japan. With the progressive industrialization of the country and spread of literacy under the Second Five-Year Plan, the consumption of paper, paper boards and newsprint is estimated by the Planning Commission to go upto 5,00,000 tons per annum by the year 1960-61. During the first Five-Year Plan period i.e. from the year 1951 to 1955-56, the indigenous production has gone up from 1,14,000 tons to 2,02,000 tons. The consumption of paper in the meantime has also gone up to 3,17,000 tons due to increase in the demand in the country. In order to fill up this gap between production and consumption, the country has been importing considerable quantities of foreign paper every year.

The Company's modernization and extension programme coupled with the continued growing demand for paper in the country leads your Directors to believe that (in the absence of some unforeseen circumstances beyond their control) the modernisation and expansion programmes coming into fruitrition according to schedule (the former by the end of April 1957 and the latter by the end of 1958), the profits of the Company should show considerable increase commensurate with the extended capacity of the mills. Computing on the present prices levels, it may well be hoped that the trading profits of the Company should be twice as much in the year 1959 compared to the present profits.

Dividend Cover:—On the basis of the present annual net profits as disclosed by the Auditor's Report hereunder appended the dividend payable on the first and second Preference Shares is covered by present earnings nearly four times over.

FINANCIAL INFORMATION

Auditor's Report:—

The following is a copy of the report of the Company's Auditors, Messrs. Price, Waterhouse, Peat & Co., Chartered Accountants:

Messrs. KARAM CHAND THAPAR & BROTHERS PRIVATE LIMITED
Managing Agents,

Calcutta, 28th March, 1957.

SHREE GOPAL PAPER MILLS LTD.,
5, India Exchange Place,
Calcutta.

Dear Sirs,

We have examined the books and accounts of Shree Gopal Paper Mills Ltd. as kept in the Managing Agents' Office at Calcutta and at the Mills, in which are incorporated the certified Returns from the Oil Mills, Ginning Factory and Forests, for the four years ended 31st December, 1955 and the half year ended 30th June, 1956 and report that the Profits of the Company are as set out below. The accounts for the half year ended 31st December, 1956 have not yet been made up. These profits have been arrived at after charging all expenses of working and management including provision for Normal Depreciation on the basis allowable for taxation and after making such adjustments as are, in our opinion, appropriate.

INCOME.	Year ended 31st December, 1952.	Year ended 31st December, 1953.	Year ended 31st December, 1954.	Year ended 31st December, 1955.	Half-year ended 30th June, 1956.

Price, Waterhouse, Peat & Co.

STATUTORY & GENERAL INFORMATION

1. Directors:

The Articles of the Company provide that

(i) unless otherwise determined by a General Meeting, the number of Directors shall not be less than five nor more than eleven inclusive of ex-officio Directors and Managing Agents' nominee Directors.

(ii) unless otherwise determined by a General Meeting, the qualification of a Director shall be the holding of Ordinary Shares of the Company of the nominal value of Rs. 5,000 in his own name, but this shall not apply to Central or State Government Director, or Technical Director, or Managing Agents' nominee Directors.

(iii) Each Director shall be paid out of the funds of the Company by way of remuneration a sum of Rs. 200 for each meeting of the Board which he attends. In addition to the remuneration payable to him as above, a Dircetor if he is not a resident of the place where the meeting is held, will further be entitled to actual travelling charges not exceeding airconditioned class railway fare from his usual place of residence in India and back; in addition to thirdclass fare for a servant if taken, and also Rs. 40 per diem for the days necessary for attending and returning from the Meeting of the Board of Directors or any Committee thereof or general meeting of the Company or otherwise in connection with the business of the Company. Where the journey is undertaken by air, actual air passage shall be paid.

The Directors shall, subject to the provisions of Sections 198 and 309 of the Act, be further entitled to receive by way of additional remuneration a commission equivalent to 1 per cent of the net annual profits of the Company, computed in the manner laid down in Sections 349, 350 & 351 of the Companies Act 1956. Such commissoin shall be divided equally amongst the directors on the Board on the last day of the financial year of the Company to which the commission relates, unless they decide otherwise.

(iv) If any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from Calcutta for any of the purposes of the Company or in giving special attention to the business of the Company, the Company may, subject to the provisions of Sections 314, 198 and 309 of the Act, remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise, and such remuneration may be either in addition to or in substitution for his or their share in the remuneration as above provided for the Directors.

(v) The general control of the business of the Company is vested in the Board of Directors who, in addition to the powers and authorities by the Articles of Association of the Company or otherwise expressly conferred upon them, may exercise all such powers and do all such acts and things as may be exercised or done by the Company and are not by the Articles or by the Companies Act or any other statute expressly directed or required to be exercised or done by the Company in General Meeting, subject nevertheless to the provisions of the Companies Act and statutes and of the Articles and to any regulations from time to time made by the Company in General Meeting; but no regulations so made shall invalidate any prior act of the Directors which would have been valid if such regulation had not been made. The Directors shall be at liberty subject to the aforesaid provisions to delegate any of their powers to the Managing Agents or a Committee of Directors or a Director, or any other person.

2. Managing Agents:—

Messrs. Karam Chand Thapar & Bros. Private Ltd. are the Managing Agents of the Company. They have been reappointed as Managing Agents of the Company for a period of ten years from 1st January 1957. Sanction of the Central Government to their reappointment has been obtained. The Managing Agents are a private limited company with a Subscribed and paid up capital of Rs. 25,00,000.

The Managing Agents are entitled to the management of the whole affairs and business of the Company, subject to the control and supervision of the Board of Directors.

The remuneration of the Managing Agents is a commission of 10 per cent on the net annual profits of the Company computed in the manner as laid down in Sections 349, 350 and 351 of the Companies Act 1956, subject to a minimum of Rs. 50,000 in case of no profits or inadequacy of profits in any financial year of the Company. The said sum of Rs. 50,000 is payable by the Company to the Managing Agents in equal monthly instalments, each payable on the last day of each month. Any remuneration due to the Managing Agents over and above the minimum of Rs. 50,000 on the basis of 10 per cent of net annual profits as above, shall be paid by the Company immediately after the accounts of the Company for each financial year have been audited and laid before the company in General Meeting.

The Managing Agents are also entitled to charge and be paid all expenses on account of rent, postage, telegrams, printing, stationery, telephones, electricity, taxes and all salaries or wages or emoluments, bonuses, allowances, Provident Fund Contributions, commissions, etc. which shall be payable to the managers, accountants, legal advisers, engineers, experts, agents, clerks, servants, workers, brokers, bankers, solicitors, auditors, technicians, commission agents, dealers or other officers, employees and workmen retained by the Managing Agents for and on behalf of the Company at the office of the Company at Calcutta or at the Company's Works or at the office of the Managing Agents or elsewhere, and all expenses of manufacture and all other out-of-pocket expenses incurred on behalf of the Company, for carrying and conducting the business of the Company, including travelling and conveyance expenses etc. likewise incurred.

The Company shall also bear and pay such proportion of expenses on account of salaries, wages, allowances, Provident Fund contributions, commissions etc., of the officers, staff and workers etc. employed partly in connection with business of the Company and partly for the business of other companies or firms at Calcutta and/or elsewhere as also the office incidentals such as rent, stationery, telephone, electricity, travelling and conveyance expenses likewise incurred relating to such officers, staff and workers.

The Articles of Association provide that the Managing Agents shall conduct and manage the whole affairs of the Company subject to the control and supervision of the Board of Directors.

The Managing Agents are entitled to nominate not more than two directors where the number exceeds five and one director where the number does not exceed five.

3. Borrowing Powers:—

The Articles of Association of the Company provide that subject to the provisions of sub-clause (d) of clause (1) of Section 293 of the Companies Act, 1956, the Directors may from time to time at their discretion, raise or borrow or secure the payment of any sums of money for purposes of the Company from any persons, firms or companies including a director and Managing Agents. The shareholders by Special Resolution dated 19th January, 1957 authorised the directors to borrow for the purposes of the business of the Company amounts in excess of the aggregate of the paidup capital and free reserves of the Company.

4. Restrictions of right to transfer:—

Articles of Association contain no restrictions on the transfer of fully paidup shares. The Directors may, however, decline to register any transfer of shares which are not fully paid up, and may also decline to register any transfer of shares on which the Company has a lien. The Company has a first and paramount lien upon all shares (not being fully paid-up shares) held by any member of the Company (whether alone or jointly with other persons) and upon all dividends which may be declared in respect of such shares for all moneys (whether presently payable or not, called or payable in respect of these shares, and for all debts, obligations, liabilities and engagements of such members solely or jointly with any other persons.

5. Voting Power:—

The Articles of the Company provide that

(1) On a show of hands every member entitled to vote and present in person shall have one vote. Upon a poll the voting rights of members shall be as laid down in Section 87 of the Companies Act 1956, Provided that save as provided in Clause 2(b) of Section 87 of the said Act, a member of a Company holding any preference share capital therein, shall in respect of such capital have a right to vote only on the resolutions placed before the Company which directly affect the rights attached to his preference shares.

No member not personally present shall be entitled to vote on a show of hands unless such member is a corporation or a company present by a proxy or by a representative duly authorised in which case such proxy or representative may vote on show of hands as if he were a member of the Company.

(2) No member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or as a proxy for any other member or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member, or in regard to which the Company has, exercised, any right of lien.

6. Interest of Directors:—

Lala Karam Chand Thapar and Mr. Lalit Mohan Thapar are Directors of Messrs. Karam Chand Thapar & Bros. Private Ltd., Managing Agents of the Company and as such, are interested accordingly. Both of them are Managing Agents' nominee directors on the Board of the Company.

None of the directors have any interest in any property acquired by the Company within the two years preceding the date hereof or to the machinery and plant and equipment that may be purchased out of the proceeds of this issue.

Lala Karam Chand Thapar is a Director of Orient Engineering and Commercial Co. Ltd., through whom Order being item No. 6 for machine drive has been placed on A. E. G. of Germany.

7. Miscellaneous:—

(i) Redeemable Preference Shares.

The Company has not within two years preceding the date hereof issued any Redeemable Preference Shares. The present issue of capital is of Redeemable Preference Shares.

(ii) The Company has not within the two years preceeding

the date hereof issued nor does it at present propose to issue any shares at premium;

(iii) The Company has not entered into nor does it propose at present to enter into any contract or arrangement whereby any option or preferential right has been given or is proposed to be given to any persons to subscribe for any shares or debentures of the Company;

(iv) No amount or any benefit has been paid to any promoter or any Officer within the two years preceding the date hereof, nor is any amount intended to be paid;

(v) The Company issued:

(a) 5,00,750 Ordinary Shares of Rs. 10/- each as fully paid up to the existing shareholders as on 1st of January 1955 in proportion of one Ordinary Share for each Ordinary Share held by them on that date, by capitalisation of reserves;

(b) 2,52,875 Ordinary Shares of Rs. 10/- each as further capital for cash at par in January, 1955,

and (c) Rs. 30 lacs Debenture loan capital in 3,000 6% Registered Mortgage Debentures of Rs. 1,000/- each at par

(vi) The Company has not issued nor agreed to issue within the two years preceding the date hereof any shares or debentures either for cash or as fully or partly paid up otherwise in cash.

(vii) The Company paid an underwriting commission of Rs. 75,000/- to Messrs. Dhanuka & Co. for procuring subscription of the aforesaid debentures of Rs 30 lacs. Beyond this, the Company has paid no other sum within the two years preceding the date hereof, nor is any such payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscription for any shares in debentures of the Company or as discount in respect thereof, nor is it intended that any should be paid in respect of the present issue.

Purchase of Properties:—

(viii) Save as respects property purchased or acquired or to be purchased or acquired being item No. (b) referred to under the heading 'Contracts', **or the additional Turbine for which order is still to be placed, any property** which the Company has purchased or acquired or proposes to be purchased or acquired which is to be paid out of the proceeds of this present issue or the purchase or the acquisition of which has not been completed on the date of the issue of the prospectus is property—

(a) Contract for purchase or acquisition whereof has been entered into in the ordinary course of business of the Company the contract not being made in contemplation of this issue, or this issue in consequence of the contract; or

(b) As respects which contract the amount of the purchase money is not material.

The property purchased or acquired or to be purchased or acquired under contracts as aforesaid is vested or will vest absolutely in the Company. There had been no other transaction relating to such property within two years preceding this prospectus.

(ix) The Company does not propose to acquire any business nor does it propose to apply the proceeds or any part of the proceeds of the present issue in the purchase of any business or in the purchase of any interest in any business or in connection therewith nor the proceeds of this issue or any part thereof are intended to be applied directly or indirectly in any manner resulting in the acquisition by the Company of shares in any other body corporate.

8. **Underwriting Arrangement:—**

No underwriting arrangements have so far been made for this issue. The Articles of the Association of the Company permit payment of underwriting commission upto 2½ percent (in addition to brokerage) on the value of the shares to person or persons subscribing or agreeing to subscribe or procuring or agreeing to procure subscription for any shares of the Company. Brokerage will be paid by the Company as hereunder mentioned.

9. **Subscription:—**

The object of this issue is as hereinabove stated. The minimum subscription, which in the opinion of the Directors is required to be provided in respect of each of the items mentioned in Clause 5 of Part I, Schedule 2 of the Companies Act 1956, is Rs 36.25 lacs.

	Rs. in lacs
(a) Price of property proposed to be purchased	35
(b) Expenses on this issue	1.25
(c) Repayment of any moneys borrowed in respect of foregoing matters ..	NIL
(d) Any other expenditure ..	NIL

Short-fall, if any, and any additional working capital required will be provided out of such facilities including advance from Banks and/or Managing Agents as may be available to the Company from time to time, and/or long term deferred payment arrangements in respect of supplies of Machinery still to be ordered.

10. **Modification of Rights:—**

The Articles of Association of the Company provide that—

Whenever the capital is divided into different classes of shares all or any of the rights and privileges attached to each class may subject to the provisions of Sections 106 and 107 of the Companies Act, be modified, commuted, affected, abrogated or dealt with by agreement between the Company and any person purporting to contract on behalf of that class, provided such agreements is (a) ratified in writing by the holders of at least three-fourths in nominal value of the issued shares of the class or is (b) confirmed by a Resolution passed at a separate General meeting of the holders of shares of that class and supported by the votes of the holders of not less than three-fourth of those shares, and all the provisions of the Articles of Association of the Company as to General Meetings shall mutatis mutandis, apply to every such meeting, but so that the quorum thereof shall be the members holding or representing by proxy or attorney one fifth of the nominal amount of the issued shares of that class. This Article is not to derogate from any power the Company would have had if this Article were omitted.

11. **Expenses of this Issue:—**

Preliminary expenses including brokerage are estimated at under Rs. One lac 25 thousand.

12. **Contracts:—**

The following Contracts, not being contracts in the ordinary course of business which are or may be material, have been entered into by the Company during the two years preceding the date hereof:—

(a) Agreement dated 11-2-57 between the Company and Messrs. Karam Chand Thapar and Bros. Private Ltd. reappointing the latter as Managing Agents of the Company for a period of ten years as from the 1st January, 1957, on the terms as to remuneration as hereinabove stated.

(b) Orders for supply of Machinery and equipment as under:—

(1) Order No. SGM/D-E/M/4 (55)/246A Dated 18/22. 6. 55 placed on M/s. Escher Wyas GmbH., Ravensburg, W. Germany for New No. IV Paper Machine, F. O. B. Value DM. 34,55,200(2) Order No. SGM/D-E/M/4 (55) 247A Dated 18/22.8.55 placed on M/s. Krauss - Maffei - Imperial GMBH. & Co., Muenchen, West Germany, for New Pulp Mill F. O. B. Value DM. 41,61,240 (3) Order No. SGM/D-JMW/3956 (Order Sr. No. 68) Dated 14.8.56 placed on M/s. Elof Hansson, Sweeden. For JMW Recovery Boiler F. O. B. Value SW. Kr. 15,10,000 (4) Order No. SGM/D-Emb/C (A)/4055 (Order Sr. No. 69) Dated 21. 8. 56 placed on M/s. Jagenberg-Werke Akt. Cos. Dusseldorf, Germany. for Dupiex Sheet Cutter F. O. B. Value £. 21,406/- (5) Order No. SGM/D-Dorr/6689 (Order Sr. No. 70) Dated 26. 12. 56 placed on Messrs. Elof Hansson, Goteborg. Sweden. for Dorr Re-causticizing Plant. F.O.B. Value Sw. Kr. 8,16,000 (6) Order No. SGM/B-M/D (4)/4437 (Order Sr. No. 71) Dated 11.9.56 placed on The Orient Engineering & Commercial Co. Ltd., Calcutta, for A.E.G. Drive for No. IV Machine, F.O.B. Value £. 45,000/- (7) Order No. SGM/D-Crane/5173 (Order Sr. No. 76) Dated 17.10.56 placed on M/s. C. Haushahn, West Germany, for Crane for New Paper Machine Buildings, F.O.B. Value £. 5,525/- (8) Order No. SGM/D-E/V/881 (Order Sr. No. 99) Dated 1.1.57 placed on Messrs. Elof Hansson, Goteborg, Sweden, for Rosenblad's Evaporation Plant, F.O.B. Value Sw. Kr. 8,87,900 (9) Order No. SGM/D-E/P/880 (Order Sr. No. 100) Dated 1.1.57 Placed on Messrs. Elof Hansson, Goteborg, Sweden, for Flaktfabriken's Electric Precipitator, F.O.B. Value Sw Kr. 2,90,250.

13. **Documents:—**

Copies of the Memorandum and Articles of Association of the Company, the original Consent Order of the Controller of Capital Issues, the original sanction of the Government of India approving the reappointment of Messrs. Karam Chand Thapar & Bros. Private Ltd. as managing Agents of the Company for ten years from 1st of January 1957, and the Managing Agency agreement dated 11th Feb. 1957 made between the Company and Messrs. Karam Chand Thapar and Bros. Private Ltd., Managing Agents on their reappointment, and copies of the orders for purchase of machinery, plant and equipment and other contracts referred to above, the abovementioned Auditor's report and the copies of the Balance Sheet and Profit and Loss a/c. upon which the report is based can be inspected at any time during the usual business hours at the Registered Office of the Company for a period of fourteen days from the date of publication of this Prospectus or until the subscription list closes whichever is earlier.

14. **Auditor's Consent:—**

Messrs. Price Waterhouse Peat & Company have given, and have not, before delivery of this Prospectus for registration withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their report, set out above, in the form and context in which it is included.

The consent in writing of the Bankers and Solicitor of the Company to act in their respective capacities have been obtained.

15. **Brokerage:—**

Brokerage at the rate of Re. 1/- per Redeemable Preference Share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stock broker or a banker.

16. **Application and Allotment:—**

Application for shares which must be for five shares or multiples of five shares should be made on the accompanying form and will be refused if not so made. The application form, together with the remittance for the full amount payable on application may be sent to any of the branches of the Company's Bankers, Messrs. Allahabad Bank Ltd. and Messrs. Oriental Bank of Commerce Ltd. The remittance if not made in cash should be made by cheque or draft drawn upon a branch of the Bank, to which the application and the draft or cheque are being sent, or upon the bank in the town in which there is a branch of any of the aforesaid Company's Bankers. If drawn on a bank elsewhere, bank charges at Rs. -/4/- percent must be included in the remittance.

Cheques or Drafts should be made payable to Messrs. SHREE GOPAL PAPER MILLS LIMITED and should for applicants' protection be crossed "Account Payee only". A Separate cheque or draft must accompany each application form.

Allotment will be notified by despatch of an Allotment Letter but the Directors reserve the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, whole or any balance of the application money, as the case may be, will be refunded to the applicant by a cheque on Calcutta Branch of the Company's Bankers.

Share Certificates will be available for issue in exchange for the Letters of Allotment on or after fortyfive days from the date of allotment letter and each successful applicant for more than 25 shares will receive Share Certificates in lots of 25 shares and such smaller denominations as is required to complete the total number of shares allotted, except when the applicants request Share Certificates in larger denominations. Such Allotment Letters and Share Certificates will be despatched by Registered Post.

Copies of the Prospects and he the Form of Application may be obtained from the Company's Bankers named above, at any of their Branches in India.

OVERSEAS DEMAND FOR INDIAN JUTE GOODS

Fairly Well-Sustained During 1956

Sri N. K. Jalan's Review of Conditions in Jute Industry & Trade

Presiding at the 58th Annual General Meeting of the CALCUTTA JUTE FABRICS SHIPPERS ASSOCIATION held in Calcutta, Shri N. K. Jalan, the Chairman observed:—

"The outlook a year ago was certainly bright enough to warant the modest hope that the progress made in 1955 would be maintained during 1956, and if today, contrary to expectations, I am not cast in the role of the aforesaid happy reviewer, I can at least try to analyse the reasons why our earlier hopes were not fulfilled.

"It is of course arguable that, solely from the point of view of the export trade, which is our bread and butter, the year was a moderately good one, even if the bread was rendered somewhat dry by the scarcity of the butter. In my Note on the Market, I did in fact use the words "reasonably satisfactory" in alluding to the year's results. I was, of course, speaking as a shipper, and it must be acknowledged that, for the manufacturing industry itself, the twelve months under review were most disappointing and literally unrewarding; and we, as shippers cannot indulge in complacency in circumstances where the manufacturing industry itself is not thriving. I think that most observers of the scene will agree that the two main contributory factors to the disappointments of the year were, firstly, the lack of a solid response from the overseas markets which we might reasonably have looked for as a result of the removal of the export duties in 1955 and the increase in the mills' production at the beginning of 1956—both of which developments must surely have been welcome features to consumer interests—and, secondly, the abnormal influence exercised on the price structure by the unusually firmed jute market witnessed during the year. Given the first factor, bad enough in itself, the addition of the second factor was sufficient to turn the scales heavily against the industry, so much so that at one stage, towards the middle of the year, a minimum export price scheme was canvassed in official circles as a means of counteracting the uneconomic margin between jute and finished goods prices. The proposal was ultimately abandoned, and I am sure we were all glad that it did not materialise for we know how repugnant the idea of controls is to our overseas customers.

"Considering the long-term interests of the industry, the real answer to the problem seems to lie in lower prices for raw jute, with finished goods prices stabilised at their present low levels, thus preserving our competitive advantage and assisting the growth of the national economy through higher earnings from increased exports. Mention of our competitive position leads me on naturally to a reference to our most formidable competitor, namely Pakistan. We have seen the Pakistan jute industry mushroom to a very respectable size and we are obviously entering a period in which our combative strength is to be severely tested. Last year, Pakistan's exports of jute manufactures totalled 80,000 tons, an increase of about 50 per cent on the previous year and roughly one-tenth of India's total exports of gunnies.

"Naturally we ourselves are immediately and primarily concerned about the state of overseas demand, and we were fortunate that it was fairly well sustained during the past year, even if it did not come up to our expectations. One keen disappointment which we all felt was the paucity of the eventual offtake by Russia, when we had been led to believe that substantial orders would be forthcoming from that quarter. Indeed, it was largely on the understanding that a sizable business was to be done with Russia that the industry agreed, at the instance of the Government of India, to increase its output in the early part of 1956. In the event, the total business put through amounted to only about 10,000 tons, and with no compensatory revival of demand from other sources, the mills were finally compelled to curtail their production once again, while shippers were left with a feeling of frustration. That Russia should have been at all interested in obtaining jute goods from India betokens a potentially large source of demand, especially when viewed against the background of that country's gigantic and rapidly expanding economy, and I am sure that, by sustained negotiation on the part of our Government, a rewarding business connection can still be established on behalf of the Indian jute industry.

"The total gunny export business during the calendar year 1956, at the provisional figure of 868,500 tons, was some 25,000 tons less than in 1955, although there is some satisfaction in being able to record that the rise in the domestic offtake was almost sufficient to restore the balance. Actually, India itself was the industry's second best customer during the year. Shipments to the U.S.A., still our largest single market, showed a welcome increase from 180,000 tons in 1955 to 195,800 tons in 1956, and if the increase in domestic consumption in that country did not quite match the higher offtake from Calcutta, we can at any rate take some encouragement from the general upwards trend, which we hope will be maintained in the coming year. The U.S.A. is essentially a hessian consumer, and so also is the Argentine, but there was a disappointing drop in that country's purchases of jute goods in 1956, compared with the previous year. Nevertheless, this is possibly attributable to the fact that large stocks had been built up previously by the Argentine and were in course of liquidation during the year under review. Moreover, there is some prospect of a better offtake in the coming year with the return of the trade there to private hands. This latter measure may well assure for us a more even and better sustained demand from the Argentine. The total exports of jute goods to the U.K., another important customer, increased slightly to 60,800 tons, a figure at which we cannot cavil.

"A telling factor in an assessment of the trade during the year was the marked decline in shipments of heavy goods to Australia, our biggest customer for this commodity. However, there is no reason to suppose that this decrease in offtake was occasioned by other than temporary considerations, and in the normal course of events there should be a substantial improvement this year in Australian purchases. Considering, also, the very heartening internal consumption of sacking goods during the past year and the prospect of an expansion of this demand in pace with the unfolding of India's Second Five Year Plan, we can look forward with some confidence—barring unforeseen contingencies—to an increase in the consumption of heavy goods. It is unfortunate that, for political and other reasons, the Far Eastern market which was once so important to us has now virtually been lost and that, owing to the growth of indigenous jute manufacture in the areas concerned, there is little liklihood of a resumption of this trade.

"One lesson that must by now have been well learnt, if we profit at all from our experience, is the fundamental importance to our export trade of assured supplies of goods and stability of prices. The rapid progress made towards the attainment of self-sufficiency in raw material supplies has been instrumental in bringing us nearer to that major goal, but speculation is still with us and will not be entirely eliminated even when it has lost the advantage of a fluctuating raw jute supply position. The recent severe depression of gunny prices, otherwise unaccountable, has shown how influential these ungoverned speculative activities can still be. The hopes of those who have the genuine interests of the industry and trade at heart now reside in the successful implementation of Government's scheme for the establishment of a properly regulated futures market which, given the chance to do so, could exercise

more influence than any other single factor in stabilising prices. At the same time, we are glad to note that Government are pursuing this matter cautiously, for desirable as a sound hedge market is, it would be disastrous if the normal forward business for specific delivery were disrupted by the imposition of a control for control's sake. A misapplication of the rules governing futures trading could well throw out of employment all those gunny dealers and brokers who at present constitute what is known as the "bazaar", and their dependants end employees would suffer with them. I consider, therefore, that in all fairness the I.J.M.A.'s standard gunny contract form should be excluded from the application of the Forward Contracts (Regulation) Act, and in support of this contention I would point out that the regulations governing futures trading in the East India Cotton Association do not affect forward contracts for specific delivery, and these arrangements have worked very satisfactorily.

"(Your Committee's Report, which was issued to you shortly before this meeting, deals fairly comprehensively with the various matters which engaged the Association's attention during the year under review and I do not propose to weary you with a recital of the Committee's activities as already described in the Report.) I would, however, like to touch briefly on one or two matters which are of rather more importance and closer concern to us than others. First of all, there is the question of delays in the loading of gunny cargo, regarding which there has been so much controversy and negotiation over a period of many years.

We seem at last to be making some headway towards an improvement in the boating position, and it will be particularly interesting to see what effect the new arrangements for Australian sailings have when they are introduced in July next. Apart from this, there is the diversion fee scheme recently introduced by the lighterage companies. No doubt this is well intentioned, but the scheme in its present form bears much too heavily on the shippers. Considerable trouble to which some members have been put as a result of the peremptory demands made on them by some of the lighterage companies. I should like to inform you that we are pressing the Calcutta River Transport Association to dissuade its members from enforcing the new scheme pending further discussions which are to take place between the interests concerned under the auspices of the Bengal Chamber.

"We have also been actively engaged in considering contract matters during the year, particularly the long outstanding F.O.B. contract for sales to America and also, as a result of prolonged correspondence with Australia during the year, the standard contract form for sales to that country. With regard to the F.O.B. contract, we are indebted to Mr. N. L. Kanoria for having taken this matter up in the course of a visit which he paid to the U.S.A. last year, and I am glad to be able to say that the I.J.M.A. has now agreed to re-open negotiations with us although it has not committed itself in anyway. Recently we who had a useful discussion with a leading representative of one of the major jute goods importing and distributing Committees in Australia and it is hoped that, before long, we will be able to arrive at some mutually satisfactory arrangement in regard to the controversial aspects of the present contract conditions applicable to Australian business".

WORLD OF FINANCE

(Continued from page 640)

from Rs 53.63 crores. The Centre's net payments have, therefore, amounted to just under Rs 30 crores during the week.

Balances of State Governments are lower by Rs 3.20 crores at Rs 31.95 crores. This has been accompanied by a rise of Rs 1.84 crores to Rs 7.65 crores in their indebtedness to the Reserve Bank. The unfavourable turn in the balances of State Governments to the tune of Rs 5.04 crores may relate to end of fiscal year payments made by State Governments.

In the last week, the lack of an increase in active notes was taken to imply that the sharp rise in borrowings of Scheduled Banks had regard to payments of income-tax to the Central Government. We stated that, "since such payments would have been effected to Government, there is no rise in active notes."

In the week under review, the contrary conclusion is derivable. Firstly, it seems obvious that no worth while payments have been made to the State Governments. Secondly, nevertheless, large scale payments have been effected by the Central Government. Thirdly, if these have been made to suppliers and contractors, such expenditure would be reflected both in active notes and in the balances of Scheduled Banks, not to speak of the deposits of the banking system. While, as far as the last is concerned, we have to await the return of Scheduled Banks for March 29, sufficient evidence is available of the first two in the statement of the Reserve Bank for the latest week. Balances of member banks with the Reserve Bank are marked higher by Rs 6.67 crores at Rs 57.77 crores; and, at the same time, the liability of member banks in respect of borrowings against usance bills is lower by Rs 1.66 crores at Rs 71.54 crores. Moreover, as we have already seen, active notes have registered a rise. All these figures may be said to lend strength to the view that payments by the Central Government have during the week related to payments to suppliers, contractors, etc.

The other noteworthy features in the Reserve Bank statement are a small increase of Rs 3.14 crores to Rs 127.87 crores in the Other Loans and Advances of the Reserve Bank; and, a further sharp decline of Rs 10.90 crores to Rs 114.31 crores in Balances Held Abroad.

The return of the State Bank for March 29 discloses a very substantial increase of Rs 20.06 crores to Rs 299.90 crores in Deposits. This may be linked with the suggestions advanced earlier in this article that Government payments have been made in respect of suppliers' bills. Only a part of the rise in Deposits, to the extent of Rs 3.50 crores, has been utilised in reducing indebtedness to the Reserve Bank from Rs 15.41 crores to Rs 11.91 crores. Cash balances have risen very sharply by Rs 7.17 crores to Rs 23.03 crores. Since the bulk of the increase is under the head of Cash in Hand and with the Reserve Bank, it is likely that the sharp rise of balances of member banks with the Reserve Bank, as revealed in the returns of the central banking institution, is accounted for almost wholly by the State Bank. Advances are higher by Rs 1.69 crores at Rs 185.14 crores. There is a further rise of Rs 7.94 crores to Rs 14.75 crores in Other Assets. It is difficult to explain the rise of Rs 12.27 crores in Other Assets within a period of two weeks.

The return of Scheduled Banks for March 22 offers substantial confirmation of the analysis of bank statements in the last week's Indian Finance. Deposits marked an unusual drop of Rs 5.95 crores to Rs 1166.94 crores; and this decline is almost wholly under Demand Liabilities. Also, advances of Scheduled Banks registered a further rise of Rs 5.86 crores to Rs 882.57 crores. The fall in deposits and the rise in advances both suggest the likelihood of large scale payments, possibly to the Centre in respect of tax. Since disinvestment in Government securities was for a negligible sum, member banks felt it necessary to increase their borrowings. Indebtedness to the State Bank rose by Rs 2.37 crores to Rs 11.44 crores; and borrowings from the Reserve Bank rose sharply by Rs 15.99 crores to Rs 97.59 crores. This level of borrowings represents the highest ever for Scheduled Banks.

The loss in Deposits in the fourth week of March is likely to be much more than made up in the last week of March. As we have seen, Deposits of the State Bank rose by over Rs 20 crores. There seems to be the distinct possibility that the bulk of the net expenditure of Government in the last week of March, at Rs 30 crores, should find its immediate way into the resources of member banks.

+

The statement of the State Bank of India for the week ended March 29 reveals a sharp rise of Rs 20.06 crores in deposits to Rs 299.90 crores. Borrowings from other banks have declined by Rs 3.50 crores to Rs 11.91 crores, while other liabilities, including inter-office adjustments, are shown at Rs 2.29 crores against Rs 1.78 crores.

On the assets side, cash balances are higher by Rs 6.64 crores at Rs 21.43 crores with Investments remaining almost unchanged at Rs 105.72 crores. Advances show a rise of Rs 1.69 crores to Rs 185.14 crores—"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 0.35 crores and "Bills Discounted and Purchased" for a rise of Rs 2.06 crores.

+

According to the returns of the Scheduled Banks for the week ended March 22, both Demand and Time Liabilities have declined, the former by as much as Rs 5.64 crores to Rs 701.08 crores and the latter by Rs 0.31 crores to Rs 466.86 crores. Borrowings from the State Bank are higher by Rs 2.37 crores at Rs 11.44 crores, while those from the Reserve Bank by as much as Rs 15.99 crores at Rs 97.59 crores. Cash and balances with the Reserve Bank have improved by Rs 1.99 crores to Rs 89.24 crores. Investments are slightly lower at Rs 348.09 crores against Rs 348.96 crores. Advances in India are shown at Rs 711.24 crores against Rs 710.51 crores; Inland Bills at Rs 113.98 crores against Rs 108.28 crores and Foreign Bills at Rs 57.35 crores against Rs 57.92 crores. Money at call and short notice stands at Rs 12.78 crores against Rs 16.20 crores.

BENARES ELECTRIC LIGHT & POWER COMPANY, LIMITED

NOTICE is hereby given that the Fifty-seventh Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at its Registered Office No. 12, Mission Row, Calcutta, on Monday, the 29th April, 1957, at 11-0 a.m. for the following purpose:—

1. To receive and adopt the Audited Accounts for the half-year ended 30th June, 1956, and the Directors' and the Auditors' Reports thereon.
2. To declare a Dividend.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 23rd April, 1957, to the 29th April, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
F. G. Liversedge,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta-1.
The 3rd April, 1957.

EXPLANATORY STATEMENT

N.B.—This meeting is being convened to consider the accounts for the half-year ended 30th June, 1956, in accordance with the provisions of the Company's Articles of Association.

HINDUSTAN LEVER LIMITED

Prerequisites to Price Reduction Lacking

Chairman, Mr. A. J. C. Hoskyns-Abrahall's Speech

The Annual General Meeting of Hindustan Lever Limited was held in Bombay on April 4, 1957. The following is the text of the speech made at the meeting by the Chairman, Mr. A. J. C. Hoskyns-Abrahall.

It gives me great pleasure to welcome our new shareholders to this Annual General Meeting of our company in its new form and under its new name. The report and accounts have been in your hands for some days and by your leave I will take them as read.

Less than five months have passed since we announced Unilever Ltd.'s intention to offer a part of our shares for sale to the public. At that time we made certain forecasts about our business and expressed certain intentions about the distribution of our profits. In the short time that has elapsed since then there has been no sudden boom in our business or any sort of windfall, but our final figures, as you will have seen, have shown our earlier forecast to have been somewhat conservative. We are therefore recommending to you a higher final dividend of 75 naye paise, at the same time coupling with that recommendation the caution that our outlook and policy have not thereby undergone any essential change. In the light of recent events we would not like you to build up any great expectations that future dividends will be higher than we forecast those few months ago.

In this connection I would remind you that the ink on our Offer for Sale documents was barely dry and the lists had not even been opened, when the Finance Minister sprang his surprise interim Budget on the country, with its capital gains tax, its lengthened scale of super tax on dividends and its compulsory depositing of a large part of companies' reserves. Moreover the Minister has also thought it right to tell us that, in seeking finance for the Second Five-Year Plan, he has by no means yet exploited corporate taxation to the full. In this sort of context I feel bound to say that, however much we may be able to increase our sales turnover in the future, it does not necessarily follow that there will be a commensurate, if indeed any, benefit to our shareholders. The development of this country costs money, a lot of money, and the private investor will continue to be called upon to pay his share by way of taxes. How much that share will eventually be we cannot know: it is not likely to be small.

We did in fact increase our sales in 1956, achieving a tonnage exceeding 121,000 without including the sale of toilet preparations, in which section mere tonnage is not a very suitable measure. That our profits were not quite of the order of those we earned in 1955 was mainly due to increases in costs of our raw materials, of processing and of freight.

We are far from complacent about this upward trend in costs, which seems to be fairly general among household necessities, or near necessities, into which class our products fall. In a community embracing so many people with very low incomes, our products run the risk of being too highly priced, whether for the consumers' good or our own, and we should greatly like to make reductions, with all the stimulus they would give to increases in consumption. Unfortunately the prerequisites are lacking. We are vitally interested for instance in Government's Second Plan target of more than 7½ million tons of oilseeds, representing a 30 per cent increase in production. That oilseeds, and particularly groundnuts, should be freely available at moderate prices is of prime importance to our business, to say nothing of its significance for export and foreign exchange purposes, but we cannot yet detect any great progress being made towards hitting the target. Transport is another vital sphere where unrestricted availability at moderate prices is essential, but at present its inadequacy is constantly giving rise to costly delays and, on the top of that, freight rates are tending to increase. These are but two indications of what I have said is a general trend.

While the rising national income will generally be absorbing some of the shock of higher prices, we do of course provide what counterblast we can in our own operations. Through nearly all the media we use, we are adding to our normal advertising efforts a steadily mounting educational service, by which habit-forming instruction in better washing and cooking methods is imparted to the public. In the countryside particularly our large and still growing fleet of demonstration, cinema and other vans is carrying this service farther afield every year.

Another matter affecting us is the recent tightening of import restrictions and some of you may well be asking to what extent we rely on imported materials for the pursuit of our business. You will already know that we find between 80 and 90 per cent of our raw materials from within this country, since that fact was stated in our Offer for Sale. That does not mean however that there are not certain key items, some perfume ingredients for instance and certain chemicals imported by us, without which—although they may be small in volume—we should be unable to maintain the quality, or what you might call the personality, of our products. We hope to be allowed to continue to import such items as being actual users of them, but of that we cannot yet be sure. It is hardly necessary to say, that such changes as we are powerless to avoid we shall seek all means to mitigate, and we do not expect to have to ask our consumers to accustom themselves to any serious departure from our normal products. You should know moreover that as exporters we are already useful earners of that scarce and greatly sought after commodity, foreign exchange. In 1956 our exports of Glycerine, Vanaspati and Soap were worth rather more than Rs. 76 lakhs, and they went to places as far apart as New York and Fiji with many destinations in between. When we seek to make imports, our record as exporters should be allowed to stand to our credit.

It is however, and has long been, our policy to buy Indian materials so far as we possibly can. In the past few years we have been encouraging with some success the local manufacture of items which previously were imported. Bleaching earth, paper and board are recent instances, where we have been able increasingly to switch our buying from foreign to local sources. We are also increasingly relying on Indian sources for the management of the business. It may interest you to know that from a peak of 59 in 1952 the number of Europeans we employ has already fallen to 32, the places of the 27 who have gone having been taken by Indians. This trend extends throughout our business whether it be in the marketing, commercial or technical sections.

Our staff have worked well throughout the year. We are glad to say that we have signed a comprehensive agreement with our Bombay factory employees covering the whole period of the second 5-year Plan. It embraces wages, bonus and retirement provisions for about half our employees, as well as production incentives. A similar agreement with the rest of our employees all over India is now on the point of being signed and we therefore have good reason to look forward to a period of steady consolidation of the goodwill already existing on both sides.

While on this subject, I might add that we try to look after the welfare of our employees, not only by giving them congenial working conditions, but more particularly by providing them with good medical services and good factory canteens. We have canteens in all our factories except the one at Shamnagar near Calcutta and there a newly built canteen is due to be opened ten days from now. Moreover we are not satisfied with our Bombay Soap Factory in this respect and propose to build there a new canteen at a cost of about Rs. 6 lakhs, as soon as we can finalise our plans and secure the necessary cement and steel. Providing this facility for our office staffs is by no means an easy matter, but we propose to include a modern canteen with recreational facilities in the new Bombay Office building, on which we hope to start work this year. So far as medical services are concerned, we have full-time doctors and nursing sisters on the staff in our Bombay and Calcutta factories, while in our smaller factories we have part-time doctors who attend daily and full-time dispenser-dressers. All factories have consulting rooms and properly equipped dispensaries. Arrangements to deal with medical emergencies occurring outside general duty hours vary from place to place; in Bombay factory we have dispenser-dressers on duty in all shifts; in our other factories we have staff specially trained in first-aid. In our offices we have arrangements for doctors to be on part-time duty or we pay them retainers, so that facilities for free consultation and treatment are available to the employees concerned. In the past few years these medical services have generally, and particularly in Bombay, reduced the time lost through illness and accident.

I would like to end this review by giving you one good reason why this business should continue to expand, lest you should think that I have listed difficulties but little else and hear little but the rattle of chains. We are in fact conducting our operations in a rapidly developing country, inhabited by something approaching 400 million people, who by modern standards consume per head so little of the sort of products we manufacture, that an immeasurably greater consumption is bound to come. Moreover it is entirely for the good of the country that it should come. On this satisfactory base we expect to go on building. As for the difficulties, they are or are likely to be largely of a type common to most consumer industries at the present time, and it is probably fair to say that our business is as well equipped as most others to meet their challenge.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Urgent Need for Reappraisal of Second Plan Targets

*

1956: A Year of Stringency for Banks

*

Chairman Sir Homi Mody's Speech

The following is the speech delivered by Sir Homi Mody, Chairman of the Central Bank of India, Ltd., at the forty-sixth Ordinary General Meeting of the Bank held on March 28:—

Ladies and Gentlemen,

I have pleasure in presenting the Directors' Report and Statement of Accounts for the year 1956, but before I deal with them I would like to make a few observations on matters of general interest affecting finance and industry.

The year marked the end of the First Five-Year Plan and the inauguration of the Second. Economic conditions in India continued to show the buoyant tone in evidence in the last few years under the impact of progressively increasing development outlay. Industrial production, foreign and domestic trade, money supply and prices recorded sizeable increases.

The total money supply with the public, comprising currency and bank deposits, amounted to Rs 2,178 crores at the end of December 1956, showing an increase of Rs 131 crores over the corresponding date of the previous year. Due to the money supply outpacing the rise in production levels and economic activity, the Index Number of wholesale prices recorded an increase of 61 points and consumer prices also rose substantially.

A feature of our economy which is causing serious concern is the rapid deterioration that has taken place in our foreign exchange resources. During the 11 months ending with February of this year, the fall in our reserves has reached the alarming figure of Rs 227 crores. This development was largely unforeseen and, for the moment, it has thrown the Second Five-Year Plan out of gear. Against a figure of Rs 783 crores of imports allowed for in the first year of the Plan, imports have been at the annual rate of Rs 953 crores. As the Reserve Bank Bulletin for December 1956 says "Whereas the Plan expected the phasing of imports to be such as to lead to a hump in the second and third years of the Plan, it seems that the actual course of events has been such as to give rise to a hump even in the first year of the Plan."

SECOND FIVE-YEAR PLAN

That brings me to a consideration of the Second Five-Year Plan. Some of us have from the start criticised the unrealistic targets of investment laid down in the Plan and have pleaded for scaling them down. We have also commented on the inadequacy of the provision for agricultural development and production of consumer goods. In the survey of Asia and the Far East published on the 18th March by the Economic Commission for Asia and the Far East, three questions have been posed: (1) Whether the Plan is not too ambitious in terms of resources; (2) Whether it assigns too great a share of responsibility to the public sector and too little to the private; and (3) Whether it does not emphasise industries (particularly heavy industries) too much at the cost of agriculture. The Commission have also spoken of the risks in attempting too much too quickly.

In mitigation of the hardships which a Plan of this magnitude might impose on the community, spokesmen of Government have been saying that there would be a process of adjustment from time to time which would take care of any material changes in the situation that might take place. I would like to urge that that is not enough and that what is needed is a reappraisal, here and now, of programmes and policies as a whole. I contend that enough is known, even at this stage, of the resources which could be mobilised for planned economic development in India, and the serious difficulties which have already arisen in the first year of the Plan must be taken as an indication that the projected scheme of development goes beyond the country's capacity to carry it out within th stipulated period. No year to year targets of investment were published when the Second Five Year Plan was originally prepared, but the provision of Rs 915 crores made for 1957-58 as outlay for the Central and State Governments is such as to suggest that the Government is still largely pursuing the schedule of investment under the original assumptions, even though the working of the first year has proved them to be wide of the mark.

In the light of this trend, the urgency of a reappraisal of the whole position cannot be questioned. The extent to which inflationary finance can be resorted to, taxation can be stepped up, and foreign exchange can be secured, is pretty well known, and it would be very unfortunate if fiscal and other measures were taken at this stage in order to live up to an unrealistic programme of investment. In this connection, I cannot, but voice my disappointment at the latest pronouncement of the Finance Minister in Parliament. I hope he will realise that the criticisms advanced on certain aspects of the Plan are neither selfish nor obstructive. The business community has repeatedly and unequivocally recognised the necessity of a planned development of the country and has offered its fullest cooperation. That does not mean, however that it should not have views of its own regarding priorities and methods, nor that its experience and knowledge in such matters should be impatiently set aside.

YEAR OF STRINGENCY

1956 was a year of stringency and dearness of finance and the resources of banks had to be strained to the utmost to meet the rapidly expanding demand for funds. The loan-portfolio of banks had to be unduly stretched and they had to depend more and more on the Reserve Bank for assistance.

The outstanding portfolio of advances and inland and foreign bills of the scheduled banks amounted to 788 crores, showing an abnormal increase of 157 crores since the end of the previous year. The resources of the banking system did not, however, show a corresponding improvement in as much as over the same period, demand and time liabilities increased by only 81 crores to 1114 crores. The banks, therefore, found it necessary to finance the additional credit requirements both by allowing their cash ratio to come down and by disposing of a portion of their security holding. The most remarkable sign of the pressure on the banks was, however, the increase in the scheduled banks' indebtedness to the Reserve Bank from 30 crores at the end of 1955 to 79 crores at the end of 1956. In fact, the volume of debt was not much short of the banks' total cash resources, comprising both till-money and balances with the Reserve Bank. In this context, I may refer to a point mentioned in the White Paper on the Budget that the Reserve Bank had lent a limited support to Government securities in order to relieve the extreme stringency in the money market. This is a move forced by the logic of the situation in which bankers have been placed. It is to be hoped that inflationary pressures would be lessened by a reasonable scaling down of the development outlay which has caused them, but given the situation as it is, official policy must obviously be directed towards providing banks with the funds they need for full-filling their function as suppliers of credit.

Before leaving the subject of the general banking position in the country, I would refer to an improvement in the published statistics which seems to be called for. Although detailed forms have to be sent in every week by all scheduled banks, up-to-date figures of demand and time deposits, as distinguished from other kinds of demand and time liabilities, are not available. Similarly, loans to trade cannot be distinguished in the statistics from loans from one bank to another. A recent issue of the Tata Quarterly discusses some of these questions, and in view of the importance of these data for assessing monetary trends, I hope that steps will be taken to compile them on a regular basis

STATE BANK OF INDIA

There is one other matter to which I would like to refer before closing this review. The statement recently made at the Annual General Meeting of the State Bank of India that, although the statute authorises its operating a commercial banks, due regard is to be had to the public interest—and this is interpreted by the Bank to include its obligations to the banking structure as a whole—is indeed refreshing. But this pronouncement cannot quite be reconciled with the reported directives to some of the Government and quasi-public institutions, which had hitherto been depositing a part of their funds with commercial banks, to deposit hereafter, all their funds exclusively with the State Bank. I would also like to point out that the measures being taken by the State Bank to increase its working funds and the opening by it of branches in areas adequately served by other institutions cannot but affect the interests of commercial banks.

BANK'S EARNINGS

I shall now turn to matters of more personal interes to the Shareholders—the Directors' Report and Statement of Accounts.

The past year was one of further growth in the resources and earnings of the Bank and in an appreciable expansion in its turnover of business in general. Our gross, earnings, which had received a setback in 1953, have since been progressively increasing, and there was a particularly marked improvement during the past year, which recorded a rise of as much as Rs 86 lakhs. While Interest and Discount accounted for a major portion of the increase, there was a substantial increase of Rs 25 lakhs under Commission, Exchange, etc. Of this, a no small part was due to the ground gained by us in foreign exchange since the establishment of our own office in London which, for the first time, was able to contribute its quota to the general profits.

The rates of interest on Time and Call Deposits had to be further stepped up during the year, and working funds, including borrowings from other banks, cost comparatively more, resulting in an increase of Rs 57 lakhs under Interest paid. With regard to Establishment Charges which apparently show a slight recession, the position is not what a comparison of the figures would indicate. The figures for the previous year included a sum of nearly Rs 13 lakhs on account of arrears paid on adjustment of staff emoluments, as laid down by the Bank Award Commission. If that is taken into consideration, the establishment charges can be said to have been up by nearly Rs 12 lakhs. The ratio of total expenses to gross profits stood at 75.24% as against 80.28% in the previous year. The ratio of establishment charges to gross profits similarly came down from 66.06% to 61.55%.

As stated in the earlier part of my speech, increase in the resources of banks lagged far behind the increased demand for credit. Scramble for deposits, therefore, continued to be acute and progressively higher rates had to be paid. In view of these conditions, our total deposits which stood at Rs 138 crores, showing an improvement of Rs 10 crores over the previous year, may be considered to be satisfactory.

The increase in the Reserve Bank's lending rate against Government Securities from 3½% to 4% and the rise in the cost of borrowings by Banks against Usance Bills from 3½% to 4% consequent upon an abnormal raising of the Stamp Duty from the 1st of February, has given further momentum to the upward trend in Deposit rates, which has carried the rate for Call and Time Deposits to as high as 4½%. This cannot but have its repercussions on the rates at which banks can afford to lend.

Advances at Rs 90.76 crores recorded a substantial increase of Rs 18.56 crores over the previous year, and constituted the highest, level touched by the Bank since its inception. Even so, our ratio of Advances to Deposits was 66% only as against the general average of 71% of all Scheduled Banks.

BANK'S INVESTMENTS

The continuing credit squeeze compelled us more vigorously to pursue our policy of reducing our Investment Portfolio. The reduction would have been more substantial but for the fact that we had to subscribe to the new Central and State Governmental Loans floated during the year. The net reduction amounted to Rs 3.74 crores, bringing down our ratio of Investment to Deposits from 44% in 1955 to 38% as at the close of 1956.

The sudden decline in market values just towards the end of the year unfortunately widened the gap between the market value and the book value of our Securities, but since the opening of the current year, there has been a revival in values and the position has improved. In this connection, it is worthy of note that nearly 75% of our investments in Government Securities mature within the next ten years, and a further 22% in the following five years. As pointed out in the past, if we can hold on to our Securities up to maturity, not only would the difference appearing at present be wiped out but there would accrue a substantial surplus.

Shareholders will have noted with satisfaction that, after a lapse of three years, the net profit figure has again crossed the rupee one crore mark. The ratio of net profit to gross income rose to 15.87% as against 13.53% for the previous year. With the reorganisation that has taken place and the further measures we have in view, we hope to keep up the improvement.

Our profit figures would have been better but for some unfortunate experience we have had in the last two or three years, and which have emphasised the need for doing everything possible to strengthen our positoin. In the interests of the Bank, it is obviously undesirable to enter into a discussion of the transactions in question. It will suffice to say, every possible step has been taken by the Board to secure the accounts which were not in order and adequate provision has been made where necessary.

SHAREHOLDERS & STAFF

It gives me particular pleasure to record that it has been found possible, as a result of the year's working, to implement the assurances I have been giving in one past. I have stated on more than one occasion that as soon as our earnings warranted it, the cut in the distribution, both to the Shareholders and to the Staff, would be restored to the extent the profits permitted. Nothing has, therefore, given greater satisfaction to the Board than to be in a position to restore, after a lapse of four years, the cut in Dividend and to double the Bonus paid to the Staff. Prevailing trends do not at the moment indicate conditions as favourable for Banks as during the past year, but it is to be hoped that, with the improvement that has taken place in our relations with our Staff and with the Management wholeheartedly devoting itself to the interests of the Bank, the institution will be able to maintain, if not improve upon, the progress shown over the past year. In this connection, I must particularly mention the services of our Vice-Chairman, Mr. C. H. Bhabha. His ability and resourcefulness and the keen interest he has been taking in the day to day working of the Bank are beyond all praise, and I would like to extend to him, on behalf of the Board and the Shareholders. our grateful thanks for all he has been doing.

I would conclude by making our acknowledgements to all who are in the service of the Bank. The General Manager, Mr. N. K. Karanjia, has been carrying a heavy burden, which he has been discharging with ability and single-minded devotion to duty. He has done a great deal for the Bank since he has been placed at the head of the administration and he enjoys the fullest confidence of the Board. To him, to Mr. F. C. Cooper, the Deputy Manager, and to all Members of the Staff at the Head Office and at the Branches, as also to the Local Advisory Committees at the various centres, I would like on behalf of the Shareholders and the Board to convey our warmest appreciation.

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

FOR THE INVESTOR

(Continued from page 636)

rebate allowances are estimated to make available Rs 65 lakhs by the end of 1958. The balance of finance required is Rs 75 lakhs.

Shree Gopal Paper have announced this week a public issue for this amount of 7 per cent tax-free cumulative redeemable preference shares. The earlier and later dates of redemption are 30th June, 1969 and 1st July, 1972.

According to the Auditors' Report on the financial information provided with the prospectus, the net profit after taxation and normal depreciation amounted to Rs 12.54 lakhs in the half-year ended June, 1956.

The confident expectation of the prospectus is that "It may well be hoped that the trading profits of the company should be twice as much as for the year 1959 comparing to the present profits".

The appraising investor will, no doubt, accord to this new issue the keen attention it deserves.

£ R$

Investment Notes:

Scindia Steam has decided to capitalise the amount lying to the credit of the Share Premium Account and issue bonus shares in the ratio of one share for every five shares held. This is subject to the sanction of the Controller of Capital Issues.

Shivrajpur Syndicate has received the sanction from the Government for issuing bonus shares to the value of Rs 14 lakhs in the ratio of 2:1. This matter is now under the consideration of the directors.

National Rayons Corporation has decided to increase the capital by the issue of fresh Ordinary shares in the ratio of 1:2, subject to the sanction from the Government. These shares will be issued at a premium of Rs 25 per share. The amount will be called in convenient instalments. The company has also decided to recommend a dividend of Rs 12 plus a Bonus of Rs 2 per share on the Ordinary shares as against Rs 12 in the previous year.

It is understood that the scheme of amalgamation of the Jeypore Sugar and the Jeypore Mining Syndicate has become effective from the current month. In terms of the scheme, the former company has taken over the assets and liabilities of the mining company.

Simpson & Company, Madras, will soon be in the market with an offer of Rs 1 crore Preference capital. The necessary sanction from the Government is reported to have been received. The issue will be in the form of one lakh 7½ per cent Redeemable Cumulative Preference shares, subject to tax. The object of the issue is to finance the expansion programme of the company.

TEZPORE TEA COMPANY, LIMITED

Notice is hereby given that the period for submission to the Company of Fractional Certificates for allotment of fully paid Ordinary Shares in lieu thereof in regard to the issue of Bonus Shares on 12th December 1955 has been further extended to 31st December, 1957.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.
Calcutta,
28th March, 1957.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE is hereby given that the Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 31st March 1957.

The Preference Share Registers will be closed from the 8th to the 9th April 1957, both days inclusive. Payment will be made on or after the 1st May, 1957, to those Preference Shareholders whose names are on the Company's Register on the 9th April, 1957 or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
F. C. Liversedge,
Managing Director,
Managing Agents.
12, Mission Row,
Calcutta,
30th March, 1957.

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LIMITED

*

Production and Sales Touch Record Levels

*

Chairman, Mr. N. D. HARRIS'S Review of Company's Activities

The following is the speech delivered by Mr. N. D. Harris, the Chairman of the Alkali & Chemical Corporation of India, Limited, at the Twentieth Ordinary General Meeting held on Thursday, the 28th March, 1957:—

Gentlemen,

The Audited Accounts and Directors' Report for the year ended 30th September 1956 have been in your hands for some time and with your permission I propose to take them as read.

I am pleased to report that the year records further increases in production and sales. The net profit for the year, after providing for depreciation amounts to Rs. 29,80,327. The total profit available including the balance from the previous year of Rs. 1,19,168 is Rs. 30,99,495 compared with Rs. 22,93,168/- for 1954-55. A sum of Rs. 13,64,000/- has been transferred to Dividend Equalisation Reserve, and I shall refer to this unusually large transfer later. After this allocation and the others referred to in the Directors' Report and the payment of the Preference Dividend, a dividend of 8% free of income tax is recommended on the ordinary shares. If you agree to this a balance of Rs. 92,495/- will be left to be carried forward.

I referred at the last General Meeting to our plans for the manufacture of Polythene at Rishra, and I am glad to say that we have received a licence from Government to proceed with this project. In fact, substantial progress has already been made on the site. As I told you, Imperial Chemical Industries Ltd., London, your technical advisers, have agreed to supply their process and continuing "know-how" on very favourable terms. Polythene was discovered by I. C. I. Ltd., who now manufacture large quantities in the United Kingdom and have licensed its manufacture in several other countries. The production, actual and projected, and consumption of Polythene throughout the world have during recent years increased to a remarkable extent, and give every indication of continuing to do so.

The process will be that used by I. C. I. in the manufacture of the well-known "Alkathene" brand of Polythene. The use of "Alkathene" in India has been developed by I. C. I. (India) Private Ltd. who have operated a plant at Calcutta for the manufacture of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. The largest single use of Polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

The project will involve a total investment of about Rs. 4 crores, which it was decided to raise by a substantial share issue at par and by borrowing. All ordinary shareholders have now received the circular letter dated 4th March which gave advance notice of the new issue of shares in the proportion of four new "A" ordinary shares for one old ordinary share held. Shareholders will have the right to renounce and they will shortly receive a letter describing the procedure. The rights are saleable on the stock market as recently announced by the Calcutta Stock Exchange Committee.

I referred previously to the large allocation of Rs. 13,64,000/- to the Dividend Equalisation Reserve. Your Directors made this reserve in the knowledge that, although the Polythene project should ultimately prove profitable, capital invested during the construction period will earn no return. It is hoped, however, with the help of the Dividend Equalisation Reserve to maintain a reasonable dividend, even on the higher capital.

Some of you may wonder why we have had to issue a different class of ordinary shares. The reason is that we hope this part of the capital of the Company will qualify for relief under Section 56(A) of the Indian Income Tax Act, and that dividends received by companies on these shares will be exempt from super tax.

Our principal shareholder, I. C. I. (India) Private Ltd., will take up their new "A" shares to the extent of Rs. 1,75,30,720/- and it should be noted that this represents a substantial additional British investment in India by Imperial Chemical Industries, London through I. C. I. (India) Private Ltd.

I. C. I. (India) Private Ltd. are also agreeable to buy any "A" shares not taken up or disposed of by shareholders.

I shall now give you a brief review of our activities. The year has been a record one for both sales and production. Demand for our products continues to increase and generally still exceeds our capacity which is being expanded in most of our products.

Production of chlorine and caustic soda was 21% higher than in the previous year, and you will be interested to know that we consumed 30% of our total production of chlorine in the manufacture of other products. As there is still an unsatisfied demand we have applied to Government for permission to increase this section of the plant.

Production and sales of hydrochloric acid were about 10% higher and plant to double the capacity has already been installed.

The plants for the production and formulation for our "Gammexane" Benzene Hexachloride (B. H. C.) products also had a successful year, and extensions were completed during the year. An interesting development in this sphere was the first large purchase by Government of B. H. C. water dispersible powder for use in their National Malaria Programme. It is expected that substantial supplies will be taken by Government during the next few years.

Our 'Duco' and 'Dulux' paints and our range of allied products continue to be very popular. The plant extensions referred to at the last General Meeting were almost completed during the year, although some delay was caused by the blocking of the Suez Canal. It is now apparent that, although these extensions will increase our capacity considerably, they will still be inadequate to meet demand and your Directors are now considering further extensions. The increasing demand for metal pretreatment products, produced and marketed under the name of A. C. P. resulted in your Directors installing a plant for their manufacture.

As I said earlier, a start has been made on the Polythene project; the site is being developed and construction has begun. Every effort is being made to ensure that this plant goes into production in the shortest possible time.

Last year I was happy to pay a tribute to the technical and sales staff of our Selling Agents, I. C. I. (India) Private Ltd. They have again earned our special thanks as they have matched with record sales, the record productions achieved at Rishra. Considerable competition was faced, particularly in the sale of Paints and "Gammexane" products which they were successful in meeting. I look forward with confidence to similar cooperation in marketing our "Alkathene" brand of Polythene when this factory goes into production.

The chemical industry in India is relatively in its infancy, and your Directors are aware that there is an immense potential market for chemicals for India's growing industrialisation. We hope to be in the forefront of this industry and have continuously in mind plans for further extension.

I do not intend to enter the worn-out controversy concerning the roles of the public and private sectors in industry, because I believe that both can function side by side, and the efficient working of both is essential to the success of India's plans. Certain spheres of industrialisation are not appropriate to private enterprise which, however, can be justly proud of its achievements to date and of its plans for the future. While I think that Government really take the same view of private enterprise's important role nevertheless some recent legislation and decisions in the fields of labour and taxation are not easily reconcilable with it.

One hopes that Labour Tribunals are doing a real service to the country, but one wonders whether those who sit on them really understand the long-term implications of their awards. Government is becoming a large employer of industrial labour, and I believe there will result a better appreciation of the private employer's point of view: also that in both the public and private sectors yardsticks to be used in wage rates, allowances, bonus, etc., will not widely differ.

In the field of taxation, it is well known that the burden of corporate tax—and that in India is amongst the heaviest in the world—the recent legislation requiring the deposit with Government of a part of profits, the penal tax on dividends, the heavy personal tax on management personnel have all contributed to the growing feeling of uncertainty and unrest.

One of India's greatest needs today is industrial capital, and the developments I have referred to above must inevitably deter the investment of capital from abroad.

A special word of commendation is due to our staff and workers for the excellent results achieved during the year and I am sure you will wish me to convey to them our sincere thanks. Our relations with them remained good throughout the year. We are endeavouring to introduce new and improved terms of service at the factory, based upon a scientific appraisement of the value of each job. Unfortunately, due to difficulties arising as a result of our having two Unions in the factory, we have so far been unable to reach an agreement which will enable us to introduce these new terms but we hope that the current year will produce a solution to this problem.

Your Board is alive to the need for trained management and technical personnel and have followed a progressive recruitment policy. A number of young Indians have received training in I. C. I. and other factories in the U. K. and more will be going when the Polythene plant is nearing completion. Indian engineering recruits are receiving practical training in workshops and factories in and around Calcutta and a "school" for fitters and mistries is in operation at Rishra.

The Directors retiring by rotation are Sir Birendra Nath Mookerjee, Sir Bijoy Prosad Singh Roy and Mr. P. M. G. Hutton and I have great pleasure in recommending their re-election.

The Auditors, Messrs. Lovelock & Lewes also retire and you are requested to re-appoint them for the ensuing year at a fee of Rs. 7,500/- which is the same as that of last year.

Stock Exchanges

A SHORT-LIVED RECOVERY

Watch-Dog Writes:

AFTER an initial shake-out, stock markets have generally staged a technical recovery, thanks to bear-covering and some replacement buying. Although the process of selling appears to have come to a halt, it is not certain whether the pause will be a lasting one. Confidence is thoroughly shaken in view of the economic and political uncertainties. There seems to be no possibility of substantial revival in values until the May Budget. The closing tone is again weak and prices are marked back due to tired liquidation.

With activity restricted, the Calcutta Stock Exchange witnessed a featureless session. The only relieving feature was a slight improvement noticed in the speculative issues at the close of the week.

Although turnover on the Bombay Stock Exchange was moderate, prices recovered some of the lost ground due to scattered buying.

Trading on the Madras Stock Exchange was generally dull and selling pressure in all sections reacted on prices.

Business on the London Stock Exchange was on a reduced scale and prices in many instances closed below the best.

Wall Street, however, closed firm with the main body of shares ranging mainly to a dollar or more.

*

Calcutta

Calcutta, Thursday Evening.

EXCEPT for a recovery in the speculative issues due to bear-covering at the close, conditions on the local Stock Exchange continued to remain dull during the past week. Despite favourable corporate news, confidence was thoroughly shaken due to fears of heavier taxation in the May Budget. Also, there was some confused thinking as to how much of the deficit on revenue account would be covered by taxation. Political uncertainties, the growing stringency in the money market and the shortage of foreign exchange also continued to be a source of worry to operators.

With the result, buyers were inclined to liquidate their holdings, while bears, taking advantage of the situation, pressed their sales, resulting in the market being reduced to a crippled state and the values steadily shrinking. Towards the close, however, the speculative issues staged a mild recovery under the influence of settlement considerations. The undertone remains hesitant.

In the Giltedged section, business continued to be restricted and interest was confined to a few issues only. Institutional investors were not in the market, due perhaps to the stringency in the money market. 3 per cent 1986 Conversion Loan after opening at Rs 74.34, receded at one time to Rs 74.00, to improve again towards the close to Rs 74.37.

Except for some ensuiry in United Bank of India 'D' at Rs 4.44, Bank shares ruled generally quiet.

Jute shares continued to remain depressed on the feeling that the working results of mills for the recent months would have been poor in view of the wide disparity in the prices of the raw material and manufactured goods. Thanks to renewed speculative interest, National continued to be supported upto Rs 20.00 from Rs 19.30, while Hooghly scored another half point at Rs 18.50. Ganges were, however, marked down to Rs 46.00 from Rs 47.50 and India to Rs 121.00 from Rs 125.50. Anglo-India were a steady feature at Rs 131.00 and Budge-Budge at Rs 90.00.

Except Burrakur which met with some speculative buying upto Rs 21.56 from Rs 21.12, Coal shares were generally listless as operators found little prospect of any improvement in view of the numerous difficulties facing the industry. Amalgamated were nearly maintained at Rs 17.62, while Western Bengal and Central India hovered idly around Rs 5.56 and 6.00 respectively.

Tea shares turned quiet with buyers rather reserved. Apart from the reluctance to enter into fresh commitments in view of the general trend of the market, the easier tendency of prices prevailing in both the Calcutta and London markets had also an adverse effect on sentiment. Above all, opinion seemed to be divided with regard to the outlook for the new season. New Dooars were marked down to Rs 296.00 from Rs 305.00 and Hantapara to Rs 179.50 from Rs 189 while Banarhat were nearly maintained at Rs 296.00. Brooke Bond changed hands at Rs 19.00 to Rs 19.25; Dhelakhat at Rs 21.12 to Rs 21.31; East India at Rs 26.00 to Rs 26.44 and Huldibari at Rs 23.00 to Rs 23.25.

Sugar shares also turned quiet with prices moving within a narrow range. There were fears that the Government might not allow any more exports during the current year. Belsund changed hands at Rs 10.62 to Rs 10.75 and Champarun at Rs 20.00 to Rs 20.37. Despite a better dividend of Re 1 per share on the increased capital as against Rs 1.75 on the original capital, SKG moved down to Rs 10.25 from Rs 10.75.

Textiles lacked any support and prices developed an easier tendency. Cawnpore were offered at as low as Rs 7.06 as against Rs 7.75, while Kesoram moved narrowly between Rs 14.00 and Rs 14.12. New Victoria were also a narrow market around Rs 1.81.

Engineering shares, after touching new low levels early in the week due to selling pressure, recovered most of the ground towards the close on bear-covering and some replacement buying at lower levels. Price movements in Indian Irons were mainly influenced by settlement considerations. The scrip, after opening at Rs 19.50, receded at one time to Rs 19.06, recovered again to Rs 19.56 to finish at Rs 19.08 on reports of a sharp fall in production, especially of pig iron during the year ended 31st March, 1957. Similarly, Renunciation Rights opened at Rs 4.62 and, after touching a low of Rs 4.25, improved towards the close to Rs 4.50. The settlement rate was fixed at Rs 19.50 as against the last settlement of Rs 20.44. Transactions started in new shares, changing hands at Rs 18.00 to Rs 18.18.

The Indian Iron & Steel Company has released the following production figures (in tons):—

	Qr. ended 31-3-1957	Qr. ended 31-12-1956
Pig Iron ...	183,857	188,546
Steel Ingots ..	139,830	141,450
Semi-Finished Steel	30,336	30,236
Finished Steel ...	90,242	84,467

Following are the total production figures for the year ended 31st March, 1957 as compared to the previous year:

	Year ended 31-3-1957	Year ended 31-3-1956
Pig Iron ...	696,156	706,986
Steel Ingots ...	532,315	531,505
Semi-Finished Steel	117,096	130,552
Finished Steel ..	324,387	319,335

Among other Engineering scrips, TEXMACO opened at Rs 19.12 and, after touching a low of Rs 18.75, finished at Rs. 19.00. Similarly, Jessop touched at one time a low of Rs 23.25 from Rs 23.75 and Richardson Rs 16.19 from Rs 16.37, recovered at the close to Rs 25.06 and Rs 16.62 respectively. Braithwaite and Kumarbhubi were steady features at Rs 25.00 and Rs 9.81 respectively. G. K. Williams continued to rule very firm, having buyers upto Rs 26.00 from Rs 25.50 following the encouragement derived from the announcement of the final dividend.

Miscellaneous issues moved in sympathy with the general trend of the market. Orient Paper opened at Rs 30.75 and, after touching a low of Rs 30.00, recovered to Rs 30.50. Titaghur changed hands at Rs 35.00 to Rs 35.37 with Shree Gopal nearly maintained at Rs 16.06. Alkali Chemicals changed hands on the ex-dividend ex-right basis at Rs 11.12 to Rs 11.31, while Renunciation Letters changed hands at 31 nP to 50 nP. Indian Copper developed a hardening tendency to Rs 3.25 from Rs 3.12, while Indian Cable recovered to Rs 25.56 from the recent low of Rs 24.50. Rohtas changed hands at Rs 16.75 to Rs 17.06; Dunlop Rubber at Rs 24.75 to Rs 24.87; Indian Aluminium at Rs 13.19 to Rs 13.37 and Metal Box at Rs 27.19 to Rs 27.37. BIC were well maintained at Rs 7.12.

*

Bombay

THE downward trend, which was discernible at the close of last week, showed signs of halting temporarily; but it was resumed with vigour with prices again hitting new low levels. The market, after opening easy on Wednesday, dropped down sharply in "kerb" trading on unloading by bulls as well as pressure from bears.

Sentiment was despondent and the final call of Rs 35, including a premium of Rs 10 by Tata Iron and Steel Co., Ltd., payable on 1st June, 1957, in the face of acute financial stringency unnerved the general feeling. The drain of money on new issue has provided a great hurdle for the market. With the result, the investment situation has been one of unparalleled gloom. It is difficult to anticipate as to when things might brighten up.

The Giltedged market was quietly easy with 3½ per cent Conversion Loan at Rs 74.52. Bank shares were a shade lower. Bank of Baroda were listed exdividend at Rs 99. Central were put through at Rs 48.50, while Bank of India worked lower at Rs 134.25. New India Assurance were done at Rs 40 to Rs 40.25. Public Utilities were a shade lower with Tata Power at Rs 1,195 and Ahmedabad Electricity at Rs 94.

Cotton Mill shares were weak with Bombay Dyeing at Rs 545. Century, after looking upto Rs 455, drifted down to Rs 451, though hopes are held that the final dividend will be maintained at Rs 14. Kohinoor eased off to Rs 320. Standard were quietly steady at Rs 445, while Svadeshi were lower at Rs 214. Tata Mills dropped down to Rs 45.50.

In the Steel section, Tata Steel Ordinary dropped down to Rs 165.50 from Rs 171, while Tata Iron were marked down to Rs 19 from Rs 19.75.

Among Miscellaneous shares, ACC dropped down to Rs 156 from Rs 161 and Bombay Burmah to Rs 582.50 from Rs 597.50. National Rayon, despite a dividend of Rs 12 and a bonus of Rs 2, eased off to Rs 227, mainly because of the forthcoming new issue at a premium of Rs 25 per share in the ratio of one share for two shares. Tata Loco were quiet at Rs 138. Scindia came down to Rs 19.10. Sugar shares were easy.

*

Ahmedabad

THE Ahmedabad share market ruled quiet during the week under review. Calico Mills were shaded to Rs 527 from Rs 532, while Arvind Mills were quiet at Rs 1,050. Ambica Mills were traded between Rs 595 to Rs 565, to finish at a lower level. New Shorrock turned lower at Rs 880. Atul Products were marked at Rs 165 and the dividend of Rs 6 for the year 1956 had very little effect.

In Brief

Guest, Keen, Williams Limited has announced a final dividend of 15 per cent on the Ordinary shares in respect of 52 weeks ended 29-12-1956. Dividend is payable on or after May 30.

*

Titaghur Paper has announced interim dividends Rs 1-2-0 (including a bonus of As 4) per share on the Ordinary shares and As 2 on the Preferred Ordinary shares, for the year ended 31-3-1957, payable on or after 30th April.

*

Shree Krishna Gyanoday Sugar has announced a dividend of Re 1 per share on the increased Ordinary capital for the year ended 31-7-1956 as against Rs 1-12-0 on the original capital in the previous year.

*

Atul Products, Ahmedabad, have raised the dividend from Rs 5-4 to Rs 6-0 per share for 1956.

*

Nutan Mills have maintained the dividend at Rs 20 per share for 1956.

*

Polson Limited has raised the dividend from Rs 10 to Rs 12-8 per share for 1956.

more food for more people

As mechanized farming brings more land under crops . . . as powerful bulldozers and other equipment labour day and night to build dams to water the thirsting earth . . . as roads and rails reach farther to bring food to the market place . . . so the need for oil—fuels and lubricants—grows. Caltex is irrevocably linked with the plans contributing to the well-being of India's millions. At Visakhapatnam the new Caltex Refinery is nearing completion—a tribute to free enterprise. Soon, from here, will flow Caltex quality petroleum products to accelerate India's progress.

OIL is the Lifestream of Progress

For the Investor

Subduing the Crisis Complex

***Investment Gossip*:**

WERE I to allow my inclination to overpower my reason, I would transform myself from Watch-dog to a sleeping dog. Further, I would hope for the Rip Van Winkle blessing of extended sleep, though I would like the duration to be a short three months. At the end of which, I would hope to pass from slumber to activity, with a less confusing picture and a less unsettling outlook emerging after the dust and heat of the dreaded Budget have settled down.

This is a craven thought; and I should dismiss it without hesitation. For, Stock Exchanges need the service of Watch-dog, not when they are at peace with themselves and with the world, but when times are out of joint in the Stock Exchanges and elsewhere.

During the terrifying days of August 1946, we had a watch-man who used to be the first to take shelter in the back rooms of the house. Watch-dog is not that type of watch-man. He will be alert and on duty in bad times as in good times; and he will, as ever, stoutly and unflinchingly defend and support the interests of investors.

In this conception of his duties, his first task is to draw the urgent attention of Authority to calamitous losses inflicted on investors and the desperate predicament of the Stock Exchanges, which are today deserted even by the customary bargain hunters.

In the last week's issue, I made out a strong case for a personal on-the-spot study by the Finance Minister analogous to the procedure he adopted at the end of the last autumn in connection with what threatened to be an unprecedented crisis in the banking situation. I also urged a strong plea that swift and constructive action should follow the enquiry, in the same way as energetic measures have been initiated to resolve the developing banking crisis.

I hope firstly that Mr T. T. Krishnamachari will continue as Finance Minister in the new Cabinet; and that the first task he will address himself to is the removal of the confidence crisis in investment circles.

My second task is to subdue and overcome this spreading crisis complex in the country. This kind of role has had to be played by Indian Finance on many an occasion in the past; and, even though it had to discharge this task in the face of heavy odds, and through what may be called single-handed efforts, it achieved complete success in transforming the crises into opportunities.

Past performance and its results encourage and embolden me to hope for like success in my present plans to convince the country that India is on the assured path to greater achievements; that our national economy is in good shape and must inspire and induce stout hearts among those who directly pilot the Plan and among all of us who are duty bound to participate in the Plan; that such difficulties as we have to contend with are not to be regarded as crises, but to be met as challenges; and that, if in that spirit, we overcome the obstacles and achieve the targets, we would have, at the same time, reinforced our national economy and strengthened our national character.

In the continuous discharge of the second responsibility, I have, again and again, written on what Governmental expenditure of Rs 2,000 crores a year means in terms of increased national income, better distributed earnings, diffused and expanded purchasing power, rapidly widening and strengthening markets for the products of our agriculture and industries, accelerated growth of agriculture and industry, more savings, therefore more and more investments. Thus would a virtuous circle be created where we have known only vicious circles.

The resolve and purpose of the Nehru Government's policies and plans are to transform traditional vicious circles into enduring virtuous circles.

In the interest of the country and in the interest of every one of us, we should respond by converting every obstacle into an opportunity, every crisis into a challenge.

That is the way, the only way, and there is no other way, to em-

Excellent Corporate News

***Balance-Sheet Reviews*:**

INDIAN Aluminium Company, Dunlop Rubber, Shivrajpur Syndicate, Century Spinning and the Finlay group of Mills have all produced excellent working results for 1956. Except in the case of the Indian Aluminium which has raised the dividend from 9 to 10 per cent on the Ordinary shares, the dividends in all other cases are maintained.

£ R$

Indian Aluminium

The year has been one of record performance for the Indian Aluminium Company Limited, with spectacular rise in sales and profits. Sales at Rs 4.25 crores show an increase of 16 per cent over those of 1955, at Rs 3.35 crores. The net profit, after Depreciation and Taxation, amounts to as much as Rs 35.79 lakhs as against only Rs 27.09 lakhs in the previous year. Apart from providing a sum of Rs 7 lakhs for Taxation, the Depreciation amount has been raised from Rs 21.55 lakhs to Rs 22.8 lakhs. The dividend is increased from 9 to 10 per cent.

In this connection, it may be recalled that, in January 1956, the company's shares of Rs 100 each were split into 10 shares of Rs 10 each and that, in October, Ordinary shareholders were given an opportunity to purchase 4.11 lakh Ordinary shares of Rs 10 each at a premium of Rs 2-8 per share.

According to the directors' report, the amount required for the current expansion programme is Rs 8.65 crores. Of this amount, Rs 3.2 crores has been raised by new shares and Convertiblee Loan Stock issues. It is planned to finance the balance by means of bank loans, undistributed earnings and depreciation reserves.

The first stage of the current expansion programme comprises establishment of a new Alumina Reduction Plant of 10,000 tons annual production capacity at Hirakud and a relatively small expansion of the existing plant at Muri to a production capacity of 18,000 tons of alumina production. This stage of the programme is scheduled for completion by the end of 1958. Thereafter, further expansion of the Muri alu-

HIGHLIGHTS

In the USA, over 20 million women are in employment. Of them, over 2 million are engaged as Secretaries. Even so, the unfilled secretarial jobs are in the vicinity of 500,000.

Bosses do not brag about their Secretaries. For, they run the risk of the Secretary so lauded being enticed by one or another of the persons who formed the audience of the braggart.

In brief, there is, in the land of the Almighty Dollar, a famine of Secretaries, Engineers, Doctors, Teachers and so forth.

Believe it or not, we are threatened with a like famine in this country.

If you do not believe it, read what the Leading Article in this issue has to say, not of wide-spread unemployment, but of fast spreading employment.

Employment in certain sectors is so fast-growing that, if not in the fields of industrial or agricultural or manual labour, definitely at least in various segments of the white collar fraternity, conditions are so developing that, where any job needs some kind of skill or technical training, the demand will far exceed supply.

Is the wag proving prophet—the wag who said that unemployment exists mostly among the unemployables?

mina plant to 30,000 tons capacity will proceed and is expected to be completed by 1961.

With regard to the proposed loan to the company by the Aluminium Limited, Montreal, Canada, of one million dollars, the directors have decided to allot 370,000 fully paid Ordinary shares of Rs 10 each in favour of Aluminium Limited in the event of the said loan remaining unpaid in full on September 30, 1959, or to allot such number of shares in proportion to 370,000 ordinary shares in the event of only a part of the said loan remaining outstanding on September 30, 1959. The dividend is payable on or after 27th April, 1957.

£ R$

Dunlop Rubber

The Dunlop Rubber Company (India) Limited has also reported a substantial increase in sales and profits for 1956. Total sales amount to Rs 17 crores, representing an increase of 12½ per cent over those of 1955, at Rs 15.12 crores, although the ratio of profit to turnover is lower, due to selling price reduction towards the end of 1955. Net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 1.33 crores as against only Rs 1.19 crores in the previous year. The directors have, after setting apart Rs 23.03 lakhs (Rs 27.51 lakhs) for Depreciation; Rs 47.35 lakhs (Rs 42.32 lakhs) for Taxation and Rs 26.00 lakhs (Rs 22.00 lakhs) for General Reserve, maintained the Ordinary dividend at 15 per cent.

Additions were made during the year, mainly to plant and machinery, at a cost of Rs 42.22 lakhs. Inventories are higher by Rs 63.84 lakhs. There is an increase of Rs 28.79 lakhs in Debtors' account, reflecting the greater volume of turnover.

£ R$

Shivrajpur Syndicate

The accounts of the Shivrajpur Syndicate Limited, for the year ended 30th November 1956, reveal excellent results. The gross profit has amounted to Rs 44.66 lakhs as against Rs 32.90 lakhs. The bulk of the increased profit has, however, been absorbed by larger provision for Taxation. Sales have reached a record level of Rs 1.63 crores as against Rs 1.15 crores. The dividend is maintained at Rs 5 and the bonus at Rs 3 per share.

The company has received the sanction from the Controller of Capital Issues for the issue of bonus shares to the value of Rs 14 lakhs in the proportion of two shares for every share held. This matter is now under the consideration of the directors. As against the capital of Rs 7 lakhs, Reserves and surplus amount to as much as Rs 70 lakhs.

With regard to prospects, the directors state that, with the advent of State Trading, it is difficult to forecast with any degree of accuracy the future prospects of the company. If, as a result of the recent negotiations in Delhi, the Syndicate is permitted to sell 50 per cent of production direct and while the reminder is purchased by the State Trading Corporation at a reasonable return to the company, the future need not be viewed with despondency.

£ R$

Century Spinning

Despite the various adverse factors, such as the rising cost of raw materials, the heavy incidence of excise duty on cloth and the resultant accumulation of cloth, the Century Spinning and Manufacturing Company has given excellent performance during 1956. The trading profit has been higher by about Rs 11 lakhs at Rs 99.88 lakhs although sales disclose a fall of Rs 45 lakhs at Rs 7.80 crores.

After providing Rs 3.24 lakhs for donations against Rs 1.06 lakhs; Rs 30.80 lakhs for Depreciation against Rs 15.00 lakhs; Rs 6.45 lakhs for managing agents' commission against Rs 7.55 lakhs and Rs 3.11 lakhs for Taxation against Rs 31 lakhs, the net profit is Rs 56.26 lakhs as compared with Rs 34.09 lakhs. The dividend is maintained at Rs 22 per share, freee of tax.

£ R$

Finlay Group Results

The Finlay Mills have reported a profit of Rs 14.60 lakhs as against Rs 13.56 lakhs in 1955, although sales are slightly lower at Rs 2.11 crores against Rs 2.13 crores. A sum of Rs 8.76 lakhs has been allocated to Depreciation; Rs 40,000 to Taxation and Rs 2.98 lakhs to Development Rebate Reserve. The dividend on the Ordinary shares is maintained at Rs 20 per share. The company has obtained permission for the installation of 18,500 additional spindles; and part of the necessary preparatory machinery has already been received.

Unemployment? Paucity of Geologists, Engineers...!

WHILE unemployment is generally considered as a problem which does not admit of easy or early solution, it is not sufficiently recognised that, in a number of fields, there is over-full employment to such effect that employers have to content themselves with less than average qualifications in respect of filling up current vacancies. We have recently been reminded of the paucity of qualified geologists. This is the state of affairs when we are at the threshold of an era of important projects needing a large number of geologists.

Coal is to occupy a vital sector of expansion in the Second Plan; and there is a dearth of mining engineers for the superior as well as subordinate cadres. The schemes involving engineering talent of every description can be energetically pursued only if the facilities for training are vastly strengthened. There is a very tight market indeed for engineers. The position is even more desperate with regard to factory foremen, skilled labour and semi-skilled labour.

The planned programme for health and medical facilities is encountering shortages of doctors, compounders, midwives and nurses.

Progress with regard to education is impeded by a shortage of teachers. In the old days, an advertisement for teachers would bring in scores of applications. The present experience of those in charge of educational institutions is that even repeated advertisements in the "Situations Vacant" column of widely-read newspapers go unnoticed.

Community projects and other aspects of village welfare work stand in urgent and continuous need of trained workers.

Even in respect of white-collar work, there are segments in which a famine of personnel is emerging. Good stenographers are becoming more and more difficult to secure; and, as for secretaries equipped for the complicated work created by the new company law and by the prodigious labour legislation, you may search for them in broad daylight with a lantern in hand, and find your quest unrewarding.

Even good typists are not so easy to get. Operators for special machines like adding and listing fall far short of the demand. Accountants, too, are becoming more and more specialised; and cost accountants particularly are in short supply.

Development piles up paper work, and there is increasing scope for men who have something more than a mere school-final diploma. In fact, it may be said that unemployment persists only with regard to those who seek general clerical jobs or who, with higher ambitions but without any particular skill, aspire to start as officers.

Tried and proved ability is assured of hundreds of openings every year through competitive examination. Some thirty years ago, the opportunities then open to young men of talent could be counted on one's fingers. In today's expanding activity of every kind, hundreds of hands are enlisted every year for the Indian Administrative Service, Indian Foreign Service, Indian Police Service, Indian Army, Navy and Air Force, Indian Railways, Indian Posts and Telegraphs and Telephones. European firms, loyally intent on carrying out Government's directive to Indianise at a faster pace and in respect of higher cadres, are greatly adding to the opportunities open to our young men to start as officers. The Reserve Bank, and the State Bank with its programme of 400 new branches, vouchsafe careers of promise and promotion.

As regards artisans, the employment situation has undergone a startling transformation. Rourkela and Bhilai, Durgapur and Bhopal—these are drawing any number of masons, carpenters, furniture-makers, electric mistries, etc.

Industrial labour is assured of rapidly increasing demand and steadily mounting wages. Agricultural labour, too, is better rewarded both with regard to duration of work and scale of wages. Labourers of this class are yet to learn the benefits of migration. For, huge areas are coming under cultivation, thanks to the vast irrigation facilities now being provided by the river valley projects completed during the First Plan; and many of these regions are not adequately developed for lack of labour.

Domestic servants are in extremely short supply; and this is proof positive that conditions for gainful employment in rural occupations are propitious.

To sum up: it is the men who are under-educated or under-trained in any special skills, that will continue to be the stubborn core of the unemployment problem. The answer is not more jobs suited for their too low, too general qualifications,—for, jobs of this kind in sufficient number cannot under any circumstances be created—but more facilities for converting such raw material into the varied types of finished products for which there is, undoubtedly, growing demand. Our young men, too, must begin to appreciate that their ambition must be to equip themselves to be more than mere clerks or even mere grandiose officers.

We, for our part, believe that the unemployment problem is in course of adequate solution.

Brushed-up Facts

THE present state of co-existence in industry throws on the State and the private sectors the unavoidable obligation of criticising and chastising each other. Sometimes, this obligation finds expression in mere sniping and cavilling; when performed without fear or malice and in a constructive spirit it can serve as an effective stimulant for efficiency and reform. Mr K. J. Cleetus' address at the Forty-Sixth Annual General Meeting of the Indian Engineering Association undoubtedly belongs to the latter category. In carefully-chosen language, Mr Cleetus has pressed certain claims of the industry he speaks for, indicated a few drawbacks in official policy and called for a general balance and restraint in outlook, where its absence can well lead to costly disillusionment.

The country's iron and steel industry is now set for a vast phase of expansion. On the way in which this expansion takes place, its pace, compactness and cost will depend the fortunes of many other vital industries, most notably engineering. One false step on steel may bring repercussions on a wide range of industrial activity. Domestic experience, though hearteningly long and varied, is yet insufficient in relation to the comparatively gigantic requirements ahead. The essence of Mr Cleetus' thesis is that in every step which is being taken, there must be a full assimilation of Indian and foreign experience and whatever enthusiasm exists in the country, whether it be for increasing production or export or for reshuffling the areas of the two sectors, must be severely restrained by considerations of what is most desirable and urgent from the standpoint of national welfare.

The Government of India are now studying the reports of two foreign missions, one British and the other Russian, on the methods of building up a heavy engineering industry. It is somewhat surprising that after several weeks since the submission of these reports, their details are not made accessible to even the key men in the engineering industry. The Government have now decided to appoint a committee of experts to examine the two reports. The Chairman of the Engineering Association pleads for an opportunity to examine the proposals and to express the Association's opinion.

This is, of course, a very legitimate demand. But it is to be wondered why the whole process of discussion and consultation with Indian experts and the Indian interests concerned was not compressed within a brief period of time. It would surely have saved considerable time and expenditure, if Indian expert opinion were to have been consulted then and there by the foreign missions, even while they were studying the question. As both the reports remain a closed book to the public, it would be premature to pronounce a comparative judgment. On the one issue to which Mr Cleetus makes reference, between centralised and decentralised location, the second, favoured by the British mission, appears more appropriate to Indian conditions, and in conformity with the declared policy of the Government in favour of dispersal of industries wherever possible. It cannot be overlooked, that after the elections, regional industrialisation which was, as a broad economic principle sound enough within limits, has now in more States than one, become magnified through the voices of political majorities.

In this connection the one-price-scheme for steel, introduced last year, is likely to be helpful. Whatever might be the arguments against it, the new price structure enables the supply of basic raw materials at uniform cost all over the country, annihilating the freight difference at one stroke.

But, while steel has become cheaper in many places, current import policy has made it more scarce. Importers and fabricators are

The Associated Chambers' Memorandum on Taxation Policy

*

Analysis of Important Suggestions

THE intervention of the general elections has deferred the presentation of full budget proposals for 1957-58 by the Finance Minister until some time in May. But the White Paper laid on the table of Parliament by Mr T. T. Krishnamachari, as well as the speech that he made on the occasion, both contain more than a suggestion of fresh imposts to come. The time has thus been rendered opportune for a re-assessment of Government's taxation policy as such, and of this policy as subserving the financial needs of the Second Plan in particular. It is, in this context, recognised on all hands that both the taxation system and policy stand in need of a thorough overhaul. For, although the Taxation Enquiry Commission did conduct their examination of the problem from the viewpoint of the Indian economy vis-a-vis the expansion and industrialisation sought to be completed, the fact remains that Government have thereafter shown themselves to be in disagreement with some of the recommendations made by that Commission. Secondly, the position has been rendered somewhat complicated and confused by the introduction of an altogether revolutionary set of tax proposals; this relates, of course, to the report made by Mr Nicholas Kaldor on the taxation system in this country. In the three years that have elapsed since the publication of the TEC's recommendations, the incumbent in the Finance Ministry has chosen to implement piecemeal suggetions both of the TEC and of Mr Kaldor. Consequently, the recent past in India has witnessed all manner of new taxation, but scarcely any relief to any quarter. The stage has been reached when serious thought has to be paid to the question whether, owing to the high rates now in force, the laws of diminishing returns have not already set in. Furthermore, India's taxation policy needs to be examined on another basis which heretofore seems to have been neglected or forgotten. While it cannot be denied that one important criterion for taxation policy lies in the revenue that Government must secure for the implementation of the Second Plan, there is a second criterion which is also directly connected to the Plan endeavours. This second basis may be said to consist of the incentive, or at any rate the atmosphere, that needs to be vouchsafed for the individual no less than for private industry if the individual and the private sector are to make their optimum contribution toward the successful achievement of Second Plan targets.

Second Plan's Revenue Needs

It is in this light that special significance attaches to the proposals submitted by the Associated Chambers of Commerce of India in respect of the taxation system. It was unavoidable that the central theme in the Chambers' proposals should be the underlying need to restore incentive for productive activity. But, before we analyse the specific suggestions mooted by the Chambers, we would do well to approach the question from the other end, of the Government's revenue requirements. For this purpose, it is necessary to revert to the reappraisal of Second Plan resources given in Indian Finance of November 17, 1956. Two of the main points sought to be emphasised in that revised table, and which are germane to the issue, may now be taken note of. Since the size of the plan had been made larger, the resources required were Rs 400 crores more at Rs 5,200 crores. Since the deficit financing of the last two years had produced some element of inflationary pressure, the extent of created money had to be cut down from Rs 1,200 crores to Rs 700 crores. Lastly, resources had to be found in respect of the uncovered deficit of Rs 400 crores. Taking all these together, the main conclusion suggested was that the surplus from taxation had to yield Rs 1,200 crores against the Second Plan's estimate of Rs 800 crores. Of this, Rs 700 crores were to be from additional tax measures during the five-year period, and Rs 500 crores from the surplus collections at 1955-56 rates. As far as the latter is concerned, there seems to be every evidence of the expansionist economy producing a surplus of the magnitude thus indicated. And, as far as the former is concerned, it will presently be realised that the bulk of new taxation for the Second Plan has already been given effect to. Revenue from additional taxation already assured as a result of tax measures adopted in 1956-57 may be summarised as follows:

	(In crores per annum)
1956-57 tax proposals ..	Rs 35
September 1956 increase in cloth excise duty	Rs 25
Mr T. T. Krishnamachari's mid-year Budget, 1956-57	Rs 25

The total collections under the first head for the five-year period is Rs 210 crores; under the second head, which would be effective for four years of the Second Plan, the realisations would be Rs 100 crores; and, under the third head, collections for the last four years of the Second Plan would work out to Rs 100 crores; and these make a total of Rs 410 crores.

The balance to be secured by additional taxation is, thus, Rs 290 crores; but, of this, Rs 225 crores are to be found by State Governments. Therefore, the shortfall in the matter of Central taxation is of the order of Rs 65 crores—a by no means imposing amount. The other heads of resources need not here be discussed; but we may point out that Government are in sight of achieving from current revenues a surplus of Rs 1,200 crores; and we suggest, consequently, that conditions are conducive for a dispassionate examination by Government of their taxation policy and the taxation system without being unduly apprehensive about the need further to raise additional revenue.

Altogether, the Associated Chambers have made 34 specific suggestions on taxation policy; and, on a first reading, the reasoning is just and the reliefs asked for reasonable. At the same time, however, it is scarcely likely that Government will or can accept all the recommendations. It is the purpose of this Special Study to analyse the more important of the suggestions, and to indicate which of them are not only desirable but also easy of practical implementation. The proposals and comments follow.

Personal Taxation

> "There should be a general reduction in the burden of personal taxation; in the first instance at least to the levels in force to 1953-54."

As the Chambers' Memorandum points out, the incidence of taxation on personal income is now so heavy that "it is arguable that a stage of diminishing returns has been reached."

An Indian Finance Special Study

The high rates of tax are described as "a positive disincentive to effort, initiative and enterprise." We agree with the former view, and apparently Mr Krishnamachari also thinks so, for, he stated some time ago that the additional revenue even on the basis of 100 per cent tax over a certain level would be negligible. The diminishing returns are, of course, due to the greater incentive provided to evade taxes in proportion to increases in rates. As Mr Kaldor pointed out, the profit in tax evasion is, in the highest brackets, something like 900 per cent. What is even more deplorable is the fact that tax evasion breeds with rabbit-like swiftness. The honest taxpayer "is rendered bitter and antagonistic" because he sees the rates levied on him increasing while the dishonest escape scot-free. We do not, however, suggest that high rates per se are bad. What renders them harmful is the lack of efficient machinery to enforce the law and effect the collections. High rates coupled with insufficiency or inefficiency of the collection agency can only result in tax evasion; and tax evasion merely increases the load on the salaried and professional class who, in some cases, may be honest only by compulsion. Effectively, therefore, increasing incentive is provided for the tax evader; and mounting disincentive for that class in society which should represent the backbone of the nation. We may, however, add that a reduction in rates will not per se bring about a decline in tax evasion; and the net result may be that, while Government lose revenue by the fact of lower rates, they will (or may) not be the better off by dint of reformation of tax evaders. On the contrary, a bad habit dies hard: and it is a debatable question whether tax evasion will be less rampant, if rates were lower. It is necessary, therefore, that the question of lower rates should be linked with proper machinery for enforcement of the law.

Penalty Provisions

In this context, the Memorandum has a good deal to say about income-tax administration. Some of the suggestions have long since been under the consideration of Government, and need not be repeated here. We may, however, point out one worthwhile proposal which it is heartening to see emanate from the Chambers; and also another suggestion which appears to have misunderstood the existing law.

> "The present penalty provisions of the Income Tax Act should be stiffened. The names of assessees against whom action has been taken should be published and wherever possible prosecutions should be vigorously pursued."

This journal has always maintained that Government have been too easy going on known transgressors of the law. The penalty for tax evasion is in other countries very rigorous indeed; and it is time that India also took a stricter line. If we remember right, the notorious American gangster, Al Capone, could not be convicted for any of the murders for which he was known to be responsible. It was on the score of tax evasion that he was arrested, found guilty, and, finally, sentenced to a long gaol term. We suggest that, in India, similar penalties must be enforced. The Memorandum says: "If some cases in recent years had been made examples the effect on public opinion would have been salutary." The Chambers have also stated that "the good work done by the Income-Tax Investigation Commission in the more serious cases justified its continuance".

An Indian Finance Special Study

> "With a view to overcoming evasion, the arrangements for the offsetting of speculative losses against business profits should be reconsidered; such losses should only be set off against speculative profits."

It would appear that the suggestion thus advanced is in respect of law as it already exists. Until recently, speculative losses were permitted to be set-off against business profits; and then we had the rare and strange phenomenon of purchase and sale of losses. But the loophole in this regard would already seem to have been closed. The suggestion is, therefore, redundant.

Earned Income Relief

The specific suggestions on personal taxation are as under:

> "The differentiation between the treatment of earned and unearned income in the higher income groups removed in 1955 should be restored and:
>
> (a) the amount of the earned income relief should be increased;
>
> (b) earned income relief should be allowed for super as well as income tax, as was done from 1946-47 to 1949-50."

> "Employers' contributions to provident funds and interest on provident fund balance should be wholly excluded from employees' total incomes and relief in respect of employees' contributions and life assurance premiums should be allowed for super tax as well as income tax."

> "Contributions by an employer out of taxed profits to provide for employees' pensions based on age, years of service and leaving salary should be exempted from assessment as income in the hands of the employee."

> "The Central Board of Revenue should sanction applications for such increased contributions to approved superannuation funds as may be required to provide for adequate pensions on an agreed basis, having regard to present day conditions."

It may be stated that the tax paid by companies accounts for 40 to 50 per cent of the total tax revenue. Next in order of importance is the tax paid by the salaried and professional class; and the lowest quantum of tax is derived from the business class. It is, thus, appropriate that the relief asked for in respect of earned income should be increased, and that the relief should also extend to super tax. Moreover, we are in agreement with the view that the employers' contribution to provident funds should not, in the employees' hands, be liable to tax. On the other hand, we do not accept the proposition that the liability to tax of pensions in the hands of the employee is tantamount to double taxation. For, although the employers' contribution is out of taxed profits, the employee has been assessed at a later date; and it is not unreasonable that his income at that stage should be liable to tax.

Rebate on Undistributed Profits

> "Super tax (corporation tax) should be charged at a standard rate on all company profits with substantial relief for undistributed profits".

The withdrawal of the rebate on undistributed profits is to be deplored in that it has removed what was once a positive incentive for ploughing back of profits. While it is true that the dividend tax imposed a penalty for the distribution of profit beyond statutorily fixed rates, the fact remains that fiscal policy has to take important note of the need for building up internal resources in the corporate sector. The non-distribution of profits is, from two points of view, desirable. On the one hand, by withholding profits, the dividend distribution is restricted and the scope for increasing inflationary pressures under this head is reduced. On the other hand, the building up of internal resources is essential if programmes of expansion and development are to be carried out. This is the more so in view of the difficulties encountered in the capital market and because of the extremely tight conditions in the money market.

Whether for development or for working capital, the retention of a larger volume of internal resources is greatly to be desired. Of course, it needs to be added that a rebate on undistributed profits should be restricted to industrial companies.

> "The present difference in the effective rate of super tax on Indian and non-Indian companies should be eliminated".

Hardly any comment is necessary. On the face of it, at a time when India is seeking to secure the increasing participation in Indian industry of foreign capital, it is both inequitable and foolish to discriminate against non-Indian companies.

Dividends : Grossing Up

> "Income tax at the standard rate should be deducted from all dividends paid to shareholders, irrespective of the paying company's liability to tax on its profits. On completion of a company's assessment and after taking account of payments made under Section 18A of the Indian Income Tax Act any excess of the tax deducted from dividends over the tax payable by the company on assessment will be paid over to the Government of India."

> "Shareholders in companies should obtain credit in their personal assessments for tax deducted from dividends at the standard rate, irrespective of whether or not the paying company has any assessable profits."

If our understanding is right, the intention of this recommendation is that the law in this regard is to be patterned after the British example. That is to say, a company would, before providing for tax, declare the gross dividends, but withhold from such distribution tax at the maximum applicable rate. If, consequently, the company is found not to be liable to tax in that year of assessment, the amount deducted would, we presume, be paid over to Government, and would lie to the credit of the shareholders. Thus, the advantages of grossing up dividends would be available to shareholders even if the company, as a result of tax reliefs under the heads of Depreciation and Development Rebate, has no liability to tax.

It may be noted that this recommendation has been made because of the anomaly to be found in the case of some of the expanding companies. For example, a new company may announce an issue of 6 per cent Tax Free preference shares; but, in the event that the company is not, as a result of Depreciation allowances and Development Rebate, liable to tax, the shareholder does not have his dividend grossed up; and the preference shares turn out to be 6 per cent stock without deduction of tax.

We are not, however, sure that the suggestion of the Chambers will resolve the difficulty. A much simpler procedure would be for new companies to issue preference shares carrying a higher interest, but subject to tax. For, the whole process of grossing up is, in a sense, notional. Whatever the tax liability of a company, so long as the profits have been assessed to tax, the shareholder receives the grossing up on the whole of the dividend. In some cases, therefore, the amount involved in the grossing up may exceed the tax paid by the company. Secondly, the Chambers' suggestion would also impose a greater responsibility on the company, which would be required to deduct tax at source. Indeed, it appears to us that Government should readily accept this recommendation, since it benefits them rather than the shareholders.

It should be recognised that the grossing up anomaly affects industrial companies which are in the throes of large-scale expansion. For new shares, as we have suggested, it should suffice to increase the rate of dividend offered, but render such preference shares subject to taxation. And, since the grossing up affects only a smaller number of companies, we should think that Government should consider the allowing of grossing up in the case of all industrial companies, whether or no they are liable to tax. We may add that such a course of action by Government would have the direct effect of making new capital issues more attractive: and this is an end, in these tight money days, that is devoutly to be wished for.

Dividends Tax

> "The present system of taxing companies in respect of dividends paid by them by withholding super tax rebates should be discontinued and an additional super tax charged on dividends paid in excess of a standard rate of dividend; such standard to be determined by reference to a capital base representing the total capital investment in the company or the average dividend paid for the three years ended on or before 31st March, 1956, whichever may be the higher, with a minimum rate of six per cent per annum."

> "The taxation of bonus share issues should be discontinued."

The justification for the dividends tax is that, in a developing economy which has directly enabled higher profits and higher dividends, some part of the benefit should be passed on to Government. However, an anomaly has arisen in that the companies which were the most efficient and most prudent are today the most penalised. For, the dividends tax is based on the paid-up capital only; the share premium account is, in some cases, also included for determining the capital base. In the case of a prudent company, however, reserves have been accumulated over the years for strengthening the company; but these reserves could be built up only by denying a higher or total distribution in earlier years to shareholders. In the result, the dividend paid appears to be excessive; but that is because the capital has not been watered down. Secondly, it needs to be remembered that the capital employed includes the undistributed profits, which also have, indirectly, been contributed by the shareholders. Thirdly, the dividend, while expressed as a percentage of the face value of the share, ought really to be considered in proportion to the employed capital; and such a state is reflected in stock exchanges. Therefore, the suggestion that capital to be determined for this purpose should also include free reserves may be admitted.

Bonus Issues

In respect of the taxation of bonus issues, we may recall that Sir Chintaman Deshmukh went specifically against the recommendations and findings of the Taxation Enquiry Commission. It is, however, conceded that the tax on bonus issues should be considered by Government to be complementary to the dividends tax. For, a bonus issue brings down the rate

of dividend paid and, thereafter, reduces the liability to dividends tax. Where the bonus issue is a mere book entry; where the earning capacity of the company has not for that reason improved; and where the total dividend distribution after the bonus issue is likely to remain unchanged, it is obvious that free and unfettered issue of bonus shares would affect the Government's revenue under the dividends tax. But herein Government have the power to see that bonus issues are not resorted to merely for the purpose of watering down capital and of avoiding the dividends tax. All bonus issues require the prior sanction of the Controller of Capital Issues; and Government can always reject such applications as are, ostensibly, for the purpose referred to. On the other hand, in the case of companies which are making productive use of undistributed profits, and where the earning capacity of the company is, therefore, being increased, it is proper that bonus issues be freely permitted. We, therefore, think that the taxation of bonus issues may be repealed. The revenue lost is meagre and will be more than made up by the goodwill that will be secured from shareholders and companies.

Section 23A

"Section 23A of the Indian Income Tax Act in its present form should be repealed and substituted by an entirely new Section on the lines indicated in paragraphs 14 and 15".

This journal has for some time been conducting a campaign for re-framing of Section 23A of the Income Tax Act. The original purpose of Section 23A was to ensure that, in the case of private limited companies, the incomes accruing in the company are paid out as dividend and thereafter assessed in the hands of the recipient. But the subsequent definitions of Section 23A companies have imposed hardship on companies other than the private limited companies. Many industrial companies attract Section 23A by reason of concentrated holdings of a majority of shares in the hands of five or six entities. This prevents such industrial companies from building up internal resources which are so necessary for expansion and development. Therefore, the first suggestion to be made in respect of Section 23A is that industrial companies, whether private or public, should be taken out of its purview. In the second place, Section 23A companies are being penalised if they obey the law and penalised also if they disobey the law. This is patently unfair and inequitable. On the one hand, Section 23A companies are required to distribute a certain minimum proportion of their assessed profits. On the other hand, in the event of such distribution exceeding statutorily fixed rates of dividend, the companies are liable to larger and penal rates of dividends tax. Relaxation of one of these two tax levies is, in all justice, required. We cannot too strongly advocate leniency in this regard by Government.

New Attitude for New Taxes

"There must be an increasing resort to excise duties".

Much is usually made of the fact that Government's revenues from taxation are, in India, a much smaller proportion of the national income than is the case elsewhere. At the same time, however, it is becoming patently clear that the scope for increases in rates or new forms of direct taxation is practically non-existent. Thus, if at all tax revenues are to be improved, hitherto untapped sources must be brought under the purview of taxes. To this end, excise duties are an admirable instrument through which to broad-base taxation, since it will mean that taxes will be spread over a larger segment of the population. But, in our view, the increasing resort to excise duties should not spring from the motivation that, in the field of direct taxation, little scope is left available. On the contrary, we think that there is every justification for bringing more and more of the population into the realm of tax-payers. Our reasoning is based on the fact that the Second and other Plans are said to be People's Plans. If so, it is proper that the people should individually contribute their mite. We therefore think that the following three suggestions made by the Chambers are entirely reasonable:

"The levy of an excise duty on salt should once again be considered".

"A surcharge on all railway passenger traffic on journeys of, say, over 50 miles should be imposed immediately".

"Postal charges for ordinary letters and postcards should be increased with the object of restoring the contribution of the Posts and Telegraphs Departments to the general revenues to approximately what it was in 1944-45".

Let it be said at the outset that these levies will not be popular, and that Government may find it difficult to accept them. But we are clear in our mind that Government must adopt a new attitude to new taxes and, what is more, that the people themselves should reorient their minds to the taxation needs of the Second Plan and the contribution which they, to this end, must make. We may add that these three suggestions have all originated in Indian Finance. We reproduce below an extract from the Leading Article of May 19, 1956, in which these suggestions were advanced:

The Second Plan's allocation to the Railways, even at the higher revised level, is considered inadequate to the tasks which will have to be discharged by the transport system in response to increased raw material demand for expanding industrial production, increased industrial and agricultural output, and increased consumer demand. Controversy has reached a high pitch; and, while the agitational impulse is in full fury, the constructive side of the problem is in eclipse.

If, at all, any move has been taken in a positive direction, it is to dissuade travel by rail. All propaganda hitherto was designed to promote travel; hereafter, people are to be expected to use trains only when absolutely necessary. How far appeals to this end will have any tangible results, is doubtful.

Meantime, it is certainly worth considering whether the hiking of fares will serve the purpose. In this connection, it needs to be remembered that fares in India have risen moderately while other costs have risen sharply.

Such an increase in fares will no doubt start an uproar. It will be urged that the poor man will be most hit. This kind of outcry is bound to greet any rise in taxes or fares.

In relation to the series of Plans that are in prospect, a new attitude on the part of the public is essential. The Plans are, it is claimed, People's Plans. It is obvious that the people at large should not only share in the profits, but also shoulder responsibilities and burdens.

Taxes should be so devised as to enable the general population to make a significant contribution. On the one hand, they should be taxes of universal applicability; on the other, they should be taxes 'without tears.'

The increase we propose on Railway fares should be described as Development surcharge on fares. This description should help create the wide-spread feeling that

An Indian Finance Special Study

everyone is putting his shoulder to the wheel of the Plan. By the same token, there should be a Development surcharge of quarter anna on post-cards.

The old salt duty cannot be revived for sentimental reasons, though, from the practical point of view, the abolition of the duty has made no difference to the price paid for his salt by the consumer. The State has lost the revenue; the population has gained nothing. We suggest that a Development duty be levied on salt. The proceeds are to be directly used for the Plan.

Stamp Duty on Cheques

The next suggestion made by the Chambers is one to which we cannot give our support.

"A stamp duty on cheques of, say, two annas per cheque should be imposed".

After a long period of considerable effort, the banking system has been able to make the public somewhat cheque-minded. At this stage to impose the stamp duty would undo the good work thus achieved; and the progress of banking will be retarded. A more powerful reason against such a duty consists in the fact that, as in direct taxation, a stamp duty on cheques will not touch the dishonest, but affect the honest considerably. For, tax evaders do not (as far as it lies in their power) utilise the medium of cheques; and a stamp duty on cheques will merely reinforce their preference for cash.

Agricultural Income

"Increased rates of tax should be levied on the rural sector and unorganised agriculture; particularly where these are associated with development projects such as the dams, (agricultural rates, irrigation rates, electrical duties, cesses, etc.) and roads (bullock-cart licences, licences on bicycles, etc.); land revenue should be increased to absorb approximately the same percentage of the gross value of agricultural output which it represented prior to 1939".

That agriculture, as against industry, should for some time continue to get preferential treatment is, in our view, inevitable. But there is a clear case for levying betterment taxes in such of those areas where, by virtue of Government's Second Plan projects completed, the earning capacity has risen considerably. However, we understand agriculture tax to be the domain of State Governments; and it is to be presumed that the State Governments will gradually adopt such taxes with a view to achieving the target of additional taxation which, in the Second Plan, has been allotted to them.

"Consideration should be given to the inauguration of State lotteries while interest-free prize bonds might be used to stimulate savings".

The operative word quite obviously is an error: the prize bonds should be "tax-free" and not "interest-free". This is a suggestion which will be considered in the World of Finance section at a later date.

It will be seen, therefore, that the Memorandum of the Chambers offers a taxation policy which, in the main, has been constructively thought out. In the sphere of personal direct taxation, particularly, it would appear that reliefs are on grounds of equity necessary. We trust that the Memorandum will be studied carefully by Government, and that a beginning will be made, in the near future, to implement the measures that are, in the national interest, both necessary and desirable.

Speculation on Wrong Track

The recent hefty rises in the Reserve Bank's investment portfolio have been interpreted, in some quarters, as part of the customary plan to prepare the ground for the New Loan. Nothing can be more far-fetched than this. In the first place, the increased giltedged holdings of the Reserve Bank are known to be connected with definite operations designed in compliance with its role as bankers' bank and as Government's bank.

The banking situation in the current busy season has, in line with anticipations, witnessed an exceptionally large drain on the already strained resources of the banks. The Reserve Bank has been making advance preparations with a view to augmenting the flow of central bank credit to the banking system. The first step in this direction was the liberalisation of the conditions under which member banks could borrow from the Reserve Bank on the security of usance bills. The procedure with regard to the approving of bills and the fixing of credit lines has been so altered as to enable the banks to feel assured, at the threshold of the busy season, that central bank credit will be forthcoming as and when required, and to the extent required.

On top of this assurance, the Reserve Bank, by a subsequent change in policy, came out as buyers of securities of any maturity from any bank which chose by this means to expand its base of cash. The Reserve Bank is known to have injected, in pursuance of this move, cash to the extent of Rs 22 crores into the banking system and, as a consequence, expanded its giltedged portfolio correspondingly. This operation has, thus, no relevance to any supposed strategy in behalf of the New Loan.

As at the end of March, the Reserve Bank's return for the Banking Department disclosed a sudden jump of Rs 40½ crores in its Investments. It is totally erroneous to argue, as some have argued, that the increase represents large-scale open market purchases of securities. What actually took place in the last week of March is just a repetition of what, for some years, has been happening in the closing week of the financial year. The Central Government, for purposes of ways and means adjustments, have found it necessary to sell ad hoc Treasury Bills for an additional Rs 40 crores. The extra currency that would have accompanied this sale to the Issue Department would have caused an expansion in the Reserve Bank's cash in the till to a level which was far beyond immediate needs. In other words, the Reserve Bank did not want so much cash; and, against the ad hocs added to the Rupee Securities in the Issue Department, withdrew a corresponding amount of marketable securities and transferred them to the head "Investments" in the Banking Department. Deficit financing is the explanation for the rise in the Reserve Bank's Investments in the week ended March 29. No pre-New Loan manoeuvre is implied or intended.

In fact, so long as the banking system continues to experience the full face of seasonal pressure, it is entirely out of question to give any thought to New Loan issue or even prospects. In the light of current and forseeable conditions in the money market, the prospect of the New Loan making its debut earlier than June-July is indeed dim.

Editorial Notes

*

Light from Canada

With Dr Hare Krushna Mahtab heading a Congress Ministry in Orissa, the only State out of alignment with the Centre and with other States is Kerala, where a Communist Ministry has been installed in office. As is to be expected, there is much of head-shaking and browbeating over what is generally believed to be an intriguing and even disturbing prospect. India must learn to take in its stride developments such as these. For the present, we may be thankful for the mercy that only one State is out of tune with the Centre.

Canada is a country which has not been vouchsafed this measure of mercy. The Federal Government of that country have, for over 22 years, been run by the Liberal Party who, however, are in power only in a minority of the units or provinces. Yet, Canada has become famed for political stability and economic prosperity. It may be news to many that Canada is a land of many paradoxes—French Canadians forming 40 per cent of the population and British Canadians making up the rest; Roman Catholics and Protestants accounting for cleavage in similar fashion and in like proportion; Liberals at the Centre and sundry other parties in a majority of the provinces. Canada has solved these anomalies so successfully that Canadian personality has come to stand for compromise and tolerance.

As we have in India more and more elections with fairness and freedom undimmed, we must cultivate the virtue of compromise and the grace of tolerance. This is as true for the Communists as for the Congress.

In the Web of U.S. Cotton

Reports from New York suggest that the USA is planning to dump cotton on the world markets. Which it can easily do from the swollen Government-held surplus commodity stocks. Price-support policies pursued over a period of years are responsible for the higher prices which consumers have had to pay for American cotton. Such high prices have provided a kind of protection for Egyptian Sudanese and Peruvian cotton. The purpose of the proposed move to dump US cotton is to eliminate such protection, particularly for the Egyptian cotton.

The concerned countries are reported to have lodged protests at Washington. Whether such protests will be of avail, is open to question. For, if the intention is to bring pressure on President Nasser, and to instill in him a greater readiness to fall in line with American wishes, objections raised by Sudan or Peru on economic grounds will fall on deaf ears.

India is, at the moment, having talks for the purchase of Egyptian cotton. It will equally suit us to have some more cotton under the Surplus Commodities Plan. Will India get such additional quantities of US cotton only if it desists from purchasing Egyptian cotton? It is a delicate question; but Mr. Dulles is not the one to shirk from a blunt answer.

*

From Famine to Feast

There is much comfort and heartening promise that India is emerging as an exporter of sugar. Earlier estimates envisaged the desirability of exporting 100,000 tons of sugar this year. The view is now being advanced that we should aim at a higher target. How far world demand of this magnitude for India's sugar, as distinguished from supplies from customary sources, remains to be seen.

But the point which we would like to stress here is that, in respect of sugar as in respect of many other commodities, we seem to swing imperceptibly from famine to feast, and vice versa. Only three years ago, we were frantically importing sugar, without limit to cost or quantity. We are in the fortunate position of frantically exporting sugar and we are told that we must do this to ensure internal price stability.

Only three years ago, pleas were vigorously advanced for price-supporting purchases of food grains. We are now having 18,000 grain shops; yet, we have not broken the back of soaring prices.

Jute seemed to be in short supply, according to the asseveration of dealers three months ago. We are now being told that something must be done to keep up the prices of jute.

Aren't we too jumpy in these matters? Too prone to hasty judgments? Too clamorous for Government intervention? Indian businessmen and traders will do well to acquire some kind of poise and some manner of calm reaction.

Naya Paisa and Prices

At least in West Bengal, the introduction of the new coins has not been unattended with sporadic squabbles and skirmishes. An Act empowering the Postal Department to raise its rates by fractions of naya paisa was given little publicity, and this resulted in some confusion. Many eating houses not only started demanding more than the equivalent value for the old rates, but quietly utilised the occasion to raise the rates.

The transport services, run by State and private agencies, are reported to be contemplating revised pricings in terms of the new coin, giving room for no more than the minimum departure from the old rates. Such decisions, promptly taken, will obviate friction and make the change-over less irksome and unpopular. It is in the market places, buses, trams and hotels that the deviations in exchange rates frequently give rise to tension. The Government should see that no one exploits the initial, transitional perplexities of the public, for surreptitious profiteering.

Currency Expansion vs. Banks' Deposits Expansion

IN 1956-57, the increase in the Deposits of Scheduled Banks handsomely exceeded the expansion in currency circulation. This is a fact whose significance for Indian banking is enormous, but which is likely to be altogether overlooked. For, this phenomenon has to be considered in relation to the oft-repeated complaint that, in India, the banking habit is so poor, that Deposits linger at a level far below currency circulation whereas, in other countries, the contrary experience is to be found. It is, therefore, appropriate that we try to discover the peculiar characteristics of Indian banking and, from data of recent years, seek a projection of trends as likely to obtain in the future.

The fundamental consideration about currency circulation in India is that, broadly speaking, there may be said to be three different money markets. The first is the money market proper and comprises the transactions passing through recognised monetary institutions. The second is the rural money market, which has a currency circulation of its own; but there is neither free nor swift inter-change between these two money markets. It is the third money market which aggravates beyond all reckoning the difficulties for the banking system: for, the currency circulation herein is purely in cash (of the black market variety) and is effectively debarred from figuring in the money market proper. The measure of the currency in circulation in the third market can be no more than approximate, for, the estimates available of incomes on which tax has been evaded are themselves in the nature of guestimates. It is, however, reasonable to assume that the black market currency may be anything around Rs 500 crores; and such an estimate is, according to at least one banker, conservative in that the figure is more likely to be around Rs 750 crores. But, even on the conservative basis, it will be seen that, as against the present level of notes in circulation at Rs 1526 crores, at least a third of it is beyond and outside the pale of the banking system. Thus, as far as the banking system is concerned, the effective notes in circulation amount to Rs 1000 crores; and, in comparison with this figure, Deposits are already at a level of Rs 1161 crores.

Our first contention, therefore, is that the expansionist economy has, in the last few years, exerted such beneficial influence as to have augmented Deposits to a level exceeding the effective note circulation.

That this is an improvement registered in the recent past, is to be inferred from the comparative figures of Deposits and notes in circulation since the beginning of the First Plan. In the first two years of the First Plan, the disbursements on this account, relating as they did mainly to the agricultural and rural sector, did not percolate into the banking system. As such, in spite of planned expenditure on a sizeable scale, currency in circulation actually showed a drop of Rs 116.09 crores and Rs 15.99 crores in 1951-52 and 1952-53 respectively. This was duly reflected in a decline of Rs 55.24 crores and Rs 5.99 crores in the Deposits of the banking system. The process was reversed in 1953-54, when currency in circulation rose by Rs 46.28 crores; and this was accompanied by a rise of Rs 11.58 crores in the Deposits of Scheduled Banks. In 1954-55, the increase in currency circulation rose still further to Rs 102.23 crores; and Deposits of Scheduled Banks benefited almost to corresponding extent, with a rise of Rs 100.83 crores. In the next year, 1955-56, the rush of expenditure lifted currency in circulation by Rs 176.98 crores; but, again presumably because such expenditure probably occurred toward the end of the year, Banks' Deposits improved by the smaller margin of Rs 93.02 crores. The relative figures for 1956-57 are on the face of it incredible; but, as we shall presently see, the experience the last year was to some extent governed by three special factors.

The first special factor was the steep import surplus. This had a contractionist influence on currency circulation. At the same time, we are to recognise that such contractionist impact was also felt by the banking system. For, a considerable proportion of the imports was on private account; and the payment thereagainst must have drained Deposits by a corresponding amount. That is to say, but for the large-sized import surplus, the increase in currency circulation would have been higher, and the rise in Deposits would have been even more marked. The second special factor lies in the changed emphasis of the Second Plan. With stress now being laid on industrialisation of the country, and with planned expenditure being largely incurred under this head, the money market proper is more immediately feeling the repercussions flowing from implementation of projects. Again, to put it briefly, First Plan expenditures had their direct impact upon the second money market whereas the Second Plan disbursements are more immediately reflected in the first, or the money market proper. The third special factor consists of the credit arrangements under which imports are being effected. In particular, reference may be made to the Indo-US Surplus Commodities agreement whereby India has purchased (without immediate liability for payment) considerable quantities of cotton, rice and wheat. Imports of this nature have benefited the money market in two ways. In the first place, there has been no contractionist influence, since payment has not yet been made. In the second place, the commodities so purchased, when sold, retrieve currency from the second money market for the first money market. In fine, the third special factor has meant that accretions have taken place to the Deposits of the banking system.

As a result of these three factors, currency in circulation rose by Rs 47 crores in 1956-57. It is to be remarked that the return of rupee coin from circulation, at Rs 14.45 crores, is the sharpest recorded in the last six years: and we take this to suggest the operation of the third special factor that we have referred to. The rise in Banks' Deposits has touched a new high of Rs 131.30 crores, and is less than Rs 10 crores short of being three times the increase in currency circulation. It may be recalled that the contractionist influence on currency circulation was offset by a like (if not for corresponding amount) drain upon Banks' Deposits. Therefore, the second contention that we would like to advance is that, in the future, the increase in Banks' Deposits is likely progressively to exceed the increase in currency circulation.

However, it would be erroneous to think that the banking system can now sit back and wait for inevitable augmentations of Deposits. We envisage an active and formidable task ahead of Indian Scheduled Banks; and we hope in a subsequent issue to indicate the measures whose adoption will contribute to a more speedy improvement in the resources of the Indian banking system.

*Figures relate to April 5 for Reserve Bank and State Bank and March 29 for Scheduled Banks.

Record Altitude of Active Notes

A steep, but by no means unexpected, increase of Rs 37.48 crores in Notes in Circulation is revealed in the returns of the Reserve Bank for the week endd April 5. It may be recalled that, in the last week of March, Government had recourse to large-scale deficit financing in order to meet the heavy commitments falling due at the end of the fiscal year; but, for the reason that expansion of currency for such amount would have lifted the Reserve Bank's cash in the till to an unwanted and unnecessary plenitude, marketable securities for like amount were transferred from the Issue Department to Investments in the Banking Department. At the same time, however, it needs to be realised that the replenishing of their resources by Government was with a view to making payment to suppliers, contractors, etc.

It would appear that, in the first week of April, a considerable number of the cheques in respect of payment both by the Central and the State Governments have been presented for encashment. Naturally, the pressure exerted on active notes was upward; and, with a view to meeting these cheques on government account, it became necessary for the Reserve Bank to effect an expansion in currency. For this purpose, investments have been transferred from the Banking Department to Rupee Securities in the Issue Department; and this accounts for the fact that the increase in Rupee Securities is for an exact amount whereas, in respect of deficit financing, the amount in question falls slightly short of a round figure.

Secondly, the normal month-early disbursements, both by Governments and by business, were further responsible for an expansion of currency. On the face of it, the change under Rupee Coin, which shows a rise of Rs 3.59 crores, indicates a contrary trend. But we must remember that, in the first week of the financial year, the Central Government traditionally tender rupee coin to the Reserve Bank, under the Act, for Rs 5 crores and receive credit thereagainst. There has, therefore, been in reality an outflow of rupee coin into circulation for Rs 1.41 crores. As already stated, currency has been expanded against Rupee Securities for Rs 30 crores. Notes in Circulation have risen steeply by Rs 37.48 crores to Rs 1,563.57 crores; and the Reserve Bank's cash is marked lower by Rs 3.89 crores at Rs 7.88 crores.

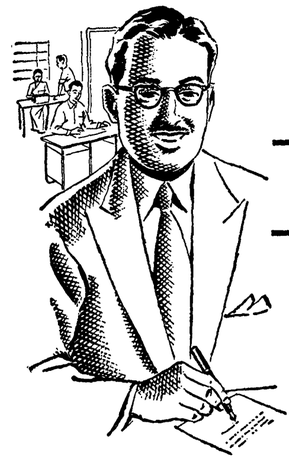
Britain and European Free Trade

By PAUL EINZIG

THE British Government has committed itself to the principle of a limited participation in the European Common Market scheme. But very few people realised the highly complicated nature of the problems that the decision would raise. Now that the subject has been under detailed examination for some time by the Government and by industrial organisations, the difficulties that will have to be faced are becoming increasingly evident. This does not mean that there is any likelihood of a reversal of the decision. Both Mr Macmillan and his Chancellor of the Exchequer, Mr Thorneycroft, are firmly committed to it. But it is a long way from the acceptance of the principle to the announcement of the definite formula, and when it will be announced it is likely to be surrounded by many "ifs" and "buts."

By far the imporant of all the major headaches caused by the scheme is the last-minute decision of the Messina Powers to include overseas territories in the scheme. That decision has made it necessary for the British Government to engage in lengthy and involved consultations, not only with the Commonwealth Governments but also with all the Colonial Government which, as far as economic matters are concerned are very far from being subservient tools of the Colonial Office in London. The answers received vary widely according to whether or not the country concerned is anxious to press ahead with ambitious industrialisation schemes. As a result of the emergence of conflict of interests, the British attitude is now in the melting pot.



The Government has not an easy task on the domestic front. The industries which stand to benefit by access to a large free trade area are of course enthusiastic about the idea. But many other industries feel that they would not be able to face continental competition in the domestic market. It is true, the maximum reduction of existing tariffs will ony be 10 per cent by the end of the first four years and 20 per cent by the end of the second four years. Not until the end of twelve years—which period is liable to be extended to 17 years—will the scheme begin to produce its full effect, for better or for worse. But in the case of some industries the margin of advantage over continental competition is so narrow that even a reduction of the protective tariff by 10 per cent would open the floodgates for competing imports. So the industrialiste concerned cannot indulge in the dubious comforting thought that "In the long run we are all dead."

Between now and the definite adherence of Britain to the scheme the Government is likely to be subject to strong pressure in favour of safeguards. One of the spheres in which such pressure is likely to manifest itself is in respect of the determination of what kinds of goods are to benefit by the scheme. All domestic products—apart from agricultural products as far as Britain is concerned—come under it. But if their production necessitates raw materials or semi-products imported from non-participating countries then it is necessary to fix the percentage limit beyond which the finished products do not qualify for the benefits of the arrangement. If the goods are merely processed in a member country and the processing merely adds small percentage to its value they will have to be excluded. But what maximum percentage should be fixed? If it is fixed too high it would reduce the scope of the schemes. If it is fixed too low it would mean that nonparticipating countries would stand to benefit without reciprocity.

The industries which hope to be able to penetrate into the continental markets want the percentage fixed as low as possible, so that their goods produced with the aid of imported materials should not be excluded. On the other hand the industries which are on the defensive against continental imports would like the percentage to be fixed as high as possible. The possibility of fixing a number of different percentages for various classes of goods cannot be ruled out. In any event there is bound to be some hard bargaining between the participating Governments on this point.

The industries which are on the defensive are likely to mobilise all their influence to secure some form of protection or compensation for the disadvantages they are liable to

World of Jute

Raw Jute Production

There is hardly anyone in the Indian world of jute today who does not subscribe to the view that raw jute self-sufficiency is an essential prerequisite to prosperity for the Indian jute industry. That the Government of India have recognised the need for planning for a larger jute crop is evident from their upward revision of the target for jute production under the Second Plan and the steps already taken by them toward increasing the productivity per man and per acre. The experience of the jute season 1956-57 has heightened the hopes of an early attainment of raw jute self-sufficiency. It is confidently expected that given favourable weather conditions, the 1957-58 jute crop will be substantially larger than that of the current season. The Indian jute grower knows that his produce will have a ready market. The last two seasons have been quite profitable to him. Though he may not again get the very high prices that he was able to obtain during the current season, he is sure that his future crops will fetch a good return. There is, therefore, every reason to expect that he will continue to evince keen interest in jute production. The fact that the yield per acre can be increased by 20 per cent will more than compensate the inevitable reduction in the price levels of raw jute.

In this view, it would appear that the outlook for the next season is quite bright. But according to P. D. Khaitan, Secretary of the Bihar Jute Growers' Association, certain forces have come into play in the world of Indian jute which, if allowed to go unheeded, will gravely jeopardise the entire programme of development for the industry. He says that as a result of the import of Pakistani jute, including low grade jute and jute cuttings at higher prices by the Indian mills in recent months, Indian jute growers have sustained heavy losses. It is his contention that unless immediate steps are taken to rehabilitate them, there is every likelihood of a marked fall in jute production in the next season. It is to be noted that in 1956-57 Bihar had 6,65,000 acres under jute, contributing 13,80,000 bales to the total Indian jute crop of 42,21,000 bales. It is also to be remembered that the jute grower is also a cultivator of paddy and at the current price of paddy which is by no means unattractive, he may switch over to paddy the moment he finds jute production unremunerative.

It is of utmost importance that care is taken to obtain the unstinted cooperation of the jute grower. It is gratifying to note, therefore, that Government will soon set up a committee to determine among other things the quantum of raw jute to be imported from Pakistan and to examine the possibility of supporting or staggering imports from Pakistan of those varieties of raw jute of which there is enough production in India. From the statement of Mr Khaitan it would appear that considerable mischief has already been done by the import of low grade jute from Pakistan. The proposed committee's finding will no doubt help Government to modify suitably their policy regarding raw jute imports from Pakistan. In the meantime, it is incumbent on them to examine the points raised by Mr Khaitan with a view to taking suitable remedial measures which will help regain the confidence of the jute growers.

*

The jute goods market opened the week under review on a steadier undertone but toward close turned quiet in the absence of foreign interest. Reports of the acceptance of India's tender for sackings by Burma imparted a cheerful tone to the market on Thursday and with bear covering prices were pushed up. Hessian 40"×10oz Ready improved to Rs 41-00 while B Twills Ready also recovered to 112-00. Prices in the sacking section developed a sagging tendency on Friday in the absence of genuine business with the quotation of B Twills Ready pushed down to Rs 111-87. Hessian 40"×10oz Ready, however, continued to rule steady around Rs 41-06.

The IJMA figures relating to stocks of jute goods with mills at the end of March 1957, which were released on Monday resulted in imparting a subdued tendency to the market as the figures disclosed an increase of 300 tons in total stocks compared with the previous month, contrary to market expectation of a decrease. Total stocks at the end of March 1957 at 97,700 tons were 300 tons higher than at the previous month. Of these, stocks of hessian cloth and bag comprised 29,800 tons which were 4,600 tons higher than at the end of February. Such stocks at the end of March 1956 stood at 30,300 tons. There had been a decline of 5,100 tons in the stocks of heavy goods which were placed at 56,500 tons at the end of March 1957. Such stocks at the end of February 1957 and March 1956 were 61,600 tons and 55,200 tons respectively. Other varieties at 11,400 tons were 800 tons higher.

Price recorded small losses all along the line with Hessian 40"×10 oz receding to Rs 40-75 and B Twills Ready to Rs 111-31. After a steady opening, prices on Wednesday again developed a reactionary tendency due to selling pressure in the Fatka and Hessian 40"×10oz declined further to Rs 40-69 with B Twills easing to Rs 110-50.

World of Tea

Plea for Renewal of International Tea Agreement

WORLD Tea situation is now in a delicate balance. Consumption is not keeping pace with the increase in production. It is generally felt that any steep rise in production, which is sure to occur, will upset the present balance and bring about a crisis in the world market unless there is a speedy renewal of the International Tea Agreement.

So far as India is concerned, a system of international regulation of exports from the principal exporting countries has become imperative. Apart from an early start to the new crop following earlier pruning, the new season's output is expected to be bigger. Output from replanted areas is also expected to be substantial. As a result, it is feared that a surplus of Common tea may develop again as there is no indication yet that the International Tea Agreement will be renewed.

Moreover, Common teas are facing stronger and stronger competition as new producing areas are coming into being year after year, both in India and elsewhere. According to a leading tea broker in Ceylon, the competition from new production, chiefly Africa, is the gravest threat to the Ceylon tea industry. It is no longer possible for anyone to belittle the prospects of Africa as a major tea producer. A further substantial acreage should come into bearing in the next few years.

For nine months of last year, African teas were selling profitably, while Ceylon and Indian producers were in difficulties. The threat of over-production was solved by the decision to stop plucking early in North India. In other wofds, India was forced to restrict the crop in order to maintain a price above cost of production. Moreover, the Indian industry had the inability to adjust the price of tea except within narrow limits, because of a very rigid cost structure and heavy taxation.

Above all, the opening of an auction centre in Nairobi foreshadows the entry of African teas in quantity into other markets. Ceylon's unreasonable condition for renewing the Agreement have delayed its revival so far. She wants a disproportionate increase in her export quota which India and other partners of the International Tea Agreement are unwilling to grant. Unless India and Ceylon, the largest producers, agree, any system of regulation will become ineffective. It, therefore, appears that producers in India will do well to concentrate on quality; and this will be the best move, for the time being, to regulate production and ensure fair prices, provided it is faithfully implemented.

Meanwhile, the final Export Sale for the 1955-57 season was held in Calcutta this week where offerings amounted to 54,633 packages. These comprised mainly end-of-the-season descriptions. There was a fair general demand with clean black-leafed types and well-made Whole Leaf grades being well supported and the strongest feature. The demand came mainly from the internal buyers; and the remaining offerings were irregular and often eased by 10 to 20 nP per pound. As the teas, on offer, were not truly representative, no quotations were given.

In the Internal Sale, offerings amounted to 16,614, packages of Dusts. The market was again easier although clean orthodox Assams with bright liquors and black-leafed Dusts were the strongest feature. The remaining offerings from all districts were 6 to 10 nP per pound lower. All CTC Assams were a weak feature, particularly the brighter liquoring kinds. These were 10 to 20 nP easier. Following rates were quoted:—Medium Dooars Dust Rs 1.50 to Rs 1.60; Medium Assams Grainy Dust Rs 1.65 to Rs 1.70; Medium Assam CTC Dust Rs 1.80 to Rs 1.90 and Best CTC Assam Dust Rs 2.60 to Rs 2.70.

Also, 3,237 packages of other grades were offered for internal consumption. There was a fair demand. The general tendency tended to be dearer although irregular.

The Government of India have authorised the Tea Board to make an interim release of tea export quota for 1957-58 to the extent of 50 per cent of the crop basis of tea estates, pending final noticification of the Indian export allotment of tea for the year. Meawhile, in the Export Quota section, business was reported done at rates varying from 12 to 16 nP per pound, the closing rate for the week being 13 nP. Small quantities of non-transferrable Shipping Licence was disposed of at 8 to 9 nP per pound.

In the Cochin market, about 1,500,000 pounds were offered for ex-

(Continued on page 685)

World of Business

Sugar Industry

Of the major industries in our country, the sugar industry has carved for itself a pre-eminent position by virtue of its tremendous progress in the past four, five years. Whereas till a year or two ago, domestic production of sugar was insufficient to meet internal demand in full, today the position has radically changed. Discussions now centre on the maximum quantity that can be exported. This question of sugar exports is of particular moment at this juncture. For, more than anything, Government's energies are now vigorously employed toward finding ways and means of earning more and more foreign exchange without an adequate quantity of which the nation's development programmes under the Second Plan may not be able to proceed according to schedule. It is, therefore, gratifying to hear from Mr Shyam Sunder Kanoria, President of the Indian Sugar Mills Association, that India can export sugar worth Rs 75 to Rs 100 crores during 1956-61.

While it is true that Government have already agreed to allow export of 1 lakh tons of sugar, it would appear that the question of sugar exports should be considered anew in the light of latest developments. It is to be noted in this regard that in assessing the foreign exchange resources of the Second Plan, the earnings from sugar exports have not been taken into account. Now that a substantial quantity of this commodity has started moving out of the country to foreign climes in a steady stream—the ISMA has exported upto 31st March 1957 80,000 tons—it will not be unprofitable for Authority, hard-pressed as it is for foreign exchange, to bestow some thought on the sugar industry's potentialities in helping it get a sizable quantity of the commodity that has become scarce in the country lately. Mr Kanoria is confident that, if called upon, it will not be difficult for the sugar industry to attain an export target of 3 lakh tons within a measurable period of time.

That an export target of 3 lakh tons is quite within the realm of possibility is borne out by the rapid progress made by the industry in recent years. Production in 1955-56, the last year of the First Five Year Plan, amounted to 1.86 million tons of sugar, thus exceeding even the revised target of 1.80 million tons. In other worlds, the sugar industry's production has recorded an increase of 86 per cent over the pre-plan average production and compares with 33% in Iron and Steel, 40% Cotton textiles, 78% in cement, 12% in jute and 58% in paper. The impressive performance of the industry during the first five year plan has encouraged the Planning Commission to aim at a substantially higher target of 2.25 million tons for the Second Plan. But it would appear that even this higher target will prove to be an underestimate. In the first place the target has been arrived at purely on the basis of the anticipated increase in domestic consumption in the next five years. The bright exports prospects that have now been revealed require a corresponding readjustment of the production target.

Referring to export possibilities, Mr Kanoria has pointed out that India can develop a prosperous export trade in sugar with its neighbouring countries whose offtake is about 12 lakh tons annually without much difficulty. He is confident that if a well-planned scheme for developing sugar exports is devised and implemented, a substantial portion of this market can be captured.

Apart from export possibilities, the industry will be called upon in the not distant future to cater to the growing domestic demands consequent on the rapid pace of industrialisation in the country. Thus there is a clear case for planning for a sizable expansion of production that will become available as quickly as practicable. While it is true that Government are taking active steps to increase installed capacity, there is no certainty that all the additional capacity will be got ready as per schedule in view of the inordinate delay already experienced in the receipt of machinery from abroad and the current paucity of foreign exchange.

It would appear that under the present licencing policy, the expansion of sugar industry has come to be governed largely by extraneous factors over which neither the Government nor the industry has any effective control. It may well be asked whether under the circumstances it would serve any useful purpose to think in terms of larger and larger exports when the prospects for installing additional capacity are by no means very bright.

Mr Kanoria has answered the poser and in so doing he has shown how production can be sizably increased with the available resources. In the first place, he has pointed out that the Government's licencing policy has erred in proceeding on the assumption that additional capacity necessarily means new units. With the import of considerations such as regional representation into the granting of licences, Government have been often obliged to act to the detriment of the main objective of an overall increase in sugar production in the country as a whole. Emphasis should have been placed on the expansion of existing units rather than on the setting up of new units. The former is cheaper, takes less time and what is very important at this juncture, will involve less of foreign exchange than the latter. Mr Kanoria's second suggestion is that existing idle factories should be brought into production. He estimates that in this way production may be increased by about thirty to forty thousand tons. Thirdly, an additional production of about 2,10,000 tons per annum, according to him, can be secured if all the factories are enabled to work for 140 days in the season. Fourthly, conversion of gur into sugar also holds great possibility of increasing sugar production. Fifthly, by making available good quality cane to factories not only production can be increased but the industry will be enabled to cut down its cost of production. At present the sucrose content of a larger portion of the canes supplied is low. It has been found

Britain

Representatives of Belgium, the Federal Republic of Germany, France, Italy, Luxemburg, and the Netherlands signed the Euratom Treaty in Rome on March 25 instituting a European Atomic Energy Community. This treaty is the latest—and the most intimate—of the many ways in which nations are co-operating, whether bilaterally or in formal international organizations, on nuclear development.

Initially, this co-operation tended to take the form of bilateral agreements and the limited arrangements concerned with particular aspects of nuclear development. Britain and Canada have maintained very close links in furthering development, while an agreement between Britain and the United States of America, signed in June 1955, provides for co-operation in exchange of information and transfer of materials and equipment between the respective atomic-energy authorities.

In addition to its close working arrangements with Commonwealth countries, the United Kingdom has negotiated a series of bilateral agreements with the countries of Western Europe which make provision for technical assistance and the exchange of information. The United States has entered into agreements on nuclear matters with more than 30 countries.

Other forms of co-operation make provision for specific assistance. For example, Canada is building a high-powered research reactor in India, and the United Kingdom is supplying enriched uranium fuel elements for the first Asian reactor now in operation near Bombay; as part of its contribution within the Colombo Plan, the USA is to establish an Asian nuclear research centre in the Philippines; the United Kingdom is to provide equipment and train teachers for a nuclear-energy centre at Baghdad for members of the Baghdad Pact.

*

International collaboration on nuclear-energy matters on the widest plane is the purpose of the International Atomic Energy Agency. This organization, which was finally established with the signature of its statutes on October 25, 1956, owes much to the initiative of President Eisenhower. The United Nations and its Specialized Agencies had previously been active in sponsoring co-operation in atomic matters, but the objective of the new agency, in whose creation the United Kingdom played a prominent part, specifically is "to accelerate and enlarge the contribution of atomic energy to peace, health, and prosperity throughout the world". It plans to hold its first international conference this summer.

Within the Orgnization for European Economic Co-operation (OEEC), the member nations have established a flexible scheme of co-operation with the emphasis on joint participation in development projects. If detailed plans are approved by the Council of OEEC, a European Nuclear Energy Agency will be created with authority to establish a chemical processing plant for irradiated fuel and five small experimental reactors of a variety of types at a total cost of more than £10,000,000.

Britain is contributing about one-quarter of the cost (about £350,000) of the initial programme of the European Organization for Nuclear Research, set up in 1953 and concerned with pure research only. Its laboratories will be equipped with the most advanced apparatus available in the world. The president is Sir Ben Lockspeiser, of the United Kingdom. A non-governmental forum for promoting the development of the industrial uses of atomic energy is the European Atomic Energy Society, consisting of representatives of the atomic-energy organizations of the principal countries of Western Europe.

*

The European atomic pool (Euratom) differs fundamentally from the other organizations for nuclear co-operation. It stems from the measures decided upon at the Messina conference in 1955 to promote the economic integration of Europe. The project provides for the creation of a supra-national authority, the European Atomic Commission, which would regulate the development of nuclear power within the community of the six nations. The functions of the commission extend to controlling and disposing of supplies of nuclear fuels and fissile materials and large-scale investment in joint installations. Member countries (except Germany, which is bound by the terms of the 1954 Paris agreement) may manufacture nuclear weapons, but only within Euratom and subject to official inspection.

The probability that nuclear power will be called upon to make a substantial contribution to the expansion of Europe's energy supplies after 1960 and the need for these countries to catch up in the application of nuclear science has underlined the significance of the Euratom Treaty.

That Britain and the USA will be closely concerned with the development of Euratom was shown by the recent visit of the three experts from the Messina Powers to the two countries to discuss possible measures of assistance and co-operation. Britain's special responsibilities to the Commonwealth and other existing heavy commitments in nuclear matters make it unlikely that she could become a full member of Euratom. On the other hand, there may be plentiful scope for close association, possibly on the lines of her treaty with the European Coal & Steel Community, on specific aspects, the more so in view of Britain's unique pioneering experience in the employment of nuclear-power techniques.

Investment Notes:

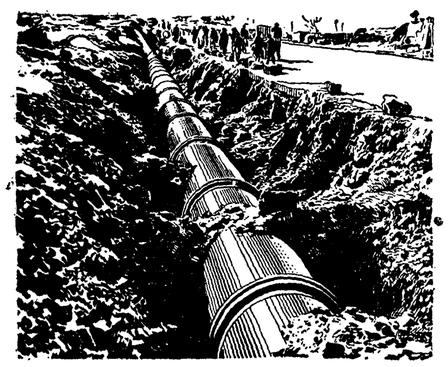
In their circular letter to shareholders of the 4th March, in the provisional allotment letter of the 3rd April and in the Chairman's speech at the Annual General Meeting on the 28th March, The Alkali & Chemical Corporation of India Ltd. expressed the hope that the new "A" ordinary shares would qualify for relief under Section 56A of the Indian Income Tax Act and that dividends received by Companies holding these shares would be exempt from Super Tax.

Government have now confirmed that, in fact, the new shares will qualify for exemption under Section 56A.

Investment Briefs:

Marshall, Sons & Company has raised the dividend from 15 to 20 per cent for the year ended 30th June, 1956.

Darbhanga Sugar has raised the dividend from 15 to 20 per cent for the year ended 31st August, 1956.



South Karanpura Coal has raised the dividend from 1¼ to 3½ per cent for the year ended 31st August, 1956.

Industrial Investment Trust Limited, Bombay, has raised the dividend from 4½ to 5 per cent for 1956.

Travancore Rayons, Madras, have raised the dividend from 7½ to 10 per cent for 1956.

Ellore Electric has announced an interim dividend of 5 per cent for the year ended 31st March, 1957.

ADDRESSING a Press Conference in Delhi last Saturday, members of the US Trade Mission expressed themselves in enthusiastic terms about the prospects of co-operation between India and the US in India's plans for industrial development. Though superlatives come naturally to Americans, the fact that these persons were seasoned men of business lends substantiality to the optimism expressed at the Press Conference. Moreover, these views have been formulated at the end of six weeks' strenuous study—of a sort that only Americans are capable of—of possibilities in which every variety of business interest and every strand of official thinking were closely scrutinised. Secondly, the actual suggestions made at the press conference and at a meeting with the departmental heads of the Commerce Ministry are both detailed and precise and give the indication that the Mission has paid serious thought to the whole subject. Admittedly, no particular commitments could have been made off-hand at a press conference, but the members did not, as is usually the case on such occasions, dish up either vague platitudes or pious hopes. On the other hand, specific lines along which efforts in both countries should be directed were indicated.

*

In our present context, American co-operation in the technical and commercial sphere has two broad aspects. Urgency has been lent to both by our present difficulties over foreign exchange reserves; but, even if these were absent, the two aspects would still be important in the formulation of suitable policies. The first aspect is participation of American enterprise in our plans of industrialisation. So far, except for the striking exceptions of oil companies and the services of experts made available under official and semi-official auspices, this participation of the US in the planned projects of the country has not been of as significant a measure as it should be. Such participation in the Plan as there is now, has been in projects of a predominantly agricultural character. Agriculture, it goes without saying, is still an important aspect of our economy, but, broadly speaking, it is true to say that American participation in India's efforts in self-improvement has been attuned more to the assumptions of the First rather than the Second Plan. The shift of emphasis in the Second Plan, with its accent heavily on industrialisation, has not so far made any corresponding significant modification in the nature of American help. Even when it has concerned itself directly with the Second Plan, American aid has tended to concentrate itself on the ancillary and consequential rather than the central purposes of the Plan. To take a striking instance, there is so far no participation by the US in any of India's plans for the putting up of steel plants, whereas every other important steel-producing country has joined us in this endeavour. This is surely a curious circumstance, considering that America is the largest producer of steel in the world and its resources in the matter of setting us on our feet are practically endless: and, what is even more important, unlike Great Britain and Germany, America could do it with its left hand, so to speak, and not at all feel either the financial or technical strain involved.

*

On the other hand, the one important purpose of the Second Plan in which the US has already participated is of consequential nature, though of paramount importance. I am thinking of the surplus commodities agreement of last year. I have no wish to be understood as saying that this agreement is not of central importance for the success of the Plan. It would be absurd to minimise its importance since, both from the point of view of saving foreign exchange and providing a second line of defence against shortage and consequent inflation, its role is of crucial and decisive importance for the success of the Plan. Again, it cannot be suggested that any other country could have done what the US has done in this regard and, therefore, the US has taken on itself a less onerous burden. For, the simple fact is that no other country could have provided both the range and quantities of the agricultural commodities that we are getting under the agreement and on such favourable terms. Even so, the fact remains that the most industrially advanced country in the world has not so far participated directly in what is considered the touchstone of industrial progress, the production of steel.

*

The reasons for this state of affairs are both numerous and complicated. The members of the Trade Mission are doubtless acquainted with them. I shall not go into them now, except for saying that among them are many reasons which they, acting simply as businessmen, are in no position to obviate. Extra-commercial considerations of varying degrees of importance and intensity operate to cloud the obvious and commonsensical point of view that a businessman would like to take. But what the members of the Trade Mission can do when they get back home is to remove a number of misunderstandings on the **commercial** considerations that operate. For instance, there is a wide-spread belief in certain sections of American enterprise that India is not a good investment risk because of its alleged anti-western proclivities, and because of national policies directed against the private sector. Both are errors of the most monumental kind and both die hard. I hope that the members of the Trade Mission would be able, on the basis of their own experience, to impress on their confreres in industrial and business circles in the US how unfounded such fears are.

*

There is yet another bogey that is haunting many another forward-looking industrialist in the US, and that is the alleged discriminatory treatment of foreign interests in India. This is a subject on which our Government have given the most categorical assurances from time to time. Mr Nehru has referred to this aspect of the matter in contexts which leave no doubt whatever of our intentions. The policy in this regard was stated not on formal or diplomatic occasions, but when this very policy of equal treatment to foreign financial interests was under heavy fire from persons who considered such policy as acquiescence in a species of exploitation and a hangover of colonialism and much worse. In other words, the policy was not enunciated so much as a piece of interested blandishment to foreigners, but as a somewhat unpopular but unevadable point of honour and decent international behaviour. There were many who would have considered such assurances in such contexts as quixotic, but they have been given. Only the other day, the Indian Parliament negatived a motion for nationalising foreign plantation companies, and a close reading of the arguments advanced on the occasion would clearly show that there was nothing, for any one who wished to take the normal risks attendant on business, to fear about his investments in India. And, unlike many another Government in the world, the Indian Government are stable enough to honour their promises.

*

Having said so much on the Indian point of view, let me hasten to give the American point of view as revealed at the press conference. This approach, as Mr Forbes, the leader of the delegation, made clear, was not "official". But assurances on this point were unnecessary, for, we in this country know that US official thinking on the subject is more fully informed and more understanding of our position than many individual business interests in the US. We should, therefore, be preaching to the converted if we try to persuade the US administration to accept our standpoint. On the other hand, it is the individual entrepreneur that we wish to interest in Indian industrialisation. It is for this reason that Mr Forbes's assurances about the attitude of US business interests come very opportunely. These assurances were both categorical and unambiguous. They also cleared up a good deal of misunderstanding in this country on the subject. He made it clear that Americans were not worried about participating in joint ven-

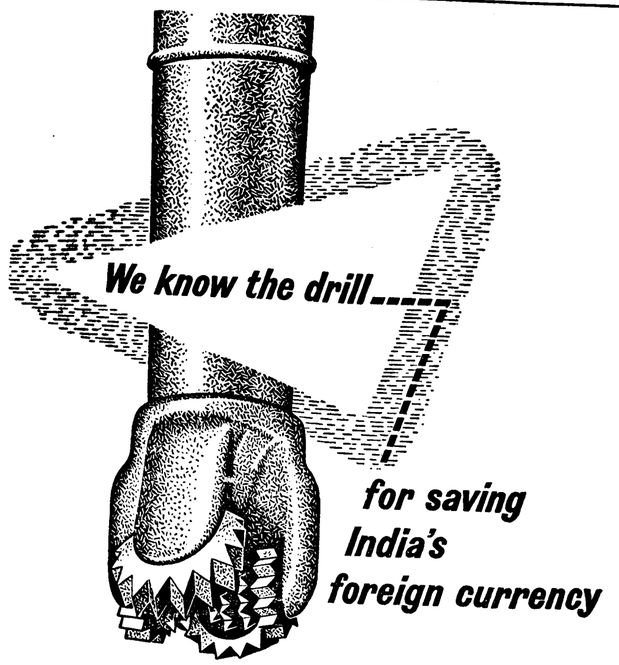
tures in the public sector. There was much interested propaganda spread in this country that the Americans were such unmitigated free enterprisers that they would never consent to be partners with Governments. Another unfounded belief, which was exposed by Mr Forbes was that Americans would insist on majority control for themselves in any joint venture either in the private or public sector. He pointed out that such matters were primarily dependent on negotiation, and rigidity is the opposite of a businessman's virtue.

*

For the rest, Mr Forbes saw practically no end to possibilities of Indo-US co-operation. There was no industrial field "in which the Americans could not participate" on a basis of joint venture. There was no "field of industry in India in which American capital would not be interested." There was also "no limit to the amount of such investment and it is our own opinion that a very substantial amount might be invested". The Trade Mission felt that there was "good hope" for increasing substantially "the prospects of joint participation in Indian economy of American business interests". More than a third of the ideas, heard in their talks with over 500 individuals and 30 trade associations, related to specific projects of Indo-American collaboration in a variety of industrial enterprises ranging from cosmetics and candies to foundries and stamping mills. There was "heartening evidence" of resourcefulness of devising new modes of getting over difficulties of foreign exchange of which the latest instance was joint venture with extended credit facilities by foreign participants.

*

In the context of much doleful breast-beating about the Second Plan, this evidence of the almost endless possibilities of American participation in our ventures should act as a stimulant. I suggest that very high priority should be given to detailed examination of every such possibility. As I said, the time has come to involve more centrally America's sympathetic interest in Indian progress. A number of opportunities of fruitful co-operation have been allowed to go by default and by extraneous considerations. Apathy about attempting to remove misunderstanding has stood in the way of real advance in this matter. The Government of India should examine closely every possibility of co-operation that is likely to arise as a consequence of the visit of this Trade Mission.



*

So far about American participation in Indian industries. The other aspect of Indo-American co-operation is in the matter of mutual trade. The US is, at first sight, a difficult country to trade with, for the simple reason that it does not seem to need anything that it cannot itself provide better than others. But there are a number of possibilities of expanding Indo-US trade. Some of these were mentioned by the members of the Trade Mission at the press conference. India's export to the US has, inevitably, to be of primary commodities and luxury and artistic goods of a specialised kind. Indian tea, jute goods, spices and coffee are our traditional foreign exchange earners, though coffee has not reached the saturation point by any means. On the other hand, a great future is envisaged by Mr Forbes for copper ware and brassware of artisitic merit and for handloom goods. Another member of the delegation saw a "terrific future" for castor seeds and castor oil in view of its use in jet engines. We have been lately having rivals for our manganese ore though they have not yet become a danger to our supremacy. Another possibility that occurs readily is iron ore.

*

It was not so much the actual commodities mentioned by the

(Continued on page 692)

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

A Word to the Wise

IT is the mark of a good share issue, if the anticipations expressed in the offer of sale are in the event exceeded. But this happy consummation is vouchsafed to the investor but rarely. On the contrary, his experience quite often has been that high sounding promises lure investment capital from him at the time of the prospectus; and, in the months and years that follow, his potion is disillusionment, as published results tend to be a far cry from the earlier optimistic asseverations.

At the present stage, when the investor has for a variety of reasons lost his confidence, and when he feels that he is alone the entity befriended by none, particularly welcome is a success story of the nature I have described in the first sentence. Thus, the performance of Hindustan Lever Limited as revealed in the latest published results must be said to comprise a silver lining of hope and cheer in a sky which, for the investor, is dull and overcast with clouds.

In referring to this fact, the Hindustan Lever Chairman, Mr A. J. C. Hoskyns-Abrahall, has stated that the final figures 'have shown our earlier forecast to have been somewhat conservative'. The higher final dividend proposed is at 75nP, but Mr Hoskyns-Abrahall warns that 'our outlook and policy have not thereby undergone any essential change'. In other words, a word to the wise is that estimates of the future and appraisal of prospects must continue to err, if at all, on the conservative side.

The HL Chairman bases his reading to such effect on the economic developments in the past five months. Firstly, the Finance Minister's mid-year Budget has produced an array of new taxes. Secondly, he has also envisaged the possibility of securing further finance under the head of corporate taxation. The conclusion derived is that, 'however much we may be able to increase our sales turnover in the future, it does not necessarily follow that there will be a commensurate, if indeed any, benefit to our shareholders'.

Another reason for a cautious assessment of prospects is that costs of production have risen, and appear to be headed for a continued rise. In 1956, for example, HL sales increased, the tonnage sold exceeding 121,000 tons; but profits 'were not quite of the order of those we earned in 1955' mainly because of 'increases in costs of our raw materials, of processing and of freight'.

Such a trend particularly affects products such as made by HL. For, soaps and toiletries are household necessities; and, 'in a community embracing so many people with very low incomes, our products run the risk of being too highly priced.' What, rather, is desired is the ability to effect reduction in prices, 'with all the stimulus they would give to increases in consumption'.

However, the prerequisites for possible reductions in the prices of the manufactured articles are lacking. HL is "vitally interested for instance in Government's Second Plan target of more than 7½ million tons of oilseeds, representing a 30 per cent increase in production.". But Mr Hoskyns-Abrahall seems to doubt the attainment of this target. Both in oilseeds and in transport, "unrestricted availability at moderate prices is essential". In this context, perhaps, a more gloomy view is taken than is necessary or warranted. For, it seems to me that the Second Plan as such depends upon the successful achievement of a wide range of targets; and production in various spheres is interconnected. While I will buy the proposition that there may conceivably develop a stringent bottleneck in transport, I am more than sanguine about the output of agricultural commodities. And, even in respect of transport, there is more than reasonable ground for hoping that the World Bank will extend substantial aid for implementation of the railway projects, and that, consequently, the problems and difficulties in this regard will be mitigated.

There is one more important matter touched by Mr Hoskyns-Abrahall, and which affects Hindustan Lever. Although the company relies for the most part on materials indigenously available—80 to 90 per cent of raw materials are of Indian origin—the fact remains that certain key items need to be imported. But, in view of the foreign exchange position, Government have declared their import-policy for January/June to be a greatly tightened one. The HL Chairman is apprehensive that, if such imported materials should be denied, "we should be unable to maintain the quality, or what you might call the personality, of our products." He seeks to make out a case for HL to be allowed to make these imports as actual users; and this is based on the fact that the company's products are widely exported, having earned rather more than Rs 76 lakhs in 1956 in markets "as far apart as New York and Fiji with many destinations in between".

Lest the erroneous impression should gain ground that dependence on imported materials will always continue at present levels, reference has been made to the local manufacture of bleaching earth, paper and board, "which were previously imported". As with material, so with men. Indianisation of personnel has also been proceeded with; and the number of Europeans employed has declined from 59 in 1952 to 32, "the places of the 27 who have gone having been taken by Indians".

After listing the reasons for cautious assessment, Mr Hoskyns-Abrahall concludes on a note more immediately cheering to shareholders.

On the one hand, industrial relations are more or less assured of being cordial. A comprehensive agreement has been signed in respect of the Bombay factory employees and "covering the whole period of the Second Five-Year Plan". Furthermore, "a similar agreement with the rest of our employees all over India is now on the point of being signed". Consequently, the company has good reason "to look forward to a period of steady consolidation of the goodwill already existing on both sides".

On the other hand, the very fact of the Second Plan means "that an immeasurably greater consumption is bound to come" for the company's products. This is one good reason "why this business should continue to expand". And Mr Hoskyns-Abrahall is not greatly anxious about the difficulties, since "they are or are likely to be largely of a type common to most consumer industries at the present time". And Hindustan Lever's Chairman is surely right in claiming that "our business is as well equipped as most others to meet their challenge". Or is this statement, again, conservative?

*

WORLD OF TEA

(Continued from page 680)

port purposes. Quality continued to show a seasonal decline; and there were one or two invoices of "rush" production on offer. There was fairly good general demand, but at much lower rates. Low Mediums and Mediums declined irregularly by 20 to 30 nP per pound. Fannings grades met with rather better enquiry at lower rates. Best Liquoring teas were irregular, but generally considerably easier and were quoted 40 to 60 nP below last prices. Whole Leaf teas were in much less demand and prices were easier. Following rates were quoted:—Plain BP Rs 1.55; Low Medium BOP Rs 1.70; Medium BOP Rs 1.85; Good BOP Rs 2.05 and well-made Black Leaf BOP Rs 2.25.

In Colombo auction, offerings were 5,648,126 pounds. Quality was plain and prices were generally much lower. Demand for Nuwara Eliya teas was fair, but prices of Broken grades were generally lower. Among high-grown teas, quality was generally plain. Demand for medium-grown teas was again quiet and all grades declined by 15 to 20 cents per pound. Low-grown teas met with good demand at a decline of 5 cents.

In Pakistan, the Government have fixed the maximum quantity of tea, to be consigned to London, under certain conditions, at 4.5 million pounds during the current tea season. The order, which will be effective for one year ending on 31st March 1958, is to encourage the sale of tea through Chittagong auctions in order to stabilise prices at reasonable levels.

In London auction, about 25,662 packages, including 18,415 packages of Northern India teas, were offered this week. The market opened with a fair demand for good liquoring better class teas. In most cases, higher prices were paid, especially for Peckoe Fannings and Orange Fannings which met with good competition. Teas from the Dooars also came in for more support than of late and, except for the poorer sorts, prices were inclined to be dearer. Light liquoring and poor teas were slow of sale and prices were a little lower. Quotations were unchanged.

Tea stocks in London, as on the 29th March 1957, were 133.08 million pounds as compared with 127.66 million pounds in the previous week and 96.11 million pounds a year ago. Landed between 23rd and 28th March 1957 were 16.32 million pounds, while deliveries during the same period were 10.09 million pounds.

Reciprocal Friendliness

Banking circles in Bombay are somewhat taken aback by Indian Finance's unfamiliar role as a defender of entrenched privileges. It is admitted that the Statute endows the State Bank of India with privileges of vast scope and deep significance. And it is asked: Is it not all the more reason why the State Bank should refrain from exploiting its special status for narrow gain? From this point of view, the issue posed by its critics is this: Is it within the bounds of propriety to indulge in manoeuvres designed to seduce deposits from other banks to the State Bank?

Reply to this poser must come, the critics say, not from the scribe responsible for Gateway Gossip, but from those responsible for the over-all policy of the State Bank. It is hoped that, with the charge repeatedly made of unfair practice, the policy-makers of the State Bank will, on the one hand, issue clear directives to the branch officials and, on the other, provide categorical assurance to the Indian banks that they will in no way suffer at the hands of the Big Brother.

A banker who, for obvious reasons, prefers to remain anonymous, adds the complaint that, while the State Bank claims State Governments' deposits as a matter of right, it evinces lofty unconcern with regard to the New Loan issues of the States. It is, he says, the other banks on whom the pressure is brought, and who have perforce to submit to such pressure and subscribe for the State Loans. State Finance Ministers are increasingly aware of their authority; and, if the State Bank had been lukewarm in the past in relation to the borrowing needs of States, it would realise, in its own interest, that being a Governments' bank involves both giving and taking.

While thus publicising the "other side" of the case, we should again emphasise that, for the smooth functioning and steady progress of the banking system, the relationship between the Reserve Bank of the first part, the State Bank of the second part and member banks of the third part must be based on mutual understanding and reciprocal friendliness.

*

Braver Balance-Sheets !

The recasting of balance-sheets in conformity with the requirements of the new company law is producing results which, in normal conditions, should cause an uplift in stock exchange spirits. Reserves hidden in secret recesses are being brought to light; and the new look of balance-sheets is one of increased financial strength. Century last week provided revelation in this respect. Buckingham and Carnatic of Madras has made impressive showing from this point of view.

It is, thus, being established that good companies are much better than was imagined hitherto. It is a pity that so favourable a development is taking place at a time when the dominant interests in share trading are incorrigibly dejected. Their outlook is guided less by economic considerations than by political interpretations. The investor should cultivate the habit of studying current events from the standpoint of criteria relevant to bonafide investment interests. The prospect of such a changed attitude on the part of investors does not seem to be reassuring.

*

Union is Strength

Government's intention seems to be that, as part of stock exchange reform, steps must be taken to ensure that, for each notified area, there is only one recognised stock exchange. The only centres which pose a problem in this respect are Bombay and Calcutta. In both places, there is a bigger and older brother—and a smaller and younger brother. The commonsense course is a plan of merger. This is how similar problems have been solved in many of the commodity markets.

The path of amalgamation does not seem to be so smooth, so far as stock exchanges are concerned. Mr Bhide and Mr Gutt of the Finance Ministry proferred their good offices and discussed matters with the concerned authorities in Bombay. No satisfactory solution has been possible. The main suggestion appears to involve the creation of a new category of associate members in the constitution of the older organisation. Associate membership is intended to embrace the members of the younger institution.

The idea seems to be practical; but the snag is that the older body is also very much bigger and fears dilution. In the impasse thus created, the two institutions respectively in the Eastern and Western capitals have applied for individual recognition. Fusion is still the way of wisdom; and Government must use more forceful initiative to this end.

GATEWAY MARKETS

Castor in Favour

TRADING on the Bombay Oilseeds Exchange was highlighted by a noteworthy advance in Castorseed during the week under report. The outlook for this commodity has undergone a major change in the past few days. After a protracted spell, export enquiries for castor oil have started flowing in. While the initiative has been taken by the Red countries, the UK and France have also figured in, making purchases of 500 tons at advancing rates. It appears that the UK has not found it profitable to buy castorseed from British East Africa. Buyers abroad now think that the Indian quotation around £154 per ton (commercial quality) is the lowest in the world. Buyers from the USA are also likely to revise their ideas although no offers have yet been made by them.

The demand for castorseed naturally pushed up the May contract to touch the highest level of Rs 175 in the early part of the week. Thereafter, the rate eased to Rs 171 before closing at Rs 173.50. September delivery opened at Rs 174 and, after touching a high of Rs 176.25 and a low of Rs 174, finished at Rs 176. Increased export demand and limited arrivals helped the spot rate to jump from Rs 33-8 to Rs 35-6 per cwt. The tendency among growers was to hold on to their stocks, expecting higher prices. The season has not yet started in Gujerat and Saurashtra.

Groundnut, on the other hand, turned easy. May contract, after opening at Rs 169.12 and touching a high of Rs 170.12, finished the week at Rs 169.75. Similarly, August delivery touched a high of Rs 173.75 and a low of Rs 171.62 to close at Rs 173. The decline in prices is attributed to increasing arrivals and the absence of demand from the vanaspati industry.

The markets for Linseed, Kardi and Niger seeds ruled quiet. Linseed May delivery opened at Rs 29.87 and closed at the same level, the highest and the lowest levels touched being Rs 28.94 and Rs 28.81 respectively.

In the Cotton section, May delivery opened at Rs 105.50 and closed at Rs 106. September opened at Rs 107 and closed better at Rs 107.50, the lowest touched being Rs 106.50.

*

Gold & Silver

Although dealings on the Bombay Bullion Exchange were restricted, Gold evinced a hardenig tendency, reflecting the spot demand locally as well as from Madras. Arrivals and offtake were estimated around 2,000 and 5,000 tolas respectively. Forward new delivery moved between Rs 105-9 and Rs 105-11 and old between Rs 105-10 and Rs 105-15. Spot gold changed hands at Rs 105-12 to Rs 105-14. Sovereign was quoted steady at Rs 69-4.

Prices in the Silver section was generally maintained. Turnover was small. Arrvials and offtake were estimated around 32 and 10 bars respectively. Forward new delivery moved between Rs 179-7 and Rs 179-11, while the old delivery hovered around Rs 179-2.

*

Yarn

Except for a slight improvement in Art Silk, conditions in the Yarn market remained generally dull. The financial stringency added the easy trend in prices. In the ready section, however, most of the varieties remained unchanged.

In Staple-Fibre yarn section, prices declined further, 2-40s April delivery going down by Rs 5 to Rs 616 per case. 20s ruled somewhat steady on reports that some spinning mills were inclined to stop production.

In the Cotton Yarn section, prices were generally steady. Some rise was witnessed in 40s and 60s as there was some buying on account of low prices. Business was, however, very disappointing.

*

Metals

Price movements in the Metal market showed a mixed trend. While Zinc, Lead and Tin remained steady. Copper prices showed a declining trend towards the close. Although the demand for copper was fairly good from North Indian centres, prices declined due to a lack of industrial demand and financial stringency. The rate was quoted at Rs 180.50 per cwt as against Rs 185 in the previous week.

The market for Zinc remained very steady, moving between Rs 75 and Rs 76 per cwt. The situation in this metal continued as before with Russian quality quoting a premium of Rs 0.56. There was nothing special to report in Lead with ready material being quoted at Rs 82.00. With no new developments in the Tin market at Singapore, the local market ruled steady, being quoted at Rs 130 per quarter.

On the London Metal Exchange, Copper eased off to £242½ from £245½ per ton and Tin to £772 from £780. Zinc and Lead ruled, however, steady at £98 and £112½ per ton respectively.

Bombay Review

World of Cotton

Piecegoods Market Turns the Corner

ALTHOUGH there was no appreciable change on the export front, trading conditions in the domestic sector of the Piecegoods market recorded a slight improvement with a better offtake in some of the seasonal varieties. With the categorical statement of the Union Minister of Revenue and Civil Expenditure that there was no possibility of a cut in cloth excise, consuming centres began to make replacement purchases. There was good demand for superfine lawns, voiled-bleached and dyed, while dhoties and sarees evoked good enquiry. Medium mulls, however, continued to be neglected. The main consuming centres were Kanpur, Calcutta, Delhi and Bihar. Trade expectations are, that there will be a revival of activity in the near future despite the continued stringency in the money market.

On the export front, too, it is expected that there will be a revival of activity in the near future. Hong Kong has evinced some interest in light weight grey sheetings and bleached long-cloth, while Singapre has booked a fair quantity of grey canvas, bleached longcloth and grey calendered sheetings. Some business is also reported to have been passed for Indonesia against licences issued earlier and also against anticipated licences. Inquiries are reported from Sudan and East Africa. The Joint Venture Corparations in Burma have put through some enquiries, which are in the stage of negotiations and may soon materialise into business.

*

Thanks to the timely measures taken by the Government, the rising trend in Cotton prices has temporarily cried a halt. The unexpected ban on cotton exports has also come as a shock to bull operators. Leading bulls are, therefore, adopting a cautious attitude, pending further Government measures.

The Government of India are now seriously considering a revision of their cotton import policy and of allowing cotton from Egypt and America with a view to arresting the rising price trends. Although normal imports have been permitted this season, the Government are inclined to argument the supplies on fears that the carryover may show a considerable decline next season. It is reported that the textile mills have been asked to state their individual requirements of Egyptian cotton and the prices they can afford to pay. The idea, it seems, is to make a joint purchase agreement with that country and to get the maximum discount in that cotton, as the trade delegation, which recently visited India, showed its willingness to offer higher discounts provided the offer was substantially large.

Traders are reported to have suggested that a substantial quantity of American cotton, equivalent to Indian Vijay, Surti and Jharilla varieties, can be imported under the Indo-US economic aid programme. It is, however, pointed out that the American varieties are costlier by about Rs 250 per candy. Although the current rates for Egyptian cotton are still far above the limit set by Indian mills, the industry is inclined to buy cotton from Egypt at 55d per pound for Karnak 154.

Meanwhile, prices in the futures market, after recording a good improvement early in the week on short-covering, eased off at the close due to profit-taking. Offerings were largely induced by fears of more stringent measures. Turnover was 10,000 bales. Jharilla May delivery opened steady at Rs 705 and, after touching a high of Rs 709.50 and a low of Rs 703, finished the week at Rs 705. Vijay June touched a high of Rs 829-50 from Rs 827 and April delivery Rs 857, to finish at Rs 827 and Rs 852 respectively.

The Spot section dispalyed a steady undertone with good business reported in staple varieties. Mills were reported to have bought Jharilla, Vijay and Surti.

Export business remained at a standstill. It was felt that the recent announcement with regard to the ban on exports was not likely to help much towards arresting the rising cotton prices since the quantity involved was only about one lakh bales. Shippers have reported that business of about 80,000 bales, entered into with Japan and Continental buyers, have been lost since no documentary evidence for this business can be produced in due time.

In the foreign cotton section, activity was mostly confined to some spot lots of American cotton. Prices remained unchanged. Fair business was also reported done in Californians for September shipment and beyond, subject to import licences.

×

NEW YORK COTTON MARKET:

In the New York cotton futures market, prices continued their advance under the influence of predictions for a higher loan rate on the 1957 crop and the Soil Bank prospects. The Washington Agriculture Department has announced export sales of 300,102 bales of 1956 crop and the sale of 873,315 bales of the 1956 crop.

In the spot section, conditions remained quiet as traders were awaiting fresh developments. Spot was quoted at 35.45 cents per pound.

×

LIVERPOOL COTTON MARKET:

Turnover in the Liverpool cotton market was rather poor and the trend of prices indicated that there was little hope of improvement in the near future. The week's sales, however, indicated that a wider range of growths were in request; and, in addition to the turnover in American styles, moderate sales were reported in Turkish, Russian and various African growths.

*

BALANCE-SHEET REVIEWS

(Continued from page 672)

The Gold Mohur Mills Limited has reported a profit of Rs 12.49 lakhs after providing Rs 4.70 lakhs for Taxation and Rs 6.25 lakhs for Depreciation. Other allocations include Rs 1 lakh to General Reserve; Rs 2.35 lakhs to Retiring Gratuity Reserve and Rs 43,000 to Development Rebate Reserve. The Ordinary dividend is maintained at Rs 15 per share. Sales have totalled Rs 2.10 crores against Rs 2.38 crores.

After proving Rs 10.50 lakhs for Depreciation and Rs 3.40 lakhs for Taxation, the Swan Mills Limited has shown a profit of Rs 14.08 lakhs. The directors have provided Rs 1 lakh for General Reserve; Rs 2.25 lakhs for Development Rebate Reserve and Rs 2.25 lakhs for Retiring Gratuity Reserve. The dividend on the Ordinary shares has been maintained at Rs 25 per share.

£ R$

Modern Mills

The Modern Mills Limited has reported a net profit of Rs 5.77 lakhs for the year ended 31st October, 1956 after providing Rs 44,261 for Taxation; Rs 4.75 lakhs for Depreciation; Rs 6.30 lakhs for Grautity and Rs 1.28 lakhs for managing agents' remuneration. This profit compares with Rs 6.33 lakhs in the previous year. The directors have also provided Rs 2 lakhs for Machinery Rehabilitation Reserve. An Ordinary dividend of Rs 5 plus a bonus of Rs 3, making a total of Rs 8 per share, is recommended. As against a paid-up capital of Rs 35.99 lakhs, Reserves and surplus stand at as much as Rs 38.95 lakhs.

£ R$

Buckingham & Carnatic

Although the production of the Buckingham & Carnatic Company has shown a further improvement during the year ended 31st December 1956, the benefit derived therefrom is more than offset by increased costs and reductions in selling prices. The reductions in selling prices are made to offset the increase in excise duties and to maintain sales in overseas markets. Sales have shown a rise to Rs 9.37 crores from Rs 9.01 crores, while the profit, before providing for Depreciation and Taxation, amounts to only Rs 91.31 lakhs as against Rs 110.63 lakhs in the previous year for reasons stated earlier. The directors have set aside Rs 40.97 lakhs (Rs 30.60 lakhs) for Depreciation; Rs 15.00 lakhs (Rs 39.00 lakhs) for Taxation; Rs 11.00 lakhs (Rs 10.00 lakhs) for General Reserve and Rs 5.00 lakhs (Rs 11.89 lakhs) for Other Funds. The dividend on the Ordinary shares is maintained at Rs 10 per share.

£ R$

Bangalore Woollen' Cotton and Silk Mills

Unlike the Buckingham & Carnatic Company, the Bangalore Woollen, Cotton & Silk Mills Company, in the same managing agency, has shown satisfactory increases, both in sales and profits, thanks to improved demand for woollen and Cotswol fabrics, which made the company to make much greater use of its installed capacity. As a matter of fact, the Woolen section, after several years of losses, has made a modest contribution to the company's profits. Profit margins in the Cotton section are, however, slightly lower than in the previous year as price reductions are made in order to offset the increase in excise duties and to stimulate the company's export trade.

Sales for the year have shown a rise to Rs 5.34 crores from Rs 4.82 crores, while the net profit, before Depreciation and Taxation, amounts to as much as Rs 78,30,182 as against only Rs 63,62,351 in the previous year. The directors have raised the Taxation amount to Rs 29.75 lakhs from Rs 20.25 lakhs; Depreciation to Rs 21.59 lakhs from Rs 18.17 lakhs and General Reserve to Rs 11.00 lakhs from Rs 9.00 lakhs. Other Funds are, however, reduced to Rs 3.00 lakhs from Rs 3.75 lakhs. The dividend on the Ordinary shares is maintained at 30 per cent.

Further progress has been made with the programme for the replacement of old machinery; and plans are now under active consideration for the installation of new plant, which will improve both efficiency and production. Considerable finance will be required to meet the cost of these developments. The directors have, therefore, borne this in mind in making their proposals for appropriations from profits for the current year.

Olympus

Prospects for Sugar

ADDRESSING the Indian Sugar Mills Association here last Friday, Mr S. S. Kanoria was understandably enthusiastic about the performance of the industry during the year 1956-57 and its outlook for the future. For the third year in succession, the industry has maintained and improved upon its previous achievements. Estimates of production for 1956-57 have been put at two million tons against 1.85 million tons in 1955-56 and 1.59 million tons in 1954-55. The performance of the industry for the last year of the First Plan exceeded the revised target of 1.8 million tons and this production represents a record increase of 86 per cent over the pre-Plan average, the nearest performer being cement with an increase of 78 per cent. As for 1956-57, Mr Kanoria quoted with pardonable pride the White Paper accompanying the budget proposals for 1957-58 in which special mention was made of the achievements of the sugar industry. The increase in production over the previous year was by 20.7 per cent as against the increase of 9.8 per cent in cement production.

In the light of these data, it seems hardly difficult for the industry to achieve the annual target of 2.25 million tons fixed by the Second Plan. On the other hand, this is a target that errs on the conservative side and second thoughts are called for. Such rethinking has already commenced in the context of overall agricultural production. It will be recailed that a massive increase in in agricultural production has been steadily advocated by the Planning Commission in view of the dangers from inflationary pressures generated by the Plan. An even more significant development which makes an increased target necessary is the emergence of the industry as an exporter of some importance. When the original target of 2.25 million tons was fixed, the guiding consideration was mainly the expected increase in internal demand, and the possibilities of export were not considered at all. This was perhaps inevitable since, at the time when the first ideas of the Second Plan were being formulated (1953-54), the sugar industry was passing through one of its difficult periods. But 1956-57 has seen the phenomenon of concerted action by the industry and Government, resulting in an export of nearly 80,000 tons and yielding a profit of Rs 2,000,000. This circumstance makes imperative serious thought on increased targets of production for the industry. For, what has happened is an important economic event. The foundation of a new line of export trade has been laid during this year.

Mr Kanoria himself was eloquent about immense benefits that are sure to be conferred by planned increase in the export of sugar. Apart from the familiar arguments in favour of such expansion, he added one which, in our present difficulties, is sure to make, so to speak, our mouths water. That is, the possibility of earning about Rs 75-100 crores of foreign exchange over a period of five years. It is true that, on the basis of the current year's performance, this is not an over-estimate, but it should be remembered that exceptionally favourable factors, like a very high international price for sugar, operated during this year. But, given imagination, organisational competency and concern for standards, the initiative now gained can be maintained and improved upon even in leaner years to come.

Such consummation can be had only by the closest co-operation between Government and the industry. The most heartening point about this particular success of the industry in the matter of export is the evidence of precisely such a co-operation. For instance, the Government of India willingly entrusted the export trade in sugar to the Indian Sugar Mills Association without trying to put it through the State Trading Corporation, as they have done in certain other commodities. On the part of the industry, it has shown commendable public spirit and devotion to the best interests of the industry by allowing the entire profit of Rs 2 million to be credited to a special fund for being utilised as a reserve to meet possible losses in export business. This instance of fruitful and mutually advantageous co-operation between Government and industry is worthy of emulation in a number of other similar contexts.

Another pleasing factor about this achievement on the export side is that it has not been done at the expense of internal consumption. The internal situation has been on the whole easy throughout the year and the price situation has been well in hand. This would have been noteworthy even otherwise in view of the fact that the most important feature of the economic climate of the last twelve months has been a steady and in some cases sharp upward trend in price levels. Considering that this result has been achieved despite significant exports, the health of the industry should be considered as remarkably good.

Apart from the export possibilities, the need for expansion of production from the point of view of internal consumption and capacity of the industry to expand is also paramount. It is notorious by world standards that Indian per capita consumption is very low. Even within the country, there are wide regional variations in per capita consumption of sugar. As living standards improve, this state of affairs is sure to disappear. In fact, a fairly accurate indication of improvement of living standards among certain classes of our people is the switch-over to sugar from gur. In view of the capacity of the industry to expand, detailed thought should be given for planned expansion of production to meet the situation. The only possible obstacle in the way of such expansion is the difficulty of getting new machinery owing to scarcity of foreign exchange. But the Second Plan itself has provided for modernisation of the sugar industry and a high priority, therefore, attaches to the sugar industry's claim on foreign exchange. Moreover, expansion of sugar production in the overall economic context is of great moment both from the point of view of economic and social gains likely to accrue from such production. And, thirdly, by its performance during the last three years, the industry has earned a right to claim greater consideration at the hands of the Government. So, within the "strait-jacket" imposed by other difficulties, room must be made for the claims of the sugar industry.

On the other aspects of Mr Kanoria's speech, I want to touch only briefly. There can hardly be any difference of opinion on the need for increasing the sugar content of canes produced and for organised research on the subject. Nor can one quarrel with his call for co-operation from the Railways. Of the catalogue of woes, flowing from lack of sympathy from certain quarters of authority, that he lists, I am deliberately refraining from commenting. For one thing, on Mr Kanoria's own showing, Government have shown commendable understading, sympathy and trust on certain aspects of the industry's working. Therefore, the industry's grievances, where they are real, should not be incapable of redress by persuading the Government to show a similar understanding. Secondly, there is another side to the complaints made by Mr Kanoria, which I believe deserves at least as serious consideration as his own point of view. Moreover, some of the grievances listed by Mr Kanoria are not those of the industry as a whole but of certain regional interests therein. In fact, if some of Mr Kanoria's suggestions were to be pursued to their logical conclusion, certain regions and certain sections of the industry now at a disadvantage would continue to suffer from the same disabilities. Their position may become worse. But, on the need for evolving a firm policy balancing all factors and sticking to it, there can be no difference of opinion. There can also be no difference of opinion on the need for achieving the economics flowing from increased efficiency and maximum utilisation of resources, and a well co-ordinated plan for developing an industry that has shown, by its performance, that it has a great future before it.

Philosopher-Statesmen

Dr Rajendra Prasad, the President, has agreed to renomination; but Dr S. Radhakrishnan was keen on retiring gracefully from the interregnum which constitutes his brief political life and to return to his beloved ivory tower. It was a great relief to all democratic parties that, in the end, he allowed himself to be persuaded to remain for another term. A grateful country recognises that, great as a philosopher, he has been no less great as a statesman philosopher.

It is India's good fortune that she has been blessed, in one generation, with three leaders who are, each one of them, a particular type of philosopher-statesmen. Most countries have politicians at the helm of affairs; a few have statesmen; but the record belongs to India of having the guidance of philosopher-statesmen in the most crucial and creative years of its history.

Gandhiji's attitude to politics which, for him, was only a small segment of national life was essentially ethical. Dr Radhakrishnan's assessment of every question in terms of fundamentals is a metaphysical attribute. Mr Jawaharlal Nehru is ever the political philosopher.

Thus, it is no accident that India is the first country in the annals of the world history to enunciate in theory and to follow in practice a high principle which insists that, in politics as in aught else, means are as important as the end and must be worthy of the end in every way. It requires utter clear-sightedness and rare courage to cherish, regard and practice such a doctrine in an age dominated by politicians who have accustomed themselves to figure and plan international politics on the basis of atomic power.

There is a horror of atomic devastation; but faith in its efficacy is undimmed. That the masses of the world's population do not view such prospects with equanimity does not deter the politicians in power from pursuing a world policy fashioned by nuclear weapons. The entire globe is at the brink of global destruction; and the only thing that can save mankind is the assertion of popular opinion on the role of worthy means in all political thinking and action.

★

Uses of Self-confidence

While the Prime Minister is busy in the serious work of ministry-making, busy bodies have derived great fun in making and unmaking ministers. Personal predilections, long-standing prejudices, wishful thinking and individual experience of rebuffs or rewards-such are the elements predominant in this popular pastime.

It is, therefore, no matter of surprise that Mr T. T. Krishnamachari is reverted to the commerce and industry portfolio. While the arm-chair politicians can thus easily dispose of TTK, whom are they to select as his successor? First of all, the same kind of objections is applicable to those considered as likely choice. For example, will Mr Morarji Desai be less drastic in action or less downright in speech if he is made the steward of finance? Friends from Bombay may prefer him on parochial grounds; but they cannot be unaware of his record as the iron man during his chief ministership of the Western State.

Secondly, is it so easy to persuade anyone to take on the job of presently reaping the whrilwind being the harvest of winds sown in earlier years? It is known that the Prime Minister offered this office to some others before his choice fell on TTK. "Declined with thanks" was the reply Mr Nehru received. TTK's superlative self-confidence accounts for his saying "Yes" to the PM's invitation. And, in the years ahead, self-confidence is a vital requirement in the occupant of the financial gadi.

★

Fancy List

There is no reason to think that Mr Nehru has any manner of disapproval for ministers with what may be called controversial qualities. It is not unlikely that combative Krishna Menon has done more good to Kashmir cause than debonair Gopalaswami Aiyangar. The impression prevails in some quarters that the hardest part of Mr Krishna Menon's task at the Security Council was to undo the effects of Mr Aiyangar's suavity. If, therefore, TTK has the reputation of hitting from the shoulder, so what? There is need for this kind of ministerial proficiency also. Some such reason has led the Ferozshah Road Ministerial Commission to name Mr Krishna Menon for the Law Ministry which is now to deal with Goa at the Hague with Kashmir at the resumed sitting in UN Head Quarters.

As Mr Menon is accustomed to regard the whole of the world as a suburb of New Delhi, the competent A. K. Sen is tipped as the minister for Legal Affairs. Further appointments made by FRMC are: Mr Jagjiwan Ram for Labour, Dr Subbarayan for Railways, Mr Lal Bahadur Sastri for Defence, and Dr Azad for Deputy Prime Ministership without portfolio.

This fancy list will hold the field with alterations and changes to suit sundry whims until the Prime Minister announces the official list in the space of few days. Mr Nehru has proved himself a discoverer of talent; so, the new ministers, that is to say, many old and some new, will represent the continuance and reinforcement of the Nehru personality

NORTH INDIAN MARKETS

Final Sugar Estimate

THE official all-India final estimate of Sugar, produced directly from cane in vacuum and pan factories, puts the current season's production at 2.021 million tons as against 1.862 million tons during the previous season, showing an increase of about 8.5 per cent. The increase in production has been shared, mainly by Uttar Pradesh, (78,000 tons); Bombay (51,000 tons); Punjab (33,000 tons) and Madhya Pradesh (11,000 tons).

In the Second Plan, the target of sugar production has been set at 2.25 million tons; and this is only an increase of 0.45 million tons from the target of 1.3 million tons set in the first Five-Year Plan period. In setting the target, the planners have, no doubt, been guided by the expected increase in the domestic consumption of sugar. In connection with the absorption of the additional production, there will naturally come up the question of the need for export. If there is any rise in the volume of exports in the years to come, it will naturally help India to earn foreign exchange of which we have a deficit in the Second Plan.

Meanwhile, sugar markets have been ruling quiet with prices showing a slightly easier endency, thanks to comfortable supply position. As a matter of fact, some of the factories in Uttar Pradesh are reported to be holding huge stocks, lying unsold. The season is likely to continue for about another two months. Following mill-delivery rates (per maund) are quoted in the Hapur market:— Jaswant Rs 28.60; Simbhauli Rs 20.75; Mowana Rs 28 to 29; Daurala Rs 30; Amroha Rs 28.18; Bijnore Rs 28.12; Mansoorpur Rs 28.63 to Rs 30.50 and Rampur Rs 31.

★

Gur

In the Hapur market, Gur prices have shown a further decline from last levels due to poor enquiry. Stocks are estimated at as much as 97,000 maunds, with arrivals at an average of 500 maunds per day. Total arrivals, from the beginning of the season, are put at 4.47 lakh maunds. Rates are moving between Rs 9.50 and Rs 9.90 per maund. Sowings of cane for the next season are now in full swing.

★

Foodgrains

Divergent trends were witnessed in the Hapur Foodgrains market during the past week. While Wheat and Gram scored modest gains, Coarse grains eased in the wake of pressure of new crop arrivals.

Wheat, after touching a low of Rs 15.85 per maund for average quality, improved at the close to Rs 16.25.

Rice recorded small gains, Basmati moving between Rs 24 and Rs 28 per maund, according to quality. Gram prices advanced slightly due to small arrivals of the new crop from Madhya Pradesh and on good consumers' demand. Barely and Bejhar, however, declined by a rupee per maund. Jowar ruled steady on reports of poor stocks in the face of increasing demand.

The Bombay grains market presented a quietly steady appearance with prices moving within a narrow range. Trading in indigenous Rice was featured by a decline of Rs 2 to Rs 5 per candy. The Wheat section revealed an increased shortage of supplies and prices of the Pissi and Khandwa qualities moving up further by Rs 10 to Rs 15 per candy. In the Coarse grains section, Jowar prices ruled steady with supplies from Hyderabad finding good buyers. The demand for Bajra was on a small scale; but the tendency of prices was steady.

★

Shellac

According to the latest reports, the yield of the Aghanic (Kusmi) Lac crop in India for 1956 is estimated at 64,000 maunds as compared with 61,000 maunds in the previous year and a normal production of 90,000 maunds. The yield of this crop is below normal, mainly because of shortage of broodlac at the time of infection.

The yield of Baisakhi lac crop this year is expected to be 675,000 maunds as compared with 683,000 maunds and 813,000 maunds in 1956 and 1955 respectively. The normal yield, based on the average production of 10 years preceding 1956, is 740,000 maunds.

It is reported that the crop has suffered some damage in Palamau district of Bihar State and in western parts of Madhya Pradesh due to hailstorm. In Ranchi and Purulia districts, the crop is reported to have progressed satisfactorily.

Meanwhile, in the Calcutta market, Pure TN shellac is ruling steady at Rs 86 per maund.

The Peninsula

The New Kerala Ministry

APRIL 5, 1957 is likely to be remembered as a red-letter-day in the history of the world. For the first time, a Communist Government were installed in power, through well-understood and universally acceptable constitutional processes. A sensational event of this character naturally produces enthusiasm and gives rise to speculation.

Those who believe in the possibility of international communism rejecting the methods of coup-d'tat and violence in favour of the parliamentary method of victory through popular vote, exultingly read in this first experiment, tiny and limited as it is in the world setting, the harbinger of that great prospect. Others, more sceptical about the resilience of communist doctrine and practice, would prefer to evaluate possible impacts in a much more restrained and guarded manner.

Whatever might be the eventual consequence of the event on international trends, for the public of Kerala it has come as a deliverance. This feeling is not inspired by any universal respect for communism or even by a faith that a Communist Government would wave off, by a magic wand as it were, the chronic and deep-rooted unemployment and poverty of this State. Communist party leaders themselves know that no miracle could be worked.

The popular enthusiasm over the event springs from the resentment against the long prevalence of Presidential rule, which in the eyes of almost all sections of the people, look like an insult to a politically mature State. It goes without saying that a Communist Government evokes wide-spread dislike and even apprehension. The peculiar position in Kerala is that even those who do not like it, feel like welcoming it as having brought about the end of Presidential rule.

The Congress party has taken this opportunity for a certain amount of healthy self-criticism, which may not turn out to be barren in terms of practical results. The party leaders have their eyes opened all of a sudden to the bundle of failings which led to their forefeiture of power. They are not going to rest idle. They believe that public judgment would be improved in their favour, after it secures the opportunity and time for studying the methods and results of an alternative government.

Are they deceiving themselves on this point? It is for the events of the next five years to provide the answer. Mr E M S Namboodiripad and his ten colleagues are a pretty tough team. The number eleven is symbolical. They seem to have taken up the Government for governing the State in a genuinely collective spirit, where as in the more manly games of foot-ball and hockey, team spirit and coordination matter more than the brilliance of individual players.

While in the matter of respresentation in the Cabinet, territorial and communal considerations do not seem to have been altogether overlooked, once in office this Ministry is bound to function as a monolith. In his first policy statement, the Chief Minister has clearly mentioned the point as also the intergral link between the Ministry and the party.

The severest damage to the earlier Ministries in Travancore-Cochin State came not so much from the strength or prestige of the Opposition, but from their own internal dissensions. Mr Namboodiripad's Ministry will see that it is not so afflicted.

The association of the two Independent members, who conscientiously took the oath in the name of God, is not merely a matter of giving representation to a small group whose adherence secured the necessary majority for the Communists. These two gentlemen will be in the eyes of the masses, a symbol of protection of all the values which they hold dear and which are generally considered unsafe in the hands of the Communists. In a way, this circumstance imparts extra strength to the Ministry which it might not have secured, if it were to have been a purely Communist bunch.

In his address to the Secretariat staff, the Chief Minister referred to the different training and different traditions of the Services and the need to combine both these traditions for the ultimate good of the people. "I admit that we have to learn much from you and you will have to learn much from us. One thing which I want to tell you is that we will bring in new ideas. You may point out our defects and that is welcome". In his policy statement, he also appealed to the public to bring to their notice the mistakes and inadequacies of steps taken by his Government and "the injustices the Ministers individually and the Government as a whole perpetrate". All men of good will belonging to all parties and all sections of the people are being asked to cooperate.

In this general setting, which is as pleasing and inviting as possible, the Chief Minister has annouced his programme for what he himself decribes as the problem State. At the outset he has explained the limitations imposed by the inexperience of his party in administrative matters and by the framework of a scheme which includes "several regulations and procedures which are not to our liking."

As far as the Constitution of India goes, which Mr Namboodiripad categorically assures his Government would adhere strictly,observing all the limitations imposed on the State-Government, the latter will use to the utmost all the powers that are conferred on them by the Constitution.

He has has taken the Centre to task for neglecting Kerala in the matter of economic development. In his estimate the financial resources will be ample, provided the proceeds of the Central levy on Kerala products now monopolised by the Centre are equitably shared as in the case of jute in Bengal and the State takes over industries which either have or promise scope for expansion in yield.

But in these respects, he says that Centre takes an unfriendly view; it is not prepared to ending foreign domination in the plantations, it shows the tendency to oppose the measures of taxation which fall on the wealthy—on the latter point the Chief Minister must have been having only the general fiscal policy of the Union Government in mind, which admittedly is not sufficiently equalitarian in the eyes of the communist party. No talks could have taken place on specific measures of new taxation. Where the Central outlook is unfriendly, the Kerala Government would be doing the utmost to have it changed.

Mr D. N. Pritt, whose presence in Kerala at this time is certainly not a coincidence, will have given objective guidance. One thing is clear. In implementing the programme appropriate to their ideology, the Kerala Government will go to the farthest extent possible under the Constitution. Even within this limit, particularly in the matter of land reform, ceilings and fixity of tenure for tenants, spectacular changes could be made which are already sanctioned by the policy laid down by the Land Reform Panel of the Planning Commission, the Congress, the Praja Socialist Party and several other organisations, not to speak of the Comunist party itself. Land reform receives first priority in the policy statement.

The statement also refers to some enterprises which are now under private ownership but could be brought under public ownership. The better informed people in the State know to which enterprises this reference applies. It might be prudent not to mention them immediately.

Another vital change contemplated by the Ministry is in respect of the association of popular organisations with their Services at different levels. Whatever be the phraseology used, association, consultation, participation or cooperation, anyone who understands the sources of inspiration for this change can see how an entirely new focus of authority would develop under the auspices of the Government.

Herein lies one of the most serious problems which are being created for the future. Again, the Constitution may support much of what could be done on the lines agreeable to communist ideologies. The long-range impact of a more or less parallel popular set-up, alongside the regular administrative machinery can better be left to the imagination of those who know what is taking place in other parts of the world.

SOUTH EASTERN RLY. TENDERS.

The Controller of Stores, Garden Reach, Calcutta—23 invites sealed tenders for supply of the following materials:

1. Tender No. COS/1/WP/3578/20/F1/57 for supply of 1200 sets C. I. airstack 2/2" dia x 10" long. Earnest money—Rs. 450/-.

2. Tender No. COS/2/WP/CM-3/GA-33/57 for supply of 82 Nos. Chain pipe cutters for cutting C. I. pipes 6" to 12". Earnest money—Rs. 430/-.

3 Tender No. COS/3/WP/CM-3/WP/16/57 for supply of 107 sets of each size Top and Bottom fuller swages of sizes ½", ¾", 1", 1¼", 1½", 1¾" and 1". Earnest money—Rs. 300/-.

4 Tender No. COS/4/WP/3798/1Cl4/57 for supply of 205 cwts. Lead Wool I.S.O. Specification G/Misc.36B. Earnest money —Rs. 500/-.

5. Tender No. COS/5/WP/CM-3/Ca-6/57 for supply of 34 sets superior quality stock with taps and dies and tap wrenches 3/16" to 1.1/2". Earnest money —Rs. 600/-.

6. Tender No. COS/6/WP/3826/31/Gb 10/57 for supply 8 tons of Rope Manila 6". Earnest money—Rs. 400/-.

7. Tender No. COS/7/WP/CE/1547/B/57 for supply of 1 No. Power Bar bender with Electric Motor for bending 1¼" size m.s. round. Earnest money—Rs. 200/-.

8 Tender No. COS/8/WP/CE/7007/HC/57 for supply of 16300 yards cable Aerial and under ground. Earnest money —Rs. 600/-.

The tenders will be opened on 1-5-57.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta—23 on remittance of Rs 2/- per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E R.Iy., Garden Reach by local firms. The cost of tender forms is not refundable under any circumstances.

The tenders should be accompanied by a receipt from the Chief Cashier, S. E. Railway, Garden Reach for amounts towards earnest money as above for each tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs. 1,000/- with the Controller of Stores need not pay the earnest money.

Firms who are not on this Railways list of approved Contractors must enclose a valid Income-tax Clearance Certificate with the tender.

S 4.

South Indian Notes

Patrician—Businessman

In Dr Alagappa Chettiar's death, which even may in itself be regarded as merciful relief to one who, though bed-ridden for a considerable time, could not resist the urge to give the finishing touches to the variety of tasks he had set for himself, and who thus functioned effectively and energetically to the last, despite utter disablement and intense pain, the country has lost a scholar-businessman, an industrial leader who believed, in profits but not a personal gain and who, therefore, approximated to Mahatma Gandhi's ideal of a capitalist-trustee. He was second to none in drive and dynamism in the development of business and in the expansion of its activities and its profits. In the diversion of profits to philanthropy, he was impelled by a planned method and practical philosophy.

The distinguishing feature of his life and career was his complete faith in scholarship. This point needs stressing as philistinism is the dominant attribute of the new race of Indian leaders in business and industry. The greatest menace to the future of India's industry is that the men who have entered this field on the strength of war profits and tax-evaded earnings are generally so grossly material that they scorn experts and work their machinery to death, despise traditions and cherish profits as piling personal fortunes. What Mathew Arnold would call light and culture means just nothing to them.

The tribute that Indian Finance would like to pay to Dr Alagappa is that, amidst the rough and tumble of commerce, through all the fierce rivalry and furious profit-making of industry, he esteemed, nurtured and preserved the graces of culture, the light of erudition, and the sweetness of poise. He belonged to the vanishing race of patrician-businessmen.

*

Genius in Econmy

A second obituary notice of this week related to one whose role in the business world had equally interesting and unique facets. Mr A. Rajagopalan, whose death occurred in Madras early this week, symbolises the progress of a personal assisant to top executive. It is a tribute alike to him, and to TISCO who were his employers. To him, because he qualified himself at each stage for the next; and to Tatas, because they employed and recognised developing talent.

Mr Rajagopalan's first appointment was in the Bombay Inprovement Trust, which, in the early twenties, was fortunate in having a remarkable man as its secretary and chief accountant. Mr K. N. Ramasubbiar was old worldish in many ways but uniquely progressive and forward-working in the fundamentals of admiistration. He evolved the plan that, instead of engaging six routine clerks on Rs 70 per month each, he could get the work done more competently and more satisfactorily by employing one man with a conspicuous academic record and with additional proficiency in shorthand and typing. He calculated that he would thereby save five tables and the office space of five assistants. And these were important considerations in Bombay at that time as the city was yet to envisage the vast development programmes. Mr Rajagopalan was the first choice in the implementaion of this plan. He was a graduate with a high rank in English and Economics. His progress under Mr Ramasubbiar was in full accord with the expectations on which the plan was conceived.

The young graduate-stenographer came to the notice of Sir Aredeshir (then A.D.) Dalal when the latter became the Commissoner of the Bombay Corporation. Sir Ardeshir came to lean more and more heavily on his trusty and efficient personal assistant. And, on the transfer of his affections and activities to TISCO, the personal assistant was persuaded to go along with the boss. Rung by rung, Rajagopalan climbed the ladder of service and of success. He combined humility with confidence, versatility with specialisation, charm with competency. Starting as a Jack of all trades, he ended up as the Master of all the chores connected with TISCO's relations vis-a-vis Government and Tariff Commission, the head office in Bombay and the Works in Jameshedpur.

Indian Bank

The Indian Bank Limited has reported a very sharp increase in its profits for 1956.

Deposits and other accounts are placed Rs 3.12 crores higher at Rs 32.56 crores. Borrowings from other banking companies are shown at Rs 1.93 crores.

The investment portfolio shows a shrinkage of Rs 1.17 crores to Rs 9.99 crores. Cash balances are Rs 0.57 crores higher. Aqvances have recorded a substantial increase from Rs 17.54 crores to Rs 23.69 crores.

The income of the bank has risen by over half a crore to Rs 2.04 crores from Rs 1.46 crores. The income by interest and discount rose by Rs 0.19 crores, while commission, exchange and brokerage have more than doubled. to Rs 75.46 lakhs from Rs 36.49 lakhs.

Interest paid has absorbed nearly Rs 20 lakhs more at Rs 77.20 lakhs, while salaries and allowances have risen by Rs 19.32 lakhs to Rs 57.70 lakhs. The balance of profit is very sharply higher at Rs 45.71 lakhs against Rs 20.28 lakhs.

The provision for taxation has been more than trebled to Rs 18.50 lakhs from Rs 5.70 lakhs. The transfer to reserves is placed at Rs 10 lakhs against Rs 4.50 lakhs last year. The dividend has been raised to 13 per cent from 12 per cent. The carry forward is Rs 8.13 lakhs against Rs 1.45 lakhs.

Altogether, the performance of The Indian Bank Limited is most impressive; and the balance sheet total, at Rs 48.00 crores, is within striking distance of the Rs 50 crore mark.

SOUTH INDIAN MARKETS

Mixed Trend in Hides and Skins Prices

PRICES in the Madras Hides and Skins markets showed a mixed trend last week. Prices of Cow hides, after ruling firm early in the week, developed an easier trend towards the close as business with the UK was slow. Inferiors, however, continued to be in good demand locally, while fresh business with London was difficult to confirm. Stocks of Buff hides were fair; but the demand was less. As clearances were small, prices were looking a shade easier. Arrivals and clearances continued to be moderate in the Calf section. In general, buyers in the UK were not inclined to operate as they felt that a decline in prices was necessary to make business workable to dressers.

In Tanned Skins section, there was fair clearance and prices were unchanged to slightly lower in both goat and sheep.

In the export section, prices remained very firm for good quality goat skins; but the higher prices were being paid mainly by Continental buyers. In the Sheep skins section, primes and semi-primes were unchanged; but enquiry for common and middle class was restricted. Reports received from the UK indicated that trade in glovings, which generally consumes large quantities of Madras sheep, had fallen off considerably.

The market for Raw Hides remained unchanged; but sheep was lower by Rs 5 to Rs 10 per 100 hides.

*

Groundnut

Conditions in the Madras Groundnut market ruled rather quiet during the past week. Though stocks with the commission merchants were increasing and were estimated at around 500 tons, sellers were reported to be unwilling to do business at lower levels in sympathy with the oil market. Arrivals averaged 25 to 30 tons a day. Crushers were not inclined to enter into commitments in view of the declining trend of oil prices. The rate for superior oil-quality seeds was quoted at Rs 160 per candy and the bold varieties at Rs 155.

In the Groundnut Oil section, prices developed as sagging tendency with the rate for the ready position quoting down to Rs 315 per candy as against Rs 320 in the previous week. The weakness of the market was attributed to the exemption from excise duty given by the Government for the first 125 tons cleared from mills. There was also a desire on the part of crushers to sell as much as possible out of the exempted quality before the forthcoming Budget. Business on ready account, was, therefore, small.

In the Cuddalore market, summer crop sowings of groundnut have almost concluded in South Arcot district centres. The condition of the early-sown crop is satisfactory. It is reported that rains are needed for the crop. Arrivals of winter crop are poor due to slack season. With the result, prices are ruling easy due to lacking of buying interest.

*

Pepper

Pepper markets have continued to rule quiet. In the Kozhikode market, transactions were poor last week as sellers were not willing to part with their stocks at rates quoted by buyers. Wynaad quality was quoted at Rs 625 and the Country variety at Rs 590 per candy.

In the Alleppey market, prices remained unchanged. Arrivals last week were 70 candies and these were sold out. Superior Palai quality was quoted at Rs 537.50 per candy and inferior Thekkan variety at Rs 525 per candy.

BRITAIN AND EUROPEAN FREE TRADE

(Continued from page 679)

suffer through Britain's adherence to the scheme. There are bound to be demand for "feather-bedding" both by employers and employees in such industries. Yet the basic object of the Common Market scheme is precisely the elimination of inefficient industries in all participating countries, so that everything within the Free Trade Area should be produced wherever it can be produced at the lowest cost. Unless high-cost producers can be eliminated no real benefit could be derived from scheme. In the case of Britain in particular, amidst the prevailing scarcity of manpower, unless the firms which are unable to compete with their continental rivals close down there would be no manpower available to enable the efficient firm to expand their output sufficiently to take advantage of the new possibilities of exporting to the continent.

The bolstering up of inefficient firms against the natural effect of the scheme would defeat the scheme. Yet it is of no use to argue that in order to make omelette we simply must break some eggs: the prospective "eggs" cannot be expected to appreciate the argument. There are, it is true, vague suggestions of setting up some compensation fund into which the firms benefiting by the scheme would have to pay a levy, and the proceeds of which would be allotted to the victims of the scheme. But the difficulties of devising and operating such a scheme even to the extent of achieving some degree of rough justice appear to be unsurmountable.

A flexible sterling is another device suggested. No doubt a reduction of the exchange value of sterling would help to bolster up the inefficient industries, and it would also increase the driving force of the efficient industries. But amidst conditions prevailing in Britain wages would soon catch up with the depreciation of sterling, and the "shot in the arm" of depreciation would have to be repeated in too frequent intervals. In any case, to the extent to which the device would bring relief, it would defeat the basic object of the Common Market Scheme. What is the use of eliminating customs barriers if they are replaced by barriers represented by a progressive depreciation of sterling?

On the other hand, it is politically impossible for any British Government today to contemplate wholesale bankruptcy and wholesale unemployment in the inefficient industries in the sacred name of "laissez faire." So something will have to be done to mitigate the effect of the Common Market scheme, even if it means a reduction of its desired beneficial effects. The fact that its application will be spread over a period of between 12 and 17 years should give ample time and opportunity of cushioning the shock, but much depends on the initial formula which have to be elaborated in the very near future.

CLIVE STREET GOSSIP

(Continued from page 684)

members of the Trade Mission that interested me. These, after all, have been known to a greater or lesser extent. What interested me was the suggestion made by them for streamlining sales organisations and studying of techniques of sales promotion. One of the members of the delegation spoke in somewhat dithyrambic terms of "Selling India" to the rest of the world. Though the expression is somewhat inflated, it would be foolish to dismiss the advice as a mere instance of the American mystique of "salesmanship". If we do want to sell things to others, let us be humble enough to learn how to do it from people who know it superlatively well. Another point that needs attention is the old problem of standards in goods. In their talks with the Commerce Ministry officials, concrete suggestions, like an independent machinery for preshipment inspection, were considered. There were doubtless many similar suggestions worth considering.

✱

Thus, both from the point of view of American investment in India and of promotion of increased trade between India and the US, it would seem that the moment has arrived for decisive action. It is for the Government of India to seize the opportunity and act promptly. The consequence to the Plan of such expedition is nothing less than the disappearance of our current difficulties over foreign exchange and other seeming obstacles in the way of the success of the Plan.

EAVESDROPPER.

BRUSHED-UP FACTS

(Continued from page 673)

naturally concerned over the uncertainties surrounding future steel imports. If as Mr Cleetus presses for, policy is laid down for at least one year at a time, planning production programmes can more confidently be undertaken.

In many respects the problems of steel and engineering industries are nearly, if not wholly, identical. Technical personnel presents a common bottleneck. While both Government and big industrial units in the private sector are doing their best to augment supply, there is a general realisation that current efforts are woefully inadequate. In this situation, what is being extensively done is reminiscent of the well-known witty saying that the majority of Frenchmen live by tipping each other. Mr Cleetus says with due modesty that in spite of a kind of gentlemen's understanding between the public and private sectors and between members within the private sector itself, some amount of "pinching" and "pirating" still goes on.

Apart from the obvious implication that this unwholesome practice has been going on for some time, we are naturally led to conclude that the established units are the worst affected. Whoever be the net loser, there is no doubt that the problem is of "tremendous magnitude" not only to the Government but every one else too; and unless some shortcut is discovered, the temptation of adopting totalitarian methods to achieve quick results, to which Mr Cleetus makes an ominous reference, may become irresistible.

What, then, is the way to put two or three engineers in the field where under the present facilities for training, not even one could be assured? Mr Cleetus goes into this question in some detail. The engineering and the steel industries have offered full cooperation in the matter of training. But there is dearth of machine, space and buildings. What is suggested is a joint endeavour in which supervision and other facilities like materials will have to be supplied by private industrial units and buildings and machines by the Government. This complementary arrangement appears eminently practicable. There is no reason why the Government who are likely to be the principal beneficiaries, should grudge participation on the basis suggested. Meanwhile, time too is equally important. Intense, short-term courses, in which technical and practical training go hand in hand on an emergency footing seems the only answer to the problem of time.

On a point of major national policy, the Chairman of the Engineering Association strikes a jarring note. For this he deserves the sympathy usually extended to victims of facts. We do not know how alluring are the prospects which his colleagues in the Export Promotion Council envisage. The stark position is that outside the light engineering industries, there is scarcely any spare capacity available. Even the bare domestic requirements of steel for current consumption and industrial expansion are not being promptly and adequately met. River Valley Projects and the Railways are seen in the queue. That essential orders for the completion of the Second Plan projects must enjoy top priority is unquestionable. In this setting, export promotion efforts largely bear the character of an attempt to sell the skin long before the bear is caught. In the engineering industry the pressure of domestic demand is so urgent and so heavy that any vigorous expansion of exports could be contemplated only as a long-term and distant prospect. At the same time, markets gained will have to be held.

Tax Reliefs in Britain

BRITAIN'S Budget for 1957-58, announced on Tuesday, makes a strong bid for retrieving Government's waning popularity. Further retreat from undiluted austerity is recorded; and, in this respect, it continues the trend foreshadowed in the reduction in the Bank of England rate and the relaxation in hire purchase finance conditions. It is now claimed that 1956 strengthened the economic foundations and hoped that the current year will turn out to be one of growth. The injury to Britain's economy as a result of the Suez Canal episode is now seen to be less serious than was once feared. In fact, in spite of the unfavourable repercussions therefrom, the balance of payments position in the second half of 1956 made good showing both absolutely and relatively. The weakness of sterling is, therefore, to be attributed not so much to current transactions as to the withdrawal of balances in London by non-sterling area countries and extraordinary capital movements. These are grounds, says the British Chancellor of the Exchequer, for what may be termed cautious cheerfulness.

For his part, Mr Thorneycroft has every reason to feel gratified with the performance of the Budget taken in itself. The realised surplus for the past year was £270 million; and, on the basis of existing taxation, the estimated surplus is of the order of £560 million. He felt, therefore, justified in providing tax reliefs accounting for £100 million in the current year.

Concessions to the tax payer are shrewdly devised. Reductions in purchase tax are on items which have a special significance for the housewife. Relief for the aged will be particularly welcome. The large middle- class community stands to benefit; and there will be general approval for the removal of the extra petrol levy introduced after the Suez crisis. The doubling of the investment allowance on new ships and the relief from double taxation for companies directed from London and operating elsewhere are other features of a Budget which is intended to revive cheer and to restore confidence.

That Britain continues to do well on the domestic front is the message of the Budget. Orthodoxy got afeared of his domestic prosperity and inspired measures deliberately calculated to hurt. It is Britain's good fortune that, before the hurt could do irreparable damage, the reverse process is being set in motion, of which a lower bank rate and tax reliefs are significant and heartening indicators.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE is hereby given that the 31st Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House", 57-B, Free School Street, Calcutta, on Monday the 29th day of April 1957, at 12.15 p.m. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in the place of those who retire by rotation.
4. To appoint auditors and fix their remuneration.

Special Business:

To consider and if thought fit to pass, with or without modification, the following resolutions of which numbers 6 and 9 will be proposed as special resolutions:

5. "That Mr. John Luckham be and is hereby appointed a Director and Managing Director of the Company upon the terms and subject to the conditions contained in the letter dated the 31st December, 1956, addressed to him by Mr. T. E. Peppercorn as the agent of the Company duly authorised in that behalf."

6. (As a special resolution): "That consent be and is hereby accorded to Sardar Hardit Singh Malik holding and continuing, with effect from the 1st January, 1957, to hold an office or place of profit under the Company, namely, as a salaried official on the terms and conditions of a letter dated the 30th day of January, 1957, issued by the Company and addressed to him."

7. "That Sardar Hardit Singh Malik be and is hereby appointed a Director of the Company."

8. "That the remuneration payable to Mr. P. N. Haksar, a Director of the Company, be increased with effect from the 1st March, 1956, from a salary of Rs. 2,900 per mensem to Rs. 3,200 per mensem with the corresponding increases in dearness allowance, bonus (if any) and the contribution by the Company to the Provident Fund."

9. (As a special resolution): "That the Articles of Association of the Company be amended in the manner following, that is to say:—

(i) In Article 1 the definition of a "Managing Director" shall be deleted and the following shall be substituted therefor:—

"The Managing Director" and "the Deputy Managing Director" means the Managing Director and the Deputy Managing Director, respectively, appointed as such and holding office for the time being under the Company."

(ii) In Article 116 after the words "Managing Director" insert the words "Deputy Managing Director."

(iii) Article 121 shall be deleted and the following new Article substituted therefor:—

"121. At each Annual General Meeting (called "Ordinary Meeting" in these Articles) of the Company one-third of such of the Directors for the time being as are liable to retire by rotation, or if their number is not three or a multiple of three, then the number nearest to one-third shall retire from office".

(iv) Articles 131 and 132 shall be deleted and the following new Article shall be substituted therefor:—

"The Directors may appoint any person to act as alternate director for a Director during the absence of the latter for a period of not less than three months from the State in which meetings of the Directors are ordinarily held and such appointment shall have effect and such appointee, whilst he holds office as an alternate director, shall be entitled to notice of meetings of the Directors and to attend and vote thereat accordingly; but he shall not require any qualification and shall ipso facto vacate office if and when the absent Director returns to the State in which meetings of the Directors are ordinarily held or the absent Director vacates office as a Director."

(v) In Article 140 after the words "time appointed for holding the same, the" insert the word "seniormost".

(vi) Articles 133 to 137 and the marginal notes shall be delted and the following new Articles and the marginal notes substituted therefor:—

Business of Company to be carried on by Managing Directors and Deputy Managing Directors

"133. The business of the Company shall be carried on by the Managing Director and Deputy Managing Director or Managing Directors and Deputy Managing Directors if and when appointed who shall subject to the superintendence control and direction of the Directors and the provisions of Article 135 be entitled to exercise the general and specific powers conferred by these Articles on the Directors collectively.

Power to appoint Managing Directors and Deputy Managing Directors.

134. Subject to the provisions of Sections 316 and 317 of the Companies Act, 1956, the Directors may from time to time appoint one or more Directors to be the Managing Director or Managing Directors or the Deputy Managing Director or Deputy Managing Directors of the Company either for a fixed term or without any limitation as to the period for which he or they is or are to hold such office and may from time to time (subject to the provisions of any contract between him or them and the Company) remove or dismiss him or them from office and appoint another or others in his or their place or places.

Powers and duties of Managing Directors.

135. Subject to the provisions of the Companies Act, 1956, and in particular to the prohibitions and restrictions contained in Section 292 thereof the Directors may from time to time entrust to and confer upon any Managing Director or any Deputy Managing Director for the time being such of the powers exercisable under these presents by the Directors as they may think fit and may confer such powers for such time and to be exercised for such objects and purposes and upon such terms and conditions and with such restrictions as they think fit; and they may confer such powers either collaterally with or to the exclusion of and in substitution for all or any of the powers of the Directors in that behalf; and may from time to time revoke withdraw alter or vary all or any of such powers.

Managing Director and Deputy Managing Director exempt from retirement by rotation, etc.

136. Subject to Section 255 of the Companies Act, 1956, a Managing Director or a Deputy Managing Director may be appointed on terms that he shall not while he continues to hold that office be subject to retirement by rotation within the meaning of Article 121 but (subject to the provisions of any contract between him and the Company) each Managing Director and Deputy Managing Director shall be subject to the same provisions as to resignation and removal as the other Directors of the Company and he shall ipso facto and immediately cease to be a Managing Director or Deputy Managing Director if he ceases to hold the office of Director from any cause.

If at any time the total number of Managing Directors and Deputy Managing Directors not subject to retirement by rotation is more than one-third of the total number of Directors the Managing Director or the Managing Directors shall not retire and the Deputy Managing Directors who shall not retire shall be determined by and in accordance with their respective seniorities so that those who have been longest in office as Directors since their last election shall retire from office and in the case of those with seniority from the same day the Deputy Managing Directors to retire shall (unless they otherwise agree among themselves) be determined by lot.

Remuneration of Managing Director or Deputy Managing Director.

137. Each Managing Director and Deputy Managing Director shall be deemed to be a salaried official of the Company for the purposes of Article 113 and each shall subject to the provisions of Sections 309, 310 and 311 of the Companies Act, 1956, receive such remuneration as may from time to time be fixed by the Company in General meeting."

10. "That each of Messrs. A. W. Gillespie, F.G.W. Jackson and P. N. Haksar, Directors of the Company, be and are hereby appointed a Deputy Managing Director of the Company upon the terms and conditions presently governing their employment and that each will continue to be entitled to remuneration presently paid or authorised to be paid."

Dated the third day of April, 1957.

By Order of the Board,
P. B. SEN GUPTA,
Secretary.

Dunlop House,
57B, Free School Street,
Calcutta.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the Meeting. A Debenture Stockholder as such is also not entitled to attend the Meeting.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 15th April, 1957, to 5th May, 1957, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 15th April, 1957.

THE HIND BANK LIMITED

DIRECTORS' REPORT

To The Shareholders of
THE HIND BANK LTD.

Gentlemen,

The Directors have pleasure in presenting herewith the Audited Accounts of the Bank for the year ended 31st December, 1956.

	Rs.		
The Profit and Loss Account after deduction of all working expenses shows a profit of	12,10,668	0	3
to which must be added the amount brought forward from previous account ..	1,66,277	15	9
Total ..	13,76,946	0	0

which the Directors have disposed of as follows:—

Provision made for taxation	4,50,000	0	0
Amount transferred to Reserve Fund ..	3,75,000	0	0
Bonus to Staff	90,000	0	0
Balance	4,61,946	0	0
Total ..	13,76,946	0	0

Out of the balance of Rs. 4,61,946-0-0 the Directors recommend to the shareholders payment of Dividend at Rs. 3/- per share free of Income Tax which absorbs Rs. 3,00,000-0-0 leaving Rs. 1,61,946-0-0 to be carried forward to the next year's account.

The business of the Bank during the year under review and the results achieved are satisfactory. The investment policy of the Bank during the year 1956 continued to be the same. About 86% of the Bank's Investments are held in Government of India and State Government Bonds of which 92% mature within the next 8 years. The Bank's Investments in the Balance Sheet stand at below market value as at 31st December, 1956.

Under Section 78 of the Companies Act, 1956 the amount of premium Rs. 3,75,000-0-0 received @ Rs. 5/- per share against issue of 75000 shares in the year 1944 which was lying in Reserve Fund Account has been transferred to the Share Premium Account and shown separately in the Balance Sheet.

Under the provisions of the Articles of Association of the Company Shri K. P. Goenka, Shri B. Kumar Birla and Shri B. V. Jacob retire from the Board of Directors and being eligible offer themselves for re-election.

The Auditors appointed by the shareholders at the last General Meeting, Messrs. K. N. Gutgutia & Co. and Messrs. Dalal & Shah retire, but offer themselves for re-appointment.

The Directors express their gratitude to the shareholders and the constituents for their support in the growth of the institution and also to the members of the Local Advisory Committees at Ahmedabad and Bombay for their valuable advice. They also record their appreciation of the loyal and efficient services rendered by the staff at Head Office and branches.

For and on behalf of the Board of Directors,
K. P. GOENKA,
Chairman.

Dated, Calcutta, the 13th March, 1957.

BALANCE SHEET AS AT 31st DECEMBER, 1956

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the annexed Balance Sheet of THE HIND BANK LIMITED as at 31st December, 1956 and also the annexed Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated Branch returns audited by Statutory or Local Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Accounts are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory; (b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank; (c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank; (d) The Bank's Balance Sheet and Profit and Loss Account deal with by this report are in agreement with the books of account and the returns; (e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

The Indian Bank Limited, Madras

(ESTD. 1907)

To be submitted to the Shareholders at the Fiftieth Annual General Meeting to be held at the Registered Office of the Company, "Indian Bank Buildings", North Beach Road, Madras, on Saturday, the 20th April 1957 at 11 a.m.

DIRECTORS' REPORT

Ninety-Ninth Report

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December, 1956. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 45,70,651-11-3 and together with the sum of Rs. 1,45,139-11-1 carried from the previous year's account, makes a total of Rs. 47,15,791-6-4.

3. Out of this sum, the Directors have made the following interim appropriations:

	Rs.	A.	P.
An ad interim dividend at the rate of 5% and a Bonus of 1½% (both free of Income-tax) was paid which absorbed	3,91,300	0	0
The Directors now recommend that the following further appropriations may be made:			
To pay a final dividend of 5% and a Bonus of 1½% (both free of Income-tax) thereby making the dividend and bonus for the year amount to 13%	4,06,000	0	0
To provision for Taxes	18,50,000	0	0
To transfer to Reserve Fund under Sec. 17 of the Banking Companies Act 1949	10,00,000	0	0
To transfer to Sinking Fund	75,000	0	0
To transfer to Special Gratuity Fund	1,50,000	0	0
To transfer to Bank's Buildings account	30,000	0	0
To carry forward	8,13,491	6	4
TOTAL	47,15,791	6	4

4. The Bank rate remained unchanged at 3½% during the year under report.

5. Offices of the Bank were opened during the year at Anakapalle, Badagara, Cuddalore (N. T.) Kodambakkam (Madras City), Kurnool, Palni, Tellicherry and Vilakuthoon (Madura).

6. In accordance with Articles 95 and 96 of the Articles of Association of the Bank read with Section 256 of the Companies Act, 1956, four Directors, Messrs. L. Alagusundaram Chettiar, K. Balasubramania Iyer, P. V. RM. Kulandayan Chettiar and Rao Saheb E. M. Muthappa Chettiar retire this year by rotation and they, being eligible, offer themselves for re-election.

Balance Sheet as at 31st December, 1956.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the above **Balance Sheet** of the Indian Bank Limited as at 31st December, 1956 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of the Head office and Branches other than those in Malaya and with certified returns from Malayan Branches and report that:—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit;

(b) Such information and explanations have been found to be satisfactory;

(c) The returns received from the branches have been found adequate for the purpose of our audit;

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank;

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required;

(f) In our opinion, (i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1956;

(ii) the Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and

(iii) proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books; and

(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of account and Returns.

The Hongkong and Shanghai Banking Corporation

*

Economies of South East Asian Countries

*

Satisfactory Progress Recorded in 1956

*

Chairman The Hon. C. Blaker's Review

The One Hundred and Fortieth Ordinary Yearly General Meeting of Shareholders of The Hong kong and Shanghai Banking Corporation was held on 15th March 1957 at the Head Office of the Corporation, No. 1 Queen's Road, Central, Hong Kong.

The following are extracts from the statement made by the Chairman The Hon. C. Blaker at the Annual General Meeting:—

The investment in an Associated Company, which is a new item in the balance sheet, represents our one-third interest in Bowmaker (C.A.) (Private) Limited in which we are equal shareholders with Bowmaker Limited and Tozer, Kemsley and Millbourn Limited. This Company was incorporated on the 29th May, 1956 to trade in central Africa, including the Rhodesias and Nyasaland, but for the present it will be mainly concerned with the granting of hire-purchase facilities in these territories.

I should like to say a little about the rise in advances and trade bills which, as you have seen has resulted in a drop in the total of cash, call money and government treasury bills. This rise is to a large extent due to the growing industrial and commercial expansion in South-East Asia but that is not the only reason. It was not until the end of 1955 that the credit squeeze in the United Kingdom began to make itself felt in the eastern territories in which we operate, but during 1956 the shortage of credit to a greater or lesser degree became a matter of increasing concern to merchants and bankers alike. This was aggravated in our case by the fact that some concerns which had previously obtained a large part of their finance in London now turned to us, while on the other side, depositors took advantage of the high rates obtainable in the United Kingdom to transfer some of their funds there.

Governments also were not slow to follow suit and as a result the banking system in a number of territories was deprived of substantial sums at a time when the demand for advances, mainly for productive purposes, was very active. Even from a purely revenue producing angle I wonder whether this action was wise. Has not the lure of higher interest rates caused them to lose sight of the increased revenue that would have accrued to them through taxation had the funds been available for local development? For the future growth of these territories an over-investment of government funds abroad must result in a slowing down of the pace as this deprives the banking system of what is almost its life-blood.

I am afraid that as a result of the increasing demand for credit the standing of the borrower and the security offered are not the only considerations which have to be taken into account by our managers when approached for new facilities. The necessity to turn away business, which at other times would be most suitable, has, I am afraid, been forced on bankers in many parts of the world and we could hardly expect to escape. Nevertheless it is not a pleasant task and I hope that many of you in this room will realise—to quote a saying from our school days—"that it hurts me more than it hurts you". In the interests of depositors and shareholders alike it would be most imprudent not to maintain a suitable degree of liquidity and, spread as our activities are over so many territories, this liquidity should, in our opinion, be higher than may be considered necessary by bankers whose interests are mainly confined to one single country. At 31st December, 1956 the ratio of the Bank's readily realisable assets to its total liabilities, was just under 45 per cent and, while your directors are satisfied that this is a safe margin, the drop over the last few years is a reminder that our ability to finance the capital and current requirements of our customers and friends must of necessity have some limitation.

Since the time of the formation of the Bank the shareholders have been liable, in the event of the Bank being dissolved, for the full amount of the notes issued by the Bank; and have also been liable to contribute to the Bank's debts to the extent of the nominal value of each share. At that time such a liability was a usual condition for the establishment of a new bank in the Colonies in order to afford protection to the holders of notes and to the depositors. The growth of banks since these days has made such a protection unnecessary and recently in a number of instances arrangements have been made to do away with such a liability. In our case an amendment of the Ordinance is necessary and we have recently made representations to the government that this should be done. In fact, although there is provision for a small fiduciary issue of under $7 millions, the note issue is fully covered by Certificates of Indebtedness and approved securities, while the depositors are protected by the very substantial reserves which have been built up.

HONGKONG

The competition which the United Kingdom cotton industry is facing from imports of piece-goods from India and Hong Kong has been the subject of numerous statements in the press and questions in the House of Commons. Led by Sir Cuthbert Clegg, a delegation from the industry visited both India and Hong Kong at the beginning of this year to discuss this problem. It was proposed that the local industry should voluntarily agree to limitation of exports of cotton cloth to the United Kingdom at an agreed figure and this suggestion is being examined. Even if certain sections of the industry are willing to co-operate, however, there seems little chance of bringing the garment making industry into the scheme. This is very much of the cottage type of industry with no organised form of association and this makes any limitation unworkable. In view of the publicity that has been given to the competition from Hong Kong it is, I think, worthy of mention that the spinning industry here comprises just over three hundred thousand spindles while in the United Kingdom there are reported to be some thing in the region of twenty-five million spindles in active operation.

Hong Kong's Trade

Hong Kong's trade in 1956 increased by 24 per cent in value while volume rose by 12 per cent. Exports showed a greater improvement than imports with Indonesia moving into first place while exports to Japan and Thailand were substantially higher. The increase in imports was fairly well spread with Japan and China making the most progress. Imports from China at just over $1,000 millions were the highest since the war and although the trend continued for exports to that country to be lower, the drop was not so severe as in 1955.

Exports of Hong Kong products increased by 7 per cent and comprised about a quarter of the Colony's total exports. The United Kingdom continued to be our best customer for local products but total exports to that country are still only 60 per cent of our imports from there, a point which some people in the United Kingdom seem to overlook. These figures illustrate the importance to Hong Kong of her local industries which continue to play a growing part in the Colony's economy. No less than 488 new factories were registered during the year as opposed to 372 in 1955.

Business on the Stock Exchange showed a fall of about one-third compared with 1955 but the market was in a much more healthy state and the boom seemed to have spent itself. Land values continued to rise although the number of properties that changed hands was considerably lower with buyers becoming more selective in their purchases.

The bank clearing figures for the year increased by 10 per cent to around the equivalent of £950 millions which has only been exceeded once before, in the year 1951.

Finances of Hong Kong

Once again the Financial Secretary, Mr. A. G. Clarke, in his speech in the Legislative Council when he presented the Budget, was able to report a very satisfactory state of affairs. A surplus of just under H.K.$15 millions is expected for the current year as revenue on what he describes as "luxury taxation" has been particularly buoyant while expenditure is again below the estimate. For the financial year 1957/8 a deficit of H.K.$54 millions is estimated but shareholders, who have followed the trend of the Colony's finances and observed how conservative these estimates seem to be, will perhaps feel, as I do, that this gives no cause for alarm. It is interesting that the government is considering dealing with capital items in a separate budget as an amount of H.K.$150 millions in next year's estimates represents this type of expenditure. The airport and Tai Lam Chung reservoir comprise 40 per cent of this amount. There is also an allocation for the preliminary work on a new reservoir which is to be built on Lantao Island and this will take about six years to complete. For the first time since the war details are given of the assets held by the government against their liability for the Certificates of Indebtedness held by us and the two other note issuing banks as security for our respective note

issues. These assets on 31st December, 1955 were 108 per cent of the liability with 37 per cent in the form of cash, money at call or short notice.

CHINA

Conditions in China are a matter of considerable interest to all the countries in South-East Asia and nowhere is this more so than here in Hong Kong. Unfortunately, information until recently has been scanty and reliance has had to be placed to a large extent on official publications and on impressions of returning visitors whose movements have in some cases been limited: but lately there has been a welcome increase both in the number of visitors permitted to enter the country and in the extent of their travel when there which is enabling us in Hong Kong to hear eye-witness accounts of what is happening. There has also been a certain amount of criticism from China's own leaders, which has shown up where some of the weakness lie, and statistical information has been considerably improved. In fact a great deal of literature is available; but the achievements of the present administration are still so much a subject of controversy that much of this takes a partisan view, giving credit or awarding blame according to the ideology of the writer. In spite of these qualifications on any opinion which is formed there seems no doubt whatever that the progress in industrial development that has been made in the last few years is substantial and that the first stages of the welding of farms into collective units have been, to a large extent, completed. To what degree this has reflected the wishes of the people, or how lasting the collective pattern will be, is difficult to estimate but the speed with which this has been brought about must have exceeded expectations.

Trade with China continues to be restricted by the embargo but it was announced in the House of Commons in May that more use would be made "of the exceptions procedure to permit reasonable exports in appropriate cases to China of goods which are not on the Soviet lists". While this move is welcome as far as it goes it has not proved so helpful as it was hoped due to the absence of precise lists and the delay in dealing with applications.

JAPAN

In Japan the year was marked by steadily increasing economic expansion with continuing instability on the political scene. The index of industrial production in November was higher by over 25 per cent compared with the figure for the previous year but internally this does not seem as yet to have caused serious overstrain. While the cost of metals and machinery rose and there were bottlenecks in both transportation and electric power the prices of basic cloth and foodstuffs remained steady but in January the consumer goods index moved up sharply. Unless this is temporary it may be a sign that demand is beginning to press where it can do most harm. Interest rates continued high but bank advances have steadily increased, resulting in a rise in the level of borrowing from the Bank of Japan.

Shipbuilding in particular has been extremely prosperous and, aided by their early delivery dates the industry has taken advantage of the world demand for shipping, particularly tankers, and Japan last year turned out 1,746,000 tons of shipping, double the previous year's total. Output of textiles also increased and exports have been rising which has not been welcomed by the competiting industries in the importing countries, particularly in the United States of America. As a result of protests from that country the Japanese have agreed to a voluntary limitation of textile exports to 235 million square yards per annum. An interesting innovation to enccourage exports has been the floating fair of Japanese machinery which is moving round various ports in South-East Asia. This fair is housed on board a freighter which will spend a few days in each city.

The demands of industry caused a higher level of imports, mainly of raw materials, but, helped by another good rice crop and a world demand for her exports, it was still found possible to maintain a favourable balance of payments. As usual this was mainly due to invisible item as payments for exports and imports were almost in balance at U.S.$2,400 millions but the foreign exchange surplus was just under U.S.$300 millions as opposed to U.S.$500 millions in 1955.

In spite of Japan's favourable overall balance her holdings of sterling have shown a considerable drop during the year and negotiations, which have been in progress in London since October, have recently concluded with the signing of a new trade agreement. It seems that the delay in reaching this agreement was caused by the different approach of the two governments. Japan considered the drop in her sterling holdings as justification for requesting increased imports by the sterling area of her goods; but the United Kingdom argued that, as sterling could now be used for many types of payment outside the sterling area, balanced trade with individual countries was a relic of bilateralism and was now out of date. For the same reason the United Kingdom does not want to enter into a new payments agreement.

THAILAND

The cautious optimism I expressed last year regarding the future of Thailand appeared to be borne out by events in 1956. There were signs of more political stability and the differences between rival personalities, which had in the past hampered the administration, seemed to be less marked. Unfortunately the elections, which were held at the end of last month, rsulted in a certain amount of unrest and it was necessary to declare a state of emergency. These disturbances seem to have been brought under control but the fact that they occurred shows that "caution" is necessary in any appraisal of events in this country. Economic conditions were satisfactory and the operation of the Stabilisation Fund ironed out excessive fluctuations in exchange rates while the over-stocked conditions of the consumer goods markets showed considerable improvement. The balance of trade, however, was slightly adverse during most of the year as imports continued at a high level, which had a beneficial effect on the revenue. This was considerably higher than expected and resulted in income exceeding ordinary expenditure in the revised estimates for 1956, while a small surplus is estimated for 1957.

FEDERATION OF MALAYA

The Alliance Government has now been in office for over a year and steady progress has been made, both in the conduct of the day to day administration and in the movement towards full independence, while many of the changes agreed upon at the Constitutional Conference in London last year have already been brought into force.

As a result of this preparatory work the scene is now set for the transference of power on 31st August and the Federation of Malaya will then take its place as a self-governing member of the Commonwealth. On the whole their future prospects look favourable. The Alliance Government retains the support of the majority of the population and the economic outlook seems bright with a continuing world demand for their primary products. The Emergency continues as a dark cloud on the horizon as, although much success has been achieved, the terrorists remain active and the cost continues to be a heavy drain. Other problems spring to mind, such as the adjustment of racial interests and the relations between the Federation and Singapore, but the present government has built up a considerable store of goodwill which should, provided tolerance is shown on all sides, enable them to get off to a good start.

The present position of the finances of the Federation was dealt with clearly and concisely by Colonel H. S. Lee, the Minister of Finance, when he introduced his first budget. The estimates showed a prospective deficit of M.$145 millions for 1957 which would reduce the realisable general revenue balance to M.$136 millions by the end of that year. This was considered to be below the safety margin and, for this reason, changes in direct and indirect taxation were brought into force. Briefly these covered increases in income tax in the higher income brackets, new taxation affecting motor cars, the raising of certain import duties and an excise duty on locally grown tobacco. This increased revenue was expected to reduce the deficit to M.$110 millions. The estimates for capital projects already approved show that a little over M.$200 millions will be required in 1957 with not far short of M.$400 millions thereafter. This finance is being provided at present by advances from the treasury but a funding operation will require to be undertaken sooner or later. Many other schemes for development are in course of preparation and it was in the light of this heavy expenditure that the financial discussions were held in London concurrently with those on defence which I mentioned above. It was agreed that the United Kingdom Government would provide some financial assistance towards the continued cost of the Emergency and would help in the expansion of the armed forces. These arrangements, although perhaps on a smaller scale than was hoped for, should assist the Federation in their development plans and, before leaving London, Tengku Abdul Rahman stated that "every encouragement would be given for the flow of foreign capital to Malaya to help the country's economic development". This is a very welcome statement as foreign capital investment and, what is perhaps more important, the technical assistance which is likely to come with it, will be essential to the Federation for many years to come.

Tin and Rubber

In the first six months of the year the price of both these commodities moved gradually downwards but this trend was halted in July due to developments in the Middle East. For the rest of the year there were considerable fluctuations with a sharp increase in both prices during November and December. This rise has, however, not been maintained.

The International Tin Agreement came into force on 1st July, 1956 and contributions have already been made by members, all of them so far in cash. At the meeting in December of the International Tin Council it was agreed to review the present floor and ceiling prices and a report is expected to be submitted to the next meeting which will be held this month. While the introduction of this scheme should, on the whole, have a stabilising influence, to operate efficiently the buffer stock should hold both cash and tin but, as the manager of the buffer stock is not permitted to buy until the price is below £720 per ton, there is little prospect of acquiring any tin at the present time. From 31st January 1957 the buying of tin by the United States Government for stockpile purposes ceased and the smelter in Texas was sold to a private concern.

Tin production in Malaya increased by a little over one thousand tons compared with 1955, while exports were the highest since 1950.

The rubber replanting scheme, which is so vital for the future of the industry, is making progress although the small holders are moving slower than the estates. This is understandable as to quote from the Federation of Malaya Annual Report for 1955 "to the smallholder, lacking mechanical aids, the task of replanting calls for hard and sustained physical labour" and considerable publicity with sufficient inducements is necessary to encourage the smallholder to undertake this work. Production was slightly below the high level of 1955 and exports at 983,000 tons showed a drop of about 1 per cent.

SINGAPORE

The conference to decide the future constitution for Singapore was held in London in April but in spite of three weeks of negotiation it was found impossible to reach agreement. The main issue on which the discussions foundered was the extent of the powers to be retained by the British Government to enable them to discharge their responsibilities for external affairs and defence. After his return, Mr. Marshall resigned in June and Mr. Lim Yew Hock became Chief Minister. His task seemed a far from enviable one as there was considerable disappointment over the failure to reach agreement in London, although in many quarters there was a feeling of relief that a period of quiet on the political scene seemed likely. In September the Chief Minister obtained a unanimous vote of confidence in the Legislative Assembly, which greatly strengthened his position, and enabled him to take stronger measures to stamp out subversive activities. One of these was an order dissolving the Chinese Middle Schools Students Union For some time past many of the pupils in these schools had become extremely unruly and neither their teachers nor their parents seemed to have any authority over them and evidence was obtained which showed the extent of Communist infiltration in the Union. The determined stand taken by the government unfortunately resulted in serious riots but no further disturbances have taken place since and there is every indication that the power of the Communists in the union has been severely weakened, if not entirely broken. This is an important achievement and particularly significant when it is remembered that over half the population is under twenty-one years of age. On the whole the position in Singapore at the end of the year seemed more stable than if had been for some time and, with the added authority which this improvement gave him, Mr. Lim Yew Hock paid a visit to London to discuss the agenda for the resumption of the constitutional talks this month. Although it is always dangerous to prophesy there seems ground for hope that this time he will not come back empty handed.

The estimates for 1957 showed a deficit of M.$36 millions but new taxation similar to the Federation's reduced this figure to under M.$20 millions. On the whole this is not an unsatisfactory state of affairs but the calls for capital development are heavy and are expected to amount to M.$750 millions for the period 1958 to 1962, of which projects totalling M.$570 millions are considered essential. To meet this heavy expenditure it is intended to increase revenue over the next three years to yield at least an additional M.$50 millions and to mobilise local capital resources to the full. A bill was introduced imposing a tax "at wholesale level on any luxury goods which it may be decided to tax in the future". This proposal has been severely criticised as likely to endanger Singapore's free port status and the bill has been referred to a Select Committee. The necessity to maintain a suitable climate for investment, in the face of mounting expenditure for social services, is the difficult problem which faces Singapore's government and a suitable balance will not be easy to find.

MALAYA

It has always been the practice in these statements to include comments on developments in the Federation of Malaya and Singapore under the same heading but, with the recent constitutional changes, this seems no longer suitable and this year I have tried as far as possible to separate them. Geography and their complementary economies, are facts which cannot be ignored, whatever the political differences may be, and it is no more easy for us to draw a line between the two territories in our summary of events than it is for one territory to ignore the effects on the other of the policy they adopt. Before I leave this peninsula, therefore, I wish to touch on a few matters of general interest to the area as a whole.

One of the recommendations of the International Bank Mission was the establishment of a central bank and last year the two Governments requested Mr. Watson of the Bank of England and Sir Sydney Caine to make an examination of the present position and to submit a report on what form that central bank should take. Under their terms of reference they were required, among other things, to advise on the desirability of separate central banks as opposed to one for both territories. This question is linked with that of the currency for the two territories, the Governments of Sarawak, North Borneo and the State of Brunei having decided to adopt a currency of their own, and the report favours the continuance of one currency, which presupposes a joint central bank. This is a conclusion with which we agree but the efficient working of a joint central bank would only be possible—to quote from the report —"if the two Governments coordinated their policies in the fiscal, monetary and economic fields". Other recommendations countries as well and these aspirations are at the moment centred round the second five-year plan. link and the desirability of banking legislation. This plan has been the subject of much comment and criticism both in India and abroad and fears have been expressed that the dangers of inflation have not been sufficiently guarded against. Many doubt whether large enough resources have been allocated to raise the level of production of food and cloth to meet the increase in the supply of money, which the deficit financing will cause, while the adequacy of the transport system and port facilities is questioned. The estimate of the foreign exchange requirements of the plan is considered to be unduly optimistic and this has already resulted in a more general realisation of the necessity to attract foreign investment, but is the present treatment of the private sector the way to achieve this? These are some of the criticisms levelled at the plan and recent developments show that there is a good deal of substance in them.

The importance of the provision of low cost housing as a deterrent to Communism is as great in Malaya as it is elsewhere and I am glad to be able to report that the Malaya Borneo Building Society, formerly Federal and Colonial Building Society Limited, for which, as I mentioned two years ago, we are providing finance, has made considerable progress. Already this society has assisted many families throughout Malaya to purchase their own homes and its activities are being extended to Borneo.

The Malayan trade figures showed a favourable balance of M.$13 millions as against M.$335 millions in 1955. This considerable reduction was mainly due to the large increase in imports while the level of exports was about the same. The total value of external trade was higher than in any other year except 1951.

INDIA

India in recent years has built up for herself a position of considerable influence in world affairs and this is particularly so in Asia where many of the smaller countries look to her for leadership and watch with anxious eyes to see how her industrial development is proceeding—a development they are all trying to emulate to a greater or lesser degree. In particular her declared policy of neutrality is one which many others wish to follow and, although the dispute over Kashmir has soured relations with her near neighbour, and may, as a result of recent events, lower her own prestige, the interest in her progress is unlikely to be much diminished. The second five-year plan has, in particular, attracted considerable attention with its emphasis on heavy industry. In India this is considered vital to enable her to improve, or perhaps only to maintain, the standard of living of her growing population and all reports indicate that the government is determined to achieve the targets even if this is not found possible within the stipulated period. China, as we have seen, is also moving in the same direction, although under a very different form of government but with the same emphasis on speed. Whether either will be successful in this rapid move towards industrialisation, the future alone can show but the success of one over the other would be viewed by many as a triumph for that form of government. The determination of India to retain her parliamentary institutions can be seen from the elections recently held—a massive piece of organisation—in which it is estimated that 200 million people have had an opportunity to vote at 200,000 polling booths. Success in her economic aspirations would strengthen such institutions not only in India but in many other

During 1956 sterling balances dropped by about £150 millions, the wholesale price index rose by 13% while the cost of living went up by about 10%. These were danger signals that could not be ignored and an interim budget was introduced in November. This imposed a tax on capital gains, increased super tax on dividends and gave the government control over the reserve funds of companies to insure that they "are put to uses which promote industrial development in accordance with the plan". Customs duties were also raised. To protect the external balances severe cuts were made in imports particularly consumer goods, and a ceiling was fixed on foreign exchange expenditure for the next six months. New projects in both the public and private sectors, which involve expenditure in foreign exchange, were postponed if no commitment had been made.

These and other measures, which there is not space to mention here, should have their effect but it remains to be seen whether they will be sufficient to halt inflation and reduce the drain on the foreign exchange reserves without any major adjustment of the plan. Meanwhile the International Bank is considering making loans for a number of projects and a survey of transportation is being carried out by a mission from that bank while arrangements have been made to purchase U.S.$200 millions from the International Monetary Fund.

These difficulties, which it is only proper I should mention, do not detract in any way from the considerable progress that has already been made or the magnitude of what is being attempted. Recently, for example, the Hirakud dam was opened which is claimed to be the longest in the world. This dam, mainly the work of Indian engineers, extends for about three miles with dykes on the

flank to a total of thirteen miles. For the future it is hoped to increase steel production during the period of the plan by four million tons a year which will mean doubling the capacity of two existing plants and building three new ones. Construction of heavy machinery is also planned and a mission from the United Kingdom has recently visited the country to advise on what is required.

These are only a few of the many interesting developments that are taking place but before I leave India there are two matters of interest to our offices there which I should like to mention. The first is the Reserve Bank of India (Amendment) Act 1956 which gives that bank power to vary the cash reserves which scheduled banks are required to maintain with it. The second is the Banking Companies (Amendment) Act 1956, which inter alia requires the appointment of managers of banks to be approved by the Reserve Bank of India. Although I understand that the powers given under both these measures are only intended to be held in reserve, they are none the less disturbing. Circumstances change and policies with them and a very recent example of this is the State Trading Corporation. This was set up to carry on trade with the Communist countries, where a government organisation was considered advantageous, but the corporation is now competing to quite a large extent in imports from other countries which were formerly handled by the private sector.

BURMA

In Burma the elections in April resulted in the expected victory for the government party although the size of the opposition vote was greater than expected. The government was faced with a considerable number of problems, of which the most important was to establish and maintain law and order, and it is disappointing that very little progress seems to have been made in stamping out insurgency. Economically the misgivings I expressed last year regarding the success of the disposal of rice under barter agreements were unfortunately proving only too well founded; and the failure to maintain a level distribution of commodities was evidence of the weakness of the administrative machine. There has been some improvement since then as rice shipments, on which so much depends, have increased, which combined with continued restriction of imports has resulted in the foreign exchange reserves rising by about 25%. Unfortunately there has been a disturbing increase in the cost of living which rose sharply by 20% in the first six months of the year but has since come back to about 10% higher at the end of the year. In an effort to improve the distribution of essential goods five import corporations, with capital subscribed jointly by the government and the public, were set up towards the end of the year. Four of these corporations will be issued with import licences for general consumer goods while the fifth will concentrate on the requirements of industry. Capital expenditure was considerably reduced during the year and was limited to carrying out projects which were already started and it was estimated that the deficit would be only half of what was originally expected, while a small surplus is hoped for in the coming financial year. A long-term loan of U.S.$25 million was recently made by the United States of America which will be used in various ways, ranging from the establishment of a medical centre to the expansion of the local air line and funds obtained from the International Bank will assist in the rehabilitation of the port of Rangoon and the railways. On the whole Burma seems to have overcome the difficulties caused by the fall in the price of rice since the end of 1953 and the over-ambitious development projects which were planned in the anticipation of a hign price continuing. An improvement in internal security and a reduction in the cost of living are two important problems that still remain.

During the year a number of discussions took place with China regarding the line of the frontier between the two countries. This has been a subject of dispute for many years as the exact line of demarcation has never been settled. A joint statement issued in December indicated that no decision had been reached although it seems likely that the Chinese will withdraw from the Wa States in return for the secession of three villages in the Kachin States.

CEYLON

The general elections held in April resulted in a sweeping victory for the People's United Front and Mr. Bandaranaike became Prime Minister of a government which was pledged to institute a Ceylonese Republic and adopt a socialist programme including nationalisation of certain industries. So far the government has proceeded slowly and no very drastic steps have yet been taken. Discussions on the British bases were held during the year and in the House of Commons in December it was announced that "the United Kingdom Government will hand over the bases of Trincomalee and Katunayake to Ceylon in 1957 on a date to be agreed between the two governments". At the end of the year the People's United Front suffered a defeat in the Colombo Municipal elections and last month Mr. Dudley Senanayake, who has considerable popular following, announced his return to active political life. These developments can be construed as a sign of a swing back to the United National Party although it is true to say that the People's United Front have relied to a great extent for their support on the rural areas. The Official Language Bill was passed in July prescribing Sinhala as the official language of Ceylon and this has resulted in considerable dissension among the Tamil community. In this controversy I hope that the recent remarks made by the Indian Prime Minister on the importance of the English language are not being overlooked.

The favourable balance of trade has shown a considerable reduction over the record surplus obtained last year but external assets were little changed at the end of the year from 1955. A further agreement with China to supply rubber in exchange for rice was signed in December and Ceylon will continue to receive a price above the average monthly Singapore market price, although the premium is a little lower.

The budget presented in July brought only minor changes in taxation comprising rises affecting those in the higher income brackets and a small increase in company rates of taxation. It appears that the development programme I referred to last year has not been found acceptable to the present government and a National Planning Council has been formed to prepare a new overall plan for economic development. This will inevitably result in delay as it is not so much in the planning that the weakness lies as in the lack of technical personnel to carry out the tasks. It was stated in June by the Auditor General that two thirds of the funds put up by Commonwealth countries under the Colombo Plan remain unused which seems to bear out this contention.

On the whole the emergence of a government with such different views from the previous one has resulted in a period of reflection with so far little change.

GENERAL

Sterling is still the medium for the finance of a large part of eastern trade and for this reason our office in London plays an important part in all our activities. Business there continues to increase and a further enlargement of our premises is becoming necessary. This we shall do by taking over the second floor of our building when the present lease expires.

New York office has naturally benefited from the increasing use of United States dollars in world trade since the war and has greatly extended its operation in recent years.

Our office in France was transferred from Lyons to Paris in 1953 at the time when the economy of Indo-China relied to a large extent on trade with France. This is no longer the case and with the dwindling of the traditional business, which had been previously handled, it was necessary to explore other avenues. In this I am glad to say we have been quite successful and I hope that this office will continue to build up satisfactory connections on its own.

Germany's increasing trade has been reflected in the turnover of our Hamburg office which continues to prove a most valuable link for our offices in the east.

To turn to our subsidiaries, the Hongkong and Shanghai Banking Corporation of California has made a good beginning and I hope that it will be able very shortly to contribute to the profits of the bank as a whole. The possibilities in the west coast of America are so extensive that the directors have decided to open also in Los Angeles and permission to do this has recently been obtained from the American authorities.

*

WORLD OF BUSINESS

(Continued from page 681)

that if better quality cane is available recovery can be increased by half or one per cent. In other words sugar production can be increased by five to ten per cent.

*

Non-Ferrous Metal

While the conditions, in the past years, in the non-ferrous metal ware industry, have been suggestive of a depression in the industry new developments have been recorded in the year 1956-57, which promise an improvement in the fortunes of the industry. The most important was the success, which the manufacturers, reported in persuading the Government to consider schemes for the manufacture of stainless steel in the country, to meet the demands of fabricators, of such articles both for domestic and industrial use. The scheme is now in the exploratory stage. Further the Government have also set up an export promotion committee to explore ways and means of expanding the export trade in metal ware. With a view to regulating the quality of the goods manufactured, the I. S. I. certification Marks Scheme was applied to the production of Aluminium utensils for export. The Mark guarantees production of Aluminium utensils to be of quality and standard as specified in IS 21-1953 Wrought Aluminium for utensils.

The relations between capital and labour also were marked by better mutual understanding. Some concerns have already adopted the principle of representation of workers on the board of management while others have agreed to guarantee for a fixed number of years certain fixed conditions to labour in return for which labour has promised not to resort to strike.

Production programmes for the industry envisage an increase in the production of copper, lead and antimony and the setting up of a smelter for zinc. In addition, an increase in the production of Aluminium from 30,000 tons to 40,000 tons has also been planned.

Mr. S. S. Kanoria's Presidential Address

Presidential Address of Shri S. S Kanoria Delivered at the Twentyfourth Annual General Meeting of the Indian Sugar Mills Association, held on Friday, the 5th April, 1957 at the Imperial Hotel, New Delhi.

Honourable Shri Jain and Friends,

It gives me great pleasure to welcome you to the 24th Annual General Meeting of our Association. In particular, it is my privilege to express to you, Sir, on my own behalf and that of the Indian Sugar Mills Association how deeply we appreciate the honour you have done us by your presence here to-day. It encourages us as a sign that the importance of the sugar industry in the national economy is recognised by those who guide the destinies of the nation.

The successful completion of the second general election in this country is a matter of most profound significance both to India and the World. We are aware as to how much depends on the success of the experiment in parliamentary government and democratic economic planning, which is now going on. All I wish to say on this matter, is that we in the sugar industry, and I am sure I speak in this matter, for the whole of Indian business enterprise, welcome the mandate which the electorate has given to the Congress Party, to govern the country for another five years. I would like to take this opportunity to assure the Government of our full and wholehearted co-operation in the great adventure on which we are all engaged, I mean the raising of the living standards of our people, through the economic development of the country, under the Second Five Year Plan.

SUGAR INDUSTRY AND THE FIVE-YEAR PLANS.

It is a matter of legitimate pride to us that the sugar industry has given such an outstanding account of itself during the First Five Year Plan and thereafter. Production in 1955-56, the last year of the First Plan, amounted to 1.86 million tons of sugar, thus exceeding even the revised target of 1.80 million tons. This represents an increase of 86 per cent over the pre-plan average production of one million tons, as compared to 33 per cent in iron and steel, 40 per cent in cotton textiles, 78% in cement, 12 per cent in jute and 58% in paper. In the White Paper on the Central Budget the 1957-58 it has been observed that sugar was the one notable case of a substantial increase in production among the established industries. It compares the remarkable achievement of the sugar industry, of increasing production in one year by 20.7%, to the much smaller increase, during the same period, of 9.8 per cent in cement, 4.2% in finished steel, 3.7% in mill-made cloth, 2.3% in cotton yarn, 6.4% in jute textiles, 4.7% in tanned hides, 2½% in coal and no increase in tea.

I believe that this impressive performance is only a foretaste of what the industry is capable of achieving. Under the Second Five Year Plan, the target of sugar production has been fixed at 2.25 million tons, an increase of .45 million tons from the last target of 1.8 million tons. There can be no doubt that this target is well within the capacity of the industry to achieve. In setting it, the planners appear to have been guided more by the expected increase in demand within the country than by the capacity of the industry for rapid expansion. But the emergence of India as an exporter of sugar introduces an entirely new element into the situation. I am glad that the possibility and importance of sugar exports, which have been long overdue, have now been realised.

NEED FOR EXPORT

I am convinced that the emergence of India as a substantial exporter of sugar is a development of highest significance, both for the sugar industry, as well as for the nation as a whole. It is my earnest hope that the foundations we have laid in the course of this year, will support a rising volume of exports in coming years. The advantages that planned development of sugar exports can confer on producers, consumers, the Government and the country as a whole, are numerous. Ours is an industry in which it is not possible to properly synchronise the increase in consumption with that of production. Some difference between them is inevitable, not only because of the uncertainty in regard to the rate of increase in consumption but also because of the dependence of this industry on the vagaries of nature which affect cane supplies. These differences can be ironed out by exports, the quantity for which can be varied according to internal conditions. Exports could act as a safety valve for regulating an even flow of supplies to the home market at stable prices. Again exports would enable a much more rapid expansion of the industry than would otherwise be possible, thus helping the movement towards industrialization, which the Second Five Year Plan stresses so much. Apart from providing investment opportunities and employment, this would materially benefit several lakhs of cane growers. As for the fear that sugar exports would lead to scarcity and a rise in prices, I think recent experience has proved how baseless this fear is. In spite of the export of one lakh tons now going on, sugar prices continue to be low.

Another very important consideration is the foreign exchange aspect of sugar exports. We are told that the foreign exchange deficit in the Second Plan will now be more than Rs. 1,100 crores originally estimated. The position is critical and every opportunity of additional earnings of foreign exchange needs to be taken advantage of, to the fullest possible extent. I think the contribution which sugar exports can make to relieve the foreign exchange shortage is generally under-estimated. Perhaps a few figures will help to put the matter in proper perspective. The present sugar export quota, which has been sanctioned, is one lakh tons. But I feel that, in course of time, we can export as much as 3 lakh tons, provided all possible efforts are made to increase production. This would yield about Rs. 24 crores of foreign exchange a year. In any case, over a five year period, I feel sugar worth about Rs. 75 to 100 crores may be exported. Surely this is not an insignificant sum. If by sugar exports we could pay for the foreign exchange requirements of one or two steel plants in five years, I consider it will be a remarkable achievement and a great step towards the successful implementation of our Five Year Plans. This addition to our dwindling foreign exchange reserves will be particularly welcome, because no substantial earnings by way of exports of sugar, were ever taken into account, by our planners.

POSSIBILITIES OF EXPORT.

When I talk of the need for exports in a big way, I am quite conscious of the state of the International sugar market in normal times and how difficult it is to sell sugar in view of the severe competition and limited market, specially for white sugar. But in view of our geographical position and the comparatively higher proportion of internal consumption, we are much better situated than many other sugar exporting countries and I am sure we shall be able to compete with them successfully, even with the United Kingdom and Formosa who are our main competitors.

The total world production of sugar is 39.1 million tons out of which 12 million tons are exported annually. The net imports of neighbouring countries, which may be considered as our natural markets are about 1.2 million tons as the following figures show:—

Actual imports of Sugar during the Calender year 1955 in tons:

Country.	White Sugar.
Aden	19,000
*Afghanistan	20,000
British East Africa (Excluding Zanzibar) ...	59,000
British West Africa ...	85,000
Burma	18,000
*China (Mainland) ..	1,00,000
†Ceylon	30,000
Iran	2,00,000
Iraq	1,20,000
Israel	73,000
Malaya (including Singapore)	1,75,000
Pakistan	80,000
*Saudi Arabia and other neighbouring territories	60,000
Sudan	90,000
‡Thailand	35,000
Vietnam	30,000
Zanzibar	4,000
	11,98,000

*Estimated.
†Another 1,20,000 tons of raw sugar was also imported.
‡Now self-sufficient.

I think that we can confidently expect to capture a substantial portion of this market, if a well-planned scheme for developing sugar exports is devised and implemented. I am aware that the present world price of sugar is abnormally high and is not likely to last. But even if prices decline they are likely to stabilise at higher levels than before and I am sure we can continue to export sugar at the expense of 4 to 6 as. per maund on our total production. This is a very small amount and would not mean any rise in internal prices. In this connection, you would recall that to initiate exports, this season, the industry had at one stage volunteered to contribute 4 as. per maund on the entire production of one season. You, Sir, were also kind enough to appreciate this gesture of the industry. Since then, however, the world markets improved and exports at a loss were no longer necessary. But in

this connection, I must clearly mention that all States, particularly U. P. and Bihar should refund the cane cess on that part of the sugar output which is exported. At one time, the Government of U. P. agreed to such a refund, but changed their minds when the world price of sugar rose and exports at a profit became possible. This sudden decision to go back on an earlier promise is difficult to understand or justify, since the profits earned on sugar exports are pooled in a separate fund and do not accrue to the manufacturers or traders. It seems to me to reflect a deplorable lack of foresight and of awareness of the crucial importance of earning foreign exchange, and I sincerely hope that they will reconsider the matter. We shall also need the co-operation of railways, through the grant of special rates for carrying sugar intended for export to the ports, as was the practice at one time.

EXPORTS BY I.S.M.A.

Before I turn from this matter of sugar exports, I would like to thank you, Sir, for having entrusted our Association with the business of exporting sugar. We feel that we have discharged this great responsibility with credit and have already sold about 80,000 tons of Indian sugar to a number of countries as follows:—

Sales upto 31st March, 1957.

East Africa	...	28,350 tons
Persian Gulf and Red Sea Ports	..	21,600 „
Malaya	...	13,750 „
Ceylon	...	8,250 „
Burma	...	6,000 „
United Kingdom	...	1,000 „
		78,950 tons

Out of the above, some quantities have already been shipped and we have been particularly careful about quality and believe that we have established sound and cordial relations with our foreign customers. You are aware that we are not making any profit on this business. The entire profit which is presently estimated at about 2 million rupees is being credited to a special fund to be utilised for meeting losses on exports as necessity arises. This excludes a sum of about Rs. 40 lakhs which should have come by way of rebate of cane cess on the above sales. We are particularly gratified that our efforts have been appreciated by the Government and thank you for having stated in Parliament that the Indian Sugar Mills Association was conducting the business of sugar exports efficiently and as a non-profit making organisation. Thank you, Sir, for your kind words. We assure you, Sir, that we shall continue our efforts to prove worthy of the high trust reposed in us. I wish to acknowledge also the great co-operation received in this matter by us from the various departments of the Government, including Central Excise, Railways, Customs, Shipping Companies etc. and above all, from the Food Ministry.

POTENTIALITIES OF INTERNAL CONSUMPTION.

Expansion of production follows as a natural corollary from expansion of exports. But quite apart from increasing production in order to meet the needs of the export market, there is an enormous scope for increasing output for home consumption. We know that, by world standards, our per capita consumption of sugar is extremely low and it is certain that as incomes and living standards increase, this gap will be narrowed. Furthermore, the regional consumption pattern within the country is marked by wide inequalities as evident from the following:—

Statewise consumption of sugar per capita during the Season 1955-56.

Saurashtra	.. ..	34.66 lbs.
Bombay	.. ..	25.05 „
Punjab	... ...	22.50 „
West Bengal	... ...	21.14 „
Madhya Bharat	... ...	14.38 „
Assam	.. ..	10.05 „
Madhya Pradesh	.. ..	9.87 „
Rajasthan	... ...	9.81 „
Mysore	... ...	9.63 „
Uttar Pradesh	... ...	8.46 „
Bihar	.. ..	6.96 „
Hyderabad	.. ..	6.24 „
Madras	... ...	5.50 „
Orissa	... ...	3.36 „
Other States including Andhra		19.15 „

We may be sure that, in course of time, the low consumption areas like Orissa, Madras and Bihar will tend to rise to the level of others such as Saurashtra and Bombay. This will involve a substantial increase in overall internal demand and will provide opportunity for an equally great increase in production. Besides, with the industrialisation of the country, other demands for sugar particularly from the fruit processing and confectionery industries will also tend to rise.

NEED FOR EXPANDING PRODUCTION AND LICENSING POLICY.

It seems to me, then, that the most urgent problem facing the industry is that of expanding production. We have to extend output, both to meet a rising internal demand and in order to provide for exports. I believe that a very substantial increase in production is possible, provided the maximum use is made of the available resources. I may also sound here a note of caution. Our hopes regarding exports of sugar and earning foreign exchange may be completely belied if effective steps are not taken to maximise production.

Let me review briefly the progress made so far to meet the targets of 2.25 million tons production and 2.5 million tons installed capacity, fixed under the Second Five Year Plan.

Licences have been granted for expansion to 69 existing factories for a total additional crushing capacity of 35,583 tons of sugarcane per day, which amount to 3.8 lakh tons of sugar a year Besides, licences have been granted for the establishment of 54 new factories, for a total crushing capacity of 52,600 tons of sugarcane per day, which amounts to about 6 lakh tons of sugar a year. Further, two factories have been set up in Punjab, by utilising old plants and one factory is due to be established similarly in U. P. which would mean about 0.28 lakh tons of sugar a year.

I regret to have to say that the present licensing policy of the Government leaves much to be desired and licences have been granted without proper consideration as to the allocation of capacity between the existing and the new factories or regions. Expansion of existing factories can be carried out more cheaply, more quickly and with less foreign exchange than will be needed for the setting up of new factories. Already the average Indian sugar factory is small, compared to those in other countries. An increase in size and reduction in the number of factories bring substantial reduction in costs. In Australia, in recent times, the number of factories was reduced from 166 to 34 who are now producing the entire output of about 1.2 million tons of sugar. As against this, a very large number of new factories have been licensed here. Progress made so far in regard to the utilisation of the additional capacity so far licensed, is satisfactory. The 69 factories, which were allowed expansion, have already taken the necessary steps for increasing their capacity, except for 12 factories which were granted expansion licences, only in December, 1956. Out of the new factories only 4 went into production last season, including two mills shifted and 14 were due to start this season but were delayed due to late arrivals of machinery. Orders for machinery are reported to have been placed for another 22 new factories for establishment during the season 1957-58 but this again is uncertain. In respect of the remaining 17 units, progress has been slow and a few of the licences might eventually have to be cancelled. Recently difficulties have been faced in securing licences for importing machineries for expansion. This deserves your personal attention.

The location of the new units licensed seems to have been decided without any forethought or proper planning. In some cases the newly licensed factories are to be set up very near the existing ones, with the result that both will suffer from shortage of cane. I earnestly hope that at least in future, if any further capacity is to be licensed, the claims for expansion existing units will be given priority over setting up of new units. In any case I would strongly urge that factories should be allowed to expand freely at least upto a capacity of 2,000 to 2,500 tons, if cane is available, which should now be considered an economic size.

Again, there seems to be a lack of co-ordination between the programmes for cane development and that for sugar production in the Second Plan as demonstrated by the following table:—

States.	Additional Capacity licensed including expansion of existing units (in terms of Lac Tons sugar)*.	Quantity of Cane requirement for the additional capacity. (Lac Tons).	Additional Production of Cane targetted by the Second Five-Year Plan. (Lac Tons).	Difference of Col. 4 & Col. 3 (Lac Tons).
1	2	3	4	5
U.P. ...	2.40	24	115	91
Bihar	0.40	4	10	6
Bombay	2.50	24	9	—15
Andhra	1.10	11	5	— 6
Madras	0.75	8	11	3
Punjab and Pepsu ...	0.90	9	24	15
Orissa	0.04	0.4	1	0.6
West Bengal	0.20	2	7	5
Other States	0.75	7.5	2	— 5.5
Total ..	9.04	90	184	94

*Figures on the basis of full particulars of licenses received by ISMA so far.

A study of the regional distribution of increased cane cultivation and sugar production programmes as per above shows that in some areas the additional capacity is quite inadequate to utilise the expected increase in cane supplies. In others, licences have been granted for sugar production where no provision has been made for increase in cane supplies. This has resulted in strange anomalies. In West U.P. for instance, the grower has been required to restrict cane cultivation, because the industry is not capable of absorbing the entire supply. This is an extraordinary situation, at a time when the industry is in the process of rapid growth.

Even from the point of view of regional self-sufficiency, the grant of licences for additional capacity appears to have been overdone. In the Southern zone, comprising the old States of Andhra, Hyderabad, Mysore, Madras, Travancore-Cochin and Orissa, consumption in 1955-56 was approximately 3,24,000 tons and has been estimated to rise to 3,79,000 tons by 1960-61. Actual production in this area in 1955-56 was 2,54,000 tons. Additional capacity licensed for this area is 3 lakh tons, which means that there will be a surplus of 1,75,000 tons by 1960-61. Therefore, the licensing of 3 lakh tons additional capacity, most of it in the form of new factories, seems unwarranted specially in view of shortage of foreign exchange for imports of machinery and the need for expansion in other areas. I feel that

if the representations by the industry in the matter were given due consideration, the position would not have been so anomalous. It is also strange that the Development Council for Sugar Industry, which is mainly concerned with this, did not have any say in the matter and no serious discussion ever took place on the subject. The members were only presented early this year with a fait accompli in the form of figures of the new capacity already licensed.

UTILISATION OF EXISTING CAPACITY

I would like to suggest that a very substantial increase in production could be accomplished by bringing the existing idle factories into production. There are at present about 18 such factories with a daily crushing capacity of 5,777 tons of sugarcane. Many of them are very small units but still it would be worthwhile to make an all-out effort to bring some of these factories which are comparatively bigger back into production which may increase output by about Thirty to Forty thousand tons.

There is also a great possibility of increase in sugar production this year by converting gur into sugar. This will improve the present low prices of gur and also provide us with more sugar to export and earn valuable foreign exchange. For this purpose, suitable concessions by way of rebate in excise duty should be immediately announced.

Another avenue of stepping up production, which seems to me to hold great possibilities, is the duration of the season. The following table shows that a very large number of factories work for a much shorter period than the normal duration of 140 days:—

SEASON 1955-56.

Frequency distribution of the number of factories according to the duration of the season.

Duration (days)	No. of factories	Daily crushing capacity of cane Tons.
Below— 60 ...	5	4,100
61— 80 ...	8	7,767
81—100 ...	9	8,945
101—120 ..	21	20,611
121—140 ...	22	17,594
141—160 ..	26	23,660
161—180 ...	18	19,962
181—200 ...	13	17,058
Above—200 ..	21	29,071
Total ..	143	1,48,768

I have calculated a duration of 140 days on the basis of 165 gross working days by working of factories from 15th November to 30th April or say 1st November to 15th April which must now be considered as normal under the changed circumstances. On this basis, an additional production of about 2,10,000 tons per annum can be secured if such factories are enabled to work for the full season. I know this sounds highly impractical, because most of these factories are in East U.P. and Binar where over-crowding makes it impossible for them to secure their full cane requirements. I venture to say that the remedy lies in shifting such factories to more suitable sites. Such a planned redistribution of productive capacity will improve the present depressed condition of these areas and at the same time, will secure a notable increase in production, with no further drain on our resources or frittering away of foreign exchange reserves.

EAST U.P. AND BIHAR FACTORIES

Another matter which seems to me to call for urgent action is the conditions of factories in East U.P. and, to some extent in Bihar too. The health of the entire industry requires that the weaker and diseased limbs are given proper treatment, lest they infect the industry in other areas. Factories in Eastern U.P. and Bihar have been operating, for some time, under severe drawbacks. They suffer from overcrowding, shortage of cane supplies, uneconomic crushing period and low recovery. Factories in East U.P. are also realising lower prices for their sugar being away from the markets. The situation is precarious and is rapidly deteriorating. I am sorry to say that in some ways, government action has tended to aggravate the situation. The action of the cane department in U.P. in some cases has amounted to taking advantage of the weak cane position of such factories to compel them to pay a premium on the cane price. Another instance of the unhelpful attitude of the government to the problems of this area, is the unwillingness to accede to the suggestion put forward by this Association, speaking for the entire industry, that factories in East U.P. should be given a 10 per cent lead in quota releases over other areas This does not involve any increase in the overall release. It is only a re-distribution of the quantity released among the different areas, to compensate the Eastern U.P. factories for the disadvantages they are suffering under the present quota release system. I am rather pained at the Government's unsympathetic attitude on this question.

It has long been evident that the only real remedy for the problems of this area is shifting of some factories to other areas. I believe that it is necessary to shift ten to twelve factories out of this region immediately so that the remaining ones would have adequate supplies of cane for a full crushing season, and opportunities for expansion. It has been suggested that the government was powerless in this matter, because the factories concerned were not willing to shift. The truth is that even with government's willingness to bear a part of the cost of shifting, the factories are in no position to raise the finance needed and even the incentives to induce them to shift are lacking. I would suggest that if loans upto Rs. 20 lakhs at least were granted by the Government on liberal terms and cane cess on the cane crushed in the new areas after shifting was not charged for two or three years, the proposals for shifting would become practicable. The exemption from cane cess does not really cost the State Government anything, because, in the area from which the shifting takes place, the cane will certainly be crushed by the remaining factories and in the new areas, the factories would be crushing cane which would not otherwise have been crushed at all. On the other hand, after a period of two to three years the crushing activities of these factories will bring additional revenue from cane cess. There should also be a special cane development programme in these areas where the problem is very difficult because of extremely small holdings of land. Until such time as cane develops and factories are shifted they should be granted a rebate in cess so that they may survive. This season the situation is very distressing and calls for immediate relief as the recovery is abnormally low as evident from the following:—

Period Ending	East U.P. To-date recovery This season	East U.P. To-date recovery Last season	Bihar. To-date recovery This season	Bihar. To-date recovery Last season
30-11-56	8.35	8.11	8.35	8.50
15-12-56	8.62	8.90	8.60	8.83
31-12-56	8.83	9.24	8.96	9.19
15- 1-57	9.07	9.52	9.12	9.41
31- 1-57	9.16	9.68	9.25	9.60
15- 2-57	9.23	9.83	9.40	9.73
28- 2-57	9.34	9.90	9.48	9.82

In this connection we should also remember that the prosperity of the cultivators in East U.P. and Bihar is linked up with the sugar industry and its existence in a healthy state is absolutely essential for their prosperity as well.

CANE DEVELOPMENT

It is hardly necessary for me to stress the dependence of the sugar industry on adequate supplies of high quality cane. At present, the position in this important matter of raw material is far from satisfactory. The low sucrose content of the cane supplied to the factories makes for low recovery and high cost of production. If better quality cane enabled us to increase recovery by half or one per cent that would mean five or ten per cent additional sugar.

I believe that there are great possibilities of increasing recovery by a judicious choice of the sowing season and the use of early, mid and late ripening varieties of cane, together with a system of harvesting on the basis of maturity of cane. This would provide a continuous supply of cane for crushing over a much longer period than the present duration of the crushing season. I feel it is now time we begin to think in terms of longer crushing season for the maximum utilisation of our resources. Unfortunately, the cane departments of the State Governments have not paid adequate attention to this matter. In fact the Cane Rules in U.P. and Binar do not permit harvesting on the basis of maturity on the plea of equitable supplies of cane.

The cane departments of State Governments have recently been doing some good work, but as now constituted, they are entirely inadequate to tackle the gigantic problem. The officials of these departments are overwhelmed with routine work and, in any case, I feel it is too much to expect from them, the vision, imagination and dynamism which are required. With about 28 crore maunds of cane supplied annually to factories and probably another 50 crores converted into gur in U.P. alone, the problems of cane development are of a magnitude and complexity that call for attention at a higher level than they now receive. They are worthy of consideration by a special Minister.

I have yet one more suggestion to make on this subject. I feel that the money now being spent on cane development does not produce the maximum possible results. There will, I am sure, be great improvement if the expenditure of these funds were to be channeled through the factories, who, after all, are most immediately and intimately interested in adequate and high quality cane supplies. The factory could be made the nucleus of cane development in its area and all the money allotted by the State and Central Government for cane development in factory zones could be spent through the Cane Development Council of each factory, where growers, management and Government are represented.

While on the subject of cane development, I congratulate you, Sir, on the wise decision of the Government that farms attached to sugar factories should be excluded from the purview of the legislation fixing land ceilings. It is heartening to us to see this demonstration of Government's awareness that these factory farms are centres of cane development, growing better quality cane and more efficiently than the ordinary cultivator does on his holding, and are also research centres, whose activities confer benefits on cultivators in those areas.

CANE PRICE

My final point with regard to sugarcane is a plea for stability of cane prices. Frequent changes in these prices have a disruptive effect, not only on cultivatrs' incomes, but on the quantity of cane grown and that offered to factories and used for gur, production costs and prices of sugar. It is because of this desire for stability that the Association advised the Government to maintain the minimum prices of sugarcane unchanged for the 1957-58 season in spite of the fact that cane prices were higher than those of other food crops.

RESEARCH AND MODERNISATION

In the matter of research, we are extremely conscious of the deficiencies of the existing institutions.

The Indian Institute of Sugar Technology is very inadequately staffed and the factories are not getting the benefit of its technical advice to improve their working or to modernise their plants. I am most anxious that India should not lag behind in this race for improvements and advanced scientific techniques of production. With your assistance and support the Indian sugar industry may even start a research organisation of its own. In the meanwhile, I commend for your consideration, the recommendation of the Sugar Delegation to Australia and Indonesia that autonomous sugar research boards should be set up. We should also take the necessary steps to provide training facilities for technical personnel for the sugar industry. Shortage of such persons and the resulting scramble for the limited number available is tending to hamper the development of the industry.

The need for rehabilitation and modernisation of plant and machinery has already been recognised by the Planning Commission, who have estimated the amount required for this purpose at Rs. 50 crores. I venture to urge upon you, Sir, that you use your good offices so that the National Industrial Development Corporation might extend the same financial assistance for this purpose to the sugar industry, as it already does to the jute and cotton textile industries.

SUGAR PRICES AND COSTS

Another matter to which I think it necessary to invite your attention is that of internal sugar prices. What I wish to emphasise is that contrary to common belief, Indian consumers are very much better off, in this respect, than their counterparts in other countries. I give below some figures of retail prices of sugar in different countries of the world, compiled by the International Sugar Council.

Retail price of sugar in different countries on 1st January, 1956.

Country	Per pound Pence	Per seer Rs.	A.	P.
Yugoslavia ...	18.6	2	2	1
Italy ..	15.7	1	12	9
Japan ...	14.8	1	11	1
Greece ...	14.6	1	10	9
Germany (F.R.) ...	12.2	1	6	3
Sudan ...	12.5	1	6	6
France ...	12.3	1	6	4
Indonesia ...	10.5	1	3	3
Formosa ...	9.9	1	2	1
U.S.A. ...	9.0	1	0	1
United Kingdom ...	8.5	0	15	7
Canada ...	7.8	0	14	4
Phillipines ...	7.5	0	13	9
Australia ...	7.2	0	13	2
Malaya ...	7.2	0	13	2
India ...	6.9	0	12	8
Cuba ...	5.8	0	10	7

According to them, the Indian consumer pays less for sugar than those of most other countries. For instance, consumers here pay less than in the U.S.A., France, the Federal Republic of Germany, Japan, Malaya and Phillipines. They pay even less than consumers in the leading sugar producing countries of the world such as the United Kingdom, Australia and Indonesia. This will come as a surprise to many, who do not realise that the chief sugar exporting countries of the world, deliberately keep prices for home consumers high so that sugar may be exported and sold in the world market at cheap prices. Those who form their impressions on the low prices at which other sugars are sold in the world market are usually not aware of the other side of the picture, that such cheap sugar is not for the home consumers in those countries, but only for export.

What is even more remarkable is that while the index number of wholesale prices has been steadily rising, sugar prices have remained at a depressed level, despite increases in taxation and rising production costs. This can be substantiated by the following figures of price indices published by the Reserve Bank.

Commodity	March, 1955	March, 1956	Variation 2 over 1
food articles			
Rice ...	415	518	+ 24.8
Wheat ...	435	532	+ 22.3
Jowar ...	102	225	+120.6
Bajra ...	223	237	+ 6.3
Gram ...	192	284	+ 47.9
Gur ...	136	186	+ 36.9
Sugar ...	281	265	— 5.7

The White Paper on the Budget for 1957-58 also comments on this stability of sugar prices at a time of inflationary pressure. I hope that these facts will effectively dispel the wrong notions about sugar industry. The Tariff Board has already said that technical efficiency of Indian sugar factories compares favourably with those in other countries. You have also been kind enough to tell the Parliament last year that the industry works under a rigid cost structure. The recent delegation to Australia and Indonesia has already established that cost of production in India is much lower as compared to those countries. I, therefore consider it a remarkable achievement that in spite of the heavy taxation, inferior quality of cane and with lower productivity of labour we are till able to supply our consumers sugar at a price lower than many other countries.

BY-PRODUCTS

No industry can develop which does not make a profitable use of its by-products. This side of the sugar industry has not so far received the attention which it deserves. Proper utilization of by-products will help to lower the cost of production of sugar, it will stimulate the growth of other industries and even holds possibilities of earning foreign exchange through exports.

One of the most important of these by-products is molasses. By the end of the Second Plan, production of molasses is expected to amount to 8 to 9 lakh tons. The industry will be faced with a serious problem in disposing of this surplus. At present the price of molasses permitted to Indian factories is much lower than in other parts of the world and there is an urgent need to raise this price suitably. The principal consumer of molasses is the power alcohol industry which is not in a position to pay a higher price on account of heavy taxation and the high mixing costs allowed to oil companies. Some relief to the power alcohol industry in these matters, seems necessary, and a rise in the price of their products should be allowed. Other uses of alcohol such as the manufacture of DDT, acetate rayon, polythene, synthetic rubber and others are developing. But, allowing for all this, a surplus of molasses will remain and I wish to urge that possibilities of its export regularly should be examined. There is a good demand in foreign markets and if facilities such as railway transport by tank wagons are made available, I am confident that export trade of a fair size can be built up. I understand that already a beginning has been made in this direction and sales of about half a lac tons of molasses are almost finalised.

Another important by-product is bagasse. I am glad that the possibilities of using bagasse as a raw material for manufacturing paper are now being realised and I welcome the decision to establish a factory for the purpose at Shakarnagar. The development of the paper industry under the Plan may result in a shortage of bamboo. Bagasse would be the answer to this problem.

Cane-trash could be utilised as a fuel and wax could be extracted from sulphitation press mud. The potentialities are great and I think an expert committee should survey the field and examine the possibilities of economic utilisation of all the by-products of the sugar industry.

LABOUR

I firmly believe that good relations between labour and management are vital to the efficiency and progress of any industry. The year under review was marked by an agreement on payment of bonus to workers in U.P., involving a sum of about Rs. 1 crores 50 lakhs. In addition, Provident Fund facilities have been introduced for the benefit of the workers in the sugar industry. At present, the industry is facing a demand for an increase in wages. I would be inclined to view such a claim with sympathy. I am convinced that a strong case exists for wage increases, but only on certain conditions. One of these is that the workers must be willing to respond to the higher wages with efforts to raise productivity. Our workers have still a long way to go before they attain productivity standards comparable to those of other countries. In Australia, the average quantity of sugar produced, per worker is 144 tons and in Java it is 40 tons. The corresponding figure for India is only about 10 tons. So I say, the industry will be happy to pay higher wages, if the labour proves worthy of his hire. My second condition is that wage increases must proceed parallel with rationalisation. If employers are reluctant to adopt improved techniques of production because of the fear that they would be burdened with surplus labour, it is surely evident that eventually everyone is worse off, labourers, employers, consumers and Government.

While on this subject, I feel it necessary to draw attention to the decline in standards of discipline, the tendency to resort to go-slow strikes and adopt coercive methods. Unless these dangerous tendencies are halted, I fear that our efforts to raise production and develop the country industrially will get a set back.

Lastly, I hope I shall not be accused of an attempt to make Jack a dull boy through all work and no play, if I suggest that we have far too many holidays in this country. The number of man hours we lose and the resulting loss in production, will, I am sure, be a staggering figure, if some one took the trouble to calculate it. But I seriously feel that for an undeveloped country, where increase of production is of paramount importance we should work a little more, even if that means playing a little less.

I.S.M.A.

Before I conclude, gentlemen, it is fitting that I should say a few words about this organisation of ours. The Indian Sugar Mills Association is the only all-India body representing the industry. It was started immediately after the grant of tariff protection to the industry, and in the twenty four years of its life, it has built up an indisputed position of leadership of the industry. I believe we can look back with pride on the work of the Association in these years. I take this opportunity of acknowledging the good work being done by our several branches in U.P. and Bihar and the valuable cooperation we have been receiving from the various regional Associations affiliated to it, the South Indian Sugar Mills Association, the Deccan Sugar Factories Association and the Madhya Bharat Sugar Mills Association.

Publication of the journal "Indian Sugar" is proceeding satisfactorily and it is developing into a useful organ of opinion and information on matters relating to the industry.

The past year has been memorable in the history of this Association because of the great responsibility conferred on it by our appointment as the sole agency through which sugar exports would be carried on. This was an entirely new activity for this Association but we went ahead and built up a Sugar Exports Division absolutely from scratch. I believe, in all modesty, that our performance has been creditable and, once again, I express to you Sir, our deep sense of gratification at your acknowledgement of appreciation of our activities. We shall continue to strive to be worthy of your trust, I personally believe that sugar exports have a great future and I shall always regard it as a particular privilege to have been associated with the initiation of this development.

This year the Association also set up a separate division to deal with the problem of factory farms. The work is expanding and has already borne fruit, in the matter of land ceilings. We are also going to set up a branch in the Punjab shortly where a number of new factories mainly co-operatives are coming up. We are legitimately proud that our membership is open to all and almost all the co-operative factories which are coming into production are finding it useful to become our members.

Gentlemen, I have taken up much of your time, but I shall not detain you much longer. I thank you for your presence here to-day. To you, Sir, I wish to say one final word of appreciation and gratitude for your constant attention to our problems and difficulties and your sympathy and readiness to consider our difficulties whenever we had occasion to meet you. To the members of the committee of the Association, I say a very special word of thanks. As the youngest member of that body, I have had to rely heavily on the experience, wisdom and judgment of my distinguished colleagues. Whatever I have been able to accomplish in my capacity as the President of the Association, would have been impossible but for their generous and unstinted co-operation. The Secretary of the Association, Mr Mehta has won my deep appreciation by his unfailing readiness to carry out his onerous duties. I have drawn heavily on his time, his energy and his patience and he has never let me down. The staff of the Association have also worked cheerfully and willingly. I thank all of them.

I would like to end on a personal note. This year, as President of the Indian Sugar Mills Association, has been, for me, an exciting and enlightening experience. I consider it a rare good fortune to have been honoured with such a high office and grave responsibility, while yet comparatively young. What I shall treasure most is the awe-inspiring sense of participating in the efforts for economic regeneration of the country, which, I am convinced, will be regarded by future historians, as one of the most momentous chapters in the history of our country. I am acutely conscious of the fact that the system of private enterprise, of which we are a part, is at the cross-roads. Whether it will take the road leading downwards to decline and extinction or upwards to higher levels of national prosperity, depends largely on us. I, for one, look to the future with faith; faith in the capacity of our leaders, both political and economic to help this country to accomplish successfully its great mission of planned economic development through democratic institutions.

I request you, Sir, to inaugurate the twenty-fourth annual general meeting of our Association.

Industrial Information

Eighth Census of Indian Manufactures: Increase in Number of Factories and Capital Investment

According to the Report of the Eighth Census of Indian Manufactures for 1953, which covered 20 former States in India, the number of registered factories in the country increased to 7,104 in 1953 from 6,758 in 1949.

At the same time the productive capital investment in these factories, including the fixed and working capital, increased to over Rs 728.65 crores from about Rs 509.58 crores.

The Report, which has just been published, was compiled under the Industrial Statistics Act of 1942. The census did not cover Jammu and Kashmir and the former States of Madhya Bharat, Hyderabad, Mysore, Travancore-Cochin, Bhopal, Bilaspur, Manipur, Tripura, and the Andaman and Nicobar Islands.

For the purposes of the census, only registered factories which used power and employed 20 or more persons per day were taken into account. Although the industries had been classified under 63 heads, the census had so far been confined to 29 of these industries.

The industries covered by the census are cotton, woollen and jute textiles, chemicals, iron and steel, aluminium, copper and brass, general and electrical engineering, cement, glassware, ceramics, plywood and tea chests, paper and paper boards, matches, bicycles, sewing machines, electric lamps and fans, soaps, paints and varnishes, distilleries, starch, vegetable oils, sugar, fruit and vegetable processing, biscuit-making, rice-milling and wheat flour.

The Report says that the gross ex-factory output was valued at over Rs 1,112.67 crores in 1953 as compared with about Rs 969.37 crores in 1949. There had been, however, a decline in the number of workers and supervisory personnel. Their total number was about 16.28 lakhs in 1953 as against 16.85 lakhs in 1949, according to the Report.

The publication contains valuable statistical information about the factories in various industries, their capital, employment and output. In the Report there is a chapter for each industry in which details about the number of factories, distribution of ownership and gross receipts, consumption of materials, fuel and power, manufacture of products and by-products, salaries and other benefits to employees are given.

This was the eighth census to be conducted under the industrial Statistics Act though it began on voluntary basis in 1944. Before the end of each calendar year, notices are served on factories calling for the submission of returns relating to the succeeding year. Although the census is statutory, in practice returns are not received from all factories. Returns for 1953 were not received from 10 per cent of the factories. Efforts are being made to make the census report complete with information about all factories.

The Industrial Statistics Act of 1942 which applied originally to the former British India was extended after Independence on different dates to the Princely States which were incorporated in the Union. Thus the areas covered by the census, conducted under the Act for the years 1946 to 1953, were gradually extended. The census for 1954 is under compilation.

Provision repealing the Act has been made in the Collection of Statistics Act of 1953 which came into force on November 10, 1956. Under the new Act, the Centre will be responsible for the collection of data relating to the industries scheduled under the Industries (Development and Regulation) Act.

PRODUCTION OF LATHES IN H.M.T. FACTORY

In February 1957, 22 lathes were manufactured in the Hindustan Machine Tools Factory at Bangalore, bringing the total number of lathes so far manufactured to 132.

During the second fortnight of the month, four lathes were despatched to the Works Manager, North Eastern Railway, Gorakhpur. Lathes in stock in the factory at the end of the month were 21.

Work in connection with the construction of labour quarters, assistants' quarters and officers' quarters, water supply and drainage is progressing satisfactorily.

OUTPUT OF COAL DURING JANUARY 1957

India produced 3,627,151 tons of coal during January, 1957, according to official statistics released by the Chief Inspector of Mines.

Despatches during the period amounted to 3,136,523 tons and stocks at pitheads were 2,780,298 tons.

During the month under review 833 collieries were reported to be working with an average daily employment of 348,056 workers.

Output per man-shift was estimated at 1.13 tons for miners and loaders, 0.60 ton for all workers under ground and in open-workings and 0.40 ton for all persons employed including surface workers.

The percentage of absenteeism was of the order of 13.01.

Nine coke plants at collieries and elsewhere produced 385,503 tons of hard, soft and other kinds of coke during the month and despatched 210,444 tons.

ELECTRICITY OUTPUT

During December, 1956, 757 public electricity supply undertakings generated 879.5 million kilowatt hours (kwh), of which 715.0 million kwh. were sold to ultimate consumers. Power production during November, 1956, was 808.6 million kwh. This shows an increase of 70.9 million kwh. in December.

Five purchasing undertakings were the new additions during the month. These are at Balikuda and Bhulnakhara in Orissa and Ahmedpur, Kalgunj and Basirhat in West Bengal.

The output and sale of power during December, 1955, were 784.3 million kwh. and 648.8 million kwh. and during December, 1939, 236.2 million kwh. and 198.4 million kwh. respectively.

FURTHER QUOTA OF RAW WOOL RELEASED FOR EXPORT

The Government of India have reviewed the policy for export of raw wool and have decided to release a further quantity for export during the period April-September, 1957. Exports will be allowed by established shippers and new-comers as in the previous period.

The details of the licensing procedure are being notified by the export trade control authorities concerned.

STANDARD VACUUM COMPANY SURRENDERS DUTY CONCESSION

Under the agreement between the Government of India and the Oil Refinery Companies, Government had agreed to grant to the companies, for a period ten years from the date when full-scale operations commence or until December 31, 1956, whichever is earlier, a duty protection of annas -/2/- per imperial gallon on motor spirit. This protection has been given by

JESSOP AND COMPANY, LIMITED.

Notice is hereby given that the Directors have declared the payment, on 1st. May, 1957, of the Dividend on the 5 per cent Cumulative Preference Shares of the Company for the half year ending 30th. April, 1957, without any deduction in respect of Income Tax payable by the Company.

The Preference Share Transfer Register will be closed from 29th. April to 30th. April, 1957 both days inclusive.

Dividends will be paid only to Registered Shareholders or their Mandatees.

By Order of the Board,

A. K. THAKUR,
Actg. Secretary.

63, Netaji Subhas Road,
Calcutta-1.
5th. April, 1957.

Stock Exchanges

LACK OF FAITH

Watch-Dog Writes:

TRADING in stock markets continues to be characterised by lack of faith. In the absence of any sustained support, the volume of business continues to be restricted and prices have been giving way, in some cases, quite substantially. The only relieving feature of the week's trading is the slight recovery noticed in selected scrips towards the close, thanks to better Bombay advices.

Apart from a slight recovery in selected Engineering and Miscellaneous scrips, interest on the Calcutta Stock Exchange was at a low ebb.

The Bombay Stock Exchange staged a sizable recovery from the recent low levels on short-covering and replacement buying, especially at the close of the week.

On the Madras Stock Exchange, sellers generally predominated in Planting and Textile sections and the price drift was not arrested.

The Budget statement was well received on the London Stock Exchange and sentiment was helped to a great extent by the Chancellor's mild optimism regarding the economic outlook.

Wall Street closed firm with the list showing a fairly good representation of gains, ranging mostly to two points or so.

*

Calcutta

Calcutta, Thursday Evening.

THE local Stock Exchonge witnessed another quiet session during the week under review. The volume of business continued to be restricted as the general tendency was to shorten commitments. Apart from the shortage of foreign exchange which continued to be a source of anxiety, the continued strigency in the money market and the drain of money on new issues provided a great hurdle for the operators. A good deal of uncertainty also centred on the dividend policy. Thanks to the rumours that the Central Budget might not be placed before the Lok Sabha before June or July, prices of selected scrips staged a market recovery at the close although higher levels could not be retained due to profit-taking.

The Giltedged market continued to be quiet with business reduced to small scale. Selling pressure and effective buying alike were absent and prices moved within a narrow range. 3 per cent 1986 Conversion Loan opened at Rs 74.31 and, after touching a high of Rs 74.75, receded at the close to Rs 74.12.

Except for some enquiry in United Commercial at Rs 53 to Rs 53.50, Bank shares also ruled quiet in sympathy with the giltedged section.

Despite a brighter outlook in the coming months and steadier advices from the jute goods market, Jute shares were completely neglected due to the continued disparity between the cost of the raw material and the prices ruling for manufactured goods. Howrah moved narrowly Rs 15 and Rs 15.87; National between Rs 18.20 and Rs 19.60 and Nuddea between Rs 20 and Rs 29.25. Khardah were on offer at Rs 119 against Rs 121 and Standard at Rs 58 against Rs 70. Budge-Budge were, however, unchanged at Rs 89.

Coal shares were listless in view of the numerous difficulties facing the industry. Burrakur continued to be sticky at Rs 21.25, while Equitable were marked down to Rs 20.87 from Rs 23.25, to finish better at Rs 21. New Beerbhoom were offered at Rs 14.68 to Rs 14.87 against Rs 15.12 and South Karanpura at Rs 8.19 to to Rs 8.31 against Rs 8.44. Western Bengal changed hands at Rs 5.19 to Rs 5.31.

The declining trend was general and continuous in Textiles. The main disturbing factor was the fear that mill profits for the current year would be considerably less if the present level of excise duty was maintained. Kesoram eased off further to Rs 13.56 from Rs 14; Cawnpore to Rs 6.12 from Rs 7.06; New Victoria to Rs 1.81 from Rs 1.87 and Bowreah to Rs 115 from Rs 120.

Sugar shares also turned quiet despite persistent rumours with regard to the possibility of the Government sanctioning another export quota to the extent of 54,000 tons. This was mainly due to fears entertained in some quarters with regard to an additional levy of excise duty on sugar in the May Budget. Only two exceptions to the general trend were Belsund having support upto Rs 11.37 from Rs 10.75 and Darbhanga upto Rs 23.37 from Rs 20.75 following the announcement of an increase in dividend in the case of the latter company. Carew were, however, offered at Rs 7.22 to Rs 7.44 against Rs 7.56. SKG were enquired upto Rs 10.50 from Rs 10.19 following the announcement of Re 1 per share on the increased capital as against Rs 1-12 on the old capital.

The Tea section continued to record only few dealings in the absence of support, mainly due to divided opinion with regard to the outlook for the new season. Banarhat were marked down to Rs 282 from Rs 296; Brooke Bond to Rs 18.06 from Rs 19.25; Bishnauth to Rs 19.12 from Rs 20.06; East India to Rs 26 from Rs 26.25; Hantapara to Rs 171 from Rs 173 and Tezpore to Rs 19.87 from Rs 20. Huldibari were, however, a very steady feature at Rs 23.25 with Methoni meeting with sustained enquiry upto Rs 18.94 from Rs 18.75.

Price movements in the Engineering section were rather irregular due to alternate buying and selling. Indian Irons opened at Rs 18.64 and, after improving to Rs 19.12, receded to Rs 18.86, to recover again at the close to Rs 19.42 on better Bombay advices. New shares changed hands at Rs 17.60 to Rs 18.45, while Renunciation Rights hardened to Rs 4.22 from a low of Rs 3.81, touched early in the week.

Among other Engineerings, TEXMACO opened at Rs 18.00 and, after touching a low of Rs 17.88 and a high of Rs 18.60, finished at Rs 18.50. An increase in dividend from 15 to 20 per cent caused Marshalls to harden to Rs 4.85 from Rs 4.31, while Jessop closed better at Rs 23.25 after touching a low of Rs 22.10 from Rs 22.81. Richardson changed hands at Rs 15 to Rs 15.50 and Indian Galvanizing at Rs 18.94 to Rs 19.06.

Miscellaneous issues followed the general trend of the market. Orient Paper opened lower at Rs 30.00 and receded further to Rs 29.95 at which level some speculative support pushed up the rate to Rs 30.46, finally closing at Rs 30.50. Titaghur changed hands on the ex-dividend basis at Rs 33.44 to Rs 33.87, while India Pulp were a shade quieter at Rs 21.62 against Rs 21.81 and Shree Gopal at Rs 15.44 against Rs 15.62. Indian Copper were a narrow market, moving between Rs 3.12 and Rs 3.18. Indian Cable changed hands at Rs 23.75 to Rs 25.00; India Steamship at Rs 9.87 to Rs 10.06; Rohtas at Rs 16.50 to Rs 17.00; Rallis at Rs 29.25 to Rs 30.00; Dunlop Rubber at Rs 24.75 to Rs 25.06; Osler at Rs 5.50 to Rs 6.06; National Carbon at Rs 26.31 to Rs 26.75; NICCO at Rs 19.37 to Rs 19.69 and Indian Aluminium at Rs 12.56 to Rs 12.81. Alkali Chemicals turned quiet at Rs 11.08 against Rs 11.43.

*

Bombay

DALAL STREET passed through another week of nervousness and prices touched new low levels before finishing better. There was a good deal of distress selling as well as bear pressure at the outset. Later on, with irregular price movements, the market staged a fair recovery to finish on a steady note.

Various conjectures have played a notable part in imparting some sort of steadiness. However, confidence in the ability of the market to stage any smart recovery is lacking in view of the continued apprehensions of heavier taxation in the month of May.

There had been rumours in Dalal Street that the Budget might be again postponed; but there is no truth in that rumour.

The Finance Minister is coming to Bombay on Thursday with a view to acquaint himself with the latest developments; and hopes are expressed in certain circles that further measures may be devised to augment resources in the money market. There are also rumours that the Central Board of Directors of the Reserve Bank is not feeling happy with the grave developments in the investments markets of the country and suggestions might be made to proper quarters for retrieving the position. Otherwise, it is felt that the loan programme of the Central Government might meet with serious difficulties.

Meanwhile, the observations made by "Indian Finance" in its last week's issue for "Pity the Investor" have been grately appreciated in Dalal Street and it is hoped that, unless the cause of the investor is taken up in right earnest by all the interests concerned, the middle class investor will be reduced to a state of pauperism.

The Giltedged market is once again in doldrums.

Bank shares were a shade easy. Bank of India, after dropping to Rs 131, finished at Rs 132. Bank of Baroda were done at Rs 97.50, while Central terminated at Rs 48.

In Insurace, New India touched a new low levels of Rs 38.75.

Electric shares were a shade easy. Ahmedabad, after being done at Rs 92.50, met with buyers at Rs 93.25. Tata Power were enquired at Rs 1,190.

In Steels, Tata Steel Ordinary slumped to a new low of Rs 163.25, to recover to Rs 167, to relapse again to Rs 164.50, to firm up at the close to Rs 168.50. Indian Irons terminated at Rs 19.30 after declining to Rs 18.65.

Following are the production figures of the TISCO for the year 1956-57 as compared with the previous year (in tons):—

	1956-57	1955-56
Pig Iron ..	1,155,500	1,150,000
Steel Ingots ..	1,073,600	1,059,000
Saleable Steel ..	797,500	800,000

Cotton Mill shares were weak although they recovered most of the lost ground at the close. Bombay Dyeing, afer dropping to Rs 535, looked upto Rs 550. Century, as anticipated here last week, has maintained the final dividend at Rs 14, thus making a total of Rs 22 per share. Kohinoor declined to Rs 318, to recover to Rs 326 c.d. The shares will be listed ex-dividend on Thursday. Svadeshi, on hopes of a dividend of Rs 14 and Tata Mills on expectations of a dividend of Rs 4, turned steady.

Among other Industries, ACC slumped to Rs 155.25, to recover to Rs 159.25 on hopes of an interim price increase of Rs 2 to Rs 2.50 in the price of cement.

Sugar shares were easy, but turned steady at the close.

In Automobiles, Premier, after touching a low of Rs 85, rallied to Rs 88.50.

Elsewhere, Scindia Steams were sold down to Rs 18.30, to move up to Rs 19.20. Bombay Burmah, after a nose drive to Rs 563, were marked up to Rs 580. Tata Chemicals were marked down to Rs 15.60, to recover to Rs 16.10. Premier Construction touched a new low of Rs 159.50, to move up to Rs 163.50 at the close.

MACNEILL & BARRY LTD.

Notice is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent per annum for the half-year ended 31st March, 1957.

Payment will be made on 1st May, 1957 to those Preference Shareholders whose names appear on the Company's Register on that date or in accordance with their instructions.

By Order of the Board,
J. H. G. Whitfield,
Acting Secretary.

2, Fairlie Place,
Calcutta-1, 10th April, 1957.

Ahmedabad

CONDITIONS in the Ahmedabad share market were quietly steady though, in tune with the weakness of other centres, the fall in prices was only moderate. Atul Products were, however a weak spot on rumours of a further increase in capital and considerations of large carry-over charges following closure of Transfer Books. The shares, after dropping to Rs 154.50, finished at Rs 157. Calico Mills, after declining to Rs 524, improved to Rs 530. Arvind Mills afer easing off to Rs 1,035, steadied up to Rs 1,050. New Shorrock were marked at Rs 875. Arun Mills were reported at Rs 605; Marsden at Rs 222.25; Jupiter at Rs 250; New National at Rs 470 and Saraspur at Rs 450.

*

WORLD OF FINANCE

(Continued from page 678)

The payments of the Central and State Governments have left their substantial impress upon their respective balances with the Reserve Bank. In spite of receiving credit against Rupee Coin for Rs 5 crores, and in spite of receipts from State Governments, the Centre's balances are lower by Rs 3.98 crores. In the case of the State Governments, year-end payments have also been presumably made to the Central Government as their Deposits have, firstly, declined by Rs 24.05 crores to Rs 7.90 crores; and their indebtedness to the Reserve Bank has, secondly, risen by Rs 8.00 crores to Rs 15.65 crores.

Balances Held Abroad have been relatively steady, the drop during the current week being one of Rs 1.49 crores to Rs 112.82 crores. Investments, by dint of the transfer to the Issue Department, are at Rs 91.97 crores against Rs 121.22 crores.

The transactions of Governments have also had a substantial impact upon the figures of member banks as contained in the returns of the central banking institution. Firstly, Banks' Deposits are higher by Rs 2.23 crores at Rs 60.00 crores. Secondly, borrowings from the Reserve Bank have been reduced, with the latter's Other Loans and Advances declining by Rs 21.83 crores to Rs 106.34 crores. Thirdly. Scheduled Banks' borrowings against usance bills are lower by Rs 13.22 crores at Rs 58.32 crores. Finally, fresh borrowings under this head are, for the first time in the current busy season, for a negligible figure: the running total is higher only by Rs 2.38 crores at Rs 173.79 crores.

It is to be presumed that the entities which received payment from the Central and State Governments during the last week of March have utilised such cash partly in reduction of any bank overdrafts that they might have. In any case, these payments have undoubtedly gone to benefit the Deposits of Scheduled Banks. It would appear that the member banks have, in turn, utilised such resources in reducing their indebtedness to the Reserve Bank.

That, in this regard, the lion's share of the benefit has gone to the State Bank is borne out in its weekly return for April 5. Firstly, Borrowings are sharply lower by Rs 10.35 crores at Rs 1.56 crores; and this, it is interesting to note, is the lowest level of Borrowings since September 7, 1956. Secondly, Advances have declined by Rs 2.23 crores to Rs 182.91 crores. Thirdly, cash balances have marked a further improvement of Rs 3.04 crores to Rs 26.07 crores, almost all of it being in respect of cash and balances with the Reserve Bank; and this is the highest level of cash balances since February 3, 1956.

Deposits have topped the Rs 300 crore mark with a rise of Rs 1.57 crores to Rs 301.47 crores. Even if we take account of the fact that the State Bank has had a windfall in this regard, in the form of counterpart funds, the augmentation in Deposits over the past year is of impressive proportions.

The return of Scheduled Banks for March 29 discloses that Deposits rose by Rs 13.67 crores to Rs 1181.61 crores. Since, in the relevant week, Deposits of the State Bank rose by Rs 20 crores, it is clear that the other member banks actually experienced a decline in theirs. Presumably, the strain of tax payments overran into the last week of March. This would also explain the increase of Rs 5.57 crores to Rs 103.16 crores in Borrowings from the Reserve Bank, as well as the sharp rise of Rs 15.20 crores to Rs 897.77 crores in the total of Advances. It is, however, possible to suggest that Scheduled Banks would, in their return for April 5, disclose a further increase in their Deposits coupled with a sharp decline in Borrowings from the Reserve Bank.

+

Hind Bank

The accounts of The Hind Bank Limited for 1956 show a negligible change in deposits and other accounts at Rs 5.118 crores against Rs 5.125 crores in the previous year. Investments, similarly, are largely unchanged.

Cash balances are placed Rs 16 lakhs higher. There has been a reduction in advances from Rs 3.80 crores to Rs 3.49 crores. At this level, the advances deposits ratio works out to 68.1 per cent, and the liquidity ratio is at a very satisfactory 47.5 per cent of deposits.

The income earned by interest and discount is higher by Rs 4.39 lakhs at Rs 24.21 lakhs. Commission, exchange and brokerage are more or less unchanged at Rs 11.35 lakhs. Interest paid has absorbed Rs 2.15 lakhs more, and salaries and allowances have taken up Rs 8.8 lakhs against Rs 7.61 lakhs. In the result, the balance of profit has improved to Rs 12.11 lakhs from Rs 10.86 lakhs.

The provision for taxation is Rs 4.50 lakhs. Bonus to staff receives Rs 0.90 lakhs. The transfer to the reserve fund is one of Rs 3.75 lakhs, and the Reserve Funds are placed at Rs 26 lakhs against the share capital of Rs 50 lakhs and share premium account of Rs 3.75 lakhs. The dividend paid is maintained at Rs 3 per share, and the carry forward is Rs 1.62 lakhs against Rs 1.66 lakhs brought in.

Investments of the Hind Bank are shown in the balance sheet at below market value.

+

Canara Bank Limited

The earnings of Canara Bank Limited for the year ended 31st December 1956 are substantially higher at Rs 74.45 lakhs and compare with Rs 55.07 lakhs recorded in the previous year. But for the careful policy pursued by the bank in the matter of granting advances, its earnings would have been much higher. This is borne out by the fact that the bank's advances at the end of the year were 52.3 per cent of deposits as against 71.5 per cent of deposits for Scheduled banks as a whole. The directors point out that the bank's pattern of total advances as against deposits, while no doubt affecting earnings, has made for easy liquidity.

The Balance Sheet total stands at Rs 20.55 crores as against Rs 17.66 crores at the end of 1955. Deposits and Other Accounts are higher at Rs 14.32 crores and are made up of Rs 5.87 crores under Fixed Deposits, Rs 2.58 crores under Savings Bank Deposits and Rs 5.87 crores under Current Accounts, Contingency Accounts, etc. Bills for Collection amount to Rs 2.26 crores while Acceptances, Endorsements and Other Obligations account for Rs 2.41 crores. Reserve Fund and Other Reserves at Rs 32 lakhs are Rs 3 lakhs (represented by transfer from current year's profits) higher than the Issued, Subscribed and Paid Up Capital of Rs 29 lakhs.

On the other side of the ledger, Cash Balances are placed at Rs 2.24 crores while Investments stand at Rs 5.13 crores of which Giltedged Securities account for Rs 4.90 crores. It may be noted here that at the corresponding date of the previous year, the relevant entry in this regard showed only Rs 3.87 crores. Advances at Rs 7.73 crores are also sizeably higher than those in the last year when they totalled Rs 6.08 crores.

Of the total income of Rs 74.45 lakhs which compare with Rs 55.07 lakhs in 1955 Interest and Discount have contributed Rs 49.54 lakhs while Commission, Exchange and Brokerage account for Rs 20.13 lakhs. A large part of the increase in income has been absorbed by Interest Paid on Deposits, Borrowings etc. which is placed at Rs 26.73 lakhs. Salaries and Allowances also have taken a larger share, having been placed at Rs 23.30 lakhs. The Balance of Profit at Rs 12.32 lakhs is over Rs 2 lakhs higher than in the previous year. With the balance brought forward from previous account together with the transfer of Rs 30,000 from Golden Jubilee Bonus to Shareholders Fund, the total available sum for distribution amount to Rs 12.81 lakhs. Out of this amount are paid an ad interim Golden Jubilee Dividend at 5 per cent (Rs 75,000) and a Golden Jubilee Bonus to Staff (Rs 65,000). After transferring Rs 3 lakhs to Reserve Fund and providing Rs 4.60 lakhs for income tax, the remaining sum of Rs 3,81,002-1-3 has been disposed of as follows. to preference dividend Rs 52,500; to ordinary dividend at 10 per cent (same as last year) Rs 1,50,000; to bonus to staff Rs 1,40,000 and to carry forward Rs 38,502-1-3.

+

The statement of the State Bank of India for the week ended April 5 reveals a slight increase in deposits to Rs 301.47 crores from Rs 299.90 crores in the previous week. Borrowings from other banks have sharply declined by Rs 10.35 crores to Rs 1.56 crores, while other liabilities, including inter-office adjustments, are shown at Rs 2.50 crores against Rs 2.29 crores.

On the assets side, cash balances have improved by Rs 2.97 crores to Rs 24.40 crores with Investments slightly lower at Rs 105.42 crores against Rs 105.72 crores. Advances show a decline of Rs 2.23 crores to Rs 182.91 crores—'Loans, Overdrafts and Cash Credits' showing a drop of Rs 2.56 crores and 'Bills Discounted and Purchased' for a rise of Rs 0.32 crores.

+

According to the returns of the Scheduled Banks for the week ended March 23, both Demand and Time Liabilities have risen, the former by Rs 7.37 crores to Rs 708.45 crores and the latter by Rs 6.30 crores to Rs 473.16 crores. Borrowings from the State Bank are slightly higher by Rs 0.05 crores at Rs 11.49 crores, while those from the Reserve Bank have risen by Rs 5.57 crores to Rs 103.16 crores. Cash and balances with the Reserve Bank are shown at Rs 88.32 crores against Rs 89.24 crores and Investments at Rs 347.41 crores against Rs 348.09 crores. Advances in India show a rise of as much as Rs 10.53 crores: Inland Bills of Rs 3.08 crores and Foreign Bills of Rs 1.59 crores to Rs 721.77 crores; Rs 117.06 crores and Rs 58.94 crores respectively. Money at call and short notice stands at Rs 10.57 crores against Rs 12.78 crores.

INDUSTRIAL INFORMATION

(Continued from page 707)

maintaining an import duty on motor spirit of annas -/2/- per gallon higher than the excise duty on locally manufactured motor spirit. The concession was granted to encourage the oil companies to set up refineries in India.

The Standard Vacuum Refining Company of India Limited commenced operations in 1954 and attained full scale production in October 1954. Following discussions with the Ministry of Production, the refinery company has agreed to surrender the duty protection of annas -/2/- per gallon on motor spirit produced by them with effect from October 1, 1956, and to refund the money already realised on account of this concession after that date. The surrender of this concession by the Company will result in additional revenue to Government of the Order of Rs 1.2 crores annually for approximately eight years. The Standard Vacuum Refining Company has also undertaken to increase their output and manufacture certain new products which would also result in a saving of foreign exchange to the extent of approximately Rs 1.2 crores per annum from 1958. The increase in output would open further possibilities of earning foreign exchange.

THREE PER CENT INCREASE IN AREA UNDER COTTON

The All-India Third Estimate of Cotton for 1956-57 puts the current years area and production at 18,084,000 acres and 4,084,000 bales (of 392 lbs each of cotton lint) as against the Adjusted Third Estimate of 17,553,000 acres and 3,382,000 bales respectively for 1955-56 according to the Directorate of Economics and Statistics, Ministry of Agriculture. This shows an increase of 531,000 acres or three per cent in area and 702,000 bales or 20.8 per cent in production over last year.

The production of cotton seed is estimated at 1,429,000 tons during 1956-57 as against the corresponding Adjusted Estimate of 1,184,000 tons for 1955-56, thereby showing an increase of 245,000 tons or 20.7 per cent.

INDIAN FACTORY FOR CONSOLIDATED PNEUMATIC

A programme of expansion in overseas markets is evident in the announcements which have been issued over the past few months by the Consolidated Pneumatic Tool Company Limited of London and Fraserburgh. This receives further emphasis with a statement just released advising the formation of a new company under the title of the Consolidated Pneumatic Tool Co. (India) Private Ltd.

The new company which came into being on February 28th. 1957, has a Directorate comprising Mr G. J. Coffey, Mr Norman Readman and Mr V. Nimbkar (Managing). It will operate in Bombay where new factory premises will be constructed.

The primary purpose behind this development, is the manufacture of CP products within the country, and it is expected that operations will be in full swing by the end of this year.

Consolidated Pneumatic products scheduled to be made in India are pneumatic tools, rock drills and demolition tools, pumps, and air compressors.

The new Company will be complementary to the Consolidated Pneumatic branches in Bombay and other Indian cities, as the entire sales and service organisation will continue without change, and will handle CP products of the British, Indian and USA factories.

FIVE FOLD INCREASE IN SHIPBUILDING PRICES DURING 1937-1955.

The index number of shipbuilding prices for the 19-year period from 1937 to 1955 compiled by the UK Chamber of Shipping at the request of the Board for Trade show that shipbuilding prices during this period have increased five fold. Even during the post-war period (1946-55) the price has nearly doubled itself.

The following are the index numbers of the yearly average of the building prices of ships (coasters and passenger vessels excluded) delivered to UK owners by UK Yards from 1937 onwards.

(Basis: 1950=100)

Year of Delivery.	Deep-sea Cargo Liners & Tramps.	Deep-sea Tankers.
1937 ...	28	28
1938 ...	33	39
1939 ...	36	44
1940 ...	38	48
1941 ...	44	57
1942 ...	53	64
1943 ..	56	67
1944 ..	60	71
1945 ..	63	72
1946 ..	73	74
1947 ...	78	83
1948 ...	84	89
1949 ...	92	95
1950 ...	100	100
1951 ...	107	105
1952 ...	114	108
1953 ..	125	123
1954 ..	136	134
1955 ..	145	143

There is every likelihood that the figures for 1956 will show a further rise of the same order as the increases in recent years.

The cost of repairs and surveys, a large item in the shipowners' budget, has also increased in line with building costs, and there has been a further increase in wages agreed by the National Maritime Board operated from May.

MANUFACTURE OF FOUNTAIN PEN INK

A scheme for the manufacture of fountain pen ink has been prepared by the Small Industries Organisation of the Ministry of Commerce and Consumer Industries for the guidance of small industrialists.

The process of manufacturing fountain pen ink (blue black) is explained elaborately in a booklet issued by the Organisation. The booklet gives the basic data on the requirements of machinery and equipment, raw materials, capital investment and manufacturing cost.

Characteristics of quality fountain pen ink, tests for ascertaining the quality, common defects in the manufacture, their probable causes and the ways to remedy them have all been described in detail in the booklet. The booklet contains also lists of firms from whom raw materials and equipment are available. As modern inks are formulated in different ways, a list of patents and journals is given which are useful for reference and consultation.

Despite a considerable increase in the production of fountain pen ink in India, it is still being imported in the country. The production in 1955 was 7,43,000 dozens of 2 oz phials as compared with about 5,33,600 dozens of 2 oz phials in 1953.

A large increase, at present, in the production of fountain pens and the growing percentage of literacy in the country would ensure an increase in the internal consumption of fountain pen ink.

EXPORT OF LINSEED OILCAKE

A limited quota of linseed oilcake has been released for export from the Calcutta port during the period April-June 1957 or till the ceiling is reached, whichever is earlier, to all permissible destinations, says a trade notice issued by the office of Joint Chief Controller of Imports and Exports, Government of India, Calcutta. Shipment against this quota will be allowed up to the end of June 1957 or till the ceiling is reached, whichever is earlier. The maximum quantity that an exporter will be allowed to export from all the ports taken together will be 75 tons only.

According to the same source, the trade agreement between the Government of India and the Royal Iraqi Government has been further extended. It will now remain in force without any change for a further period of one year from January 1, 1957.

KHARIF PRODUCTION OF SMALL MILLETS GOES UP SECOND ESTIMATE FOR 1956-57

The all-India second estimate of small millets for 1956-57 puts the current year's area and production at 11,527,000 acres (Kharif and Rabi) and 1,728,000 tons (Kharif only) as against the corresponding adjusted estimate of 11,535,000 acres (Kharif and Rabi) and 1,601,000 tons (Kharif only) respectively for 1955-56, according to the Directorate of Economics and Statistics, Ministry of Agriculture. This shows a negligible decline of 8,000 acres or 0.1 per cent in area (Kharif and Rabi) and an increase of 127,000 tons or 7.4 per cent in production (Kharif) during the current year as compared to the previous year. Production estimates for Rabi crops will be available at the final estimate stage only.

There is only a nominal fall in area under small millets this year as compared to last year. The decline recorded in Madhya Pradesh, Andhra Pradesh and Mysore have largely been offset by increases in Uttar Pradesh, Bihar and Rajasthan.

Despite the decrease in area, the production of Kharif small millets during the current year shows a sizeable increase due generally to favourable weather conditions during growing period of the crops. The increase in production has been reported by all the States except Bombay and Mysore.

This estimate generally covers the period up to the middle or third week of January, 1957. Till then, the condition of standing crop was reported to be generally satisfactory except in parts of Visakhapatnam, Nellore, Kurnool and Cuddapah districts of Andhra Pradesh and in parts of Himachal Pradesh where the crop were affected by excessive rains, during the south-west monsoon period.

This estimate does not include the entire area sown to small millets since only preliminary estimates of area in respect of Rabi crop have been included in the estimate. Complete estimates of area sown to both Kharif and Rabi small millets will be included in the final estimate.

NEW RECORD SET UP BY BOMBAY PORT

The tonnage handled at Bombay port during 1955-56 was 10,305,799 setting up a new record in the history of the port. Imports during the year accounted for 6,707,000 tons and exports 3,599,000 tons.

The corresponding imports and exports, during the previous year were 5,630,000 tons and 1,954,000 tons, respectively. Imports of iron and steel showed increase as compared with the previous year, the figures being 140,900 and 281,000 tons, respectively.

The number of vessels which entered the port during 1955-56 was 2,621. The number of sailing vessels that used the port during 1955-56 was 24,191.

Amongst important works on which expenditure was incurred during the year was the construction of a new marine oil terminal (Rs 164.75 lakhs).

HEAVY BOOKING OF ORDERS AT HINDUSTAN MACHINE TOOLS

There has been heavy booking of orders with the Hindustan Machine Tools during the month of March 1957—185 machines valued at Rs 75 lakhs having been booked during this period. This brings the total orders booked during the whole financial year 1956-1957 to 292 machines valued at Rs 115 lakhs. Despatches during the year amounted to 119 machines, leaving forward orders pending execution on April 1,1957 of 173 machines, valued at Rs 70 lakhs—roughly equivalent to the production of seven to nine months forward at the current rate.

The factory registered a production increase of 237 per cent of its original targets laid for financial year 1956-57 which has just ended. Although production commenced during the middle of the financial year, it was stepped up to 135 lathes as against the target of 57.

For the Investor

Imaginary Conversations

Investment Gossip:

FOR the Investor, this past week has been an important one. Both in public statements and in private discussions, Authority has been displaying a keen awareness of the role allotted to free enterprise in the implementation of the Second Plan. We have had, for example, the unambiguous and forthright definition by Mr Nehru in New Delhi; the no less forceful and frank utterances of Mr Morarjee Desai in Calcutta; and the tactically significant visit of Mr T. T. Krishnamachari to Bombay. For the moment, I am not interested in the published statements, since they would have been taken due note of by investors; instead, I intend in this Gossip to indicate the likely trend of the private conversations in which Mr Desai in the Eastern capital and Mr Krishnamachari in Western capital have both participated. I set down below, in the form of dialogue, an imaginary, but nonetheless imaginative, discussion: the dramatis personae being the Minister and that old acquaintance of mine, Barabar Kushi, the Pandit.

£R$

(The scene is the Eastern capital; the Minister is being feted to a dinner; and who should be sitting by his side but the Pandit. Small talk was being indulged in, when, suddenly, drama began to be enacted with the asking of a question by the Pandit.....)

£R$

The Pandit: Why do Ministers say things that harm the Stock Exchange?

The Minister: Don't speak to me of your Stock Exchange! They have twice before stabbed me! They are today serving only as gambling dens for the bears to get their satta. You put down the prices when you feel like it, and lay the blame on official statements ....

The Pandit: No, no, what I meant was that something was to be done for the investors and the middle class man, who are finding things very difficult, with share prices greatly down.

The Minister: You don't represent the middle class. You are in the minority of the ten per cent of the Indian population, whereas I have been elected by the ninety per cent: and, if I do not look after their interests, your ten per cent will not be able to survive. Why don't you recognise this, instead of always complaining that you cannot make as much money as you used to

The Pandit: I am not complaining for myself, but Ministers saying that they will be like Robin Hood are hurting the morale of stock exchange, and.....

The Minister: But you are foregetting that a Robin Hood is a do gooder; and if a Minister says he will be like one, he is merely satisfying the desires of the ninety per cent.

The Pandit: But you will nevertheless admit that firm stock exchange prices are necessary if the investor is to make a success of the new capital issues?

The Minister: I do not understand these insinuations about the impact of things said by Ministers upon stock exchange prices. You have charged that a Minister, if he says that he is going to be Robin Hood, indirectly causes a decline in share prices. Now, will you tell me what sort of stock exchange you have, when the most reassuring statements by the Prime Minister and me are not thought to be sufficiently helpful in raising the morale of the market? I have not seen any evidence of an improvement in share price consequent to the specific assurances given by the Prime Minister and me.

The Pandit: I confess that the stock exchange seems to be more responsive to things of the bear genre than to influences which would lift up share prices. I still think, however, that there must be a clear indication by Government of the manner in which private enterprise is to be helped in performing its allotted task.

The Minister: Let me reassure you, again, that we envisage the private sector as having a vital role in the Second Plan. Moreover, if you send your representatives to Delhi, you will find out in what specific manner we intend to help the private sector to expand and to increase production. Secondly, I want to point out that it is unnecessary for the private sector to think that the State will gradually be assuming greater and greater responsibilities for production. There were, of course, certain spheres of production which had to be undertaken by the Government. These we have taken up; for the rest, we can spare neither the time nor the effort; we are adequate neither in administrators nor in business talents, to think of adding substantially to our responsibilities. But, while assuring you that we are giving every possible help to the private sector to expand, we shall be forced to take the responsibilities ourselves if the private sector, in the event, does not fulfil the targets laid down for it. So, I want you to think of the Second Plan as providing immeasurable scope for the private sector to expand. I also want you to feel that it is vitally incumbent upon you to undertake and to complete all such expansion.

£R$

(Let us leave this after-dinner discussion when the conversation is on such an optimistic note. We shall now wing our way to the Western capital, to eavesdrop upon another imaginary conversation between, shall we say, the Minister and the Governor).

£R$

The Minister: I have come here particularly to find out the means whereby the Government can render such facilities as will enable the private sector to fulfil the targets laid down under the Second Plan. Tell me, have you given thought to the question of the facilities which the private sector will need?

The Governor: I have been closely following the banking situation in this country; for, I feel that one of the vital pre-requisites for the successful completion of its tasks by the private sector is the sufficient availability of all kinds of banking accommodation.

The Minister: I agree that the banking situation in the recent past has merited very close study indeed. What do you feel about one aspect of bank credit, accommodation for short term periods in the form of working capital?

The Governor: Undoubtedly, the demand for working capital has increased very substantially over the last few years. What is more, we must be prepared to see an even greater increase in the next few years. At the same time, however, the advances of the banking system, in relation to deposits, are already at as high a level as they can be. So, it seems to me that it is necessary to calculate whether the increases in deposits in the future will be of sufficient size to cover the increase in advances. If we find that the normal increase in deposits is not of sufficient size, it will be necessary for us to suggest ways and means by which the flow of deposits into the banking system can be quickened.

The Minister: On this particular question, let me interrupt you to give you some of my views. We

(Continued on page 747)

HIGHLIGHTS

Is Mr Nehru, and are his colleagues, inimical to Free Enterprise? The answer is in the affirmative, if one were influenced by impressions fostered by what the spokesmen of Big Business say on all and sundry occasions, by the echoes heard on the Stock Exchanges and in some sections of the press.

The answer is in the negative, if you read the Leading Articles in this issue.

Wait for the next week's second article in this series; and you will be convinced that no Government, functioning anywhere in the world, have done so much good to national industry as the Nehru Government.

It is time Big Business realises the suicidal folly of a campaign which is founded on misrepresentation and which is calculated to foul the economic climate whose healthy conditioning is of direct concern to progress and prosperity.

The Battle of the Sectors has no sense. It must at once be called off.

Grouses against taxes all the time make no sense. A correct perspective and a patriotic approach must take the place of the present carping.

Balance-Sheet Reviews:

Marshall, Sons & Company (India) Limited has produced satisfactory working results for the year ended 30th June, 1956. Sales have shown an increase to Rs. 2.56 crores from Rs 2.12 crores in the previous year; but the trading profit shows a decrease, due to keenly competitive market conditions which have necessitated a reduction in the margins of profit realisable.

The net profit for the year, before providing for Taxation and Depreciation, amounts to Rs 5,05,959 as against Rs 4,79,472 in the previous year. In respect of allocations to Funds, the sum set aside to Depreciation is raised to Rs 1.17 lakhs from Rs 1.03 lakhs while the Taxation amount is slightly lower at Rs 1.90 lakhs against Rs 2.00 lakhs. The dividend is raised to 20 from 15 per cent.

According to the Directors' report, the company has had the satisfactory co-operation with the Britannia Engineering Company in the working of the Marshall-Britannia Agreement for the indigenous manufacture of tea machinery. The directors have also reported a further joint undertaking with the Britannia Engineering Company for the indigenous manufacture of steam road-rollers, which will soon be available for sale.

Moreover, the Marshall Electric Motors, which are being indigenously manufactured by the companyy, are in very great demand. Again. with the curtailment of imports, the company has found it essential to explore every avenue leading to sources of indigenous manufacture of the various items of machinery with which the company has been so long associated. To this end, the company has received a licence from the Government of India for the indigenous manufacture of Baxter Stonebreakers.

£ R$

SKG Sugar

Shree Krishna Gyanoday Sugar Limited has reported a substantial increase in sales for the year ended 31st July 1956 although the net earnings are lower as compared to the previous year. The company's factories at Hathwa and Lauriya crushed 35,74,870 maunds and 38,97,662 maunds of sugarcane and produced 3,59,307 maunds and 3,89,216 maunds of sugar respecly, the cane crushed at Lauriya being the highest recorded so far.

Total sales have risen to as much as Rs 2.38 crores from only Rs 1.11 crores, while the net profit, before providing for Taxation and Depreciation, amounts to only Rs 14,68.505 as against Rs 18,66,708 in the previous year. The directors have, after allocating Rs. 5.83 lakhs (Rs 5.67 lakhs) to Depreciation and Rs 4.10 lakhs (Rs 7.25 lakhs) to Taxation, recommended a dividend of Re 1 on the increased ordinary capital as against Rs 1-12-0 per share on the original capital.

£ R$

Mahindra & Mahindra

Mahindra & Mahindra Limited has presented excellent working results for the year ended 31st October, 1956. This has enabled the directors to step up the dividend on the Ordinary shares from 10 to 12½ per cent.

Sales for the year have gone up to as much as Rs 14.00 crores from only Rs 5.73 crorres, while the gross profit amounts to Rs 48.82 lakhs as against Rs 25.23 lakhs in the previous year. The directors have set aside Rs 2.15 lakhs (Rs 1.51 lakhs) for Depreciation; Rs 16.00 lakhs (Rs 9.50 lakhs) for Taxation and Rs 10.00 lakhs (nil) for General Reserve.

In this connection, it may be added that the company was converted into a public limited company in June, 1955.. In July 1955, the capital was increased by the issue of Ordinary shares of the face value of Rs 21.63 lakhs and Preference shares of the face value of Rs 25 lakhs.

£ R$

National Rayon Corporation

The working results of the National Rayon Corporation Limited are in line with the market expectations. The net profit amounts to Rs 58.33 lakhs after providing Rs 60 lakhs for Depreciation and Rs 26.61 lakhs for Taxation. Other allocations are: Rs 17 lakhs to General Reserve; Rs 10 lakhs to Deferred tax Reserve; Rs 10 lakhs to Debenture Redemption Fund and Rs 2 lakhs to Gratuity Reserve. The Ordinary dividend is Rs 12 per share; but a bonus of Rs 2 per share

Hostile to Free Enterprise?

More Factories, More Expansion . . . !

FROM the way in which some spokesmen of Big Business have been utilising all and sundry occasions for diatribes against every aspect of Government's economic policy and programme; from the way in which the professional gladiators in the Stock Exchanges have construed every policy statement and policy decision as a blow to trade and industry; and from the way in which certain sections of the press have offered withering criticism of all measures of taxation, planning, and social and economic reform, the impression likely to be fostered is that, with Mr Jawaharlal Nehru at the head and the congress ministers at the Central and State levels, congress Governments, out of ignorance and predilections, because of obstinacy and cockiness, are leading the country to economic ruin, serfdom and totalitarianism.

It is time we face the simple and straightforward question: Are the Government the enemies of economic consolidation and progress; or are they trusty, earnest and knowledgeable champions and guardians of national economy in the most comprehensive view of the phrase, fashioners, and creators of a new social and economic pattern, of a new India with political freedom and stability, social justice and well-spread economic well-being, all achieved through policies and projects which are in loyal accord with democratic principles and processes and which seek scrupulously to match worthy means to worthy ends?

Our own answer is that it is only narrow preoccupation with self-interest and sectional interest and unreadiness or incapacity to see the nation's social and economic problems as an integrated whole, that generates doubt and scepticism about Government's bonafides and wisdom in the economic sphere. In support of our contention, we may, at the outset, examine the Government's performances and promises from the limited standpoint of Big Business, that is to say, of the private sector (to use an over-worked description), of free enterprise (if you prefer the style now in fashion).

What, broadly speaking, are Free Enterprise's grievances? Leaving details aside, these grievances may be summed as follows: (1) Threat of nationalisation; (2) Growing importance of the public sector and subsidiary role for the private sector; (3) Onerous taxation; (4) New Loan issues of the Centre and the States leaving but little capital for the requirements of Free Enterprise; and (5) Diminishing importance accorded to the representatives of Big Business in the counsels of the Government. These complaints, so repeatedly made and so calculated to foul the economic climate, merit frank and full examination.

In a sense, the first and second complaints overlap at many points. The charge is that the Government, on ideological grounds, are so wedded to the development of the public sector that, apart from assigning a higher place and according larger resources to State enterprises in the projects embraced in the present and future plans, they also grab existing concerns on flimsy grounds, in the promotion of the objective to extend, ramify and enlarge the segment of enterprises owned and managed by the State.

Big Business admits and concurs in the appositeness of a policy of mixed economy. In simple terms, Big Business fully recognises the need to foster and develop the public sector no less than the private sector. What it regards with disquietude is the thesis that the public sector should be the more important of the two.

Misgivings of official attitude in this respect are unwarranted; and apprehensions of adverse repercussions therefrom on the destiny and prospects on the stature and standing of Free Enterprise are unjustified. Government spokesmen in the highest authority have, repeatedly and unambiguously, made precise and reassuring declarations. The latest is from the Prime Minister who told an assembly of businessmen last week-end that the private sector was assigned not only an important but respected place in the planned development of the future.

It is surely scurvy on the part of Free Enterprise to persist in the thesis: "This does not suffice. We are not content with the importance and respect thus accorded to us. What we ask for and claim is that the public sector should not be assigned a more important role. The private sector should, at the least, be on par with the public sector."

The issue is confused by the reference to relative importance. For, the simple fact of the matter is that the relevant consideration in the formulation of policy and plan is in no way connected with the importance of this sector or the other, but with the practical question: In reference to the magnitude of the project to be completed, the resources involved, the risks that are not unlikely, and the time-schedule set for it, which of the two sectors is in better position to take on and discharge the responsibility?

There is a growing recognition, even on the part of Big Business, that, however big it is, it is not big enough for most of the individual projects assigned in the Second Plan to the public sector. Considered strictly from the practical point of view, can any business house in this country raise the Rs 150 crore capital needed for Bhilai or Rourkela or Durgapur? Can any business house provide or mobilise, for the Heavy Electrical machine manufacturing plant, the fifty-crore capital on the footing that, for many years, there is no prospect of return to the investor?

Tatas have, in the past, successfully tapped the new issues market for the capital required for long-term projects like hydro-electric or chemical or locomotive. But, in all such cases, the total needs were of modest proportion. It is Free Enterprise that harps on the inadequacies of the new issues-market in this country; and it cannot be seriously contended that, by a sudden emergence of good fortune, the capital plants of projects involving hundreds of crores of rupees can be successfully pilotted by private enterprise.

The private sector can have no such pretensions; for, in the multi-crore schemes like expansion in Jamshedpur or Hirapur, the large-sized loans agreed to be given by the World Bank have been possible only on the basis of the good offices and guarantee of the Union Government.

Clearly and candidly, then, the public sector is, in the main, entrusted with the projects which, practically speaking, the private sector cannot essay. There is nothing, in this position, for Free Enterprise to feel slighted, or reduced to a secondary status, or deprived of its opportunities or profits. It is common-sense, prudence, and realism that is the basis of this distribution of responsibilities between the two sectors. There is nothing of ideology, or theoretical predilection.

The same conclusion emerges from a disinterested appreciation of the circumstances concerning the post-Independence nationalisation plans. The Reserve Bank was transformed from a shareholders bank to a state bank; so was the Bank of England and so was the Bank of France. Public opinion's reaction was, not that the Central banking institution was made a State Bank, but that it should have been, at the very outset, set up as a state bank.

The Imperial Bank of India was transformed into the State Bank of India, but only because the Imperial Bank Board, with their responsibility to private shareholders, would not undertake branch expansion on the scale envisaged and would not launch rural credit plans on the lines deemed vital in national interests.

Life Insurance was nationalised only after the misdeeds of some of the directors and managers had accumulated in snow-balling files at the Finance Ministry.

Private air lines were nationalised just because most of them could not make both ends meet and carried forward colossal debits. A good part of the capital had been lost in quite a few cases.

It is time Big Business frankly admits and gratefully recognises that the public sector and its special role are in no sense fads or obsessions of Government; that nationalisation has nothing to do with whim or caprice, or even fancy and theoretical flamboyancy; that the accomplishments in the public sector will set free numberless opportunities for the private sector; and that nationalisation's only purpose is the strengthening of strategic elements in the national economy to such effect that the benefits will be widespread, embracing the private sector, too, in many ways.

It is time Free Enterprise ceases regarding the economic scene as a Battle of the Sectors. The two sectors are not competitive but complimentary. They are not rivals in rigid postures but, modifying the philosopher's phrase, differences in identity. Both must function with the utmost competency, display the keenest enterprise and aspire for the highest efficiency. Both must be impelled by the highest sense of national interest. So functioning, reciprocity will develop, and mutual benefits must accrue.

Free Enterprise's next grouse is: onerous taxation. In this regard, hysteria has become normalcy. All roads of business criticism lead to the Rome of perpetual complaint that personal income taxes and corporate taxes are an intolerable burden. We shall admit that taxes on personal income are steeply graded; and that recent measures have made corporate taxes more complicated and more detrimental. While, in respect of taxes payable by joint stock companies, we would add our voice to the many pleas put forward for a realistic appraisal from the point of view of the need to maintain and preserve a confidence inspiring investment climate; and while we have always urged that the many honest tax-payers are being asked to shoulder far heavier burdens because of the Government's inability or incompetency to collect the just dues from the few but powerful and large-scale tax-evaders, we must emphasise and

Indian Finance
Established 1928
April 20, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

underscore the need for a correct perspective and for a patriotic approach in regard to the significance and implications of taxation.

From the constant howl that is raised over taxes, the implicit suggestion is that taxes on personal income are stiffly graded only in India; that this is essentially a policy of "soaking the rich"; that the rich are not being so soaked in other countries; that the proceeds of the taxes are being put to undesirable use; and so on and so forth. If, in India, the more rich a person, the more he is taxed, we are doing just what every other country is doing. And any government which does not do this cannot hope to be in power in any part of the world. Time spirit has imposed this as the basic principle of any taxation system. No more can the rich stem the tide of rising taxes than was King Canute able to stem the flow of swelling waves. The rich in India as anywhere else have to learn the practical wisdom of the adage which asks one to grin and bear it.

There is another important consideration. Let each one of those who vociferously condemn taxes put his hand on his heart and ask himself: "Do I make this protest with a clean heart? Have I, for my part, paid the tax as strictly due and payable by me? If, before the bar of my conscience, I am guilty of withholding lawful taxes to a greater or lesser extent, with what face can I join in this general protest against taxation?"

It is our suggestion that, in terms of these criteria, many of those who always rave against taxes will be out of court; and that those who have a legitimate grievance should turn, not against the Government, but against those tax-payers for whom the correct description is tax-dodgers and join in a movement designed to compel the Government to mulct every rupee due by the tax-evaders in the past as in the future and to brand and proclaim them as despicable anti-social elements.

In a word, there can be tax relief only if there is tax enforcement without fear or favour.

So long as the honest businessmen have done nothing to locate and expose the dishonest ones in their fraternity, their pleas with regard to heavy taxation cannot sound very convincing.

If the taxes are onerous, it is entirely within the power of the business community to prove and establish that, on their guarantee of honest payment by each and every member among them, a lower tax will suffice to produce the same target.

In other words, criticism of the Government on the score of high taxes is only partly justified. The justification in this regard will turn out to have even less validity when a close examination is made of the circumstances and purposes of the so-called new taxes. In this connection it is important to remember, that new taxes are but a small proportion of the new incomes generated by and from Government's plans and policies. The imposts connected with the financing of the Plan are better described as betterment levies or development surcharges. If one is better off or if one's property acquires a betterment value, why should one grudge a share thereof to the State which makes it possible? In any centre where functions an Improvement Trust, people have become accustomed to a betterment levy. The whole of India is now endowed with the processes and purposive activities of an Improvement Trust; and we suggest that everyone in this country must not only get accustomed and reconciled to new taxes as betterment levies but deem it his privilege to participate in the great projects by contributing his individual mite to the target fixed.

From this point of view, we look to 1957-58 taxes taking the form of Development Duties and Development Surcharges, and, if need be, Development Profits Tax (patterned on the war-time Excess Profits Tax). The style and description of the new taxes must carry a message and evoke an obligation.

Instead of emptying their vials of condemnation on every tax proposal, and instead of making people's hair stand on end in dread of prospective taxes, let businessmen, inspired by a sensible and patriotic attitude toward taxes, resolve to pay their taxes as a solemn and sacred duty and to educate public opinion on the rights and obligations of individuals and institutions toward taxes directly connected with developing India's fullest potentialities.

The public at large are not so gullible as to accept at face value the piteous tales of grinding burdens borne by the rich on the one hand and by thriving companies on the other. They, (the public) are more affected by the spectacle of luxurious cars, palatial houses, gorgeous jewellery and conspicuous weddings, which all seem to be the prerogative and monopoly of the tax-bled businessmen. If companies are so taxed that they cannot plough in profits, how is it, they ask, that almost every company of worth-while status, be it a cotton mill or paper mill or sugar factory or cement factory or engineering works or art silk mill, has completed or launched a programme of rationalisation, modernisation and capacity-expansion? Wherefrom has all this capital expenditure been made possible?

Immodest living on the part of individuals and unconcealed but heady expansion on the part of companies are regarded by the public as evidence which refutes the much-agitated contention that taxes on the prssent scale kill initiative and leave no savings.

That the pleas in behalf of lighter taxes may convince the public and influence State policy, the concerned parties must learn the value of constructive policies, the importance of integrity in one's attitude to taxes, and the virtues of reasoned argument and measured expression. The agitational technique, now in fashion, is calculated to defeat its own end. Exaggeration in the facts presented and misuse in the statistics cited can only do harm. Tax relief and tax enforcement go together.

It is time our businessmen realise that, toward tax-relief, they have to take the first move by way of tax-honesty.

The New Team

THE Prime Minister and those from whom he took counsel are to be warmly congratulated on the composition of the new Union Government. At a glance, they look the old team. The majority of those, who were in the previous Ministry and are not in the present, are either election casualties or disabled by age. Of the rest, Mr M. C. Shah and Mr A. C. Guha are rather unexpected omissions.

The retention of External Affairs by the Prime Minister has an inevitability about it, though his new charge, the Department of Atomic Energy is likely to be misleading. In India, atomic energy has a purely peaceful function.

With Mr Krishna Menon looking after defence, the extraordinary measure of liaison and synthesis in policy needed between External Affairs and Defence is forcefully pressed into view.

It is possible to look at the new choices and the changes made from various angles. For our part, the new Union Ministry will be judged more by the success of the Second Five-Year Plan than by any other criterion. From this standpoint, we are confident that the talent represented will be adequate. And that this set of eminent men and women will spare no effort in seeing the Plan through with resoluteness and confidence, there is no doubt. A few passing difficulties at the initial stage seem to have created some diffidence, if not alarm, in certain quarters. A great national endeavour with whose fortunes the future of the entire humanity is to some extent linked, is not a matter for timid and cowardly minds. Very often, the state of the national mind has a decisive influence in the shaping of a country's material destiny.

The first task of the new Government should, therefore, be to dispel whatever diffidence exists in respect of the scheduled fulfilment of the Second Plan. A few strokes of courage and imagination are all that are needed to create a proper national mood, in which all the sacrifice and strain called for will be willingly given and amidst which difficulties will begin to shrink and natural and circumstantial advantages will reveal their maximum potentialities. The election verdict is a confident vote for the Second Plan and a robust expression of faith in the capacity of Mr Nehru and his colleagues to implement it. In this background, and amidst the universal understanding and appreciation of the aims and methods of the Plan, there is scarcely any room for the least diffidence over the success of the Plan.

Rules for Compulsory Deposits

THE delay which has occurred in the framing of the draft rules for the compulsory deposit of current profits by Companies under the Finance Act of December, 1956, reflects the care and concern with which the Government are trying to apply a controversial, though salutary, financial expedient. While we propose to dwell at adequate length on this subject in a later issue, we may, at the outset, congratulate the Finance Depaprtment on the exemptions already announced. What is even more gratifying is that the draft rules published this week are made liable to modification in the light of public comment.

The compulsory deposit scheme springs from the Government's keenness to see that fiscally favoured internal finance of Companies actually goes into the most beneficial utilisation. As the process of check-up is, by common consent, intricate, the Government are certainly well-advised in bestowing the utmost detailed attention to framing rules and, having framed them, throwing them open to further public criticism. The present attitude on the part of the authorities is a sure enough guarantee that all legitimate grievances and difficulties of business concerns will be properly scrutinised without militating against expeditious disposal of application of refunds.

Constructive Banking Suggestions

IT has become accepted procedure for a banker to bemoan the monetary stringency that has taken grip of the Indian economy, and then vaguely to generalise on the steps which Government should take in order that the money market may attain to a position of greater normalcy. We think it is curious that there should have been such a conspicuous lack of constructive suggestions, and that we should instead have given to us a list of the trials and tribulations. It is worth recalling that Mr T. T. Krishnamachari last year bewailed the fact that, in his discussions with the banking fraternity both in Bombay and in Calcutta, he was offered no specific proposals.

This lacuna has been eminently rectified by the United Bank of India Limited. On the one hand, its Chairman, Dr N. N. Law, has voiced the altogether praiseworthy suggestion

(Continued on page 761)

Readjustment's End?

Despite Treasury Secretary Humphrey's kind promise of blood curdling depression in prospect, US economy is going about its business, firm in its faith; day by day, better and better. At each peak of prosperity, the customary soothsayers opine that it is too good to last and predict the imminent reversal of the trend. A slight fall in production here and a slight easing in sales there provide the signal for the emergence of another set of star-gazers who indulge in nice distinctions between depression, recession and readjustment, and advance the confident view that what is taking place is just readjustment; and that, with readjustment effected in speedy style, the economy will be ready for the next climb-up.

There was, in the USA, a readjustment of this pattern in 1949 and in 1950. It is now believed that the readjustment of 1957 has run its course in true form; and that the upturn has commenced as from last month. Employment is reported at the record level of 64 million. More pay for more men for more work has meant augmentation of purchasing power to unprecedented magnitude. Retail sales in March were of the "better and better" kind; and, what is even more significant, repayments in respect of hire-purchase finance were in excess of commitments.

Thus far, the credit squeeze has not affected the overall tempo of economic progress; and businessmen are coming to regard the higher price of money as nothing more than an index of increased demand in response to surging business activity. Dear money in this view becomes something of a heartening indicator.

The main sufferer from the higher interest rates is the Government, whose short-term financing is costing a great deal more than, say, two years ago. Long-term borrowing has been rendered difficult; and onerous terms have to be offered. Investors in Bonds have suffered enormous losses; and gentlemen no longer prefer bonds.

Editorial Notes

*

Improving UK Climate

In Britain, too, the yearning for a changed economic climate is widespread. Government have duly taken note of the public temper, and offered a tax-relief budget as the token of their appreciation in this respect. Stock Exchange circles have felt justified in initiating a hopeful outlook. There is less ruthlessness in the credit squeeze; and the money market can afford the luxury of relaxation.

Banks, however, continue to be exhorted to be stern in assessing requests for loan facilities; and the considerable decline in their liquidity ratios is an influence in the same direction. Their clients, true to the traditions characteristic of British Business, have made the painful adjustments. Industrial production in the current year is expected to make good showing; and there is general relief that the balance of payments position has steadily improved.

The Treasury is in a comfortable budgetary position, though the Ways and Means budget has to bear the impress of dearer borrowing. No longer are the virtues of dear money as sacrosanct as they were throughout 1956. There is, therefore, the likelihood of further lowering of the Bank Rate, with banks left to effect credit control through stringent scrutiny of applications for business loans.

*

Two Significant Visits

Mr T. T. Krishnamachari was in Bombay, last week, for important consultations pertaining to the money market; and Mr Morarji Desai was in Calcutta for equally significant discussions on matters pertaining to commerce and industry. At a time when speculation is rife on the prospective distribution of portfolios among the Central Cabinet, these visits and their purposes are interpreted as evidence of the confirmation of the expectation that the two ministers are absolute certainties in the new cabinet; and of a stern "No" to those wishful thinkers who see Mr Desai as Finance Minister and Mr Krishnamachari back in the Ministry for Industry and Commerce. (The Cabinet has since been announced).

The Finance Minister used his BoBmbay visit for a fresh appraisal of the tentative schemes and proposals which have been engaging his close study. Once his continuance in this assignment is officially announced, we may expect a number of reforms for the specific purpose of endowing the money market with more strength and with more flexibility.

Mr Desai was at once friendly and frank in his assessments and advice. He is actuated, it goes without saying, by a genuine desire to help Free Enterprise help national economy. This is an important task that must be fulfilled. It is a vital element in the Plan's success. Mr Desai is sincere in his solicitude for full co-operation from the private sector. He is sure, however, that the co-operation has to be patterned to the spirit of the times and to be governed by the conclusive fact that the Congress Government, while wishing well of Free Enterprise, must always remember that they are answerable to an electorate predominantly made up of elements who oppose vested interests of every kind. Yesterday's servants are today's masters. Conversely, yesterday's masters must learn to be today's good servants.

*

New Status for Singapore

On April 11, representatives of Britain and Singapore attested their signatures to a formal report, which embodied the framework of a new Constitution for the Crown Colony. The negotiations which eventually culminated this Report have had a long and chequered course and involved more than one crisis in the relations between the two Governments. The First Chief Minister of Singapore, who came very near securing a similar Constitution a year ago had to come empty-handed. His successor too would have met the same fate, had he not submitted to counsels of moderation over an important last-minute change.

This change according to which subversive persons are debarred from being elected to the first Parliament of Singapore, is frankly distasteful to the Singapore delegation, but wisely accommodated by it in view of the great advance the Constitution itself marks toward complete independence. The Constitution gives Singapore "full internal self-government." External affairs and defence will remain Britain's obligation, along with which go some powers in the sphere of overseas commercial relations.

A peculiar institution envisaged in the Constitution is the Internal Security Council, composed of three Britons, three citizens of Singapore and a Minister from the Malayan Federation. This body is obviously intended to symbolise mutual interest in the security of Malayan Peninsula. In the event of Malaya withdrawing from the Council, it will function as a purely consultative body till its status gets again considered. The Legislative Assembly provided for by the Constitution will have powers to amend the Constitution to the extent it relates to purely internal matters. The British Government will on their part retain the power to suspend the entire Constitution, in the event of any emergency.

The broad division of authority the Constitution represents closely corresponds to the financial and strategic position of Singapore on the one side and the interest of Britain and Malaya in the political security of the island. Britain's retention of the right to hold on to its bases and installations will also be found to spring from the same reason.

*

Reversing River-Flow

Soviet Russia is reported to be planning a scheme for the control of its rivers, which when accomplished, will rank as the most gigantic human effort in the taming of nature. Several north-flowing rivers in European Russia are to be reversed in their course, to produce electricity and irrigation facilities in the steppe and semi-desert land which lie in the region of the Via and Volga rivers.

A considerable proportion of the waters now being emptied into the Arctic Ocean will, under this scheme, be stored up in a reservoir of colossal dimensions and from there channelled south. It is premature to calculate the hydro-electric or irrigation potentialities of this project. All that can be said is that it will raise production to an appreciable extent. This scheme is announced on the top of a post-war agricultural production

Busy season—1956-57

AS the 1956-57 busy season nears its peak, certain broad features of the emerging position of the banking system are becoming available for the student of money market affairs. On a previous occasion, it was suggested in these columns that the demands postulated by the current busy season were being and were likely to be met without much technical difficulty. We had advanced the view that, strictly as a short-term measure, resources would be made available such as to enable the banking system to entertain all reasonable and legitimate demands for funds. The latest figures are in general confirmation of that thesis; and they moreover offer a pattern as to the participation in the busy season of the State Bank, on the one hand, and of the other Scheduled Banks, on the other. The relevant figures in this regard, together with the comparative figures for the 1955-56 busy season, are presented in the form of three tables published in the text of this article.

The broad conclusions may first be summarised.

1. Active Notes rose by Rs 144.68 crores against Rs 200.83 crores in the corresponding period of the previous busy season.

2. Banks' Deposits with the Reserve Bank are, in 1956-57, higher by Rs 8.61 crores as contrasted with a decline of Rs 4.29 crores.

3. The expansion in the Other Loans and Advances has been, in 1956-57, smaller at Rs 22.99 crores against Rs 45.25 crores.

4. The increase in borrowings against usance bills is slightly lower at Rs 18.03 crores against Rs 21.28 crores.

5. In the course of the current busy season, Deposits of the State Bank have increased by Rs 71.87 crores against Rs 22.77 crores.

6. The other Scheduled Banks have augmented their Deposits by Rs 30.35 crores against Rs 6.44 crores in the previous busy season.

7. The State Bank has reduced its borrowings from the Reserve Bank by Rs 7.44 crores.

8. On the other hand, other Scheduled Banks been obliged to increase their indebtedness by Rs 41.59 crores against Rs 44.92 crores.

9. Disinvestment in Government securities is for Rs 1.98 crores against Rs 9.29 crores in the case of the State Bank.

10. Giltedged holdings of other Scheduled Banks have declined by Rs 20.32 crores against Rs 23.50 crores.

11. Advances of the State Bank have gone up by Rs 53.15 crores against Rs 43.74 crores.

12. Advances of other Scheduled Banks are higher by Rs 85.00 crores against Rs 120.66 crores.

The conclusions thus presented need, however, to be viewed in the light of certain special considerations affecting the 1956-57 busy season. These special factors are:

(1) In the course of the current busy season, an import surplus of substantial magnitude has caused a decline in the Reserve Bank's holdings of exchange resources to the tune of over Rs 115 crores.

(2) This, taken in itself, would have had a contractionist influence on currency circulation as well as Deposits of Scheduled Banks.

(3) Therefore, the increase in active notes during 1956-57 would, but for the import surplus, really have been of the order of over Rs 200 crores Similarly, of course, the Deposits of Scheduled Banks would have been higher by a like margin.

(4) The State Bank has had an impressive increase in its Deposits, a part of which at least is in the nature of a windfall, relating as it does to counterpart funds lodged with the State Bank.

(5) Although the increase under the heads of Other Loans and Advances, borrowings against usance bills and Borrowings from the Reserve Bank are all smaller in the 1956-57 busy season, it needs to be remembered that, in the 1956 slack season, the decline under these heads had been negligible. Thus the increase in borrowings was super-imposed on an already high level of indebtedness to the central banking institution.

Of the factors we have just mentioned, it will be seen that the contractionist influence of an import surplus would have affected both active notes and Deposits of Scheduled Banks. Thus, except insofar as the net increase under each of the two heads is smaller it is not altogether wrong to suggest that the relation between increase in Deposits and increase in active notes is unaffected Secondly, while allowance must be made for windfall deposits on the part of the State Bank, there is, nevertheless, sufficient evidence to suggest substantial accretions to the State Bank and to the Scheduled Banks as a whole. Thirdly, although, in terms of absolute figures, borrowings from the Reserve Bank are at a high level, the extent of the rise in advances against Usance Bills is much lower than anticipated.

We would, therefore, suggest that the demands arising in the 1956-57 busy season have been less severe than in the previous year. At the same time, the banking system has been put to less inconvenience in the matter of securing resources than was originally apprehended. For, the fact of the matter is that the State Bank had no difficulty at all in meeting the busy season demand that it encountered. Although the expansion in advances has been higher during 1956-57, this has been more than offset by the very sharp improvement in Deposits. Indeed, the expansion in the State Bank's advances falls short of the expansion in its Deposit resources.

In the case of the other Scheduled Banks, the increase in Deposits is one of Rs 30.35 crores as against Rs 6.44 crores in 1955-56 busy season. While it is true that such an improvement in Deposits appears to be accounted for solely by the increase registered in the week ended April 5, 1957, it is also true that, in the two immediately preceding weeks, the Deposits of Scheduled Banks were drawn upon substantially for meeting tax payments. Thus, just prior to the heavy demand against tax payments, as at the week ended March 15, 1957, the Deposits of other Scheduled Banks were placed Rs 21.93 crores higher than the level which obtained at the beginning of the busy season. In the following two weeks, we repeat, almost the whole of such extra resources was drained away by, presumably, payment of tax. And, in the week ended April 5, 1957 Deposits have returned because of payments presumably being received from Government by private contractors, suppliers, etc. It seems to us, therefore, undeniable that the pace of increase in Deposits has been higher in 1956-57 busy season than in 1955-56 busy season. (In the case of the State Bank, the much sharper increase in Deposits is

Cash	30.86	79.76	20.96	89.63	17.73	97.08	26.07	96.90
—Ratio to Deposits	(14.1)	(9.7)	(8.7)	(10.8)	(7.7)	(11.1)	(8.6)	(10.7)
Government Securities	106.39	285.95	97.10	262.45	96.15	275.38	94.17	255.06
—Ratio to Deposits	(48.7)	(34.8)	(40.2)	(31.7)	(41.9)	(31.5)	(31.2)	(28.2)
Advances including Bills	93.48	498.92	137.22	619.58	129.76	630.59	182.91	715.59
—Ratio to Deposits	(42.8)	(60.7)	(56.8)	(74.8)	(56.5)	(72.1)	(60.7)	(79.1)

partly to be accounted for by the windfall Deposits to which we have referred). In the result, the other Scheduled Banks have actually found it necessary to borrow less from the Reserve Bank and to disinvest less in Government securities during 1956-57 busy season than in 1955-56 busy season. Moreover, the expansion in advances of the other Scheduled Banks has been less, at Rs 85.00 crores, than in the previous busy season.

The second table has a pithy significance. It is that the State Bank has, in the current busy season, been playing a more prominent role in the financing of it. Advances of the State Bank expressed as a ratio of the advances of all Scheduled Banks have risen from 17.1 per cent to 20.4 per cent. It is also to be noted that the State Bank accounts for 25 per cent of Deposits of Scheduled Banks against 20.8 per cent at the beginning of the busy season. This, of course, is in some measure due to the windfall Deposits.

The last table published together with this article also gives an indication of changes in the roles of Scheduled Banks and of the State Bank in the financing of the busy season. The State Bank expanded its advances in 1955-56 busy season from 42.8 per cent of deposits to 56.8 per cent; and, in the current busy season, the ratio has risen from 56.5 per cent to 60.7 per cent. On the other hand possibly because advances of the other Scheduled Banks were already at a high level, the ratio of the advances of other Scheduled Banks to deposits rose from 60.7 per cent to 74.8 per cent in 1955-56 busy season, and from 72.1 per cent to 79.1 per cent in 1956-57 busy season. What is even more interesting is the fact that the State Bank's holdings of Government securities, as a ratio of deposits, have declined from 48.7 per cent at the beginning of 1955-56 busy season to 31.2 per cent on April 5, 1957. Over the same period, the relevant ratio in the case of the other Scheduled Banks has declined from 34.8 per cent to 28.2 per cent. Finally, the State Bank of India has been running down its cash balances, whose ratio to deposits was 14.1 per cent at the start of the 1955-56 busy season and was placed at 8.6 per cent on April 5, 1957--this latter ratio in spite of the fact that cash balances of the State Bank have risen by over Rs 10 crores in the course of the two preceding weeks. On the other hand, the other Scheduled Banks improved the ratio of cash to deposits from 9.7 per cent to 10.7 per cent over the same period.

It is to be pointed out that the banking system has risen to the occasion in meeting the demands of the 1956-57 busy season. The strain upon the banking system would have been both severe and rigorous if Deposits had not increased by the handsome margin that they have done. Since the lines of credit approved by the Reserve Bank for advances against Usance Bills are in the neighbourhood of Rs 150 crores; since the advances actually taken against Usance Bills by all Scheduled Banks are only at Rs 58.32 crores; Since the expansion in advances during the current busy season has already totalled Rs 138.15 crores; and since the total expansion during the current busy season is unlikely to exceed Rs 200 crores, it seems clear that the banking system is in the eminently comfortable and reassuring position of being able to meet the extra demand likely to arise during the rest of the current busy season.

+

State Bonds Frozen in Russia

By BENJAMIN E. WEST

Sometimes an act of the Kremlin hierarchy is notable for what it is, and sometimes for the manner in which it is done. Last week's "proposal" by Party Boss Nikita Khrushchev—that state bonds in the staggering value of 260,000 million Rubles be frozen for 20 to 25 years—was notable on both counts.

The Khrushchev proposal is noteworthy because it is, of course, tantamount to a default on a government obligation. For all practical purposes, the 20 year "postponement" of repayment wipes out the domestic debt of the Soviet Union by the simple expedient of repudiating the solemn promise of the Government. By the same stroke, the savings of millions of Soviet citizens are practically confiscated since repayment after 20 years "or later" is largely academic.

To be sure, Khrushchev also proposed to discontinue the forced sale of bonds after 1957. In other words, the bitter pill that the Soviet people have to swallow now, next year will be followed by sugar water—maybe.

At the moment, however, no one knows what will happen. Certain only is that the Soviet workers deprived of their savings number in the tens of millions since virtually everyone—worker as well as collective farmer—had to subscribe to bonds every year over the past ten years. Though nominally voluntary, bond sales were accomplished through payroll deductions.

To look at it another way, 260,000 million Rubles are about 1,300 Rubles for every man, woman and child in the Soviet Union. This is more than the average monthly salary.

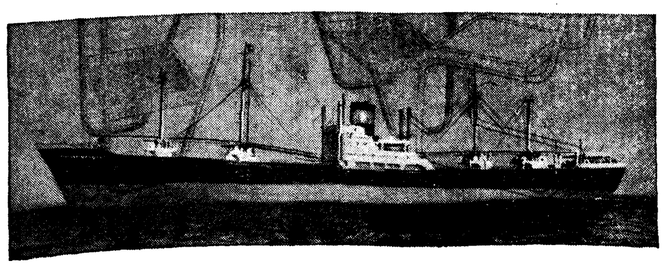
The way in which Khrushchev's announcement was stage-managed would seem to be noteworthy, too It was made (on April 8) at the end of a long speech before a conference of agricultural workers. Switching abruptly from a plea for better production of "meat, milk, potatoes, vegetables, fruits and other agricultural products," Khrushchev turned to the USSR's financial problems. It was in this passage of the speech that he said the Government and the Communist Party "proposed" to solve those problems by postponing the repayment of loans (i.e., bonds) for 20 to 25 years. According to Moscow Radio's home service, he was interrupted by "stormy applause."

The possibility that the applause was real rather than fabricated or ordered from above seems slim. True, the Soviet people were apparently resigned to the fact that their bonds were not worth the money put into them, as evidenced by the considerable discounts at which bonds used to be traded. True also, that applause could have been meant for the plan to discontinue the sale of state bonds in the future.

But the fact remains that the latest Khrushchev move has little if any chance to be popular. For one thing, this is about as drastic a financial action as has ever been taken by the Soviet Government. State bonds were in effect sold on the Government's assurance that they are the safest means of investment.

With the bonds—in lieu of interest payment—went the chance of winning up to 100,000 Rubles in a lottery. And the Government implied that returns on the bonds will be substantial as Soviet policy succeeds in lowering prices for goods and thus increasing the nominal value of the bonds.

All this has now been wiped out in a step that would appear as much a means of warding off inflation as it is an admission that the resources of a tightly government-controlled and government- directed economy fall short of the demands of the programmes the same Government has itself pledged to.



For another thing, the bond repudiation proves that the Soviet workers are still being asked to sacrifice the present for the future. In fact, an editorial last week-end in the official party paper, **"Pravda,"** makes this quite clear. "The Soviet people do not live and work for today, for the purpose of having more for themselves privately. No, they are first of all concerned with higher communal production . . ." says **Pravda.**

Banks' Deposits cross Rs 1200 crore Mark

At the threshold of the new financial year which began this month, the Centre and the States contrary to norm, face drastic depletion of cash balances and the consequent need for substantial reinmbursement. The norm as such was distorted by the heavy disbursements on account of the Plan. Such disbursements have an extra-budgetary quality and have been snowballing since the fourth year of the First Plan. When normalcy prevailed, the position of the Central and State finances in the early months of the fiscal year used to bear the

British Tax Concessions

By PAUL EINZIG

TAX concessions made by the new Chancellor of the Exchequer, Mr Thorneycroft, to income groups between £2,000 and £10,000 a year went so far as they could reasonably be expected to go in existing circumstances. Those who expected sweeping concessions overlooked the fiscal, economic and political difficulties the Government has to contend with. Had the Chancellor made an attempt to be equally generous on the present occasion to income groups below £2,000 he would have incurred a deficit and would have let loose a flood of inflation. Had he set out to correct with one stroke the grossly excessive taxation of the higher income groups he would have provoked an aggravation of labour relations and would have further antagonised that middle income groups of the middle classes on whose political support the Government depends for its existence. Even as it is, there is much pessimism in many Conservative quarters about the effect of the measures on the results of the next by-elections. A number of middle-class supporters of the Government have already voiced their profound disappointment. From this point of view, Conservative opinion is divided about the effect of the taxation measures on the attitude of the middle classes.

It is true, the large majority of the middle classes has incomes well under £2,000 and does not stand therefore to benefit by the Budget to any appreciable degree. But the view is held in many Conservative quarters that in spite of this the middle classes as a whole are likely to derive comfort from the fact that at long last the Government has ceased to try to produce Socialist Budgets and has mustered up enough courage to help the upper middle-classes.

"The difference between the Socialist and Conservative attitude in this matter is this," so runs the argument of the optimistic Conservatives. When a Socialist sees an expensive car his reaction is that if he cannot have such a car nobody should have one. When a Conservative sees such a car his reaction is that, even though he could never possess such a car, he is glad that at any rate some people can possess them. The fact that the Government is now prepared to make tax concessions to the higher income groups is therefore popular among the middle income groups, not only because many people in those groups hope to rise to higher incomes, but also because it is in accordance with basic Conservative mentality.

In the course of the Budget debate a Government spokesman pointed out that, even though the present Budget will not do much for the middle income groups, the Conservative Government has in fact made very substantial concessions to them since assuming office in 1951. In fact, while in previous Budgets Conservative Chancellors reduced taxation on middle incomes, this is the first time since 1920 that concessions are made for the benefit of surtax payers. But such is the mentality today that many people in the middle income groups are not likely to see this. While they, and members of the lower income groups, considered it only natural that in previous Budgets everything was done for them and nothing for the higher income groups, they claim it to be their right to participate in the first concession made to the higher income groups. It remains to be seen whether by-election results will be affected by this mentality or by the more generous attitude described earlier in this article. In any case, as far as the general election is concerned, in all probability there will be at least two more Budgets before it will take place, so that the Government will have opportunities for making fiscal concessions to the discontented middle income groups.

From a purely economic point of view the effect of the Budget depends, not on its reception by the middle income groups, but on its reception by organised labour. If the concessions made to higher income groups should stiffen the attitude of trade unions in wage negotiations, then it may become necessary to release to the working classes additional purchasing power amounting to many times the sum total of the tax reductions

World of Jute

Smart Rise in US Burlap Consumption

THE jute goods market ruled steadier during the past week, sentiment having been helped by reports of fresh enquiries in sackings and a sizable increase in burlap consumption in US during March.

It was reported on Wednesday that during last month, American burlap consumption totalled 73 million yards compared with 62 million yards in February 1957. It may be remembered that one of the reasons for the subdued tendency of the Calcutta Jute goods market in the early part of March was the steep drop of 13 million yards in the burlap consumption in America during February compared with January 1957 when such consumption was placed at 75 million yards. Now that March has recorded a smart rise it is evident that burlap continues to enjoy popularity among consumers in America. In the nine months ending March 1957, US burlap consumption has totalled 673 million yards compared with 628 million yards in the corresponding period of 1955-56. In the first quarter of 1957 burlap consumption in US is maintaining a steady trend having been placed at 210 million yards as against 211 million yards during the comparable period of last year.

Though looked at from the standpoint of US burlap consumption, the prospect for hessian seems satisfactory, the same cannot be said as regards its immediate outlook as this depends to a large extent on the level of burlap stocks in that country. At the end of February, total stocks were placed at 266 million yards, a quantity which will be enough to take care of the demand for over three months at the current rate of consumption in US. Reports from New York indicate that consumers in the US are taking current requirements from spot and afloat stocks and buyers are inclined to limit inventories in anticipation of lower prices. This is also borne out by the figures relating to jute goods despatches from India during March 1957.

Total despatches during March at 83,964 tons compared with 85,951 tons in February and 92,764 tons in March 1956. Exports have totalled 68,793 tons against 71,431 tons in the previous month and 72,356 tons during March 1956. Exports of hessian are lower at 28,980 tons compared with 31,363 tons in February. Exports of sacking, on the other hand, are higher at 37,319 tons as against 34,981 tons. Other varieties are lower at 2,494 tons as against 5,087 tons. Internal consumption during March 1957 is slightly higher at 15,171 tons with hessian accounting for 2,303 tons, sackings for 11,063 tons and other varieties for 1,806 tons. Such consumption during February 1957 and during March 1956 was placed at 14,520 tons and 20,408 tons respectively. Total despatches for the nine months July-March 1957 amounted to 797,000 tons as against 786,200 tons in the corresponding period of the previous year.

Jute goods production during March 1957 totalled 84,700 tons as against 80,200 tons in the previous month and 99,300 tons in the corresponding month of the previous year. Output in the nine months ending March 1957 has amounted to 771,000 tons and compares with 800,500 tons in the nine months ending March 1956.

*

After an easier opening, the jute goods market steadied up in later dealings. In earlier dealings, sentiment was mainly governed by thoughts about the new jute crop. The crop report for the week ending 6th April, 1957 as supplied by the Jute Balers' association indicated that as a result of the continuation of mainly hot and dry weather in all jute growing areas, the crop was becoming a little late. Hessian 40"×10 oz which began at Rs 40-87 moved up to Rs 41-19 on Monday. B Twills Ready advanced from Rs 110-37 to Rs 111. The undertone became firmer on Tuesday on reports of a tender for 10,000 bales of sackings from Burma. However, as business passing had been small, only fractional gains were recorded. Hessian 40"×10 oz improved further to Rs 41.25 while B Twills ready gained another quarter point to Rs 111.25. Wednesday brought fresh good news in the shape of US burlap consumption figures for March. The increase of 11 million yards to 73 million yards as compared with the previous month was definitely a piece of welcome news and marketmen recorded their reaction by putting up hessian prices. It was, however, evident that operators could not take a very optimistic view as regards the immediate prospects for hessian in the absence of news regarding the level of burlap stocks at the end of March. Hessian 40"×10 oz closed the week steady at Rs 41.37 with B Twills Ready done at Rs 111.50.

The following table shows the week's opening and closing rates.

	Opening	Closing
Hessian		
40"×10 oz Ready	40.87	41.37
40"×8 oz July-Septr.	41.56	41.81
40"×8 oz ..	33.75	34.00
40"×7½ oz ..	31.25	31.50
Sackings		
B Twills Ready	110.37	111.50
B Twills July-Septr.	111.12	112.87
Hy. Cees Green ..	110.75	110.87
Cornsacks ..	111.62	111.50
Cubans ..	135.00	134.00
A Twills ..	133.50	133.50
L Twills ..	126.25	126.00
Sugar Bags ..	127.50	127.50
D. W. Flour ..	133.00	133.00

World of Tea

Outlook for Prices

THE declining trend in Tea prices has not shown any signs of recovery. It is generally felt that a surplus of Common teas may develop again, especially when these types are facing stronger and stronger competition, as new producing teas are coming into being year after year both in India and elsewhere. It, therefore, appears that producers in India have to concentrate on quality and this will be the best move for the time being to regulate production and ensure fair prices.

In this connection, it will be of interest to study the monthly report issued by Messrs. J. Thomas & Company. The report states:

"There has been a sharp fall in the market since the new year, which once again emphasises the need for quality production. Although the new season is likely to open without any carry-over of 1956 teas, the market may be discriminative, with a wide price concertina for quality and plain teas during 1957. It will, therefore, be most inadvisable to let crops advance indiscriminately at the expense of quality as coarsely-plucked or ill-manufactured teas may prove most vulnerable to market vicissitudes."

In general, the tea situation is now in a delicate balance and consumption is not keeping pace with the increase in production. It is felt that any steep rise in production, which is sure to occur, will upset the present balance and bring about a crisis in the world market, unless there is a speedy revival of the International Tea Agreement.

No Export Sale was held in Calcutta this week. In the Internal Sale, offerings were 18,921 packages of Dusts prices for which were again generally easier. Black leafy exportable kinds were well supported; but the poorer CTC Assams were a weak feature. Mediums with bright liquors and teas with clean leaf appearance were sold at dearer rates. The remaining offerings were from 4 to 8 np per pound easier although orthodox Assams with useful liquors did not generally share the same decline. Following rates were quoted:—Medium Dooars Dust Rs 1.50 to Rs 1.60; Medium Assam Grainy Dust Rs 1.65 to Rs 1.70; Medium Assam CTC Dust Rs 1.75 to Rs 1.85 and Best CTC Assam Dust not quotable.

In the Export Quota section, business in the current season's quota was not transacted. Buyers, however, showed interest at 23 and 24 nP per pound. The rate for Special Export Licence, after opening at 13 nP, advanced towards the close 17 nP per pound. The price of non-transferrable Shippping Licence hardened during the week from 9 to 15 nP per pound.

In the Cochin market, about 422,000 pounds of Dusts were offered last week. There was a good general demand. Best liquoring high-growns came into an irregular market and were generally up to 20 nP per pound easier. Good Medium descriptions and well-made Teas from the Wynaad and Travancore were keenly sought after and sold at fully firm to occasionally dearer rates. Other teas from these districts met with fair enquiry at a drop of 5 to 10 nP per pound. Milled nd Residual Dusts found ready buyers at irregular, but generally barely steady prices. Black grainy descriptions met with good support and were fully firm on last levels.

A quantity of 1,900,000 pounds of Leaf tea was offered in the Export Sale held this week. The quality of the teas was below that of the previous auction. Against a fair general demand, prices were again easier. Low-growns and Mediums were 10 to 15 nP per pound lower. There was more demand for Whole Leaf grades.

Meanwhile, the South-Indian tea crop, during the 11 months ended February 1957, was larger at 119.57 million pounds as compared to 117.38 million pounds in the corresponding period of the previous year. This increase is mainly due to the larger harvest in January and February this year when the tea crop totalled 15.42 million pounds as against 13.74 million pounds in the same period last year.

In the auction held at Amsterdam last week, there was very little interest, prices being lower. The bulk was bought for home consumption.. Importers were careful and retaining much tea due to the Suez Canal uncertainty. Prices varied from 168 to 252 cents per half kilo against previous 210 to 270 cents. The next auction is scheduled for May 2..

Tea stocks in London, as on the 5th April 1956, were 140.37 million pounds as compared to 133.08 million pounds in the previous week. Deliveries during the week were 9.95 million pounds, while landings were 17.25 million pounds. Total afloat was 41.02 million pounds including 22.80 million pounds from Calcutta; 997,590 pounds from Chittagong; 3.19 million pounds from Cochin; 9.73 million pounds from Colombo and 4.31 million pounds frfom other Ports.

World of Business

Sago Industry

The growth of the Sago industry in the South is closely linked with the granting of protection to it. Protection was granted to the industry in 1950 and involved the conversion of the existing revenue duty of 24 per cent ad valorem preferential and 36 per cent ad valorem standard into protective duty at the same rates. Protection had been continued until December 1957 at varying rates by subsequent Finance Acts. With the inquiry that is now in progress, the industry stands on the threshold of a new stage in its development.

The progress of the Sago industry under the shelter of protection has been remarkable. In 1950 just on the eve of protection there were about 40 factories, with an estimated capacity of nearly 19,500 tons. While actual production was only 6000 tons. Under the favourable impact of Protection the indusry made such rapid strides that at present there are 135 units with an annual capacity of 30,000 tons while actual production has exceeded 18,000 tons for the three years commencing with 1954-55. The granting of protection was also followed by a complete ban on imports of Sago into the country.

The present demand for Sago is estimated at different levels by different authorities varying from 18,000 tons to about 23,000 tons. The self-sufficiency of internal production is indicated in the complete removal of quantitative restrictions on exports of Sago from all ports with effect from July 1956. Even if the internal demand is to increase, it should prove little difficult for the industry to fill it in view of the existing gap between actual production and rated capacity.

The present location of the industry has brought problems of raw material supply to the forefront. While the industry is localised in and around Salem, it is dependent for supplies of tapioca tubers, which is the principal raw material on areas outside the district mainly Kerala, where the area under tapioca and consequently production are far higher than in Madras State. States reorganisation has also transferred much of the area under tapioca, in the erstwhile Madras State, to neighbouring states. The prices of tapioca, have shown a tendency to wide fluctuation and is a problem which has to be solved to save adverse effects on the grower and the industry.

Apart from problems of raw material supply, it has been found that the conditions under which tapioca sago is manufactured in India requires considerable improvement.

Tractors & Allied Equipment

Addressing the Ninth Annual General Meeting of the Tractor and Allied Equipment Manufacturers' and Importers' Association, Mr L. R. Patel the Chairman dealt at length on some of the immediate problems, facing the tractor trade in India, and pointed out how a revision in the attitude of the Government in regard to the import of spare parts of tractors and in regard to the grant of licences for import of tractors, which the Government have contracted to purchase, would put the manufacturers and traders on a better footing.

The restriction on imports of spare parts required by the tractor trade in the country, though meant to serve the interests of indigenous manufacturers of such parts, has, in view of the inability of the latter to substitute the imported items, only gone to immobilize the agricultural and earthmoving machines in the country. Liberalization of import control with respect to types and sizes of the spare parts would therefore be required if the existing tractors etc., are to be put to profitable uses. Further the practice of removing items from O.G.L. at extremely short notice, has made planning of indents by the importer, impossible.

Similarly the practice of the Government in not granting licences in cases where they have accepted a tender for purchase of imported machines is rather anomalous and is without any justification. This is only one part of the non-co-operative attitude of the Government which extends to other lines also. For example, the Government's refusal to meet their liability to sales tax on purchases in spite of the ruling of two High Courts in favour of the suppliers has involved several members in heavy financial loss. Finally the recent Government ruling under which importers are required to produce within six months of import, evidence acceptable to the customs authorities to prove, that an imported tractor has been sold and is being used for agricultural purposes, failing which they are required to pay a duty at 5½ per cent and to produce licence to import industrial tractors, has, Mr Patel alleged, caused a lot of inconvenience to the importers. The helplessness of the importers, in procuring a licence is well reflected in the Chairman's statement that a uniform levy of 5½ per cent on all tractors would be preferable to the distinction which subjects them to the difficulty of procuring evidence of use.

In the course of his speech Mr Patel also criticised the land policy of the Government. The census of land holdings undertaken by the National Development Council has revealed the existence in the country of about 453 lakhs holdings below 10 acres, 12 lakh between 10 and 50 acres and less than seven lakhs of holdings of the size of above 50 acres. The fixing of low ceilings he pointed out, militates against mechanization in farming and consequently against efficiency in operation. But here a balance will have to be struck between, the requirements of a scientific system of agriculture and the widespread hunger for land among the millions of agriculturists in the country. The conflicting claims of the two can be reconciled if the cultivators can be pursuaded to take to co-operative farming.

US Notes

One of the significant economic development in the United States has been willingness of north American industries go ahead with expansion projects even when capacity to produce has outstripped demand. A good example is the aluminium industry. Aluminium supplies in recent months have run slightly ahead of requirements. But this has not deterred US aluminium producers from continuing to expand their capacity. By 1960, they see the United States consuming three million short tons of Aluminium, compared with 1955's two million. And, by 1965, they see consumption rising to more than four million tons. At this moment, the industry has under way expansion plans that should bring production capacity to more than 2.6 million tons. By comparison, in 1939, the industry could turn out only 160,000 tons.

Aluminium producers do not mind seeing a little excess capacity on hand. Their view is that this makes aluminium available for new and larger uses based on the metals many attractive qualities, its lightness of weight, ability to conduct heat and electricity, resistance to corrosion, the ease with which it can be worked, and its competitive price.

On market the aluminium makers are hoping to expand, for instance, is the automobile industry. The average passenger can today contains about 45 pounds of aluminium. This is more, than seven times the aluminium used in the 1947 car, but still a long way from the 95 pounds per car expected by 1956. The increased use of aluminium may save as much as 200 pounds from the weight of the average passenger car. This kind of weight saving is particularly important to trucks and railroad cars since it enables them to carry larger loads without a corresponding increase in total weight. By using more aluminium, one manufacturer has been able to cut the weight of its truck bodies by 3,000 pound.

Already making its mark in power transmission lines, aluminium now is beginning to enter the electrical machinery and pipeline fields as well. It is sharing, too, in the expansion of the nations highway network, where its resistance to weather makes it particularly useful for signs and makers but aluminium's most promising use may lie in the structural field. Walls and building panels now

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

MR ANEURIN Bevan has been so insistently and so controversially in the centre of British politics of the last few years that many do not remember that he was a comparatively obscure person till 1945. The Penguin Political Dictionary compiled by Walter Theimer in 1939, for instance, does not carry an entry on him. His emergence as a political figure of crucial importance in post-war Britain is a measure of the change that had come over British politics after the war. It is the projection in a personal career of qualitative changes that were symbolised by Labour victory in 1945 elections, the granting of independence to India and other South-East outposts of the British Empire and, last but not least, the placing on the Statute Book of the comprehensive National Health Act for which Mr Bevan was personally responsible. From then on, British politics has been irretrievably committed to a progressive shedding of its imperial trappings and to the pursuit of the ideal of the Welfare State. And yet, hardly four years earlier, before Labour came to power, Sir Winston (then Mr) Churchill was growling in an undertone that he had not become the first Minister of His Majesty's Government to preside over the liquidation of the British Empire. And, though welfare state was something which Sir Winston could not have been so loftily contemptuous about, his notorious election-eve speech in 1945 about Socialist slavery showed how uncomprehending he was about the qualitative change that had come over British politics. He was at any rate till well past 1945, in the same romantic stage of imagining that British politics were something that could be conducted in terms of speeches out of Shakespeare's English Historical plays ("God for Harry, England and Saint George"). As long as the war lasted, it certainly was a stirring call to respond to, but once the war was over, he found that the historical current had churned him aside as a magnificent anachronism. How utterly and irredeemably anachronistic such attitude has become was inglorious demonstrated by the Suez adventure, which can legitimately be considered as the last ineffectual attempt of British political romanticism.

*

In one sense, therefore, Mr Bevan is the product of post-British politics. But it would be too great a simplification to call him its symbol or even its typical product. Mr Bevan had run into difficulties with his more moderate colleagues in the Labour party too often in the last few years to be considered as the central strand even in left-wing thinking in Britain. It is true, in the last year or so, his views have moved more to the centre of such thinking; and now that he is the foreign secretary of the shadow cabinet and the chances of Labour getting back to power are much brighter, his stand on a number of issues are of paramount importance in assessing British views on any subject. But he is still something of an "outsider" even in his own camp.

*

Though thus there is a sense in which Mr Bevan is a post-war British phenomenon, there is another sense in which he is in the central tradition of British politics. As I have often written in these columns, British political maturity has been the result of the fruitful interaction of its conservative (in the literal sense of the term) and its radical elements. Much to Great Britain's good fortune, both traditions were rooted so firmly and deeply in a passionate faith in liberty (at least within England) that ugly manifestations of authoritarianism have been mercifully spared them. It is a safe bet that neither a Czar nor a Lenin, much less a Stalin, is ever likely to emerge in England, and that Oswald Mosley will always remain a figure of fun. That is why we see the rather curious but entirely explicable paradox of one of the greatest Englishmen of all times, Edmund Burke, being at once a libertian and a conservative.

*

Mr Bevan, of course, is not in the direct line of succession of Burke; his antecedents are more uncompromisingly radical. His true political forbears are, interestingly, to be sought among the English poets—early Wordsworth. Shelley and Byron, whose passionate and compassionate concern for the individual human being was an important element in nineteenth century British radicalism. British Socialism, unlike socialism elsewhere, was not the child of revolution, but of romantic radicalism, at any rate until trade unionism took it over in the present century. I do not know whether any of my readers remember that great friend of India H. N. Brailsford, happily still alive. He was a typical intellectual socialist of the early years of this century and it is interesting to note that one of his early and best books is called "Shelley, Godwin and their circles." In many ways Mr Bevan is the true descendant of Mr Brailsford. (It occurs to me parenthetically that Mr Bevan is to post-Independent India what Mr Brailsford was to pre-independent India). It is to this radical tradition of Godwin, Shelley, Bernard Shaw, Brailsford, Cole and the New Statesman group of intellectuals that Mr Bevan belongs. As I said, it is a long and honourable tradition in British politics.

Interestingly, Indian nationalism has been nurtured by precisely the same sources. There are elements in our nationalism of the last hundred and fifty years which are uniquely Indian and about which I am not concerned at the moment. These are the elements that were brought into it by Mahatma Gandhi. What I am at the moment concerned with is those elements which Mr Nehru brought into Indian nationalism. I may add at once that, in thus referring to Mr Nehru's responsibility for certain strands in our political thinking, I am using him as a convenient symbol. As a matter of fact, these elements were imported into our political thinking long even before Gandhiji entered the scene. For instance, the Indian liberals of the last century and early years of this century, of whom Ram Mohun Roy and Gokhale were the most important representatives, had already fashioned Indian political thinking along lines chartered by British radicals. In fact, it would be true to say that Indian politics became less intellectually and more morally oriented after Gandhiji arrived on the scene. With the striking exception of Mr Nehru, no leader in the Congress camp thought it necessary to relate the impulses behind their actions to firm intellectual principles. In that sense, and with the reservation that in all rank and file were many who attempted to find an intellectual frame to their political acts, it is fair to describe the radical and socialist orientation in Indian political thinking as primarily Mr Nehru's contribution.

*

Be that as it may, the interesting point to note is that, but for the complication of our having

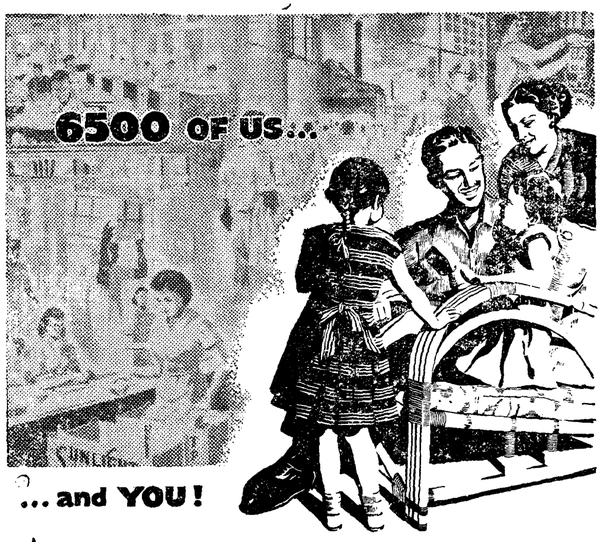
been part of the British Empire for the greater part of the period in question, British radical thinking and Indian nationalist thinking have had a remarkable parallelism. In so far as it depended on the development of personal political philosophies, even the vicissitudes of such development were identical. For instance, many in this country were as much emotionally involved as the "progressives" in England over the emergence of Soviet Russia as a communist power, over the slow development of Nazi power and even the Spanish Civil War. One has only to read the autobiography of Mr Nehru to realise this.



✱

And one has only to read the remarkable speech Mr Bevan delivered the other day in New Delhi before the members of Parliament to get a most interesting confirmation of this hypothesis. As so many other speeches of Mr Bevan, it had what can only be called the "Tribune quality"—the unique flavour of the weekly paper he edits. It radiated not only intellectual energy but a warmth of humanity that made it irresistible. Reading the speech, I was not only struck by the parallelism I have referred to, but also by the closeness of views between Mr Bevan and the majority of our countrymen. In introducing Mr Bevan, Mr Nehru referred to the fact that we have taken over British parliamentary institutions and were working them successfully and said that, "if by any chance Mr Bevan were to become a member of the Lok Sabha, I am sure he will feel quite at home here." What struck me as even more remarkable was that, if by chance Mr Bevan were to replace Mr Nehru as the Prime Minister of India, we would hardly feel the difference.

✱

This fact I consider to be of great significance, especially in the context of the world situation. Often have I argued in these columns that the Indo-British encounter is no marginal irrelevance in world history. On the contrary, it is an event, I have said, of importance not only to the two peoples, but to the whole world. In India are being worked out British ideals and British institutions which we have taken over as part of political thinking. And, as Mr Bevan argued in his speech, the significance to the Commonwealth and to the rest of the world of the Indian political and social experiment, is profound. Interestingly, he quoted the example of Poland and said in so many words that Poland was trying to become a "Slav India" by imitating the Indian experiment. India and Britain have a common background of political first principles. So, the need for maintaining the friendliest possible relations between the two countries is paramount. In this context, Mr Bevan's acute analysis of the importance of the Commonwealth is of great interest. I agree entirely with him, and those who advocate our leaving the Commonwealth will do well to ponder over what he has to say. On an earlier occasion, I pleaded that Great Britain should not allow its temporary pique at India's criticism of it to behave in such a way as to jeopardise a relationship that has great present virtues and even greater potentialities. Now, it is my turn to endorse Mr Bevan's plea that we should not allow ourselves to go off in a huff because the British criticise us on Kashmir. The essence of the Commonwealth idea is that we can differ and still be closely associated. After all we are not entirely friendless in Great Britain. No less a person than one who will probably be the next Foreign Secretary in Great Britain has openly endorsed our stand on Kashmir. The now famous Tribune article on Kashmir states India's case with a cogency

(Continued on page 739)

... and YOU!

All 6,500 of us in Hindustan Lever, a small army of men and women, have something very important in common. For us, it is not enough to make soaps, toiletries and cooking fats—with each of our products we aim to give you what you need in unvarying quality, so that you—the families of India—may know and trust and use them.

For almost eighty years, we have grown with your growing needs. And, like a flowering plant, we have put forth new and exciting blooms—dynamic pioneering activities behind the actual manufacturing scenes. Our Market Research department—unique in this country—carefully studies your preferences, your habits and opinions, and guides production with its findings. Our Quality Control department carries out strict tests on each product from the raw material stage to the finished article. The Dalda Advisory Service and the Washing Information Service are there to help you make the best use of our products.

And what are these products? You know them well—Sunlight Soap, for instance ... Lifebuoy ... Lux ... Rexona ... Gibbs S.R. Toothpaste ... Dalda Vanaspati ... and others that have become household friends. We are proud that so many of you have chosen to use them every day in your homes. At the same time we realise that your patronage lays upon us a duty, that of keeping steady our common aim, to offer the very best quality and value to our customers ... to you!

Bombay Review

Money Market Matters

MR T. T. KRISHNAMACHARI'S brief sojourn in Bombay for consultations on money market matters has engendered the feeling that his continuance as Finance Minister may be taken as certain; and that, after the short interregnum caused by the general elections and the interim Budget, he is again addressing himself to the problem of institutional facilities and realignments. Satisfied that the short-term question of helping banks tide over the current busy season has been suitably dealt with he is now giving constructive consideration to the long-term issue raised by a moiety of bank credit being diverted (not clandestinely but quite definitely) to medium-term uses.

TTK seems convinced that a Refinance Corporation to take care of medium credit requirements has a definite role to play; and that, only by this means, banks can be provided with the relief which will be at once substantial and enduring. On more than one occasion, he has "thought aloud" in this matter; and it is possible for him to draw the inference that there is general welcome for a scheme of this kind. Apart from the favourable response thus evoked, a good few of the banks may be interested in the provision of capital for such a corporation and in passing on to it an adequate volume of suitable business.

In fact, the securing of the requisite capital presents no great difficulty; but a policy decision that needs to be made is whether the participation in capital is to be confined to the Reserve Bank and the State Bank or whether a wider participation is to be preferred. If the latter view prevails by what criterion is the privilege of participation to be determined? Will it be on the basis of selected joint stock banks plus, maybe, ICICI and IFC?

Other questions relate to the size of the capital and the extent and manner of rediscount facilities. It may well be that a relevant point for consideration is the use, through the Refinance Corporation, of a moiety of the US surplus commodity counterpart funds earmarkable for aid to private industry. These are in no sense formidable questions; and the discussions now taking place should provide satisfactory answers.

As regards institutional readjustments, the Finance Minister may be toying with the idea of transferring the Agricultural Credits Operation Department from the Reserve Bank to the State Bank. The original Reserve Bank of India Bill did not contain any chapter in this regard; and the old Legislative Assembly incorporated responsibilities and tasks of this kind on the pattern of Australia's central banking institution. The Agricultural Operations Department was thus in the nature of an after-thought; and, if the truth be told, it has functioned more or less as a fifth wheel in the coach.

This Department is not integral to the functioning of the Reserve Bank; and there is sense in the suggestion that it will be more appropriate in the State Bank with its new role in the promotion of rural credit. Should a change of this nature be decided upon, the Reserve Bank will still continue to provide over-all guidance to the State Bank of which it remains the largest single shareholder.

It is yet too early to state whether Mr Krishnamachari has given thought to the need for his active intervention and his courageous drive in regard to the present parlous plight of Stock Exchange and in regard to the adoption of measures designed to restore the investment climate to normalcy. The talks he has had in Bombay should have brought home to him the gravity of a situation which can be neglected only at the Second Plan's peril.

Another matter which currently appears to be exciting his interest and receiving his close study is the evolving of a plan whereby a moiety of gold in the form of hoards and jewellery can be made available as currency reserve, so that a corresponding amount of foreign securities held by the Reserve Bank in the Issue Department is set free to bridge the foreign exchange gap anticipated in the Second Plan. The Prime Minister is evidently attracted by the possibilities of a scheme suitably devised and imaginatively pilotted. Should Gold Bearer Bonds impress public imagination and win public confidence, it will be the largest single contribution for the easing of the foreign exchange position.

It is undeniable that, at the routine official level, an exhaustive list of the practical difficulties has been set out with plausible arguments and half-true statistics. Any minimising of the difficulties likely to be encountered can serve no useful purpose; but too much thinking on them can paralyse effort and thus "make cowards of us all". The Second Plan has no room for cowardice; on the other hand, the inadequacies in the visible resources have to be made good by courage and imagination. None but the brave deserve the Plan.

It is, thereefore, to be presumed that the decision on the merits of a scheme of Gold Bearer Bonds will be made at the level of the Prime Minister and the Finance Minister; and that, once it is agreed that it should be launched leadership in the stage of pilotting will come from the same quarters.

An allied question for the continuing attention of TTK is the conditioning of the giltedged outlook so as to facilitate successful outcome for the 1957 New Loan issues of the Centre and the States. The forces of disruption have been mastered; and this is no mean achievement. For, immediately on the raising of the interest rate on advances made by the Reserve Bank on government and eligible securities, a landslide in giltedged prices was quite on the cards. Firm policy and confident strategy, both of which were competently publicised, prevented such a landslide from occurring. When market circles came to realise the full significance of the Reserve Bank's changed giltedged policy and changed open market strategy, operators who had maintained an oversold position, particularly in 3 per cent 1986 loan, recognised the wisdom of covering their sales. We, thus, witnessed the curious situation of giltedged prices firming up, not through bull tactics, but through the activities of the bears. Official policy, thus, won the battle without firing a shot.

The subsequent purchases of government securities directly from individual banks were less market operations than aids to the banking situation. A correct appreciation of this position is necessary if we are to gauge the measure of success which the mere announcemnt of a confident open market policy can achieve. Our contention is that, in the process of 3 per cent Conversion Loan advancing from below Rs 83 to over Rs 84, the Reserve Bank did not have to make any worth-while purchases for the deliberate purpose of supporting the market. It was sufficient to let the market know that the Reserve Bank was ready and willing to provide all the support necessary. Bears did the rest of the job.

This recent experience is sure to have special validity when, at the appropriate time, Authority sets about preparing the ground for the New Loan. The lesson is that, given courage in leadership and confidence in execution, victory is assured without the firing of any shot. The New Loan is still a distant prospect; but the Finance Minister must needs keep himself in live touch with developments in the giltedged market and must make sure that skill in techniques will be forthcoming at the right time and in the right measure.

In relation to a well-conditioned giltedged and investment climate, the State Life Insurance Corporation, with its integrated funds and centralised purchases of bonds and

Indo-Australian Trade

Speaking at the Bombay Rotary Club, Mr John G. Hurley, leader of the Australian Trade Mission to India, said that positive action would have to be taken by India and Australia on shipping and import licensing if trade between the two countries was to increase.

It would appear, that on its part Australia is well on the way to bring about conditions conducive to an expansion of its trading activity with India. It is estimated that the recent relaxation of import restrictions will increase the import bill by more than 10 per cent over the current level. As regards improvement of the shipping position, six ships have been diverted from coastal service to the overseas trade with India. Moreover, the modernisation of port facilities have been given top priority among many national development schemes.

Mr Hurley also disclosed that Australia was willing to render whatever assistance that was possible in the direction of obtaining capital goods on long-term credit. He revealed that the Government of his country was already exploring the possibility of assisting Australian manufacturers to meet the terms in that regard.

Having made some significant moves in the direction of relaxation of import licensing and expansion of shipping facilities Australia naturally expects India to initiate action on similar lines. As far as shipping and port facilities are concerned Mr Hurley himself has seen the work already under way in the major ports in this country toward effecting improvements. Reciprocal relaxation in import control by India bristles with many difficulties and it is gratifying to note that Mr Hurley has conceded the need for import controls to meet adverse balance of payments situations. He has, however, pointed out that the question of import control should be considered in the light of its possible repercussions on the country's internal economy. It has been the experience of Australia that continued controls are highly inflationary in their effect and cause severe internal economic strain.

*

Textile Industry

That the Indian Cotton Textile industrry does not view its immediate future with optimism is the main conclusion of all authoritative analyses of the working of the industry in the past year. Recently we have been told by the Chairman of the Bombay Mill Owners' Association that a serious situation has developed in the cloth trade because of mounting stocks in mills' godowns. Speaking at the 62nd Annual General Meeting of the shareholders of the company couple of weeks ago the Chairman of the Kohinoor Mills has warned that if the rising trend of the tax burden is not arrested soon, weaker units of industry may be forced to close down, with the attendant evils of unemployment and lower production and consequently a lowering of the already low standards of living.

The Kohinoor Chairman has characterised the proposal that companies should deposit 25 per cent of their reserves with Government as ludicrous especially when applied to companies like the Kohinoor which has ploughed back its profits over many years. Now, under the new regulation, Kohinoor has to increase its overdrafts with its bankers. This will lead to a chain reaction in which an amount equivalent to that to be deposited with the Reserve Bank by the companies as compulsory deposit will have to be withdrawn by banks from the Reserve Bank itself to meet the demand for increased accommolation from their clients.

Other difficulties that confront the industry are the extra excise duty levied by Government from last September, the shortage of cotton, overproduction of yarn and the restriction imposed on the expansion of the industry. Despite the handloom industry's inability to absorb the increased supply of yarn, there has been as yet no modification in the export policy governing yarn and sewing thread. The fact that Indian sewing thread has always enjoyed a high reputation in world markets both because of its high quality and because of its competitive price, has somehow escaped the notice of Authority. As regards expansion of the organised sector of the cotton textile industry, it is pointed out that in view of the indication already available as to the inability of the handloom sector to effect any marked change in its offtake of yarn, it will be only prudent to increase substantially the share of the mills in the target of cloth production under the Second Five Year Plan.

GATEWAY MARKETS

Silver Reacts: Gold Steady

SILVER, on the Bombay Bullion Exchange, witnessed a reactionary trend during the week under review, while Gold succeeded in holding the initial gains, thanks to sustained spot demand.

The quick change in the tendency of Silver has been attributed to nervous bull unloading inspired by fears of imminent arrivals of a large quantity of silver coins from Tibet. It is also felt that some of the major consuming centres, which usually obtain their requirements from Bombay, have been buying from Calcutta, which receives supplies of the Tibetan coins directly. Some advantage in respect of Sales Tax also seems to have contributed to the buyers' preference for the Calcutta market.

While the activity in the ready section has thus been somewhat smaller, the decision of the bullion market authorities to allow trading in the Jeth position ahead of the usual time has also accounted for the easy trend. It is stated that the Ashad contract is likely to start earlier with a view to preventing unhealthy bull manipulations.

As a result, Silver futures suffered a sizeable relapse on the eve of the expiry of the Chaitra position with the quotation moving down from Rs 182 to Rs 179.75, to finish better at Rs 180-12. Baisakh delivery began at Rs 181-12 and, after improving to Rs 181-13, dived down to Rs 180.69, to finish better at Rs 180.94. Spot closed at Rs 180-11 after touching a low of Rs 180.05. Arrivals amounted to 3 bars as against an offtake of 14 bars.

Gold prices, in contrast to weakness in silver, ruled very steady due to better demand for the mental. Chaitra delivery started at Rs 105.81 and, after touching a low of Rs 105.56, finished at Rs 105.72. Baisakh delivery began at Rs 105.87 and, after declining to Rs 105.62, recovered at the close to Rs 105.81. Spot moved between Rs 105.75 and Rs 105.94, to close at Rs 105.87. Soverign hovered around Rs 69-4.

*

Oils & Oilseeds

The market for Oils and Oilseeds ruled generally firm, the only exception being groundnuts. Although at times encountered considerable pressure, Castorseeds recorded an advance in prices on reports of American enquiry. Castor May delivery opened at Rs 178.25 and, after touching a low of Rs 176.75, advanced steadily towards the close to Rs 180.75. September delivery opened at Rs 181.25 and close firm at Rs 185.75.

Although Groundnut prices showed an improvement early in the week, higher levels could not be retained till the close due to lack of follow-up support. May delivery opened at Rs 170.50 and, after touching a high of Rs 172, finished at Rs 171.50. August delivery hovered around Rs 175.50.

Price movements in the Linseed section were in sympathy with the general trend. May started at Rs 29.50 and closed at Rs 30.62. Similarly, September delivery opened at Rs 30.25 and closed at Rs 31.62.

In the Cottonseed section, May delivery began at Rs 108.50 and closed higher at Rs 111. Similarly, September opened at Rs 111.50, to firm up at the close to Rs 113.75.

*

Yarn

Trading in the Yarn market continued to be listless and price movements were irregular on alternate bouts of buying and selling. In general, the improvement, witnessed in the past two weeks in rayon cloth, was not followed in the Art Silk yarn section. In the case of Staple-Yarn, the demand for 20s continued to be good; but that for 40s was at a low ebb.

Sentiment in the Cotton Yarn section also remained subdued. Reports from upcountry centres indicated that weavers were not inclined to enter the market owing to poor demand for their cloth. 20s lost about an anna per pound, while higher counts were neglected.

*

Metals

Price movements in the Bombay Metal market were mostly influenced by London advices. Copper was quoted at Rs 180.50 per cwt. Demand from North Indian centres was quite good and also from local rollers. Demand for Zinc continued unabated with the rate ruling firm at Rs 76 per cwt. There was nothing to report in Lead with the rate quoted around Rs 82 per cwt. Demand for Tin was moderate in the absence of any special development, rate hovering around Rs 129 per quarter.

On the London Metal Exchange, Copper spot was quoted steady at £241½ per ton; but the outlook for the metal continues to be in a state of uncertainty.

Zinc ruled quiet at £99¼ per ton. Demand for the metal in the USA is reported to be disappointingly low and production of high quality zinc is running above consumption.

Bombay Review

World *of* Cotton

Supply and Distribution Position Reviewed

THE Cotton Advisory Board, which met in Bombay early in the week to review the supply and distribution of Indian cotton in the current season, has appreciated the steps taken by the Government to keep Cotton prices within the ceilings prescribed under the Cotton Control Order.

As mills are taking more and more of Indian cotton, the Board has estimated that the mill consumption, during the current year, will be of the order of 46.50 lakh bales and expects a shortage of cotton in the 13|16″ to 1-1|16″ group. The Board has, therefore, recommended that imports of one lakh bales of American cotton under the Aid Programme should be permitted of staples 13|16″ and above instead of 1-1|16″ and above, as at present. To further improve the supply position in the country, the Board has suggested that 50,000 bales of cotton of staple 1-1|32″ and above and 25,000 bales of staple length 1-3|16″ and above should be permitted to be imported from soft currency areas immediately. The position should be reviewed later and, if necessary, a further 50,000 to 75,000 bales should be allowed to be licensed, subject to such staple length stipulations as may be considered necessary.

The Board has further recommended that the "floor" and "ceiling" prices of cotton for the 1957-58 season should be announced by the Government as early as possible and that the basic "floor" prices should be raised by Rs 50 per candy so as to provide an incentive to the cultivator. The Board has also appealed to the mill industry not to buy Indian cotton in excess of their normal requirements, as otherwise the Government would be reluctantly compelled to reintroduce the quota system of allocation of Indian cotton to mills.

Meanwhile, the cultivation of sea island cotton—the world's finest long-staple cotton, which has been grown successfully in Malabar—is to be extended to 300,000 acres in Kerala, Assam and Mysore by 1960-61. The object of the present scheme, estimated to cost Rs 6 lakhs, is to spread this variety of cotton in India and, by 1960-61, produce 225,000 bales, valued at over Rs 9 crores, thereby reducing the import of long-staple cotton by a similar quantity.

×

FUTURES MARKET

Despite increased Government interventions, cotton futures scored again fresh ground in the absence of selling pressure. The inherent strong position offered enough ground for the germination of a bull regime in the forward market. The sharp rise in values was largely due to speculative support on higher Akola advices. Indications of this were available on Saturday itself when Akola interests covered extensively. Also, marketmen began to think that the Government might not interfere with the working of the forward market at any rate. Further impetus was provided by the sustained strength in spot prices which were hovering around the ceiling levels.

Thus, prices registered a spectacular advance with uptrend necessitating special clearings. Margins also came into operation on the distant Vijay delivery. Sentiment was bolstered by smaller than expected tenders of 1,350 bales against the maturing Vijay and absence of any further Government measure. The turnover was 20,000 bales. Jharilla opened at Rs 717 and, after advancing Rs 739, finished at Rs 737.50. Similarly, Vijay June closed at Rs 862 after opening at Rs 845.

Again, on Wednesday, Jharilla May spurted to Rs 759 and Vijay April to Rs 903 due to bull support. In view of the sharp rise in prices, the Forward Markets Commission ordered the suspension of trading for the day on the ground that prices had been "artificially rigged up". After this directive, the following rates were quoted:—Jharilla May Rs 735 and Vijay June Rs 858.

The EICA fixed the clearing rates at Rs 754 for Jharilla May; Rs 915 for Vijay April and Rs 878 for Vijay June.

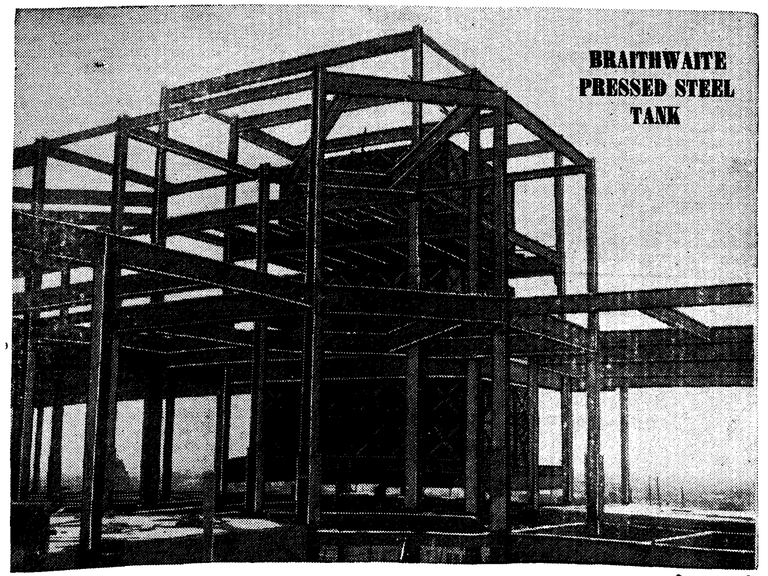
×

SPOT MARKET

The Spot, as usual, continued to be active with mills evincing interest in all staple varieties and prices remained firm all-round. It was reported that mills were finding it somewhat difficult to obtain the required quality due to scarcity of cotton.

In the foreign cotton section, a few spot lots of American and Egyptian cotton were reported to have changed hands.

Following rates quoted:—Bengal Rs 690 to Rs 740; Oomra Rs 800 to Rs 830; Dhollera Rs 770 to Rs 780; Jharilla Rs 800 to Rs 840; Vijay Rs 975 to Rs 980; AR/BP/52 Rs 1,650 to Rs 1,675; Karnak Rs 2,800 to Rs 3,000; Sudan Rs 2,600 to Rs 3,000 and American Good Middling Rs 1,425 to Rs 1,440.



×

NEW YORK MARKET

Prices in the New York futures market extended recent gains with some buying credited to export interests, believed to be against sales of cotton to Spain. Part of the demand was again associated with expectations of a higher 1957 loan rate along with scattered showers and low temperatures over parts of the belt. These were expected to further delay crop preparations.

There was, however, no follow-through buying and prices, as a result, gave up a good part of the gains under profit-taking at the close. Trading in 1958 October delivery started at 32.15 cents. Spot was quoted at 35.45 cents per pound.

The Ghosts of Adam Smith and Karl Marx

I have often wondered about the impulses that prompt Chambers of Commerce and similar custodians of the interests of the private sector to ask the Prime Minister to inaugurate their annual get-togethers. By the same token, I have been equally curious about the impulses that urge Mr Nehru to accept these invitations despite the fact that he is the most over-worked man in the country. As regards the former, something must doubtless be put down to the spell of Mr Nehru's name, from which even hard-headed businessmen do not seem to be immune. On the other hand, it may be due merely to the ancient habit of homage paid by commerce to political power—a hangover from the days when Viceroys addressed annual meetings of Associated Chambers. More importantly, the desire to have the Prime Minister in their midst, for however short a period, may be due to the intention to let him know their point of view about the various policies pursued by his Government in so far as they touched the national economy and their particular interests.

As for Mr Nehru, his acceptance of such invitation may be a measure of the importance he attaches to the problems of industry and trade. For, as far as he is concerned, there is no question of attempting to squeeze private enterprise out of existence. His view, at its most lukewarm, is that there is hardly any sense in not allowing it to function effectively as long as it is part of the national economy. But there is, I believe, a more immediate reason for Mr Nehru's acceptance of such invitations, and that reason flows from a function that Mr Nehru seems to have assigned himself in the present stage of India's development. It is not merely that Mr Nehru presides over particular tasks in which the Government and the people are engaged at the moment. It is not merely that particular economic, political and social acts are being considered important and they are being put through mechanically. What Mr Nehru has conceived as his function seems to be nothing less than the creation of a climate of opinion, a basic and fundamental change in national character, and a new dynamism in the thinking of 370 million people. Sophisticated people often complain that Mr Nehru talks far too much, and that he deals out generalities on all manner of contexts, and they could do with little less preaching and nagging. What these superior persons miss is that, unlike their lazy selves, Mr Nehru is anxious to give depth and perspective to all the reforms that are being attempted, to relate every particular act to certain basic principles of human conduct.

It is this anxiety to broaden the base of every deliberation, to relate every consideration to larger issues that is responsible for Mr Nehru's constant harking back to fundamentals. So, when he addresses Chambers of Commerce, he speaks little about particular problems facing them, but more on general considerations that ought to be borne in mind. There is, therefore, a certain calculativeness about this attempt to give a larger frame of reference to the deliberations that are to follow.

For instance, about a fortnight ago, he seized a reference in Mr Singhania's speech to the notion of "Obsolescence of mind" and pleaded for dynamic thinking in economic matters. Likewise, addressing the annual meeting of the All India Manufacturers' Organisation here last Saturday, he pleaded for "exorcising the ghosts of Adam Smith and Karl Marx" He added, "These ghosts and spectres prevent us from realising that we are living in a terrifically dynamic and changing world and what might well have been clear thinking some time back is out of date today in view of the new developments in science and technology".

In intellectual circles of any respectability, these have been cliches for a long time. But, in practical life, the implications of these ideas have not seeped down. The conundrums of an undeveloped economy trying to catch up with progress in the middle of the twentieth century are not answerable in terms of either the Wealth of Nations or of Das Kapital. Morover, our problems are insoluble even along lines pursued contemporaneously elsewhere. All these are evident to any one who really cares to think these things out without an ideological apparatus already provided by thinking and experience elsewhere and at other times. But, to judge by extremists of the right and the left in the country, these things need iteration.

About free enterprise in the country, Mr Nehru made an important point: "If India had to progress, we have to develop the spirit of enterprise in the 370 million people of India. We are not going to regiment them and make them robots. I am all for enterprise but when 'free enterprise' actually leads not to free enterprise but to huge accumulations of power, economic and the rest, it is not free enterprise in the right sense of the word at all. It comes in the way of the real development of the spirit of enterprise in the people which I would like to develop".

It is possible that, under certain conditions, "free enterprise" may lead to concentration of power in a few hands. But the shades of Karl Marx against which Mr Nehru warned us, are unconsciously darkening the discussion here. As Mr Nehru himself has pointed out earlier, conditions have changed so much everywhere that there is little likelihood of the kind of concentration of power that Mr Nehru fears. The reason is quite simple with the possible exception of text books of classical economics, there is nowhere in the world today anything like a "free enterprise" in the pristine sense of the term. (Mr Nehru himself had stressed this in other contexts). But this is not to say that enterprise has no place in modern economic activity. The freedom that "free" enterprise enjoys today is not the freedom supplied by the operation of Say's law, but by technological daring. So long as there is one entrepreneur willing to take the necessary risk in a pioneering venture, there need be no fear about the extinction of free enterprise. But those who would rather have the comforts of freedom without the risks attendant on enterprise argue only half the case of free enterprise, and the less respectable half of the case at that.

These thoughts come appositely in the context of the annual meeting of the All India Manufacturers Organisation. For, it is not another "Chamber of Commerce". As its name indicates, and as its antecedents have clearly established, it is an organisation concerned more with manufacture than with trade as such. As I have often remarked, the case for the private sector has had a poor hearing largely because its most vociferous advocates have been its more parasitical members whose real stake in production as such has been comparatively little. The Second World War saw the emergence of this upstart species of businessman whose interest even in production was only money. He took to manufacture only because he saw that there were quicker and larger profits in it than in buying and selling. So, he flowered into an "industrialist" over-night. This unsavoury gent had, unlike an earlier generation of industrialists, no pride in his enterprise and no sense of vocation in his chosen field. All he wanted was more and more money and in the quickest possible time. Obviously, he has no use in technological courage. His advocacy of free enterprise was nothing but a plea for freedom to make money.

The AIMO has, on the other hand, always been known for its standing four square for technological advance. Its long association with Sir M. Viswesvarayya is clear indication of the orientations of its attitudes. It holds no brief for the get-rich-quick-merchant, and its policy has been progressive, more so even than that of the Government in many respects. One interesting confirmation of the AIMO's progressiveness is to be

Prizes as Incentive

Having recognised that prizes for individual cultivators are effective stimulants to enthusiasm and sustaining effort, the Government do not seem to have proceeded on that basis with sufficient vigour. A single prize or a handful of prizes for a whole crop would be a poor and remote incentive for stirring competitive effort among cultivators who would number a few lakhs. Nowadays, the peasant who seeks to win a prize is fascinated as much by the distinction as by its material content.

The Union Food Minister recently announced a prize of Rs 5,000 to the owner of the best orchard in the country. The way in which the selection is to be made does not assure that the prize will go to the most deserving in the whole of India. The owners of many orchards may even not know that there is an offer.

Prizes, if they are to whip up competitive production, should not only be substantial but sufficiently numerous. Their number will have to be determined according to extent of the crop. Where fruit and vegetable gardens abound it would be better to offer at least one prize for every District. For such crops as rice and wheat, the area may be reduced even further. Alongside the present all India competitions, there is a very good case for instituting similar offers at the State and District levels, if not even at the level of the taluks.

*

Fruit Preserving Industry

Despite its immense scope, the Indian Fruit Preserving Industry has not been able to make much headway. Its retarded growth has been primarily due to the absence of two important prerequisities. In the first place, for any industry to thrive there must be a good demand for its output. In view of the low standard of living of the people, tinned fruits and vegetables are beyond the reach of the common man. Secondly, due to various handicaps the industry has no other alternative but to pay a high cost for the containers. Speaking at the recent annual conference of the All India Fruit Preservers' Association in New Delhi, Mr Meher Chand Mahajan, president of the Association revealed the startling fact that about 50 per cent of the price paid by consumers went to cover the cost of containers, packing and over-printing.

It will be clear, therefore, that whatever may be done to help the industry, the desired results may still elude our grasp so long as the standard of living of the people in the country is not substantially increased and so long as the industry is not enabled to obtain containers at a greatly reduced cost than that is being paid by it.

Apart from its contribution to the better health of the population, the fruit preserving industry has another vital role to play. It is scarcely necessary to draw attention to its importance to the army in times of national or international emergencies. Tinned food vegetables and fruits occupy a vital place in army supplies. Hence a prosperous fruit preserving industry within the country may be of immense help to the defence department of the Government in times of need.

The large outlay on the Second Five Year Plan may be expected to bring about in the next five years some sizable improvement in the standard of living of the people. Though such improvement as will be recorded will not be large enough to arouse any widespread popular interest in tinned fruits vegetables etc., it may be taken for granted that in coming years there will be a larger demand for preserved fruits than that is met with today in the country.

It is gratifying to note that the potentialities of this industry are slowly being recognised as is evident from the Planning Commissions' increased allocation for horticulture under the Second Plan. The Plan has provided for bringing an additional area of 3,00,000 acres under orchards Inaugurating the conference Mr A. P. Jain has emphasised the importance of research in the development of the industry. In recognition of this, Government have decided to set up four research stations in the country as a beginning. It is to be hoped that the industry will find its way soon to follow the advice of Mr Jain and make arrangements to conduct research in their own laboratories in collaboration with Government so that quick results can be obtained.

NORTH INDIAN MARKETS

Hardening Tendency in Grains Prices

Barring Gram which declined due to bumper crop prospects, prices of other Foodgrains developed a hardening trend in the Hapur market last week, mainly due to paucity of stocks at the fag end of the season. Continued cloudy weather also delayed arrivals of the new crop in the market. Harvesting of Coarse grains has finished and that of Wheat is in full swing. Arrivals of the new wheat crop are expected to begin within a week.

Wheat prices touched peak heights of the season at Rs. 17|4 per maund for average quality, while farm quality was transacted upto Rs. 19. Prices of Rice also recorded gains on firmer advices from the main producing centres.

New crop Gram arrivals from Madhya Bharat were scanty and prices after touching high levels early in the week, declined towards the close on easier Punjab advices. Barley and Bejher recorded some gains as arrivals of the new crop were small.

Prices of Peas also scored gains due to good buying enquiry from East Uttar Pradesh and Bihar in the face of a fall in daily arrivals. Arhar and other pulses, however, ruled quiet.

In the Delhi grains market, sentiment was rather subdued, with the exception of farm Wheat and dara Moong which closed firm. Farm wheat improved slightly due to restricted arrivals against better demand. Gram lost about Rs. 1.12 to Rs. 1.25 per maund in the absence of outside buying enquiry. Buyers in Barley were lacking. With the result, the market for this commodity ruled quiet. Demand for Bajra and Maize was poor in view of the decline in gram.

*

Sugar

Sugar markets continued to rule quiet and the small offtake by the consuming centres was mostly against previous commitments. Following mill-delivery rates (per maund) were quoted in the Hapur market:—Jaswant Rs 28|10; Simbhauli Rs 28|12; Mowana Rs 28|4 to Rs 29|8; Daurala Rs 29|8 to Rs 30|8; Amroha Rs 28|3; Bijnore Rs 28|2; Mansoorpur Rs 28|8 to Rs 30|2 and Rampur Rs 31|0.

According to figures released this week, production and despatches of indigenous sugar amounted to 1.545 million tons and 838,000 tons upto 31st March, 1957 in the current season as against 1.402 million tons and 680,000 tons respectively in the corresponding period of last year. Stocks with the factories, as on the 31st March 1957, were 1.235 million tons as compared to 1.133 tons on the corresponding date last season.

The sugar season in West Uttar Pradesh is still in full swing. Out of one lakh tons of sugar allowed for export this year, 78,950 tons had been sold out by March 31; but despatches were small.

The Khandsari market continued to remain dull in the absence of new driving forces and prices remained mostly unchaged at Rs 18 to Rs 24 per maund, according to quality.

*

Gur

In the Hapur market, the rates for ready Gur moved between Rs 10|0 and Rs 10|12 per maund, according to quality. Stocks were estimated around 98,000 maunds as against 71,500 maunds in the same period last year. Arrivals averaged only 250 maunds daily. Outside buying enquiry continued to be limited.

*

Shellac

The Shellac market remained quiet with Pure TN quality hovering idly around Rs 86.00 per maund. Shipments during April until the 10th were 9,095 packages comprising 5,602 packages of shellac; 2,579 packages of Seedlac; 161 packages of Buttlonlac and 753 packages of other varieties.

The market is generally feeling the effects of competition from Siam; export shipments have fallen off since January and some Indian traders believe that foreign buyers are keeping off the market in the hope of a fall in prices, as they know that there is a substantial carry-over in India to be disposed of.

In the London market, traders are still operating with caution, as there is plenty of spot material. They, therefore, do not feel pressed to buy forward in order to be sure of meeting requirements. The rate for the commodity is now quoted around 214sh with sellers at 221sh per cwt.

CLIVE STREET GOSSIP

(Continued from page 734)

and fairness that cannot be bettered even by us. It is, therefore, necessary that we show the same degree of political maturity that we expect from Great Britain. Not the least of the service rendered by Mr Bevan to India and Great Britain has been his bringing to bear on India and Great Britain his persuasive eloquence on a matter of great moment to both countries. For this, as for so much else in him, I subscribe myself as his grateful and admiring.

Timely Reassurances

MR ELLSWORTH BUNKER'S speech at the meeting organised by the Council of Public Affairs at Rajaji Hall, spiced with happy reminiscences of family connections with India, will I am sure, be cherished as one of those rare utterances by top-level diplomats which will go a long way toward removing the mists of mutual suspicions between countries and assisting the growth of understanding.

Indo-US relations, though having a permanent basis for friendship, has passed through many vicissitudes in the last decade. Just now there is a heavy cloud of misgivings which obscures the innumerable links of mutual co-operation and common interests. In the United States there have always prevailed two distinctive attitudes toward India. The President and the States Department have consistently shown a readiness to understand the handicaps and difficulties of this country and to appreciate its achievements in all spheres; in the Congress and in the Press, we have always seen an irrepressible bias against India, a recurring tendency to exaggerate situations or aspects unfriendly to India and to support interests inimical to it directly or indirectly.

Amidst these two attitudes though the two Governments have shown sufficient understanding and goodwill, the two peoples have not moved sufficiently closely. Mr Bunker's speech, which naturally reflects the Political and States' Departments attitude, should also contribute to greater mutual friendliness on the popular level. On certain highly controversial issues of both national and international significance, he has expressed views, capable of absorbing rancour between the interests involved and of developing a general approach agreeable to all.

At the outset, he explained how in India a more positive role on the Government in the field of economic development than obtaining in the United States was more or less predetermined, because of the relatively low level of capital formation. While in both the countries private enterprise had a large part to play, its future, he pointed out, was conditional on the extent to which the businessman recognised and accepted his responsibility in a changing world; the responsibility included "such things as acceptance of the fact that the widest possible distribution of the products of industry at the lowest price, rather than charging what the traffic will bear will make for conditions of sound and permanent prosperity."

Equally important, in his opinion, was the need to recognise the fact that well-paid and contented workers with security for themselves and to their family were the most productive. He mentioned a third one too, that business had a social responsibility to the community in which it lived. It must support the activity which made for a better life for the people. To continue, business must be able to show that it could perform essential public service better than it would be done by other methods. And he gave the warning that if it could not do this, some other system would replace it; and this was a challenge which business and industry in the United States, India and everywhere in the world had to face.

In other words, Mr Bunker was holding up as an example and inspiration to India the highly enlightened attitude and methods of US private business. He wanted us to succeed in the Plans which formed the Charter of the country's economic development programme, and which he described as undertakings of great magnitude and courage and were being pursued with industry and enthusiasm. He wanted us to understand, that the future of India's economic plans was not a matter of exclusive interest to India alone; "we want you to succeed your own sake, for our sake and for the sake of all the free peoples of the world".

This universal interest and particularly the interest of the United States arose from the fact that the United States equally with India believed that economic development could best be achieved by democratic methods. In drawing a parallel between the two countries, the US Ambassador emphasised what both the countries were keen on avoiding, the surrender of these methods.

At this point, it may be pertinent to recall certain comparisons in economic progress between India and China drawn by "Newsweek" on the basis of UN statistics. In 1956, China's national income rose by more than 10 per cent. India's gain was just 2 per cent. China could invest 22 per cent of its national income on its industry, while India could only invest 8 per cent. Against China's increase in industrial production to the extent of 25 per cent, the Indian figure was 8 per cent.

These statistics alone, however, do not tell the whole story. There is an enormous difference in social cost, in the preference of one method against another; there are also developments like the Community Projects, dams and irrigation canals, which do not completely lend themselves to statistical analysis, in spite of the impressive additions to wealth and prosperity they represent. Any way, the comparison itself is useful as part of a world focus.

The elevating ideas which Mr Bunker put into his Madras speech must therefore be helpful as a corrective as much to private enterprise in India as to his own countrymen whose judgments are based on an inadequate or distorted picture of conditions here.

The subject of the Second Plan and the economic development it involved naturally drew him to the question of US assistance. The United States has, in the course of the last nine years, extended to India assistance in the form of loans and grants amounting to more than Rs 450 crores. Then, there is the technical assistance programmes through different agencies. The 900 to 1000 engineering trainees for whom the US has made itself responsible for the next five years will make a significant contribution to the supply of personnel in a field where it is woefully insufficient.

Explaining how the fear of invasion by outside capital was unfounded, he recalled American experience. American railways coal mines, steel mills and other factories had received the impetus of European capital both in the 19th and in the early years of the 20th centuries Britain, French, Dutch and other investors have made a great contribution to United States industrial development.

In this background, Mr Bunker could believe that India would benefit in the same way as the United States did. As for the ways by which more American capital could be attracted, he left to the Government to decide, but hoped that methods mutually beneficial to the private foreign investor and to the country would be found. He also referred to the hope expressed by Mr Forbes, the leader of the United States trade delegation recently in India, that during the next three years there would be substantial increase in Indo-US trade and collaboration.

Winding up his observations, the US Ambassador made a fervent appeal for mutual generosity and tolerance, vigilance in protecting our liberties and steadfastness in holding the course until the goal was in sight. "Is this too much to ask of the two largest democracies in the world when the prize is the kind of world in which we may live in dignity in freedom and in peace?"

That Mr Bunker steered clear of the issue which was top-most in the minds of his audience must surely have been somewhat disappointing to those present. I am referring to the issue of Kashmir and its impact on Indo-US relations. Kashmir came in for discussion at the Press Conference held at the

South Indian Notes

Blowing Hot and Cold

The Communist Ministry in Kerala have been providing indications of the policies and purposes which will guide and distinguish their regime. The main impression so far vouchsafed is that they are seeking to acquire proficiency in the dubious art of blowing hot and cold. On the one hand, the threat is repeated that foreign-owned plantations' industrialists will be nationalised. On the other, Indians are being given assurance of conditions conducive to their successful entry in the industrial sphere.

The emphasis on the State taking over the large tea and rubber and coffee estates now run by British companies, is as much a political as an economic issue. How far these enterprises, if managed by the State, will augment the resources of the Kerala Government, is a debatable point. But, in terms of political policy, the step now toyed with by Mr Nambudiripad and his colleagues is certain to lead to a head-on collision between the Communist Government in the State and the Congress Government at the Centre. There is, herein, an obvious conflict calculated to result in a serious collision.

The Centre is intent on policies which will maintain and strengthen conditions congenial for growing investment of foreign funds and for increasing participation of foreign firms in Indian business. For this purpose, assurances are given that foreign business will not suffer any discrimination. Such being the Central policy, Kerala proposes a programme whose essential motive is discrimination. The Centre is sure to resist any moves which adversely affect foreign owned business just because it is foreign owned.

In such resistance, the Centre would have been in unassailable position if it had not acceded to the imprudent proposal of Mysore for the nationalisation of the gold mines. That there was yielding to the State's pressure in one case makes difficult an unyielding stand in the other. Yet, the Centre dare not allow a repetition of an unwholesome incident. The favourable odds are that it holds the purse-strings, and that it has added reason to be firm on this occasion.

*

Problems of Cottage and Small Scale Industries

The two groups, which discussed the problems of cottage and small scale industries, at the Fifth Interstate Seminar on community development at Kodaikanal, have pointed to the existence of a number of defects in the working of the development programmes for the various cottage and small-scale industries.

One of the most important of the problems and the one which requires immediate remedy is the delay experienced in getting schemes for development of Khadi and Village Industries Board, and the Production Ministry, and this it was pointed out resulted in funds not being utilized within the financial year. By way of a solution to this, it has been suggested that the All India Khadi and Village Industries Board should make ad-hoc allotments for each State for development of different village industries and furnish the State Governments, with model schemes, and the pattern of financial assistance for different types of schemes.

The marketing problem with reference to the products of cottage and small scale industries also remains to be tackled on a scientific basis. There was very little progress in organising marketing societies for sale in any area. It was particularly noted that the cooperative societies dealing in handlooms products have to be more business-like in their working. To popularise the products, it was also recommended that cottage industries products should be exempted from sales tax, octroi etc., and that products of village industries like leather footwares, edible oils, palm gur, soap, coir goods and tiles might be considered for grant of rebate on sales as in the case of handloom goods. Standardization of village industries products marketed on an all-India basis and exported outside is also called for to perfect the marketing structure. A drive for increased consumption of the products is to be launched in the development blocks as it has been found that there was much scope for increased consumption of such products in these areas.

Finally it has been explained that if the object of solving the problem of unemployment, which is the reason advanced for encouragement of small scale industries is to be achieved, it is necessary that they should be allowed to develop to their fullest extent on the basis of a certain measure of protection and reserving certain areas of production.

*

Agricultural Education Personnel

The efforts made by the Community Development Personnel in popularising better farming methods, seems to have achieved little results so far as the small farmers are concerned and the per acre yield in these farms is still very low. This points to a shortcoming in the working of the agricultural plan by the Community Development staff, which has been isolated and identified by the groups which discussed the agricultural problems at the fifth Inter-State Seminar on Community Development, as neglect of educational functions of agricultural extension. The apathy and indifference of small farmers to changes of whatever kind are factors which have to be overcome, if the long-range objectives of the Community Development Programme namely, development of the personality of the farmer, through participation in the projects, is to be realised. Selection and training of farm leaders, who could impart training to other farmers in the villages, to help them increase agricultural production, as well as demonstration of improved methods on the farmers' fields, are the measures, recommended by the groups so as to bridge the gap between low and high yields. An increase in the number of progressive farmers, has been found to be preferable to the increase in the yield of those who already were producing sufficiently good crops.

Further lack of simultaneous availability of agricultural credit and supplies are handicaps seriously felt in the Community Development areas and this had adverse effects on agricultural extension. Proper planning of supplies is therefore necessary to smoothen the agricultural operations of the cultivators. The example of Bombay where arrangements had been made for synchronisation of credit and supplies by establishment in each of the selected Taluks, of cooperative depots from which supplies of fertilizers and seeds were made and where the participants were required to market their crop through the cooperative society is a pointer to other states.

SOUTH INDIAN MARKETS

Coffee Outlook

According to the latest release, the Coffee Board, at the recently-held meeting, considered the coffee export position, the fall in the prices and the best way of marketing the surplus stock. The receipts into the Pool,. as on the 1st April 1957, were 34,984 tons, while the whole of the 1955-56 crop was already sold except for a small quantity of 300 tons—mostly Rebusta—which is scheduled to be cleared by the end of this month. The consumption in the internal market, for the quarter ending March 31, 1957, was 6,194 tons.

The release says that, owing to an improvement in the estimates of the current crop, some more surplus will be available for export. But the prospects for the 1957-58 crop are not as bright as they were some time ago. Certain quarters forecast a fall in the crop from the original estimate of 50,000 tons in view of the untimely rains, which accompanied by storm, in Coorg, Mysore and the Nilgiris. A rough estimate places the crop at 30,000 to 35,000 tons.

The Coffee Board has already held discussions with the members of the Finnish, American and Australian delegations regarding the prospects of exporting Indian coffee to these countries. The Board is now concentrating on the disposal of coastal stocks, both for export sales and for internal consumption.

Following were the range of prices quoted at the auction held at Mysore last week (per cwt):—Plantation A Rs 211.20 to Rs 213.50; Plantation Peaberry Rs 228.30 to Rs 230.10 and Robusta Flats Rs 153.90 to Rs 154.00.

*

Groundnuts

The Madras Groundnut market ruled quiet with prices hovering idly around previous week's levels. Arrivals averaged 25 to 30 tons a day. As buyers did not show much interest, stocks with the commission houses were accumulating. Small crushers took up only small quantities in order to meet their immediate requirements. The rate for superior oil-quality seeds was quoted at Rs 159 and the bold variety at Rs 154 per candy.

In the Groundnut Oil section, the rate for for the ready position was quoted Rs 2 per candy lower at Rs 318. This was mainly due to the diversion of buyers to the Andhra market where oil was available at cheaper levels. Moreover, crushers in Madras had to pay, from April 1, 1957, sales tax at 2 groundnuts and 1 9|16 per cent on per cent. on their purchases of the sale of oil. With the result, business in the forward section was also difficult to put through.

THE PUNJAB NATIONAL BANK LIMITED

Directors' 110th Report to the Shareholders for the Year ended 31st December, 1956

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1956.

The transactions for the year under report have resulted in a profit of Rs. 90,20,272-7-8 (including Rs. 2,35,108-2-3 brought forward from the previous year's account). The following amounts have been appropriated for the undermentioned purposes:—

	Rs.	A.	P.
1. Transferred to Income-tax Provision ..	27,50,000	0	0
2. Transferred to Reserve Fund (Statutory)	27,50,000	0	0
3. Transferred to Bonus to Staff Account ..	13,00,000	0	0
4. Transferred to Charity Account ..	1,00,000	0	0
5. Transferred to Gratuity to Staff Account	1,00,000	0	0
6. Ad-interim Dividend at Rs. 2/- per share free of income-tax paid	7,00,000	0	0
	77,00,000	0	0

The Directors recommend that the balance of Rs. 13,20,272-7-8 be disposed of as follows:—

	Rs.	A.	P.
(a) Dividend at Rs. 2/- per share free of income-tax making the total at 16 per cent. per annum	7,00,000	0	0
(b) Carry forward to the next year's account	6,20,272	7	8

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors,

March 12, 1957. S. P. JAIN, Chairman.

BALANCE SHEET AS AT 31st DECEMBER, 1956

AUDITORS' REPORT

TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Ltd., as at 31st December, 1956, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the unaudited returns of the Bank's Branches in Indian Union, Pakistan and Burma none of which were visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our knowledge and information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

NEW DELHI, March 11, 1957.

The Alkali & Chemical Corporation of India Ltd.

The Twentieth Ordinary General Meeting of the members of the Alkali & Chemical Corporation of India Limited was held at the Registered Office of the Company, 34 Chowringhee Road, Calcutta on Thursday the 28th March 1957 at 3-30 p.m.

Mr. N. D. Harris the Chairman presided.

Mr. M. Cariapa representing the Secretaries, Imperial Chemical Industries (India) Private Ltd., having read the notice convening the meeting and the Auditors' Report, the Minutes of the Nineteenth Ordinary General Meeting held on the 7th March, 1956, the Minutes of an Extraordinary General Meeting held on the 2nd April 1956 at 3-30 p.m. and the Minutes of a General Meeting held on the 28th September 1956 at 3-30 p.m., were laid on the table having been already signed.

After the Chairman had delivered his speech which has already been reported through these columns on 6th April 1957 two Shareholders, Messrs. A. V. Seth and K. L. Mukerji, raised the following points: About the proposed share issue they said that since the Company had been formed, it had paid a low rate of average dividend, whereas the market prices of the Ordinary Shares had ranged as high as Rs. 60/- and averaged about Rs. 30/-. Good profits were made by the Company in 1956, but nevertheless a dividend of 8% only was paid, a large transfer having been made to Dividend Equalisation Reserve; it was contended that this was unfair to Shareholders. In addition, Shareholders were faced with a 4:1 rights issue, the new shares having to be paid for over five months. This it was suggested was unfair on small investors who in the present tight money market conditions were unable to raise the extra money in the time. At the same time this rights issue had brought the market price down by nearly 100%. The new shares, it was believed, would not receive a dividend for several years. They would only start to rank for dividend from 1-10-57 and dividends would probably then be payable at even lower rates than now.

Mr. Harris replied that the market price of shares was, he understood, determined by other factors as well as by the rate of dividend declared. For some years past now, A. C. C. I. Ltd. had declared a reasonably good rate of dividend. It was in order to safeguard the interests of Shareholders and to endeavours to ensure that a satisfactory dividend should continue on the larger capital which the Company would shortly have, that a substantial transfer had been made to the Dividend Equalisation Reserve. The terms of the present Polythene issue had been decided by the Board only after very careful thought, and after taking the best advice available. To help Shareholders, agreement of the Stock Exchange Committee had been obtained for official dealings to take place in renunciation letters, thus enabling Shareholders who did not wish to take up the new shares, to have a market for the sale of their rights. The term over which calls were to be collected has been made as long as was practicable, but the Stock Exchange disliked shares which were partly paid for a long period, owing to the difficulties involved in dealings, and it was in the Shareholders' own interest that a market should be created for the fully paid shares as soon as possible. The new shares would start to rank for dividend from the 1st October 1957, i.e. five months after application money had been paid, and immediately after the final call. From the above date they would participate both in profits made by the old capital and in the substantial sums which have already been set aside to the Dividend Equalisation Reserve. For the prospects of future dividends Shareholders were advised to consult recent published accounts.

In regard to accounts, the above Shareholders pointed out Selling Commission totalling to Rs. 22,61,430/- had been paid on a turnover of Rs. 1,88,30,913/-. This rate of commission was compared with the rate of commission paid by Indian Iron & Steel. Why was the commission not based on profits instead of on sales? It was noticed that technical fees were paid in addition to selling commission. Was Directors' remuneration by way of a commission or fees? What benefit was received by the Company for the fee paid for loan guarantee?

In reply Mr. Harris pointed out that I. C. I. (India) Private Ltd. were Selling Agents for A. C. C. I. Ltd., and not Managing Agents and that they could not be compared with the Managing Agents of Indian Iron & Steel. Whereas a Managing Agency Commission is paid by reference to profits, Selling Commission is paid by reference to turnover and its amount must depend on the nature of the products and the difficulties and costs in selling them. Products requiring a high degree of technical sales service demand an expensive sales force and necessitate a high rate of selling commission. Paints and B. H. C. formulations are examples of such products and they are in no way analogous to bulk sales of iron or steel.

The technical charges paid to I.C.I. (India) Private Ltd. are quite separate from the selling commission and refer to the technical help given in running the plant by arrangement with I. C. I. (India) Private Ltd., technical advice received in this way costing the Company much less than would the appointment of a separate technical staff. Directors' remuneration is by way of monthly fees. No commission is paid. By paying I. C. I. (India) Private Ltd., for guaranteeing their Bank Loan, A. C. C. I. Ltd. are charged a lower rate of interest. This saving is shared equally with the guarantors.

The above two Shareholders asked whether tenders were called for, for the construction of the Polythene Plant. I. C. I. being a monopoly, they were, it was suggested, able to make any charge they might wish to A. C. C. I. Ltd.

Mr. Harris replied that I. C. I. Ltd. are providing the technical "Know-how" and design work for the erection of the Polythene Plant. The contract was, it was understood, put out by them to tender and the Company accepted Simon-Carves' quotation on the counsel of their technical advisers.

Is A. C. C. I. Ltd., a Company to which the provisions of Section 23A of the Indian Income-tax apply, asked the Shareholders.

The Provisions of Section 23A of the Act did not this year affect the Company, though they might in future years, was the reply.

The Report and Accounts was adopted. Sir Birendra Nath Mookerjee, Sir Bijoy Prosad Singh Roy and Mr. P. M. G. Hutton were re-appointed Directors. The Auditors Messrs. Lovelock and Lewes were re-appointed.

The United Bank of India Limited

Another Year of Progress

Need for "A Banking Plan"

Review by Dr. N. N. Law, The Chairman

The following is the speech delivered by Dr N. N. Law, Chairman of the United Bank of India Ltd., at the Annual General Meeting of the Bank, held at its Head Office, on April 15, 1957.

Gentlemen,

It gives me pleasure once again to welcome you all to this Annual General Meeting of the Bank. The basic features of the economic activity in the country continued to be healthy during the last year with all round improvement in the major items of production. In the industrial field, production maintained its upward trend. Production of steel, coal, sugar, jute goods and cement recorded appreciable increase, and production of mill-made cloth reached an all-time high during the year. Imports recorded a steep rise, mainly on account of capital goods and steel. With such import of capital goods coupled with increase in the generation of electricity, the prospect of acceleration of the tempo of economic activity in the years to come appears to be hopeful. In the field of agriculture, after a noteworthy rise in production at the end of the First Plan, there has been slight decline during the year under review. The demand for funds from trade and industry rose during the year, consistent with the trend of economic activity. Despite the stress and strain experienced by the banking system owing to slower rise in deposits, the banks tried to do their best to meet the situation. Our bank made its due contribution in this progress.

Copies of the accounts for the past year have been in your hands for sometime, and I hope you all share our pleasure in that the results depict another year of progress. The year's achievements generally have followed the pattern of most of the larger banks. The deposits of the Bank at Rs. 33.9 crores were higher by Rs. 2.6 crores i.e. 8.4% over the previous year's figure. This should be deemed to be very satisfactory considering that the average rise in deposits of scheduled banks for the year was 7.8%. Although our advances were correspondingly higher by Rs. 2.3 crores, the increased revenue from this source was more or less absorbed by higher interest charges as also salaries and allowances resulting in a smaller rise in net profits.

RISING TREND OF INTEREST RATE

Despite further increase in money supply, the year under review witnessed persistent tight-money conditions. A large portion of the increase in money supply was in spheres beyond the reach of the organised banking system and the increase in bank deposits was disproportionately small compared to the increase in money supply. While this was the position in regard to banks' resources the demand on them for accommodation increased substantially, reflecting quickened pace of the economy. This resulted in a severe competition on the part of the banks for a shift in deposits from one bank to another, and the rate of interest for call and short-term deposits was forced upto a new high level. I would refer you to my observations made in this regard in my speech last year where I suggested that banks should make fuller use of existing associate facilities for making concerted efforts to combat the growing malaise of the increasing rate of interest on deposits. Although we still hold to that view, it is difficult for us to keep up a sustained resistance to a tendency which we feel not to be in our best interests.

Very high rates of interest offered by most of the larger banks of the country have not attracted proportionately higher deposits to the banking system. That is an indication that deposits are not interest-sensitive to the extent they are supposed to be. If instead of diverting the spending power, by those who have it, in the direction of payment of interest, the amount was spent in extending the banking organisation, better results could possibly have been obtained and foundation laid for ensuring a systematically rising trend in deposits. The point is a pertinent one because tight money condition and high interest charges threaten to be a permanent feature if the present pattern continues in a developing economy.

Since 1951 five new branches have been opened, and I am glad to report that every one of these is self-supporting and each contributes something to the profits. During 1956 only one new branch was opened at Berhampore (Ganjam) in Orissa and one of the branches in the city of Calcutta was shifted from an area which had already been served by other branches of the bank, to Park Circus area which was so long left without any banking facility. These two branches are progressing well. In view of the general need for expansion of banking services and encouraged by past experience we are planning to open a number of branches at places which are yet uncovered by any banking office mainly in West Bengal and the neighbouring States in an endeavour to attract new money into the banking system. Arrangements are well advanced for the opening of a new branch at Coimbatore to service and expand our South Indian connections.

It is appropriate here to make a passing reference to the general expansion programme of the State Bank of India. There are instances of the Bank having opened branches at centres which are already supplied with banking services. During the last year they have opened a number of branches in places where we have, at great effort and cost, initiated the people to banking habit. So far as our experience goes, these branches of the State Bank of India have actually been laying their claim on the existing quantum of resources by entering into direct competition. It is true that such competition would be inevitable, but one would have thought that they would direct their attention first to the places yet uncovered by any banking office to bring in newer areas and newer people within the fold of banking. Remittance facilities, which are also sought to be provided by opening new branches of the State Bank, could easily be provided by a programme of co-ordinating the major banks of the country in a scheme of "depository banking" in which the regional collection, by the Union and the State Governments, of the loan and revenue resources would remain with eligible commercial banks who would then also act as repositories of the "currency chest". Acceptance of such an idea would go a long way towards encouraging non-State-owned banks to expand in the unexplored areas in coordination with the State Bank of India. The need for thinking in that direction appears to be growing in urgency because of the sharply expanding participation by the State in the field of production and because of the progressively larger allocation of the national income and resources to the State sector. The continued isolation of the banking transactions in the State sector from the sphere of commercial banking in the other sector is acting against the concept of inter-dependence and the spirit of concord between the two sectors and should be removed.

I have mentioned earlier about the rise under the head "Salaries & Allowances" and in view of the present tendency I cannot hope for a reversal of the trend in the immediate future. The situation will correct itself only when a substantial rise in the spread of the volume of deposits per capital of the employees is achieved. Better appreciation of the needs of the situation by all concerned, progressive increase in willingness to serve and better "implements" are the essentials for the realisation of that objective. With a view to achieving this, we are making all possible endeavours to instil better understanding and induce necessary response from the workers. A phased programme of extensive mechanisation has also been undertaken. Mechanised operations improve the per capita output considerably and tend, up to a point, to raise automatically the standard of service to the customers. With the decimalisation of the currency, it will be possible to acquire latest models of machines available abroad and eventually integrate our operations into the improved mechanised system. Apart from Head office where mechanisation was first undertaken in 1955 one of the city branches has alreay been brought under mechanised system in 1956 and it is our intention gradually to mechanise the operations of a number of other branches in the city, where the volume of turnover warrants it.

During the past year the economy of Eastern Pakistan where we have 15 branches at present, was strained owing to floods, and food shortages. Generally speaking, however, some improvement was noticed in the foreign trade of Pakistan resulting from devaluation in 1955. The draft of Pakistan's First Five-Year Plan (1955-60) was released in 1956 and is still under consideration. The Plan aims at achieving a 20 per cent increase in the national income during the Plan period, which considering the growth of population by 7.5 per cent during this period, will mean a rise of 12 per cent in the per capita income. The working of this Plan will naturally increase the economic activity. This, along with the 3-year Trade Agreement recently concluded between India and Pakistan should lead to a higher volume of business between the two countries. As one of the popular and active banks in Eastern Pakistan, we intend to continue to make our contribution to-

wards the successful fulfilment of its developmental activities.

I am glad to be able to report that our branches in Eastern Pakistan have recorded considerable progress during the past year and we are now planning to open a branch at Karachi for which the necessary permission from the State Bank of Pakistan and the Reserve Bank of India has been obtained.

Returning to the general economic situation at home, the past year has been particularly eventful with regard to the banking business and marked with an unprecedented stringency in the money market. To ease the situation the Reserve Bank of India further liberalised its Bill Discounting facilities. At the same time, they also thought fit to make such facilities relatively expensive. As a result, there has been an accentuation of the interest charges on deposits and for advances. Such all round rise in the interest rate is not, in my view, helpful to the planned economic growth. I feel that the cost of obtaining advances against bills or gilt-edged securities had better not been raised. At least the rate in regard to the Bills market scheme should have been made flexible and related to the rate of interest charged by banks on the advances. To introduce such flexibility it would be necessary to change the scheme to that of discounting of bills in place of making advances against them. If lending rates had to be hardened as a monetary operation the action could be viewed in one light but if the need for it arose for controlling the trend of bank profits, the decision perhaps has not been quite appropriate. That most of the banks in the country have yet to accumulate adequate inner reserves which is so vital for the health of the banking system in a growing economy has been accepted even by the Industrial Disputes Commission (Banking). I feel, therefore, that the rising trend of banks' profits, which is yet small as a ratio to the working funds, should be encouraged to enable the banking system as a whole to consolidate the position.

BILL MARKET SCHEME

With regard to the Bill Market scheme, only a few banks including ours are in a position to utilise the facility. The aggregate amount availed of by the banks is rather small compared to what the Reserve Bank is inclined to permit. It is of course for the banks to decide how far they will go. But I would like to mention here that if the intention of the 'scheme' is to provide funds to the trade and commerce and make it available at all levels, non-inclusion of a large number of banks in this facility limits the scope of its functioning. Since the bills against which such advances may be allowed would arise out of genuine commercial transactions, attempts should be made to bring in more of the banks, insofar as they otherwise qualify, within the purview of the scheme. Indeed the recommendation of the Shroff Committee was for inclusion of at least all the scheduled banks within the same scheme.

BANK RATE

Coming back to the monetary situation which is considered paradoxical in that we have stringency of money concurrently with a rising trend in prices in certain sectors of the economy, I feel that the question of Reserve Bank's lending rate deserves more attention. It is not the money market alone which has got to be viewed in the determination of an appropriate monetary policy. In the context of an expanding economy, a higher Bank Rate, if anything, only hardens the cost structure and acts against developing a climate for investment or a favourable trend for export and also adds to the problems of resources. Therefore, stringency in the money market, under conditions of rapid economic development, demands graduated flow of less costly funds to the money market. This is not to deny the need for ensuring that such a flow does not lead to conditions of credit inflation. But such tendencies when they persist in raising their ugly head, could be curbed by the application of qualitative control by the central bank of the country. In an economy serviced by a banking system limited in its scope both territorially and functionally, the controls would, in any case, be less effective. I, therefore think that whatever may have been the circumstances leading to the raising of the Bank Rate, the issue demands re-examination.

While such stringency in the money market, for all the attempts of the Reserve Bank to counteract its effect through liberalisation of the Bill Market facilities has been having an unsettling effect on enterprise, an enactment was made imposing additional tax burden generally and requiring the Joint Stock Companies to deposit a portion of the profits and reserves with the Government. It may be hoped that difficulties arising out of this undesirable imposition will be materially removed. If, however, that is not done, the banking system will have a difficult problem of resources to deal with.

NECESSITY OF A BANKING PLAN

The past year marked the initiation of the Second Five-Year Plan. Although the size of the Plan is about double that of the First Plan, it is a national duty on the part of every person and institution to ensure success and that too within the time schedule. It is also true that taxation measures, at least for sometime to come, will have to be broad-based and intensive, if the resources are to be obtained consistently with the social objectives. But, on the other hand it is the duty of the Government to see that every economically active individual and organisation contributing to the Plan's fulfilment can retain a part of the resulting benefits so that they may continue with greater vigour and encouragement to make progressively better contributions. The wholehearted participation of all the sectors of economy including the enterprise and risk capital is vital and necessary for the success of the Plan. If persistent attempts are, however, made towards more and more centralisation of economic powers in the hands of the State and if the extensive measures of direct taxation are pushed to such a level as will substantially discourage the existing enterprise in the private sector, the success of the Plan will suffer from substantial limitation dissuading the entrepreneurs from being adventurous enough to think in terms of taking upon themselves progressively larger risk of enterprise. The capital market is not in that mood.

The need for resources in the State sector should very largely be met by borrowing, and the borrowing programme should be so geared as will make the need for various fiscal measures less urgent or necessary. But, left to the Government alone such a programme is unlikely to produce a balanced result. In this regard the banking community can make its special contribution to the success of the Plan by ensuring that the necessary developmental climate has been created both for expansion and consolidation of the banking structure. I say with all seriousness and with emphasis that this co-operative atmosphere must be brought about among banks so that they can bring in the untapped resources as grist to the economic mill and so aid the avoidance of an excessive and frustrating tax level by assisting the Government in getting larger funds through borrowings. The need for resources in the private sector is growing apace, which has to be met without much leaning on the Central Bank of the country. The growing needs are again varied in pattern. With these in view, your Managing Director, at the request of the Indian Banks Association has tried to draw the attention of the banking community to the need for a "Banking Plan" for the territorial and functional development of banking, in a brochure entitled "Necessity for a Banking Plan—A tentative Study". I am glad to mention that the outlines given therein have so far been favourably received as a basis for discussion.

At the end of 1955 there were only 1670 places which have been covered by the offices of the commercial banks and of these only 646 places were served by major banks including State Bank of India. It is also obvious that the needs of the common man in smaller places cannot be suitably met by specialised central organisation or by larger all-India banks. It has, therefore been further suggested in the said Plan that this be taken care of through a two-pronged programme of quick extension of banking facilities by opening new offices at the rate of 1000 per year in new places and by strengthening the existing ones, where necessary, and bringing into existence smaller unit banks set up regionally. Such unit banks may be organised and developed either as independent units or as subsidiaries to the larger banks. The Union Finance Minister himself has also expressed the hope that a large number of banks will grow in the country to accelerate the rehabilitation of the unemployed. It has also been suggested that the relics of past failures should be removed quickly in a planned way and in due course positive indemnity to individual depositors will have to be arranged if deposit banking in the country is to grow as fast as the economic and social requirements demand and that India in this respect should take a lesson from banking experience in the U.S.A. and draw up her schemes for Insurance of Bank Deposit and Rehabilitation of smaller banks. Necessity of rehabilitation of the small banks is further emphasised by the facts that, whereas the major banks of the country were, at the end of the year 1955, serving only about 2,15,000 customers by providing advances; the rest of the banks were serving about 12,00,000 customers. It is not the aggregate quantum of money advanced but the number of places and customers serviced that is important. Indeed, we are aware of a number of smaller banks in the South and elsewhere in the country which are rendering useful service by helping medium and small business and industries in their respective regions. The position with regard to employment and rehabilitation of the people can largely be improved by helping development of the medium and small industries through proper and careful financing and here the necessity of rehabilitation and new growth of smaller unit banks is so acutely felt. In this regard I would further suggest a statutory ceiling for the rate of interest that the major banks including ours may offer for deposits, as a measure of assistance in the growth and development of the smaller banks till they assume necessary credit maturity and immunity from neglect due to smallness in size through Insurance of Bank Deposits.

So long as such regional banking organisations do not come into existence independently in large numbers, it is our view that it should be the duty of the larger banks to sponsor subsidiaries in different regions to be converted into independent units in due course. It has also been suggested in the said plan that the larger banks, in addition to opening new offices, should play their role in the regional development of banking by assisting the existing smaller banks insofar as that can be done with safety, in conjunction with the suggested Government sponsored organisation. We are of the view that a workable plan should be drawn up on the basis of the proposals made. Such a plan would go a long way in substantially increasing the flow of new resources into the banking system and this will in the ultimate analysis, apart from helping the lower-income-group-economy in general, benefit the banks in the country, including this and other larger banks. It has been suggested that if the banking system is to evolve such a plan and work it out effectively it may be useful to organise various associations amongst the banks both on the basis of regions as well as on the basis of size linked to a Federation of all such Associations. As it is, the Indian Banks Association has a membership of only 39 whereas the total number of banking companies in the country is over 470. It is, therefore, felt necessary that if a bold plan like the one suggested is to succeed, participation of all the banks in the country should be ensured. Such Associations and the Federation may also be found useful by the Reserve Bank of India in the matter of formulation of policies and its financial operations.

In the matter of formulating a plan as envisaged in the brochure proposals have been made for holding, under the auspices of Indian Banks Association, a Convention of all the banks with a view to sponsor the idea of forming a Banking Expansion Commission" and to appoint a "Standing Plan Committee" of the Convention to maintain liaison with the proposed "Banking Expansion Commission". I fervently hope that the banking community as a whole and the leading banks in particular will be able to see that the interest of their own institutions lies in the growth of the banking system as a whole and not in the attempts to acquire prosperity in isolation. I trust therefore that they will fully co-operate and contribute towards the formulation and working of a plan.

I take this opportunity of acknowledging the willing and helpful assistance and co-operation which I continued to receive from the Managing Director and my colleagues on the Board as also from the Chairmen and Members of the Local Advisory Committees. My grateful thanks are also due to the Secretary and the senior executives of the Bank and to other members of the staff who have rendered useful service to this institution throughout the year.

In conclusion, I wish to thank you all for coming here today. I am glad to mention that my hopes expressed at last year's meeting have been fully borne out by this year's results and I confidently feel that despite the difficulties that remain to be overcome, we can now look forward with optimism towards continued advancement in the Bank's progress during the coming year.

(Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.)

FOR THE INVESTOR

(Continued from page 723)

must not forget that, in implementing the Second Plan, the disbursements by Government are going to be for very substantial sums. This will exert an increase in active note circulation; and it is inevitable that such rise in active notes will be accompanied by an augmentation of deposits of the banking system. For this reason, I am not altogether apprehensive that the rate of increase in deposits will not keep pace with the rate of increase in demand for working capital.

The Governor: Yes, what you say is correct. Particularly is this so since the Second Plan expenditures will be on industrialisation; and, therefore, there will be less of a time lag in the return of such money to bank resources. I should say that the banking system can, for the future, count upon deriving a more immediate benefit from increase in active note circulation.

The Minister: Do you suggest that, consequently, nothing needs to be done about putting in train measures intended to increase the deposit resources of banks?

The Governor: Not quite. For, I believe that the national economy as such requires an expansion of the banking system. I am, therefore, for a speedy expansion in branch banking. It is necessary for us to consider in what way we can provide the incentive for such branch expansion. At the same time, I am helpful that the programme of the State Bank, though it is primarily meant to improve agricultural credit facilities, will have the indirect beneficial result of mopping up resources in what presently are in the non-banking sector of the money market. Yes, I am firmly of the view that banks should be encouraged to create new branches at a swift pace, but consistent nevertheless with canons of safe banking.

The Minister: What of medium term facilities?

The Governor: In this matter, as we have already discussed before, I am afraid that the institutional facilities are sadly lacking in this country. I think it is an urgent matter to set up a Refinance Corporation, whose essential task would be to provide medium term credit. I rather think that action in this regard needs urgently to be taken—certainly, the Refinance Corporation must start functioning before the onset of 1957-58 busy season. I think that such a Refinance Corporation will also have to relieve the banking system of a part at least of its portfolio of advances which are being put to the financing of plant expansion.

The Minister: Yes. I hope to take a decision in the matter shortly. What of long term credit?

The Governor: Institutions already exist in this regard; but I wish there were some means whereby we could increase the use of the facilities so available. Perhaps, a reduction in red tape might be the answer. Moreover, I should fancy that the expanding units should be able to secure foreign exchange help from the World Bank; I think, it may be necessary for Government to guarantee and to encourage more and more such loans.

The Minister: From what you tell me, I gather that we have a good deal to accomplish, and within a short time too, if the banking facilities are so to be created and made available as will facilitate the expansion of industry. I think this discussion has been necessary, because we have come to the conclusion that the private sector must not be allowed to fail in its targets for the reason that the proper banking facilities are not readily available.

(On this happy note, we leave the Western capital. The investor will easily read between the lines and come to the conclusion that it is the intention of Government to privide every facility that the private sector may need to achieve the targets of production set for private enterprise in terms of the Second Plan. But private enterprise, too, has its obligations to be less carping and more constructive, to think less of profits and more of opportunities, to subordinate sectional interest to national interest to desist from ways of business and ways of life which alienate the goodwill of the masses, to agitate less and perform more, and to regard developing situations as a challenge to courage and enterprise and not as a crisis, sapping initiative and paralysing effort).

OLYMPUS

(Continued from page 738)

seen in the fact that, at their current session in Delhi, they were opposed to any scaling down of the outlay of the Plan. Mr Haji said in his presidential address: "It is essential to provide the necessary resources for the success of the Plan even if it requires temporary hardships on sections of the community". This resoluteness about the targets of the Plan and willingness to make the necessary sacrifice stands in striking contrast with the almost professional breast-beating we hear from certain other quarters of the business community. If every organisation representing the private sector showed similar earnestness about the Plan and similar willingness to make sacrifices in its interests, the case of private enterprise would be automatically made.

Before I conclude this despatch, I should like to refer to one interesting suggestion that Mr Haji made in the course of his address. It was that Government should associate the public in the equity capital of public enterprises. He said, "We would like to stress that in as many industries as possible excepting the four industries, namely arms and ammunition, atomic energy, railways and air transport, which are to be developed as Government monopolies, the people either as individuals or in corporate bodies should be associated in financial participation through investments in shares up to 49 per cent of the share capital of these enterprises." I consider this one of the most fruitful suggestions made in the context of the controversy over the private and public sectors and of assurances by authority of an honoured place for private enterprise. It puts to test several professions at once, and has immense practical advantages which I have no space to consider in detail here. I may also add that it is in tune with the latest even in socialist thinking, for Mr Hugh Gaitskell, writing in Socialist Commentary some time ago, foresaw precisely such an alternative to conventional nationalisation. I do hope that the idea will be given the most serious consideration.

WORLD OVERSEAS

(Continued from page 732)

consume 15,000 short tons a year, and this is expected to grow to 65,000 by 1965.

Interestingly enough, the market that worries aluminium producers most is the aircraft industry, which was their mainstay for many years. Nevertheless, they are optimistic that development of new alloys will give aluminium the heat—resistant qualities needed for the supersonic airplanes for the future.

Particularly significant aspect of projected aluminium demand in the years ahead is that it is based entirely on the growth of the civilian market. In 1955, defence uses took nearly 300,000 short tons of a total demand of two million tons. By 1965, the estimates are that defence requirements will drop to about 250,000 tons out of a total demand for 4 million tons.

✱

EDITORIAL NOTES

(Continued from page 727)

record, which will be flattering to any country.

A rapid extension of area and a steady improvement in yield have enabled Russia to grow 80 per cent of the world's flax. Sugar production which rose from 1 million tons in 1913 to 4.3 million tons in 1956 is scheduled to register a 50 per cent increase in the next four years; the annual output is expected to be around 6.5 million tons in 1960.

The remarkable expansion of cotton cultivation and of the textile industry is reflected in another set of figures. The latest reported area under cotton is about 5.6 million acres. It is claimed that the Soviet Union now produces more cotton than Brazil, Pakistan, Turkey and Iran put together. A small percentage of the output is being exported. Last year's textile output was 5,500 million metres of fabrics.

Notes.

I. Investments in British Government Securities amounting to £326,055,546 (1955: £342,117,328) are taken at or under cost and below redemption price. The market value of these investments at the 31st December 1956 was £317,930,506 (1955: £333,878,617). Provision for the difference has not been made and is regarded as unnecessary as all the securities are redeemable at fixed dates, the majority within 10 years.

II. Other Investments: the market value of the quoted investments at the 31st December 1956 was greater than the balance sheet figure.

III. Securities and Other Investments totalling £545,875 (1955: £1,030,000) nominal are lodged for Public and Other Accounts and for the Note Issue in the Isle of Man.

IV. A Capital Reserve of £838,425 was created as a result of the reorganisation of the share capital by cancellation of 11s. 8d. of each £1 of the "B" Stock. At the same time £1,161,575 was transferred from Contingency Account to General Reserve.

V. Foreign Currencies have been converted at the rates of exchange ruling at the 31st December 1956: in the case of Eastern branches, as at the 31st October 1956.

PROFIT AND LOSS ACCOUNT FOR THE YEAR 1956

Note.—Directors' emoluments amounted to £77,053 (1955: £75,613), including £8,549 (1955: £7,774) paid to certain Directors by subsidiary and other Companies and £2,500 (1955: £2,500) pension to a Director in respect of past services as Chairman.

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED

In our opinion and to the best of our information and according to the explanations given to us, the foregoing accounts of the Bank, with the annexed statements relating to the Bank's subsidiaries, The National Bank of Scotland Limited and Lloyds Bank (Foreign) Limited, give in the prescribed manner the information required of banking companies by the Companies Act, 1948 and on the basis therein authorised give, subject to Note I and to the corresponding note on the accounts of The National Bank of Scotland Limited, a true and fair view of (a) the state of the Bank's affairs as at 31st December 1956 and of its profit, ascertained as indicated in the accounts for the year ended on that date and (b) that state of affairs and the profit, ascertained as indicated in the accounts and annexed statements, of the Bank and its subsidiaries so far as concerns members of the Bank.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit. In our opinion the Bank has kept proper books of account and obtained proper and adequate returns from the branches and the above accounts of the Bank are in agreement therewith. The accounts of the Eastern branches are included therein as at 31st October 1956 and the accounts of the subsidiaries are made up to 1st November and 30th September 1956 respectively.

LLOYDS BANK LIMITED— (Contd.)

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED, UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December 1956 and above set forth and the annexed Profit and Loss Account for the year ended 31st October 1956 with the books and accounts as kept at the Chief Manager's (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the ten Indian Branches and also with the books and accounts kept at the Calcutta Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949, read with the provisions of Section 211(1), (2) and (5) and Section 227(5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956. The accounts are therefore drawn up in confirmity with Forms A and B of the Third Schedule of the Banking Companies Act 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit.

(b) In our opinion proper books of account as required by law have been kept by the Chief Manager's (Eastern Branches) Office and the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the 9 Branches not visited by us.

(c) The Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act (f) 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Branches as at 31st December 1956, and the Profit and Loss Account give a true and fair view of the profit for the year ended 31st October 1956.

Calcutta, PRICE, WATERHOUSE, & CO.
27th March 1957. Chartered Accountants.

GATEWAY GOSSIP

(Continued from page 335)

equities, has emerged as a money market institution of vast significance. In the first year of nationalised insurance, the target of new business could not, for obvious reasons, be kept up. All energy and attention were directed to administrative, organisational, personnel and readjustment matters. It can be no matter of surprise that the tasks in these respects are of stupendous magnitude and stubborn complexity. Even flow of new business is not to be expected until the whole organisation is completely streamlined. And all that can be said now is that the rationalisation processes are under the shrewd guidance and experienced direction of two Managing Directors of acknowledged ability. Mr H. M. Patel has been devoting intense attention to the policy issues as well as to the major administrative problems. Mr Kamath has begun functioning as full-time Vice-Chairman and is being groomed for full-time Chairmanship.

It is gratifying, however, that the net accruals to the Life Funds are not affected to any great extent. This is a matter which directly concerns the money market. The Corporation's role in the money market is now limited to the from-time-to-time investment of accumulating cash balances. The policy is one of investment, pure and simple.

Among the policy decisions which TTK will have to make sooner rather than later are those pertaining to plans for accelerating the pace of accumulating funds, an for imbuing the investment policy with dynamic open market attributes. In implementation of their solicitude for the right kind of climate not only in giltedged but also in equity shares, the Life Insurance Corporation can be put into service as one of the instruments for making official intentions effective.

*

WORLD OF COTTON

(Continued from page 737)

LIVERPOOL COTTON MARKET:

In the Liverpool cotton market, slow conditions persisted throughout the week narrow under small routine supply and demand dealings. Sudan contract ruled quiet at unchanged to 15 points down. The distant delivery came under pressure from switching offers Trading in the other months continued inactive.

×

CLOTH AND PIECEGOODS

Thanks to good offtake, prices in the Bombay Piecegoods market were well maintained. Demand for superfine qualities continued to be good, while Poplins under fine category also evoked fair demand. Coarse varieties were, however, neglected due to seasonal factors.

While activity in the domestic markets had been improving, trading conditions on the export front were not quite satisfactory. In fact, some of the principal lines of export tendened to ease owing to lack of adequate foreign demand. Shippers were, however, hopeful that business with foreign buyers would broaden in the near future as a sequel to a larger turnover witnessed in the internal markets.

Exports to Burma are expected to broaden further in the coming months as shipments have already been rising. Similarly, prospects of larger exports to Sudan are also held to be bright. Discussions between the Sudanese trade delegation and some of the textile interests are reported to be encouraging. The general feeling is that India can export to Sudan printed goods and processed varieties on a larger scale, apart from grey material.

*

BRITISH TAX CONCESSIONS

(Continued from page 730)

made for the benefit of the surtax payers. Alternatively, the strikes resulting from resistance to the steeper wages demands might lose for the national economy output the value of which would be many times the amounts of the tax concessions. However, such is now the attitude of the trade unions that the strength of arguments in favour of wages demand has become quite unimportant compared with the balance of power between employers and employees. A 10 per cent all-round wages demand seems to have become an annual event, and employers and consumers may consider themselves relatively lucky if they can get away with a mere 5 per cent increase. In the past wages demands were based on arguments about increase in the cost of living, or in productivity, or in profits. Now they are put forward and pressed on the simple ground that it was eight months ago that the last wages increase was granted.

In face of the size of additional purchasing power that has been or is likely to be created through wages increases in 1957, the fiscal concessions in the 1957 Budget fade into insignificance. The tax cuts are reckoned in tens of millions of pounds, while the wages awards are likely to run into hundreds of millions. In any case, something like half of the total of tax cuts is likely to assume the form of increased saving, while most of the additional purchasing power represented by higher wages is likely to be used for increasing demand for consumer goods.

However, the outlook for sterling in 1957 need not be viewed with undue pessimism, unless some major strikes should develop during the year. The balance of payment figures certainly do not justify the absence of the seasonal firmness of sterling. While there is no sign of any return to London of foreign funds withdrawn during the Suez crisis, the very fact that those funds are abnormally low is a hopeful point, because there is less that can be withdrawn from London when the next drain on sterling takes place. —(Copyright).

Stock Exchanges

FAIR GAINS ON BALANCE

Watch-Dog Writes:

STOCK markets have made fresh efforts to recover a further part of the ground lost in recent weeks. Conjectures, that the Government will devise measures for toning up the investment markets in view of the heavy deterioration in the position and take further steps to augment money supplies, have been mainly responsible for the improved tendency.

The publication of the draft rules regarding deposits with the Central Government of a company's reserves from current profits had a depressing effect on sentiment at the close of the week; but the atmosphere is considerably calmer with buyers feeling their way in first class equities to take advantage of the attractive price levels ruling at present.

The Calcutta Stock Exchange extended its rally in the week's dealings although the closing tone was a shade quieter in view of settlement adjustments in the speculative issues.

Despite renewed selling at bulges, the entire list on the Bombay Stock Exchange staged a moderate recovery at the close, thanks to short-covering and some replacement buying.

Sentiment on the Madras Stock Exchange brightened up and the week's trading reflected the revival of buying support for popular shares.

On the London Stock Exchange, there was a disposition to lighten commitments in view of the forthcoming holidays for the Easter.

Wall Street closed barely steady and selected issues continued to provide the chief feature of trading.

*

Calcutta

TRADING on the local Stock Exchange was fairly active last week. Encouraged by higher Bombay advices, prices in most sections were marked up further from last levels on influential buying. There was a general feeling that the Finance Minister might soon announce some measures to make available more money for industry and trade. Also, the news, that the call money on the Indian Iron & Steel Company's right shares was likely to be made in instalments in view of the present monetary conditions, gave encouragement to operators who lent consistent support to the market. Although the speculative issues were slightly easier towards the close of the week due to settlement adjustments, the general undertone remained satisfactory.

The Giltedged market continued to rule dull with prices showing minor movements. Institutional support was conspicuous by its absence, while business already reduced in volume was further restrained by monetary stringency. 3% 1966 Conversion Loan opened at Rs 74.56 and, after touching a low of Rs 74.12, improved again to Rs 74.75, to finish the week at Rs 74.62.

Bank shares ruled quiet. Punjab National, after a long time, came in for business at Rs 52.00, while United Commercial were quoted around Rs 53.00. Hind turned ex-dividend at Rs 33.25.

Despite fairly steady advices from the jute goods market and the news of the substantial increase in US burlap consumption in March, Jute shares continued to be neglected counter where operators were still reluctant to enter into commitments. There was a feeling that, although gunny prices had steadied up after the recent decline, the profit margins for mills might still be narrow in view of the steadiness of raw jute prices. The news of the closing down of three jute mills had also an adverse effect on sentiment. The only exception to the general trend was National, which met with some speculative buying upto Rs 20.70 from Rs 20.00, to finish lower at Rs 20.10. Ganges moved narrowly between Rs 86 and Rs 45; Kamarhatty between Rs 68 and Rs 70. 88 and Meena between Rs 68 and Rs 70. Nuddea closed better at Rs 29.25 against Rs 29.00 Standard recesed further to Rs 55.50 from Rs 58.00 on reports of the closing down of the mill due to uneconomic working conditions.

Except Burrakur which were pushed up to Rs 21.81 from Rs 21.25 on speculative support, Coal shares were generally listless in view of the numerous difficulties facing the industry; and even the Government decision to increase stowing subsidy had no effect on sentiment East Indian were offered at Rs 24.56 to Rs 24.81 against Rs 25.50. Western Bengal, after improving to Rs 5.56 from Rs 51.8, receded again at the close to Rs 5.37. Central India were a narrow market around Rs 6.12.

Little interest was shown in the Textiles section where prices, after recording new low levels early in the week, improved slightly towards the close on reports of better conditions in the cloth and piecegoods markets. Kesoram, after being marked down further to Rs 13.62 from Rs 13.81, improved to Rs 13.75. Cawnpore hovered idly around Rs 6.18 and New Victoria around Rs 1.81.

In the Tea section, trading conditions continued to be restricted. Apart from fears entertained in some quarters with regard to over-production in the current year, others were inclined to await the results of the talks which were held with the Government on tea company financing. Banarhat were offered at Rs 271.50 against Rs 282; East India at Rs 24.62 against Rs 25.25 and Hasimara at Rs 24.75 against Rs 27.50. Bateli, however, received some enquiry upto Rs 26.75 from Rs 26.50; Brooke Bond upto Rs 18.19 from Rs 17.75 and Hantapara upto Rs 169 from Rs 163. Tezpore moved narrowly between Rs 19.75 and Rs 19.87.

Although dealings were very few, Sugar shares came in for selective support on dividend considerations. Belsund were a bright feature, having forged ahead to Rs 11.50 from Rs 11.37 following the increase in dividend from As 12 to Re 1 per share, while Darbhanga met with good demand upto Rs 21.50 due to increase in dividend by 5 per cent for last year. SKG changed hands on the ex-dividend basis at Rs 10.25 to Rs 10.39. Carew had support upto Rs 7.69 from Rs 7.31.

Price movements in the Engineering section were mostly influenced by settlement adjustments in the speculative scrips. Indian Irons opened at Rs 19.59 and, after advancing steadily to Rs 20.38 on higher Bombay advices, receded again to Rs 19.60 on profit-taking, to finish the week better at Rs 19.69. The settlement rate was fixed at Rs 20.09 as against last settlement of Rs 19.50. New shares changed hands at Rs 18.80 to Rs 19.20, to close at Rs 19.00 Jessop were pushed upto Rs 25.37 from Rs 23.31 Richardson, after being marked upto Rs 18.56 from Rs 17.06, receded at the close to Rs 17.87. G. K. Williams had buyers at Rs 25.37 to Rs 25.68. TEXMACO touched a low of Rs 18.50 and a high of Rs 19.20, to finish at Rs 18.70.

Miscellaneous issues moved in sympathy with the general trend of the market and buying enquiry was selective. Most prominent were Indian Aluminium and Indian Cable which were keenly sought after upto Rs 13.25 and Rs 27.37 from Rs 12.50 and Rs 25.43 respectively, thanks to good investment enquiry. NICCO were a very steady feature at Rs 20.00. National Carbon changed hands at Rs 26.00 to Rs 26.75; Osler at Rs 6.50 to Rs 7.06; India Steamship at Rs 10.00 to Rs 10.15; Durlop Rubber at Rs 23.69 to Rs 24.00 xd. and Alkali Chemicals at Rs 11.44 to Rs 11.62. Indian Copper developed a hardening tendeny, to quote Rs 3.30 against Rs 3.22 following higher advices from the metal market. Among Paper shares, Orient Paper moved rather irregularly between Rs 30.60 and Rs 31.30 on alternate bouts of buying and selling, to finish the week at Rs 30.35. Titaghur were better at Rs 34.25 against Rs 33.44 with Shree Gopal having support upto Rs 15.25 from Rs 15.00 and India Pulp upto Rs 21.62 from Rs 21.50.

BALACE SHEET BRIEFS

(Continued from page 724)

is an additional attraction for the shareholders.

The expansion of the rayon plant, taken on hand, is said to be progressing satisfactorily. The second stage of expansion was completed in December last, and the third and fourth stages are expected to be completed within a short time. With the completion of this expansion the total installed capacity of the plant will be 24 tons per day on the basis of 150 denier.

£R$

WIMCO Results

The results of the Western India Match Manufacturing Company Limited, for the year ended 31st December 1956, make satisfactory reading. Gross sales are maintained at Rs 10.24 crores as against Rs 10.16 crores. while the net profit is a shade lower at Rs 37.29 lakhs as against Rs. 39.65 lakhs in the previous year after providing Rs 9.66 lakhs for Depreciation against Rs 8.56 lakhs; Rs 7.33 lakhs lakhs for managing agents' remuneration against Rs 8.86 lakhs and Rs 29.9 lakhs for Taxation against Rs 34.4 lakhs. General Reserve gets Rs 4 lakhs.

The Directors have, in their report, stated that, while production and sales show an increase over the previous year, severe competition from the subsidised cottage industry remains. They have decided to build a factory for the manufacture of paper; and the Government have granted the necessary licence. This establishment is to be situated adjacent to the Calcutta factory and orders for machineryy have already been placed!

Industrial Investment Trust

The net revenue of the Industrial Investment Trust Limited, for 1956, has amounted to Rs. 5.99 lakhs after providing for the secretaries' remuneration. Profit of Rs 11,511 on sale of Investment has been transferred to Capital Reserve. The directors have provided a sum of Rs 50,000 for Investment Reserve as against Rs 25,000. A dividend of Rs 5 per share has been recommended.

The approximate valuation of the company's investments in 212 companies, at market quotations as on the 31st December 1956 or in the case of unquoted investments at the book value, was higher than the total book value (Rs 1.22 crores) by 3.1 per cent.

£R$

Sassoon Mills

After providing Rs 3.24 lakhs for managing agents' commission; Rs 15.09 lakhs for Depreciation and Rs 6.15 lakhs for Taxation, the Sassoon Spinning & Weaving Company Limited has reported a net profit of Rs 18.66 lakhs for 1956, while sales have totalled Rs 4.88 crores. A sum of Rs 9.57 lakhs is allocated to Development Rebate Reserve. A dividend of Rs 2 per share has been recommended on the Ordinary shares.

The paid-up capital of the company is Rs. 73.35 lakhs against which the Reserve and surplus total as much as Rs 84.55 lakhs. As against a total block of Rs 1.98 crores, Depreciation has been provided to the tune of Rs 1.20 crores, which leaves a net block of Rs 78.56 lakhs.

£R$

Adoni Spinning

The Adoni Spinning & Weaving Company has made a nominal net profit of Rs 1,880 for 1956, which is being written off against the debit balance brought forward, leaving a net credit balance of Rs 1,007, to be carried forward.

The directors have stated that the erection of a major portion of the machinery was completed in April 1956 and that, though the mill started working from the middle of May, normal production commenced from November only.

The mills are now working two shifts. The mill will go in for the third shift as soon as power becomes available. The company is now going ahead with the installation of the balance 12,000 spindles. It is expected that the present expansion scheme will be completed by about the middle of next year and the additional spindles will then go into production.

£R$

In Brief

Among Sugar companies, Belsund has raised the dividend from As 12 to Re 1 per share for the year ended 30-9-1956. Cawnpore has maintained the dividend at As 12 per share for the year ended 31-10-1956.

In Madras, Travancore Cements have reduced the dividend from 6¼ to 6 per cent for 1956.

Constructive Banking Suggestions

(Continued from page 726)

that it behoves the banking system to examine what for its part it needs to do in order that the market for Government loans may increase. As Dr Law points out, "left to Government alone", a programme to meet the bulk of the resources needed by the state through borrowings "is unlikely to produce a balanced result". He urges that "the banking community can make its special contribution to the success of the Plan by ensuring that the necessary developmental climate has been created both for expansion and consolidation of the banking structure". The UBI Chairman is to be congratulated for giving public utterance to a matter of considerable import to the banking system, that is, the varied benefits flowing from a larger investment in giltedged by banks.

In a second way, the United Bank of India Limited has thrown up constructive food for thought. The Bank's Managing Director, Mr B. K. Dutt, has, at the behest of the Indian Banks Association, prepared a brochure on the Necessity for a Banking Plan. Mr Dutt has taken considerable pains to draw up a correlated and comprehensive scheme for the consolidation and rehabilitation of Indian banks. In particular, one of the suggestions he has made to this end can be of substantial significance to the Second Plan. This suggestion is that all emphasis must be laid on the rapid expansion of bank facilities via the medium of 1,000 new branches opened each year over a five-year period. Since the peculiar characteristic of the Indian monetary situation is that currency circulation is impeded by the parallel existence of a second money market comprising the agricultural sector (and such resources are outside the purview of the scheme to mop up deposits in the presently non-banking sector of the economy cannot be exaggerated. We intend next week to publish a Special Study on Mr Dutt's Banking Plan.

WORLD OF FINANCE

(Continued from page 723)

impress of the heady tax collections in the final quarter of the preceding financial year. After the execution of large-scale inter-governmental transactions in the closing weeks of March, the Centre and the States could start the new year with cash in the till sufficient to last until the summer during which replenishment from New Loan issues was the usual practice. In the present year, however, the distortion has resulted in the interregum between the beginning of the financial year and the New Loan schedules necessitating substantial ingenuity in ways and means planning. We shall first examine the causes of this changed situation and then deal with the measures designed to meet it.

An emerging element toward the close of the financial year is the large disbursements which the Union Government and the units have now to make in the second half of March in respect of payments which are due to suppliers and contractors, and which, if not paid before March 31, will lapse, requiring fresh authorisation by the Legislature. In this need to avoid the lapsing of grants, there is a last minute rush both on the part of the suppliers and contractors in presenting bills and on the part of Governments in paying them with unusual celerity. Such eleventh hour payments have assumed gigantic proportions; and the tendency in the coming years will be still more marked. They have the effect of more or less emptying the coffers of the States as well as the Centre.

In this predicament, the Centre has the ready recourse of selling ad hoc Treasury Bills to the Reserve Bank and thereby utilising the currency created for the corresponding amount. The device of deficit financing is, so to say, exclusively reserved for the Central Government. What are the States to do in this plight? The usual ways and means advances from the Reserve Bank are found to be inadequate to the new needs. The States have, therefore, shown ingenuity in pressing into service some of their accumulated reserves, which, for varying amounts the States had utilised in buying a portion of the ad hoc Treasury Bills sold by the Centre to the Reserve Bank. As we have pointed out on more than one occasion, the bulk of ad hoc Treasury Bills figures under Rupee Securities in the Issue Department of the Reserve Bank while a fluctuating proportion is taken up by the States. For their present needs, the States are selling a moiety of their ad hoc holdings to the Reserve Bank. This is in addition to ways and means advances taken from the Reserve Bank.

In the case of the Centre financing itself through ad hocs, the transaction is primarily reflected in the Reserve Bank's Issue Department, whose Rupee Securities show a rise. In the case of the States financing themselves through ad hocs, the resultant effect is seen in the Banking Department, the head Bills Discounted and Purchased revealing an increase. In the light of these observations, we may examine the returns of the Reserve Bank for April 12.

In the two weeks since the end of March, State Governments have found it necessary considerably to replenish their resources. On the one head, the heavy disbursements are reflected in the sharp fall in their balances from Rs 31.95 crores on March 29 to Rs 1.54 crores on April 12. On the other hand, they have obtained ways and means help from the Reserve Bank, with their borrowings rising from Rs 7.65 crores on March 29 to Rs 18.74 crores on April 12. A third manner of adding to their cash resources was the sale of ad hocs held by them to the Reserve Bank. The relevant head in the Banking Department shows an increase from Rs 2.98 crores on March 29 to Rs 18.40 crores. It may safely be suggested that the rise is largely, if not wholly, account for by sales of ad hocs effected by State Governments.

As for the Central Government, they have had in the week under review to take recourse to deficit financing for Rs 10 crores. It would appear that the Centre's balances were thus reinforced for the purpose of meeting the payments that had already been made in the last week of March. For, the Reserve Bank has expanded currency against Rupee Securities for Rs 10 crores; Rupee Coin has gone out into circulation for Rs 0.35 crores; Active Notes are higher by Rs 10.85 crores at Rs 1574.47 crores; and Reserve Bank's cash in the till has been diminished by Rs 1.16 crores.

After receiving credit for Rs 10 crores against the ad hocs sold to the Reserve Bank, the Central Government's balances have declined by just under Rs 7 crores to Rs 53.60 crores. This suggests that the Centre's net payments continue to be heavy.

Banks' Deposits have shot up by Rs 9.24 crores to Rs 69.83 crores; and their indebtedness to the Reserve Bank has presumably declined, since the latter's Other Loans and Advances have registered a fall of Rs 1.64 crores to Rs 104.40 crores. The possible inference is that, in the second week of April, Scheduled Banks have received a further substantial accretion to their Deposits.

Investments are more or less unchanged; and Balances Held Abroad are lower by Rs 8.62 crores at Rs 104.20 crores, indicating a continuance of the import surplus.

✱

The return of the State Bank for April 12 reveals a small drop of Rs 1.39 crores to Rs 300.08 crores in Deposits. The rendering into cash of Other Assets, which rose sharply from Rs 2.48 crores on March 15 to Rs 14.75 crores on March 29, has boosted cash balances to Rs 33.19 crores from Rs 26.07 crores in the previous week. Advances, for the second week in succession (and for the first time in such manner in the current busy season), are slightly lower at Rs 182.07 crores against Rs 182.91 crores. It may be noted that the State Bank is responsible for the bulk of the increase in Banks' Deposits discernible in the Reserve Bank returns: the State Bank's cash and balances with the Reserve Bank are higher by Rs 3.63 crores against the rise of Rs 9.24 crores in the Deposits of member banks with the Reserve Bank.

The return of Scheduled Banks for April 5 discloses Deposits as having crossed the Rs 1200 crore mark with a steep increase during the week of nearly Rs 25 crores. What is noteworthy is that, in the relevant week, the Deposits of the State Bank rose only by Rs 1½ crores or so; it is, thus, clear that it is the other Scheduled Banks which have benefited from the accretion of Deposits. It is to be suggested that the higher level of Deposits, as well as the decline of over Rs 21 crores to Rs 81.96 crores in Borrowings from the Reserve Bank, are both indicative of the favourable impact upon Scheduled Banks of the heavy governmental expenditure at the end of the fiscal year.

Cash balances have improved by Rs 14.32 crores to Rs 124.94 crores; the State Bank's cash balances were higher only by Rs 3 crores and this fact, too, could be taken to imply receipts in behalf of Government payments.

Although it is the first week of a month, the total of Advances has registered a rise of only Rs 0.75 crores to Rs 898.50 crores; and advances as such have actually declined by Rs 5.58 crores to Rs 716.19 crores. It is inconceivable that month-early disbursements, particularly in a busy season month, should have involved such negligible strain as suggested by the small rise under Advances. It seems to us, therefore, that a special explanation is called for.

We would suggest that some part of Government payments to suppliers and contractors has been utilised in reducing overdrafts, that this would explain the decline as having taken place in overdrafts rather than in bills; and that the increase in Advances due to month-early disbursements was in this wise largely offset by liquidation of debt by suppliers, contractors, etc.

Finally, as indicated by the rise of Banks' Deposits with the Reserve Bank, as also the decline in Other Loans and Advances, the subsequent return of Scheduled Banks should reveal a further improvement in Deposits and a further reduction in indebtedness to the central banking institution.

✱

The statement of the State Bank of India for the week ended April 12 reveals a decline of Rs 1.39 crores in deposits to Rs 300.08 crores. Borrowings from other banks are lower by Rs 0.34 crores at Rs 1.22 crores, while other liabilities, including inter-office adjustments, are higher by Rs 1.92 crores at Rs 4.42 crores.

On the assets side, cash balances have risen by as much Rs 8.26 crores to Rs 32.66 crores with Investments slightly lower at Rs 105.32 crores against Rs 105.42 crores. Advances are shown at Rs 182.07 crores against Rs 182.91 crores—"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 1.75 crores and "Bills Discounted and Purchased" for a rise of Rs 0.92 crores.

✱

THE PENINSULA

(Continued from page 740)

United States Information Service office the same day.

The limitations of his office disabled Mr Bunker to be drawn freely into a cross-fire of questions. All the same what he felt obliged to say carried the issue of Kashmir as handled by the US to a slightly more advanced stage of clarification. The US Ambassador in India could be excused for not being as hearty and frank as one of his predecessors, Mr Chester Bowles, on this unfortunate controversy.

It is understandable that Mr Bunker could not endorse Mr Bowles' description of American military assistance to Pakistan as resulting in an armament race in the neighbouring India and Afghanistan; Indian sentiment, however, is justifiably outraged by US arms aid to Pakistan and the extra burden it throws on India's defence expenditure, thus neutralising to a large extent the benefit of the US financial aid it receives.

Mr Bunker reassured India that the US military aid to Pakistan was inspired solely by the desire to resist the spread of international communism and it was given on the solemn pledge of the receiving country, not to utilise it for aggression. He went a step further and vouchsafed that should Pakistan use US arms against India, the United States would not only withdraw its assistance but function on the side of the country against which aggression took place.

The first part of this reassurance is of little practical significance, because once an attack commenced with the aid of US arms, even the powerful donor country cannot stop it all at once. The risk of the use of US military aid remains. But the assurance that in the event of such a development, the US would be on the side of the aggrieved must certainly be comforting to those who have been looking with alarm on Pakistan's military preparations. Mr Bunker also mentioned the fact that under American law, no foreign country will receive American atomic weapons. It will be recalled that during the last session of the Parliament the Prime Minister referred to a Pak military directive implying the possible use of atomic weapons.

For the Investor

Imaginary Conversations

If the PM Met with JRD

Investment Gossip:

I do not claim to have eavesdropped upon any conversation at the Reserve Bank Buildings; and, thus, the fact that an announcement has been made upon the setting up of the Refinance Corporation should be construed as confirming that the imaginary conversation I reported in this column last week was imaginative as well. Such success has emboldened me to try my hand at a few more imaginary conversations; my choice of subject, or rather the dramatis personae, will present no difficulty, as it is easy enough to decide who, in the national interest, should be the conversationalists. The criterion for finding two people whose discussion would be both interesting and valuable must first rest upon one of them being an authoritative spokesman for Government. Secondly, from the point of view of the section, the talk must have some bearing on industrial prospects. Thirdly, the essence of the discussion must be constructive thinking on the part of the participants. Finally, it must not stray into the realm of the improbables, but stick strictly to points as they very well might enter the discussion.

For this purpose, I have this week thought it fit to set out the dialogue that could take place if Mr Nehru and Mr Tata (J.R.D.) were to get together. Let me first justify this choice.

It is scarcely a week since Mr Nehru emphatically asserted what the role of the private sector would be. The Prime Minister said that private enterprise would have not only an important but also a restricted place in the Indian economy vis-a-vis the Second Plan. More than this, it is obviously impolitic for a Prime Minister to say at a public gathering. But, from the standpoint of the private sector, the element of elucidation and clarification would be desirable. What better could this be done, than calling in a leader of industry and having a frank and straight talk with him? And what better choice, for this purpose than Mr Tata, who is the doyen and respected leader of Indian industry? I do not think that I for my part need further or at greater length to justify what follows. On, then, to the imaginary conversation between India's leader and India's industrial leader.

£R$

(Mr Nehru has been considering it his special responsibility to revitalise and re-energise the private sector; and he has utilised every possible public occasion to give assurances in this behalf. The last opportunity thus offered was the annual general meeting of the All India Manufacturers Organisation; and he then said that the private sector could count upon having an important and respected role in the Second Plan. However, he has been feeling that such public statements have, for reasons he cannot quite understand, failed to elicit the desired results. He does not want to lose any more time, as time is of the essence in the implementation of the Second Plan. He thereupon decided to invite Mr J. R. D. Tata to come over to Delhi and meet him. Since Mr Nehru is mentally at his most agile after his morning Yogic exercises, Mr Tata has been summoned to breakfast. The breakfast over, the coffee imbibed, the two of them get down to serious business).

£R$

Mr Nehru: I am very happy you have come down. The main reason why I want to talk to you is something which I shall come to later. First, however, I should tell you that I was somewhat put out by your statement last year at the Tata Steel's annual general meeting. I do not think you were correct to envisage all manner of threat and danger emerging from a higher tempo of industrial activity by the State. As a matter of fact, let me suggest that such statements do not at all help in creating the atmophere or the climate or the conditions in which the nation can whole-heartedly concentrate on expansion and development. It has even pained me a bit, that you of all people should yet be unsure of what the Congress Government at the Centre propose to do in respect of free enterprise or private sector or private enterprise, call it what you will.

Mr Tata: Sir, I am sorry if I have unwittingly given the impression that you find in me an opponent of the Congress Government. To the contrary, leaving aside for the moment the strident support that the Indian business classes have given since the days when the nationalist movement first began, let me assure you that Indian industry and business consider it essential to the speedy progress of this country that we should have a strong and stable Congress Government. Nevertheless, it is true that, speaking personally, some official measures have provoked my anxiety. I now realise that some of the things that were said in the latter half of last year were very likely motivated by the impending elections. To these disquieting statements, however, we must add some disquieting actions as well. While I have been grateful—and so have all industrialists been—for the rational lead you have been giving to official economic policy,—and in particular I remember your categorical assurances about nationalisation—the fact remains that grounds were not wanting for some element of alarm. For example, I scarcely think that it is necessary or desirable for the State to take up trading activities. Just prior to the TISCO annual meeting, the talk of the town was the bombshell of State Trading Corporation. I should have thought that trading was something that was best left to the individual, and that the STC as a body was unnecessary. I shall not dwell upon the aphorisms either of Plato or of Mahatma Gandhi, both of whom explicitly warned of the threat arising to the nation out of monopolistic economic powers in the hands of the State. I do not do this, because the Bible is being quoted for their own purpose by interests persona non grata with Government. Moreover, it is not now my apprehension that the Congress Government are in the process of acquiring for themselves such aggrandising power. But I shall say this, that my comments will have served a useful purpose in the sense that Government have thereby been apprised of some genuine grievances on the part of the business and industrial community.

Mr Nehru: The less said about election speeches, the better. But I cannot agree that State Trading is unnecessary. A lot of thought went into this, into whether we should have State trading. And we decided, the Cabinet decided, that we must have State trading for certain particular, definite reasons. For instance, you know that India is increasing its trade with the East European countries. These countries prefer barter arrangements, these "package" deals. So, we thought that such business could be on a Government-to-Government basis. They will not deprive business of private enterprise, merely complement the transactions of the private sector.

Mr Tata: Excuse me, sir, for interrupting. This kind of State trading cannot be objected to by any one. But what is an incursion on the part of Government is trading in such things as iron ore and manganese ore. Even where such ore is being earmarked for East European countries, it does not matter. But, in the rest of the trade, why should the State interfere?

Mr Nehru: You do not appear to know the facts of the case, otherwise you wouldn't be saying this. Do you know how many countless contracts for shipment were broken by the private traders, because prices later turned more favourable? Do you know how often the grades of ore exported were much lower than contracted for? Do you know that all this was affecting our exports, our foreign exchange earnings? These are considerations we must remember, we must see the picture in its entirety, we cannot overlook any aspect. My Government are trying to do this, and so sometimes a course of action that seemes logical to us appears to you to be irrational or ideological.

Mr Tata: But this argument can be carried to dangerous extremes. No man is free of fault. No industry, it follows, is untainted by corruption. Consequently, will Government take up one activity after another?

Mr Nehru: You are forgetting the basic objectives of the Second Plan, and that is to raise the standard of living, which in turn will start moulding a national character. In any case, no democracy can countenance exploitation—this is something I shall shortly refer to. And no country can allow rampant corruption. So, it is the duty of a democratic Government to put in train the measures that will penalise exploitation and to create the conditions in which the propensities for corruption will be minimised. As for exploitation, do you know the wages that are being paid to labourers in the iron ore mines? You would be shocked. These people in charge of the iron ore export industry do not keep accounts, they make large profits, they evade tax. Isn't this exploitation that I am committed to prevent? Finally, I don't think you are aware that a proposition was placed before us, to say that the iron ore industry would be prepared to pay a cess or special tax so long as they could continue in their business. This can only mean that the tax-evadable profits in

LIGHTS

Free Enterprise has been so grousing and grumbling that one would form the impression that in this country, freedom for the private sector has been killed and enterprise stifled. Its major complaint is that the public sector is making inroads into its preserve. Mr G. D. Birla himself has admitted that the State has actually taken up projects which are clearly called the resources of private enterprise.

The next charge is nationalisation. It is, however, clear that Government embark on nationalisation only when they must. There is no frivolity or lightheartedness or theoretical predilection in this.

The capital market is drained dry by Government loans—is the next grouse. Eavesdropper, who has taken over this chore of reply from the Leading Articles section, gives the amazing total of Rs 400 crores as the amount made available to private enterprise by Government for all categories of capital requirements.

In the face of these facts and figures, Free Enterprise can have no excuse for repeating its popular fallacies.

resolve to take up greater responsibilities.

Mr Nehru: Look here, I don't presume to understand this line of reasoning. If a policy statement reserves more enterprises for the State, that is wrong. And if it increases the scope for the private sector, that is also wrong, because it could or might be reversed! This is the most pessimistic and unhelpful sort of attitude that I can encounter! Anything else bothering you?

Mr Tata: Yes. There is the matter of incentive for the private sector, the due scope and encouragement and conditions in which it can expand.

Mr Nehru: But this a point on which I have given the most categorical possible assurance.

Mr Tata: Perhaps, it may be stated that actions do not suit words.

Mr Nehru:: Heavens, man, are you complaining that we are not doing enough for helping the private sector?

Mr Tata: Well, I don't agree with all that has been said in this context. What is more, I know the help that has been given by Government in respect of the many industries that have sought aid from the World Bank. Then, there is also the matter of the special advances given by Government. It is obviously wrong to say that Government have done nothing. But, it is perhaps true that positive measures to restore confidence in the minds of the private sector have yet to be undertaken or implemented.

Mr Nehru: Development Rebate, tax holidays, World Bank guarantee, special advances—all this is nothing?

Mr Tata: Sir, you are putting me on the defensive. But taxation is so....

Mr Nehru: You can't expect much relief in that quarter. In any case, these are emergent times in which we live, and present taxes are justified. If you want relief, you must first make sure that everybody pays his due taxes. So long as tax evasion is persisted in, you can discard hopes of tax rates declining.

Mr Tata:: But taxes, at any rate high taxes, are disincentives.

Mr Nehru: Anyway, let me suggest that it is time we forgot about public sector and private sector. We have drawn up our plans deliberately in such a manner that certain basic things, you understand, certain fundamentals will be the responsibility of the State. I look to the private sector to set up the ancillary industry to make use of the increased basic materials that we will be producing. There is no sense in producing 6 million ingot tons of steel, if the demand or consumption in the country is less than that. TTK has already said that the Third Plan's target should be around 15-18 million tons. In this, I will expect both you and IISCO to undertake further expansion. Finally, your Mr Kutar said somewhere that India must begin to think in terms of producing 100 million tons of steel annually. If all this steel is produced, manufacturing industries must also come into being; and that will be your responsibility. We all have to get to work! Let's not get lost and entangled in and delayed by controversies. Then, you must think of India's mixed economy as the co-operative and collaborating co-existence of the private and public sectors—this being the national sector we have in mind.

Mr Tata: Sir, we may complain now and then; at the same time, however, we are not idle. It is to our credit that industrial production should be rising so satisfactorily. We can assure you that our objectives are Indian objectives: with the proviso that there should be some positive incentive. But this last is a matter which we need not consider for some time now.

Mr Nehru: Make sure everybody learns what I have told you. I will see that the so-called private sector has an important place in the Indian economy, that it has a respected place. It will be encouraged to expand production. It will be given help in a form that only Government can give. We shall set up the financial institutions necessary to render suitable assistance: and TTK is now busy on the job. Make it known that Government's enterprises are themselves intended to broaden the scope for the manufactures of the private sector, because they will release additional purchasing power. Understand that the job of the two sectors is complimentary. Finally, make it clear that the challenge and initiative are left with the private sector. They must rise to the occasion, and fulfil their targets. Let them realise that if they fail,—well, that they cannot afford to fail, because what is at stake is democracy, the survival of private enterprise.

Excellent Results of Belsund Sugar

Balance-Sheet Reviews:

THE Belsund Sugar Company Limited has produced excellent working results for the year ended 30th September, 1956. The quantity of cane crushed is substantially higher at 37.65 lakh maunds as against 19.84 lakh maunds, while sugar manufactured amounts to 3.76 lakh maunds as against 2.12 lakh maunds in the previous year. Sales have risen to as much as Rs 100.16 lakhs from Rs 94.19 lakh maunds. The net profit for the year, before providing for Taxation and Depreciation, amounts to Rs 10,77,036 as against only Rs 4,06,004 in the previous year.

In respect of allocations to Funds, the Directors have, apart from providing a sum of Rs 1.25 lakhs for General Reserve and Rs 1.00 lakh for Development Reserve, raised the Taxation amount to Rs 4.80 lakhs from Rs 1.40 lakhs although Depreciation is slightly lower at Rs 90,663 against Rs 1.10 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend to Re 1 from As 12 per share.

According to the Directors' Report, it is expected that more than 30 lakh maunds of cane will be crushed during the current year.

£.R$

Cawnpore Sugar

Despite an increase in sales from Rs 1.60 crores to Rs 1.65 crores, the Cawnpore Sugar Company has reported a decline in net earings for the year ended 31st October, 1956, mainly due to expensive operation of the company's additional two factories in Deoria district. The quantity of cane crushed is higher at 61.45 lakh maunds as against 56.77 lakh maunds, while sugar manufactured amounts to 6.38 lakh maunds against 5.91 lakh maunds.

Net profit, after Taxation and Depeciation, amounts to only to Rs 6.65 lakhs as against as much as Rs 8.07 lakhs in the previous year. With the result, Depreciation has been reduced to Rs 2.5 lakhs from Rs 3.0 lakhs; Taxation to Rs 4.00 lakhs from Rs 6.50 lakhs and Rehabilitation Reserve to Rs 3.50 lakhs from Rs 4.80 lakhs. The dividend on the Ordinary shares is, however, maintained at As 12 per share.

Jute Results

The difficult conditions generally experienced by the jute industry, during the half-year ended 30th June 1956, are fully reflected in the working results of the Nellimarla and Waverley jute mills.

Although the Nellmarla Jute Mills Company has reported an increase in sales from Rs 44.61 lakhs to Rs 47.10 lakhs, the net profit, before providing for Taxation and Depreciaton amounts to only Rs 4,69,760 as against Rs 5,74,809 in the previous half-year. This is mainly due to the rise in manufacturing expenses from Rs 4.02 lakhs to Rs 4.91 lakhs and in "salaries and wages" item from Rs 9.33 lakhs to Rs 10.13 lakhs. A sum of Rs 37,356 (Rs 56,200) is set aside for Depreciation and Rs 1.90 lakhs (Rs 1.85 lakhs) for Taxation. The dividend on the Ordinary shares is, however, maintained 50 nP per share.

The Waverley Jute Mills Company has actually reported a loss for the same half-year; but the accounts show a profit, before providing for Depreciation and after sundry cre-

SOUTH EASTERN RLY TENDERS

The General Manager Garden Reach, Calcutta—23, invites sealed tender No. CON|GM|8|CE(C)|WP|121|C|57 for supply of 18 Nos. Tacheometers. 3 screwed complete. Earnest money—Rs 1000/-.

this business must be enormous. My Cabinet wants to put a stop to that. No, I think State trading in certain fields is essential.

Mr Tata: My only fear is that the State enterprises may be biting off more than they can chew.

Mr Nehru: You mean from the point of view of administrative and other personnel?

Mr Tata: Yes. I honestly doubt that Government will be able to lay their hands on sufficient talent.

Mr Nehru: You are presupposing that there is limitless scope for expansion in the State sector.

Mr Tata: But isn't that the intention of the Government?

Mr Nehru: By no means so. And this really is the purpose of my sending for you. There are certain specific things I want to impress upon the private sector. I have been thinking that the best way of getting the "message across" is by means of this personal conversation. At the outset, I want to say that I am greatly irritated by this constant and unceasing controversy on private sector and public sector.

Mr Tata: Does that mean that Mr Birla the other day mirrored your thought in Bombay, when he talked of the national sector being alone important?

Mr Nehru: I suppose you could say that. Don't you think it is time that you industrialists realised what is meant by Indian mixed economy?

Mr Tata: Well, I can say what the general impression is: and that is that India's mixed economy has an ever-growing place for the State!

Mr Nehru: Now, now, you are getting altogether on the wrong track. Don't you people pay attention at all to industrial statements and other public... rances and official clarifications...

Mr Tata: If you are referring to the fact that the revised industrial policy by implication leaves tremendous scope for the private sector, we have realised this.

Mr Nehru: Then, in God's name why have you been acting like churlish schoolboys?

Mr Tata: I suppose because there is the sub-conscious fear that Government may in the future...
