CURRENT DEPOSIT ACCOUNTS.—Interest on daily balances from Rs. 300 to Rs. 1,00,000 will be allowed at quarter per cent per annum and on sums over Rs. 1,00,000 by special arrangements. No interest which does not come to Rs. 5 per half year will be allowed.

LOANS, OVERDRAFTS AND CASH CREDITS.—The Bank grants accommodation and undertakes on behalf to its constituents the Safe Custody, of Shares and Securities and the collection of dividends and interest thereon.

It also undertakes the sale and purchase of Government Paper and all description of Stock at moderate charges. Terms on application.

Sterling and Dollar credits arranged and foreign bill negotiated for approved customers.

The Bank acts as EXECUTOR AND TRUSTEE UNDER WILLS AND SETTLEMENTS and undertakes TRUSTEE business generally.

N. M. CHOKSHI, General Manager.
WALTER RIBEIRO, Manager, Calcutta.

For the Investor

A Bad Year?

***Investment Gossip*:**

1956 WILL go on record as having been less than a fair year for the Stock Exchanges. Almost uninterruptedly, there would appear to have been a lack of confidence, a diffidence about the future. The year began uncertainly, brightened a bit around budget-time, and lost itself in uncertainty once again in the last few months. And yet, from the investor's point of view, should we write off 1956 as one of the worst years since the Liaqat Ali budget?

It was the work of a moment to pose the question. But, when I sat down to answer it, I found that the issue is complicated by so many extraneous considerations, that it does not admit of a clear cut answer. All I can do is to summarise and analyse the basic factors that may be said to have influenced market trends during 1956; and I can also indicate broadly the other developments which have, or should have, a special significance For the Investor; for the rest, it is up to the reader to reach his own conclusions.

1956 began, as I have already pointed out, on an uncertain note. The bear operator in his overpowering fashion still held sway in Lyons Range. Budget predictions made their appearance sooner than the norm. These usually took the form of dire forebodings about wealth tax and capital gains tax and ceilings on income and similar such hideous prospects in store. It was not, therefore, surprising that the quantum of activity was at a reduced tempo and pace.

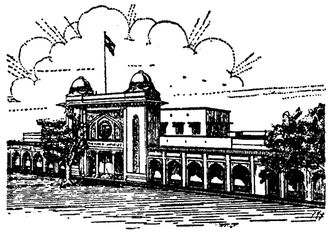
Then, of course, came the Budget; and, with it, some steadiness. The general feeling was one of gratitude for such mercy as Sir Chintaman Deshmukh had shown. None of the dreaded imposts, that had been anticipated with trepidation, figured in his proposals.

Next, we had the heartening restatement of industrial policy. This was calculated to clarify Government's intentions as regards spheres of responsibility as between the private and public sectors. Again, there was a general welcome accorded to the categorization of Indian industry in which there was the implied readiness and perhaps intention of Government to seek the assistance and co-operation of the private sector in fields which were reserved to the State. But these were influences that were short-lived.

I do not know why, but the market took an extremely glum view of the Government insistence upon a premium of Rs 3-8 for an Indian Irons rights issue. Apparently, the reasoning is that, in lieu of the increase in dividend that Government do not seem to be disposed to approving, authority should at the least have permitted the rights issue at par. I do not want to digress; but I must point out that, so long as Government allow and approve a rate of dividend on the rights shares which is in consonance with the premium exacted, the investor can and will ask for no more. Especially since Government had earlier indicated a premium in the case of the Tata Ordinary and ACC rights issues, the small premium of Rs 3-8 on an Indian Irons rights issue should have been expected as entirely natural.

After that, the market never quite recovered. The increase in the excise duty was held to be a body blow that would severely hit the textile industry. Even more severe a blow, according to the market cognoscenti, was Mr T. T. Krishnamachari's mid-year Budget.

The significance of deficit financing for stock exchanges was forgotten; instead, the market operators had begun to talk almost knowingly of the money market. Money was tight. Rates of interest (particularly for their purposes) were high. In view of the bear phase of share prices, satta was heavy. The Reserve Bank was issuing directives intended to curb speculation. With the decline in share prices, banks were calling for higher margins on their advances. In short, Phatkaram Pagla would say, "Little scope for speculative activity."



That, indeed, is the truth. This is only one man's views that I here advance: But I feel that we should correctly assess 1956 as having been a bad year, not for stock exchanges as a whole, but for the speculative elements in it. Apparently, the bear tribe must have had a profitable time of it. But the total effect of 1956 on jobbers has been to reduce the extent of activity; and this has told upon their purses and earnings. Thus, in this view, even the bear tribe is not entirely happy, although prices are downward, because the scope for their manipulations has been so drastically reduced.

I am not so sure that we can blandly assert that 1956 was a woeful year For the Investor. True, share prices have fallen—but the declines have been steepest only in the speculative issues. True, the investor in the not too distant past might have sold his scrips for a good book profit—but he is not the sort who has been after quick profits. True, the lower tempo of share activity might affect his own dealings—but he is a buyer, and not a seller, at today's prices. True, the Indian Irons dividend is seemingly frozen—but 1956 has thrown up a good number of worthwhile prepositions, in all of which he has participated.

A final word: Is the lower volume of activity indicative of any decrease in investor interest? I don't think so. On the contrary, the decline in the number of transactions can be taken to mean that sellers are reserved. The investor is anxious that he should get a steady return on his capital, with a gradual improvement in the dividend; and the investor is careful to make sure that his investment also possesses growth propensities. A paper profit does not entice him to sell. Again, on the contrary, he is interested in picking up further scrips that fulfill his conditions of trusted management, steady dividend and growth prospects.

1956, a bad year For the Investor? No.

HIGHLIGHTS

A nine-letter threat to progress: Inflation

That which mocks savings, that which sends up prices dizzily, that which drags down the prestige of a nation and its stature in world trade: Inflation.

One is not considered au fait, if one does not discourse on the inflation threatening and —in the view of some—overtaking the Indian economy.

But what these pundits forget is that academic economics has not made allowance for the world economy as it obtains today.

Take, for instance, the question of depression. In the closing years of the war, he was not a pundit who did not foresee a depression in the wake of the war as surely as he knew that day follows night.

No depression was forthcoming. At that time, Indian Finance suggested that the word could safely be eradicated from the world's economic dictionaries. The pundits slunk back into the background to lick their wounds.

Let us not forget the devaluation of 1949: Pakistan's failure to follow suit was thought to be the harbinger of sore straits for India. Indian Finance suggested instead that it was a challenge and a rare opportunity to become self-sufficient in cotton and raw jute.

Or, for that matter, let us hark back to 1954: when the world sat back, waiting for recession to deal America a crippling blow. No crippling blow.

What exactly is inflation in a semi-developed economy? Inflation in a stridently industrialising and developing economy? The measures to deal with the species of inflation that may make itself felt? The reader is enabled to find the answers to these questions in the Leading Article which, in its assessment of 1956-1957, presents an analysis of inflation.

It is generally agreed that the measures taken by Government in these directions ha e largely succeeded in curbing any runaway trend in prices.

We suggest that this will be the pattern for the future as well. To anticipate that we shall never be faced with inflationary tendencies is to be complacent to the degree of being foolish. To apprehend that deficit financing of the scope and size envisaged in the Second Plan will lead to galloping inflation is to be unnecessarily pessimistic. We need always to remember that areas of shortages will emerge. But, we need also always to remember that Government possess a sufficiency of weapons, both monetary and economic, in their arsenal to keep in check any virulent inflationary tendencies that the future might throw up.

The incipient inflation of 1956 has, as we have pointed out earlier, entailed a rediscussion of the resources plan. The first estimates in this regard were envisaged by Indian Finance in the middle of November last year. While we do not propose to study those figures in detail once again, it is necessary for us, in the context of inflation, to pay particular attention to some of the revised targets of resources. First, we may point out that deficit financing has not been as substantial as some have thought it to be. Indeed, if we study the figures in this regard, we will see that Government are utilising the instrument of ad hoc Treasury Bills as flexibly as is desirable. The following table gives the net change in Treasury Bills outstanding, as shown in the relative table published by the Reserve Bank in its monthly bulletin:

	Deficit Financing (in crores Rs)
January/March 1956 ..	+134.96
April/June	+ 48.15
July/September	— 74.70
October/November ..	+ 92.43
January/November ..	+210.84
April/November	+ 75.88

It is important to note that net deficit financing in the first eight months of the Second Plan has amounted to no more than Rs 75.88 crores. But, according to the Budget Estimates, deficit financing in 1956-57 was expected to be around Rs 350 crores. We may, therefore, first address ourselves to the question: Why has deficit financing been for a much smaller amount than originally envisaged? The answer is partly to be found in the table, in the figures relating to the change in Treasury Bills outstanding as at the end of September in comparison with the position at the end of June. In the July/September quarter, the amount outstanding actually fell by Rs 74.70 crores. Readers of this journal will recall that we had suggested, at the time of the Centre's New Loans and again when the State Governments' Loans were issued, that the bank returns indicated a substantial element of reverse ad hocs. That is to say, the Central Government were able, thanks to a high level of subscriptions to the new loan of 1956, to liquidate or cancel a part of their Treasury Bill liability. Secondly, the change at the end of November seems to be somewhat high. But here, too, the explanation is simple. The re-organisation of States, as from the beginning of November, had necessitated a number of payments by the Central Government to the State Governments before the appointed date. For the purpose of making these payments, the Centre had to take recourse to substantial deficit financing. Indeed, the more detailed figures show that deficit financing during October was of the order of Rs 78 crores as against the total of Rs 92.43 crores for both October and November. Thirdly, we may also suggest that higher excise collections must have contributed to an improvement in the Government's Ways and Means position. Figures for the first seven months of the year, in this regard, suggest that collections under this head were likely to exceed the Budget Estimates by Rs 20 crores or so; and this is without taking account of the higher levy on cotton cloth announced by Mr T. T. Krishnamachari as his first act as Finance Minister, and without the other excise duties proposed by him in his mid-year budget. Moreover, it would appear that tax collections have also been of satisfactorily improved proportions. Fourthly, it may be taken for granted that the budget estimate of expenditure will prove to be higher than the actuals. As a result of all these, deficit financing in 1956-57 is certain to be very much less than the Rs 356 crores envisaged by Sir Chintaman Deshmukh in February last year. Our own view is that, thanks to the higher excise duty on cotton textiles; to the mid-year budget of Mr Krishnamachari; to the remarkably good performance of giltedged borrowings in 1956; to the improved showing of excise and customs collections; to the better realisations from income-tax; and, finally, to the lag in estimated expenditure, it seems very likely that the total of deficit financing for 1956-57 will not exceed Rs 200 crores.

Our understanding is that the programme of deficit financing, generally speaking, involves created money in the first three years of the Second Plan and some element of reverse ad hocs in the last two years of the Plan. In the second place, we repeat here our belief that the revised estimate of deficit financing for the Second Five-Year Plan should be around Rs 700 crores as against the planned figure of Rs 1,200 crores. In the third place, we believe that the raising of other resources will enable a cut of this magnitude in the amount of deficit financing. In the fourth place, such a cut is clearly desirable in the sense that it will reduce the risk of inflation.

Let us now study the problem of inflation from another angle. We feel that, if the Second Plan is to emerge triumphant over all forces of inflation, Government policy will have to be directed along four important channels. Firstly, bank rate should not be allowed to be linked with inflation, but must instead be considered in relation to its impact on Government's borrowing policy. Secondly, import restrictions are inevitable, but need to be accompanied by a vigilant and alert care for increasing internal production whenever and wherever areas of shortages emerge. Thirdly, a fundamental cause of inflation, the existence of a parallel sphere in which there is money circulation, must be removed. Fourthly, a vigorous attempt must be made to channel gold and exchange earnings into our resources. We may now proceed to a discussion under each of these four heads.

We are emphatically of the view that, in the conditions of the Indian economy, the orthodox weapon of higher bank rate as a means of offsetting inflation will be thoroughly ineffective. Indeed, as we had written on an earlier occasion when we analysed the relationship between bank rate and giltedged, on the one hand, and bank rate and inflation, on the other, we had pointed to the conclusion that a higher bank rate might even have the contrary effect of stiring up and aggravating inflationary tendencies. Government must consider one of their most important tasks to be the evolution of a monetary policy designed to encourage and increase the inflow of subscriptions to giltedged. In this regard, the fact that Central and State New Loans in 1956 realised a total of Rs 226 crores, or the annual average as envisaged in the Second Plan, must embolden Government to raise the target under market borrowings to a figure of Rs 1,500 crores gross or Rs 1,100 crores net. In some circles, it is believed that the New Loan collections in 1956 will not be equalled, least of all exceeded, in the immediate future. But this is to disregard the fact that there is a steady expansion in the capacity of special institutions to absorb giltedged. Secondly, this is also based on the pessimistic assumption that the Second Plan will not release expansionary influences upon the economy. There is already evidence of India being in the process of developing a truly expansionist economy; and, in the next few years, as the tempo of Government expenditures rises, resources available for investment in giltedged must also correspondingly increase. In this matter of borrowing policy by Government, we shall content ourselves with the suggestion that it would be advisable for Government closely to study the inter-connection between lower bank rate and higher Government loan subscriptions.

In the second place, it is inevitable that India will need to conserve foreign exchange; we need to be particularly careful not to fritter away our reserves on imports which are either non-essential or on goods which could be manufactured within the country. Import restrictions by themselves will encourage inflation, and not otherwise. What is needed is a simultaneous drive at increasing internal production. We have reasons to believe that Government are properly cognisant of the measures to be taken to rectify areas of shortages. The line of action adopted in regard to both cotton textiles and foodgrains last year, is evidence in this regard. Moreover, it may be recalled that the Finance Minister, in his note to the AICC Session at Calcutta, had asserted that it was Government's intention, in the event that handlooms failed to attain their target, to licence an increase in capacity of the organised sector in cotton textiles. But, of course, the production drive has to be most prominently displayed in foodgrains. While it is true that the Indo-American Surplus Commodities Agreement of 1956 will have provided us with a satisfactory margin of buffer stocks, and while the latest information is that India is negotiating for the purchase of an additional 1½ million tons of wheat under a similar agreement, it is in the field of foodgrains that the greatest danger of inflation lurks. Here, also, it is heartening to record that Government are keenly alive to the importance of additional foodgrains production as the best insurance against inflation. The Second Plan does not allow of any substantial increase in the financial allocation to agriculture. But there is sufficient warrant for the belief that both the Central and State Governments will succeed in their attempt to encourage and to elicit intensive cultivation on the part of agriculturalists. As far as paddy is concerned, the pilot projects of adopting the Japanese methods of cultivation are likely to improve yields. Already, the jute yield per acre has shown improvement in India, although West Bengal has recorded some worsening. In practically every agricultural commodity, it is clearly recognised that there is a substantial margin to be achieved by way of higher yields. And these yields are the more likely to be realised because of two favourable developments. One is the fact that the multi-purpose projects are steadily increasing the cultivable areas. The other is the fact that production of fertilisers is consistently exceeding targets. The combination of these two factors may ensure that, provided that weather is not monstrously unkind, agricultural production will achieve the targets set out.

(Continued on page 26)

Calcutta Stock Exchange

1956—Year of Ups and Downs

1956 was a year of mixed showing with heavy ups and downs in prices on the local Stock Exchange. Peak levels were touched by most of the scrips during the second half of the year. Activity was, however, mostly confined to Tea, Engineering and Miscellaneous sections. The market finished at only slightly above the lowest levels for the year.

The market, which started the year on a subdued note, was confronted with heavy selling pressure due to various adverse factors. Mainly amongst these were, the Planning Commission's suggestions for an annual tax on total wealth as a complement to Income-Tax and Death Duties, fears of additional taxation in the 1956-57 Budget, the clearing difficulties experienced due to bank strike, the promulgation of the Ordinance taking over the management of all the Insurance business and the disturbances over the States Reorganisation plans. Thus, near-panic conditions prevailed throughout January when all efforts, taken by the Stock Exchange Committee to solve the settlement, were of no avail. In February, sentiment deteriorated further and it looked as though the market would not regain its vigour until the Budget was out of the way.

When the Budget proposals were actually announced, the first reaction was a sharp marking down of prices as operators were inclined to attach a bearish import, mainly to the two proposals—the tax on bonus shares and the imposition of super tax on dividends above 6 per cent. But second thoughts appeared to be more reassuring and there was a feeling that the new tax proposals were less hurtful than had been expected. On balance, the market entered the Budget week with a technical position that was sounder than that of any Budget-eve before. An important news to cause a change in sentiment was the Stock Exchange Committee's decision to allow free trading in all the clearing shares from the pre-Budget session.

From March, a recovery movement started, operators being encouraged by good corporate news, a substantial expansion in currency, the prospects of bonus issues by some companies, a constructive interpretation of the rivised Industrial Policy of the Government and the postponement of the additional excise duty on cloth. In brief, the market was in good form throughout the second quarter when all equities, with only a few exceptions, touched the highest levels for the year.

The market, however, lacked drive and energy from the beginning of the third quarter and price movements were generally irregular due to alternate bouts of buying and selling. Operators were not enthused over the size of the increase in the coal price sanctioned by the Government. Also, there was a feeling that, apart from loans to be issued by the State Governments, the new Central Loan would siphon off a large sum of as much as Rs 150 crores from the investment market and that speculative interest would substantially be limited in future due to paucity of funds. Despite the fact that prices were carried down to attractive low levels, there was poor response from professional operators as well as investors who were unwilling to accumulate lines.

The developments relating to the nationalisation of the Suez Canal Company, the news of the happy ending to the controversy over the various proposals under the States Reorganisation scheme and the successful floatation of the State Loans caused a return of confidence in the market in August when a wholesome process of recovery was set in motion. This was, however, proved shortlived and prices again developed a reactionary trend in September when no fresh incentive came to the forefront to keep market's activity well-maintained.

Apart from the anxiety to await further developments over the Suez Canal dispute and fears with regard to the possible effects on exports from this country, certain other adverse factors such as, the recommendations made by the Plantation Inquiry Committee, the decision made by the Pakistan Government to enhance the export duties on certain varieties of jute, the Finance Minister's warning about imposing price control on cloth, the Government decision to take adequate measures to check inflation, apprehensions entertained with regard to the rise in industrial costs in view of the rise in the prices of essential commodities, depressed sentiment in the market at the end of September when operators were generally inclined to book profits at higher levels.

To make matters worse, came the announcement, at the beginning of October, of the Government's refusal to permit an increase in the Indian Iron dividend and the news of the cut in the ex-factory prices of cement in respect of several companies. Above all, operators were worried over the growing stringency in the money market, continued adverse balance of trade and the need for financing the accelerated activities in business and industry. With the result, they were reluctant to adopt an aggressive stand, while investors seemed to be earmarking their funds for the new capital issues. Thus, the market was in a moribund state during the last two months of the year. Although steps were taken by the Reserve Bank to revise the Bill Market scheme for meeting the increased credit requirements, there were still apprehensions with regard to the Government's fiscal and monetary policy. Working under these various qualms and doubts, operators were unable to formulate any constructive idea about the future.

On the whole, the market indulged in stone-walling tactics toward the closing stages of the year, because it did not know which way it should take the plunge. Although bulls tried their best to push up prices, there was lack of follow-up. In the midst of these factors, the announcement of the new tax proposals, the Finance Minister's proposal to assume arbitrary powers to enhance excise and import levies, the news of the Reserve Bank having obtained extensive powers of control over banks and the annoucement of the Government's decision not to permit any more issue of bonus shares by companies, created a state of nervousness in the market.

Thus, sentiment was disruped, resulting in the prices tumbling down precipitously on a broad front due to non-stop selling orders and touching the lowest levels during the last week of December. But for bear-covering and selective buying based on consideration of yield, the decline in prices would not have been halted toward the end of the year. Sentiment was also helped by two important factors—the reports of the World Bank making a further loan of 20 million dollars to the Indian Iron & Steel Company and the feeling that the shortage of foreign exchange could be relieved by the possibility of India receiving increasing economic aid following Mr Nehru's visit to the USA.

Bombay Stock Exchange

A Confused and Uncomfortable Period

THE Bombay Stock Exchange passed a confused and uncomfortable period in 1956. After wide fluctuations and mixed showings, equity values slumped sharply at the end of the year following the mid-term Central Budget and indications of higher incidence of taxation in the coming years.

Rising industrial production and the expansionist policies, visualised under the Second Five-Year Plan, inspired the market to start the year in a promising fashion; but the gradual recognition that there was no development without tears curbed runaway enthusiasm. The sharp rise in values received a severe jolt

Annual Reviews

On the whole, in contrast to 1955, the market in 1956 was thoroughly in a despondent mood with confidence generally lacking in the outlook, mainly due to the radical changes in the Government's fiscal and monotary policy. Anxiety is now felt as to what will be the actual state of affairs in the New Year. A section of the operators feels that, from the speeches and indications given by the authorities, it is difficult to anticipate any news of beneficial effect to the market. Others, however, seem to be convinced that, in the field allotted to the private sector, there is no cause for alarm in investment outlook and, once the Government's fiscal policy is crystalised in the light of working for a couple of years of the Second Five-Year Plan, the movement of shares will take a healthier trend, paving the way to a better market. It remains to be seen whether there will be at all a turn in the tide or whether conditions will continue worsening.

The following table shows the price trends of a few selected scrips during the year:

Annual Reviews

when the Government inaugurated the New year with an Ordinance nationalising Life Insurance Companies. This major step called for a sharp reaction of the share market ideas about the outlook.

Meanwhile, indications were not wanting that the enhanced needs of the Second Plan would imply a "heavy Budget". True to expectations, the Budget imposed an all-round rise in excise levels, more taxation for higher income-brackets and a tax on bonus issues and dividends beyond six per cent. It was a measure of the market's resilience that, even with the impact of these higher burdens and a general shake-out immediately following the Budget, the subsequent weeks witnessed a general revival of confidence, based primarily on the improving performance of industries.

By July-August, the market regained their form and many industrials recorded fresh peaks. This, however, coincided with the cry of "inflation danger"; and Cotton Textiles, which provided the base for the boom in shares, were one of the first victims of a new policy designed to keep prices of essentials under check. Confronted with the problem of fresh resources on the one hand and curbing the rise in cloth prices on the other, the Government of India raised the excise duties on all varieties by a substantial margin. This altered the picture not only for the mill industry, but also for the share market in the middle of the year.

Not to be outdone, the new Finance Minister, Mr T. T. Krishnamachari, followed this up with several important speeches, which foreshadowed higher burdens and more inhibitory measures. With the resrlt, share values received a severe jolt in September.

The additional taxation proposals and the virtual control of company Reserves, which would provide the Government with more funds for accommodating certain of their Plan requirements, imparted a bearish influence on the market. Had it not been for these factors, the market would have ended the year more or less in a boom. For, the profits secured by most undertakings were impressive. There was an unending train of bonus and new issues. Many companies announced higher dividends, reflecting better working results and some notable maiden dividends were also declared.

For instance, the Tata Iron & Steel Company secured a loan of $75 million from the World Bank to finance its expansion project. The Associated Cement Companies successfully completed negotiations with Vickers Limited and Babcox and Wilcox of the UK for setting up a giant capital equipment project at Durgapur. Most of the new issues met with good response and, especially Hinduthan Levers and Guest, Keen, Williams met with phenomenal success.

In the Shipping field, the Great Eastern Shipping Company acquired the first oil tanker in the country's merchant fleet. The Indo-Russian and the Indo-Polish shipping agreements also provided increased opportunities for the Indian shipping companies. The Government of India's two Shipping Corporations also began to effectively function during the year.

Above all, the profits earned by Textile mills were impressive and internal prices were generally remunerative although, toward the end of the year, cloth markets turned sluggish due to consumer resistance to higher prices and the consequent slackness in internal demand.

The financial needs of the Second Five-Year Plan, which visualise a substantial rise in taxation, is an important factor that will govern the outlook for the markets in the New Year. Again, the approching elections have induced some quarters to believe that the forthcoming Budget may not be as bad as generally apprehended. While the outlook for cotton textiles has been rendered rather obscure for the time being, production statistics and earning prospects show that Steel, Cement, Rayon, Automobiles, Bicycles, Engineering and Chemicals are faring well and they should continue to be in the limelight in the share market in 1957. Meanwhile the share market and joint stock companies will have to work within the four walls of the new Securities Contract (Regulation) Act and the Companies Act respectively. The following table will show the trend of prices of a few selected scrips during the year:

Jute

Erratic Fluctuations in Prices

ERRATIC fluctuations in prices characterised trading in the Jute Goods market during last year. The lowest levels were touched during the second quarter and the highest levels in the third week of December. Except for a temporary setback in May, prices of Raw Jute ruled firm throughout although the closing tone was a shade quieter on lack of mill interest.

At the beginning of the year, conditions remained generally firm due to speculative buying induced by healthy stock position. Although overseas buyers showed some reluctance to follow the advance in prices, it was generally believed that there was little possibility of any recession in prices; especially when the market for Raw Jute continued to rule firm. While mills were anxious to reduce further the cost of production by increasing production by unsealing 2½ per cent of the looms with effect from the 9th January, they were not, at the same time, able to obtain their requirements of raw jute in full. They also decided to unseal another 5 per cent looms with effect from the 20th February after reviewing the crop and production position. But, it was felt doubtful whether any increased flow of enquiries would be sufficient to absorb the higher level of output, especially in the face of keen competition from Pakistan. The tone of the market remained, however, steady till the first week of March after which it turned easy due to restricted enquiry.

The general tendency was to wait for a clearer picture of the effect of increased production on stocks and to get an idea of the probable size of the next jute crop. It was felt that the second increase in loom capacity was not quite warranted. Two main factors—the news of heavy curtailment of output in the US automobile industry and the persistent rise in raw jute prices—appeared to make the position a little disquieting.

Meanwhile, overseas buyers seemed to be bidding time in the hope of a further fall in prices or in anticipation of minimum rates being imposed. Moreover, they felt confident that, with the steadily rising production and stocks, and expectation of a bumper crop, prices would not show any rise. Most circles therefore, held the opinion that the only really permanent way out of the dilemma was to regulate production according to demand and improve the quality and quantity of raw jute supplied to the mills and not through the fixation of minimum prices. On the contrary, the European group of mills were in favour of a reduction in working hours. Thus, opinions appeared to be divided as to the best way to get the trade out of the difficulty. All things considered, there was a strong case for lower prices for raw jute which should not, however, deter the incentive of cultivators to grow more. There was even a suggestion for giving an export bonus in cash as a short-term expedient.

It was, however, clear that the Government were averse to limiting production. For, they expected that there was bound to be an increased demand on account of the expected rice purchases from Burma and increased consumption of cement in India. They also felt that a shortage might even be reached when demand would cut deeply into stocks and artificial method of controlling production would only help speculators to be continually active in their dealings, resulting in an instability in prices. Thus, the situation was rather confusing at the middle of the year when prices were pushed down to the lowest levels on renewed liquidation by weak holders.

The market, however, gave a better performance from July due to speculative activity, being influenced by various factors. Mainly amongst these were, the expectation of overseas demand for stock-piling in view of the international tension following the nationalisation of the Suez Canal and the IJMA's decision to reseal a total loomage of 12½ per cent looms from the 17th September. Despite limited interest shown by overseas buyers due to instability in prices and the announcement made by the Pakistan Government with regard to the increase in export duties on Jute Cuttings and Ropes, general sentiment continued to remain better till the end of the third quarter.

Meantime, reports were pouring in to the effect that, since the abolition of the export duties, the Continental manufacturers were not able to compete with the rates quoted by the Indian mills and their exports had fallen considerably. Also, there was a good deal of speculative buying in Sackings, mainly due to the fact that those buyers, who had so long been purchasing heavy goods from Pakistan at a cheaper rate, were compelled to turn to the Indian markets following the reports that the bulk of production of these classes of goods would be required for internal consumption in that country.

Except for a temporary setback in prices in October in the absece of any enquiry from overseas buyers, the market continued to present a firm front with prices advancing steadily to touch the highest levels for the year in the third week of December. Despite the fact that overseas buyers showed reluctance to enter the market at rising levels as they had already bought heavily in the anticipation of delays in the arrivals of goods at their destinations, speculators pushed up prices on reports of the boom-like conditions prevailing in the Pakistani jute market and enquiries from Burma. The tone, towards the close of the year, was a shade quiet following the news of the decrease in US burlap consumption in November and reports of poor shipping orders for December.

*

RAW JUTE:

Except for a temporary setback in May in sympathy with the sharp fall in manufactured goods prices, the market for Raw Jute ruled firm throughout last year. From the beginning of the year, sellers were reserved in their ideas of prices, being encouraged by various factors. Mainly amongst these were, the IJMA's decision to unseal 2½ per cent looms with effect from the 9th January and another 5 per cent looms from the 20th February, the announcement by the Pakistani Jute Board with regard to the increase in the minimum export prices of all grades, reports of difficulties experienced in the despatch of jute from Fakistan, of flooding in the low-land areas of both India and Pakistan and the unfavourable weather conditions in some of the jute-growing areas. Mills were, on their part, buying sparingly in order to meet their immediate requirements.

Despite the reports received during the middle of the year that the new crop was not much affected and the condition of the plants was satisfactory, sellers remained reserved on reports of damage to the crop. Communication and transport difficulties also brought the movement of jute to a standstill. Some circles were inclined to believe that the discriminate policy adopted by Pakistan would hamper the flow of jute into India. As a matter of fact, imports from that country were showing signs of decline. Thus, the decision to reseal 2½ per cent looms from the 16th July had little effect on sentiment as it was felt that there was no possibility of any immediate fall in prices unless the disparity between the prices of Indian and Pakistan jute was narrowed down.

There was, therefore, a wide difference in sellers' and buyers' ideas of prices during the last quarter of the year when sellers were even in a position to dictate terms with the mills in view of the fall in imports into mofussil centres consequent on the hazards which the floods had caused to river transport. With only small stocks, mills were naturally compelled to make their purchases at advancing levels. Taking advantage of the situation, stockists were reluctant to offer in large quantities as they were holding the bullish view that, due to shortage of Indian jute, mills would be forced to pay high prices toward the end of the season. Thanks to the withdrawal of buyers, higher levels could not retained till the close of the year.

On the whole, the outlook for Jute Goods, in the New Year, appears to be encouraging on various considerations. First is the healthy stock position. Secondly, the fact, that burlap still figures as a low-priced commodity, will ensure a steady offtake by the USA although no substantial increase in demand from that country is foreseen in the near future in view of the heavy purchases made during the past few months. Thirdly, with the Continental mills struggling to keep themselves just alive and being completely at the mercy or Fakistan for their supplies of raw jute, it seems quite likely that Indian jute goods will enjoy continued popularity in the world market. Lastly, stocks have been showing a declining trend; and these are expected to show a further decline in the coming months, especially when production will be lower due to the resealing of looms. There are indications that there will shortly be a squeeze, especially in hessians, due to shortage of these classes of goods.

It is obvious that Raw Jute has played an important part in the present situation. It seems that quite a lot of the raw material has gone underground in the sense that it has not yet been offered for sale. It is now known that the 1956/57 crop has, by no means, been small or "famine" size. According to the official figures, the Indian crop is 4.22 million bales. Including the carry-over of 2.15 million bales and 0.5 million bales of Bimli and Mesta crop, the total jute available in the 1956/57 season will be around 12.87 million bales. The Pakistani crop is placed at 6 million bales although nobody lays credence on this figure. Even so, there will still be some leeway to be made up between supply and demand. In case the mills decide to work with the full complement of their looms, the Indian industry will continue to be at the mercy of Pakistan. It cannot be denied that the high prices ruling for the raw commodity at present are positvely injurious to the industry although there is a belief that the availability in the 1956/57 season will be of such adequate quantity as to enable the IJMA mills to produce at a higher monthly rate.

The essential requisite to an expansion of overseas business is a sizable reduction in the price that is now being paid by mills. This can be achieved only by stepping up the yield per acre and improving the quality of jute. In this respect, the decision made by the Government to revise the target of production and the announcement that futures trading will be allowed in both jute and jute goods, may pave the way to bringing about stable conditions in the industry.

The following table shows the price trends of both raw jute and jute goods during the year:—

Tea

From Crisis to Confidence

SENTIMENT in the Tea market, after remaining depressed till the second half of the year, turned better toward the close. The highest levels in the prices of most descriptions were touched during the third quarter:

At the beginning of the year, the tea industry faced a crisis, the extent and severity of which exceeded those of the depression in 1952. Encouraged by the high prices of tea, all the countries increased their production and/or export in 1955. With the result, the world market faced with an excess production of something like 142 million lbs or 11 per cent more than the world needed. Information went to show that there was bigger accumulation of tea in India as compared with other producing countries proportionate to the production. Such a development was attributed to a number of reasons, the most important of them being:—

1. High level of export duty in India;

2. Variation of the duty month to month which caused uncertainty in the minds of overseas buyers;

3. The much lower ceiling fixed for shipment of tea to London for direct auctions in 1955-56 and;

4. Sudden over-production toward the end of the year 1955 in North India.

It was felt that, if the situation left as it was, it would bring in a worse slump in 1956 than that of 1952. Again, the trend of prices impressed the fact that, if the industry was to be stabilised, it was necessary to regulate output and exports at the international level. Even the Calcutta Tea Regulation Committee, representing the main tea producing associations of North-East India, decided to introduce a scheme for regulation of the crop. The Committee also agreed to ask its constituent associations to recommend to their members that all tea waste should be destroyed to prevent such grades of tea having further depressing effect upon prices.

Also, many in the trade believed that, if residue teas were not offered at the auctions, the marketing of the rest 1955 crop would not be very difficult.

As a matter of fact, during January, large stocks of poor quality teas were accumulating due to restrictions imposed by the Government on teas to be sent to London and due to less buying. Even the announcement in February with regard to the export quota of 480 million lbs. for the 1955 crop had no effect on the market as trade circles felt doubtful whether all the additional quota would be used considering the none-too-encouraging foreign demand. The Government, therefore, decided to remove restrictions on direct shipments to London; but producers were not able to take advantage of the slightly higher prices ruled then in London. For, by the time the announcement was made, the differentials between Calcutta and London rates gradually narrowed. British blenders, preoccupied with the stricter credit squeeze,

were cutting their purchases still further. But the Government's aim of gradually increasing sales of tea for export at the Calcutta auctions met with some success Thus, a generally better feeling pervaded the market toward the close of March, and this was reflected at the auctions.

A variety of new factors emerged, which improved the tone of the market during the second quarter. Thanks to the removal of restrictions on shipments, the pressure of stocks was gradually easing as large quantities were shipped for London auctions. There were also strong rumours that Russia would soon enter the market for making her purchases. Also, the considerable increase in the domestic consumption imparted fresh confidence in the market and it was expected that the closing sales of the 1955-56 season would witness considerable competition. It was also expected that, instead of a heavy surplus, the reports of smaller crops, both in South India and Ceylon, would strengthen the position of the market. The demand, especially for quality teas, became stronger with prices quoting several annas per pound dearer. Thus, the Export Sale for 1955 teas ended on a satisfactory note.

The auction of the New Season's teas started in the second week of June. The results of the export auctions were encouraging except that there was hardly any improvement in the demand for Low Medium and Common qualities, as buying was concentrated on the better varieties on the view that their supply might not be large. And, the wide gap between the prices of good and inferior qualities also induced producers to concentrate on quality rather than quantity. Producers fortunate enough to be situated in the quality districts of Darjeeling and Assam experienced a period of high prices unlike producers in non-quality districts. In general, buyers appeared to have no price limit for the best quality teas and the rates they were prepared to pay for common descriptions could scarcely be considered by sellers as remunerative. As a consequence, the difference between the quotations for Plain Broken Pekoe and the Best CTC Assam BP became as much as Rs 3, which was greater than on any previous season.

Quite in contrast, prices obtained in August were lower and withdrawals were heavy, reflecting a cautious attitude adopted by buyers in the absence of any definite ideas about the possible course of the Suez Canal controversy. Some in the trade claimed that the statistical position of the industry was fairly healthy, while others pointed out that the statistical position was immaterial in assessing the short-term outlook as developments in the Suez Canal situation would have a decisive influence on the tea market.

Meanwhile, there was a strong feeling that tea propaganda should be intensified, both in the producing and consuming countries in view of the increasing competition from other beverages and the steady rise in production. Apart from the unforeseeable factors, such as the Suez dispute, it looked as though the market trend for the rest of the season would depend heavily on the size of the North-Indian crop. Also, the opinion was growing that an over-supply of tea seemed likely as production in the major exporting countries had been running ahead of last year. Anxiety was the more, as price trends at the auctions were irregular.

In fact, the possibility of tea gardens being asked to stop production from the end of November and destroy two per cent of the output was freely mentioned in tea circles. But the attitude of the planters in South India to such a voluntary regulation of crop as a method to adjust production to demands continued to be unfavourable; but they decided upon finer plucking instead of restricting the production. Meanwhile, trade interests, having got the scent about the crop regulation, lent full support to the auctions held in the last two weeks of September. With the result, there was an impressive recovery in prices. The demand from internal operators was more pronounced and a part of this demand emnated out of the feeling that they should stock for the Pujah holidays when sales would not be held for two weeks consecutively.

One of the major factors responsible for the recovery in prices was the demand from foreign buyers who entertained fears that the export duty might rise at the end of September under the slab system. Buyers were naturally keen to have their teas moved soon, as the Suez situation exerted a considerable influence on sentiment. In the result, even Common teas which were very much neglected for long, fetched prices allowing a premium over those prevailing in Calcutta. Despite the increase in the North-Indian production in October, trade circles did not expect the market to suffer much as they believed that the Calcutta Tea Regulation Committee's decision to stop plucking would have a generally healthy effect.

As anticipated, October experienced a good market, mainly due to the small quantity of tea on offer. The announcement by the Government, that the rate of export duty would remain unchanged for November, came as an anti-climax after the hectic buying in the last two sales of October. All sections of the trade were greatly heartened that the Government of India were willing, in the long-term interest of the industry, to forego a small return to the Treasury, thereby providing the much-needed relief to the Common tea producer. It was felt that the lower duty should prove valuable in the stabilisation of prices for Common and Low Medium teas, while, from a long-term point of view, it should lend considerable strength to the competitive position of Indian tea.

The disruption in normal tea flow to Britain, as a result of re-routing many ships round the Cape of Good Hope, remained a market factor throughout November when a very strong and excited general demand at dearer rates continued to exist for all except a few descriptions, thanks to the strong statistical position. With a view to take advantage of the high prices prevailing in overseas markets, shippers, exporters and even gardens were anxious to ship as much as possible before the end of November as fears were entertained that the Government would raise the export duty from December in view of the rising prices. Also, the tension in the Middle East showed little signs of easing; and it had become an established fact that the task of clearing the Canal would take several months.

The United Kingdom, faced with the prospect of much longer time-lag in receiving her supplies, purchased substantially in anticipation of a temporary shortage. There was also strong buying from the Irish Republic and the USSR, while there were prospects of an acute shortage of freight with the possibility of certain Shipping Lines forsaking India in search of more lucrative cargo elsewhere. All these factors combined with the threatened Dock Workers strike in the Calcutta Port provided the necessary stimulus to the market in November when Common teas received the main benefit of the rise and were valued at the highest level for the season.

While tea interests were eager to ship early, there was an acute shortage of tea export quota, which developed a steady upward trend and touched a high of 102 pies per pound in the first week of December as against 36 pies quoted at the beginnig of the 1956-57 season. As the quota available was very inadequate to meet the demand and quota-holders were reluctant to sell in view of the uncertain international situation, it was felt that, unless a further release of quota was announced, quota prices would rise further. It was also felt that the 1956 crop was much bigger and that, even with the crop regulation scheme in force, the total production would remain adequate for demand. Thanks to the announcement of the increase in export duty from As 6 to As 8 per pound for December and the export quota allotment for 1956-57 at 443.3 million pounds, the Export Quota price declined steadily, to quote 62 pies per pound at the end of the year.

But the improvement in auction prices, toward the end of the year, was probably in response to the substantial decline in the lead of the North-East Indian crop. The crop figures of the major producing countries, which were available, showed that the world output was 11 million pounds behind the 1955 production. There was a general belief that, although the price increase might be mainly due to the pressure of demand, it would prove short-lived as the incentive to the present high prices was likely to result in an appreciably larger crop from North-East India next season and would probably also lead to an increase in the supply to the UK of other grades such as occurred at the end of 1954.

Fears are now entertained in some quarters that the restriction on direct shipments to London and the large increase in the estimated crop of Assam and the Dooars, will have a considerable effect on the attitute of overseas buyers. As a matter of fact, trade circles in London do not expect the present high prices to extend into the New Year. It is felt that shipments, diverted via the Cape route, would be arriving in Britain. This, coupled with the fact that there is plenty of tea to come forward, will doubtless exert a depressing effect on the market.

It is, however, encouraging to note that internal consumption has been showing a rising trend. While, in 1954-55, the consumption of tea in India was of the order of 171.6 million lbs., it is now stated to have gone up to 211.5 million pounds, which represents an increase of about 40 millon pounds. If consumption keeps on rising at this rate, there is every possibility of 50 per cent of the total output of tea in India being consumed within the country. There is also ample scope for renewed publicity, both by the Government and by the trade to that end.

The following table shows the opening, highest, lowest and the closing rates during the year:—

	Opening Rs. a. p.	High Rs. a. p.	Low Rs. a. p.	Closing Rs. a. p.

Sugar

Output Touches All-time Peak

THAT the Sugar industry in India gave an outstanding account of itself during the First Five-Year Plan by achieving the initial target of production within the first two years of the Plan, is a known fact. It was able to exceed even the revised target of 18 lakh tons in the 1955-56 season, representing an increase of 80 per cent over the pre-Plan production of 10 lakh tons.

Output in the 1954-55 season was itself an all-time record of 15.94 lakh tons as against only 10.01 lakh tons in the previous season. But the substantial increase in production in 1955-56 was mainly due to the fact that, at the beginning of the year 1956, 42 existing factories had been licensed to expand their capacity. Moreover, licences for setting up 39 new factories with a total capacity of 3.9 lakh tons were also granted. Thus, a total additional production capacity of 6.25 lakh tons was licensed.

The marked improvement in output, during 1955-56, was also due a substantial rise in the quantity of cane available to the factories. First, the sugarcane crop registered an increase, the aggregate yield being 57.75 million tons as against 56.92 million tons in 1954-55. Secondly, the price of Gur continued to be low, the average being Rs 10 to Rs 11 per maund as against the same in the previous season and Rs 20 to Rs 22 during 1953-54. Consequently, the cultivators continued to prefer to sell a large part of their cane crop to the sugar mills instead of converting it into gur themselves or selling it to the professional gur producers. A third factor was the new price formula for sugarcane which led to a more enduring arrangement than before for the supply of sugarcane between cane-gowers and the factories.

Besides large supplies of cane, the improvement in the quantity of cane supplied to the mills also contributed, to some extent, to the expansion in sugar output. Indicative of this improvement was the rise in the recovery percentage of sugar, the all-India average for the season under review being 9.95 as against 9.93 a year before. Again, the rise in sugar production was shared by all the States with the exception of Mysore. The rise was particularly marked in Bihar, being 100,000 tons. Uttar Pradesh accounted for an increase of 47,000 tons and Bombay for 34,000 tons.

Because of abundant cane supplies last season, particularly in the West Uttar Pradesh and Bihar, the sugar factories, in spite of their comparatively early start and working to the maximum capacity, could not crush all the cane offered to them. Though factories worked for a much longer season than normal—some of them continuing well upto the middle of July—it was still reported that all the cane that the growers could offer could not be crushed. This was because, with the setting in of the monsoon, the roads got damaged, preventing growers from transporting their cane to factories.

All the three parties concened—the Government, the industry and the cane-growers—are now anxious to see that such a position is not repeated during the current season. The new season has already started with a large carry-over stock of 5.36 lakh tons. The record production of 18.6 lakh tons, during the 1955-56 season, has naturally instilled a new confidence in the prospects of the sugar industry, particularly because almost the whole of this increased production—barring some 10,000 tons produced by newly-constructed factories —has been achieved by the existing factories.

This year, the cane prospects are much better—the first forecast estimated 16 per cent increase over last year's figure—and some 13 new factories are also expected to start working. It is estimated that production, during the current season, will be about 20.5 lakh tons as against 18.6 lakh tons in the previous season. The total available supply, including the carry-over, will, therefore, be 25.86 lakh tons. Against this, consumption during last year was 19.38 lakh tons. Allowing for a further increase of 75,000 tons this season (as estimated by the Planning Commission), the expected consumption may be taken as 20.13 or, say, 20.2 lakh tons. The current season is thus expected to close with a balance of 5.66 lakh tons.

The surplus, during the coming years, is expected to increase as the present scheme of cane development begins bearing fruit and all the newly-licensed capacity becomes effective. Again, under the Second Five-Year Plan, the target of production has been fixed at 22.5 lakh tons. representing an increase of 4.5 lakh tons. The Plan further provides that, for achieving the target of production, the installed capacity of the industry should be raised to 25 lakhs tons. The Government have also issued licences for 39 new factories. It is also learnt that licenses for more factories are in the process of being issued.

With better production prospects in future, it is imperative that ways and means are devised, so that excess of production over consumption does not adversely affect the industry and the cane-grower. With more than normal stocks, the mills' godowns will be full and their finances blocked. With the result, it may not be possible for them to maintain an increasing level of production. At the same time, a load of excess supply of sugar in the market will inevitably affect the farmer in as much as his cane may remain standing in the field unrushed. The country will, therefore, have to plan in such a way that, whenever there is surplus, it is exported.

Meanwhile, sugar markets ruled quiet during the most part of the year, thanks to the easy supply position. The highest levels were touched during the third quarter of the year and the lowest in November. The following table shows the trends of the mill-delivery rates (per maund) quoted at the Hapur market during the year:—

Hapur Market:	Opening Rs. a.	Highest Rs. a.	Lowest Rs. a.	Closing Rs. a.

Foodgrains

Mixed Trend in Prices

THE year 1956 produced mixed results in the Foodgrains market. While the trade generally benefitted from the sharp rise in the prices of all kinds of foodgrains at about the middle of the year, it was also obliged to surrender a part of the freedom earned by it in the previous year.

The rise in prices, registered during the year, was shared equally by Wheat, Rice, Coarse grains and Pulses. The tendency in indigenous wheat was markedly bullish, while the price of Jowar nearly doubled. Bajra followed the same course. Trading in Pulses also resulted in an all-round rise prices; and the strength in this commodity became all the more significant since it defied even the ban on exports, announced by the Government in the latter half of the year.

The steady rise in prices was, however, symptomatic of the significant change in the country's food position. Thanks to tle efforts taken during the Five-Year Plan, the country appeared to have turned the corner regarding food supplies toward the end of 1955. This confidence was based mainly on the increased output during 1953-54; out the failure to maintain this performance in the subsequent years once again brought the supply position to the fore.

Greatly encouraged by one or two very good seasons during the last five years, the Government did not hesitate to believe that self-sufficiency in foodgrains had been attained. Accordingly, they reduced imports drastically and even went so far as to allow some quantities of grains to be exported. Such a short-term thinking brought its own nemesis. Prices began to rise and, with low stocks in Government godowns, kept on rising. Import arrangements were improvised in haste. Fortunately, large stocks, being available in other countries, could be made without much difficulty.

Yet, the situation was at one stage serious that the Government was obliged to concentrate all their attention in meeting the challenge afresh. Compelled by the imperative need for keeping down food prices to a reasonable level, the Government started moving quickly to surmount the problem. While the long-range solution of increasing domestic output of foodgrains was being tried out in co-operation with all the States, immediate arrangements were made for huge imports of wheat and rice from the USA, Australia, Burma and China.

The Government of India also took other measures to discourage the upward trend in prices. These included the restriction of bank credit and the distribution of wheat at lower prices. The remedy of banning exports from and imports into the major Cities like Calcutta, Bombay and Madras was also tried. But, of the measures, the scheme for the distribution of wheat and rice at fair prices achieved commendable results; and this was reflected in the steady decline in prices toward the end of the year. The wholesale trade was dispensed with in the matter of distribution, and the selling of wheat and rice at fair prices was entrusted to retail shops. This policy achieved good results with the consumers getting supplies at almost subsidised rates.

Whether the food situation will improve or not will depend, to a considerable extent, on the domestic output in the current season. Imports from abroad will, no doubt, constitute the main plank of the defence as the shortage of foreign exchange is expected to set a limit to any extensive use of this device.

According to the Second Five-Year Plan figures, the production of foodgrains will be increased to 80.4 million tons by 1960-61 from 65 million tons in 1955-56. The main emphasis in the Plan will be on increased production of Rice, the production of which is expected to be raised from 25.5 million tons to 33.0

Structural and Mechanical Engineers : Builders of all types of Railway Rolling Stock : Importers of Electrical and Mechanical Plant and General Industrial Requirements.

million tons. No change in the Wheat target is, however, contemplated.

Meanwhile, the Government have decided to expedite shipping and other arrangements in connection with the programme for the imports of foodgrains. It is understood that five lakh tons of rice are due to be imported from Burma at the rate of 33 pound sterling per ton against 34 pound sterling paid in 1956.

The following table shows the month-end rates (per maund), quoted in the Hapur market:—

Commodity.	Jany.	Feb.	March	April	May	June	July	Aug.	Sept.	October	Nov.	Dec.

BRITAIN'S ECONOMIC PROSPECTS FOR 1957

(Continued from page 4)

1956 which have just been published. Investment in factory construction and equipment continues to increase, even if the rate of its increase shows signs of slowing down. The fact that building operations by industrial firms continued to expand during the third quarter foreshadows continued demand for capital equipment in 1957. British shipyards have orders in hand that will keep them busy for years ahead.

How is a resumption of the boom, that is liable to occur as soon as the oil shortage is overcome, likely to affect sterling? The dollar facilities arranged by the Government with the International Monetary Fund and the Export-Import Bank have provided adequate safeguards against speculative pressure. But no conceivable amount of such facilities would be sufficient if an inflationary rise in the cost of production were to outprice British goods from overseas markets. A balance of payments crisis would then compel the authorities to resort to more drastic disinflationary measures.

From this point of view the change of attitude of British industrial firms is to some extent reassuring. They appear to have heeded the warning implied in the moderate setback of 1956. The inflationary mentality as a result of which any additions to costs were cheerfully added to the selling price has now given way to a more sensible attitude on the part of boards and managements. They have realised the importance of cutting costs by means of efficiency drives and, if necessary, by means of cutting profit margins. The disinflationary drive has certainly produced a salutary effect on the management side of industry.

The question is whether the trade unions, too, have heeded the lessons of the disinflationary experience of 1956. Several leading unions will have to decide early in 1957 whether to press their excessive wages claims or to accept the modest offers made by employers. If they should insist on their full claims, and if these claims should be conceded by the employers, then all the beneficial effect of the latters' economy drive would be wiped out with a stroke of the pen. Inflation would then resume its course and sterling would become vulnerable.

But the change of managerial mentality referred to above affects also the attitude towards wages demands. In the past employers were inclined to give way too easily, in order to avoid strikes or go-slow tactics. They preferred to add the higher wages to the selling prices of their manufactures, rather than risk a fall in the output at a time when the whole output was easily marketable at increased prices. It seems probable that this easy-going and irresponsible attitude is now a matter of the past. Apart from the change of mentality that developed in 1956, the higher level of inventories, too, is likely to induce many firms to resist wages demands even at the risk of strikes. Possibly the realisation of this by the unions will make the latter less uncompromising in their wages demands. If so, there would be every reason for Britain to expect 1957 to be a satisfactory year combining prosperity with stability.—(Copyright).

Bharat Electronics

The report of the Estimates Committee of the Lok Sabha on the working of the Bharat Electronics (Private) Ltd., Bangalore draws pointed attention to the urgent need for adopting business principles in the organisation and administration of stateowned projects. In this regard it suggests the gradual replacement of the officials on the board of directors by non-officials such as industrialists, scientists, chartered accountants etc.

In support of this recommendation, the report catalogues a number of unhealthy developments that have been noticed in the working of the project. In the first place the price demanded for the company's products are exorbitant in that a wireless equipment of the type manufactured by Bharat Electronics is said to be

(Continued on page 18)

THE MYSORE SPG. & MFG. CO., LIMITED

NOTICE OF 88TH DIVIDEND.

NOTICE is hereby given that the Directors by virtue of the power vested in them under the Articles of Association have determined to pay an interim dividend of Rs. 3/- per ordinary share of Rs. 50/- and a dividend of Rs. 1-2-0 per 4-1/2% Cumulative Preference Share of Rs. 50/- for the half year ended 31st August 1956.

The dividend will be payable at the State Bank of India, Bombay, on and from Monday the 4th February 1957 to those shareholders whose names stand on the Register of Members on the 25th January, 1957.

The Transfer Books of the Company will remain closed from the 25th January 1957 to the 2nd February 1957 (both days inclusive).

By Order of the Board,
N. SIRUR & CO PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Registered Office:—

SHREE GOPAL PAPER MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN that the next Ordinary General Meeting of the Shareholders of the Company will be held at its registered office at 5, India Exchange Place, Calcutta, on 19th January, 1957, at 12-30 P.M. Your presence at the Meeting is requested. The following business will be transacted:—

AGENDA:

(1) To receive the Directors' Report and pass the audited Accounts of the Company for the half-year ending 30th June, 1956.
(2) To declare dividends.
(3) **Special business:**
(a) To pass the following Resolution with or without modification as a Special Resolution:

"RESOLVED—That pursuant to section 360 of the Companies Act, 1956, the Company hereby consents as from 1st April, 1956, to the continuance of the existing arrangements with M/s. Modern Agencies Ltd., for purchase and supply of stores, chemicals etc. to the Company on a remuneration of 5% on all purchases and supplies made through and received from them, subject, of course, to section 361 of the Companies Act, 1956."

(b) To pass the following Resolution with or without modification as an Ordinary Resolution as required under section 293(1)(e) of the Companies Act, 1956:—

"RESOLVED—That with effect from the date of commencement of the Companies Act, 1956, consent of the Company be and is hereby accorded to the Board of Directors of the Company to contribute and/or subscribe to any national, political, charitable, benevolent public or general funds or trusts (not directly relating to the business of the Company or the welfare of its employees) from time to time such amounts as may be considered proper by them, in section 293(1)(e) of the excess of the limits laid down Companies Act, 1956."

(c) To pass the following Resolution with or without modification as an ordinary Resolution as required under section 293(1)(d) of the Companies Act, 1956:—

"RESOLVED—That sanction be and is hereby accorded to the Board of Directors of the Company borrowing (excluding temporary loans from time to time obtained by the Company from its Bankers in ordinary course of business) in excess of the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purposes, as the Board may from time to time deem necessary for the purposes of the Company."

(4) To consider any other business that may be brought forward with the permission of the Chairman.

NOTE: The Share Transfer Books of the Company will be closed from 10th January 1957 to 19th January, 1957, both days inlusive.

NOTICE: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy, who need not to be a member, to attend and vote instead of himself.

Dated,
8. 12.56.

By Order of the Board,
KARAMCHAND THAPAR &
BROS. PRIVATE LTD.,
Managing Agents.

Wooing the Electorate

In a country where barely fifteen per cent of the people are literate, the vote-catching potential of election manifestoes is limited. More so, when the flexible fringe to be won over by persuasion is relatively negligible. Besides, in the Union and in the majority of States, Congress victory is a foregone conclusion.

When the socialistic pattern and the welfare state have become the common property of all the political groups, it becomes a tormenting obligation for each one of the contending parties to discover the subtle shades of differences by which it is distinguishable from the others and to present these in a form sufficiently intelligible to the lay voter. Naturally, the temptation to introduce insincere or unrealistic elements into the programme held out becomes often irresistible.

The Jan Sangh has come out with the advocacy of complete militarisation of the country The PSP has as its main bait the nationalisation of banks, mines and mineral oils, and a fiscal system in which the rich will be mauled from every side. The Communists would go further on almost the same lines. Every party offers land to the tiller and a chopping off of high salaries.

Only the avowedly communal parties are spared the agony of discovering ideological distinctiveness. The Muslim League in Malabar could be frank that it would work for the interests of the Muslims, conceived separate from those of others. A new organisation has sprung up in the Punjab, demanding a Sikh state within the Indian Union and Urdu as the national language.

Editorial Notes

Where, as in Malabar, the outcome of the election is in doubt, party interests are being sought to be served by shrewd and well-calculated electoral understandings. For the Congress, almost everywhere, there seems to be the problem of an unmanageable surplus of applicants for seats among men and the unavailability of women to make up the fifteen per cent quota.

*

Cooperative Farming

Whatever might be the future of co-operative farming in India, its past has been none too encouraging. Even to speak of a past for co-operative farming may be somewhat misleading. Barring a few sporadic experiments here and there, largely confined to areas under refugee resettlements and State-owned property, the system has not come into extensive vogue in any part of the country.

A survey made by the Indian Co-operative Union, New Delhi, shows that even the small number of farms worked on a co-operative basis have not generally fared well. In some of the societies which the Planning Commission recently investigated, it is really the absentee land-owners who run the show with the help of hired workmen. Even when the owners participate in farming operations, more often than not, it is done on a distinctly individual basis. There have been cases of withdrawals of land by individual owners from the originally pooled area and the restoration of independent cultivation. Disputes over use of funds, the value of individually contributed work etc., are frequent.

The experience of co-operative farming in other countries also is such as to reinforce scepticism. But all this does not amount to a clear indictment of the system. When there is a mixed record, the sound course would be to seek the causes for failure and to eliminate them as far as possible when new experiments are launched.

*

Tamil as Official Medium

The Madras Government are the first to enact legislation for adoption of the principal language of a State for transacting official business. The vote in the Assembly was unanimous, indicating a measure of public support which few reforms of a drastic character as this can hope to enlist. All the party leaders spoke in sincere acclaim and the Finance Minister's exhortation to his colleagues in the House to participate in the discussion on the Bill as if they were enjoying a festival received whole-hearted response.

In the midst of the proud and reminiscent flights into the past glories of Tamil rule, there was hardly any room for doubts or misgivings. The only note of scepticism—and even this was not harsh—stemmed from the feeling that it was a move designed to catch votes. The timing justifies this argument but does not reflect badly on the responsiveness of Government to public opinion.

A handful of members, while welcoming the change, wanted its implementation by cautious stages and stressed the wisdom of being hospitable to the flow of new words, particularly technical terms, from other languages. Mr C. Subramaniam himself detailed a number of practical steps called for, to avoid transitional difficulties.

While the constitutional propriety of a switch-over to Tamil is beyond question as also the backing of public sentiment for it, it is obligatory on the part of the authorities to see that the consideration for and interest in the national language, present and prospective, is kept unimpaired. Having secured the rightful place for Tamil, it must now be possible for the Tamilian to take a thoroughly uninhibited view of the claims of Hindi.

The example set by Madras has already inspired a similar demand in Mysore. But Mysore seems to be in no hurry and a Committee will guide its decisions.

The handicap of minority language groups was again forcefully brought out in the Mysore Assembly, when members started speaking in Telugu and Marathi and a demand was made in all seriousness to translate every speech in every other language. The procedure in the United Nations was cited as precedent. To copy it would be to pay too exacting a price for the satisfaction of the minority interest. The more practical remedy should surely be for the minorities to pick up the dominant language.

*

A New Damper

The report that the United States contemplates the stationing of military units in the Middle East is a damper to the high, though vague hopes of the results of the Nehru-Ike meeting. True, Pandit Nehru himself disclaimed the possibility of any immediate major consequence of his visit to the United States. But against this over-all impression, to be somewhat discounted for its modesty, he indicated that disarmament was a little nearer solution, that in the Middle East they hoped to go ahead step by step and that the world situation as a whole had improved a little. The joint statement issued after his meeting with President Eisenhower referred to a broad area of agreement.

That China was uppermost in the Prime Minister's mind, when he left for Washington was more than a guess. Chou En Lai would not care to visit India for a second and a third time in quick succession, if these visits are not concerned with some substantial prospect of improvement either on behalf of world peace or on behalf of China's international status and relations.

It is to this train of happy expectations that the news of the latest US decision on the Middle East comes as a disquieting red signal. India's reaction is easily predictable. What is worse, the contemplated step crudely vindicates the Communist forecast that the US is only manoeuvring to get a vital and direct foot-hold in the Middle East and is thus no better than those who launched the misadventure in Egypt.

The signatories to the Baghdad Pact, till now enthusiastic for a fuller participation by the US, are not equally so over the offer. All told, there is the making of another awkward situation, one which creates new preplexities for the already confused Arab Powers. Even the progress of the reclamation of the Suez Canal and of the UN forces' work in general may well go out of step. The interest of world peace will certainly not be strengthened by the close juxtaposition of US and Soviet forces in one of the most explosive spots. A cold war, which promptly fills up any vacuum, is far from frozen.

World *of* Finance

1957 May Better 1956

AS bankers are busying themselves with the year-end closing of books and with getting their annual accounts ready for publication, they are in the habit of making a quick retrospect of the year that has ended and visualising a succinct prospect of the year that has opened. Taken all in all, 1956 has been a good year for banks. Money rates ruled firm; and interest paid on deposits must record a substantial increase. But, then, incidence of the higher interest charges is a matter that must worry the borrowers who, ultimately, will have to bear the burden. The borrowers, however, are in the mood to bear this burden gladly; for, what matters in present conditions is not the cost of finance, but the availability of finance.

With the timely aid of increased deposits induced by an expansionist economy, and with steadily maintained and continuingly increasing recourse to the facilities provided by the Reserve Bank under the bill market scheme, commercial banks have been able to effect such expansion in the service rendered to commerce and industry that both the banks that lend and the business that borrows have greatly benefitted. The average level of bank loans and advances must, on a rough guess, have been Rs 100 crores higher in 1956 than that in 1955. That is to say, the assets in the most remunerative category have kept, and continued to keep, a record altitude. Not only has the higher cost which banks have had to pay for deposits been passed on, in full, to the borrowers; but, in many cases, a further margin has been possible. Banks have, thus, secured a higher margin of profits on a higher level of advances. The realised profit on this account so far as banks operating in India are concerned must, we reckon, make a better showing to the extent of Rs 1½ crores. It is a different matter how much of such additional profits will be reflected in the published accounts. It will be safe to assume that bank profits in 1956 will be of such magnitude as to result in more handsome allocations both to inner reserves and to published reserves. As for banks engaged largely in foreign exchange business, the dearer money rates in foreign centres have not stood in the way of a record turnover with a record margin of profit.

Banks begin 1957 with a satisfying performance behind them. There is every reason to hope that 1957 will provide them with similar occasions for service and like opportunities for profit. The expected additional demand for bank credit is of the order of Rs 150 crores in the next four months. The Reserve Bank is ready and willing to provide the requisite facilities with understanding and promptitude. For our part, we do not take a jittery view of the anticipated stringency in the money market. Far from it. The stringency is, in itself, a sign and symbol of business at full tempo and of economy in full stride toward the targets fixed. There would be cause for jitters if, for this expanding demand, the supply of money would prove inadequate, and cause for dismay if the money, if at all available, can be secured only at onerous rates of interest. Bankers in India have every reason to feel grateful for a state of affairs in which money rates are reasonably cheap and money supplies are reasonably adequate. Government's economic policy vis-a-vis the money market and the banking system stands fully vindicated. The dreaded stringency has all the look of a blessing in disguise.

Peeping into the future, bankers need have no tremors about scarcity of money developing into a famine of money. The likely trend is: money will be available to banks to the extent of all legitimate business requirements; and, on their part, they can utilise all their money fully and very remuneratively.

Banks would also like to know where they stand as regards exchange. As the old year was drawing to a close, they were keeping themselves oversold in sterling, and overbought, to the extent possible, in US dollars and Swiss francs. West German, Belgian and Dutch currencies were also favoured in this respect. What should be the policy for 1957? So far as our rupee is concerned, the loss of foreign exchange in the course of 1956 must not lead to any doubts about the stability of our currency. Eavesdropper has, in Clive Street Gossip this week, discussed the foreign exchange gap in the Second Plan; and he proves convincingly that our resources and reserves, present and potential, are ample not only for our routine requirements but also for the special needs of the Second Plan. As for sterling, the measures already taken by the British authorities for defending the pound are adequate to meet the adverse factors of economic import. It is beyond our province to assess the influences with a political content. It is certain that, whoever is the Government in power, Authority in Britain will stoutly defend the pound sterling.

+

The returns of the Reserve Bank for the week ended December 28 do not reveal any noteworthy trends, except perhaps the recourse by member banks to larger borrowings fom the central banking institution, presumably for purposes of the year-end window-dressing.

Active Notes are higher by Rs 0.57 crores at Rs 1466.07 crores; Rupee Coin has returned from circulation for Rs 0.35 crores; and Reserve Bank's cash in the till stands reduced by Rs 0.22 crores at Rs 9.14 crores.

Both Foreign Securities and Rupee Securities are unchanged for the third week in succession.

In the Banking Department, the Centre's balances have been marked up by Rs 1.68 crores at Rs 57.24 crores. Deposits of State Governments, on the other hand, are lower by Rs 1.45 crores at Rs 8.00 crores.

Banks' Deposits with the Reserve Bank are sharply higher by Rs 5.76 crores at Rs 58.09 crores. But their borrowings are also much higher, as suggested by the even steeper rise of Rs 12.23 crores to Rs 106.04 crores in the Other Loans and Advances of the Reserve Bank. In this connection, it is to be remarked that this is the first time that the Rs 100 crore mark has been exceeded.

The advances against usance bills show a rise of Rs 7.71 crores to Rs 57.20 crores. The total since January is higher by Rs 13.26 crores at Rs 425.68 crores. Investments show little change. And, finally, Balances Held Abroad reflect a drop of Rs 3.96 crores in foreign exchange during the week.

Although the Deposits of the State Bank rose by nearly Rs 3 crores to Rs 242.02 crores in the week ended December 28, there has been need to increase borrowings from the Reserve Bank, the figure under this head marking a rise of Rs 2.99 crores to Rs 9.52 crores. Presumably, the accretions to deposits were used to take care of the higher demand for funds: Advances have staged a further rise of Rs 3.03 crores to Rs 140.12 crores; and presumably the borrowings from the Reserve Bank are for window-dressing: cash balances are higher by Rs 3.22 crores, although money at call has declined by Rs 0.40 crores.

The return of Scheduled Banks for December 21 discloses the substantial decline of Rs 8.79 crores to Rs 1106.58 crores in Deposits; this doubtless reflects the accelerated tempo in the demand for money toward the year-end. Since, at the same time, the total of advances has also risen, by Rs 6.61 crores to Rs 783.81 crores, member banks have had to increase their indebtedness to the Reserve Bank—the relevant figures being shown Rs 4.70 crores higher at Rs 67.64 crores. Moreover, there was during the week some drawing down of cash balances. As such, it is to be anticipated that the higher borrowings in the week ended December 28, as disclosed in the Reserve Bank returns for that week, were availed of to present satisfactory liquidity ratios in their year-end balance-sheets.

+

The statement of the State Bank of India for the week ended 28th December 1956 reveals a rise of Rs 2.99 crores in deposits to Rs 242.02 crores. Borrowings from other banks have risen by Rs 2.99 crores to Rs 9.52 crores while other liabilities, including inter-office adjustments, are shown at Rs 9.58 crores against Rs 9.30 crores.

On the assets side, cash balances have improved from Rs 16.46 crores to Rs 19.67 crores and Investments from Rs 106.70 crores to Rs 106.90 crores. Advances show a rise of Rs 3.03 crores to Rs 140.12 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 4.15 crores and "Bills Discounted and Purchased" for a decline of Rs 1.12 crores.

According to the returns of the Scheduled Banks for the week ended December 21, 1956, total Demand Liabilities have sharply declined by Rs 8.94 crores to Rs 646.72 crores, while Time Liabilities have risen by Rs 0.15 crores to Rs 459.86 crores. Borrowings from the State Bank are lower by Rs 0.22 crores at Rs 9.68 crores, while those from the Reserve Bank are higher by Rs 4.70 crores at Rs 67.64 crores. Cash and balances with the Reserve have moved down from Rs 87.86 crores to Rs 86.08 crores and Investments from Rs 365.33 crores to Rs 364.83 crores. Advances are shown at Rs 618.76 crores against Rs 605.50 crores; Inland Bills at Rs 110.02 crores against Rs 117.97 crores and Foreign Bills at Rs 55.03 crores against Rs 53.73 crores. Money at call and short notice stands at Rs 13.03 crores against Rs 14.15 crores.

+

Government of India Treasury Bills:

During the week ended the 28th December 1956 Government of India Treasury Bills for Rs 38,87,00,000/- were sold in favour of the Reserve Bank of India.

TEA BOARD

EXPORT QUOTA 1957-1958.

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April 1957 to 31st March 1958 are required to submit an application therefor, which must be filed with the Tea Board not later than the 1st February 1957. No export quota will be allotted unless an application under this rule is duly filed. Application forms have already been issued to all registered estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaires who have not received the application forms are requested to apply for these, in the case of estates situated in North India, to the Controller of Licensing, Tea Board, 27 & 29, Brabourne Road, Calcutta-1, and, in the case of estates situated in South India, to the Joint Controller of Licensing, Tea Board, Fort Cochin, Cochin-1, South India.

Sd/- P. V. GOVINDAN,
Controller of Licensing.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

DESPITE the continuance of the orthodox—some would call it obsolete—form of budgeting on revenue and capital account, we have, in practice, quietly abandoned the former pretence that taxes financed current expenditure and loans financed development expenditure. In this blurring of distinction between the two forms of communal "saving" and communal deployment of funds, is to be seen a revolution—I am almost tempted to say, perversion—in recent thinking on economic and financial policies. Since planning is "total", and the economy under total planning is by definition a complete circuit, the distinction between "Taxes" and "Loans", theoretically at any rate, is unreal. For, what is not taken away as taxes and is not allowed to be consumed will be available for investment. From another point of view, this austere determination to finance the development part of the Plan from current revenues is a measure of our earnestness, our willingness to pay in blood, sweat, toil and tears for realising the targets of the Plan. For, as the philosophical Dickensian Barkis said, "It is as true as taxes is. And nothing is truer than them."

✱

While not wishing to take anything away from the idealism implied in the determination I mentioned just now, it is permissible to point out that this dependence, as much as possible, on taxes for financing the Plan has other reasons. For one thing, the theoretical assumptions I mentioned earlier have serious practical limitations, stemming from the fact that planning, especially in democratic countries, is never total in the complete sense of the term. In the first place, short of a regime of draconian control, untaxed income may be consumed in ways that do not increase the wealth of the country—certainly not the kind of wealth planned for. Secondly, as long as there is a "private sector", the untaxed surplus has a rival suitor as importunate and in some respects more seductive. It is not, therefore, surprising that, in all the reckoning of resources for the Plan, anxious thought should be given to increasing the taxable areas of the economy.

But it would be a mistake to imagine that it will be difficult to make the people part with money to the Government unless they are compelled to do so. Certainly, nothing in the history of giltedged in the country gives any warrant for this assumption. Indeed, the evidence is reassuringly to the contrary. As I stated in the first of this series of articles, the history of giltedged during the war, despite the initial scare about its ability to survive the first few days of the war, would go to show that the preference of the true investor for giltedged is almost automatic. It is a preference easy enough to understand: the man who is prudent enough to save is a fortiori the man who will go in for "safe" investments though the yield is comparatively unspectacular. Besides an instinct for self-preservation, you can assume—not unreasonably—a modicum of patriotism in the investor. In that event, there is no reason at all why he, who was ready enough to part with money for a war that was not his, for a purpose that did not create a pie of extra wealth in real terms, should not be willing to do so for what is obviously and unmistakably a great creative patriotic endeavour.

✱

It is not merely the history of giltedged during the war years, that gives us cause for optimism about the outcome of a bold, imaginative and resourceful policy of public borrowing. More recent history covering the period of the First Five-Year Plan and the success that attended the borrowing during the first year of the Second Plan give reasons for sober hope. For example, the subscriptions to the loans of both the Union and State Governments during 1956 have totalled Rs 226 crores. This was, as was hailed with jubilation at the time, far beyond the expectation of the Governments; and many of the loans were heavily oversubscribed. The figure of Rs 226 crores represents roughly the annual average of the gross target of borrowings of Rs 1,100 crores set out in the official estimates. In other words, in the very first year of the Plan, the annual average envisaged has been realised. Surely, if in a plan which has just started functioning and in which the really hefty disbursements under the various schemes of development have yet to be made, investments in Government loans are of this proportion, it is only reasonable to assume that, as the Plan gets into stride and expenditure of the order envisaged in the Plan percolates into the monetary system, a more abundant surplus will be available for investment in government securities.

✱

Some pessimism has been created and to some extent fostered by the temporary recession in giltedged prices, especially of some of the State loans, about mid-November. It is said, with every appearance of gloomy satisfaction, that this heavy unloading of recently acquired securities shows that the market has no capacity to absorb new loan programmes of such dimensions. This is to take a wholly narrow view and exaggerate a temporary stringency at the onset of the busy season in the money market into a permanent feature of the economy. And it is here that the resourcefulness and willingness of the Government and the Reserve Bank in the strategy of open markets operations should come to the aid of the Plan. For instance, bold initiative in the matter of open market operations whenever giltedged shows signs of getting wobbly would stem the rot that threatens to set in. For, the effect of such selling as there was recently is more psychological than financial. The total value of new loan scrips, which were being sold in November and which had the effect of sapping the confidence, could not have exceeded Rs 6-7 crores. And, if State Governments utilised the excess over loan targets for investment in their own securities by open market operations through the Reserve Bank, the depressing effect of a steady dumping of the securities on the market would be arrested. Likewise, suitable adjustments of the tap rates would keep giltedged in a position in which the desirability of giltedged as a valuable form of investment is never jeopardised. Already, the adoption of the open market operational technique by the Reserve Bank on behalf of some of the States has had the effect of restoring the stability of these scrips.

Therefore, seasonal and other variations in the fortunes of these scrips should not be brought into arguments about the general capacity of the community to save and invest in Government loans. This capacity, it is reasonable to assume in the light of past performance, is likely to make good the target of Rs 1,100 crores net for the five year period easy of realisation. The only reservation that is to be made for this assumption of automatic success is the Government's adoption of a positive, confidence-inspiring policy toward borrowing; for, after all, if the Government themselves have no faith in their own stock, it is idle to expect others to have great enthusiasm for them. The psychology that approaches borrowing with a gingerly distrust of giltedged's intrinsic attraction should be shed if the programme of borrowing outlined is to succeed.

✱

This leaves foreign exchange resources of the Plan to be still discussed. The Plan's estimate of the likely figure of external resources needed was Rs 800 crores. Our own estimate is Rs 1,200 crores. About the need for increasing the target from the point of view of the requirement for this amount, there is hardly likely to be any difference of opinion. Of the goods we need from abroad, we are still in a sellers' market and recent international events have only increased the apprehensions of higher costs of these essential requisites. Secondly, from the point of view of overall resources, reduction of deficit financing by about Rs 500 crores—which was inevitable from other points of view—and the fully extended credit taken for internal resources, the dependence on this order of external assistance is inescapable. But the question has really to be answered in terms of availability of this external finance and not in terms of our desire for it.

What is the outlook in this regard? Pessimism stems from two facts. One has been the recent drawing at a rapid pace from our sterling balances, a pace that has reduced our holdings to a size just above what is needed as backing for note issue. But this substantial withdrawal was not by any means "unplanned". The second reason has been doubts about the forthcoming in sufficient measure of credit facilities from international institutions like the World Bank. The unauthorised publication of the correspondence between the Government of India and the Chairman of the World Bank was responsible to some extent for this sudden panic about the possibility of our not getting the requisite resources from the World Bank. These fears have been happily proved unfounded by the subsequent correspondence between Mr T. T. Krishnamachari and Mr Eugene Black. In his latest communications, the World Bank chairman has given broad indications of the projects which the Bank is ready to consider favourably for extension of credit facilities. He has particularised Railway projects as items in which the Bank is specially interested. Considering that Railways have a very high priority in our own scale of evaluating relative importance of projects, and that the foreign exchange requirements for our transport plans are quite considerable, the vouchsafed assistance fits in neatly with our Plan. There can hardly be any doubt that the World Bank officials who are to scrutinise our detailed plans will find them acceptable in every way; and, therefore, taking credit for Rs 400 crores of external credit from World Bank would not at all be improvident planning.

*

As regards the other items, I should like to refer to the estimates made in Indian Finance of November 17:

	(In Crores of Rs)
Spillover from First Plan unutilised foreign aid credits	100
Foreign Exchange Saving in consequence of Surplus Commodities agreement with the US	137
Gross amount from Steel credits	83
World Bank aid for Railways	400
American Aid	150
Colombo Plan Aid ..	80
Russian Credits	60
Foreign Exchange earnings by Export Promotion ...	190
Total ...	1,200

I have already discussed the World Bank's aid to the Railways. Of the others, items 1, 2, 3 and 5 are already there and these add up to Rs 380 crores; and, with the addition of the near-certain World Bank credit for the Railways, we have nearly the total of Rs 800 crores the Plan had fixed as the target of external resources. The "imponderables", if so they may be called, are the other items in the list. These, again, will be found to be not so incalculable after all, and as I shall show presently, the estimates given are not wide of the mark.

*

Let us take American aid, for instance. Any lingering doubts about American sympathy for the Indian experiment in democratic planning have been dispelled by the triumphant conclusion of Mr Nehru's recent visit to the US. The significance of the momentous meeting between Mr Nehru and President Eisenhower in its political aspect has naturally been the principal subject of interest to most observers. But, it cannot be that Mr Nehru talked for hours with Mr Eisenhower and did not discuss what, after all, is his first affection, the Second Plan. It was widely reported during Mr Nehru's Washington visit that Mr Eisenhower had shown deep interest in the Indian Plan and that one of the possible results of this study would be substantial stepping up of the rate of American aid to India. The thesis is by now well accepted by the American Administration that the Indian experiment in democratic planning is something of a test case: in American eyes, the rival systems of planning of China and India are trying to win the heart of Asia and America is anxious that India should be the winner. It is, therefore, not extravagant to expect that the new understanding of India that Mr Nehru's personal discussion with Mr Eisenhower has generated will take tangible forms of aid to the Second Plan. In that case, the credit we have taken of an annual average aid of Rs 30 crores may well turn out to be:

Escape? **Impossible!**

Liquids, steam and gases cannot escape from stuffing boxes, glands and cocks if they are sealed with Turner's "Firefly" asbestos packing. Use it and your worries about leakages are over.

By arrangement with Turner Brothers Asbestos Co. Ltd., England, we make "Firefly" Packings. We spin asbestos fibre into yarns, and then plait these yarns into packings which provide the perfect seal, unaffected by the temperatures and pressures normally encountered in industry.

Turner's "Firefly" Packings are just one of the many technical asbestos products that we at AM & FM make to meet the needs of India's industry. The increasing use of Asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

Record Progress—Maiden Dividend Declared

*

Sri Lakshmipat Singhania's Address

Presiding at the Eighteenth Annual General Meeting, held on Thursday, the 27th December, 1956, Sri Lakshmipat Singhania, said:—

Gentlemen,

I have great pleasure in welcoming you to the Eighteenth Annual General Meeting of the Corporation.

This year is of special significance for your Corporation. After 18 years of difficult and hard pioneer work by Indian capital, Indian management, Indian technical skill and Indian labour on this important basic industry, we have just turned the corner towards prosperity. The audited Accounts and Directors' Report which have already been circulated to you will show that during year sales reached a new record being Rs. 90,90,208 against Rs. 72,87,824 in the previous year. The production also has reached a record figure and has been higher than the installed capacity. The gross profit, as you will notice, is almost double that of last years' and this again is a new record. Although this gross profit after taking into consideration the statutory depreciation for the year does not leave a net amount sufficient to be called a good return on the capital invested, yet as this is the first year, of their being such a net amount, I feel proud that we have done well. Further, the Corporation's Mortgage Debenture loan has been reduced and the liquid assets position of the Corporation has improved. The Corporation's assets have been revalued during the year, to indicate a true picture of their value after giving due consideration to depreciation which the block has already been subjected to. The Directors after mature consideration of all circumstances which have been fully explained in the Notice and in the Report, have recommended for your consideration the payment of all arrears of dividend on the Cumulative Preference shares, a major portion of which being in form of fully paid up Ordinary shares of the Corporation of Rs. 10 each. The Directors have also recommended for the first time in the history of the Corporation a dividend on Ordinary shares. All these facts, therefore, point to the opening of a new era for the Corporation.

During the year two important events have happened, viz., the publication of the Tariff Commission Report on the continuance of protection to the aluminium industry and formulation by the Government of India of the New Industrial Policy Resolution.

I am glad to inform you that the Tariff Commission at last have recognised that the ingot production requires a better incentive than rolling if the industry is to develop, and have recommended the continuance of the ad valorem duty on imports, till 31st December, 1958. The Government have accepted this recommendation I had pointed out to you, when we met last, the serious situation caused by the heavy import of duty free aluminium scrap. I had also pointed out how aluminium scrap was on a different footing from other non-ferrous metal scraps. All these facts were placed before the Tariff Commission and further, evidence was also produced to prove that even virgin metal was coming in the form of scrap only to avoid duty. The Tariff Commission agreed that there was a case for imposition of duty on scrap and accordingly made a recommendation to the Government. The Government also accepted the recommendation and imposed a duty of 25 per cent. ad valorem from 3rd December, 1955. But unfortunately the duty has again been withdrawn suddenly with effect from 14th July, 1956, without any consultation with the industry. As a consequence, once again more and more scrap will be imported instead of virgin metal and the foreign prices of scrap will naturally rise. The door has also opened for import of virgin metal in the guise of scrap to avoid duty and for import of scrap whose purity is doubtful being unguaranteed. In other words, no benefit is accruing to India either in price or in quality. The Government are, on the other hand, losing valuable foreign exchange as well as revenue in form of import duty. The earlier these defects are remedied, the better for the industry as a whole.

The Tariff Commission have estimated an annual consumption of about 35,000 tons of metal in the country by the end of 1958, whereas the Planning Commission in their second plan have provided for an installed annual capacity of 40,000 tons by 1961. Tabulated below are figures for total consumption of the metal in the country in all forms for the last eight years.

Year.	Indigenous Production.	Imports in all forms.	Estimated Secondary Metal in the country.	Total.
1948 ..	3,372	9,327	2,539	15,238
1949 ..	3,516	8,300	2,363	14,179
1950 ...	3,590	5,767	1,871	11,228
1951 ...	3,876	8,677	2,510	15,063
1952 ...	3,566	5,833	1,879	11,278
1953 ..	3,759	5,360	1,823	10,942
1954 ...	4,882	10,614	3,099	18,595
1955 ..	7,225	11,746	3,794	22,765
1956 (6 months) ...	3,449	6,004	1,888	11,331

About 10 per cent. of the total metal in use comes back as scrap every year. As it is very difficult to estimate this quantity on the basis of total metal, I have assumed in the above table that about 20 per cent. of the total metal put into use during any one year will represent the total secondary metal returning to process that year. A market survey conducted by us reveals that these figures are fairly accurate. The table indicates a definite rising trend in the consumption of the metal in the country. This is no doubt due to more diversification in the uses of the metal. All these years the consumption of the metal was confined mainly to utensil manufacturing, but now new industrial uses are also becoming important. Even though there may be a small increase in the tonnage of virgin metal used for utensil manufacturing, gradually, the percentage of total virgin metal used for industrial uses will rapidly increase and will ultimately increase the consumption of the metal to a much greater extent. This is exactly the pattern of development for this metal practically in all the countries in the world. Now, it is well known that aluminium has innumerable uses right through from the manufacture of a pin to a plane. Therefore, if the industrial uses of aluminium are going to develop, it is safe to assume that installation of plants to manufacture such finished products as alloy sheets, pressure castings, extrusions, A.C.S.R. cables, foils for packing, etc., will be very necessary. As and when these plants are installed the consumption also will increase.

Coming to the second important development, the Government have placed this industry in Schedule 'B', under the new industrial Policy Resolution, i.e., this industry will be developed in the State Sector also and it has further become known that the Government have decided to put up themselves two new plants of 10,000 tons each. The development of this metal in the country has thus been given an importance comparable with steel. There is no doubt either as to the necessity to increase the production of the metal in the country or as to the desirability of doing so, especially because the possibilities for developing other non-ferrous metals production in the country are very poor. The world trend of production of aluminium is ever on increase. I am placing before you a table showing the world production of the basic metals aluminium, copper and steel together with their prices at New York, for each year from 1948 to 1955. The table also shows the percentages of increases in production and prices, taking 1948 as base.

The table will indicate that the rate of increase in production of aluminium has been greater than in steel while the rate of rise in price has been lower than in copper. It is a well known fact that the cost of production in every industry in the world is

Year	ALUMINIUM				COPPER.				STEEL.			
	Ton (Thousand)	%	$ per Ton	%	Ton (Thousand)	%	$ per Ton	%	Ton (Thousand)	%	$ per Ton	%
1948	1,206	100	352.35	100	2,420	100	493.65	100	136,500	100	57.26	100
1949	1,241	102.9	380.80	108.1	2,453	101.4	430.12	87.13	136,300	99.8	58.29	101.8
1950	1,492	123.7	396.70	112.6	2,447	101.1	475.66	96.3	188,600	138.2	59.64	104.1

THE ALUMINIUM CORPORATION OF INDIA LTD.—(Contd.)

rising higher and higher but aluminium is the only metal which is still continuing to be comparatively economical. These facts also add to the arguments for the need for rapid development of the industry in India.

I had analysed last year the global position of aluminium industry showing how there were very few independent firms in the industry. I would like to repeat that there are only 9 independent companies in the world operating 17 plants which have no corporate or operating ties with any other producers and your Corporation has the privilege of being one of the nine. Your Corporation have built up this highly technical industry, practically independently against heavy odds and obstacles and have trained up a team of Indian technicians. Therefore, your Corporation certainly possess completely the necessary management and technical skill and talent to undertake any expansion scheme. But the difficulty in such basic industries is the large amount of capital required and in the present condition it is not possible to find such large finance without the help of the Government. As has been pointed out in the Directors' Report, your Corporation's plant being situated in the D.V.C. area, we had very great hopes of getting power which is the main raw material for this industry, at economic rates when the D.V.C. came into being, so that your Corporation could stand in par with any other aluminium producer in the country on similar basis. But we have been disappointed as D.V.C. demanded a very high rate for supply of power. The Government projects are offering power at various power generation centres for the proposed Government plants at a much cheaper rate than what D.V.C. has offered us. We have been left, therefore no other option than either to put up a plant in a new area where power is available at a suitable rate or to put up our own plant to generate the necessary power. However, your Directors and Managing Agents are making all attempts to persuade the D.V.C. or the West Bengal Government to supply power at suitable economic rates to enable us to expand this industry at Jaykaynagar where your present completely integrated plant is situated. I am confident that in a short time the scheme which your Directors and Managing Agents are working out to increase three-fold your Corporation's present capacity will be finalised and made known to you.

The second Five Year Plan is under implementation and opens a big era of industrialisation in the country, as Industrial development is the main target therein. The foreign resources are no doubt a great problem, while taxation inside the country is growing heavy; in spite of these I have great confidence in our country's potentialities and in the eagerness of our people to fulfil the plan targets and to go ahead with the industrialisation of the country as herein lies the only way for improving the economic condition of our poverty-stricken country.

Gentlemen, before I close I would like to express again great appreciation of the patient and conscientious working of our Indian technicians who have made this Corporation a success by doing pioneer work for this industry against heavy odds and I can say that the team of technicians of your Corporation have performed a great duty in development of this industry. But for their co-operation this Corporation would not have turned the corner and established itself for future.

ROOPACHERRA TEA COMPANY, LIMITED

NOTICE is hereby given that the 48th Annual General Meeting of the Shareholders of Roopacherra Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 31st January, 1957, at 4 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the retiring Director.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company."

Special Notice dated 10th December, 1956 of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge is a Director of Amluckie Tea Co., Ltd. and Tyroon Tea Co. Ltd., subsidiaries of McLeod & Co. Ltd., the Managing Agents to the Companies and he is, therefore, an associate of the Managing Agents within the definition in Section 2(3)(c) (1) of the Companies Act, 1956.

4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

AS SPECIAL BUSINESS:

5. To consider and, if thought fit, to pass the following resolution:—

"That the Board of Directors be and is hereby permitted with effect from the Commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 17th January, 1957, to 31st January, 1957, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 24th December, 1956.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared will be made on or after 7th February 1957, only to those members whose names are registered in the Books of the Company on the 31st January 1957, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT.

The Resolution being Item No. 5 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293(1)(d) of the Companies Act, 1956.

CLIVE STREET GOSSIP

(Continued from page 16)

an underestimate. For, the basis of the estimate was the annual average of the actuals of the last three years—a period which, despite the unsparing efforts by Mr Cooper and other friends of India and America, was one in which Indo-American misunderstanding was constantly exacerbating relations between the two countries. Now that there is greater mutual understanding between the two countries, possibilities of greater help from the US are definitely bright.

✱

I have space only to deal with export earnings briefly: The Indian Finance estimate assumes modestly that our traditional earners of foreign exchange will render as good an account of themselves in the Plan-period as they have so far done, and no more. This may well turn out to be unduly modest, but in the circumstances not wholly unjustified. (In any case, since I am answering pedlars of gloom, this underestimate does not affect the argument). The extra Rs 190 crores estimated should come to us from export of commodities in which we have not fully exploited our resources. An export target of five million tons of iron ore annually—surely not an extravagant target—can yield about Rs 30 crores annually. There are others which can take care of the rest.

✱

And, finally, we have the option of purchase of dollars in an emergency from the International Monetary Fund, an option that Britain exercised recently and that we ourselves previously exercised. Readers would doubtless recall the detailed exposition of this particular nest-egg which appeared in Indian Finance two weeks ago.

✱

All in all, it seems to me that despondency about the Plan stems not so much from a wary assessment of possibilities, but paradoxically from insufficient realism. Those who are considered unduly optimistic are precisely those who have made a sober assessment of available resources. It is, therefore, necessary that the present corrosion of confidence by insistent harping on on alleged lack of resources for the Plan should be stopped. The example in this regard may usefully be set by persons in authority.

EAVESDROPPER

(Continued from page 12)

available in the country at one-third or half the price. Such high prices are asked for in spite of the fact that the components imported by Bharat Electronics are charged a concessional rate while the normal duty for the items is about 31½ per cent. Another drawback is the large number of resignations. The committee has found that there have been 30 resignations so far. In its opinion, the reason why technical personnel do not stick on is that the scales of pay in the undertaking are not quite lucrative.

1956—1957

(Continued from page 6)

In the third place, there is the action to be taken by Government in the matter of tax evasion. The evils generated by tax evasion are many more than we are prone to think. Firstly, the cheating of the national exchequer of its just dues has forced the hands of Government to think of all manner of new taxes. The higher taxes bring in their wake some element of dis-incentive for work or productive activity. At the same time, the higher taxes induce greater incentive for tax evasion. Tax evasion prevents the banking system from fully benefitting from the expansionary influences of a developing economy, because there is a considerable proportion of money which circulates outside the banking system. Tax evaded money has a currency of its own; and since tax evaded money is more freely spent, it aggravates inflationary pressure. Finally, tax evasion is demoralising in the extreme upon the national desire to produce more or give of one's best. Mr Krishnamachari is aware of all this harm that is being wrought by tax evasion; and he has promised more than once that he will pay special attention to measures intended to close the loopholes. If the scope for tax evasion is reduced, we have no doubt that the threat of inflation will correspondingly be less.

The fourth head under which we foresee the need for dynamic action by Government is not directly related to inflation. Nevertheless, there is an indirect aspect. If a reduction in the volume of imports contains the seeds of inflationary tendencies, the axiom is as true that a higher volume of imports can normally be expected, by restoring some equilibrium between supply and demand, to bring down prices. But it has to be recognised that a developing economy makes a very heavy demand on the foreign exchange resources of the country. In our case, the present indications are that we shall just be able to find the foreign exchange necessary for the capital imports that we need. The consumer goods imports, termed non-essential, are beyond our ability to afford—at least at the present stage. There may, however, be a time in the course of the next five years when, faced by inflation, we cannot afford not to import consumer goods. Obviously, therefore, we need to approach foreign exchange not merely from the negative view-point of conserving it by denying ourselves all manner of non-essential imports, but also from the positive aspect of setting in train measures calculated to increase our exports and, therefore, our earnings. For, to the extent that we are able to increase our foreign exchange earnings on current account, to that degree we shall be able to afford, in time of necessity, such consumer goods imports as may be in short supply within the country. We cannot, in this view, overstress the importance of a vigorous export drive. In the matter of exports, it seems to us that we should concentrate on four specific lines.

Firstly, there is a proved demand for Indian ores generally and our iron ore in particular. The target for export has so far been at a depressingly low figure. We see no reason why India should not be able to export 5 million tons or even 10 million tons of iron ore annually. The new facilities to be created in railway track and port capacity and equipment are likely to be neither extraordinarily expensive nor onerously difficult. We feel that Government should display a much greater solicitude than they have hithertofore in iron ore as an exchange earner.

Secondly, India cannot afford to lose out in the textile markets. The present trend would seem to indicate that the per capita consumption of cloth will, by the end of the Second Plan, exceed present estimates. We have seen in 1956 that internal demand was already of a size in excess of supply. But, for this reason, our exports must not be allowed to be affected. There is a good case for permitting the organised sector to proceed with further expansion; such increased production would, however, be, in the first instance, earmarked for export. There are two reasons for this suggestion. On the one hand, the existence of additional capacity can be of succour to the country if the handloom sector should fail to attain its target. On the other hand, there are indications of the existence of special markets wherein Indian handlooms enjoy a considerable popularity. Thus, it is not inconceivable that the exports of handlooms should rise to sizeable proportions in the next few years; and, since such exports would reduce internal availability, the gap in supply could be made good by the organised sector.

Thirdly, we are of the view that positive action has been lacking to conserve the existing markets for tea and jute goods. Besides, we do not think that there is sufficient realisation of the possibility that, by the end of the Second Plan, internal consumption of both these commodities might rise to such proportions that the surplus available for export may dwindle. Government policy, in this light, needs to be fashioned not merely on the basis of production being maintained at current levels, but on the basis that production must rise still further. As far as jute goods are concerned, we feel that the target of raw jute production must be raised now, so that we shall have an adequacy of the raw material at the time when we shall need to produce more of jute manufactures. And the incentive for increased production must to some extent rest on an understanding labour policy for the two industries.

Finally, although we now have to import vast quantities of steel, we must be alive to the prospect of being able, maybe as early as in 1959-61, to export steel. As India so ruefully has found out, the world demand for steel exceeds supply. We should be able to effect, in the near future, the export of an important commodity which can become an important exchange earner. The future targets for steel must also be on the basis of a surplus being produced for export. We may add that there is encouraging scope for the export by India of a number of light engineering goods. Indian fans, sewing machines, bicycles and the like can all be produced in such quantities as to figure as prominent exchange earners. If the Indian composition of trade has been changing swiftly in recent years, Government must realise that the change may be even more revolutionary in the next few years.

In concluding this assessment of 1956, which has to some extent been tantamount to an analysis of inflation, we wish to offer once more our suggestion of gold bearer bonds. The other day, Mr Krishnamachari said something about his being able to find a full gold-backing for the note issue, if only each adult woman were to give him one hundred rupees worth of gold. There is, we suggest, no need thus to ask for charity. While we do not have any reliable data on or even an approximate notion of the stores of gold that may be hoarded in this country—from whatever the reason—we nevertheless feel that the process of dehoarding of such gold would be facilitated by a scheme of gold bearer bonds. As readers will recall, this suggestion originated in Indian Finance some months ago. Its chief feature is that gold would be tendered in subscription to a Government loan to be designated as gold bearer bonds and maturing in some specific year. Government would undertake, on maturity, to redeem the gold bearer bonds in kind. The bearer aspect of the scheme is, of course, intended to maximise subscriptions toward such a loan. The benefit accruing from the scheme is not merely that it may release, at an optimistic estimate, anything like Rs 400 crores of foreign exchange resources for expenditure on the Plan; it will also mean that hoarded gold, now lying fallow and waste, can be put to fruitful use.

MEN WHO WILL MOULD OUR FUTURE

Our scientists are the pilots of our destiny . . . the men who will chart our industrial progress. And in order to provide them with every equipment and facility, 11 National Laboratories were established in the First Plan. In the second Five Year Plan over Rs. 20 crores will be spent on scientific and industrial research.

In the work of our scientists, as in the training of research students in our universities, paper will play an important part. In laboratories all over the country paper will provide the means of computation and instruction.

Price Trends during October, 1956	72

Stock Markets Depressed in December

Extremely nervous conditions prevailed in the country's stock Exchanges at the beginning of the month consequent on the Finance Minister's surprise tax proposals. At a special session of the Calcutta stock exchange prices declined sharply all along the list under the leadership of the speculative scrips. A special clearing was arranged at the following closing rates. Indian Irons Rs 31 Indian Copper Rs 3-10, TEXMACO Rs 20-12, Orient Paper Rs 34-8, National Jute Rs 22-8 and Burrakar Coal Rs 20. In the curb the same day the reactionary trend continued unabated with prices recording further declines. In Bombay selling pressure pushed down Tata Iron to Rs 180-12 with Bombay Dyeing declining from Rs 625-10 to Rs 586-14.

2

Mr T. T. Krishnamachari, Union Finance Minister said in Bombay that the next budget of the Government of India would be a lameduck budget.

Speaking in Ahmedabad, Mr Manubhai Shah, Union Minister for Heavy Industries, said that the Union Government would shortly announce the formation of a National Coal Development Corporation for planned development of coal mines in the country. The step had been decided upon with the object of stepping up coal production which at present stood at 38 million tons. It was intended to raise the production to 65 million tons, the Minister said.

3

Under increased selling pressure brought about by the new taxation proposals, prices especially in the speculative counters were further sharply marked down. In Calcutta Indian Irons after opening at Rs 30-4 declined to Rs 29-15 at one time but closed at Rs 30-5. After hours the reactionary trend reasserted itself and the scrip was reported as low as Rs 29-12. Texmaco receded to Rs 19-8, Indian copper to Rs 3-7, Orient Paper to Rs 32-11 and National Jute to Rs 21-4.

The Bombay Stock Exchange displayed an irregular trend. After a steady start profit taking intervened at higher levels. Tata Iron closed the day unchanged at Rs 180-12 while in the Textile section Bombay Dyeing shaded to Rs 585 from Rs. 586-14.

4

Second thoughts on the Mid-year Budget seemed to have revived confidence in the stock markets. Bears were found to cover their positions and as a consequence the downtrend of prices was halted atleast temporarily. The volume of business passing, however, was meagre and the undertone hesitant. Indian Irons after opening at Rs 30-3 closed better at Rs 30-7. In Bombay industrials staged a recovery with Tata Irons moving up to Rs 183 from previous closing of Rs 180-12 with Bombay Dyeings moving up sharply to Rs 595 from Rs 585.

5

The revival of interest noticeable the previous day could not gain momemtum as apprehensions about the adverse effects of the capital gains tax and the dividends tax returned on varied assessments of the effect of the mid-year budget in the press. Both operators and investors were reluctant to extend their commitments in the prevailing uncertain conditions in the investment situation. In the absence of follow-through support, conditions remained quietly steady in the stock markets. In Calcutta, Indian Irons moved within narrow limits opening at Rs 30-4 and closing at Rs 30-3. Bull unloading brought about a moderate recession in earlier dealings in the Bombay Stock Exchange. Thanks to better advices from the cloth market sentiment slightly improved in later dealings especially around textiles. Tata Iron receded to Rs 181-12. Among textiles while Bombay Dyeing was shaded at Rs 591-14 Century was steadier at Rs 518-12.

In a joint telegram to Mr T. T. Krishnamachari, Union Finance Minister, the Stock Exchanges of Bombay, Calcutta and Madras pointed out that the steep increase in dividend tax and imposition of the capital gains tax would adversely affect capital formation and seriously hit each and every investor, small or big.

6

The stock exchanges displayed a steadier tendency with prices of particular groups of shares gaining ground. The incentive had come from the hope that companies with a small capital base would issue bonus shares. Indian Irons in Royal Exchange opened at Rs 30-5 and improved to close better at Rs 30-11. On rumours of capitalization of reserves by Century Mills to reduce the new burden of higher dividend tax, Dalal Street presented an improved undertone with textiles under the leadership of Century in the limelight. Century spurted to Rs 536-8 from previous closing of Rs 518-12. Bombay Dyeing was marked higher at Rs 598-2. Tata Iron recovered to Rs 183-4 from Rs 181-12.

7

The introduction of a Bill to amend the Banking Companies Act of 1949 by Mr T. T. Krishnamachari, Union Finance Minister, in the Lok Sabha had a depressing effect on stock market sentiment. Under the Bill, appointment of managing directors, managers or cheif executive officers of banks and the terms of their appointments would be subject to the prior approval of the Reserve Bank. It also sought to prevent certain undesirable tendencies in the administration of banking companies, which might affect their soundness or which might not be in the interest of the depositors.

It was felt that the cumulative effect of the various provisions in the New Bill would be to make conditions in the money market further difficult. Though during the official working of the Stock exchange prices were generally steady, a reactionary trend developed after hours and rates declined sharply. Indian Irons which was done upto Rs 31-3 in official trading that day was hammered down in the kerb to a low of Rs 30-9. Bonus shares rumours continued to keep sentiment steadly in Bombay where Bombay Dyeing advanced to Rs 611-4 from Rs 598-2, with Century further higher at Rs 549-8. Tata Iron was well maintained at Rs 183-4.

8

The Calcutta and Bombay stock exchanges remained closed.

In his speech to the Shareholders of the Indian Iron and Steel Company, Limited, Mr T. Leslie Martin, Chairman of the Company, at the very outset stated that contrary to his expectation the results of the company for the year 1955-56 were quite good. Referring to the progress made with the 1953 extensions, he said that the programme was scheduled to be brought to completion by the end of 1958 in two stages. He disclosed that the further expansion to an annual output capacity of 800,000 tons of saleable steel was scheduled for completion under normal conditions early in the second half of 1959.

9 & 10

Addressing the annual meeting of the Associated Chambers of Commerce of India at Calcutta, Mr T. T. Krishnamachari, announced that the Government of India had decided to reconstruct the basis and structure of the taxation system in the country. He further declared that if India was to be saved for democracy, the Second Plan should be fulfilled. Referring to foreign capital, he said that Government welcomed foreign capital on certain terms the most important of which was that foreign capital would have to work in cooperation with indigenous capital and enterprise.

While Calcutta Stock Exchange remained officially closed on account of the death of a member, in Dalal Street conditions were easier on apprehensions of fresh tax burdens in the annual budget. Tata Iron quietened to Rs 181-8 from Rs 183-4 Textiles were also easier Bombay Dyeing coming back to Rs 603-12 from Rs 611-4.

11

The Government of India announced the appointment of a Commission of Inquiry to look into "complaints regarding a large number of companies and firms" controlled by Mr Ramakrishna Dalmia and others.

Evidently the Finance Minister's speech at the Associated Chambers at Calcutta was not to the linking of marketmen. However, selected shares were in request. In Calcutta Burrakur advanced on interested buying to Rs 22. Orient Paper on bonus expectations was done upto Rs 34-13.

12

The Lok Sabha passed the two new Finance Bills. In his reply to the debate on the Bills, Mr T. T. Krishnamachari gave an assurance that banking companies would be exempted from the provision for compulsory deposits by companies. Declaring the firm intention of Government to implement the Second Plan notwithstanding the various difficulties in the way, the Finance Minister declared that to fulfil the task on hand it would be necessary for all who could to tighten their belts. In this connection he pointed out that it might become necessary for him to impose new taxes in season and out of season, in short, any time was tax time during the plan period.

The Stock Exchanges were worried about a possible increase in the Bank Rate and in Calcutta on easier advices from Bombay prices gave way on a broad front on selling pressure. Indian Irons after opening at Rs 30-9 receded to close at Rs 30-3. In Dalal Street price movements were irregular, with alternate bouts of buying and selling. The market, however, closed

(a) Dividend for three years ended 1952 at 6 per cent per annum.

(b) Pref. Dividend for the year ended 31-12-51.

(c) After transferring Rs. 1,00,000 from Contingencies Reserve.

(d) After transferring Rs. 3,50,000 from General Reserve.

(e) Dividend for year 1949

(f) After transferring Rs. 11,50,000 from provision for taxation.

(g) After transferring Rs. 6,00,000 from Improvement Reserve.

(h) Dividend for three years ended 31-12-52, 31-12-53 and 31-12-54 at 9 per cent per annum

(i) After transferring Rs. 1,75,000 from Revenue Reserve; Rs. 49,000 from Building and Machinery Reserve and Rs. 20,000 from Taxation Reserve.

(j) It is proposed to issue bonus shares in lieu of dividend.

(k) After transferring Rs. 1,85,000 from various Reserves.

(l) Dividend for the year 1951, 1952, 1953 and 1954 at 5 per cent per annum.

(m) The Indian Estates of The Patrakola Tea Co., Ltd. were transferred to this company at book value as on 1-12-1954.

(n) After writing back Rs 1,51,566 being provision for taxation in part provided in 1954.

(o) After transferring Rs 1,00,000 from Taxation Equalisation Reserve,

(p) After transferring Rs 1,50,430 from General Reserve,

(q) After transferring Rs. 40,000 from Revenue Reserve.

(r) After transferring Rs. 95,000 from General Reserve.

(s) After transferring Rs. 1,65,000 from General Reserve.

(t) After transferring Rs. 1,00,000 from Revenue Reserve and Rs. 1,20,000 from Building and Machinery Reserve.

(u) After transferring Rs. 90,000 from Revenue Reserve.

(v) After transferring Rs. 1,75,000 from Revenue Reserve.

(w) After transferring Rs. 1,25,000 from General Reserve.

(x) After transferring Rs. 1,50,000 Revenue Reserve.

(y) After writing back Rs. 5,50,000 from Taxation Reserve.

(z) After writing back Rs 45,25,000 being excess Provision for taxation.

(Continued from page 29)

the day on a quiet note. Tata Iron shaded to Rs 179-8 but textiles were better at close. Bombay Dyeing closed at Rs 603-12 as against previous closing of Rs 602-8.

The Reserve Bank of India in a Press Communique stated that the rate of interest at which it lends to banks remained unchanged at 3½ per cent. The weekly announcement on Bank Rate was made a day earlier than usual in view of a "flood of rumours" suggesting an increase in Bank Rate, it was said.

13

The Finance Minister's statement that hereafter fresh taxes should be expected any time of the year thus contradicting himself that the next annual Budget would be a lame-duck budget came as a rude shock to stock markets. Further it was reported that the Finance Minister was seeking powers to enable him to levy excise duties even when Parliament was not in session. The marketmen took a serious view of the latest statement of the Finance Minister and seemed to have arrived at the conclusion that the future for equities was quite gloomy with so many uncertainties in the investment situation.

Prices declined sharply all along the list in the stock markets. In Calcutta Indian Irons on overnight selling pressure opened easier at Rs 29-14 and closed further easier at Rs 29-6. In a short one hour session in Dalal Street rates declined on a wide front. Tata Iron declined sharply to Rs 176-12 from Rs 179-8. Bombay Dyeing reacted to Rs 592-8 from Rs 603-12.

14

Mr Jawaharlal Nehru, Prime Minister of India, left by air for Washington.

Sentiment was subdued in the Calcutta Stock Exchange with prices tracing an irregular pattern. Indian Irons kept fairly steady on bear covering but the rest of the market was featureless. Indian Irons opening at Rs 29-9 closed at Rs 29-9 after being done down to Rs 29-2. In kerb trading in Bombay Tata Iron was quoted at Rs 178.

15

Prospects of friendlier Indo-US ties consequent on the visit to the USA of Prime Minister Nehru and World Bank assistance aided stock market sentiment and there were indications of support at lower levels. Bombay shares ruled steadier and at the day's close the list showed widespread modest gains. Tata Iron was well maintained at Rs 178-8 while among textiles Bombay Dyeing gained nearly three points to Rs 600.

16

Prime Minister Nehru arrived in Washington for a four day talk with President Eisenhower.

The General Council of the INTUC at its 22nd session in Hyderabad adopted a resolution demanding the appointment of national wage boards for all organised major industries in the country.

17

Mr T. T. Krishnamachari, Union Finance Minister, introduced in the Lok Sabha a Bill seeking to vest the Government with extraordinary powers to raise the existing excise duties subject to a maximum of 50 per cent of the existing rates. The Bill had an adverse effect on stock market sentiment and prices after a quietly steady start backed away in later dealings. Indian Irons in Calcutta receded from Rs 29-10 to Rs 29-6. An easier trend developed in Dalal Street where on lower advices from Calcutta, prices were marked down. Tata Iron lost Rs 1-8 to close at Rs 177. Bombay Dyeing shed five points to come back to Rs 599.

18

Mr K. D. Malaviya, Union Minister for Natural Resources, announced in the Lok Sabha that the Government of India and the Assam Oil Company had reached an agreement regarding the formation of rupee company for carrying out exploration and production of crude oil in Assam.

In the Stock Exchanges price movements continued to show an irregular pattern. In Calcutta, Indian Irons after opening at Rs 28-12 closed couple of annas better at Rs 28-14. Bombay shares after earlier easiness recovered on replacement buying. By close, however, sentiment was depressed and the list showed minor losses on balance. Tata Iron shaded to Rs 176-8 while among textiles Bombay Dyeing was easier at Rs 509-10.

19

The Lok Sabha approved the Finance Minister's Bill to give the Government Powers to increase by notification existing excise duties without its prior sanction.

Share prices displayed a steadier tendency and indications were prices would stabilise around prevailing levels. Buying interest was noticeable at the lower levels. Indian Irons in Calcutta however continued subdued opening the day at Rs 29-4 and closing at Rs 29-3. In Bombay Tata Iron gained a point to be placed at Rs 177 with Bombay Dyeing gaining about three points to quote Rs 593-2.

20

In a joint statement issued in Washington President Eisenhower and Prime Minister Nehru said that their talks confirmed the broad area of agreement between India and the USA.

Hopes of increased US aid to India consequent on the successful conclusion of Nehru-Eisenhower talks were mainly responsible for the improved tone in the country's stock markets. It was believed that with increased foreign aid, the Indian Finance Minister would not be required to impose further new taxes. The more speculative scrips displayed a steadier trend and the rest of the market also showed some improvement. Indian Irons opened at Rs 29-7 and closed at Rs 29-8. Tata Iron was well maintained at Rs 177. Bombay Dyeing was fractionally better at Rs 533-12.

21

The Lok Sabha passed the Bill seeking to impose extensive controls on banking companies.

Share markets continued to rule steady though dull. The lack of interest was due mainly to the impending Christmas holidays. The news that the World Bank had sanctioned the loan to the Indian Irons and Steel Company was also a contributory factor in aiding sentiment to revive. Indian Irons moved narrowly around Rs 29-6 to close slightly better at Rs 29-8. Tata Iron was unchanged at Rs 177 Bombay Dyeing was further better at Rs 595.

22

Prices sharply declined all along the list in the Bombay Stock Exchange due to a number of adverse developments. In the first place, rumour had it that Government would not easily sanction bonus issues. The high badla charges and the selling pressure due to adjustment of year-end accounts also aided the downtrend. Tata Iron lost Rs 3-8 to be finally placed at Rs 173-8 In the textile section Bombay Dyeing declined sharply to Rs 581-4 from previous closing of Rs 595.

23 to 24

The Bombay Stock Exchange remained closed on account of Christmas and New Year holidays from December 24 to January 4, 1957.

The Calcutta Stock Exchange remained closed for Christmas holidays from December 24 to December 26 both days inclusive.

27

The Calcutta Stock Exchange resumed trading after the Christmas holidays on a steadier note with several bright spots developing all along the list. Indian Irons opened at Rs 28-14 and closed couple of annas better at Rs 29. In kerb trading in Bombay, Tata Iron was done upto Rs 175.

28

Prime Minister Nehru returned to New Delhi from his US visit. Speaking to pressmen soon after his arrival, he disclosed that President Eisenhower had accepted his invitation to visit India.

The State Labour Ministers meeting in New Delhi accepted the Central Government's proposal to appoint wage boards for a few selected industries of national importance.

The Calcutta Stock Exchange ended the week on a subdued note, sentiment having been inevitably influenced by the New Year and Bank holidays. Indian Iron opened quiet at Rs 28-8 and reacted further to close at Rs 28-6. In kerb trading in Bombay Tata Iron suffered a setback to be placed at Rs 171.

29

The stock markets were closed. In the kerb sentiment was quietly steady with Tata Iron at Rs 172-4 and Indian Iron at Rs 28-5.

30 & 31

The Import policy for January-June 1957 disclosed drastic cut in import quotas in over 500 items. The principle followed was one of cutting down relatively less essential imports. It was pointed out that the major cuts in imports had been made over the range of items which could reasonably be expected to be supplied by the indigenous industry.

Industrial production during 1956 recorded an all-round increase. With 1951 as the base year, the average monthly index of overall industrial production during 1955 was 122.1. The average monthly index during the first eight months of 1356 has been 134.7. In June 1956 the index stood as high as Rs 199-6. The production of cotton textiles in 1956 was 5,245 million yards as against 5,094 million yards last year and 4,998 million yards in 1954. Iron and steel production is 1.33 million tons as against 1.26 million tons last year and 1.24 million tons in 1954

For the Investor

More Bite than Bark

***Investment Gossip*:**

THE last few weeks of 1956 witnessed on the part of those in authority an almost wanton disregard for the calamitous impact that their utterances had upon stock exchange sentiment, on the one hand, and on the investment climate, on the other. The conjuring up of austerity and sacrifice, of new taxes and higher rates, may be likened to the fierce barking of the canine species; but the question for which the investor will have to find the answer is whether, true to the proverb. the barking betokens by no means a corresponding tendency to bite, when the time comes.

That the barking has held great terror, there can be no question. Every stray occasion has with advantage been used to press home the point that we are in for an era of taxes which will be attuned to the financial requirements for implementation of the Second Plan.

For the Investor, then, two questions. Firstly, how big or cruel will the bite be, when it materialises? Secondly, is he to fear a revolutionary change in the tax structure?

As to the first, I would refer the reader—whether he is an investor or whether he is a Government spokesman—to the series of articles written recently by Eavesdropper. It cannot be denied that the Second Plan will entail great efforts on our part—in administrative ability, in sacrifice and austerity, in taxes to be paid and in resources to be raised. But what is being forgotten—deliberately, may I suggest, both by the bear fraternity in Stock Exchanges and by high authority in Government for reasons of their own—is that the outlook is not anywhere as bleak as has been sought to be painted.

Let us, for instance, see reality in the matter of taxes. Both with a view to reducing the quantum of deficit financing and to meeting the higher cost of the enlarged plan, the target for tax collections has to be raised. Let us concede that taxes will have to yield Rs 1,200 crores, in place of the Rs 800 crores they were originally expected to contribute to the Second Plan.

But a little study will reveal that, in ways that touched lightly and which did not penalise heavily, Government have secured, by the end of the first year of the Second Plan, a set of taxes calculated to raise the bulk of additional taxes. It cannot with conviction be charged that the new taxes of 1956-57, even including those that formed Mr T. T. Krishnamachari's mid-year Budget, are onerous or the last straw upon the investor's back. And yet, the total yield from these is considerable.

If Phatkaram Pagla were peering over my shoulder, as I write this, he would surely have interjected at this stage: "What about the capital gains tax?" To the market, but not necessarily to the investor, the re-imposition of what was reckoned as the most dastardly proposal figuring in the Liaqat Ali budget is thought to have killed all scope for incentive.

And yet, even the Finance Minister's re-imposition of capital gains has an import that is far from bearish—For the Investor, that is, and for the middle class individual.

I now will take back the reader to the middle of last year, when there were the first leakages of the Kaldor Report. All sorts of new-fangled taxes figured in the eminent Mr Kaldor's suggestions. But interest in the Report died down, when the impression arose that Sir Chintaman Deshmukh, the then Finance Minister, was not kindly disposed to the Kaldor recommendations. This was to have been expected, since one of the first premises made by Mr Kaldor was violently disputed by the Central Board of Revenue as well as by Sir Chintaman. The premise upon which Mr Kaldor proceeded to build up an entirely new structure of taxation was that the system now in force in the country offered gigantic avenues of evasion through which the evader could calmly and comfortably drive his coach and four.

If Sir Chintaman's cold shoulder to the Kaldor Report was apparent, as obvious is the keen interest taken by his successor in those recommendations. Mr Krishnamachari, unlike his predecessor, admits that tax evasion is of rampant proportions, and that the amount involved approximates the estimate made by Mr Kaldor. Logically, we may say that the introduction of the capital gains tax is the outcome as well as index of the importance attached by the Finance Minister to the Kaldor suggestions.

Mr Krishnamachari's studious interest in the Report is moreover evidenced by his repeated intention to close, as far as lies in his power, the loopholes now permitting tax evasion. Also an indicator in this regard is his reiterated statement that the Indian tax system is in need of a thorough overhaul.

Which, if it takes place, would be a good thing—and not otherwise—For the Investor. For, we may suggest that if Government take the measures necessary to tighten up and to enforce the tax laws, there will be no need for authority to discover new taxes or raise the rates of the existing ones.

Furthermore, if in due course the Kaldor recommendations are implemented, they should be welcomed—and not otherwise—by the investor. A basic requirement of the Kaldor proposals is that the rates of income tax should be reduced substantially—the supertax would be abolished, and the maximum for income tax would be 45 per cent (as against the present maximum of 25 per cent income tax plus 68 per cent or so super tax).

In hailing any prospective implementation of the Kaldor recommendations, the investor could well say, Let the galled jade wince, my withers are unwrung. For, their implementation would benefit him substantially—and not otherwise.

A word in conclusion. The deliberate Jeremiahs of today, in Government and in the Stock Exchanges, have an eye to the profits. The former believes there is money in being bearish. The latter may hold it that bleak prognostications of further taxes on the classes will win votes from the masses. Both these attitudes may turn out to be self-defeating. On the one hand, as the bear operator of today already knows to his cost, the bear sentiment has so been spread as to make impossible activity of any kind—even bear sales. On the other hand, for anybody in authority to believe that what happens in the Stock Exchanges and what disrupts the investment climate are no concern of his is extremely short-sighted: the boomerang

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policy-holders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business in the best ORIENTAL tradition, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

HIGHLIGHTS

The tight upper lip was mandatory during the war; and reasons therefor were two in number.

Firstly, of course, the mouth was to be kept closed, belts were to be tightened—in a word, austerity.

Secondly, no one knew where a spy might be about; and the tight upper lip, so to say, was necessary to stop loose talk.

India's Second Plan, and its implementation, will need austerity—that much is clear, by the evidence of resources to be raised, etc.

What it will also need is the forswearing of loose talk; for, a chattering tongue may spell the end of confidence.

In Investment Gossip this week, Watch-dog points out that there has been a good deal of loose talk, both by Government spokesmen and by the bear fraternity.

While explaining why such loose talk might be indulged in, Watch-dog forefully asks that we be aware of its inherent dangers.

Investment Notes:

The Bank profit statements, which have started flowing, have made encouraging reading. The main reason for improved earnings has been the full employment of the available funds throughout the year. The following tables show the profits earned and the dividends recommended for 1956 as compared with 1955:

	Net Profit (In Lakhs Rs)	
	1956	1955
Bank of India ...	92.03	84.90
Devkaran Nanjee ...	16.63	12.76
Bank of Jaipur ...	9.81	6.20
	Dividend	Percent
Bank of India ...	16	16
Devkaran Nanjee	6	5

Dawn Mills, Bombay, are ruling firm around Rs 162-8. The directors have proposed to capitalise a sum of Rs 12 lakhs from Reserves and issue Bonus shares in the proportion of 3:4. In this connection, the sanction has already been obtained from the Controller of Capital Issues.

Andhra Cement, Madras, has obtained the permission from the Government of India for the issue of 2,13,128 Ordinary shares of Rs 10 each to the existing ordinary shareholders in the ratio of 2:5.

Investment Briefs:

In Andrew Yule jute group, Belvedere and Delta have passed over the Ordinary dividends for the half-years ended 30th June and 31st May, 1956 as against Rs 2½ and Rs 5 paid in the previous half-years respectively.

Khardah Jute has maintained the dividend at Rs 5 per share for the half-year ended 31st March, 1956.

The Central Hydraulic Press has raised the dividend from Rs 5 to Rs 6 per share for the year ended 30th June, 1956.

Delhi Safe Depcsit Company has recommended an interim of 5 per cent on the Ordinary shares. Transfer Books are closed from the 18th to the 25th January, 1957.

Mysore Sugar has maintained the dividend at 20 per cent for the year ended 30th June, 1956.

Neelamalai Tea, Madras, has reduced the dividend from 17½ to 7½ per cent for the year ended 30th June, 1956.

Sirpur Paper Mills Results

Balance-Sheet Reviews:

THE Sirpur Paper Mills Limited has produced satisfactory working results for the year ended 30th June, 1956. Both production and sales have shown a rise, the former from 13,700 tons to 14,200 tons and the latter from Rs 1.63 crores to Rs 2.08 crores. But for the highest cost of coal incurred by the company due to non-availability of adequate supplies from the Singareni coalfields, the working results would have been much better.

The net profit for the year, after providing for interest on loans, managing agents' remuneration and Depreciation of Rs 3 lakhs, amounts to Rs 15.19 lakhs as against Rs 22.72 lakhs in the previous year. The directors have provided Rs 1.13 lakhs for brokerage and underwriting commission on issue of shares. A sum of Rs 1 lakh has been provided for Contingencies Reserve. A dividend of As 8 per share has been recommended on the increased Ordinary capital.

According to the directors' report, another reason for the comparatively lower profit is the payment of bonus to workers for the past year together with the increase in wages. The production was also adversely affected by the go-slow tactics of the labour for a considerable period despite agreement reached with the Labour Union settling all outstanding disputes.

The company is granted a development licence for increasing its capacity to 100 tons a day. The orders for the additional equipment have already been placed. According to present indications, most of the new plants should go into production by the end of this year.

The Indore Session

Indian Finance
Established 1928
January 12, 1957
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

HAVING declared in bold and unmistakable terms its social objectives and the means of achieving them and having gone some way with their implementation, the Congress Party could not be expected every time it meets in annual session to proclaim any novel creed or any radical revision of methods chosen. Perhaps, this is the main reason why the Indore session happened to be relatively dull.

Barring the developments over Egypt and Hungary, the Party found very little to discuss by way of new themes. These two unfortunate sets of events did provide an occasion for the reaffirmation of the Congress stand reputably and firmly on the side of national freedom and against the expression of colonialism in any form or from any quarter, though even here, the annual session only echoed sentiments which had already found emphatic expression in Parliament and outside. The inclusion of this subject in the agenda was undoubtedly necessary not only to keep up the traditional importance attached to the international situation but to clear whatever vestiges of doubt still lingered on the national attitude toward the Anglo-French attack on Egypt and the Russian armed intervention in Hungary.

Domestic affairs were barren of any similar event to attract the Party's attention. It was, therefore, possible to concentrate on the realm of details. This involved not more than certain redefinitions and clarifications. Perhaps, these could be more faithfully described as attempts at further refinement of definitions which have already become part and parcel of the nation's political terminology.

The socialistic pattern of society, which was enunciated as the Party's objective at Avadi in 1955 and which the Congress President, Mr Dhebar, chose to explain as including social democracy, received further elaboration at Amritsar, the next year. The Amritsar Resolution disapproved the concentration of industries at the Centre, indicated the inevitability of increasing tax burdens and the need to prepare public opinion therefor, the inescapability of ceilings on private income and the emphasis on the right of every citizen to expect from the State a minimum of material satisfactions. This Resolution was the outcome of a feeling that the Avadi definition of the Party's objective and the explanation given then and there were not adequate.

At Indore, this process of clarification was carried further. While the redefinition of the socialistic pattern and the cooperative commonwealth into a socialist cooperative commonwealth undoubtedly imparts greater precision and throws ampler light on the practical connotations of the objective, on some vital details the leading spokesmen of the party do not seem to have agreed ideas. In certain respects, we are afraid, new doubts have been stimulated. Pandit Nehru, for instance, firmly rejected the suggestion for fixing a ceiling on individual incomes. The staunch and convinced socialist as he is, he concedes the value of incentive for the individual and repudiates the notion that socialism necessarily implies a drab uniformity in the level of income or expenditure. "What the State could do and ought to do is to provide equality of opportunity to all and thereafter it should be left to the individual to utilise the opportunity to his and to the community's best advantage".

But in spite of the Prime Minister's denial of the need for a ceiling on incomes, and his appeal not to take too rigid a view of what socialism means, it is not to be supposed that a concrete ingredient attributed to the socialistic pattern at the Amritsar Session would be lightly discarded. On the contrary, in land, ceilings have been accepted and are being implemented with the full blessings of the Planning Commission, the Union Government and indirectly of the Congress Party. In more than one State, there is already legislation on land ceiling both in respect of existing holdings and future acquisitions. It can pertinently be asked if there will be a reversal of this trend. It is also not illogical to think in terms of the extension of this principle to non-agricultural income. Equally striking is the difference of opinion openly voiced and even otherwise very well discernible in the Congress between the advocates of Sarvodaya and those who believe in another form of economic and political set-up.

Curiously enough, the terms Sarvodaya and socialism seem to have become loosely interchangeable synonyms, and the frequent reference to both in the public utterances of Congress leaders have only served to blur the distinctive content and connotations of both. The Prime Minister has again chosen to point out that India must evolve a pattern of socialism suitable to its special genius and traditions and that in this evolution it is no use trying to copy others.

To the extent that violence has to be rigorously eschewed for the achievement of the socialistic pattern and the individual freedoms guaranteed in the Constitution jealously protected, there seems to be near unanimity in the Congress Party. Every one is sincerely agreed that a democratic as opposed to a totalitarian form of Government has to be preferred and sustained. But beyond this minimum area of agreement, there is a vast outlying tract where all kinds of ideologies have sprouted and are thriving. Mr Dhebar says that Indian socialism should lean more on the Gandhian concept of Sarvodaya, even if we cannot fully reach up to the Gandhian conception of a new socio-economic order. In Gandhiji's ideal, social regeneration and the achievement of fair, if not equal, economic opportunities for all is not so much a matter for the State to shape through pressure and compulsive legislation as it is a triumph of individual character and outlook.

Whatever might be the inspiring contribution of leaders like Acharya Vinoba Bhave for the attainment of Sarvodaya, as far as the majority of people are concerned it is a more or less forlorn, languishing ideal, to which at best periodical lip sympathy is extended. It is an ill-understood and perhaps impractical ideal. Clarity demands that the Congress leadership should declare what the socialism of its concept is clearly not and in this process confine Sarvodaya to the place it actually deserves. That this has not been done is not a compliment to the Party. As against Sarvodaya, socialism with the State as the principal guide and mentor can claim a long and vast historical background. Its aims and methods are well-understood, though in India some of its inner disciplines have yet to permeate the general outlook. If this much-needed clarification were to have been made, the ideological foundation for what the Congress Party actually does in office would have been more clearly intelligible, certainly less immune to hostile criticism. Now, it is an uneasy, unequal existence, with the scales heavily loaded against Sarvodaya.

Similar divergences in top-level views found vent on decentralisation and the place of capitalism in the contemporary economic evolution.

The Personality of India's Mixed Economy—V

A THEORY of economic growth is, from an academic point of view, a virtual impossibility. But it is well to distinguish between those unquestionable truths about economic expansion which can serve as reliable guidance in matters of practical policy and a theory which will stand up to the scrutiny of hostile critics or exacting social scientists. From the latter point of view, the scope of the enquiry has to be so vast, both in time and in space, that it is inevitable that the enquiring scientist will throw up his hands in despair. Pioneers in this forbidding field like Lewis and Kuznets have not been able to get far beyond giving us the range and scope of the study. "In an attempt to pinpoint the major forms of such a theory, in further organisation of data and analysis," the latter says, "we could begin with the statement that economic growth is a combination of transnational, international and intranational elements; that among the former the stock of knowledge of mankind and its persistent characteristic as Homo Sapiens are major; that economic growth within a nation during any historical period is the result of an interplay between institutions and patterns of behaviour it inherits from the past and the strains and tensions created by potential implied in the stock of knowledge, whether or not this potential is already being utilised by another nation; that economic growth is a costly process, both in the breakage it produces on the inherited complex of institutions and interests and in the opportunity cost of resources it requires; and that because economic growth is so costly (and although resolving the tension created by the opportunities inevitably gives birth to other strains and conflicts) the role of the State and other social institutions is of strategic importance."

The acceptance of this central focus in a wide field is not only a spur to the organisation of an increasing body of empirical evidence but also a bar to retreat within the

(Continued on page 91)

Editorial Notes

A Dual Problem

The United Nations will soon be called upon to pronounce views and take action on Kashmir. It has already done this but without much practical result. Had the UN taken a firm stand and treated Pakistan as an aggressor ought to be, the issue would have been settled long ago. After nine years, the issue is again haunting UN doorsteps.

It is worthwhile to recall that the first reference, made by the Indian Union, was motivated solely by the desire for peace. The Indian army was in complete control of the situation in Kashmir when the Union moved the UN. Subsequent developments have been chaotic and the UN instead of trying to help throw out the aggressor was content to remain a helpless spectator of events.

At no time has the Indian Union challenged UN authority to give practical guidance but what it actually received was the Baghdad Pact on its inimical frontier and the progressive militarisation of Pakistan with unconcealed foreign aid in arms. Pandit Nehru's offer of a "no war" declaration between India and Pakistan and, more recently as reports go, Chou En Lai's suggestion of a settlement through negotiation have left Pakistan cold.

Meanwhile the Indian Union had to fulfil its obligations toward improving the material welfare of the State. The success of this highly arduous task reinforced the inherent allegiance of the Kashmiris to the Union. A freely elected Constituent Assembly had endorsed and ratified the State's accession and its status as an integral unit of the Indian Union. Enlightened world opinion has not only approved all these developments but seen in them a distinct contribution to the political stability of a highly strategic area and consequently to the forces of peace in the world.

Perhaps it is for this reason that UN interest in Pakistan's present move is found to be half-hearted. The future of this move is a foregone conclusion. Though some countries may revel in the resurrection of old acrimonious points, the Indian Union can be sure of a fair and realistic attitude on the part of everyone who counts.

But that may not be the whole story. As if in anticipation of discomfiture in the United Nations, Pakistan has raised cries of jehad, has been advertising "restiveness" in the occupied Kashmir area and hinted at the possibility of a mass incursion into Indian territory. The Prime Minister has spoken of the massing of weapons across the frontier underlining the necessity for the Indian Union also to be prepared for any eventuality. Painful as it might seem, this pointed affirmation of the need for military preparedness must be welcomed as most reassuring.

*

Implications of A Balance

Inaugurating the All-India Commerce Conference at Ranchi, the Union Minister for Trade emphasised the need to achieve a balance between the agricultural and the Industrial Sectors. The conception of a balance between the two sectors is not new, though it remains somewhat obscure in the concrete policies of the Government. Generally speaking, the maximisation of output in agriculture and quickening of the tempo of industrialisation must automatically contribute to the achievement of such a balance, provided a certain parity in price levels between the two sectors is maintained.

Perhaps, a new base year will have to be discovered to which further price movements will have to be linked. Almost all over the world, there is a long-standing complaint that as against industry agriculture does not receive an adequate return. Non-material rewards such as the pride of individual ownership, the relatively friendlier hygienic conditions and the absence of the stress and strain of industrial routines are mentioned as extenuating features, on the side of agricultural producers.

In India, differences in return are probably sharper than in most advanced economies, a fact which is often clouded by the public outcry, whenever agricultural prices tend to rise. Even during the war, when industrialists argued that there occurred a steady flight of funds to the rural sector, it is doubtful if a fair balance was achieved in terms of comparative returns.

In striving for a balance between the two sectors, it is no longer possible to ignore the fundamental problems raised in this sphere. The agricultural producer and worker are already conscious of the urgency to improve their lot both absolutely and in relation to the industrial producer and worker. A long-term view must necessarily take into its sweep a radical revision of current ideas of comparative wage levels, which in turn will affect the corresponding price relationships. Mr Karmarkar's indication of the problem must stimulate economic thinking in new directions.

*

The Import Cuts

The drastic cuts on imports announced on the eve of the New Year are expected to save for the national economy about Rs 30 crores annually. While this saving is to be welcomed, the corresponding obligations thrown on Indian industry have to be kept constantly in view. The cuts are primarily inspired by what is officially described as the indigenous industry bias. Domestic production is expected to cushion the gap. Not only should there be sufficient goods forthcoming but these should sell at more or less the same level of prices obtaining before the announcement of the cuts.

On both points there is cause for diffidence. In a few industries, the imports of essential raw materials have been cut and, from what could be gathered, indigenous production does not seem ready to take their place promptly. In certain goods, prices have already leapt up irrespective of the fact that the stocks affected belong to the previous period of imports. There are also other unfriendly repercussions.

Foreign travel by Indians is one of the "import" items to fall under the axe. The Air India International is obliged to revise its plans for expansion. A substantial contraction in the overseas traffic of Indian air lines is feared. Even air traffic within the country is likely to be affected, as it also serves as a feeder for foreign travel.

The new restrictions on the import of foreign films hold a threat to the income of picture houses. The expectation that the preference for indigenous production will be correspondingly stimulated may turn out to be largely illusory, unless Indian film producers make a hectic effort toward improvement of quality and range.

The situation undoubtedly calls for a more vigilant review of progress in the concerned domestic industries and the way in which they respond to the new opportunities. The Government, we can be sure, will concentrate more on export promotion, having touched the outer limits of import restraint.

*

Woman and Steel

Woman and steel make a wierd combination. Even poets have no use for it, except when they describe the heart which is unmercifully cold to the importunate lover. Pandit Nehru sees in woman and steel the twin yardsticks of national progress. How the women delegates at the Congress Session reacted to this statement is not known. The more orthodox among them might feel embarrassed over this novel association and parity. But even they should have been brushed up by the elevating presence of Mr T. T. Krishnamachari. To the latter, this oblique tribute from his chief could open up more enchanting visions, of million ton factories gracing every one of the Union States and the total investment figure leaping to the region of a couple of thousand crores. Acharya Vinoba Bhave and even those who take less enthusiastically to the ways of a simpler economy, will wonder why at all steel should assume such prominence. A similar feeling can arise in others who see the rapidity with which steel is yielding place to other materials, say plastics. But these do not amount to grave objections. Simplicity is a dying creed and its very crutches are a testimony to its pre-mortem agonies. The new rivals to steel belong to a not very near future.

Indian women have an even stronger case. The Constitution and the law have placed them on a status of equality with men, barring a few minor disabilities. Equalisation everywhere involves some transitional agonies. Everything will be right, if we take it that in this case woman embraces man.

But then, in America where women have the best of opportunities and steel is produced more lavishly than in any other country, sociological experts are sadly sceptical of the results. They seem to think that the Americans are not happy with all that.

Annual Survey

1956 in the Money Market

THE bank returns for the last week in December now being available, we can proceed to the study of the developments in the money market during 1956 as reflected in the statements of the Reserve Bank, the State Bank and Scheduled Banks. While the tables reproduced on this page set out the net changes under specific heads as between the last Friday in 1955 and the last Friday in 1956, there is the need for a good deal of reading between the lines. Almost every change that has taken place offers an important lesson. But there are naturally any number of extraneous considerations that we have constantly to bear in mind if our interpretation of the bank figures is not to go awry.

We may start with the figures relating to Notes in Circulation. During 1956, there was expansion of currency against Rupee Securities for Rs 246.68 crores. Secondly, there was also expansion against and as a result of the re-valuation of gold to the tune of Rs 77.75 crores. Since, as we shall presently see, the expansion in currency under these two heads was preponderantly entailed by the Centre having to replenish its cash balances, currency was contracted in 1956 against Foreign Securities for Rs 239.58 crores. Moreover, rupee coin would appear to have returned from circulation for Rs 16.36 crores. In this context, we should take account of two factors relating to Rupee Coin. On the one hand, a moiety of the rise under Rupee Coin—an amount of Rs 5 crores—is to be attributed to the tender, in the first week of April each year, of rupee coin by Government to the Reserve Bank and by their being credited with a like amount. Thus, the actual or net return of rupee coin from circulation should be placed at Rs 11.36 crores. It is here, on the other hand, that an explanation is necessary for the return of rupee coin from circulation in such considerable amount. We suggest that, until the not too distant past, there was a tendency to hoard in rupee coin which, technically, covers one rupee notes also. Such a tendency was the result of the apprehension that notes of high denominations might be demonetised. More recently, however, Government have once again been issuing notes of higher denomination. In the result, there is very much less apprehension of demonetisation. Consequently, it is possible to explain the return of rupee coin from circulation as having been due to the replacement of hoarded rupee coin by the hoarding of larger denomination notes.

To return to the subject of Notes in Circulation, after expansion had been effected against Rupee Securities and gold revaluation, and after the contraction against Foreign Securities, Active Notes rose during 1956 by Rs 104.09 crores. In the result, the Reserve Bank's cash in the till declined by Rs 2.90 crores. The net rise in Active Notes, however, must have been lower. The net return of rupee coin from circulation was, as we have seen, Rs 11.36 crores. We may thus say that the net rise in Active Notes was Rs 92.73 crores.

The decline in Foreign Securities in the Issue Department was Rs 239.58 crores. This represented the transfer from time to time and over the year to the Banking Department. Balances Held Abroad in the Banking Department showed a rise of Rs 34.31 crores. Thus, the net decline in the foreign holdings of the Reserve Bank was Rs 205.27 crores. In other words, the monthly average of exchange depletion was Rs 17 crores in 1956.

The rise in Rupee Securities in the Issue Department was Rs 246.68 crores. At the same time, Investments in the Banking Department were also marked higher by Rs 11.28 crores. The net rise in the Reserve Bank's holdings of Government securities was, therefore, Rs 257.96 crores. Not all of this, however, represents deficit financing during 1956. Firstly, we have to deduct a sum of roughly Rs 50 crores as appertaining to Reserve Bank's subscriptions to the Centre's New Loan in 1956. Readers will recall that, at the time of the New Loan, we had suggested that there was evidence to indicate the possibility of the Reserve Bank having subscribed in cash for an amount of this size. This is more or less confirmed by the figures relating to deficit financing as available in the relevant table published in the Reserve Bank of India Bulletin. This table indicates that deficit financing in the first eleven months of 1956 was of the order of Rs 210.84 crores. In the last month of the year, there would appear to have been further deficit financing for Rs 20 crores. Thus, the total of deficit financing in 1956 may be put at Rs 230.84 crores. But not all of this would have been reflected in a rise in Rupee Securities in the Reserve Bank statement. For, particularly in the week when the State Government loans were opened for subscription, there was evidence of re-investment by State Governments of a portion of their proceeds from the loans in Government securities. We may take it that such re-investment was likely to have been by way of direct purchases of ad hoc Treasury Bills. That is to say, that element of purchases of ad hocs by State Governments from their cash balances would not figure, nor be reflected in, the Reserve Bank statement. Thus, while deficit financing in 1956 was for Rs 230.84 crores, it is possible to suggest that the element of deficit financing reflected on the Reserve Bank statement—and, therefore, relating to the magnitude of deficit financing which benefited the Central Government and which can be discerned in the Reserve Bank returns—may have been of the order of Rs 205 crores. The balance of the rise in the giltedged holdings of the Reserve Bank may be attributed to purchases by the Reserve Bank of the Centre's New Loan in 1956. In the

BANK PROFITS

While it has been known that 1956 has proved to be a very good year for the banking system generally, the first results will be found to be even better than earlier anticipations. In particular, the superlative performance of the United Commercial Bank Limited in 1956 can scarcely be expected to be equalled let alone surpassed.

*

The United Commercial Bank Limited has had a remarkably good year in 1956. The profit, subject to audit, has jumped to Rs 56.52 lakhs from Rs 36.69 lakhs—an increase that works out to an almost incredible 54 per cent on the profit of 1955. The provision for taxation has gone up by Rs 2 lakhs to Rs 16 lakhs. The transfer to Reserve Fund is a massive Rs 20 lakhs as compared to Rs 8.50 lakhs. The staff bonus receives Rs 2.50 lakhs more at Rs 6.50 lakhs. The dividend proposed is one of 7 per cent, against 5½ per cent in the previous year. With the current appropriation of Rs 20 lakhs, the Reserve Fund is placed at Rs 1.15 crores against the capital of Rs 2 crores.

*

The Bank of India Limited has reported a profit, subject to audit, of Rs 92.03 lakhs as compared with Rs 84.91 lakhs in 1955. The provision for taxation has been raised by Rs 3 lakhs to Rs 28 lakhs; the dividend is maintained at 16 per cent for the year; a transfer has been made to the Reserve Fund of Rs 8 lakhs, as against a transfer in 1955 of Rs 3 lakhs to the Landed Property Account; and the carry forward, subject to bonus to staff, is Rs 29.30 lakhs. It may be recalled that bonus absorbed Rs 12.75 lakhs in 1955; and the brought forward from 1955, after bonus, was Rs 13.27 lakhs.

*

Dena Bank has announced a profit of Rs 14.87 lakhs, after providing Rs 1.50 lakhs for staff bonus. The dividend has been raised from 5 per cent to 6 per cent. The Reserve Fund receives Rs 3 lakhs; Investment Reserve has been allocated Rs 0.50 lakhs; the provision for taxation is Rs 8.00 lakhs; and the carry forward is placed at Rs 2.13 lakhs against Rs 1.76 lakhs brought in.

matter of deficit financing, we must be clear in our mind that created money, though of substantial proportions in 1956, is of much smaller magnitude in the financial year 1956-57. For, ad hocs were for a total of Rs 134.96 crores in January-March, 1956—the last quarter of the financial year 1955-56. Created money in the first three quarters of 1956-57 has amounted to Rs 95.88 crores. Readers will recall that, in the Leading Article last week, we had advanced the view that deficit financing in 1956-57 was likely to be around Rs 200 crores as against Sir Chintaman Deshmukh's estimate, at Budget time last year, of Rs 350 crores.

The Central Government's deposits do not show much change—they have risen by Rs 3.23 crores over the year. Obviously, however, their net disbursements have been heavy. In this money market study, it is neither possible nor desirable to assess with any exactitude the size of Government's net disbursements. We may, however, briefly indicate the various factors which would have contributed to the swelling of the Centre's resources. Over and above the deficit financing, Government would have received Rs 5 crores by tender of rupee coin to the Reserve Bank; secondly, Government would have received the Reserve Bank's profit for 1955-56; thirdly, the Centre's balances would have benefited from the cash subscriptions to the New Loan of 1956; and, fourthly, we have the imponderables—the Budget revenue surplus, possibly higher because of the better tax and excise collections, contributions from the Railways, etc.

The balances of other Governments with the Reserve Bank declined by Rs 2.62 crores over the year. The State Governments have besides found it necessary to increase their Borrowings by Rs 3.61 crores. Here, too, no definite conclusion is inferable. For, we cannot even suggest that the unfavourable turn in the balances of other Governments is wholly due to net disbursements. We need to remember, in this context, that, while the State Governments would have benefited from the State Loans of 1956, they had, at the same time, re-invested—we cannot be certain in what amount—in ad hoc Treasury Bills.

A word suffices to explain the rise of Rs 80.36 crores in Other Liabilities in the Banking Department. This, of course, represents the transfer to the Banking Department consequent to the revaluation of gold in the Issue Department. It is to be presumed that the surplus accruing on such re-valuation would be turned over to the Central Government. However, for reasons that we are not sure of, the Banking Department liability, apparently payable and due to the Centre, is being kept in suspense.

We need also to note that, during the year and from its profits, the Reserve Bank has set apart and created a long-term operations fund and a stabilisation fund for agriculture. The appropriations under these two heads total Rs 16 crores and must, to a corresponding extent, have reduced the profit paid to the Central Government.

We move, finally, in this consideration of the Reserve Bank indications, to the figures concerning member banks. The Deposits of member banks with the Reserve Bank are more or less unchanged—they show a rise of Rs 0.22 crores. But, at the year-end, their indebtedness to the Reserve Bank was very much higher than it was at the end of 1955. The Other Loans and Advances of the Reserve Bank are sharply higher by Rs 61.41 crores. Under this head, the outstandings of advances availed of by member banks against usance bills have steeply risen by Rs 38.34 crores. The greatly increased utilisation of the instrument of usance bills for securing Advances from the Reserve Bank is indicated in the fact that the running total of Advances given by the Reserve Bank under this head marks a rise of Rs 200.24 crores over 1955. What exactly the impact of these changes is will be seen when we study the Scheduled Banks returns.

During 1956, the Demand Liabilities of Scheduled Banks increased by Rs 39.71 crores. Time Liabilities expanded by the even larger amount of Rs 41.10 crores. The Deposits of member banks thus rose by Rs 80.81 crores. We may point out that the higher rise under Time Liabilities is explained by the sustained demand for funds during 1956, which brought about such a structure of interest rates as to induce and encourage a better flow of funds to Term Deposits. Secondly, it is an interesting point to note that accretions to the deposits of Scheduled Banks have totalled Rs 80.81 crores as compared with the net rise of Rs 92.73 crores in Active Note circulation. The relation between additions to the Deposits of the banking system and increase in Active Notes is thus seen to have improved substantially. The ratios in the past four years are given in the table below:

	Net Rise in Active notes (1) crores	Rise in Banks' Deposits (2) crores	Ratio of (2) to (1) percentage
1956 ...	92.73	80.81	87.15
1955 ...	162.54	90.81	55.87
1954 ...	64.17	93.14	145.15
1953 ...	26.12	3.74	14.32

Optimism Revives in Britain

By PAUL EINZIG

THE London Stock Exchange opened the New Year with a fairly firm tone. Although things are far from boom-like, most markets registered appreciable recoveries. Sterling, too was distinctly harder. The announcement that the outflow of gold came to an end on December 11, when the conclusion of the arrangement with the International Monetary Fund for the provision of dollar facilities was announced, went a long way towards reinforcing the feeling of optimism which usually prevails at the beginning of each year.

There was indeed much room for the improvement of the morale in Britain. The failure of the Suez intervention to achieve its ends, and the high economic cost of the stoppage of traffic through the Canal, gave rise to a wave of pessimism throughout the country. There were widespread fears of the effects of the oil shortage on employment, of the need for draconian measures to support sterling, and of the consequences of the weakening of the authority of the Conservative Government. Above all, the anticipation of the loss of Britain's oil interests in the Middle East,—whether through Russian penetration or through American penetration—gave rise to gloomy views about Britain's economic future.

Although the turn of the year has not brought any fundamental change in the situation, it seems to have restored the sense of proportion of the British people. The outlook continues to give rise to much concern, but the view is gaining ground that the British economy will survive this crisis without experiencing a major disaster. It is now confidently expected that traffic through the Suez Canal will be normal before the middle of this year. Even before that oil supplies are expected to become normal. For this reason, any business recession and unemployment resulting from the stoppage of traffic through the Canal is not unexpected to continue for more than a few months, the extent of such recession and unemployment is no longer expected to be very extensive. It will be confined to the relatively small number of industries more or less directly concerned.

At the same time, however, fears of a permanent deterioration of Britain's economic position through the loss of British oil interests in the Middle East continue to prevail. Hence the subdued character of the recovery on the Stock Exchange and in the foreign exchange market. Taking a long view, the direct effects of the Suez crisis are expected to be overcome in a matter of months, before they can do much real damage to Britain's economy. But if Britain should lose her oil investments in the Arab countries and in Persia, it would result in a perennial deficit in the balance of payments, against which dollar facilities of the International Monetary Fund or the Import-Export Bank would be of no avail.

The view is gaining ground that, should such a situation arise, the only way in which it could be met would be through really drastic cuts in defence expenditure. Complete withdrawal of British forces from the Far East and from the Mediterranean, and also from the European continent, is now advocated from quarters which even a few months ago would have indignantly opposed any such suggestion. Isolationism and "neutralism" are gaining ground in British opinion. A small but growing school of thought takes the view that, in view of the economic difficulties—which are liable to increase considerably through the loss of British oil interests in the Middle East—Britain should confine her military effort to the defence of the British Isles and of the "loyal" Dominions, leaving responsibility for maintaining the international defence system entirely to the United States.

It is widely felt in Britain that the extent to which Britain has engaged her economic resources and manpower in her defence commitments in Europe and the East have not been appreciated in the United States or in India, although both countries stand to benefit greatly by the British defence effort. The argument runs that, since the United States appears to favour the "uncommitted" countries at Britain's expense, the obvious course for Britain is to withdraw from all NATO and SEATO commitments and to become an uncommitted country. Responsible elements in Britain do not of course share this view, since they realise the vital importance of maintaining existing alliances. They may find it increasingly difficult, however, to resist the pressure of growing neutralism if the loss of British Middle East oil interests should place the Government before the alternative of a drastic reduction in the standard of living or a drastic reduction of defence expenditure.

As far as the Stock Exchange is concerned, it does not appear to share the widespread pessimism concerning the consequences of the loss of British Middle East oil interests, judging by the recovery staged by British oil shares. It is felt that the firmer line taken by President Eisenhower against the threat of Russian penetration is a bull point for oil equities. The difference between the loss of oil interests through Russian and American penetration is considered in financial circles to be equivalent to the difference between confiscation without compensation and acquisition against reasonable payment. Even the latter solution would be highly unpopular, judging by the reaction of British opinion to the Trinidad Oil deal. But from a purely Stock Exchange point of view the receipt of substantial capital amounts through an increased American participation in Middle East oil would mean a mitigation of Britain's immediate economic difficulties. And it is perhaps too much to expect the Stock Exchange to think beyond the end of the next fortnightly settlement.

World of Business

National and International Economic Trends

THE economic developments in 1956, viewed in retrospect, reflected for the first time in a definite and inescapable manner some of the fundamental aspects of production and exchange as envisaged in India's new social aims. The appointment of a separate Ministry for Community Development, the presidential appeal to economic experts to pay more attention to production for consumption than for private profit or marketing, the creation of another Ministry for small-scale industries, the Prime Minister's declaration that steps would be taken to enable labour to play an effective part in the management of industries, the nationalisation of insurance and in Mysore of the gold mines, the setting up of the State Trading and the Coal Corporations, all these have come as prominent links in the chain of thought and action which emphasises the growing importance of the small producer and the worker in the affections of the State and its reflection in concrete measures, covering a wide and diverse range.

It is this special interest which is an inevitable corollary of the social pattern embodied in the national aim which is also discernible in fiscal and other policies and in the extension of amenities to lower income groups sponsored by legislation. The Second Plan has allocated Rs 90 crores exclusively for the welfare of the backward classes.

The Second Five-Year Plan, through which the desired increase in material welfare is sought to be achieved, has been enlarged in outlay from Rs 4,800 crores to Rs 5,300 crores. This substantial expansion announced within a few months of the actual commencement of the Plan significantly has come without any serious controversy. Along with this first instalment of adjustment implied in a flexible plan, came also the demand for an extra Rs 400 crores by way of additional taxation.

In the vital sphere of transport, the Indian Railways have among other things drawn out a scheme for electrification of about 800 miles. Major ports development is expected to absorb Rs 60 crores and national highways about half this amount. The Planning Commission was encouraged to make some new revisions in production targets most notably in jute manufactures.

The setting up of a separate Directorate for oil and natural gas, the agreement with a foreign concern for the establishment of an oil-refinery in Eastern India, the discovery of iron ore deposits in the Cuttack District of Orissa, the final decision to set up a lignite and an aluminium factory in South India and the commencement of work on the Durgapur Plant and what would turn out to be an epoch making event from the standpoint of the future, the atomic reactor at Tromby coming into operation are among the high-lights in the region of major industrial developments.

On the whole, with the considerable lee-way made in the direction of the setting up of industrial estates in several States, the development of textile output-through Ambar Charka and other small industries, the expansion programmes undertaken with or without help of foreign capital by private producers in seel, chemicals etc, the record of industry for the year both in the expansion of potential and in actual production is immensely satisfactory. The general index of industrial production went up from the average of 121.9 points to in 1955 to 197.9 points in June, 1956. Since then there has been some set-back though the lowest level for any month has remained higher than that of the 1955 average.

For the first six months of the year, the index averaged 144.8 as against 121.9 in 1955 and 112.9 for 1954. For the first eight months the average recorded a fall at 134.7. During the period up to the end of August 31, out of the 41 engineering industries, 4 out of the 5 in the textile and 38 out of the 44 non-engineering industries in the organised sector registered marked increases in production. Aluminium and worsted yarn belong to the other side of the picture, with small declines.

Cement production for the whole year is expected to be of the order of 4.95 million tons as against 4.5 million tons in 1955; salt to leap upto 119 million maunds from 81 million maunds in 1955 and 74 million maunds in 1954; and steel to increase from 1.26 million tons in 1955 to 1.33 million tons in 1956. During the year more industries were brought under the scope of the Industries Development and Regulation Act; 262 new licences were granted and 598 licences for the expansion of capacity or the introduction of new products by existing undertakings.

Agricultural production gives a comparatively poor showing while crop estimates for 1956-57 are undoubtedly of an encouraging character, actual production of foodgrains tended to decline over two consecutive years, since the all-time peak achieved in 1953-54. Against 68.72 million tons in the latter year, production of foodgrains in 1955-56 was only of the order of 63.54 million tons.

Of the principal cereals, wheat alone stood higher than in 1953-54, though compared to 1954-55, there was a considerable decrease. For rice, the year 1954-55 recorded a steep fall from the previous year; the last financial year saw a restoration of the favourable trend. Compared to the year 1949-50, foodgrains production increased by 17.8 per cent while the area showed an increase of 10.6 per cent. We are left with the heartening conclusion that the difference is explained by the average increase in yield.

A contraction in output as between 1954-55 and 1955-56 has also occurred in ground-nut, linseed, cotton and mesta. Jute is among the few exceptions, having increased from a little over 2.9 million tons to over 4.1 million tons in 1955-56. According to the latest All-India Estimates, the area under sugar-cane in 1956-57 has gone up by 16 per cent, under ground-nut by similar proportion, under cotton by 10.8 per cent and jute by 14.7 per cent. Sugar production touched a new peak during 1956, exceeding the targetted figure of 18 lakhs tons and representing an increase of 80 per cent over the pre-First Plan figure. The over-production to which tea was tending was restrained by a prompt self-imposed cut by the industry.

Though net deficit financing in the first eight months of the Second Plan, that is upto the end of November 1956, was kept within Rs 76 crores, and new taxation was being gradually geared up, price levels kept moving forward albeit with intermittent temporary reverse strides. The general index of wholesale prices moved up from 375.9 in the second week of December 1955 to 429.4 in the corresponding week of 1956; the miscellaneous group went up from 542.5 to 591.7; food articles, industrial raw materials and semi-manufactured articles registering the sharpest increases, rose respectively from 323.2 to 419.1, from 427.1 to 510.1, and 343.4 to 418.6. Manufactured articles though lagging behind also participated in the rise, moving up from 372.7 to 386.1.

On two occasions, foodgrains prices shot up to threatening levels and though on both, a general crisis was averted, the situation still continues to be impregnated with risks. It must be noted in this connection that the Union Cabinet, the Planning Commission and the States' Agriculture Ministers have been reviewing the food situation from time to time. About mid-year, a conference of Agriculture Ministers thought that the targets could not be raised without additional allocations of finances and price incentives. Shortly afterwards, they revised this opinion and envisaged the possibility of a 15 per cent increase over the original Second Plan targets, without any fresh financial aid. A conference held last week is reported to have reaffirmed this view but clinging to the conclusion that minimum prices for foodgrains would be indispensable.

It goes without saying that internal price levels are to some extent inflated by the import policy which seeks to eliminate the "unessentials" as rigorously as possible. In this respect the mid-year changes were relatively modest, but those announced on the eve of the new year were slashing, as they aimed at a saving of about Rs 30 crores.

It is even felt that as a consequence of these cuts, a more careful scrutiny of some of the Second Plan projects might also become necessary, an inference which derives fresh support from the Union Finance Minister's statement recently at Madras that the total demand for foreign exchange for the plan in 1957 might not exceed Rs 200 crores.

Consideration of foreign exchange likewise imparted extra pressure on export promotion. The export trend over a period has not been unsatisfactory. Machinery and mill works, cinema equipment, electric fans and a wide range of other engineering goods were figuring more and more prominently in exports. But as between 1954-55 and 1955-56, there was a considerable decline both in value and the volume of exports in a number of important commodities.

The figures up to October 1956 generally reaffirm this trend. Earning in cotton piece goods in particular were substantially lower, mainly on account of declining volume. Cotton textiles best symbolises the new competition which India is facing particularly at the hands of Japan, which through bilateral agreement and through the sale of goods as war reparations has lately been growing to rapid ascendency in Asian market.

There are however a few silver linings. For instance, for the first time Indian-made motor cars were exported during the year. But the picture leans heavily on the deficit side. The Suez crisis called for an upward revision of the cost of capital goods needed for the Second Plan. Some of the projects like Durgapur and Rourekela are now expected to go up in cost by several crores.

Amidst these developments the stock markets emerged very much shaken. One is tempted to describe the annual record of the stock market during 1956 as that of a patient suffering from mental depression showing unexpected signs of zest and activity now and then but eventually coming out with far less of stamina and nerve left.

Not all the advances in industrial output, the expansion in new outlay and the consistent bias toward a sellers' market for many indigenous products combined with the prospect of a steady and progressive economic expansion well ahead into the future, could compensate for the recurring "shocks" of the nationalisation of insurance, the dividend limitation tax and the tax on bonus shares in the annual budget, the implementation of the

(Continued on page 92)

World of Tea

General Outlook

THE general outlook for Tea is now considered to be in favour of a fairly steady market although some delays and interruption are expected to occur in the movement of the commodity. Indian consumption, variously estimated between 185 and 210 million pounds, provides adequate counter to the rising trend in Indian production. Together with the 130 million pounds at Calcutta on growers' account at the end of November and the prospective South Indian production till March-end, there will be 170 million pounds available as against 65 to 70 million pounds of tea required in the internal market. Meanwhile, the world outlook for tea is now estimated on a total output of roughly 10 million pounds above that of 1955.

The outlook for the London trade is, however, regarded as depressing by many operators. Broken Pekoe—the tea trade barometer—is quoted one and a half pence per pound cheaper than the pre-Christmas rate, while other grades have fallen by amounts varying from a penny to tup-pence a pound. The first shipments, sent via the long Cape sea route, are beginning to arrive and the fears, that reserves will fall to danger level, have now been averted.

Despite the tendency to lower prices in the wholesale market, some of the leading retailers in London have increased their prices to the public by four pence to eight pence a pound. There is also a tendency among certain sections of the trade to purchase to minimum levels now, as prospects of a resumption of transit through the Suez Canal are brighter.

Meantime, in the Export Sale held in Calcutta this week, offerings were as much as 72,928 packages as against only 63,500 packages offered in the first sale held in the New Year. There was a strong and general demand for most descriptions. Dooars and Assams with bright liquors were keenly competed for at one to two anas per pound above last rates. Medium Assam BOPs and Orange Fannings were generally As 2 easier, while the remainder were one anna per pound easier.

CTC sorts were in good demand at one to two annas below valuations, while clean and well-twisted Whole Leaf grades received keen competition and were upto As 2 per pound dearer. Stylish BPSs were fully firm and three was more demand for Darjeeling teas which were sold well.

In the Internal Sale, offerings amounted to 26,674 peckages of Dusts for which there was a good general demand. The better quality black leafy Dusts were again a strong feature and were selling upto As 2 per above valuations. Orthodox Dusts from all districts were well supported and were generally firm and sometimes half to one anna dearer. Bright liquoring CTC Assams were sold well and were upto As 2 and sometimes As 3 per pound dearer, while those with ordinary liquors received less support and were As 2 dearer.

Offerings of Leaf grades consisted of 2,502 packages for which there was a strong demand. All kinds, particularly Fannings, were generally upto As 2 dearer; but the few lines of Green teas on offer received only fair support.

Export Sale:			
Clean Black Pekoe	2 6 0	2 5 6	2 7 6
Plain Broken Pekoe	2 4 0	2 4 0	2 5 6
Medium Assam BP	2 6 0	2 5 6	2 7 0
Best CTC Assam BP	2 12 0	2 14 0	3 0 0
Dust Sale:			
Medium Dooars	2 1 0	2 0 6	1 15 0
Medium Assam Grainy ...	2 2 0	2 1 6	2 0 6
Medium Assam CTC	2 5 0	2 6 0	2 6 0
Best Assam CTC	2 11 0	2 9 0	2 11 0

A total of about 750,000 pounds was offered in the Cochin market. The market opened the New Year with a fair general demand. There was again only small enquiry for Nilgiri descriptions, which declined fully by As 3 to As 4 per pound. Good Mediums registered a drop of one to two annas. Mediums from Travancore and the Wynaad met with useful support, but were an irregular one to two annas easier. Residual and Milled descriptions found buyers at one to two annas below last levels. Demand for Black Grainy descriptions were very slack and these sorts were largely withdrawn.

Production of tea in Southern India was higher at 12 million pounds in November as compared to 10.9 million pounds in the corresponding month of the previous year. Total production for the eleven months ended November 1956 was, however, lower at 115.8 million pounds as compared with 121.3 million pounds in the corresponding period of the previous year.

In the Sale No.14, held at Chittagong, offerings were 15.572 packages of Leaf grades and 4,774 packages of Dusts. Once again, blenders and export buyers were active. The market opened very strong at up to As 4 per pound over last rates with Broken Pekoes and BPS in most demand. Toward the end of the sale, prices were generally one to two annas above last rates. Whole Leaf grades, however, continued their gradual decline.

Except for very occasional lots, bazar buyers and Karachi operators were very quiet in the Dust section. Nevertheless, blenders showed keen interest at a drop of around one anna per pound. Plain Sylhet Dust was quoted at Rs 1-13-0. Sale No. 15 will be held on the 16th January when offerings will be about 15,680 packages of Leaf grades and 4,646 packages of Dusts.

Tea stocks in London, as on the 28th December 1956, were 62.45 million pounds as against 61.08 million pounds in the previous week. Total amount to be landed on the same date was 27.86 million pounds. Deliveries, during the week, totalled 4.68 million pounds and landings 6.05 million pounds. Total afloat, on December 18, 1956, was 78.03 million pounds including 57.25 million pounds from Calcutta; 4.18 million pounds from Chittagong; 2.52 million pounds from Cochin; 12.70 million pounds from Colombo and 1.37 million pounds from other Ports.

In the Export Quota section, rates moved between 45 and 48 pies per pound. Business was reported done at these levels.

The following table shows the price trends during the past two sales (price per pound):—

	Week ended 10-1-1957	Week ended 3-1-1957	Year ended 1956
	Rs. a. p.	Rs. a. p.	Rs. a. p.

Medium Assam CTC	2 5 0	2 6 0	2 6 0
Best Assam CTC	2 11 0	2 9 0	2 11 0

World of Jute

Hessian Stocks Lowest Since November 1950

WITH the release of figures relating to jute goods stocks at the end of December 1956, the latest statistical position of the Indian jute industry as far as it concerns its manufacturing side can be gleaned. The picture that emerges is of a variety which is encouraging in more than one respect. In the first instance the decline of 5,100 tons in total stocks as compared with November 1956 is itself higher than general market expectation. Even as late as Monday this week the market place was full of rumours regarding an increase in stocks. Even the most optimistic of operators expected only a negligible decline, if at all.

The announcement early on Tuesday that stocks of jute goods with mills at the end of December 1956 totalled 96,600 tons as against 101,700 tons at the end of the previous month came as an agreeable surprise. Of the total, hessian stocks amounted to 20,000 tons recording a fall of 4,700 tons, sacking stocks amounted to 65,100 tons which were 2,000 tons less than the previous month's and stocks of others increased by 1,600 tons to 11,500 tons. The figures compare with total stocks at 63,500 tons, hessian stocks at 23,500 tons, those of sacking at 34,400 tons and those of other varieties at 5,600 tons at the corresponding period of 1955.

It will be seen that though stocks have continued their downward trend, the overall position is not as satisfactory as it had been a year ago. Total stocks are still too large to engender any feeling of complacency. Moreover, the next few months are usually a slack period in foreign business. It will be seen that quite a large portion of the total stocks is accounted for by Sackings. Out of the total of 96,600 tons, as much as 65,100 tons are under sackings, leaving only 31,500 to be shared by hessians and other varieties. Sacking stocks are thus one and a half times the monthly rate of production on the basis of output during November.

Turning to hessian, it will be found that stocks of this category of goods at 20,000 tons are lowest since November 1950. They are 4,700 tons lower than last month and 3,500 tons lower than at the corresponding period of last year. Further, they are slightly higher than half-month's production. It is significant to note that hessian stocks have touched a new low in many a past year at a time when mills are steadily switching on their sacking looms to production of hessian.

✱

The jute goods market commenced the new year on an irregular trend. On adverse rumours and in absence of foreign enquiries, hessian ruled quiet but sackings showed some improvement toward the close of the opening day due to bear covering. Presumably due to apprehensions about increase in December-end stocks of jute goods, the undertone continued to be quiet in the next few days. On Friday last, prices sagged further on heavy hessian unloading by a prominent bull operator in the Fatka. Hessian 40″×10 oz Ready which started the year with the rate at Rs 45-12 was steadily pushed down to Rs 45-4 by Friday. B Twills Ready also reacted to Rs 118-12 from Rs 120. April-June Hessian 4″×10 oz was considerably lower at Rs 42-10 as against Rs 44-8 with B Twills for the same position declining to Rs 119-12 from Rs 121-4.

Rumours regarding increase in December-end stocks continued to affect sentiment adversely on Monday. With bear selling pressure in

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

AS a political party, the Indian National Congress has one overwhelming advantage over the others in the country. It is that it is in the central tradition of the Indian politics of the last 70 years. Indeed, the political history of India of the last half-century and more can hardly be written without its being at the same time the history of the Indian National Congress to a large extent. The Congress was until independence the symbol of progressive nationalism in the country; and, despite Mr Jinnah, its claim to represent the people of India as a whole has not been seriously challenged unless when it suited the challenger. Secondly, as Mr Nehru recently mentioned, almost every one in the other parties, especially those that were not too overtly communal, was at one time or another in the Congress. And, even among the communalists, there were persons like Mr Jinnah and Mr Ramaswami Naiker who were in the Congress before they launched on their career as frank and unabashed communalists. As for the Socialist parties, one of their chief sources of ineffectiveness has been their inability to cut themselves adrift, despite every obvious and petulant effort, from the apron strings of their parent. Mr Jayaprakash Narain talks a language which is in some respects more conventionally "right wing" than Mr Nehru.

✱

After independence, the Congress was the logical successor to the British Government, and the others who were opposed to the Congress found that, besides the psychological disabilities I earlier mentioned, they were despite themselves the "opposition" and therefore had actually to set about acquiring a policy. Except for the Communists and the Communalists, this was in many ways an almost hopeless enterprise. And, of these two, the Communalists had their backs broken by the supreme folly of Gandhiji's assassination. As for the Communists, their differences with the Congress were fundamental and, for a long time, they were able to keep their identity distinct by attacking the Congress both for their internal and external policies. Then came the change in the policies of international communism, roughly dating from the death of Stalin, which seriously handicapped the Indian communists. (Many of them remember with mortification the unsolicited testimonial that the Soviet Union gave to Mr Nehru's Government just before the Andhra elections in early 1955). In consequence, they quickly dropped the earlier attitude of pretending that India was still Britain's colony. They also found that they could not assail India's foreign policy with any degree of regard for appearance of conviction or solidarity with their elder brothers of the Soviet Union. And, more recently, the Congress's more overt commitment to Socialism has taken the wind out of the sails of their opposition to the Congress as the representative of the big business in the internal policies of the country.

✱

Indeed, in some respects, the attitude of the Communist party is extremely grotesque and, short of a theory of expediency, impossible to explain in terms familiar to Communist theory. For instance, their election manifesto talks "of the legitimate rights of the Capitalists" and of the need for "ensuring" these rights! I was under the impression that the only right the capitalist was vouchsafed under Communist dispensation was the right to be expropriated. But wonders never cease! Not only do the Communists want to take under their protective wings the capitalist, they have tears to spare for that pet abomination, the Bourgeoisie: For, the manifesto promises to improve their lot, too!

But, to return to the Congress: The second advantage that the Congress possesses is the fact that it does represent in a large measure the uncommitted middle opinion in the country. In its avoidance of extremism of all sorts, and in its pragmatic approach to the problems that face the country, it has the backing of the vast majority of the common people of the country. And, thirdly, the Congress is in the rather enviable position of being able to take credit as a political party for the achievements of the Government in the last few years. This last advantage is in some respects a most formidable one, for, the opposition is reduced all the time to the role of a destructive critic who is for ever pointing to failures. Therefore, if the Congress is also modest in its claims on behalf of the Government and ready in its admission of errors (which it can, in the light of Government's real achievements, afford to do), the opposition will be reduced to the position of a carper without being able to claim any credit for the achievements.

✱

These and the inherent and insuperable advantage the Congress possesses in the personality of its de facto leader have given it a serene confidence that the coming elections will see it back in power both in the Centre and in the States. There are no doubt difficulties to be faced, and special circumstances to be encountered in areas that were affected by linguistic chauvinism, but the general prospect is such as to make the Congress look forward with optimism. This optimism is reflected in the presidential address of Mr U. N. Dhebar to the sixty-second annual session of the party in Indore last week.

✱

In his address, Mr Dhebar claimed that the recent amendment of the objective clause of the Congress constitution to include the word "Socialist" before "Co-operative Commonwealth" was "one more step in the evolution of the Congress and the direction in which we propose to go." Unless one were to consider this as a piece of rhetorical flourish—and Mr Dhebar's speech contained many of them—it is rather an odd thing to say. One would have imagined that, with the passing of the Avadi resolution two years ago on the ideal of "socialistic pattern of society", the commitment of the Congress to the ideal of socialism was complete. Therefore, the formal restatement of the Congress objective as a socialist co-operative commonwealth cannot with any particular propriety be considered a new mutation of Congress policy.

✱

For the rest, Mr Dhebar's address contained a cogent and convincing dissertation of the real raison d'etre of the Congress ideal of Socialism. Despite repeated elucidation of the real nature of the Congress policy in this regard by Mr Nehru, there is constant difficulty encountered, chiefly by the conventional associations of the word Socialism. It would be a great help in discussion if a new word could be coined to describe the kind of society envisaged by the Congress idea of "Socialist Co-operative Commonwealth." But it is not altogether certain that the Congress itself would like such a new description, for, at least to a certain type of Congressman, the appropriation of the advantages to be gained by the use of the admittedly ambiguous expression is not unwelcome. But Mr Dhebar's exposition of the Socialism the Congress wants can reasonably be taken to be the official one. This brand of socialism, both in its ordering of the ultimate ends it is to sub-serve and in the reasons it gives for the inevitability of adopting certain methods of planning, is unexceptionable.

✱

To put it briefly, the aim is to achieve a qualitative change in the lives of our people. What precisely is the quality that is aimed at? Answering this question, Mr Dhebar relates it to the preamble to our constitution, and emphasises that Socialism is merely a means and not an end. In his own words: "The fulfilment, therefore, of the goal of socialism demands the backing of conviction born of the full understanding of the reason why and the purpose for which we want it. The fact that India is now free to legislate capitalism out of existence cannot be a sound reason for socialism, nor the mere need for economic development. Material happiness has been secured in other countries in various ways. West Germany has attained her pre-war level of living without ever talking of socialism. And so also has Japan." Again, "we have to understand the principles and values of life that lie enshrined in our sacred constitution beyond all measure of

doubt and suspicion.....It would be....wrong to approach these principles as mere desirable objectives. They constitute the life breath of a progressive and evolving nation. They are the very essence of which nations are made. Social inequality, economic injustice, political serfdom, deprivation of essential liberties, lack of equality of opportunity in life and disregard of individual freedom end in the nation's destruction or result in stunting its growth. We have to digest this great truth about democracy.....It is only in the framework of democracy that the individual initiative can develop to its full."

✱

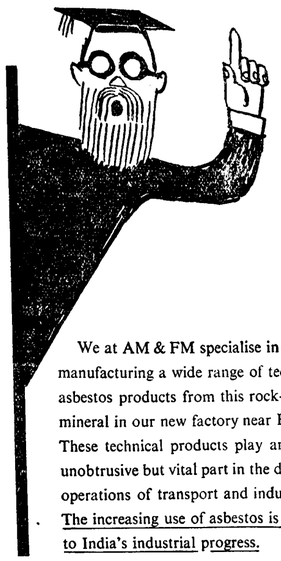
The end, then, is what is usually described as liberal values, the right of the citizen to a rich and socially satisfying individual life. To put it differently, the end is to give to every individual the right for a socially significant personal expression of all that is best and valuable in him.

✱

This manner of formulating our ultimate ends is inherent in our traditions and background. Confining ourselves to the immediate past, three strands in our political life of the last half-century make any other kind of socialism impossible. In the first place, there is the deeply impressed lesson that Gandhiji taught of the necessity for keeping the means pure in order to achieve our ends. The second strand is the fact that our recent history has taught us the value of achieving our ideals without violence and conflict. Mr Nehru dealt at length with this aspect of the matter at Indore when he ruled out the possibility of imposing any particular brand of socialism on the people. He emphasised the need for taking the 300 million people with us, whatever we do. Otherwise, we shall generate conflicts that will take generations to resolve before we get back to the task of socialising the country. The history of other countries where socialism has been imposed by bloody violence has no lessons to offer us except the negative one of their not being useful to us. The third strand is, of course, our liberal democratic tradition inherited from our association with the British. The ideal of individual liberty as a desirable end in itself has been too deeply ingrained in us for us to wish to throw it away. Even our stress on equality stems from our desire to give the under-privileged the valuable gifts of liberty.

✱

Once it is realised that the act of giving the fruits of liberty to the masses of our people involves the raising of their appallingly low standards of living, then the problem is one of how best to do the latter. It is in this context that the inescapability of the policies we now pursue and loosely described as socialism becomes clear. Mr Dhebar brings out this fact persuasively: "The need for socialism in India arises from the conditions in India. India has to provide the transition from a colonial-cum-feudal economy to a modern economy. The agrarian pattern of her economy, the heavy pressure on land, a large unemployed and semi-employed personnel, ever increasing population, extremely low level of living, great privations in the sphere of even minimum needs of human life have to be taken into account. So the problem for India is not merely to revive a shattered economy. The problem is to build up an economy from A to Z, and simultaneously to meet the most exacting but legitimate, unavoidable and the most urgent calls of humanity.....It throws the responsibility on India's leadership to view the whole problem of needs and resources in the totality and work on the basis of comprehensive planning, making sure that all the available resources of the nation, whether they are handled by individuals or groups or Government, are put to the maximum use to meet the needs of the people. But socialisation of the resources by itself does not produce socialism in a country. Social fabric or structure must be so organised that it helps in the process. The social instincts, social behaviour, social values of life, not only must be in keeping with the plan, but must inspire the social effort, the social production and the social utilisation."



✱

This inescapability of a particular mode of raising our living standards imposed by our very backwardness, in other words, offers us unique opportunities for making fundamental changes in social attitudes. This is the really important and truly revolutionary

Bombay Review

The Telco Speech

IT has been a particular apprehension of the private sector in national activity that, in fields where State enterprise is competitively engaged, an undesirable discrimination may be shown in favour of the Government undertaking. This arises from the fact that Government possess the powers, if I may say so, to enforce their will if they think such action was necessary. And, in this context, the rival claims of State and the private sector upon available wagon capacity were last year in the nature of a controversy. These apprehensions have, in another field of activity, been falsified. And Mr J. R. D. Tata, at the annual general meeting of the Tata Locomotive and Engineering Company Limited held recently in the Gateway City, acknowledged this fact.

One aspect of Telco operations—in fact, its name describes this activity—is the manufacture of locomotives. There is, however, another producer of locomotives, the State-run Workshops at Chittaranjan. But the consumer for all locomotives is Government. For some time past, Telco has been engaged in representing to Government its case for a selling price based on its higher cost of production. The matter was then referred to the Tariff Commission. The Commission duly conducted a thorough and detailed investigation. And, in the matter of this investigation, Mr Tata says:

> "It is gratifying and reassuring to note that, in an industry in which Government is itself a competitor as well as the sole customer, it decided to refer a dispute about costs and prices to an impartial statutory inquiry and abided fully by the resulting recommendations even though they went to some extent, against its views."

The Tariff Commission came to the conclusion that there was no sound or fair basis for comparison between the cost of production at Tatanagar and the prices of imported locomotives. Instead, Telco's operations and costs are compared with those of Chittaranjan; and the Commission's conclusion is that Telco's costs do not compare unfavourably. The fact remains, however, that the inquiry has pointed to a somewhat lower efficiency and higher labour costs at Tatanagar as compared to Chittaranjan. Telco's Chairman has indicated that there may be some re-deployment of labour with a view to improving the efficiency and economy of the Works. Prices have been fixed for two years until the end of March 1958; and since these have been worked out on the basis of better productivity and lower labour costs, it is to be presumed that Telco's scheme for re-deployment of excess labour will swiftly be implemented.

The fact that prices have been fixed in advance has encouraged Mr Tata to express his confidence that, barring unforeseen circumstances, the company will achieve "the targets of production and costs set before us by the Tariff Commission". Moreover, the expansion programme to increase the locomotive capacity to 100 complete units a year is well under way, and Mr Tata reports that "it is now expected to be completed a few months ahead of schedule". Such expansion, we may be sure, will contribute toward a reduction in costs.

Telco is also proceeding with the setting up of a steel foundry which will reduce costs and "end our dependence on imported steel castings"; this foundry is expected to go into production by the middle of this year.

Finally, in regard to locomotives, Mr Tata has drawn attention to the fact that India is one of the few countries left in the world which still depends on steam for rail traction. He foresees as inevitable a change over to diesel locomotives with either electric or hydraulic transmission. Telco's Chairman is confident that the company would be able to play its due part in such a process of change over:—

> "With the versatility built into our plant and the human skill and experience we have developed over the years, our Company will be especially well fitted to play an important role in the "dieselisation" of the country's railroad system and I hope, when the time comes, we shall be given an opportunity to do so."

Shareholders were next informed about the second important aspect of Telco's activities. German efficiency and Tata ability have combined to produce in India the Tata-Mercedes-Benz truck and bus chassis. These trucks are in such demand as often to be unavailable except at grey market rates. The demand for these vehicles, as Mr Tata points out, "continues to outstrip supply". The target rate of 6,000 units a year was exceeded toward the end of the year; and plans are now in hand for a further expansion of the Auto Division. In this regard, too, private enterprise conveys to Government its appreciation of a policy calculated to increase production in the industry. Mr Tata says:

> "Our thanks are due also to the Government of India for the realistic and far-sighted policies they have adopted towards the automobile industry. The progress made by the industry in general and by our Automobile Division in particular provides, to my mind, a remarkable example of what can be achieved with the help of well conceived and consistently applied policies."

Mr Tata's speech at the Telco meeting is, thus, important for two reasons, besides the news of specific import to shareholders regarding expansion of capacity. For, on two issues, the Telco Chairman has expressed what amounts to complete appreciation and endorsement of Government policy. On the one hand, he has welcomed the acceptance by authority of the Tariff Commission's recommendations, some of which, he points out, run counter to Government's views; this is scrupulous honesty, and is suggestive that the private sector need fear no apprehension of discriminatory treatment by Government in fields where the State is competitively engaged. On the other hand, Mr Tata is wholeheartedly in praise of Government's automobile policy which, he states, is calculated to encourage production in every way. I am heartened by this statement of faith in Government policy.

TEA BOARD

EXPORT QUOTA 1957-1958.

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April 1957 to 31st March 1958 are required to submit an application therefor, which must be filed with the Tea Board not later than the 1st February 1957. No export quota will be allotted unless an application under this rule is duly filed. Application forms have already been issued to all registered estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaires who have not received the application forms are requested to apply for these, in the case of estates situated in North India, to the Controller of Licensing, Tea Board, 27 & 29, Brabourne Road, Calcutta-1, and, in the case of estates situated in South India, to the Joint Controller of Licensing, Tea Board, Fort Cochin, Cochin-1, South India.

Atomic Power Station by 1961?

Generation of electricity from the atom in India is no longer a distant prospect but seems to be an almost accomplished fact. It is certainly a great credit to the Atomic Energy Department of the Government of India to be able to announce that it will be in a position to put into commission the first atomic power station for generation of electricity within nearly five years of the going into production of the first atomic power station in the U.K. Dr Homi J. Bhabha who made the happy announcement that the first power station would most likely be set up before the completion of the Second Five Year Plan, in Bombay recently, however, had not omitted to record the fact that India had been greatly helped by various international conferences in the advancement of her atomic energy research in general and the International Conference on the Peaceful Uses of Atomic Energy held in Geneva in August 1955 in particular.

Three countries, U.S.A., U.K., and Russia, are known to have made great strides in harnessing the atom. While the emphasis has for a long time been on the destructive aspects of the atom, in recent times there has been a welcome change in the emphasis to the peaceful uses of atomic power. Presumably due to the urgent need for augmenting their power resources the UK and Russia have been bestowing active attention on measures designed to put atomic power to peaceful uses, and the first atomic power stations have already been put into commission in the two countries. In the case of the USA the progress has been stupendous.

In India it has been realised that it is of utmost importance that the country should remain abreast of developments in the field of nuclear power. Outlining the progress made by the Atomic Energy Department, Dr Bhabha pointed out that generation of electricity would be the first use made of atomic energy in India. Atomic powered ships would follow with the provision of motive power for locomotives coming next in the programme of development.

Though the first atomic power station will largely be of foreign design and make, it has been pointed out that adequate facilities will be provided at the Atomic Energy Establishment at Trombay for developing power stations of indian origin. According to Dr Bhabha, India will soon become largely self-sufficient in raw materials with a sizable increase in technical needs as well.

*

Cotton & Hair-Belting Industry

Though the cotton and hair belting industry is occupying a comparatively minor position among the nation's industries today, it is to be expected that with the rapid industrialisation envisaged in the second and subsequent five year plans, this industry will have a bright future. Much depends, however, on its ability to produce high quality products at reasonable prices.

There are now ten factories engaged in the production of cotton and hair beltings. The installed capacity of these factories on single shift basis is placed at 1498 tons of belting. The progress of the industry is by no means uniform. Whereas in 1954 production amounted to 868 tons, in 1955 only 855 tons had been produced. There has, however, been a sizable increase in the current year, production in the first ten months of 1956 totalling 703 tons. Of the two varieties, production of hair beltings shows an upward trend while that of cotton belting shows a decline with the result that there is a large unutilised capacity in the industry as a whole.

In the course of his speech in opening the public enquiry into the question of continuance of protection to the industry, Mr K. R. Damle, Chairman, Tariff Commission, pointed out that while consumers in general seemed to be satisfied with the quality of indigenous beltings, the Railways had not found them upto the mark.

The industry is enjoying tariff protection for some considerable time now. The first enquiry was held in 1947 and protection was granted upto 31st March 1950, by converting the then revenue duty of 7½ per cent ad valorem into a protective duty. The second enquiry took place in 1949 and protection was extended upto 31st December 1952 at the same rate of duty. Government extended the protection upto 31st December 1953 and again till 31st December 1954. The duty was raised to 10½ per cent ad valorem by the Finance Act of 1954. The third enquiry was conducted in 1954 and protection extended upto 31st December 1956 at the same rate of duty. Recently the protection has been extended upto 31st December 1957.

There is every reason to hope that the industry will be able to establish itself firmly especially when it has no problem in regard to raw materials except in the case of hair yarn. As for marketing the products there need not be any anxiety because with the emphasis on industrialisation, both large scale and small scale, there will be a tremendous increase in the demand for beltings of all kinds.

GATEWAY MARKETS

Futures Trading in Non-Ferrous Metals

ONLY one Association in the country—the Bombay Metal Exchange Limited—applied to the Forward Markets Commission for recognition for conducting forward trading in non-ferrous metals. It is now learnt that the Government of India have accepted the recommendation of the Commission and granted recognition to the Bombay Metal Exchange for conducting futures trading in copper, zinc, lead and tin throughout India for a period of three years. The only condition is, that the Exchange should carry out modification in its Articles of Association and bye-laws on the lines suggested by the Commission.

Meanwhile, price movements in the Copper market were confined to a narrow range on weak London advices, although offtake locally was good. It was reported that 50 to 75 per cent of the incoming stocks had been sold out. Ready was quoted around Rs 195 per cwt. In the Zinc section, conditions ruled steadier with ready quoting Rs 69-4. Demand for Lead was moderate and the rate was quoted around Rs 82. Demand for Tin was quite good with the rate quoted around Rs 134 per quarter. Due to higher price ruling in Calcutta, there has been fair upcountry enquiries for the metal.

On the London Metal Exchange, trading in Copper was dull and featureless, the spot rate being quoted lower at £269 per ton against £271 in the previous week. Easier conditions characterised the Zinc market where the rate was quoted at £101 for first half-January delivery against £102. Little interest was shown in the Lead section and the rate was quoted lower at £116¼ per ton for first half-January delivery against £117¾. The Tin market was quiet, both in Singapore and London. Supply and demand position is reported to be pretty well-balanced. The rate is quoted around £780 per ton.

*

Gold & Silver

On the Bombay Bullion Exchange, Silver continued to forge ahead under persistent speculative support, while Gold remained quieter following reports of increased arrivals. With holdings almost tightly held by a few speculators and with the onset of the busy season, prices are generally expected to advance in the coming weeks.

In the Gold section, Posh delivery opened at Rs 104-5 and, after touching a high of Rs 104-15, receded towards the close to Rs 104-5-6. Maha delivery started at Rs 104-14 and, after touching a high Rs 105, finished the week at Rs 104-12. Spot was quoted around Rs 104-2, the highest touched being Rs 104-5-6. Sovereign ruled nearly steady at Rs 67-12. Arrivals of gold amounted to 3,000 tolas against an offtake of 5,000 tolas. Unrefined metal receipts totalled 4,000 tolas.

Silver Posh delivery, after starting at Rs 174-4, advanced gradually to Rs 177-2 at the close. Maha delivery started at Rs 177-6 and declined to Rs 176-14; but advanced again at the close to Rs 177-12. Spot moved between Rs 176-14 and Rs 177-2. Arrivals of silver amounted to three bars against an offtake of 10 bars. Unrefined metal receipts totalled 8 bars.

*

Oils & Oilseeds

The Government of India have decided that export of castor oil, cottonseed oil and linseed oil will continue to be licensed freely up to the end of June, 1957. There will not be any quantitative restriction in regard to the export of castor oil. The Government have also decided not to release any fresh quota for linseed oilcake for the present; but the validity of export quotas, granted up to the end of December 1956, is extended up to January, 1957.

Following the above announcement, conditions in the oil and

(Continued on next page)

Bombay Review

World *of* Cotton

New Year Augurs Well

THE New Year has augured well for the Cotton market. The nervous trend, witnessed last month, has been replaced by marked improvement in sentiment on renewed buying and short-covering by prominent operators. The strength has emnated from rumours about an additional export quota of 1.5 lakh bales of ¾" varieties and of a special small quota for Vijay for China.

As regards production, the aggregate outturn for the 1955-56 season was finally put at 43.50 lakh bales as compared with 51.90 lakh bales in the previous season. It is estimated that production during the current season will be around 55 lakh bales.

As far as consumption is concerned, it has been generally on the high side. Indian cotton consumption improved from 41.38 lakh bales in 1954-55 to 43.65 lakh bales in 1955-56. The estimated consumption figure for 1956-57—at around 47 to 48 lakh bales—will be a new peak level in the post-Independence era. In the case of foreign cotton, consumption has declined from 6.25 lakh bales in 1954-55 to 6.03 lakh bales in 1955-56. For the current season, inasmuch as there is a difference of only 7 to 8 lakh bales between production and consumption (granting imports to be normal), the export figure may not exceed this.

In the light of the above, it will be seen that there is practically nothing to worry about in respect of the cotton economy as a whole, the exception being provided for by the unhelpful bearish trend in prices. Even this can be set right if only the Government are more accommodative in releasing export quotas as and when there is need for the same and tone up the market sentiment.

Meanwhile, new crop will start moving in Saurashtra within about six weeks. Growers apprehend that they will be hit hard without Government's permission for export since their usual customers—mills from Delhi and Uttar Pradesh—have, this year, bought a substantial quantity from the Punjab. The crop in Saurashtra is expected to be around 4 lakh bales this year. The overseas demand for the growths is, however, very limited for the time being and heavy unofficial premia for export licences have made the problem more difficult.

×

FUTURES MARKET:

Cotton futures staged a brisk recovery in the initial part of the week due to bull support and considerable replacement buying as prospects of an immediate announcement of an export quota seemed to have brightened up. In fact, market circles had been expecting an announcement along with import policy, Talks, that the disparity between the spot rates and the futures would narrow down with the proximity of the current settlement, gave fresh impetus to the small bulls who sat tight on their holdings even at high level. ICC Jharilla March started at Rs 624 and finished higher at Rs 644-8. Similarly, ICC Vijay April started at Rs 725 and finished higher at Rs 741.

×

SPOT MARKET:

Activity in the Spot market also brightened up when mills started buying cotton on a sizeable scale. There was also substantial covering by those who had sold cotton for December delivery. Good business was reported done in Berar and Khandesh Jharillas and other staple varieties.

On the export front, exporters showed keener interest on expectations of an early announcement of the quota. Good demand was indicated in Oomra Deshi from shippers who also appeared to have covered fully against their nearby commitments.

Among foreign varieties, US afloat cotton came in for a few enquiries; otherwise the market was neglected. Fresh business put through, during the past few days, had not exceeded 1,000 bales. Mills were reluctant to augment their stocks of foreign growths since they were burdened with heavy accumulation of fine and superfine cloth. There was a general tendency to await the official import policy for Egyptian and sterling area cottons for January-June, 1957 period.

Speculation is rife in market circles that imports of Egyptian cotton will be allowed freely, as the statistical position of this variety is rather tight. This explains the continued firmness in the Alexandria cotton market despite lack of spinner interest. It remains to be seen how far India will be able to go in for Egyptian cotton at the prevailing prices, which are certainly on the high side from the point of view of Indian mills.

Rumours are also current that the Government will soon allow an import quota for East African cotton to the extent of one lakh bales. The import trade, however, points out that the announcement, if any, should come as early as possible since more than 60 per cent of the crop in that country has been already marketed. While the futures sales programme is not yet knwn, the next auctions are expected to start early next month.

Following rates were quoted:—Oomra Rs 740 to Rs 770; Dhollera Rs 700 to Rs 720; Jharilla Rs 745 to Rs 780 and Vijay Rs 850 to Rs 860.

×

LIVERPOOL COTTON MARKET:

Trading on the Liverpool cotton market remained quiet; but, in the absence of any selling pressure, rates for nearby positions improved on trade calling with some mill fixations and renewed inter-month switchings. Egyptian Karnak contract January-February delivery was quoted at 60.00d, while Sudan contract January-February was nominally quoted at 61.30d.

×

NEW YORK COTTON MARKET:

Prices in the New York cotton market, after initial firmness, eased off at the close due to profit-taking and hedging. The initial firmness was attributed to trade and commission house buying under the lead of nearby March where additional short-covering found limited offerings. Support in new crops was attributed to the view in some quarters that the loan on the 1957 crop is likely to be around the level of the 1956 crop loan. Upto now, the trade generally expected a lower loan. Spot Middling was quoted around 34.65 cents per pound.

×

CLOTH AND PIECEGOODS:

Trading conditions in the Cloth and Piecegoods markets were slightly better, dealers having reported better enquiries from consuming centres. The actual business materialised did not, however, reach any large proportions. Demand for fine and superfine goods was more pronounced, while coarse and medium varieties evoked only modest enquiry.

The performance on the export front was not quite encouraging. Only scattered business was reported done with foreign countries. Ethiopia was reported to have accounted for some business in Drills. In view of the political unrest in Indonesia, fresh business with that country was not done.

*

GATEWAY MARKETS

(Continued from previous page)

oilseeds market remained steadier with prices registering an all-round moderate improvement on short-covering and fresh bull support. But lack of follow-up support caused a slight decline in prices toward the close of the week.

Discouraging private advices from the United States and the absence of overseas enquiry depressed sentiment in the Castor-seeds section. Turnover was 10,000 candies. May delivery opened around Rs 169-8 and, after touching a high of Rs 169-12, receded towards the close to Rs 166. Ready was quoted around Rs 37-12 and Castor oil, commercial quality, at Rs 22-0.

The continued reports of increased arrivals and disappointing spot advices affected the Groundnut section where February delivery receded to Rs 155-12 from a high of Rs 158-0. Ready Bold was quoted at Rs 32-6 and Groundnut Oil at Rs 18-4.

Linseed section ruled quiet with a small turnover May delivery opened at Rs 29-10 to ease off at the close to Rs 29-8. Linseed ready was quoted at Rs 34-10 and Linseed Oil at Rs 18-2.

In the Cottonseeds section, February delivery moved between Rs 90-8 and Rs 91-8 to finish at the former level.

*

Yarn

Thanks to a drastic cut in the import quota for the half-year ended June 1957, firm conditions prevailed in the Art Silk Yarn market. Prices of Staple-Fibre yarn moved up in sympathy.

The overall import quota for art silk yarn has been reduced from 25 to 15 per cent. The actual extent of the cut in the case of 120 deniers and 150 deniers comes to 5 per cent and 2½ per cent respectively. The only redeeming future in the new import policy is the Government's decision to link import licences with the export of rayon fabrics on the basis of 2/3rd import licences to be granted to exporters.

The Cotton yarn section, however, continued to be listless and some counts showed a further fall in the absence of support from weavers. The main reasons were the growing financial stringency and lack of demand from the consuming centres. Since there is no change in the import policy for cotton yarn, prices of 80s have declined just in sympathy with the general price pattern elsewhere by about three annas per pound.

Parties and Promises

WITH the general elections just round the corner, all the principal political parties have come out with their manifestoes. How far the various promises made in these documents are going to prove decisive in the choice by the electorate is problematical. The reason for this doubt is not the much advertised illiteracy of the masses who have been given the right to vote: On that point, such data as we have about the electorate of the so-called advanced countries do not give any justification for automatic assumption of greater political discrimination of the merely literate. The reasons that lead a person to vote for a particular candidate, wherever he may be, do not always have any relation to wisdom or justice of what he or his party stands for. In countries where party stratification is fairly complete, as in the US or the UK, there is the solid block of loyal votes from the respective adherents. These persons vote, not wholly from unworthy motives, for "their party, right or wrong." For the rest, a thousand small things influence the voter's decision, some of them as trivial as the personal charm of the candidate, his local politics or the brand of cigar he smokes.

And, as for experience in our country, it is true that no certain conclusions of political maturity can be drawn from the first general elections. But we have had enough indication that the naive belief that, because a man cannot read the newspaper, he cannot have intelligent views on how to run the country, is wholly unfounded. I do not say that considerations other than austere evaluation of the candidate's suitability or the party's ability to deliver the goods do not enter into the calculations of the voters in India. But, by and large, the issue is determined here, as elsewhere, by personal contacts with the masses, and the persuasiveness with which one's policies are related to their welfare, and some general principles of acceptable political and social conduct.

As for the contents of the manifestoes, there is practically nothing in them that would surprise any one who has been following the activities of these parties. An exception must, however, be made of the Communist party's manifesto, to which I shall refer in a moment. Meantime, it is necessary to note that, on the basis of their solicitude for the masses of our people revealed in these documents, it would be difficult to decide whom to choose as the custodian of our fortunes for the next five years. Secondly, Socialism as a panacea is claimed by most of the parties, including the Congress; and, if any one were to make up his mind merely on the basis whether or not a particular party is socialistic, he will be hard put to it to choose from among rival claimants. There are, of course, specific questions like nationalisation and ceiling on income and the expropriation of foreign capital, severance of the commonwealth tie and so on, which are recognisable differences; but the most important feature of the manifestoes of the parties not in power is a general and not too coherent criticism of the one in power.

The Congress, on the other hand, is in the enviable position of being able to appear to ignore completely the existence of other parties. Unlike the others, it has its record to speak for it. What is even more unfair, from the point of view of other parties, is that it is, by an historical accident, in a position to claim as a party the credit for a great many things to which the whole nation, including many who find themselves in other parties, has contributed. As for the post-independent era, the other parties are at a disadvantage of not ever having any record of their own to speak for them. All they can do is to point to the deficiencies in the performance of the Congress and to assert that they would have done things much better—a kind of argument that can always be easily ridiculed.

It is too much to expect that the Congress party would willingly abandon its historical claims merely out of a spirit of sportsmanship. Of course, it is arguable that, if the Congress can do so with a flourish, and tell the electorate that it should be judged only by its performance after 1947, that would again be a shrewd cashing in on the favourable impression such a gesture is bound to create. And, even if the electorate were to take it at its word, it may not be taking any particular risk; for, the other advantage, namely, that it has had a run of the Government in which it has considerable achievements to its credit, would still weigh heavily in its favour. I imagine that, in the actual election campaign, this kind of gesture will be made, particularly in view of its tactical advantages. But, in the manifesto itself, no chances of the sort have been taken. The manifesto traces with obvious pride the historical role of the Congress, beginning with its humble origins in 1885 and continues to recount the achievements of the years after independence. It is, again, inconveniently for the other parties, in a position to claim the credit for the First Plan and the formulation of the Second Plan, to the basic assumptions of which even the Communist party cannot object. Therefore, the Congress is in the supremely unassailable position of a party that has, on its positive side, an overwhelming advantage over the other parties. The manifesto of the Congress reflects serene confidence generated by this circumstance.

The difficulty with the Praja Socialist party is that its real differences on matters of fundamental policy with the Congress are unimportant. As in the old days, when it was the Congress Socialist party, it is really the protestant wing of the Congress. Now that the Congress itself has moved more overtly to the left of centre, the PSP's role is more or less analogous to that of the devil's advocate in ecclesiastical courts. It is a role that is hardly enviable and is certainly one that is incommoding when one is electioneering. It has, therefore, to tag itself on to points of detail, like for instance the nationalisation of mines, mineral oils, plantations, whole-sale and foreign trade in selected items. I wonder whether the Praja Socialist party has worked out the organisational and financial details of all these proposals that it so glibly offers as a programme. On the whole, on details on which it differs from the Congress programme, the Praja Socialist party offers wholly impractical suggestions that do not bear a moment's scrutiny.

The Communist party's manifesto follows the familiar pattern, but has some surprises in detail. I have no doubt that their theoreticians have their explanations, but I find the party's concern for capitalists extremely interesting. The manifesto hopes to persuade Indian capitalists to vote them to power by telling them they have a limited usefulness in the present stage of our development and that it would protect them from foreign competition and that all their "legitimate rights would be ensured." Doubtless, the Indian capitalists would, when their limited usefulness came to an end, cheerfully allow themselves to be liquidated by the party. It is not the theoretical aspect of this tongue-in-cheek assurance that amazes me: as a matter of fact, the limited usefulness of the capitalist in the dialectic of economic development is quite orthodox Marxism. But, to imagine that the prospect of this limited usefulness is going to make the capitalists so wild with delight that they will all rush to vote for them, is either supreme naivete or colossal self-assurance.

For the rest, the Communist party's manifesto is noteworthy for its demand for the expropriation of foreign capital, getting away from the commonwealth and the other familar short cuts to success. If the Communists were to depend upon their manifesto, rather than on their wellknit, fanatically purposeful and trained organisation, on the loyalty of the sections of the public that are traditionally in their support and on the exploitation of discontent over linguistic reorganisation and other local grievances, their chances at the polls are dim. And the Communists know it.

CLIVE STREET GOSSIP

(Continued from page 84)

aspect of the Indian experiment in Socialism. On detail, it will be found that this fundamental modification of the social structure contains features that are not strictly socialist or even strictly "progressive". The emphasis on cottage and home industry, and the multiplication of vested interest in land, are instances in point. But these flow from our need for "answering the exacting but legitimate, unavoidable and the most urgent calls of humanity" mentioned by Mr Dhebar. But this concession to expediency is sure to modify the nature of socialism we attempt and make it perhaps a new experiment in social organisation. It is in this sense that the Indian brand of socialism is an unprecedented phenomenon.

EAVESDROPPER

SOUTH EASTERN RLY. TENDERS.

The Controller of Stores, Garden Reach, Calcutta-23 invites tender No. CS23/56/K6/40(57) for supply of 360 Tons (approx.) of Slaked Lime for Water Softening plants containing 76-85% Calcium hydroxide and moisture 5% maximum in 1-cwt. suitable gunny bags to different watering stations on this Railway during 1957 on Rate Contract basis. Tender Forms are obtainable from his office (B Section) on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 25-1-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender. 2-lbs. Samples in duplicate must be submitted to him before the closing date for approval.

Weights and Measures

Although the report of the Joint Committee of the two Houses of Parliament on the Standard Weights and Measures Bill has not been published yet, it is evident from the Bill, as introduced and passed by the Lok Sabha in the session just concluded that the report has endorsed most of the provisions of the Bill as originally drafted. There was, it is true, no apprehension that the Joint Committe would recommend major changes but doubts had been expressed on the point whether the controversy about nomenclature might not assume undue proportion in the deliberations of the Committee.

Fortunately, the apprehension has proved to be without foundation and apparently the Joint Committee has unanimously rejected the demand for Hindi or Sanskrit names. Mr Nityananda Kanungo, the Minister for consumer goods, who piloted the Bill through the Lok Sabha, speaking on the question of nomenclature gave the simple and sensible reason why the Bill proposed adoption of international nomenclature for the various measures of length, mass, time and electric current. He said that it would be impossible to find cut any set of terms in any language which would be acceptable to the majority of the people in the country. Moreover, the international terms (metre, kilogram, second and ampere) are easily pronounceable and are in current use throughout the world except China.

The Standard Weights and Measures Bill, which will very soon be passed into law, will introduce a uniform metric system of weights and measures throughout the country by a phased programme within the maximum period of 10 years. It is not realised often how important a statute this will be seeking as it does to replace the multitude of local systems which vary from province to province and obstructs the smooth running of the wheels of commerce. The local systems have grown up through usage down the centuries and it is no easy matter for people to unlearn and discard the mental habits formed slowly and in the course of hundreds of years. To many members of the Lok Sabha 10 years seemed to be too short a period to allow for the change. But, as the Minister pointed out while replying to the debate, the character of India's economy was rapidly passing from an agricultural economy to an industrial one. Any further delay, in the circumstances, would seriously hamper later attempts at conversion as has happened in the UK. In fact, Mr Kanungo said, the Government would make earnest efforts to reduce the period for the implementation of the Bill.

Even if such a reduction is not found ultimately possible and the time schedule provided for in the Bill is adhered to, it would be highly creditable achievement on the part of the Government. For, the difficulties are by no means negligible. The problem of sustained publicity on a scale covering the entire length and breadth of the country in a number of languages is sufficient to tax the governmental agencies of publicity to the utmost. The lack of trained personnel necessary for the successful implementation of the Act—inspectors, supervisors, technicians and administrators—will have to be quickly overcome. And, lastly, proper arrangements for the production of the standard weights will have to be made.

Serious as these obstacles are, the importance of the measure and the unanimous and active support it is likely to receive from the leaders of commerce and industry, make it certain that the obstacles will be surmounted and the present anarchy in the realms of weights and measures in the country will soon be a thing of the past.

*

Local Self Government

It is in the fitness of things that the Second Plan has been formulated on the basis of development from the village upward. For, nearly 151 million people in the country live in villages with a population below 1000 and the rural population itself is of the order of 300 million. The Constitution has naturally enjoined upon the State "to take steps to organise village Panchayats and endow them with such power and authority as may be necessary to enable them to function as units of self-government."

It is, however, to be pointed out that progress in the direction of establishing Panchayats as envisaged in the Constitution has not been uniform in all the States. The Planning Commission have stated that rural progress depends entirely on the existence of an active organisation in the village which can bring all the people into common programmes to be carried out with the assistance of the administration.

A significant step was taken toward revitalising local self-government when in June 1954 a Conference of Local Self-government and Panchayat Ministers in States was held in Simla. Since then a Central Council of Local Self-Government Ministers has been constituted with the Union Minister of Health as its chairman, to review the work done by State Governments in the field of local government and give suggestions for improvement from time to time.

Accordin to a publication recently issued by the Central Council, there are 12 Municipal Corporations, 1453 Municipal Committees and Boards, 383 Small Town Committees, 82 Notified Area Committees, 309 Local Boards and 1,23,670 Gram Panchayats. More than half the total number of villages in the country have been covered by Panchayats.

The State of Uttar Pradesh has the largest number of Panchayats —36,139, closely followed by Andhra's 31,818 Panchayats. Next comes Mysore State with a little over ten thousand Panchayats. The Panchayats have been formed for a village or group of villages with a population ranging from 5,000 to 10,000. In Assam the unit comprising a Panchayat is approximately 25,000. The Bombay State leads in the number of Municipal Committees which is 213. Uttar Pradesh has largest number of Town Area Committees —268. Of the 12 Municipal Corporations in the country, 3 are in Bombay State i.e., Bombay, Poona and Ahmedabad and 2 each in Madhya Pradesh and Hyderabad State. Bihar, Madras, West Bengal, Mysore and Travancore-Cochin have one each.

The publication points out that the Bombay Municipal Corporation is in many ways a model for local bodies throughout India. Its constitution, which, in its present form was fixed in 1888 has its triple coordinate authorities consisting of the Corporation, the standing Committee and the Municipal Commissioner Two main reasons are given for the steady and rapid development of the Bombay Corporation as an autonomous and efficient organ of Municipal government. They are the absence of communal electorate or special reservations throughout the history of Municipality and the separation of executive and deliberative functions and the harmony with which the two wings have worked together.

NORTH INDIAN MARKETS

Divergent Trends in Foodgrain Prices

A divergent trend prevailed in Foodgrains prices last week. While Wheat prices flared up, prices of some Coarse grains recorded an easy trend.

According to the figures released this week, the area under Rice cultivation is up by 3 million acres during the current year 1956-57. Last year, 76.3 million acres were under this crop. The crop harvested in many parts of the country is good, particularly in Madras, Andhra, Crissa and Uttar Pradesh, and is expected to better last year's 25.3 million tons.

Prices of rice have recorded a decline in most parts of the country. Compared with October and November, prices in many States have shown a downward trend, ranging from a few annas to a rupee per maund. The downward trend is attributed to Government stock-build-up from internal production and imports.

Like the rice crop, the winter Wheat crop is also reported to be thriving well, especially in the Punjab, Uttar Pradesh, Madhya Pradesh and Rajasthan. Production, it is expected, will be comparable to last year's 8.4 million tons.

The forecast for Millets is also good as last year's, which amounted to 17 million tons.

Meanwhile, sales of wheat in the Hapur market were very irregular last week, mainly due to non-arrival of Government stocks. Consumers' demand was, therefore, concentrated in the open market. Consequently, prices for the commodity registered an improvedent of As 4 per maund to Rs 16 for dara quality and Rs 17-4 per maund for farm quality.

The market for Rice continued to remain depressed as pressure of arrivals of new crop in the market increased. Rates moved between Rs 22-0 and Rs 25-8 per maund, according to quality. Gram was in good demand and prices recorded slight gains. Some of the coarse grains, however, eased as slight rains brightened prospects of the coming crops. As supplies of seasonal coarse grains, viz., Maize and Bajra, were reported to be satisfactory, prices for these ruled quietly easy.

Slack outside buying enquiry, despite poor stocks, accounted for quiet conditions in ready Pulses. Demand for Arhar was dormant and the stock position remained unchanged. Other Pulses eased slightly in sympathy with peas and arhar.

Rural Medical Care

THE Community Projects and Extension Blocks are designed to offer to the rural population of India the minimum amenities of life for which political freedom stimulated expectations. It is significant that the Estimates Committee's Report on the Community Projects describes them as a means of repaying to the rural areas a debt long due from the urban.

Whatever might be the justification for this description, it is an inexorable obligation on the part of the State to lift the level of consumer expenditure, particularly among the lower income groups and, as the generation of income is not expected to progress at a sufficiently satisfactory pace, to provide to these sections a large volume of amenities free of cost.

Employment, education and medical care are the three spheres in which effort will have to be concentrated. In respect of employment, the aims of the Second Plan are admittedly modest. It may perhaps take another ten to twenty years before rural unemployment and under-employment, now in colossal dimensions, get wiped out. As for free education, the Prime Minister himself has reaffirmed the impossibility of extending it universally, for financial and other reasons.

Medical care remains a field in which postponement of State effort would be utterly blameworthy. The twenty-third Andhra Provincial Medical Conference, held at Tirupati, has again focussed attention on some of the immediate problems which Governments have to contend with, in their attempt to augument the flow of medical aid into rural areas. Though there are marked regional differences in the development of rural medical services, there is scarcely any difference of opinion on the desirability of a common, fairly uniform policy for the whole of India, in many matters such as medical education, drug control and the relationship which should exist between the indigenous systems of medicine and the foreign.

In the last week of December two conferences of practitioners of the Western system of medicine, one meeting at Trivandrum and the other at Delhi, discussed these problems. At Trivandrum, the spokesmen bemoaned the tendency of practitioners in indigenous medicine to prescribe antibiotics and other modern drugs. One cannot help thinking that the plea for the mutual synthesis between the two systems of medicine is getting an inconveniently premature response.

Anyway, as this kind of synthesis has come to occupy a place among the controversial ideas at present, it is imperative and urgent that the Government alike should soon make up their minds as to how far it is practicable and to take such steps in the field of medical education as would give practical validity to well-understood decisions.

At Tirupati Dr C. Suryanarayana Moorthi, who presided, deplored the fact that the practitioners of Western medicine were not keen on incorporating in their pharmacopoea indigenous drugs used successfully by practitioners of Indian medicine. He pointed out that system of medicine developed in each area depended on the herbs and minerals available in the locality. He mentioned the Indian School of Medicine in Madras started by the late Raja of Panagal as a pioneer step in this direction.

A more vigorous encouragement to the preparation and use of medicines derived from indigenous materials is a necessity, prescribed by the low level of income in rural areas and the comparatively high cost of imported medicines. Whether the indigenous medicines are dispensed through practitioners of Western medicine, or through those of indigenous medicine, or the category of those who claim to understand a great deal of both, the State will have to strive for popularising them further. As there is already a widespread and long-sustained preference among the population, the extra stimulus needed may not come up against serious impediments.

Dr Moorthi was frankly dissatisfied with the emphasis given to health in the Second Plan. Evidently he under-rates the beneficial consequences of the stress on creative wealth. Though he refers to the hope that once national living standards go up as a result of the wealth-producing programmes there will be time enough to take care of the nation's health and the average citizen will be rich enough to purchase good health. There is, however, force in the argument that an extra Rs 3 per mensem may not, under the present circumstances, mean much to the average Indian.

Dr Moorthi envisages a balanced medical development programme for the future on the following lines. While there should be more generous allotment for medical relief and public health care should be taken that expenditure on Building programme is kept to the barest minimum. There should be a health insurance system for the villagers; in every village, a small cess may be collected along with other taxes. Health insurance under the panel system may be given to the villagers of the lower economic groups, a minimum of thousand such insured persons to be entitled to a doctor of modern medicine. The rich villager not covered by this scheme, will be having facility of his services on separate payment.

In such a set-up, the number of available doctors can be more equally distributed. Uniform minimum standards should be prescribed for the practitioners of indigenous systems. Dr C. Muthia, Chairman of the Reception Committee said, in his welcome address, that once a kind of socialised medicine best suited to Indian's needs came into vogue, the doctor-patient relation would become cordial and unsullied by involvement in fees collection.

Already, some costly building projects are either under consideration or have been decided. For instance, the All India Institute for mental Health at Bangalore is allotted a sum of Rs 41 lakhs for development during the Second Five-Year Plan. A large part of the sum is to be spent on building extensions. While certain items of expenditure on building would be obviously unavoidable, Dr Moorthi's plea for economy in this particular is not to be despised.

His ideas find a near echo in one of the Resoultions taken up for consideration by the All-India Congress Session. This resolution, tabled by a delegate from Nagpur, suggests that attempts should be made to make available free medical service to all persons having an annual income of less than Rs 500. The trend of thought is definitely moving in the direction of universal free medical aid in India, for the poorer sections of the people. It is heartening to see that profession is also actively contributing to this vital stream of thought.

WORLD OF JUTE

(Continued from page 82)

the Fatka, prices fluctuated erratically in earlier dealings. Toward close of the day, thanks to bear covering in Cornsacks and Liverpool Twills, rates recovered and the market closed the day on a steadier note with Hessian 40″×10 oz Ready at Rs 45-8 and B Twills Ready at Rs 120. April-June Hessian 40″×10 oz was also better at Rs 44 with B Twills for the same position placed at Rs 119.

Despite the fact that contrary to earlier expectations jute goods stocks at end of December 1956, according to the figures released by the IJMA, showed a decline of 5,100 tons in total stocks, sentiment continued to be quiet mainly on account of heavy bear selling in the Fatka. Hessian 40″×10 oz Ready declined sharply to Rs 44-2 with B Twills Ready also coming back to Rs 119. April-June Hessian 40″×10 oz was placed at Rs 44-2 and B Twills for the same position at Rs 119.

Prices improved somewhat the next day with Hessian 40″×10 oz Ready quoting at the close of Wednesday at Rs 45-4 with B Twills Ready done at Rs 119-4. April-June Hessian 40″×10 oz was marked at Rs 44-4 and B Twills for the same position at Rs 119-6.

The following table gives the year's opening prices and the closing prices on Wednesday this week.

	Year Opening Rs. a.	9-1-57 Rs. a.
Hessian:		
40″×10 Oz Ready ...	45 12	45 4
40″×10 Oz April/June	44 8	44 4
Sackings:		
B Twills Ready ...	120 0	119 4
B Twills April/June ...	121 4	119 6
Hy Cees Green ...	122 0	119 8
Corn Sacks ...	122 4	121 6
Cubans ...	147 0	145 0
A Twills ...	144 12	143 8
L Twills ...	136 8	137 0
D W Flour ...	141 8	140 0
Sugar Twills ...	137 12	136 4

The Raw jute market opened the year on a steady note with Assam Bottoms Jan/Feb Shipment quoting at Rs 32. The next few days the market ruled quiet with only small quantity mill business reported done, with the rate for Assam Bottom fluctuating narrowly between Rs 31-12 and Rs 31-8. Toward the close of the week the undertone considerably improved as sellers became reserved. Despite small business passing prices displayed steadier tendency with Assam Bottoms done uto Rs 32-8.

SOUTH INDIAN MARKETS

Pepper and Ginger Drift Lower

PRICES of black Pepper have continued to drift lower in the absence of any enquiry from overseas buyers. All the arrivals of the new crop are not absorbed and, as such, are exerting pressure. World buyers, particularly the USA, are not inclined to pay more than 24 cents per pound as against 40 cents paid two years ago. In the Kozhikode market, Wynaad quality is quoted around Rs 675 and the Country variety old around Rs 625 per candy.

In brief, India has almost lost the monopoly of supplying pepper to the world and is faced, this season, with increasing competition from Indonesia's Sarawak and Singapore. Conditions are expected to be more difficult for India this year on account of a good crop in those countries and consequently the world trade emphasis will shift from Malabar to Singapore. To make matters worse, increasing supplies from South-East Asia have told adversely on Indian prices.

Advices from New York are discouraging and dealers are reported to be marking time. Malabar and Lampong spot and "awaiting release" are quoted at only 26½ cents per pound. The future of Indian pepper, therefore, depends upon how New York shapes its buying policy during the coming weeks when business is expected to be more regular after the long holidays. The holding power of Malabar growers and their resistance to lower prices will play an equally important part in arbitering the world pepper prices since Malabar pepper is cheaper than any other pepper.

Similarly, in the case of Ginger, a further break in prices is feared since the indigenous crop has, this season, gone up by 50 per cent to 15,000 tons and export enquiries have been dwindling. As a matter of fact, ginger prices have been declining every year in the world

(Continued on page 33)

THE PERSONALITY OF INDIA'S MIXED ECONOMY—V

(Continued from page 77)

confines of any one of the social services. It would be idle to ask of any possible theory on this subject a definite predictive value. But, as "a solvent of obsolete notions and as a distiller of whatever kernel of validity" in it, it must be rated high by all who believe that public policy must be based not on predilections but on truths ascertained by patient enquiry and careful thinking. The merit of the theory of economic growth as conceived here lies also in the fact that the by-products of such scientific work may often prove more valuable than those which are directly arrived at.

In this view, it is of special significance to India in its present phase of economic development that, according to Kuznets, "industrialisation implies a new technological base for both agriculture and industry" and that it is not a matter of easy transfer of labour from "backward" agriculture to "progressive" industry. The technological revolution in agriculture, which is an indispensable base of modern economic growth, involves the problem of carrying out a major dislocation of people settled on land for centuries without "the social and political deformations that may stunt or misshape economic growth in the longer run that follows."

A history of economic growth, it will thus be seen, lays as much emphasis on the social conditions necessary for the change and the social consequences of change as on factors like savings and investment, technical and material resources, on which the economist as such would be inclined to fasten attention. It is necessary to emphasise this fact as its importance is apt to be overlooked by governments which, because they are able to obtain control of the economic factors, are prone to assume that they can shape economic growth according to their hearts' desire. One of the most serious difficulties in the way of formulating a theory of economic growth is the fact that the facts concerning forced growth in partially or totally socialist economies bear a small proportion to the total data on which the theory has to be based. If it is possible to know the conditions in which growth has occurred in the comparatively distant past in ancient, medieval or modern industrial economics, capitalist or socialist, is it also possible to know the conditions in which the urge to development on socialist lines will be felt by politically effective elements in a body politic?

The theory of growth will have to make a distinction between development which occurs as a natural phenomenon and development which is induced under high pressure political power. To the latter, the kind of social transformation that must precede and that which must follow industrialisation would not be a natural change which may be trusted to come about in the ordinary course. It would also be something which, like investment in heavy industries or conscription or large scale transfer of labour, would call for the special attention and determined exertion of the Government and the political powers that be. A ruthless Communist government may not flinch from such a challenge and may show itself eager to take it up. But it is far different with a democratic government which adopts socialist methods because they are the only means of speeding up economic development. To such a government, these problems of social transformation, when they are found to be pressing, will only be a belated reminder of the basic conflict between democracy and a completely socialised economy.

Even apart from what may be the non-economic or social aspect of that problem, there is also the question of how best the expansion of the national economy from the standpoint of individual welfare can be secured, once the basic conditions of such expansion—increase in capital equipment and technical knowledge and training, assurance of ready expansion of demand through an equalitarian social structure, etc.,—have been provided by the State working directly for the establishment of a welfare state. The assumption behind all these questions is that India's socialist policies are to be attributed less to doctrinal preferences than to the recognition that the essential conditions of the development needed by the nation today cannot be left to private enterprise to provide. Ex hypothesi, the question remains open whether, after these conditions have been provided, socialism or a mixed economy with a larger or a smaller admixture of private enterprise will provide the best aid to further growth.

The openness of this question is not a mere hypothesis. It is treated as such by large sections of devout socialists in many parts of the world. It is seen in the recognition of the need to revise socialism, though in some cases, such as that of Mr G. D. H. Cole, it leads to a reaffirmation of the more uncompromising socialist standpoint. Here, the thoughts and inclinations of the large body of workers and peasants in every country are more important than the rationalisation of socialist theoreticians who are sufficiently open-minded to recognise the need for change, but are still mentally too rigid to admit the need for compromise with other schools of thought. The inclinations of the common people are best seen in such significant developments of recent times as the decision of American labour not to form a political party, the determination of skilled workers in Britain to preserve the differentials of wages and salaries, the indifference of industrial labour in India to the requirements of a general rise in the standard of living in the country and, most important of all, the ferment in the satellite countries for a shift in the emphasis of communist planning from defence and heavy industries to food and consumer goods.

In most attempts to formulate a theory of economic growth which will apply to communist and free economics equally, there is a tendency to ignore or under-rate the importance of the fact that, in spite of the breakneck speed of its progress in heavy industries, a communist economy has yet to achieve economic growth which is comparable with that of the Western democracies. This failure can no doubt be attributed in large part to its preoccupation with defence and its heavy demands upon the resources which should go to the production of consumer goods on a large scale. But it does not necessarily follow from this that, if the demands of the defence industries are reduced, the communist economies will be able to secure the same volume of output of consumer goods with the variety and quality of that of the capitalist economies. The satisfaction of the consumer is still far, far away from every communist economy, however advanced it may be. The urge to de-Stalinisation in Russia and the rising in Eastern Europe are plainly the result of the apprehension of this fact by the masses. In this sense, too, the question considered here is an open one. It cannot be closed either by the theoretician at this stage or by the high-handed political bosses in the Kremlin, let alone politicians who have to depend on the vote for chance in office.

The merit of Indian planning is that it continues to lay the same stress on human values as on capital equipment. It hits big business and nationalises key industries and, at the same time, pays attention to the co-operative activities of the common people. But it shows no awareness of the conflict between what it does in the field of organised industry and what it is attempting in other fields through its Community Projects and National Extension Services. It is not informed by any clear idea of what will be needed to turn the potentialities of development into actualities. The politicians are blind to the importance of helping the common people to keep the same open mind on ideological issues which they, for the present at least, claim for themselves. If public opinion in the future is to be an aid to genuine development instead of a fetter on it, it must be familiarised with the needs of economic growth in the conditions of this populous country and with the most necessary ingredients of individual welfare. The first step toward that end is a clear explanation of the causes of our economic stagnation in the past and setback in the last one century. To this question, we shall turn in the next article of this series.

BALANCE-SHEET REVIEWS

(Continued from page 76)

results for the year ended 30th June, 1956. The net profit, after providing for all expenses and Depreciation, amounts to Rs 5.14 lakhs as against Rs 5.26 lakhs in the previous year. Provision for Taxation absorbs Rs 1.17 lakhs. The directors have recommended a dividend of Rs 8 per share on the Ordinary shares.

During the year under review, some of the latest types of equipments, ordered with a view to supplementing and modernising, arrived and the same were being erected. The Lead refining plant has gone into production. Considerable improvement in the process control and tests have been effected. The demand for aircraft and special batteries for defence services to accepted standards are being met in a regular basis. The factory is now developing batteries for electric traction, telegraphs and telephone departments. Sales for the year have totalled Rs 73.19 lakhs.

£ R$

Tata Locomotive

This company has been making good progress in all its expansion schemes. The expansion of the locomotive division to a capacity of 100 locomotives a year is expected to be completed soon. The steel foundry, it is hoped, will begin production by the middle of this year. These two factors are likely to help reduce costs of production. The automobile division continues to make satisfactory progress and the company's output has met with excellent demand.

£ R$

Consolidated Tin Mines

The Consolidated Tin Mines of Burma has passed over the dividend for the year ended 31st March, 1956. In this connection, the company's Chairman has stated that, as the profits for the year under review and for every year commencing with 1953 remain in Burma, a dividend cannot be prudently recommended until the position in Burma has improved and the Burma Exchange Control sanctions the remittance of the profits from which dividends are paid.

The company had been committed in principle to the transfer of its mines in Burma to a joint venture with the Government of the Union of Burma. The Government have since withdrawn the proposal for the joint venture. The company has now accepted the Government's offer to renew the leases for five years. This means, that the company cannot, with a feeling of security, re-equip the mines for operating on a long-term programme.

£ R$

J. S. Ranjitsinghji Mills

The Jam Shri Ranjitsinghji Spinning and Weaving Mills Company, Limited have, after providing Rs 1.14 lakhs for Depreciation, earned a net profit of Rs 4.19 lakhs for the year ended 30th June, 1956 as against Rs 4.23 lakhs in the previous year. Sales of cloth, yarn and waste have risen to Rs 89.63 lakhs from Rs 84.98 lakhs. A sum of Rs 1.25 lakhs has been provided for General Reserve, while Rs 2 lakhs has been claimed by Dividend Equalisation Reserve. The dividend is proposed to be raised from Rs 50 to Rs 60 per share.

An order has been placed for 12 Weft frames, out of which two frames have already been received. In order to improve the finish of cloth, the company has placed an order for three Bowl Friction Calender. With a view to increasing the productive capacity, the directors have started a third shift in the spinning department and have put into operation all looms hitherto remaining idle.

*

TYROON TEA COMPANY, LIMITED.

NOTICE is hereby given that the 66th Annual General Meeting of the Shareholders of Tyroon Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 31st January, 1957, at 4-10 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of a Director who retires by rotation.

   And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. D. N. Mukerji be and is hereby re-appointed a Director of the Company."

   Special Notice dated 15th December, 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Section 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. B. N. Mukerji is presently a Director of the Company, which is a subsidiary of McLeod & Co., Ltd., the Managing Agents to the Company, and he is an associate of the Managing Agents withing the definition in Section 2(3)(c)(1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director by a Special Resolution, of which Special Notice has been given to the Company.
4. To appoint Auditors for the year ended 31st December, 1956, and to fix their remuneration.

AS SPECIAL BUSINESS.

5. To consider and, if thought fit, to pass the following resolution:—

   "That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 21st January 1957 to 31st January 1957, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 3rd January, 1957.

NOTE:

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.
2. Payment of the proposed Dividend, if declared, will be made on or after 7th February 1957, only to those members whose names are registered in the Books of the Company on the 31st January, 1957, or to their Mandatees.

   No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT.

The Resolution being Item No. 5 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves pursuant to Section 293(1)(d) of the Companies Act, 1956.

*

WORLD OF BUSINESS

(Continued from page 81)

Tribunal award in the coal industry and the latest additional imposts such as the capital gains tax and the increased rates of tax on dividends. It could be suspected that the stock market's behaviour was also vaguely influenced by some fears about the future.

The broad balance sheet for the year for the national economy may be summarised in terms of a higher and more broad-based industrial production, buttressed by confident and well-balanced fiscal policies on the one side and a certain measure of restraint on consumption on the other, with deficit financing and price levels kept under control, agricultural targets promptly revised in accordance with needs and the shocks of international developments largely absorbed through changes in trade policies, and the State conspicuously strengthening its direct and strategic hold on the mechanism of production and exchange.

On the international front, the most outstanding development must be seen in the launching of the atomic fission process at Kaldor Hall by Her Majesty, the Queen of England. This is a pioneering achievement, being the world's first controlled atomic electric power plant to come into operation. Naturally, the event held world interest for several weeks. In Britain two other contracts for atomic power stations are also reported to have been signed. The United States has probably not cared to keep pace with Britain but its preoccupation with the military atom may soon give place to a preference for the exploitation of the peaceful one. In the years to come the world may well look back on 1956 as the herald of the new staple source of industrial energy.

Amidst the general international expansion in industrial production, the US is estimated to have recorded a 21 per cent increase in capital outlays. In Britain capital investment was also of more or less the same order of improvement as compared to the previous year in the manufacturing industries. In Russia and China, industrial investment took equally significant strides, though in China the priority for agriculture was not disturbed and in Russia the new economic policy clearly embodied a shift in emphasis toward agriculture and the production of consumption goods.

A tentative appraisal of the world's cereal crops puts wheat production as considerably in excess of the previous year's. Almost the same thing may be said of cotton. The US sold as much as 6 million bales of cotton, a most unexpected record and achieved without any serious repercussion on the international market. For 1957, US sales are expected to go another one million bales ahead. The progress of industrial production in West Germany which had been outstanding in 1955 has been carried further though reportedly at a slightly reduced tempo.

East-West trade was less inhibited at the end of 1956 than it was at the commencement of the year. Particularly in Asia, Russia, China, Yugoslavia and Poland bid fair to assume a regular competitive role as against other countries in the exchange of goods and services.

Stock Exchanges

Resistance to Lower Levels

STOCK markets started the New Year on a subdued note and, under heavy selling pressure, equity values slumped to new low levels in the recent downtrend. The acute stringency in the money market and the anxiety over reports of payment difficulties in the Bombay market, also contributed to the depressed sentiment.

The only redeeming feature of this week's trading is, that markets have staged a slight recovery from the low levels as operators are now inclined to offer resistance to further declines in prices. The outlook for industry is still regarded as extremely favourable in view of the rising trend of production and the substantial protection accorded to it by way of drastic cuts in imports for the first half of the current year. Clarification of matters relating to Capital Gains Tax has also led to an improvement in sentiment at the close of the week.

Except for small buying at lower levels, trading on the Calcutta Stock Exchange remained dull.

A better sentiment prevailed on the Bombay Stock Exchange where values recovered to some extent on some short-covering.

The stock market in Madras was in a poor form and the general trading pattern continued to depict investors' apathy.

The outstanding feature on the London Stock Exchange was a remarkable improvement in Gilt-edged prices, being influenced by the renewed strength of sterling.

Price changes on Wall Street were fractional either way due to limited trading.

*

Calcutta

Calcutta, Thursday Evening.

THE New Year started with a feeling of subdued optimism on the local Stock Exchange. There appeared a growing manifestation of anxiety about the future of private investment following the establishment of a socialistic pattern of society. The acute stringency in the money market and the reports of payment difficulties in Bombay caused stale liquidation and distress selling, resulting in the prices touching fresh lower levels. Despite the attractive price levels, investment buying, too, was very poor, reflecting lack of confidence in the market.

At the lower levels, however, there was some evidence of small buying on the belief that, irrespective of various taxation ideas and the general anxiety to await the results of the forthcoming elections, the outlook for indigenous industries remained good, especially in view of the drastic cut in the import quotas for the current half-year. The improvement in sentiment at the close of the week also partly reflected the clarification on the Capital Gains Tax.

The Giltedged market continued to rule dull. With monetary conditions remaining tight, there was no noticeable enquiry in any of the Loans.

Bank shares were quietly steady with scattered business. Despite the announcement of encouraging working results by a few banks, new investment activity in this section was poor, reflecting difficult feeling among investors.

Jute shares were practically neglected with prices showing a downward trend. Buyers were conspicuous by their absence in view of the growing disparity between raw jute and manufactured goods prices. The announcement of disappointing results by the Andrew Yule group of mills, also contributed to the depressed sentiment in the section.

Except Burrakur which continued to receive support from speculators, Coal shares were generally listless. Operators were inclined to await the effect of the recent Tribunal Award on the working results of various collieries.

Textile scrips lacked any interest in the absence of any encouraging news from the cloth and piecegoods markets.

Tea shares were no exception to the general trend of the market. Transactions were only very few and prices also showed an easier tendency. Operators were inclined to restrict their commitments due to various factors. Mainly amongst these were, the feeling that there was plenty of tea to come forward in the New Year and the anxiety with regard to the size of distribution of dividends by tea companies for 1956 in view of the recent levy of super-tax.

Little or no interest was shown in the Sugar section where prices developed an easier trend on continued quieter advices from the commodity market in view of the comfortable supply position and the reports of a record production during the last season.

Price movements in the Engineering section were mainly influenced by the speculative activity in Indian Irons.

The Miscellaneous section provided a few firm spots on dividend and other considerations. Prominent amongst these were Indian Copper which continued to meet with strong support, thanks to the announcement of an interim dividend of 6 2/3 per cent for 1956 on the increased capital as against 10 per cent interim paid on the old capital in 1955. Aluminium Corporation were a very firm feature following the announcement of a maiden dividend of 5 per cent. India Steamship met with sustained support on reports of favourable developments taking place in the shipping field. Price movements in Orient Paper were rather erratic due to alternate buying and selling.

The following table shows the price trends of a few active scrips from the beginning of the year:—

	Year Opening Rs. a.	Highest Rs. a.	Lowest Rs. a.	10th January Rs. a.
Indian Irons	28 5	28 9	27 9	28 2

SOUTH INDIAN MARKETS

(Continued from page 91)

markets, the current rate being quoted around Rs 362-8 per candy in the Alleppey market and at Rs 375 in the Kozhikode market.

Meanwhile, there has been a steady increase in the export of ginger from India. According to official figures, the value of ginger exported from India has risen from Rs 69.32 lakhs in 1954-55 to Rs 90.85 lakhs in 1955-56. In the six months ended April to September 1956, exports amounted to Rs 54 lakhs as against Rs 20 lakhs in the corresponding period of 1955. The main markets are the countries of West Asia, particularly Aden and Saudi Arabia.

*

Coffee

According to the figures released this week, a quantity of 2,138 tons of Coffee are reported to have been sold from the Pool during November, 1956. The total sale, to the internal market, for eleven months ended November, amounted to 22,096 tons as against 20,187 tons in the corresponding period of 1955. The average monthly sale from the Pool has increased from 1,788 tons in 1954 and 1,848 tons in 1955 to 2,000 tons for the eleven months under review.

Although the release price for coffee has been higher during 1956, sales have increased by about 150 tons per month or 8.5 per cent—a a rate of increase which will be remarkable if it continues. At this rate of increase, the internal absorption may be about 26,200 tons in 1957.

*

Groundnuts

The Madras Groundnut market ruled firm during the week under review. The rate for superior oil-quality seeds was quoted around Rs 164 against Rs 162 per candy and the bold variety at Rs 157 per candy. Arrivals were estimated around 250 tons. Big crushers did not show much interest due to the considerable disparity in the prices of seeds and oil. Calcutta interests and small crushers were operating only for small quantities.

In the Groundnut Oil section, the rate for the ready position was quoted around Rs 322 per candy, showing an improvement of Rs 3 over the previous week. Operators were reported to have shown considerable interest in forward than in ready position. Calcutta interests took up small quantities for ready delivery.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were small, but clearances were on a fair level. Arrivals of Buff hides were also small, while prices for these ruled steady. There was no change in the arrivals and clearances of Cow Calf and Buff Calf.

In the export section, buyers were unwilling to enlarge their commitments unless at a considerably reduced level of prices. Latest reports from London indicate that buyers' ideas were for 5-5½ lbs at 46d, 42d and 38d for runs, fourths and fifths respectively. Madras sellers were, however, unwilling to consider these prices, particularly in medium weights. Buff Calf was sold around 64d and that too for runs alone.

In the export section, buyers' ideas for prime class goat skins were anything between 3d to 6d lower as compared to December levels. In Sheep skins, prime classes were very firm, while commons were steady.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were fair as also clearances. Prices ruled steady.

Conditions in the Raw Hides market did not show much change.

WORLD OF FINANCE

(Continued from page 80)

It will be recalled that Indian Finance has maintained that expenditure during the first three years of the First Plan was not seeping through and into the resources of the banking system. It is only in the last three years, that the direct impact of a rise in Active Notes can be discerned on Deposits of Scheduled Banks We may expect this trend to continue during 1957, although the foreign exchange deficit does have a contractionist effect. But such contractionist effect is equally felt by the Deposits of Scheduled Banks and by Notes in Circulation. In the result, it is likely that what rise there is in Active Notes will be mirrored in more substantial measure in the Deposit Liabilities of member banks.

Although the Deposits of Scheduled Banks rose by Rs 80.81 crores, the insistent demand for accommodation was at even higher tempo. Therefore, Scheduled Banks had to free resources for the sake of Advances in a number of other ways as well. Firstly, Borrowings from the Reserve Bank and the State Bank put together rose by roughly Rs 50 crores. Secondly, cash balances were run down by Rs 8.47 crores. Thirdly, Investments in giltedged were reduced by Rs 20.30 crores. All these resources put together went to an expansion in Advances. The total of Advances showed a rise, as at the end of 1956, of Rs 157.01 crores as compared with the close of 1955. We may add, for the future, that Scheduled Banks can afford neither any further substantial running down of cash balances nor any further substantial dis-investment in Government securities. The conclusion is clear that, for future expansion in Advances, Scheduled Banks will have to find resources in an increase in Deposits and in a rise in their Borrowings from the Reserve Bank. What the prospects are in this regard have repeatedly been indicated in the columns of Indian Finance in recent months.

There is one more point worth studying about the Advances of member banks. The following table shows the composition of Advances, the net change, and the change expressed in terms of percentages.

	28-12-56	30-12-55	Change	Change
	(In crores of Rs.)			% age
Advances	622.91	516.73	106.18	20.55
Inland Bills	111.74	66.25	45.49	68.66
Foreign Bills	53.81	48.47	5.34	11.01
Total of Advances	788.46	631.45	157.01	24.86

It will be seen that, although Advances in the form of cash credits and overdrafts have risen by a considerable amount, the most significant rise has been under Inland Bills Purchased and Discounted. The size of the increase in Inland Bills is one of 68.66 per cent, as against the rise of 20.55 per cent in cash credits and overdrafts and the increase of 24.86 per cent in the total of Advances. This also is a trend which we may expect to see continued in the immediate future.

We come finally to the returns of the State Bank. Over the year, the Deposits of the State Bank rose by Rs 19.72 crores and accounted for roughly one-quarter of the rise in Deposits of all Scheduled Banks. Secondly, the State Bank's Borrowings were marked higher by Rs 4.42 crores and worked out to roughly one-twelfth of the increase in the Borrowings of Scheduled Banks from the Reserve Bank. Thirdly, the running down of cash balances by the State Bank, at Rs 1.55 crores, accounts for roughly one-sixth of the diminution in the cash balances of all member banks. Fourthly, the State Bank is responsible for Rs 13.60 crores of the dis-investment in Government securities which, for all member banks, was placed at Rs 20.30 crores. The State Bank's Advances rose by Rs 36.81 crores, and accounts for slightly less than one-quarter of the rise in the Advances of member banks. But the rise in the State Bank's portfolio of Bills Purchased and Discounted, at Rs 19.94 crores, is a much higher proportionate increase than for all Scheduled Banks taken together. This would suggest that, of all the Scheduled Banks, the State Bank more than any other makes the greatest use of Borrowings from the Reserve Bank against usance bills.

1956 has altogether been a momentous year for the money market. The sustained demand for money further blurred the distinction between the traditional busy and slack seasons in the national economy. There was a substantial foreign exchange deficit. This had a contractionist effect on money circulation. The accretions to Deposits of member banks formed a more encouraging ratio to the rise in Active Notes. Member banks had to discover new ways of finding resources with which to satisfy the demand for accommodation. And all these trends may be expected to continue into 1957.

+

The returns of the Reserve Bank for the week-ended January 4, 1957 reveal that, for the first time in a month, Government have found it necessary to effect sales of ad hoc Treasury Bills in favour of the Reserve Bank.

Currency has been expanded against Rupee Securities for Rs 15 crores. Rupee coin has gone out into circulation for Rs 1.04 crores. Active Notes are sharply higher by Rs 15.45 crores at Rs 1,481.52 crores. As such, the Reserve Bank's cash in the till has declined from Rs 9.14 crores to Rs 7.55 crores.

We may take it that the expansion in note circulation has been effected for purposes of meeting the month early disbursements. The Central Government's Deposits are marked lower by Rs 2.90 crores at Rs 54.34 crores. On the other hand, Deposits of State Governments are substantially higher by Rs 5.93 crores at Rs 13.93 crores. Month early demands have obviously entailed the running down of the balances of member banks with the Reserve Bank—their deposits are reduced by nearly Rs 10 crores from Rs 58.09 crores to Rs 48.34 crores. But such a view must be modified by the fact that member banks would appear to have liquidated some part of the borrowings that they had taken from the Reserve Bank in the earlier week, presumably for purposes of window-dressing. This is suggested by the drop of Rs 6.08 crores to Rs 99.96 crores in the Other Loans and Advances of the Reserve Bank. The reduction in banks' indebtedness is further suggested by the fall of Rs 4.38 crores in the loans advanced by the Reserve Bank against usance bills and outstanding as on January 4.

The return of the State Bank for January 4 indicates that month early disbursements have made a substantial impress on the bank figures. Although the decline in Deposits is a small one of Rs 1.43 crores to Rs 240.59 crores, cash balances are very sharply lower, in order that an expansion in advances might be enabled. While balances with other banks and money at call are largely unchanged, cash is shown to have declined by Rs 8 crores to Rs 8.34 crores. Advances are marked higher by Rs 6.29 crores at Rs 146.41 crores.

In the last week of 1956, the Deposits of Scheduled Banks rose by Rs 7.11 crores to Rs 1113.63 crores. The resources of member banks were further increased by recourse to Borrowings from the Reserve Bank, the figure under this head showing a rise of Rs 11.42 crores to Rs 79.06 crores. Such increase in resources, Under deposits on the one hand and under Borrowings from the Reserve Bank on the other, has been utilised toward an expansion in Advances as well as cash balances. The total Advances is higher by Rs 4.65 crores at Rs 788.46 crores. Cash in hand, balances with other banks and balances with the Reserve Bank all show increases, although money at call has declined.

+

The statement of the State Bank of India for the week ended 4th January reveals a decline of Rs 1.40 crores in deposits to Rs 240.59 crores. Borrowings from other banks are shown at Rs 6.91 crores against Rs 9.52 crores and other liabilities, including inter-office adjustments, at Rs 6.49 crores against Rs 9.58 crores.

On the assets side, cash balances have shown a sharp decline of Rs 8.08 crores to Rs 11.59 crores. Investments are only slightly higher at Rs 107.05 crores against Rs 106.90 crores. Advances have risen by Rs 6.29 crores to Rs 146.41 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 7.30 crores and "Bills Discounted and Purchased" for a drop of Rs 1.01 crores.

+

According to the returns of the Scheduled Banks for the week ended 28th December 1956, total Demand Liabilities have sharply risen from Rs 646.72 crores to Rs 654.19 crores, while Time Liabilities have declined by Rs 0.36 crores to Rs 459.50 crores. Borrowings from the State Bank are lower by Rs 1.57 crores at Rs 8.11 crores, while those from the Reserve Bank have risen by as much as Rs 11.42 crores to Rs 79.06 crores. Cash and balances with the Reserve Bank have improved by Rs 4.91 crores to Rs 90.99 crores. Investments are shown at Rs 364.75 crores against Rs 364.83 crores; Advances at Rs 622.91 crores against Rs 618.76 crores; Inland Bills at Rs 111.74 crores against Rs 110.02 crores and Foreign Bills at Rs 53.81 crores against Rs 55.03 crores. Money at call and short notice stands at Rs 10.78 crores against Rs 13.03 crores.

+

Government of India Treasury Bills:

During the week ended the 4th January 1957 Government of India Treasury Bills for Rs 75,40,75,000/- were sold in favour of the Reserve Bank of India.

*

NORTH INDIAN MARKETS

(Continued from page 89)

Sugar

The sugar market in Hapur continued to rule quiet with prices developing an easier tendency in the absence of any announcement of an export quota. Following mill delivery rates (per maund) are quoted:—Jaswant Rs 28-6; Simbhauli Rs 28-10; Mowana Rs 28-4; Daurala Rs 29-8; Amroha Rs 27-14; Bijnore Rs 27-14; Mansoorpur Rs 28-8 to Rs 30-0 and Rampur Rs 31-10.

Although the turnover was small, the Meerut market ruled quiet as bookings by railway to certain consuming centres was restricted.

*

Gur

There was a fresh break in Gur prices due to increasing arrivals of new production and the absence of demand. Rate for ready position declined further to Rs 9-12 from Rs 10-4 per maund. Daily arrivals at Hapur averaged 2,500 maunds, which had a ready offtake under previous commitments. Outside buying enquiry was, however, slack.

Unlike previous year, there has been no stock-building as yet and arrivals, which were estimated at about 2.85 lakh maunds since the beginning of the season, were all sent to the consuming centres.

In the Meerut market, prices showed an easier tendency due to loading restrictions to certain destinations. Arrivals last week fell considerably, firstly due to rainy weather and secondly due to the fall in prices. An estimated quantity of 20,000 maunds was put on the market by producers.

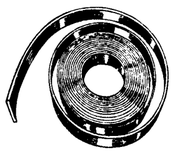
TURNING A NEW ROLL



We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray ?
At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.

So what ?
Merely that steel tubes pipe up water from deep inside the earth to parched fields, helping to grow a rich harvest. In the cities, countless homes receive a protected supply of water through these pipes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

TATA STEEL
SERVES THE NATION

For the Investor

No Bite, No Bark

***Investment Gossip*:**

LAST week, I spoke of more bark than bite. Mr T.T. Krishnamachari's speech last week in Madras has no bite and, it is pleasant to add, no bark either.

As regards the earlier bark, he was at pains to show that the bark was not so vicious as was thought in some quarters. His remarks were taken out of context, and given an extravagant interpretation, he pointed out.

He could not, he protested, have four or five budgets in a year; there were only three sessions of the Parliament.

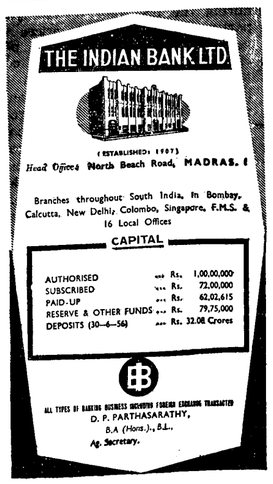
There would not be, he assured, any new taxes after March 1958. That is to say, the latter three years of the Second Plan would be taken care of by the augmented revenues provided and arranged for in the first two years.

Assurance on these lines is in accord with the assurance given in a recent series of four articles appearing in the Clive Street Gossip section. The accomplishments that may be expected to result from the three sets of new taxes levied in the course of 1956 and the promised tightening of tax-evasion loopholes should, by themselves, account for a major part of the additional tax revenue needed in the interest of the Second Plan.

Both from the point of view of the gap in resources and the gap in foreign exchange, there is every reason to think that T.T.K. is actively considering the merits of a scheme of Gold Bearer Bonds. It is a year ago that this suggestion was put forward by Indian Finance; and, at long last, it has come up for active consideration on the part of Authority. T.T.K. does not allow grass to grow under his feet; and we may expect an early and positive move in this matter.

We may also expect positive and substantial moves with regard to the export of iron ore. Indian Finance made this suggestion three years ago, and has again reverted to the theme. T.T.K. is fully alive to the possibilities in this regard both from the point of view of internal resources and of the foreign exchange. He is thinking in terms of an export of 3 million tons. It may not be long before he (as he did in the case of the domestic steel production) steps up his target to something like 10 million tons.

He has the guts, the drive, and the belief that new situations demand new ideas.



All of which stresses the points favouring the success of the Plan. The Plan's success means good shape and brave prospects for India's national economy. A confident national economy means more broad-based prosperity For the Investor.

As a post-script, I may add that the Life Insurance Corporation already conducts its purchases of stocks in such a way as to emphasise and underscore its appropriateness for utilisation as the instrument for open market strategy in industrial shares.

Last week, the LIC bought, though on a modest scale, parcels of Texmaco, Indian Irons, Indian Copper, Tata Steel, etc.

The present technique is for the Corporation to specify the shares and the quantities and to invite tenders from a list of approved brokers. Prices being volatile as they are, brokers, in sheer self-protection, include a safety margin in their tenders. The tender system is unsuited, wooden and costly.

An appropriate technique for open market operations in gilt-edged has been evolved by the Reserve Bank. The Life Insurance Corporation could, with advantage, adopt a similar technique in its purchases of industrial stocks.

The Aluminium Corporation of India Limited

Among the basic metals, aluminium is fast becoming the most sought after metal in the world today by virtue of its cheapness as well as its versatility. It has been found that there are few spheres in which aluminium cannot replace steel without impairing efficiency. In short it will be no exaggeration to say that aluminium has become the latest yardstick to measure the industrial progress of a country.

It is no wonder, therefore, that the production of the metal has assumed worldwide importance. But the high level of technical skill and the enormous quantity of electric power required for its production have inevitably put the industry beyond the capacity of more entrepreneurs with the result that in the entire world today there are only 9 independent companies engaged in the manufacture of aluminium.

The Aluminium Corporation of India has the unique distinction of being one of the nine. It is no small achievement of the company to be in a position to announce confidently that it "possesses completely the necessary management and technical skill and talent to undertake any expansion scheme." Aluminium Corporation is an eloquent testimony that Indian private enterprise is competent to undertake any pioneering task as much as its counterpart anywhere in the world.

The national importance of such a basic industry has naturally been recognised by the Government of India as the country has immense potentialities for a large scale production of the metal. Government have decided to put up two new plants of 10,000 tons each in the public sector under the Second Plan. The private sector has also been given adequate facilities to expand its installed capacity.

Meanwhile Government have also taken steps to foster the growth of the indigenous industry by tariff protection. It is, however, regrettable that presumably due to lack of coordination between the various Government departments, the advantage gained from protection has largely been nullified. The recent sudden removal of a duty of 25 per cent ad valorem on aluminium scrap imposed from 3rd December, 1955, is an instance in point.

In his address to the Eighteenth Annual General meeting of the shareholders of the Aluminium Corporation of India Ltd, Mr Lakshmipat Singhania drew pointed attention to similar defects in Government policy. Referring to the company's expansion plans, he said that contrary to expectation, the DVC were demanding a very high rate for supply of power and hence the company had been obliged to redraw its expansion plans. It is to be hoped that the Central Government will use their good offices with the DVC and the West Bengal Government so as to enable the company to get cheap electric power which, as described by Mr Singhania, is "the main raw material" for the aluminium industry.

£ R$

***Investment Notes*:**

On the Calcutta Stock Exchange, NICCO have forged ahead to Rs 26-8 from Rs 25-0 quoted last week. Subject to the Government sanction, the company has proposed to capitalise Rs 10 lakhs from Reserves and issue Bonus shares in the proportion 1:4.

As the company is likely to need more capital for expansion, shareholders are, it is understood, being approched for the issue of further capital in cash to the tune of Rs 20 lakhs. The directors have proposed to issue 2 lakhs Ordinary shares of Rs 10 each at par to the existing Ordinary shareholders in the ratio of 1:2.

Burrakur Coals are now idling around Rs 21-2. The firmness in this scrip, which had been noticed during the past many weeks, was mainly due to cornering operations with a view to taking over the managing agencyship. Some circles have now the feeling that this

THE HIND BANK LTD.

Working Results for 1956

The Profit of the Hind Bank Ltd. for the year 1956, subject to audit, including the amount brought forward (Rs. 1,66,000) from last year's accounts is Rs. 13,77,000. Out of this sum, the Directors have made the following appropriations:—

	Rs.
Provision for Taxes ..	4,50,000
Transfer to Reserve Fund	3,75,000
Bonus to staff ..	90,000
Balance	4,62,000
Rs.	13,77,000

Out of the above balance, the Directors propose to recommend to shareholders at the next General Meeting the payment of a Dividend at Rs. 3 per share, free of income-tax which will absorb Rs. 3,00,000 leaving Rs. 1,62,000 to be carried forward to the next year's accounts.

The securities and investments of the Bank appear in the accounts on December 31, 1956 at or below the market rate ruling on that date.

HIGHLIGHTS

"India is to be congratulated," says the New Yorp Herald Tribune

The congratulations are due for the opening of the Hirakud project.

In particular, the newspaper has hailed the fact that India has completed the project almost single-handed.

And yet, in the not too distant past, there was no joy but sorrow in Hirakud news.

First, there was the calamity of gross underestimate of costs.

Secondly, there was the disaster of internal squabbles.

Third, there was the presentiment that the project would take ages to complete.

It required a firm hand to guide the reins, before the first phase of the journey could be completed.

See the Leading Article and Olympus for views on India's newest project for plenty—the Hirakud Dam.

cornering activity will be over as the company and its friends are reported to own over 50 per cent of the Ordinary shares. It is even felt that the removal of the scrip from the forward scip is now being seriously considered.

On the Bombay Stock Exchange, the Ordinary shares of Gwalior Rayons are placed on the official list. The unit of trading is 100 shares. The shaes, which are Rs 10 paid-up, are now quoted around Rs 14.

On the Delhi Stock Exchange, Raza Sugars and Buland Sugars are ruling firm around Rs 20-0 and Rs 15-8 respectively. It would be recailed that the Allahabad High Court issued an interim injunction restraining these companies from carrying out their merger scheme and the dividend proposal of 1951. Market circles are keenly awaiting the High Court's decision, which is expected to be announced shortly. If the company's proposals are sanctioned, every two shares of Raza will be converted into three shares of Buland and get one share of Dalmia Cement as dividend in species for 1951.

On the Madras Stock Exchange, Indian Steel Rolling Mills have decided to issue 50,000 new Ordinary shares of Rs 10 each at par to the existing shareholders as on 7-2-1957 at one new share for every 3.757 Ordinary shares held. Transfer Books are closed from 1-2-1957 to 7-2-1957.

Mysore Sugar Maintains Dividend

Balance-Sheet Reviews:

THE Mysore Sugar Company has presented the reports and accounts for the year ended 30th June, 1956. The year under report was a normal one for the company, both production and sales being satisfactory. Crushing of sugarcane in the Mandya factory began on the 21st July 1955 and closed on the 23rd April, 1956. During the period, a total quantity of 347,523 tons of cane was purchased and crushed as against 375,548 tons in the previous year, while the quantity of sugar produced was 34,798 tons against 35,312 tons. As usual, the Distillery continued to work satisfactorily.

The net profit for the year, before providing for Taxation and Depreciation, is slightly lower at Rs 14,37,631 against Rs 15,27,291. Apart from setting aside a sum of Rs 5.00 lakhs for Taxation, the Depreciation amount has been maintained at Rs 5.29 lakhs, although no provisions have been made for General Reserve and Other Funds as against Rs 2.50 lakhs and Rs 2.50 lakhs respectively set apart against these items in the previous year. The dividend is, however, maintained at 20 per cent.

Andrew Yule Jute Group Results

The difficult conditions generally experienced by the jute industry, during the first half of last year, partly due to the high prices for raw jute and partly to the poor offtake of goods by overseas consumers, are fully reflected in the latest working results of the seven mills in the Andrew Yule group. Although the reports of these companies cover different half-yearly periods, their accounts reveal losses in all cases, resulting in the passing over of the Ordinary dividends in five cases. The only company to show a real profit is National. In the circumstances, the directors have been compelled to transfer funds from various Reserves in

Indian Finance
Established 1928
January 19, 1957
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius

THE inauguration of the Hirakud Dam represents a happy landmark in the economic history of Orissa. In the past, Orissa has been a by-word for famine. Only the first phase of the work on the project for harnessing the waters of Mahanadhi is now over. When the whole project is completed, nearly two million acres of land, now partially or wholly uncultivated, will receive the benefit of a steady and regulated water-supply, in all probability converting the State into a rich surplus area in goodgrains. Besides, there will be ample electric power, available for the industrial development of the State.

The electricity transmission lines covering several hundreds of miles are intended to carry power to places as distant as 200 miles away from the dam site. Within this distance lie the Rourkela steel plant, a big aluminium factory and numerous other industrial units producing cement, paper, textiles etc and collieries. At Joda, there is a ferro-manganese factory. Many more industrial units of varying sizes would take their place in due course. Rural electrification is one of the main purposes of the Project.

The dam, which Pandit Nehru described as a brilliant product of the modern age, is the longest in the world. Apart from the 3 miles long main dam, thrown across four river channels between two hills, there is another chain of impervious barrier, closing the gaps in the hills on the flanks and together making up an extra 13 miles length. Technically an earth dam of this size, 200 ft at the lowest point, is a marvel of achievement and the nation should proudly congratulate the engineers who conceived the idea and executed it without flaw. Again, as the bridge over the Ganges and the Chittaranjan works, it is a triumph of Indian skill and imagination.

Tracing the genesis of this great piece of work, the names of two individuals deserve special and grateful mention. It was Sir Arthur Cotton, the reputed architect of the Godavari Irrigation Scheme, who first produced a report on the harnessing of the waters of the rivers of Orissa. It was as early as 1858. . His ideas of the technique necessary were entirely different, though they coloured a number of recommendations made by others subsequently. The suggestion that only flood control reservoirs on the main rivers would effectively meet the problem in Orissa was first mooted by Sir M. Visweswarayya, when the Government sought his advice after the devastating floods of 1937. Even since then, the authorities were toying with all kinds of unimaginative ideas. It was only when the Central Water, Irrigation and Navigation Commission endorsed Sir M. Visweswarayya's suggestion that the way was cleared for concrete steps. The foundation for the dam was laid in 1948. It took eight years for completion.

The New Call on Science

ONE of the interesting side-lights of the Forty-Fourth Session of the Indian Science Congress is the confusion experienced by some delegates coming from other parts of India to find out what takes place where. A distance of five miles separates the two venues of the Congress and the volunteers are reported to be unable to post the delegates promptly with all the information sought of them. This confusion is symbolic of the high and growing degree of specialisation which has become an inevitable feature of the progress of scientific knwledge.

It is impossible for a specialist in one branch to keep track of developments even in a not distantly associated branch. In the current Congress, about 1,200 Papers are read on subjects covering from anthropology to zoology. No wonder, therefore, that some of the delegates find difficulty in locating even the discussions. There is no use bemoaning the isolation inseparable from the exacting concentration on special branches and themes, without which some of the greatest achievements of modern times would either not have taken place at all or have taken an incredibly longer time.

In these conditions, Pandit Nehru's appeal to the scientist not to confine himself to an ivory tower, cutting himself off from what is happening around and from the results of his own work, may sound somewhat ungenerous. It is undoubtedly too taxing for an individual consistently employed in the pursuit of a single-minded and all-absorbing purpose, to keep in touch with the innumerable economic and social repercussions of his work. Scientific research, if it has got to produce results, should be more and more an individual or collective dedication. Distraction can spell defeat.

Pandit Nehru's appeal has therefore to be understood in a broader light. He wants the scientists to be humble, to refrain from thinking that any one individual or country has the monopoly of truth and to understand that science divorced completely from the realm of morality and ethics might become an instrument of the devil. In other words, he wants scientific research to be integrally linked to human welfare. Is this possible? If so, how far? The business of the scientist is the discovery of the nature of matter and energy. The application to social purposes comes afterwards. The restraint and the direction indicated by the Prime Minister belongs to the stage of application, the cross-road as it were, in the path of knowledge.

If, for instance, all the illustrious scientists who have contributed to the discovery and utilisation of atomic energy had in a spirit of unwavering allegiance to human welfare conceived as a whole, refused to develop certain applications, the world would have remained a much more secure place to live in. As it is, the threat of total destruction and contamination, implied in the latest weapons of warfare, hangs heavily over the future. That they did not desist poses the wider background against which Pandit Nehru's appeal will have to contend with. The inhuman weapons of destruction evolved with the help of modern discoveries cannot be blamed on the eminent men responsible for those discoveries. Most of them could simply not foresee all the eventual uses to which the new knowledge they gave the world would be put; others might have purposefully proceeded with refinement of the most horrible inventions, on the inescapable compulsions of patriotism and national defence. It is even now held by people in the United States that the atom bomb thrown on Hiroshima enabled a net saving of human lives by cutting short a war, which would otherwise have dragged on involving casualities several-fold.

The scientist's lot is deserving of great sympathy. A conviction that he is even remotely responsible for large-scale suffering will be a standing remorse for him. It is not always possible for him to choose between the loyalty of his own State and nation, as is impressed on him from time to time and the wider loyalty to mankind. He will certainly exercise the necessary restraint and display due understanding of the needs of human welfare, if the statesmen who guide the world's destiny will consistently give him the right lead and the proper task. After all, all the marvellous achievements harnessed to the requirements of a peaceful and comfortable living have come through the path of science. Its uglier by-products can be avoided, if the different peoples of the world cultivate tolerance and goodwill and the habit of settling mutual differences without recourse to armed conflict.

Pandit Nehru at least is not guilty of a one-sided emphasis or a misdirected appeal. His call to the scientists comes amidst sincere, and often frantic, importunities to the leaders of the nations, who exercise a powerful and decisive voice in contemporary international relations, and on whose good sense hangs the prospect of world peace.

Dr B. C. Roy is deeply pessimistic of the future. If the social and technological changes conceived by the mind are permitted to advance at the present pace, man's brain which is at once his glory and curse, while it has raised him above the beasts, the Doctor analyses, will doom him as a species. The overdeveloped and over-specialist brain endows men with a mind that "conceives new machines to take the place of muscles, new instruments to supplement inadequate senses, new and complex ways of living. The poor body cannot adapt rapidly enough to these changes.....The verdict appears to be that man must crack under this strain." According to Dr Roy, the rocket, the radio and even artificial woven fabrics are incompatible with the survival of man as a species. And yet, he sees no alternative for the human mind but to go on experimenting even at the risk of extinction.

To the doctors of the soul, modern scientific discoveries offer a ghastly challenge to man's faith in God. Thus both the body and the soul of man will have to be understood as facing a very grave crisis, with the eventual prospect nothing short of complete extinction.

But this is only one view. It is possible, while admitting that the progress of scienti-

(Continued on page 130)

Editorial Notes

Sir Anthony Eden

A pathetic combination of ill-health and personal failure has driven Sir Anthony Eden into premature retirement. One irretrievable political miscalculation put an inglorious end to a reputation jealously built over two decades. That his resignation caused genuine sorrow for all those who know Eden intimately is borne by the highest encomiums paid from far and wide to his personal qualities. If the Suez muddle hadn't irreparably damaged his national standing and international prestige, ill-health would not have so decisively interfered with his career.

How far a change of premiership contributes to the fading of memories and the wiping out of bad blood between Britain and other countries is not predictable. The Suez action was a full-fledged Cabinet decision and Mr Macmillan, Eden's successor, was not one among those who raised even a lukewarm protest. He could not. The sacrifice of his erstwhile chief does not absolve him of the due share of responsibility. The only difference is that the new Prime Minister does not suffer from the handicap of having suddenly become persona non grata with powerful friends of Britain like President Eisenhower.

Britain's self-imposed new problems of foreign exchange, oil and relations with France and some of the Commonwealth countries may be now understood outside with less antipathy and cynicism, as the main architect of the Suez intervention has left the stage.

Britain's domestic politics does not appear likely to cool down by the change of occupant in 10 Downing Street. On the contrary, the choice of the new entrant has aggravated party feelings. The Labour Party does not approve the discretion exercised by the Queen in handing over premiership to a person to whom the nation, or for that matter even his party, has given a clear title for the post. Among Conservatives, there is wide sympathy for Mr R. A. Butler, who could secure only the second place in the Cabinet. A general election in the immediate future may be avoided, as the ruling party knows that it will be hazardous. The constitutional issue raised by the Queen's preference will continue to simmer for some time.

The Fight Against T.B.

Perhaps in no other country is the fight against tuberculosis bedevilled by as much mystery and controversy as in India. Expert and statistical knowledge about the disease and its incidence has gone a long way. But still we are asked to assume that a much larger percentage of the population suffer from this ailment than the five lakhs of known cases. In this calculation, the prospect of hospitalisation as a general method of isolation belongs to an extremely remote future; at present, there are 22,000 beds in the whole country and by the end of the Second Five Year Plan another 4,000 may be added.

It is logical, therefore, that prevention and treatment of the disease at home are preferred in current policies. For prevention, the BCG has been accepted by the Government of India as the cheapest and the most effective method. In the course of the next four years, it is planned to give BCG vaccination to every one below twenty-five found susceptible to the disease. The battle between C.R. and Rajkumari Amrit Kaur on the efficiency of BCG each enlisting ample expert opinion from all over the world has to some extent shaken the layman's faith in the drug, and perhaps even the confidence of the authorities. The Union Health Minister has conceded that certain matters connected with BCG vaccination were under investigation.

At the International Tuberculosis Conference recently held at New Delhi, a US expert advocated isoniazid as a cheap and efficacious drug, particularly suitable for countries where the number of patients were high. An expert from India promptly pointed out that no conclusion could be arrived at as to the effective mechanism of resistance and attenuation of the isoniazid resistance bacilli. Others held that this medicine by itself could not yield independent results.

At the meeting of the National Institute of Science at Calcutta, Dr Ukil said that there were still some important gaps in the knowledge of the metabolism of tubercular bacilli. These are, of course, matters for the most highly specialised talents to deal with. Possibly, unanimity will always remain a dream. What is desirable is that when there is no conclusiveness on the scope or efficacy of a particular drug, its application on a general scale should be cautious and careful. Even those who have full faith in BCG or for that matter in any other modern drug, will not challenge the contention that improvement in nutrition is indispensable. The protein content of the average Indian diet is 5 grams, while the normal requirement is 40 grams. Besides, there is an annual increase of population at the rate of 4 to 5 millions. As long as there is no short-term answer to these two problems, there is unassailable force in the stand taken by C.R. that nothing should be done to spread a general consciousness of the disease and depend on preventive drugs alone.

Incentives in Eastern Europe

Among the 1956 trends of production in Eastern Europe and the policies influencing them, as reviewed in the UN Economic Bulletin for Europe, the restoration of incentives to the individual producer stands out prominently. In Bulgaria, the agricultural producers have secured a general increase in prices. The Soviet Union, Poland and Czechoslovakia have fallen into the same line. The Bulgarian Government increased payments for obligatory deliveries from 20 to 30 per cent and have held out the promise of similar increases for contractual deliveries from next year. Much higher percentages of increase were given to wheat, apples and wool.

In the Soviet Union, sugar beet price was raised by 50 per cent. The producers of wool, fruits, berries and grapes are among the other important beneficiaries. From next year, provided the harvest is favourable, the State's share of grain from the Kolkhozy will be substantially less. The farms are also given the option of substituting wool and meat for compulsory deliveries of grain, a step obviously intended to encourage stock-breeding. A similar concession in Poland is reported to be aimed at discouraging premature slaughter of animals. The Government of Eastern Germany have offered tractor and machine services to large private farms at rates hitherto applicable to smaller farms. Fiscal concessions for members of higher-grade cooperatives were announced in Hungary where several industries were also offered increases in wage rates.

The Soviet Union has taken decisions on a more comprehensive programme, in which, among other things, compulsory deliveries of milk would be abolished, the planning and direction of socialistic enterprises would be substantially decentralised, management and work councils granted more independence and additional payment from profits devoted to staff welfare. A revised definition of the Kulak is expected to encourage the growth of medium peasants employing hired labour.

Unrest in Indonesia

The Indonesian Government's charge that some foreign countries are behind the uprisings in Sumatra cannot explain away the recurrent political troubles which the world's fourth biggest democracy has been facing ever since its coming into being. That President Soekarno and Premier Sastroamidjojo have together been able to assemble and retain sufficient national support to avoid disruption of the State is indeed praiseworthy.

But the odds against the present government are heavy. Wide-spread corruption in the administration is reported. Vice-President Hatta would not have resigned, if he were satisfied that the administration left little to be desired. The very geographical make-up of the State provides temptation for local leaders to bid for independence of the Centre, every known weakness on the part of which could be easily exploited by any competent adventurer playing on provincial sympathies. When the Central authority itself depends on an uneasy coalition, the prospect for the rebel is reinforced.

The defection of the Vice-President and the withdrawal by the Masjumi Moslem party from the Cabinet are serious blows to the Government. A vast area in Sumatra is reportedly under the control of the insurrectionists, whose example seems to have inspired wavering loyalties in other parts of the State. In this situation, President Soekarno has decided, to back up firmly the rump of the Cabinet. As long as the Communist party is safely on the side of the Government, there is no room for despair. But if the overall position has to be held, at least the present political alignment will have to be jealously protected and strengthened.

Pointless Speculation on Bank Rate

DURING the current week, there has been a fresh spate of speculation on the possibility of a rise in the Reserve Bank Rate. That the stringency in the money market is acute, and that money rates are at or near the 4 per cent level, are adduced as grounds suggesting a higher Bank Rate. The immediate impetus to rumour in this respect is the retirement of Sir B. Rama Rau from the governorship of the Reserve Bank. He has been the fashioner of the policy of selective monetary control; and, in such a policy, there was no need, for the time being at any rate, for an increase in Bank Rate. Market circles seem to think that, with Sir B. Rama Rau relinquishing his office, there may be some change in policy; and that such a change may involve a higher Bank Rate. The apprehension thus conjured up is, we believe, groundless. For, while it is true that Sir B. Rama Rau was definitely associated with a policy of unchanged Bank Rate, we must not forget that Mr T. T. Krishnamachari, too, is a firm believer in the particular policy which India has pursued so far. In one of his earlier speeches soon after he assumed office as Finance Minister, he stated, in positive terms, that no change in Bank Rate was being contemplated. This assurance holds.

Nor need it be supposed that, immediately on assuming responsibility as governor, Mr K. G. Ambegaokar would give top priority to the task of converting the Finance Minister to the virtues of a higher Bank Rate. There is no warrant for any inference that, while he was deputy governor, he was in disagreement with his chief over the Bank Rate issue. It must also be borne in mind that, as at present envisaged, Mr Ambegaokar is to be governor "until further notice". This suggests that the Union Government are taking time to reach a final decision on the permanent arrangement for the governorship. Maybe, Mr Ambegaokar is the final choice after this detailed consideration is completed. For, he has the apposite experience, having been the Secretary of the Economic Affairs Ministry for a considerable time. That he has been a Deputy Governor only for a year, can be no valid argument, considering that a similar disability did not stand in the way of Sir Chintaman Deshmukh's promotion to the governorship on the death of Sir James Taylor.

Maybe, as whispers from New Delhi indicate, Sir N. Raghavan Pillai would again enter the picture; but, if anything, the current posture of affairs in regard to foreign policy makes him even more indispensable to the Prime Minister than was the case two years ago. It is also not unlikely that Mr H. V. R. Iengar may be considered as very much more valuable at the Reserve Bank than at the State Bank; and that, in such an eventuality, Mr P. C. Bhattacharya may be offered the chairmanship of the State Bank. There are, thus, a number of probabilities; and it is not to be supposed that, in this fluid state, a momentous change in the policy of selective monetary control would be essayed. We continue to be unrepentant believers in an unchanged Bank Rate. We further believe that, in the course of 1957, the world money markets would witness a weakening of the fanatical faith in an orthodox Bank Rate policy. West Germany has, for a second time, lowered the official minimum; and the British Treasury Bill rate has registered a further fall of some magnitude.

+

The returns of the Reserve Bank for the week ended January 11 reveal a number of noteworthy changes some of which are reflected and in turn reflect changes in the statement of the State Bank for the same week.

There has been a sharp rise of Rs 13.69 crores to Rs 1,495.21 crores in Active Note circulation; in the last two weeks alone, therefore, expansion in Active Notes has totalled Rs 28 crores. Outflow of Rupee Coin has been for Rs 0.70 crores. Expansion of currency has been effected for Rs 20 crores against Rupee Securities; and, in the result, the Reserve Bank's cash in the till has improved by Rs 5.61 crores to Rs 13.16 crores.

Not all of the increase in Rupee Securities, however, represents deficit financing. For, it is to be noted that Investments in the Banking Department are lower by Rs 13.05 crores at Rs 49.48 crores. Possibly linked with this decline is the decrease in the Deposits of State Governments. It thus seems probable that sales of securities to State Governments account for the decline, or some portion of it, in Investments; and the proceeds would have contributed to the improvement in Reserve Bank's cash in the till.

At any rate, we advance our view that a moiety of the rise in Rupee Securities in the Issue Department is due to sales of ad hocs in favour of the Reserve Bank, and that the other moiety relates to transfer from Investments in the Banking Department. In this view, created money would have benefited the balances of the Central Government; and the transfer from Banking Department would have been made in order to expand currency for circulation.

In spite of possible deficit financing during the week, the Centre's balances are lower by Rs 0.34 crores at Rs 54 crores. The likely purchase of Investments from the

Mr Macmillan's Economic Policy

By PAUL EINZIG

SIR Anthony Eden's resignation took the British public almost completely by surprise. For, although some newspapers were forecasting an early resignation of Sir Anthony Eden, those newspapers have been making similar forecasts off and on for over twelve months. The fact that during the last few days of the Eden regime sterling was distinctly firm and so was the London Stock Exchange—especially Government loans—shows that no acute crisis was anticipated. Even though Sir Anthony Eden was sharply criticised for his Suez policy in many Conservative quarters, his position was considered secure in well-informed political circles, on the ground that, in face of the Socialist frontal attack, the Conservative Party could not afford to be disunited. Any split would have justified the Socialist demand for an early general election which, in given circumstances, would have meant the advent of a Socialist Government.

If Sir Anthony Eden wished to remain in office he would certainly not have been overthrown by his Party, not only because it has a well-established tradition of loyalty to its Leader, but also because disloyalty would have meant political suicide for the Party. These considerations were widely realised, hence the firmness of sterling and of the Stock Exchange. Any anticipation of developments that might have involved the risk of an early general election would have caused a flight from the pound and a slump in the Stock Exchange. Indeed, the immediate effect of the announcement of Sir Anthony Eden's resignation was a distinctly weaker trend in the markets. This was because it was assumed that he would be succeeded by Mr Butler, and it was widely known that a strong section of the Conservative Party would be unwilling to support him.

Sir Anthony Eden decided to resign because, realising his unpopularity in the country, he did not wish to become a liability to the Conservative Party on the eve of some important by-elections. He felt that his party and Government stood a better chance of living down the Suez affair if it were led by someone else. And the main reason why the Queen decided to invite Mr Macmillan to form a government instead of in-

BANK PROFITS

The second instalment of bank profits announcements continues to confirm 1956 as having been a remarkably good year for the banking system. Earnings are consistently higher; larger allocations to reserve are being made; dividends are being raised; taxation receives more; and bonus to staff also shows a corresponding increase.

•

The Indian Overseas Bank Limited has shown an improvement of over Rs 12 lakhs in the net profit, from Rs 16.56 lakhs to Rs 28.65 lakhs: the increase over 1955 profits works out to 72.4 per cent. The provision for tax is higher by Rs. 6.50 lakhs at Rs 14.00 lakhs; the Reserve receives Rs 2 lakhs more at Rs 6 lakhs, which places the Reserve at Rs 36 lakhs against the capital of Rs 49.20 lakhs; the dividend payment has been raised by 2½ per cent to 10 per cent; and the carry forward is Rs 2.52 lakhs as compared with Rs 2.28 lakhs brought in.

•

The bonus paid or proposed to be paid to staff by Andhra Bank Limited for 1956 is for 1½ months against half a month for 1955. After this charge was met, the net profit for 1956 is Rs 9.55 lakhs versus Rs 5.15 lakhs in 1955. The ad interim dividend for 1956 is at 7½ per cent per annum, compared with the previous year's 6 per cent. From 1956 profits, a transfer of Rs 1.03 lakhs is being made to Reserve; and the Reserve is placed at Rs 16.43 lakhs against the capital of Rs 34.20 lakhs. The balance left for distribution is Rs 7.23 lakhs against Rs 4.26 lakhs in the previous year.

•

The Hind Bank Limited has improved its profit by more than a lakh from Rs 10.86 lakhs to Rs 12.11 lakhs. Taxation receives more at Rs 4.50 lakhs, as against Rs 4.00 lakhs in the previous year; Bonus to staff gets Rs 0.90 lakhs as compared to Rs 0.83 lakhs; the transfer to Reserve has been raised from Rs 2.50 lakhs to Rs 3.75 lakhs; the dividend is maintained at Rs 3 per share; and the carry forward is Rs 1.62 lakhs against Rs 1.66 lakhs brought in.

•

The Bank of Baroda Limited has recorded a sharp increase in its profit from Rs 29.66 lakhs to Rs 40.90 lakhs. The interim dividend for the first half year in 1956 absorbed Rs 6 lakhs, against Rs 5 lakhs in the first half of 1955. The provision for tax has been increased from Rs 9.00 lakhs to Rs 15.75 lakhs. Bonus to staff gets Rs 8.75 lakhs against Rs 8.00 lakhs. The final dividend, which makes the distribution 14 per cent for the year against 12 per cent, absorbs Rs 8 lakhs against Rs 7 lakhs. The carry forward is placed Rs 1.41 lakhs higher than the Rs 5.36 lakhs brought in.

viting Mr Butler the view is that the former would stand a better chance than the latter to secure the united support of the Party.

From the point of view of sterling and of the Stock Exchange, what matters is that there should be a stable Conservative Government with a sufficiently secure majority to justify the Prime Minister in rejecting the Socialist demand for an early general election. Such a demand has no foundation in British constitutional practice, so long as the Government is not defeated in the House of Commons. But an influential section of the Conservative Party felt so strongly against Mr Butler's Premiership that they would have been prepared to risk a general election. The uncertainty arising from such a situation would have resulted in a revival of the speculative drain on sterling, and the Stock Exchange would have been weak just at a time when the Treasury is anxious to prepare the ground for some large conversion operations.

Admittedly, a number of Conservatives disapprove of Mr Macmillan. But they do not feel so strongly about it as do Conservative critics of Mr Butler. So the Queen followed the well-established tradition in choosing the man who is the most likely to be able to command the support of a

WHAT HAS HE TO DO WITH CEMENT ?

Cement builds his home. It is in the pavement on which he walks, the school in which he learns the arts of man, the hospital which he may need, the swimming pool, sports track and gymnasium that build his team spirit and his muscle. It is in the dams, power houses, factories, grain silos . . .

CEMENT — more and yet more cement — is the need of his future. The Associated Cement Companies Limited, which has doubled its output between 1948 and 1955, will double its production again during the next five years. The success of the Second Five-Year Plan and the future of India's youth both depend upon Free Enterprise.

The ACC is helping to build his India of tomorrow.

World of Jute

Promotion of Jute Production

WHILE the Government of India have always been evincing keen interest in the working of the Indian jute industry, their approach to the problems facing it from time to time has generally been governed by revenue considerations. The position, however, has changed radically since Independence. Even so, the old outlook has not altogether disappeared with the result that there have been only half-hearted attempts to enable the industry to overcome the obstacles in its way. That is perhaps the reason why, notwithstanding the consensus of opinion that complete raw-jute self-sufficiency is an essential prerequisite to the orderly working of the industry, Government have been content with setting the target for jute production for the Second Five Year Plan at only 50 lakhs bales.

Ever since the Second Plan target was announced, this journal has taken the view that the figure is low. It may be recalled by our readers that Indian Finance has been advocating hundred per cent raw jute self-sufficiency almost from the day Partition had put the Indian jute mills and their source of supply of the raw material in two different countries. It has been our firm belief from the very beginning that so long as there is a gap between demand for and local production of the raw material, there will be no stability for the industry.

Thanks to the rapid depletion of our foreign exchange resources in recent months, Government's attention has now been focussed on the traditional sources of supply of foreign exchange the demand for which has greatly increased in the current plan period. Speaking at the last annual general meeting of the Indian Central Jute Committee, Dr Panjab Rao Deshmukh, Union Minister for Agriculture, emphasised the jute industry's key role in the Second Plan. At the meeting it was also announced that the target of jute production for the Second Plan had been raised to 55.4 lakh bales. Considering the fact that the Indian jute industry will normally require 72 lakh bales per annum, it will be seen that there will still be a big gap between supply and demand at the end of the Second Plan also. We, however, do not believe that by naming a smaller figure, Government are averse to attaining raw jute self-sufficiency as quickly as practicable.

That Government are "very anxious to tackle the problem of increasing jute production on a high priority basis" has been made clear recently. Since the revision of the target, Government have been actively engaged in devising ways and means of attaining it. A conference on Promotion of Jute Production was held in New Delhi last week presided over by Dr Panjab Rao Deshmukh and attended by representatives of the main jute growing states like West Bengal, Bihar and others. The conference decided that it was necessary to bring additional area under jute in order to achieve the target, and that 50 per cent of the area should be fertilised by the end of the Second Plan period. Other suggestions made at the conference were use of improved strains of seeds, better cultural practices, line sowing by drills and inter culture by wheel hoes. The necessity for the appointment of a wholetime coordinating officer who will work in close collaboration with the NES and State Governments was emphasised by the conference. This officer was expected to coordinate the requirements of each State and assist them in their planning in respect of improved seeds, seed drills and wheel hoes, manures and fertilisers and plant protection equipment. The conference also appointed a sub-committee to study the question of price-support policy, the maximum quantity of mesta the country should produce and the area where it could be most profitably grown.

The deliberations at the conference revealed a new sense of urgency on the part of Government in tackling the most important problem that is now facing the Industry. Raw jute has come to exercise an unduly powerful influence on jute trade in recent months. This state of affairs has been brought about solely by Pakistan's uncertain jute policy. Latest reports from jute goods consuming countries indicate that resistance to higher price levels is daily increasing. Producers of jute goods all over the world find it impossible to reduce prices when they have no other alternative but to pay high prices for the raw material. It is now patently clear that India cannot afford to depend upon Pakistan for any

(Continued on page 119)

World of Tea

Production and Prospects

TEA crop in North-India has established a new record of 536.66 million pounds in 1956 as compared to 534.20 million pounds in 1955 despite the fact that the outturn in December 1956 was nominal at 2.90 million pounds due to complete stoppage of plucking by the end of November under the crop regulation scheme. The total crop last year is higher by 25.78 million pounds as compared with 510.88 million pounds, the average for the last three years.

A remarkable feature of the crop last year is, that the increased output has not been achieved at the expense of quality. The season, on the other hand, is described as a "vintage year for quality' by leading tea brokers. Credit must, however, be given to producers for insisting on a finer standard of plucking than had been prevalent in recent years.

The increase in production is attributed entirely to the ever-increasing replanted areas of young tea, which are now reaching maturity. Most estates are reported to have been steadily uprooting and replanting their poorer low-yielding sections for the last ten years. It, therefore, seems inevitable that the North-East India crop will increase year by year as these replanted areas reach full maturity. With increased crops from other countries, notably East Africa, saturation point will soon be reached unless internal consumption within India itself can be increased considerably.

Tea production in South India during 1956 is expected to close with 5 to 6 million pounds short of 1955, but the final figure for December are not yet available. One of the reasons for the shortfall in production is the greater insistence on finer plucking. Those are also strong contributory factors, such as, go-slow policy of labour in certain areas, bad weather and the appearance of flush-worm.

The following table shows the production figures of the major producing countries (in million pounds):—

Countries.	To End of	1956.	1955.	1954.
North-East India	December	536.66	533.20	513.61
South-India	November	116.20	121.3	117.82
Pakistan	November	51.4	48.9	51.73
Ceylon	November	339.6	348.7	333.24
Indonesia	October	76.6	80.1	85.35

At this stage, it will be of interest to review the latest monthly report issued by the well-known tea brokers, Messrs J. Thomas & Company. The report states:

"World production during 1956 will be almost the same as in 1955. The world off-take, on the other hand, has increased by over 125 million pounds over 1955. As the Indian shipments represent the largest proportion of the improved export position, the balance of teas, to be left over in India for internal consumption, may show a shortfall and the internal buyers will from now onwards have to operate on a heavier scale than usual and compete with the outmarkets, if they are to obtain all their requirements.

Prospects for the balance crop available for sale in Calcutta are good and it is difficult to conceive that Clean Common tea will be available below Rs 2 per pound at any time during the current season. January sales may show a slightly easier tendency, especially as a heavy weight of 'rains' teas are placed on the market from week to week. It is possible, however, that the market may register an upward trend during February, with the seasonal improvement in quality and reduction in the weight of auction offerings.

There may be a slight decline in the tempo of purchase by the UK as its depleted stock position builds up, but this is likely to be offset by increased internal purchases of the end-of-season teas. The USSR is expected to continue to lend its support to this market, especially for autumnal teas, while satisfactory demand should be forthcoming from the Middle East and some of the other outmarkets.

It is hoped that the experience of the early months of 1956 will be borne in mind by the producers in India when production targets for 1957 are set as a correct adjustment between supply and demand is the only sure guarantee of a stable and remunerative market. A recession from the present price level may set in at the outset of the 1957 season, if production is allowed to increase too sharply in the early months of the New Season".

Meanwhile, in the Export Sale held in Calcutta this week, offerings were higher at 73,000 packages. The market opened with a good general demand; but, as the sale progressed, an easier tendency was noticed. Any teas with bright liquors were keenly competed for at slightly dearer rates, while the few Tippy sorts, on offer, also received useful support. Medium Assam CTC teas were in good demand, but the more expensive kinds were, however, again from one to two annas per pound easier. The majority of the Common and Medium teas, on offer, were from one to two annas lower, but tea for price received good support and was generally firm to dearer.

Whole Leaf grades were slightly dearer, but there was much less demand for the more stylish BPS grades. With the exception of a few selected lines, Darjeeling teas were generally easier. Following rates were quoted per pound:— Clean Black Pekoe Rs 2-6-0; Plain Broken Pekoe Rs 2-3-0; Medium Assam BP Rs 2-4-6 to Rs 2-5-0 and Best CTC Assam BP Rs 2-12-0 (nominal).

In the Internal Sale, offerings consisted of 26,298 packages of Dusts for which there was a good general demand. Except for the best liquoring CTC Assams and the black-leafed exportable types which were firm, the majority of the offerings were generally easier. Orthodox Assams, with the exception of the Middle East types, were upto As 1½ per pound easier, while

Commons and Docars were about firm.

The very best liquoring CTC Assams were sold well, but the remaining offeings in this category were often upto As 2 per pound easier. Following rates were quoted:—Medium Dooars Dust Rs 2-1-0; Medium Assam Grainy Dust Rs 2-1-0 to Rs 2-2-0; Medium Assam CTC Dust Rs 2-4-6 and Best CTC Assam Dust Rs 2-9-0 to Rs 2-11-0.

Offerings of other grades amounted to 2,852 packages for which there was a good general demand. The cleaner Leaf teas of orthodox manufacture were sold well. CTC Assams were generally dearer, while the residual kinds of all descriptions were strongly supported. The few lines of Green teas, on offer, received fair support.

In the Export Quota section, the rate was quoted at 39 pies per pound with sellers at 42 pies at the close of the week.

In the Cochin market, offerings were 3,332,953 pounds—the largest quantity to be offered here. The quality of Nilgiri teas was disappointing, but some of the later invoices showed the customary seasonal improvement and this also applied to those from other districts. There was only a fair general demand at rates which were irregularly As 2 to As 6 per pound easier.

The few best liquoring Nilgiris were sold at upto As 8 below valuation and the others at As 4 to As 6 below last prices. Good Medium Brokens declined by As 2 to As 4 as was the case with the brighter Mediums. Low Medium and Low-grown Brokens eased off by As 3 to As 4 per pound. All Fannings in these categories came to a weak market and withdrawals were heavy. Enquiry for Black Leaf descriptions was again very limited and these sorts were generally As 3 to As 4 easier.

The demand for Whole Leaf grades was the strongest feature and these descriptions eased by As 2 to As 3 per pound. Following rates were quoted:—Plain BP Rs 1-15; Low Medium BOP Rs 2-2-6; Medium BOP Rs 2-4-6; Good BOP Rs 2-8 and Well-made OP Rs 2-9.

World *of* Business

Reinsurance Corporation

The Reinsurance Corporation of India got into stride with its registration under the Indian Companies Act on the 29th October 1956 as "India Reinsurance Corporation Ltd", and not Reinsurance Corporation of India as it was popularly known. Its nominal capital is Rs 10 crores divided into one lakh shares of Rs 1,000 each. It will seek permission to issue capital to the extent of Rs 2,50,00,000 out of which subscribed capital will be Rs 2 crores. Only 50 per cent of the subscribed capital will be called up, with the result that the Corporation will commence trading with a working capital of Rs 1 crore.

Whether Rs 1 crore with uncalled capital of a like amount is over-capitalisation for an undertaking of this nature cannot now be said, although the view is held that Rs 50 lakhs with an uncalled Rs 50 lakhs could have sufficed. Professional reinsurers the world over, barring a few, seem to have a capital structure on the lines of Rs 50 lakhs. There is an inherent risk both in over-capitalisation and under-capitalisation from the business and trading point of view. A professional reinsurer must trade overseas to produce balanced results so that adverse results from one territory can be balanced by good results from another. It is the average which is important to the reinsurer. It is, therefore, essential that the reinsurer commands international confidence both in management and capital structure. This is more so in India, for, the Corporation is going to be first of its kind. On its failure or success will depend the future of other professional reinsurers in this country. From these points of view, the promoters can hardly afford to take risks, and that largely explains their anxiety to have a capital which must be proof against all fears. From the business point of view, however, Rs 50 lakhs could have sufficed.

Membership of the Corporation will be restricted to general insurers only.

Nothwithstanding anything contained to the contrary in the Memorandum of Association or any articles of the Corporation, the members by an instrument called the Promoters' Agreement agree and covenant with the Corporation to enter into certain bindings. Should a member, at any time, act against the bindings, he is not liable to action in a court of law under the Companies Act 1956, so long as his actions are in accordance with the Memorandum and Articles of Association of the Corporation, although he may be liable for a breach of contract entered under law.

The bindings are of far reaching character and have vital bearing on the functioning of the Corporation. Members have already entered into the bindings which now require to be considered.

It has been agreed both in the Agreement and Memorandum of Association that Indian insurers will have 30 per cent of the issued capital, the balance of 20 per cent being shared by non-Indian general insurers registered in the country. This allotment removes one of the contentious questions in the formation of the Corporation, the original proposal being to restrict membership to Indian general insurers only such a restrictive provision would have constituted discrimination of a kind in trading in general insurance hitherto unknown and could have offended the general policy of the Government of India. Since membership constitutes obligation to cede business to the Corporation, the bindings restrict, to some extent, the allegedly large reinsurance overseas of foreign general insurers.

The minimum holding of each member in the share capital is to be for a face value of Rs 20,000 in the issued share capital. There is also a formula whereby each member shall be entitled to apply for, in addition to this, an allotment approximating that percentage of the unallotted capital of the Corporation to the extent of 30 per cent for Indian insurers which the particular insurer's capital plus reserves including unexpired risks reserves as on 31st December 1954 bears to the total capital, plus reserves of all the insurers incorporated in India who have applied for being members of the Corporation. This is, again, subject to a ceiling of 15 per cent of the issued share capital for each member.

For non-Indian insurers, the minimum is Rs 20,000 face value of the issued share capital, with an additional allotment in proportion to gross direct premium written in India by the member applied to total gross direct premium written in India by all foreign insurers in the year 1954.

In case a member or members do not apply for allotment in the manner aforesaid for his or their prescribed quota, the surplus will be allotted as far as possible on the same basis amongst the members who are willing to take more shares in addition to prescribed quota.

If after allotment as aforesaid, there still remains any share capital unallotted, the Directors shall be at liberty to deal with it at their discretion bearing in mind these stated principles.

It has been agreed that no member or group (meaning a company with subsidiaries) shall hold, in any circumstance, more than 25 per cent of the share capital of the Corporation.

This complicated formula for distribution of share capital has been devised to ensure equitable distribution of shares amongst the companies depending upon capacity and size and, at the same time, to see that there is no undue weightage leading to control of the Corporation by a company or group. This has throughout been the overriding view in determining the distribution formula. Not content with this, the promoters have further covenanted with a view to forestalling any possibility of domination of the Corporation by any one or more members or groups that voting rights be limited as to (a) full voting rights for first 200 shares, (b) 60 per cent of voting rights for the next 200 shares and (c) 40 per cent of voting rights for shares over 400. It is further stipulated that in no event shall a member or a group exercise more than 12½ per cent of his or their voting rights.

This voluntary limitation in the matter of exercising of votes agreed to by members is of interest in the context of trading in reinsurance. It is not correct that a direct writing company should at any time be in a position to control or influence the policy of the professional reinsurer. The interest of the direct company and the reinsurer is not always the same. The reinsurer has its own norms of trade. Its freedom in the matter of acceptance and retrocessions must remain unsullied if it has to succeed. Pressure tactics from interested groups may seriously prejudice its working. Since membership is limited to general insurers only, whose interest in placement, cessing and acceptance is inter-linked with the trading of the reinsurer, it is only fair that any member or group should, as far as practicable, be divested of the power to control.

It must be remembered that these limitations in voting rights are voluntary arising out of covenants and agreements.

The agreement, however, has been qualified by the proviso that members holding at least 40 per cent of the share capital may abrogate the bindings when they are of the view that the Corporation is being mismanaged, the only qualification being that the Central Government be informed and their views obtained. This provision, which can have very large implications, makes the binding, in the matter of voting rights, somewhat theoretical.

Membership of the Corporation involves obligation to cede business. Indeed, this is one of the surest ways to give the Corporation a good start. Accordingly, it has been arranged that each member shall obligatorily cede premium equivalent to 10 per cent of the Fire and Marine and 5 per cent of the miscellaneous gross premium written direct in India. Apart from this minimum cession, there is no bar for any member to cede business in excess of the minimum provided the Corporation is willing in the course of business to accept additional premiums. There is no bar either for non-members to enter into reinsurance deals with the Corporation.

The equivalent premiums can be ceded either by a quota share of every direct policy written in India or by way of a share of first surplus treaties in the fire and marine departments. The Corporation, by a recent circular, has limited its acceptance to 3 surplus lines in the fire and marine sections. It will not matter if, to start with, ceded premiums are short of the stipulated 10 per cent by 25 per cent.

In the miscellaneous section, however, it is mandatory to cede by quota share only of each and every direct policy written in India.

This broad outline of commencement of trading of the Reinsurance Corporation is different from the trading of professional reinsurers in free countries, where they owe their existence to competitive trading without a subsidy of any kind. The subsidy in India can be defended on the count of "Infant Industry Agreement". As stated earlier, the reinsurer must trade overseas to obtain an average and to produce balanced results. In that alone lies the future of the Corporation, but the Corporation will undoubtedly face serious obstacles to obtain business in the free markets. Nationalisation of life insurance in India is likely to create a psychological barrier. Very few companies will like to trade with the Corporation, as they are likely to identify the Corporation as a part of insurance in India, half nationalised and half on the border line with future very uncertain. There can be little support, again, in the international market for a company which, rightly or wrongly, has commenced with compulsory slicing of business obtained by reinsurers all over purely by competitive trading. It may thus so happen that the Corporation, perforce, will have to confine its trading within the borders of India. That has obvious limitations and disabilities.

Much will, however, depend on the management and it is indeed unfortunate that, as yet, no foreign talent could be drawn. No vain pride or sentiment should stand in the way of drawing freely from the pool of experience overseas. It is still more unfortunate that Mr T. K. Desai, a man commanding international recognition, should have been disabled, by physical ailments, almost immediately after he became the General Manager. That makes a void which can be fixed up by drawing freely from the pool of experience abroad.

World Overseas

US Notes

EVENTS of the past few weeks have effectively reaffirmed the United states adherence to liberal trade policies. First, President Eisenhower turned down a US Tariff Commission recommendation that duties be raised on imported fish fillets. Then, the Commission itself rejected an Agriculture Department proposal that duties be hiked on imported figs and fig paste.

It is significant that in neither case was the decision taken purely on the narrow, technical grounds permissible by law. It was based, rather, on a broad and liberal interpretation of the law—an interpretation that took fully into account both the economic welfare of friendly exporting countries and the over-all prospects of the American industries concerned.

The President, in announcing his decision, once again stressed his reluctance to impose tariff restrictions unless they are essential to the United States national interest or promise substantial aid to domestic industries solely and clearly in need of precisely that kind of help. The nature of the two decisions has led experts to conclude that President Eisenhower will be pursuing his liberal trade policies with as much vigour in his second term in office as in his first. Seldom, if ever, have genuinely liberal policies in this field been carried out as assiduously as in the four years—a fact sometimes obscured by the publicity given the few instances in which the President agreed to boots in certain US tariff rates.

Indicative of US interest in widening the channels of commerce with the rest of the world was Congressional approval this year of a broad customs simplifications measure proposed by the President. This action, taken after a year of careful debate, clarifies and eases the procedures under which imported goods can enter the United States. Its net effect will be to reduce existing tariff strictures on many items—a fact clearly understood when the legislation was approved.

This new milestone in US trade legislation followed Congressional approval in 1955 of another extention of the US Trade Agreements Act, under which the President is authorized to enter into reciprocal arrangements with other countries for the reduction of trade barriers. This Act has governed US trade relations with the rest of the world continuously since 1334. Its existence has freed Congress of the burden of legislating individual tariff rates for the thousands of items involved in world commerce. The Act has served to facilitate US trade negotiations with other countries and to make US tariff schedules less susceptible to protectionist pressure. In the past 22 years, US Tariffs in dutiable imports have been reduced from more than 50 per cent to about 12 per cent, on the average.

The 1955 extension contained additional features of considerable import; it has covered a three-year period, thereby assuring greater continuity in US trade programmes, and delegated to the President even more tariff-cutting authority than before. All is paved the way for extensible US participation in the multi-lateral tariff reductions, negotiated early this year at Geneva under the auspices of the 35 national General Agreement on Tariffs and Trade (GATT), to which the United States has been a party since its inception in 1947.

This US interest in improving the conditions of trade, coupled with real economic progress around the world, has been a key factor in the noble expansion of international commerce. In the past four years, world exports and imports, excluding those of the communist bloc, from which reliable data are all but unobtainable, have increased more than 15 per cent. During this same period, US trade has shown an even more remarkable growth. Imports have increased 17 per cent, while commercial exports, excluding government aid shipments, have jumped some 35 per cent.

In 1956, US imports and exports reach the amazing record totals of nearly $13,000 million and $17,000 million, respectively. Every part of the world and virtually every category of merchandise have shared in the US trade expansion since 1953. US imports from Africa are up 6 per cent, from South America—7 per cent, from other parts of North America—17 per cent, from Asia—23 per cent, from Europe—23 per cent. Indicative of growing American acceptance of products from other lands is the fact the imports of finished manufactures, many of them competitive with the output of American industry, have claimed some 40 per cent since 1953; imports of raw materials, needed to fire the furnaces of American industry, are up 18 per cent. Most American experts are looking forward to even greater trade gains in the future. They base their view not only on the prospect of continued economic expansion, but also on United States willingness to take the lead in progressively reducing the barriers to peaceful international commerce.

*

Britain

Britain sold goods worth £3,173 million during 1956 to oversea countries.

This was an all-time record. It was over nine per cent. more than in the record year of 1955.

Announcing these provisional figures, the Board of Trade said that imports in 1956 were valued at £3,890 million, almost the same as in the previous year, although import prices rose by about two per cent.

Re-exports totalled £146 million (an increase of £27 million), 23 per cent. up on 1955.

The visible trade deficit in 1956 was £571 million, a drop of £283 million compared with the previous year.

The Board of Trade stated: "Allowing for the inclusion in the 1956 figures of silver bullion repayments to the U.S.A., and in the 1955 figures of shipments delayed by the October 1954 dock strike, the underlying increase in value last year, compared with 1955, was close on 10 per cent.—the rise in the volume of shipments being six per cent., while export prices increased by about four per cent."

The value of United Kingdom exports in December with £253.7 million. This was £40 million less than the average for October/November, but December contained only 24 working days, against 28 and 26, respectively, in the two previous months.

Imports amounted to £307.8 million, the second lowest figure during 1956 and £29 million less than the average for October/November. Re-exports, at £11.2 million, were £2.5 million below the October/November average.

The excess of imports (valued c.i.f.) over exports and re-exports (valued f.o.b.) was £42.9 million in December, £13 million more than the average for October and November, but £5 million less than the average for the first 11 months of the year.

*

Sweden

The report on an investigation into long-term trends in Sweden's economy for the period 1956-60 was submitted to the Government by an expert committee headed by Professor Ingvar Svennilson on December 11. The findings and conclusions are presented in the form of two alternatives for the growth of Sweden's gross national product over the five-year period. It is emphasized that consumption will have to be heavily checked in order to create the scope for necessary investments and to improve Sweden's balance of payments vis-a-vis foreign countries.

Some salient points in the report are quoted below:

The planned reduction of the working week from 48 to 45 hours, proposed by another committee earlier this year, will reduce the growth of the gross national product by some 4 per cent to 15 and 10 per cent respectively, in the two alternatives.

Sweden's foreign currency reserves are expected to rise by 12 per cent from 1955 to 1960 or by Kr 300,000,000. This implies that, as in 1955, the reserves will suffice for about three months imports.

Military expenditure and maintenance and repairs are calculated at an unchanged 15 per cent of the gross national product.

Consumption in the next few years will have to be retained in order to prevent inflation and to create scope for such investments as are likely to reduce the present backlog in housing, building of schools, hospitals, etc.

The committee recommends that, in spite of the risks of a less favourable development of production, long-term investments should be planned with a view to the higher alternative (a 15 per cent increase in the gross national product), as there are fairly good prospects of approaching or attaining this alternative. Investments should therefore be directed towards those fields in which, at short sight, production can be accelerated and thus, in its turn, speed up the development at longer range.

State and municipal expenditure is likely to increase by about 20 per cent over the five years, largely as a consequence of schemes already approved. The committee finds that the principles which have already been laid down for an increase in the standard of living should be realized before fresh steps are taken towards a still higher standard. To create new backlogs of unrealized reforms, alongside with the old ones, appears meaningless, the committee says.

Social reforms and investments will, in practice, result in a freezing of consumption for the private income earner up to 1960, except for the growing number of people receiving old-age pensions.

If it is to be generally accepted that Sweden faces a fairly lengthy period of large investment requirements and limited possibilities of increasing consumption, savings are likely to be increasingly regarded as a "social virtue" and an increase in expenditure on consumption as a "mischief". Under such circumstances the policy should aim at shifting the pressure of taxes from direct to indirect taxes, i.e. from saving to consumption.

The scope available for investments in 1955-60 is set at alternatively Kr 750,000,000 and Kr 1,000,000,000 per annum more than in 1955, i.e. an increase of 8 and 11 per cent respectively.

Investments should not be withheld in fields where increased capacity is likely to improve Sweden's balance of payments, e.g. at the iron-ore mines, in the forest and steel industry and in certain branches of the engineering industry. Priority should also be given to schemes entailing a considerable increase in efficiency and saving of labour, i.e. those partly covered by the term "automation."

Investments in housing, at the rate of 65,000 housing units per annum, are likely to increase by 20-25 per cent.

A considerable increase in investments at colleges and universities is foreseen.

The power output should be heavily increased. Emphasis should be laid, at short sight, on steam-power plants, and at longer range on atomic power plants.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

IN sheer insouciance and audacity of historical imagination and resourcefulness in historical pattern weaving, Professor Arnold Toynbee (who is now in India) has few contemporary equals. In a speech in Madras last week. Professor Toynbee traversed grounds familiar to those who have some acquaintance with his work. (I should add, in fact, that he appeared deliberately to keep to the foreground of the castle and avoid the vaster and more tangled wood of his truly amazing historical scholarship). Choosing as his subject the question: "Can we learn lessons from History?", he spoke with persuasive charm on the extent and limits of historical wisdom.

*

The usefulness of history as a humanist discipline has always been a lively subject of debate. One recalls the terse robustness of Henry Ford's, "All history is bunk". On the other hand, we have those endless inventors of parables and allegories, of system builders and pattern makers, who see in the rise and fall of cultures and civilisations the outlines of several determinist patterns. Cyclical theories of history are as old as civilisation: One may perhaps even say that all views of history as a straight line, as a circle, as a recession of seasons or as circles of vegetation and so on prove that mathematics and biology are perhaps the only ultimate sciences.

*

But, from the point of view of learning lessons from history, most system-builders are just as unhelpful as those who dismiss history as of no value as a guide to human conduct. For, by definition, the only lesson that the determinists can teach us is the lesson that history is moving toward the destination implied in the preordained pattern. Such fatalism is as true of optimistic theories of perpetual progress as of the pessimistic ones that predict the imminent dissolution of our own civilisation. Whether it is a straight line or a circle, they are there, like Plato's archetypes, beyond human modification. Macaulay, for instance, said that "the history of England was emphatically the history of progress". Spengler, on the other hand, applied the analogy of the seasons and circle of vegetation to several known cultures and gloomily predicted in 1918 the imminent disappearance of the West. If such are the lessons of history, then, there won't be much point in learning them. *

On the whole, one is inclined with Fisher to view with extreme caution any theory of historical development that is too pat and that too neatly lets facts fall into set patterns. In a gently ironical passage in his preface to his History of Europe, he says, "One intellectual excitement has been denied to me. Men wiser and more learned than I have discerned in history a plot, a rhythm, a predetermined pattern. These harmonies are concealed from me. I can only see one emergency following upon another as wave follows upon wave, only one great fact with respect to which, since it is unique, there can be no generalisations, only one safe rule for a historian: that he should recognise in the development of human destinies the play of the contingent and the unforeseen".

*

But, like all disciplines, history involves the imposition of a pattern for the simplest reason that all intellectual activity is concerned with the organisation of disparate facts and experiences that are muddled up in reality. It is an abstraction that is not the whole truth, if you like, but so long as one is aware of the undoubted play of the contingent and the accidental, such a pattern helps the comprehension of the vast mass of historical material. In fact, all historians, except mere annalists and panegyrists, do have a pattern as least as a scaffolding. And, so long as the scaffolding is not mistaken for the plan of the house and much less the house, not much harm will be done.

*

The truth is, while history is not a science, and a historian no scientist, the writing of history is a moral activity and the historian is by implication a moralist. Even when you feel with Gibbon that history is "little more than the register of crimes, follies and misfortunes of mankind", you have to have a theory of human conduct. You may, depending upon the temperament, see history as the story of liberty as Croce or Acton did, or as the essence of biography as Carlyle did, or the vicissitudes of man's perpetual effort to meet every new challenge with a suitable response as Toynbee does. But, implied in all these attitudes all of which are true, though not exclusively so, is a temperament and a moral stance.

*

Secondly, whatever the austere empiricists might say, there can hardly be any doubt that history which has some kind of theoretical peg to hang on has a greater fascination for reader than the other kind. I do not believe that this is wholly due to the accident of the endowments of particular historians. Whatever may be your ultimate view of the validity of the particular parallelisms that Mr Toynbee draws between events as separated from each other in time as mid-twentieth century and second century AD, there is something awe-inspiring in a view that takes in simultaneously such vast stretches of time, and discerns identities with astonishing plausibility. I have read with immense pleasure large portions of his condensed history and his Reith Lectures of 1952. I suspect that a great deal of the pleasure derived is literary, for, Mr Toynbee has a limpid and insinuating style, except in places where he clutters up the passage with outlandish learning. (Of course, this latter may be merely a measure of my ignorance, but the complaint about style remains). Even here, Professor Toynbee uses with cunning the tricks familiar to all readers of Milton—the sonorous use of exotic proper names. I can think of few other writers on serious subjects, with the exception of Fraser and Trevelyan, who have the same felicity of style as Toynbee. *

And, as for the substance of Toynbee's contribution to the study of history, it would be at once presumptuous and unnecessary to speak. On detail, he is extremely vulnerable, as indeed he can hardly help being, in view of the vastness of his scope, despite his immense and authentic learning. Even I, with less than a mite of his learning, could spot many errors: he says in his Reith Lectures, for instance, that India's population is 450 millions: and, in matters of interpretations, too, his exaggerated view of the extent of Hellenic influence on Indian Art in the centuries immediately after Christ has long been abandoned by Indian Art historians. This is not a minor error, as the factual one on population I quoted earlier is; for, on this partly depends his thesis that, in the centuries immediately before and after Christ, the Greco-Roman penetration of the "World" has points of analogy with the Western penetration of the last three hundred years.

*

But the most important thing about Toynbee is that, contrary to the popular view and despite his fertile—some would call it fatal—inventiveness in the matter of historical and cultural parallelisms, he is not a determinist like Spengler. He does not claim any dogmatic finality for the patterns of developments he has discerned (or imposed) on history. In a recent book on An Historian's Approach to Religion, he says in his preface: "I know very well that I have been presenting one view among many possible alternatives. My object in writing is to ask questions, not to coin dogmas". Again, in his Reith lectures, he develops the thesis that the situation today is similar to that which obtained about the second century AD. It is interesting to note that Spengler uses this very parallel to predict the decline and fall of the contemporary Western culture. While the cultural stalemate actually provided the opportunity for "a new society, in which there was neither Scythian, nor Jew nor Greek, neither bond nor free, neither male nor female, but in which all shall be one in Christ Jesus,—or in Mithras, Cybele, Isis, or one of the bodhisatwas, an Amitabha (the spirit of boundless light) or perhaps an Avlokita (the spirit of compassion)", it is possible that a similar new society may emerge from out of the encounter between the east and the west. (In fact, we have been arguing its possibility in these

columns often enough). But Professor Toynbee is careful to warn that we cannot "cast the horoscope of our own future by observing what happened to Greco-Roman history beyond the point where, our own records break off....History does not automatically repeat itself; and the most that any Greco-Roman oracle can do for us is to reveal one among a number of alternative possible future denouements of our own drama. In our case the chance may well be against the plot's working out to its Greco-Roman conclusion...."

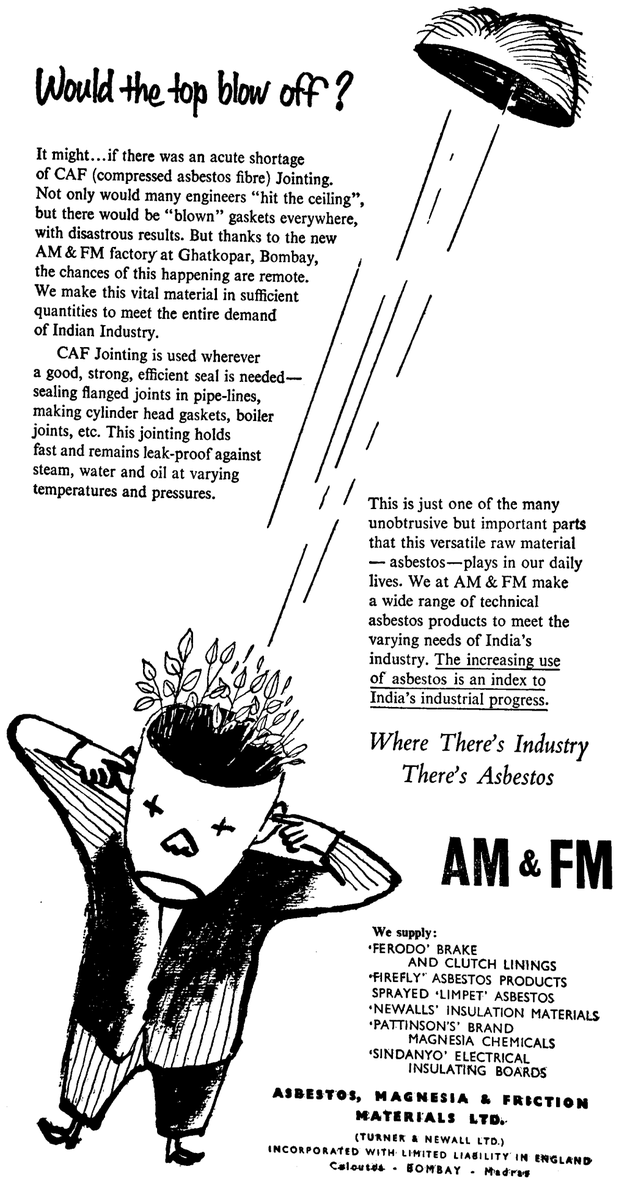
This aspect of the unpredictability of the future, which clearly sets him apart from historical determinists like Spengler and Marx, was emphasised by Toynbee in his speech at Madras. A historian is no astrologer of human affairs: all that history can do is to give us some insight into those aspects of human behaviour that were responsible for certain historical developments and this wisdom may help us, if we choose to profit by them. In Professor Toynbee's own words: "If we have knowledge of the situation in the past, that knowledge can tell us just one of the alternative possibilities in future. What it cannot tell us is of the alternative possibilities in our own future. And it certainly cannot tell us which of these many alternative possibilities, some of them unknown to us until they come upon us, is actually going to happen". Even this, of course, pre-supposes the correctness of our view of the direct causal relationship between events in the past about which there is, despite enormous data, no unanimity. For instance, on such a widely written subject as the European Renaissance, there is still wide divergence of views on its direct responsibility to subsequent events.

*

Thus, we are reduced to the predicament of using history as mere illustrative material for particular moral attitudes, to point, in other words, a moral or adorn a tale.

*

But the enterprise of seeking patterns in history is not wholly barren, even when the historical parallels are not strictly accurate or when the exact sequence of causation is imprecise and uncertain. Something would have been gained in the enlargement of the moral vision of the reader of facts thus organised and though history would have given nothing that we did not have in moral resources before, it would still have pointed their particular relevance.



*

For instance, Mr Toynbee argued convincingly that moderation as a political virtue was learned by Britain as a result of the Civil War in the seventeenth century. The lesson of King Charles' Head, as he picturesquely calls it, was learned after the bitterness of the protectorate; and subsequent events have proved that the English have since then preferred their ex-kings with their heads on their shoulders. So, the settlement of 1688 was the lesson of the preceding half a century and represents the "acme" of British political wisdom. (By the way, scratch any British historian, however apparently bizarre, and you will find a Macaulay!) Again, the political realism of the British revealed itself in their granting of independence to their former colonies and represents the lesson, learnt unwillingly at first, of the American War of Independence.

*

One peculiar fact about our present predicament was touched upon by Mr Toynbee in his Madras speech. That is the fact that, in a sense, even the limited usefulness of history that we have been discussing seems to be unavailing in our present state. This flows from the truly unprecedented nature of our present position. The lessons of past wars have no lessons for us for the simple reason that the war of the future will resemble no war of the past. Mr Toynbee has been willing enough, in other contexts, to "predict" the possibility of the emergence of a new religion that will make the future safe for us. But he sees clearly enough that a war with atomic weapons will be quite unlike any wars of the past, and history has no lessons to offer on that score. We are, therefore, thrown back on old fashioned common sense to prevent such a war taking place. In fact, one of the most favourable factors for the emergence of the new religion that Professor Toynbee predicts lies in the paradox of the impotence of supreme power.

Bombay Review

Reserve Bank Changes

IT was a thunderbolt alright, but not a bolt from the blue. For nearly three weeks, the Reserve Bank sky has been overcast with menacing clouds; and it was generally feared that, any moment, there might be lightning and thunder. The first intimation to the public of tension between the Union Finance Ministry and the Reserve Bank was Mr T. T. Krishnamachari's sarcastic reference in a Madras speech to the Reserve Bank as well as to the State Bank. Convention prescribes that differences (if any) between the Treasury and the central banking institution be kept completely hidden from public ken. When, therefore, the Finance Minister spoke in the way he did about what he considers an inflexible attitude on the part of the Reserve Bank and State Bank authorities, it was taken as an indication that the strained relations were reaching a breaking point.

In any case, it was not to be expected that Sir B. Rama Rau would consent to be involved any more in controversies that could come to be publicly aired. That he promptly sought to relinquish the Reserve Bank governorship is, in this sense, the mere materialisation of what was expected. That Sir Purshottamdas Thakurdas notified authority that he would not care to be renominated to the Central Board of the Reserve Bank, is, likewise, in accordance with form as known from the long and distinguished career of this eminent businessman as a company director imbued with a high sense of propriety. In line with service traditions, of which he is a zealous exponent for over four decades and in a variety of important assignments, Sir B. Rama Rau quits the scene unobtrusively. And, characteristically, Sir Purshottamdas severs his twenty-one year connection with a strong expression on the recent "extraordinary, one-sided and unprovoked" happenings in the relationship between the Reserve Bank Board and the Central Finance Ministry.

The Finance Ministry communique in this respect is content with the bald statement that Sir B. Rama Rau was being relieved at his own request. Not a word of appreciation of his most valuable services extending over six years. It was while Dr John Matthai was Union Finance Minister, that Sir B. Rama Rau, if I remember right, who was then Ambassador in Washington, was offered the governorship of the Reserve Bank. In the spirit in which his brother, Sir B. N. Rau, answered the call of the Prime Minister to be Constitutional Adviser to the Government of India, Sir B. Rama Rau responded to the request of the Finance Minister; and it is not generally known that he cheerfully accepted a cut in the scheduled salary attached to his new post. Nor is the public aware of the voluntary cut of another Rs 1,000 a month which he himself suggested two years ago. This is a measure of his public spirit.

His sensitiveness to the rapidly growing responsibility of the Reserve Bank vis-a-vis the money market, the banking system and the national economy is reflected in his agreeing to two extensions even though, at the end of the second, he would be within sight of his seventieth year. The first extension was for one year. Before he was due to retire, Sir Raghavan Pillai was named as his successor. But, as the date for the change-over approached, the Prime Minister came to realise that Sir Raghavan could not be spared from the manysided foreign policy discussions and decisions. So, Sir B. Rama Rau was requested to continue in office for another two years.

In the light of this record, the abrupt termination of his captaincy has a poignant significance. Four developments in the fashioning and guiding of which Sir B. Rama Rau has shown a bold initiative and constructive approach, need to be mentioned in this context, as, in all these respects, there is a great deal of the danger of changing horses in the midstream. The first is the bill market scheme. For over two decades, there had been learned discussions on the importance of endowing usance bills with a key role in the functioning of the money market. It was Sir B. Rama Rau's constructive genius that translated this dream into fact. The Bank Rate was raised in November 1951; and Indian Finance brought out a Bank Rate Supplement emphasising that, to avert the threatened stringency, three concrete schemes should be considered: (1) The Reserve Bank should inject funds into the banking system by making advances against usance bills; (2) the Reserve Bank's open market operations should be so conducted as to bring about a rising pattern of giltedged prices; and (3) Banks should be permitted to show their giltedged securities at prices specified in relation to maturity, etc. Sir B. Rama Rau took immediate action on all these suggestions; and the bill market scheme was set in motion by January 1952. The success in the first quinquennium of this far-reaching experiment is spectacular; and Sir B. Rama Rau was, at the moment of relinquishing office, actively engaged in greatly liberalising the bill market scheme so as to accord with the anticipated heavy demand for finance in the current busy season. Enough is known in authoritative circles of the liberalisation techniques to give the assurance that the 1956-57 busy season would pass off as smoothly as did the 1951-52 busy season in spite of acute apprehensions, on both the occasions, at the beginning of the season.

The second development associated with Sir B. Rama Rau is the gradual evolution of an appropriate and effective policy of selective monetary control. If Bank Rate in India has remained unchanged for these five years while, in almost every other important country, high Bank Rate has been the vogue and fashion, the credit goes entirely to Sir B. Rama Rau. Revival of orthodoxy in London and New York, in Amsterdam and Bonn and elsewhere, was responsible for the expectation that Bank Rate efficacy would be as certain in the mid-fifties as it had been in the days when good old Gold Standard was more or less universal. Sir B. Rama Rau, on the other hand, took the view that new times needed new techniques; and the basis of the new techniques should be, not bank rate, but selective control. As 1957 dawns, there are signs and omens that the world is realising that Bank Rate has but limited uses, and that realism demands a new version of monetary control. The guess may be hazarded that the policy pursued by India under Sir B. Rama Rau's leadership will gain wider and wider acceptance throughout the world in the course of the current year.

The third development to be noted in this review is the nationalisation of the Imperial Bank, the assumption by the State Bank of responsibility for extension of rural credit, and the continuing guidance and direction that must come from the Reserve Bank. The institutional changes and adjustments have been made; but the actual work, resulting in concrete results, is yet to begin on any worth-while scale. The role which the Reserve Bank must play and continue to play in this important programme finds recognition in the appointment of Mr Venkatappiah as the third Deputy Governor with rural credit as his special portfolio. Liaison between the State Bank and the Reserve Bank, the extent as well as the limitation of intervention by the latter, the over-all relationship of these two institutions to the concerned Government Departments—these are hall marks which will make a heavy demand on tact, good sense, and understanding. Sir B. Rama Rau could have provided firm and confident guidance; and rural credit loses its best friend, philosopher and guide. The Reserve Bank of India Act contains a chapter on agricultural operations; and, in formal compliance, a department has been set up from the beginning. So far, we have not advanced beyond pious hopes and platitudinous reports. Sir B. Rama Rau has initiated the measures that would give substance and scope for the original intentions of the Reserve Bank Act in respect of agriculture; and it is not a little consolation that Mr K. G. Ambegaokar, who will officiate as governor "until further notice", was, in his earlier avatar at the Reserve Bank, the head and chief of the Agricultural Operations department. Mr Venkatappiah was a member of the committee responsible for the momentous decision to nationalise the Imperial Bank and to give a markedly rural bias to the activities and tasks of the re-fashioned institution.

The fourth development of significance is the responsibility, now devolving on the Reserve Bank, to conduct a statutory inspection of all the banking institutions in the country. Statutory inspection of banks does not exist in England but is an American practice. But then, it has functioned in the USA for a considerable time. When legislation was devised in India imposing this obligation on the Reserve Bank, the organisation had to be created from scratch; and the vast army of personnel required had to be recruited and trained. All this has been accomplished with such conspicuous success that bank inspection now functions with a competency and

Gateway Notes

Progress of Sugar Industry

Of the major industries in the country which have made spectacular progress in recent years, the sugar industry stands out prominently. Sugar production in 1955-56 at 18.62 lakhs is over half a lakh tons higher than the target set for that season. It is expected that in the 1956-57 season production will reach 22.5 lakh tons. The extremely creditable performance of the Indian sugar industry in the last few years coupled with the good prospects for the coming season has encouraged Government to allow export upto 50,000 tons of sugar for the present.

The Development Council for Sugar Industry which met at Walchandnagar last week approved the plan for the sugar industry for 1957-58 which aimed at a production target of 22.16 million tons, the estimated production during 1956-57 being 2.05 million tons. According to this plan, 22 new factories with their expanded capacities will go into production, raising the installed capacity of the industry by about 0.35 million tons.

The additional production from the new capacity of the factories likely to go into operation will be 0.25 million tons. The investment in the sugar industry during 1957-58 is estimated at Rs 24 crores, of which Rs 19 crores will be spent on the setting up of 22 new factories and Rs 5 crores on the expansion of 17 existing factories. With a view to increasing the sugar content of the standing cane crop, the Council approved a scheme for countrywide experiments for this purpose by preharvest spraying with a solution of sodium salt.

Speaking at the meeting of the Council, Mr T. C. Puri, Joint Secretary, Union Ministry of Agriculture, emphasised the need for undertaking soil survey work by the technical staff of sugar factories during the off season. The Indian Central Sugarcane Committee was also of the opinion that the soil survey work was of the utmost importance and that the services of the factory chemists should be utilised and, if necessary, they should be given adequate training to take up this work. The Committee has arranged for the training of factory chemists in soil survey at the Indian Institute of Sugarcane Reasearch, Lucknow. Mr Puri disclosed that the demand so far from sugar factories for availing of this training facility had, however, been very poor.

Active steps have also been taken to increase installed capacity of the industry so that production may rise to 25 lakh tons of sugar per month by the end of the Second Five Year Plan. The entire additional capacity has already been licensed which when fulfilled will result in adding 54 new factories, substantial expansion in 69 existing factories and the utilisation of two old plants. The progress in this regard is quite satisfactory as four new factories came into operation last year and another 14 are expected to go into production during the current season

Side by side with steps to increase the installed capacity of the industry, emphasis has also been laid on the need to augment production of sugar cane. As a result of the development schemes during the First Five Year Plan, the per acre yield in the development zones have gone up to even 30 per cent in some cases. Government have planned to intensify rapidly the work during the Second Five Year Plan with a view to cover the entire sugar-cane crop by 1960-61, starting with 15 lakh acres during the first year of the plan. The target for sugarcane production by the end of the Plan is 780 lakh tons as against the production of 530 lakh tons attained during the last season. The Central Government are giving various kinds of subsidies both to the industry and the canegrowers so as to enable them to achieve their respective targets.

*

Role of Small Savings

Bombay hopes to get a substantial portion of the total outlay of Rs 350 crores on its Second Five Year Plan from small savings. The State Government have been informed by the Central Government that they will get 25 per cent of the collections from the State to be utilised for the State Plan.

Inaugurating the Small Savings Week in Bombay, Mr Y. B. Chavan, Chief Minister, said that the State's target was Rs 26 crores a year during the plan period. He was confident that since active steps had been taken to impress on the people the purpose and potentialities of the scheme, the task of collecting the targeted amount would not be very difficult.

Though the Planning Commission have estimated the collections under small savings at Rs 500 crores over the Second Plan period, it is generally believed that very much more than this figure can be easily obtained provided concerted effort is undertaken by State Governments and non-official agencies to spread the message of the plan all over the country.

Apart from the fact that the rate of savings in India as compared advanced countries of the West admits of a sizable increase, there is the additional factor that the National income has increased in the past five years. A sizable portion of the increase in the National income has been accounted for by a substantial improvement in the standard of living of the rural population and hence the small savings drive may be depended upon to stimulate savings at a rate far greater than that has been estimated.

GATEWAY MARKETS

Firmness in Oilseeds Prices

THE Oilseeds market ruled firm with advances more pronounced toward the close of the week under the leadship of castorseed. Crop ideas as well as prospects of overseas business bolstered sentiment in castorseeds, while Groundnuts improved in sympathy. Trading in Linseed and Cottonseed was, however, featureless.

Although shippers reported a significant demand for castor oil in America, they were not inclined to extend their commitments due to fears regarding export duty on oil. In spite of this factor, the tendency in the ready section was generally firm. This was attributed to comparatively small arrivals from upcountry centres. Ready was quoted upto Rs 29-2 from Rs 28-8. In the futures section, Castor May delivery, after touching a low of Rs 171-0, steadily advanced toward the close to Rs 176-4.

Trading in the Groundnut section was featured by an early spell of easiness, but prices firmed up towards the close due to crop ideas which were revised downwards. According to a trade estimate, the crop, during the current season, is estimated to be only about 22½ lakh tons. Besides, the Til crop is also estimated to be lower than in the previous season. As against lower crop ideas, poor arrivals in Madras, Andhra, Hyderabad and at some terminal markets of Saurashtra, the demand from both crushers and vanaspati interests continues to be encouraging.

Meanwhile, Groundnut February delivery moved between Rs 161-2 and Rs 164-10, to finish at the last quoted level. Ready was quoted higher at Rs 33-6 and Groundnut Oil ready at Rs 19-8.

Trading in Linseed lacked any special features and hence price variations were generally confined to a narrow range. Linseed May delivery opened at Rs 30-5 and, after touching a high of Rs 30-12, finished the week at Rs 30-10. Ready was quoted at Rs 34-12 and Linseed Oil 19-8.

In the Cottonseeds section, May delivery opened at Rs 96-8 and, after touching a high of Rs 98-8, finished at Rs 97-8.

*

Gold & Silver

On the Bombay Bullion Exchange spot Silver was on the lead of the advancing movement, while the improvement in Gold wase also sustained on good spot demand. The turnover was moderate.

The smart rise in Silver prices was attributed to rumours of a likely fall in arrivals of Tibetan coins during the next few months. Higher prices of the metal in Tibet and reports of China buying a large quantity from that country also induced bull operators to lend renewed support to the market. Maha delivery moved between Rs 179-14 and Rs 181-7 and Posh delivery between Rs 178-5 and Rs 181-5, to finish the week at Rs 181-7 and Rs 181-15 respectively. Ready was quoted at Rs 181-5, the lowest level touched being Rs 179-7. Arrivals and offtake balanced at six bars.

The support for Gold was, however, limited as a large quantity of smuggled gold was expected to be marketed in the near future. Posh delivery moved between Rs 105-8-6 and Rs 107-0-6 and Maha delivery between Rs 105-15-6 and Rs 107-8, to finish the week at Rs 107-0-6 and Rs 107-8 respectively. Ready was quoted at Rs 107-5. Sovereign remained unchanged at Rs 68-8.

*

Yarn

Conditions in the Yarn market remained firm with prices of Art Silk and Staple-Fibre yarns showing further improvements over last levels. Various deniers of Art Silk yarn shot up by about half an anna per pound in the ready market. Steady trend was, however, witnessed in the Staple-Fibre yarn section where prices remained unchanged. Turnover in both futures and ready was limited due to the absence of favourable advices from the consuming centres.

It is reported that the rayon industry in Bombay is likely to revive its earlier policy of making bulk purchase of art silk yarn from overseas markets. The Silk and Art Silk Mills' Association has received a special import licence of the value of Rs 75 lakhs. It is learnt that the President of the Association and another member have decided to visit Japan to ex-

Bombay Review

Import Policy for Current Half-Year

SPECULATION about the import of sterling area cotton for the current half-year has ended. The Government of India have finally decided to continue to issue licences for import of raw cotton stapling 1 3/16″ and above from soft currency areas during the January-June 1957 period. In other words, the Government have not favoured the import of East African cotton, except BF/52. Higher staple varieties from Sudan and Egypt can be imported, while varieties above 1 1/16″ have already been permitted from hard currency countries.

The Government appear to be anxious to ensure the absorption of the entire quantity of American cotton allocated under the Aid programme. Under this programme, India has yet to lift about 20,000 to 25,000 bales out of 1.5 lakh bales earmarked for this year. The total quantity allocated under this agreement is 5 lakh bales, to be imported within a period of three years. The Government are not likely to import those growths from soft currency countries which will be competing with American cotton, both in terms of quality and prices.

Licences will be issued on a "first come, first served" basis and within a limited monetary ceiling. The monetary ceiling, according to reliable sources, will be sufficient to import about 5 lakh bales in the current season. Licences to the extent of about 1.88 lakh bales have already been issued, including 1.2 lakh bales of American cotton, which is at present available around Rs 1,500 per candy for Middling.

Import of foreign cotton in Bombay, in the first four months of the 1956/57 season (from September to December) were as follows:—Americans 43,034 bales; Sudans 24,578 bales; Egyptians 9,812 bales; East Africans 58,266 bales and others 765 bales. Thus, the total for this period was 136,455 bales as against 112,331 bales during the corresponding period of the previous season.

On the export front, the market was speculating about an additional export quota around 1.5 lakh bales to 2.0 lakh bales.

Although the new import policy has failed to enthuse mills and importers, both the futures and spot sections have responded well to good buying and short-covering. This is mainly due to a string of good news which has come to broaden market sentiment. Better conditions in the cloth market, the stiffening of premium in the spot section and growing complaints about the quality of the new crop, particularly in the Punjab, are some of the bullish influences at work. Moreover, about 10 lakh bales from Khandesh, Madhya Pradesh and the Punjab have already been sold out. With the result, mills are now anxious to build up stocks out of the remaining crop.

In the futures section, sentiment was bolstered by the strength of spot where brisk mill demand was in evidence, more particularly for Vijay. The turnover was 30,000 bales. ICC Jharilla March, after opening at Rs 650-8, advanced toward the close to Rs 657. Similarly, ICC Vijay April delivery terminated at Rs 765 after starting at Rs 751-8.

A feature of the recent development in the market is the growing importance of the Spot section in which speculative activity has broadened. Good enquiries continued to come for Berar Jharilla and Khandesh. Business was also reported done in new crop Vijay, while Oomra Deshi continued to feature well in the export section.

Among foreign styles, scattered business was reported done in Sudan varieties; but Egyptian cotton remained neglected. There was also moderate buying of spot and afloat lots of Californians together with some purchases for shipment.

Following were the rates quoted:—Moglai Rs 710; Moglai 197/3 Rs 730; Bengal Rs 780; Darwa Deshi Rs 125 "on"; Dhulia Rs 710 and Jalgaon Rs 155 "on".

×

CROP OUTLOOK:

The long-term outlook for Indian cotton is considered to be bright. The US Department of Agriculture, in a study of the Indian cotton situation, suggests that the Indian crop will rise to about 5.7 million bales by 1961 and the output of long-staple growth will rise to about 175,000 bales. It is also thought that there will be a surplus of 4 lakh bales of short-staple cotton. Since the output of cloth is expected to reach 8.2 billion yards by 1961, it will absorb about 5.7 million bales of raw cotton. On this basis, export of short-staple growths will be matched by imports of long-staple varieties

×

NEW YORK COTTON MARKET:

Recent gains were extended in moderately active dealings during the week under report with near March and May touching new highs for the season. Some of the buying of the current crops was induced by the loan programme and firming prices at the primary markets with support for new crops, based on Soil Bank considerations and expectations of higher mid-January cotton parity price.

Nearby March delivery encountered increased resistance at 34.49 cents with several of the leading spot firms offering cotton at that level. Switching operations from March to nearby May were fairly extensive. Spot was quoted around 34.70 cents per pound.

×

LIVERPOOL COTTON MARKET:

Trading on the Liverpool cotton market remained dull. Although values improved sharply in mid-week as a result of trade buying and covering by local shorts, the advance attracted some long liquidation at the close. Egyptian contract Jan/February contract was quoted at 60.00d and Sudan at 61.30d.

×

CLOTH AND PIECEGOODS:

Trading conditions in the piecegoods market were better, thanks to continued enquiries from the consuming centres. Demand was more pronounced in respect of coarse and medium varieties. There were also enquiries for fine and superfine goods.

As the stock position in the consuming centres is meagre, the consensus of opinion is, that replacement buying will be better in the coming weeks.

On the export front, the UK is reported to have accounted for some business. While enquiries from Sudan are moderate, larger business with this country is visualised in the near future.

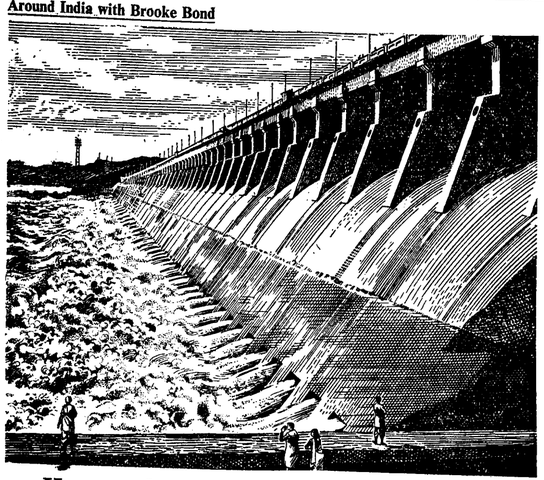
Olympus

The Significance of Hirakud

THE self-sufficiency of the Olympians, especially of those belonging to the journalist fraternity, is notorious. It is not often that they deign to take notice of events beyond India Gate, for, the little world around the Secretariat and Parliament offers them all they need by way of professional and other sustenance. They are usually glib enough about the domestic tittle tattle of foreign dignataries that have taken to visiting India by the horde in recent months, but you would be appalled at the amount of ignorance among them of the details of what actually goes on in the rest of the country. They all know vaguely about the river valley projects and the community development projects and so on and so forth, but, on the actual details, they are rather hazy.

That was why the sight of the Hirakud Dam, which was formally opened by the Prime Minister last week, came as a profound and awe-inspiring experience. All that they had tucked away in the recesses of their complacent mind was that Hirakud was the dam on which a fair amount of money had been wasted; on which there had been endless squabble among the senior staff; and on which, thereupon, Parliament had had a long and acrimonious debate. All this, as they were made to realise, was the memory of four or five years ago: the last three years have seen a complete change in the set-up, with the dam itself as evidence of a monumental dedication to the unremitting and purposeful activity of tens of thousands of people under the inspiring leadership of Mr Thirumale Iyengar.

It is perhaps not very tactful, but nevertheless necessary, to recall, even on this formal occasion, the vicissitudes of this project. As is well known, Orissa has been the victim of alternating floods and drought, like so much of the rest of India. But the floods of Orissa were more than ordinarily evil in their destructive propensities, because they do not drain away easily since the coastal areas of Orissa are lowlands. Moreover, the floods bring down large quantities of sand and deposits with them, thus making the land unfit for cultivation. The task of controlling these floods has, therefore, been of central importance to Orissa's economy; and efforts were made, rather fitfully, from almost a hundred years ago—when Sir Arthus Cotts produced his report on the control of Orissa's rivers. Thereafter, despite multiplication of reports, nothing really worth while was done until 1937, when Sir M. Viswesvarayya recommended flood control reservoirs of the sort that have now been built. Again, finance and technical dubiousness stood in the way of the realisation of the idea. It was only after independence that the Central Waterways, Irrigation and Navigation Commission got busy with the idea given by Sir M. Viswesvarayya, and drew up the plans and estimates for the project.



The early history of the project makes dismal reading. Though there were extenuating circumstances, the casual way the pians and estimates were made, the lack of attention to detail, and the appalling waste of material and stores, not to mention charges of mal-practices, cannot be overlooked. For instance, the Hirakud Dam was originally estimated to cost Rs 47.8 crores; the final revised estimate is Rs 70 crores. The point of this underestimate is not the rather usual one of bad and improvident spending, but of ridiculous budgeting. There was no detailed scrutiny of details of appropriations; and most of the budgeting was done on a happy-go-lucky approximation. There were subsequently squabbles between the engineering wing and the accounting wing of the project; and there was a period when the morale of the working force at Hirakud was mutinously low. Fortunately, the entire set-up was changed, and Mr Thirumale Iyengar was put in charge; and, within a short while, he transformed the former gloom into a blazing enthusiasm of a band of dedicated workers. The result was that, during the terrible floods of last year, Hirakud (still not in official commission) was able to mitigate to a significant extent the horrors which, but for it, would have visited Orissa.

The technical details of the project are interesting for a number of reasons. The dam's primary purpose is flood control; but, from the point of view of "cost', it was considered expedient to make it multi-purpose, that is to say, make it function both as a power and irrigation project. Secondly, it has made use of all the techniques of dam building in India, and is a concrete-cum-masonry-cum-earth dam. It is, in fact, the longest of that kind in the whole world. The main dam is 15,748 feet long, 3,768 feet in masonry and concrete and the rest in earth. There has been some controversy about the use of masonry, but Tungabhadra has used it with the approval of the highest authorities in the world on the subject of dam-building, who themselves have not used such a method in the dams they have built. The substitution of earth and masonry has been done in the interests of reducing cost and maximising use of labour, which is abundant.

There are certain other aspects of Hirakud which are of the utmost importance from the social and political point of view. Hirakud is an endeavour in which not only Orissa but the whole of India has participated. I am not thinking of the fact that the money has been provided by the centre (it is only a loan, though the Government of Orissa, like other State Governments, hope that it is only a euphemism). I am thinking of the fact that the project was manned by engineers and supervisory staff and workers drawn from all parts of the country. Orissa could not have provided all the necessary technical skill from among its own people; and the fact that the whole of India worked for the welfare of Orissa is of utmost significance. It is a heartwarming lesson, for all of us who are only too ready to think in narrow parochial ways, to see thousands of people belonging to the rest of India working under environments very different to which they have perhaps been used. It is a lesson that I would like the Oriyas, since the context is Orissan, to take to heart. Even while some people of Orissa were burning the Puri station over the alleged injustice done to Orissa by the rest of India, there were people from the rest of India building unostentatiously for the future of Orissa.

Around India with Brooke Bond

Harnessed to prosperity—**Hirakud Dam**

A remote village in 1946 on the banks of the Mahanadi, Hirakud today assumes new importance. For here a mighty dam tames the turbulent river, harnessing its power to create prosperity. Over a million acres of land will be irrigated, and the power generated at Hirakud —123,000 KW—will feed many new industries, light lakhs of homes.

The Hirakud dam is just one of the many nation-building projects which are helping to make our country stronger, more prosperous.

Around here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop. Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

North Indian Notes

Improvement in Transport Position

If their working in the past few months is any guide, there is hope that the Indian Railways will largely be able to meet the challenge of the Second Plan. At a recent meeting of the National Railway users' consultative council, members generally expressed their appreciation of the steady improvment achieved in the transportation position.

An increase in the loading to the extent of 6.1 per cent on broad gauge and 9.3 per cent on metre gauge has been achieved during the period April-October 1956 as compared to the corresponding period of the previous year. According to latest statistics available, the outstanding registration in terms of wagon-loads awaiting clearance on October 1956 were 18,663 on broad gauge and 75,607 on metre gauge as compared with 58,108 and 104,199 respectively on the corresponding date of the previous year. There has been an increase in coal loading. In August 1956 the loading in the Bengal and Bihar coal fields rose to a daily average of 3,824 wagons, which was an all-time record. Coal loadings at other points have also recorded substantial increases. The daily average movement of coal beyond Moghalsarai also has shown appreciable improvement during April-October 1956.

Addressing the Council, Mr Jagjiwan Ram, Railway Minister, disclosed that the railway's October 1956 index of "Wagon mile per wagon day," a reliable guide to operational efficiency, was the highest to be achieved during the past 17 years. The index exceeded even the best war time performance. On the broad gauge system the index advanced from 45.9 in October 1955 to 49.9 in October 1956, an improvement of nearly nine per cent in one year. A similar improvement took place on the metre gauge system, the index during the same period advancing from 29.3 to 32.2

The picture is not so rosy when one turns one's attention to passenger transport. While admitting that there is serious overcrowding on some sections, the Railway Minister has made no secret of the fact that a complete solution of the problem will inevitably take considerable time. He has concluded that the overall picture of the provision in the Second Plan on the removal of overcrowding is not bright. Even so the progress attained in this regard is not inconsiderable. The passenger transport capacity on December 1, 1956, stands at 189,800 train miles on broad gauge and 117,100 train miles in metre gauge and compares with 183,300 train miles on broad gauge and 115,800 train miles on metre gauge on April 1, 1956.

*

Resilience of Indian Economy

The basic problems facing India at the present juncture, according to the Colombo Plan Consultative Committee, are to limit the growth of demand so as to enlarge the flow of savings as levels of investments rise and to strive for the greatest possible increase in productivity.

Reviewing the economic and financial situation in India in 1955-56, the Fifth Annual Report of the Committee has noted that the large expansion in developmental outlay during the last three years of the First Plan was achieved without any significant pressure on prices or the balance of payments. Thus the Indian economy has shown considerable resilience in recent years in the face of expansionist forces. The position, however, has undergone a radical change in the first six months of 1956-57 when there has been an appreciable rise in prices and a substantial fall in foreign exchange reserves.

The Report points out that over and above the great national efforts to be put forth, the requirements of the Plan will call for external assistance on an increasing scale. The need for conserving foreign exchange reserves and for bringing into play external resources in other forms is also emphasised. The Report recognises that the accelerated tempo of development in the Second Plan will put a strain on the resources available to the community and says that this situation will call for a review of programmes of development from time to time.

It may be pointed here that the Report's suggestions regarding the ways and means of meeting the challenge of the Second Plan have either been already implemented or in the process of being implemented by the Govornment of India. The drastic cuts in imports announced recently aim at conserving foreign exchange. Simultaneously active steps are being taken to stimulate exports.

The report's observation that the economic situation on the eve of the Second Plan was distinctly better than it was on the eve of the First Plan is in keeping with the finding of other expert bodies both Indian and foreign. It is this feature of our economy that has generated the confidence that the nation will be quite capable of carrying out the big tasks that it has set before it. The report also notes that there is greater confidence in the country's ability to achieve the desired goals of social and economic policy and there is readiness allround for greater effort.

Commenting on the Second Year Plan, the Report says that the Second Plan has to provide for a larger increase in production, investment and employment. It further notes that in the preparation of the Plan every effort has been made to ensure that the Plan embodies a widely considered and agreed programme of development calculated to secure optimum results, economically and socially.

NORTH INDIAN MARKETS

Sugar Production Target for 1957-58

THE Development Council for the Sugar industry has approved of the plan for 1957-58 which is aimed at a production target of 2.16 million tons, the estimated production during 1956-57 being 2.05 million tons. According to this plan, 22 new factories with their expanded capacities will go into production. This will raise the installed capacity of the industry by about 0.35 million tons. The additional production from the new capacity of the factories likely to go into operation will be 0.25 million tons.

With a view to increasing the sugar content of the standing cane crop, the Council has approved of a scheme for countrywide experiments for this purpose by pre-harvest spraying with a solution of sodium salt. The Council has also recognised the need of exporting surplus sugar and commended the decision of the Government to allow export of sugar up to 50,000 tons for the present.

Meanwhile, mill delivery rates ruled quietly steady with modest gains in the week-end as export prospects to Pakistan have again revived. Following rates were quoted per maund in the Hapur market:—Jaswant Rs 28-10; Simbhauli Rs 28-12; Mowana Rs 28-8; Daurala Rs 29-10; Amroha Rs 28-1; Bijnore Rs 28-1; Mansoorpur Rs 28-12 to Rs 30 and Rampur Rs 31-8.

Sugar factories in West Uttar Pradesh are crushing to their maximum capacity as, due to fall in gur prices, they are getting large quantity of cane.

*

Gur

The Gur market at Hapur, after ruling quiet early in the week, steadied up toward the close, thanks to a fall in daily arrivals. The rate touched at one time a low of Rs 9-12, to finish better at Rs 10-5 per maund.

Outside buying enquiry was slack as prices in the South had gone down. Total arrivals from the beginning of the season were put at 3 lakh maunds and there has been as yet no stock-building. Arrivals are expected to increase after a few days with the clearing up of the weather.

*

Foodgrains

It is learnt that imports of Rice and Wheat will be stepped up during the current year to prevent any rise in Foodgrains prices. The import of 3.5 million tons of US wheat is proposed to be completed within two years. Authorisation for the purchase of 1.5 million tons, up to July next, has already been issued by the US Government. Part of this wheat has also arrived in India. The second phase of purchase will start from August.

As regards Rice, India has entered into an agreement with Burma for the import of 2 million tons over a period of five years from 1956 to 1960. During last year, 2.8 lakh tons had been imported; and the balance is expected to arrive during the current month. During the current year, 5 lakh tons of rice are expected to be imported from Burma. Two lakh tons have been purchased from the USA under the recent agreement between the two countries and this quantity is expected to reach India during the period January to April. Sixty thousand tons have also been purchased from China.

For obvious reasons, Foodgrains markets in Hapur have continued to rule quiet. Consumers' demand for Wheat is fairly good, dara quality quoting Rs 16-2 and farm quality Rs 17-4 per maund. The market for Rice also rules quiet, rates for Basmati quality moving between Rs 22-8 and Rs 26-0 per maund, according to quality.

Madras Review

The Peninsula

Party Alignments for the Election

PARTY alignments in the Peninsula have now progressed from the stage of speculation and manoeuvres to that of settled or nearly settled facts. Of the four States, Andhra Pradesh, Madras, Mysore and Kerala, the outcome of the elections has always remained predictable for the first three: while for the last, it was a question of unending uncertainty.

For a little while, when Mr S. K Patil was in Kerala in connection with the Congress election campaign, it was possible to think that the Congress would rope in on its side the Moslem League and would find some way, at least to neutralise the PSP. These hopes have turned out to be false. The Congress Secretary, Mr Madhavan Nair has buried all rumours and guesses about any electoral alliance to which the Congress would be a party.

There is only one group, the Kerala Socialist Party, which has chosen to throw its lot with the Congress. But the accession of strength resulting therefrom is not expected to tilt the scales decisively in favour of the Congress. For one thing, the party's numerical strength is relatively negligible. In the old Travancore-Cochin Assembly, it had three members. It does not pretend to claim any considerable representation from the Malabar District; for another, its alliance with the Congress has come in the spirit of a choice of the lesser of two evils. The Party tried to become one of the units of a National United Front, composed of other leftist groups as well. It was only on the failure of that move, a decision was taken to pull its weight with the Congress.

There is a hardening of differences between the Kerala State Moslem League and the Congress Party. Whatever chances there were for an understanding were removed once and for all by the unfriendly criticism which the Moslem League received at the Indore Session. The Secretary of the State Moslem League has made a special reference to this point, when he explained his party's irrevocable stand on the election. He asserts that the Moslem League is not interested in any alliance with the Congress or other parties and that it is the Congress which stands in need of the help of the League to win the elections in Malabar.

His assessment of the election prospects for his party is undeniably objective. In Malabar, the Party can win wherever the Moslems are in a majority. About 12 seats in the State Assembly and two Parliamentary constituencies are the League's strongholds. There is also a marginal area, in which in the event of a triangular or quadrangular fight, the League can hope to win 3 to 4 seats more. In consideration of this circumstance, the Congress has decided to keep off the League's strongholds. The Party will not be putting up candidates for these seats. Whether the hope that the League will reciprocate the gesture by abstaining from areas where it cannot by any chance secure a majority remains to be seen.

Against this adverse circumstance, the Congress feels somewhat emboldened by the failure of negotiations between the PSP and the Communist Party. The two, in reversal of a previous expedient, would most probably fight the elections independently and naturally undermine the prospects for both.

The Communist Party is not altogether friendless. The Revolutionary Socialist Party, which has always stood by its side and whose political programme is virtually the same, will be associated with it in a joint compaign. If no development takes place in the interval and if the elections are to run in the general set-up indicated above, one is afraid that a stable government for Kerala will be as remote as it has always remained for Travancore-Cochin.

While political ideologies cut across communal divisions, there is an almost complete identification of the Malabar Moslems with the League and general hostility on the part of the Catholic Christians against the Communists and associated groups. The All-Kerala Catholic Christian Convention, a body which can authoritatively speak for the entire Catholic Christian section of the population has publicised an appeal to the public of Kerala pleading for the combination of the non-Marxist parties and asking the community "to be careful enough not to return such other candidates who would lead them astray." This section claims 20 out of the 126 Assembly seats, on the basis of population, though, it is complained, the delimitation of constituencies has robbed it of its full share of possible representation.

In Madras, as indicated in an earlier despatch, the Congress is assured of an overwhelming victory. This time, the principal Opposition is likely to emerge from out of the ranks of the Dravida Munnetra Kazhagam, one of the two splinter groups of the parent body, Dravida Kazhagam. The other group, which has taken the title of the parent body itself, is committed to support the Congress. The Communists know that their strength in the future assembly will be smaller. It is to some extent the mark of confidence on the part of the Congress that it took the initiative in calling an all-party conference to consider steps for the smooth conduct of the elections. Several agreed decisions have been taken by this Conference.

In Mysore, the Congress is equally strongly entrenched. But over the selection of candidates, a rather serious split has occurred. A protest meeting of a few hundreds of Congress workers, addressed by the former Chief Minister Mr K. Hanumanthaiya, who also offered to retire from public life, indicated the strength of opinion against the selections. There is a striking lack of coincidence of names between those who stood by Mr Hanumanthaiya at the time of his resignation and the Congress list of candidates for the elections. All the same, it is not necessary to read too much into this. It can be hoped that these domestic squabbles will not actually impair the strength of voting.

In Andhra, it is accepted on all hands that the Congress Party will have a tough time in Telangana, the Telugu-speaking area of Hyderabad; though even here, the Peoples' Democratic Front led by the Communists may not be putting up more than about 60 candidates against a total of 105 seats to the State legislature from this area. The majority of them will be Communists. In one district, Nalgonda, the PDF has decided to contest all the seats. Parleys between the PDF and PSP have hitherto not yielded any fruit. The Communist leaders have not yet given up hopes.

Meanwhile, the Praja Party, which is a constituent of the United Congress Legislature Party as whose leader Mr Sanjeeva Reddi heads the Andhra Pradesh Cabinet, has been hob-nobbing with the PSP for an electoral alliance. Mr Sanjeeva Reddi, who knows the uncertainties over Telangana is frankly worried over this unilateral move of an associate group. At the State level, he has no solution against the hypothetical situation, in which the Praja Party will be opposing Congress candidates. He is inclined to transfer this problem to the Party's national leadership.

★

NORTH INDIAN MARKETS

(Continued from previous page)

Gram has recorded a modest advance due to good demand. Good rainfall in the week-end has brightened crop prospects. Prices of other Coarse grains have hardened due to poor stocks. Arrivals of Maize from East Uttar Pradesh in large quantities have failed to check the rise in the prices of this grain.

Despite good crop prospects due to rains, prices of Peas have registered some gains during the week due to poor stocks and good buying enquiry from outside States. Arhar prices ruled quiet, while prices of other pulses eased due to better supply position.

In the Delhi grains market, Wheat prices ruled steady as both arrivals and offtake are equally balanced. Demand for Gram is good, particularly from Uttar Pradesh, while stocks are small. With the result, rates have registered a rise of about As 8 per maund. Supply position of Rice is not so good and the rates have recorded gains of about As 8 to Re 1 per maund. Maize and Bajra are held steadier due to better enquiry.

The Bombay grains market has presented a quiet appearance with the prices of most items moving within a narrow range. With the retailers having already bought the bulk of their requirements, the average sale of rice per day has been smaller.

In the Wheat section, there has been small trading since the import from other areas in the country has been banned. The bulk of the consumers' requirements are being met from stocks.

In the Coarse grains section, prices of Jowar and Bajra have been ruling steady. The demand for these grains is better in view of the seasonal consumer interest. Trading in Pulses is featureless.

★

GATEWAY GOSSIP

(Continued from page 111)

confidence which is freely acknowledged by the "victims" themselves. A leading exchange banker told me recently that the inspecting staff go about their work with such understanding and assurance that he could not believe that this work has been organised and routinised in the space of five years. His actual words were: "The Reserve Bank has picked the right men, given them the right training and instilled in them the right attitude". I reckon this should be the proudest plume in Sir B. Rama Rau's helmet.

The failure to acknowledge, formally and officially, services so outstanding is a grave and graceless act of omission on the part of the Finance Ministry. Not less grievous is the similar omission in the case of Sir Purshottamdas. First with the Imperial Bank, and then with the Reserve Bank, he has been dominant in the well-being of the banking system and the smooth functioning of the money market for over three decades and a half. Those who have had the privilege of working with him hail him as a confident and confidence-inspiring leader.

Madras Review

South Indian Notes

Small-Scale Industries

Yet another feather has been added to the Madras Government's cap. The small-scale Industries Board which met in Madras last week-end in a two-day session has commended to the other State Governments the administrative set-up of the Industries Department of Madras State.

The part played so far by the State Governments in general in implementing the schemes for the development of small-scale industries in their respective regions, however, does not seem to be quite complimentary to them.

One explanation of the disinterest of State Governments in a matter with which one would expect them to be vitally concerned is that development of small industries is perhaps considered to be the sole business of the Central Government.

In the course of his speech, the Chairman of the Board, pointed out that despite the offer from the Government of India to meet 50 per cent of the expenditure on account of the additional staff required for strengthening their State Departments of Industries, to cope with the increased work connected with the small industries programme, the progress achieved in that direction in most of the States had not been very encouraging.

It is rather strange to find that while all the facilities needed to develop a wide variety of small-scale industries in their regions are offered by the Central Government, the State Governments are crying themselves hoarse that the Centre has ignored their legitimate claims for the establishment of major industries.

During 1956-57, the Centre has sanctioned about Rs 3.87 crores to State Governments for schemes to help small industries excluding industrial estates. Out of this amount about Rs 2.78 crores have already been released for expenditure. Apart from financial assistance, Government has constituted the Small Industries Service Institutes, the Development Commissioner's Organisation and the National Small Industries Corporation to render help to small-scale industries in the country. Besides the Regional Institutes at Delhi, Bombay, Calcutta and Madras, the Government of India had started during the current year five major Institutes at Hyderabad, Trivandrum, Rajkot, Patna and Ludhiana. Seven Branch institutes had been set up at Bangalore, Hubli, Indore, Cuttack, Gauhati, Agra and Allahabad. Further, Government have now decided to raise the branch institutes at Bangalore, Indore, Cuttack, Gauhati and Agra to major institutes during the next financial year. One major institute will be set up in Rajasthan and another in Jammu and Kashmir. It has also been decided to set up four subsidiary Corporations at Delhi, Madras, Bombay and Calcutta to deal with applications on hire purchase expeditiously and to provide marketing service to small industries in each region. The Chairman also announced at the meeting that at the end of the next financial year there would be one major institute for small-scale industries in each State.

As in many other development projects, in the matter of organising industrial extension service also dearth of technical staff with the requisite qualification and experience has stood in the way of rapid progress. A contributory factor has been the delay in getting the equipment and machinery. It is, however, gratifying to note that the Board is confident of overcoming these obstacles in a shortwhile.

Though it is undeniable that the States have their own problems, technical and other, it cannot be now claimed that they are insoluble. With so many organisations to guide them, the States' task has been greatly simplified. The frame-work has been completed and what remains to be done now is the building up of the superstructure.

★

Interim Budget for New Mysore

The budget estimates for the five month period, 1st November 1956 to 31st March 1957, for the new State of Mysore disclose a deficit of Rs 44.90 lakhs. No new or additional taxes to cover the gap has been proposed. Revenue is estimated at Rs 2,130.80 lakhs while expenditure is placed at Rs 2,580.70 lakhs. Presenting the budget to the State Legislative Assembly, Finance Minister, Mr. T. Mariappa said that the reason for the deficit was mainly due to the fact that a sum of Rs 441.57 lakhs (net) had been included in the revenue account for the various development schemes in the Second Five Year Plan including some of the carryover items of the First Plan. He, however, pointed out that the interim budget should not be considered as giving any indication as to the overall financial position of the new State. But it would appear that a surplus budget could be ruled out in view of the fact that excepting Coorg all other areas forming the new State are financially deficit areas.

A sum of Rs 1,333.82 lakhs has been provided in the capital budget for financing capital expenditure. The funds have to come from borrowings and Central assistance. The budget anticipates a total Central assistance of Rs 15 crores by way of loans besides grants.

Turning to future prospects, Mr Mariappa said that though it was to be expected that the deficit would amount to as much as Rs 15 to Rs 20 crores at the end of the Plan period, the several untapped sources in the state could be expected to make up the deficit to a large extent. The states forests. coastal fisheries electricity projects, irrigation works, industries would start yielding more revenues in the near future as a result of development works carried out during the First Five Year Plan period and new works planned for implementation during the next four years. Much however depended on the final recommendations of the Finance Commission.

In view of the fact that areas from a number of states have been added to make the new state it has become necessary to alter suitably the Second Five Year Plan of the State. Since, as the name itself shows, the plan is to be implemented within a specified period, the task of preparing an integrated plan for the new State is to be given the highest priority. Tentatively the outlay on the revised plan has been estimated at Rs 144.85 crores or Rs 76 per capita.

SOUTH INDIAN MARKETS

Better Turn in Pepper Markets

PEPPER prices, which had been showing a steady decline during the past few months, have staged some improvement following a revival of demand from overseas buyers. Although arrivals have been heavy, most of them are taken up. In the Alleppey market, the rates moved between Rs 500 and Rs 550 per candy, according to ripeness of the stuff.

Total Russian purchases to date are reported to be around 2,000 tons for shipments during January to March. China is likely to make some purchases. Shipments, during December, were estimated around 1,300 tons.

There is a general feeling that, if the present tempo of overseas buying orders continues, shipments during the period from January to March may be around 5,000 tons, including purchases by Russia and China. Most market circles are, therefore, now bullish and they consider a price of Rs 550 a bottom.

It is reported that Sarawak, Lampong and Muntok are firmly held at Singapore and, as such, most of the demand from Europe is likely to be diverted to India. Meanwhile, there are also reports that growers are now willing to give some concession in the price to create interest in foreign buyers, who, after sizable buying during the past week, are waiting for a new development.

In New York, the market remained in the doldrums with neither buyers nor sellers showing any aggressive interest. It was, however, felt that January portion of Russian purchases in India had been covered and consequently buyers agreed anticipating concessions. Prices remained, however, unchanged.

Meantime, the Forward Markets Commission has announced that, on its advice, the Government have granted recognition to the India Pepper and Spice Trade Association, Cochin, for conducting forward trading in garbled Malabar black pepper for a period of three years. Trading was inaugurated on the 15th January, 1957.

★

Coffee

The Coffee Board has released 279 tons of Arabica Cherry Coffee out of the 1955/56 crop for export. The quantity released consists of 120 tons of Arabica Cherry Flats, 2 tons of Arabica Cherry PB, 135 tons of Arabica Gleanings Flats and 22 tons of Arabica Gleanings PB. Tenders are due on January 22.

At the monthly auction held at Tiruchi toward the end of last week, 320 cwts of Plantation variety were offered, but only about 140 cwts were sold in the case of Robusta. No quantity of Arabica Cherry was exposed for sale. Following were the price ranges (per cwt):—Plantation PB Rs 230-0 to Rs 232-8; Plantation A Rs 212-8 to Rs 215-1; Robusta PB Rs 161-8 to Rs 164-0 and Robusta Flats Rs 155-3 to Rs 157-0.

★

Groundnuts

In the Madras Groundnut market, arrivals were small and averaged only 50 to 60 tons a day. These were taken up by small crushers. Big crushers did not show any interest as there was no workable parity at current oil levels. Superior oil-quality seeds were quoted

Industrial Information

Central Board of Reserve Bank of India

The Central Government has nominated with effect from January 15, 1957, the following persons to be the Directors of the Central Board of the Reserve Bank of India:—

Shri Kasturbhai Lalbhai, Ahmedabad, from the Local Board for the Western Area;

Shri B. M. Birla, Calcutta, from the Local Board for the Eastern Area;

Shri Shri Ram, New Delhi, from the Local Board for the Northern Area; and

Shri C. R. Srinivasan, Madras, from the Local Board for the Southern Area.

The Central Government has also appointed with effect from January 15, 1957, the following members to constitute the Local Boards for the four areas:—

Western Area: Shri Kasturbhai Lal bhai, Ahmedabad, Shri Mathurdas Mangaldas Parekh, Ahmedabad; Shri D. V. Potdar, Poona; Shri Mohan Lal Tannan, Bombay and Shri K. C. Mahindra, Bombay.

Eastern Area: Shri B. M. Birla, Calcutta; Dr Bimala Churn Law, Calcutta; Mr O. T. Jenkins, Calcutta; Shri D. N. Mitra, Calcutta; and Shri B. P. Singh Roy, Calcutta.

Northern Area: Shri Shri Ram, New Delhi; Shri Satya Paul Virmani, Amritsar; Sahu Jagdish Prasad, Pilbhit; Shri S. Gurdian Singh Uppal, Amritsar; and Shri Rishi Narain Shastri, Banaras.

Southern Area: Shri C. R. Srinivasan, Madras; Shri M. Ramunnimenon, Trivandrum; Shri R. Ramanathan Chettiar, Madras; Shri P. Suryanarayana, Madras; and Shri S. Anantharamakrishnan, Madras.

✱

GOVERNOR OF RESERVE BANK OF INDIA

The Government of India have appointed Shri K. G. Ambegaokar, a Deputy Governor of the Reserve Bank of India, as Governor of the Reserve Bank with effect from the afternoon of January 14, 1957, until further orders. Shri B. Rama Rau, the present Governor, has tendered his resignation and it has been accepted by the Government of India.

✱

BANKING COMPANIES (AMENDMENT) ACT COMES INTO FORCE ON JANUARY 14, 1957

The Central Government have notified January 14, 1957 as the date on which the Banking Companies (Amendment) Act, 1956, will come into force.

✱

UNDERWATER SULPHUR

The first completely offshore sulphur mining operation in history has been planned by Freeport Sulphur Co at a deposit discovered in the Gulf of Mexico by Humble Oil and Refining Co. The deposit, located off Louisiana in 45ft. of water six miles from the nearest land, represent a major new source of sulphur, according to a joint announcement by Mr H. H. Baker, president of Humble Oil and refining, and Mr L. M. Williams, president of Freeport Sulphur.

Under a contract signed by the two companies, Freeport will design, install and operate a mining plant to produce sulphur by the Frasch hot water process. Construction is required to begin by the latter part of 1958 and is expected to take two years to complete. The deposit, known as Grand Isle, Block 18, was discovered by Humble in the course of offshore oil exploration, and ranks among the most important sulphur discoveries of recent years.

The Grand Sulphur was found approximately 1,700 ft. below the floor of the Gulf of Mexico in the caprock of a salt dome, a geological formation commonly found in the Texas and Louisiana Gulf coastal area. Grand Isle will be the first Sulphur mining operation to be conducted in the open water of the Gulf of Mexico. It will be a new and novel undertaking but one for which Freeport is especially qualified because of its experience in mining sulphur at marshland and partially submerged locations.

Indeed, Freeport already had developed and successfully operated three sulphur mines in the coastal marshes. Two of the mining plants were erected on 75 to 95 ft. piling, and the third was built on a barge, floated to the site, and sunk in place. The company also pioneered the use of sea water in the Frasch process and marine transportation of sulphur in molten form, innovations which will greatly facilitate offshore operation.

Under the contract stipulations, Freeport sulphur will basic royalties to the Federal government and will pay to Humble certain royalties the effect of which is that Humble and Freeport will each receive after taxes approximately 50 per cent of the net profits from Freeport's operation of the properties.

Production of sulphur from beneath the floor of the Gulf will be entirely different from production of oil. The Frasch process, whereby superheaded water must be fed continuously into the formation to melt the sulphur which in molten form is forced to the surface through wells, requires a heating plant of great capacity and weight. This plant and all other installations will have to be built on a tall steelstructure, out of the reach of storm waves. The structure will be the largest of any of the permanent structures in the Gulf of Mexico.

✱

BRITANNIAS ON BOAC'S EASTERN ROUTES

Propeller-jet Britannia aircraft will replace the present Constellations on BOAC routes through India to Australia at the beginning of March. The first Britannia service will leave London for Calcutta and Sydney on March 2. In the reverse direction, the first Britannia will leave Sydney on March 5. The service will be thriceweekly in each direction.

The introduction of the Britannia will have the effect of reducing the time of transit between London and Sydney by about 28 hours. This reduction will be effected not only by the higher speed of the aircraft compared to the Constellations; it will be also due to the fact that the higher speed combined with the vibrationless comfort of the Britannia makes it feasible to cut out the present nightstop at Singapore without inconveniencing passengers. These change will mean that the Britannia will bring Sydney within a day's flight from Calcutta, a considerable improvement on the fastest schedules of today.

Of the three services a week, one flight will be a luxury service fitted with 39 "slumberette" chairs of the greatest comfort. The other two Britannia services will be "two class" services with 19 slumberette seats and 42 tourist seats.

Later in the year, Britannia are expected to replace the BOAC Constellations on services calling at Delhi and Bombay.

The Britainnia is a large aircraft with a wing span of 142 feet, a length of 114 feet and an all-up weight of 80 tons. Its four Proteus propeller turbine engines, each producing 3900 equivalent horsepower, give it a crushing speed of 375 miles an hour.

✱

NATIONAL RESEARCH DEVELOPMENT CORPORATION

The Government of India have now reconstituted the Board of Directors of the National Research Development Corporation. The new board has been appointed for a period of three years from December 31, 1956.

Shri Kasturbhai Lalbhai will be the Chairman of the Board. The members are Lala Shri Ram, New Delhi, Shri P. A. Narielwala, Bombay, Dr V. A. Sarabhai, Physical Research Laboratory, Ahmedabad, Shri G. G. Takle, Inspector-General of Forests Ministry of Agriculture, New Delhi, Shri R. K. Ramadhayani., Secrectary, Ministry of National Resources and Scientific Research, New Delhi, Prof. M. S. Thacker, Director-General, Scientific and Industrial Research, New Delhi, and Shri A. Baksi, Joint Secretary, Ministry of Finance (Expenditure Department), New Delhi.

The Corporation set up by the Government of India in December 1953, devotes itself to the development and coordination of laboratory researches for commercial production. The Corporation has also taken over the work of development and exploitation of patents and inventions from the Council of Scientific and Industrial Research and the exploitation of Government-owned patents and the patenting of inventions from other research institutions administered by the Central Government. Where feasible, patenting of inventions from individuals is also undertaken by the Corporation in public interest.

✱

Mr S. C. ROY

Mr S. C. Roy, M.A., LLB, J P, Editor, Insurance World, has been appointed Sheriff of Calcutta for the ensuing year. Mr Roy is an active journalist for over 25 years. He was Vice-President of the Indian Journalists' Association for several years. Besides journalism, Mr Roy is a prominent insurance man and industrialist. He was President, Indian Life Offices Association and presided over the Madras Session of All-India Insurance Conference. A leading textile millowner, he was President, Bengal Millowners' Association and took a leading part in war-time textile control. He is director of about sixteen industrial and commercial concerns besides being Director of Industrial Finance Corporation of India, Member, local Board, State Bank of India. He is also connected with a number of Social and educational institutions. He was Secretary of Industrial Exhibition at the Kalyani Session of Indian National Congress.

✱

ROUND THE WORLD FOR TWA

Trans World Airlines was certificated on December 28, 1956 to serve Bangkok and Manila in an award granted by the United States Civil Aeronautics Board with the approval of President Dwight Eisenhower.

The extension of TWA's present international route beyond Bombay and Colombo creates a round the world service that TWA and North West Airlines will now be able to provide by connection at Manila.

Announcing this in Bombay, Mr Jules C. Gindraux, TWA's Sales Manager in India, said the action of the CAB in providing a second round the world air service, offered an enormous potential in future travel. In 1952, only about 6,000 persons travelled round the world. Currently that number has grown to nearly 15,000 a year. By 1960 the volume of such travel should be doubled, for travel round the world is the ultimate goal of all tourists. By granting this extension of 2900 miles to TWA's current routes which extend 12,150 miles from San Francisco to Colombo, the Civil Aeronautics Board has shown commendable foresight.

While TWA was originally certificated to operate from India to Shanghai via Calcutta, Mandalay, Hanoi and Canton, disturbances in the Far East including civil war prevented that portion of the route from being activated.

OLYMPUS

(Continued from page 114)

Another aspect of Hirakud project, to which repeated references were made at the time of its inauguration, lies in the fact that it was the achievement of Indian engineers. I do not wish to detract anything from the legitimate pride taken in this fact by those who have richly deserved it. But it seems to me that Hirakud cannot claim to be the first that has this particular distinction. As far as South India is concerned, for instance, this has been true for a long time: Mettur, Krishnarajasagar and others have been conceived and executed by Indian engineers long before Hirakud was even a blue print. As a matter of fact, Indian skill in hydraulic engineering would come as a surprise only to those who have seen nothing of the great schemes of irrigation in the Cauvery and other deltas. There can be no serious doubt that there is no problem in engineering that, given the opportunity to study, the Indian will not be able to solve.

To Orissa itself, Hirakud is a dream come true. Its most valuable blessing is the control of the recurrent floods which have sapped all the enterprise out of the Oriya. Now that these have been controlled, we may hope to see the emergence of the spirit which animated this ancient country ages ago. Secondly, the ancillary benefits of irrigational and power production from the projects are not inconsiderable. The Hirakud canal system is expected to irrigate 4.54 lakhs of acres by 1958-59; and already about a lakh of acres are deriving such benefits. The total installed capacity of hydro-electric power on completion of the first stage is 123,000 kilowatts. But, already, so many industries are earmarked for this area, including Rourkela and the Aluminium factory, that even a power famine is anticipated by the end of the Second Pian. Orissa is a potentially rich area with extensive mineral deposits like iron, coal, manganese, bauxite, limestone and chromite In a sense, Orissa, despite its present backwardness, is perhaps potentially the richest state. The completion of the first phase of the Hirakud project is only the first glimpse into the richness of Hirakud—which means literally the diamond pot.

✱

GATEWAY MARKETS

(Continued from page 112)

plore the possibilities of placing the orders there. The Association may even place a large order if it is found necessary and attractive and adjust the extra quantity against the quota for the current period.

Prices of Cotton Yarn, however, failed to show any improvement as offtake was limited, resulting in the prices of seome varieties falling down. Weavers at the consuming centres were reluctant to augment their stocks of yarn till cotton prices get stabilised.

✱

Metals

A Development Council for Non-Ferrous Metals has been constituted by the Government of India under the Industries (Development and Regulation) Act, 1951. The Council will recommend to Government targets for production of non-ferrous metals, co-ordinate production programme and review the progress of the industry from time to time. It will also recommend measures for securing the fuller utilisation of the installed capacity and for improving the working of the industry, particularly of less efficient units.

✱

BALANCE-SHEET REVIEWS

(Continued from page 100)

order to pay the dividends on the Preference shares as they had done in the case of the Ordinary shares in the previous half-year.

Of the companies, National has halved the dividend to As 6 per share, while Orient has recommended a nominal divided of Re 1 per cent against 4 per cent. Belvedere, Budge-Budge, Caledonian, Cheviot and Delta have all passed over the dividends on the Ordinary shares. The following table shows the profits earned or losses incurred before providing for Depreciation:

Companies:	Latest Half-Year Rs	Previous Half-Year Rs
Belvedere	— 64,309	—1,94,424
Budge-Budge	— 4,241	—1,97,392
Caledonian	— 13,238	—1,44,150
Cheviot	—1,31,112	— 77,960
Delta	— 65,123	+1,03,608
National	+2,16,678	+2,61,466
Orient	— 53,440	— 18,672

£R$

Burrakur Coal Repeats

Despite a fall in profits, the Burrakur Coal Company has maintained the Ordinary dividend at As 5 per share for the half-year ended 30th June, 1956. Raisings have declined to 500,931 tons from 516,165 tons and despatches to 517,428 tons from 526,106 tons. Profits have declined by Rs 4.46 lakhs to Rs 7.44 lakhs. Allocations include Tax Contingency Reserve at Rs 67,700 against Rs 55,500. Development Rebate Reserve gets Rs 35,300 against Rs 6,900 and Debenture Redemption Reserve Rs 25,000 against Rs 50,000. Taxation provision is Rs 3.20 lakhs against Rs 5.53 lakhs and Depreciation Rs 4.99 lakhs against Rs 4.30 lakhs.

The directors in their report, have stated that they have still had no direct reply from the Government in connection with the expansion programme submitted to them. Until they are given definite instructions regarding the part they will be permitted to play, orders for the equipment required to increase the output in accordance with the expansion programme cannot be placed.

WORLD OF TEA

(Continued from page 106)

The tone of the London market was irregular with bright liquoring kinds often easier. Competition was less keen than of late. Plain Broken Pekoe was quoted at 63½d per pound against 64½d in the previous week. With the quantity of tea put up for auction each week now not topping 60,000 packages mark, auction prices may well be restrained.

As a result, the combined UK warehouse, landed and afloat figure at around 173 million pounds is almost 20 million pounds more than a year ago. But, it is pointed out that ships, now discharging, will have to make longer voyage to east and back and stocks can easily start to fall again temporarily.

WORLD OF JUTE

(Continued from page 105)

sizable proportion of raw jute requirements. It is to be hoped that Government will recognise the industry to be as important as it is—Indian mills account for 53 per cent of world loomage. Consequently, there can be no debate as to whether Government must seek self-sufficiency in raw jute by the end of the Second Plan.

The following table gives opening and closing prices for the week.

✱

MR. MACMILLAN'S ECONOMIC POLICY

(Continued from page 104)

working majority. The response of the markets to the Queen's decision shows that this view is widely held in financial circles, not only in London but also abroad. Under Mr Macmillan's leadership the stability the Conservative government inspires confidence. Which is what really matters from the point of view of the prospects of sterling and of the Stock Exchange. Had Sir Anthony Eden prolonged his term of office there would have remained a feeling of uncertainty that his unpopularity might at any time create a situation in which the continued existence of the Conservative government would become doubtful. As it is, there can be no justification for such fears.

From the point of view of the government's economic policy, too, there is reason for viewing Mr Macmillan's Premiership with confidence. He unhesitatingly committed himself in favour of maintaining the present parities of sterling. While Mr Butler was for some time flirting with the idea of introducing the floating pound, Mr Macmillan rejected the idea out of hand as soon as he succeeded Mr Butler as Chancellor of the Exchequer. Had Mr Butler become Prime Minister, Mr Macmillan would have left the Treasury, and the new Chancellor of the Exchequer might have revived the idea. Indeed, a few days before the change of government, Lord Chandos, who was very much the power behind the throne during the Eden administration, came out strongly in an article in favour of the floating pound. Possibly Mr Butler might have listened to his advice. It is safe to assume, however, that Mr Macmillan as Prime Minister will be no more in favour of the floating pound than he was when Chancellor of the Exchequer. For this reason alone the firmness of sterling after the announcement of the Queen's decision was justified.

The transfer of Mr Macmillan from the Treasury to 10 Downing Street secures a continuity of the Government's economic policies. He is first and foremost an economic expert, and is certain to continue to take an active interest in economic policiies after his departure from the Treasury. The new government's primary aim will be the reinforcement of sterling—not with the aid of additional dollar facilities but by means of resisting inflation at home. In so far as it is possible to relax the credit squeeze without coming into conflict with this objective, the new Chancellor of the Exchequer will undoubtedly do so. But the position of sterling is not expected to be jeopardised for the sake of yielding to pressure in favour of lower interest rates. The Bank rate will be reduced in due course, but not until the government is satisfied that in doing so it does not run the risk of a relapse of sterling. The more confidence the Macmillan administration inspires at home and abroad, the better will be the chances of an early reduction of the Bank rate.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(INCORPORATED IN ENGLAND)

Notice is hereby given that the Board of Directors of this Company have declared payment of a Final Dividend on the Company's Preference Stock at the rate of £2-3-9 per cent net for the year ended 31st December, 1956. Payment will be made on 15th February 1957 to those stockholders whose names are registered in the Company's Stock Register on 25th January 1957.

Applications for transfers received in this office before 2 P.M. on Friday, the 25th January 1957, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,
I. A. MACPHERSON,
Agent.

Victoria House,
Calcutta, 15th January, 1957.

Stock Exchanges

Smart Rally in Some Blue Chips

STOCK markets have started the week on a more confident note. Although some of the operators are still in no mood to extend commitments in view of various uncertainties, bulls are of the opinion that encouraging corporate news will continue to stimulate investment demand. This may probably be the reason that buyers have come forward for selected scrips and prices are pushed up from the recent low levels.

No doubt, uncertainty on the Indo-Pak relations continues to cause anxiety, while a certain class of bears believes that the Bank Rate may be stepped up. Professional operators are, therefore, cautious, resulting in an irregular trend of prices. But it is encouraging to note that there is still substantial investment buying in some of the blue chips, which have recorded satisfactory gains over the week.

Although price movements on the Calcutta Stock Exchange were rather irregular, there was evidence of continued support at lower levels.

Commencing on a steady note and moving slightly higher, equities on the Bombay Stock Exchange faced small profit-realising toward the close.

Activity on the Madras Stock Exchange was mostly confined to the Planting and Miscellaneous sections.

The London Stock Exchange was in a buoyant mood and many useful gains were established at the close of the week.

*

Calcutta

Calcutta, Thursday Evening.

CONDITIONS on the local Stock Exchange remained, on the whole, steady although price movements were rather irregular due to alternate bouts of buying and selling. The market, which was already ripe for technical recovery, moved up briskly early in the week, the main inspiration being provided by the change in the tone of the Finance Minister. The second factor, that was responsible for the rally, was the feeling that the cycle of bearish news had almost come to an end. The third factor were the reports that the settlement in Bombay was surmounted successfully. Above all, the marked improvement in sentiment reflected the support given to the Ordinary shares of companies by the Life Insurance Corporation whose attention had so far been concentrated only on the Preference shares and Debentures.

Price movements were, however, irregular toward the close of the week although the undertone remained fully steady. This was mainly due to caution adopted by operators in view of the anxiety with regard to the uncertainty on the Indo-Pak relations and the revival of the rumours about an increase in the Bank Rate. With the result, the market finished the week with only minor gains on balance.

The Giltedged market ruled quiet with the volume of business on a small scale. Institutional investors continued to keep out of the market due to acute monetary stringency and the general uncertainties on the immediate horizon. 3 per cent 1966 Conversion Loan moved narrowly between Rs 72-12 and Rs 73-4 to finish at the last quoted level.

The brightest spot has been Banks which have responded to the string of better results and dividends. Punjab National and United Commercial were in good demand, being pushed upto Rs 55 and Rs 59 from Rs 51-4 and Rs 58-8 respectively.

Although more Jute shares changed hands in comparison to the past few weeks, there was no appreciable change in values and the slight improvement, that was noticed toward the close of the week, was mainly in sympathy with the general trend of the market. National, after improving to Rs 18-14 from Rs 18-4, eased off again to Rs 18-11 at the close, while Barnagore changed hands upto Rs 99 from Rs 96; Anglo-India upto Rs 136 from Rs 129 and Gourepore upto Rs 196 from Rs 193. India were, however, maintained at Rs 123 with Nuddea moving between Rs 29-12 and Rs 30-8.

Coal shares ruled generally steady, but turnover remained restricted as operators were inclined to await the effects of the recent Tribunal Award on the working results of various collieries. Bengal improved to Rs 443-8 from Rs 442-8; East Indian to Rs 26-12 from Rs 26-4 and Equitable to Rs 25-2 from Rs 24-12. Burrakur hovered idly around Rs 21-2 on lack of support with Western Bengal moving narrowly around Rs 5-15.

The slight improvement in the conditions of the piecegoods market was reflected in the Textiles section, where prices of selected scrips showed a smart recovery from the recent low levels. Prominent amongst these were Elgins and Kesoram having buyers upto Rs 28-14 and Rs 15-7 from Rs 24-4 and Rs 14-8 respectively. Jayshree moved narrowly between Rs 5-11 and Rs 5-14 with New Victoria ruling steady at Rs 1-14.

Despite the improvement in export auction prices, Tea shares remained practically unchanged with only few deals recorded. Apart from a general anxiety with regard to the future trend of prices on the London tea market in view of the heavy arrivals there, there was a feeling that profit margins of companies would be affected by increased costs and that the dividend distributions for 1956 would be pruned down substantially from the 1955 levels. Among the few prominent scrips were Bateli changing hands at Rs 27-6 to Rs 27-10; Bishnauth new at Rs 18-12 to Rs 19-2; Brooke Bond at Rs 19-2 to Rs 19-8; Dhelakhat at Rs 20-7 to Rs 20-12; Dhunseri at Rs 20-8 to Rs 21-0; Methoni at Rs 19-0 to Rs 19-8 and Hantapara at Rs 182 to Rs 183.

Sugar shares ruled fairly steady in sympathy with the general trend of the market. Cawnpore were enquired upto Rs 20-9 from Rs 20-4; Darbhanga upto Rs 22-2 from Rs 22-0 and SEG upto Rs 11-9 from Rs 11-2. Balrampore were marked at Rs 5-14 and Carew at Rs 7-4.

Although price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons, the general improvement in sentiment was aided not only by technical reasons, but also by the reports that settlement difficulties in Bombay were surmounted successfully. Indian Irons opened at Rs 28-8 and after improving gradually to Rs 28-15, receded again to Rs 28-4 on selling pressure, to finish the week at Rs 28-13. Similarly, TEXMACO were pushed upto Rs 20-4 from Rs 19-8, to finish at Rs 20-1. Jessop changed hands at Rs 27-13 to Rs 28-1; Richardson at Rs 22 to Rs 22-4 and G.K. Williams at Rs 23-4 to Rs 23-12.

The Miscellaneous section provided many firm spots on bonus and investment considerations. Prominent amongst these were NICCO which met with renewed demand upto Rs 26-12 from Rs 25 on reports of the company's proposal to issue bonus shares as well as a right issue at par. Indian Cable were pushed at one time upto Rs 33-10 from Rs 29-8 on renewed buying by a prominent group, to relapse again at the close to Rs 32-6 on profit-taking. India Steamship met with sustained support upto Rs 9-13 from Rs 9-7 on rumours of an interim dividend.

Elsewhere, Orient Paper moved rather erratically due to alternate buying and selling. The scrip moved between Rs 30-12 and Rs 31-5, to finish the week at Rs 31-10. Titaghur changed hands upto Rs 37-12 from Rs 36-3 with India Pulp a shade cheaper at Rs 22-7 against Rs 22-12. Indian Copper were a narrow market around Rs 3-10 and so also BIC around Rs 8-7. Dunlop Rubber changed hands at Rs 25-14 to Rs 26-2; Anglo Brothers at Rs 20-0 to Rs 21-10; Indian Aluminium at Rs 14-3 to Rs 14-9; Sone Valley at Rs 7-8 to Rs 7-11; IBP at Rs 33-13 to Rs 34-4 and Rohtas at Rs 19-10 to Rs 20-2.

*

WORLD OF FINANCE

(Continued from page 103)

Reserve Bank by State Governments possibly accounts for the fall by Rs 8.99 crores to Rs 4.94 crores in the latter's Deposits. In this context, we may also note that the Reserve Bank's loans to Governments are shown higher by Rs 1.05 crores at Rs 8.60 crores. Other Deposits are unchanged.

There are two interesting points (which we will see reflected in the State Bank return) as regards figures relating to member banks in the Reserve Bank statement. Firstly, Banks' Deposits are sharply higher by Rs 7.91 crores at Rs 56.25 crores; and, secondly, banks' borrowings would also seem to have risen substantially, as indicated by the increase of Rs 6.64 crores to Rs 106.60 crores in the Other Loans and Advances of the Reserve Bank.

The loans advanced by the Reserve Bank against usance bills are shown Rs 8.04 crores higher at Rs 60.86 crores. The running total of advances against usance bills marks a rise of Rs 19.79 crores to Rs 23.37 crores. This figure of Rs 23.37 crores compares with Rs 3.87 crores in the corresponding week of 1956.

Finally as regards the Reserve Bank statement, the decline in Balances Held Abroad is a small one of Rs 0.77 crores to Rs 80.30 crores. In the course of the past six weeks, the weekly average of foreign exchange depletion has been less than Rs 1.50 crores. This compares with the monthly average of Rs 17 crores in 1956.

Turning to the return of the State Bank for January 11, we find that Deposits are sharply higher by Rs 7.17 crores at Rs 246.76 crores. But, since this accretion to resources was largely taken up by the higher volume of advances, and since the State Bank's cash and balances with Reserve Bank had, in the previous week, shrunk to small proportions, Borrowings from the central banking institution have gone up. Borrowings are higher by Rs 9.73 crores at Rs 16.64 crores; and, since the Reserve Bank's portfolio of Other Loans and Advances had increased by Rs 6.64 crores, it seems fair to conclude that the State Bank has mainly been responsible for the higher volume of Reserve Bank advances to member banks. Similarly, the State Bank's cash and balances with the Reserve Bank are marked Rs 6.89 crores higher, whereas the increase in the Deposits of member banks with the Reserve Bank is Rs 7.91 crores: it is, thus, possible to suggest that the State Bank is also largely accountable for the improvement in balances of member banks with the Reserve Bank.

While the improvement in Deposits is one of Rs 7.17 crores, and while borrowings were marked up by Rs 9.73 crores, these additional resources were mainly claimed by advances, on the one hand, and an improvement in cash balances, on the other. Advances have increased by Rs 5.00 crores to Rs 151.41 crores. Cash in hand and with the Reserve Bank is higher by Rs 6.89 crores.

*

Government of India Treasury Bills:

During the week ended the 11th January 1957 Government of India Treasury Bills for Rs 77,42,50,000/- were sold in favour of the Reserve Bank of India.

*

SOUTH INDIAN MARKETS

(Continued from page 117)

at Rs 163 per candy, while bold variety was quoted at Rs 154 to Rs 157 per candy.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow Hides were normal, while prices moved rather erratically by one to two annas per pound on account of short-covering. Prices of Buff hides remained almost unchanged, while those of Cow Calf advanced by As 2 to As 3 per pound. Buff Calf prices were unchanged.

In the export section, buyers appeared to be hesitant and preferred to wait and watch in view of the large incomings. The maximum which London was prepared to pay was 48d for 5/5½ lbs; 41d for 8/8½ lbs and 38½ for 10/12 lbs averages. In single tannages, business was reported at varying prices between 54d and 60d in light weights, depending on the marks.

In the Tanned Skins section, arrivals were same as in the previous week. Clearances of Sheep skins were as usual, while those of Goat skins were slightly lower. Prices for both qualities, however ruled steady.

Support from the UK and the Continent was not striking. The general level of prices was 3d to 4½d per pound less as compared to pre-Xmas levels. One or two marks of Sheep skins were reported to have realised 28sh 6d. Semi-primes were sold upto 24sh 6d.

Following were the total exports during 1956 to the UK, USA and the Continent (figures in bales):—

	UK	USA	Continent
Kips ...	45,766	2,039	152
Goat ...	11,825	1,200	5,730
Sheep ...	6,896	...	754

The New Call on Science

(Continued from page 101)

fic knowledge has brought out both good and evil, to think in terms of a future where the good will over-balance the evil. The very picture of the all-devouring Frankenstein, which some of the latest inventions have raised, has aroused a universal fear and disgust and has turned the minds of men who count to new and more constructive directions of thought and action. And the technological applications of science have also started falling into line.

In Britain, there is now a clear preference for the development of the peaceful use of atomic energy. In the US, there is a growing call for a similar preference. If we read without fear and prejudice, the trends in popular feelings and outlook in the Communist countries, it may be possible to detect a similar attitude among them also. In fact, the tyranny of material knowledge has become so dominant and crushing that instead of looking at scientific ingenuity as a matter of national or ideological importance, a revulsion has set in along with a reversal in understanding. The armament race is no longer looked upon as affording protection against one's rival, but only as contributing to the quick destruction of every party. In other words, a check to the destructive utilisation of scientific knowledge can now proceed on considerations of pure self-interest for nations. The estimation of the future need not necessarily be depressing or gloomy.

Indian scientists are, from this point of view, relatively favourably placed. They have enough on hand to concentrate on activities immediately vital for the economic and social improvement of the country. And as the State is actively inspired by principles of peace in domestic as well as foreign policies, the scientific worker in India will not suffer from a conflict of loyalties like what has largely been responsible for the odium his counterparts elsewhere have incurred, as the remote agents of destruction.

Even in the less dreadful sphere which Dr Roy's description covers, there is a way out. The future could be faced with greater confidence and courage, if the frothy, luxury-based civilisation comes to be rated properly, in relation to all the needs of the individual. In countries where the values of this civilisation are most prized, a strong scepticism has arisen, engendered by new physical and mental ailments. In this respect too, India has the great advantage of having more trustworthy ideals to fall back upon, a fact which, however, is struggling rather hard to retain effective recognition.

For the Investor

A Favourable wind for the Investor

Investment Gossip:

The new managing agency agreement proposed for the Scindia Steam Navigation Company should serve as a pointed reminder to investors of the marked influences that the new Company Law, while it gets into full stride, will foster and promote in their favour and to their advantage.

The changes, which, of their own accord, the managing agents are suggesting, are significantly indicative of the way the wind will blow in the new company law regime. Before I proceed to deal with the substance of the altered agreement, let me stress the fact that, so far as I can make out, the initiative in this respect is from the managing agents themselves. The Company Law Commission is not yet in the picture; so, the favourable features do not owe their origin to any pressure from the Company Law Administration. I shall, in a later context, revert to the import of this voluntary gesture on the part of the managing agents.

Scindia Steam Navigation Company was started in 1919-20; and the leading figure in the promotion of the Company was Mr Narottam Morarji of revered memory. He was ably assisted by Mr Lallubhai Samaldas also of revered memory. The managing agency was in the name and style of Narottam Morarji and company. There were other interests that joined the firm—particularly Mr Walchand Hirachand (who, in later stages, was in the forefront of the picture) and Mr Kilachand.

The agreement between Scindia and Norottam Morarji and company expired by the middle of this month. At the agreement's termination by efflux of time, the managing agency comprised Mr Shantikumar Morarji, Mrs Shantikumar Morarji, members of the families of Messrs Walchand, Lallubhai and Kilachand.

Some years ago, it was impressed upon the managing agents that they must reinforce the administrative talent of the firm. To this end Mr Dandekar was taken on and he rendered valuable service for a period. Mr Dandekar, however, left the assignment some three years ago; and the loss of Scindia has become the gain of ACC.

The terms of the old managing agency agreement provided for 10 per cent commission on net profits before any allocation is made for depreciation.

As I said, this agreement expired by mid-January. The new agreement, whatever it is, has to be framed with the consent of the Company Law Commission. This consultation with the Commission arises from the termination of the agreement on the expiry of the stipulated term, and is to be distinguished from the statutory obligation requiring every managing agency arrangement to come under the purview of Government under the provisions which set a limit by 1961 for this purpose.

The old agreement expired on January 14; and the new agreement has to undergo a number of formal processes before it can become effective. Scindias, therefore, will have no managing agency in this twilight period.

The main purpose of the directors in devising the new agreement has been to bring it in alignment with the letter and spirit of the new company law, the outstanding aim of which is to protect the interest of the investors in the fullest way possible. The changes, contemplated by the Scindia directors, have, therefore, the definite object of favouring the shareholders in every respect.

The principal changes are as under:

First: The managing agency firm is to be rationalised and streamlined. Norottam Morarji and Company will be converted into Norottam Morarji Company Private Limited. A business leader of acknowledged repute is to be the Chairman endowed with over-riding authority: and Mr Dharumsey Khatau is to be the Chairman. Mr Shantikumar and Mrs Shantikumar will be on the Board of the private limited company. The members of the families of Walchand, Lallubhai and Kilachand will be shareholders but will not be represented on the Board. It is also proposed to strengthen the personnel by associating someone with administrative and otherwise appropriate experience.

The remuneration provided in the new agreement will be conspicuously favourable to the shareholders. In line with the new company law, the net profit will be determined after depreciation. The percentage of commission to the managing agents is changed from a flat rate of 10 per cent on net profit to a sliding scale on the following basis: 10 per cent on the first Rs 50 lakhs of net profit, 7½ per cent on the next Rs 50 lakhs, and 5 per cent on the net profit in excess of Rs 1 crore.

The cumulative effect of these changes and cuts in remuneration will be quite substantial in the case of Scindias whose present earning capacity will be greatly augmented by the expansion planned with the aid of the special financial facilities given by Government to the shipping industry.

A few other companies have been in analogous predicament; that is to say, their managing agency agreement had expired or are about to expire. New agreements (possibly of an interim nature) have to be settled with the Company Law Commission. The Commission were inclined to take the view that 10 per cent of net profit was a maximum, and that the Commission had the authority to lay down the exact percentage to be granted on the merits of each case. Government, however, have made it clear to the Commission that such was not the intention of the framers of the Act.

In such circumstances the voluntary cut suggested by the Scindia Directors is worthy of commendation; and it is not unlikely that it will be regarded as an example to be followed by, or recommended to, companies whose net profits are expected to be of striking magnitude.

I hail the Scindia gesture as a sign and symbol of the direction in which the wind may be expected to blow.

£ R $

Investment Notes:

Results of the convertible loan stock offer of the Indian Aluminium Company Limited are now available. Of the total offer of 2.68 crores, Aluminium Limited of Canada has taken up Rs 1.34 crores, while the present shareholders of Indian Aluminium and other supporters have subscribed for Rs 78 lakhs. The company has proposed to offer the remaining stock, worth Rs 56 lakhs, for public subscription, at par, on February 4.

Holders have the option to convert each unit of the stock into Ordinary shares in the proportion of 15 Ordinary shares for a stock unit of Rs 200 during the current year. The proceeds of the loan stock will be utilised for the construction of an aluminium smelter at Hirakud. The company has already announced an interim dividend of 5 per cent for 1956.

Aluminium Industries, Madras, have decided to issue 4 lakh Ordinary shares of Rs 10 each at par to holders as on the 1st February, 1957 in the ratio of 1:1. A sum of Rs 5 per share is payable on application on or before 1-4-1957 and the balance on or before 1-10-1957. The last date of receipt of applications is 1-4-1957.

Premier Automobiles, Bombay, are ruling very steady at Rs 107. According to latest reports, this company sold as many as 4,810 cars and 4,483 trucks during the year ended 30-6-1956 as against only 2,162 cars and 4,675 trucks in the previous year. Moreover, spare parts worth Rs 68.58 lakhs were reported to have been sold as against Rs 66.22 lakhs. The company is now taking steps to meet the increasing demand by stepping up production progressively. It is hoped that sales will be more than 15,000 vehicles in the current year. With a view to achieve the target, the company is in need of more funds. Negotiations for floating Debentures to the tune of Rs 2 crores have, therefore, started.

Scindia Steams are a firm feature at Rs 18-13. Apart from the imminence of the profit statement for 1955-56, the main inspiration has been the major change that is to be effected in the company's managing agency agreement, which expired on Monday last. The general impression is, that the proposed change will prove beneficial to the shareholders.

£ R $

Investment Briefs:

Pench Valley Coal has reduced the dividend from 7½ to 7 per cent for the half-year ended 31-3-1956.

Duffiaghur Tea and Nagri Farm have announced interim dividends of 15 per cent each for season 1956, payable on or after 8th February, 1957.

HIGHLIGHTS

Difficult, but not desperate: that is how the foreign exchange position is described by Indian Finance.

Difficult, if not desperate: that would seem to be the view of authority on the same subject.

In both the descriptions, the conjunctions are all important. The one is realistic, but not unnecessarily optimistic.

The second claims to be realistic, but succeeds no more than being unwarrantedly pessimistic.

Nevertheless, a ways and means problem may emerge in foreign exchange and, in anticipation thereof, Government have taken a number of measures.

The first was the mid-year Budget, with its avowed intention to discourage import of non-essentials.

The second was the import policy for January-June 1957: which explicitly indicated the need for paring our imports to the bone.

The third was the announcement regarding foreign exchange for intendant Indian visitors abroad: no more pleasure trips.

The fourth is the decision to revise targets of imports under cement and steel and railway wagons.

Notwithstanding these measures, World of Finance suggests that the foreign exchange problem is one of a number of whirlwinds reaped from the winds sowed last year.

These are problems which Mr T. T. Krishnamachari will be called upon courageously to tackle.

But these are problems, as World of Finance points out, for which the solutions can surely be found.

Samastipur Central Sugar Results

Balance-Sheet Reviews:

THE Samastipur Central Sugar Company, Limited has reported satisfactory working results for the year ended 30th June 1956, although the dividend has been passed over again. The quantity of cane produced is the highest on record, amounting to 2,835,276 maunds; but the longer crushing season to take off the larger crop together with the effects of the floods reduced the sugar recovery to the low figure of 9.32 per cent.

The cane price remained at the high rate of Rs 1-7 per maund at the factory gate and Rs 1-5 at outstations; and these relatively high prices encouraged farmers to grow more cane. This was a general experience throughout the sugar industry, with the result that the sugar production in the country rose to an all-time record of 18.5 lakh tons.

The result of the high production of sugar in India tended to reduce the market prices of sugar, particularly in Bihar and Uttar Pradesh where factories have to compete with sugar factories near the Port towns. This disadvantage, aggravated by a shortage of railway wagons on the NE Railway in the early part of the selling season, also tended to depress prices.

The quantity of cane crushed by the factory, during the year under review, is higher at 2,835,276 maunds as against only 1,697,490 maunds in the previous year, while sugar manufactured is also higher at 264,330 maunds against 168,644 maunds.

Sales have risen to Rs 43.08 lakhs from Rs 36.08 lakhs, while the net profit, before providing for Depreciation, amounts to Rs 2,15,077 against Rs 1,30,022 in the previous year. Thanks to increased earings, the amount set aside to Depreciation has been raised to Rs 1.20 lakhs from Rs 75,000 and Other Funds to Rs 1.00 lakh from Rs 60,000.

£ R$

Amalgamated Coal

The effect of the recent Tribunal Award on the coal industry is fully reflected in the working results of the Amalgamated Coalfields Limited for the half-year ended 31st March, 1956. Raisings have shown a rise to 419,014 tons from 415,791 tons, while despatches have declined to 425,735 tons from 436,024 tons. The net profit has declined to Rs 2.92 lakhs from as much as Rs 6.83 lakhs in the previous half-year. Apart from providing Rs 30,000 for Dividend Equalisation Reserve, the Taxation amount has been reduced from Rs 2.83 lakhs to Rs 1.33 lakhs. The dividend is reduced from As 12 to As 8 per share.

£ R$

Bararee Coke

The Bararee Coke Company, Limited has announced a dividend of only 6 per cent for the half-year ended 31st March 1956 as against 7 per cent in the previous half-year. The profit has declined by Rs 24.000 to Rs 2,38,751. The provision for General Reserve is unchanged at Rs 25,000. The Taxation provision is lower by Rs 5,000 at Rs 1.00 lakh and Depreciation at Rs 20,000 against Rs 39,865.

The Coke output has risen from 28,971 tons to 34,200 tons, while despatches have increased from 28,584 tons to 32,203 tons. The production of Benzol is higher at 5,483 tons against 4,271 tons. Despatches have risen from 6,132 tons to 7,547 tons.

£ R$

Central Hydraulic Press

Thanks to a rise in earnings, the Central Hydraulic Press Company has been able to recommend a higher dividend of Rs 6 per share for the year ended 30th June 1956 as against Rs 5 in the previous year. Net profit, before Taxation, amounts to as much as Rs 1,24,464 as against only Rs 60,995. Apart from setting aside a sum of Rs 37,132 as Reserve for Depreciation on Investments and Rs 15,000 as Taxation Reserve, the Taxation amount has been reduced to Rs 30,000 from Rs 35,000.

It would be recalled that the company's presses have been remaining idle since July 1, 1953 in view of the continued poor outlook for the jute baling industry. As there is little prospect of the recommencement of baling operations, the directors have opened negotiations for the sale of the presses and the ancillary plant.

On Anniversaries

THE notion of the observance of an anniversary is not quite the same in India as it is in the West. Indeed, the basic approach would seem to differ substantially. The emphasis in the West is on celebration; and, appositely, the atmosphere generated, whether for Christmas or for observing Independence day, is one of cheer and joy. In India, it would seem to us that the stress is more prominently laid upon the rationale of the anniversary: the thought behind the man or event whose anniversary is being remembered.

That is to say, there is a tendency to let solemnity be the characteristic of the celebration. This solemnity has its outward evidence in remembrance of things past, of recalling past glories, of asserted re-dedications. Lest we be thought to hold a brief for the more ebullient variety of commemoration, let us make it clear that we would never want it otherwise in India.

For, India's past is rich, but is in danger of being obscured and forgotten the while that we strive ambitiously to bring into being a new and industrialised India. We cannot afford so easily to lose the heritage of the past. It is therefore proper that we should utilise every opportunity we can to recall and to remember days and events that are memorable, and of the lessons offered therein.

In this context, the last week in January can justifiably be said to describe rich Indian history of modern times.

It was on the 23rd of the month, some many years ago, that Subhas Chandra Bose was born. Should we not gratefully pay homage to him, on the anniversary of his birth? If proof was wanting that the Indian is a courageous breed, that fight he would if necessary, Netaji provided the example.

It was on the 26th of the month, some many years ago, that India proclaimed its determination to be free; it was on the 26th that, some years later, India declared itself a Republic. It is a day of dedication, even while it is a day to pay one's tribute to the unknown many who made possible Indian independence; on Republic day, it behoves us all to pledge ourselves to keeping India free, to conserving the freedom that was so dearly won.

It was in this week that India proved that it could furnish a scientific mind equal to the world's contemporary best. The first of his kind in modern India, Sir C. V. Raman proved that men dedicated to science and research, men dedicated to the service of mankind, were born in India, too.

It was on the 30th of this month that India witnessed its most calamitous tragedy. And yet, are we to remember that the Mahatma was assassinated, or should we not learn instead by his death that violence is never a just answer? A new dedication to the paths of peace, a fresh dedication to ahimsa, is what properly may be expected of us on this day.

The last week in January is important for this journal for one more reason. It was at this time, twenty-nine years ago, that Indian Finance made its debut; and we have not wavered these 29 years, nor shall we in the future, from our determination to serve the Indian economy as best we may, but always so that neither prejudice nor predilection be permitted to influence our view, our judgment, our suggestions.

Thought on the Centenary

THE Centenary of all three of India's oldest universities is an occasion which should stimulate reflections of a wide and varied range. It is legitimately claimed by the British people and gratefully acknowledged by Indians that the most precious by-product of British rule in India is the knowledge and tradition of modern liberal democracy as understood and practised in the West. Even when the East India Company was consolidating its power in India, a few British statesmen had the vision to see the eventual fulfilment of British rule as the complete political emancipation of this country.

It is undeniable that university education imparted through the language of the ruling race provided the soil on which many noble yearnings of the last two or three generations sprouted and bore fruit. Under Mahatma Gandhi, the consciousness of subjection and the urge for its removal did permeate to the masses to some extent and no one can claim that the achievement of freedom was the exclusive work of the educated classes. But while paying due homage to the great contribution of the masses, it can still be maintained that leadership and initiative, not only in the field of politics but in the more immediately constructive economic and social endeavours, have come mostly from university men. Even today, it remains largely so.

When, therefore, the vicissitudes and achievements of the Calcutta, Bombay and Madras Universities, from which most of the other universities of India splintered one after the other, are viewed in retrospect, the picture will reflect the outstanding trends in Indian public life over the century. While every one of these universities could claim outstanding individuals among its alumni, the Calcutta University can proudly boast of a richer crop of eminent distinction, particularly in the realms of scientific achievement and political leadership.

When higher education is beset with several perplexities, a respectful study of the ways in which standards were kept by these universities might be rewarding. At the Symposium on the Future of University Education in India, organised in connection with the Calcutta University Centenary, some of the master minds in Indian education exchanged thoughts. A number of distinguished educationists from abroad are also taking part in the celebrations, especially in the discussions on current problems. The transition to freedom involves the arduous task of adjusting the aims and methods of university education to new economic and social purposes.

From the observations and views coming from educational experts, it is now clear that hitherto this task was not sufficiently well understood. One of the uncontested conclusions now emerging is that the university should no longer keep its door open to every person who cares to enter. The short spell of indiscriminate expansion in higher education has inexorably led to this conclusion. Possibly, the most important change in the immediate future will be in the direction of conditions obtaining in Britain, where the percentage of university students to literate population is much smaller than in India and where training for occupation is restricted to those professions which called for the greatest and most prolonged intellectual effort and maintained very high standards.

On other issues, opinion seems divided. The timing of transition from English to Indian languages remains highly controversial. In his inauugural speech at the Calcutta celebrations, Dr Rajendra Prasad pointed out that it would be futile to expect a language to grow, while shutting it out from the holy precincts of higher and particularly technical knowledge. He believes in the practicability no less than in the wisdom of an early and complete swing to the regional languages. "Necessity is the mother of invention and I have no doubt that when the demand is made on these languages they will, in course of time, develop and acquit themselves creditably." says the President. The Prime Minister, on the contrary, would have a more guarded spacing.

Whatever be the final decisions on intricate issues such as this, it should be every one's hope that no step will be taken either by Governments or by the Universities, which will directly or indirectly impair the existing freedom of intellectual intercourse and social understanding between different parts of the country or choke the streams of international contacts, particularly in the field of higher knowledge and culture.

Another vital problem, which is laid up for the future, concerns the resurrection of Indian knowledge and culture in the curricula of higher education. The place of Sanskrit, Ayurveda and even religion is being debated with competence and sincerity in many places. It is not clear at this stage whether new forms of synthesis will evolve or different systems and literatures will simply be permitted to co-exist in separate grooves.

It is a gratifying thought that the occurrence of the Centenary would enable examination of these problems with the extra dignity and pride born of the contemplation of great achievements and with the determination to excel them. Now that there is general agreement that Indian Universities should not degenerate into an intellectual miscellany and scrap-heap, those concerned with the future can concentrate their attention on how they could be made the abode of the aristocracy of the brain. To understand the function of a university in any other light would be injurious to the nation's prowess and progress, material and non-material alike.

The Personality of India's Mixed Economy—VI

THOUGH a sound and useful theory of economic growth is not within our reach, it is not difficult to account satisfactorily for the decline of Indian economy during British rule and thereby secure some indirect guidance for the future. There are some who, in this context, would think of the reasons for our backwardness which foreign writers of Indian history or economics used to give in the textbooks of olden days. These reasons covered a wide range, from a too regular coastline free from inlets or estuaries and the like to the domination of our social life by caste and other institutions making for rigidity. It did not occur to them that these same features did not stand in the way of India's prosperity in the past and that, therefore, other forces must have been at work. There is no doubt that there is in all economic phenomena what may be called the personal factor, the faculties and bent of mind of the individual and the power of organisation and adaptation which the society can evince at crucial stages of economic evolution. This personal factor is more or less wholly unpredictable, though one would think that it should be predictable at least to the extent that it is the result of perceptible strains and stresses and not of inherent qualities. It is a matter of common experience that people whose natural environment is hostile or inhospitable develop in course of time qualities which enable them to surpass peoples to whom Nature has been too kind. But these explanations of disparities in the attainment of different communities have no longer the same validity as they had in the past.

At any rate, it is outside the sphere of this personal factor that the forces of economic growth or decline can be analysed in an objective manner. While it would be wrong to deny the cramping effects of caste on our economic progress, we should not overlook the fact that, during by far the greater part of our history, it also helped to impart stability to our economic organisation and even to facilitate progress within certain limits and in certain conditions. At any rate, earlier ages of Indian history knew nothing of the accelerated decline of rural life and growth in indigence which were so marked a feature of the British period of our history. This decline can only be explained by the presence of mutually aggravating forces.

The drain of wealth from the country, which was the favourite theme of Indian nationalist politicians in the last half a century, was to some extent a misunderstood phenomenon. The amount of income which the foreign rulers derived from India in various ways, through the Home charges, through domination of our foreign trade channels and through other familiar methods of imperialist exploitation, did not of itself bear any high proportion to the total national income. But the manner in which it was derived was such that a downward spiral was brought into being which Indian society was not sufficiently organised to check. The Government did not care to take note of what was happening, much less to institute measures to arrest the rot. The kind of foreign trade which the Government sought to develop and the new basis of exchange of raw materials for manufactured goods which they were providing for it only helped a very small class of merchants in the urban areas to grow rich. Outside that small circle, there was an impoverishment of whole classes; and this was choking life out of the economic organisation as a whole.

In the economic life of any country, increases in production of goods occur in response to the demands issuing from the emergence of purchasing power in some classes and as a result of the possession of the requisite skills and other resources in the hands of others. Whatever the modes of organisation or production may be, the impetus to increased production can come only in this way in a non-socialist economy. But, in India, what happened as a result of the impact of British rule on the national economy was that not only was there no impetus of purchasing power, but there was a positive decline in the pre-existent demand for goods which were being formerly produced within the country. Nobody can be expected to persist in production in the face of dwindling demand and losses. And, every time one class reduces its activity, there is a cut in the national income which gathers volume in snowball fashion.

The imports of cotton goods from abroad is only the most spectacular instance of this retrogression in the national economy. But, in point of fact, handloom weaving is not the only cottage industry which went out of production and accentuated the poverty of the countryside. All classes of artisans were sucked into this maelstrom. And the pressure on land was increased particularly as the increase in population coincided inevitably with the decline in the material circumstances of the people. Even the cultivation of land was adversely affected except in the case of production of foodcrops or of money crops for which the foreign firms were ready to pay a price or of mere subsistence farming.

In such circumstances, none of the conditions of economic growth can be expected. If the country were politically free, that is, if the people had not been overawed by the army commanded by foreigners, there would have been some kind of social convulsion which would have arrested the process. What is known as the industrialisation of India during British rule could by itself do nothing in this regard. Though in comparison with the achievements of most other Asian countries during the period, it looks impressive, in terms of the national economic life as a whole, it was of little moment. At no time could Indian industrialists aspire to do more than replace, at great cost, the goods imported from abroad with their own indigenous production. This supply, whether it was from abroad or from within the country, represented only a fraction of the total needs of the population even for a ludicrously low standard of living. India's industrialisation in the pre-independence period was no doubt valuable as providing a helpful start for the planned development of today. It gave no little emotional satisfaction that the goods which we had been importing from abroad could be provided at home. But, for arresting the downward spiral, it had little or no importance. Though it produced a few millionaires, it did not create either large pockets of savings and investment, which could bring about further industrialisation, or throw up a new class whose prosperity could percolate to the masses by reviving the artisans or other producers. Apart from the question of a nexus of subtle economic forces, there was no attempt to provide the country with the heavy industries necessary for the expansion of production on the scale required by the country. There was no significant addition to the national income while population was increasing. The result is that the decline of the national economy was not arrested. No stimulus to new production was brought into play.

The lesson of this era in our economic history is that the impoverishment of any large class is bound to have a long chain of results which must sterilise productive activity over a wide sphere. Conversely, it may be said, without subscribing to the old theory of prosperity percolating from the top, that the creation of surplus purchasing power in large sections of the population will automatically create new demand and new production to satisfy it. In a far-flung country like India, with its population distributed in lakhs of villages and hamlets, increase in production such as will add to the consumer goods that are within reach of the common people can be brought about more surely by setting up the forces of demand and supply within a small orbit or area than by centralised production. If what the village population needs is more food and more varieties of food, namely, milk, vegetables, eggs, etc., more housing, cloth, more of household requisites, the prime requirement for meeting these needs is the creation of effective demand for them and the provision of conditions necessary for the increased production of these goods.

The wisdom of making the revival of cottage industries an important part of the Plan rests not on the choice between capital-intensive and labour-intensive industries, or to the priority to be assigned to employment over output, but on the superiority of a spontaneous outburst of new production throughout the country to the action of the Government or of big business. Private enterprise will find it a paradise where objective conditions are favourable to the inauguration of business on a small scale and its progressive expansion on the strength of its own profits. Such conditions have always been present in the United States, where the saga of a small business unit growing to a gigantic stature is an all too familiar tale. Such conditions, it is necessary to note, are also favourable to the growth of a spirit of service and a sense of social responsibility in the various business units. Despite the disparity between American and Indian resources, the same thing can happen in India, too, if official policy will allow such developments. But such developments cannot be hoped for now. Even the spontaneous growth of productive activity in the rural areas is in danger of being officialised and deprived of the dynamism of spontaneity. The grants that are being made to handloom weavers and artisans in the villages have the ugly look of doles motivated by political considerations. Large numbers of people who constitute a considerable part of the rural electorate are being given a vested interest in the economic policies of the Union Government. Dangerous ideas of direct conflict between their interests and those of big industry are being put into their heads; and changes in the future are sure to meet with determined political opposition. We are creating large masses of industrial Kulaks in this country who will be found very difficult to deal with in the later Five-Year Plans. Intelligent understanding of the causes of our economic decline in the British period could have served to correct such dangerous errors.

Editorial Notes

Rifts in Congress

When the Prime Minister expressed his disinclination to visit the South for campaigning purposes he could not have foreseen certain developments. There is clearly no room for doubt that the Congress party would be returned to power in the Centre and in the majority of States with unassailable strength; even Mr A. K. Gopalan openly admits this. However, in a few States, the party's performance may not rise up to expectations hitherto held.

In West Bengal, a powerful group of dissident Congressmen has decided to fight the elections on its own. In Behar, the long-standing feud within the party is now seeking expression through open rivalry against the party's nominees. The most awkward news comes from Madras, where a large number of resignations have taken place from the ranks of leaders, including two Ministers who were denied the privilege of standing for re-election. One sitting member of the State Assembly has denied to accept the offer of candidacy on the ground that the Congress was beset by group mentality. He also gives the reason of being influenced by the speeches of Acharya Vinoba Bhave. There are others selected by the party either refusing to stand at all or standing as independent candidates. That there is much resurgent discontent cannot be concealed.

The chagrin of disappointment invariably produces sporadic murmurings and defections. This time the roots go deeper. The Madras Selection Committee has not only discarded a number of loyal and influential stalwarts, but given tickets to many who have been consistently crying down the Congress and espousing political principles totally repugnant to the party. The Selection Committee appears to have also dealt cavalierly with the recommendations of representative local Congressmen in many places, substituting names unacceptable to the latter, thus promoting factiousness and jeopardising the chances for the Congress candidate.

The extent to which Central direction should be applied in the matter of nominations will ever remain a moot point. It is a pity that, when the party constituency's preference is clear and emphatic, it is overlooked at some higher level. It can be made a safe general rule that in the event of such preference there would be no interference from above. Confidence in victory should not be permitted to endanger basic techniques, inseparable from the proper functioning of democracy.

*

A Constructive Step

Some of the prevalent confusion in the sphere of education will disappear, if the Central Advisory Board's recommendation for the compulsory study of three languages in the secondary stage is accepted in good spirit by all the State Governments. For several years the future of English in the educational curriculum has been hanging in the balance, giving not a little concern to the more thoughtful among the educationists and administrators.

Some of the Universities have already given up English as a compulsory study in the high school and switched over to the regional language for the university. Warnings against these premature and ill-considered changes were brushed aside and even the marked deterioration in standards which followed failed to impress.

It is significant that until the Prime Minister declared himself emphatically in favour of retaining the English language as an important medium and as one indispensable for the acquisition of technical and scientific knowledge, the Central Advisory Board itself did not dare to make up its mind. Even now the Board has the benefit of the opinion of only seven out of the twenty-two State Governments whom the Union Ministry of Education offered to consult on the matter.

There are very sound arguments against the compulsory study of three languages. Where one or two would suffice for practical purposes the imposition of an additional language will dissipate interest and energies and will undoubtedly be burdensome to the students. But against this come two vital requirements, equality among all language groups and easy and smooth inter-State contacts, and understanding both within India and between India and the world outside. A niggardly attitude to Hindi or English, would have defeated the latter purpose.

The Union Education Minister is of opinion that for sometime to come, all the Universities in India should continue to have English as their medium. Those who had given it up may not like to retract. Perhaps a compromise may be accepted under which scientific and technical subjects are taught in English and the others in the principal language of the State.

*

Sugar Prospects

The Development Council for Sugar has endorsed a Plan for the production of 21.6 lakh tons for 1957-58. Production for 1955-56 is estimated at 18.62 lakh tons, which was in excess of the Council's target by about 50,000 tons. The production prospect for 1956-57 is held out to be 20.5 lakh tons. Annual exports up to 50,000 tons are also envisaged, without the industry having to look for any financial assistance for this purpose. In other words, the outlook for 1957-58 could be summarised as an increase in production to a level and at a cost which, after meeting the entire internal consumption, will enable the industry to compete unaided in the international market.

As expectations do have a sanction in the achievement of the past, the targets fixed by the Council cannot be deemed beyond reach. The improvement in output recorded for 1955-56 was the result mostly of an extension of the crushing season. A long crushing season is not without its difficulties nor is it the only way in which a better output could be achieved.

A relatively favourable price fixed for sugarcane as against other cash crops in Northern India must have helped a great deal. Between sugar and gur there is always a price tangle, whose character determines the preference between the marginal sales to the sugar factories and for the production of gur.

The extension of sugar cultivation in the Deccan and in South India will be increasingly reflected in the country's total output. But even with all these, the industry may not be in a position to sell competitively to the domestic consumer, who ultimately pays for the low yield of cane, the unscientific location of factories and the innumerable levies borne by the industry. Much remains to be done, yet.

*

Protective Redefinition

The demolition of Stalinism as announced in the 20th Party Congress in Moscow aroused such devastating reactions in thought and action in Communist countries that Khrushchev has found it dangerous to postpone a new explanation of his ill-fated statement. In his New Year message, the Russian leader proudly pointed out how he and everyone of his colleagues were being inspired by Stalin and collaborating in his great work. More recently when proposing a toast to Chou-en-lai, he raised the pitch of loyalty higher and extolled the departed leader as a model communist in fighting for the interests of the working class and in a rather un-Marxist way, invoked God to grant every Communist ability to fight like Stalin to defend the interests of the working class. On a lighthearted interruption from Bulganin, Khrushchev felt obliged to add "I don't separate Stalinism and Stalin from Communism."

These statements have come as the answer to the hopes no less than to the doubts raised in non-communist countries, by what looked like the dethronement of Stalin last summer. The illusion that Soviet Russia was getting into a fit of remorse and trying to liberalise its outlook in unacknowledged imitation of the Western democracies might have been sustained longer or even turned into a fact, had it not been shared by some intellectuals in Russia and in other communist countries. The immoderate ambitions for national independence displayed in Poland and Hungary brought about the decisive blow and led to a hurried retreat.

The reinstallation of Stalin in the avowed discipline and loyalty of the Soviet Communist Party seems to have been due not so much to any inherent merit of the special characteristics of the Stalin regime, as to the extraordinary threat to Communist solidarity which any serious departure from that regime was seen to hold. Khrushchev was probably in no way insincere at the 20th Congress. The retraction was forced by the mistaken response to his gesture. The restoration of the truly international and unified character of the Communist goal is underlined by the joint statement of Bulganin and Chou-en-lai from Moscow last week.

Mastering the Whirl-wind

AS you sow, so you reap. This is, one might say, just the law of Karma. If what is sown is the wind, the harvest is apt to be the whirlwind. This may be described as the law of Karma in terrific operation. Mr T. T. Krishnamachari has to tackle a number of such harvests; and, in respect of some of these, the sowing of the wind was done by some one else. T. T. K., as the present steward of India's finances, has the responsibility to deal with the reactions, without wasting time or energy in ascertaining the responsibility for the original actions. The fact is that he has, at one and the same time, to assert his superb mastery over the raging as well as the threatening storms. The occasion calls for circumspection and confidence. While we have no desire to underrate the gravity of the problems, we are convinced that none of them is beyond solution. In a sense, they are the sort of issues which the planners have themselves foreshadowed, and which could not, therefore, be regarded as unpleasant surprises or unexpected shocks. The Plan, in the course of implementation, will throw up many more challenges; and those who have had the vision and courage to frame an ambitious plan may, surely, be trusted to evince the calm judgment and competency needed to find appropriate answers to the many questions that are now being, and may hereafter be, posed. Panic in such circumstances is unwarranted and must be avoided in official as well as popular thinking with regard to the problems. The correct attitude is self-confidence in Authority, which, in its turn, must evoke and foster confidence in the public mind.

The first whirlwind of which mention must be made in this context is the difficult foreign exchange situation. The sowing of the wind in this respect is partly the responsibility of Mr Krishnamachari who, as Minister for Commerce and Industry, authorised the import of steel and cement in vast quantities. It is far from our intention to question the wisdom of such large imports of two commodities whose vital need for the execution of the projects under the Plan is recognised on all hands. These imports are essential; and the loss of foreign exchange on this account is something for which Government are prepared. So, the simple question is: How may we utilise the steel and cement (domestic and imported) to such effect that their use is limited to top-priority purposes; that black marketing does not divert these precious commodities into purposes and projects which cannot be assigned such top priority; and that the present stocks are so carefully husbanded and so efficiently utilised that future imports can be reduced to manageable dimensions?

For our part, we cannot conceal our feeling of disquietude that Government, as the largest consumers of steel and cement, have so far given but little thought to policies and plans of conserving supplies and maximising their effectiveness. On inspecting the Perambur Integral Coach Factory, one of the Russian leaders declared that there was a reckless and wasteful use of steel and cement in the project. Did this grave observation make Authority in New Delhi sit up and think? We doubt it. Our projects are being prepared mostly by the technicians hailing from countries to whom economising in the materials used is by no means a primary consideration. Our dams are planned on the facile assumption that mountainous quantities of cement can be made available. Dam construction in South India has not meant a bottomless pit for cement. There are other countries, too, who plan their dams with a strict eye on the economies of steel and import. We suggest that Government should set up an expert committee to advise on the most economical use of materials which are in short supply, and to revise the blueprints of new projects from the point of view of minimising utilisation of steel and cement.

In present circumstances, restrictions on foreign exchange availability are unavoidable; their imposition should not suggest panic on the part of Government or evoke alarm in the mind of the public. They are inseparable from the deprivations which an ambitious plan must impose on all sections of the population. We must emphasise and underline the all-important fact that the foreign exchange situation is difficult, but in no sense desperate. Firstly, there is still a fair margin before the minimum of Rs 400 crores as backing for currency is touched. Secondly, there is nothing sacrosanct about this minimum of Rs 400 crores. This figure was enshrined in the amended Reserve Bank Act, not as a result of scientific calculation, but by way of more or less arbitrary assumption. If the Parliament could have given legal sanction for a limit of Rs 400 crores, the same Parliament could approve a lower figure. The point to bear in mind in this connection is that, while the foreign exchange reserve in the case of the UK has a unique significance, India has a narrow, limited and more or less self-contained money market and need not, therefore, attach too much importance to the international aspect of its foreign exchange reserve. In simple terms, we can, at a pinch, reduce our foreign exchange cover to below Rs 400 crores.

We may also remind the authorities in New Delhi and the public at large that, in case of need, India could seek and be sure of securing emergency aid from the IMF. We have, on a previous occasion, availed ourselves of this aid, and built up our credit by prompt repurchase of the rupees. On the basis of the emergency aid currently secured by Britain in this way, India could, for an emergency, count on Rs 200 crores in foreign currencies being available from the IMF.

Finally, we may ask: What is Mr Krishnamachari doing to launch a scheme of Gold Bearer Bonds? There is so much gold hoarded in this country, that the enticing of a moiety of such gold into the monetary system is the first requirement of self-help, and the foremost manifestation of self-respect.

The other storms facing T. T. K. are: (1) the whirlwind of inflation, being the harvest from the sowing of deficit financing; (2) the whirlwind of depressed giltedged, being the harvest from the seed of faint-hearted open market strategy on the part of the Reserve Bank; and (3) the whirlwind of depressed stock exchanges, being the harvest from T. T. K.'s sowing by way of speeches on recurrent budgets and mounting new taxes. There is a sure plan and method whereby T. T. K. can, with consummate confidence, ride every one of these storms. With these, we hope to deal in subsequent issues.

+

Advances Cross Rs 800 crore Mark

THAT the pressure for funds from the banking system is likely to be of large dimensions is being borne out and confirmed each week in the return of Scheduled Banks. In the space of the last two weeks alone, the total of advances has registered a rise of just under Rs 20 crores from Rs 788.46 crores on December 28 to Rs 808.43 crores on January 11.

At the same time, deposits are shown to be lower, having declined from Rs 1113.69 crores to Rs 1104.59 crores on January 4 before improving to Rs 1110.00 crores on January 11. In the result, the expansion in advances had to be met by recourse to larger borrowings and by running down cash balances. Borrowings from the State Bank have risen successively from Rs 8.11 crores on December 28 to Rs 10.21 crores and Rs 10.52 crores on January 4 and January 11 respectively. Indebtedness to the Reserve Bank, which was reduced by Rs 6 crores to Rs 73.19 crores on January 4, has risen again by Rs 6 crores to Rs 79.10 crores. Cash balances are sharply lower at

BANK PROFITS

The latest batch of bank profit announcements, which are reviewed below, give further forceful confirmation of 1956 as an extremely good year for banks.

The Punjab National Bank Limited has had a sensationally good year, with net profits marked up from Rs 64.41 lakhs to Rs 87.85 lakhs. The press communique issued by the bank vouchsafes the further information that Deposits rose by Rs 16 crores to Rs 106 crores.

•

The Indian Bank Limited's net profit would appear to have more than doubled from Rs 20.58 lakhs in 1955 to Rs 44.21 lakhs. The dividend, including bonus, has been raised by one per cent to 13 per cent, absorbing Rs 7.82 lakhs against Rs 6.96 lakhs last year.

•

The Canara Bank Limited has announced a profit, after payment of special Golden Jubilee Bonus to staff and dividend to shareholders in July last year, of Rs 8.21 lakhs. The 1956 appropriations include Rs 4.60 lakhs for tax, Rs 1.40 lakhs for Bonus, Rs 0.52 lakhs for preference dividend, Rs 1.50 lakhs for ordinary dividend and Rs 0.39 lakhs as carry forward.

•

The Central Bank of India Limited has reported a sharp upswing in its profits from Rs 77.76 lakhs to Rs 104.37 lakhs. The dividend payment has been raised to 14 per cent from 12 per cent. The allocation to investment account is maintained at Rs 15 lakhs; the provision for tax is marked up by Rs 7.50 lakhs to Rs 13.00 lakhs; the Staff Gratuity Fund receives Rs 5.00 lakhs against Rs 5.50 lakhs; the carry forward, at Rs 18.23 lakhs, shows little change from the brought forward of Rs 18.40 lakhs; and Staff Bonus, at Rs 27.50 lakhs, gets more than double the 1955 figure of Rs 13.50 lakhs.

•

The dividend payment by the Union Bank of India has been increased to 8¾ per cent from 7½ per cent, thanks to a rise in its profits from Rs 9.48 lakhs to Rs 11.15 lakhs. A transfer of Rs 2.50 lakhs is to be made to Reserve; the investment account gets Rs 1.25 lakhs; the allocation for tax is higher by Rs 0.50 lakhs at Rs 2.25 lakhs; the staff bonus absorbs 1.80 lakhs against Rs 1.25 lakhs; and the carry forward is placed at 1.81 lakhs against Rs 1.96 lakhs brought in. Two 1955 appropriations, amounting to Rs 1.25 lakhs, have not been made from 1956 profits.

•

The first of the exchange banks to report results for 1956 is Hongkong and Shangnai Banking Corporation, which has announced a net profit of $(HK) 20.66 million against $ (HK) 20.58 million in 1955. The allocation to Bank premises written off continues at $ (HK) 4 million. The final dividend is maintained at £3 per share. The carry forward is placed at $ (HK) 11.04 million against $ (HK) 10.61 million brought in.

"Macmillan Boom" in Britain

By PAUL EINZIG

The advent of Mr Macmillan as Prime Minister was greeted by a minor boom on the London Stock Exchange. Actually the upward movement began immediately after the turn of the year. After a brief interruption as a result of Sir Anthony Eden's resignation, the rise was resumed as soon as it became known that Mr Macmillan would succeed him. Sterling, too, was very firm, touching its parity of $2.80.

Paradoxically enough, while the Stock Exchange was booming, business conditions were changing perceptibly for the worse. There was an increase in unemployment, especially in the automobile industry. For the first time since 1952, the number of registered unemployed exceed that of registered vacancies. The effects of petrol rationing are beginning to make themselves felt. As a result of the sharp fall in the demand for motor vehicles, the industries directly or indirectly connected with the automobile industry are curtailing their output. Moreover, the possibility of having to cut production as a result of oil shortage is widely envisaged, even though hopes of being able to avoid this are increasing.

Amidst rising unemployment and in face of the possibility of further industrial difficulties, the industrial section of the Stock Exchange usually tends to be depressed. Instead, amidst prevailing conditions it is going from strength to strength, and so is the market for Government loans. The only sections which have been dull are the markets for American and Canadian dollar securities and for gold mining shares. As these securities are used extensively as a hedge against a devaluation of sterling, the improvement of sterling's prospects naturally resulted in a fall in demand for them.

Bank rate reduction hopes are the main reason for the firmness of industrial equities in spite of the worsening of the industrial position and prospects. The high Bank rate is not needed any longer for the present either for the defence of sterling or for resistance to inflation. Sterling is firm, and, in the absence of new political complications in the Middle East or elsewhere, it is now likely to remain firm until the late summer. And the deterioration of the employment situation has mitigated fears of further inflation, at any rate for the time being.

Mr Macmillan is not likely to maintain the Bank rate at the high figure of 5½ per cent a moment longer than is absolutely necessary. He realises that, from the point of view of the Budget alone, it is essential to reduce it. The cost of the floating debt, and of the refinancing of maturing loans, would affect the Budget materially unless the Bank rate can be reduced in the near future. Before Christmas, speaking as Chancellor of the Exchequer, he foreshadowed the possibility of an increase in taxation in the next Budget, in order to resist inflation. In the changed situation this may no longer be necessary, especially if substantial savings can be effected in the cost of the public debt through a timely reduction of the Bank rate. Indeed, the new Chancellor of the Exchequer, Mr Thorneycroft, may even be able to make some slight reductions in the burden of taxation.

The British horizon is still far from being clear of clouds. The possibility of new complications in the Middle East cannot be ruled out. And even though the change of governments has improved the outlook in the domestic political sphere, it may take some time before the Conservative Government will be able to live down the consequences of the Suez intervention. It depends on the extent of the hardships caused by the shortage of petrol and oil. For the time being the Government is not very popular, and even though the change of Prime Minister may make a difference, it seems probable that the Conservative Party will lose ground at the impending by-elections. What matters, however, is that there is no need for a general election until 1960. By that time Suez will have been forgotten. So there is no need to envisage the possibility of a Socialist Government.

In consequence of the deterioration of employment conditions was that many trade unions no longer insist on grossly excessive wages claims. On several recent occassions wages disputes were settled by conceding a bare fraction of what was originally demanded. It is true, several important wages

A Clearer Perspective of Oil Prices and Profits

GOVERNMENT have for some time been concerned about the extent to which the motive of private profit has to be circumscribed by the notion of public good; and this explains the insistence in recent months on the "maximum" of what constitutes a fair return. Obviously, however, no absolutes can be laid down. A just and equitable quantum of earnings depends upon a great number of factors, which differ from industry to industry. The notion of a fair yield is already seen exemplified in such industries as steel and cement and electricity undertakings: in the first two, selling prices are fixed; and, in the last, a formula for a "standard rate" or return has been provided.

But, even in these cases, extraneous considerations do have a substantial influence on the more or less arbitrary rates of return. For instance, the steel selling and retention prices have been arrived at after keeping three basic fundamentals in view. Firstly, the differential between the selling and the retention price for the internal producers has to be of a size to make good the disparity in cost between indigenous steel and imported steel. Secondly, the Tariff Commission have recommended a basis for the return on block to be permitted. Thirdly, provision has had to be made to enable the steel producers to earn a special element to be earmarked for the repayment of loans and liabilities that, for the purpose of the expansion projects, have been assumed. In somewhat similar fashion, a subsidy of exports and the intention to foster ploughing back of profits for expansion are the basic factors underlying the cement selling and retention prices.

In the case of electricity undertakings, the return permitted under the old Act (which is shortly to be replaced in terms of an amending bill) was so palpably low as to render it difficult for units to raise capital in the open market. A long period of representation has finally fructified in the decision of Government to permit a higher return.

It is obvious, therefore, that it is virtually impossible for Government to place an absolute maximum as to the return that may be earned. In the light of the Second Plan, and the expansion to be undertaken under it, there may even be need to revise thinking on what constitutes, for particular industries, a fair return; indeed, where industry is called upon to expand, and where it may not be able to acquire capital easily (for whatever the reason), what assumes greater importance is whether the return is "sufficient". That is to say, are earnings of a size as will generate an adequacy of internal resources to pay for the expansion that has to be proceeded with?

This last question is ably answered in a factual brochure brought out by Burmah-Shell; and, since the last year was productive of charges levelled against the oil industry on the floor of the Parliament, the brochure also serves the purpose of proving false all accusation of extortionate profits.

Briefly, the demand for oil in this country and the per capita consumption are both low; but both shows signs of a rise much in excess of the world rate of increase. Since the war, "the rate of growth of total demand has been nearer 5 per cent, and in India the rate of growth has been greater". In the seven years to 1955, demand for oil doubled itself in India; and it is anticipated that demand will again double itself in less than a decade. But the cost of expansion, or new oil, is enormous: "The cost for every additional ton of oil required in excess of existing demand calls for an investment of at least the equivalent of Rs 535 per ton, and this cost is rising." If, therefore, the Indian oil industry has to meet the enlarged demand of tomorrow, it is apparent that the expansion in capacity is going to involve substantial and heavy expenditure for the industry. The estimate of cost during the next ten years is Rs 360 crores.

Where is this money to come from? Not from the world's money markets: "...it appears unlikely that more than about 10 per cent of the money required can be drawn from the world's markets without seriously disrupting the flow of badly needed capital required for a multitude of other equally important claimants in industry and development schemes." The logical conclusion is that the oil industry must be "self-financing." As the brochure points out,

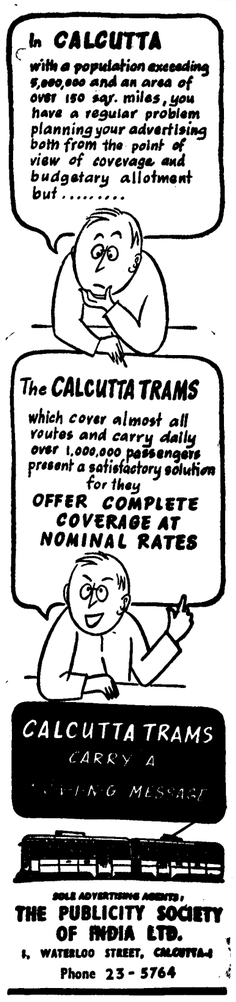
"This means that after provision has been made for replacement of outdated existing plant the money required to meet expanding demand can only be found by retaining in the business the major proportion of net earnings, and also that the size of these net earnings must be adequate to sustain the required growth."

To what extent has Burmah-Shell in India been able to plough back profits? Have the earnings been large enough to permit the expansion proceeded with? In other words, is the return available to the oil industry, having regard to the expansion it must go ahead with, such as may be termed fair, just, equitable and sufficient? These are questions answers for which will be found in Burmah-Shell's experience in the last seven years.

The gross earnings in 1949-55 amounted to Rs 57.95 crores. Of this, Rs 28.84 crores went toward Indian taxes; and another element of Rs 6.08 crores was taken up by UK taxes; the balance, or the net earnings, was thus Rs 23.03 crores.

The capital employed at the end of 1955 was Rs 53.52 crores, as against Rs 21.56 crores at the beginning of 1949. In other words, the amount of money necessary to run Burmah-Shell rose by just under Rs 32 crores in seven years. Of this increase, the net earnings of the seven years, the whole of which was ploughed back, contributed Rs 23.03 crores; and external sources had to foot the bill in respect of the shortfall of Rs 8.93 crores.

It is apparent that Burmah-Shell's return has not been "sufficient" in the sense that it was able to set by and find from internal resources the full extent of the enlarged capital needs postulated by expansion. There can, thus, be no question of the margin available to the oil producers being considered to be on the high side, if we grant that pricing and profit policy must be such as to provide an adequacy of internal resources.



While we are on the subject of margin, we may note that "after payment of all taxes the net earnings of Burmah-Shell and its consignors averaged about one anna per gallon sold". The total trading receipts during 1955 was Rs 106.53 crores. Distribution absorbed 27.4 per cent of this figure at Rs 29.13 crores; a sum equivalent to 29.0 per cent was paid to Government account; ocean freight cost 4.5 per cent; the f.o.b. value of oil worked out to 35.8 per cent; and the net earnings in India, after Indian taxes but subject to UK taxes, amounted to Rs 3.52 crores or 3.30 per cent.

Is an earning of 3.30 per cent on sales tantamount to extortionate profits? Is a return of 6.58 per cent on capital employed high?

The picture of an oil company's profits is rendered somewhat complicated by half-understood interpretations of the basis for the pricing system. What is known is that the US Gulf price for oil has a bearing on quotations all around the world. But what is mistakenly assumed is that, for Indian quotations, no allowance is made for the lower cost of freight for the oil which comes to us from the Persian Gulf. In fact, "the basic product prices at Indian ports are established on the basis of Platt's quotations (Gulf prices) plus freights from the Persian Gulf and revised from time to time in sympathy with fluctuations in world prices and tanker freight rates." As for the selling prices, they are worked out on "an established price formula and the prices are reviewed from time to time."

We cannot expect any substantial reduction in oil prices for as long as our dependence for imported crude does not diminish. But

World of Tea

A New Record in Exports

TEA exports from North India have established a new record. Last year, 433.98 million pounds were shipped as compared to 289.69 million pounds in the previous year. Although shipments of the substantial carry-over of 1955 teas in the early months of last year accounted for the increased shipments, demand was good throughout the year, particularly toward the end when the growing tension in the Middle East culminated in the closure of the Suez Canal.

The improvement in shipments was most marked in supplies to Britain. Out of the total increase of 144.29 million pounds of tea exported in 1956, the UK alone accounted for nearly 110 million pounds. Exports to the USA rose from 17.26 million pounds in 1955 to 21.04 million pounds and those to Canada from 10.98 million pounds to 14.85 million pounds. Exports to Australia, however, declined by a million pounds to 2.55 million pounds.

Meanwhile, in the Export sale held in Calcutta this week, offerings consisted of 76,000 packages for which there was a fair demand, but the market for the majority of the offerings was As 2 to As 3 per pound easier. Once again, the few bright liquoring teas were well supported and were firm to occasionally dearer, while Tippy sorts were also in strong demand.

All other kinds were an irregular As 2 to As 3 pound easier although Fannings grades were in better demand than Brokens. Whole Leaf grades were the weakest feature of the sale and were a full As 3 per pound lower, while Darjeelings with very few exceptions were also sold at easier rates. The number of withdrawals was greater than in recent weeks. Following rates were quoted:—Clean Black Pekoe Rs 2-3-0; Plain Broken Pekoe Rs 2-1-0; Medium Assam BP Rs 2-2-0 to Rs 2-3-0 and Best CTC Assam BP Rs 2-9-0 to Rs 2-10-0.

In the Cochin market, offerings amounted to nearly 650,000 pounds. The market opened to a good general demand which prevailed throughout. More interest was shown in Nilgiri descriptions than in recent sales; but they were irregular and tended easier, except for invoices showing improved quality which advanced by one to two annas per pound. Good Mediums met with useful enquiry at around last rates, while those from the Wynaad and Travancore were an irregular half to one anna easier. Milled and Residual types were well supported at firm to dearer rates. Black Leaf grainy descriptions met with a good demand and were fully firm to half anna per pound dearer.

Sale No 15 was held in Chittagong toward the end of last week when offerings consisted of 13,724 packages of Leaf grades and 4,643 packages of Dusts. From the start of the sale, there was keen competition for Leaf grades amongst the blenders and, with two big buyers reluctant to divide freely, the market almost immediately advanced by around As 4 per pound. Broken grades were always at this level and the sale closed with demand unsatisfied. Following rates were quoted:—OP Rs 2-4 to Rs 2-5; Pekoe Rs 1-15-6 to Rs 2-0-0; BOP Rs 2-9; BP Rs 2-7-0 to Rs 2-7-6; PF Rs 2-6-6 and BPS Rs 2-8-0 to Rs 2-8-6.

There was a good demand for Dusts with Plain Sylhet Dust quoted upto Rs 2-1-6 per pound, showing an advance of As 4½ over the last level. Sale No 16 will be held on the 30th January.

In London, there was less competition generally for the week's offerings of around 64,000 packages of tea. The last sale passed off on a more buoyant tone on expectations that the tally clerks' strike will reduce the large quanity of tea printed for sale next week of over 81,000 packages. It is believed that some of the catalogues will have to be cut by at least one-third. But the fall in prices earlier was not fully recovered and net losses in many instances were recorded.

Plain Broken Pekoe was indicated at 62d per pound. Only best quality invoices held up and the spread between top and bottom qualities, which hitherto had been narrowing, has shown a widening tendency.

A large quantity of tea is reported to be waiting to be landed, because of the strike and, for the

(Continued on page 151)

World of Jute

Markets Depressed

THE jute goods market developed a reactionary tendency during the past week with prices in both the hessian and sackings sections declining sharply. As against its opening rate of Rs 45-12, Hessian Ready at the close of transactions on Tuesday was quoted at Rs 44-1. Sackings followed a similar pattern with B Twills Ready receding from Rs 120 to Rs 116-13.

After a steady opening, prices especially in the hessian section were marked lower consequent on the news that US consumption of burlap during December had been at the disappointing level of 71.6 million yards. This figure compares with the previous month's consumption of 81 million yards and 74 million yards representing consumption during the corresponding month of the previous year.

Apart from the fact that there has been a sharp decline of about 10 million yards in US consumption during December 1956 as compared with the previous month, last month's performance in this regard is less satisfactory than that of December 1955 as well. The cause of worry, however, is the high level of burlap stocks in the USA. At the end of December 1956, burlap stocks in the US stood at 267.4 million yards as compared with November 1956 figure of 268 million yards. Even at the present improved rate of consumption, the stocks can take care of the demand for more than three months.

The setback during the last month of 1956 need not, however, cause undue alarm. Taking the figure for US consumption of burlap for the whole year and comparing it with that for 1955, it will be found that after all burlap has not fared badly in the US. American consumption of burlap in 1956 has amounted to 878 million yards as against 826 million yards in 1955. Considering the fact that throughout the past year and earlier, month-end stocks of burlap in the USA have remained in the neighbourhood of 240 million yards, the latest stock figure of 267 million yards does not appear to be anything extraordinary.

Reports from the USA indicate that prospects for burlap are quite bright. The burlap manufacturers in the country are doing brisk business not only in their traditional markets but also in new fields. The American farmer may be depended upon to continue to lend his support for the simple reason that burlap bags are the most suitable packaging medium for his purposes. If its price does not become too exorbitant, there is no reason to suppose that burlap will not be as popular in America in 1957 as it had been in 1956. The fact that both the American industry and the home market are beginning to realise that burlap can be used by them with profit augurs well for the jute goods industry. It will be no exaggeration to say that so long as jute goods retain their competivity and so long as they are available in adequate quantities, their world consumption will increase rather than decrease in coming years.

Ever since the US consumption and stock figures were released the jute goods market had been in a depressed mood. Prices in the hessian section recorded sharp declines due to unloading by bulls in the Fatka. Hessian 40"×10 oz Ready receded to Rs 45-6 from previous closing of Rs 45-14 with B Twills Ready marked down to Rs 119-10 from Rs 120. April/June Hessian 40"×10 oz came back to Rs 44-2 and B Twills for the same position to Rs 120-8 from Rs 121-8.

Prices declined further last Friday in the absence of foreign business, Hessian 40"×10 oz Ready quoting Rs 45-6 and B Twills Ready Rs 119-6. The undertone especially in the hessian section was distinctly easier on Monday and Hessian 40"×10 oz Ready was placed at Rs 44-11. Sackings, however, managed to rule almost unchanged at Rs 119-5.

Due to selling pressure from mills as well as due to bull liquidation, the reactionary tendency became well pronounced all along the list on Tuesday. Hessian 40"×10 oz Ready shed another ten annas to be placed at Rs 44-1. B Twills Ready declined sharply from Rs 119-5 to Rs 116-13.

The following table gives the week's opening and closing prices.

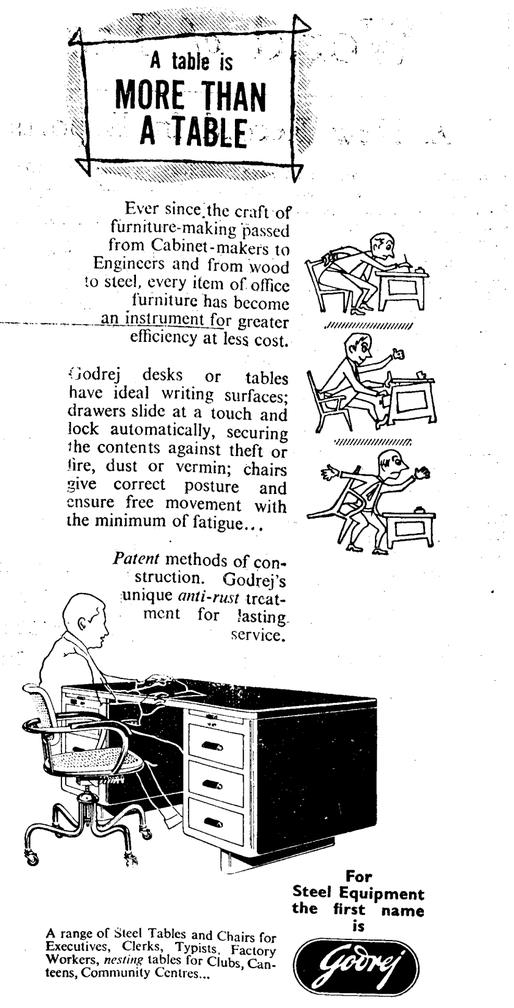
	Week's Opening. Rs. a.	Week's Closing. Rs. a.
Hessian:		
40"×10 oz.:		
Ready ..	45 12	44 1
April-June ...	44 10	43 11
Sackings:		
B. Twills—		
Ready ...	120 0	116 13
April-June .	121 8	118 0
Hy Cees Green ...	121 8	119 4
Cornsacks ...	122 12	118 12
Cubans ...	145 0	142 0
A. Twills ...	145 0	142 8
L. Twills ...	139 0	137 0
D. W. Flour ..	141 8	139 4
Sugar Bags ...	137 0	135 0

In the raw jute market, though fair quantity mill business had been reported done in the earlier part of the week with Assam Bottoms quoting between Rs 33-8 and Rs 33 per maund, conditions have turned quiet lately as mills are not very keen on business at prevailing levels presumably in view of the sharp decline in the prices of jute goods over the week. Even so, the nominal quotation for January/February shipment Assam Bottoms is only slightly lower at Rs 32-8 per maund thus indicating that sellers have no inclination to discount prices.

A look at the trend of raw jute arrivals into Calcutta and Mill Stations will reveal the real cause for the continued firmness of the Indian raw jute market.

Arrivals of raw jute during December totalled 751,700 bales of which 691,600 were of Indian orgin and 60,100 Pakistani. These compare with 683,000 bales of Indian origin and 84,000 bales of Pakistani in the previous month.

Taking the whole of 1956, it will be found that a total of 5,431,000 bales of Indian origin jute has been received as against 4,353,000 bales in 1955. Arrivals of raw jute from Pakistan during 1956 are placed at 1,028,000 bales as against such arrivals during 1955 of 1,432,000 bales.



From the above figures three significant factors emerge. Firstly, total arrivals of raw jute during 1956 at 6,459,000 bales are considerably higher than those in 1955 when they amounted to only 5,785,000. Secondly, arrivals of raw jute of Indian origin in 1956 are also considerably higher compared to the previous year. Thirdly, imports from Pakistan have declined sharply during 1956. Considering the much publicised news that there is very little jute left in Pakistan for export purposes, it may be safely taken for granted that the remaining six months of the jute season may be left out of the reckoning as far as arrivals of raw jute of Pakistani origin are concerned. In other words, the Indian raw jute dealer is the only source from whom Indian mills have to obtain their raw material till atleast the next crop begins to move in.

MORE AREA UNDER MESTA

The All-India Second Estimate of Mesta, 1956-57, puts the current year's area and production at 695,000

(Continued on page 165)

World Overseas

US Notes

THE proposed budget for the 1958 fiscal year beginning next July which President Eisenhower submitted to the United States Congress earlier this week is noteworthy for its stress on the expansion of essential public facilities. Among these, the President emphasized particularly programmes for homes, schools and highways. Yet, outlays for one of these programmes—$1,700 million for highways—are not included in the estimated spending total of $71,800 million.

For the highways programme, expected to cost the Federal Government some $38,500 million over a projected 13-year period, is being financed through a special trust fund. This fund puts construction of the new nationwide road network to include eventually some 41,000 miles (65,600 kilometers) of interstate expressways, on a "pay-as-you-build" basis. This is an interesting departure in Federal highway financing, for it frees the Federal budget from listing substantial sums for road construction. This was made possible by the Federal Highway Act approved by Congress and the President last summer. That Act earmarks for a special trust fund certain excise taxes relating to the operation of motor vehicles. Out of this fund come the vast sums needed to finance the new national highway programme under the act.

The Federal Government generally will be putting up 90 per cent of the money for new inter-state highways and the states themselves 10 per cent. For inter-state roads, mostly local and connecting routes, the Federal Government will match every state dollar with one of its own as has long been the practice in Federal-state highway cooperation. The Highway Trust Fund will derive about two thirds of its receipts from the motor fuel tax which was raised from two-cents to three-cents a gallon as of last July. Other principal sources include a higher tax on tyres—an increased excise levy on new commercial vehicles and a special tax on heavy trucks.

Since it will take time before the road construction programme moves into high gear, fund collections in the first few years are expected to accumulate faster than expenditures. This will provide a reserve from which spending can be increased actually beyond collections in later years, when construction reaches a peak. Spending on the highway programme from Federal and state contributions will rise to 3,500 million dollars a year by 1965 and to about 4,000 million dollars a year in the final stages. In all, the programme will cost a total of more than 50,000 million dollars and completion of the programme may actually take more than the projected 13 years.

In the first place, construction costs have been rising lately, and outlays may have to be higher than presently estimated. In the second place, fund receipts may fall below estimates. And, finally, the 1956 highway law says that financial allocations for inter-state programme are to be reduced or deferred when it appears that spending may exceed the resources of the Trust Fund.

It is possible therefore that actual completion of the inter-state programme may be stretched to, say, 16 years. Accordingly, the special taxes going into the Fund may remain in effect until 1972, but the possibility of a programme stretch-out is not considered a major obstacle. Far more important from a fiscal viewpoint is the fact that Federal financing of the highway programme will be on a strict pay-as-you-build basis.

This means that expansion in federal highway spending will come from actual tax collections and no Federal borrowings will be required. This can substantially mitigate the programme's possible inflationary effect on the thriving US economy.

✱

Britain

The new British Cabinet includes Mr Peter Thorneycroft as Chancellor of the Exchequer—a promotion which has been widely welcomed in the British press. He moves from the Board of Trade, a position he had held since the Conservative Government was formed in 1951. The year's trade figures for 1956 are, in a sense, therefore, Mr Thorneycroft's parting achievement and, as such, they seem obviously satisfactory.

Exports were at a new record level while imports hardly increased at all. The visible trade gap—itself always exaggerated by the method of valuation employed—fell by a third. As a result, Britain's balance of payments for the first half of the year moved back into a surplus, and the figures for the whole year are also likely to show a surplus.

The provisional Board of Trade figures show that the total value of United Kingdom exports and re-exports in 1956 was £3,318.8 million—an increase of 9.7 per cent over 1955. Admittedly, the December figures showed a rather larger visible trade gap than those for November, which were much affected by the delay in the receipt of imports due to the Suez situation. Even so, December was the best month of the year except for November and May, and the year ended on a strong note.

The reason for this improvement in the British position is considered to be that the credit "squeeze" and the high Bank Rate have repressed demand in the home market.

As a result, the demand for imports—which caused so much anxiety in 1955—has been checked. Equally, exports have not been drawn off into the home market, and British firms have been more than usually keen to sell abroad.

The Economists, commenting on end-year figures, published two remarkably interesting tables which show the pattern that is developing in British exports. The large traditional Commenwealth markets in which Britain enjoys preferential advantages have become less important relative to other markets in which Britain has to face the full impact of competition. Canada and India were important exceptions in 1956.

The big export success of 1956 has been in the dollar markets. Total exports for the year to Canada and the United States of America in 1956 amounted to £398,000,000, excluding £22,400,000 of bullion payments to the United States. Exports to the United States were up by more than a fifth. Those to Canada rose by more than a quarter; so did exports to India.

Exports to Europe also increased. One naturally thinks of the Federal Republic of Germany as a main competitor, but Germany has become an important British market. In the first 11 months there was a 20 per cent increase. Other large increases were achieved in exports to France, the Netherlands, and Sweden, despite the falling-off in exports of passenger cars.

The figures also show that it was in the field of capital goods that this expansion of exports was mainly achieved. Machinery, shipbuilding, and aircraft all recorded excellent increases.

Even with all these increases, however, it remains true that British exports rose somewhat less fast than the total volume of world trade. This has been a constant anxiety in Britain, and the new year sees a fresh resolution on the part of Government and industry to ensure that Britain exports keep pace with the expansion of world markets.

✱

Sweden

The pulp market has during the past three years shown a stability of prices which is worthy of notice, said Mr. Sverker Kastrup, sales manager of the Swedish Cellulose Company, at a company conference at Sundsvall last week. If 1954 average prices for all kinds of cellulose are set at 100, the index for 1955 was 105 and that of this year 107. In a period of rising production costs this has been possible only at the expense of shrinking profit margins at the mills.

It is certainly not a mere coincidence that these three years of rare price stability have also been marked by an unparalleled increase in consumption and production, Mr. Kastrup continued. In 1950-55 world production of all kinds of pulp rose from 34,000,000 to over 46,000,000 tons. The present year has probably seen a further couple of million tons added to this quantity. Consumption in Europe, excluding the Soviet bloc, amounted to 12,000,000 tons in 1955. It would be fairly realistic to calculate with an annual increase of 4 per cent, or about 500,000 tons, which almost exactly corresponds to the European pulp industry's potential rise in output per annum.

It seems as if North America's pulp exports culminated in 1955, when they totalled somewhat more than 900,000 tons. This year they are expected to fall short of this figure by 150,000 tons. If one considers North America as a margin supplier to the world market outside its own continent, it is also natural to believe that American price policy will to a large extent influence our own. It would be no exaggeration to say that the large European pulp buyers can now purchase Scandinavian pulp at prices which in any case are not higher but often lower than what their colleagues in America have to pay for North-American pulp. It could therefore be said that when North-American pulp is offered in Europe at lower prices then those at present quoted by Scandinavian mills this could be characterized as a form of dumping, although there exists no European jurisdiction to prevent it. Astonishingly enough, this kind of competition takes place on a rather large scale.

This American competition and the fact that some Swedish sellers have not been able to dispose of their entire output—especially as regards unbleached sulphite—has created a situation of some uncertainty in the past few months, Mr. Kastrup said. Contributory factors have been Britain's active efforts to dampen boom trends at home and also the recession in the textile industry. However both absolute and relative figures the quantity out of this year's Swedish output not likely be sold is so relatively small that, by and large it will be of fairly little significance. Yet it has given rise to some sales at forced-down prices, which has complicated the situation on the threshold of next-year sales. As far as the Swedish Cellulose Company was concerned, Mr. Kastrup mentioned that his company's entire output of cellulose and mechanical pulp, including the small stocks available at the beginning of 1956, had been disposed of.

✱

A plywood substitute designed to be impervious to termites and fungus is being incorporated in all new milling plant being made by one of Britain's leading firms of mill engineers. The new material will replace the plywood previously used on the wooden rollers, which, particularly in tropical countries, have always been of considerable trouble to millers because of their vulnerability to termite attacks.

The products of the mill engineering firm are known throughout the world. It has built plants in India and other Commonwealth countries, China, the Middle East, throughout Europe and in North and South America. At the end of 1956 it opened at Hameenlinna, Finland, a mill described as the finest in the world.

Industrial Information

Major Nickel-Producing Operation in Northern Manitoba

Plans for the development over the next three to four years of a $175,000,000 nickel project in the Mystery-Moak Lakes area in Northern Manitoba were announced recently by Premier Douglas Campbell of Manitoba and Henry E. Wingate, President of The International Nickel Company of Canada, Limited. Participating in these decisions were Members of the Cabinet, Deputy Ministers and Senior Departmental Officials, as well as D. M. Stephens, Chairman and General Manager of the Manitoba Hydro-Electric Board, and J. Roy Gordon and Ralph D. Parker, Vice-Presidents of Inco.

International Nickel will open two new nickel mines in the area, to be known as the Thompson and the Moak Mines. The project will constitute the biggest nickel-producing operation in the world next to Inco's operations in the Sudbury District of Ontario and will be the largest single investment of any kind in Manitoba. By arrangement with the Manitoba Government, the new town and the plant site, as well as the immediately adjacent mine, are to be named Thompson in honour of Dr John F. Thompson, Chairman of the Board of Inco, who this year completed 50 years of service with the company.

The project in Manitoba together with the progress under way at Sudbury will lift Inco's regular 1955 annual nickel-producing capacity by approximately 130,000,000 pounds to 385,000,000 pounds, or by 50 per cent, of which some 24,000,000 pounds will be regular production to replace existing temporary premium-priced production for the United States national stockpile.

The joint announcement was made with the conclusion of understandings between the Province and Inco including an agreement for the establishment of a new local government district of Mystery Lake and an agreement with the Manitoba Hydro-Electric Board. The Hydro agreement provides that the Board will undertake construction, at an estimated cost of $32,000,000 to $38,000,000, of a large power plant at Grand Rapid on the Nelson River to supply power for Inco's new facilities. The arrangement reflects the long-standing desire of the Government to develop this site. Premier Campbell said that the capacity of the hydro-electric plant will be sufficient to supply Inco's initial and subsequent power needs, with reserves for other new industries, thus playing its part in the broad development of Northern Manitoba.

The company will assist the Province in financing the power plant by way of a four-year $20,000,000 loan during the construction period bearing interest at two per cent. Thereafter the loan will be converted into debentures repayable in instalments over a period of 20 years.

Mr Wingate said that in setting up its expansion programme Inco had taken into account the published invitation by the Office of Defence Mobilisation of the United States Government to companies inside and outside the United States for the development of plans for new and expanded nickel production facilities. He said that in response Inco had submitted a proposal to the United States Government covering the expansion projects now announced and the circumstances under which a portion of the nickle from Inco's new and additionally expanded facilities might be supplied, at market prices, to the United States Government.

He stated that while Washington had not accepted Inco's proposal, Washington had confirmed that if it determines to enter into contracts for new nickle production in Cuba in connection with its invitation for proposals for expanded production, consideration would also be given to providing Inco with the right to deliver some portion of its new Canadian production to the United States national stockpile. With this confirmation, Inco is proceeding immediately to initiate these extensive expansion projects, Mr Wingate said, in order to avoid substantial delays by taking advantage of the winter freeze-up for transportation of construction equipment.

The new Inco mine sites are located about 400 air miles north of Winnipeg and 950 miles northwest of the company's operations in the Sudbury District. They are in an area from 30 to 50 miles north of Thicket Portage which is on the Canadian National Railways' line between Winnipeg and Churchill, on Hudson Bay. The power plant will be located about 50 miles northeast of the minning operations and approximately 10 miles northwest from the present C.N.R. Hudson Bay line. Moak Mine and the Thompson Mine and townsite will be linked together by a 20-mile company-operated railway and a new 30-mile C.N.R. spur line will connect the Thompson townsite with the C.N.R. Hudson Bay line from a point north of Thicket Portage.

Financing of Project

"In order to get the programme under way immediately. Inco with its own funds will finance all of the initial capital costs of the undertaking but expects ultimately to be reimbursed for its advances for the construction of the power plant and for advances which may be made for the new 30-mile C.N.R. spur line", President Wingate said. "As presently projected Inco's capital investment in Manitoba, not including expenditures already made for exploration and preproduction items, will approximate $115,000,000. This will include the cost of opening and developing two mines, of constructing a concentrator, smelter, refinery and transportation facilities and of providing certain townsite installations. The $115,000,000 is exclusive of the $32,000,000 to $38,000,000 power plant costs, of approximately $5,000,000 of costs for the new C.N.R. spur line, and of some $20,000,000 estimated costs of homes and buildings at the townsite."

President Wingate said the new mining development will contribute greatly to the very much larger supply of nickle which the free world can expect by 1960.

He announced that the opening up of the Manitoba project in 1960 is part of a major expansion programme through which Inco expects to attain an annual over-all regular nickel production capacity of 385,000,000 pounds from its operations in the Sudbury District of Northern Ontartio and in Manitoba. In 1955, total Inco Sudbury District nickel production from its own ores was nearly 280,000,000 pounds, consisting of approximately 255,000,000 pounds of regular production and 24,000,000 pounds of special production from high-cost ores for the United States Government stockpile.

Mr Wingate emphasised that since the Manitoba ores carry very small copper values, Inco's copper production capacity will not be increased correspondingly with the large increase for nickel. Heretofore the copper production has been nearly as large as nickel production. In view of the costs of separating and refining the copper from the Manitoba ores, the copper content is not regarded as a commercial asset. Minor quantities of cobalt, platinum, palladium, gold and silver are present to assist in making the project successful.

World Nickel-Producing Capacity to Exceed 600,000,000 Pounds

The Inco President forecast on the basis of Inco's programme and the announced expansion plans of others that total free world nickel capacity some four years from now may be of the order of 600,000,000 to 625 000,000 pounds, or an increase of about 175,000,000 to 200,000,00 pounds from all sources above the total of 427,000,000 pounds for 1955. The forecast is exclusive of the prospect of increased Cuban output beyond the 50,000,000-pound annual capacity which the United States Government will shortly have available at its own plant in Cuba. He said that "with the achievement of this world capacity the total free world capacity for nickel supplies should exceed the entire free world civilian consumption of nickel during the 12 months ended September 30, 1956, by more than 325,000,000 pounds. This large amount will be available for the unsatisfied and expanded needs of civilian industry and for whatever the defence requirements may be at that time.

"It is evident that a huge demand must be provided in order to sustain the projected enlarged capacities of Inco and other nickel producers."

He commented that therefore "hand in hand with our extensive production project and continuation of our active exploration for still further sources of nickel, we are going forward energetically with our work of market development and research so as to do everything possible to stimulate the growth of further markets and uses for nickel. In the face of the need for greatly expanded future demand for the metal we hope that other producers will not confine their efforts solely to the production of nickel but will make a major contribution also by actively pursuing long-range research and development of uses and markets."

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

WAY back in 1934, I had a most revealing experience, which told me more about certain aspects of American character than anything I have been able to learn since from books and other sources. I was on a visit to England then, and was lunching with two distinguished journalists in Grosvenor House in London. One of them was an Englishman, the Financial Editor of the Times. The other, an American, was the Chief of the London Bureau of the New York Times. Britain, as the reader will doubtless recall, was then slowly emerging out of the slough of the depression of the thirties: the abandoning of the gold standard and devaluation had rectified many of the calamitous errors of the earlier period, and a cautious policy of reflation was making things look up for Britain. On the other hand, the US had not yet got out of the woods, for, President Roosevelt's New Deal had not yet then started yielding results; and, for the moment, the struggle between the President and the Supreme Court merely increased the confusion of the scene. Conversation at the lunch veered, not unnaturally, to the situation in America. My English friend told the American with some complacency that, if only America followed the tried and tested methods which Britain had followed, things would have been in far better shape for it. There was more than a trace of smugness in his satisfaction of the way Britain had weathered the storm, which happy circumstance he attributed to the essential soundness of the British character. Being a cultivated as well as a sensible man, he did not break into the kind of cant that has irritated many besides Colonel McCormick of the Chicago Tribune. But there was a perceptible air of slight disparagement of American methods, and scepticism about America's ability to set its economic house in order.

✱

After listening quietly for a while, my American friend said, "Do you know, Mills, that New York has more telephones than the whole of Great Britain? Do you know that we have more automobiles on our New York roads than the rest of the world on all its roads? Do you know that our girls spend on cosmetics a great deal more even today than the combined national budgets of many European states? Do you know...." I am quoting from memory, and it is not unlikely that the figures and instances I have given are not those given by my American friend. Again, I have no head for relative facts, and therefore even the hypothetical rhetorical questions I have framed may be wrong on facts. All I can vouch for at this distance of time is that he reeled off quite a few such questions; and I have no doubt that the information he gave at that memorable lunch was quite correct.

✱

I learnt quite a number of things about the "average" American's way of looking at things from this conversation. First among these, not necessarily in importance, is the American passion for facts. Facts of all kinds, however trivial and however inessential for the purposes of formulating general attitudes, are devoured avidly and indiscriminately. The popularity of quiz programmes is at once an index and a characteristic cashing in on this particular American propensity. The advertisers see the value of a programme like the 64,000 dollar question, and the whole nation sets out grimly to win the prize by gathering all the facts. It does not matter what the subject is. It may be jazz music or baseball results or English literature. All facts are equally "sacred". Secondly, relativity in facts is an obsession with Americans: of course, this selective relative evaluation of facts has certain aspects which have given the Science of Statistics a humorous or sinister reputation, depending upon the outlook of the viewer. I am not thinking of that for the moment. I am more concerned with what looks at first sight as the entire pointlessness of the comparisons. The most weird kinds of comparisons are instituted, not because any new and unsuspected significances are thrown up by such juxtapositions. For instance, in a recent survey of the American economy in an American journal, the point was made that the US spent in 1956 more money on "highways alone than the entire value of Norway's economy" (whatever that may mean); that "its new homes were worth more than the entire economy of Spain; its new cars more than the combined economies of Mexico, Denmark and Australia." What precisely is the purpose of comparing the US expenditure on roadways with the "entire economy of Norway"? I can understand a comparison with the amount spent on roadways by Norway; and, if that figure is ridiculously low, with the combined expenditure on roadways of half a dozen or a dozen countries. Again, why choose Spain of all countries for purposes of comparison in the matter of housing? Spain is not particularly known for its performance in the matter of housing.

I can think of only two explanations for this sort of comparison: One is that it is merely the expedient of a tired journalist who simply finds from indexed figures the nearest lower figure of any sort, and puts it in his copy since this kind of thing seems to be expected of him. Otherwise, his writing may not be considered weighty enough. The other explanation, which is probably nearer the truth, is that this is a meretricious stylistic trick consciously employed to give the reader a vaguely awesome picture of the magnitude of certain aspects and the whole of the US economy. Such a trick is familiar to all students of style, but the unwary are invariably taken in and do not realise that the particular comparison has elucidated nothing at all, especially since the actual figures involved are not available in the article itself. If you are an American, and you are also guileless—I am bound to point out, however, that I feel that most Americans see through these things and are immune, by long practice of this kind of wile—you may be cozened into a coma of self-complacency. Of course, such smugness may be justified, on the facts of the situation itself—but the comparisons have nothing to do with it. If, on the other hand, the facts are not so flattering, then the comparisons would have been misleading.

✱

The second thing that I learnt about the Americans during the lunch of 1934 was their supreme and unwavering optimism. Here was a country which had, by any manner of reckoning, met the worst crisis in its life, and had not come out of it yet. But here was a man who was no fool, but who was actually boasting, in a manner that some would consider naive, about his country's economic and material supremacy. A great deal in American achievement is explicable in terms of this refusal to accept defeat and in this unself-conscious faith that, even when one is down at heel, one can still do things in a bigger and better way than any other.

✱

If such was the American optimism in their worst years, it is not surprising that the Americans should be full of zest and enthusiasm for their achievements in 1956. 1956 has seen new heights in American prosperity, and since America is the "mightiest economy mankind has ever known", Americans can legitimately boast that it has been the "greatest year in history by virtually every economic measure." With barely 6½ per cent of the world's population—which, however, contains, by historical accident, the cream of talents—the United States produced 60 per cent of the world's goods. Gross national product increased by 6 per cent to 412 billion dollars, a far higher figure than was predicted by even the most optimistic. Consumption also rose to new heights, and so did investment. For the first time in the last few years, capital outlay for "civilian" purposes exceeded military spending, which itself was at the staggering figure of 36 billion dollars. Population, too, was growing at a pace that was in tune with the astronomical figures just mentioned—an annual increase of about 4 million. This would be an alarming rate for an economy that was not in such a fine fettle as the American economy; but, in the American context, this merely means more consumption and therefore more opportunities for production. Unemployment was

no problem at all, since there was a job to be had for all who could work, and the figure of unemployed was down to about 2¼ million. To be sure, the threat of inflation was there always, and did have its impact on the economy; but it was firmly under control by credit control operations by the Federal Reserve Board. Moreover, though prices went up by about 2.4 per cent, the wages went up by 4 per cent. Here, again, the nation gained because increased efficiency has reduced the overall cost. The figure of increase in efficiency for 1956 is somewhat low, compared to the average since World War II, because of steel strikes and loss of production for 37 million man-hours; but, even so, the increase in efficiency of 1.7 per cent was a sizeable factor in cost reduction.

✱

Thus, the economic history of the US in 1956 has been one of unprecedented prosperity—more production, more consumption, more investment than ever. The outlook for 1957 is equally optimistic, though, of course, cautious folks make their reservations. If no major change in the international situation, such as a serious war, takes place, 1957 is expected to be the biggest year ever, with the gross national product reaching new levels and the rest of the indices of prosperity showing similar increases. Inflation would continue to be a problem, and would need the same watchful eye of the Federal Reserve Board. But, on the whole, there is no serious misgiving that the economy would be overtaken by it before it knows where it is. In the present mood, there is apparently no limit to the possibilities: automation, which is viewed with mixed feelings elsewhere, is looked upon with great enthusiasm both by labour and by management. Quick obsolescence, so shocking to many another penny-pinching economy, is actually considered more economical in the long run. As usual, technical research is pursued with a fanatical devotion; and not to be ahead in this is considered a major risk.

✱

To us in India, the lessons of the American expansion are not of a direct kind. It is necessary, of course, that we should inform ourselves of the performance of the most powerful economy in the world today. Apart from this, our problems are of an entirely different sort: in a sense, what are America's assets are our liabilities. Vast population, combined with a low level of technical development and acute shortage of technical skill and a whole series of other disabilities make it impossible for us to emulate directly the American methods. But some aspects of the American endeavour have their relevance and validity for our development. To take an instance: Their technological restlessness, the desire for increasing efficiency by intensive research, the readiness to be a pioneer and take risks in new lines are some of the lessons that our entrepreneurs may well take to heart. With honourable exceptions, private enterprise in this country is more interested in commerce than in industry—and, even among industries, would much sooner take to safer lines of assured profits rather than blaze a new trail. This technological cowardice is the opposite of all that is best in the US economy.

✱

Those of our countrymen who talk of the blessings of "private enterprise" should demonstrate as unmistakably as the Americans do their faith in "enterprise". So far, the emphasis has all been on the word "private". It is all too fatalistically assumed that, ten years from now, the present orientation of economy heavily in favour of the public sector would be more, and not less, firmly entrenched, and that the private sector will be gradually eliminated. There is no warrant for such pessimism. It is true that, at the moment, the present arrangements are, as I have often argued, inescapable. But there is no finality about them. So much depends on the performance of the public sector itself, on which such faith has been reposed. Again, even if it does succeed spectacularly, the very prosperity generated by the methods now employed may make it obsolete. It may well be that, ten years from now, the finding of alternatives to the public sector in certain aspects of the economy may be expedient. If such a contingency arises, the claims of the private sector as an automatic alternative would be maintainable if the private sector demonstrates in the interim that it believes in "enterprise" as firmly as the American does.

Bombay Review

Code for Free Enterprise

FOUR years or so ago, if I remember right, Sir Homi Mody began in this city seriously to consider the possibilities of bringing into being a society that would, so to say, be composed of industrialists with a perceptive awareness of their responsibilities to the national interest. But the circumstances of the time did not conduce to the creation of such a body. If I remember right, again, it was the intention then most carefully to scrutinise the fitness of individuals or institutions to belong to that prospective organisation. That is to say, a primary requisite would have been that, for membership, the applicant must have been clearly above reproach.

When, therefore, the Forum of Free Enterprise came into existence in July last year, I had entertained the hope that a dissociation from the black sheep that acknowledgedly has been possessed in the private sector of national activity would be one of its main purposes. The Manifesto as drawn up hearteningly suggested that such an end was indeed kept in view. Unfortunately, for reasons that we shall presently examine, the scope and range of activity of the Forum, until the last week, were disappointingly narrow.

One might say that, in a sense, the immediate provocation for the setting up of the Forum was the necessity on the part of the "clean" private sector to defend itself against and rebut the all manner of wild charges that with a political tinge had been made against it. I agree that it was altogether wholesome and desirable for the Forum to take up the responsibility for setting the record straight. For, there can be no doubt that some of the accusations, couched as they were in sweeping generalisations, were less than fair to the real achievements of Indian industry; and, in fact, if unrebutted, they may even have caused mischief.

But it should have been realised that, in this context, offence could never be construed the best means of defence. For example, some of the press statements that I have seen appeared unnecessarily to attack Government policy. This, I do not think, was quite the right approach. As Mr T. T. Krishnamachari himself admitted in Calcutta last December, there has been an unfortunate tendency to "witch-hunt" the private sector. However, the Forum could as easily have made its position clear beyond ambiguity by insisting on the facts and figures of the private sector's achievements. Parenthetically, I may in this regard refer to the very proper manner in which two Indian industries have drawn pointed attention to the progress recorded in their fields.

One cause, perhaps, why Forum policy—if I might call it that—was on the lines that it has been may lie in the fact that, since the middle of last year, with elections drawing inexorably nearer, the onslaught of political propaganda against the private sector has been more severe in its intensity. In the result, the Forum has had a largely negative role in the first six months of its existence; and I have been chafing with impatience for it to embark on constructive endeavours.

There are many things that it is desirable, necessary and proper for the Forum to do. From the constructive point of view, it could firstly present the achievements of Indian industry in a manner to capture the imagination of the individual; and let us remember that it is the individuals who comprise the private sector. I do not here have in mind a comparison of activity in fields where both public and private sectors are competitively engaged: for, comparisons are always odious, and some of them may even boomerang upon the private sector. It will suffice if the cold hard figures of production, of profits ploughed back, of expansion undertaken and completed—it is enough if these figures are more forcefully brought into public ken.

The second suggestion that I have is that the offensive as part of the Forum's armoury must be dropped. It does no good at all, it is even harmful in the sense that it antagonises. As Mr Morarjee Desai pointed out to the Gujerat Chamber the other day, it is time that Indian businessmen began to forswear their carping propensities, and especially as relating to Government. If free enterprise is fundamental to a democracy, the statement can also be made that a democracy will never permit the abolition of free enterprise. From this angle, we have to ask ourselves the question: Is democracy being throttled by the Government now in power, or is the present Government on the other hand the best possible assurance of continuing democracy? The details, as for instance the indication of a socialistic pattern of society as an objective, must not be allowed to obscure this basic question-mark about the future.

I think that, generally, none will describe the Indian Government as being a government which is taking India away from democracy. To the contrary, India can claim that it zealously avoids the blandishments offered by the get-rich-quick abilities and achievements of totalitarian regimes. Furthermore, that India is wedded to democracy is a fact that the rest of the free world is sure of; why, then, should some Indians alone doubt that free enterprise in India is in danger? So long as India is democratic, so long will the private sector of national activity have a place in it.

I am afraid I have digressed somewhat: and, to go back to the subject of this Gossip, I am glad to find that the Forum can now justly claim constructively to view its task. The education that the Forum has to impart is of two sorts. On the one hand, it has to educate the public of industry's achievements. On the other hand, it has to educate the individual as to the attributes and qualities which alone will ensure that our democracy will be lasting and which, therefore, must be deemed part of the stock-in-trade of free enterprise.

The Forum has last week published a Code of Conduct for free enterprise. They are fine sounding phrases which have been embodied in this Code; but, for that reason alone, they cannot be dismissed as being mere platitudes. I know the awesome obstacles that had to be overcome before Indian industry could gain a foothold, in the days when India was just a subject nation. I know, therefore, that hard work and lion-hearted effort had gone into the fashioning of such industry as existed in 1947. I know, thus, Indian industry's capacity for work. I am hopeful, for that reason, that the Code is not just a list of desirable attributes in free enterprise, but is more properly an index of the qualities that one even today generally finds.

Which takes us back to the question of the black sheep. The very existence of law postulates that it has been and will be broken. It is thus in the nature of man that there should be malpractices. What we must be concerned about is how we may bring about a reduction in such anti-social and anti-national activity. Which, again, takes us back to the conditions in which the Indian malpractices thrived. War in India wreaked much greater havoc than the inflation that it set afoot. The greatest damage was done by the fact that goods were in short supply, that scope for black marketing and profiteering was enormous, that tax evasion was rampant. It is the demoralisation of the war period that was responsible for the tarnishing of the reputation of free enterprise: for, enterprise was then not free, but for a price, and a black-market price at that.

The war-begun era of shortages ended five years ago; and I am sure in my mind that malpractices have dwindled greatly, if only because the scope for them was sharply reduced. But we may today be on the eve of another era of shortages: and we cannot afford a repetition of the experience of the war years. It is in this light that the publication of the Code may be said to be most timely. If it is conceded that the First Plan has evoked a greater national consciousness, or that it has witnessed the reawakening of the Indian individual, there is substantial ground for hope that the Code of Conduct—which I know the generality of free enterprise scrupulously to follow—will be strictly adhered to in the future. This Code of Conduct is printed elsewhere in this issue of Indian Finance, and merits a very careful study indeed. It may be that it will be the Forum's responsibility in the future to think out the ways and means whereby those that dishonour the Code will be brought to book—or at least exposed.

Gateway Notes

Key Role of Private Sector

WHATEVER justification there might have been for the belief that Government have scant interest in the welfare of the private sector, has now been completely removed. Speaking in Ahmedabad last week at a reception held in his honour by the Ahmedabad Mill Owners' Association, Mr Morarji Desai, Union Minister for Commerce and Industries, made it clear that far from being antagonistic toward private enterprise, Government were keen on aiding industries in the private sector to grow at a rapid pace. Thanks to the Suez crisis and the drastic cut in imports, new vistas had opened up. Industries could go ahead with their expansion programme and entrepreneurs could confidently embark upon new ventures without let or hindrance.

This is the first categorical assurance that Government stand by their revised Industrial policy Resolution since the mid-year budget which has undermined the confidence of the business community. While it is true that Mr Nehru has already assuaged its apprehensions to a considerable extent at the Indore session of the Congress, uncertainties have nevertheless persisted as much has also been said about the need for sacrifice. In his Ahmedabad speech, Mr Desai had left little room for doubt as to Government's attitude toward private sector.

In the context of the acute shortage of foreign exchange, indigenous industries have come to occupy an important place in the national economy by virtue of their ability to check the rising trend of prices through increased production. It is in this connection Mr Desai has given certain extremely valuable assurances. Private enterprise can depend upon the full cooperation of Government in setting up new industries. The State will not only not interfere with their working but are willing to examine any restriction which may be an impediment to the rapid growth of industries in the country. It is clear, therefore, that Government are deeply conscious of the important role played by private enterprise in national regeneration, and as such it will be afforded all facilities to discharge its responsibility efficiently.

Mr Desai has rightly warned the business community against wasting their energy in futile controversies. The apprehension that the emphasis on small-scale industries will result in the neglect of large-scale industries is baseless and will disappear the moment their respective roles are correctly understood. The main objective in the encouragement of small-scale industries is to provide employment to a large number of people while the large-scale industries will be responsible for increasing production. There is thus no conflict between them.

That the fears regarding the growth of industries in the private sector are largely exaggerated is also made clear by the good progress recorded by them during the last year. The textile industry for instance has given the lie direct to the claim that certain regulations and restrictions imposed by Government on the industry have adversely affected its working. It is evident that the expansionist forces in our economy have already given our major industries enough strength to take new taxation measures in their stride.

Finally Mr Desai has indicated in broad outline the code of conduct that the business community would do well to follow if they are to be spared frequent Government interference in their affairs. It should be always kept in mind that the national objective is a socialistic pattern of society and the business community should realise that they are placed in a particularly advantageous position to help Government achieve the end in view in an orderly manner. Viewed from this angle, the apparent conflicts between the private and public sectors will vanish into the air and the Indian business community with their long tradition of helping the needy will have no difficulty in adjusting themselves to the changing situation in the country. In short the appeal issued by Mr Desai to the industrialists is an appeal to the Indian business community to revive their hoary tradition to all its old glory.

*

Public & Private Limited Companies in Bombay State

During the half year ending December 31, 1956, eleven public limited companies with a total authorised capital of Rs 25,15,00,000 and 82 private limited companies with the total authorised capital of Rs 7,77,16,000 were registered in the office of the Registrar of Companies, Bombay.

This includes the following nine big concerns: Jaifabs Rayon Industries Private Ltd. (authorised capital of Rs one crore), New Era Fabrics Private Ltd (authorised capital of Rs 50 lakhs) and Cambata Ferro Manganese Private Ltd (authorised capital of Rs 1 crore 50 lakhs) registered as private limited companies, and Indian Rayon Corporation Ltd (authorised capital of Rs 10 crores), India Re-insurance Corporation Ltd (authorised capital of Rs 10

GATEWAY MARKETS

Bull Grip on Bullion

THE bullion market has been exhibiting a marked strength during the past few days with prices of both silver and gold registering a steady rise to new high levels for the past several months. The sharp advance in silver is attributed to aggressive bull buying inspired by the belief that the inflow of silver coins from Tibet will be significantly small in the next two months. This belief has gained ground following reports of snowfall in Tibet which is expected to aggravate transport difficulties. Although the conditions in respect of Gold are not encouraging, the bullish fervour in silver has produced a sympathetic rise in this metal and the process is considerably aided by the lack of offerings of Mysore gold.

Thus, prices gained substantial ground with advance necessitating even imposition of special margins in Silver. At the outest, prices shot up under keen speculative buying with sellers extremely reserved. Arrivals and offtake were estimated around 10 and 25 bars respectively. Maha delivery opened at Rs 181-14 and advanced steadily to Rs 184-14 at the close. Spot was taken upto 185-7 from Rs 182-5.

Gold also advanced, influenced by the strength of silver and encouraging spot demand. Arrivals and offtake were estimated around 2,000 and 5,000 tolas respectively. Maha delivery opened at Rs 107-7-6 and steadily advanced to Rs 108-14 at the close. Spot was taken upto Rs 108-13 from Rs 107-12. Sovereign scored another half point at Rs 68-8.

*

Oils and Oilseeds

The Bombay Oilseeds Exchange, at an emergency meeting on Friday last, decided to impose a margin of Rs 15 per candy on the net open purchases on any particular day when the closing rate is Rs 165 per candy or above. This will apply to all futures transactions in Castor May delivery and Groundnut February and May deliveries with effect from January 22. This decision is said to have been taken by the Board of the Exchange to check the rising trend of prices which is apparently getting out of control.

Sources close to the Forward Markets Commission appear to be fairly hopeful of the success of the present measures. Although they do not expect the prices to come down substantially in the immediate future, they feel that the margins will make for greatly restrained trading. It is believed, however, that, if the prices continue to rise even after the adoption of margins all over the country, the Government will come out with fresh measures which are already under study.

Meanwhile, the undertone continued to be firm on account of the strength in the ready section. Continued demand from a leading vanaspati interest largely evoked speculative buying in the Groundnut section where prices showed an all-round rise. Turnover was 20,000 candies. Groundnut February delivery opened around Rs 163-4 and May around Rs 165, to finish the week at Rs 168-10 and Rs 170 respectively. Ready Bold quality was quoted upto Rs 34-4 and Groundnut Oil ready at Rs 18-14.

In the Castorseed section, May delivery opened at Rs 172-4 and advanced to Rs 175-4 at the close. Turnover was 10,000 candies. Ready was quoted at Rs 38 and Castor Oil at Rs 21-12.

Linseed and Cottonseed continued to lack special features of their own; but they shared the general strength in the market in view of their strong ready position. Linseed May delivery started at Rs 31-2 and finished at Rs 31-14. Cottonseed February and May deliveries fluctuated identically. February opened at Rs 100-8 and May at Rs 100-8 to finish at Rs 104-8 and 105-8 respectively.

*

Yarn

Steady conditions continued to prevail in the Yarn market. After a break of over three months, there was a marked improvement in the offtake of rayon goods. While the forward quotations have been fluctuating within a range of five points, the spot section has maintained a firm front. Delhi and Calcutta are the major centres that account for the bulk of the business. Dealers are hopeful

World of Cotton

Brisk Activity in Spot and Futures

THE upward trend in Cotton prices, noticed in the previous week, gathered further momentum during the week under review. There was considerable bear-covering and fresh buying as a sequel to the reported decision of the East India Cotton Association to reconsider its earlier decision of keeping the bye-law 61 unaltered for the present. Moreover, the cold wave and recent rains in Gujerat, Saurashtra and the Punjab, the rumours of an export quota of one lakh bales of Saurashtra varieties and the increasing interest shown by mills also aided the bullish sentiment.

Among a section of the trade, there was a feeling that, since the amendment of the bye-law 55 was made, it should have been done simultaneously with an amendment to bye-law 61 also. From the point of view of mills, it appeared that there was need to revise both the bye-laws. It was said that there should be a sufficient provision for a buyer to fall back upon the process of invoicing back should a tender be rejected or a seller failed to give delivery.

A special meeting of the EICA was, therefore, held on Tuesday this week to consider the issue. At this meeting, the Association decided against any changes in the bye-laws pertaining to "tendering differences" and "basis of invoicing back". It also decided to drop the proposal for tightening of margin regulations. The Board's decision will be sent for the approval of the Forward Markets Commission.

On technical grounds, the marked improvement in sentiment was partly due to the proximity of the tender days. Sellers in Jharilla March were left with no option, but to cover and square up their commitments at rising levels since they could not switch over to the next contract in the absence of permission for trading. Reports about a deterioration in the quality of the crop also made them nervous.

Again, reports from the cloth market indicated that superfine and fine varieties had evoked fair demand from the consuming centres. Their prices looked up and, with the result, dealers were hopeful of a broadening turnover and rise in prices in the coming months. Export enquiries were also stated to be good. The strength in the bullion and other commodity markets also induced bulls in cotton to lend renewed support.

For obvious reasons, prices in the the futures section made advances under brisk general buying. The turnover was 25,000 bales. ICC Jharilla March opened at Rs 663-8 and, after touching a low of Rs 661-8, advanced toward the close to Rs 669-8. Similarly, ICC Vijay April closed at Rs 777, showing a rise of nearly 10 points over the opening level.

Brisk activity was also noticed in the spot section where good quantity of Jharilla and other staple varieties were reported to have been bought by mills. Vijay cotton was particularly in demand as is reflected by the broadening disparity between Vijay and Jharilla futures.

In the export section, some business was reported done in Bengal and Oomra Deshi. It was also reported that Japan had ceased buying of Dholleras since the enthancement of the export duty on this growth.

In the foreign section, US cotton went up by 10 to 20 points per candy, reflecting good demand from local and Ahmedabad mills. Reports have suggested that the monetary ceiling, fixed under the Indo-US Trade Agreement, is nearing completion. It is not known whether the Government will allow further imports of this cotton. There are, however, strong rumours that the Government may allow 50,000 bales during the current season.

Business in high-priced Egyptian and Sudanese cottons is almost negligible, except stray enquiries for medium and higher Karnaks. Actual arrivals of foreign cotton, during the first four months of the current season, have amounted to 1.71 lakh bales including cotton licensed last season. Total import licences, given this season, are placed at 1.84 lakh bales.

Following were the closing rates:—Bengal Rs 690 to Rs 750; Oomra Rs 770 to Rs 800; Dholleras Rs 700 to 710; Jharilla Rs 780 to 810 and Vijay Rs 880 to Rs 890.

×

KARACHI COTTON MARKET:

A firm trend was witnessed in the Karachi market. This was attributed to the sizable volume of export business to Liverpool and Hongkong. Another helpful factor was sustained domestic mill demand.

It is reported that Pakistani mills have requested the Government to impose restrictions on exports of cotton and to reserve about one million bales for domestic consumption annually. Following rates are quoted:—Sind Deshi Rs 94-0; Punjab Deshi Rs 85-12; 4F Roller Rs 90-10; Punjab Roller Rs 91-14; 289F NT Roller Rs 90-2 and 289F Punjab Roller Rs 95-2.

×

LIVERPOOL COTTON MARKET:

Tading in the Liverpool market was generally quiet. Prices fluctuated within a comparatively narrow range with scattered hedging, mainly in the American cotton being absorbed by a prominent spot house. Bearish sentiment was based on the large quantity of US cotton which, under the current export programme, was to be exported before August 15. Sudan contract Jan/February was quoted at 61.30 and Egyptian contract Jan/February at 60.00.

×

NEW YORK COTTON MARKET:

Prices in the New York market drifted narrowly in featureless dealings with local and New Orleans operators accounting for most of the limited activity. Majority of traders were inclined to await Washington developments. Spot was quoted around 34.95 cents per pound.

×

CLOTH AND PIECEGOODS:

Trading conditions in the Piecegoods market showed further improvement. Although they were below the mark, the market was reported to be humming with activity. There was a fair demand for superfine bleached and dyed voiles, dhoties, etc. There were enquiries for medium dhoties, sarees, mulls, dorias, etc. Delhi, Kanpur, Calcutta and Uttar Pradesh were some of the main consuming centres that showed buying interest.

On the export front, conditions remained almost unchanged, barring scattered enquiries from here and there. There are reliable reports that the Burmese Government will shortly issue licences for the import of textiles worth about Rs 2 crores. Shipments to this country are likely to touch an average of 3 million yards per month until the end of June. A large turnover with Thailand is expected in the near future. Ethiopia has booked small quantities of grey sheetings, Khakhi and mulls. Enquiries from Aden have been subdued.

Delhi Review

Olympus

The Zig and Zag of Pak Attitude

INDO - PAKISTAN relationship reached new levels of bizarrerie last week. By a curious irony of circumstance, trade talks between the two countries were scheduled in New Delhi at about the same time that the Security Council's discussion of the Kashmir issue took place. Though we have by now got used to the spectacle of Pakistan speaking not with two but a hundred different voices, the sight of Pakistan's Minister of Commerce billing and cooing in New Delhi the while its Foreign Minister was spouting fire and brimstone against India in New York was weirdly fantastic. It is true that such anomalies are something that the student of affairs should take in his cynical stride: and one sympathises with and is eager to reciprocate the desire, reportedly expressed to Mr Nehru by the leader of the Pak delegation, to keep trade and politics apart. But the air of unreality that pervades such make-believe, in the light of Pakistan's persistent and vociferous vilification of this country, is too patent to be overlooked.

Apart from this somewhat basic difficulty, it would appear that the trade delegation from Pakistan is not in entire unanimity about what it wants from the agreement. There is unmistakable evidence of cross-purposes between the Eastern and Western wings of Pakistan. Trade with India is a matter of life and death for East Pakistan. But the Karachi Government, for political and other reasons, appear deliberately to prefer other countries as their trading partners. It would appear that Pakistan's basic policy is to divert all its trade with India to others, and think of India only when it cannot get things elsewhere. For instance, India can supply Pakistan's entire requirement of cotton textiles. But Pakistan prefers to buy them from others, even though they are more expensive.

This policy to whittle down trade with India to the minimum takes scant notice of the peculiarity of the economy of East Bengal, which is both by geographical and historical reasons tied to the economy of Eastern India. Moreover, the internecine quarrels between the two wings of Pakistan have a painful and embarrassing way of revealing themselves before their technical outsider and even enemy. East Pakistan resents an allocation of imported commodities and foreign exchange resources to the Eastern wing which is niggardly compared to that to the Western wing, even though both the logic of population and the fact that East Pakistan is the principal earner of foreign exchange for Pakistan makes a greater allocation desirable. But the difficulty for India is that it cannot, nor does it have the desire, to take sides in such a controversy.

The differences in approach between Karachi and Dacca to the question of Indo-Pakistan trade were disclosed somewhat dramatically during the current parleys. Half-way through the talks, the Pakistani delegation wanted to terminate the present liberal arrangements for border trade between India and Eastern Pakistan. This was an intriguing and unexpected turn, because the delegation, which consisted mostly of East Pakistan leaders, was originally very keen on helping the poorer section of the people on the border by allowing them to move freely across the border and carry on their century-old trade without impediment. And, suddenly, the delegation expressed its desire to put an end to the existing arrangements and securing, in some measure, this end.

Once again, it was not possible to be sure whether it was the zig or the zag of the Pak policy that would prevail. The switch-over in position is attributed in informed quarters in the capital to the vigorous attack in the West Pakistan press against the friendly attitude toward India shown by the leader of the trade delegation. Once again, internal quarrels and an almost pathological hatred of India interfered in the smooth working out of a mutually advantageous trade agreement. Fortunately, however, the set-back was —one hopes—temporary, and the next day it was announced that agreement had been reached on this question. The turn for the better in the talks has been attributed to the special efforts taken by Mr Morarji Desai, the Commerce Minister, and Mr Ata-ur-Rahman, the Chief Minister of East Pakistan. At the time of writing, the agreed communique has not been issued; and, therefore, it is not possible to indicate precisely how the compromise has been worked out.

For the rest, the trade agreement is expected to be for a period of three years, with provision for half-yearly review. The exact details are not available, but the principal commodities covered are coal, cement, jute and gypsum. East Bengal's needs are again principally the consideration. Supplies of coal and cement by sea from West Pakistan have been costly and irregular. Indian coal, on the other hand, which is the cheapest in the world, can easily be supplied to both the wings of Pakistan without any strain either on the sources of production or transport. The agreement is expected to specify the amount of such supply.

As far as cement is concerned, the arrangement is likely to be a mutually beneficent one of a sort of barter. East Pakistan will be supplied an agreed quantity of cement from the Calcutta area, and West Pakistan will supply the identical quantity to Western India. This is, of course, besides the other quantities of cement that Pakistan is to supply India for its own requirements.

On the Indian side, we are anxious to get a regular supply of gypsum for Sindri and raw jute for our mills. Past experience in either of these commodities has not been too happy. I shall not talk of jute, because our experience on that has been notorious. As for gypsum, though an agreement was concluded between the State Trading Corporation and Pakistan last August for its supply in substantial quantities, only a fifth of the quantity agreed upon has reached us.

This brings up at once the question of transport and co-ordination on details of delivery. This has been discussed by an official committee, and it may be expected that concrete decisions will be embodied in the agreement regarding the mode of transport of the commodities to be traded. Delays in executing contracts will have to be minimised, if the full benefits of the agreement are to be reaped.

But the conclusion of agreements and their ratification will not automatically ensure their success. Pakistan's mental reservations in all its dealings with India are nothing new. Again and again, Pakistan has declared in other contexts that it considers India its enemy. And its declared trade policy is to minimise, as far as practicable, trade relations with India, even though this may entail a trade policy of extravagant folly and divide its two wings. So, the fixing up of quantities and of the time-table of supplies will at best help us to measure the success achieved from time to time. The real test of Pakistan's professions of a desire for friendly trade relations with us will lie in the actual implementation, in the months to come, of the agreement now reached.

✱

GATEWAY NOTES

(Continued from page 150)

crores), Everest Cement and Construction Co. Ltd (authorised capital of Rs 2 crores) the Rayon Mills Commercial Corporation Ltd (authorised capital of Rs 50 lakhs) Anil Hard Board Ltd (authorised capital of Rs 1 crore) and Color Chem Ltd (authorised capital of Rs 1 crore) registered as public limited companies.

During the same period five private companies with a total paid-up capital of Rs 27,000, one public limited company having a paid-up capital of Rs 4,000 and one association not for profit were struck off the register of companies under Section 560 of the Companies Act, 1956.

Four public limited companies, three private limited companies and one company limited by guarantee were reported to have gone into liquidation during the half year ending December 31, 1956.

One public limited company having a paid-up capital of Rs 1,20,875 and six private limited companies with the total paid-up capital of Rs 14,03,760 were reported to have been finally dissolved during the same period.

Twenty-one cases were filed against companies, directors and other officers of companies during the same period, out of which 10 cases were for not filing annual return as required under Section 32 of the Indian Companies Act. Eight cases were made out for not filing the balance sheet as required by Section 131-134, one case for not holding the general meeting in a calendar year as required by Section 76 and 2 cases for defaults made by liquidator in filing annual statement of accounts required under Section 244 of the Indian Companies Act, 1913.

Altogether 74 cases against companies and their directors and officers resulted in conviction during this period. Nine companies and 32 directors and officers of companies were fined the fines in each case ranging from Rs 25 to Rs 150. The prosecutions in all these cases were instituted for non-compliance with the provisions of sections 32, 131-133 and 244 of the Indian Companies Act, 1913 (corresponding sections 159-162,210,219 and 551 of Companies Act, 1956) for not filing the annual returns, for not laying the balance sheet before the company in general meetings and not circulating it to the members and for not filing the annual statement of accounts to be filed by the liquidators of companies in liquidation.

Delhi Review

North Indian Notes

Plans for Increasing Paper Production

Paper has so intimately entered into the fabric of modern life that no plan for the economic development of a country can be considered to be complete until it makes adequate provision for meeting the demand for this commodity from its population. It will be no exaggeration to say that paper has come to occupy a place analogous to the basic necessities of life. Even a slight improvement in the standard of living of the people may be generally expected to be accompanied by a corresponding rise in the consumption of paper. The Planning Commission have, therefore fixed the target for paper production in the Second Plan period at almost double the present level.

Inaugurating the First Meeting of the Panel for the Paper and Pulp Industries, last week in New Delhi, Mr Manubhai Shah, Union Minister of Heavy Industries pointed out that since the per capita consumption of paper in a country had come to be considered as an index of the degree of progress of a nation, Government attached great importance to the development of the paper industry.

Though at present the per capita consumption of paper at about 1.9 lbs. is the lowest in the world—it is about 418 lbs in the USA—the rapid increase in literacy and education planned during the Second Plan will considerably increase demand. The present position is that while total production stands at 187,000 tons, consumption of paper and paper products amounts to 226,540 tons. It will be seen, therefore, that there is already a big gap between domestic supply and demand. The shortfall is now being made up from imports. It is estimated that consumption will be of the order of 350,000 tons per year by 1960-61. The demand for newsprint is anticipated to increase from the present figure of about 80,000 tons to 120,000 tons by 1960-61.

Mr Manubhai Shah disclosed that licences for the substantial expansion of the existing 21 units and for setting up of 22 new units which had already been issued would bring up the capacity for paper and paper board to 542,196 tons. Applications for 137,500 tons were pending before the Licencing Committee.

In this connection Mr Shah emphasised the need for establishing chemical pulp plants in order to reduce the cost of production of paper and paper products. Presumably due to the lack of coordination in the development of the industry in the past, papermills in India have come to mean integrated units manufacturing both pulp and paper under one roof, involving transport of bulky raw materials over long distances. It is gratifying to note that a welcome beginning has now been made in establishing chemical pulp plants in the heart of the region where the raw materials are available in abundance. Apart from going a long way in reducing the cost of paper, the pulp mills will help reduce the load on rail transport which has to cope with ever increasing goods traffic on account of the implementation of other major projects.

Considerable progress was being made in the matter of production of newsprint and the Minister said that there was still scope for two more newsprint factories with a capacity of 30,000 tons each. Emphasising the need for utilising bagasse for the manufacture of paper, he said that from the quantity of bagasse available in the country, nearly two million tons of paper could be produced. Another important aspect of the paper industry to which the Minister has drawn attention may be noted with profit by our entrepreneurs. Mr Shah pointed out that over 50 per cent of our imports were of cheap wrapping papers which could easily be manufactured by small scale plants dispersed throughout the country. The fact that such a plant would cost only between Rs. 5 lakhs and 15 lakhs together with the assurance that it will be as economic as big plants should make it an attractive proposition to medium level industrialists. The prospects for such small plants in the present context of severe import restrictions are quite bright indeed since Mr Shah has pointed out that machinery for the plants of this size can be manufactured more conveniently in the country itself.

✱

Third Commonwealth Standards Conference

Standardisation is a natural corollary to industrialisation. The advantages of standardisation had long been recognised in the industrially advanced countries. The initiative, however, was taken by the United Kingdom and the British Standards Institution promoted, established and maintained the British Standards which are now used all over the world. Standardisation has greatly reduced the work of the production engineers, merchants, designers etc. Being on the threshold of embarking upon big industrial enterprises, standardisation is of particular interest to India. The fact that it has planned for the simultaneous development of large-scale as well as small-scale and cottage industries has made it incumbent on the Government of India to pay utmost attention to standardisation.

A large number of leaders of industries and important personalities in the field of standards in the Commonwealth are attending the conference. This is the first time the conference is held in this country. Its previous sessions were held in London in 1946 and 1951. The conference seeks to secure greater alignment of industrial standards and standardisation policies of commonwealth countries in the interest of inter-Commonwealth relations and trade. There will be technical discussions at the conference covering steel, electric cables, electric equipment of machine tools and safety requirements for domestic electrical appliances.

In the course of his inaugural address, Mr Morarji Desai, Minister for Commerce and Industries, stressed the need for the greatest possible agreement between standards of different countries in the world. Referring to the Government of India's decision to change over to the Metric System, he said that it was ample proof of the fact that there was no thought of regimentation of standards within the Commonwealth and that National Standards Bodies were perfectly free to adopt measures suited to the needs of their countries.

NORTH INDIAN MARKETS

Sugar Better

PRICES in the Sugar market have recorded slight gains during the week following the Government's decision to allow export of 50,000 tons of the sweet commodity. The undertone remains strong. Following mill-delivery rates (per maund) are quoted in the Hapur market:— Jaswant Rs 28-10; Simbhauli Rs 28-14; Mowana Rs 28-12; Daurala Rs 29-14; Amroha Rs 28-2; Rampur Rs 31-8 and Mansoorpur Rs 28-12 to Rs 30-0.

According to the Indian Sugar Mills Association, sugar production, during the month of December 1956, was 3,36,236 tons, bringing the total production during the first two months of the 1956-57 season to 4,52,183 tons. The corresponding figures, during the last season, were 280,000 tons and 357,000 tons respectively.

The offtake of sugar from factories during December was 163,000 tons as against 113,000 tons during the corresponding month of the previous season. Total offtake of indigenous sugar, during the first two months of the current season, comes to 316,000 tons as against 243,000 tons in the same period last season. Closing stocks, as on the 31st December 1956, were 658,000 tons as against 526,000 tons on the same date last season.

At Hapur, the Khandsari market continued to rule steady with the rates moving between Rs 20 and Rs 23 per maund, according to quality. In Meerut, demand for the commodity is negligible. Inferior grades are quoted at Rs 20 to Rs 23 per maund and superior at Rs 24 to Rs 27 per maund, according to qualities.

✱

Gur

The market for Gur remained depressed during most part of the week, although there was a steadier tendency in prices toward the close. The ready rate, after touching a low of Rs 10-4, improved to Rs 10-12 per maund.

Arrivals at Hapur are small due to continued cloudy weather and occasional rains. There has been as yet no stock-building. Total arrivals, from the beginning of the season, are put at about 3 lakh maunds.

At Meerut, good demand and low arrivals due to rainy weather have lead to a rise of about As 8 per maund in all varieties of gur. Rajasthan, Bihar and Bengal are the principal buyers. An estimated quantity of about 10,000 maunds is put on the market by the producers.

✱

Foodgrains

Steady to firm conditions have prevailed in the Foodgrains market. This is mainly attributed to fears that continued cloudy weather with occasional rains would affect adversely the standing "rabi" crops. At Hapur, Wheat average quality improved by As 2 to Rs 16-4 per maund, while farm quality advanced by As 6 to Rs 17-8 although outside buying enquiry at the prevailing rates was slack.

Despite satisfactory supply position following arrivals of the new crop, Rice prices have recorded slight gains in sympathy with wheat and coarse grains. Basmati moved between Rs 23 and Rs 28-0 per maund, according to quality.

Gram continues to be very much in request and prices have recorded an improvement of As 8 per maund. Besides being very much in demand for local consumption for seasonal requirements, Maize is also des-

The Peninsula

Verdict on Ariyalur Accident

THE verdict of the Commission appointed by the Government of India to enquire into the cause of the Ariyalur train disaster which occurred on November 23 last, though not flattering to the regional railway authorities, does not amount to a severe and unqualified indictment of any human agency. After having made a thorough assessment of every piece of evidence on hand and after having inspected the spot of the tragedy in person, Mr Justice Bose, who constituted the one-man Commission nearly exonerates every one concerned with the inspection of the bridge and the surrounding area.

His conclusion is that "unprecedented and unforeseen floods in the river Marudayar and in the areas round the embankment of the river caused erosion or scour under and the southern abutment of the bridge and its approach and when the express train reached the spot of the accident, 70 feet of the approach to the bridge beyond the southern abutment collapsed or had already collapsed due to this scour or erosion and this resulted in the accident."

Even when some officers have come in for strictures, these are administered subject to the overriding doubt as to whether any amount of caution on the part of the officers who could otherwise be blamed would have averted the accident. The Commission has passed critical remarks against the Regional Engineer, the Station master the Permanent Way Inspector his Assistant and the patrol man on duty.

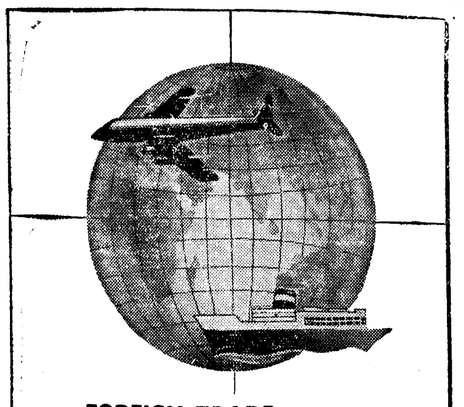
It is felt that when the rains were extraordinarily heavy, the patrol man on duty ought to have remained on the spot and stopped any approaching train or at least given caution to the driver of the approaching train. While noting the fact that with no more than a hand signal lamp the patrol man could not have noticed the rising level of water, it is considered all the more reason why he should have taken more than ordinary care in watching the situation.

The Station Master has been blamed for not issuing a caution order to the driver of the ill-fated train. As this particular bridge has a "history" behind it and as the Railway Board had already issued instructions for more concentrated inspection of bridges of this type, specially calling Deputy Chief Engineers or Regional Engineers on each Railway for personal inspection of all bridges having a past history, the Regional Engineer has been taken to task for having done his work in a perfunctory manner.

In accordance with the directions of the railway Board, bridges on Southern Railway were inspected but somehow or other the Marudayar bridge was thought not to need any special attention. Again, commenting on the suggestion that the timely construction of a rivetment or protective work at or around the abutment which collapsed would have prevented the accident, the Commission remarks, "the whole thing rests on the region of conjecture. It will be a rash conclusion definitely to fix the responsibility for this accident on the Engineering Department of the Southern Railway."

The most significant fact, as supplying the background for the disaster, is that the flood level in the river at the time of the accident was unprecedented. Against the highest previous recorded discharge of 16,000 cusecs passing through the bridge in 1937, the water discharge on the night of Nov 22/23 was about 50,000 cusecs.

The Report of the technical assessors appointed to assist and advise the Commission of Enquiry goes even further toward the view that the accident was providential. The assessors are more sympathetic to the patrol man and they say that he carried out his duties strictly in accordance with the special instructions laid down. The Permanent Way Inspector, whom the Commission found guilty of utter lack of sense of responsibility in not being sufficiently alert amidst the extraordinarily uncertain weather conditions, inspected the bridge and its protection work on the day of the accident and did not find anything wrong with the work and therefore did not consider any intensive patrol necessary, or for that matter any further precaution.



According to the assessors the only relevant criteria to be applied in judging the conduct of the officers concerned should be the knowledge of facts and experience gained up to the date of the accident and not of facts and knowledge gained after it.

The operative part of the Commission's recommendations is more important. As the series of major accidents in the course of the last three years have aroused a new sense of vigilance on all levels of the railway hierarchy, the safeguards suggested by the Commission would be acceptable without exception and in all probability more may be devised to strengthen the technical and administrative apparatus intended to ensure safety. After reminding the authorities that the rules of the Indian railway Ways and Works Manual should be rigidly and conscientiously observed, that the rules should be amplified and instruction on the rules given to Engineers and Inspectors every year before the monsoon, the Commission proceeds to recommend a number of detailed steps. The more important among these are:

The foundations of abutments of bridges resting on screw piles should be strengthened and construction of rivetments or pitching of the river banks or margins on either side of the abutments to a sufficient length, should be at once undertaken. The Railway Assistant Engineers and District Engineers should undergo a short course in river training and control and also visit river model research stations to acquaint themselves with the behaviours of the rivers and their response to training works.

On sections where railway quarters are not provided to patrolmen at least two patrollers should be appointed for each beat from experienced gangmen specially trained for the purpose. The length of beat of patrollers should not exceed three miles. Night patrolmen should have as part of their equipment a powerful electric torch to enable them to observe the level of water and the strength of current flowing through the bridges or along the abutments.

Patrollers should be trained to take soundings and probings near abutments and piers to determine the depth of scour in order to decide whether trains should be allowed. Stationary watchmen should be posted at the bridge during the floods or heavy rainfall whether there is imminent danger to the bridge or not until the flood water subside. Good glass should be fitted to the YP engines to make it possible for the drivers to see through the glass at a distance especially during rains. Daily water reading should be taken at all important bridges during the monsoon.

FOREIGN TRADE...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.

With a network of correspondents at all important trade centres of the world the **United Bank of India Ltd.**, is equipped to render adequate service and give expert guidance in matters of foreign trade.

South Indian Notes

Power Resources in India

The estimate that even after the completion of the Second Plan when the total installed capacity in the public utility undertakings is expected to reach 6.2 million kilowatts, the number of villages electrified will form hardly three per cent of the total in the country, will give a rough idea of the enormous leeway that is yet to be made up in India both in the matter of generation of electricity and in making available to the people at large its benefits. With a large majority of its population living in villages, its progress in rural electrification is a reliable measure of the material progress of India.

In his inaugural address to the Second All India Power Engineers Conference held in Bangalore early this week, Mr Gulzarilal Nanda, Union Minister for Irrigation and Power emphasised the need for harnessing every available sources of energy because cheap electricity in an abundant measure to the remotest corner of the country was an essential pre-requisite to a sizeable improvement in the standard of living of the people.

Sustained work awaits both the Central and State Governments in the coming years. Of the 560,000 villages only about 3,000 were served by electricity at the beginning of the First Five Year Plan. The figure rose to 6,000 by the end of the First Plan and it has been planned to carry the benefits of electricity to another 10,000 villages by the end of the Second Five Year Plan, thus bringing the total to 16,000. A comparison of the per capita generation of electricity in the more advanced countries of the world with that in India shows that Britain produces, on a per capita basis, 88 times, USA 162 times and Norway 360 times. The per capita generation in India is now taken at 25 units.

It is, however, gratifying to note that in recent years our country has made rapid strides in electrical development. The per capita generation in India has doubled itself over the last eight years, indicating thereby that rate of growth is almost on a par with that in the industrially advanced countries. During the First Five Year Plan, a total generating capacity of one million Kilowatt was added bringing the total installed capacity in the public utility undertakings of the country to 2.7 million kilowatts. An addition of 3.5 million kilowatts is envisaged during the Second Five Year Plan, bringing the total installed capacity to 6.2 million kilowatts. Mr Nanda said that among the projects which were taken up during the First Five Year Plan and which were expected to yield substantial benefits in the Second Five Year Plan were the Bhakra Nangal Project, the Gandhisagar Power Station under the Chambal Scheme and the Rihand Project. The Hirakud Power station came into commission recently. The programme of power development during the Second Five Year Plan comprise forty-four hydro-electric and steam generating schemes. Of the 44, 25 will be hydro-electric stations and 19 thermal power stations.

*

Exaggerated Fears

The Second Plan and the recent taxation measures were subjected to scathing criticism by Mr A. D. Shroff in Madras last week. According to him, the Second Five Year Plan was over-ambitious in the sense that all the targets could not be achieved within the scheduled time. He characterised the Plan as an adventure and said that it was based on wrong assumptions. In the first instance, the provision of a budget surplus of Rs 400 crores at the end of the First Plan had already proved wrong. Deficit financing would inevitably result in high prices and consequently the gap in the resources budget would get wider. Referring to Government's plan to raise Rs 900 crores by fresh taxation, he pointed out that the taxation policy as revealed by the trend of the latest taxation proposals, was suicidal. The Finance Minister had devised such measures that without bringing any appreciable additional money to the Exchequer, they did immense harm to the national economy. The compulsory deposit scheme indicated lack of clear thinking on the part of Government.

Instead of aiming too high it would be prudent to cut the plan to manageable proportions. Mr Shroff also warned against giving room in Government policy to such dangerous thinking as the destruction of the rich people in the country as a means toward socialism and pointed out that of the two alternatives open, the process of levelling up, as he called it, was to be preferred to the process of levelling down.

In the light of the speeches of Mr Jawaharlal Nehru at Indore and the presidential address of Mr Dhebar, it would appear that Mr Shroff's fears about a certain class of thinkers who believe in destroying the rich gaining the upper hand in the Congress Government, seem to be grossly exaggerated. Mr Nehru has categorically stated that in achieving Socialism, Congress will never swerve from the path of democracy.

It is unfortunate that Mr Shroff has exposed himself to the charge of making unwarranted assumptions in criticising Government. His apprehensions about Government policy have long ceased to have any validity, and consequently much of his criticism has lost its force. Hardly any one in this country or outside will agree with him when he says by implication that Government have appropriated to themselves the credit for the implementation of the First Plan, while in reality whatever credit that there is should go to the previous Government.

SOUTH INDIAN MARKETS

Rubber Replanting Scheme

IT is learnt that the Rubber Board's replanting scheme is receiving very good response from the growers. It is reported that applications for subsidy have been received for over 8,500 acres. The Board has already granted permission for replanting over 4,500 acres in 1957. It is hoped that the target, fixed for 1957 at 7,000 acres, will be reached and there will not be much difficulty in replanting 70,000 acres within 10 years as stipulated in the scheme.

Unlike in the case of replanting, the new planting scheme, which now awaits the sanction of the Union Government, is not likely to get so much of support from the growers, because the terms of recovery of the loans will naturally be harder.

The total availability of natural and synthetic rubber for 1957 is estimaeted by the Board at 39,713 tons and reclaimed rubber at 782 tons. On the basis of the figures supplied by the manufacturers, consumption and carry-forward of natural and synthetic rubber are estimated at 53,444 tons and the availability of reclaimed rubber at 6,640 tons. These figures will be placed before the Government for their decision with regard to the quantity of rubber to be imported in 1957.

The overall deficit now estimated for 1957 at 13,000 tons compares with last year's deficit of over 6.000 tons. It is learnt that the Board wants the Government to divide the imports between the first and second half of 1957 in the ratio of 65:35 and allow the manufacturers to import only on pro-rata basis of their consumption during 1956.

*

Coffee

According to present reports, the Coffee crop is estimated at 36,000 tons during the current season. The Coffee Board had released, during 1956, an aggregate quantity of 23,800 tons for sale in the home market. The quantity offered for export purposes, during the same period, was 7,475 tons.

The Board has offered 591 tons of Plantation coffee for the new season's first export sale, to be held at Mangalore on the 22nd January. There are reports to the effect that it will take another six to eight weeks before sufficient quantities of new season's coffee is made available for sale in the internal market. Meanwhile, home requirements will be met by the last season's stock of 6,056 tons, carried over from 1956.

*

Cashew

For Cashew, 1957 has commenced as a difficult year although a record crop, now estimated at 90,000 tons, is expected from East Africa, and the indigenous crop itself is estimated to be around 80,000 tons.

Meanwhile, the rate for the commodity has been ruling high, presently quoted at 52 cents per pound as against 50 cents a month ago. This is mainly due to paucity of spot offers. A new force in the market is the appearance of Russia as a buyer.

*

Pepper

Pepper markets have continued to rule quiet. In the Alleppey market, superior Palai variety is quoted around Rs 575 per candy, while inferior Thekkan variety is quoted Rs 550. In the Kozhikode market, Wynaad is quoted at Rs 640 and the Country variety at Rs 610 to Rs 625 per candy.

In spite of heavy arrivals, prices are well maintained. This is mainly due to the fact that growers are unwilling to part with their new pepper at the present low levels.

The New York market is ruling firm with buyers at 24 cents per pound, but no exporters are willing to sell at this bid. Russia is also reported to be in the market for further quantity.

The general sentiment of the market is bullish as there is a felling that both New York and Russia will have to depend, until June, upon India only.

*

Groundnuts

The Madras Groundnut market ruled steady last week, thanks to smaller arrivals. The rate for supe-

Stock Exchanges

HANDSOME GAINS ON A BROAD FRONT

Watch-Dog Writes:

FOR the first time in the New Year, the stock market has come into its own with most industrials staging a substantial recovery. Sentiment has turned somewhat constructive and the market, which was already ripe for technical recovery, is moving up vigorously; and the recent change in the tone of the Finance Minister's speech has proved extremely helpful in placing the market on its own foot. The steady advance in prices is, however, checked by profit-taking. It looks as if the tendency of prices will mainly be dependent on how the situation on Kashmir issue develops in the next few days.

Thanks to firmer Bombay advices, conditions on the Calcutta Stock Exchange remained cheerful during the short week under review.

Brisk trading was witnessed on the Bombay Stock Exchange where prices continued their upward trend.

Sentiment on the Madras Stock Exchange remained cheerful and a spate of buying pushed up prices in Planting and Textile sections.

On the London Stock Exchange, Industrials advanced on a broad front under the lead of Nuclear-power shares, which showed gains running into several shillings.

*

Calcutta

Calcutta, Thursday Evening.

THE local Stock Exchange remained open for trading only for three days during the week and, during this period, it gave a welcome evidence of its inherent power of recovery. There were signs of broadening interest in many directions and prices moved steadily upwards. The flow of encouraging news, the Life Insurance Corporation's buying interest in selected equities and the emergence of demand from investors due to attractive price structure—all these factors contributed to the marked increase in turnover. Above all, sentiment was greatly helped by the feeling that new taxation measures were not likely to be announced before the General Elections were over.

The Giltedged market presented a somewhat cheerful appearance. While the general volume of business continued to be small, there was more interest in some directions due to special influences. 3 per cent 1986 Conversion Loan changed hands at Rs 73-5 to Rs 73-9.

Bank shares staged an all-round advance following the excellent results for 1956 and the resultant increase in dividends. Punjab National were taken upto Rs 56-8 and United Commercial upto Rs 59-4.

Although Jute shares came in for limited enquiry due to the growing disparity between the prices of raw jute and manufactured goods, the downward trend in prices, noticed during the past many weeks, appeared to have been arrested. Howrah recovered to Rs 20 from Rs 19-1; National to Rs 20 from Rs 19-6; Kinnison to Rs 137 from Rs 129 and Kamarhatty to Rs 102 from Rs 93. Anglo-India were quoted better around Rs 136 and Barnagore at Rs 97-8.

Coal shares were generally neglected as operators showed some anxiety with regard to the West Bengal Government's Ordinance stipulating the royalty to be paid to them. The only two bright spots were Bengal having support upto Rs 450 from Rs 445-8; Equitable upto Rs 25-6 from Rs 24-12 and East Indian upto Rs 27-3 from Rs 25-8. Burrakur, after improving at one time to Rs 21-9 from Rs 21-4, receded again at the close to Rs 21-6 on lack of follow-up support. Amalgamated were offered around Rs 19-0 following the reduction in dividend from 7½ to 5 per cent for the half-year ended 31st March, 1956.

Textile scrips showed marked irregularity, but rallied smartly at the close on reports of better conditions prevailing in the cloth and piecegoods markets. Kesoram rose by more than a point to Rs 15-10, while New Victoria improved from Rs 1-14 to Rs 2-6. Elgins, after being pushed upto Rs 28-14 from Rs 24-4 on renewed buying from interested quarters receded towards the close to Rs 27-0 on profit-taking.

Tea shares ruled fairly steady, but turnover continued to be restricted. Operators, before extending commitments, were generally inclined to await the results of the London auctions in the coming weeks due to the recent heavy arrivals of the commodity there. There was also a feeling that the dividend distributions for 1956 would be substantially lower than in 1955 in view of the increased costs coupled with the recent levy of super-tax on dividends. Brooke Bond changed hands at Rs 19-6 to Rs 19-11; Bishnauth new shares at Rs 19-2 to Rs 19-12; Dhelakhat at Rs 20-12 to Rs 21-8; Gohpur new at Rs 22-0 to Rs 22-8; Methoni at Rs 19-7 to Rs 19-14 and Sapoi old at Rs 28-0 to Rs 29-0.

Thanks to the drastic cuts in imports of liquors during the first half of the year, scrips of those sugar companies owning distilleries came in for good support at improved levels. Prominent amongst these were Cawnpore and Carew which were keenly sought after upto Rs 20-8 and Rs 7-4 from Rs 17-8 and Rs 6-12 respectively. Ramnugger met with some enquiry upto Rs 24-4 from Rs 24-0 with SKG showing a hardening tendency to Rs 11-9 from Rs 11-6.

The general recovery in prices in the market was, no doubt, influenced by the remarkable headway made by the speculative issues, especially Indian Irons and TEXMACO on hectic replacement demand and bear-covering following firmer Bombay advices. Indian Irons forged ahead to Rs 29-13 from Rs 29-0 on renewed bull support and TEXMACO to Rs 20-12 from Rs 20-4. G. K. Williams had buyers upto Rs 24-2 from Rs 23-12; Jessop upto Rs 29-7 from Rs 28-12 and Kumardhubi upto Rs 9-11 from Rs 9-7. Richardson, however, moved within a narrow range around Rs 22-8.

The Miscellaneous section provided a few bright features on dividend, bonus and other considerations. Prominent were NICCO, which were easily absorbed upto Rs 26-12 from Rs 25 following the company's proposal to issue bonus shares in the ratio of 1 : 4 as well as right shares in the ratio of 1 : 2. India Steamship remained very firm around Rs 10-10, pending the announcement of the interim dividend, which is expected to be As 12 per share. Indian Aluminium met with steady support upto Rs 14-12 from Rs 14-6 following the announcement of results with regard to their recent offer of Convertible Loan Stock.

Elsewhere, Orient Paper met with renewed speculative buying, being pushed further upto Rs 33-14 from Rs 31-9. Titaghur advanced to Rs 37-12 from Rs 36-2 and Shree Gopal to Rs 16-9 from Rs 16-1. Dunlop Rubber improved to Rs 26-2 from Rs 25-11 and IBP to Rs 35-10 from Rs 34-6. The firmness in shellac prices was reflected in Angelo Brothers, which came in for good demand upto Rs 22-4 from Rs 20-2. Indian Cable, after touching a high of Rs 33-10, receded at one time to Rs 32-6, to finish better at Rs 32-10. Indian Copper hardened to Rs 3-12 from Rs 3-10, while National Carbon scored half a point at Rs 26-8. Martin Burns were taken upto Rs 23-6 from Rs 22-12 and Metal Box upto Rs 27-4 from Rs 26-5. Rallis closed better at Rs 38 against Rs 37-4. Rohtas forged ahead to Rs 19-14 from Rs 19-6 on renewed support. BIC improved to Rs 8-12 from Rs 8-8 with Sone Valley ruling firm at Rs 8-2.

*

Bombay

THE stock exchange has turned the corner. Bulls as well as investors who had been despondent all along the line have been comforted by the rally of nearly 7 per cent from the lowest levels recorded in the second week of this month. The market's going is good, thanks to the encouraging performance of Lyons Range as well as replacement buying by well informed quarters. Ever since the Finance Minister introduced the supplementary Budget proposals on 30th November 1956 and followed them up with a series of provocative statements,

(Continued on page 166)

DUNCAN BROTHERS & COMPANY, LIMITED.

DIVIDEND ON PREFERENCE SHARES.

NOTICE is hereby given that the Board of Directors has sanctioned payment on 31st January 1957 of a dividend on Preference shares for the year ended 31st December 1956 of 4 per cent. without any deduction for income-tax paid by the Company.

The Preference share register will be closed from 28th to 31st January 1957, both days inclusive.

Warrants will be issued to shareholders whose names appear on the Company's register on 31st January 1957 or in accordance with their registered mandate instructions.

DUNCAN BROTHERS & CO., LD.

31, Netaji Subhas Road,
Calcutta, 17th January, 1957.

BIRDS INVESTMENTS LIMITED.

NOTICE is hereby given that the Twentieth Ordinary General Meeting of the Shareholders of BIRDS INVESTMENTS LIMITED will be held at the Registered Office of the Company, at 4, Lyons Range, Calcutta, at 12 noon, on Friday, the 15th day of February, 1957, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 30th September, 1956, declaring the dividends recommended by the Directors, electing Directors in place of those retiring and appointing Auditors.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member of the Company.

The Share Transfer Registers of the Company will be closed from 1st February, 1957 to 15th February, 1957, both days inclusive.

By Order of the Directors,
LOVELOCK & LEWES,
Secretaries.

Note: Dividends will be paid to registered shareholders or their mandatees only.

4, Lyons Range,
Calcutta, the 22nd January, 1957.

WORLD OF JUTE

(Continued from page 144)

acres and 1,430,000 bales (of 400lbs. each) as against the Adjusted Second Estimate of 553,000 acres and 1,101,000 bales for 1955-56, according to the Directorate of Economics & Statistics, Ministry of Agriculture. This shows an increase of 142,000 acres or 25.7 per cent in area and 329,000 bales or 29.9 per cent in production over last year.

The increase in acreage and production during the current year has been shared by almost all the mesta growing States, specially, West Bengal, Bihar, Bombay and Mysore and has been attributed generally to favourable climatic conditions both at the sowing and growing periods of the crop.

This Estimate covers the period generally up to the end of October or beginning of November, 1956. Till then, the condition of the crop was reported to be, on the whole, satisfactory.

The Estimate does not cover the entire area sown to mesta. Information regarding some late varieties of the crop grown in Punjab, Mahakoshal region of Madhya Pradesh and Vidharbha region of the Bombay State will be included in the final Estimate.

Information given in this Estimate relates to the set-up of States afttr their re-organisation on November 1.

✱

WORLD OF BUSINESS

(Continued from page 142)

this is not to say that the near future does not hold prospect of cheaper oil for the Indian consumer. On the contrary, the exploration for oil is being conducted with more zest and energy; and there seems reasonable grounds for hoping that India will gradually attain a more satisfactory self-sufficiency (if not total adequacy) in production of crude oil. But, even in this regard, we need to remember that oil exploration is an even more expensive enterprise; and, as such, it will be necessary—in the interests of increasing indigenous production of crude —for some part of exploration costs to be absorbed in the oil price.

✱

NORTH INDIAN MARKETS

(Continued from page 153)

patched to Ahmedabad. Poor stock position has accounted for the hardening tendency in Barley and Bejher prices.

Fast dwindling stocks due to good outside enquiry have accounted for the advance in the prices of Peas. The standing crop is reported to be progressing satisfactorily due to recent rains.

The Delhi grains market ruled quietly steady. Wheat farm quality has risen by about As 8, while Gram, after initial softness, has recovered to its previous week-end level on renewed buying enquiry. There is good demand for Bajra following steadier advices from the Punjab, while Barley is quiet due to small offtake.

Divergent trends are in evidence in the Bombay grains market. Although the demand for Rice is comparatively small, the market is favourably influenced by higher advices from the upcountry centres. Reports from Andhra and Madhya Pradesh have indicated a good demand for rice from Eastern India. With the result, prices in these growing areas have tended to be higher than those ruling in the City.

Trading in indigenous Wheat is confined to stray deals. The majority of the consumers have continued to draw their supplies of foreign wheat, released by the Government at Rs 14 per Bengal maund.

In the Coarse grains section, Jowar is a weak spot with the rates registering a decline of about Rs 10 per candy. The weakness in the grain has resulted from bigger arrivals of the new crop. The tendency in Bajra is generally steady, mainly attributed to the disparity in prices arising from higher upcountry advices.

GATEWAY MARKETS

(Continued from page 150)

that demand from other consuming centres will broaden in the coming weeks.

Demand for Cotton yarn was also encouraging, being more pronounced in respect of lower counts. Sixty, eighty and higher counts received good support and their prices hardened by about As 8 per bundle on account of increasing demand for fine and superfine cloth. Export demand, however, remained restricted since Indian prices are not in parity with the other textile manufacturing countries. Unless prices are cut down drastically, chances of export business seem to be remote.

Import of Art Silk yarn into Bombay in December amounted to 22.28 lakh pounds. Germany has been the main supplier at 6.38 lakh pounds, while Japan comes next with 4.62 lakh pounds. Import of staple-fibre yarn has amounted to 8.6 lakh pounds.

✱

Metals

The Metal market ruled generally steady. Copper ready was quoted at Rs 193-12 per cwt. Zinc continued to rule firm at Rs 70 on London advices following reports of the delay in the arrivals of the metal. The Lead market was featureless with ready quoting Rs 82. Ready stocks in Tin were reported to be not abundant. With booking facilities for North Indian centres being available, much of this material was sent out to those centres. This metal hovered around Rs 136 per quarter.

In general, the copper industry is enjoying a period of plenty and the situation is now easier than it was for some years. The US demand for Zinc continues to be quiet. The ending of the rail strike in Canada has helped to relieve anxiety about supplies from that country. As far as Lead is concerned, the supply position is very satisfactory. US reports have indicated a lack of buying interest on the other side of the Atlantic.

"MACMILLAN BOOM" IN BRITAIN

(Continued fram page 131)

disputes are still in progress, and their outcome will affect the trend of consumer demand and that of cost of production to no slight extent. From this point of view a continued boom on the Stock Exchange would not be helpful. Already the Socialist newspapers are drawing attention to the fortunes that are supposed to have been made through the rise since the beginning of January. The ingenious calculations simply multiply the amount of the total existing stocks with the figure of the increases. They ignore the fact that the sharp falls in 1956 through the increase of the Bank rate and the Suez crisis caused heavy capital losses. Moreover, the large majority of stocks is held by investors for their yield, and a rise in their Stock Exchange quotation does not mean that they spend their capital profits. But these facts are ignored by those who want to use the rise on the Stock Exchange as an argument in favour of excessive wages demands.

Substantial wages increases would increase consumer demand just at a time when the industrial output is stagnant or declining. While at present many industrial firms are inclined to cut their prices in face of the slacker demand, the pumping of additional purchasing in power into circulation by higher wages would stiffen their attitude. Unfortunately, in spite of the change in the emlpoyment situation, some trade unions remain in a very strong position to press excessive wages claims. The engineering and shipbuilding industry, with their order books full for years ahead, could ill afford strikes. And coal miners are well in a position to hold the country for ransom, having regard to the shortage of liquid fuel. The only consideration which may mitigate their demands is the relative steadiness of the cost of living.

—Copyright

✱

SOUTH INDIAN MARKETS

(Continued from page 155)

rior oil-quality seeds was quoted at Rs 164 and the bold variety at Rs 157 per candy. Reports from upcountry centres have indicated that sowings for the "summer" crop have begun in some of the Southern districts.

In the Groundnut Oil section, the rate for the ready position was quoted at Rs 327 per candy. Calcutta interests showed good interest, while buyers showed interest for February and March positions.

✱

Hides and Skins

In the Madras Tanned market, arrivals of Cow hides were restricted, while clearances were brisk. Arrivals of Buff hides were moderate and these met with steady clearance at firm levels. Prices of Cow Calf and Buff Calf ruled firm at last levels.

In the export section, trading with the UK showed some improvement, although many lines of Kips failed to procure satisfactory prices. 10/12 lbs were quoted on the basis of 40d and 5/5½ lbs at 50d.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate and there was a satisfactory clearance. Trading with the UK was, however, not better than the previous week. Business was reported done in 11/12 lbs runs and fifths at 135h 3d and 10sh respectively.

✱

INDUSTRIAL INFORMATION

(Continued from page 146)

IKAMA 1957

The "International Congress and Exhibition of Measuring Instrumentation and Automation—IKAMA—" is scheduled for 2-10 November 1957 at Dusseldorf/Germany.

The Exhibition will comprse the following fields: Measuring, tele metering and control instruments for electrical and processing quantities as well as analytical equipment for production control and research. Promoters are the respective Trade Associations. The organization is in the hands of Nordwestdeutsche Ausstellungs-Gesellschaft mbh (NOWEA), Dusseldorf.

✱

BICC

During their world tour of BICC Group Organizations, Mr and Mrs W. H. McFadzean and Mr and Mrs W. C. Handley arrived in Calcutta on January 23rd. for a three day visit.

Mr McFadzean is Chairman and Mr Handley is Deputy General Manager of British Insulated Callender's Cables Ltd.; and during their stay here they made a tour of inspection of the Tatanagar Works of The Indian Cable Company Ltd. for whom BICC are the Consulting Engineers.

✱

IMPORT AND DISTRIBUTION OF RAW SILK

In order to meet the demand from silk weaving industry in India, particularly in Surat and Varanasi and to protect the interests of the indigenous sericulture industry, imports of raw silk have been canalised through the agency of Government since January-June, 1955.

In pursuance of this policy, the State Trading Corporation of India has imported 57 metric tons of raw silk from China and Japan for distribution to the weaving industry through the Central Silk Board, which is a statutory body under the Ministry of Production, Government of India, New Delhi, responsible for the development of the sericulture industry.

With a view to maintaining a reasonable level of prices for imported raw silk, the present selling prices will be continued. For the information of the actual users of silk, the ex-godown price at Madras, Calcutta and Bombay are notified as under:

1. Chinese raw silk 20/22 Denier "A" Grade Rs 33-8 per lb. 2. Japanese raw silk 20/22 Denier "A" Grade Rs 35-8 per lb. 3. Japanese raw silk 13/15 Denier "A" Grade Rs 37-8 per lb.

STOCK EXCHANGES

(Continued from page 156)

the market, so to say, was enveloped in a pall of gloom and there was no knowing as to when the downward trend which had started in the last week of August 1956 would come to a halt. But it appears that the authorities in power were at last perplexed by the daily receding prices in equities in the context of the needs of financing the development plans of the industries in the private sector and hence there have been no bearish statements of late. The mistake of making recurrent discouraging statements has apparently been realised with the result that the market shows distinct signs of depicting mild optimism about the future based largely on the satisfactory workings of several industries and the heartening results announced by almost all the banks in 1956. Bears who were dominating the scene have been set to thinking and revise their ideas. The only snag at the moment is the uncertainty over the political situation and especially with regard to Kashmir developments in view of Pakistan's outspoken attitude against India. Barring unforeseen developments on this front, the recovery movement is expected to gain further ground.

The decline in prices of some selected counters from the peak levels recorded in August 1956 and the modest recovery during the past fortnight from the bottom levels is brought out below:

	Highest in Aug. '56		Recent Low		23rd Jan. '57

*Ex-dividend.

Securities:—The gilt-edged market after presenting dull conditions for the past few months has showed some steadiness with 3 pc conversion loan looking upto Rs 73-8.

Banks:—Bank shares after the recent rise on higher dividends have preferred to consolidate the gained ground. The comparative profit figures and dividends of some of the leading banks are given below:

	(Profit in (Lakhs of Rs) 1956	1955	(Dividends) 1956	1955
India ...	92.03	84.03	8	8
Baroda ...	39.90	29.65	7	6
Central ...	104.00	77.75	3.8	3
Punjab National ...	90.20	59.40	...	3-8
United Commercial	56.52	36.69	3.8	2-12
Union ...	11.48	9.48	0.7	0-6

Utilities:—Electric shares have proved better, following the implications of the recently amended Act. Ahmedabad evoked inquiry in view of the proximities of the final dividend.

Textiles:—This section has improved halting in the wake of steels after the relentless bear pressure. As the cloth market shows signs of picking up, sentiment was somewhat better. The permission for bonus issues is being awaited in the case of Century, Dawn and Thackersey Group of mills. It may be recollected that Century has announced a bonus issue of three shares for every two shares; Dawn three shares for four shares and Thackersey group two shares for every one share.

Steels:—Prospects for increased production by TISCO in 1957-58 and thereafter and the Golden Jubilee Year of the company giving hopes for higher distribution this year have led to some active support in Tata steels while Indian Iron has met with active inquiry from Lyons Range on the eve of the announcement of particulars of payment for the new issue and the closure of transfer books.

Miscellaneous:—This section has made a mixed show. Tata Locomotive met with some bull unloading on conjectures that the Tata Steel Co which is holding 120,000 shares of TELCo might liquidate a portion thereof while rumours of impending right issue were revived. Bombay Burma, responded to low carryover charges but substantially quietened down. Scindia steams have evoked inquiries on better prospects and reconstitution of the managing agency. National Rayon were better off. Premier construction have met with some replacement buying. Tata Chemicals were a shade better. Among sugar shares Bhopal found buyers up to Rs 18 on dividend decision of Re 1-8 for the year September '56 as against Re 1 for 1954-55. ACC where better on the eve of the annual general meeting. Premier Automobiles have met with scattered selling pressure on implications of the forthcoming issue of debentures of Rs 2 crores. Tata Oils were quietly steady.

*

Ahmedabad

The Ahmedabad share market has remained subdued following the recent recovery. As fall in local shares was relatively small, the rally has failed to attract buyers at the bulge-calico which had gone up to Rs 605 on announcement of the bonus issue in last December had fallen down to Rs 545 to recover upto Rs 577 to be placed at Rs 570. Arvind was reported at Rs 1170, Ambica 612, New Shovock 855. Saraspur Rs 510. Jupiter Rs 260. Atul Products which had slumped to Rs 173 recently are quoting around Rs 188 after having risen up to Rs 192.

*

WORLD OF FINANCE

(Continued from page 140)

Rs 103.27 crores on January 11 as against Rs 114.60 crores on December 28 and Rs 106.38 crores on January 4.

As seen reflected in the Reserve Bank returns, deposits of member banks fell from Rs 58.09 crores on December 28 to Rs 48.34 crores on January 4; they have thereafter improved to Rs 52.98 crores on January 18. At the same time, however, indebtedness to the Reserve Bank would appear to have been reduced: the Other Loans and Advances of the Reserve Bank declined from Rs 106.04 crores on December 28 to Rs 99.96 crores in the next week, before rising again to Rs 102.61 crores on January 18.

The State Bank would seem largely to be responsible for the rise in banks' advances. The portfolio of advances has gone up from Rs 146.41 crores to Rs 154.77 crores. Although, over this period between January 4 and 18, Deposits rose by more than Rs 5 crores to Rs 245.76 crores, the State Bank has nevertheless found it necessary to increase its borrowings from Rs 6.91 crores on the earlier date to Rs 18.75 crores on January 18.

There is also evidence of the manner in which member banks will become possessed of the additional resources with which to meet the demand during the current busy season. In the week ended January 11, the Reserve Bank's advances against usance bills touched a new peak of Rs 60.86 crores; and, in the latest returns, the figure is nominally lower at Rs 60.70 crores. In the context of the 1956-57 busy season, we shall need to anticipate sizeable increases being registered in bank advances as a whole, in bank borrowings from the Reserve Bank, in the latter as reflected in the Reserve Bank returns and in the loans granted by the central banking institution against usance bills.

The returns of the Reserve Bank for January 18 indicate deficit financing as having taken place for Rs 5 crores. But, since cash-in-the-till was comfortable, contraction has been effected for a similar amount against Foreign Securities by transfer to the Banking Department.

Notes in Circulation have been marked down from Rs 1495.21 crores to Rs 1490.89 crores. Rupee Coin has returned from circulation for Rs 0.17 crores; and cash in the till has gone up by Rs 4.50 crores to Rs 17.66 crores.

Notwithstanding ad hocs sold in favour of the Reserve Bank for Rs 5 crores, the Deposits of the Central Government have declined by Rs 3.29 crores to Rs 50.71 crores. Balances of State Governments have improved by Rs 2.09 crores to Rs 7.03 crores, while their borrowings are also shown lower at Rs 8.42 crores against Rs 8.60 crores. Other Deposits are more or less unchanged at Rs 13.29 crores.

Banks' Deposits are lower by Rs 3.27 crores at Rs 52.98 crores; but this has obviously been accompanied by a reduction in the borrowings from the Reserve Bank, whose Other Loans and Advances have declined by Rs 3.99 crores to Rs 102.61 crores.

After transfer of Rs 5 crores from the Issue Department, Balances Held Abroad in the Banking Department show an increase of Rs 0.94 crores to Rs 81.24 crores. The net loss of foreign holdings has therefore been of the order of Rs 4 crores during the week.

The return of the State Bank for January 18 shows that Deposits are lower by Rs 2.00 crores at Rs 245.76 crores. Secondly, Borrowings are marked up by Rs 2.11 crores to Rs 18.75 crores. Thirdly, cash balances are reduced by Rs 1.37 crores at Rs 18.63 crores. In the result, the expansion in advances during the week has been one of Rs 3.36 crores to Rs 154.77 crores.

The return of Scheduled Banks for January 4 was unduly delayed in its publication, but no explanation has been forthcoming. It is to be presumed that some of the member banks, preoccupied with the yearly closing of accounts and computation of profits for 1956, were somewhat tardy in their submission of their statutory statements. The most important aspect of the figures of member banks, namely, the piercing of the Rs 800 crore mark in Advances, has already been dealt with in detail. The second noteworthy feature which we may stress is the level at which cash balances are placed. It seems not improbable that, in the next few weeks, member banks will consider it prudent to add to their cash balances by recourse to borrowings, since the total of cash balances (including balances with the Reserve Bank and money at call) is barely above the Rs 100 crore mark.

\+

The statement of the State Bank of India for the week ended January 18 reveals a drop of Rs 2.00 crores in deposits at Rs 245.76 crores. Borrowings from other banks have risen by Rs 2.11 crores to Rs 18.75 crores, while other liabilities, including inter-office adjustments, remain almost unchanged at Rs 3.62 crores.

On the assets side, cash balances are slightly lower at Rs 18.03 crores against Rs 18.59 crores with Investments shown at Rs 107.05 crores against Rs 107.03 crores. Advances have riseen by Rs 3.36 crores to Rs 154.77 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 0.51 crores and "Bills Discounted and Purchased" for Rs 2.85 crores.

\+

According to the returns of the Scheduled Banks for the week ended January 11, total Demand Liabilities have shown a sharp rise of Rs 6.36 crores to Rs 653.16 crores, while Time Liabilities have declined by Rs 0.95 crores to Rs 456.84 crores. Borrowings from both the State Bank and the Reserve Bank are higher by Rs 0.31 crores and Rs 5.91 crores at Rs 10.52 crores and Rs 79.10 crores respectively. Cash and balances with the Reserve Bank are shown at Rs 85.93 crores against Rs 85.78 crores. Investments have declined by Rs 2.04 crores to Rs 362.42 crores. Advances have risen by as much as Rs 9.56 crores to Rs 645.46 crores, while Inland Bills and Foreign Bills have declined by Rs 1.96 crores and Rs 0.87 crores to Rs 111.39 crores and Rs 51.58 crores respectively. Money at call and short notice stands at Rs 6.93 crores against Rs 9.06 crores.

FORUM OF FREE ENTERPRISE

CODE OF CONDUCT

This Code of Conduct for Free Enterprise has been prepared by the Forum of Free Enterprise and is now placed before industrialists, business men and those belonging to different professions and vocations in India in the belief that they will find it worthy of acceptance and of application in their daily activities. The Forum pledges itself to do all it can to create a widespread awareness in the ranks of Free Enterprise of the obligations that are contained in this Code. We feel that Free Enterprise, which has been tested and proved by time and experience of all democratic societies, should maintain its reputation by insisting on high standards of integrity which are dictated by social purpose. Honesty, hard work, courtesy and continuous initiative are the foundations on which the edifice of Free Enterprise rests.

PRODUCERS and distributors owe it to the consumers of their products that they shall always be of the highest quality and available at reasonable cost. They shall maintain fair measure and guard against adulteration. Customers are entitled to courtesy, promptness and good service, and every endeavour shall be made to see that they receive them.

EMPLOYERS owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible. Opportunities should be made available for the worker to gain technical skills and better his economic prospects and social status. Procedures should be instituted for the removal of legitimate grievances so that the employee is satisfied that he gets a fair deal. The employers should welcome the existence of stable and democratic trade unions. They should recognise that in the sphere of employee-management relations, as in other spheres, checks and balances are essential for the working out of rational and democratic solutions. They should accept the role of labour as one of creative co-operation and recognise the need for providing increasing opportunities for consultation of employees and their progressive association with Management to help in the promotion of increased productivity from which all will benefit.

MANAGEMENT owes it to those who invest in their enterprise that they receive a fair return on their investments commensurate with the risk they take. At the same time, reserves must be created for expansion and modernisation of the plant and machinery and in their utilisation the Management remains accountable to the investor. Money must also be provided for research. The earning by the shareholder of a fair return or profit by the entrepreneur under competitive conditions and after payment of fair wages must be regarded as a legitimate reward for the risk and the work of promotion and development which the community urgently needs. Certain mal-practices have crept into the system of company management. They are to be condemned and should be removed. Hoarding, black-marketing and profiteering are anti-social and evil. Honest business practices can be promoted and encouraged by an honest and efficient administration in a democratic State.

PROFESSIONAL MEN—lawyers, teachers, doctors, auditors, or writers—owe it to those who avail themselves of their services to maintain the highest standards and traditions. They should discharge their duties truly and faithfully, and should always subordinate considerations of personal gain to the larger objective of service.

WE ALL owe it to the community that we accept our obligations as good citizens. We shall bear our share of taxation honestly. We condemn unequivocally any attempt at tax evasion. We shall actively participate in the promotion of social, cultural and civic improvements. Wealth or power shall not be a justification for vain-glory or ostentatious display, but an opportunity for rendering service to the community.

For the Investor

The Immediate Future— The Impending Elections

Investment Gossip:

(I note down below the conversation as it took place between a young member of the Calcutta Stock Exchange and Watch-dog).

What do you think of the short term prospects before the market?

It is difficult to say anything about the immediate future, because of the impending elections.

I agree, but don't you think that prices have touched rock-bottom?

Certainly, the blue-chips have touched levels when, For the Investor, purchases are in order; but I can't say the same for the speculative shares.

But what about T. T. K.'s statement that he hopes he will not make any new tax proposals after financial year 1957-58?

Yes, he has said that, and that should normally be a bull point—unfortunately, logic is not the strong point with speculators

Have you started framing your views on the next budget?

No.

Why not, since it is your usual custom to picture the prospects on the basis of a realistic assessment?

You must remember that we may have a "caretaker" budget, and that the real budget may come later.

Then, what about that second budget?

No thoughts as yet—too early to say what Government's ways and means will be.

What does T. T. K. mean by his repeated desire to effect a revision of the taxation structure?

My interpretation is that he may be thinking in terms of adopting —as far as is practicable—some part of the Kaldor recommendations.

Do you suggest that T. T. K. will reduce income tax rates, as recommended by Mr Kaldor?

I can't answer that question—all I can say is that, if the Finance Minister were to adopt the taxation measures, it would be proper for him to give the reliefs intended for the professional classes.

How far do you think T. T. K. will go in the taxing of the classes?

In answer, I will refer you to a statement he made somewhere, in which he said even a 100 per cent rate of taxes will not yield much more by way of revenue.

So you think he will spare the classes?

I should say that Government hope to bring more of the masses into the tax paying classes—that is the intention of the Second Plan in an indirect way. Later on, when more of the masses are transformed into the classes, the classes, too, may be spared by way of lower taxes.

But such a reading is a long, long-term view, isn't it?

Yes.

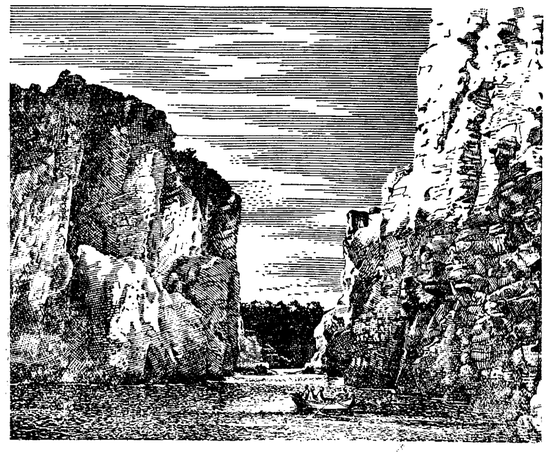
Investment Notes:



Indian Coppers are ruling very steady around Rs 3-11, thanks to renewed support given by investors. The company has presented a satisfactory report with regard to the output for the last quarter of 1956. It is now learnt that the company has put forward a scheme for the installation of an electrolytic copper refinery in India. This should play a useful part in supplying the requirements of high-conductivity copper for the electrical industries.

Basmatia Tea Company has decided to capitalise Rs 5.10 lakhs from Reserves for distribution of bonus shares to the shareholders, subject to the sanction of the Controller of Capital Issues.

News has come to hand that the 4½ per cent fifth series Debentures of Rs 10 lakhs, floated by the Orissa Provincial Co-operative Land Mortgage Bank, has been oversubscribed.

The Adoni Spinning & Weaving Company has announced a fresh issue of one lakh 6 per cent tax-free Cumulative Preference shares of Rs 10 each and 1.5 lakh Ordinary shares of Rs 10 each. Three Insurance companies have agreed to take a total of Rs 2 lakhs of Preference and Rs 5.89 lakhs of Ordinary shares. The Life Insurance Corporation of India has underwritten Rs 5 lakhs of Preference shares, and the Investment Corporation of India of Rs 9.11 lakhs of Ordinary shares and Rs 3 lakhs of Preference shares.

Around India with Brooke Bond

A masterpiece of nature—**The Marble Rocks**

Thirteen miles from Jabalpur is located one of the scenic wonders of India—the Marble Rocks. Here the Narbada enters a mile-long gorge, flanked on either side by high white rocks, often tinted with delicate shades of blue, yellow and pink. At the end of the gorge, the river comes cascading down in a tumultuous, roaring waterfall. The Marble Rocks are always a glorious sight but they look unique on full-moon nights, with their shadows reflected in the clear waters of the Narbada.

Around here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop. Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Indal Issue

Investment Special:

I was asking a friend the other day: what is the state of the capital market, and can it make a success of a new issue?

A friend was asking me the other day: do you have influence that you could use . . . I would like some of the convertible stock being offered by Indian Aluminium Company, Limited, but I understand that the issue is being over-subcribed many times.

The two questions that I have posed are related. For, I had in mind the Indal issue when I inquired of my stock exchange friend the prospects for a new offer. He, of course, realised that I was thinking of this offer, and his answer was terse and to the point.

'First, aluminium as an industry has very good prospects.'

'Second, the market has a very high opinion about Indal.'

'Third, the issue, ostensibly large, is really small.'

'Fourth, the terms are exceedingly favourable to investors.

'Fifth, the Rs 56 lakhs offered will be over subscribed many times.'

Let us go over these five points, one by one. Aluminium is an in-

HIGHLIGHTS

In the course of the nine years odd since independence, a number of new industrial centres have come into being.

These are, unknown a decade ago, become household words of today.

Chittaranjan's locomotives, Sindri's fertilisers, Perambur's integral coaches, DVC's power, Bhakra Nangal—these are words that conjure up the country's Projects for Plenty.

These milestones of prosperity are milestones of hope for India's millions, measured in material achievements.

But there are the other intangible gains as well, the evolution of a plan consciousness, the re-awakening of resurgent India.

In recording the seventh anniversary of the Indian Republic, Eavesdropper has waxed poetic on our national maturity. See Clive Street Gossip.

dustry of strategic importance and, in recognition whereof, the Government have suitably fixed a high target for increased production.

Secondly, the country which perhaps possesses the greatest know-how in aluminium is Canada; and Indian Aluminium represents an Indo-Canadian enterprise. Particularly for this reason, the investor is confident that the technical and research facilities available to Indal will be of the highest calibre.

Thirdly, although the amount on offer was for a total of Rs 2.68 crores, the directors and their friends and the existing ordinary shareholders have already taken up Rs 2.12 crores; the balance available for public subscription is a bare Rs 56 lakhs.

Fourthly, the issue is a 5 per cent convertible loan stock 1971-81 at par. Each Rs 200 nominal of stock may, at the shareholder's option, be converted into ordinary shares (at a specified ratio) up to 1970. For example, if conversion is opted for before December 15, 1957, Rs 200 of nominal stock will be exchanged for 15 ordinary shares of Rs 10 each—the current quotation for ordinary shares is already Rs 14-8! Such converted ordinary stock will rank pari passu with the existing ordinary shares. Readers will remember that I have on previous occasions written about convertible stock; the present Indal issue is one such, which offers the investor a fixed return for so long as he desires; and with option to convert to ordinary shares, at the time of his choosing. The investor, that is to say, gains both ways.

Finally, this is market opinion and as reflected by the query to me that I have reported: Success is assured for the Indal issue; and the only question is, how many times will it be oversubscribed?.

More Sugar Results

Balance-Sheet Reviews:

THREE more Sugar companies, viz., Champarun Sugar Company Limited, Bhopal Sugar Industries Limited and Changdeo Sugar Mills Limited, have presented their reports and accounts for last year. Except Champarun which has reduced the dividend from Rs 1-8 to Re 1 per share, the other two companies have raised their dividends—Bhopal from Re 1 to Rs 1-8 per share and Changdeo from Rs 2 to 3 per share.

Despite a substantial increase in sales from Rs 83.16 lakhs to Rs 1.02 crores, the working of the Champarun Sugar Company has revealed a decline in net earnings for the year ended 30th June, 1956. This is mainly due to the fact that the high production of sugar in India tended to reduce the market prices for the commodity, particularly in Bihar and Uttar Pradesh where factories had to compete with the sugar factories nearer the Port towns. This disadvantage, aggravated by a shortage of railway wagons on the North-Eastern Railway in the early part of the selling season, also tended to depress prices.

The quantity of cane crushed at the company's Barrah factory has improved considerably over previous years and was indeed the highest crush ever taken off at this factory during the last twenty years. The crop taken off at the Chanpatia factory was, however, disappointing, both in quantity and quality. The total quatity of cane crushed at both the factories amounted to 5,621,786 maunds against 4,383,738 maunds, while the quantity of sugar manufactured was 543,614 maunds against 457,025 maunds in the previous year.

The net profit for the year, before providing for Depreciation and Taxa-

Balance of Payments

Indian Finance
Established 1928
February 2, 1957
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius

THE second periodical review of India's balance of payments, published by the Reserve Bank of India, represents a substantial advance in the technique of statistical presentation. The main inspiration in this direction is acknowledged to have come from the International Monetary Fund, which has developed a Balance of Payments Manual to facilitate a consistent system of international reporting. The Reserve Bank authorities do not claim to have attained perfection in the present compilation and the overwhelming reliance on foreign exchange control statistics admittedly implies limitations. Exchange control statistics do not necessarily cover all the balance of payments transactions. There is some evasion of the control regulations. Omissions are possible through investments in kind, earnings ploughed back by foreign companies, short term credits, etc. Besides, there are difficulties in respect of classification and timing. Subject to these limitations, the data presented are the most dependable.

It is now possible to secure a much more precise idea of the value of imports and exports than could be had from the "Accounts relating to Foreign Trade and Navigation of India", published by the Department of Commercial Intelligence and Statistics. The points of difference between the two publications are elaborated at some length in the Reserve Bank booklet. The 'Accounts' do not cover government imports equally completely. Exchange control records relating to private imports are not entered in the normal course. Between the two publications variations occur in export prices, as also differences in timing for the same set of transactions; the 'Accounts' entries are based on arrivals in or shipments from India while the exchange control records refer to dates after the goods have been shipped from India, in respect of exports and when exchange is sold or transferred to foreigners in respect of imports.

Sometimes these differences may involve considerable variations in figures. The Reserve Bank reviews, being a later and a wider retrospect, have the additional advantage of being able to correct the errors and include the omissions in the Annual Accounts. The refinement in techniques is a continuing process and the next review will in all probability contain, among other things, new data on certain items of the capital account, which are now being collected.

The present review relates to the period, 1948-49 to 1955-56. Out of these eight years, the last five cover the First Plan. But in the sub-division adopted, for purposes of analysis, the first four years, 1948-49 to 1951-52 form the first phase, the two subsequent years the second and the remaining couple of years the last phase. While the broad trends in the entire five year period of the First Plan are described separately, the above-mentioned division into three sub-periods is presumably related to the presence of certain distinctive features in international production and trade. The first four years were generally marked by inflationary pressures and shortages to be followed by a mild recession over the succeeding two years. The last sub-period marked a general expansion of economic activity. In the Indian Union particularly, the international trends gaining momentum at the commencement of the period of review, found aggravated expression as a result of the partition.

At this distance, we are enabled to take a more sober and critical appraisal of the changes in trade policy with which India has been seeking to adjust the requirements of its domestic economy to the fairly sharp vicissitudes in international commerce. The legacy of the war was reflected in liberal imports for a time but by 1948-49, a huge overall current deficit in the balance of payments had arisen, to be met by a gradual intensification of import controls coupled with a virtual suspension of licensing of dollar goods for a time.

Then the Korean War threw up a situation of almost unprecedented advantage to India and the screw was once more loosened on imports; but only to swing back soon to a substantial deficit; which in turn called for the restoration and tightening up of controls. This period of successive alternations in policy with regard to controls ended by 1953, since when there had been a more or less continuous and careful attempt to link import policy primarily with the needs of development, with machinery, industrial raw materials and food-grains enjoying top priority and almost every other item made to explain its indispensability from time to time.

Likewise, the rigid export controls, the product of innumerable vital shortages were gradually relaxed in favour of liberalisation which, kept under temporary abeyance in the Korean War period, continues to date, with the accent growing more and more on promotional measures. Another significant development in the sphere of trade regulation is the tendency for tariffs to replace quotas, in view of the more intimate link between domestic industrialisation and trade.

In an overall view, the most encouraging feature of this period is the ease with which the First Plan was seen through, without making any hefty inroad on the country's net foreign exchange resources. The result was largely a surprise. Against an average annual current deficit of Rs 180 to 200 crores anticipated for the period, January 1952 to March 1956, which interpreted on the basis of 1948-49 terms of trade would have amounted to about Rs 700 crores, the actual current deficit for the entire period of the Plan turned out to be only Rs 125 crores. If official donations, which account for Rs 196 crores comes into the picture, there is a net surplus of the order of about Rs 15 crores per year for this period.

This unpredictably favourable position was made possible, mainly through the improvement in domestic food output, involving a saving of Rs 300 crores. On the negative side, there was also the circumstance that owing to delay in imports of machinery the scheduled construction work on steel plants and in the heavy electrical equipment industry had to be postponed beyond the Plan period. As a result of these developments, the foreign exchange reserves were touched only to the extent of Rs 121 crores against the anticipated decline of about Rs 290 crores.

Over the eight-year period, India's foreign exchange assets went down by about Rs 721 crores. Alongside, there was a net increase in foreign exchange liabilities, of Rs 22 crores. Thus, the total deterioration in the foreign exchange position amounted to Rs 743 crores. This figure might look unduly alarming. It would have been very much lower, but for the partition payments to Pakistan, the purchase of pension annuities from UK and the migrants' transfers. The outflow of private capital was only of the order of Rs 92 crores in the whole period. And for the last four years it dwindled into an annual average of Rs 6.7 crores.

In the sphere of trade relations, the pre-war regional pattern was tending to get restored, what with the decline in India's trade with the dollar area and expansion in its trade with the OEEC area. Trade between India and the sterling area was more uneven in its course, declining during the first sub-period and reviving subsequently.

The Personality of India's Mixed Economy—VII

AN ANALYSIS of the causes of economic decay during the greater part of British rule and of economic stagnation toward its end was attempted in the last article of this series as a working substitute for a theory of economic growth. It was seen that the twists and turns which were given to our national economy by the development of our foreign trade on the familiar colonial basis released many mutually aggravating forces which hastened the decline of productive activity throughout the country. The impoverishment of the rural areas was brought about because the reduction of purchasing power in the hands of one class inevitably reduced the productive activities which catered to the needs of that class; and, with every such reduction in productive activity, there was a reduction in purchasing power, and the chain lengthened itself, leaving only the minimum of subsistence farming to be continued by the common people. The same phenomenon accounts also for the stagnation of the national economy even after establishment of big staple industries like cotton textiles, jute, iron and steel, cement and sugar. For, in the conditions of general impoverishment of the masses, these industries would be powerless, even with much higher standards of efficiency, to move forward from the position of replacing imports to the position in which they could secure a steady and rapid increase in consumption and production of their goods. It would be well nigh impossible for them, within the limits of the consumption possible in those circumstances, to save and plough back their savings on the scale necessary to secure genuine expansion.

Besides these difficulties, there was also the fact that the country had not established the basic or key industries without which genuine industrialisation of a vast country like India would have been unthinkable. It is an interesting, but practically unseless, exercise to speculate on the extent to which industrial expan-

sion on the basis of imports of essential machinery could be effected. That it involves increased exports of raw materials in order to pay for the imports of capital goods is too obvious to call for more than a mention. Could India command surpluses of such raw materials on any large scale? Could the employment which expanding industries would provide be sufficient to induce sufficient consumer demand? Could costs and prices be kept low enough to ensure expansion of demand? These are the questions which the nation would have had to face, if the developments of the postwar years had not changed the complexion of the national economy and brought Government and people face to face with an apparently different set of problems.

In reality, the problems of the post-war period and the problems of the national economy, as they are now viewed in the present era of planning, are not as different from the problems of the pre-war years as is generally supposed. What the war and partition did was only to bring out in a specially aggravated and therefore inescapable form the shortcomings and weaknesses of the national economy, which even otherwise would have claimed the attention of even the foreign Government if it had continued in power. The problems of the national Government after the attainment of independence were the shortage of foodgrains, the insufficiency of ordinary consumer goods, the difficulty of importing producer goods on the requisite scale and therefore of increasing the output of goods at home. Considered in monetary terms, the problems were inflation and balance of payments. But these two terms are really a compendious description of a wide range of problems regarding production and consumption. Inflationary phenomena catch the eye of the public because war-time financing produced an effective demand where otherwise there would have been a simple want. Foreign trade problems, too, were recognisable because, thanks to our sterling balances, larger imports could be effected without having to pay for them by current exports. In such circumstances, monetary measures could be thought of not only as additions to the remedies to be adopted but also as steps which are intrinsically more important than those taken to increase production or regulate consumption.

But the root of the trouble lay in the fact that the possibilities of development on the basis of the old policies had been exhausted while the problems had been aggravated further by postwar inflation and the partition. This is best seen in the marked dissatisfaction which was felt all over the country and by all sections of public opinion with the policy of developing industries by the levying of heavy protective duties for a well nigh interminable period. It was seen in the growing weakness of our foreign trade, and the insecurity of our export markets, the inability to devise a new basis of exchange of goods with the rest of the world which would help further development. Even if the war had not intervened, and partition had not cut into our food and raw material resources, the Government would have felt called upon to tackle the national economy at its very roots. Since the advent of national Government coincided with the acuteness of these problems, the pressure to tackle them all together instead of separately or in a piece-meal fashion was irresistible.

The years before the inauguration of the First Five Year Plan were marked by controls to check inflation, a centralised administration of food and regulation of imports and exports alike in order to ensure the satisfaction of internal demand to the full extent that the conditions of the time permitted. The presence of sterling balances was a great help in this respect, since not only more imports had to be made, but exports had to be limited in consideration of the domestic demand for raw materials and such manufactured goods as cotton textiles. Relief from this difficult position came with the onset of a period of favourable monsoons. But the basic weakness remained, a weakness which could not be removed except by a planned attack on all of them from different sides.

The acceptance of the cult of planning thus had objective economic causes which, for purposes of a theory of economic growth, should be clearly distinguished from the ideological reasons for resorting to planning. For, while the developments in our national economy during the last one century, and particularly during the last few decades, show clearly that the decay cannot be checked or the foundations for progress laid without planning, there is nothing yet to show clearly that planning is equally necessary for economic growth. If we go by the theory of economic decline as discussed in these columns, we ought to distinguish between planning as a means of arresting decay and removing weaknesses and planning as a means of positive growth. The advent of a democratic Government in independent India, in the conditions of aggravated weaknesses and all too evident crises in our economic affairs, has made the advent of planning not only inevitable but also easy. But it has served to push the objective causes of planning into the background, so that they are unfortunately obscured by the subjectives aims of the supporters of the cult of planning.

As a result, it is assumed without question that centralised planning must be as efficacious in securing growth as in checking decay. The question must be asked whether the analysis of the causes of economic decline under British rule has any light to throw on the best method of stimulating growth. Such a question would seem to suffer from an inherent contradiction. For, it is prima facie impossible that knowledge of the causes of decline will show us anything more than the ways of preventing such decline in the future. But, if the economic system had in it the seeds of growth, which only the decline and the causes behind it effectively sterilised, it may well be that the removal of those causes and the arrest of the decline would be sufficient to induce rapid growth. This, of course, is at best a possibility. To urge that the growth of the national economy requires no more than a radical change from the basic conditions of the old era would be at least as dogmatic as to argue that, in the present conditions, planning is as necessary for inducing positive strength as for removing old weaknesses. Strictly speaking, one ought to keep an open mind on this issue.

There can be no doubt that, without planned development of irrigation and agriculture, the establishment of key industries in the public sector, the redistribution of national income so as to sustain a broader demand for consumer goods of various kinds, the national economy cannot move one step forward. But, once these basic conditions are ensured, it is by no means certain that a comparatively free economy will not be able to do more for raising the general standard of living than an economy which is subject to more or less complete central direction. Popular antagonism to private enterprise is based on the assumption that private enterprise necessarily implies profiteering gross inequalities of distribution, of income and indifference to the interests of the national economy, long-term as well as short-term. There are no limits to the power of a popular Government to purge private enterprise and ensure that the national economy will derive all the benefits of its initiative and drive without exposure to its evils. The picture of such private enterprise has not been effectively brought home to the public though, of late, American propaganda is directed to that end. The vast difference between American conditions and conditions in any other country will also deprive the American example of all its practical value.

The leeway to be made up by every underdeveloped country, which has laid the foundations of development, is far different from one which has not completed such spade-work. The difference is overlooked or altogether denied because, in the public mind, the economic grounds for planning and the political or other non-economic motives behind it are inextricably mixed up. But all talk of ideological impartiality is meaningless, if the two are not carefully separated and an attempt is made to see how far the non-economic aims require, for their attainment, the restriction of free enterprise.

BALANCE-SHEET REVIEWS

(Continued from page 172)

tion, amounts to only Rs 10,75,484 against Rs 12,84,690 in the previous year. The directors have, after setting apart Rs 3.25 lakhs (Rs 3.00 lakhs) for Depreciation; Rs 2.00 lakhs (Rs 3.00 lakhs) for Taxation and Rs 3.65 lakhs (Rs 4.15 lakhs) for other Reserves, reduced the dividend to Re 1 from Rs 1-8 per share.

The net profit of the Bhopal Sugar Industries Limited, for the year ended 30th September 1956, is substantially higher at Rs 8,66,510 as compared to only Rs 2,79,190 in the previous year. Out of the profits, the directores have provided Rs 5.50 lakhs for Taxation, including those for previous years for which the asessment and appeals are pending.

Production was higher at 86,591 bags as compared to 40,242 bags, the average yield per acre of the farms of the company being 31 tons against 26 tons in the previous year. The total quantity of cane crushed was 2,031,425 maunds, the average recovery being 9.27 per cent. The directors have, in this connection, stated that suitable measures are being taken to add new machinery. It is expected that, after the erection of one more mill and pan which have been ordered, the grading of sugar will improve and that the extraction will be higher.

The outlook for the current season appears to be very promising. Crushing operations were started on the 15th December last itself as the company expects larger supplies of sugarcane. The company hopes to continue crushing till the end of April and produce 85,000 to 90,000 bags of sugar—a rise of 20 to 25 per cent.

In the case of the Changdeo Sugar Mills Limited, the net profit amounts to Rs 1.49 lakhs after providing for full depreciation and development rebate aggregating Rs 12.45 lakhs. In all, 1,903,931 maunds of sugarcane were crushed to produce 73,379 bags of sugar, the average recoveay being 10.62 per cent.

Production, during the current season, is estimated at anything between 100,000 to 110,000 bags as compared to 73,379 bags in the previous season. This is mainly due to the increase in the crushing capacity of the factory from 500 to 700-800 tons per day by adding new machinery of the value of about Rs 28 lakhs.

In this connection, it would be recalled that this company, during the year under review, capitalised Rs 22.50 lakhs out of the Reserve and issued 1.80 lakh Ordinary shares of Rs 12-8 each as bonus in the proportion of three shares for every two shares held as on the 1st October, 1956.

£ R$

Birds Investments

Birds Investments Limited has reduced the dividend from 12½ to 10 per cent on the Ordinary shares for the year ended 30th September, 1956. The profits have declined by Rs 1.24 lakhs to Rs 3.49 lakhs. The amount set aside for Taxation is lower at Rs 1.30 lakhs. The carry-forward to the next year is lower at Rs 37,162 against Rs 1.16 lakhs brought in from the previous year.

The directors have, in their report, stated that the dividends from tea, investment and miscellaneous companies have shown some improvement; but this is offset by substantial decrease in the dividend from jute mills, collieries, paper mills and mining companies.

The Kashmir Resolution

In India and in many other countries, the UN Security Council's Resolution on Kashmir would be regarded as farcical. The Resolution was drafted before the Indian case was presented; its principal supporters are in military alliance with Pakistan. It would have been more naive on the part of these powers, if they had at least waited for a couple of days more and listened to Mr V. K. Krishna Menon. Even then, the result might not have been different nor the international alignment over the Resolution. But, at least the dignity and status of the Security Council would have been left unimpaired.

The wording of the Resolution, its sponsorship, the time of its drafting and the hurry with which it was put to vote, betray a hostile conspiracy against India. The broad division of opinion reflected in the Resolution is not a matter of surprise; what is surprising is that a few nations have chosen to demonstrate their antipathy to the Indian Union in an unconcealed manner. It is this circumstance which might lead to the most damaging consequences conceivable.

A balanced discussion of the Kashmir situation ought to take stock of Pakistan's role as the aggressor power and of the facts which compelled the Indian Union to resort to a more workable alternative to the plebiscite which, incidentally, was only a unilateral commitment. Neither morally nor politically could the Indian Union feel itself justified on an indefinite continuation of a tentative status for Kashmir. While the present Resolution disapproves of the attempts to confirm the affiliation of Kashmir to the Indian Union, as not in accordance with the principles of a plebiscite, there is scarcely any mention of the developments, which incapacitated India for holding a plebiscite.

How exactly a negative Resolution of this character could be helpful to Pakistan in any way is beyond our ken. The satisfaction and enthusiasm with which Pakistan has greeted the event will either be self-delusion or part of a tactics for following it up in other ways.

Pakistan's intentions are not clear. Mr Shuhrawardy cannot err in the calculation of the consequences of any move. Threat of an attack on Indian Union territory is held out by some prominent Pakistani spokesmen. The practical significance of this threat should inevitably be linked with the measure of understanding and vision with which the powers mainly responsible for Pakistan's military strength and confidence assess the situation. An independent initiative cannot also be ruled out.

*

Prospects for West Bengal

Seldom does a Governor's address to the legislature receive such harsh comments as Miss Padmaja Naidu's address to the joint session of the West Bengal Assembly and Council this Monday did. The Opposition members described the narrative as irrelevant, untruthful and misleading. That the election mood coloured the entire atmosphere was obvious. But the suggestion that there should be a motion for thanks without a debate carried an element of unfairness about it. A compromise was later arrived at.

The fault of the address was mostly that of the events which the past year brought for West Bengal. There was an unwieldy influx of refugees from East Bengal; and the new avenues of employment discovered for the refugee population could not be anything more than a scratch. What is praiseworthy is the new direction of policy. Cyclones and floods made substantial contribution to mass misery; the Government, on the whole, acquitted themselves well in handling the situation caused by these natural calamities. Food prices remained high; but the Address attributes the phenomenon more to the fall in the value of money caused by inflation than to any intrinsic worsening of the supply position.

These setbacks and upsets were somewhat balanced by the improved state of industrial peace, progress in education, medical aid etc., and the advance or completion of development projects, most notably the Mayurkashi Reservoir. These latter provide the foundation for more extensive prosperity in the years ahead. Commercial enterprises undertaken by the State have a better record to show. That at Rs 154 crores, the expenditure on the Second Plan in West Bengal is about two and a half times what was spent on the first Plan is a rough indication of the overall improvement in sight. The record of a rather unfortunate year could be balanced with the undoubtedly bright assurance for the future.

*

An Ominous Issue

The issue on which the President of the Non-Gazetted officers' Association, Madras, has resigned is one of vital national importance. Put in a nutshell, it is simply this: Is it proper and necessary for State employees agitating for improvement in conditions of service, to accept the direct leadership of politicians, in furtherence of their aims? With the growing extension of governmental functions, the number and strength of organisations of State employees is also bound to increase.

Such organisations have invariably enlisted the support of members of the legislature. Even if the employees were to be indifferent to the assistance coming from this source, party leaders are not likely to miss the opportunity involved. The championship of aggrieved sections of State employees by the members of legislatures is a familiar feature of public life in any democratic country.

But beyond that, if political leaders, even if they belong to the ruling party, are drawn into the agitation as direct participants, as is already being done in more than one case, and if the tradition is to develop, the State may, in course of time, come to be confronted with most unenviable situations. For one thing, any section of Government servants can throw up competent leaders from among themselves for their organisations; for another, the entanglement of Opposition party leaders cannot but result in an undermining of the employees' loyalty to the State, in howsoever subtle or initially innocuous a form. The practice should be disapproved lest, the whole governmental machinery become enmeshed by factionalism and intrigues of a very dangerous type.

As for the grievances of the NGO's in Madras, they have already received a general assurance from the Chief Minister that their emoluments would be gradually made to correspond with those of comparable grades in the Union Services. Other States, financially less favourably placed than Madras, might well envy this prospect.

Again, it seems to us that the rationalisation of emoluments in Government services is not likely to be achieved with fairness and finality, except with reference to criteria applicable to the country as a whole. Between the Union and State Services, the practice obtaining in other federal countries may offer some guidance. As a number of factors have to be taken into consideration, such as the comparative capacity of States, the cost of living in different regions and the comparableness of work done, it is desirable that sooner or later the entire problem is thrashed out by a special national body.

*

Power Does'nt Lure

While ceilings, achieved or attempted, are the rule, in contemporary national economy, the percentage of women for Congress candidates in the forthcoming elections, is regulated by a floor—fifteen per cent. In Madras, a harassed selection committee dutifully laid their net wide, but could not secure more than about half the number required. It is a pity that the fair sex has thus badly let down the ruling party. Even in Kerala, the response appears to be inadequate, which is all the more puzzling. Kerala boasts of a larger percentage of literate and graduated women than any other State in India. However, this haughty indifference will not pierce any soul; after all the party has no soul.

In the North, there is at least one case of a frantic, tenacious competition between a husband and wife for a Congress ticket, ending, as most of us would like to have it, in the victory of the lady. The unchivalrous gentleman was beaten hollow, and if the news reports are to be relied on, he had to return humble, crestfallen and thoroughly submissive

World of Finance

Bank Rate Atmosphere

IN FULFILMENT sooner than we hoped for, the process away from dear money, the prospect of which in the course of 1957 we forecast as the old year was being rung out, has gathered significant momentum in London in the past few weeks. There is persistent discussion of the imminent possibility of a lowering of the Bank of England rate. Treasury Bill rates have recorded substantial decline; and giltedged prices have risen in strident style. Till a short while ago, Authority was proclaiming from the housetops that it was determined to crush out inflation, and that, toward this end, credit squeeze would be ruthlessly pursued, no matter how grave was the hurt it inflicted. The tune heard since the last week is that credit liberalisation is now the official policy, and that the enemy to be defeated this time is deflation. The orthodox pundits, who had been goading the Government to tighten the screw further and further, will not be prepared to own that the Bank Rate technique had failed to produce the results expected of it; but the general argument is that the Suez affair has transformed Britain's malady from inflation to deflation. It is not necessary to examine, in this context, the virtues or otherwise of the credit squeeze; and it will suffice to hail the revived policy of liberalised credits as one showing a realistic appreciation of the needs of the current economic situation in Britain.

While, in a week or two, the Bank of England rate will be stepped down from 5½ per cent to 4½ per cent, we have, in this country, a weekly speculation on a rise in the Reserve Bank rate, despite impressive manifestation of selective monetary control effected, from time to time, in appropriate and flexible style. Over the past one month, the stock exchanges in Bombay and Calcutta have been buzzing with rumours of a higher Bank Rate, the rumours becoming active each Tuesday and quietening down by Thursday morning. The bears, already equipped with powerful weapons, strengthen themselves with the Bank Rate weapon every mid-week. The gulls are taken in, despite the recurrent falsification of the beartale. It is true that money rates rule at firm levels; but call money at 3½ per cent and over, and allied rates at correspondingly high levels are no severer than what have been anticipated by those who have made a close study of the special circumstances in the current busy season. When the Finance Minister declared, unequivocally, that a rise in Bank Rate would not be in the interest of India's economy as it is now, he was fully alive to the influences, present and prospective, in the Indian banking system. While industrial shares have been repeatedly subjected to the scare of a higher Bank Rate, giltedged stocks have not only remained immune to such alarms, but displayed a remarkable revival of activity and upsurge in prices. The Reserve Bank has officially announced its readiness to buy securities maturing up to 1961, but it is known that it will, when necessary, extend its open market purchases to other securities, too. This change in the attitude of the Central banking institution is now recognised as a signal for a rising pattern of giltedged prices. For its part, the Reserve Bank has not had to make any large purchases; but the changed open market strategy has produced magical results. Bears in the 3 per cent 1986 loan have had to cover their sales in a hurry; and the prices, not only of this stock but of other medium-longs, have responded strikingly. It is now realised that the market is bare of floating stocks; and this is the combination of circumstances which favours a resumption of a confident open market strategy. Let there be no more faltering, no more craven succumbing to defeatist ideas of the future of giltedged. Let there be, above all, no repetition of the kind of disastrous policy which preferred a spineless apathy while 3 per cent 1986 loan was sliding headlong from Rs 81 to Rs 73. Whoever was responsible for this supine policy, it has done incalculable harm to the prospects of market loans needed for the success of the Second Plan. Mr T. T. Krishnamachari's advent to the Finance Ministry has, we are happy to record, wrought a timely change in the giltedged outlook of Authority and public alike.

+

To return to the Bank Rate: on Thursday morning, the Reserve Bank announced that Bank Rrate was "unchanged". Toward the evening, however, the following communique was issued:

> "With effect from the 1st February 1957, the rate of interest on advances to scheduled banks against Government and other eligible Securities under Section 17(4)(A) of the Reserve Bank of India Act, 1934, has been raised to 4 per cent per annum."

Here is further testimony to the flexibility of a policy of qualititive control as opposed to Bank Rate policy. The most important point to note here is that the increase now announced applies only to Scheduled Banks, and also only to the advances made to Scheduled Banks against "Government and other eligible securities." The change is applicable only to sub-section (4) (A) of Section 17, and not to the other sub-sections. Particularly is it to be noted that Scheduled Banks will get advances on usance bills at Bank Rate, which continues at 3½ per cent. Nor does the present increase apply to co-operative and warehouse loans.

That the rise of ½ per cent is limited to advances on Government and eligible securities deposited by Scheduled Banks is in pursuance of the developments arising firstly from the recent increase from 3½ per cent to 3½ per per cent in respect of advances on usance bills and secondly from the enhanced stamp duty which is effective as from February 1.

The result of these two factors is to bring up the cost of central bank credit on usance bills to the level of 4 per cent. If Scheduled Banks had continued to enjoy the option to borrow on Government securities at Bank Rate, they would have shown increasing preference for this mode of replenishing their resources. The bill market scheme would thus have suffered a setback. It is clearly the intention of the Reserve Bank authorities to induce banks more and more in favour of the bill market scheme.

The increase to 4 per cent in the rate under Section 17(4)(A) would doubtless confirm the other money rates at the present firm levels. Call money rate as applicable to inter-bank credits as well as to house money may even register a slight increase. It is also likely that the rate charged by Scheduled Banks to their clients may be suitably stepped up. But the point to emphasise is that, on the one hand, industry and commerce can take the extra ½ per cent or so in their stride; and that, on the other hand, the agriculture sector will continue to enjoy special facilities. It may also be

(Continued on page 205)

BANK PROFITS

The latest instalment of bank profits includes the results of the State Bank; and the comparison has to be made as to the previous year with figures for Imperial Bank for the first half and for State Bank for the second half.

*

The State Bank's net profit in 1956 amounted to Rs 1.56 crores against Rs 1.36 crores for Imperial-State in 1955. The dividend absorbs the same amount at Rs 90 lakhs. The transfer to Pensions funds is slightly higher at Rs 6.14 lakhs compared to Rs 5.75 lakhs. The extra Rs 20 lakhs of profit has gone toward (1) a transfer of Rs 2.50 lakhs to the Reserve Fund; (2) an allocation of Rs 10 lakhs for the Staff Amenities Fund; and (3) in adding to the carry forward by slightly more than Rs 7.50 lakhs to Rs 41.91 lakhs from Rs 34.37 lakhs.

*

The Habib Bank Limited (all figures in Pak Rs) has announced a net profit of Rs 5.06 million for 1956. The interim and final dividends absorb Rs 4.12 million; and the carry-forward is Rs 1.05 million against Rs 0.11 million brought in.

*

The Lloyds Bank Limited has reported an increase in profit by £0.22 million to £2.54 million. The dividend proposed, at 13 per cent, marks an increase of one per cent over 1955.

Deficit Financing for Rs 15 Crores

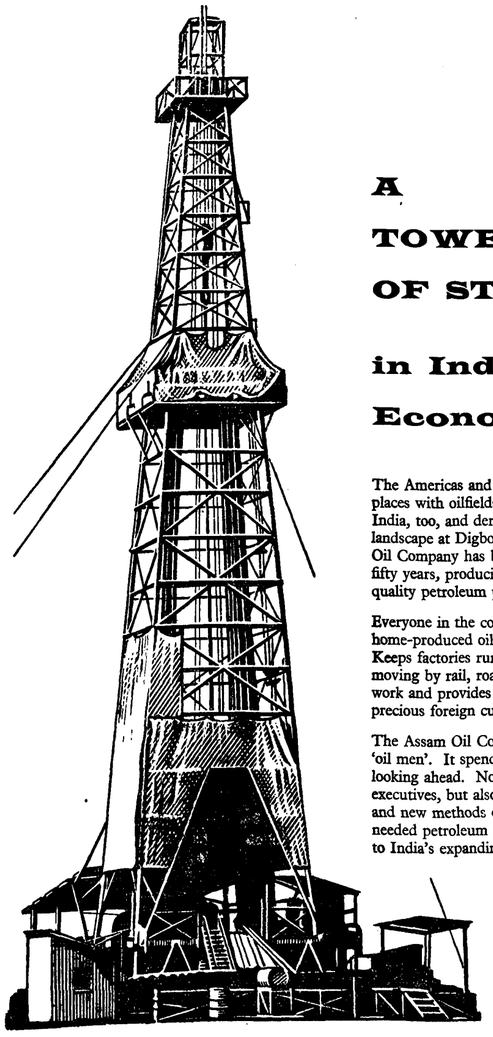
As 1956-57 draws near its end, the pace of deficit financing is, notwithstanding Mr T. T. Krishnamachari's assertion to the contrary, getting brisker. While the second and third quarters witnessed a much smaller dose of created money, possibly owing to the remarkable success of the Centre's New Loan, the fourth quarter would appear to have started off at a tempo of deficit financing that is on a par with the pace obtaining in the last quarter of 1955-56. These facts relating to created money are seen revealed in the Reserve Bank returns during January.

The statement of the Reserve Bank for January 25 indicates that ad hocs have been sold in its favour for Rs 15 crores during the week; and the expansion in Rupee Securities, presumably most if not all of it by sale of ad hocs to the Reserve Bank, has totalled nearly Rs 55 crores in the period 28 December 1956 to 25 January 1957. In the corresponding period of 1955-56, the expansion in Rupee Securities was slightly less than Rs 50 crores. Deficit financing in the last quarter of 1955-56 amounted to Rs 140 crores. The apparent implication is that January/March 1957 should account for deficit financing of like size, if not more. What, however, we wish to emphasise in this connection is that, even on the basis of a speedened tempo of created money, the net rise in Treasury Bills outstanding during 1956-57 must fall far short of the Rs 350 crores or so budgetted by Sir Chintaman Deshmukh in February last year. Our own view continues to be that deficit financing in 1956-57 will not far exceed Rs 200 crores.

The Reserve Bank returns for January 25 show a drop of Rs 5.37 crores in Active Note circulation. Since the expansion in Rupee Securities was for benefit of the Centre's balances, there has been contraction for Rs 14.90 crores against Foreign Securities by transfer to the Banking Department. With Rupee Coin returning from circulation for Rs 0.54 crores, the Reserve Bank's cash in the till has improved by a further Rs 5.90 crores to Rs 23.56 crores.

(Continued on page 206)

A Semi-Flexible Sterling?



By PAUL EINZIG

STERLING'S firmness since the conclusion of the arrangement to provide additional dollar facilities from the International Monetary Fund in December 1956 gave rise to a wave of optimism in Britain. The possibility that sterling might soon reach its upper limit of $2.82 is now widely envisaged. In face of a buying pressure the rate would then be held at that figure by the Exchange Equalisation Account which would take up the surplus supply of dollars in the London market. As a result the gold and dollar reserve would increase. After its decline during the second half of 1956 such an increases would be very welcome. For the addition of substantial amounts as a result of the arrangement of dollar facilities constitutes no genuine strengthening of sterling defences. Those facilities will have to be repaid sooner or later, and should they have to be drawn upon extensively, the anticipation of their eventual repayment would necessarily add to the pessimism, concerning the prospects of sterling in the long run. No such considerations arise if the reserve increases as a result of dollar purchases by the Exchange Equalisation Account, even if the counterpart of the additional gold is represented by an increase of foreign sterling balances which are subject to withdrawal at short notice.

The optimism concerning the prospects of sterling in the near future gave rise to a new suggestion—that, when the rate reaches the figure of $2.82, the authorities should not intervene to arrest its further rise beyond that figure. It is suggested that Britain should follow the example of Canada, by allowing sterling to go to a substantial premium if that is the natural trend of the market. This suggestion represents compromise between the official policy of maintaining sterling within 2 cents on either side of the parity of $2.80 and the idea of a 'flexible" pound with no limits to its fluctuations, advocated in many influential quarters. It is quite obvious that Mr Macmillan is committed to the prevention of any depreciation of sterling. On the other hand, he is not committed to the prevention of an appreciation of sterling. The Government's determination to prevent a depreciation below $2.78 is as firm as ever. It is incompatible with the adoption of the flexible system. It is not incompatible with the adoption of a semi-flexible system under which sterling would be rigid in face of a selling pressure but flexible in face of a buying pressure. Many of the supporters of the flexible system, realising that their proposal stands no chance of being adopted under the present Government, would now be quite willing to support the semi-flexible system as the next best thing to their proposal from their point of view.

A great advantage of the semi-flexible system as compared with the flexible system is that it does not do away with the lower limit of $2.78, the rigid maintenance of which is practically the only safeguard Britain has against nonstop and accelerating inflation. It is too tempting for Chancellor of the Exchequer to take the line of least resistance and to allow sterling to slide rather than take unpopular disinflationary measures if this course can be taken without grave loss of prestige. If virtue is made of necessity by laying down the rule that a depreciation of sterling under market pressure is a respectable monetary system, it would be politically impossible to adopt measures such as the credit squeeze or instalment credit

(Continued on page 205)

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

A member of the Burmah Group of Oil Companies

ASSAM OIL COMPANY does it all

World of Jute

Ample Supply of Raw Jute During 1956-57

WITH the All-Indian Second Estimate of Mesta. 1956-57 putting the current year's area and production at 695,000 acres and 1,430,000 bales, the prospects of raw jute supply during the jute year 1956-57 have become much brighter than earlier considered probable. It may be recalled that the all-India final estimate of jute for 1956-57 has put the current year's area and production at 1,883,000 acres and 4,221,000 bales showing an increase of 144.000 acres or 8.30 per cent in area and 24.000 bales or 0.6 per cent in production over last year. Taking jute and mesta together, it will be found that the Indian jute and mesta crop on the basis of Government estimates, come to 5,651,000 bales. Adding to this the actual mill stocks at the beginning of the current season, we arrive at the figure of 6,635,000 bales. As against this, there are the estimated IJMA mills consumption of 60 lakhs bales, that of mills outside IJMA of 2.2 lakh bales, and Indian domestic consumption of 2 lakh bales making up a total of 64.2 lakh bales. It will be seen, therefore, that even on the most conservative estimates of the Indian jute and mesta crops, the raw jute supply position during the current jute year is quite satisfactory. It may be noted that we have not included in our calculation, the stocks with mills outside IJMA (0.39 lakhs bales), and Indian Carry Forward (trade estimate 2.47 lakh bales). If these items are included, it will be found that even on the basis of the production of raw jute within India, there will be a surplus of supply over demand of 5.01 lakh bales. Again we have another item to be included: Import of raw jute into Calcutta and Mill stations from Pakistan during the last six months amounting to 3.81 lakh bales. This will bring the total supply of raw jute in the country during the current jute year to 73.02 lakh bales as against an estimated demand of 64.2 lakh bales. Even supposing that not even a single bale of raw jute will be received from Pakistan during the whole of the remaining six months of the jute year, it is evident that Indian jute mills have no cause for worry as regards the supply of the raw material for their working till the new crop arrives.

An irregular tendency prevailed in the jute goods market due to alternate bouts of buying and selling in the fatka by speculators. The market which began the week on a quiet note due to paucity of buying support became active as soon as the UN decision on Kashmir was made known. With shippers evincing interest in the proceedings and in the absence of sellers at prevailing levels, prices were marked up sharply. Hessian 40x10 oz Ready which opened at Rs 43-10 advanced to Rs 44-2 with B Twills Ready moving up to Rs 116-12 from Rs 115-6. On Monday, sentiment continued to be confident though the recent improvement was fully maintained only with regard to B Twills. The reason for the special interest in B Twills was the news received on that day that Government had placed an order for sackings on behalf of Sindri. Trade circles were also expecting more orders from Government. While Hessian 40x10 oz Ready was shaded at Rs 43-13 B Twills Ready was comparatively steady at Rs 116-8. Dull conditions prevailed the next day with the Sackings section, however, displaying continued steadiness with B Twills ready quoting at Rs 117-1. Due date considerations exerted strong influence on the market on Wednesday in the absence of genuine foreign business. B. Twills Ready were the worst sufferer as its quotation was hammered down by bears during the day to as low as Rs 116-4. Hessian 40x10 oz was also easier in sympathy at Rs 43-6.

The following table shows the week's opening and closing prices.

	Week's Opening. Rs. a.	Week's Closing. Rs. a.

USE OF BURLAP BAGS INCREASING IN USA

US consumption of burlap for conversion into bags in the first nine months of 1956 recorded an advance of 7.5 per cent over the same period a year ago, reports the Jute Bulletin of the Indian Central Jute Committee.

To keep up consumer interest in continued use of burlap bags, the Textile Bag Manufacturers' Association has decided to spend $60,000 on a bag promotion programme in 1957.

A significant factor in the increased use of burlap bags in 1956, according to an authoritative source, is the 50-lb potato bag which is enjoying wide consumer acceptance. The use of 50-lb bags in the US is reported to have increased 50 per cent during January-September 1956.

World of Tea

Good Demand at Easier Rates

AT the Export Sale in Calcutta this week, offerings consisted of 68,700 packages for which there was a good general demand at easier rates. Once again, bright liquoring teas were keenly competed for and these, together with good Medium Assams, were generally sold at dearer rates. The bulk of the Common and Medium offerings were, however, upto As 2 per pound easier. Fannings were again more popular than Brokens. Thin liquoring and stalky Broken Pekoes were the weakest feature of the sale and many lines were withdrawn. Although slightly easier, CTC teas received better support than in recent weeks and a few of the bright liquoring invoices were sold well.

Well-made Whole Leaf grades were a strong feature of the sale and were from one to two annas per pound dearer, while stylish BPSs were also a little stronger. Tippy sorts were in very strong demand and were generally selling As 2 to As 4 per pound above last rates. Darjeeling teas, on offer, were again neglected. Following rates were quoted per pound:—Clean Black Pekoe Rs 2-3-6 to Rs 2-4-0; Plain BP Rs 1-15-6 to Rs 2-0-0; Medium Assam BP Rs 2-1-6 and Best CTC Assam BP Rs 2-9-0 to Rs 2-10-0.

In the Internal Sale, offerings amounted to 24,095 packages of Dusts for which there was a fair general demand, but prices again showed a further decline. The only teas to sell at about valuations were the few lines of bright liquoring CTC Assams, but the remaining offerings of this description were from one to occasionally two annas per pound easier. All other kinds were upto As 2½ lower although the black leafy types were the strongest feature and were fairly well supported. Following rates were quoted:—Medium Dooars Dust Rs 1-12-6; Medium Assam grainy Dust Rs 1-13-0; Medium Assam CTC Dust Rs 2-1-0 and Best CTC Assam Dust Rs 2-9-0 (nominal).

A total of 2,950 packages of other grades were also offered for internal consumption. There was a fair general demand, but generally at one to As 2½ below last rates.

In the Export Quota section, rate opened at 36 pies and developed a hardening tendency to 39 pies per pound at the close of the week.

A total of about 1,888,380 pounds was offered at the Sale No. 2 held in Cochin. Of this, 16 per cent had to be withdrawn as it mainly comprised reprints. Quality from all districts generally showed improvement. There was a good general demand, but prices were very irregular, especially for the better liquoring descriptions.

Useful support was given to best liquoring Nilgiris at rates which were most irregular, while lesser high-growns met with restricted inquiry. The Plainer ones, when sold, were up to As 4 per pound easier. Enquiry for good medium descriptions was strong while low-grown Brokens found buyers at a drop of one to two annas below valuations, while similar Fannings were sold at around last rates.

Black Leaf Borkens were one to two annas easier, but their Fannings met with rather more support and declined to a lesser extent. Whole Leaf grades were the weakest feature of the sale and registered a drop of As 3 to As 4 per pound. Plain BP was quoted at Rs 2-0-0 (nominal); Low Medium BOP Rs 2-2-6; Medium BOP Rs 2-4-6; Good BOP Rs 2-8-0 and Well-made OP Rs 2-7-0.

In the sale held at Colombo last week, there was a good demand. The finest liquoring teas were firm on last rates, while other high-growns declined by 20 to 40 cents per pound. Medium descriptions were 20 to 30 cents easier, while low-growns registered a drop of 10 to 20 cents per pound. The lower BOP Fannings met with useful enquiry, but tended easier. Quotations for BOPs were as follows:—Best high-growns 3.05 to 4.31; High-growns 2.20 to 2.95; Mediums 2.00 to 2.35; Low-growns 1.95 to 2.15 and Plainest 1.90.

Meanwhile, Ceylon produced 36 million pounds of tea in December last, bringing the total production for 1956 to 375.6 million pounds as against 31.3 million pounds in December 1955 and 380.0 million pounds for the whole of 1955.

Tea prices at the past week's auction, held at Mincing Lane, mostly recorded a firm to dearer tendency. Plain Broken was finally indicated at 62½d per pound as compared with 62d in the previous week. As a result of Tally Clerks' withholding their labour, the unloading of tea was delayed and the quantity, originally printed for sale at over 81,000 packages, was reduced to under 65,000 packages. In addition to reducing the amount of tea available for auction, the strike was also responsible for the diversion of three ships to the Continent.

The demand for the smaller quantity of tea, finally catalogued

World of Business

Capital Goods Imports

THE policy to be followed by the Government of India in respect of import licences for capital goods in the private sector, as set out in an official communication to the Federation of Indian Chambers, is likely to create a rather forbidding first impression. It may appear to convey that there is some discrimination between the public and the private sectors in the facility afforded for the import of capital goods.

Actually, what is proposed to be done for the public sector is not mentioned, as it is outside the scope of a communication of this character. Presumably, the Government will see that the import of capital goods intended for the industries in the public sector is also governed by the same considerations as are being applied to industries in the private sector. Priorities specified for one group are pertinent to others as well.

The Government are alive to the possibility of frozen investment, if the import of capital goods is interfered with, in a manner affecting the continuity of progress of industrial installations, irrespective of the sector to which they belong. The letter says that if the foreign exchange for any product has already been released to the extent of about 90 per cent, the balance of 10 per cent may well be released so that what has already been spent may not be rendered infructuous.

As it is, the priorities to be observed are unobjectionable. Those items whose import is essential for maintaining the economy at its present level of activity will come first; schemes for new development, however, important and desirable in themselves, will generally take second place. Two other points will also be relevant. The first is whether the raw materials needed by the project on completion would be available from indigenous sources or would have to be imported necessitating further foreign exchange expenditure. The second is how soon the project is completed, so that it starts earning or saving foreign exchange by its production. The very low figure of the amount allocated for the import of capital goods for new schemes will not lead to any dislocation.

Import licences for capital goods will, therefore, be issued only in cases where Government are satisfied that there will be no appreciable increase in foreign exchange payments for some considerable time to come. Applicants are asked to explore ways and means of reducing their immediate foreign exchange requirements to the minimum. They may secure foreign capital investment in their undertakings to the extent at least of the value of the plant and machinery to be imported. They may negotiate for long-term credit from the overseas suppliers of machinery and other similar sources. The third alternative suggested is that applicants should try to secure credit in the appropriate foreign currency from lending institutions which have been set up for this purpose in different countries.

World Overseas

US Notes

THE United States Department of Commerce has just issued a new-and in a sense, revolutionary—study which takes a comprehensive and realistic look at US private investments abroad. It answers in large part a question that has long concerned economists and businessmen: how to appraise the benefits of capital?

Investments By U. S. Companies In Other Lands:

Based on the experiences of about 85 per cent of—100—US concerns operating in Latin America, the study's lessons are of unmistakable value to all parts of the world, particularly the less-developed areas in need of outside capital. One major finding of the new study is that U.S. companies produced nearly 5,000 million dollars of goods and services in Latin America in 1955. This accounted for about 20% of the net output of Latin America industry.

Exports by U.S. companies accounted for 30 per cent of all Latin American exports to all parts of the world, including the United States. These export sales, plus net capital inflows from the United States, totalled some 2,300 million dollars. The U.S. companies spent about 1,300 million dollars to import materials and equipment into Latin America. This made up about 10 per cent of all Latin American imports. A significant part of these imports consisted of capital equipment needed in the area. On balance, then, Latin American countries gained a net foreign exchange return of about 1,000 million dollars as a result of the operations of U.S. Companies in that region.

In addition to their exports, U.S. companies produced some 2,500 million dollars of goods for local use in Latin America, goods that helped meet many of the areas vital industrial and consumer needs. Any of these goods would otherwise have had to be imported. Their local production constituted, in effect, an additional saving in foreign exchange.

The study also shows that the U.S. companies generated a considerable portion of total Latin American income. Their wage and other payments to employees came to nearly 1,000 million dollars in 1955. In all, Latin American subsidiaries and branches of U.S. companies employed more than 600,000 persons, of whom fully 98.5 per cent were Latin American nationals. Of a total of 46,000 supervisory, professional and technical employees, no fewer than 37,000 were local residents.

U.S. companies also spent 1,800 million dollars in Latin America for materials and supplies, and paid more than (1,000?) million dollars in direct and indirect local taxes. These tax payments amounted to 15 per cent of all governmental revenues in the area, and 30-40 per cent of all direct taxes on income and profits.

Gross investments by U.S. companies in Latin America in 1955 totalled nearly 600 million dollars, including about 425 million dollars for new productive facilities. What is more, investment activity by U.S. companies was even greater in 1956, and is continuing at a high rate.

There is, unfortunately, no accurate way of measuring statistically the contributions made by local labour and resources to the U.S. companies operations. By the same token, however, the study measures only the direct impact of U.S. investments, not the varied indirect benefits. Among the latter would be, for instance, the influence of consumer spending by local employees of U.S. enterprises on the area's economic vitality and social well-being. But even with these qualifications, the study shows that the benefits of U.S. private investments, undertaken in partnership with the people of the host countries, go far beyond earlier evaluations, which were confined largely to balance-of-payment aspects.

This new investment study appears in the January issue of the Commerce Department's monthly publication, A Survey of Current Business. In preparation are other and even more detailed analyses of this important stimulus to economic progress.

*

Canada

THE economic upswing of 1955 has continued with sustained vigour throughout the current year. The result has been a period of accomplishment in many ways without equal in Canadian history. In the brief space of two years, overall physical output has risen by about one-sixth. This is the equivalent in dollar terms of roughly six Canadian wheat crops or one-third the output of the entire North American automobile industry.

More fundamental even than the rise in output has been the tremendous strides toward further development of Canada's resources and widespread additions to productive capacities generally. Industries based on the newly developed resources of oil, natural gas, iron ore and uranium have continued their meteoric advance, and now hold positions of ever increasing prominence in both national and continental markets. Production of these key materials within our own borders adds tremendously to Canada's industrial stature and to the solidity of the economy. Yet, outlays in these fields, though large, constitute but a minor part of the overall volume of resources directed toward expansion of capital facilities. Capital expansion in 1956 has been proceeding, not only on a broader scale, but is actually increasing at a more rapid rate than at any previous time in the post-war period. Opportunities for new investment in Canada have become increasingly attractive, not only to Canadians but to business interests the world over. Industrial growth has, therefore, been facilitated by a record inflow of capital in the form of both direct investment in specific undertakings and security purchases, attracted by prospective yields in the Canadian market. This external participation in Canada's development has been a key factor in sparking the currently high rate of expansion. At the same time the accompanying capital inflow has provided the means to pay for the tremendous upsurge in imports needed to service this expansion.

With the aid of this influx of resources from abroad, the substantial step-up in capital outlays has been achieved alongside a continuing rise in exports and a further improvement in the living standards of Canadians. Moreover, in the face of a generally strong demand situation, increased imports and a strong Canadian dollar have helped to counteract upward pressure on prices. Although the consumer price index has been rising for some months, the rate of increase has been moderate and of about the same magnitude as that occurring in the United States. In short, increased foreign participation in Canada's development has made possible a rate of growth which, to achieve otherwise, would have involved substantially more dislocation in our business life and extensive sacrifices on the part of Canadian consumers.

Production :

Canada's Gross National Product in 1956 has surpassed the 29½ billion mark, roughly 11 per cent above the level of the previous year. Moderately higher prices have contributed to this increase. After allowance is made for this factor,

Industrial Information

Over 8 Million Tons of Shipping Under Construction in World's Shipyards

There were under construction in world's yards 1575 ships totalling 8,065,068 gross tons as on the 31st of December 1956, showing an increase of 1,452,427 tons compared with the position a year ago, according to the shipbuilding returns of the Lloyd's Register of Shipping just to hand. On the same date India had 13 vessels totalling 23,685 tons under construction in her own yards, four of them being sea-going motor vessels of 4,000/6,000 tons each totalling 20,658 tons and the rest small vessels totalling 3,027 tons, all under 1,000 tons each. India had also 10 vessels totalling 47,307 tons in foreign yards, of which 7 of 34,857 tons were under construction in Germany, one of 4,450 tons in the UK, one of 6,450 tons in Japan and one of 1,550 tons in Netherlands. There were therefore in all 23 vessels totalling 70,992 tons under construction in Indian and foreign yards for registration in India.

The tonnage under construction in the leading shipbuilding countries, with the increase (+) or decrease (−) over the year in brackets is as follows:—

UK	...	2,135218	(— 90,972)
Japan	...	11,364,190	(+532,245)
Germany	...	798,772	(+ 50,098)
Italy	...	657,529	(+198,630)
Netherlands		599,780	(+ 90,750)
France	...	498,899	(+ 97,114)
Sweden	...	485,218	(+114,902)
USA	...	294,885	(+190,565)
Norway		243,140	(— 2,883)
Spain	...	181,479	(+ 13,348)
Denmark	...	147,558	(+ 13,165)
Belgium		136,750	(+ 17,375)
Finland	...	126,497	(+ 49,617)
Poland*	...	124,816	(—)
Yugoslavia	...	99,536	(+ 9,576)

*The Lloyd's statistics, for the first time, give figures for Poland, which it is observed were 'included at the express wish of the Polish Government who supplied them".

Of the total tonnage under construction in the world's yards, viz 8,065,068 g.r.t. 1,837,540 tons are for registration in the UK, 946,728 tons in Liberia, 854,633 tons in Norway, 524,200 tons in Panama, 498,024 tons in the Netherlands, 465,883 tons in Italy 428,780 tons in Japan, 356,230 tons in the USA, 303,474 tons in France and 226,324 tons in Germany. The two war-shattered countries, Germany and Japan are, it may be noted, completely depending on their own yards for making additions to their merchant fleets. Italy is also doing likewise, except for one small ship of 1,550 tons.

BOAC CHAIRMAN VISITING INDIA

Mr Gerard d'Erlanger, Chairman of BOAC, left London Airport on January 21 on his first tour of the Corporation's eastern routes. He is flying across the world in easy stage to inspect the arrangements being made for the reception of the Britannia jet-prop services which are due to begin through India on March 2. Mrs. d'Erlanger and Miss Penelope d'Erlanger are accompanying him.

Mr d'Erlanger's tour pogramme include visit to Pakistan, India, Thailand, Hong Kong, Japan, Australia and New Zealand. He will return to Britain via Singapore and Colombo and is due back in London on March 12.

During his stay in the Indian Capital, Mr d'Erlanger will discuss matters of common interest with the Civil Aviation authorities. He will also visit the Taj Mahal at Agra for a day.

Mr d'Erlanger (50) is himself a qualified pilot, having taken up flying in 1928. His connections with the air transport industry date back to 1934 when he became a director of Hillman Airways, one of the ancestral companies of BOAC.

During the war he was Commanding Officer of the Air Trannsport Auxiliary. In 1946 he took over as Managing Director of British European Airways and in the following year he became Chairman of that corporation. In 1952 he was appointed to the Air Transport Advisory Council and became its Deputy Chairman in 1954, a post he resigned in May 1956 on his appointment as Chairman of BOAC.

Mr d'Erlanger is Chairman of the Forestai Land, Timber & Railways Co. Ltd., of the City & International Trust Ltd., and of Air Finance Ltd.; and he is Vice-Chairman of Erlangers Ltd. He is also Deputy Chairman of the Provident Mutual Life Association and a director of John Mackintosh & Sons Ltd. and of the General Consolidated Trust Ltd.

WORLD BANK: $75 MILLION LOAN TO IRAN

The World Bank has made a long equivalent to $75 million to Iran to provide short-term financing required for Iran's Second Seven-Year Development Plan. It is the Bank's first loan to Iran.

The Bank of America, Irving Trust Company and Manufacturers Trust Company are participating in the loan, without the World Bank's guarantee, in the total amount of $3.5 million of the first maturity which falls due on September 15, 1959.

Iran's Second Seven-Year Plan encompasses a wide range of projects and programs for the development of agriculture, transport, electric power, industry and social services. The Plan is being administered by the Plan Organization, an independent government agency, and is being financed mainly out of oil revenues.

Iran embarked on its first Seven-Year Development Plan in 1948, but when oil production was drastically curtailed in 1951, development activities had to be abandoned for about four years. After oil revenues again became available late in 1954 following an agreement with a consortium of foreign oil companies it became possible to resume development activities on a substantial scale and a Second Seven-Year Development Plan was formulated.

The portion of Iran's oil revenues allocated to the Plan Organization is expected to exceed the equivalent of $1,000 million during the seven-year period from September 1955 to September 1962. These revenues should be sufficient to cover the expenditure now programmed over the seven-year period. However, since oil production can only gradually be restored, the revenues during the early years of the Plan are expected to fall somewhat short of the expenditure to be undertaken in those years; in the later years, on the other hand, the revenues will be much more ample.

The World Bank loan is being made to enable Iran to anticipate some of these future revenues and consortium of foreign oil companies, thus to proceed with programs and projects which would otherwise have to be delayed until the later years of the Plan. The proceeds of the loan will be made available to assist in financing Plan expenditures during the period from August 21, 1956 to March 20,1958, or such later date as may subsequently be agreed upon.

The loan is for a term of less than six years; semi-annual amortization payments will commence September 15, 1959 and are scheduled to retire the loan by September 15, 1962. The rate of interest will be 5 per cent, including the 1 per cent commission charged by the Bank. The loan is a general obligation of Iran. In addition, arrangements have been made for servicing the loan from oil revenues allocated to the Plan Organization.

After having been approved by the Bank's Executive Directors, the Loan Agreement was signed on January 22 by Dr Ali Amini, Ambassador of Iran to the United States, on behalf of Iran; and by W.A.B. Iliff, Vice-President, on behalf of the International Bank for Reconstruction and Development.

INTRODUCTION TOURIST CLASS ON SOUTH ATLANTIC AIR-ROUTE

As from the 1st March next, KLM will introduce—beside the existing first class fares which will be increased by about 7 per cent—the tourist class on their services to Rio de Janeiro, Montevideo, Buenos Aires and Santiago de Chili. The difference between the tourist class fare and the first class fare will then be 28.5 per cent. In comparison with the old first class fare, this tourist class fare is about 23 per cent lower. The service in the tourist class on this South Atlantic route is the same as that usual on the North Atlantic route, viz: a free baggage allowance of 20 kilos, meals free of charge, whereas cigarettes and drinks are to be had at reasonable prices.

It is the intention to equip the DC-6B aircraft, with which these services are to be operated, with 25 tourist chairs and 22 de-luxe chairs, called Sleep Airs. Upon the introduction of the tourist class on the services to South America, which is still subject to government approval, this class will then have been introduced all over the world.

The old standard class will be reintroduced on the North Atlantic KLM service Amsterdam-New York on 1st April next, so that passengers on this route will be able to travel in three different classes, viz. tourist, standard and de luxe.

FLYING HORSES AND HEIFERS

On behalf of the American Heifer Project Inc., KLM flew 45 calves across from New York to Ankara, the capital of Turkey. The calves were flown over in six box-stalls each containing about eight heifers. It took two days to get them across from America to Turkey by DC-4.

At about the same time four horses were carried from London to New York also in a DC-4. It is expected that eleven horses more will be flown over by KLM from London and Shannon to the United States. To date KLM has transported more than 400 horses by air, among which some very valuable race-horses.

COMBINED AIR-DRIVE-SKI VACATION

For many years now KLM is known to many Americans as the airline that takes them fast and comfortably to the winter sports centres of Europe. New arrangements will make things still easier for next season's ski-enthusiasts. There will be a comfortable limousine equipped with ski-racks, snow-chains and anti-freeze liquid, which will take the tourist to the skiing resorts. Special trips have also been organised by KLM and an American travel agency. Even an expert ski-instructor is included in these all-in "snow-packages" as they are called in America.

Is it surprising that Schiphol Airport has been renamed ski-pole-airport in American ski-circles—the place where one can drink the traditional "Gluhwein" of the skiers after the flight across the ocean?

TAX ON INTER-STATE SALES

The Government of India in the Ministry of Finance issued notification No. SRO 78 dated January 4, 1957, in the Gazette of India Extraordinary Part II, dated January 5, 1957, appointing January 5, 1957, as the date on which the provisions of the Central Sales Tax Act, 1956, except Section 15, shall come into force.

This notification appears to have caused some misapprehension about

Dassnagar, Howrah.

THE most striking aspect of the national mood on the seventh anniversary of the Republic is its unself-conscious assumption of our nationhood. That it should be so is perhaps the most important reason for hope for our future: for, the essence of the paradox of political maturity is that it is unself-conscious about overtly political issues. It has been given to few nations, young or old, serenely to take for granted the fact of their political basis and to concern themselves with the decencies of ordinary but humane and purposeful life. This is especially true of those that have achieved a new status as free nations, as also of those that have acquired a new personality as the child of a revolution. Comparisons are odious, but there is nothing unfactual about the assertion that, of all nations that have achieved independence since the Second World War, India is the one country that has had the most impressive record of continuity of political stability and normalcy. And, as for nations that have had a second parent in a revolution, Soviet Russia, for instance, does not even now feel secure enough as a nation to relax either internal or external vigilance. Part of the conundrum posed by Mr Khrushchev's attempt at once to jump out of the skin and stay in it is resolvable by a hypothesis of his doubts about the Soviet people's ability to assimilate politically unpleasant facts. Externally, Soviet Russia is feeling so insecure that its leaders feel impelled every now and then to talk about the Soviet Union in terms that are embarrassingly sentimental and jingoistic to sophisticated ears. In comparison, our vocal expression of patriotism is not only more decorous and seemly, but is sober and critical of national shortcomings. Even in those somewhat naive effusions of pride about our "international prestige", there is nothing brash or self-assertive.

✱

But unself-consciousness about politics does not mean indifference to basic political issues or even particular controversial political decisions. From the point of view of political awareness, some may even deplore what they may consider our obsessive preoccupation with politics. But, on the whole, an agile and sensitive responsiveness to political stimuli is an indication of political health, and is therefore to be welcomed. Nor does the normalcy of our lives mean humdrum acceptance of the ordinary. Indian mood today is not normal in that sense at all. Quite the contrary. Everywhere, there is an unmistakable sense of urgency about the future, an undertone of expectancy and optimism. But there is nothing tense or taut about it, nothing that implies an unbearable psychological strain. While it is true that there is no ground for complacency about our economic backwardness —indeed, its spectre is an ever-present nightmare with the more thoughtful among us—there is a serene sense of our getting to grips with our chronic problems in a determined and planned way.

✱

Politically speaking, the nation has shown an enormous resilience and capacity to absorb shocks that at one time seemed perilous. He would indeed be smug ignoramus who fails to recognise that there are aspects of national character which have grave dangers for our national future. His political purblindness would stand particularly luridly revealed in the light of events of the last twelve months, in which there was widespread disorder in some parts of the country following the State Reorganisation proposals. These weaknesses are still there and may come to the surface again unless we do something to choke them off at the source. Again, the squabbles over nominations for the coming elections in various parts of the country have brought to light a surprising amount of political dirt and revealed dangerous orientations of political attitudes. There can hardly be any doubt that these are things that will leave us pathetically vulnerable to disruptive forces. No one who has had even a nodding acquaintance with our history, can fail to be impressed with the capacity for mischief of such weaknesses.

✱

But the noteworthy thing is that the general political health of the country is able to survive these sudden eruptions of what are chronic malaises of our polity. Perhaps, the better metaphor would be that of an epidemic visiting a community. We are only too familiar with the grim visitations of these fell killers and we have evolved a system of dealing with them on a short-term basis and, in some cases like Malaria, have even succeeded in nearly exterminating them. Given time and determination, this latter felicity may be ours in the matter of dealing with communalism, parochialism and other narrowing creeds. Meantime, the fact to note is that the linguistic trouble died down as suddenly as it flared up. Though no firm conclusions can admittedly be drawn from this, the fact that normal communal life has resumed its even tenor shows that the community has the necessary robustness to withstand periodical bouts of debilitating political epidemics.

✱

Even as recently as a few months ago, there were rumours that the general elections would be postponed because of the upsets caused by the reorganisation of States; but, in the event, these fears have been proved groundless. I consider this a very significant thing from a number of points of view. Firstly, it is indicative of the resourcefulness, both administrative and political, of the community. That the gigantic problems of reorganisation should not have been allowed to interfere with the normal holding of the elections shows that the country is not awed by the problems that crop up. The enormous strain on its administrative resources, cast by the need to cope with several problems like States Re-organisation, the Second Plan and the elections, is being borne by the country with a sangfroid and aplomb that must take the breath away of many a nominally maturer nation. And, lastly, and most importantly, it shows the deadly earnestness of the country for the due democratic processes. Here were excellent excuses for putting off the elections: indeed, they were more than excuses and no one could have seriously accused the Government of prevarication if they had chosen to put off the elections. And yet the Government did not do it. Considering how quick Governments all over the world are to choose to put off elections on some pretext or other, this insistence on holding the elections on time should be considered a remarkable piece of democratic good faith and earnestness. Our neighbour Pakistan, which took years and years to frame a constitution, is still to hold its first general elections under the new constitution. Mr Suhrawardy, who was vociferous about the need for immediate elections before he took office, blandly explained their impracticability the moment he became the Prime Minister. In India, however, we have had impressive evidence of the high priority in our values that democratic forms have. Some would have considered our fussy preoccupation with constitution-making in the years after independence, when we were having unprecedented economic and other difficulties, as a quixotic ordering of relative importance. But the instinct that made us give ourselves the Constitution before we proceeded further, and the instinct that is at work now which refuses to dodge basic democratic obligations by plausible ruses, are not only fundamentally decent but show the enormous faith we have in our nationhood.

✱

There is yet more telling evidence of our political savoire faire which is also interesting as a piece of remarkable coincidence. I am referring to the composure with which the nation as a whole has accepted the fact of the uninformed hostility to India of a considerable body of world opinion on the Kashmir issue. Forgetting for the moment the rights and wrongs of the issues, the events that preceded the resolution adopted last week by the Security Council were of a sort that would have provoked deep resentment among any people. But nothing in the conduct of our people in the last few days has been so heart-warming

as the coolness with which they have received this fact of their comparative isolation and of the injustice of the procedure adopted by the Security Council. One need not even imagine what Pakistan would have done under similar circumstances, since what Pakistan has done in what imagines to be its hour of victory is crude enough. The vulgarity of the demonstrations in the various cities of Pakistan is beneath contempt. But it underscores heavily the comparative political maturity of India, which has received the news with an equanimity that is beyond praise.

✱

While all this evidence of political poise is reassuring, none can deny that there is a great deal to be done by us before we can congratulate ourselves for a job of work done. To be sure, much has happened in the country since the Republic came into being seven years ago of which we may be legitimately proud. The changes that have come about are there to be seen in not only palpable forms but in intangible mutations of the national mood. All over the country is strewn literally gigantic testimony to years of dedicated endeavour of planned prosperity. Names that were unheard of ten years ago, like Chittaranjan, Sindri, Bhakra Nangal, Bokaro, Tilaiya, Hirakud and so on are today household words: and these represent in their sum a most impressive effort in changing the quality of the lives of our people. Apart from these, the subtle changes that are taking place in our country-side through the agency of the community development projects and other rural communal efforts add up, despite comparatively poor physical achievement, to a considerable communal psychological revolution.

✱

But despite all this evidence of the advent of a real qualitative change in the lives of our people, a very great deal still remains to be done. Even if we were not so audacious as that most generous spirit, Gandhiji, and aimed at a far lesser goal that that of wiping every tear from every eye, we have still a very great deal to do. The Second Plan is but the beginning of such a high adventure. There will, doubtless, be difficulties in the way, but our future as a nation depends upon its success. Here again, the striking thing about the national mood is the self-confidence in its ability to carry the thing through. As I have often argued in these columns, about all our multifarious and apparently disparate national tasks, it is possible to formulate a theory of action based on a particular view of what constitutes the most desirable kind of lives for the people. It is true that such a theory of ultimate values does not appear to be consciously held by many of those who are directly responsible for initiating the innumerable social and governmental acts that have far reaching social and economic consequences. In fact, contemplating this phenomenon, one is even tempted to speak like some crude historical determinist, of history fulfilling itself through the instruments of these unconscious initiators of fundamental changes. But there are enough people in the country who do see that these endeavours are not merely an unrelated sum of a number of meliorative measures, but form a pattern of development that implies the values of what in effect is a new type of civilisation. How far we shall succeed in realising them is a question that must, for the present, remain unanswered, but the vision of the kind of society we are consciously or unconsciously striving for is a quite unexceptionable one.

✱

Step by step, therefore, we seem to be making our way toward the appointed goal. Our second tryst with destiny is still some way off. But the journey that began seven years ago has passed some milestones. I have no space here to recapitulate the enormous social gains we have achieved in the last seven years, and the resourcefulness we have shown in achieving them. I can only quote the single example of the passing of the Hindu Code in instalments. The far reaching nature of the changes in the structure of the Hindu society these new legislations have introduced will be apparent to any one who has given some thought to the subject. And the manner in which the new Hindu Law was legislated revealed at once the country's democratic desire not to impose anything on an

what the eye doesn't see...

There are some things you don't see disappearing. You don't see the loss of heat from a badly-insulated steam pipe—but you see the bills, because heat costs money. So it is well worth having your steam systems properly insulated. The best insulating medium for this purpose is undoubtedly Newalls 85% Magnesia, produced by our associates Newalls Insulation Co. Ltd. But it's not just a good product we have to offer... we can offer free technical advice on any insulation problem. Heat or cold insulation is a science. Our highly trained staff can advise you exactly on the thickness to which insulation material should be applied. Too little or too much insulation means less economy—and it is our job to save you money. Practically every industry uses asbestos in one form or another. In our new factory at Ghatkopar, we make a wide range of technical asbestos goods to satisfy the varying needs of India's economy. **The increasing use of Asbestos is an index to India's industrial progress.**

The Changing Picture in Cement

I WAS not quite sure what my reactions were when I went through the speech delivered by Mr Dharamsey M. Khatau in his capacity as Chairman of the Associated Cement Companies Limited. For, there were a number of points on which I found that I was in wholehearted agreement: but there were others which, or so it seemed to me, could or should have been played down. But, whether you agree with Mr Khatau or not, it is exceedingly important that one should be apprised of what he said in his Chairman's address. For, Mr Khatau may be said to speak for the cement industry; and, next to steel, cement figures as the most vital industry to the implementation of the projects that India has taken up.

The indispensability of cement and the need for ever increasing quantities were forcefully indicated in the Government's decision of some months ago to import substantial quantities of cement to make good the shortfall in the indigenous availability. Mind you, the industry has been in the process of undertaking expansion programmes calculated to raise production by a considerable margin. There was, nevertheless, felt the need, some months ago, to supplement indigenous production by imported cement. There can, it scarcely needs saying, be no two views on the advisability of or the necessity for approaching foreign markets for cement. But where there can be questioning, and where there is controversy, is in the so-called consequential measures adopted by Government. Before I come to these, it would be better if we were to apprise ourselves of the background in cement.

The cliche about cement is that it is needed wherever there is a job of building to be done. The greater the project, the larger quantities of cement involved. This is particularly so in respect of the multipurpose projects which, with a view to controlling flood waters, increasing the cultivable area and providing hydro-electric power, the Government have been implementing. Thus, it has happened that the Government have been the largest single consumer of cement—accounting perhaps for more than 50 per cent of the total indigenous demand. In course of time, the cement industry generally and the ACC in particular has been adding to its installed capacity; and mention must be made of the fact that, as far as was practicable from the point of view of availability of the raw materials involved, fresh factories have been opened in areas which had hitherto to rely for their supply upon a factory quite some distance away. Notwithstanding what I might call the regional opening up of factories, the costs of cement manufacture and the prices for cement have differed from area to area. This perhaps was inescapable, because India is a country of such distances. In the sense and to the extent that cement should be available all over the country at a standard price, so that development could proceed on regional basis, the idea of equalised selling prices for cement must be deemed good. At that time, however, when first the notion of equalised selling prices was mooted, the element of imported cement was a negligible quantity. Later, however, on the pretext that the imported cement had to be "subsidised" by indigenous cement, a system of prices was evolved for cement on the lines of steel.

It seems to me an odd coincidence that the basic and vital raw materials should both experience, in this country, the strange position of the indigenous producer subsidising foreign manufacture. We are in effect having the reverse of protection in steel and in cement. The consumer pays no less—perhaps he pays even a bit more, so that funds could be built up in the equalisation fund with which to pay for the excess of cost for imported cement or steel. The producers get no more. Then, who does benefit? The answer, strange to relate, no body in India. The vicious or sorry aspect of the whole thing is that the system of retention prices, etc., puts a brake upon the internal resources generated in the cement manufacturing companies; so long as expansion in capacity does not take place, the need for foreign cement continues; and, so long as cement is imported, the retention prices are deemed necessary to offset the higher cost of imported cement. Ideally, I would wish that the notion of retention prices is scrapped altogether; and, since India's present foreign exchange predicament has entailed a drastic revision of quotas of import under cement and steel, it should not prove unduly difficult to do away with this system. Already, in the foreseeable future, Indian steel production is thought in some quarters to achieve such a level as to be in excess of demand. I have not heard a similar statement about cement; but I venture to suggest that the re-phasing of projects, which has already been decided upon by Government, should also be undertaken with a view to economising in cement consumption. That is to say, I make bold to present my view that, if Government possessed the courage to permit the steel and cement companies to retain that margin in prices which is the difference between the selling and retention prices—but with the proviso that this element should strictly be reserved for expansion of capacity—I venture to suggest that, then, Indian production of cement and steel will go up much more sharply than in the past.

Now, for one of the consequential steps taken by Government: Mr Khatau states that Government have sought to justify the introduction of State trading in cement on the following grounds:

(a) The need to import substantial quantities of cement to meet the current 'cement gap';
(b) The need to sell both indigenous cement and imported cement (which would cost about Rs 40 to Rs 45 per ton more than indigenous cement) at an equalised price; and
(c) The need to rationalise all railborne cement movements so as to impose the minimum strain on the transport system in the country.

But, was State trading the only solution—conceding for the moment that it is a solution? There is, I should point out, one aspect of State trading which undoubtedly was necessary and is helpful. I here refer to the arrangements for import of cement on a governmental basis. Cement is a commodity that is as hard to come by as steel; and a Government body, like the State Trading Corporation, may be best fitted to conclude arrangements, particularly with the East European countries, for import of steel and cement. In other words, I will go on record as saying that, for purchase of cement from abroad, State trading may be the best, even the only, solution. But, when we consider cement distribution within the country, State trading is by no means an adequate answer. The present procedure is that the manufacturers sell their entire output to the STC: and they

Role of Cooperative Movement in Second Plan

In the context of the radical change in the formulation of national objectives, the cooperative movement has been assigned an important role in the future set up in India. It is the general belief in the country now that cooperation alone can help the nation achieve its cherished objective of raising the standard of living of the people and also avoid the concentration of economic power in a few hands. Speaking in Bombay, Professor D. G. Karve pointed out that though by giving scope to private enterprise, it would be possible to raise the standard of living of the people, concentration of economic power would be inevitable. The distribution of wealth had also its own disadvantages. Taking the abolition of landlordism, for instance, the new class of small land-holders would find it difficult to utilise modern methods of farming due to lack of sufficient funds. It was here that cooperation could play an useful role and help Government make their land reform policies really effective.

The Planning Commission have observed that the character of economic development in India with its emphasis on social change provides a great deal of scope for the organisation of cooperative activity. In view of the growing tendency in the country toward the formation of compact decentralised units both in agriculture and industry, the cooperative movement has automatically attained special significance. The Commission have listed as being especially appropriate for the cooperative method, of organisation agricultural credit, marketing and processing, all aspects of production in rural areas, consumers cooperative stores, cooperatives of artisans and labour and construction co-operatives. They have further pointed out that the co-operative form of organisation has advantages which neither the system of private enterprise nor that of State ownership can match.

It may be recalled that the Government of India delegation under the leadership of Mr R. K. Patil which recently visited China and Japan has found that in China food production has increased by 20 to 30 per cent as a result of cooperatives. Apart from helping to increase food production, the cooperatives which cover 92 per cent of the rural population, have also helped in fighting floods and drought, and also in introducing scientific methods of agriculture.

*

Reform of Education

The need for reorganising the country's educational system has long been realised but the enormousness of the task has rendered any worthwhile reform difficult of achievement. In the first place it has been found necessary to increase considerably the facilities available for technical education if the present practice of producing graduates most of whom cannot be found suitable jobs, is to be rectified. The position now is that while thousands of educated young persons come out annually from the colleges, the various development projects that are being implemented have to look elsewhere for their requirements of technical personnel

Secondly, the emphasis on regional languages culminating in the reorganisation of the states on a linguistic basis has brought the question of medium of instruction in the three stages, primary, secondary and university, to the fore. The future of English has inevitably become the subject of a long drawn-out controversy to which no early end seems to be in sight.

Mainly because of the urgent need to provide suitable technical personnel in sufficient numbers for the proper maintenance of the projects already completed and for manning those under implementation and under planning Government have been obliged to take active steps to expand rapidly facilities for technical education. The progress toward reform of the educational system as a whole, however, has beeen slow because of paucity of funds.

Speaking in Surat last week, Mr H. V. Divatia, Vice-Chancellor of the Gujerat University, drew Government's attention to the fact that unless adequate arrangements were made in the country to produce personnel needed to maintain the roads and dams that were being built in the country, the full advantages of the improvements attained would not be available to the nation. To train the required personnel, the country had necessarily to depend upon the secondary schools and colleges. It followed, therefore, that Government 'could ill afford to ignore the higher stages of education', on the plea of paucity of funds.

GATEWAY MARKETS

Mixed Trend in Oil and Oilseeds Prices

THE market for Oils and Oilseeds gave a mixed performance during the past week. Castorseeds recorded a sharp setback under extensive liquidation following the announcement of an increase in freight rates. The downward trend was accelerated by lower Brazilian advices and on reports of increased arrivals of the new castor crop at the terminal markets. Groundnuts eased in unison with castorseeds, but eventually steadied up following a recovery in the spot section. Trading in the Linseed section was without any feature, while the prices of Cottonseeds continued to harden under demand for cottonseed oil.

In general, the market functioned regularly during the initial part of the week, but trading revealed a significant lack of interest on the part of operators who were disinclined to extend their commitments. The implementation of the margin system in Castorseed and Groundnut futures led to a moderate squaring up of outstanding transactions and retarded the tempo of fresh business. While sellers were not prepared to take the risk of being caught in a rising market, buyers remained subdued on account of the fears of further Government action.

In the Castorseed section, turnover amounted to 10,000 candies. May delivery opened steady at Rs 174 and touched a high of Rs 175-12, but receded to Rs 164-12, to finish the week better at Rs 165-12. Ready was quoted around Rs 38-0 and Castor Oil, commercial quality, at Rs 22-8.

Groundnut February delivery opened higher at Rs 171 and, after touching a high of Rs 173-8, receded at the close to Rs 170-10. May delivery opened at Rs 172-4 and, after touching a high of Rs 174-12 and a low of Rs 170-8, finished at Rs 171-8. Ready bold was quoted at Rs 34-12 and Groundnut Oil at Rs 19-4.

In the Linseed section, May delivery opened at Rs 31-14 to ease off at the close to Rs 31-4. Ready was quoted at Rs 35-4 and Linseed Oil at Rs 18-12.

Cottonseed February opened at Rs 107 and May delivery at Rs 105, to finish at Rs 104-8 and Rs 105 respectively.

*

Gold & Silver

Prices in the bullion market, after ruling firm during most part of the week, developed a slightly easier tendency at the close. Silver displayed spectacular buoyancy with upturn reflecting keener upcountry demand for spot. Higher advices from Tibet accentuated the upward trend in prices. Gold also showed progress in sympathy with the spurt in the counterpart, but profit-taking finally erased the interim advantage.

Arrivals and offtake of Silver were estimated around 15 and 9 bars respectively. Arrivals of coins from Tibet are reported to have dwindled considerably on account of winter and it is felt that the situation will not improve for some more months. The demand is, however, on an upgrade in view of the marriage season, war clouds hanging over India and improvement in cotton, oilseeds and other commodities. Total stocks all over the country are estimated at about 4,500 bars only. Meanwhile, forward silver fluctuated between Rs 183-5 and Rs 183-12 and ready between Rs 184-1 and Rs 184-11.

Arrivals and offtakes of Gold were estimated around 5,000 and 3,000 tolas respectively. Accordig to latest reports, the supply of smuggled gold has declined on account of a smart rise in the yellow metal in Pakistan. The only attraction is, that the Indian rupee commands a good premium in the Middle East and Pakistan. Meanwhile, forward gold fluctuated between Rs 107-8 nad 107-14 and ready between Rs 107-4 and 107-9. Sovereign was nearly maintained at Rs 68.

*

Yarn

Listless conditions continued to prevail in the Yarn market, and prices moved rather irregularly on alternate bouts of buying and selling. Turnover did not show any improvement in both the spot and futures sections.

It is understood that the Government will effect a very substantial cut in the rayon textile industry's imports of Art Silk Yarn during the current period. It is stated that the Government have decided to limit the total imports to a ceiling of Rs 5 crores. This represents a drastic cut in imports of yarn valued at nearly Rs 10 crores in the last licensing period. The above Government decision appears to have been inspired by their desire to conserve foreign exchange.

The Government of India are also expected to impose a complete ban on the import of Staple Fibre Yarn during the current period. Imports by established imports have already been stopped.

Although conditions in the Cotton Yarn section showed some improvement, turnover was not satisfactory. Weavers were still not confident about the future demand for cloth and preferred to adopt a hand-to-mouth policy in regard to their purchases of yarn.

World of Cotton

Initial Firmness not Held

THE Cotton futures market opened the week's trading on a very firm note on heavy covering by bear speculators; and both the contracts touched new higher levels, being influenced by keener mill demand and dearth of tenderable varieties, particularly in Vijay. Firmer advices from the seeds market also aided the upward trend in prices. Toward the closing stages of the week, however, prices developed an easier tendency under general liquidation. The sell-off was prompted by weakness of side-markets following rumours of some anti-inflationary measures by the Government.

Nervousness among bulls was the chief factor responsible for the weakness of the market. Bulls rushed to realise their holdings, while the option dealers liquidated their commitments in view of the option settlement. With the fixation of the option rate at Rs 669-0, option dealers sold on a wide scale, with the result rates fell headlong. Though a partial recovery ensued near the fag-end of the week's session, sentiment remained easy at the close. Turnover approximated 25,000 bales.

ICC Jharilla March started at Rs 676-8 and, after touching a high of Rs 677-12, receded at the close to Rs 667-12. Similarly, ICC Vijay April opened at Rs 789-8 and after touching Rs 792-8, finished the week at Rs 779-4.

The Spot section, however, displayed a steady undertone with mills buying Khandesh and Berar Jharillas. Good business was also reported done in Vijay. Turnover approximated 3,500 bales.

Prices for popular growths are reported to have gone up in upcountry markets, presumably because of falling arrivals. Mills are in the market as they hope that the demand for textiles will considerably go up after February, specially of coarse and medium varieties of cloth.

In the export section, Oomra Deshi and Bengal were in good demand.

In the foreign cotton section, there was fair offtake of US cotton. There were also some enquiries for new crop Sudan and Egyptian cotton.

Following were the rates quoted:—Bengal Rs 675 to Rs 730; Oomra Rs 770 to Rs 800 Dhollera Rs 710 to Rs 720; Jharilla Rs 775 to Rs 805; Vijay Rs 910 to Rs 915; Karnak new crop Rs 2,900 to Rs 3,200 and Sudan average new crop Rs 2,700 to Rs 3,000.

×

CROP REPORT:

According to the latest reports, almost 80 per cent of the crop in the Punjab has been already marketed. Similar conditions are witnessed in Berar and Khandesh where 60 per cent of the crop has been marketed. The season has just started in Madhya Bharat, while the crop in Gujerat and Saurashtra will start moving after February 15.

With regard to the new crop position, following estimates are given:—Bombay 29.2 lakh bales; Punjab 8.6; Mysore 4.7; Madhya Pradesh 3.95, Madras 2.9; Rajasthan 2.2; Andhra 1.8 and Assam 0.3 lakh bales. The total crop is estimated at around 54 lakh bales of 400 lbs each.

The pace of arrivals is expected to improve in about a fortnight, but prices are not likely to decline in view of increasing mill support.

×

KARACHI COTTON MARKET:

Prices in the Karachi market developed an easier trend as the good buying enquiry, that was noticed in the previous week, was not forthcoming, due mainly to the accumulation of stocks. Activity in the futures section was also affected by the weakness of the spot market.

The total Pakistani cotton crop, in the current season, is estimated at around 1.5 million bales, which is 2 lakh bales less than last year's output.

*

NEW YORK COTTON MARKET:

In the New York market, recent gains in prices were extended last week with old crops meeting with additional trade demands and short-covering. Buying was again based on tightening free-market supplies, as a result of the loan programme while, commission houses purchased new crop positions. Part of the demand was attributed to the prolonged drought in the south-west and expectations of a higher mid-January parity price. Spot was quoted around 35.15 cents per pound.

Meanwhile, the Agriculture Department, USA, has announced the sale of 43,502 bales of surplus United States Government-owned cotton for export. These sales were made at an average price of 27.21 cents per pound basis Middling inch cotton. The minimum price for 15/16" cotton at average location was 25.55 cents per pound. At the Department's previous sale, held two weeks ago, the price for Middling inch cotton was 26.87 cents and 25.55 cents for 15/16" cotton.

The Department has stated that, since sales of surplus cotton began last April, the total sold, including the latest one, amounts to 6,316,694 bales. Bids for the next sale of cotton will be received at the New Orleans office in February.

×

LIVERPOOL COTTON MARKET:

Dealings in the Liverpool market continued to be featureless with dealings mainly professional. The demand for both ready and shipment cotton in particular has been extremely slow. This can be attributed to the heavy buying of shipment cotton from the USA, which took place prior to the dock strike. The demand for actual cotton is not, therefore, expected to improve for several weeks to come.

CLOTH AND PIECEGOODS:

Sentiment in the Piecegoods market remained subdued. Dealers, however, feel that the setback in the trading conditions will be only temporary and the offtake will improve appreciably in view of the paucity of stocks in the consuming centres.

Earlier fears that exports of cotton piecegoods from this country would be lower in 1956 have now been confirmed. The quantity of cotton goods passed for shipment, during the last year, has totalled only 783.58 million yards as against 875.11 million yards in 1955 and as much as 920.6 million yards in 1954. There has thus been a steady fall in the quantum of cloth exports in the past three years.

Conditions on the export front have changed for the better. Demand has revived from Sudan, which has accounted for some business in sheetings. Enquiries from East Africa have broadened, while modest business has also been put through with Ethiopia. The UK has continued to evince interest in grey goods, while Singapore has concluded some fresh business. In general, the tendency on the export front has shown a modest improvement.

STATE BANK OF INDIA

The following is a note of the net profits of the State Bank of India for the year ended the 31st December 1956 and their distribution:—

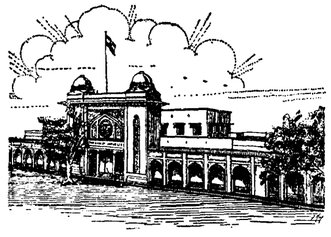
Olympus

Curiouser and Curiouser

LAST week's debate on Kashmir as well as the resolution adopted in the Security Council must be considered as perhaps the oddest thing that has happened on the floor of that august assembly. If it were not for the fact that we are contemplating the actions of what is nominally at least the most important body of men in the world today, and if it were not also for the fact that the issues involved are too serious to be treated frivolously, we should be tempted to look at the whole thing from the humorous angle. For, the situation was indeed full of Gilbertian and Carrolleque overtones. For instance, we saw the topsy turvey spectacle of eleven good men and true so far forgetting the history of the case as to treat the person who came before them with a complaint as the person complained against. This is the kind of error that is right up the Mikado's lane. Again, even the cunning old Fury of Alice's wonderland would have been constrained to raise its bushy eye-brows at the way in which the Security Council made up its mind before it had even heard what India had to say on the subject. "After all", you might hear Fury saying, "the feline code has none of the pretensions of the human: When I say, 'I'll be the judge, I'll be Jury, I'll try the whole cause and condemn you to death', I may not perhaps be as hightoned as the humans. But I shall at least be honest. There would have been none of the high-falutin clap trap that they indulge in."

Whichever way you look at it, the action of the Security Council in not even keeping up appearances in the matter is hard to defend. Mr Nehru last week described the procedure as "Extraordinary". It is a piece of meiosis that would have won the approbation of his fellow Harrovians. The resolution which begins with the words, "Having heard statements from the representatives of the Government of India and Pakistan..." was ready two days before Mr Menon had begun his speech and a copy was actually in the hands of the delegates before Mr Menon had opened his mouth. It was officially introduced on the morning of the 24th, well before Mr Menon had completed his speech. Thus it is clear that the sponsoring nations,—Australia, Cuba, Colombia, the Unied Kingdom and the United States—had made up their minds even before they had heard the Indian view-point. Any attempt to make it appear that preparations of such drafts in advance are expediencies forced upon all such bodies by pressure of time, is wholly disingenuous. For one thing, the urgency was quite unreal. The whole atmosphere of crisis, the sense of an approach of a zero hour, of the imminence of something irrevocably happening if the Security Council did not beat the clock was the deliberate creation of Pakistan and its friends. As was pointed out by Mr Menon, all that was to happen on the 26th of January was the dissolution of the Kashmir Constituent Assembly. What was it that the Security Council wanted—the prevention of the dissolution of this assembly, whose very basis it does not accept? What is it that has been prevented by the resolution, which, but for the resolution, would have so irretrievably compromised the earlier position? The answer is, precisely nothing.

Mr Menon's patient, cogent and conscientious effort for over two days to make the members of the Security Council focus their attention on the real issues involved and the realities of the situation was, by all accounts, a futile one. He had against him a stonewall of closed minds on which no impression whatever could be made. But no one who reads the detailed reports of his arguments, supported by a wealth of documentation, can fail to be impressed by the magnificent job he has done. The enterprise of bringing to the surface the real issues involved, buried deep beneath mountainous prejudice, ignorance and misinformation, was a difficult one. But it was performed wonderfully. As a piece of advocacy as an exercise in forensic and political eloquence, as a conscientious attempt at unravelling a complicated mesh of legal and political strands and as a sober assessment of political realities, Mr Menon's speech was superb. It deserved far greater consideration than the Security Council thought fit to give it. In not doing so, it has merely denied itself the opportunity of being enlightened on the issues.



Mr Menon's four main points were: The Security Council was supposed to be discussing India's complaint about a "situation" created by Pakistan allowing the tribesmen to enter Kashmir, which was and is legally Indian Territory. The issue is one of aggression by Pakistan on Indian territory, an aggression that is still continuing. Secondly, the promise of plebiscite was unilaterally given by the Government of India to the people of Kashmir. How that should be considered an obligation to the UN and to Pakistan is difficult to see. If the people of Kashmir choose to dispense with the mechanism of plebiscite, then it is a matter between the Government of India and the people of Kashmir. The fact is, the act of accession of Kashmir to India is not something that is within the competence of the UN to question. The accession flowed from the arrangements regarding former Princely States made in the Indian Independence Act passed by the British Parliament and other allied legislations. It was, in other words, a matter within the sovereign rights of a particular country which the UN has no right to question. Much confusion has resulted in treating the whole question as a territorial dispute between India and Pakistan. It is not so. By all the well understood canons of interpretation, the legality of Kashmir's accession to India is beyond question. As Mr Menon sardonically pointed out, what the British delegate wants done by the resolution he has sponsored, is to undo something done under an Act of Parliament of the sovereign he is supposed to be representing at the UN. The issue before the UN is not whether Kashmir properly acceded to India, but whether Pakistan had any business to allow its troops and countrymen to be in unlawful possession of Indian territory.

The third point made by Mr Menon was that, even assuming that we have certain obligations to the UN to hold a plebiscite in Kashmir, we have been urging that the conditions for holding the plebescite must be created before it can be done. The first condition is that Pakistan must clear out of the State. This Pakistan has steadily refused to do from the beginning, and the negotiations that have taken place from time to time have broken down precisely on this point. Eight years after aggression was committed in Kashmir, Pakistan is still there and refuses to leave the territory even for the purpose of enabling the holding of the plebiscite it is so clamant for. Since, the essential pre-requisites for a free and impartial plebiscite have not been fulfilled, it cannot be held.

Finally, even the Security Council, which seems to have such an astonishing incapacity for facing facts, must realise that time does not stand still. Eight years is no short period, and so much has happened during that period. Kashmir has settled down to normalcy; and the hard and bitterly won recognition of the principle of secular inspiration for politics continues to be respected. Indian policy, as we understand it, is based on an unwavering faith in the concept and it is a faith that has to be nurtured even after it has been accepted as a policy of State. Much in our history, especially in recent his-

North Indian Notes

Automobile Industry

WITH the publication of Government's decisions on the Tariff Commission's report on the Automobile industry last week hopes have revived that the automobile industry will play an increasingly important role in the transport system of the country. The fact that Government have accepted in principle the Commission's recommendations regarding the manner in which the industry should develop to meet the country's requirements augurs well for future prosperity of the Indian Automobile industry. The recommendations in this regard are that (a) priority should be given to the manufacture of commercial vehicles rather than passenger cars (b) the trend toward the use for diesel commercial vehicles should be encouraged, (c) no more passenger cars should be introduced for manufacture in the country and (d) additional capacity for commercial vehicles should be installed in existing units rather than new one.

The above recommendations are generally in line with the views of the industry as well as of those who represent the larger interest of the country as a whole. It is quite in the fitness of things that emphasis is placed on the manufacture of commercial vehicles as supplementing the transport capacity in the country is of utmost importance in the context of the growing needs of the Second Plan. Likewise the decision not to allow the manufacture of more passenger cars is a step in the right direction. The fact that Government have decided whatever additional capacity for commercial vehicles is needed to meet the demand must be met by existing units should go a long way in reassuring the indigenous industry that it will get all the help from Government to go ahead with its expansion programme.

The Tariff Commission have estimated that the annual demand for motor vehicles is likely to increase by 1960-61 to 40,000 commercial vehicles, making up a total of 65,000 vehicles. About 70 to 80 per cent of the demand for commercial vehicles is expected to be for the diesel driven type.

Evidently the estimate has been arrived at on the basis of existing conditions. For they have observed that the number of commercial vehicles required for the effective implementation of the Second Five Year Plan will be much higher. But the increase in demand is not likely to make itself felt so long as the various obstructions are left uncleared. The hampering factors listed by the Commission are (i) inadequate road development and bad conditions of roads; (ii) heavy and varying rates of taxation of commercial vehicles; and (iii) restrictions on inter-State movement of commercial vehicles and their permissible laden weights. With the amendment of the motor vehicles Act 1939 and the cooperation of the State Governments in the matter of inter-State movement of commercial vehicles, it is to be expected that the estimate of the Commission will be left far behind during the next five years. Consequently, the indigenous industry will be called upon to step up production considerably. Government point out that already there are indications that the industry is making steady progress. The total production of all types of vehicles has gone up from 6,302 in 1953 to 12,146 in 1954, 22,153 in 1955 and over 31,000 in 1956.

On the question of tariffs, Government have accepted the Commission's recommendation that the industry should be given protection for a period of 10 years. Government, however, have not deemed it necessary at this stage to effect the changes in tariffs recommended by the Commission because they feel that the domestic industry is sheltered considerably by restrictions on imports.

*

Production of Non-ferrous Metals

With the rapid development of heavy industries envisaged under the Second Plan, Government have naturally laid great stress on the need for stepping up production within the country of non-ferrous metals. That considerable leeway remains to be made up in their production will be evident from the fact that the country's imports of non-ferrous metals amount annually to Rs 20 to Rs 25 crores. In the next five years, the demand for non-ferrous metals is expected to be of the total value of Rs 41 crores. As the value of indigenous production is placed at Rs 6 crores, it will be evident that production has to make big strides if it is to catch up with demand.

Thanks to the intensive survey carried out in the last nine years by the Ministry of Natural Resources, data sufficient for formulating some sort of development programme are now available. It is, however, recognised that much more extensive work must be carried out if production schedules are to be clearly defined.

Inaugurating the first meeting of the recently constituted Development Council for Non-ferrous metals, Mr Manubhai Shah, Minister for Heavy Industries, drew pointed attention to the vital role played by non-ferrous metals in the development of all the basic industries.

Among the basic non-ferrous metals, aluminium has come to occupy the pride of place on account of versatility. In advanced countries, aluminium has been put to such a wide variety of uses that it is replacing even steel in many spheres where steel has hitherto been considered indispensable.

An important factor that renders prospects for a prosperous aluminium industry in India bright is the large availability of bauxite within the country. India's bauxite deposits which are fairly widely distributed all over the country, are estimated, on presently available data, at 250 million tons. It is believed that when an intensive geological survey is carred out, the existence of more deposits may be revealed.

Actual production of aluminium in India has, however, lagged far behind demand. As against the current requirement of 25,000 tons, indigenous production accounts for only 75,000 tons. The balance is made up by imports. It is anticipated that in the next five years, the demand for aluminium will increase to 35,000 tons to 45,000 tons. Accordingly the Planning Commission have fixed the target under the Second Plan at 39,000 tons. To achieve the target, Government have sanctioned the installation of a new smelter of 10,000 tons capacity by the Indian Aluminium Company Limited at Hirakud. This together with the licence granted for the expansion of an existing unit to 5000 tons per annum will bring the installed capacity to 20,000 tons. Government have now decided to establish an aluminium plant at Mettur in Madras State with a capacity of 10,000 tons per year, thus raising the capacity to 30,000 tons.

The country's position with regard to the other principal non-ferrous metals is not quite satisfactory though.

NORTH INDIAN MARKETS

Sugar Exports

IT is understood that all preliminaries have been completed with regard to the export of 50,000 tons of Indian sugar. According to the information available at present, the Indian Sugar Mills Association has been exclusively entrusted with this work. For organising this export, the ISMA has set up a Sugar Exports Division, and a special Central Committee has been appointed for the purpose. This Committee will be assisted by three regional Committees working at Calcutta, Bombay and Delhi.

Owing to an improvement in the international sugar market lately, there appears to be definite possibilities for the export of Indian sugar. From the enquiries, which have emanated from several trade quarters, the prospects appear to be satisfactory at the moment.

According to the figures released this week, production and despatches of sugar from indigenous factories amounted to 6.20 lakh and 3.82 lakh tons up to January 15, 1957 during the current season as against 5.28 lakh and 3.03 lakh tons respectively in the corresponding period of the previous season Stocks with the factories on January 15, 1957 stood at 7.65 lakh tons as compared to 6.37 lakh tons on the same date last year.

Meanwhile, sugar markets have continued to rule quiet. Mills seem to be eager to move their old season's stocks, while offtake, during the past few days, has been far from encouraging. Naturally, this is depressing the market and prices have tended to be a shade easy.

The first quota of the new season's production is expected to be released during the next few days. The current mill-delivery prices of the new crop sugar in Uttar Pradesh appear to be sustained by the still persisting rumours of an increase in excise duty. A clear picture as regards the prices for the new sugar will, however, emerge after the first quota is out.

*

Foodgrains

Prices in the Bombay grains market showed a mixed trend. Trading in Rice continued to show a generally upward tendency under the stimulus of higher upcountry advices with prices of several qualities advancing by about Rs 5 per candy. Traders are expecting a further improvement in demand in the coming weeks.

Although the general interest in indigenous Wheat was of an academic nature in the absence of arrivals, traders were busy speculating on the future of the present

The Peninsula

Augmenting Food Supplies

IF one were to piece together the various developments taking place from time to time on what might be described as the food-front in India, it is possible to hold out a prospect in terms of a fuller and more balanced food supply than the bare statistics of annual production could suggest.

It is no doubt true that the bubbling confidence stemming from the 1953-54 food grains output has, in the course of three subsequent years, given place to a more guarded appraisal. While nothing has yet happened to give up the present state of restraint, experts in different spheres have been contributing to the enlargement and diversification of food resources on new lines.

The Central Food Research Institute at Bangalore has evolved a new process for the production of infant food on a large-scale basis. Infant foods form a not inconsiderable item among the country's imports and any successful attempt to replace them is bound to be a double boon. The vagaries of the market in imported food products are often extremely oppressive to the consumer. Besides, there is the question of precious foreign exchange.

Dr. Subramaniam, Director of the Bangalore Institute, in communicating the discovery of this new process to an assembly of press-men, recalled how the possibility of producing a humanised form of infant food suitable for mass consumption was engaging their attention, for the last two years. In cooperation with the Kaira Milk Union at Anand, Bombay, the Institute has now commenced production of such a food in its own plant. The main ingredient is buffalo milk. The higher solids and the fat content of buffalo milk, hitherto considered impediments to processing, are now made to yield, besides the new infant food, a substantial quantity of table butter as by-product. Together, these two products make production economical.

The Director of the Central Food Research Institute believes that the production of these two products from buffalo milk can be undertaken all over India and he has made an appeal to State Governments and industrialists on this behalf. It is believed that in due course these could gain vogue in family consumption all over the country. The only snag is the unavailability of buffalo milk in the required quantities.

The Technical Research Sub-Committee of the Indian Oil Seeds Committee, at its latest meeting at Hyderabad, has recommended a scheme for the manufacture of edible proteins from commercial oil cakes like groundnut and sesamum. This is one of the nine schemes which the Committee has put up for the consideration of its parent body. Though many of these schemes have no bearing on food products, some of them at least may have the indirect result of making available for edible consumption a larger percentage of the oil seeds output.

The schemes include a pilot plant study on the optimum conditions for groundnut milling at the Oil Technological Institute, Anantapur, the preparation of useful chemicals from castor oil at the National Chemical Laboratory at Poona, research on storage of seed and cake of groundnut in Madras State and preparation of activated carbon for bleaching purposes from waste materials like shells of neem and mahua at the Technological Institute, Kanpur.

The manufacture of edible proteins from commercial oil cakes suitably processed for that purpose has been demonstrated at the Central Food Research Institute.

From the standpoint of intensive agriculture, some of the proposals for field service, which are now under contemplation might turn out to be of substantial use. Inaugurating the Agricultural Information Seminar at Coimbatore, Mr M. U. Damodaran Director of Agriculture, Madras, disclosed that a National Agricultural Information Service would soon be created for more effective and direct approach to the farmer.

This Service will function in close liaison with the Indian Council of Agricultural Research, the transmission of whose work, along with that of other bodies in this field, in a prompt and impressive fashion to the individual cultivator will form its principal work. In Madras a separate section has already been created for this purpose in the office of the Director of Agriculture with an Information Officer in charge.

The assumption behind the creation of a special agency for the communication of research results directly to the cultivator is that existing agencies are inadequate and that a specialised organisation capable of pooling all the results of research undertaken in India and other countries, rationalising them and passing them on in a readily intelligible form should achieve much better results.

Mr Malcolm Orchard, Information Adviser to the Indian Council of Agricultural Research, who took part in the Seminar, described how the workshop methods would be utilised for teaching and for publicity. The particular workshop envisaged as part of the field service will produce publications for the use of the village worker and the cultivator.

The inauguration of the ice factory and cold-storage plant at Neendakarai near Quilon marks another step forward in the direction of augmenting the supply of animal food. There is already a large ice and cold-storage plant at Kozhikode, which caters to the South Canara and North Malabar Coast.

The plant near Quilon is intended to cover the southern belt of the Malabar State, roughly from Trivandrum to Cochin. The majority of population in this area are fish-eaters and when it is remembered this is one of the chronically deficit food regions of India, the importance of measures intended to conserve and market fish can scarcely be exaggerated. The supply of this principal subsidiary food has hitherto remained uncertain and rather primitive in arrangements.

The Neendakarai factory is the product of Indo-Norwegian co-operation and is part of the Community Project in the area. It is hoped that this plant would be of great assistance in stimulating not only the domestic fish trade but the export of frozen prawn and fish, for which there is vast scope.

In his inaugural speech, Dr Punjab Rao Deshmukh, Union Minister for Agriculture, indicated that more such units would be established on the Malabar Coast. Neendakarai Plant is designed to produce 25 tons of ice per day. There is a deep freezing cabinet with a capacity of 6 tons per day where prawn could be frozen at a temperature 20 degrees below zero. The total capacity of this cabinet is about 175 tons. There is also another compartment with a capacity of about 150 tons where fresh fish could be stored at temperature a few degrees above freezing point. The ice storage plant has a capacity of 160 tons. The total cost of the plant is a little over Rupees seven and a half lakhs.

South Indian Notes

Oilseeds Production

As in the case of many an agricultural crop in our country, the main problem of the oilseeds crop is one of increasing yield. That there is vast scope for improvement in this regard will be evident from the fact that the yield per acre in China is 1519 lbs per acre with the USA recording an yield of 887 lbs. The yield per acre in India is only 639 lbs. The need for intensive cultivation has become all the more imperative as it is made clear that the area under oilseeds cannot be increased.

It may be recalled that Mr Karmarkar, speaking at the Export Advisory meeting recently, had pointed out that Oilseeds constituted a valuable source of foreign exchange so badly required by the country at the present juncture. It was his opinion that it should not be too difficult for the country to step up the production of oilseeds in the long run. It has been pointed out by the oil mills interests in the country that by improved agricultural practice production can easily be increased by 50 per cent in the next five years. It would appear, therefore, that the target of production of oilseeds for the Second Five-Year Plan at 76 lakhs tons, representing an increase of about 38 per cent over that of the First Plan, is quite a modest one.

While Presiding over the annual meeting of the Indian Central Oilseeds Committee in Hyderabad last week, Dr M. S. Randhawa, Vice-President of the Indian Council of Agricultural Research and Chairman of the Indian Central Oilseeds Committee, made it clear at the outset that the increased production could be achieved only through the adoption of intensive methods of cultivation as no expansion of area under oilseeds was possible. In this connection he recommended the adoption on a country-wide scale intensive cultivation similar to the Japanese method of paddy cultivation.

The progress of oilseeds production during the First Five-Year Plan also raises the hope that the new target is not very difficult of achievement. The acreage of the five major oilseeds crops in India rose from 26.5 million acres in 1950-51 to 29.5 million acres in 1955-56. The corresponding production also increased from 50.76 lakh tons to 55.96 lakh tons against the target of 55 lakh tons at the end of the First Plan period. About 9 per cent of the total area under agricultural crops in the country is occupied by the oilseeds crops. The value of the produce from the five major oilseed crops during 1955-56 is estimated at about Rs 343.4 crores. The production of oil from these oilseeds is estimated at about 13.9 lakh tons, valued at Rs 184.9 crores.

In the production of oilseeds, India occupies a prominent position in the world. This country is the largest producer of groundnut in the world accounting for 3.4 million tons, out of the total world production of 10.3 million tons. As regards the production of Castor, Sesamum and Rape-Mustard, India occupies the second rank.

In view of the growing demand for edible oils for human consumption, Dr Randhawa's plea for undertaking countrywide botanical and technological surveys of the potential sources of non-edible oils deserves the closest attention of all the interests concerned.

★

Problems Facing Kerala

The need for giving authoritative recognition to the trilingual pattern for the students of our country—(a) the mother tongue or the regional language (b) Hindi or the Rashtra Bhasha and (c) English, the international language was stressed by Dr. B. Ramakrishna Rao, Governor of Kerala, in the course of his Convocation address to the Travancore University. Such a step would put to an end to the trial and error method followed by the various States and help in overhauling the educational system as a whole in a suitable and uniform manner.

Language, however, does not constitute the only problem in the educational sector. The growing unemployment among educated young men on the one hand and the ever-increasing demand for technical personnel on the other have made it necessary to reorientate our educational system. The folly of having allowed our universities to develop into factories for the manufacture of graduates whose equipment is largely useless for the tasks that await them is increasingly being realised. It is now recognised on all hands that the only effective way of minimising the problem is an increase in the facilities for technical education in the country.

With the taking up for implementation of a number of development projects in the two Five-Year Plans, it has been forcefully brought to the attention of Government that technical personnel in large numbers are an essential prerequisite to the successful implementation of future plans.

As the percentage of literacy in Kerala is the highest in the whole country, the problem of unemployment has inevitably gained top priority among the State's tasks. The fact that the density of population per square mile in the State is the highest in the whole world—130 lakhs of people inhabiting 15,000 square miles—coupled with the fact that it is deficient in food production by nearly 50 per cent has been largely responsible for securing for it the appellation 'Problem State'.

While admitting that there were difficult problems to slove, Dr Ramakrishna Rao deprecated the tendency to magnify comparatively insignificant problems. The State and the Central Governments are fully seized of the problems facing Kerala and have drawn up plans for bringing about alround improvement within a measurable period of time. With the active co-operation of the people, many of these problems which appear insoluble at the moment will disappear gradually.

SOUTH INDIAN MARKETS

Pepper Prospects

PEPPER markets have been ruling steady with prices showing a slightly improving tendency, thanks to reports that new arrivals are slowly tapering off. In the Alleppey market, rates are moving between Rs 587-8 and Rs 612-8 per candy, according to quality.

Usually, arrivals during the last week of January and the first two weeks of February are the heaviest. But the smaller arrivals have made market circles to feel whether the present arrivals are a passing phase or they denote smaller crop in Alleppey and Travancore areas. The coming three weeks are, therefore, likely to give a clearer picture as to the final turnout of Malabar crop.

Growers in jungle areas are, however, reported to be reserved sellers, while continuous and scattered enquiries from Russia, China and other East European countries have made exporters to be cautious. Buyers from New York seem to be testing the intrinsic strength of the market, while grinders appear to be slow to follow.

According to latest reports, shipments of Malabar black pepper are estimated to be between 2,200 and 2,300 tons in January, while exports, during February, are tentatively placed at round about 3,000 tons. If this figure turns out to be correct, the statistical position of Malabar pepper will be quite healthy. There are chances of the market improving in the long run, if Sarawak crop turns out to be 20 to 25 per cent less, as some informed sources predict, though it is too early to say anything definitely.

The New York pepper market ruled steady with dealings remaining light. Buying orders at one quarter to half cent below the asked levels are going unfilled. With dock strike uncertainties hanging over the market, the nearby possition was becoming even tighter.

Meanwhile, the Cashew and Pepper Export Promotion Council, Cochin, has recommend to the Union Government enactment of legislation for the levy of a cess on the exports of pepper and cashew kernels in order to promote the activities of the Export Promotion Council.

★

Rubber

According to the figures released by the Indian Rubber Board, production of raw rubber in India last month reached an all-India high of 2,914 tons. This was 114 tons more than production in November last and 127 tons more than this time the previous year.

Consumption, during the same period, however, fell short of the record reached in December 1955 by 74 tons (the figure being 2,647 tons) even though this was a hundred tons more than the consumption in November last.

Estates, dealers and manufacturers also held between them the largest-ever stock of 8,311 tons on December 31st last year. At the end of the previous month, it was only 7,833 tons.

Nearly 13 tons of Crepe Sole were exported during December 1956.

★

Groundnuts

Prices in the Madras Groundnut market maintained a firmer tendency despite restricted activity. While buyers seemed to be hesitating, sellers were in no mood to part with stocks at lower prices.

Arrivals averaged 40 tons a day, crushers being the chief buyers. The rate for superior oil-quality seeds was quoted at Rs 167 per candy and bold variety at Rs 158.

In the Groundnut Oil section, the rate for the ready position firmed up to Rs 332 from Rs 326 per candy. Calcutta interests continued to show good ienterest in their purchases and were reported to have bought substantial quantities.

(Continued on page 195)

This is an advertisement and not a Prospectus. A formal Prospectus dated 20th December, 1956 has been prepared and filed with the Registrar of Companies, West Bengal.

Consent of the Central Government has been obtained to this issue by an Order, of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed in regard to them.

A licence has been obtained from the Central Government for the establishment of the new industrial undertaking described in the Prospectus and a copy of the licence is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

THE SUBSCRIPTION LIST WILL OPEN ON THE 4TH OF FEBRUARY, 1957, AND WILL CLOSE ON 15TH FEBRUARY, 1957, OR EARLIER OR LATER AT THE DISCRETION OF THE DIRECTORS.

SHAREHOLDERS, DIRECTORS AND FRIENDS HAVE ALREADY SUBSCRIBED TO Rs. 212 LAKHS OF THIS ISSUE.

INDIAN ALUMINIUM COMPANY, LIMITED

1971-81 AT PAR

PAYABLE IN FULL ON APPLICATION

Applications must be for multiples of Rs. 200 with a minimum of Rs. 200.

The Convertible Loan Stock now offered for subscription was created by a Resolution passed at an Extraordinary General Meeting of Shareholders held on the twelfth day of November 1956 and is constituted by a Deed Poll as an unsecured obligation of the Company. Interest at the rate of 5% per annum (less tax) will be payable on the 1st January each year for the year ending on the preceding 31st December, except that the first payment to be made on the 1st January, 1958, shall be nine rupees and four annas (less tax) for each unit of Stock of Rs. 200 outstanding on 31st December, 1957.

The following is a summary of the principal terms and conditions upon and subject to which the Rs. 2,68,13,200 Convertible Loan Stock is being issued:

CONVERSION RIGHTS: Stockholders will be entitled on the terms and conditions mentioned in the Deed Poll, by giving written notice to the Company, to convert every Rs. 200 nominal amount of Stock held by them into fifteen fully paid Ordinary Shares of the Company up to 15th December, 1957, and into fourteen such Ordinary Shares during the period from 1st January, 1958, to 30th June, 1960, inclusive, and into twelve such Ordinary Shares during the period from 1st July, 1960, to 15th December, 1970, inclusive, after which date the conversion rights shall cease to be exercisable. After the 15th December, 1970, the Stockholders will be subject to and entitled to the benefit of all the conditions endorsed on the Stock Certificates except the option to convert. **The Ordinary Shares into which the Stock is converted will rank pari passu in all respects with the then existing Ordinary Shares of the Company and will be entitled to participate in any dividend that may be declared after receipt by the Company of notice of intention to convert.**

REDEMPTION: On the 2nd January, 1971, and on the same date in each succeeding year the Company will redeem at par Stock amounting to Rs. 25,00,000 until all the Stock has been redeemed. The Stock to be redeemed will be selected by drawings. In addition, the Company may redeem at par all or any of the Stock outstanding at any time after 31st December, 1970, upon giving three months' notice in writing and if the Company elects to redeem part only of the Stock, the part to be redeemed will be selected by drawings. The Company will redeem at par any Stock which remains outstanding on the 2nd January, 1981.

DIRECTORS

KAILASH CHANDRA MAHINDRA,
"Mont Blanc," Dadyseth Hill, Bombay, 26. Industrialist and Chairman of the Company.

ERIK SPENCER GREENWOOD,
7, Mayfair Road, Calcutta. Managing Director of the Company.

LAWSON GREENE BASH,
Apt. 19D, Hotel Ten Park Avenue, New York, 16, U.S.A. Merchant.

JAKOB BOETSCHI, Alternate for Mr. Bash,
9, Dover Park, Calcutta. Merchant.

JAMES WILLIAM CAMERON,
146, Easton Avenue, Montreal West, P.Q. Canada. Engineer.

MUTHIAH ANNAMALAI CHIDAMBARAM,
Chettinad House, Raja Annamalaipuram, Madras, 28. Industrialist.

JAMES ATWOOD DULLEA,
Dogwood Lane, Westport, Connecticut, U.S.A. Senior Vice-President, Aluminium Limited, Canada.

SIR UDAY CHAND MAHATAB, K.C.I.E.,
Maharajadhiraja Bahadur of Burdwan.
"Aftab Ville," 14|1, Burdwan Road, Alipore, Calcutta. Landlord.

DR. PARAMESWAR VELAYUDHAN NAIR,
"Saraswathi Sadan," Cotton Hill Road, Trivandrum. Additional Director of Industries & Commerce, Kerala State.

WILLIAM ARCHIBALD RUSSELL, M.C.,
1, Minto Park, Calcutta, 27. Stockbroker.

MANU SUBEDAR,
Lotus House, Marine Lines, Bombay. Businessman.

HISTORY AND BUSINESS: The Company was incorporated in Bengal on the 17th December, 1938, under the name Aluminium Production Company of India Limited as a private limited company. On the 21st June, 1944, the name of the Company was changed to Indian Aluminium Company, Limited, and on the 28th March, 1945, the Company was converted into a public limited company.

The Company undertook the construction of a rolling mill at Belur, Calcutta, in 1939 for the fabrication of aluminium and its alloys and operations commenced mid-1941 with an initial capacity of 2,500 tons per annum which has since been increased to 7,000 tons per annum. This rolling mill was at first entirely dependent upon the importation of aluminium ingot. However, by 1943, an aluminium smelter to produce 2,500 tons of ingot per annum was constructed and completed at Alupuram, near Alwaye, Travancore. When this smelter commenced operations in 1943 it was dependent on imported alumina but by 1946 the Company was operating its own bauxite mines at Lohardaga, Bihar, and producing alumina at Muri also in Bihar and about 80 miles from the bauxite mines. The capacity of these mining, alumina and aluminium smelting facilities was subsequently increased to produce 5,000

INDIAN ALUMINIUM COMPANY, LIMITED

tons of aluminium ingot per annum at which level the smelter is now operating. However, due to recent improvements in operating techniques and the installation of additional furnace pots, it is expected that the smelter will operate at approximately 5,600 tons per annum commencing 1957.

In addition to the above smelting and fabricating facilities, in 1951 an aluminium powder and paste plant was completed at Kalwa, near Bombay, with an annual capacity to produce 600 tons of aluminium powder and 250 tons of aluminium paste, in respect of which India was formerly dependent upon imported supplies. During 1955 the Company completed the installation of a modern extrusion press capable of producing 1,000 tons of extrusions per annum. This extrusion press is located adjacent to the smelter at Alupuram, Travancore.

DEVELOPMENT PLANS: With the evidence that India is becoming increasingly dependent upon the importation of aluminium ingot, and since technological developments in the industry are creating greater demands for aluminium, the Company has decided to construct at the Hirakud power project site an aluminium smelter with an initial capacity to produce 10,000 tons of aluminium ingot capable of easy expansion to 20,000 tons or more per annum in the future. The necessary licence has been granted by the Government of India under the Industries (Development & Regulation) Act of 1951.

Simultaneous with the construction of the new smelter at Hirakud, the Company's bauxite mining and alumina producing facilities will be suitably expanded and subsequent further expansion will provide sufficient bauxite and alumina for all the Company's expanded smelting operations. Pending completion of the necessary bauxite and alumina producing facilities, arrangements are being made, with Government approval, to import alumina to ensure full use of the new smelter.

Negotiations with the Government of Orissa for the supply from the Hirakud Power Project of sufficient electric power to enable the new smelter to produce 10,000 tons of aluminium ingot per annum and for a lease of the necessary land at Hirakud for the establishment of the smelter have reached an advanced stage and it is expected that such negotiations will be successfully concluded in the very near future.

MARKET POSSIBILITIES: The Tariff Commission enquiry into the aluminium industry held in 1955 determined that the then prevailing demand for aluminium was about 20,000 tons per annum and it was expected to increase at the rate of approximately 5,000 tons per annum so that by the end of 1958 it would reach about 35,000 tons as follows: utensils 10,000 tons; electrical conductors 14,000 tons; transportation 5,000 tons; foil, canning and packaging 3,000 tons; engineering, building construction and other uses 3,000 tons.

However, consumption of aluminium in India in 1955 was about 27,000 tons of which approximately 10,000 tons of semi-fabricated products and 4,100 tons of ingot were imported. Since India's present capacity to produce primary aluminium ingot only approximates 7,200 tons there is an obvious and urgent need to expand ingot producing facilities and when the proposed new swelter is in operation it is expected that the new production will be promptly absorbed. Furthermore, since the Tariff Commission estimates that the demand for aluminium will increase at the rate of 5,000 tons per annum the need for smelting facilities in addition to those now planned is evident and it is already envisage that the capacity of the proposed Hirakud smelter may eventually be doubled from 10,000 to 20,000 tons per annum.

TECHNICAL AND RESEARCH FACILITIES: The highly complicated operations of smelting and fabricating aluminium in this relatively new industry, must necessarily be supported by extensive and unceasing efforts in exploration, engineering and research. Fortunately, due to close affiliation with its principal Shareholder, Aluminium Limited, Montreal, Canada, this Company is, by agreement able to use and benefit from the research and technical facilities of Aluminium Laboratories Limited, which is a fully owned subsidiary of Aluminium Limited, and is thereby provided with technical information, engineering services and advice regarding all developments in the aluminium industry and guidance on operational problems and the development of new products.

The research facilities of Aluminium Laboratories Limited are located in Canada and the United Kingdom and are probably the most extensive of their kind. Aluminium Laboratories Limited's annual budget for research and development exceeds 4 million dollars.

FINANCING: The amount required for the expansion programme and for additional working capital is estimated to be Rs. 8.65 crores, part of which will be financed by the proceeds of the recent new and fully subscribed issue of 4,11,000 Ordinary Shares and this issue of Convertible Loan Stock; the balance will be financed by bank loans, depreciation reserves and undistributed earnings. Part of the proceeds of this issue will be utilised for the purpose of repaying the sum of Rs. 50 lakhs which the Company has borrowed from Aluminium Limited.

The financial information included herein reflects the effect of the increased aluminium ingot capacity which commenced in the second quarter of 1955 when the capacity of the Alupuram smelter was increased from 2,500 tons to 5,000 tons per annum. The increased ingot production was most rewarding and it will be noted that profits of Rs. 20,44,011 in 1955 and Rs. 23,57,567 for the nine months ended 30th September, 1956, were recorded, compared with Rs. 2,69,243 in 1954.

The new ingot capacity of 10,000 tons per annum now envisaged by this Company together with India's existing capacity of approximately 7,200 tons per annum is, as previously indicated, substantially below the Tariff Commission's estimate of an overall demand of 35,000 tons per annum by 1958. Consequently, it is expected that production from the new smelter will be marketed at profitable levels and will provide a reasonable return on the new capital invested as well as sufficient funds to service and repay loans which will become necessary during the construction period.

FINANCIAL INFORMATION: The following is a condensation of the accounts of the Company which have been audited by the Company's Auditors, Price, Waterhouse, Peat & Co.

	Sales	Net Profits before Depreciation and Taxation	Net Profits after Depreciation and Taxation*
	Rs.	Rs.	Rs.

DIVIDENDS ON PAID-UP CAPITAL: Dividends paid on Ordinary shares were 3½% for the year ended September 1950, 5% for the year ended September 1951, Rs. 5 per share for the 15 months ended December 1952, 9% for the year ended December 1955 and an interim dividend of 5% was paid in respect of the year 1956. Dividends on the 5% Cumulative Preference Shares have been paid regularly.

GENERAL INFORMATION

MANAGEMENT: The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

INTEREST OF DIRECTORS: Mr. K. C. Mahindra is the Financial and Technical Adviser of the Company and receives remuneration for his services as such.

Mr. E. S. Greenwood is the Managing Director of the Company and receives remuneration for his services as such.

Mr. W. A. Russel is a partner in the firm of Place, Siddons & Gough, Stock and Share Brokers, brokers to this issue.

Mr. J. A. Dullea is a Director of Aluminium Laboratories Limited which Company is a party to contracts for the supply of engineering and technical services at cost to this Company.

Save as above no Director has any financial or other interest in any property acquired or proposed to be acquired by the Company.

UNDERWRITING: The Convertible Loan Stock now being issued is not underwritten.

BROKERAGE: A brokerage of one half of one per cent will be paid on allotment of Stock made in respect of applications bearing the stamp of a recognised Stockbroker.

APPLICATIONS FOR STOCK

Applications for the stock, which must be for Rs. 200 or multiples thereof, must be made on the official forms issued by the Company, and sent together with a remittance for the full amount payable on application to one of the undermentioned Brokers, or a branch of Lloyds Bank Ltd., in India, or a branch of The First National City Bank of New York, in India. Copies of the official application forms and of the formal prospectus may be obtained from the Registered Office of the Company at 31, Chowringhee Road, Calcutta 16, the Company's Bankers and the following Brokers:

The Associated Cement Companies Limited

Expansion Programme Progressing on Schedule

The Case Against State Trading in Cement

The Relationship Between Free Enterprise and Democracy

Review of the Industry by Mr Dharamsey M. Khatau, the Chairman

The following is an abstract of the speech delivered by Shri Dharamsey M. Khatau at the Twentieth Annual General Meeting of the Associated Cement Companies Limited, held in Bombay on 25th January, 1957.

Following upon drastic amendments to the Constitution enabling outright nationalisation, or the assumption by Government of complete managerial control over private property upon such terms as to compensation as the Government of the day might think proper, there have been enacted a series of laws of the most far reaching character. Taken together with the previously existing restrictive laws and the voluminous labour legislation already on the statute book, they furnish such a complete range of weapons in the Government's armoury that it seems pointless to talk any longer of freedom for the private sector. The issue must be joined hereafter on the broader base of preservation of freedom and democratic institutions, because what is now in danger of being smothered is not just the private sector in the industrial field, but Free Enterprise generally."

STATE CAPITALISM

Shri Khatau mentioned the nationalisation of Life Insurance and the resort to State Trading in cement as the two most outstanding recent examples of the suppression of Free Enterprise and the onward march of State Capitalism. He referred to the notable contribution of these two industries and their achievements over the last twenty years and observed that in the case of Life Insurance, the grounds on which that vast and growing industry was nationalised, did not bear dispassionate scrutiny. Nor had the results been conspicuously successful or demonstrably in the larger public interest. In fact there had been an alarming drop in the volume of new business since nationalisation.

STATE TRADING IN CEMENT

"As for State Trading in Cement", the Chairman continued, "the Government's reasons for resorting to this remain a mystery to this day. The Government's decision is all the more inexplicable because the conditions obtaining in the cement industry did not warrant any such measure. The cement industry had on the basis of its performance and record, honourably justified its stewardship.

Referring to the 'cement gap' which existed in the country despite the industry's impressive production efforts and performance, Shri Khatau pointed out that the ACC was the first to foresee the gap which was likely to develop due to the requirements of the Second Five Year Plan. The ACC brought this to the notice of the Government as far back as September 1955 and offered to import cement and to distribute it to the consuming public **without profit.** "After taking little or no notice of this suggestion for some months", the Chairman continued, "the Government seemed suddenly to feel the urgency to resort to State Trading in cement and sought to justify this step on the following grounds:

(a) The need to import substantial quantities of foreign cement to meet the current 'cement gap'

(b) The need to sell both indigenous cement and imported cement (which would cost about Rs. 40 to Rs. 45 per ton more than indigenous cement) at an equalised price

(c) The need to rationalise all railborne cement movements so as to impose the minimum strain on the transport system in the country.

The Chairman met these points by stating: "We had already recognised the existence of the 'cement gap' and had offered to import foreign cement and to sell it to the consumer at cost. We suggested that price equalization should be done **without profit,** by raising the price of Indian cement by just so much as would be necessary to meet losses on the sale of imported cement at a common delivered price applicable to both. We suggested that this could be done either through the medium of enhanced excise duty, or by imposing a 'price equalization pool' or 'trust fund', either voluntary or statutory. We also offered to evolve a pattern of distribution which would involve only the minimum rail movement. But the disappointing outcome of all this was that while the Government accepted our main proposals they rejected all the alternative price equalization mechanism we had suggested. And so the country was launched upon State Trading in cement."

The Chairman then examined the mechanism of State Trading in cement. The entire production is sold to the State Trading Corporation of India and the Corporation pays to the producers of cement the old ex-works price which in the case of the ACC is Rs. 54/8 per ton for naked cement, plus packing charges (varying from Rs. 13/8 to Rs. 14/8 per ton) to be determined by Government each quarter. "But the State Trading Corporation in turn sells the cement to the public at the new equalised price of Rs. 102/8 per ton F.O.R. destination, inclusive of excise duty, selling expenses, freight and other handling charges, all of which are borne by the Corporation. As against this, our selling price F.O.R. destination before the advent of State Trading was approximately Rs. 90/- per ton. The purchase and sale of cement is arranged by the State Trading Corporation through the existing selling agencies of the cement manufacturers, who were appointed as Agents of the State Trading Corporation for this purpose. The Agents' remuneration for their services comes out of the ex-factory prices originally fixed for the manufacturers. The Cement Marketing Co. of India Private Ltd. is accordingly the agent of the State Trading Corporation since 1st July 1956 for the sale and distribution of A.C.C. cement at a commission of Rs. 1-8-0 per ton."

FREE ENTERPRISE AND THE FREEDOM TO TRADE

Stating that the cement industry's objection to State Trading was fundamental, the Chairman stated: "We believe that all forms of State Trading constitute a serious infringement of the right of freedom of trade in a democratic society. The mere fact that State Trading can resolve a given problem in terms of agreed objectives is not, by itself, a sufficient justification for its adoption if other solutions of equal, or superior or even slightly inferior validity, are available, which do not involve state interference. Moreover, State Trading lops off the essential sales function from a basic productive industry—a function laboriously built over the years by Free Enterprise, thereby causing grave injury to it. I would also emphasise that State Trading in cement runs counter to the declared policies of Government itself as enunciated in the Industrial Policy Resolution early last year and in which an attempt was made to strike an admirable balance between State and Free Enterprise. The continual maintenance of such a balance is of the very essence of a socialistic pattern of society, if it is to be built on the foundations of a democratic constitution."

"In this context, the recent assurances of the Prime Minister in respect of the urgent need for India's adherence to democratic processes in Planning and of evolving a balanced approach between State and Free Enterprise are indeed welcome. Experience has shown that the concentration of a economic power in the hands of Government, backed by monolithic majorities in the legislatures and operated through a well organised bureaucracy must, in course of time, result in whittling down both individual freedom and liberty. It is with this larger objective in view that one must repeatedly warn the Government against adopting a doctrinaire and unrealistic approach to problems of planning and in the techniques for achieving industrial development. Issues like Nationalisation and State Trading should be conceived only as the means to an end, and not as ends in themselves.

"Enlightened Free Enterprise working within the framework of planned development is an indispensable part of the democratic set-up, for there is a close interrelationship between socially regulated Free Enterprise and Democracy. Free Enterprise should therefore be positively encouraged to thrive by appropriate incentives and reliefs whenever needed, because it had a legitimate and vital function to perform in national planning and development so long as democracy is the foundation upon which our Constitution rests."

PRODUCTION AND SALES

Turning to the affairs of the Company, the Chairman reported another year of successful working for the ACC. Both production and sales of cement were satisfactory. Yet the results were less profitable than for the preceding year, due to repeated increases in freight rates, the price of coal, imported stores and spares, royalty on limestone, etc. The Chairman felt that this trend of rising costs was likely to continue, and that the Company would have to face up to a substantially higher cost of production in the future. This would be further aggravated by the irresponsible demands for wage increases which were being sponsored by the INTUC, and the threat of hasty legislation to enhance the rates of Provident Fund contribution which was being pressed for by Government.

PLANT REHABILITATION AND EXPANSION

Reviewing the Company's programme of modernisation and expansion, Shri Khatau reported that it was progressing according to schedule and that the Company had formulated plans to expand its installed capacity over the next five years to a total of 5.2 million tons per annum as its contribution to the national target of 12.5 million tons of cement under the Second Five-Year Plan. During the year the modernisation and expansion of the Company's Bhupendra, Kistna, Chaibasa and Kymore factories continued satisfactorily. The Chairman also announced the Company's intention to install a third unit at the Sindri Works, "provided that a satisfactory price for the additional raw material (calcium carbonate sludge from the Sindri Fertilizer Factory) required can be negotiated with the Fertilizer Factory."

NEW PROJECTS

The Chairman stated that satisfactory progress had been made in the construction of the Company's new cement factories at Mancherial and at Porbandar and that work on the construction of a new plant at Drug would be started in the near future. All these three factories would operate the dry process, instead of the wet process employed at other ACC factories. The Company's newly constructed refractory plant at Katni was functioning satisfactorily and its output would steadily be stepped up to its rated capacity.

FINANCE FOR EXPANSION PROJECTS

Speaking about the very heavy capital outlay entailed by the expansion programme, Shri Khatau stated that the projects would be financed partly out of the proceeds of the recent issue of new shares and partly by borrowing against the Company's cash-credit arrangements with the State Bank of India up to the full limit of Rs. 4 crores. He continued: "Despite this, however, substantial additional funds will obviously be needed. By far the largest portion of this extra finance will have to come out of the internal resources of the Company consisting of depreciation allocation and undistributed profits retained to the credit of various reserves. This process of ploughing back as large a portion of the profits as was possible is in serious danger of being prejudiced in the years to come by recent trends in bonus awards and in the taxation policies of Government. As for the former, there appears to exist no appreciation whatsoever of the need to plough back into industry an adequate volume of profits not merely for rehabilitation and modernisation of existing plant but also for expansion of capacity; with the result that these needs are virtually ignored and a substantial portion, if not the whole, of the socalled 'surplus' is cheerfully awarded as Bonus. The time has come for some realistic thinking in this matter with a view to evolving a fair and workable formula for the award of bonus so that industry may not be deprived of that steady volume of annual accretions to internal resources so essential for financing both expansion and modernisation. If there must be a curb on industrial dividends, then there must also be one on bonus to industrial workers."

Dealing next with the effects of the recent Finance Act upon industrial development, the Chairman observed: "The Act directly impinges upon industrial development in two ways. In the first place there can be no doubt that with the existing confiscatory level of personal taxation, the Capital Gains Tax and the heavy additional Corporation Tax on dividends in excess of 6% can only act as decisive disincentives to new investment and to ploughing back profits into industry. On the other hand, the deposit scheme for canalising in approved directions the utilisation of corporate funds represented by undistributed profits and the tax saved on depreciation and other allowances need not, in itself, give cause for anxiety. But the effect of the whole scheme will depend entirely upon the flexibility and consideration with which it is operated in practice. In particular, Companies such as ours which may have already used their funds for approved purposes should not be required to make any deposits; and "approved purposes" should include not merely the full range of Fixed Capital and Working Capital requirements of a Company, but also the repayment of moneys borrowed and utilised for those purposes. There is every reason to hope that the Rules which are now being framed will fulfil these expectations. And if the deposit scheme is so operated, it need cause no undue concern; but otherwise, it may precipitate a major crisis in the money market and bring all significant industrial development to a grinding halt."

THE ACC-VICKERS-BABCOCK & WILCOX PROJECT

The Chairman reported that **satisfactory progress had been made in the Company's negotiations** with Messrs. Vickers Ltd. and Messrs. Babcock & Wilcox Ltd. for the establishment of an uptodate heavy engineering plant, which within a few years, would make India largely self-sufficient in the whole range of cement-making machinery. The new project would also provide a substantial proportion of the country's requirements of water tube boilers and mining machinery.

PAKISTAN

The Chairman stated that the ACC's two factories in Pakistan were operating satisfactorily. As anticipated, prices of coal, stores and other materials had risen sharply in that country, with the devaluation of the Pakistan rupee. But the price increase granted by the Government of Pakistan covered only a portion of the actual increase in costs, and unless production costs declined, Shri Khatau felt that the Company would have to approach the Government there for an upward revision again. Shri Khatau also reported that as a result of the representation by the Company the Pakistan Government had since rescinded certain restrictive clauses in the Cement Control Order which were not warranted in view of the supply position there.

LABOUR—MANAGEMENT RELATIONS

Turning to labour-management relations the Chairman observed: "I am very glad to report that the present year has been one of distinct improvement in our relations with our employees. I am heartened to think that the enlightened and progressive policy which your Company has always followed in promoting the welfare and well-being of its employees is not without its due response from them. And I would like to congratulate my labour friends and officials of the trade unions at the various factories for the generally realistic attitude which they have adopted in solving problems of common interest and for showing an increasing awareness of their responsibilities in our common endeavour. Unlike in past years, there was no strike or stoppage of work to mar the growing accord and understanding based on good faith and goodwill.

"In my report last year I had referred to the unanimous decision of the Industrial Committee on Cement to abolish the contract system wherever possible in the normal working of our factories. With the co-operation of the Unions we were able to implement this decision during the year under review. This provides an excellent example of the Company's workmen and management striving together with singleness of purpose to achieve satisfactory results in solving important issues."

BONUS AND APPRECIATION

The Chairman announced that the Board had recommended this year the payment of a bonus equivalent to three months basic earnings to all employees at the Head Office, the Works and Branch Offices, including those employed in the Cement Marketing Company, and concluded by recording the Company's warm appreciation of the unstinted co-operation and unremitting hard work put in by all members of the Company's staff during the year.

NOTE: This does not purport to be a record of the proceeding of the Annual General Meeting which will be sent separately to Shareholders.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE

At a meeting of the Board of Directors of the Indian Iron & Steel Co. Ltd., held to-day it was decided that in accordance with the resolution passed at the Extraordinary General Meeting of the Company held on the 1st December, 1956, the Rights offer of 5,183,708 new Ordinary shares of Rs. 10 each at a premium of Rs. 3-8-0 per share be made to those persons who are registered as holders of Ordinary shares in the Company's Register of Members on the 11th March 1957, in the proportion to one new Ordinary share for every Ordinary share held by each such person on the said date.

The Ordinary Share Register of the Company will remain closed for the purpose of this offer from the 21st February, 1957, to 11th March, 1957, both days inclusive.

Holders of Ordinary shares under blank transfer are particularly reminded that it is necessary to lodge the Certificates of Shares with instruments of transfer duly completed in all respects before the Register is closed in order to be entitled to the Rights offer. Authority of persons signing instruments of transfer and in cases of transfer of shares out of the names of deceased shareshareholders, grants of legal representation, Estate Duty Discharge Certificates or evidence of acquiring the shares by the transferees for valuable consideration must be registered with the Company, otherwise applications for transfer of shares in such cases cannot be entertained by the Company.

Legal Representatives of deceased shareholders should get their legal representations immediately registered with the Company to enable them to receive and deal with the Letters of Rights on behalf of the estate of the deceased.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. Liversedge,
Managing Director,
Managing Agents.

RESERVE BANK OF INDIA

Applications are invited for the following posts in the Reserve Bank of India:

(A) POSTS AND SCALES OF PAY:

1. Probationary Assistants, Department of Research and Statistics/ Legal Division. } Rs. 250-25-450 E. B. 25-650
2. Economic/Statistical Assistants, Department of Research and Statistics. } Rs. 175-12½-300 E. B. 20-440
3. Field Inspectors
4. Field Investigators } Rs. 90-5-100-8-140 E.B. 10-250 E. B. 12½-300.

Note:—Candidates possessing exceptionally good qualifications and experience of value to the Bank and those having experience of field investigation work, may be given a higher starting pay in the prescribed scale.

In addition to pay, the selected candidates will be eligible to draw local pay, house rent allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) AGE LIMITS AS ON 1ST JANUARY 1957:

1. Probationary Assistants, Department of Research and Statistics/ Legal Division. } Not less than 21 years and not ordinarily over 24 years.
2. Economic/Statistical Assistants. } Between 18 and 24 years.
3. Field Inspectors.
4. Field Investigators.

(a) Undergraduates: Between 18 and 22 years.

(b) Graduates: Between 18 and 24 years.

The maximum age limit is relaxable but not beyond 30 years, in the case of—

(1) Probationary Assistants in the Department of Research and Statistics possessing special qualifications and experience of value to the Bank;

(2) Probationary Assistant in the Legal Division;

(3) Candidates having extensive field experience;

(4) Candidates with approved war service;

(5) Ex-employees of Banking Institutions whose services had to be terminated for reasons of economy or as a result of the Banks going into liquidation;

(6) Personnel retrenched from Government offices after at least one year's service, applying through Employment Exchanges and

(7) Candidates belonging to the Scheduled Castes or Scheduled Tribes.

(C) QUALIFICATIONS:

1. Probationary Assistants, Department of Research and Statistics.

Essential: A brilliant academic record with a first or high second class Master's degree in Economics or Agricultural Economics or Commerce or Statistics/Mathematics.

Desirable: 1. A period of research work in
(a) Agricultural Economics
(b) Co-operation
(c) Rural Sociology, OR
(d) Sampling Theory.
2. Experience gained in a responsible position in a Co-operative Institution/Department.
3. Experience of field investigation work.

2. Probationary Assistant, Legal Division.

Essential: Applicants should be Advocates or Solicitors and must possess high academic qualifications in law and practical experience of work in an Advocate's or Solicitor's office or experience of independent practice, for a minimum period of four years.

3. Economic/Statistical Assistants.

Essential: A first or high second class M.A. or M.Com degree in Economics or Statistics of a recognised University.

Desirable: Practical experience of research in Economics or Statistics.

4. Field Inspectors.

Essential: At least a second class Bachelor's degree in Economics, Commerce, Agriculture, Mathematics or Statistics of a recognised University.

Desirable: (1) Practical experience of the working of Co-operative Credit Institutions or Agricultural Marketing and Processing Societies or Industrial Co-operatives.
(2) Experience of field investigation work.
(3) Special study of Agricultural Economics or Rural Sociology.

5. Field Investigators.

Essential: Matriculation or equivalent examination of a recognised University or Board in first or second class with at least 50% marks in English, Mathematics and Geography.

Desirable: (1) A Bachelor's degree of a recognised University.
(2) Experience of field investigation work or of work in Co-operative Institutions.
(3) Knowledge of two or more vernacular languages.

Note::—Field Investigators and Field Inspectors should be able to speak and write one or more of the following vernacular languages:
(1) Bengali (2) Gujarathi (3) Hindi (4) Kanada (5) Punjabi (6) Tamil (7) Telugu.

The selected candidates for the posts of Probationary Assistants, Department of Research and Statistics/Legal Division will ordinarily be on probation for a period of three years.

The selected candidates for the posts of Probationary Assistants in the Department of Research and Statistics should be prepared to work in Districts selected for Rural Surveys and should be able to conduct the field work, if required.

The selected candidates for the posts of Field Inspectors and Field Investigators will be appointed on a temporary basis for a period of one year in the first instance but are likely to be made permanent and they will be stationed in Districts selected for Rural Surveys and will be required to carry on investigations in selected Villages in such Districts.

The selected candidates for the posts of Economic/Statistical Assistants will be required to appear for a written test.

Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and they should also mention prominently on their applications the other posts applied for by them.

Applicants for the posts of Probationary Assistants must remit application fee of Rs. 7/8 by Postal Order, Cheque or Bank Draft on a Scheduled Bank payable at Bombay along with the application. Applicants for the posts of Economic/Statistical Assistants and Field Inspectors must remit an application fee of Rs. 2/- in a similar manner. The application fee is in no case refundable. Bonafide Refugee candidates who are NOT IN EMPLOYMENT applying through any of the Government Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Scheduled Tribes the fee will be reduced to 1/4th.

Applications should be in the candidate's own handwriting. Applications for the posts of Probationary Assistants, Department of Research and Statistics/Legal Division, Economic/Statistical Assistants should be in the prescribed form obtainable from any office of the Reserve Bank. Applications for the posts of Field Inspectors and Field Investigators should be on plain paper and must contain the following information:

Name in full; educational qualifications—Examinations passed with subjects, distinctions, classes and marks obtained; Schools, Colleges and Universities attended; date of birth; age; address; place of birth and domicile; community; details of previous office/research experience, if any; period of approved war service, if any; number of languages able to speak and write; father's name; father's occupation; extra curricular activities; proficiency in games, etc.

All the applications should be accompanied by copies of two testimonials (originals should not be sent; the Bank does NOT accept responsibility for returning the originals if sent through oversight) and forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 18th February 1957. Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes or Scheduled Tribes should mention this fact prominently on their applications and also enclose a copy of certificate to that effect from a competent authority.

Appointments will be subject to candidates being found medically fit for service in the Bank. If any candidate desires to have his application acknowledged he should send it by "Registered Post Acknowledgment due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them.

Canvassing in any form will be regarded a disqualification.

SOUTH INDIAN MARKETS

(Continued from page 189)

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were fair and these met with fair clearance. Prices ruled steady, light and heavy weights being higher by 1d per pound. Arrivals and clearances of Buff hides were moderate and prices for these ruled steady. There was no change to report either in the Buff Calf or Cow Calf section.

On the export front, scattered business was reported done, although there was very little enquiry for light weight inferiors. Business was done in 5/5½ lbs at 40d to 40½d and in 10/12 lbs at 34d. In the Calf section, enquiry for prime class Buff Calf tappered off with "thirds" becoming increasingly difficult to sell.

In the Tanned Skins section, arrivals of both Sheep and Goat skins were moderate. Prices ruled generally lower by As 2 per pound.

In the export section, business in prime class Goat skins was fair. There were some enquiries in 11/12 lbs, but business was difficult as sellers' ideas were 3d per pound higher. In the Sheep section, prime and semi-prime class held the ground at last week's levels. Commons were taken in small quantities at unchanged prices.

THE INDIAN CABLE COMPANY LIMITED

NOTICE

Notice is hereby given that a General Meeting of the Shareholders of The Indian Cable Co. Ltd. will be held at the Registered office of the Company, 9, Hare Street, Calcutta, on Friday, the 22nd February 1957, at 11.00 a.m., to consider and if thought fit to pass, with or without modification, the following resolutions, namely:—

1. (As a Special Resolution) that the capital of the Company be increased to Rs. 4,00,00,000 by the creation of 30,00,000 additional Ordinary Shares of Rs. 10/- each.
2. (As a Special Resolution) that the regulations contained in the printed document submitted to the meeting, and for the purpose of identification subscribed by the Chairman thereof, be approved and adopted as the Articles of Association of the Company, in substitution for, and to the exclusion of, all the existing Articles thereof.

By Order of the Board,
S. N. MUKERJEE,
Chairman.

9, Hare Street,
Calcutta, 21st December 1956.

N.B.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

NORTH INDIAN MARKETS

(Continued from page 187)

ban on imports. A section of the trade expects that the imminent merger of certain outlying areas with Bombay city may provide an opportunity for securing supplies of wheat which have accumulated in those areas during the past few weeks.

Jowar prices tended to stabilise on account of the buying support at lower levels. Prices, therefore, ruled higher by Rs 2 to Rs 3 per candy. The trend of Bajra prices was also steadier with the traders realising Rs 2 to Rs 5 per candy more.

In the Pulses section, Gram prices were easier to the extent of Rs 2 to Rs 3 per candy. Trading in other pulses was featureless.

In the Delhi grains market, conditions remained steadier, farm quality wheat recording a rise of about As 8 to Rs 22 per maund—a peak in the past few years. This was attributed to tight supply position and lower stocks. In sympathy, Rice moved up by As 8 to Re 1 per maund.

Higher advices from the Punjab and Uttar Pradesh caused a rise of about As 8 to As 12 per maund in the rates of Maize and Bajra. Dara Moong showed small gains on account of better offtake. Masoor also gained As 12 due to increased demand. Among Pulses, Gram was quoted slightly lower.

*

WORLD OF TEA

(Continued from page 178)

for sale, was decidedly keener and the amount of tea actually on spot fell to around 60.5 million pounds or equivalent to between six and seven weeks' supply at the present rate of consumption. The quantity of tea, awaiting to be landed, rose to about 46.5 million pounds for the week ended January 18 from at least 42 million pounds a week earlier.

Tea stocks in London, as on the 18th January 1957, amounted to 68.48 million pounds as compared to 69.85 million pounds in the previous week and 101.61 million pounds a year ago. Landed between the 12th and the 18th January 1957 were 10.56 million pounds, while deliveries during the same period were 11.92 million pounds.

TEZPORE TEA COMPANY, LIMITED.

Notice is hereby given that the period for submission to the Company of Fractional Certificates for allotment of fully paid Ordinary Shares in lieu thereof in regard to the issue of Bonus Shares on 12th December 1955 has been further extended to 11th April, 1957.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.

Calcutta, 28th January, 1957.

WORLD OVERSEAS

(Continued from page 179)

national output in physical volume terms has risen by about 7 per cent, more than in any other post-war year except 1955, which was a period of recovery. All major segments of industry have contributed to this production increase.

Canada's unparalleled expansion of the past year has been taking place against a background of sustained prosperity in other parts of the Western World and expanding international trade. Production levels in the United States and in Western Europe rose less rapidly in 1956 than in the preceding year, but international trade in these areas and elsewhere moved steadily upward. In these circumstances external markets for Canada's goods have continued to grow. On the basis of ten month figures, it now appears that merchandise exports will approximate $4.85 billion for the full year, 12 per cent higher than in 1955. Larger shipments of wheat account for more than one-third of this increase.

The indications are that overall demand will remain strong in 1957. Toward the end of the year pressure from new investment may ease, as some of the larger expansion projects now underway approach completion. Meanwhile the likelihood of an increased influx of immigrants will help to fill deficiencies in the supply of labour. The current economic upswing, though now in its third year, gives no indication of general vulnerability. Inventories have increased but not out of line with final demands. Speculative tendencies have been restrained and prices have increased but moderately. Shifts in market demands will continue to cause ups and downs in some industries, but these are not likely to affect the underlying surge toward everwidening economic horizons.

*

EDITORIAL NOTES

(Continued from page 175)

in the company of his triumphant spouse. Or is it that beneath a convenient pose, he was all along secretly exulting in a gain which was only that of his better half?

Anyway, this highly public-spirited couple seem to represent the limit to which election ambitions have temporarily interfered with domestic felicity. Another, better-known couple, in the forefront of Indian public life, have parted political company, but with no intention to carry the breach any further.

Curiously enough, women candidates were less conspicuous than before in the Polish elections too. Two countries, even when they belong to the two different political systems, are not enough to tell the full story of the woman-in-politics trend. Neither are we inclined to draw any moral beyond saying that the experts who have been anxiously warning against ceilings may find floors equally entitled to disapproval.

SOUTH EASTERN RLY. TENDERS.

The Controller of Stores, Garden Reach, Calcutta—23, invites tenders for the following:—

1. Tender No. CS1/57/10221R(56) for supply of 2 Nos. of Transformers 6.6/4 K.V., 100 KVA. double wound oil immersed self-cooled, indoor type complete with accessories as per the Railway's specn.

2. Tender No. CS2/57/4976R(55) for supply of 150 Nos. of Wicket Gate for Level Crossing to the Railway's drawing.

3. Tender No. CS3/57/K6/9/1(57) for Fabrication of Garments for the staff of the Railway during 1st April, 1957 to 31st March, 1958.

Tender forms are obtainable from his office (I.B. Section) on remittance of Rs. 2/- per copy per tender (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach, Calcutta—23 by local firms. Earnest money against tenders (1) and (2) is Rs. 250/- each and that against tender (3) is Rs. 2,000/-. Closing date of all tenders is 27-2-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income-tax Clearance Certificate and the earnest money receipt along with the tenders.

INDIAN COPPER CORPORATION

(Incorporated in England)

By Order of the Board,
DAVID JOHNSTON,
Actg. Secretary.

Clive Buildings,
Netaji Subhas Road,
Calcutta.
28th January, 1957.

STATE BANK OF INDIA

NOTICE

The Second Annual General Meeting of the Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Appollo Street, Bombay, on Thursday, the 28th February, 1957, at 4 P.M. (Standard Time) for the transaction of the following business:—

To receive the Central Board's Report, Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1956 and the Auditors' Report on the Balance Sheet and Accounts.

H. V. R. IENGAR,
Chairman.

Bombay, the 25th January, 1957.

Stock Exchanges

MARKETS INACTIVE: MODEST RECESSION

Watch-Dog Writes:

IN general, stock markets have cried a halt to the recent recovery movement. Sentiment has been adversely affected by the developments in the Kashmir situation. But, more than anything else, the main bearish factor responsible for the sudden turn for the worse is the announcement, by the Indian Iron & Steel Company, of the new issue.

Apart from a feeling that large capital will be taken away from the already stringent money market, there are fears with regard to the difficulties that may arise in the delivery of shares on the ex-right basis after the settlement date—7th February, 1957. Bear-covering has, however, helped the market to recover some of lost ground at the close of the week.

Equities on the Calcutta Stock Exchange, after ruling very firm midweek, developed an easier trend toward the close due to some selling pressure.

Except for a feeble attempt at rally, prices on the Bombay Stock Exchange steadily yielded ground on persistent bull unloading.

While activity on the Madras Stock Exchange continued broad-based, higher levels could not be retained till the close of the week.

On the London Stock Exchange, Giltedged securities maintained remarkable firmness, the main stimulus being prospects of a lower Bank Rate.

Trading on Wall Street showed a mixed pattern. Steel and Copper shares were among the weaker groups.

*

Calcutta

Calcutta, Thursday Evening.

CONDITIONS on the local Stock Exchange remained very firm during the initial stages of the week under review. Factors, which helped values to look up further, were the flow of encouraging corporate news, the Life Insurance Corporation's buying interest in selected equities, the rising trend of commodity prices and the emergence of demand from investors due to attractive price structure.

However, the closing of the week was not without some hesitations. Fears were entertained that, despite the satisfactory trade agreement concluded recently between the two countries, relations between India and Pakistan would be strained again by the latest developments over the Kashmir issue. Above all, the announcement of the closing of the Transfer Books of the Indian Iron & Steel Company in connection with the right issue caused renewed selling pressure, resulting in the prices coming down in most of the sections. Thanks to some bear-covering at lower levels, the market finished the week on a slightly steadier note.

The Giltedged market was in a good shape with prices developing a hardening tendency, thanks to the reserved attitude on the part of sellers. The volume of business did not, however, reflect any appreciable change. State Loans were in good demand at the Reserve Bank buying rate. 3 per cent 1986 Conversion Loan changed hands at Rs 73-8 to Rs 73-15.

The Banking section ruled quietly steady with small losses recorded in some scrips due to profit-taking. Punjab National forged ahead to Rs 56-8 from Rs 55-12, while United Commercial, after touching a high of Rs 58-12, receded at the close to Rs 56-12.

Jute shares were in surprisingly good demand, probably due to the attractive prices prevailing now. Profit-taking at higher levels, however, erased some of the gains at the close. There was a feeling of uncertainty with regard to the implications of the proposals on raw jute imports from Pakistan as contained in the recent trade agreement. Howrah were at one time taken upto Rs 20-8 and National upto Rs 19-14, to ease off at the close to Rs 19-2 and Rs 19-10 respectively. Naddea moved narowly between Rs 31 and Rs 31-4, while Bally were enquired upto Rs 155 from Rs 143 and Lansdowne upto Rs 101-8 from Rs 97-8.

Coal shares were listless. Operators were generally inclined to book profits at the recent high levels on the feeling that the award of the Appealate Tribunal would make the working of the industry more uneconomic. Bengal were marked back to Rs 456 from Rs 460, while Burrakur closed better at Rs 21-3 after touching a low of Rs 20-14. Equitable, however, met with some support upto Rs 26-6 from Rs 25-6 with Western Bengal well maintained around Rs 6-4.

Textile scrips ruled generally quiet in the absence of any definite improvement in the conditions of the cloth and piecegoods markets. Elgins were offered at Rs 26-10 against Rs 27, while Cawnpore changed hands at Rs 7-15 to Rs 8-1 and Kesoram at Rs 15-9 to Rs 15-12. New Victoria were a narrow market around Rs 2-2.

Although turnover continued to be restricted, Tea shares ruled fairly steady with prices of selected ones scoring small gains over last levels. Apart from the fact that prices obtained were lower at both the export and internal auctions held this week, operators were inclined to await the trend of prices at the London auctions in the coming weeks in view of the larger arrivals there and the reports with regard to the strike of Tally Clerks. The general view, that dividend distributions for 1956 would be substantially lower than in 1955, was another contributory factor. Most prominent scrips, dealt with, were Bishnauth changing hands at Rs 20-6 to Rs 21; Dufflaghur at Rs 33 to Rs 33-2; East Inda at Rs 22-2 to Rs 22-5; Hansqua at Rs 22-12 to Rs 23; Methoni at Rs 19-8 to Rs 19-12; Sapoi Old at Rs 28-15 to Rs 29-2 and Teloijan at Rs 24 to Rs 24-2.

Little or no interest was shown in the Sugar section. Operators were generally inclined to await further developments following the recent sanction made by the Government to allow exports upto 50,000 tons of sugar.

In the Engineering section, price movements were mostly influenced by speculative activity in Indian Irons, which were subjected to alternate bouts of buying and selling. This scrip opened at Rs 29-10 and, after touching a high of Rs 29-15, receded gradually to Rs 28-12 due to selling pressure following the announcement of the right issue, to finish the week better at Rs 29-30. Similarly, TEXMACO opened at Rs 20-11 and, after touching a high of Rs 21-4 and a low of Rs 20-10, finished better at Rs 20-13. G. K. Williams touched at one time a high of Rs 24-15 and Jessop Rs 29-4 from Rs 24-10 and Rs 28-12, to finish at Rs 24-10 and Rs 29 respectively. Indian Galvanizing were a narrow market around Rs 19-7 with Braithwaite having sustained support upto Rs 27-8 from Rs 26-4.

Miscellaneous issues followed the general trend of the market. Orient Paper were pushed up at one time upto Rs 34-4 from Rs 33-11 on speculative buying, to recede toward the close to Rs 33-10 on lack of fresh support. Titaghur were in good demand upto Rs 39 from Rs 38-4, to finish at Rs 38-12. India Pulp were nearly maintained at Rs 23-8 and Shree Gopal at Rs 16-10. Indian Cable were taken upto Rs 33-4 from Rs 32-8; Rohtas upto Rs 20-4 from Rs 20-2; Dunlop Rubber upto Rs 26-4 from Rs 26-1, to finish the week at Rs 32-10; Rs 19-15 and Rs 26-2 respectively. Angelo Brothers forged ahead to Rs 23-4 from Rs 22-15 despite a setback in shellac prices. National Carbon met with good investment demand at Rs 26-10 to Rs 26-12; Indian Aluminium at Rs 14 to Rs 14-8; NICCO at Rs 26-12 to Rs 26-14 and Martin Burns at Rs 24-4 to Rs 24-11.

Among lower-priced scrips, Indian Copper hovered idly around Rs 3-10 following quieter advices from the London Metal Exchange. India Steamship met with steady support at Rs 10-4 to Rs 10-9, pending the announcement of the interim dividend. BIC moved irregularly between Rs 8-5 and Rs 8-13, to finish at Rs 8-6. BBP changed hands at Rs 2-13 to Rs 2-15.

*

Bombay

TRADING in Dalal Street was suspended on Wednesday, 30th January in observance of Nirvana day of Gandhiji. Sentiment during the week under review has once again undergone distinct change leaning to pessimism. Industrial counters have lost ground and the recent gains from the bottom levels recorded in the second week of January have been erased to the extent of 50 per cent. Several factors have conspired to bring about the fall in the values of the industrial counters. Heavy unloading in Tata Steel Ordinaries by sources well connected with the company's management has been followed by large scale speculative sales in view of the apprehensions that actual delivery to the tune of about 5,000 shares of Tata Steel Ordinaries will be pressed from these quarters. Dalal Street has been left wondering as to why sales on such large scale have been indulged in when the outlook for the company is good. Certain sources ascribe this selling to certain adjustments in investments, while a section of traders is still inclined to believe that if the rate of Ordinary moves up to Rs 180, further selling might develop from these quarterms. Whatever may be the real reason for this genuine liquidation, it has nevertheless produced adverse effect at the time when the market was trying to steady up at slightly improved levels.

Acute stringency in the money market has continued to provide another headache with the result that, with the approach of Wednesday every week, the old dame rumour of increase in Bank Rate gets circulated despite the fact that there are prospects for an imminent decrease in the British Bank Rate to 5 per cent from 5½ per cent. There is also a small section which is inclined to believe that Government might provide another damper for the market by way of some anti-inflationary measures. This aso continues to be the subject of speculation in stock market circles.

Though the announcement for an imminent right issue of Indian Iron and the closure of transfer books was expected any moment, the decision of the Management on Tuesday, 29th January to close the transfer books as from 21st February to 11th March has resulted in large offerings in the share in view of the fact that the longs will have to pay big amount in 'Satta' as it is called in Lyons Range or 'Budla' in Bombay. This new issue in the face of acute stringent conditions will involve in all drawings of about Rs 7 crores. This has also provided a bearish factor.

Last but not the least is the confused state over the Kashmir issue following the Security Council's decision thereon asking for a plebiscite before Kashmir being merged with India. Apprehensions are held that the situation may flare up in the near future have also induced a very cautious feeling.

With the initial setback prices have reached attractive levels for buying, but confidence is once again impaired following the above factors.

The market has finished practically at the lowest levels of the week and this has been brought about in the following comparative prices:

	23rd Jan., 1957.	29th Jan., 1957.
Tata Steel (Ordy.)	183 0	177 8
I. Iron	29 14	29 2

Tata Loco ...	154 0	152 0
Tata Oil ...	47 0	46 0

Securities:—A steady tendency was marked in view of the floating supplies having been depleted.

Banks:—Movement were narrow in view of the rates being quoted cum-dividend.

Utilities:—Electric shares after keeping firm turned a shade quiet in consonance with conditions in industrial sector.

Textiles:—Cotton mill shares drifted lower and finished at about the lowest levels of the week on large scale pressure, while buyers were scared away. The dividends of New Great and New City will be out after a fortnight or so.

Steels:—Steel shares suffered the most in view of the influential offerings. In kerb trading on Tuesday afternoon. Ordinaries fell to as low as Rs 176 and Rs 177 and Rs 29 respectively on Wednesday.

Miscellaneous:—Bombay-Burmah was the solitary spot to withstand the attack in view of the excellent results and bright prospects for the current year. The shares which dropped down to Rs 714-6 on Tuesday were reported at Rs 722-8 on Wednesday. The company's net profit for the year ended 31st May, 1956, amounted to Rs 49 lakhs, after providing for agents' commission, Rs 49.10 lakhs for taxation and Rs 28.44 lakhs for decprtciation. It is expected that bulkee charges will be against bears to the tune of Rs 2-8 to Rs 3-12.

Sugar shares were quietly steady. Phaltan Sugar has stepped up the dividend to Rs 9 from Rs 8 and Changdes Sugar to Rs 5 from Rs 2, while as referred to last week, Bhopal Sugar were done at Rs 19-8 on dividend being raised from Re 1 to Rs 1-8. National Rayon which were taken upto Rs 249 on expectation of further cut in imports of art silk yarn were marked down to Rs 244-8. A.C.C. also turned easier on the Chairman's warning that the shareholders should not expect higher dividend for the current year. Scindia, which had provided a steady front also succumbed to pressure. Tata Loco were easier, while WIMCO met strong investment inquiries around Rs 171-4. Premier Construction, Tata Chemicals and Premier Automobiles were marked down.

*

Ahmedabad

CONDITIONS on the Ahmedabad market were a shade easier. Calico Mills dropped down to Rs 556 from Rs 570 before steadying upto Rs 559. Arvind Mills receded to Rs 1,155 from Rs 1,170, Ambica to Rs 604 from Rs 612 and New Shorrock to Rs 845 from Rs 855. Atul Products gave way to Rs 185 from Rs 188. Ajit were reported at Rs 540, Ashoka Rs 1,025, Ayodoya Spg. Rs 500 and Sayaji at Rs 190.

A SEMI-FLEXIBLE STERLING?

(Continued from page 177)

restrictions instead of allowing sterling to decline by another 10 cents or 20 cents at a time.

Had the flexible system existed during the run on sterling in 1947 Dr Dalton would have authorised the Exchange Equalisation Account "with a song in his heart" to allow it to decline again and again. Nor would Sir Stafford Cripps have lost face by eventually consenting to a drastic devaluation, after having emphatically disclaimed any such intention on half a dozen public occasions. Even the two Conservative Chancellors Mr Butler and Mr Macmillan would have preferred to avail themselves of sterling flexibility in the downward direction rather than check the expansion of industrial output by the adoption of their disinflationary measures.

The advocates of the semi-flexible system would still claim to be able to defend sterling under that system more effectively against speculative pressure than under the present arrangements. In their view so long as the official policy is to maintain sterling rigidly in the close vicinity of its parity, speculators attacking sterling stand a chance of making a profit by taking negligible extent of risk. The extent of their possible losses is strictly limited by the Government's policy of preventing a rise above $2.82. Once that limit is removed those who go short in sterling would run a much grave risk, the extent of which would be difficult to estimate.

It is true an appreciation of sterling above its present limit would necessarily be temporary because it would react unavoidably on British and Sterling Area exports. Many speculators would not be in a position, however, to wait until sterling relapsed to its parity or below it. They might feel impelled to cut their losses by covering at an unfavourable rate. The mere possibility of such losses would discourage the extent of adverse pressure on sterling during unfavourable periods. It would enable the Exchange Equalisation Fund to pursue deliberate tactics, somewhat similar to those pursued during the 'thirties, aiming at inflicting punishment on speculators in sterling. The scope for such manoeuvres would of course be much narrower than under full flexibility when sterling could be allowed to decline as well as to rise. Even so, according to the apostles of the elastic rate half flexibility is better than none.

It seems probable that when sterling approaches its upper limit pressure will be brought to bear on the Government to allow it to go beyond that limit. Nor would it be altogether safe to assume that the Government will not listen to that advice. Admittedly by allowing sterling to rise instead preventing it through buying dollars, the authorities might abstain from securing as much gold as they would secure under existing system. Even this is by no means certain, however. Possibly the mere announcement of the suspension of the upper limit of $2.82 would lead to a covering of short positions and a replenishment of depleted sterling balances on a large scale. Foreign importers, who during recent months were deferring their long-overdue payment for goods delivered, would hasten to repair their omission. Conceivably the Exchange Equalisation Fund would be able to secure a larger amount of dollars than under the rigid system, without having to arrest altogether the rise in sterling.

These considerations are no doubt examined in official quarters with due care. While the chances are that the Government will adhere to present policy, it would not be altogether safe to take this for granted.

✱ OLYMPUS

(Continued from page 186)

tory, is inimical to the idea: The creators of Pakistan have a direct responsibility in the creation of the history inimical to the idea, and, in fact, as they loudly proclaim in season and out of season, Pakistan is a triumph of forces inimical to that idea. Even now, there are counterparts in India of Muslim fanatics of Pakistan, though less numerical and less influential, who are straining at the leash that curbs them from a more overt communal politics. A plebiscite in Kashmir now would be an open invitation to the release of the worst communal passions which we look upon with the utmost horror. Pakistan, on the other hand, has no qualms on this ground since its very approach is an endorsement of the communal idea. If the Security Council imagines that the pristine principle of plebiscite is something for which even the price of a possible communal blood-bath is worth paying, we must respectfully submit that it is talking in this fashion because it is we and not the council that are going to pay the price. Apart from the human aspect of it, which we consider most important, there is the question of the principle behind the idea. It is unrealistic to expect that India, with the greatest desire to please the Security Council, would be willing to jeopardise the principle on which its whole polity is based.

Therefore, "reagitating" the Kashmir issue, as Mr Menon aptly called the current activities of the Security Council, is not going to solve the problem. It will, on the other hand, create fresh problems which we, for our part, have no intention of allowing to be created. Our other preoccupations with our own people cannot let us have the luxury of Kashmir letting loose a new wave of communal passions. The Security Council would do well to bear this in view when it makes up its mind in the weeks to come on what further action should be taken in the matter.

✱ INDUSTRIAL INFORMATION

(Continued from page 180)

the date from which the liability of dealers to pay tax under the provisions of the Act on inter-State sales arises.

In order to remove this misapprehension, it is hereby notified for the information of the public that the liability of dealers to pay tax under the said Act on inter-State sales can arise only on and from the date which may hereafter be appointed by the Central Government in a notification issued in the Gazette of India under Section Six of the said Act. That notification has not yet been issued, and therefore, no tax is for the time being payable on inter-State sales.

REVIEW OF BUSINESS BY CALTEX COMPANIES DURING 1956

Caltex companies sold the equivalent of 218,000,000 barrels of crude oil and refined products in 1956, an increase of more than 10 per cent over 1955, it was reported over the week-end in a statement issued in New York by California Texas Oil Company, Limited.

In 1956 Caltex companies and their affiliates also:

1. Spent $80,000,000 for new equipment and supplies, 75 per cent of which went into the economies of the 67 countries of the Eastern Hemisphere where Caltex companies operate.

2. Took delivery of three new tankers and authorized construction of sixteen more.

3. Completed new refineries in Australia and Japan, installed new units in existing plants in Holland and France.

4. Entered the West German retail market in partnership with a local company.

5. Developed plants for a major expansion of crude oil transportation facilities in Sumatra.

6. Continued a world-wide programme of geological exploration, and development of existing fields.

This progress came about, the statement added 'Despite international developments which had some adverse effect on the orderly conduct of business. However, these developments were brought about by action of the governments involved, and naturally can be resolved only by them".

DRAFT STANDARD FOR WATER TAPS

The Indian Standards Institution has issued, for eliciting comments, a draft Indian standard specification for sand cast brass screw-down bib taps and stop cocks for water services.

Bib taps and stop cocks are most commonly used water fittings and are generally subject to heavy usage. They should, therefore, be robust and of a corrosion—resistant material, and the construction should be such as to withstand a certain degree of mishandling.

The draft standard, which has been prepared with a view to meeting these requirements, specifies materials, sizes, dimensions and tolerances, and constructional features. As a general guide to the buyer, minimum overall weight of different sizes of bib taps and stop cocks has been given in the standard.

Comments on the draft may be sent to the Indian Standards Institution, 19 University Road, Delhi—8.

NEW RAILWAY BOARD MEMBER

Shri Karnail Singh, at present General Manager, Chittaranjan Locomotive Works, has been appointed Member (Engineering), Railway Board. He succeeds Shri P. C. Mukerjee, who was appointed Chairman, Railway Board, on December 31, 1956.

INDO-CZECHOSLOVAK TRADE AGREEMENT EXTENDED

Letters were exchanged today in New Delhi between the representatives of the Government of India and the Government of Czechoslovak Republic extending the validity of the Indo-Czechoslovak Trade Agreement up to March 31, 1957, pending further negotiations between the two countries.

The Trade Agreement was signed on November 17, 1953, and was initially valid up to December 31, 1954. It was extended from time to time and was valid up to the end of 1956.

INCREASED PRODUCTION OF SUGAR

The production and despatches of sugar from indigenous factories amounted to 6.20 and 3.82 lakh tons up to January 15, 1957 in the current season as against 5.28 and 3.03 lakh tons respectively in the corresponding period of the last year. The stocks with the factories on January 15, 1957 stood at 7.65 lakh tons as compared with 6.37 lakh tons last year.

✱ WORLD OF FINANCE

(Continued from page 176)

added that Authority seems to have the clear intention that giltedged prices should not be adversely affected by the higher rate now proposed.

In the field of central banking credit, the Reserve Bank's policy of qualitative control is seen in: the inauguration of the bill market with favourable terms for advances against usance bills; the stepping up of the rate on such advances by ¼ per cent, as the scheme came to be increasingly utilised; a further rise of ½ per cent what time money rates tended to be very firm; a liberalisation of the scheme of advances in tune with the greater need for funds on the part of the banking system; an enhancement of the stamp duty with further reference to money rates and the busy season; and, now, the raising of the rate for advances on Securities on a par with the effective cost to banks of credit on usance bills.

GATEWAY GOSSIP

(Continued from page 182)

are paid an ex works price plus packing charges, but excluding excise duty and other expenses. The STC, in turn, sells the cement at an equalised price of Rs 102-8 per ton FOR. Mr Khatau points out that the FOR price before State trading commenced was approximately Rs 90 per ton. In effect, what the STC does is to utilise the existing selling agencies of the cement manufacturers as agents for purchase and sale of cement. Why, then, should the STC figure as a middleman?

Ostensibly, the reason, as Mr Khatau pointed out, lies in the need to set up an equalisation fund and to rationalise railborne cement movements. Mr Khatau answers—rather, refutes—the validity of these reasons. Firstly, he points out that the industry had, in recognition of the cement gap, "offered to import foreign cement and to sell it to the consumer at cost". Secondly, it was suggested that "price equalisation should be done without profit, by raising the price of Indian cement by just so much as would be necessary to meet losses on the sale of imported cement at a common delivered price applicable to both." Thirdly, the industry also offered to evolve a pattern of distribution which would involve only the minimum rail movement.

The ACC Chairman has gone on record as saying: "We believe that all forms of State Trading constitute a serious infringement of the right of freedom of trade in a democratic society." This, however, is a point on which, as I shall presently show, my views differ from those of Mr Khatau. But Mr Khatau is perfectly proper in drawing pointed attention to the fact that:

"State Trading in cement runs counter to the declared policies of Government itself as enunciated in the Industrial Policy Resolution early last year and in which an attempt was made to strike an admirable balance between State and Free Enterprise."

Let me clarify my views on State Trading and on State trading in cement. In the overall scheme of planned development, it is inevitable and even necessary that Government should assume the responsibility for taking effective and positive measures for fostering and finding new markets for Indian exports. Secondly, the Government have an equal responsibility to ensure that we should be able to obtain commodities which may not be available through normal trade channels. For both these purposes, I think State Trading is good for the Indian economy. For instance, I envisage the STC as having an honourable role to fulfil by way of agreements being concluded with East European countries for an enlarged quantum of trade. In this light, incidentally, as far as concerns the import of cement, I think that the participation of the STC in arranging for imports is not in itself wrong.

But the STC has to be clear-eyed as to its operations within the country. Where the existing trade channels in India are sufficiently developed, and where the operations in such trade are not blatantly anti-social, I think the STC would do well in desisting from interference with or assimilation of such existing trade. What does the STC do in India, which the Cement Marketing Company was not previously doing? That is rhetorical question; for, it is quite clear that, for trading in and distribution of cement, the STC was quite unnecessary.

A final word about State Trading in this country. A test case has already proved that the Centre's notions of State Trading have been somewhat vague. Clarification is thus necessary of the aims and purposes of State Trading. I trust that authority will, soon after the elections, consider as one of its major tasks the evolution of a clear policy for State Trading—one that will imbue the STC with the authority and responsibility for concluding trade agreements on a governmental level, but one which leaves the existing trade interests to continue their operations unhindered.

✱

DEFICIT FINANCING FOR RS 15 CRORES

(Continued from page 176)

The Centre's net expenditure would appear to have been heavy, since its balances have increased only by Rs 0.85 crores to Rs 51.46 crores in spite of its ways and means having been replenished by Rs 15 crores against ad hocs.

The possibility of transactions between the Central and State Governments is suggested by the sharp upswing of Rs 6.30 crores to Rs 13.33 crores in the latter's balances; and this has been accompanied by a reduction of nearly a crore in State borrowings from the Reserve Bank.

The status quo in the position of the banking system is indicated by the small drop of Rs 1.22 crores to Rs 51.76 crores in Deposits of member banks; and, at the same time, reduction of indebtedness has not taken place to any significant extent since the Reserve Bank's Other Loans and Advances, at Rs 102.19 crores, show negligible change from Rs 102.61 crores in the previous week.

There is also irrefutable evidence of greatly increased utilisation of the facility of advances against usance bills; this perhaps is indicative of the liberalisation of the scheme in recent weeks by the Reserve Bank. Another reason for advances against usance bills being maintained at a high level may lie in the fact that the enhanced stamp duty is to be effective from February.

The Reserve Bank's advances against usance bills are placed at Rs 59.31 crores, as compared to Rs 60.70 crores last week and Rs 17.69 crores in the corresponding week of 1956. The running total of loans against usance bills shows a smart rise from Rs 9.20 crores as at 20 January 1956 to Rs 45.62 crores on 25 January 1957.

Finally, there has occurred a steep decline in the foreign exchange holdings of the Reserve Bank. After having held remarkably steady for six weeks or so, the depletion during the week ended January 25 has been of the order of Rs 13 crores. A possible explanation is that exchange banks, which it is thought may have sold TT in December 1956 for purposes of window-dressing of Indian balance-sheets, may have repurchased sterling. A second possible explanation, which would also partly explain the Centre's high level of disbursements, is that some payments of interest and principal may have been made in respect of IBRD loans, wheat loan and Russian loan.

+

The return of the State Bank for January 25 reveals another smart increase in deposits from Rs 245.76 crores to Rs 252.03 crores. Since the week ended 2 November 1956, Deposits of the State Bank have gone up by Rs 22.66 crores. Deposits of Scheduled Banks rose by Rs 30 crores between 2 November 1956 and 18 January 1957. The inference, therefore, is that the State Bank has benefited by a windfall, possibly in the shape of a special account of governmental variety.

The windfall has been invaluable to the State Bank as it has been called upon substantially to increase its accommodation to constituents. Advances have shot up by more than Rs 6 crores during the week to a new high level of Rs 160.83 crores; and the expansion in advances since November 2 has exceeded Rs 30 crores.

For the first time in recent weeks, Deposits of Scheduled Banks show a considerable rise; they have gone up by Rs 15.29 crores to Rs 1125.29 crores. This has enabled borrowings from the Reserve Bank to be reduced from Rs 79.10 crores to Rs 75.13 crores; and cash balances are slightly higher at Rs 104.05 crores as against Rs 103.27 crores. The higher Deposits have come in handy, as Advances rose by Rs 7.44 crores to Rs 815.87 crores. Since the week ended November 23, each week has witnessed a rise under Advances; and, since the week ended December 7, each level has constituted a new high.

The statement of the State Bank of India for the week ended January 25 reveals a sharp increase of Rs 6.27 crores in deposits to Rs 252.03 crores. Borrowings from other banks are lower by Rs 1.12 crores at Rs 17.63 crores, while other liabilities, including inter-office adjustments are higher by Rs 0.64 crores at Rs 4.26 crores.

On the assets side, cash balances and Investments remain almost unchanged at Rs 17.96 crores and Rs 106.92 crores against Rs 18.03 crores and Rs 107.05 crores respectively. Advances have risen by Rs 6.06 crores to Rs 160.83 crores —"Loans, Cash credits and Overdrafts" accounting for a rise of Rs 4.27 crores and "Bills Discounted and Purchased" for Rs 1.79 crores.

+

According to the returns of the Scheduled Banks for the week ended January 18, both Demand and Time Liabilities have risen, the former by as much as Rs 13.22 crores to Rs 666.38 crores and the latter by Rs 2.07 crores to Rs 458.91 crores. Borrowings from the State Bank are higher by Rs 1.28 crores at Rs 11.80 crores, while those from the Reserve Bank are lower by Rs 3.97 crores at Rs 75.13 crores. Cash and balances with the Reserve Bank have declined by Rs 1.13 crores to Rs 84.80 crores and Investments by Rs 0.30 crores to Rs 362.12 crores. Advances, Inland Bills and Foreign Bills have all risen by Rs 5.21 crores, Rs 1.82 crores and Rs 1.41 crores to Rs 649.67 crores; Rs 113.21 crores and Rs 52.99 crores respectively.

✱

CLIVE STREET GOSSIP

(Continued from page 181)

unwilling public and its resourcefulness in matching wiliness with wariness. Culturally and intellectually, there is a most reassuring ferment in the country. I have no doubt, in time, this will yield impressive results. But it is unfortunately true, and it is a thing that I deeply deplore, that nothing startlingly and breathtakingly original in the realms of thought or imagination has yet emerged from independent India. Both in terms of the best contemporaneous achievements elsewhere and in terms of our own best in the past, present achievement is pitiful. Perhaps, I am impatient. But on the day in the not distant future when we are at the end of the first stage of our pilgrimage as Republic, I should like to have as my companion a new Kalidasa or a new Sankara.

✱

Mr P. A. Seshan, for long a valued and valuable colleague to all of us working in Indian Finance, has now joined the distinguished team who help to maintain, and keep maintaining, The Hindu in the universally acknowledged reputation of being The Manchester Guardian of India. Mr Seshan was, for a while, actively engaged in the formulation and preparation of the literature designed by The Employers' Association of India to publicise the virtues of free enterprise. Mr Seshan was not unequal to the propagandist bias which he had to impart to his studies and writings while he was in this assignment; but, in consonance with his talents and training, he will find himself in poise and at home in the kind of objective and sober assessment of men and events, which The Hindu has, consistently and unwaveringly, stood for throughout its long and progressive career. For my part, it is a flattering thought that old staffers from Indian Finance are in much request from leading dailies to tend and nurture their economic consciences.

Bridging the Future...

Rs. 25 crores are to be spent during the next five years on bridges alone. For these reinforced concrete and structural steel bridges, thousands of cast steel roller and rocker bearings will be needed. These cast bearings form an integral part of bridge construction because they allow for free movement of the bridge caused by temperature variations.

We, at Mukand, have a large expansion programme under way. Production capacity at the Mukand foundries is being stepped up to supply India's construction and engineering companies with the cast steel roller and rocker bearings which they will need. We are proud of our role in India's industrial progress.

For the Investor

Exit the Gamblers: Enter the Investors

Investment Gossip:

Over the past three months, stock exchange trends have been downward; and such occasional rallies as have taken place have been of feeble impulse and short duration. Current prices are at levels which are admittedly very low both in relation to break-up value and yield basis.

Speculators as such are not keen on extending operations at these price-levels. The prices now ruling are favourable for bull operations; but the omens, present and prospective, are deemed suitable for bear tactics. No blank sales on any large scale are ventured, as the prices are at levels at which there is no "give".

So, the professionals are evincing very little interest in the popular gambling counters; and they have turned their attention to bullion, oilseeds and cotton in all of which speculative fervour is at high pitch.

This respite from the activities and antics of the gamblers must be regarded as a welcome opportunity by genuine investors who can, on a selective basis, purchase high-grade stocks at rates which give them 6 per cent free of tax and over.

What the investors have to take note of are the intrinsic, as opposed to extraneous, factors. The extraneous influences are availed of by the professionals as convenient aid to their style and direction of operations. But, as I said, they are now disposed to let the market alone; and there are reasons to think that such will be their attitude until a clear picture emerges as a result of elections. In simple terms, stock exchange prices are likely to hover round their present levels for a spell of three months or so.

This interregnum, with the advantage of the present low level of prices, is extremely valuable for the investors who can pick and choose and add to their portfolios selected scrips at exceptionally low prices and with attractive yields as to the present and alluring capital gains as to the future.

Let me repeat that investors for their part, must be guided by intrinsic considerations, the chief of which is that every industry is now doing superlatively well and may be expected to do even better in India's expansionist economy.

On the one hand, Government's policy is designed to provide every facility and to render every assistance for the increased production of every industrial concern. On the other hand, Government's unwavering determination to make the Second Plan a complete success is an assurance that there will be rapid stepping-up in the purchasing power of the population at large. Here, then is a propitious combination of favourable forces for the enlargement of production and for the marketing of the increased output at satisfactory prices.

Let the investors also take note of a very important new factor. This is the emergence of the Life Insurance Corporation as a buyer of industrial shares on a large scale from time to time. The snowballing funds of the Corporation, dynamically used, serve as effective open market strategy alike for giltedged and equities.

The authorities of the Corporation are following stock exchange movements with the advantage of concerted judgment and augmented resources. For my part, I fully believe that, in the not distant future, the Corporation may well become the strongest single shareholder of every important and well-managed concern in the country.

Already, the Corporation is the biggest single shareholder in such companies as TISCO and ACC. The purchases made in the last few months have widened their interest. The coming months are sure to witness a further widening and strengthening and deepening of that interest.

The investors cannot go wrong if they follow the lead of the Corporation. This lead is to buy worth-while equities at worth-while prices.

The present combination of circumstances in the share markets stresses the significance of that lead.

£ R$

Investment Notes:

At an emergency meeting held by the Calcutta Stock Exchange Committee, on Monday this week, it was decided that business in Indian Irons should continue in cum-right basis until further notice. It was also decided that the delivery of shares in Clearing No. 232 on February 20 will compulsorily be carried over to Clearing No. 233 on March 6 at the fixed carry-over charge of seven pice.

Electricity shares have been in good shape since the Chairman of the Association of Electricity Undertakings in India has expressed a note of optimism in regard to the amendment to the Electricity Bill. The share market's optimism in regard to the future outlook for the industry has been fully justified by the decision of the Ahmedabad Electricity Company. The directors have recommended a final dividend of 4 per cent, making a total of 6½ per cent for the year ended 30-9-1956 against 5 per cent in the previous year.

It is learnt that Gokak Mills will soon be in the market with a Debenture issue of Rs 40 lakhs. The proceeds of the issue will be utilized for the expansion of the mills, especially in the weaving section. The Debentures will carry interest at the rate of 6 per cent per annum, redeemable after 10 to 15 years, say between 1967 and 1972.

Lakshmi Mills, Coimbatore, have proposed to increase the authorised capital from Rs 1 crore to Rs 2 crores by the creation of one lakh new equity shares of Rs 50 each and 2 lakhs new "A" class shares of Rs 25 each. It is further proposed to issue 71,282 shares of Rs 50 each and 71,282 "A" class shares of Rs 25 each, at par, to existing shareholders as on the 23rd February in the proportion of one share for each share held. The allotment letters will be completed before 31-3-1957.

Midland Rubber & Produce Company is said to be seeking to drop the proposal regarding the sale of Mukampala group of estates.

HIGHLIGHTS

The Bank Rate is unchanged, announced the Reserve Bank on Thursday morning last week.

The rate of interest on loans made to scheduled banks against Government and other eligible securities will go up by ½ per cent to 4 per cent, declared the Reserve Bank the same evening.

Why not raise the Bank Rate to 4 per cent and be done with it?—ask the critics, who also argue that their advice would accord with straightforward policy.

The issues are not so simple as is made out. India has good reasons for pursuing its own policy of selective monetary control; and the present devotees of the orthodox Bank Rate thesis may be the future practitioners of selective control.

The leading article paints the personality, and stresses the virtues, of India's policy.

Rise in Bombay Burmah Profits

Balance-Sheet Reviews:

THE Bombay Burmah Trading Corporation Limited has produced very satisfactory results for the year ended 31st May, 1956. The gross profit for the year comes to Rs 125.94 lakhs as against about Rs 1 crores in the previous year. In respect of allocations to Funds, the directors have raised the Depreciation amount to Rs 28.44 lakhs from Rs 26.38 lakhs and Taxation to Rs 48.40 lakhs from Rs 18.42 lakhs. In addition, a sum of Rs 5.86 lakhs has been transferred to General Reserve and Rs 2.50 lakhs to Investments Reserve. Even after these incerased allocations, they have found it possible to raise the dividend from 30 to 32 per cent for the year.

The company's South Indian estates have produced a record crop of 5,940,276 pounds as against 4,876,500 pounds in 1954-55. The directors have, in this connection, pointed out that full provision in the year's accounts for the possible effects of the Plantation Award has not been made.

Regarding operations in Borneo, production and puchases of hardwood logs at the company's branch in Wellace Bay have reached a total of 65,750 tons as against 50,487 tons in the previous year.

The scheme of arrangement of conversion of Founders' shares has also been dealt with by the directors by stating that, if the scheme is passed, the difference of Rs 6.50 lakhs, kept in suspense account, will be available for distribution by way of dividend to shareholders.

The company's balance-sheet position is strong. As against the paid-up capital of Rs 94.50 lakhs, the share premium account stands at Rs 21.23 lakhs, while Reserve and other funds amount to as much as 3.90 crores. The gross block account has been increased by Rs 67.55 lakhs to Rs 3.98 crores, the net block accounting for Rs 2.26 crores.

The outlook for the company, during the current year, appears to be good from the view point of the shareholders as tea prices have been generally higher, while there will be a net saving of about Rs 8 to Rs 9 lakhs on account of the management's commission. With the passing of the scheme for promoters' shares, the management may proceed with the contemplated bonus sharing plan.

£ R$

Eastern Shipping Corporation

The Eastern Shipping Corporation has done well during the year ended 31st March, 1956. The profit, after providing Depreciation of Rs 29.95 lakhs and Taxation of Rs 2 lakhs, comes to Rs 31.71 lakhs as against a loss of Rs 19.01 lakhs after providing Rs 25.26 lakhs for Depreciation and Rs 1.12 lakhs for Taxation in the previous year. The loss in the previous year is, however, ultimately reduced to Rs 1.02 lakhs after taking into account credit of Rs 17.99 lakhs for the indemnity from the Government of India.

Out of the profits, the directors have provided Rs 9 lakhs for Deferred Taxation; Rs 4 lakhs for Fleet Special Repairs Reserve and Rs 17.99 lakhs by way of repayment of indemnity amount to the Government in full settlement. Revenue by way of freight passage fetched Rs 2.20 crores as against Rs 1.43 crores, showing an increase of 84 per cent.

£ R$

J. K. Chemicals

J. K. Chemicals Limited has reported a gross profit of Rs 1.26 lakhs for the year ended 30th June 1956. Out of this, the directors have set aside Rs 84,605 for Depreciation. Sale of products fetched Rs 14.36 lakhs. Dividends on the Preference shares upto the 30th June 1956 were paid, leaving a balance of Rs 2,179 to be carried forward to next year.

The directors have, in their report, stated that both production and sales are maintained although competition has continued. They have expressed the hope for completing the erection of the new factory for additional lines of chemicals manufacture at the site as expeditiously as possible.

The Personality of India's Monetary Policy

Indian Finance
Established 1928
February 9, 1957
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

WE ARE amused by the comment evoked by the Reserve Bank's action of last week in raising by ½ per cent the rate of interest chargeable on loans taken by scheduled banks from the central banking institution against government and other eligible securities. It is naively argued that this is tantamount to a rise in the Bank Rate to four per cent; and it is, in this line of reasoning, suggested that the Reserve Bank should have, in a straightforward manner increased the Bank Rate to four per cent and left it at that. In certain quarters, the Reserve Bank has been charged with disingenuousness; and its action has been described as camouflage.

Criticism of this kind is general and it follows that there is insufficient appreciation of the policy of selective monetary control which the Reserve Bank of India is pursuing, as distinguished from the orthodox Bank Rate thesis.

The UK is a conspicuous example in regard to the adoption of the Bank Rate mechanism as an all-sufficient method for dealing with the admittedly grave problem of inflation. The British monetary authorities were assured by the economic pundits that the Bank Rate, if resolutely used, could do the whole job of exorcising inflation. The Bank Rate was raised to 5½ per cent; and credit squeeze was maintained at a high pitch with a view to make the Bank Rate fully effective. No one will deny that the five and a half per cent rate has had a long spell to do its job; that the credit squeeze has shown not only resolution but even ruthlessness; and that the whole structure of interest rates has been attuned to the 5½ per cent Bank Rate. But, few would claim that the Bank Rate experiment has proved the success it was expected to be.

The present position in London is that the credit squeeze is in the process of relaxation; that the Treasury Bill rate, one of the most important elements in the interest structure, is now nearly one per cent below the Bank Rate; that there is general expectation of an immediate lowering of the Bank Rate; and that the current speculation is not on the whether but on the how much of a decline in the Bank Rate.

The strangest thing in the current discussion in Britain is that the reversal of policy is designed to deal with deflation, which is said to have startlingly emerged.

In the USA, a similar faith in orthodox monetary techniques has resulted in the highest Federal Reserve Rate in over twenty years, and in the severest landslide in the prices of Bonds. At the end of it all, the President has, in his recent economic message to the Congress, admitted that tight and tighter money could not do "the whole job" of rooting out inflation. Apart from the policy decisions of the monetary authorities, the policy decisions of business chiefs and labour leaders are of equal importance. It is clear that, in America too, faith in the orthodox Bank Rate thesis is wavering.

In many of the European countries the retreat from the Bank Rate philosophy has been manifest for some time. Early in the year, the West German Bank Rate was lowered.

The fact of the matter is that, in the simple, unsophisticated days of gold standard on a more or less universal basis, the Bank Rate had its appointed role and its allotted task, and filled that role and accomplished that task with a measure of predictable competency.

But, times have changed, and conditions have become different. The automatic mechanism of a gold standard is, in the present-day world, an oasis in a desert of consciously directed exchange controls and of deliberately segregated gold reserves. The old techniques are decidedly unsuitable; and new techniques have to take note of the altered circumstances.

The first of such circumstances is the less limited role of gold reserves. The second is the emergence of Treasury transactions and operations as a vastly significant element in the functioning of the money market. It is politics, rather than interest rates, that now govern international movement of funds. The totality of Government transactions as impinging on the money market is of a magnitude not less significant than the totality of banking and commercial transactions.

The Bank Rate, then, has little of the old effectiveness in the sphere of the international movement of funds. Its present role is to be determined not only in relation to bank bills and the financial destiny of the private sector, but in relation to Treasury Bills and the financial requirements of the public sector.

The policy of selective monetary control, as practised by India for some years, has been fashioned in full and realistic understanding of the new factors that have, thus, emerged into considerable importance. The Reserve Bank of India Act has been strengthened with the powers and authorities required by the central banking institution for enforcing selective monetary control.

While the Bank Rate was involved in Britain and elsewhere to do the "whole job" of rooting out inflation and cannot be claimed to have done this job with any great success, the Reserve Bank of India has utilised the procedure of directives to banks enjoining on them a restrictive credit policy with regard to such commodities as have come under inflationary pressure.

When faced with a rising trend in the rates for short-term money, the Reserve Bank's first step was to distinguish between government transactions and agricultural requirements on the one hand from commercial banking transactions on the other. Having made this distinction, the increase in interest rates (effected in various ways and in stages) is kept confined to the sphere of commercial banks.

The Reserve Bank is enjoined to extend facilities to cooperatives and warehouses; and these facilities will not be affected by last week's rise in the rate of interest.

The Reserve Bank has to provide considerable finance to the Government against ad hoc Treasury Bills. The interest cost of Government on this account will not be increased by last week's rise in the interest rate.

The Reserve Bank has to pilot the new loan issues of the Governments, both Union and State, and generally to see that conditions in the giltedged market are kept favourable for the successful floatation of such new issues. The Reserve Bank's responsibilities in this regard will not be adversely affected by last week's rise in the interest rate.

Such is the personality, and such the significance and virtues of the selective monetary control now being pursued by India with due regard to the requirements of flexibility and alertness.

The Personality of India's Mixed Economy—VIII

THE uniqueness of India's planned economy arises from the need, which the earlier articles of this series have attempted to bring out, to alternate the emphasis of official policy between the public sector and the private sector according to the particular phase of development attained and the one that lies ahead. The fact that, at the present stage, the public sector fills nearly the whole picture of the Second Plan has had unfortunate results. The worst of it is that it has destroyed the sense of perspective in the defenders as well as the critics of the Plan. Controversy, which must be sharply distinguished from discussion or deliberation, invariably and inevitably concentrates attention on the present. And the pros of the Plan are formulated, not on its intrinsic merits, but only as the most telling answers to the cons alleged from the other side. Attention is diverted from proper assessment of the needs at every stage. The champions of private enterprise in India are no doubt sobered by thoughts of the chinks in their armour. They are eager to hold forth promises about the future and are anxious that they should be taken at their face value.

What is really required from them is a recognition that Indian economy had evolved in the past in a manner in which it cannot take a single big stride forward without its being strengthened basically by State action in different spheres. The whole tone of present controversies would have been changed and would have acquired a healthy look, if that admission had been made by private enterprise and if its spokesmen had on that basis turned their attention to showing that, once this phase of development has been completed by concentration of virtually all our resources on the public sector, the next phase will call for transfers of affections, so to say, to the private sector.

The Government can hardly claim to have visualised the picture of the national economy as it will be when the Second Plan will be completed. So much is made of the targets of production that little thought is given to the potentialities that these targets will open up. When one is concerned with consumer goods, the attainment of higher levels of output will of itself bring no complicated problems, though, even here, their movement into consumption might offer difficulties if the distribution of additional purchasing power is not properly planned. But it is far different

(Continued on page 230)

Editorial Notes

Food Policy

The Union Government's decision not to proceed with the idea of internal procurement of rice for building up buffer stocks is highly realistic. Had they resorted to procurement, prices would have risen further, and in the resulting confusion, the authorities would have been forced not only to sound a humiliating retreat but leave the field clear for another spell of speculative orgy.

Why at all internal procurement was thought of as a necessary step no one has explained. The effect of the fair price shops has not been uniformly satisfactory. Lately, pockets of shortages have again emerged. Transport is officially blamed. The Government's food policy in general is also not immune to criticism. When Government spokesmen begin talking of price supports for this and that food-grain it is inevitable that the public look forward to an era of plenty; and when immediately rice and wheat become scarce, the statements advertising bumper crops ahead are remembered with irritation and lack of faith.

Though slightly embarrassing, it is on the whole beneficial that the illusion of an affluent food position is now given up. The new assessment should also be backed by equally realistic measures to strenthen food reserves and to keep the apparatus of distribution flexible enough for contingencies.

That hitherto neither stocks nor transport facilities were kept adequate has been proved by experience. Internal procurement, at any rate, should be resorted to only from areas with clear surpluses. It is also safer to underestimate a prospective harvest than to feed the country with exaggerated expectations.

*

Increasing Rubber Production

The recommendations of the Plantation Enquiry Commission for rubber fall more or less on the same pattern as those for coffee and tea. There is the same concern and special treatment accorded to the small growers, the same methods for financing a replanting fund and the same role for cooperatives as ancillary organisations.

That indigenous production would ever be sufficient to meet internal demand is ruled out as impossible. The next best, as envisaged by the Commission, is to advance toward self-sufficiency as far as possible and to reduce costs of production to the minimum to meet the competition from synthetic rubber. By 1965, natural rubber production is expected to yield another 20,000 tons through replanting 70,000 acres and new planting of 50,000 acres with high-yielding rubber.

While the Commission are averse to any outright grant for replanting even for the small holders, there is, at the same time, the suggestion for a surcharge on the excise duty on rubber manufactures at about 2 per cent ad valorem, the proceeds of which might go to make a small-holders Assistance Fund. The summary of the Report takes for granted that production of synthetic rubber is desirable. As long as India remains at the bottom in respect of average yield per acre, the question of the synthetic substitute is not debatable. But the current estimate of the prospective increases in consumption may have to be revised, if the pace of expansion in the demand for goods, as for instance, automobiles, for which rubber is a conspicuous ingredient, fails to abide by expectations. For this reason, the regulation of the relation between natural and synthetic rubber production in India may become increasingly onerous.

The late Mr K. G. Sivaswami, in his Minute of Dissent, would have the rather difficult task of new planting undertaken by the State either on its own or in partnership with the existing companies, as he thinks the hands of estate managements would be full with replanting in the existing areas.

*

Common Market for Western Europe

The common market scheme for Western Europe which had a drowsy start about a year ago, has picked up new life with the sudden display of decisive friendliness from France and the change of Government in Britain. As Chancellor of the Exchequer Mr Harold Macmillan had put forward a complementary proposal in the form of a free trade area in Europe consisting on the whole of eighteen European countries, including the six covered by the common market. The dove-tailing of the two proposals would invoive innumerable adjustments, and if Britain was thinking in terms of some kind of Commonwealth participation, the intricacies and range of adjustments would increase even further.

Anyway the Suez crisis and its economic consequences overshadowed discussions for the last few months. The discussions have now revived in a more earnest spirit. Mr Paul Henri Spaak of Belgium recently had talks with the new British Prime Minister and the Chancellor of the Exchequer. The British Foreign Secretary has paid a visit to Rome for the same purpose. There is reason to believe that the US is also kept in touch with the progress of these talks.

Though its trade with Western Europe stands to be adversely affected by the two proposals, the US may not like to stand in the way, as their implementation would impart the necessary balance for Western Europe's external trade. As is now envisaged, the six common market nations, France, West Germany, Italy, Belgium, the Netherlands and Luxembourg, will gradually abolish all customs and quota restrictions among themselves and function with a uniform schedule of tariff rates for imports from the rest of the world. The free trade zone, as proposed by Mr Macmillan, will have the same relation with this common market but on condition that its individual members will have independent tariff rates toward the rest of the world, and Britain will have no commitment, on the import of food, drink and tobacco.

*

Automation no Panacea

The views expressed by Mr Oliver Humphrey, Director of the General Electric Company's Research Laboratories, in his talk at the Rotary Club Luncheon, Calcutta, should contribute to constructive thinking in the country on the subject of automation. The gist of Mr Humphrey's thesis is that automation, can be good for one country, not so good for another and good at all for a third. This thesis can hold good for mechanization as well, of which automation is a comparatively recent extension.

In India, mechanisation as an infallible method for reducing cost has till lately been axiomatically accepted. When the consideration of human employment gained priority in policy, mechanisation had to bow down a little. The result is a rather uneasy compromise, in the choice between labour-intensive and labour-saving methods.

Perhaps this pattern of coexistence of man and machine for the same type of work may extend in the future in certain directions. The problem of population makes it inescapable. The tragedy lies in that sections of expert and influential opinion do not approve of it. To these sections, there is an opportunity for revision of views, in the light of Mr Humphrey's elaboration. That national situations should call for independent assessments of the methods of production cannot be over-looked. He has given a convincing reason why Britain proceeds to develop nuclear energy for industry, while the US emphasises other forms of utilisation. Britain lacks oil; the US has oil in surfeit. Automation is on the contrary good for both, as neither has a reserve of human labour.

India has a huge reserve of labour and this reserve is getting bulkier. In such circumstances, automation would create more problems than it could solve. Where in particular spheres, the general technological frame-work or considerations of safety render automation indispensable, it is not frowned upon. Such exceptions do not impair the validity of the general rule that the replacement of human labour by mechanical methods has to be kept at a minimum, in India, till a new transformation in the relation between population and material resources takes place.

Balance of Payments

A publication released last week by the Reserve Bank of India has made a study of India's Balance of Payments over the period 1948-49 to 1955-56. While the figures compiled in this publication, relating as they do to past experience, have a restricted usefulness in the lessons they can offer for the future, for the simple reason that both directionally and from the point of view of composition, India's foreign trade is undergoing sweeping changes, there is one matter dealt with which is, for the money market, of fundamental importance. Table VIII of the publication analyses India's Balance of Payments from the standpoint of the two Plans. In other words, it is an enterprise worth the study, because it seeks to view on larger canvas the Balance of Payments of India. We shall, in this short article, discuss the main features pertaining to this table; and our interest in it is whetted by the earlier revision that we had offered in these columns of foreign exchange requirements under the Second Plan.

As to the Actuals over the First Plan-period and for the estimates in the Second Plan-period, the following table, which is extracted from Table VIII clarifies the position:

	(Rupees Crores) Totals 1951-52 to 1955-56 Actuals	1956-57 to 1960-61 Estimate
Imports ...	3622	4340*
Exports ..	3109	2965*
Trade Deficit ...	—513	—1375
Net Invisibles (excluding official donations) ...	388	255*
Current Balance ..	—125	—1120
Official Donations ...	96

Change in Foreign Exchange Reserves	—121	—200

*Based on Second Five-Year Plan—1956.
**Excludes private foreign investment in the shape of goods and reinvestment of profits by foreign firms.

For the Second Plan, it is assumed that the total import bill will amount to Rs 4,340 crores; that is to say, the heavier bill for imports, entailed particularly by the need for capital machnery and producer goods, is clearly recognised. But the Second Plan has taken a somewhat bleak view of the prospects in exports; the anticipated figure of exports in the second quinquennium is actually less than the value of exports during the First Plan. The trade deficit expected over the Second Plan is Rs 1,375 crores. Net Invisibles are expected to be in our favour for Rs 255 crores; and, in the result, the current balance deficit would be Rs 1,120 crores. Official donations and loans are put down for Rs 400 crores, and private capital for Rs 100 crores. Then, the table blandly asserts that we would need Rs 420 crores by way of foreign grants and or loans. Consequently, the change in foreign exchange reserves would be to run them down to the extent of Rs 200 crores. A footnote, however, warns us that the foreign exchange gap may be even larger. The footnote reads:

'Since the publication of the Plan, the estimates have undergone revision,—the current deficit being placed considerably higher than the earlier calculations, thus pushing up the requirements for additional foreign aid."

We do not intend to pass comment after a hasty or superficial study of this table. But, nevertheless, we would like to emphasise that the foreign exchange gap is being continued to be presented in bleak and cheerless colours. We do not dispute the fact that vigilant watch must be kept on foreign exchange expenditure; and we admit that, in the short term view, the prospect is not very bright. But, as we have emphasised on earlier occasions, and as we pointed out last week, the foreign exchange problem is capable of being resolved without too much fuss and flurry. We hope, in the next week, to begin the first of a series of articles on the foreign exchange problems and how to deal with them.

+

Sharp Rise in Active Circulation

THE returns of the Reserve Bank for the week ended February 1 disclose recourse to created money to the extent of Rs 14.90 crores. Despite so large a reinforcement of their cash balances, the Central Government record only a small rise of Rs 0.89 crores in their balances with the Reserve Bank. The expansion thus effected has been solely in the interest of the Centre's ways and means requirements; and this operation was counter-acted by contraction against foreign securities, which show a corresponding fall. The Reserve Bank did not presumably need a large cash balance in the Banking Department. Despite the transfer of foreign securities for Rs 14.91 crores from the Issue Department to the Banking Department, the foreign balances held in the latter account disclose an expansion of only Rs 10.66 crores. The net loss of foreign exchange in the week under review is, thus, Rs 4.25 crores. The seasonal demand for funds accounts for a rise of Rs 8.50 crores, an outgo of rupee coin for Rs 0.51 crores and an increase in Other Loans and Advances to the extent of Rs 6.27 crores. The Reserve Bank would appear to have made open market purchase of securities on a moderate scale, Investments being up by Rs 1.81 crores. This may, perhaps, be construed as evidence that to the extent last week's action in raising the interest rate on Central Bank credit to member banks leads to any offerings of government securities, the Reserve Bank intends to provide the needed support..

The returns for the week ended February 8 are likely to bear the full impress of beginning-of-the-month payments. A sharp increase in active note circulation is quite on the cards. A headier outflow of rupee coin into circulation is also likely. And it is quite possible that the Reserve Bank may feel the need to strengthen the cash in its till. We suggest that such addition to cash in the till must be arranged by transfer of commercial bills from the Banking Department to the Issue Department.

Notes in circulation have risen by Rs 8.50 crores to Rs 1,494.02 crores. Notes held in the Banking Department have declined by Rs 9.01 crores to Rs 14.55 crores. Foreign securities have declined by Rs 14.91 crores to Rs 412.52 crores, while rupee securities have risen by Rs 14.90 crores to Rs 855.03 crores.

In the Bankng Department, all deposits have risen—Central Government's by Rs 0.89 crores to Rs 52.35 crores; State Governments' by Rs 3.35 crores to Rs 16.68 crores; Banks' by Rs 2.68 crores to Rs 54.44 crores and others by Rs 0.72 crores to Rs 13.40 crores. Balances held abroad show a rise of Rs 10.66 crores to Rs 93.84 crores. "Other Loans and Advances" have risen by Rs 6.27 crores to Rs 108.46 crores, which includes Rs 58.88 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since 1st January 1957, is Rs 59.12 crores. Investments are higher by Rs 1.81 crores at Rs 51.43 crores.

+

The State Bank of India, during the week ended February 1 has strengthened its deposits to a marked extent. This may be due, as in the last week, to adjustments in respect of the counterpart funds arising from the US Surplus Commodities Loan

Deposits reveal a sharp rise of Rs 10.23 crores to Rs 262.25 crores. Borrowings from other banks have declined by Rs 5.94 crores to Rs 11.69 crores, while other liabilities, including inter-office adjustments, are lower by Rs 0.71 crores at Rs 3.55 crores..

Cash and other balances and Investments remain almost unchanged at Rs 18.03 crores and Rs 106.52 crores respectively. Advances show a rise of Rs 3.85 crores to Rs 164.68 crores—'Loans, Cash Credits and Overdrafts' accounting for a rise of Rs 9.30 crores and 'Bills Discounted and Purchased' for a decline of Rs 5.45 crores.

+

It is fortunate that, while the Scheduled Banks have had to meet seasonal demand for funds to the extent of over Rs 10 crores in the week ended January 28, the resources have been strengthened by a rise in deposits to the extent of nearly Rs 8 crores. Both Demand and Time Liabilities have risen, the former by Rs 4.44 crores and the latter by Rs 3.39 crores to Rs 670.82 crores and Rs 462.30 crores respectively. Borrowings from the State Bank are higher by Rs 2.01 crores at Rs 13.81 crores, while those from the Reserve Bank are lower by Rs 0.98 crores to Rs 74.15 crores. Cash and balances with the Reserve Bank have declined by Rs 1.69 crores to Rs 83.11 crores, and Investments by Rs 0.48 crores to Rs 361.64 crores. Advances in India, Inland Bills and Foreign Bills have all risen by Rs 7.40 crores, Rs 2.08 crores and Rs 0.68 crores to Rs 657.07 crores, Rs 115.29 crores and Rs 53.67 crores respectively.

Labour Troubles in Britain

By PAUL EINZIG

ECONOMIC recovery in Britain that has developed since the turn of the year is in danger of becoming reserved as a result of new epidemic of labour troubles. There is a full-scale stoppage at the Ford Motor Works in Dagenham where production has come to a complete standstill. Other strikes are believed to be imminent. There is a distinct stiffening in the attitude of the Amalgamated Engineering Unions and of other unions in matters of wages claims. By the look of things British industries are in for a period of troublesome labour disputes. During the period of the Suez crisis and its immediate aftermaths, the attitude of most unions was exemplary. There were hardly any major strikes and the unions were prepared to accept a fraction of the wages increases they had demanded. Admittedly, they could well afford to be conciliatory, considering that during 1956 wage rates increased by 7½ per cent compared with an increase in retail prices by 3½ per cent. Even so, credit must be given where credit is due. The position of sterling would have weakened further if in addition to the difficulties arising from the Suez crisis there had been a series of strikes.

This stiffening in the attitude of organised labour must be attributed to the improvement in the situation. In face of a major crisis the unions and their members were willing to practise a certain degree of selfdenial. The moment the acute phase of the crisis has pass-

World of Business

Production & Export of Tobacco

In the interwar years, the tobacco industry in India received considerable attention from the Governments of India, Madras and the Hyderabad State. Far greater interest in the development of the industry was shown by the Imperial Tobacco Company, which has continued to hold virtual monopoly of the manufacture and trade in Indian tobacco. The Company and the Imperial Council of Agricultural Research, together did a great deal to extend the cultivation of Virginia tobacco under suitable conditions, with the result that mostly under foreign auspices, there grew up a well-sized tobacco industry in India.

The attempts to Indianise the industry have met with little success. All that could be done during the old regime was to organise a few regulated markets, to set up a Central Tobacco Committee and to see that the Exchequer derived a fairly good income from the trade.

The Indian Central Tobacco Committee, which is now the main guiding light for the tobacco grower and trader has lately come up against problems, which involve a new orientation of policies in many fields. As far as the exchequer is concerned, even now it is not a bad showing. Tobacco occupies a place among the major sources of excise revenue. It is on the production and export side that concentrated efforts are called for in the immediate future.

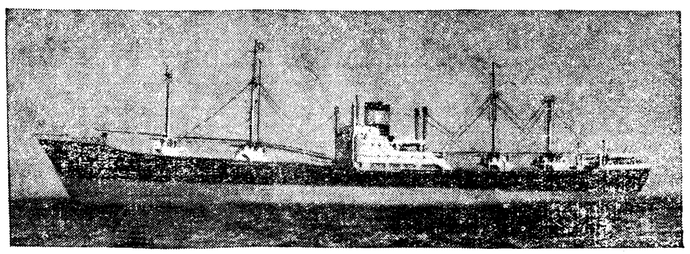
At the Twelfth Annual General Meeting of the Indian Central Tobacco Committee, held last week at Bangalore, Dr P. N. Uppal, Agricultural Commissioner, Government of India and Chairman of the Committee, gave an idea of what is already being done on tobacco research and its prospective intensification under the Second Plan. Among the former, come the production and distribution of pure seeds and seedlings and training in improved methods of cultivation, handling and curing. Work on the establishment of a Tobacco Research Station at Hunsur will shortly be taken up. This station would concentrate on the production aspects of virginia cigarette tobacco and indigenous varieties suitable to Mysore.

The Central Tobacco Research Institute at Rajamundry is almost complete. Studies on the effects of soil improvement by deep tillage and conservation of moisture by certain methods intended to make virginia tobacco more responsive to manuring are being undertaken. Among the many new schemes sanctioned for the ensuing year, there is one for the study of the chemical characters of beedi tobacco, an exploratory research scheme for cigarette tobacco in UP and a proposal for a soil survey of certain tobacco growing areas in Andhra Pradesh.

The Central Committee's work is thus branching out into fresh and more expansive directions. It is noteworthy that over one year, between 1954-55 and 1955-56 tobacco production went up from 547 million pounds to 580 million pounds. This increase was achieved on a considerably reduced acreage—an impressive enough testimony to the response which the crop yields to new methods and better care.

Encouraged by these results, the authorities can now proceed more confidently with the scheduled programme of research and its prompt and better-organised transmission to the tobacco cultivators. It may be recalled that the Government have decided on an extension service with a net-work of rural information agencies.

At the Annual Meeting, Dr Panjab Rao Deshmukh paid a well-deserved compliment to the Central Committee for having successfully pushed through the improved methods of cultivation and curing, through literature in the regional languages of India. The Committee has now decided to add to its publications.



The Indian Union has been importing annually some quantity of raw tobacco. Between 1953-54 and 1955-56, the annual import of tobacco went up from about 25 lakhs pounds to 39 lakhs pounds. The export of unmanufactured tobacco is several times larger. But that does not undermine the need to stimulate further the cultivation of varieties figuring so prominently in imports.

In the sphere of marketing and commerce, too, the trends are not unsatisfactory. Against 68 million pounds of raw tobacco exported in 1953-54, the export for 1955-56 stood around 92 million pounds. Heartening as this improvement is, it does not reveal certain weaknesses, inherent either in the trade or in the international conditions which have a close bearing on it. Amidst the highly unstable political conditions in many countries it would be unwise to depend on any country as a stable importer. Moreover, consumer taste is becoming more and more discriminatory, if not fastidious, and unless the trade is much more vigilant and alert and above all critical of its own imperfections, the foreign market cannot be cultivated with the full possible degree of success. Trade with some countries also calls for organisational changes in production and distribution. The Union Minister for Agriculture points out how the Central Consumers' Cooperative Organisation in Russia would be glad to enter into trade agreements with other countries, but only when similar cooperative organisations were available for direct negotiations and contracts. In fact Russia, has offered to purchase Indian tobacco in substantial quantities, but on two conditions; one relates to the cooperatives; the other is that, instead of a cash purchase, Russia wants barter, offering, in return for Indian goods, mostly factory products such as bicycles, watches, cameras, radio sets, electric goods and fountain pens. China, is a good customer for Indian tobacco; so too are some of the Middle Eastern Countries. But these markets could be strengthened and developed only if local tastes and preferences, which sometimes spell into spheres hitherto considered irrelevant, could be accommodated.

Where information is comparatively obscure, is with regard to thinking on lines of expanding cigarette manufacture in India. With all the tentative warnings of the rather perturbing to the habitual smoker, lung specialists, the world does not seem likely to give up the use of cigarettes; nor does one find any serious attempt anywhere for a reduction in consumption. If the prospective international demand for cigarettes is taken for granted, there is no reason why a large tobacco-producing country like India should not develop the industry, with the export bias transferred from the raw material to the finished product. It has been demonstrated that this country can grow the richest varieties in a number of areas and our experts assure us that large-scale extensions of these varieties are possible.

While the research and organisation connected with cultivation and processing is of fundamental importance, it can also be looked upon as providing a foundation for a colossal cigarette manufacturing industry. Over and above the domestic production, the Indian Union is now importing small quantities of cigarettes; Exports of Indian cigarettes is next to nothing.

Perhaps, ambitions need not be specatcular right now. For a time, the exports of Indian tobacco could continue, especially to traditional customers such as Britain, where, the demand for suitable qualities from India could be expected to grow. Economically, Britain should prefer Indian tobacco against the costlier imports from other countries. Once the quality of Indian tobacco becomes completely satisfying, some at least of the foreign markets could be stabilised, for reason of the advantage in price differences.

World of Jute

Jute Supplies in Pakistan

SPEAKING at the annual general meeting of the Pakistan Central Jute Committee, Mr Dildar Ahmed, Food and Agriculture Minister, has indicated the position as regards supply and distribution of raw jute in Pakistan during the jute season 1956-57.

The Minister has estimated the production of jute during the current jute year at 5.5 million bales and the acreage at 1.2 million. Exports during the five months ending November 1956 have totalled 1.9 million bales. Pakistan's own jute industry has consumed during the same period roughly 365,000 bales. That is to say, in the five months July-November 1956, a total quantity of 2.3 million bales has been taken out of the available supply in the country. In other words about 3.2 million bales of the current year's crop were available at the end of November 1956 and if the Pakistan carry **Forward** (trade es mate) of 3.30 lakh bales is added, the total will come to about 3.5 million bales.

Mr Dildar Ahmed says that since the offtake continues to be satisfactory, the expected carry-over for the next jute season will be negligible. He has, however, stressed the need for increasing jute production in the coming season to meet the demands of some lost markets.

Those who are in close touch with the world raw jute markets will find it difficult to share the optimism of the Pakistani Food and Agriculture Minister.

In the first instance India's offtake during the six months ending December 1956 at 381,000 bales is slightly less than half its offtake from Pakistan during the corresponding period of last year when it totalled 777,000 bales. As has been pointed out in these columns last week, in view of the comfortable domestic supply position, Indian mills are unlikely to evince much interest in raw jute imports from Pakistan atleast during the remaining period of the current jute season.

Latest reports from overseas indicate that while the UK is not very keen on making purchases of raw jute at this juncture, the offtake by continental mills, which has been much less this year than at the comparable period of last year, does not seem to show any marked improvement. It would appear, therefore, that Pakistan will be making a big mistake if it bases its estimates on the demand in the first five or six months. From present indications, the chances are that the carryover, even on the basis of official estimates of the jute crop for 1956-57 will be considerable and not negligible as official spokesmen in Pakistan would like to have it.

*

The jute goods market ruled easy during the past week and prices declined rather sharply toward the close all along the line. Hessian 40"×10 oz Ready which was quoting at Rs 44-1 was placed at close of business on Wednesday at Rs 42-8 while B Twills declined from Rs 116-12 to Rs 114-6.

Throughout the week, both sections of the market were extremely dull. In the raw jute section no mill business had been reported done most of the time, while in the goods section foreign enquiries were conspicuous by their absence. Conditions were somewhat steadier on the opening day in the hessian section due to moderate interest shown by shippers. Sackings, however, were dull. Hessian 40"×10 oz Ready was done at Rs 44-1 and B Twills at Rs 116-12. Friday witnessed a reactionary tendency both in sackings and hessians in the absence of genuine business and Hessian 40"×10 oz declined to Rs 43-12 with B Twills coming back to Rs 115-14.

The downward trend became well pronounced on Monday when in the continued absence of overseas enquiry Hessian 40"×10 oz Ready receded further to Rs 43-4 with B Twills quoting Rs 115-10. On Wednesday prices were marked down sharply due to unloading by bulls in the Fatka. Hessian lost 12 annas to come down to Rs 42-8 while B Twills dropped more than one point to be finally placed at Rs 114-6.

In the raw jute market conditions were quiet at the opening with Assam Bottoms quoting at Rs 31-8 per maund. Throughout the next day also there was no change in sentiment as no mill business was reported done. The market closed the week on a quiet note in sympathy with the goods section.

The following table shows price trends during the week:

		Week's Opening Rs. a.	Week's Closing Rs. a.
Hessian:			
40" × 10 oz.:			
April-June	...	43 6	42 4
Ready	...	43 6	42 8

FRENCH INDUSTRY'S OUTPUT LOWER IN 1956

The total output by the French jute industry during the first 11 months of 1956 showed a decline at 88,738 tons of yarns and 68,240 tons of fabrics from 91,299 and 72,114 tons, respectively, in the comparable 1955 period, reports the Jute Bulletin of the Indian Central Jute Committee.

Exports of French jute goods to foreign countries during the first nine months of 1956 rose to 7,088 tons from 5,704 tons in the corresponding period a year ago. But exports to French overseas territories showed a slight decline to 11,253 tons during January-September 1956 from 11,968 tons in the same period of 1955.

Imports of raw jute during January-September were up at 75,502 tons against 68,666 tons in the same period in 1955.

World of Tea

Continued Easier Trend in Prices

ALTHOUGH there has been a good general demand for Tea, prices have been ruling easier during the past few weeks This is mainly attributed to an expected fall in London auction prices. At the moment, retail prices are averaging between 7sh 4d and 7sh 8d per pound measured against the sensational increases two years ago when prices rocketed to 8sh 4d for the popular brands.

There was a swift decline from the 1955 peak, because of a purchasing boycott staged by housewives. While the present increase has been less spectacular, it is nearing the point where public buying is beginning to harden. Government of India's decision to cut As 2 per pound in export duty is taken as an indication that cheaper prices are likely.

Meanwhile, in the Export Sale held in Calcutta his week, offerings consisted of 66,921 packages for which there was a good general demand; but the market for the bulk of the offerings was again easier. Bright liquoring teas, especially Fannings grades were in strong demand and were upto As 2 per pound dearer, while tea for price met with keen competition and was from one to two annas dearer.

Well-made and stylish Whole Leaf grades were fully firm to slightly dearer, but the remaining Common and Medium Brokens were irregularly from one to one and a half annas easier. The low-priced CTC teas were often dearer, but the more expensive kinds in this category were easier and many were withdrawn through lack of interest.

Darjeeling teas met with a slightly improved demand. Following rates were quoted:—Clean Black Pekoe Rs 2-4-0; Plain Broken Pekoe Rs 1-15-0; to Rs 1-15-6; Medium Assam BP Rs 2-1-0 and Best CTC Assam BP 2-9-0 (Nominal).

In the Internal Sale, offerings consisted of 18,533 packages of Dusts for which there was a good and general demand. The market opened a little irregularly and occasionally easier, but strengthened slightly toward the close. Orthodox Assams with improving quality were sold well and were sometimes dearer. A strong feature of the sale were the bright liquoring CTC Assams which were fully firm.

Commons and Dooors received good support at the close, but the smaller kinds were better supported than the grainy types. Black exportable kinds from all districts were generally easier. Following rates were quoted:—Medium Dooars Dust Rs 1-13-6; Medium Assams Grainy Dust Rs 1-14-0; Medium Assams CTC Dust Rs 2-2-0 and Best CTC Assam Dust Rs 2-10-0.

Also, 2,120 packages of other grades were offered for internal consumption. There was a good general demand at about last rates.

In the Export Quota section, rates moved narrowly between 38 and 40 pies per pound; and business was reported done at these levels.

At the Cochin auctions, offerings comprised approximately 400,000 pounds. There was a strong general demand at firm to dearer rates. The better liquoring Nilgiris met with only fair support and prices were irregular, tending dearer with quality. More interest was shown for Good Medium descriptions which were sold up to As 1½ per pound above last levels. Enquiry for Medium from Travancore and the Wynaad was again useful and these sorts were fully firm to occasionally dearer. Residual and Milled Dusts were the strongest features of the sale, selling at irregularly dearer rates. Black Grainy descriptions came to a firm market.

Sale No. 16 was held in Chittagong toward the end of last week when Leaf offerings consisted of 11,398 packages and Dusts 4,486 packages. In the Leaf section, blenders were again operating freely and the offerings met with a useful all-round demand, but the trend was very irregular and it was becoming difficult to quote accurately.

The better liquoring Broken grades and Pekoe Fannings were keenly sought after; and there was much more enquiry for Whole Leaf teas. Plain liquoring types showed little change from the last sale. Price-teas were, however, well sup-

World *of* Insurance

The Executive Committee and the Code

Mr C. D. Deshmukh, whilst piloting the Life Insurance Corporation Bill created a stir amongst general insurers by his several significant pronouncements concerning general insurance. Whilst stating that Government had no intention of nationalising general insurance for the present, he held out the threat that Government of India would seriously examine the issue if malpractices alleged to vitiate the trade continue unabated. He, therefore, asked general insurers to set their houses in order. With a view to substantiate that his was not an empty threat and that Government meant business, he refused to let go the subsidiary general companies which came under Government control following nationalisation of life business, the trading in which, according to Mr Deshmukh, would provide Government with "experience". He then went on to state that when Life Corporation got into its stride, it would cast its eyes on other forms of trade meaning, no doubt, other branches of insurance.

These are significant pronouncements. They, however, did not fall in deaf ears for the Executive Committee. General Insurance Council took no time in formulating a "Code of Conduct" which in its implications seem to overstep the mark. In the endeavour to supplant nationalisation, by what it considers good practice, it has formulated a norm of behaviour which imports so many disabilities to the companies that discerning observers see little difference between it and nationalisation which it seeks to defeat, except of course that in nationalisation profits would go to the State. The meaning of this will be evident from the wordings of the undertaking which the Executive Committee requires every board of the companies to give under the signature of the Chairman and the Principal Officers.

The undertaking is worded as under:

(a) afford all necessary facilities for such inspection as may be directed by the Controller, as often and at such intervals as he finds necessary; the purpose of inspection being to establish that business is being conducted (on proper lines and) in accordance with law and tariff regulations and that a proper value is placed on assets and liabilities;

(b) abide by such disciplinary action (warning, fine, requirements terminating the services of an officer, agent etc) as the Controller in consultation with an independent body to be set up by the Chairman of the Executive Committee, may impose;

(c) maintain the minimum departmental reserves specified by the Executive Committee;

(d) ensure that the minimum information to be specified by the Executive Committee as required to be readily available in insurers' accounting systems is so available;

(e) maintain an excess of assets over liabilities which is not less than the minimum security margin prescribed by the Executive Committee;

(f) assume on or after first January 1957 no risk before the premium has been received by the insurer, except in such cases and under such conditions as are specified by the Executive Committee;

(g) grant on or after first January 1957 no loan on personal security; and

(h) maintain such particulars and information regarding the administrative and development staff, premiums, commission claims and refunds as may be specified by the Executive Committee".

It will be seen that the main idea behind the above is designed to enlarge the purview of the scope of control of the Controller of Insurance and his allied bodies corresponding to the diminution of the scope of authority of the management of companies. This has been, for many months, a significant trait in the administration of the Government of India. In the name of socialisation, what is really happening is bureaucratisation in all affairs where Government can find a foothold. In general insurance, whilst professing that nationalisation is not intended, a subtle scheme of interference in the affairs of the companies has been designed, which as well may be a prelude to nationalisation which professedly it seeks to defeat.

The Executive Committee with a membership partly elected and partly nominated has under law the "function" to "aid and advise insurers carrying on general insurance business in the matter of setting up standards of conduct and sound practice and in the matter of rendering efficient service to holders of policies of general insurance." Aiding and advising are quite different from "directive" by which term Mr H. M. Patel, Chairman Executive Committee, has characterised the new Code. In law, Mr Patel may thus be guilty of going beyond his functions.

It is, again, a travesty of truth to masquerade the Executive Committee as representing the industry and its "directors" as representing the views of the industry. The Executive Committee is a product of law. Its Chairman, in terms of the Insurance Act, being always a Secretary of the Ministry of Finance. It is thus a legally constituted authority and is thus different in context and character from, say, the Indian Insurance Companies' Association which has no legal existence in the sense that it is not a product of law. The Executive Committee has all the familiar marks of a government department. Its Secretariat is with the Department of Insurance. Officials of the Department of Insurance hold office as Secretaries and departmental heads. Its secrets are government secrets, not of the companies or even of constituencies which elect representatives.

The spokesmen of the companies are their associations. The ready endorsement that has been given by the Associations to the terms of the very controversial code has surprised many. The Associations represent the private sector and if the Executive Committee can be considered to represent the views of the Government, there can hardly be ready cooperation between the two for the conflict between the private enterprise and the Socialist Government can no longer be concealed under platitudinous verbiage.

A spokesman of the Indian Insurance Companies' Association, Bombay, described compliance with the current code as 'our last chance'. This is a language of defeatism born of demoralisation, for general insurers are now completely demoralised. When Mr C. D. Deshmukh threatened general insurance, insurers lost all courage and stamina and out of sheer fear their Associations, even individuals, began to flood the Government of India with all manner of suggestions as to how the insurers themselves should behave. It remains a paradox in general insurance in India that behaviour which should emanate from within has always to be patterned from without. Self condemnation went without limit, and it is again a matter of lasting shame, that they were not unanimous in the nature and character of condemnation.

The conflict provided Government with the opportunity of formulating its own scheme of subtle incursion in the affairs of companies. It should be known that ready endorsement to everything emanating from the State provides no salvation. There should be hard thinking before deciding to walk in the spider's parlour.

Time has now come to rethink and re-examine the position and to hold to the view that the interests of voluntary associations and the Executive Committee need not, always, be the same. In India's present context, jealousies between private and public sectors are no longer theoretical. This thought process should characterise our thinking in reference to the present code and the many moves that are now in the offing. The Executive Committee's ordinary role, whenever necessary, can be rendered infructuous if insurers can speak with one voice. There is nothing to be lost by this, for if they nationalise, they will do it despite what insurers may say.

With regard to the terms of the current code, there is not much to say for it has already been elaborately examined. In the matter of providing powers to the Controller of Insurance to carry out inspections, it has been suggested by many individuals, that they are not worried as their books are in order. This attitude is entirely pointless. What is of importance, is the principle. The whole idea behind the inspection is to arm the Government with greater authority thus enlarging the scope of bureaucracy. On principle, this has to be resisted. This is also based on distrust of management and company auditors. It is, therefore, too much to expect the management and to condemn themselves and their own auditors. The Controller has ample powers under current law to get information.

It is again too much to expect company management to divest themselves of the power of control over employees, whatever be the circumstances, and to abide by the decision of an independent body. This is contrary to all ethics of management and it is thus a matter of great surprise as to how the insurance bodies could agree to this.

Another astounding provision is advance payment of premium before assumption of risk—an innovation unknown anywhere in the world. Insurance is, after all, a business and not disposal of flagged giles. There is hardly any business where some credit is not allowed and, therefore, it is hard to conceive how such an unbusiness-like proposal can be endorsed by business executives.

Other provisions are all related to abrogation of company direction with corresponding enlargement of authority of the Department of Insurance and its associated bodies. Quite a few of the provisions are, however, calculated to strengthen the companies, but nevertheless regimentation of companies in a rigid pattern contains more implications than apparently meets the eye.

The Executive Committee in its function of aiding and advising insurers has to set up "standard of conduct". There is no explanation as to the meaning of 'conduct' in the Insurance Act. It is, therefore, common sense that misconduct must mean violation

LAST three weeks saw in quick succession the sedate and decorously enthusiastic celebration of the founding of the three oldest modern universities of the country. They have a word in rhetoric called 'Oxymoron' for the kind of figure I have employed in referring to the 'oldest modern' universities. But the description is exact and constitutes a comment in itself on our cultural history. It emphasises the sad fact that the continuity of our heritage has been badly disrupted in the course of history and such channels as keep us in contact with the fountain-head have been of an exiguous and fugitive sort, such as sacerdotal rituals and popular oral traditions of all too fallible memory. Dead evidences of our ancient universities are there in plenty in Nalanda, Taxila, Kanchi, Banaras and Ujjain and so forth. These were, by all the available evidence, in every way as authentically seats of dis-interested inquiry as the ancient universities of Europe. Consequently, I cannot help being struck by the irony of a situation in which this ancient land should be celebrating, with self-conscious formality, the hundredth anniversary of some of its seats of learning while many a country with an admittedly lesser lease of life as civilized nations should be taking their universities as part of their way of life for as long as they can remember. Oxford and Cambridge, have, in fact, been so much a part of the English life that an Englishman would feel exquisitely uncomfortable if some one were to suggest a formal celebration of their 700th or 800th anniversary. Many Britons have developed as part of their social equipment a defensive mechanism to conceal their intense pride in these institutions of being slightly irreverent about them. Thus, as a point of fact, their heart may miss a beat when they see the Bodelian dome or the Christ Church Spire (as Mathew Arnold's did), but they hide the fact by pretending to consider the old place something of a joke. "Oxford, the home of lost causes and forsaken beliefs, and unpopular names and impossible loyalties", with its crotchety dons and comical charladies! But behind all this elaborate pretence is a profound and unwavering faith that it represents certain ineffable values which have to be preserved at any cost.

✱

The second element of irony that struck me about the current centenary celebrations was that, in a sense, none of the three universities is a university in the strict and pristine sense of the term. I hope I do not sound maladroit on a formal occasion and peevishly unconscious of all that these three seats of learning have done for the advancement of knowledge, for the cultivation of the mind and spirit of generations of young men and women who have come to them during the last hundred years. None can deny their achievements have been important and, in an ultimate sense, decisive in the shaping of our present and future. Of many things that have impelled national action in the last hundred years, of many of the orientations that have informed our political and social philosophies, the first wondering glimpse we had only in the precincts of these universities. And, personally speaking, such rudimentary notions of the rigours of the discipline of disinterested thought, such fugitive glimpses of the possibilities of man's unconquerble mind and spirit, such faith in the humane and compassionate fellowship as I possess today, I owe entirely to that most bounteous of mothers, the Madras University. But as is only too well known, the Calcutta, Madras and Bombay Universities were modelled on the London University which came into being a little earlier and not on Oxford or Cambridge. They were and still are affiliating and examining bodies. And though some like the Calcutta University latterly gathered all post-graduate teaching together under its own auspices, the real intellectual and spiritual companionship that comes by residence was conspicuously unprovided by the Universities themselves. These were the gifts, in a somewhat different form from what obtains at Oxford and Cambridge, of the individual colleges that were affiliated to the parent body. Many of these colleges are objects of deep affection and some of them like the Presidency Colleges of Madras and Calcutta have already had their centenaries. It was in these colleges that one acquired, besides the exacting delights of intellectual discipline, the most precious of gifts that it is in the power of any community to give, the first glimpse of the abiding value of personal relationships. The delights of friendship, of the heady joy of conversation and the quieter happiness of companionable silence, the gentle art of lazing, or the distractions of omnivorous reading, and the thrills of juvenelia, so exquisitely embarrassing in retrospect, and a thousand other nuances of genuine happiness were the bounties of the colleges rather than the university itself.

✱

But directly or indirectly, these universities have given many thousands of Indians gifts far beyond the capacity of man to measure. The modest self gratification that these universities have given expression to on the centenary occasion will, therefore, be grudged only by the most incorrigibly churlish. The occasions were used fully by the University authorities to indicate how badly off they were and how grossly ill-provided in the matter of resources they were to do all that the country expects them. To judge by reports from the papers, these entirely just complaints have fallen on sympathetic ears and the beginning of the second century of these universities is auspicious. The occasion was utilised also for some free thinking on present educational discontents, and formulation of the purposes of university education. Dr Rajendra Prasad who spoke at Calcutta, put his finger on what was one of the basic weaknesses of the present system, the appalling wastage involved in the correlation of bread-winning with a university degree. The repercussion on standards this involves is, in my view, the most serious problem the universities have to solve quickly, if they are to fulfil their real purpose in the years to come. It is true that we do not have enough universities if we reckon these things in terms of the needs of the population. But it is paradoxically also true that nearly fifty per cent of those at the university now have really no business there. This creates a whole series of problems, like the watering down of standards and, where this is resisted, an appalling number of failures at the examination about which Dr Ghosh of the Planning Commission was scathing at a Calcutta symposium. It also contributes to the problem of indiscipline, for the simple reason that those who find themselves unequal to the demands of intellectual passion fall a prey to the furtive and frustrating thrill of emotional self abuse involved in collective demonstrations. A resolute and rigorous weeding out at the end of the secondary stage of all those who cannot profit by the kind of education the university has to offer will solve a number of problems at once. And this can be done only when a university degree is not insisted upon for getting a job.

✱

At Madras, the celebrations on the occasion were of a more fundamental sort. The Vice-President, Dr Radhakrishnan, was obviously worried about the way in which the danger to the world today proceeded more from the educated and the literate than from the uneducated and unlettered. He spoke with his customary eloquence on the 'inexhaustible mystery' that for ever beckons the inquiring spirit. The university is the one place from which this passionate pilgrimage in search of the holy grail can start. The Governor of Mysore summed up tersely the purposes of University education: "Universities have to balance and reconcile various and often conflicting claims of thought and action, of matter and spirit, of science and the humanities of men and women: they have to supplement knowledge at every stage by wisdom, to fire conventional patriotism with the divine spark of fellow feeling; they have to instil integrity and teach men invariably to prefer justice and peace". In

effect, the Universities have to act as the custodian of the mind and conscience of mankind. More precisely and immediately, their purpose is primarily to keep alive the intellectual passion, to cultivate a profound and passionate desire to explore the farthest frontiers and the dingiest corners of knowledge. And such an exploration should be wholly disinterested and unrelated to the enormous adventitious advantages it gives in terms of power. Knowledge as power is not an object of adoration at all in the universities. The ancient quest is for wisdom, or discrimination (Viveka) and that is a quest that never ends. The university may have engineering colleges, scientific laboratories, medical colleges and these are important parts of the universities. But the university can live without them and they can form part of a fellowship that need not be the university. In all our current preoccupation with the need for trained personnel for the Plan, the demand is made that the universities must produce these men quickly and in sufficient number. Since the university is now in charge of training these men, the demand is perhaps not wholly unjust. But in responding to this call, the university will not be fulfilling its characteristic function. Except in so far as these disciplines involve the basic and fundamental discipline of thought the university does not concern itself with them. In America, for instance, universities will include in their curricula any subject from poultry farming to nuclear physics. And the question that is often asked is, "Why Not?" The answer is simply that the university is not there to teach anything that can be learned elsewhere.

*

The university is, therefore, let us make no mistake about it, a citadel of privilege. It is in many ways the most undemocratic and 'useless' institution, in which the best minds of the country are left in comparative leisure to contemplate the infinite without any apparent immediate benefit to anyone. But no mature democracy can afford not to have such a privileged class in its midst.

*

One final comment. Many a harassed Vice-Chancellor and professor who listened to the unexceptionable speeches delivered on the centenary occasions must have wondered at the difference between the actuality and the ideal. I have earlier touched upon the feature in our universities that knocks the bottom out of the assumption that the best minds among the young are up at the university. I have also referred to the appalling lack of even ordinary rigour in standards in many universities. And, lastly, it is simply not true that the universities are harbouring among their teaching staff the very best in the country by way of talents. The most notorious reason for this is the fact that, owing to a variety of factors, the most important of which is the deplorable monetary rewards offered, many who would have found a real vocation in teaching do not find themselves there. If the universities in our country have to serve the purposes for which such institutions are created, then the immediate step to take would be to see, firstly, that only the best go there: and, secondly, that the best don't go anywhere else.

*

Official announcement confirms what has been anticipated in knowledgeable circles. Mr H. V. R. Iengar, after a short tenure as Chairman of the State Bank of India, becomes the Governor of the Reserve Bank; and Mr P. C. Bhattacharya leaves the Finance Ministry to head the State Bank. In both instances, the choice is admirable. Both have a distinguished and versatile record of service. Both have been eminently successful in every assignment entrusted to them. Both are animated by the new spirit of New Delhi—to give of one's best toward the accomplishment of the developmental plans to such effect that India becomes economically strong and socially dynamic as the crowning symbol of political independence. The Reserve Bank and the State Bank are increasingly the instruments of national economic policies; and that Mr Iengar and Mr Bhattacharya enjoy the full confidence of the Ministers who have a dominance in policy-making decisions, is good augury for an integrated approach to every aspect and every facet of national economy and public finance.

EAVESDROPPER

Escape? **Impossible!**

Liquids, steam and gases cannot escape from stuffing boxes, glands and cocks if they are sealed with Turner's "Firefly" asbestos packing. Use it and your worries about leakages are over.

By arrangement with Turner Brothers Asbestos Co. Ltd., England, we make "Firefly" Packings. We spin asbestos fibre into yarns, and then plait these yarns into packings which provide the perfect seal, unaffected by the temperatures and pressures normally encountered in industry.

Turner's "Firefly" Packings are just one of the many technical asbestos products that we at AM & FM make to meet the needs of India's industry. The increasing use of Asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

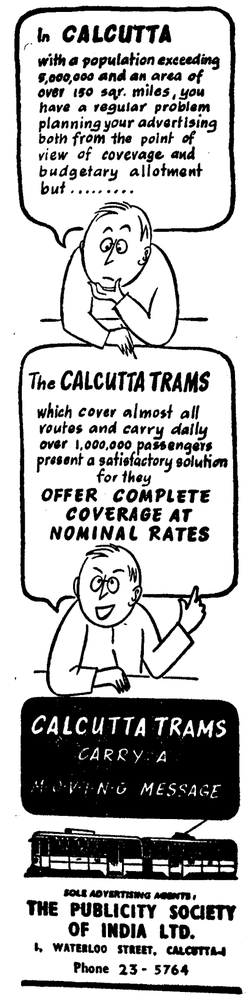
The TISCO Family

IN March last year, I had occasion to commend enthusiastically a new idea of the House of Tatas. Since occasions for such enthusiastic endorsements are rather frequent, the reader is perhaps entitled to be reminded which particular idea it was. I shall, therefore, recall it for him. It was the experiment attempted by the Chairman of TISCO reporting to its employees about the activities of the company exactly in the same manner as he does to shareholders at the annual general meeting. I pointed out on that occasion that it was only in the fitness of things that the Tatas who have been pioneers in many aspects of industrial relations should have taken the initiative in what is perhaps an unprecedented experiment. As is well known, the law of the land requires that the management of a joint stock company should render annual accounts to the shareholders of the company. But so far there is no law requiring a similar responsibility toward the employees. That the Tatas have come forward, of their own volition, to take the employees into confidence on the affairs of the company accords well with their basic approach to the whole question of industrial relations.

Long before the present cant phrase 'Socialistic pattern of Society' became the substitute for thought, and long before people talked about the need for substituting 'social gain' for 'private profit' as the object of industrial enterprise, the House of Tatas has acted, perhaps unconsciously—certainly unself-consciously—on that assumption. It is well known how the major portion of the disposable income of the House of Tatas goes to trusts for public purposes. Secondly, it is not only the net income that the Tatas have felt themselves to be the trustees of. They have always acted on the premise that they are the trustees of the welfare of the thousands of people who are connected with them in a number of capacities—in the capacity of a shareholder, of an employee or of a consumer of their products. Those who have visited Jamshedpur know with what thoughtful care the welfare of the TISCO community is being looked after. Therefore, this annual rendering of accounts to the employees of how the company has been run in the past year is but a culmination of a series of acts based on the concept of trusteeship.

Moreover, the experiment gives yet another indication of how seriously the Tatas take the idea of labour being a partner in industry. Much interested lip service is paid to the idea, but few care to work out its practical implications with sincerity. Labour leadership has its own mental reservations on the concept; in a majority of cases, the participation such leadership wants is of a sort that will leave the real interests of labour completely untouched. As for the management, they do not, in the majority of cases, believe in the idea at all. And parliamentarians and other public men who talk of it, do so, in most cases, apparently without any thought of its practical aspects. But the Tatas have given practical evidence of how seriously they take the notion. Two significant examples of such earnestness during last year are commented upon in the Chairman's report to the workers for 1955-56, which has just reached my hands. They are the agreements between the TISCO management and the TISCO Union in January 1956 and in August 1956. These have provided that none of the TISCO workers will be retrenched in the near future and all the surplus labour will be absorbed in the expansion programme of the company. Moreover, the change-over will be made easy by suitable training facilities to the workers transferred to new units. The supplemental agreement of August provides for closer association of workers with management by the machinery of various consultative councils that have been set up. These are sure to be worked with sincerity and a sense of responsibility on both sides, for, we have the happy circumstance in Jamshedpur of a responsible management and a responsible labour leadership determined to make a success of the experiment.



Mr Tata's reports to the employees this year as well as the illustrated colloquy between the workers and the accountant babu reveal interesting shifts in emphasis. This year, a good portion of the report and the dialogue is taken up with the two million ton expansion programme: and queries —somewhat hostile, at that—about how the funds of the company were disposed of that loomed large in last year's encounter with the Munshi take far less space this year. What is even more important is the absence, in the queries, of any truculent suspicion. The illustrations, too, capture the mood of relaxed trust that the employees show toward the accountant babu. And, lastly and most significantly, a new character in the drama is the superintendent saheb who is plied with a variety of questions about the expansion programme by the workers. These shifts in emphasis are clearly indicative of the changes in relationship that have been the first fruits of mutual trust and identification of interests. The worker is taking more interest in the expansion programme than on an immediate increase in his wages. The superintendent is only too willing to discuss the technical data with his workers. The accountant, though still an important man, is not the all important man he was before.

Not that the worker was not interested in how the TISCO rupee was disposed of. The accountant babu was ready with his figures. These did not show much of a variation from what happened last year. Raw materials and freight charges took away 67 pies this year against 71 pies last year. Taxes accounted for 15 pies against 18 pies of the previous year. Replacement charges took a slightly smaller chunk this year accounting for 17 pies against 22 pies. Reserves for future expansion and unforeseen contingencies accounted for a further sum of 19 pies in the rupee. And, if you take into account certain other expenses, the TISCO family of workers and shareholders have 61 pies to share between them.

This was shared between the workers and the shareholders in the proportions of 53 against 8. The corresponding figures for the preceding year were 60 and 9 respectively. Though there is thus an apparent whittling of the worker's share this year, two points are worth remembering. One is that the value of the TISCO rupee, at least nominally, was more than what it was last year, since the gross earnings of the company with which we have equated the TISCO rupee, were much larger this year. Secondly, the apportionment to the shareholder has also registered a slight fall, though the actual amount paid to them was identical. If it is realised that there are about as many shareholders spread over the whole of India as there are workers in Jamshedpur, then the vision of some bloated monster fattening on unearned income made at the expense of the toiling workers would be seen to be a fantastic one.

But let us, like the worker, hear what the superintendent saheb has to say about the expansion programme, and the investment for this expansion. The programme is to put up a new battery of coke ovens, a great new blast furnace and to make possible other ancillary developments which will add to the output 1,285,000 tons of steel per year. There will be three new mills, a blooming mill, a continuous sheet, bar and billet mill and a medium and light structural mill. As for the investment in the development programme, the Munshi explains to a somewhat dazed group of workers, it will be of the order of Rs 110 crores. The increased price of steel (about which there were some keen questions earlier) will provide about 20 crores of rupees over a period of five years. Shareholders have agreed to put in a further Rs 13½ crores. The World Bank has promised what has been the largest single loan so far sanctioned by it, a sum of Rs 36 crores. And after using the

Production of Machine Tools

One of the points stressed by Mr Manubhai Shah, Union Minister for Heavy Industries, in his inaugural address to the first meeting of the Development Council for Machine Tools in Bombay early this week is that the private sector has an important part to play in the development of the Machine Tools Industry in the country. Considering the fact that the manufacture of machine tools falls under the category of basic industries, the complaint that Government's industrial policy is aimed at the gradual elimination of private enterprise becomes untenable.

The Machine Tools Committee set up by Government in 1947 to examine the potentialities of the existing units in the country and assess their ability to adopt more progressive and dynamic programme of production has estimated that the growing industrial activities in the country will create by 1961 a demand for machine tools of various sizes and types aggregating to about 5,000 to 6,000 per annum worth about Rs 9 to 10 crores. The Committee has also suggested several steps for the strengthening of the industry both in the public and private sectors.

Mr Shah has pointed out that Government's view is quite clear that the roles to be played by the two sectors are to be complementary and not unnecessarily competetive or overlapping. Thus Government's policy conforms to the recommendations of the Committee.

Though the target for machine tools production in value at the end of the Second Plan is placed at Rs 10 crores annually, the demand according to Government's calculations, is estimated to go up to about Rs 15 to 17 crores. As against this, total production of the Hindustan Machine Tool Factory at Bangalore which is being considerably expanded and the Praga Tools in Hyderabad, another public sector factory, is expected to increase to Rs 5 crores per year by 1960-61.

It will be seen, therefore, that more than two-thirds of the potential demand is left to be covered by production by the private sector. Now the bulk of the demand has to be met from imports as indigenous production in 1956 amounted to Rs 1 crore against current demand of Rs 8 crores.

The programme of development of the machine tools industry has, however, been drawn up for attaining a modest target of Rs 10 crores, allocating certain heavy duty and medium duty lathes, drilling machines, milling machines and other categories to the public sector factories. The three factories are expected to produce machine tools worth Rs 5 crores by the end of the Second Plan leaving machine tools worth another Rs 5 crores for private enterprise.

It is not as though the entrepreneur is asked to undertake such a difficult task as the manufacture of machine tools without proper guidance. Government are fully aware of the big gap between the technological developments made by the industrially advanced countries and India and hence are ready to extend all assistance in securing the necessary foreign technical collaboration for the production of different types of heavy duty and medium duty tools.

*

Canadian Aid

The talk, which Mr Nik Cavell, the Canadian Colombo Plan Administrator, now in India, gave the Bombay Pressmen, was informative in many ways. Mr Cavell explained how with the completion of the atomic reactor which is now under construction at Trombay, India would become the leading Asian country, in respect of the production of atomic energy. The various hydro-electric projects in India, had the potentitlities of generating electricity, but often their location was unsuitable from this standpoint. It is also for this reason that the atomic reactor as a generator of electricity becomes particularly important for the country's future economy.

Among the possible projects for which the Canadian Government would be interested in the Colombo Plan mention was made of Neiveli. According to Mr Cavell the Canadian Government might do something for this project for the distribution of power, though he took care to point out that the whole thing was now in a formative stage. Canada had already started participating in rural electrification schemes; the first batch of small diesel generation sets was well on its way from Canada to India. The schemes involved are intended to generate electricity in villages and small towns where there was no grid.

The Kundah hydro-electric Project in the Nilgris, the engineers in charge of which came in for high encomiums from Mr Cavell, would be receiving electrical equipment from Canada. The equipment and installaion of towers for this project, also being undertaken by Canada, are together estimated to cost $20 million. In 1955-56, $13 million was allocated to this project by Canada; the balance is being met out of allocation for the subsequent year.

As at 30th September 1956, Canada has allocated approximately 80 million for capital aid to India under the Colombo Plan. There would be further allocation from the funds voted for the current year. The total cost of the atomic reactor project at Trombay is around $7 million. Besides expenditure incurred on the spot, Canada trains about 40 students from India, in the operation of the reactor.

GATEWAY MARKETS

Silver Flares Up: Oilseeds Weak

SILVER rates flared up during the past week due to increased speculative buying following continued heavy offtake in the spot section. Political uncertainties arising from the Kashmir situation helped to sustain sentiment, while technical considerations also prevented prices from any falling. In general, bulls sat tight on their holdings even at higher levels, with the result the market closed near the week's best levels.

Arrivals and offtake of silver were estimated around 18 and 13 bars respectively. Silver Maha delivery moved between Rs 185-12 and Rs 186-5 and Phalgun delivery between Rs 186-5 and Rs 186-14. Spot, after being taken upto Rs 186-13 from Rs 186-5, finished at Rs 186-6.

The Gold section succeeded in holding the recent high levels. Although there was profit-taking due to reports of larger arrivals of smuggled gold and fears of Government intervention to check the rising trend, the underlying tendency continued to be satisfactory. Gold Maha moved between Rs 108-5 and Rs 108-11 and Phalgun delivery between Rs 108-9-6 and Rs 108-14. Spot, after touching a high of Rs 108-11 and a low of Rs 108-4, finished the week at Rs 108-5. Sovereign was As 4 higher at Rs 68-4.

*

Oils and Oilseeds

Sentiment in the Oils and Oilseeds markets remained generally depressed due to fears that fresh steps might be taken to push down prices. These fears were strengthened when the market authorities considered a move to impose a ceiling on castorseed and groundnut futures. In these conditions, the business morale deteriorated and prices tended to lower levels.

Conditions in the Groundnut section were, however, comparatively steadier. The Government continue to maintain a vigilant watch and fluctuations, since the last ten days, have not been very wide. This has made hoarders in trading centres to reassess their expectations. The feeling is growing that, whatever action might be taken in respect of forward prices, will also have their impact on spot prices and that regulation of forward prices will be so devised as not to result in spot prices flaring up. In regard to control over spot prices, the Reserve Bank has already had some experience of the credit squeeze measures in the case of paddy. It is feared that similar measures might be imposed on oilseeds, should circumstances warrant them.

Meanwhile, Groundnut February started at Rs 167-2 and, after touching a high of Rs 168-12, it declined to Rs 166-4, to finish better at Rs 166-8. May delivery moved between Rs 165-4 and Rs 168-0, to finish at Rs 165-10. Ready Bold was quoted around Rs 34-4 and Groundnut Oil at Rs 18-10.

In the Castorseeds section, prices declined further due to increased offerings on reports of heavy arrivals in the interior stations of Hyderabad. Ready was quoted at Rs 33-4 and Castor Oil, commercial quality, at Rs 18-10.

Trading in the Linseed section also revealed the impact of the bearish atmosphere in the market. With the decline in the overseas prices of linseed oil, the tendency in linseed futures was distinctly weak. May delivery opened at Rs 29-8 and, after improving to Rs 29-10, receded toward the close to Rs 29-0. Ready was quoted at Rs 32-4 and Linseed Oil at Rs 18-8.

In the Cottonseeds section, prices were adversely affected by the weak trend in cotton. February delivery, after opening at Rs 97 and touching a high of Rs 99-0, receded at the close to Rs 98-4.

*

Yarn

Lisless conditions prevailed in the Yarn market; and prices moved rather irregularly as operators were reluctant to extend their commitments. In the futures section, 120/D Dull Cone Snia February delivery touched a high of Rs 809 and a low of Rs 800, to finish at Rs 804. 120/D spot Japan was quoted at Rs 4-5-6 and 120/D spot Italy at Rs 4-2-0.

In Staple-Fibre yarn section, however, rates were nearly maintained on reports that the import of staple-fibre would be severely

(Continued on next page)

Bombay Review

World of Cotton

Eica Board's Decisions

IT is commonly known that, despite heavy arrivals, the rising trend in Cotton prices during the past few weeks has been causing serious conrern to the market authorities. Faced with the danger of Government intervention in the market, the Board of the East India Cotton Association has thought it fit to arrest the upward trend well in time and to fall in line with the Government policy of curbing inflation. The Association is, therefore, in search of appropriate measures to check an undue rise in prices.

At a meeting held by the EICA on Friday last, there were hot discussions and, under the guise of preventing prices from rising, several measures were envisaged. The Board pas given the powers to levy stringent margins as conditions arose if prices moved up or went down. In order to make the forward contract bearish, the Board decided to maintain the status quo in regard to both bye-laws 55 and 61 of the cotton hedge contract. The Board also decided to accept for tenders stained and leafy cotton under special circumstances and within a specified range. An early resumption of business in Jharilla May contract was also favoured by the Board.

While the Government are, no doubt, concerned over the wide fluctuations in the market, there is a growing realisation that this trend is not entirely speculative. If the range of fluctuations last year, following the resumption of futures trading on the 18th June 1956 was not considered speculative, the trend of prices this year have also been shaped by the demand and supply position rather than the result of wreckless overtrading. There is still the fear of a likely scarcity of tenderable cotton as well as some deterioration in quality on account of the untimely rains and the intense cold spell which prevailed some time ago. With the approach of the delivery, the question whether there will be sufficient quantity of tenderable cotton available for delivedy has naturally been assuming increasing importance.

On present indications, the chances of relaxing the existing ban on import of East Afriran cotton varieties other than BP/52 are very bleak. It appears that the Government are holding in check the import of this cotton for two reasons. In the first place, East African cotton is priced much higher than US cotton. The second consideration is the difficulties in regard to the sterling exchange position confronting India. Both mills and trade are fully aware of these factors although they continue to show preference for Uganda roller-ginned cotton to US saw-ginned cotton since the former has a low blow-room loss percentage and is easier to handle in dry atmosphere.

Meanwhile, latest reports have suggested that no further import of American cotton under the Indo-Burma-US Tripartite Agreement will be allowed into India. The monetary ceiling, equivalent to the value of Indian textiles exported to Burma under the agreement, has been reached. With the Government announcement of January 30 last, that monetary ceiling for the import of American cotton under PL/480 had been reached, import of American cotton into India can now be done only under the tripartite agreement. But, under this agreement also, import of American cotton can take place only after further exports of Indian textiles to Burma.

×

COTTON FUTURES:

Trading on the Cotton futures market disclosed a cautious feeling among traders who considered the decision of the EICA as unwarranted. With the result, they were apathetic from the start of the session. Values, therefore, opened weak and declined further on impact of selling pressure from speculative bulls and due to the absence of support. At lower levels, however, selling subsided and the market gradually gained ground on covering by bears. Turnover was 25,000 bales. ICC Jharilla March opened at Rs 654-8 and, after touching a low of Rs 653, finished the week at Rs 658-8. Similarly, ICC Vijay finished at Rs 765-4 after opening ot Rs 760 and touching a low of Rs 758-8.

×

SPOT MARKET:

Rates in the Spot section, however, continued to rule steady with active spinners' demand for domestic styles, particularly for 197-3, 216F and new crop Surti. New Crop Vijay, which is now quoted near the ceiling, finds ready buyers although a small setback is generally expected when the crop begins to move later this month. Daily offtake in Bombay as well as upcountry markets continues to be good.

In the export section, business was confined to Oomra Deshi.

Among foreign styles, brisk business was reported done in US ready and afloat cottons and prices had gone up by Rs 15 to Rs 20 per candy. Sudan and Egyptian cotton prices remained very firm; and a moderate business took place in Sudans, both new crop for March/April delivery and 1956 crop for prompt shipment.

Following rates were quoted:—Bengal Rs 670 to Rs 740; Oomra Rs 740 to Rs 765; Jharilla Rs 740 to Rs 770; Dhollera Rs 700 to Rs 710 and Vijay Rs 890 to Rs 900.

KARACHI COTTON MARKET:

The Karachi cotton market depicted a bearish trend. Speculative selling and slack overseas demand resulted in a sharp dip in prices. The spot section also was depressed. Following rates were quoted:—Sind Deshi Rs 91-0; Punjab Deshi Rs 82-0; 4F Roller Rs 89-9; 289F NT Sind Saw Gin Rs 94-15 and 289F Punjab Rollar Rs 92-13.

×

LIVERPOOL COTTON MARKET:

Prices on the Liverpool cotton market eased further on renewed local realising on a 25 points reduction in official spot values. The decline was however, checked by an Anglo-American house buying at limits and some recovery influenced by trade buying in later dealings. The Egyptian and Sudan contracts continued idle.

×

CLOTH AND PIECEGOODS:

Conditions in the piecegoods market remained steady. There was a satisfactory demand for super-fine dhoties, while enquiries were moderate in respect of medium sarees and bulls. Medium shirtings and mercerised shirtings were, however, neglected and prices for these receded to some extent.

On the export front, conditions may be said to be satisfactory. Fair business was reported done with Indonesia, while moderate business was concluded with Australia. There was no significant business with Burma. It is reported that the Government of Burma has established four Corporations in association with the trade and that each of these corporations has been issued import licences to the value of 70 kyats for the imports of textiles from the sterling area. It is generally believed that the Corporations will shortly invite tenders for the supply of cloth.

*

WORLD OF INSURANCE

(Continued from page 218)

of the terms of the Act. The Executive Committee will be discharging its obligations well if it sets upon the task of ensuring compliance with the terms of the Act by the insurers. Any incursion beyond the terms of reference has to be rigidly questioned.

There is nothing on record to show that insurers have failed to render "efficient service to holders of polycies of general insurance". So long as general insurance remains in the private sector, competitive service is inevitable if companies have to exist. Competition breeds service, not monopoly, neither regimentation. The Executive Committee will enable the companies to render service better by leaving them alone, not by incursions in their methods of trade and organisation.

WORLD OF TEA

(Continued from page 217)

ported at As 2 to As 3 over brokers' valuation.

About 1,150 packages of Green teas were also offered and all these were sold. The polished lots found buyers at one to As 1½ below last rates, with the unpolished grades steady to a shade dearer. Following rates were quoted:—OP Rs 2-6-6; Pekoe Rs 2-3-0; BOP Rs 2-8-0; BPS Rs 2-10-0 and PF Rs 2-8-0.

There was a good demand for Dusts and most sorts were sold at dearer rates. The market was particularly strong for Common and Leafier types which were frequently several annas dearer. The remainder was generally sold at one to two annas above valuation. Plain Sylhet Dust was quoted at Rs 2-3-0 per pound.

In the Colombo market, offerings were 6,757,423 pounds. There was a strong demand for Low and Medium-grown teas at rather dearer rates. High-grown teas came to a considerably easier market and prices fell by 20 to 30 cents a per pound where quality was indifferent.

In the auction held at London this week, offerings were 20,151 packages which included 19,733 packages of Northern India teas. The market continued fully firm for good liquoring teas, but for all other sorts there was less demand and prices ruled easier. Low Medium and Common kinds were very slow of sale.

Tea stocks in London, as on the 25th January 1957, were 64.65 million pounds as compared to 68.43 million pounds in the previous week and 91.20 million pounds a year ago. Landed between the 19th and 25th January 1957 were 7.64 million pound, while deliveries during the same period were 11.48 million pounds.

*

GATEWAY MARKETS

(Continued from previous page)

curtailed during the current half-year. February delivery opened at Rs 660 and, after touching a high of Rs 665, finished at Rs 658.

Conditions in the rayon market remained quiet on account of the limited demand from the main up-country buyers.

The Government's decision to continue to allow exports of limited quantities of Cotton Yarn during January/June 1957 has been received with subdued optimism. It is felt that keen competition prevailing in the world markets will affect the prospects of exports of Indian yarn. The price factor appears to be the main stumbling block. Pakistan is a potential competitor. Also, the trend of exports, during the past year, has not been what it should be. Apart from Pakistan, China and Japan are also competing in South-East Asian markets.

Olympus

The Rubber Industry

THE Plantation Inquiry Commission's third and last report was released to the public here last week. As will be recalled, the Commission which was appointed to make detailed inquiries and report on the various plantation industries in the country has been submitting its reports in instalments. The first two reports on Tea and Coffee plantation industries have already been published last year and were commented upon in these columns. The last report now published deals with the remaining important plantation industry, namely, Rubber.

The report makes constant references to its earlier reports and for many of its suggestions like cost structure and labour relations, it refers us back to its recommendations in the earlier reports. This was perhaps inevitable since besides the special problems each of them have and pose there are problems that are common to all of them. For instance, preponderance of non-Indian capital in organised plantation industry is a feature which is best understood in the overall context of the entire plantation industry. Similarly, the labour aspect of the various plantation industries has regional rather than industrywise orientations. For these reasons, the three reports of the Commission will have to be read together for certain purposes.

On the Rubber plantation industry itself, the Commission has very many specific recommendations to make. The most important consideration was, of course, to see that the recommendations that they make accord with the purposes of the second plan and to see that the targets fixed by the plan are made possible of realisation. Unlike tea and to a lesser extent coffee, rubber poses no export problems. All our production of rubber is consumed by the Indian rubber manufacturing industries. In fact substantial imports are being made at the moment. The production of raw rubber in India should, therefore, be increased to meet the manufacturing needs of the present and immediate future of the country. As is notorious, the average yield per acre of Rubber in India is about the lowest among the rubber growing countries of the world. This will have to be increased substantially if we are not to be perpetually content with a high and inefficient production cost. The Commission's estimate of the consumption of rubber in the near future is not very extravagant. It estimates that by 1960, we shall be needing for our manufacturing purposes a total of 40,000 tons per year. This is expected to rise to 65,000 tons by 1970. Assuming that the synthetic rubber plant to be set up by the Government (about which I shall have something to say in a little while), will produce about 20,000 tons by 1960, natural rubber that we shall be needing will be of the order of 20,000 tons. On the basis of a yield of 800 lbs per acre, this would necessitate the fixing of the acreage of high yielding rubber at 120,000 acres. This is the minimum rather than the ceiling. This naturally will mean replanting on a substantial scale and also some new planting. There has been some lack of unanimity among the members of the commission on the subject of new planting: one of the members, the indefatigable Mr K. G. Sivaswami, who died some time ago, has objected to any new planting pending comprehensive inquiry into unregulated expansion. That there has been lack of a comprehensive plan in the matter of expansion is admitted, but the majority of the Commission feel that there is a case for both replanting and some new planting. Substitution of new acreage for patently unsuitable areas formerly planted in, has been conceded as a necessity even by Mr Sivaswami. For the rest, the new acreage will, in the view of the Commission, be for small estates.

As regards replanting, the commission has suggested that the acreage of 75,000 acres sanctioned for this purpose by the government should be increased by another 50,000 acres. Both the replanting sanctioned already by the government and the additional replanting now recommended by the Commission should, in the Commission's view, be allotted equally between big estate and estates with a total acreage of less than 50. This is one instance of the Commission's concern shown for the small producer of which there are further pieces of evidence in the report. As a matter of fact, the Commission has discussed exhaustively the problems of the small growers. The crux of the matter is, as perhaps not very originally pointed out by the Commission, the uneconomic size of the holdings. As elsewhere in the Indian economy, it is not possible to let the inexorable laws of economics operate to eliminate the uneconomic holdings both because of the time and human factors. The Commission therefore, suggests, almost inevitably, the application of the cooperative principle in order to give the small grower the advantages of the economies of large scale production. The size of the minimum holding suggested by the Commission is four acres, which is perhaps too small. But these small growers will have the advantages of a 'chain of primary cooperative societies' for smoke-house facilities for processing their latex. Another suggestion for the benefit of the small man is the creation of a fund to be called 'Small Holders Assistance Fund.' This is to be created from a surcharge of 2% ad valorem on the excise duties on manufacturers of rubber products. This further levy is certain to be unwelcome to manufacturers, but they will perhaps be willing to bear it if it means an assured supply of raw materials from these sources.

The replantation of 120,000 acres recommended is, in the view of the Commission, to be financed by a fund called the 'Rubber Replantation Fund.' Readers will recall that similar funds were suggested for the Coffee and Tea Industries. The Commission recommends that, as in the case of the Tea and Coffee Industries, dividends, managing agency commission and other rewards for capital and management will have to be curtailed substantially for the purpose of increasing the sources of internal finance for replanting and increasing labour welfare schemes. Inevitably, such a blanket recommendation will have to be worked out in detail and even when that is done, it is quite likely that since conditions will vary from company to company anomalies and even injustices will result.

Other recommendations of the Commission include the reduction of the replanting cess as and when increased acreage starts yielding results. Here again, the small planter, who owns less than fifteen acres, is to be given some relief by confining his contribution to the fund to his share of the administrative and research charges of the Rubber Board, thus relieving him of the element of replantation subsidy included in the cess. And on the question of subsidy itself, the Commission feels that there is no case for it in respect of big units. Even in the case of smaller units who have no adequate internal resources for replanting, the Commission would prefer long term credit to charity. These arguments proceed on the well known objections to any form of subsidy and are, on general grounds, unexceptionable. But in actual practice, a changeover may lead to certain complications. The bigger units, again, may complain that here as elsewhere, their interests have had less than summary justice done to them.

On the somewhat delicate question of capital gains by sales of estates, the Commission recommends proper valuation of the estates so that over-capitalisation is prevented. Since many estates are owned by non-Indian interests, there is bound to be the usual bitterness over illegitimate capital gains being drained out of the

Influx of Refugees

WELL may Pakistan proclaim from housetops to the world that it is looking after the interests of the minority community living within its territory as carefully as it is concerned with the welfare of the majority community. But anyone who cares to look into the matter a bit closer will not fail to see the utter hollowness of Pakistan's claim in this regard.

The influx of refugees from East Pakistan, if anything, is on the increase during the past three years; and it is now estimated that the total number of displaced persons from East Pakistan who have crossed the border into India upto 31st December adds up to the huge figure of 39.87 lakhs. It will be easy to imagine the manner in which Pakistan is looking after the welfare of the minority community if it is noted that an ever-increasing number of people belonging to that community is only too eager to leave its home and come to India no matter what hardships await it here.

It is gratifying to note at the same time that the Government of India have been tackling the problem of rehabilitation of the displaced persons in an efficient manner. The latest six-monthly review of the Union Ministry of Rehabilitation reveals that the task facing this Ministry has assumed enormous proportions in the past three years. The influx of refugees from East Pakistan touched the record figure of 3.20 lakhs in 1956 showing a fourfold increase from 1953. The total number of displaced persons from East Pakistan is estimated to be 391.87 lakhs, the number of migrants being 76.100 in 1953; 1.13 lakhs in 1954 and 2.39 lakhs in 1955.

According to the review, there has been a fall in the pace of migration during the latter half of 1956, compared to the first half of the year. The average rate during the Second half of the year has been about 18,700 per month against 34,700 per month in the first half of the year. The monthly average for the last four years (1953-1956) sespectively is 6,300; 9,800; 19,900 and 26,600.

That the Government have spared no effort toward the rehabilitation of the displaced persons will be evident from the fact that on an average, they are spending over Rs 1½ crores every month.

Along with eflorts to settle refugee families on suitable lands, steps have also been taken to provide long-term employment. To ensure the economic rehabilitation of displaced persons sanction has been accorded to set up 20 medium-scale industries with an employment potential of about 9,600 with Government investment of about Rs 213 lakhs. The educatinal needs of the refugees have also been given proper consideration.

During the last six months schemes have been sanctioned for the construction of over 150 more primary schools and Rs 2,75,000 have been given to eductional institutions.

The continued heavy influx of refugees has necessitated the opening of new camps in states other than West Bengal. During the last six months eight new camps have been opened and sanction has been given for the opening of three camps in Madhya Pradesh. Proposals are now under consideration for the opening of camps in Uttar Pradesh and Rajasthan.

★

Salt Production

Salt has been one of the few food industries, which have exceeded the expectations of the Planning Commission, in their performance in the course of the First Five Year Plan period. The target of 83.7 million maunds to be reached by 1955-56, was surpassed two years in advance, and production in 1953-54 stood at 86 1 million maunds. The decline that was witnessed in the subsequent two years, has been well off-set by the record production achieved in 1956. The concern and eagerness evinced by Government in recent years to increase salt production are meant mainly to boost up exports; self-sufficiency in salt has been attained as early as 1951, and domestic production since then has exceeded domestic consumption, leaving a surplus for exports. But the position of the industry is by no means enviable. Existence of uneconomic units, inferior quality of the product, especially in the private factories and non-recovery of by-products are some of the adverse developments which the industry must overcome if efficiency is to be added to self-sufficiency.

The Second Five Year Plan, envisages an increase in salt production to the tune of 1,000 lakh maunds per annum, and has made a provision of Rs 187,75,340 for the development of the industry. One of the important schemes is the development of Mandi salt mine, which will increase the production of rock salt in India. The other schemes include establishment of laboratories, model farms, installations of plant and machinery etc. The industry is mainly in the hands of the private sector which accounts for ¾ of the fixed capital investment.

NORTH INDIAN MARKETS

Export Business in Sugar

DESPITE increased production prospects, Sugar prices have been ruling very steady, thanks to export possibilities. Offtake has been better. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Jaswant Rs 28-15; Simbhauli Rs 28-12; Mowana Rs 29; Daurala Rs 30; Amroha Rs 28-4; Bijnore Rs 28-4; Mansoorpur Rs 29-0 and Rampur Rs 31-8.

Meanwhile, reports suggest that sizeable export business has been done against the export target of about 50,000 tons earmarked. The export division of the Indian Sugar Mills Association is reported to have effected sales at £62 f.o.b. Bombay. Nearly a dozen countries, besides four belonging to the Persian Gulf Ports, have approached India for the purchase of sugar. More than 20,000 tons have already been sold, mostly for Middle East countries.

At the meeting held on February 1, the International Sugar Council announced the lifting of all restrictions on exports by member countries as, during 17 working days since January 1st, the market price had been higher than 4.00 cents per pound. The Council had, in addition, called upon all participating countries to release immediately to the free market the minimum stocks held by them under the agreement and decided that, should the market price fell below 3.90 cents, the exports made by any country, up to the next meeting of the Council, should not be charged against its quota when quotas become operative.

The Khandsari market, at Hapur, ruled steady; the Uttar Pradesh Government's decision to reduce the Sales Tax on the commodity from six to three pies has been welcomed by the producers. Rates moved Rs 23 and Rs 27 per maund, according to quality.

★

Gur

At Hapur, the Gur market continued to rule quiet due to slack outside demand. Stocks were estimated at 10,000 maunds as against 50,000 maunds in the corresponding week of last year. Offtake aggregated 6 wagons daily. Daily arrivals averaged 4,000 maunds. Total arrivals from the beginning of the season are estimated at 3.25 lakh maunds. The rate hovered idly around Rs 11-4 per maund.

★

Shellac

Prices in the Calcutta Shellac market have been developing a downward trend during the past few weeks following the gradual easing of world tension over Suez. Pure TN shellac is hovering around Rs 95 per maund.

Prices in the London market have, however, shown small improvement although they are in selling favour. February delivery is quoted around 276 shillings.

Thailand has now emerged as an important supplier of lac in the world market, attracting a good deal of business away from India. The Thai crop was both large and of high quality and attracted American and Continental buyers.

Although India is not left with any unwieldly surplus of shellac, partly because domestic consumption is increasing, there is enough material left over from the Bysakhi and Katki crops to satisfy world demand until the next Bysakhi crop comes forward in April. Most traders, therefore, expect prices to move, if at all, within fairly narrow margins.

★

Foodgrains

Steady conditions prevailed in the Foodgrains market. Supply of Wheat through fair-price shops improved considerably following large-scale arrivals of imported wheat. Average quality was quoted at Rs 16-4 and farm quality at Rs 17-8 per maund. Stockists seemed to reserve their stocks on expectation of an improvement in prices in the coming weeks. The standing crop of wheat is reported to have slightly suffered due to untimely heavy rains in the middle of January.

Rice prices ruled quiet following the Government decision not to make any internal purchases of rice and paddy for the purposes of building stocks. Rates for Basmati moved between Rs 23 and Rs 26-4 per maund, according to quality.

The Delhi grains market displayed a firm tone. Dara Wheat remained steady, while farm quality showed a loss of about Re 1 at Rs 21 per maund on account of unauthorised arrivals from the Punjab. Offtake of Bajra was small and the rates eased slightly. Gram was slightly steadier due to better enquiry from Uttar Pradesh and other centres. Maize improved on increased demand. Urad and Masoor steadied up modestly in sympathy with the general trend of the market.

Madras Review

The Peninsula

Nehru Answers Critics

THIS time, when Pandit Nehru visited Madras for a day's crowded functions, a few highly important themes were awaiting elucidation at his hands. Though the University Centenary Celebrations provided the immediate occasion for the visit, there was the dominant domestic political purpose concerned with the elections. Still more urgent was the call for an answer to the charge of "double standards" and of repudiation of commitments to the United Nations, which were either implied in the UN Resolution or provokingly levelled by Sir Feroz Khan Noon and his associates.

If on the international front, the Prime Minister was seeking to reply to a highly influential group of nations ranged in sympathy with Pakistan, on the national front, he had to answer the slings and arrows of a diverse group of leaders, representing almost every shade of organised and unorganised opposition. Mr C. Rajagopalachari had raised the plausible slogan of "vote for character", which too demanded a reply. Even in respect of the policy in Kashmir, he had to answer some severe criticism coming from Opposition parties to the right and left alike. Added to all these is the frivolous obligation thrown on him to create a healthy Opposition in the country.

The last of course he could shake off with ease. He said he could not create a bogus opposition, though he frankly believed in the need for a strong Opposition party, as indispensable for the proper functioning of parliamentary democracy.

Nor did the charge of double standard give him, any shiver. Modestly indicating that he might not be able to understand all his failings, Pandit Nehru said he did not feel being guilty of this particular charge; on the contrary, if moral issues did come in, India stood rather well on the Kashmir question. For him and the Government of India the major consideration has always been the good of the people of Kashmir. Almost the entire speech at the Island Ground was devoted to an explanation of how the good of the people of Kashmir and eventually, of the people of India and Pakistan too, were best served by the policy which was being pursued now. Any attempt to unsettle facts in Kashmir is likely to provoke largescale communal violence and blood-shed in both the countries, leading in its train to refugee movements, with all the other heart-rending features of the post-partition tragedy. On his part, he was not going to be a party to any course of action which carried with it such dark possibilities.

The offer of a plebiscite, he pointed out, was not unconditional, it was subject to certain conditions, and it was not an offer for all time. He wondered why countries which did not have any semblance of free elections and where the popular vote was not known should be so insistent on holding a plebiscite in Kashmir, a State which was going to have a general election in a few weeks.

Pandit Nehru argued in a very convincing manner that it was Pakistan and its friends, that had actually come in the way of a plebiscite, Pakistan agreed to withdraw its troops as a prior condition. This condition was not fulfilled. For three years Kashmir and the Indian Union waited, at the end of which the people of Kashmir decided to have the elections and Constitution, unlike Pakistan which had neither.

The contrast which the Prime Minister drew between the State administered by the Jammu and Kashmir Government and the area occupied by Pakistan is striking. Not only is there a constitutional and freely elected Government in Kashmir, but tourists from all countries in thousands are coming to the State and seeing conditions without any hindrance or restraint. The area occupied by Pakistan has been quietly incorporated with Pakistan, an event against which no body raised his voice, while the integration of Jammu and Kashmir with India through well-accepted constitutional methods embodying the free will of the people concerned evoked boisterous protests.

The military aid given to Pakistan by the US, perfectly legitimate in itself, had also altered the military situation in relation to Kashmir. The Gilgit area has been converted into a powerful base for aerial operations, another development with a similar effect but against which again, India did not raise its voice. India's silence was only an expression of its accommodating attitude. The legal position behind the integration of Kashmir was also mentioned by the Prime Minister not because he placed undue value on it, but because every aspect of the Kashmir situation was important, when it came to a question of dealing with unfair charges levelled against himself and his Government.

Apparently for the benefit of those nations whose spokesmen either did not possess a correct understanding of the social background in Kashmir or pretended not to know it, Pandit Nehru explained how there was very little of communal tension in the State, how even at the height of frenzy in August '47, Kashmir remained calm. He recalled how irrespective of the religion of the rulers, Budhists, Hindus and Muslims had all along lived in amity in Kashmir, as far as Kashmir was concerned, the two nation theory had no validity at all.

Turning to the domestic scene, Pandit Nehru found little difficulty in exposing the ridiculousness of Jai Prakash Narain's thesis that the Congress should help Opposition candidates to win in the general elections. The example of Turkey under Mustafa Kemal Pasha who created an artificial opposition was shown to be misleading and mischievous. Moreover, he said, it was for neither of them to decide who should win in the elections, it was for the people. Left to himself, Pandit Nehru had no doubt that a Congress defeat, which incidentally he considered most unlikely, would be disastrous for India, as it would unsettle constructive work in very many lines and put the clock of progress back.

The answer to CR's slogan was equally impressive. While Pandit Nehru conceded the possibility of some of the best available persons having been kept out of the field of contest, he pointed out how difficult it was to fix the criteria for judging the proper type of people who ought to be returned to the legislatures. That was where the indefinable attribute of character, might prove inadequate as a practical test of suitability. Rather sarcastically, he spoke of the prospect of philosophers sitting in the Assembly, people who would not do anything but philosophise amidst grave crises, what the nation demanded was disciplined action, both in normal times and in emergencies. The message of national unity was again put across to the people with a fervour characteristic of the great leader.

On the occasion of laying the foundation stone of the University Centenary Building, Justice P. V. Rajamannar, President of the Centenary Celebrations Committee, said that they could think of no better person for laying the foundation-stone than one who had laid the firm foundation for new India, an India free, prosperous and progressive. Some of the observations made by Pandit Nehru at this function carried implications which would perhaps have failed to catch the minds of those who were listening to him at the moment. While admiring the great geniuses who had shone as beacon lights in the path of knowledge, he was impelled to think that there was an element of luck which gave them opportunities and threw them into prominence; he was endeavouring to point out that among the 360 millions of Indians, there were innumerable persons with extraordinary aptitudes and talents, who for the sheer absence of opportunity were forced to languish in obscurity. He stressed the necessity that everyone among the population should therefore be given a chance to live a good life and it rested with the University to give a lead in that direction.

Referring to Dr C. V. Raman's address at the Science Symposium the day before, Pandit Nehru emphasised two points in particular: the nation should imbibe the real scientific temper for the search of truth, regardless of results. Holding out the lives of great men like Einstein as examples, he also pleaded for the qualities of gentleness and modesty. "Never forget some at least of the qualities which you have inherited from the past", exhorted the Prime Minister, even when he was drifting into the subject of crisis and war.

★

GATEWAY GOSSIP

(Continued from page 221)

depreciation reserve, the company will have to borrow an additional Rs 10 crores from the public in India.

And, finally, the worker wants to know what he is to get out of all this expansion programme. The superintendent points out that this means a number of things to the worker: First of all, the admitted surplus of labour in the Works will be absorbed in the new undertakings for which they will be trained. This has been agreed upon in the agreement between the company and the workers. This means greater security. As for the future, the company has promised that the benefits of extra production, which is expected to start flowing from 1958, will be shared with the workers. As a matter of fact, an undertaking has been given to discuss the matter of revision of wages with the Union, the moment the expansion programme is completed and extra steel begins to be made. This is expected to happen by the middle of 1958.

Thus it would appear that the TISCO is rather like the old fashioned Hindu Undivided family. It has embarked on a very important enterprise in which the Karta expects every younger member to do his best: the shareholders, to put in the requisite extra money and workers the extra effort needed. If these are forthcoming, the resultant prosperity will be distributed to all according to their needs.

South Indian Notes

Cultivation of Spices in Kerala

The fact that cashewnut and pepper between them earn about Rs 36 crores foreign exchange annually makes their position in the country's economy particularly important at the present juncture when foreign exchange is in great demand for implementing many of the schemes under the Second Five Year Plan. This key role of spices and cashewnut has long been realised by Government and in recent years the Indian Council of Agricultural Research has devoted considerable attention to the improvement of spices.

Indian cashewnuts have secured a prominent position in world markets; for, nearly 90 per cent of the international trade in cashew kernals and cashew shell oil is in Indian hands, the main buyers of cashew products being the USA and the UK to whom nearly 75 per cent of the Indian produce is exported. With the current annual production of 80,450 tons of raw nuts, India is the largest producer of cashew nuts in the world. In 1955-56, India exported kernals valued at Rs 12.92 crores and cashew shell oil valued at over Rs 60 lakhs.

As regards pepper, next to Indonesia, India is the biggest pepper-growing country in the world. Thanks to the high prices for this commodity in post-war years, pepper is one of the biggest dollar earners for the country, its exports amounting to Rs 23 crores, annually.

The problems that confront these two commodities in coming years are somewhat different. While in the case of pepper, the endeavour is to retain its present position in the world market, in regard to cashewnut the aim is to make the country self-sufficient in raw nuts. Though India leads other countries in cashewnut production, it is importing cashewnuts from East Africa to keep its factories working throughout the year. The indigenous production of nuts is enough only to feed the factories for 8 to 10 months in the year. In order gradually to reduce the country's dependence on outside sources for its requirements of nuts, Governments have formulated a number of measures to increase production of raw cashew nuts to 1,06,000 tons in 1960-61.

Among these are two development schemes sanctioned for cultivation of cashewnut in forest lands—over 40,000 acres in the East Coast districts of Madras State and 20,000 acres in Kerala State.

Goverment's plans for pepper under the Second Plan evisage a production target of 36,000 tons as compared with the production of 26,000 tons in 1955-56 and 18,500 tons before the war. Among the development schemes, the most important is the establishment of a project in 1955 with Cannanore, in Malabar, as its headquarters. The object of this project, financed by Government, is to promote intensive cultivation in existing pepper plantations, replace inferior vines with selected superior varieties in homeshed gardens and other suitable areas, establish a network of nurseries in pepper growing regions for distribution of cuttings of superior vines, and collect and distribute seeds of standard trees and of cover crops to pepper gardens. The Cannanore project will cover the entire re-organised Kerala State, which produces 92 per cent of the total pepper production in India.

Apart from these two pepper and cashewnut, there are other spices such as Cardamom, ginger, turmeric and tree spices which also make sizable contribution to the country's foreign exchange earnings. India enjoys a monopoly in the production and trade of Cardamom.

With a view to focus attention on the national importance of the development schemes for spices drawn up by Government, the Central Spices and Cashewnut Committee is holding a spices and cashewnut show in Cannanore. Kerala is naturally interested in the schemes because nearly 50 per cent of the total world production of pepper is from this state. The Cashewnut industry of Kerala has attained an important place not only in the State but in the whole of the country by virtue of the large foreign exchange earned by it. In other spcies also Kerala occupies a prominent position.

Speaking at the opening ceremony of the show, Mr K. Rammuni Menon, Adviser to the Governor. of Kerala, pointed out that if suitable steps were taken, the production of lemongrass oil in Kerala could be considerably increased. Already the State accounted for most of the 500 tons lemongrass oil annually exported from India.

SOUTH INDIAN MARKETS

Coffee Exports and Stocks

ACCORDING to a Press Note issued this week, the Coffee Board has sold 591 tons for export out of the 1956-1957 crop. This quantity consisted of 480 tons of Plantation A, 66 tons of Plantation B and 45 tons of Plantation Triage. The average prices secured per cwt were Rs 362-14, Rs 352-12 and Rs 312-9 respectively.

The Board has also sold 279 tons of coffee out of the 1955-56 crop for export, the quantity being made up of 120 tons of Arabica Cherry Flats, 135 tons of Arabica Gleanings Flats, 2 tons of Arabica Cherry PB and 22 tons of Arabica Gleanings PB. Prices per cwt averaged Rs 276-1, Rs 279-10, Rs 291-9 and Rs 257-13 respectively. Thus, the total quantity sold for export, up to the 15th January this year, amounts to 7,475 tons.

According to the latest statement of Pool stocks and sales, the Board received, upto the 15th January, 34,019 tons of coffee against the 1955-56 crop and sold up to the same date 21,351 tons in Pool sales, local sales and allotments.

At the recent Pool auction held at Mysore, 829 tons were exposed for sale. This consisted of 254 tons of Plantation, 197 tons of Cherry and 378 tons of Robusts varieties. Following were the range of prices (per cwt):—Plantation A Rs 212-3 to Rs 220-15; Plantation Peaberry Rs 219-8 to Rs 226-9; Cherry Peaberry Rs 195-11; Cherry Flat Rs 180-15 to Rs 192-15; Rabusta Peaberry Rs 155-0 to Rs 164-9 and Robusta Flats Rs 155-9 to Rs 163-15.

★

Pepper

Pepper markets have been ruling quiet, probably due to pressure of sales by a Singapore house. It is reported that Sarawak pepper in Singapore remains quiet in sympathy with rubber and due to liquidation by weak holders in view of the approaching Chinese New Year. With the result, only small business is reported done during the week. In the Kozhikode market, Wynaad quality is quoted at Rs 640 and the Country variety at Rs 630 to Rs 635 per candy.

Nearly 37½ per cent of the crop is reported to have already been marketed. Although sentiment among the growers and exporters is bullish, lack of contructive buying from the USA and want of short sales in the markets are responsible for the present narrow fluctuations in prices.

Sarawak offers being cheaper, Europe is said to be taking little interest in Malabar pepper. Another contributory factor to the slow offtake is the increase in the freight rate by 10 per cent from the 15th February, both for US and European Ports.

In the New York market, black pepper is quiet with prices ruling unchanged although lower Indian advices have a mid unsettling effect. Traders believe that local values are shadable at least half a cent per pound on firm bid. Prices remain unchanged. On the London market, Malabar February delivery is quoted at 197½sh.

★

Groundnuts

Conditions in the Madras Groundnut market remained steadier during last week. Daily arrivals averaged 25 to 40 tons; and these were absorbed by small crushers. The rate for superior oil-quality seeds was quoted at Rs 168 and the bold variety at Rs 158 per candy.

Reports from the producing areas indicate that sowings for the 'summer" crop are in progress in some parts of the South Arcot district.

In the Groundnut Oil section, price movements were rather erratic. The rate for the ready position, after improving at one time to Rs 334 from Rs 332, finished the week at Rs 328 per candy. Calcutta interests took up fair quantities in ready and forward positions.

★

Hides and Skins

Activity in the Madras Tanned Hides market was rather subdued. Arrivals of Cow hides were fair, but prices were weaker by an anna per pound. There was no change in Buff hides. In the Cow Calf and Buff Calf sections, clearances were moderate, while prices were unchanged.

In the export section, trading with the UK continued to be difficut as there was a difference of 1d per pound between buyers and sellers in almost every description of Kips. There was some enquiry in 5-5½ lbs fifths and business was done at 40d to 44d, according to mark and standard. Inferior fifths continued to be difficult to sell to the UK as buyers' ideas were 30½d-31d for 5-5½ lbs and 29d for 10-12 lbs, while Madras rates were at least 1d higher.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were normal, but there was only fair clearance. Prices remained practically unchanged, showing ample evidence of the weakness which, operators stated, would be more clearly seen in the coming weeks.

In the export section, there was little change in view of London auctions. The auction concluded with 70,000 skins, out of four lakhs offered, being unsold. The market for Sheep skins was reported to be 6d to 9d per pound down. On the whole, actual sales reflected a larger decline and that certain marks fetched prices indicating a fall of 12 to 18d over December levels.

★

Tobacco

The fifth and final forecast report on Tobacco, issued officially, reveals an estimated area of 264,200 acres—167,594 acres under Virgina and 96,606 acres under Country— for the period ended 25-12-1956.

THE INDIAN STEEL & WIRE PRODUCTS LTD.

NOTICE

Notice is hereby given that Twenty-first Annual General Meeting of the Shareholders of The Indian Steel & Wire Products Limited will be held at its Registered Office No. 7, Wellesley Place, Calcutta-1, on Wednesday, the 27th February, 1957, at 3-30 P.M. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Manufacturing and Profit & Loss Account of the Company for the year ended 31st March, 1956.
2. To declare dividend on Ordinary Shares.
3. To appoint a director in the place of Sardar Ajaib Singh, who retires by rotation and is eligible for re-appointment. In this connection to consider, and if thought fit, to pass the following resolution in respect of which a Special Notice, as required under section 261 of the Companies Act, 1956, of intention to move it as a special resolution for the reason that the said Sardar Ajaib Singh is a member and director of Indra Singh & Sons Private Limited and therefore "an officer and associate of the managing agents", has been received by the company and is hereby given to the members;

"RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Sardar Ajaib Singh, a member, director, officer and associate of Indra Singh & Sons Private Limited, the Managing Agents of the company, be and is hereby reappointed a director of the company".

4. To approve, pursuant to section 281 of the Companies Act, 1956, the appointment made by Indra Singh & Sons Private Limited, the Managing Agents of the company, of Sri J. C. Mukerjea as an ex-officio director of the company and to consider and if thought fit to pass the following resolution in respect of which a Special Notice, as required by the said section, stating that he has attained the age of 76 years, has been received by the company and is hereby given to the members:

"RESOLVED that pursuant to the provisions of section 281 of the Companies Act, 1956, the appointment made by Indra Siingh & Sons Private Limited the Managing Agents of the Company of Sri J. C. Mukerjea as an ex-officio director of the company who has attained the age 76 years be and is hereby approved and it be and is hereby specifically declared that the age limit for directors prescribed in section 280 of the said Act, shall not apply to him".

5. To appoint a director in place of Sri P. C. Mustafi who vacates under sub-section (2) of section 280 of the Companies Act, 1956, and, being eligible, offers himself for re-appointment. In this connection to consider, and if thought fit, to pass the following resolution of which a special Notice, as required by the said section, stating that he has attained the age of 65 years has been received by the Company and is hereby given to the members:

"RESOLVED that pursuant to section 281 of the Companies Act, 1956, Sri P. C. Mustafi, who has attained the age of 65 years be and is hereby re-appointed a director of the company and it be and is hereby specifically declared that the age limit for directors prescribed in section 280 of the said Act, shall not apply to him".

6. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the company will be closed from 15th February, 1957 to 27th February, 1957, both days inclusive.

By Order of the Board of
Directors,
INDRA SINGH & SONS
AJAIB SINGH,
PRIVATE LIMITED,
Director,
Managing Agents.

7, Wellesley Place,
Calcutta—1.
31st January, 1957.

Note:—

(1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and upon a poll to vote instead of himself, and that a proxy need not be a member.

(2) The relevant Explanatory Statements in respect of item Nos. 3, 4 and 5 of the Notice of the Annual General Meeting to be held on the 27 February, 1957, are annexed hereto as required by section 173 of the Companies Act, 1956.

(3) If dividend on shares, as recommended by the directors, are passed at the meeting, the payments will be made on or after 12th March 1957 to those shareholders, whose names are on the Company's Registers on the 27th February, 1957.

THE INDIAN STEEL & WIRE PRODUCTS LTD.

Annexure to Notice:

Explanatory Statement as required under Section 173 of the Act, 1956.

To:

The Shareholders,

The Indian Steel & Wire Products Limited.

Dear Sir (s)/Madam,

In compliance with Section 173 of the Companies Act, 1956, the following explanatory statement relating to the items Nos. 3, 4 and 5 of the Twenty-first Annual General Meeting of the Company to be held on the 27 day of February, 1957, is annexed to the said Notice.

ITEM NO. 3:—

The company has received a Special Notice, as required by section 261 of the Companies Act, 1956, of the intention to propose the resolution set out under this item as a special resolution for the reason that Sardar Ajaib Singh, a director of the company who retires by rotation of directors at this annual general meeting, is also a director, officer and member of Indra Singh & Sons Private Limited the Managing Agents of the company and as such "an officer and associate of the managing agents" and hence he can only be appointed a director of the company that it should continue by a special resolution of the company under the said section 261 of the said Act and that it is in the interests of the company that it should continue to avail of the benefit of the valuable advice and guidance of the said Sardar Ajaib Singh by appointing him a director of the company.

ITEM NO. 4: —

Sri J. C. Mukerjea has been appointed an ex-officio director of the company by its Managing Agents Indra Singh & Sons Private Limited in exercise of the power vested in them under an agreement and the Articles of Association of the company. Hence he is not liable to retirement by rotation. But as he has attained the age of 76 years, he will have to vacate his office under sub-section (2) of section 280 of the Companies Act, 1956, at the conclusion of the third annual general meeting of the company unless his appointment is approved by a resolution passed by the company in general meeting specifically declaring that the age limit prescribed in section 280 of the said Act, shall not apply to him. As required by the said section 281 Special Notice stating that he has attained the age of 76 years and proposing to move the resolution set out in the notice under this item has been received by the company from some members. In view of his valuable advice and able guidance it is desirable that the company should approve of his appointment and declare that the age limit shall not apply to him.

ITEM NO. 5:—

Sri P. C. Mustafi, who was appointed director by the company in General Meeting held on 22nd May, 1956, has since attained the age of 65 years and therefore vacates his office at this annual general meeting under the provisions of sub-section (2) of section 280 of the Companies Act, 1956, and can only be appointed under the provisions of section 281 of the said Act by a resolution of the company in general meeting specifically declaring that the age limit shall not apply to him. As required by the said section 281 Special Notice stating that Sri P. C. Mustafi has attained the age of 65 years and proposing their intention to move the resolution set out under this item has been received by the Company from some members. In view of his experience as a retired Engineer and advice it is desirable that Sri P. C. Mustafi be re-elected a director of the company specifically declaring that the age limit shall not apply to him.

By Order of the Board of
Directors,
INDRA SINGH & SONS
PRIVATE LIMITED,
AJAIB SINGH,
Director,
Managing Agents.

OLYMPUS

(Continued from page 224)

country. There is also the complication of the distortion of foreign exchange position that such repatriation will lead to. Here again, the actual operation of the recommendation will be a very difficult task as contradictory economic considerations operate at once in the economy and in each case the balance of advantage has to be taken into account. Therefore, while the Commission's recommendation is unexceptionable, I for one, do not envy the government that is obliged to translate the recommendation into action.

One further observation of the Commission is perhaps worth commenting upon. It is its insistence on the need for the enunciation of a clear and comprehensive rubber policy. This is particularly important because of Government's plans for synthetic rubber production in the country. It is true that in the immediate future, there is no question of the modest plans for the production of synthetic rubber turning out to be a menace for the producers of natural rubber. It is also true that our present consumption and present capacity for production being what they are, there are no grounds for any fear that in the forseeable future there will be a clash of interest between producers of natural rubber and synthetic rubber. But a comprehensive policy dovetailing in the same calculation the production and consumption patterns of natural and synthetic rubber will go a long way in dispelling uncertainties and facilitate long term planning by plantation interests. Moreover, the cost factor will give enough cause for worry to the natural rubber producer. It is necessary to indicate in the policy statement how the differential in cost factor that is bound to exist even when cost is reduced to the minimum by planters will be neutralised in a way that is fair to the planter as well as the consumer.

Stock Exchanges

REDUCED TURNOVER: SELECTIVE ENQUIRY

Watch-Dog Writes:

TRADING in stock markets has generally been dull with price movements confined to a narrow range during the week under review. Operators are cautious in their commitments in view of the anxiety over the Kashmir issue. Also, in the midst of the uncertainty heightened by the election fever, they are unable to take a view. Even the credit relaxation, announced by the Reserve Bank against textiles, has failed to enthuse them. No definite lead can be expected until the electorate gives the verdict.

Once again, activity on the Calcutta Stock Exchange was at a low ebb. Except for selected Tea and Jute shares improving on fresh support, prices elsewhere displayed a sagging tendency.

Equities on the Bombay Stock Exchange moved within a restricted range due to lack of fresh impetus to the upward movement.

The Madras Stock Exchange witnessed slow dealings and sellers predominated in a number of scrips.

Conditions on the London Stock Exchange remained unsettled; and small declines predominated among Industrials.

On Wall Street, price movements were irregular with active issues showing well-divided, but mostly fractional changes either way.

★

Calcutta

Calcutta, Thursday Evening.

EXCEPT for a few selected scrips which continued to receive good support at improved levels, conditions on the local Stock Exchange remained dull during the past week. In general, the market opened without any show of promise and prices suffered an all-round decline due to lack of sustained support and small selling. There was a section which was inclined to believe that the Government might provide another damper for the market by way of some anti-inflationary measures. Anxiety was also felt that the growing shortage of foreign exchange would retard development programmes in private as well as public sectors. Political uncertainties arising from the Kashmir issue were another contributory factor to the depressed sentiment in the market. Thus, operators were inclined to book their profits at the recent high levels. The closing tone was quietly steady.

The Giltedged market continued to rule steady, thanks to sustained official support as well as some buying by the Insurance Corporation of India. The increase in interest rate on advances, announced recently by the Reserve Bank, has not perturbed the market so far. 3 per cent 1986 Conversion Loan, after touching at one time a low of Rs 73-6 from Rs 73-11, recovered again at the close to Rs 73-12.

Bank shares were a shade quieter in view of the decision of the authorities to raise the lending rate. United Commercial after touching a low of Rs 56-4 from Rs 57-8 due to profit-taking, improved toward the close to Rs 57. Punjab National were quoted around Rs 56-4.

Jute shares came in for good demand although buying was selective and higher levels could not be retained till the close due to profit-taking on quieter advices from the jute goods market. Apart from a feeling that the present prices were attractive, signs of easiness in the raw jute supply position made operators to feel that the working of the industry should become more economic. The cornering activity in National seemed to have subsided and the scrip, which touched a high of Rs 21-9, receded at one time to Rs 20-6, to finish better at Rs 20-7. Anglo-India were, however, enquired upto Rs 143 from Rs 138-8; Champdany upto Rs 140 from Rs 136; Gourepore upto Rs 224 from Rs 217 and Lansdowne upto Rs 108-8 from Rs 104.

Sentiment in the Coal section remained depressed. Operators were reluctant to enter into commitments following the recent announcement of the award of the Appellate Tribunal. It was felt that the working of the industry would become uneconomic as the increased labour charges following the award had not even been covered by the increase in the price of coal by Rs 3 per ton. Burrakur, after being pushed down to Rs 21-3, improved at the close to Rs 21-7. Western Bengal moved narrowly between Rs 5-15 and Rs 6-1 and South Karanpura between Rs 10-1 and Rs 10-4. Bengal were on offer at Rs 463 to Rs 466.

Textile scrips, after ruling quiet during most part of the week, steadied up slightly towards the close, thanks to relaxation of credit announced by the Reserve Bank. Kesoram were enquired upto Rs 16 from a low of Rs 15-10, while New Victoria remained very steady at Rs 2-3. Cawnpore changed hands at Rs 7-11 to Rs 7-14.

Little or no interest was shown in the Sugar section where operators, having extended their commitments, were anxious to await further developments with regard to the decision of allowing exports of sugar upto 50,000 tons. SKG changed hands at Rs 11-4 to Rs 11-6, while Balrampore were offered at Rs 6-6 following the passing over of the dividend again for last year.

Only redeeming feature of the week's trading was the renewed support lent to selected Tea shares at further improved levels. Although the easier trend of prices prevailing at both the export and internal auctions caused a restricted turnover, operators were encouraged to enter into dealings following the recent announcement of a reduction in export duty by As 2 per pound. Most prominent scrips were Banarhat having changed hands at Rs 330 to Rs 331-8; Bishnauth at Rs 21-12 to Rs 22-2; Grob 'B' at Rs 16 to Rs 16-12; Hantapara at Rs 190 to Rs 193; Methoni at Rs 20-15 to Rs 21-3 and Tezpore at Rs 21-4 to Rs 21-8.

The main factor to cause a sudden change in market sentiment was, no doubt, the recent announcement relating to the book closing of the Indian Iron & Steel Company. It was felt that, in the absence of any renunciation or allotment letter from the company before the settlement date, transactions in the scrip would be disorganised. The Stock Exchange Committee has, therefore, decided that business in Indian Irons should continue on cum-right basis until further notice.

Meanwhile, price movements in Indian Irons, during the week, were mainly influenced by settlement considerations. The scrip, after opening at Rs 29, receded gradually to Rs 28-10 at which level the settlement rate was fixed as against the last settlement of Rs 29-15. The carry-over charge for the next settlement is As 7½. With the result, the closing rate for the week was quoted at Rs 29-6. TEXMACO turned quiet at Rs 20-13 against Rs 20-15 and Jessop at Rs 23-4 against Rs 23-12. G. K. Williams were, however, maintained at Rs 24-3 with Braithwaite receiving sustained support upto Rs 28 from Rs 27-8. Richardson were quoted around Rs 20-8 and Indian Galvanizing at Rs 19-7.

Miscellaneous issues ruled generally quiet. The only two firm features were Martin Burns and Metal Box, which were keenly sought after upto Rs 25 and Rs 29 respectively in view of the proximity of dividends. Orient Paper moved irregularly between Rs 33-5 and Rs 33-15, to finish the week at Rs 33-9, while Titaghur met with good demand upto Rs 39-4 from Rs 39. India Pulp changed hands at Rs 22-14 to Rs 23-1.

Quieter advices from the metal market had an adverse effect on Indian Copper which were on offer at Rs 3-9. India Steamship ruled quiet at Rs 10-4, pending the announcement of an interim dividend. NICCO turned ex-rights and changed hands Rs 21-4 to Rs 21-6. National Carbon, Rohtas and IBP were all unchanged at Rs 26-8; Rs 19-15 and Rs 36 respectively. Indian Aluminium were a narrow market around Rs 14-3. Jardine Henderson were marked back to Rs 80 from Rs 82-8 with Duncan Brothers quoted around Rs 109. Dunlop Rubber were rather cheaper at Rs 25-13 against Rs 26.

★

Bombay

DALAL Street has pursued a zig zag pattern for the week ended 6th February. The market tried to look up in the initial stages, but the raising of interest rate by ½ per cent by the Reserve Bank on advances to scheduled banks under cover of Government and other eligible securities led to some flutter on 31st January, just after the close of the session. Prices were marked down in kerb trading, but on second thoughts, the market once again steadied up on Friday. In kerb dealings on Saturday, the market met some realising at higher levels. Monday saw a lower opening obsessed by the reports of increasing tension on the Kashmir dispute and with bear pressure and tired long liquidation, prices dropped sharply. This trend continued well up to mid-session on Tuesday, but subsequently the market took a turn for the better on directive of relaxation of credit on cloth to the scheduled banks by the Reserve Bank and hopes for some relief in excise duty on cloth in view of the accumulated stocks following slow offtake. The market made some further recovery on Wednesday in anticipation that the outcome of the informal parleys between the Finance Minister and the leading industrialists in New Delhi sceduled on 6th February would turn out to be somewhat favourable from the market angle. Dalal Street attaches great importance to these talks as a clue for things to come.

It is admitted on all hands that the level of equity prices is low judged from the fundamental view point of the performance of the industries. But investors have been scared away in view of the uncertainty of new taxation measures which will be in the offing. There is no denying the fact that Government is keen on raising internal resources to finance the enlarged plan. This will be done further on the lines of Prof. Kaldor's recommendations. The question mark is whether the Budget of 28th February will be a routine one or carry once again the measures for further taxation. As this date approaches, business will dwindle further on account of the minimum commitments which traders in general will prefer ot keep in view of the rude jerk administered last 30th November. There are some who feel that in view of T. T. K's anxiety to raise funds, he may utilise the earliest opportunity to levy fresh taxation while another view is that with imminent elections he might not like to displease any further richer or higher upper middle classes. It is all very difficult to say as to what will come out of T. T. K.'s bag on 28th February.

In the meanwhile, Dalal Street remains worried over the Kashmir situation and further proceedings at the Security Council of the United Nations are awaited. This is one of the hurdles which the market has to meet apart from the monetary and fiscal situation. Hopes are held in certain quarters that more money will be pumped this month in view of the large size of the Treasury Bills having been sold by the Government in favour of the Reserve Bank. In view of the several uncertainties hanging around, investors are not able to look ahead with confidence. This is why some of the blue chips are selling almost at very attractive prices which in the ordinary course may be considered as good for bargain hunting.

Textiles: After keeping steady at the outset, shares of the cotton textile industry were marked down sharply on discouraging advices from cotton piecegoods but subsequently steadied up at close on directive of free advances to scheduled banks by the Reserve Bank and hopes for cut in the excise duty in the near future.

Steels: An irregular tendency was discernible in this section. Lower rates have attracted fair support in both the counters. Tata Steel Ordinary after early rise to Rs 180-12 from Rs 177 dropped down again to Rs 176-4 to rally to Rs 178-2 to finish at Rs 178 on Wednesday. Pig Iron production at TISCO works during January amounted to 97,400 tons, steel ingots 94,300 and saleable steel 70,500 tons.

Indian Iron has been listed ex-right here officially as from 4th February. The process had been smooth though bulls had to pay up to 12 annas as 'sutta'. The shares after being marked up to Rs 22-15 XR dropped to Rs 22-16 to be placed at Rs 22-3-6 XR. The rights were put through at Rs 7-6 to Rs 7-1-6 to quote at Rs 7-2.

Miscellaneous: With expectation of reverse budlee having not materialised, Bombay Burmah met with heavy unloading on the part of a prominent bull operator to recover to some extent. Sugar shares were a shade quiet. Oudh as well as New Swadeshi Sugar Mills have maintained the dividends at Rs 11 and Rs 20 respectively for the year 1955-56. Associated Cements met some disinvestment. Telco dropped further while National Rayon also met with pressure. Shipping shares also eased off in consonance with general market conditions but later on steadied up. Tata Chemicals touched a new low before staging a small recovery. WIMCO were again better off. Premier Automobiles kept quietly steady.

★

Ahmedabad

The Ahmedabad share market moved both ways during the past week. Ambica Mills have attracted support at lower levels on reports that the company's profit in 1956 might amount to about Rs 90 lakhs. The shares after dropping to Rs 591-8 from Rs 604 came up to Rs 605. Calico Mills after being done at Rs 560 at the outset receded to Rs 548 to recover to Rs 555. Arvind Mills were marked down to Rs 1,148 to rally to Rs 1,167. New Shorrock were quiet at Rs 845. Atul Products were done between Rs 182 to Rs 184-8. Arur were reported at Rs 700, Ashoka Rs 990, Jupiter Rs 260, Marsden Rs 225, Monogram Rs 220, Saraspur Rs 540, Shorrock Rs 530 and Maheswari Rs 146-4.

SOUTH EASTERN RLY. TENDERS.

The Controller of Stores, Garden Reach, Calcutta—23, invites tender No. CS4/57/K6/41(56) for handling of materials at Khargpur Scrap Yards during 1-4-1957 to 31-3-1959.

Tender forms are obtainable from his Office (I. B. Section) on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside Firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 25-2-1957 at 12 noon. Firms not on the Railway's list of approved contractors must deposit Rs. 1,000/- in cash with the Chief Cashier Garden Reach as Earnest Money and enclose his receipt together, with a valid Income Tax Clearance Certificate with the tender.

S 14

The Personality of India's Mixed Economy—VIII

(Continued from page 213)

with producer's goods, particularly heavy machinery, which the country is now equipping itself to produce. The present plan is so clearly above the available resources in every respect that all people assume, without question, that, at all stages in the future, the position will be more or less similar; that resources will be short of needs; that the Government will need much more for their plans for the public sector; and that it would be necessary to cold-shoulder the private sector in order that it may not cut into the scarce resources.

But that assumption is clearly wrong. When the present Plan will be over, our potentialities will be increased in various departments of agriculture, in a wide range of cottage and small-scale industries and also in a number of industries which can be organised only on a large-scale basis. There will also be scope for expansion of innumerable services as a result of the progress in the distribution of electric energy. In such conditions, will the public sector be capable of realising all these potentialities through the working of the public sector?

There is a real danger that this question will be viewed on the narrow basis of total resources computed in terms of money savings which the Government can get at through their loan programmes. The increasing vogue of employing statistics will no doubt strengthen that tendency. But the capacity of an economy which is equipped with the means of securing growth should not be gauged by such means. Can the Government in any set of conditions do all that may be necessary to increase the production of foodgrains, vegetables, fruits, eggs and milk products to the fullest limit of capacity? Can the Plan provide full employment to artisans in the villages? Can they establish through the public sector all the large-scale industries which the Second Plan will make possible? And, even if they can, can they resolve the conflict between large-scale industry and small-scale and cottage industries in the same way as now when large-scale industries are owned by private proprietors? Can the distribution of fertilisers, iron and steel and cement and other producer goods be done as satisfactorily in the conditions of five years afterwards as they may, pardonably, be deemed to be done today?

These are questions to which only practical urgency can give any degree of clarity. But the spokesmen of private enterprise can visualise these problems much ahead if they view them from the standpoint of national and not alone their own sectional interest.

Now their ideas do not reach beyond such narrow questions as the future of the managing agencies, the provisions of the Companies Act, the scale of depreciation allowances, the fate of company reserves and prices, tax rates and permissible dividends. All these questions are no doubt important. But they also serve to confirm the public in its idea of private enterprise as an instrument of exploitation of the masses.

The first thing to do for businessmen in India is to show themselves capable of rising above their past limitations and considering the public interest at least as much as their own. When they criticise the Government's policies, they must be concerned to show how the changes they advocate will accelerate the rate of progress. They must be seen by the public as critics, who will give disinterested advice to the Government rather than as people clamouring for redress of the wrongs, imaginary or real, done to them by the Government. They must abandon the notion that a policy which is most in the interest of the common people will necessarily be less in their own. They must cultivate a sympathetic understanding of the special purposes which a democratic government in a poor underdeveloped country must set before themselves, the fears, the prejudices and the aspirations of the common people in such circumstances and the inevitability of imperfect understanding on the part of both alike of their real needs. If the Government often misconceive their duty to the public, the people, too, do not know what to demand of Government's policies. While the Government believe that every act of hostility to private enterprise increases their popularity with the people, the people too believe that the bona fides of the Government be judged by the doles they make to the poorer classes and even more by their readiness to harm the interests of propertied business men.

The role which the spokesmen of private enterprise have to play is to help both the Government and the people to get out of this position which, at the moment, cannot do much harm but, which later, may prove a great obstacle to progress. They must convince the people that the cause they play is not identical with the interests of big business. They must recognise that, in India, economic problems must be considered in terms of three divisions, namely, the public sector, the big business part of the private sector; and the small-scale and cottage industries, which belong to the private sector, but which are treated by the Government as if they are an integral part of the public sector. The problems of all these sections, as they can be appraised at every stage of future development, must be considered and their needs must be expounded to the public. There is need to show the relation at the end of the Second Plan between the industries in the public sector and those in the private sector and between the latter and the small-scale industries and cottage industries. What is being done to the cottage industries today is on an unavowedly tentative basis. Their ultimate future is envisaged differently by different people. Professor Mahalanobis, for instance, thought they would be superseded by large-scale centralised industries in the public sector. There are others who think of them as the basis of a return to Arcadian simplicity on a national scale. But the retention of the mixed economy will open other means of fruitful reconciliation, which must be made clear to the public. And there is no time to lose either.

LABOUR TROUBLES IN BRITA

(Continued from page 215)

ed, however, they reverted to their previous attitude by insisting on wages increases quite out of proportion to increases in productivity and unjustified by any previous increases in prices. Indeed, during 1956 British industrial production remained stationary. The increase in wage rates by 7½ per cent created additional purchasing power unaccompanied by a corresponding expansion in the volume of goods. It is true, the increase in wage rates by 7½ per cent did not mean corresponding increase in the actual amount of the total wages paid by industry. Owing to the credit squeeze and other disinflationary measures there was less overtime in 1956 and in some industries short working weeks were introduced. Even so, the grand total of wages in 1956 was appreciably above the corresponding figure for 1955. In such circumstances wages increases are bound to be potentially more inflationary than those conceded during the period of expanding output.

That in spite of this the increase of prices was comparatively moderate it is due to the self-denial exercised by employers. A very large number of firms paid the additional wages out of profits instead of adding them to the prices of their goods. Although the immediate effect of this attitude was to moderate the inflationary trend this effect is liable to become reversed as a result of the more equalitarian distribution of the national income brought about by smaller profits. Dividends remained high in 1956, but in many instances they will have to be reduced in 1957, owing to the self-imposed reduction of profits in 1956. This means that less will be available to classes who are in the habit of saving, while more is available to classes who are in the habit of living right to the limit of their incomes.

Once the immediate threat to sterling has ceased the unions no longer feel the need for self-restraint. There is also more likelihood of unofficial strikes for trifling reasons. In this respect the strikes at the Ford Motor Works may well prove to be a foretaste of things to come. The immediate cause was the discontent caused by the laying off of a number of workers resulting from the fall in demand for cars. It may appear absurd that in such circumstances workers should be in a mood for striking but they are so used to having the upper hand that refuse to realise that in face of fall in demand they are now not in a very strong position. They may hope that the relaxation of disinflationary measures, at any rate as far as the motor industry is concerned may reverse the trend in their favour. Demand has in fact revived since the New Year in many spheres. And this encourages workers to try once more to dictate their terms.

The possibility of an oil shortage remains a grave menace. Although the Government reassured the industries that there would be no further cuts in oil supplies during February and March the inadequacy of oil shipments from the United States and the slow pace of the clearance of the Suez Canal is giving rise to concern.

Following on its promising start to the New Year sterling weakened slightly towards the end of January. Most of those who are short in sterling are still reluctant to cover even though it should be obvious to them that whatever the prospects may be in the long run the dollar facilities arranged in December are more than adequate to safeguard sterling in the short run. Possibly the weaker tone may be due to the unfavourable change in the attitude of labour. Even allowing for that factor sterling is bound to be firm during the greater part of the first half of the year. For one thing owing to the incidence of tax payments, the early months of the year usually witness disinflationary trend which is largely responsible for the seasonal firmness of sterling and the increase in the gold reserve during the first half of the year.

Optimism concerning the prospects of a lower bank rate has weakened somewhat. In the absence of bank rate cuts anticipated week after week, the rising trend on the Stock Exchange has become more restrained. Nevertheless, it is reasonably safe to expect a bank rate reduction in the not too distant future. There is a growing volume of criticism of the reluctance of bankers to restrict credit of their own free will without being compelled to do so by high bank rate and official credit squeeze. It is this attitude which compelled the Government to raise the bank rate to 5½ per cent a year ago and to maintain it at such a high figure for such a long period. Possibly the bankers may under pressure of public opinion accept the point of view that voluntary credit restraint is after all the smaller of two evils.

Price Trends during January, 1957	276

Equities Steadier in January

NARROW price movements characterised trading in the Stock Exchanges in the absence of buying support. While turnover in Calcutta was restricted as the market closed early as a mark of respect to the death of a member, in Dalal Street transactions were mostly of a squaring up nature due to proximity of end of account.

In later dealings sentiment seemed to have slightly improved presumably on the news that production of Indian Iron and Steel Company Limited for the quarter ended December had increased over the previous quarter. During October/December 1956, production of pig iron totalled 188,546 tons, an increase of 14,099 tons over the previous quarter. Steel ingots at 141,450 tons were 8,125 tons higher Finished steel, however, were lower at 84,467 as against 85,206 tons.

In Calcutta Indian Irons opened at Rs 28-5 and after moving within narrow limits closed at Rs 28-3. After hours, however, the scrip met with some buying and was done upto Rs 28-8. Tata Iron in Dalal Street was slightly better by close at Rs 173-8. Textiles were easier with Bombay Dyeing moving down to Rs 564-8 and Century to Rs 508-8.

3

After a fairly steady start the stock market developed a reactionary tendency as vague rumours about settlement difficulties began to circulate in the market place.

Another powerful influence governing market sentiment had been the Congress Session at Lakshmibai Nagar, Indore. Operators were naturally reluctant to extend commitments before knowing the contents of the Congress Election Manifesto.

In Bombay, Tata Iron lost one point to be placed at Rs 171. Textiles were easier with Bombay Dyeing marked down by nearly 10 points to Rs 555-10. In Calcutta listless conditions prevailed in the absence of buying support and Indian Irons after opening at Rs 28-8 closed rather quiet at Rs 28-1.

4

Dull conditions continued to prevail in the stock markets in Calcutta with price movements confined to a narrow range, while in Bombay end of account considerations depressed sentiment. Indian Irons opened steadier at Rs 28-7 and shaded to close at Rs 28-5. Tata Iron lost another ¼ point to be marked at Rs 170-12 with Bombay Dyeing dropping nearly 2 points to quote at Rs 553-2.

5

President Eisenhower asked Congress to authorise the use of military forces to protect the territorial integrity and political independence of any Middle East nation requesting such aid to resist overt armed aggression from any nation controlled by International Communism. He further told the Congress that his Middle East Plan would authorise the USA to co-operate with and assit any nation or group of nations in the general area of the Middle East in the development of their economic strength.

In his Presidential address the Congress President, Mr U. N. Dhebar, categorically declared that the Congress when it talked about socialism did not think in terms of class conflict nor consider a class of the people as social culprits. The Congress was very clear that it should bring about social changes in an atmosphere of co-operation and goodwill.

The Stock Exchanges both in Calcutta and Bombay remained closed.

6

The Government of India announced that the Bombay Metal Exchange Limited had been given recognition for conducting futures trading in copper, lead, zinc and tin throughout India for a period of 3 years, on the conditions that the exchange should previously carry out modifications in its articles of association and by-laws on the lines suggested by the Forward Markets Commission.

At the end of the 62nd Congress Session at Indore, Mr Jawaharlal Nehru disclosed that the Government of India were getting worried about the continued stockpiles of modern and deadly weapons by Pakistan.

Speaking on the Congress Election Manifesto Mr Nehru said "we do not envisage the establishment of a socialism where everyone becomes equal in terms of poverty. We do not believe in pulling down the few who may be better off for the moment. I do not like a big gap between the high and the low but I will not take any step which might result in the pulling down of a few and which would interfere with larger objectives of taking all the people forward."

7

Listless conditions continued to prevail in the stock exchanges in the absence of buying enquiry. It would appear that both operators and Investors were chary of adding to their portfolios.

In Calcutta business passing was at a meagre level with price movements insignificant. Indian Iron opened at Rs 28-7 and after touching a high of Rs 28-9 and a low of Rs 28-4 closed at Rs 28-6. Tata Iron fared better and gained Rs 1-12 to be placed at Rs 172-8 Textiles also were better with Bombay Dyeing improving by 5 points to Rs 558-2.

8

The Stock markets displayed an easier tendency on selling pressure. In Dalal Street Industrials eased on long liquidation. Tata Iron reacted from Rs 172-8 to Rs 168-8. Bombay Dyeing dropped 18 points to come back to Rs 540. In Calcutta on renewed offerings Indian Irons opened easier at Rs 27-15 and steadily lost ground further to be finally placed at Rs 27-11.

In Delhi an official spokesman explaining the provisions of the Capital Gains Tax imposed by the Finance Minister in his midyear budget said that the tax was only on capital gains realised and not on capital gains accrued. He also pointed out that not all capital gains were subject to tax. The exemptions were capital gains arising from sale of agricultural land or sale of personal effects and household goods and those embedded in gifts, bequests or in partitions or in partitions of Hindu undivided families. The capital assets transferred by a parent company to another company which it owned 100 per cent were also exempt from capital gains tax.

9

Following the clarification on the Capital Gains Tax, stock market sentiment tended to be steadier. It would appear that both operators and investors were beginning to realise that the Indore Session of the Congress, contrary to earlier expectations, had instilled confidence in the business community as regards the role of the private sector in the future setup of the country.

In Dalal Street a steady opening was followed by selective buying and short covering. Though, higher levels, especially in textiles, attracted some profit taking, the market closed the day on a fully steady note. Tata Iron made a smart recovery to Rs 170-12 with Bombay Dyeing regaining more than 8 points to quote Rs 548-12. In Calcutta, however, conditions were rather dull presumably due to clearing adjustments. It was however, noted that the lower levels were beginning to attract some attention. After opening quiet at Rs 27-13 Indian Irons closed fractionally better at Rs 27-15.

Sir Anthony Eden resigned as Prime Minister of Britain.

10

Mr Harold Macmillan became Britain's new Prime Minister succeeding Sir Anthony Eden.

Calcutta Stock Exchange witnessed a revival of interest especially around the most speculative counters. Apart from the general tendency to take a more optimistic view of the investment situation, sentiment had been helped by the ad-interim dividend of 6 2/3 per cent for 1956 announced by Indian Copper as well as by the excellent report issued by some of the big banks. In Calcutta, Indian Irons opened better at Rs 28-3 and closed almost unchanged at Rs 28-2. In Dalal Street Tata Iron met with some profit taking and due to absence of fresh support closed at Rs 170. Bombay Dyeings was marked at Rs 543-12.

11

The recovery movement was further extended in Calcutta with the speculative counters in the forefront. It was reported that the Life Insurance Corporation had given support to equities. Indian Irons opened at Rs 28-2 and steadied up further at Rs 28-8. In Bombay on reports that the Investment corporation had bought a sizeable quantity of Tata Iron, prices elsewhere also were marked higher. Tata Irons gained 3 points to Rs 173 Bombay Dyeing made a smart recovery to Rs 555-10 from Rs 543-12.

12

Fresh further enquiries coupled with bear coverings imparted a buoyant note to the Bombay Stock Exchange. As a consequence, prices advanced further with Tata Iron gaining another 2½ points to quote at Rs 175-8. Bombay Dyeings forged ahead to be finally placed at Rs 562-8. A contributory factor for the improvement in sentiment in Bombay had been the satisfactory production figures of TISCO for December 1956. Production of pig iron improved from 94,700 tons in November to 101,500 tons in December 1956. Steel Ingots were higher at 93,200 tons as compared
