Kumardhubi Fireclay & Silica
It would be recalled that, in December 1956, the Kumardhubi Fireclay & Silica Works Limited issued new Ordinary shares of Rs 10 each to the existing shareholders, thereby raising the paid-up ordinary capital from Rs 15 lakhs to Rs 30 lakhs. Moreover, according to the resolution passed on the 8th March 1957, the 2,000-7 per cent Preference shares of Rs 100 each were cancelled and the amounts paid thereon were refunded to the

holders thereof at a premium of Rs 5 per share together with interim dividend for 1956 and for the period ended 8th March, 1957.

Sales for 1956 are higher at Rs 1.09 crores against Rs 97.08 lakhs, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 13,04,099 against only Rs 10,10,617 in the previous year. In respect of allocations to Funds, the directors have raised the Depreciation amount to Rs 1.93 lakhs from Rs 1.43 lakhs; Taxation to Rs 3.71 lakhs from Rs 3.30 lakhs Taxation Contingency Reserve to Rs 55,000 from Rs 41,500; Development Rebate to Rs 1.89 lakhs from Rs 3,500 and Plant Renovation Reserve to Rs 1.75 lakhs from Rs 50,000. The dividend on the Ordinary shares is, however, reduced to Re 1.00 from Rs 1.50 per share.

According to the directors' report, the first stage of expanded Firebrick section was completed during the year and the New Tunnel Kiln was put into operation in December. Work on the second stage is well advanced including the third Tunnel Kiln.

General Investment Trust
This investment company in the Birg group has maintained the dividend at 64 per cent for the year ended 28th February 1957 despite a decline in net profit. The item "By dividends and interest on Investments" is shown at Rs 49,122 against Rs 53,032, while the net profit, before providing for Taxation, amounts to only Rs 57,579 against Rs 72,345 in the previous year. The Taxation provision has been raised to Rs 25,250 from Rs 14,962 while no provision is made either for General Reserve or Investment Reserve against Rs 10,000 and Rs 20,000 respectively in the previous year.

Investment & Finance
In the same managing agency group, Investment & Finance Company Limited has also maintained the dividend at 64 per cent for the year ended 28th February, 1957 despite a decline in net profit from Rs 1,64,710 to Rs 1,17,087. "Income by dividends and interest on Investments" is nearly maintained at Rs 1.19 lakhs. The Taxation provision is raised to Rs 41,609 from Rs 37,815 while the allocation to General Reserve is lowered to Rs (Continued on page 948)

Salvation of the Plan

Iron Ore Exports

HAS New Delhi forgotten what drive, initiative and selfreliance are, in its pre-occupation with the foreign exchange problem and in its anxious assessment of the resources that India will be able to find? Has the gap in foreign exchange resources paralysed the capacity for energetic action, has it benumbed the ability to think and plan constructively? We are now at a stage when so much publicity has been given to the need for external resources, that the contingency—which surely cannot be ruled out—of India not obtaining aid of sufficient dimensions could cause an attitude of mind to the Second Plan that will border on apathy. For all that Mr. Nehru has, as it were, interrupted this tale of woe of foreign exchange difficulties with an assertion that, foreign aid or no foreign aid, India will see the Plan through, the fact remains that, on the important level of popular psychology, the incessant denigration of India's foreign exchange prospects has seriously undermined public support and co-operation for the Plan. The intention of our Government must surely be that Indian democracy, won after so difficult a battle, must be preserved. That democracy can be kept safe and vouchsafed to future generations only if the Second Plan does not become a farce, only if its successful implementation paves the way for further planned developments. We regret to find, as we have remarked, a conspicuous short fall—not in internal resources nor in external resources, not in skilled labour nor in unskilled labour, not in technology nor in know-how—the serious shortfall is in the sphere of the capacity of our planners to show courageous and constructive thinking at a time when the difficulties threaten to engulf us.

The tendency to take the line of least resistance is evidenced in respect of internal resources no less than in regard to external resources. In the case of the former, Government pin their hopes on taxation and on deficit financing—neither of which entails effort, neither of which is an index of constructive planning at the top. We should have thought that logically and correctly a major head of internal resources would be comprised by market borrowings. After all, if Government disbursements in connection with the Plan are on a stupendous scale, and if such disbursements—whether enabled by taxation or representing deficit financing—were expected to aggravate the inflationary pressures, because it will take some years before the investment constituted by these disbursements would begin to yield new production, it should have occurred to Government that market borrowings would help to siphon the excessive purchasing power released by Government outlays. But the burden of this article is not Government policy as relating to internal resources, it is the official attitude in respect of external resources.

Then, as in the case of internal resources, we look importantly only to the sterling balances and to foreign assistance to meet the foreign exchange gap. A conspicuous omission of avenues in this regard is the foreign exchange that we may earn by increasing our exports. As we remarked last week, the Planning Commission have been timorous, if not neglectful, of planning for increased

foreign exchange earnings. The role of exports in the securing of external resources is given a sparse three pages in the Second Plan—a publication that runs 641 pages. Even deficit financing is accorded more importance, the discussion on created money running to 34 pages. This, if we may remark, signifies that the charge to be laid against the Planning Commission is not one of over-ambition in their targets, but one of a lack of confidence in respect of the planning of exports. It is true that the Planning Commission seek to explain the limited emphasis on exports by asserting that, on the one hand, it is beyond India's capacity to increase its earnings from traditional exports, and, on the other, it will take some years before India can diversify its exports or produce the new commodities which we can export. We are afraid that neither explanation satisfies, for, we believe that we can not only increase earnings from commodities which we presently sell on the world's markets, but we are confident that, within the period of the Plan, we should be able to build up a sufficiently large market for new items of exports.

At this stage, let us pause to take account of a question that may be hurled at us: If the Planning Commission's Export Plan is under-ambitious, in which ways can the targets be raised? It is indeed this question that we seek to answer, and we shall here set out how, in an important measure, India can free itself of the foreign aid complex that presently confounds us, and how we can show to the world that what we want is not an unceasing flow of foreign assistance, but merely limited aid by which the world itself will benefit, materially and immediately.

A prophet is without honour in his own country; this is an adage that has been proved at least in respect of the reiterated and emphatic suggestions of Indian Finance that India's salvation, in respect of the Second Plan, lies in an intensification of iron ore exports. In our discussions with authority, we have, of course, found a reception for our views in this regard in New Delhi; but our complaint is that, in the matter of this particular scheme, Government appear strangely to shy away from it, to listen to us with one ear, but allowing the words to pass through the other. On the contrary, when we have broached this topic with spokesmen of the World Bank and other international entities, we are gently reminded that our efforts are in the nature of a preacher trying to convert the converted. These international agencies are keenly and fully alive to the centrality of iron ore exports in an Export Plan for India. They realise that India ranks at the very top of the list of countries with iron ore resources. They know that the Indian iron ore is of high grade, and among the best in the world. They are aware that the distance from minehead to port of shipment is a short one. It is clear to them that the investment required to exploit Indian iron ore is relatively small. There is no doubt in their mind that there are ready-made, eager markets abroad which would absorb any quantities of iron ore that we may make available to them. In short, in Indian iron ore, they see a bonanza which would be of profit to India no less than to the countries in need of iron ore.

Indian Finance

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

On a rough basis, if India were to export, or arrange to export, 10 million tons a year, it would still work out to less than 0.5 per cent. of our known resources as at present. The foreign exchange earnings from an export of 10 million tons would amount to, roughly, Rs. 50 crores. It is strange that, when the potential earning capacity of iron ore is so vast, the Indian Government should so far have shown themselves to be relatively uninterested.

We admit that, since the publication of the Second Plan, negotiations have been carried on, off and on, with Japan for a regular supply of iron ore from this country. But, even here, it is incredible that the overtures should have emanated from Japan. Secondly, some of the East European countries are also known to be actively interested in this raw material for steel, but has India done anything on its own initiative to institute negotiations and conclude agreements? The answer, we regret to say, is "No".

We know it for a fact that, when Mr. Nehru was in Japan, a document was handed over to him in which Japanese interests conveyed their desire to negotiate for a substantial quantity of iron ore from India on a long term basis. The document also made it clear that the Japanese interests were ready and willing to advance the finance and the capital goods for the transport and port facilities which would need to be created, if iron ore shipments were, in this wise, to be considerably increased. In this matter, too, the Indian authorities are showing less energy than they should.

Again, it is recognised by the international organisations that the development of Geonkhali as a satellite port to Calcutta is linked with any scheme for iron ore exports. This suggestion, we may recall, originated in Indian Finance more than four years ago. Every study group, whether under British or American or World Bank auspices, has stressed the desirability of creating the new port at Geonkhali. In the just published Report of the Export Promotion Committee, cognisance is taken of this matter, and the Report states that the Committee was "informed that the West Bengal Government have submitted a scheme to Government for building a subsidiary port at Geonkhali". The Committee has recommended that "the Geonkhali proposal be actively pursued". One would think that matters were progressing well. It was, therefore, a shock to learn from Mr. K. B. Lal, in the Ministry of Commerce, that Geonkhali must still be reckoned as a distant prospect since the scheme has yet to be submitted to the Planning Commission. We are, to say the least, puzzled by Government action—or is the operative word inaction?

Japanese interests would be prepared to finance Geonkhali. Yugoslav, Polish and Czech interests might be willing to finance expenditure at the mineheads. It should be possible to secure, besides, an appropriation from the American President's Special Fund for developing Geonkhali. In other words, Geonkhali does not offer any problem of financial resources or of technical equipment. Yet, Geonkhali hangs fire.

We put it to the authorities that Government are displaying a strange and inexplicable lack of enterprise, of constructive thinking, of self-reliant endeavour. Perhaps, Mr. Nehru has not followed closely the potential role of iron ore exports in the implementation of the Second Plan. If so, this is a grievous omission. We cannot afford, now already nearing the end

ECAFE on Mineral Resources

THE Third Session of the Mineral Resources Development Sub-Committee of the ECAFE Committee on Industry and Mineral Resources Development, which commenced on November 11 in Calcutta, might turn out to be a landmark in the economic progress of India and of the ECAFE region as a whole. The full results of this Session will be known only after this Issue is out. But enough has been known already of the excellent work being done.

The US, the Soviet Union, the United Kingdom, Australia and France have offered technical assistance, data and training facilities in the prospecting and utilisation of radio-active minerals in Asian countries. The US and Soviet Union have made a special offer of the particulars of the knowledge useful to efforts in this region for the utilisation of all sources of atomic energy. In India, uranium and chromium are found to exist in Rajasthan, Bihar, West Bengal, Madras and Kerala. In Kerala, according to the Geological Survey of India, every monsoon throws considerable quantities of heavy sand on the beach making mineral sands available for the mere scrap-ping.

We are not particularly fascinated by the atomic resources alone. But there is no gain-saying the fact that in the future, these are likely to become increasingly serviceable and as long as India is interested in making the best use of every material available for raising the standards or human welfare, any form of foreign co-operation and assistance has to be gratefully welcomed.

Perhaps, just now it might be a little too ambitious to hope that the new sources of energy which are being rapidly pressed into service for various purposes in other countries would also provide an answer to the resources problem for the developing economies of Asia. We are now seeing the faint beginnings of the technological revolution, of which the guided missile and the baby moon are spectacular symbols.

Immediately however, attention has necessarily to be concentrated on the traditional minerals, with which India is fairly well endowed. We have here mica, iron ore, aluminium, manganese and several refractory materials. Though other minerals also occur in sizeable quantities, the country has to depend in varying degrees on imports, notably for copper, zinc and lead.

Both on the production and on the export side great strides have been taken since the advent of independence. The total value of mineral production in India stood at about Rs. 70 crores in 1947. The total value of mineral production in 1956 is estimated at Rs. 125 crores. The output of copper, bauxite iron ore and ilmenite has increased substantially during recent years; and has contributed either to larger exports or lesser imports. Iron ore, particularly is now being looked upon as one of the main hopes of the immediate future.

of the second year of the Plan, any more vexatious delay in instituting the Export Plan and in inaugurating the iron ore export plan. Action at the top is necessary. We invite Mr. Nehru's personal and energetic intervention to carry through the iron ore exports scheme, which could very well be the salvation of India's Second Plan—foreign aid or no foreign aid.

In the Second Five Year Plan, the targets of mineral production have been fixed in accordance mainly with the requirements of domestic industry. Subsequently, however, the deterioration of the foreign exchange situation has compelled certain revisions which render the task of mineral development a little more arduous. Even in India, which in respect of geological equipment and organisation is ahead of most of the other countries in the ECAFE region, there is a clear dearth of technically qualified men in the higher ranks. For the ECAFE region, this handicap is more severe.

The exploration of resources on the basis of regional cooperation is obviously more economical and expeditious, especially when there is the friendly assistance of countries in possession of better techniques and information. But this regional cooperation can proceed smoothly only if the proffered foreign assistance is purely non-political in motivation and the countries of the region also lay aside their mutual differences.

It has to be mentioned in this connection that the majority of these countries are being now called upon to seek relief for their foreign exchange problems through stepping up non-agricultural exports, a circumstance relevant not only when international prices for agricultural products are comparatively lower, but when these price levels get into a more advantageous relation with the prices of industrial products. Viewed from any angle, the benefits of a speedy development of the mineral resources of this region should be precious and indispensable.

India is now passing through a stage in which a thorough assessment of coal and other mineral resources, including petroleum and natural gas, has become extremely urgent. No less urgent is a pattern of utilisation which while subserving current needs will at the same time ensure maximum conservation of comparatively scarce minerals for the future. The experts' outcry against the reckless use of coking coal is still near.

Though new coal seams are being discovered here and there, the mining and processing practices leave much to be desired. While mining without sand stowing enables 50 per cent extraction, an additional 20 per cent could be secured with the aid of sand stowing. We gather that the programme for the establishment of coal washeries is being pursued with vigour and that both at Bokharo and Durgapur, there will be facilities for the utilisation of the high ash Middlings which the washeries throw out. The Fuel Research Institute at Dhanbad claims success with a number of experiments calculated to minimise the use of coking coal, of which there is a clear shortage in relation to national needs.

Manganese, which is second only to coal among India's mineral resources, has hitherto occupied the most prominent place in mineral exports. For some reason or other, the export trade in manganese has been recording sharp fluctuations in recent years; in 1953 the exports amounted to Rs. 25.7 crores in value; in 1954

they dropped to Rs. 15.2 crores and in 1955 declined further to Rs. 9.8 crores. There was a slight recovery in 1956 to nearly Rs. 11 crores.

The very fact that in a single year nearly Rs. 26 crores was earned by Indian manganese is indicative of a long-term prospect which has to be exploited to the full. Even from the standpoint of domestic production, the export trade is overwhelmingly important. Domestic consumption is only a fraction of the exports and will remain so even as the steel industry absorbs more. Beneficiation, with the aid of which the low grade ores can also be utilised offers a way out. The Plant recently set up in Madhya Pradesh, we hope, has stimulated plans for many more. With a larger volume of domestic demand from the Indian steel industry in sight and the exports suitably stepped up, the manganese industry will be ensured a sound footing.

Iron ore exports form the subject of another article in this Issue. It is a subject which engages national attention, having acquired a sense of urgency in view of the certain prospect of expansion, particularly to Japan. India, it is worth while to recall, is one of the few countries in the world which has a vast export potential in iron ore. A great deal has to be done in the field of transport which has emerged as the main bottleneck in the way of increased exports at present. At the same time, it is also necessary to keep an eye on production. In recent years iron ore production has ranged roughly from 4 million to 5 million tons, and many new and rich mines have been discovered in the wake of the export prospects.

Lately however, it is understood, a few mines have got nearly or wholly exhausted. According to the estimates in the Second Plan, about 12 million tons of iron ore would be required by the steel plants by 1961 and if we look a little further ahead into the Third Plan, in another five years an extra 15 million tons more may be in demand. Exports of iron ore are intended to be stepped up to 6 million tons a year, the bulk of which likely to go to Japan. Thus the total iron ore requirements may go well beyond 30 million tons, in due course.

We are not sure if the Planning Commission or for that matter any official or non-official body has a clear-cut idea as to the preliminary work which has to proceed before this much of iron ore production on a sustained basis becomes feasible. The problem is not alone one of export and transport. The preparation of mines and possibly the discovery of new ones in place of those getting exhausted may also become equally urgent. All that the layman now knows is that this country has a virtually inexhaustible potential wealth in iron ore. For the rest, the Government have to take suitable steps in time.

Petroleum is another vital material, on which there are hopes of more bountiful domestic supplies. The present measure of dependence on imports, indicated by an annual bill exceeding Rs. 80 crores does not warrant dreams of self-sufficiency. Petrol finds are a matter of labour and luck. As late as 1954, a new field was discovered in Assam and the Government and private agencies are now engaged in extensive prospecting in various parts of India.

While as in the case of post-Suez Europe, a frantic search for alternative fuel is within the hands of any nation, a country of the level of development as India has to pin its faith on the efforts of the geologist and the geophysicist.

Editorial Notes

Food Yields

A Commonwealth Economic Committee report, that crop yields in India have undergone some reduction since the Second World War, in comparison with pre-war years. According to the Report, the yield of wheat has gone down from an average of 5.6 cwt per acre to 5 cwt during 1946-50. Likewise, the yield of rice which stood at 7.2 cwt per acre before the war came down to 6.2 cwt during the first five post war years. During subsequent years both wheat and rice yields have recovered. The average for 1951-56 for wheat stands at 6.1 cwt above the pre-war level. For rice, however, the corresponding figure is only 6.4 cwt.

A few other food crops are also in company with rice, in respect of comparative yields before and after the war. The increase in food production during and since the First Five Year Plan is thus attributable entirely to the extensions in acreage. To some extent the fall in average yields might also be due to less fertile lands coming under cultivation.

At the FAO Conference, the Union Food Minister expressed the hope of raising India's agricultural production by one hundred per cent in another fifteen years' time. This is indeed a worthy ambition. But when the extent of cultivable land is nearing its limits, improvement in trends on the whole have not been heartening, in spite of the achievements of individual land owners, who have secured yields which beat the best averages in foreign countries.

Timber for Housing

The National Building Council, at its recent Bangalore meeting, voted in favour of increasing use of

timber in house construction and decided on the establishment of suitable plants for seasoning and preservation of timber. The problem of timber is not confined to the stage of seasoning or of preservation. Where attention has to be diverted principally is production. As forests are being mercilessly denuded and new plantings are not vigorously and systematically pursued, any programme for house construction dependent on timber will quickly come up against a serious and unmanageable shortage.

No statistics of timber production are available in India; consumption of timber for furniture and fittings has undoubtedly been going up at a very rapid pace, with the increase of industrial housing and in general standards of living. In the demand for timber, furniture takes a competitive place with house building. Steel, the alternative source, is neither always preferred nor is it less costly.

Even timber has, of late, become so dear as to keep it beyond the reach of the comparatively poor house builders. Organised and extensive timber production, which incidentally, is a matter of decades. At a certain stage, the question of priority utilisation and rationing for alternative consumption demand may also become necessary.

An Opposition Agreement

The reorganisation of States effected on October 1, 1957, was presumed to be final in all its major features. As boundary disputes between Bengal and Bihar were settled by a compromise arrangement, and the controversy over the city of Bombay was resolved by putting it within the jurisdiction of a State where the Maharashtrians are a permanent majority, it could be hoped at that time that neither of these issues would be resurrected. In one case, that hope seems to have been fulfilled; in the other, it is not.

Certain significant electoral reverses for the Congress indicated the strength of opinion both in the Maharashtra area and in Gujarat against the newly created bilingual State of Bombay. Leaders of the Samyukta Maharashtra Samiti and of the Maha Gujarat Janata Parishad are now reported to have come to an agreement on how to divide Bombay into two unilingual States. Inevitably, Maha Gujarat leaders have conceded the City of Bombay for the Maharashtra State and both the two groups are planning on a joint effort to build up a movement for the annulment of last year's reorganisation.

To the Congress in Gujarat and Maharashtra this agreement would cause an embarrassing problem. Even at the cost of Bombay, the average Gujarati may prefer a unilingual State of its own; for the average Maharashtrian, the charms

of separation are even more alluring. In the Union Government, particularly for the Prime Minister, the agreement between the two groups causes a new political problem, where considerations of prestige and of public support in the areas concerned might not always coincide. If the undoing of the previous decision is to be resisted once and for all, action must be firm and imaginative from the outset; if not, the alternative of revision should be conceded with as good a face as possible. The country cannot afford to generate or keep alive further spurts of organised provincial ill-feeling.

An Ominous Boycott

The decision of Soviet Russia to dissociate itself with the UN Disarmament Commission is, on the face of it, an ominous development. Announcing the decision, the Soviet delegate condemned the Commission as a futile body which could do nothing beyond giving a platform for powers which were not serious in taking any step toward disarmament. Whatever might be the realities behind the charge, the new attitude taken up by Russia embodies an unexpected form of challenge to the entire UN Organisation.

Almost simultaneously, two incidents took place in India, symptomatic of the same trouble and portent. At the International Red Cross Conference, two delegates from Formosa were smuggled in under the sponsorship of the US delegates, and the entire proceedings of the Conference were disrupted by this unfortunate event and the walk-out which followed. At the ECAFE Geological Conference in Calcutta, a similar situation was averted only by more tactful handling by the host delegates. When the Soviet representative refused to have anything to do with a map of China presented by a Formosan delegate, the Co-ordinator from India made the Conference agree to request the Soviet delegates to provide as much information on the subject as possible.

The majority of Asian countries do not like to continue to keep China out from UN representation. It is a pity that the US takes an utterly unrealistic stand on this subject, often creating extremely awkward situations during the deliberations of the UN bodies. If the Soviet Government were to pursue the tactics adopted against the Disarmament body and gain more and more of international sympathy, the very existence of the UN Organisation may gradually be threatened. Even the worst critics of the Organisation will have to concede that willy nilly it has functioned at least as an invisible, negative force against world chaos. The preservation of the Organisation should be the equal concern of

every leading Power. It is also obvious that as long as the preposterous gaps between form and fact in the Organisation are allowed to persist, those responsible for the development are inviting its collapse.

The Small Newspaper

In his inaugural address at the Annual Session of the All India Newspaper Editors' Conference, Mr Jawaharlal Nehru made a fervent plea on behalf of the small and medium newspapers. Drawing comparisons with other countries, he pointed out how the small, local newspaper had a vital function in social education. In a few States in India, the non-metropolitan paper has begun to assert itself in recent years. But the difficulties are many and real.

A comparatively poor circulation which an overwhelmingly illiterate population implies, scarce advertisers. Technical handicaps enable the big newspapers issued from capital cities to steal a march over these small ones, even in respect of the latest news. As payment to editors and other staff is dependent on income, often the local newspaper fails to attract the best type of talent, which in turn is reflected in poor standards of performance.

The Prime Minister's plea is likely to be answered better after the passage of a few years, when the percentage of literacy and the level of family incomes are expected to go up. Till then, the present state of affairs is bound to persist.

A word of caution is also necessary. Newspapers, which have a national circulation have a social and political value, which does not seem to be fully appreciated. Under any circumstance, journals in a language understood all over India have to be encouraged, whether they be big or small.

World of Finance

Bank Advances and Selective Control

THE Governor of the Reserve Bank, Mr H. V. R. Iengar, has indicated that the attitude and policy of the monetary authorities, during 1957-58 busy season, will be, to a significant extent, in contrast to the steps taken by the Reserve Bank in the 1956-57 busy season. Most importantly, where, last year, the main objective of the Reserve Bank lay in ensuring that the banking system was provided with an amplitude of funds to meet the requirements of the 1956-57 busy season, Mr Iengar now talks of the need to continue the general credit restraint which has, as it were, been enforced

since the 1957 slack season. Indeed, it is possible to suggest that Mr Iengar's hint is in the nature of reiteration of monetary policy to the effect that the scope for banking finance being used for non-essential purposes must be kept at the minimum. This would explain the Reserve Bank Governor's insistence that the policy indicated for the 1957-58 busy season did not seek to impose any restrictions on the availability of funds for what may be called productive purposes. In our view, the logical interpretation of the Governor's speech must be that the authorities, being fully satisfied with the success of selective monetary control, envisage such control as requiring to be wielded throughout the year; there is, for such purposes, no distinction between slack and busy seasons. Perhaps, if anything, selective control needs to be more rigorously applied during the busy season when, owing to the general intensification of demand for funds, there is the possibility of the "leakage" of funds for non-essential purposes. So, it is deemed necessary to advise the banking system that great vigilance must continue to be kept on the trend and direction of advances. In particular, advances against foodgrains have to be circumspect; that is to say, there must not be the least chance of foodgrain prices being enabled to be pushed upward on the strength of banking finance obtained.

While it is by no means our purpose this week to analyse the monetary situation as it obtains on

the threshold of the busy season, a few general remarks will not be out of place. In an important sense, we welcome such indications as have been given that there is no intention, at present, to raise the Indian Bank rate. However, we wish that there could be a more specific statement of policy on Bank rate; and, having regard to the success of selective monetary control, on the one hand, and to the unfavourable repercussion that Bank rate weapon would have on India's monetary policy, on the other hand, we are disposed to the view that little will be lost, and much gained, by Government disavowal of bank rate technique as such. Moreover, the spectacular increase that has occurred in the Deposit resources of the banking system, combined with the general restraint on credit, should largely enable the volume of available funds to exceed the volume of advances to be met. Then, with the Reserve Bank presumably willing to supplement banking resources by permitting advances against usance bills to the extent necessary, there is no case for believing that the 1957-58 busy season should be productive of any undue stringency in the money market. Finally, we are heartened to have Mr Iengar's cordial recognition of the cooperation that has been forthcoming from the Scheduled Banks in the observance of Reserve Bank directives and in the enforcement of monetary policy so devised. For, though the target of Rs 800 crores was not reached, the underlying intention behind the directive has been served. There can be no doubt that a conscious attempt was made to effect slack season contraction in Advances; and it is barely possible that, had there been no complication arising from the Calcutta bank strike, the target might even have been touched. It remains for Mr Iengar, when he next comes to Calcutta, to congratulate the Calcutta banks on having weathered what was quite a storm.

Bank Deposits: Over Rs 1400 crores

Month early disbursements—and, possibly, the first signs of the busy season—have been responsible for the Reserve Bank disclosing a sharp rise of Rs 20.54 crores to Rs 1,490.98 crores in Note circulation at the week ended November 8. Rupee Coin went out into circulation for Rs 1.13 crores, and the expansion in currency was met from the Reserve Bank's till, whose balances showed a drop of Rs 21.67 crores to Rs 22.45 crores. There would appear to be deficit financing for Rs 10 crores, presumably in order that the Central Government's pressure for month early disbursements could be met. Rupee Securities are higher by Rs 9.93 crores at Rs 960.71 crores, and there has been countervailing transfer for a like amount from Foreign

Securities in the Issue Department to Balances Held Abroad in the Banking Department.

In spite of possible deficit financing for Rs 10 crores, the Centre's balances are higher only by Rs 1.05 crores at Rs 54.86 crores. Deposits of State Governments have been marked down by Rs 3.44 crores at Rs 6.16 crores; and, besides, their borrowings from the Reserve Bank have risen by Rs 1.81 crores to 21.02 crores in the Reserve Bank's advances against usance bills.

There has been a sharp decline of just under Rs 14 crores to Rs 94.80 crores in the Reserve Balances of member banks. This is presumably due to the month early demand for funds experienced by Scheduled Banks. We may note that Rs 8

crores of the decline in Reserve Balances is due to the State Bank. It is interesting that there has nevertheless been a decline in borrowings of member banks from the Reserve Bank. While the fall of Rs 1.33 crores to Rs 61.75 crores in the Other Loans and Advances of the Reserve Bank is an indication in this regard, the extent of reduction in borrowings is revealed in a decline of Rs 2.12 crores to Rs 21.02 crores in the Reserve Bank's advances against usance bills.

Lastly, the loss of foreign exchange is again fairly steep, with balances held abroad showing a rise of Rs 3.35 crores after transfer of Rs 9.94 crores from the Issue Department; thus, the drain during the week has amounted to just under Rs 6.60 crores.

According to the return of the State Bank for November 8, month early disbursements have occasioned a drop of Rs 4.38 crores to Rs 365.44 crores in Deposits. Cash Balances have fallen by Rs 8.18 crores to Rs 49.51 crores. There is the indication that part of the reduction in Cash Balances is due to transactions of a temporary nature, since Other Assets have increased from Rs 13.11 crores to Rs 17.28 crores. Advances showed a small rise of Rs 0.31 crores to Rs 161.40 crores.

The return of Scheduled Banks for November 1 is notable for Deposits crossing the Rs 1,400 crore mark, with a rise of Rs 4.30 crores to Rs 1400.24 crores. Also significantly, the total of Advances shows a substantial reduction—for the first week since the week ended September 20, when the Calcutta bank strike started—of Rs 11.16 crores to Rs 856.77 crores. On the face of it, it would appear that the sum of the increase in Deposits and decline in Advances is an index of the corrective to the Calcutta bank impasse consequent on the resumption of clearing. But, since the statement refers to November 1, it is possible that there may have occurred a drawing upon Deposits and an increase in Advances due to month early disbursements. The notional extent of such a twofold impact on the banking figures must, therefore, be added in order to indicate correctly the size of the adjustments that should have taken place at the end of the Calcutta impasse.

Borrowings from the Reserve Bank have been marked down by Rs 5.25 crores at Rs 24.52 crores. Giltedged has been added to by Rs 9.93 crores to Rs 403.88 crores, this being on account of the State Bank which, in the relevant week, had shown a rise of this size. Finally, Cash Balances have improved by Rs 4.68 crores to Rs 209.11 crores. Since the State Bank showed a drop of Rs 6 crores in Cash Balances in that week, it is clear that the other Scheduled Banks improved their balances by more than Rs 10½ crores.

Will the Government Really Resist Inflation?

By PAUL EINZIG

THE chances of effective Government action to check the wage spiral appeared to improve somewhat at the beginning of November, when the Minister of Health flatly rejected the demand of National Health Service employees for a 3 per cent increase of their wages and salaries. This action conveyed the impression that, after all, the Government really means business this time and is not afraid of unpopular steps in the interest of arresting inflation. But the outcry of indignation by trade unions and the Socialist Opposition appears to have made the Government hesitate once more. Ministerial speakers were at pains to emphasise that there was no question of any rigid rule against wage increases, and each issue would be decided upon according to its merit. They also made it plain that the Government did not intend to bring pressure to bear to arbitrate tribunals to induce them to resist inflationary wage demands. So the question whether the Government will really muster enough courage and determination to bring inflation to a halt has remained unanswered.

However, it would be unfair not to recognise the progress made by the Government since last summer towards the adoption of a firm attitude. Nor should the Government's critics ignore the great difficulties which an effective disinflationary policy would have to face in the economic, social and political sphere. Within the Government there is a struggle between the "appeasers" and those in favour of firmness. The former wing is led by the Minister of Labour, Mr Macleod, who is becoming increasingly unpopular among Tory backbenchers. During a recent debate he triumphantly quoted figures to show that the number of hours per worker lost through strikes last year was much smaller in Britain than in any other industrial country. He appeared to be blissful oblivious of the fact that this was because in Britain there was much less resistance to wage demands than in other countries. The other side of the picture was represented by the higher degree to which wages were raised in Britain, in spite of the stagnation of productivity last year.

In 1938, when Chamberlain returned from Munich, he declared that his agreement with Hitler, achieved through conceding him everything, was "peace in our time." Similarly, it was observed in Conservative circles, Mr Macleod should declare that the relative absence of strikes, achieved at the cost of conceding excessive wages claims, was "industrial peace in our time." The latter is not likely to last any more than did the former.

The Opposition seized upon a letter published recently in "The Times" and signed by twelve more or less eminent Oxford and Cambridge economists, demanding the cessation of disinflationary measures,

for fear that they might aggravate the downward trend of world commodity prices. This group of economists (they came to be known as "the twelve apostles of the creed of non-resistance to inflation") were challenged from many quarters to produce an alternative solution to the policy pursued by the Government. Up to the time of writing they ignored the challenge, pre-

sumably because when it came to suggesting constructive steps, the twelve economists held thirteen different opinions and could not agree on an answer to the challenge. In the meantime the commodity outlook appeared to have improved. It is to the credit of the Government that it has refused to allow itself to be influenced by non-resister agitation which might have provided for it an excuse for backing out of its firmer policy.

Meanwhile the increasing trend of both wages and prices continues. During recent weeks a number of wage demands were conceded. Even

though in each instance the number of employees involved was small, the total of additional purchasing power released by employers is growing. And every now and again the price of some goods or services is put up. Evidently the stage has not yet been reached at which employers feel impelled to say "no" for fear that a further increase of their prices would give rise to consumer resistance.

Another influence tending to encourage wage concessions is the decline in the prices of raw materials. Industrial firms are in many

Successive Decline in Stocks

FOR the sixth month in succession, stocks of Jute Goods with the mills have shown a decline; the fall at the end of October, at 800 tons, is, however, small as compared to the previous two months. Nevertheless, it reflects the healthy tendency which has set in in the market. It also goes to confirm that the industry has turned the corner.

As far as production is concerned, it has been maintained at a fairly steady level except in August and October, when production was interrupted by a number of holidays. Again, production, especially of Sackings, has been showing a steady rise, while that of Hessians has been declining, indicating that the mills are gradually switching over more looms to the production of the former classes of goods. This will be clear from the following comparative figures (in thousand tons):—

	Hessian	Sackings	*Total
End of:			
October	29.4	37.8	76.2
September	30.3	33.1	77.0
August	34.8	51.1	92.5
July	38.3	63.5	108.4
June	42.4	64.8	116.0

	October	September	August	July	June
PRODUCTION					
Hessian	31.7	33.7	33.9	35.6	32.3
Sackings	47.1	47.3	43.1	45.0	42.3
Total	83.5	86.0	81.9	85.9	80.1

Marketwise, the week under review has been a dull affair as overseas buyers are not keen to purchase substantial quantities and they seem to be withholding purchases in the hope that prices will soften in the near future. Also, shippers, who were doing some covering business so long, are not now active due to lack of enquiries. Again, the tempo of exports has slackened considerably, indicating that foreign buyers are unwilling to pay the high prices quoted recently.

But, there is still a hope that the present dullness of the market will be temporary and that overseas buyers will enter the market shortly, as the prices offered by the Indian mills are already attractive. These assumptions are based on the fact that stocks have not only been showing a steady decline, but also are less than one month's pro-

duction of each category. But, the decline in stocks is more pronounced in Sackings, reflecting a steady increase not only in internal consumption, but also the steady flow of orders from Burma and the Government of India. Although the tone in Hessians has been generally quiet, there are still hopes for better things to come from this section as the USA is now entering its peak period. In this respect, the news of the increase in burlap consumption from 72.5 million yards in September to 74.8 million yards in October is encouraging, although it is substantially lower than 88 million yards in the corresponding month of last year. Thus, the statistical position of jute goods has become more healthier than ever.

The Raw Jute market has been ruling comparatively steady and was little affected by the price movements in the manufactured goods section. The steadier tone, at a time when prices usually fall with the pressure of arrivals, is attributed to the fact that the jute crop in the current season has been affected to a great extent by adverse weather conditions. Mills, however, do not seem to be active buyers and are making purchases only to meet their immediate requirements.

It is a fact that arrivals are now far below the normal level for this time of the year. Consequently, sellers are found to be reserved in their ideas of prices. But, the re-

ports of the damage to the crop by drought and the inadequacy of the arrivals have not created any panic among mills, which are still under the belief that the new crop cannot be kept off the market indefinitely and that prices for the golden fibre may fall appreciably when once the pressure to sell increases, especially with the present tight conditions prevailing in the money market. Only small business was reported done in Assam Bottoms at Rs 28.25; Deshi Tossa Bottoms at Rs 30.25 and Jungli White Bottoms at Rs 21.50, all per maund for November-December delivery.

Following were the price trends of Jute Goods:

	Closing 7th Nov.	High-est 14th Nov.	Closing 14th Nov.
Hessian:			
40" x 10 Ozs—			
Ready	41.45	41.75	41.75
December	41.50	41.87	41.87
Jan-Mar.	41.45	41.95	41.95
40" x 8 Ozs	34.50	34.75	34.25
40" x 7 1/2 Ozs	31.75	31.75	31.25
Sackings:			
B Twills—			
Ready	114.90	116.00	114.50
December	113.80	113.85	113.25
Jan-Mar.	112.55	112.75	112.50
Hy. Cees			
(Green)	115.00	115.00	114.50
Cornacks	115.00	115.00	113.50
Cubans	141.00	143.00	143.00
A. Twills	138.50	138.50	137.50
L. Twills	123.50	130.50	129.50
D. W. Flours	136.25	136.25	136.00
Sugar Twills	131.50	131.50	131.00

Medium BP Rs 1.76 to Rs 1.80; Medium Fannings Rs 1.86 to Rs 1.90; Best Assam CTC BP Rs 3.00 to Rs 3.50 (nominal) and Best Assam CTC Fannings Rs 2.80 to Rs 3.00 (nominal).

In the Internal Sale, offerings were 15,542 chests of Dusts. There was a good general demand except for poorer liquoring fibrous CTC teas, which were sometimes upto 20 nP easier. There was a better selection of the best liquoring CTC Assams on offer and these were well supported and frequently sold above valuations. The remainder of the sale met with a strong competition, particularly for cleanly-sorted teas and powdery types from Assam. Following rates were quoted:—Medium Doars Dust Rs 1.74 to Rs 1.76; Medium Assam Grainy Dust Rs 1.76 to Rs 1.80; Medium Assam CTC Dust Rs 2.05 to Rs 2.20 and Best Assam CTC Dust Rs 2.70 to Rs 3.00.

Also, 2,884 chests of Leaf grades were on offer and prices were generally dearer.

In the Export Quota section, business was done at 19 to 19 1/2 nP per pound.

In the Cochin market, offerings were about 1.8 million pounds. Buyers showed interest particularly in low medium and medium Broken, which were quoted dearer. There was useful enquiry for black leaf Fannings and these types advanced slightly. All other low medium and medium Fannings were irregular and occasionally easier. Best liquoring teas met with some competition and prices were often dearer.

There was rather less enquiry for whole leaf grades and, in particular,

Orange Pekoes were difficult of sale. Following rates were quoted:—Plain BP Rs 1.35; Low Medium Rs 1.38 to Rs 1.55; Medium Rs 1.50 to Rs 1.78; Good Medium Rs 1.80 to Rs 2.05 and Quality Rs 2.25 to Rs 3.95.

Offerings in the Colombo market were 4,831,600 pounds. There was a limited selection of Nuwara Eliya teas, which was sold at slightly dearer rates. The quality of high-grown teas from Western districts showed a slight improvement; but Uva teas generally declined. Among medium-grown teas, prices of the better Broken advanced by about 10 cents per pound and Low Medium sorts by 10 to 20 cents. Among low-grown teas, small leaf Broken were about 5 cents dearer, while the Middle-East types were irregular.

The Sale No. 11 was held at Chittagong towards the end of last week when offerings were 13,845 packages of Leaf grades and 3,779 packages of Dusts. The market of Leaf grades ruled easier by As 2 to As 3 per pound. Tippy sorts were sold well, while all grades of Green teas were easier. Dusts were in fair demand, though at lower rates.

In Mining Lane, offtake has been steadily maintained, indicating that actual consumption of tea in the UK has not fallen. Stocks of tea in London, as on the 1st November, were 123.55 million pounds as compared to 127.63 million pounds in the previous week and 98.50 million pounds a year ago. Landed between 26th October and 1st November were 13.14 million pounds, while deliveries were 11.96 million pounds.

World Overseas

Australia

Australia has embarked on a new phase for pioneering mineral production. Not since the early days of great gold discoveries have the prospects of winning great mineral wealth been so bright, says the Australian and New Zealand Bank Ltd., in the course of a recent survey.

The Bank states that survey teams on the ground and in the air are opening up thousands of square miles of arid country for detailed mineral exploration. The Bureau of Mineral Resources carried on a large share of this work with fixed-wing aircraft and with helicopters. Many mining companies in the north were operating their own search aircraft, and private companies were playing an important role.

Australia has an important output of many materials, being the leading world producer of the beach sands, rutile and zircon, second world producer of lead, and third in zinc, with impressive reserves of other minerals.

Present plans indicate that during the next decade mineral developments will rapidly expand, the Bank states.

The Bureau of Mineral Resources, in its last quarterly review of the mineral industry, indicates rise and fall in production of the most important Australian minerals.

Gold output, which reached a post war peak of 1,049,011 oz. in 1954, has declined in each of the two succeeding years. Lead output has been maintained, zinc and copper increased, and tin production (which is always small) declined slightly. Aluminium ingot production, recently commenced, is satisfactory; production of tungsten concentrates was up, and iron and steel output was also increased.

Black coal figures were also improved.

The search for oil is continuing in several States, though with less public interest than two years ago.

Because Australia needs increased supplies of formalin, Imperial Chemical Industries of Australia and New Zealand Ltd. has completed plans to step up its production at Botany, New South Wales. Output will enable local requirements to be met for some years. As a result of overseas investigations by the company's chemists, a new process will be introduced enabling efficient production of several grades.

Formaldehyde or formalin, is one of the essential raw materials used in the manufacture of resins for the plastic adhesive, and surface-coating industries. It is also used extensively by the pastoral industry for treatment of foot rot in sheep.

The Australian Aluminium Production Commission is now operating on a profitable basis at its plant in Bell Bay, Tasmania. Last year the Commission incurred a loss of

£A144,573 on production of aluminium ingots, but in its first full year of production this has been changed to a profit of £A52,357.

The ingots totalled 11,250 tons, an increase of approximately 1,500 tons on the previous year. In its latest annual report the Commission states that furnace efficiency, which had been adversely affected earlier, had reached a level comparable with world standards, and the prospects of maintaining these were good.

One of the biggest manufacturers of chemicals in Australia is planning to export water purification equipment to countries of Asia, the Pacific and the Near East.

This is Sulphates Ltd., with its subsidiary, Filtration and Water Softening Pty. Ltd., of Springvale, Victoria. Overseas agents are now being appointed to distribute the equipment.

Sulphate Ltd. makes aluminium sulphates and alums which are used intensively for water purification plants. These plants, together with chlorinators and trade waste treatment units for domestic supplies, and for industry, have been installed in hundreds of towns and cities throughout Australia. The company has also supplied treatment plants for numerous swimming pools, including the Melbourne Olympic Pool.

Australia has only a 40 year reserve of iron ore and is importing ore from New Caledonia because of limited supplies.

Suggestions of immediate surveys to find new reserves, with rewards to finders of new fields, were made to the Minister for National Development, Senator William Spooner. Senator Spooner has stated that his Department is doing everything possible to find, and encourage the finding of new fields.

In Victoria 3,000,000 tons of iron ore have recently been proved at Nowa Nowa, in the eastern sector of the State, according to the Premier, Mr H. E. Bolte. This follows the disclosure of another 500,000 tons by recent drilling.

An Australian company, Duncan's Holdings Ltd., of Sydney, has become the first company in the English-speaking world to attract investment from the International Finance Corporation. The few investments made to date by this Corporation, whose funds have been subscribed by 50 member countries, have been in Latin American projects.

Directors of the Australian company have announced that they have reached an agreement in principle on a request for an investment of the dollar equivalent of £A300,000.

Duncan's Holdings Ltd. has established a joint venture with the British company, Hickson and Welch (Holdings) Ltd., to undertake construction of a series of wood preservation plants, the first of their type in Australia. Three of

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 555 offices waiting to serve you throughout India.

STATE BANK OF INDIA
Largest of the Indian Joint Stock Banks

SISTA'S-58-9

THE last three weeks have witnessed a broadening of activity in the Tea auction in London. Buying has been on a larger scale and more widespread than had been the case in recent months. Competition is keen for offerings with all sections of the trade participating, including re-exporters. There is a general feeling that the overall supply position—at present ahead of last year's—may tighten up over the rest of the year. It is also felt that there is a possibility that Ceylon's output may lose some of its former impetus and thus play a decreasing part in offsetting North India's shortfall. A big factor in the market is the impact of Russian buying at Colombo.

The improvement in prices in London has had its effect on prices at the Calcutta export auction. Quality teas is still the centre of interest of buyers and the weather in North India, this season, has not been conducive to production of a high-quality crop. Although the crop output in October is higher at 89.44 million pounds as against 87.73 million pounds in the corresponding month of last year, total production during the current season ending October 1957 amounts to only 462.61 million pounds as

against 491.04 million pounds in the corresponding period of last year, showing a decline as much as 28.4 million pounds. This compares with 468.21 million pounds, being the average for the last three years.

Meanwhile, in the Export Sale in Calcutta this week, offerings were 50,830 packages. There was a strong and active demand for "Teas for price" and for Clean Common teas with black leaf, particularly for Fannings which were often 8 to 10 nP dearer. Medium BPs and Pekoe Fannings were in good demand. Apart from a few teas with bright liquors, medium BOPs and OFs met with only a restricted enquiry and were sometimes 20 to 30 nP easier.

The very best CTC Assams were sold well, but the remainder met with very selective buying and those with indifferent leaf and liquor were often 10 to 25 nP easier, particularly the Fannings some of which were withdrawn. Stylish BPSs were in good demand, while whole leaf grades were rather irregular. Darjeelings, particularly the broken grades and Tippy sorts, met with a good demand. Following rates were quoted:—Clean Black Pekoe Rs 2.25 to Rs 2.30; Plain BP Rs 1.66 to Rs 1.70; Plain Fannings Rs 1.78 to Rs 1.82;

these plants are already in operation, processing impregnated poles for the Postmaster-General's Department.

Finance for the company's activities with pole timber and timbers for electric power, railroad, bridge and water front use is the prime purpose of the loan.

Australian-built motor trucks and farm equipment are finding new markets in areas from South Africa to India, right through the South Pacific and as far afield as Chile, according to the International Harvester Company of Australia Pty. Ltd.

In the month of July last, the company's export section took orders for equipment valued at nearly £A100,000.

The company considers that there is a tremendous potential for

trade in South-East Asia, and in many countries which Australian exporters may have overlooked. Chile, for instance, has not traded with International until recently. First order for agriculture machines gave promise of bigger ones to come.

Australian Paper Manufacturers Ltd. is making a new paper product at its mill in Botany, New South Wales, for use by joinery companies which produce doors for buildings. It takes the form of honeycomb types of slabs of kraft paper and can be incorporated in the construction of veneered flush doors.

The slabs give an improved polishing surface to the doors, and hide the joints in the veneer, as well as providing strength to the constructed unit.

The company's engineers designed a special machine to make the kraft paper slabs, and it has received large orders for them from the Sydney building industry.

In the work of hand stringing of tennis racquets, it is important that each string should be provided with the exact tension, and a sporting manufacturer in Melbourne, Australia, has invented a simple machine for this purpose. The firm, Strachan Brother Pty. Ltd., of 326 Flinders Lane, Melbourne, has exported the device to South Africa and New Zealand, as well as using it for its own business.

Worked on the simple principle of a weight and a lever, it holds the racquet firmly, and takes away the human element in stringing,

and enables the required tension of the strings to be accurately gauged. A complete restring can be accomplished in about 15 minutes. It allows a racquet to stand up to ten restringings where normally a frame would be pulled out of shape after two or three.

Britain

A meeting of Britain's National Production Advisory Council for Industry was held in London last week, it was announced by the Treasury. Among those present were the Chancellor of the Exchequer, the President of the Board of Trade, the Minister of Transport, the Minister of Power, and representa-

tives of the Trades Union Congress, the nationalized industries, and employers' organizations.

It is understood that at the meeting—one of a regular series which has been held in London for a decade or so—the Chancellor of the Exchequer spent some time in reviewing the current condition of the United Kingdom economy and, in particular, the effect of the September measures in meeting their declared aim of mitigating inflationary pressures.

In this review he pointed out that while overseas opinion was still sensitive to developments in Britain, and in particular to movements in the pound, there had been a considerable measure of success in reversing the speculative movements in

the exchange markets. But the Government regarded the home situation as the key to the external position, and its current policy was not negative but consisted in maximizing essential investment in both the public and the private sector and at same time, on the wage front, in respecting the time-honoured processes of arbitration.

It is further understood that the Chancellor of the Exchequer made some effort to impress on the trades union representatives the extent of current controls operating within the national economy—a point which, hitherto, trades union opinion has tended to stress as an indispensable need for wage stability.

The British system of direct and indirect taxation is being studied by a group of Indian experts now visiting the United Kingdom under the Technical Co-operation Scheme of the Colombo Plan. They are Mr S. K. Bhattacharjee, Secretary, Central Board of Revenue, Ministry of Finance, New Delhi; Mr R. S. Chadda, officer on special duty, Central Board of Revenue, New Delhi; Mr V. S. Desikachari, inspecting assistant commissioner of income-tax, Mysore State, and Mr S. V. Deva, appellate assistant commissioner of income-tax, New Delhi.

Their studies, which began on October 6, will end on December 14. The experts have just completed a joint lecture and discussion course arranged with the appropriate government departments, before separating to take up particular studies of the respective aspects of national and local-government taxation with which they are most concerned in their posts under the Indian Government.

Mr Bhattacharjee explained in an interview that the Indian system of taxation was broadly based on the British model, but that they were all finding much interest and value in the applications of British methods.

All the Indian officials said they were impressed with the efficiency of the British organization but, even more, by what they described as "the good manners and co-operation of the British public" in taxation matters, as in all others.

The renewal of broken or faulty undersea cables between Bombay and Aden is part of the work the British cable ship Ocean Layer will undertake for four months in the Indian Ocean. Owned by Submarine Cables Ltd., the ship is to leave London within two weeks carrying 1,000 nautical miles of telegraph cable for renewals on behalf of Cable and Wireless Ltd.

Sir John Dean, joint managing director of Submarine Cables, has announced that the firm has received an order to extend the power cables it laid at Vancouver, Canada, last year. Forty miles of cable are to be laid between the Canadian mainland and Vancouver Island. Sir John also spoke of the firm's £8,000,000 contract for 2,000 miles of the new transatlantic cable from Canada to France.

THERE is a certain ineffable quality about Mr Nehru's perennial youthfulness that defies definition or even description. Even the glibest among us find it difficult to convey its paradoxical nuances. To say, for instance, that he carries his years well merely conveys the impression of a well preserved old fogey and conjures up a vision of the local club bore who is dreaded by everyone and whom no one ever quite succeeds in avoiding. On the other hand, if one were to go lush with his being an Adonis or a Markandeya—as is done sometimes by his more flamboyant admirers—such one is being merely corny. Such one is being merely puts me in highfalutin irrespectibly puts me in mind of an elderly ex-matinee idol who pathetically begs for roles more appropriate to his son. Both these visions are totally inappropriate to the vibrant vitality that Mr Nehru's personality radiates. Until quite recently, Mr Nehru looked as young as he did when he was in his late thirties. In the last few years, however, his face, at least in photographs, looks drawn and his eyelids somewhat heavy. In his more thoughtful looks these days, one detects gravity rather than intensity as used to be the case in the old days. But his step continues to be as firm and lively as it was as far back as one can remember, and he carries the air of bustle with him now as inevitably as he did in the days when he used to campaign with Satyamurthi in Tamil Nad. And above all, his mind is as nimble, his sensibility as vivacious and the generosity of his emotions as extravagant as they were forty years ago when he capitulated to Mahatma Gandhi. Much has, as I shall argue presently, been added unto him since that important encounter between the two, but these original endowments have remained. So, at sixty eight, as he shall be this week, we can recall with gratitude the multitudinous gifts that have accrued to this country from Mr Nehru's purposeful employment of these attributes of youth, which he retains to this day. As he himself confessed recently, there have been few lives that have had the means of fulfilment that his has had, and so, if one must recall a classical analogy to help define the aura of Mr Nehru's personality, one must look to some such figure as the Greek Odysseus or our own Arjuna. There is a certain deathless quality about these two heroes who greatly strove all their lives.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

But analogies are treacherous tools: Odysseus, at least according to Tennyson, was at the end of his long life finding the tasks of purposeful kingship an intolerable burden and was rather superciliously willing to abdicate them to his humdrum son Telemachus, whom he despised. Not for him, he said, the dispensing of "unequal laws to a savage race", give him the wider horizon beyond the high seas, from where "experience" was forever beckoning him. Despite the fine phrases, the transparent evasion of responsibility that is implied in this attitude shows him up to be the crassest escapist. It is clear that his much vaunted experience has left him completely untouched and there is a certain naïveté about his sophistries. One cannot entirely escape the feeling that at least part of the impression of perpetual youth given by Odysseus is due to this basic immaturity. Likewise, there is a certain air of triviality clinging to Arjuna with his silly little affaires de coeur. And, with the sophistries that he employed on the battle field to rationalise his cold feet, I have hardly any patience. Even Lord Krishna, you will recall, twitted him about his "learned tosh" and asked him in some anger wherefrom he had acquired this mildew of the soul. It is only the thought that but for his sudden access to qualms, he would never have had the Baghavad Gita that makes me relent.

If Mr Nehru was so inclined, he could have, Odysseus-like, basked in the sterile glory of a revolutionary past and left the business of running the country to others. But he saw clearly where his duties lay when, in 1947, he arrived at the end of his long voyage. It is true that he sometimes talks nostalgically of the quieter graces of life that his political preoccupations have denied him, but that is, unlike that of Odysseus, a yearning for what might have been and never was. By its nature, this is a regret, that has no practical implications of any sort, where a man wrapped up in a romanticised version of one's own past may conceivably find the desired recapture of its disillusioning. Again, it is also true that Mr Nehru talked at least once, about three years ago, of retirement to the Himalayas, but then he was clear sighted enough to see almost immediately where his duties, not to say, destiny, lay.

It could not have been easy for Mr Nehru to take these decisions to continue at the post of his duties. It is easy enough to be cynical about conscientious decisions to continue in power, but even in cases of the most brazen aggrandisement, the decisions could not be as easy as the powerless seem to imagine. And, in the case of a man of such fastidious sense of personal integrity as Mr Nehru, the heart searching must be both frequent and strenuous. Not a day passes without some one or another discussing the question of Mr Nehru's successor. Not a day passes without some one bemoaning the absence of the second line of leadership and the complete absence of any kind of effort to make good this lack. Not a day passes without some one pointing out that the Congress is being put up with merely because of Mr Nehru's association with it. It is true that Mr Nehru does not have the time to read or hear the things said about him every day, but there can be no doubt that he has a general idea of the wide spread impression about his indispensability. Every day must be bringing forth at least one instance of the apotheosis in which he is held by the vast populace of this country; and more depressingly, instances of people looking up to him for guidance even in comparatively trivial matters.

Apart from anxieties about the rightness of crucial personal decisions about one's public life, there are the wider considerations. Even while Mr Nehru faces these questions without false modesty, there would still remain the question of the impact of continued power on his own personality and on the political traditions of the country. Mr Nehru might conceivably be worried whether or not his almost unchallenged leadership is not effecting imperceptible changes in his own personality, and since power's corrupting propensities are so notorious, whether such changes may not suddenly add upto a deterioration. Such thoughts used to worry him even in the old days when he did not have any appurtenances of formal power. (But, in some respects, the power he enjoyed in the old days was more real since it had an obvious halo of martyrdom about it.) And the now famous anonymous skit on himself he wrote in the Modern Review of Calcutta, in which he facetiously pilloried his dictatorial propensi-

ties in one real sense was an earnest essay in introspection. More recently, he had occasion to consider the question of the effect of power on him, in one of his characteristically semi-public self analyses, and he referred to an old friend's criticism that power was insidiously corrupting him. Almost certainly because he has been having qualms on the subject, Mr Nehru allowed himself to get somewhat ruffled over it. Instead of giving the true answer to the charge, which was that he had to take the chance of that happening in the interests of the country, he got involved in an argument about whether or not a person who has no power has any right to criticise a man who is in power, since the carper has no direct responsibility. The answer to this question cannot but be that, in a democracy, every one, with or without power, has the right to criticise even though he himself has not the slightest chance or intention of being put on trial.

I only mention this to indicate that considerations of this sort must be exercising Mr Nehru's mind every now and then. I myself am quite certain that the criticism that power was getting Mr Nehru down is quite unfounded. If Mr Nehru was a vulgar demagogue and a manipulator of popular emotions, instead of the scrupulous democrat that he is, it should have been the easiest thing to have ridden on the wave of popular emotion to become the most absolute dictator in the world. Such things have been known to happen before. But, instead, he is forging, with an intense concentration of purpose, invaluable democratic conventions and truly popular institutions. It is needless to labour a point that is quite obvious. The fact is Mr Nehru's democratic faith stems, not so much from latter day theories of popular will, but from a passionate concern for the inviolability of the individual human being. Such a faith entails a fierce personal integrity and a respect for that of others. In the ultimate analysis, this is what neutralises the corrosive propensities of power. If one were to use a biological analogy, even as power keeps on destroying the cells of our personality, true democratic faith keeps on creating fresh cells and keeps our integrity intact. Only if there is any imbalance and waste in this spiritual nourishment will disaster occur. In Mr Nehru's case, there is not the

slightest danger of that happening in the near or distant future.

On the other hand, Mr Nehru may have qualms about the effect on the country's future that his continued leadership may have. Here, again, it is possible to be overscrupulous and falsely modest. Here, as else-

where, it is a question of balancing of advantages and a sensible ordering of priorities. And, on the question of successor to Mr Nehru, I personally feel that there is a lot of quite needless, rueful shaking of head. While I do agree that there is need for some kind of training for leadership from gene-

ration to generation, I am sure that, when the time comes for us to do without Mr Nehru, we will be sure to manage. Leadership is something that emerges on the strength of its own dynamics. After all, a country which has had within a life time two such men like Gandhiji and Mr Nehru need not

despair about the right kind of leadership. In the meantime, it would be folly to deny ourselves the advantages of Mr Nehru's leadership merely because of certain misgivings about future leadership. The present, as is only too often demonstrated to us, has need of him.

★

Apart from considerations of power and its effects on his personality and on the country's political future, Mr Nehru may have to reckon with still more deeper issues connected with this question. In this connection, I should like to refer the reader to a document of extraordinary importance to any student of current Indian affairs: I am thinking of the extremely interesting apologia of Mr Jaya Prakash Narain for abandoning politics. I have no space here for dealing with a number of important issues he raises. But his final justification for leaving the political arena is worth considering in the context of Mr Nehru's own decision to stay in it. Mr Narain has come to the conclusion that politics (or Rajnithi as he calls it), leads you to a dead end, whereas Loknithi, the way of life he has now chosen, is more satisfying as touching life at all points and as being based on a fuller vision of man's destiny. I am in deep sympathy with a great deal about modern politics that Mr Narain says. But I think that, for many, though not, perhaps, for Mr Narain, the decision to abandon Rajnithi for the Loknithi is an easy way out of their true responsibilities. Analogies are, as I said before, dangerous, and sometimes lead to silly results; but I cannot wholly help thinking that at least part of the motivation of such acts as that of Mr Narain is analogous to that of Arjuna when he trotted out his learned arguments against killing his friends and relatives. And, as Krishna pointed out, Arjuna's momentary aberration was a result of his distorted view of his Swadharma, which was to live and strive in the world as he found it. Politics is a politician's Swadharma, exactly as fighting is a warrior's. God knows, it is no easy thing to have a clear sighted vision of one's own vocation, and if Mr Narain feels that he has never really had a vocation for politics, and that his true self can find itself only in Sarvodaya, well, more power to his elbow in his new adventure. But, before you take the decision to quit politics, you have to consider whether there cannot be a too easy disillusionment with politics. There must have been moments in Mr Nehru's life when he should have felt that he should quit the whole thing. But then, he will almost at once see that he will only be running away from his duties. Here, again, Mr Nehru to his eternal credit, and to the infinite good fortune of his fellow countrymen, would have taken a decision that is absolutely correct.

Good Performance by Mukand Works

THE working results of engineering industries are always an infallible index of the state of an economy. Immediately for India, they are also an indication of the tempo of economic development and to a large extent of the preparation obligatory on the country for the future export drive.

In the present situation, with a very rigorous control on imports, with a substantial measure of protection for a wide range of engineering products and a hungry internal demand, the opportunity opened by the Second World War is being repeated under circumstances which are undoubtedly more pleasing. It is undeniably more reassuring to say that quite a number of manufacturing units have risen equal to the occasion and showing heartening proficiency in the planning and execution of their development and expansion schemes.

To this category of units the Mukand Iron and Steel Works Limited rightly belongs. In Mr Kamalnayan Bajaj, the Chairman, the Company has a businessman endowed with ample imagination and foresight and one capable of taking time by the forelock. Mr Madanmohan Ramnarayan Ruia is another well-known name. It is indeed a matter for pride for the Company that an erstwhile Director, Mr Lalji Mehrotra, is now the Indian Ambassador to the Union of Burma. It is no wonder that with such men on the Board, the Company had been able to make very satisfactory progress in production and earnings.

Barring a slight setback in production in 1951-52, the record of output has been one of progressive increases from year to year. Against 258 tons of steel castings produced in 1946-47, the production in 1952-

53 stood at 1,122 tons, and it rose to 4,153 tons in 1956-57. Likewise, steel rolling mill production has risen from 5,066 tons in 1946-47 to 17,112 tons in 1952-53 and to 32,123 tons in 1956-57. It will also be seen that the output of both rolled steel products and cast steel products has been nearly 50 per cent higher in 1956-57 as compared with the previous year.

The Directors are legitimately gratified over the progressive contribution of the Company toward the fulfilment of the various targets of the Second Five Year Plan. During the latter part of the year, the supplies of billets got comparatively reduced, owing to the shortage of foreign exchange and there is a fear that the supply position is likely to remain somewhat fluid as these are mostly imported. The Directors are, however, hopeful that the Government will not leave the Company in the lurch in this respect, especially when improvements are being made in the plant facilities for increased production during the years ahead.

ties for increased production during the years ahead.

The twenty-year old Company, it will be recalled, received a major shock through the partition of the country in 1947 and the consequent loss of its major assets situated in Lahore. For ten years, the shareholders had to wait for a return on their investment. There is no doubt that the Company has now turned the corner. This year dividends have been declared on the ordinary and deferred shares too.

Out of a gross profit of Rs 27.72 lakhs, Rs 3.12 lakhs has been made available for dividends. A dividend of Rs 5 per share (subject to tax) on preference shares of the value of Rs 100 each, of Re 1 (free of tax) for ordinary shares of the value of Rs 10 each and of Rs 5.58 (free of tax) per share on deferred shares, also of the value of Rs 10 each, would be distributed. As much as Rs 14 lakhs goes to Rehabilitation and Development Reserve and Rs 4.25 lakhs for Depreciation.

The expansion programme of the Company is naturally linked to the steadily growing demand for its products. A scheme relating to steel castings, which the Company has submitted, is now under the

consideration of the Government of India, Industries Department.

The Company has also entered into a Technical Aid Agreement with the well-known British steel foundry, Messrs David Brown Industries Limited, England, under which the latter has undertaken to give technical guidance for a period of 8 years on problems relating to the steel foundry, including training facilities for the personnel of the Company in Britain.

Financial needs ahead are proposed to be met by the issue of additional ordinary share capital. The Controller of Capital Issues has given sanction for Rs 20.47 lakhs.

The difficulties experienced by the Company are not unsurmountable. In Mr Bajaj's address to the shareholders, mention is made of the question of a railway siding, of sufficient imports of billets, which, the Committee on Electrical Furnaces, Steel Foundries and Steel Re-rolling Mills, has already recommended, and of Government approval for further expansion schemes. There is no reason to think that the Government will take an unimaginative attitude on any of these points.

TODAY How the world has changed! The old dependable Hercules which carried Gangadhar to his office is now taking his 20 year old son to the college!

Hercules

is more than a cycle, it's a lifetime companion

Ask the man who owns one. He'll tell you that HERCULES lasts a lifetime. Backed by the experience of people who have made top quality cycles for nearly 50 years, this precision-built HERCULES cycle is now made in T.I. Cycles' ultra modern factory. You'll admire its streamlined beauty, its smooth, effortless drive. HERCULES is the finest cycle you can buy, and yet it is so moderately priced.

Gateway Notes

Balance of Payments

That lower exports rather than increased imports are at the root of the present difficulties on the foreign exchange front, is the conclusion which the statistical study made by the Reserve Bank of India reveals. The study relates to the period of April-June. The aggregate imports during this period are marked at Rs 323.1 crores and this represents an increase of 6 per cent or Rs 17.4 crores over the previous quarter. As against this the exports during the latest quarter declined to Rs 139.8 crores from Rs 177.2 crores in the preceding quarter, which in percentage terms amounts to 21.

The over all impact on the balance of payments is a deficit of Rs 157 crores on the current account. The decline in net earnings was to the tune of Rs 13.1 crores and this necessitated drawing down Rs 70 crores from the reserves and the utilization of Rs 34.5 crores from the stand-by credit arranged with the International Monetary Fund. The decline in net receipts on invisible account was of the order of Rs 3.8 crores the reduction being particularly marked in private invisibles. The total under this head is marked at Rs 28.6 crores. Net receipts on account of official donations were also lower by as much as Rs 9.3 crores. The net deficit after allowance being made, to the tune of Rs 87.2 crores for the net inflow on capital account from official loans and other capital transactions including the utilization of the stand-by credit, is placed at Rs 70.2 crores.

Though the regional incidence of the deficit was widespread the most important change was the widening gap in the trade with the sterling area. While the trade with the sterling area disclosed a surplus of Rs 6 crores during January-March 1957 this deteriorated to such an extent as to result in a deficit of Rs 26.1 crores in the next quarter. The trade with the dollar area showed no improvement either and the deficit was as much as Rs 33.7 crores.

The rise in imports into the country was shared by both the private sector as well as the public sector. While imports by the private sector increased by Rs 6 crores in the latest quarter over the previous one, imports by the public sector increased by Rs 11 crores for the same period. Imports of machinery seems to have accounted for the major part of the total imports. Imports of food were also considerable and was valued at Rs 49.4 crores. The remedy for all this is self-suggestive, i.e. intensi-

fication of the drive for exports promotion.

Sugar Export

When, last year, the sugar industry, was able to set apart nearly a lakh ton of sugar for exports, it raised very high hopes among the interests concerned and was hailed as a very desirable development as contributing in a very material way, to the foreign exchange resources of the country. The situation since then has changed so much that the exports now pose a problem. The competitive position which the country secured last year in the foreign markets was not based on the internal efficiency of the industry but was derived from extraneous factors such as an inflated world price level consequent on the failure of the beet crop and the Suez crisis. This competitive strength has been undermined by the sag in the world price of sugar in the current season consequent on the restoration of normal conditions in the beet crop in the world. The present price of sugar in the world market is at a level far below the internal price including the various taxes on sugar.

If in such a situation, the exports of sugar from the country are to be

preserved, the desirability of which in the present foreign exchange crisis, would be admitted by all, possibilities of reducing the price of sugar for exports have to be explored. In the light of the rigid and inflexible cost structure of the industry, this calls for some sacrifices on the part of the government.

In this connection, Mr K. J. Somaiya, pointed out while addressing the 14th annual conference of the Deccan Sugar Technologists' Association, in Poona that the incidence of the State taxes on sugar amounted to about Rs 75 per ton. This practically leaves no other alternative, by way of solution to the problem of exports of sugar, than tax concessions on the part of the State Governments for sugar intended for export. The closing of the outlet for the excess production of sugar in the country, Mr Somaiya pointed out would only result in crisis in the sugar industry followed by a slump in the domestic market.

Mr Somaiya also expressed himself as opposed to the idea of a central agency to handle the exports of sugar from the country. Such a central agency he said would be disastrous to the industry in general and particularly to the infant co-operative movement. Mr Somaiya is in favour of a scheme which would leave the incentive in the hands of the manufacturer for the production of better sugar.

GATEWAY MARKETS

Firmness in Oils and Seeds

CONDITIONS in the Bombay Oils and Oilseeds markets remained generally firm. Calcutta and Delhi operators extended fresh speculative support in the absence of any official action to check the rising trend in prices. The firmness was also attributed to the fact that the proposed meeting of the representatives of the Saurashtra Oilseeds Exchange and the Bombay Oilseeds Exchange with the Forward Markets Commission had been postponed to a future date.

The Groundnut section continued to attract bulk of the trading activity and set the pattern of behaviour for other oilseeds. February delivery started at Rs 165.62 and, after firming up to Rs 167.72, finished at Rs 167.25. In the ready section, Bold quality was quoted at Rs 34.25 and Groundnut Oil at Rs 19.62.

The Linseed section reflected a firm bull grip on hopes of a better overseas demand for linseed oil in the near future. May delivery started at Rs 31.81 and, after touching a

high of Rs 32.12, finished at Rs 31.94. Ready rate was quoted at Rs 30.87 and Linseed Oil at Rs 15.94.

The Castorseed section lacked an initiative of its own; but responded to the general firmness in the market by attracting support at lower levels. May delivery commenced at Rs 155.50 and, after recording a high of Rs 157.50, finished a shade quieter at Rs 157.25. Ready was quoted at Rs 33.25 and Castor Oil, commercial quality, at Rs 18.37.

Trading in the Cottonseed section was influenced mainly by the strength in other oilseeds on the one hand and by the weakness in cotton on the other. May delivery began at Rs 106.50 and, after touching a high of Rs 108, finished at Rs 107.50.

Gold & Silver

The Bombay Bullion Exchange shrugged off the recent protracted dullness and values edged up under persistent speculative buying. Heavy buying by Calcutta and local

operators and bear-covering aided sentiment.

Gold was on the spotlight under keen demand from Madras. Arrivals and offtake amounted to 2,000 tolas each, while unrefined metal receipts were 4,500 tolas. Mangsir delivery moved between Rs 108.59 and Rs 109.19, while ready was done at Rs 109.06 to Rs 109.31. Sovereign was quoted better at Rs 70.57 against Rs 70.25.

Although prices in the Silver section developed a hardening tendency on reports of restricted Tibetan supplies, there was a slight reactionary tendency towards the close due to lack of follow-up support. Mangsir delivery changed hands at Rs 183.62 to Rs 184.63, while the ready rate closed at Rs 183.81 after touching a high of Rs 183.94 and a low of Rs 182.94.

Non-Ferrous Metals

Except for the renewed steadiness in Copper prices, conditions in the Non-Ferrous Metal market remained generally quiet. Copper ready was quoted very steady at Rs 155 per cwt, thanks to the healthy statistical position and reports of smaller arrivals. Zinc, after touching a high of Rs 59, receded to Rs 57 per cwt at the close. The easiness in prices was attributed to heavy arrivals in Calcutta and expectation of further arrivals during the current month. The rate for Lead hovered idly around Rs 72 per cwt on reports that stocks had arrived. Tin ruled quiet at Rs 127 per quarter on lower advices from Singapore.

On the London Metal Exchange, Copper firmed up to £192 per ton from £190 despite the reports that demand was only moderate. This was mainly due to a threatened strike in the copper mine at Portreth although the strike was reported to have been avoided by arriving at an agreement with the workers. Zinc was quoted steady at £68½ per ton. Stocks in London were reported to be adequate. Weakness persisted in Lead, the rate being quoted at £86½ per ton. Tin was quiet at £730 per ton, mainly due to the absence of American interest.

Yarn

Trading in the Yarn market was listless in the absence of any enquiry. Price movements were, therefore, confined to narrow limits. Both Cotton and Art Silk yarn witnessed a moderate fall in prices, while Staple-Fibre yarn ruled comparatively better.

Meanwhile, it is reported that the efforts to step up export of pure silk fabrics from India have taken a concrete shape with the finalisation of the scheme to provide cheaper raw silk to the indigenous industry for the purpose of export of pure silk fabrics.

Futures Sag: Spot Quiet

FORWARD rates on the Bombay cotton market developed a sagging tendency under consistent general liquidation with buyers only limited. Increasing arrivals in terminal markets, weaker advices from up-country centres, discouraging performance in the spot section and, above all, absence of any news regarding much expected export quota, adversely affected the morale of the market. Nervous bulls were liquidating their holdings, while shrewd bears tried to hammer the prices. Also, leading commission and spot houses were unloading their commitments. With the result, the market declined. Although attempts at rally were made, they proved abortive and the undercurrent remained easy at the close.

ICC Jharilla March delivery opened quiet at Rs 635 and, after improving at one time to Rs 703.75, declined steadily to Rs 688, to finish better at Rs 691.

Operators in the Spot section adopted a cautious attitude and appeared to be reluctant to augment their stocks on fears of prices declining further.

In the export section, activity remained at a standstill as shippers did not show any interest. With the result, Ganganagar, Dhuri and Abhor varieties in the Punjab declined by about Rs 10 per candy. Principal attention was paid to new crop 197-3 of Khandesh and Berar.

In the foreign section, spot lots of American, Sudan, Egyptian and East African varieties were in demand. Small transactions also took place in new crop Uganda, subject to the receipt of licence. It is understood only 21,000 bales of East African cotton have been licensed so far out of the quota of 50,000 bales.

The quantity of foreign cotton imported into the country, this season, till October 19 is stated to be 68,133 bales as against 74,995 bales for the corresponding period of last season. Exports till the same date were 2,487 bales against 17,418 bales. Exporters have pointed out that sterling allocation to Japanese importers might not be released earlier than January. Besides, the current prices for Bengals are considered to be almost prohibitive by Japanese and other buyers in the context of cheaper varieties available from Pak'tan and the US. Shippers, therefore, plead for a reduction in the export duty on Bengal Deshi cotton.

CROP REPORT

The quality of the new crop in Berar is stated to be unusually good this season. The marketing has also commenced in Khandesh and will take a fortnight more in Jharilla areas of Madhya Pradesh and

Andhra. Gaorani and other growths in Moglaj areas are expected to be marketed next month.

Contrary to earlier expectations, the season will commence in Gujarat about three weeks earlier than usual, presumably because of the prolonged absence of rains. The crop in Gujarat has shown satisfactory progress in recent weeks and no damage has so far been reported. About 25 per cent of the crop in the Punjab has been already marketed.

NEW YORK COTTON MARKET:

The New York cotton futures market ruled steady. Initially, values scored modest gains following

the issuance of government current crop estimate of 11,788,000 bales—613,000 bales under last month's forecast and 200,000 bales below trade expectations. Demand, however, dried up and the market reacted. The drop in production prospects apparently did not raise any fears among traders of a short crop since only domestic consumption is expected to come out of the new crop supplies. Middling Spot was quoted at 35.50 cents per pound.

LIVERPOOL COTTON MARKET:

On the Liverpool cotton futures market, values opened quiet and remained unchanged for both the contracts. Trading was slow with local and trade bidding finding sellers reserved. Later, some hedging was offset by small trade support

and offerings were restricted. The official Bureau figures were less than expected, but failed to stimulate fresh activity.

KARACHI COTTON MARKET

Conditions on the Karachi cotton futures market remained quiet. Despite reports that France had permitted imports of 10,000 tons of cotton from the sterling area, including Pakistan, the market failed to improve. This was mainly due to the poor ready demand. Overseas enquiries also did not show any revival. Punjab Deshi 4F Saw Gln was quoted at Rs 77-8; Punjab Roller at Rs 81-8; New Crop Punjab Deshi at Rs 77-6; NT Roller Sind at Rs 88-6 and 289F Roller Gln at Rs 85-10.

It's 1,000 miles across the room...

RATTLE, clatter, thump goes the toy engine at the little boy's heels... rattle, clatter, thump across the room. And, to him, it's a thousand-mile trip! So what's vital to him is movement and speed.

To us, at Hindustan Lever, speed and distance are no less important. For you, we cover thousands of miles every day — every inch of India's 35,000 miles of railroad, for instance.

But before our products are despatched, we must consider how they will travel. Plane or train? Road or waterway? Handcart, head-load or mule-train? The answer depends on a great many factors — for instance, on the kind of territory those goods must cross and how soon they must arrive.

But arrive they must — and arrive in the best condition. For people have come to trust the goods we make — things like Sunlight Soap and Vim, Rexona and Dalta Vanaspati. The need for these products is growing — everywhere, all the year round.

We take trouble to satisfy this need — and so add another service to the service that the goods themselves perform. We add the service of regular supply.

Hindustan Lever serves the home

Olympus

Winter Thoughts

THE session of the Lok Sabha which commenced on Monday is likely to turn out in many respects to be one of crucial importance. In the first place, events at home and abroad have given a new urgency to familiar problems. Secondly, many decisions of basic importance to the immediate future of the country which had been postponed for a variety of reasons will now have to be taken. On the level of party political manoeuvres, tentative trials of strength may be expected, though, of course, no immediate surprises by way of reversals of fortunes will result. This

does not mean that the ruling party will not have fresh occasions for heart searchings. Lastly, to the section of the public (and let me add, in honesty, to that part of our own beings) which conceives of parliamentary proceedings as a species of dramatic entertainment, there is some promise of tragic-comedy in the anticipated discussions of some of Mr T. T. Krishnamachari's recent utterances. Except for the last possibility, the tone of the session, as a whole, is likely to be sombre, matching both with the season and the prevailing national mood.

Addressing the Congress parliamentary party, Mr Nehru gave some indication of some of his own preoccupations of the moment. Thinking aloud on the political situation in the country, he referred to new manifestations of disruptive forces in various parts of the country. He has talked of these in other contexts in the past, but, in recent weeks, his references to them add up to an indication of a deep-seated worry. That he has good grounds for worry will be denied only by the politically purblind. The caste riots in Ramanathapuram are one facet of the problem. It gives an indication of the consequences of a kind of politics that is as assiduously practised in private as it is virtuously abjured in public. It is not at all certain that the right morals have been drawn by the persons concerned from the deplorable incidents. Mr Nehru cannot be unaware of the implications of the episodes and, though his references to them were in general terms, he is sure to make his mind known to his colleagues in the party. In any event, it is a pointer about the state of the nation of which the rulers of the land must take timely note. The subject was sought to be raised in the House in the form of an adjournment motion. The speaker has deferred his decision on the question of allowing it. At the moment of writing, it seems likely that the speaker may disallow it in deference to the wishes of the Government of Madras. Even if that happens, it does not matter very much. After all, an acrimonious debate conducted on party lines may not be the best way of discussing the deeper causes of the riots and their relevance to the question of national solidarity and the political health of the nation. The important thing is that the events themselves should compel rethinking by Congress leadership about the kind of politics that it has acquiesced in for so long. Mr Nehru particularly would have noticed certain features of the situation that unpleasantly recall the ugly word of Fascism to one's mind. It is this aspect of the matter that makes it impossible for any responsible student of affairs to let the thing slide into forgetfulness as an unpleasant episode of no permanent significance.

Another subject that has exercised the minds of large sections of our people, and which is also troubling Mr Nehru, is the situation created by partisans of Hindi. In the last few months, ever since, in fact, the Official Language Commission's Report was sent during the last session to a special parliamentary committee for scrutiny, public opinion in non-Hindi speaking areas has been expressing itself in the clearest possible terms against any attempt to force the pace of natural developments. In Madras and Bengal in particular, the opposition is both articulate and influential in the sense that important public men and popular organisations have expressed their views against any steps that will constitute any imposition from above. In Madras, there is absolute unanimity on the subject. About a fortnight ago, a number of public men representing all shades of opinion addressed a personal appeal to the Prime Minister asking him to bring his influence to bear on the zealots of Hindi. More recently, the Government of Madras have felt obliged officially to make known to the Centre their opposition to imposing Hindi prematurely. Mr Nehru's own eminently sensible views on the question were made known to his colleagues in Parliament. He made it clear that, in his personal view, the imposition of Hindi on non-Hindi population against its will, would create "unnecessary problems". He conceded that the changeover to Hindi will confer an adventitious advantage in the matter of recruitment to services, etc., to the persons whose mother-tongue was Hindi. And he urged that this vital matter must not be allowed to be clouded by passions. He advocated a cooperative and friendly approach to the whole question.

Mr Nehru showed himself aware of the deeper motivation of the zealots of Hindi by relating their enthusiasm for imposing Hindi-Raksha Samithi in the Punjab. Only a couple of days earlier, he had been to Chandigarh and he had expressed the view that the agitation would bring "rain" to the Punjab, if better counsels did not prevail. The agitation in the Punjab is seen by a large number of people (not excluding Mr Nehru) as an ironic and portentous commentary on the protestations of good faith by the Hindi zealots. It seems natural that linguistic minorities should think that what is happening in the Punjab is but a foretaste of the fate that is sure to overtake them if they acquiesced in the plans to impose Hindi on them. It is significant that Mr Nehru should have taken the opportunity of his address to his fellow parliamentarians to bring up this question of Hindi. For, the question has no special urgency if viewed in the narrow parliamentary context. The matter is, nominally at least, open, since the Joint Committee of the Parliament has not yet finalised its views on the Official Languages Commission's Report. And yet, the question itself is

North Indian Notes

The Plan and the People

Broadcasting from the Delhi Station of the All India Radio, Mr V. T. Krishnamachari, Deputy Chairman, Planning Commission explained the significance of the Second Five Year Plan in terms of its targets of income and employment and pointed out how if the prerequisites for the success of the Plan are to be satisfied, the united efforts and dedicated service of men and women in all parts of the country are necessary. Mr Krishnamachari listed the three prerequisites for the success of the Plan as increased production especially agricultural production, availability of sufficient internal resources, and a price level which would be fair to consumers as well as producers.

Explaining the features of the agricultural plan Mr Krishnamachari drew attention to the various lines in which production is sought to be pushed up. The very nature of agricultural planning which partakes of the decentralised pattern with every village having its own plan and for which the village panchayat and the cooperative would accept responsibility demands for its effective implementation the willing partnership and cooperative endeavour of the people as a whole. The present condition of the food supply in the country call for intensification of such efforts for adding to the food resources in the country.

In respect of the financial resources, also, the present situation in which the State Governments have to concentrate on small savings to find the requisite revenues to execute their plans calls for unstinted support from the people. In this connection Mr Krishnamachari pointed to the need for the State Governments to evolve a permanent organisation for stimulating savings on the largest scale possible and the necessity for such an organisation to reach and establish touch with every family in urban and rural areas. The people could contribute to small savings by becoming members of cooperative societies. Mr Krishnamachari hoped that by 1960-61 at least half of the rural families should become members of cooperatives. He also outlined a scheme whereby the towns would be divided into wards where the cooperatives would play a significant role in tapping urban savings.

The price situation is also one where public appreciation and recognition of the need for minimum controls, are needed for the maintenance of a level of prices which would be fair to the consumers and the producers alike.

Finally Mr Krishnamachari pointed out that there was very great scope for harnessing the unutilised

energy in the countryside for building permanent assets like irrigation works, afforestation and soil conservation, fuel plantations, improved village pastures etc. Mr Krishnamachari stated that a five year programme should be prepared for each NES block in respect of such work.

Food Problem

The grave turn that the food situation has taken is the greatest challenge that the Government is confronted with at present. The situation is one almost bordering on calamity with about an area of 167,000 sq miles and a population of about 79 million subsisting mostly on agriculture, in the grip of near-famine conditions. Even the Union Food Minister Mr A. P. Jain was sufficiently frank about the seriousness of the situation when he forecast in his address to the F.A.O. conference at Rome the contingency of India having to cut into her food reserves early next year.

Reviewing the Government's import policy in regard to food grains, Mr Jain pointed out that though the Government had been able to build up stocks of a little over one million tons by means of the rice agreement with Burma and the P. L. 480 agreement with the USA the demands that would be made on these stocks as a result of the drought conditions would be of such an order as to leave the country

with no stocks of foodgrains by the middle of 1958. Mr Jain does not foresee any easing of the position for the whole of 1958.

The prospects that the drought affected people are faced with are abject starvation and misery which can only be forestalled by imports of food grains. The acute foreign exchange shortage adds to the difficulties of the problem and though it may be hoped that the requisite quantity of imports would be secured at all costs the adverse repercussions that such a diversion of foreign exchange resources may have on other sectors of the national economy which are almost exclusively dependent on the imports of foreign machinery are certain to retard the pace of progress of the Second Plan as a whole.

The situation has also set the authorities thinking about the most speedy and effective methods to raise agricultural production. Official thinking has already crystallised in certain recommendations which have been made to the State Governments by the Ministry of Food and Agriculture. These relate to the necessity of convincing the cultivators about the efficiency of ammonium sulphate as a manure as also to popularise the use of alternative sources of concentrated nitrogen such as inedible oilcake bone-meal and fish manure. The State Governments have also been urged to take necessary steps to enforce the provisions of the Fertiliser Control Order which seeks to prevent the adulteration of fertilisers and other malpractices such as hoarding.

NORTH INDIAN MARKETS

Sugar Markets Depressed

SUGAR markets have continued to remain depressed in the absence of consumer demand. According to the latest reports, crushing for the new season has already begun in the South, while, in the North, it has also begun in some of the factories. Consensus of opinion is, that all major units will show an increase in their output in the season just begun.

The production of indigenous sugar amounted to 20.26 lakh tons up to October 31, 1957 in the current season as against 18.59 lakhs tons in the corresponding period of last year. The total off-take, including quantities despatched for exports, was 21.21 lakh tons. The stocks with the factories, as on the 31st October, stood at 4.58 lakh tons.

In order to augment country's foreign exchange, the Government will encourage exports; but world

prices are not favouring such exports at the current rates. A scheme may, therefore, be evolved for exports at rates comparable to world price levels. Ex-mill delivery rates have eased slightly during the week as factories are anxious to lighten their stocks.

Rumours are current that the Government are in consultation with the sugar interests over the possibility of enhancing the internal prices in their bid to subsidise exports. Some of the factories have gone into production, while the rest are expected to do by the end of the month. Meanwhile, following mill-delivery rates (per maund) are quoted in the Hapur market:—Jaswant Rs 32.87; Simbhauli Rs 32.87; Daurala Rs 33.12 to Rs 33.87; Amroha Rs 31.75; Mansoorpur Rs 33.06 to Rs 33.75 and Rampur Rs 33.50 to Rs 34.50.

Sugar markets in Muzaffarnagar have ruled quiet. Barring some en-

quiry from the Punjab, demand from other consuming centres was dormant. Prices of some of the qualities of various mills declined by 6nP to 12 nP per maund. Meerut (D/28) was quoted at 32.62; Rampur(B/29) at Rs 34.50 and Khatuall (B/28) at Rs 33.81.

The Khandasari market, too, ruled quiet in line with the crystal section and prices remained mostly unchanged, ranging between Rs 27.00 and Rs 31.50 per maund, according to quality.

Gur

In sympathy with sugar, prices in the Gur market have also declined. Arrivals of new gur into the Hapur market are reported to be on the increase, amounting to as much as 8,000 maunds. Old gur stock was estimated around 7,000 maunds, which is not attracting any demand. Arrivals are likely to increase further and, with the result, a further fall in prices is expected.

Demand for Pansera and Chakku quality was fairly good from the Punjab and Gujarat. There has been good enquiry for Shakkar from Rajasthan. Prevailing rates (per maund) are quoted at Rs 15 to Rs 16 for Chakku quality; Rs 15 for Ladoo and Rs 15 to Rs 15.25 for Pansera.

Foodgrains

While Wheat prices ruled steady, fresh gains were registered by Maize and Bajra due to good seasonal demand. In order to check the rising trend of prices the Central Government has applied the amended provisions of the Essential Commodities Act in respect of wheat in Uttar Pradesh and the Punjab; and this has accounted for a check in the rising prices of wheat.

Wheat average quality was quoted at Rs 16. Rice prices continued to rule steady despite the increase in the new crop arrivals. This trend was attributed to food scarcity in the neighbouring areas. The market for Gram was steady, while that for Barley and Bejher was quiet. Maize was in request from Bihar and Bajra from Rajasthan.

Despite poor demand from outside, Peas and Arhar prices did not display any sign of easiness from last levels. The markets for Urad and Moong ruled, however, steady.

Firm conditions were noticed in the Delhi grains market. Farm wheat registered a rise of about a rupee per maund, while there was good demand for Rice locally as well as from the neighbouring States. A gain of about 37 nP per maund was recorded by Gram, thanks to good enquiry from Uttar

The Peninsula

A Discussion on Food

IS the Madras State a deficit area in food? Will the fixation of ceilings on individual ownership of land contribute to increase in food production? Is the zonal system in the South working satisfactorily? How far are fair price shops useful as a check on free price? A lively discussion on the current food situation in Madras which took place in the State Legislative Assembly showed that on none of these questions was opinion unanimous.

Mr K. Chattanatha Karayalar, a former Chief of the Madras Congress Party and now an Independent, asserts as a "basic fact" that the State is deficit in food production and that the food problem in any of its aspects will have to be tackled from the point of view of making good the deficit. The Minister in charge of Food also accepts this fact, explaining that the State is deficit to the tune of 1½ lakh tons.

The leader of the Opposition, Mr V. K. Ramaswami Mudaliar, is however still in doubt and he wants the Government to determine clearly at the outset whether the State is a surplus or a deficit area; if it is a deficit one, he wants the State authorities to press the Centre for adequate supplies of rice to make up the deficit. There is, of course, a highly treacherous element in food statistics. One point which most members of the Assembly speaking on the problem failed to take note of is the fluctuating character of the annual crop.

Mr Bhaktavatsalam himself says that the figure of 1½ lakhs tons is the normal deficit of the State and

it would go up to 3 lakhs tons in the event of failure of monsoons. One could go a little further to state the obvious that if the monsoon's failure is severe, the deficit may be much more and if the monsoon is more than ordinarily good, there may be no deficit at all. At present, the statistical assumption is that the State has a deficit of 1½ lakhs tons. For this reason, it is claimed, the inclusion of Madras in the zonal grouping is advantageous.

On this question of zonal grouping, again, the explanation officially offered appears to be rather awkward. Is it, for instance, implied that the zone functions to the disadvantage of surplus areas? Is it again implied that Madras is interested in perpetuating the advantages of a deficit condition or that in the event of the State getting converted into a surplus area, Madras will promptly discard the zonal link.

The Minister concerned was, it was clear, trying to convince unfriendly critics that the zonal system was beneficial to the State, especially, when it was argued, not on quite sound facts, that prices had gone up to some extent since the establishment of the zone. It was pointed out by the Minister that since the formation of the zone in July, the price of rice had gone down from Rs 18.77 a maund to Rs 18.50.

The allegation that large quantities of rice were being taken out of the State through trade channels to Laccadive Islands and Goa through Kerala, was met by Mr Bhaktavatsalam, when he said that the State was getting rice from

Andhra and even if there were to be some speculative purchases, it had only the result of domestic hoarding; such rice did not move out of the State, as it was obviously unprofitable.

It is clear that the Assembly discussion was largely influenced by the somewhat panicky statement made by the Union Food Minister that 1958 would be a very difficult period for the country in the matter of food supplies. The closing of the fair price shops in many places by the State Government has also led to some disquiet, as it is generally felt that these shops have always had a sobering influence on the free market price.

A non-official Resolution which sought to bring to the notice of the Government what it described as a critical food situation was neither pressed by the mover nor directly opposed by the Government. This happy fate of the Resolution was due to the circumstance that it was timely in the sense that though no critical situation had actually arrived, there were disturbing symptoms, local difficulties and perceptible speculative bias in the trade. The Resolution came as a helpful forewarning.

Actually, the Government have anticipated developments by already making arrangements for procuring a part of the rice crop in Tanjore District in the coming season. This step is intended to checkmate profiteering. On the question of fair price shops, Mr Bhaktavatsalam took an unassailable stand. He said that fair price shops were not intended to be a permanent buffer but a temporary device to counteract hoarding and unduly high prices.

It was also pointed out to the critics of the zonal arrangement that the rice requirements of the zone could be fully met only with some measure of assistance from the Centre.

The exchange of views on the food problem had a more constructive aspect to the extent that it dealt with long range needs and possibilities. It is interesting to see a veteran, orthodox Congress leader like Mr Vedaratnam Pillai questioning the practical usefulness of ceilings as an incentive to production, when in another place a Union Minister in charge of Food was extolling ceilings, as an indispensable preliminary to increased output on a national scale.

According to Mr Vedaratnam Pillai there was still great scope for adding to the cultivable area and for better facilities and concessions to producers. In the Tanjore District, he said, there were still 60,000 acres which could be brought under the plough, though about half the area would need waters diverted from the rivers.

In Coimbatore and other Districts, individual peasants have demonstrated that by intensive cultivation, one acre could be made to yield five to six thousand pounds of paddy, a level of output which if generally attained will rescue the State permanently from the remotest shadow of a food deficit. There is no doubt that incentives particularly in the form of prizes and other social distinctions can go a long distance toward increasing total food production.

It was complained by one member that in certain places of high food grain yields, cash crops were being substituted. There is an answer to this complaint in the Food Minister's statement that the agricultural problem has to be understood on a wider setting than mere food production. In Madras particularly, cash crops are no less important than food grains as they not only impart a certain stability and balance to the economy of the State, but enable the most profitable utilisation of cultivable land.

That there is no royal road to food sufficiency is beyond question. When the Chief Minister of Kerala was in Calcutta, he explained at one of the meetings he addressed how a State could improve its production through the efforts of individuals and small groups and even without the least dependence on engineers, other experts or on external aid of any kind. Mr E. M. S. Nambudripad explained how small tanks and canals could be repaired and small plots of land lying waste almost all over the country reclaimed and attended to in the most economical way and when there were cooperative societies, these things could be done in a more systematic and larger scale.

As conditions obtain today, the uncertainties which have crept into land-lord tenant relations and the revolutionary outlook of certain reforms act as disincentives. Nor are these confined to the land owners. Whatever be the nature of land reforms which a particular State Government are keen on achieving, good relations between owners and tenants are always indispensable. It cannot yet be said that in Madras, conditions are happy in this respect.

The small land holder who, according to statistical data made available through recent sample surveys, forms the backbone of the peasantry, will have to be assured freedom from harassment and a remunerative price. In the distribution of manures and other facilities to the cultivator, departmental red tape remains a matter of wide complaint. The Community Projects and NES Blocks must provide a satisfying and enduring answer to some of these problems.

(Continued on page 946)

South Indian Notes

Nationalisation of Text-books

Presiding over the conference of Educational Publishers at Hyderabad, Mr M. Venkatarangalya, Editor of "Educational India" urged the Andhra Pradesh Government to abandon the proposed scheme of nationalisation of text-books. The Government's stand on nationalisation was based on the feeling that publication by private sources, gave room for unhealthy competition and corruption. Though it was true that influence was brought to bear on the members of the Text-Book Committees and school authorities by publishers and politicians, the remedy for this should have been found in the selection of such members as were proof against such malpractices to form the Committee and not in forthright nationalisation. In this case even the Government could not escape responsibility if the members succumb to corrupting influences.

Mr Venkatarangalya pointed out that the success of the Government's scheme would depend on its ability to handle the whole business in its own press which for this purpose has necessarily to be an up-to-date one from every point of view. If it should happen that the Government in its inability to cope up with the work, employs private agencies to transact the business, it would open the door to corruption which it was the objective of nationalisation to root out.

The other arguments for nationalisation such as financial benefits to the Government and superiority of text-books are also baseless. Thus the whole scheme of nationalisation according to Mr Venkatarangalya is a fruitless venture. He pointed out that it would be unwise on the part of the Government to divert forty or fifty lakhs of rupees out of its funds to a work of this character at present. It was further pointed out that the pressing need of the moment was not nationalisation but research in textbook writing. He outlined a scheme whereby training colleges would be called upon to do research on this matter under specific recommendations by the Government as to the subject matter, language, style and even the kind of illustrations, and maps.

The nationalisation scheme has caused great dismay among the publishers in the State, since this means the closure of the business of the registered publishers. If these interests are to be enabled, the event of nationalisation implemented, to wind up their business without loss, it is reasonable that sufficient notice should be given. In the alternative reason as compensation and provision of it to the workers who would be thrown out of employment have to

be guaranteed. A resolution to that effect was passed at the conference.

Soil Conservation

Inaugurating the eleventh meeting of the State Soil Conservation Board, Mr M. Bhaktavatsalam, the Home Minister of Madras, indicated that comprehensive legislation for promoting schemes of soil conservation, was likely to be introduced in the next session of the State Legislature. The importance of soil conservation, based on long-term considerations of soil fertility, is, in view of the heavy damage that the uncontrolled elements of weather are capable of doing to the earth's surface, very great. Measures against soil erosion are as urgently needed as any other measure, intended to raise productivity. The Second Plan has laid equal emphasis on this as on others. The proposed legislation of the Madras Government reflects the concern of the authorities at the magnitude of the problem as also their determination to fight it.

The rationale for such a comprehensive measure, lies, according to Mr Bhaktavatsalam, in its potentiality to help make soil conservation work more effective and the procedure less cumbersome. That such a measure to expedite soil conservation work is called for would be evident from the fact that though an area of 34710 acres has been brought under its operation,

actual achievements extend only upto an area of 14820 acres. The problem of soil erosion is particularly acute in the Nilgiris and the Kundah Project area. For the current year the Government have in view the bringing under the scope of soil conservation scheme an area of nearly 17000 acres.

The particular lines of work which the soil conservation scheme has taken are extension of casuarina plantations, reclamation of eroded lands by afforestation, development of fodder and pasture and reconnaissance survey of eroded lands outside the reserve forest. The afforestation scheme would be taken up over an area of about 23,500 acres in the Cuddalore and Tiruvannamalai divisions, while the scheme for the development of fodder and pasture aimed at developing 3,750 acres as pasture and fuel areas in the Chinglepet district.

The foreign exchange problem has had its impact on the work of soil conservation also. For one of the limiting factors to the progress of soil conservation work is the availability of tractors. Under the present conditions of stringency in the foreign exchange front, imports of tractors are out of the question and therefore the targets of work in connection with soil conservation, had to be revised. All the same it is necessary to accelerate the work by fully utilising the grants and loans sanctioned by the Government of India. Co-ordination of the work done by the various agencies such as the P.W.D., Forest and Agricultural Departments is also essential.

SOUTH INDIAN MARKETS

Hides and Skins Quiet

THE markets for Hides and Skins in Madras ruled generally quiet last week. In the tanned Hides section, arrivals of Cow hides were on the same restricted scale as in the previous week. There was moderate clearance with prices ruling unchanged. Buff Calf and Cow Calf sections were quiet. Arrivals of Buff hides were moderate with a fair clearance and prices were firm to a shade dearer.

On the export front, trading with the UK continued to be difficult and the only enquiries worth mentioning were for light weights, runs and fourths. Business was reported done in market quality at 49d to 54d, depending on the mark. Business was patchy in the Calf section. While fourths were saleable at a discount, runs were not easy to sell. In Buff Calf, there was good enquiry for 2-2½ lbs thirds and business was reported done at

48d for good class marks. Single tannage Cow Calf was sold between 67d and 68d.

In the Tanned Skins section, prices of market quality Goat skins were unchanged, while those of Sheep skins were slightly firm.

In the export section, trading in prime class Goat skins was difficult, mainly on account of the firmness of the Madras market. There was, however, some enquiry for 11-12 lbs fifths and business was done at 10sh 9d. Prices of light weights were maintained between 14sh 6d and 14sh 9d. In Sheep skins, primes ruled steady. In commons, the market was steady and business was done in 8-10 lbs on the basis of 8sh 3d for runs.

Groundnuts

Prices in the Madras Groundnut market maintained a firmer tend-

ency; and the warning issued by the Government that the trade should not entertain bullish ideas regarding exports of groundnut oil, had no effect on market sentiment. Arrivals were about 250 tons and these were taken up by small crushers. The rate for the new crop peanut variety improved to Rs 167 from Rs 165 per candy.

In the Groundnut Oil section, the rate for the ready position improved further to Rs 345 from Rs 342 per candy. The main contributory factors for the firmer tendency in prices were the poor offerings and the reluctance on the part of sellers to reduce rates. Only local retail interests took up small quantities in order to meet their immediate requirements.

Rubber

Rubber production in India is estimated around 25,000 tons during the current year, while manufacturers estimate their requirements at 35,000 tons. They, therefore, want the shortage to be met by imports for which the Government should adopt a more liberal policy.

In the world market, rubber prices have been falling, touching a low of Rs 136 per 100 pounds. The statistical position of the commodity is against any immediate chance of high prices. It is learnt that Indonesia has large offers to make, while Malaya holds one of the largest stocks in the past seven years. Also, Ceylon has 20,000 tons more of rubber to offer in the open market.

Cashew

According to a report from Cochin, Cashew production this year may reach 14 lakh cases. This is a good record for a year, which found may interruptions in production and an unexpected shortfall of first quality nuts.

In spite of the large production, kernel prices have been holding steady at 51 to 52 cents per pound. American buying has been excellent, but steady. Russian buying is expected to provide some strength, especially since their order appeared at a time when labour troubles were at their height.

Pepper

Pepper markets have been ruling generally steady with prices showing small improvements over last levels, thanks to rumours that some of the East European countries, perhaps Russia, bought a couple of hundred tons for shipment during January-February at Rs 105 per cwt f.o.b. Heavy rains in the pepper belts and fair demand in ready were also contributory factors. In the Allepey market, the rate was quoted at Rs 562.50 per candy for superior Palai variety and Rs 400 to Rs 550 for the new season variety.

TEXTILE INDUSTRIES FAIR

SPONSORED BY THE MINISTRY OF COMMERCE & INDUSTRY, GOVERNMENT OF INDIA

7th DECEMBER 1957—6th JANUARY 1958
Venue of the Fair—Nariman Point, Marine Drive, Bombay.

An exhibition of cotton, silk, rayon, jute and other textile machinery, stores, auxiliaries, dyestuffs and the products of these industries, as also the handicraft and small scale industries. This exhibition also provides a general shop section, entertainments and other attractions.

For details and stall requirements contact:

Elphinstone Bldg., Ground Floor,
Vir Nariman Road, BOMBAY 1. Tel: 251807.

This Notice is not an invitation to subscribe for shares but is issued for the purpose of giving information to the public concerning the Company. A formal Prospectus dated 5th November, 1957 has been delivered to the Registrar of Companies, West Bengal, for registration and copies thereof are obtainable from the Bankers and Brokers named below.

The Consent of the Government of India has been obtained to this issue by an order, a complete copy of which is available for public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Application is being made to the Calcutta Stock Exchange for permission to deal in and for an official quotation of the Equity Shares of the Company.

The Subscription List will open at the commencement of banking hours on the 19th day of November, 1957, and in accordance with the requirements of the Securities Contracts (Regulation) Rules, 1957, will close on the 21st day of November, 1957, or later at the discretion of the Directors.

PHILIPS INDIA LIMITED

(Incorporated under the Indian Companies Act, 1913.)

SHARE CAPITAL

Authorised

Rs. 5,00,00,000 divided into 50,00,000 Shares of Rs. 10 each.

Issued, Subscribed and Paid-up

Rs. 1,70,00,000 divided into 17,00,000 Equity Shares of Rs. 10 each.

LOAN CAPITAL

The Company has no debentures or other loan capital outstanding but has a bank loan and overdraft secured by hypothecation of stock-in-trade and book debts and also an unsecured bank overdraft.

ISSUE OF

5,00,000 EQUITY SHARES OF Rs. 10 EACH FULLY PAID AT Rs. 12.50 PER SHARE PAYABLE IN FULL ON APPLICATION.

After the shares now being issued have been allotted the Company will not be deemed to be a Company in which the public are substantially interested within the meaning of Section 23A of the Indian Income-tax Act, 1922.

The shares now being issued will rank for any dividend that may be declared in respect of the profits of the current year and of any subsequent years and in all respects *pari passu* with the Equity Shares of the Company already issued.

History & Developments :

The Company was incorporated in India in 1931, as a Private Company primarily for the purpose of carrying on the business of selling in India the great variety of articles manufactured from time to time by N. V. Philips' Gloeilampenfabrieken and their associated companies in the Netherlands under their trade marks. The Company was converted into a Public Company on the 31st October, 1957.

Since 1938, the greater part of the electric lamps sold by the Company has been manufactured in India by Electric Lamp Manufacturers (India) Private Ltd., Calcutta and since 1951, also by Hind Lamps Private Ltd., Shikohabad.

From the commencement the radio business developed satisfactorily and due to the excellent reputation which Philips radio receiving sets enjoyed with the public it was felt in 1947 that a sufficiently stable basis had been reached to start production in India. In compliance with the Government's policy gradually to reach self-sufficiency in as many industries as possible, it was decided in 1951 to start with the manufacture of radio components as well.

In support of these manufacturing activities agreements have been concluded with N. V. Philips' Gloeilampenfabrieken of Eindhoven, the Netherlands, whereunder the Company obtains the benefit of the research facilities and the vast technical knowledge which the said N. V. Philips' Gloeilampenfabrieken have and will have at their disposal in the field of the production of radio apparatus, radio components, lighting fittings and accessories, public address equipment and other electrical articles; pursuant to Licence Agreements concluded by the Company with N. V. Philips' Gloeilampenfabrieken licences in respect of such manufacture under patents owned by the said N. V. Philips' Gloeilampenfabrieken in India has been granted to the Company.

By a Registered User Agreement the Company has been granted the right to use trade marks owned in India by N. V. Philips' Gloeilampenfabrieken on all products made by the Company—or by third parties for the Company—in accordance with the specifications and on the basis of technical assistance granted by the said N. V. Philips' Gloeilampenfabrieken.

Having regard to the nature of the Company's main business it is evident that there is a close relation between the further electrification of the country and the sales possibilities of the Company.

Under the First Five Year Plan the electrification of the country increased by about 50%. During the same period the Company succeeded in expanding its business to

a far greater extent due to the fact that, in full realisation of the increasing demand for electric and electronic articles, production facilities have been enlarged whilst modern, efficient and well organised regional or branch offices were established in Calcutta, Bombay, Delhi, Madras, Patna, Kanpur, Lucknow and Bangalore.

Moreover and mindful of the fact that in this line of business sales and service go hand in hand, nation-wide service facilities were made available to the public at reasonable cost.

All this, combined with the excellent quality for which the Philips' name has become world famous has led to a strong demand for the Company's products throughout India.

Under these circumstances it seems reasonable to anticipate that the Company's progress will continue during the Second Five Year Plan period in which a further substantial increase in the country's electrification is planned. Apart from the obvious influence of this further electrification on the Company's Light business, it should be noted that under the Second Five Year Plan the Government has decided to arrange for an everwidening network of broadcasting stations which will result in a rapid increase of the market potential for radio sets.

It is on the strength of this favourable outlook that the Company decided to plan a second manufacturing centre at Loni, near Poona for which purpose the Company has entered into an agreement with The Imperial Tobacco Company of India Limited, dated the 1st December 1956, to purchase a plot of land measuring about 60 acres for Rs. 4,00,000. Up-to-date manufacturing space at Loni to house metalware and electroplating departments has already been provided for. The production in these departments is due to start early in 1958, for which purpose imported modern machinery and equipment is being installed at present.

For these metalware activities at Loni the sanction of the Central Government has been received in terms of a Licence under the Registration and Licensing of Industrial Undertakings Rules, 1952, concerning which Licence the following statement has been included in the Prospectus:—

"A licence has been obtained from the Central Government for shifting a part of the undertaking from Calcutta to Poona of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it."

It is, however, emphasised that it is the Company's intention to maintain the output of the Calcutta factories at full capacity whilst the distribution of the Company's radio products will be possible from two centres. Apart from providing better service to its customers this will involve a considerable saving in expenditure.

The next step will be the construction of new premises to house the second manufacturing centre for radio components and the additional production of radio receiving sets from parts manufactured both in Calcutta and Loni.

New technical developments in the field of electronics are within the orbit of the Company's activities and will be vigorously pursued.

As a result of the progressive industrialisation of the country it may be expected that the demand for electronic equipment for industrial and scientific application available for sale by the Company will continue to increase.

Television, as and when introduced in India, will receive the Company's closest attention. Supported by the vast experience of N. V. Philips' Gloeilampenfabrieken with regard to television all over the world, the Company expects to play an important role in this respect.

The technical "know-how" accessible to the Company, its manufacturing experience, its trained technical staff, service and sales organisation will further strengthen the leading position of the Company not only in respect of its present activities but also in the new fields of electronic application mentioned above.

LAND, PREMISES AND PLANT:

The Company's main factory premises in the Calcutta area are situated at 19, Convent Road, Entally, and 12A, Canal Street, Entally. At both the abovementioned premises the Company has established well equipped and up-to-date factories where the manufacture of radio receivers, radio components, amplifiers, lighting fittings and accessories, as well as servicing is carried on. The works are well equipped with plant and machinery of high quality and up-to-date design to ensure production in accordance with the latest production techniques. All the buildings, plant and machinery are well maintained.

Whilst the Canal Street premises are held under a tenancy arrangement at a monthly rental of Rs. 2,600, the Convent Road premises are the property of the Company. In order to be able to extend the factory and so increase the production a plot of land containing an area of approximately 1 bigha, adjacent to the Convent Road premises, was purchased in 1957 for Rs. 1,30,000.

In addition, the Company, as mentioned above, has contracted to

purchase a plot of land at Loni in Bombay State measuring about 60 acres in area for the purpose of substantially increasing its production facilities. The Company already enjoys on this plot modern manufacturing facilities equipped with recently imported modern machinery for the production of metalware and for electroplating.

OFFICE BUILDINGS:

The Central Offices of the Company are situated at 7, Justice Chandra Madhab Road, Calcutta and 221, Dadabhai Naoroji Road, Fort, Bombay.

Regional Offices have been established in Bombay, Calcutta, Madras and New Delhi and Branch Offices are situated at Bangalore, Kanpur, Lucknow and Patna.

For all the abovementioned office buildings the Company has entered into lease agreements.

GODOWNS:

The Company possesses a great number of godowns for storage of raw materials and semi-manufactured articles near the factories and for finished products all over the country.

OTHER PREMISES:

For the housing of staff personnel the Company has entered into lease agreements for residential flats in Bombay, Calcutta and Delhi.

MANAGEMENT AND STAFF:

The Chairman and Managing Director as well as the other Directors have been connected with the Philips organisation for years and their valuable experience and guidance in the Company's various fields of activity will be available. They are assisted by other able and experienced officials.

In connection with the rapid growth of the Company during the last few years and the necessity to increase the number of employees (nearly 100 per cent between 1951 and 1956) the training of staff both in the technical and commercial fields and in that of accounting has become an important part of the Company's policy.

Such training is organised in India as well as abroad. In the former case personnel attend—apart from training courses within the Company—Management Courses organised by Industry in India.

Training outside India is organised in co-operation with N. V. Philips' Gloeilampenfabrieken, the Netherlands.

OBJECTS OF ISSUE:

The objects of this new issue are to enable the Company, with the participation of Indian capital, to expand its production, to extend the range of its activities and to provide additional working capital.

Financial Information :

The following is a condensation of the Auditors' Report by the Company's Auditors, Messrs.

[November 16, 1957]

Lovelock & Lewes, as published in the Prospectus.

Year ended	Sales	Profits before Depreciation and Taxation	Net profits (after Depreciation and Taxation)
	Rs.	Rs.	Rs.
1952	1,70,49,141	16,55,751	7,53,508
1953	1,65,72,892	1,91,319	4,70,816
1954	2,03,66,666	34,094	3,14,855
1955	2,92,25,153	15,81,724	11,04,472
1956	4,22,64,729	47,37,997	22,77,721
6 months to 30-6-1957	2,35,70,707	27,90,770	11,81,881

ASSETS AND LIABILITIES as at 30th June, 1957:

Fixed Assets (at original cost less depreciation), Capital Expenditure in Progress, and Investments (at cost)	Rs. 62,16,998
Current Assets	4,38,77,473

Less Liabilities	4,42,26,473
Net Assets as at 30th June, 1957	58,67,998

DIVIDENDS ON PAID-UP CAPITAL:

Dividends were 20% for the year ended the 31st December, 1951; 25% for the year ended the 31st December, 1952, and nil for each of the years ended 31st December, 1953, 1954 and 1955. For the year ended 31st December, 1956 a dividend of 48% was declared.

PAST TRADING:

During the years prior to 1953 the Company's activities were concentrated in the main cities of India and more particularly in Calcutta. Plans were made for a vigorous programme of expansion and in the years 1953 and 1954, as a first step and at considerable expense, a countrywide sales organisation was established. This expense, however, is already bearing fruit and it is confidently anticipated that the future will show that it was amply justified as the resulting India-wide sales organisation is in a position to provide the necessary facilities not only for a rapid increase of sales of products hitherto handled but also for the promotion of new products. The outcome of this policy is

reflected in the Company's turnover figures as follows (1952=100).

1952	100
1953	97
1954	119
1955	171
1956	248

This marked increase of the Company's turnover during the last few years has given rise to a corresponding increase in the production of the Calcutta factory and has rendered it desirable to expand further the manufacture of components and also to provide additional space in order to house machinery for metalware production and electroplating at the second manufacturing centre at Loni. By these means the Company will be rendered less dependent on importations from abroad and a corresponding amount of foreign exchange will be saved.

Because of these factors the results for the years 1952, 1953 and 1954 bear no relationship to those of the subsequent years. The profits for the year ended 31st December, 1956 and for the first half year of 1957 show clearly the fruits of the policy of the Company of extending their sales organisation all over India.

FUTURE PROSPECTS AND DIVIDENDS:

The turnover as well as the profits of the Company for the first 6 months of the current financial year exceed the relative figure for 1956 and whilst it is too early to forecast profits for the full financial year 1957, the Directors expect that in the absence of adverse unforeseen circumstances such profits should not be less than those for the year 1956. The Directors, therefore, have every reason to hope that the results for the current year will enable them to recommend a dividend on the increased capital which will be more than commensurate with the length of time during which the new shareholders will have held their shares and that as regards 1958 with a continuance of the present level of trading a dividend of approximately 10% per annum may be anticipated. With the additional finance now to be made available to the Company and with the Company's various plans gradually materialising it is confidently expected that profits of future financial years will show an increase consistent with the extension of the Company's activities.

General Information:

MINIMUM SUBSCRIPTION—The minimum amount which in the opinion of the Directors is required to be provided in respect of each of the matters mentioned in Clause 5, Part I of Schedule II of the Companies Act, 1956 is Rs. 50,00,000.

UNDERWRITING—The shares now intended to be issued have not been underwritten but the Company will pay brokerage as indicated below.

INTEREST OF DIRECTORS—Mr. P. C. Vink is the Managing Director of the Company and receives remuneration for his services as such.

Mr. D. P. Dunderdale is a partner in the firm of Messrs. Sandersons & Morgans, Solicitors to the Company.

Dr. P. K. Kapre, Mr. H. R. Vorstman and Mr. J. Zantman are full time employees of the Company and receive remuneration as such.

No Director has any financial or other interest in any of the property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it.

MANAGEMENT—The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents. **BROKERAGE**—Brokerage at the rate of 25 Naye Paise per equity share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stock broker.

Copies of the Prospectus and Forms of Application will not be available at any of the Company's offices but can be obtained from the Bankers named above, at any of their Branches in India, and the following Brokers:

Managing Brokers

Calcutta: PLACE, SIDDONS & GOUGH, 6, Lyons Range, Calcutta 1.

Brokers

Bombay: BATLIVALA & KARANI, Union Bank Buildings, Dalal Street, Fort, Bombay 1.

New Delhi: HARBANS SINGH MEHTA & CO., 33, Regal Buildings, Parliament Street, P.O. Box 300, New Delhi 1.

Madras: PATERSON & CO., 22, Errabalu Chetty Street, P.O. Box 48, Madras 1.

November 16, 1957]

Mukand Iron and Steel Works Limited

MARCH TOWARDS STABILITY AND PROGRESS

Speech of the Chairman, Shri Kamalnayan Bajaj

The following is the speech of the Chairman, Shri Kamalnayan Bajaj, delivered at the 19th Annual General Meeting of the Mukand Iron and Steel Works Limited, held at Bombay on Tuesday, November the 5th, 1957.

Gentlemen,

I have great pleasure in welcoming you to this, the 19th Annual General Meeting of the Company, and in presenting to you for adoption the Audited Statements of Accounts for the year ended 31st March 1957 and Reports of the Directors and Auditors thereon. As the Statements of Accounts and the Reports are in your hands for some time now, with your permission, I take them as read.

The working results of the year have been fairly satisfactory and we can say with renewed confidence that the Company has now definitely turned the corner in its march towards stability and progress. The production of steel bars and rods in the steel rerolling mills of your Company has increased from 23,610 tons to 32,123 tons in 1956-57, an increase of 35%. The production of steel castings has shown a rise of 63% from 2,549 tons to 4,153 tons. The gross profit is Rs. 27.72 lakhs as against Rs. 16.09 lakhs for 1955-56. All this is indicative of the advance made by the Company in that direction.

It is a matter of great satisfaction to me and my colleagues on the Board that it has been possible for us this time to recommend to you declaration of dividends on ordinary and deferred shares. After the rude shock of partition in 1947 which involved the Company in a loss of its major assets in Lahore, the Shareholders of the Company have been patiently waiting for the last ten years for a return on their investment. I trust they would now feel that the confidence which they placed in the management of the Company all these years has resulted not only in rehabilitating this Company but also in bringing it to its present stage of development and profit-earning capacity.

EXPANSION PLANS

With the growing industrialization in India the demand for steel castings in the country is increasing. The Company has expanded its activities to a certain extent by making improvements. It has further planned an expansion programme for steel castings for which an application has been made to the Government of India under the Industries (Development & Regulation) Act of 1951. It is hoped that the necessary sanction will be granted by the Government shortly.

In order to plan the expansion activities of the Company on an efficient basis and to further improve the existing working, the Company has entered into a technical aid agreement with the well-known British steel foundry, Messrs. David Brown Industries Ltd., England, for a period of 8 years during which the Company will get technical guidance on problems relating to the steel foundry including training facilities for the personnel of the Company in the works of the British Company.

LABOUR SITUATION

Our relations with labour have, throughout the year, been cordial and happy. As you may have noticed from the chart published in the Annual Report, the average earnings per worker of your Company have increased by 57% over his earnings in 1950-51, while the cost of living index during this period has increased by 13%, thus giving a net increase of 44% in the real earnings of the workers. In the ultimate analysis, after a certain limit, the increase in the workers' earnings will have to be achieved only by increase in his skill and better application of his mind to the work allotted to him as would result in greater productivity.

In order to combat inflationary trends in the economy, of which wage increases are contributory factors, reduction in costs is necessary by increasing productivity. The quality of the products should also improve. For this purpose improvements and modernization in plant and equipment should continue to be made by the industry. I trust that the Government of India would give all necessary facilities to the industry for this purpose, and such foreign exchange requirements as may be essential would be given high priority.

To meet the increasing needs of the Company for finance, the Directors propose to issue new ordinary share capital. Sanction from the Controller of Capital Issues has already been received for Rs. 20,47,475.

POWER SUPPLY

In my address to you last year I had referred to certain difficulties. The question of increased power supply was one of them. I am glad to inform you that additional power has since been sanctioned to us by the Government of Bombay. Regarding the rates of electricity, the tariff has recently been revised by the suppliers and there is a slight reduction of rates though not to the extent we desired. The

question of railway siding is still pending.

The Tariff Commission which has been entrusted with the work of fixing conversion charges for the Steel Re-rolling Industry for converting steel billets into bars and rods is at present seized with the matter. Its report is likely to be ready in the early part of 1958.

The need of the industry for rehabilitation and expansion was also referred to by me in my speech last year. I trust that the Tariff Commission as well as the Government of India would make, as in the case of the major steel producers and the cement industry, adequate provision in the costs payable to the industry so as to cover the industry's need for rehabilitation, modernization and expansion.

COMMITTEE REPORT

The Committee on Electric Furnaces, Steel Foundries and Steel Re-rolling Mills appointed by the Government of India in July 1956, to which reference was made by me last year, has submitted its report to the Government, which is now on the floor of the Parliament. The Government have not yet taken any final decision on the same. The report has made out a strong case for import of sufficiently large quantities of billets on the ground that the steel rolled by this industry is needed for the projects which are part of the core of the national plan. It has also recommended that the existing rolling mills should be permitted to improve and modernize their plants for better and more efficient working. In the matter of the steel foundry industry also, the Committee has recommended that existing industries should be allowed to expand. I trust the Government would take a favourable decision on these recommendations at an early date.

The prosperity of the industry in which your Company is engaged, in fact the prosperity of the country as a whole, is linked with the success of the Plan, or rather the hard core of the Plan. We are now amidst the second year of the Second Five-Year Plan. The Plan is encountering difficulties, particularly in the availability of foreign exchange. These difficulties should not dishearten us. As our Prime Minister has repeatedly said, these are difficulties of progress, not of stagnation. The real cause for anxiety is, however, on the agricultural side. In spite of the emphasis on the industrial development in the Second Five-Year Plan, food remains the key to the success of the Plan.

I thank the Executives, Staff and Workers for the efforts made by them in improving the working of your factory, without which it would not have been possible to get the satisfactory results as disclosed in the audited Balance Sheet and Profit & Loss Account which you are going to consider this evening.

RANICHERA TEA COMPANY LIMITED.

NOTICE is hereby given that the 49th Annual General Meeting of the Shareholders of Ranicherra Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday the 5th December, 1957, at 3-30 P.M. for the following purposes:—

- To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
- To declare a Dividend.
- To appoint a Director in place of Mr. O. N. Goenka, the Director retiring by rotation at the Meeting.
- To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 22nd November, 1957 to 5th December, 1957 both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.
C. HOCKLEY
Secretary,
Managing Agents.

3, Netaji Subhas Road, Calcutta, 7th November, 1957.

NOTE:—

- A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.
- Payment of the proposed Dividend, if declared, will be made on or after 16th December, 1957, only to those members whose names are registered in the Books of the Company on 5th December, 1957, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

NORTH INDIAN MARKETS
(Continued from page 923)

Pradesh and smaller arrivals Barley was also in good demand, while the prices for Maize and Bajra were slightly easier on reports of increased arrivals.

Conditions in the Bombay grains market also ruled firm, Rice recording a rise of about Rs 20 per candy. This was attributed to the brisk demand from consumers and the rumours that the Madhya Pradesh Government had decided to ban the export of the commodity from the State.

The marked strength in rice had a tonic effect on the Coarse grains section where Jowar and Bajra recorded gains, the former moving up by about Rs 5 and the latter by Rs 7 per candy. Pulses registered an around advance, partly because of a broader buying interest and partly because of the strength in rice.

Of course...it's wrapped in TRAYOPHANE

The new name for Trayons Transparent Film

It's smart!
It's inviting!
It's attractive!
It's unsoiled!

- ★ TRAYOPHANE makes your products look smart, elegant!
- ★ The vivid, brilliant colours of TRAYOPHANE make your sale easy!
- ★ Its perfect transparency means greater visibility!
- ★ A ream (containing of 500 sheets each of 30" x 24" size) of TRAYOPHANE costs Rs. 44.00.

stops the eye - starts the sale!

THE TRAVANCORE RAYONS LIMITED

Rayonpuram P.O. Kerala State
Sales Office: 2/6 Second Line Beach, Madras-1

The subscription list will open at 10.30 a.m. on Friday, the 22nd November 1957 and will remain open until Saturday, the 30th November 1957 unless closed earlier or later at the discretion of the Directors but not before Tuesday, the 26th November 1957.

INCOME			
Sales	...	...	Rs. 3,00,00,000/-
Miscellaneous Receipts	...	...	Rs. 2,75,000/-
			Rs. 3,02,75,000/-
EXPENSES			
Consumption of Stores and Raw Materials	...	...	Rs. 1,94,56,000/-
Salaries, Wages and Bonus	...	...	Rs. 30,54,000/-
Rent, Taxes, Insurance, Interest and Miscellaneous Expenses	...	...	Rs. 30,10,000/-
			Rs. 2,55,20,000/-

GROSS PROFIT .. Rs. 47,55,000/-	
Less Appropriation ..	Rs. 6,10,000/-
Depreciation ..	Rs. 6,87,875/-
Interest on loan from West Bengal Financial Corporation ..	Rs. 6,78,875/-
Less Tax payable on assessable profit ..	Rs. 16,70,000/-
Tax on Dividend in excess of 6% ..	Rs. 18,00,000/-
NET PROFIT ..	Rs. 22,76,125/-
Sinking Fund for loan ..	Rs. 80,000/-
Preference Dividend at 6% ..	Rs. 21,96,125/-
Ordinary Dividend at 20% ..	Rs. 10,60,000/-
Reserve Fund ..	Rs. 11,36,125/-
Carried Over ..	Rs. 8,00,000/-
	Rs. 3,36,125/-

Profits

On the basis of normal production after expansion of the Factory it is expected that the total sales will be over Rs. 3 crores per year. The profit as worked out above is estimated at Rs. 40,76,125/- after providing Rs. 6,10,000/- depreciation and the net profit after payment of taxes is expected to be Rs. 22,76,125/-. The increased rate of profit is due to the fact that the overhead and other expenses will come down considerably after the expansion thereby appreciably adding to the profit margin.

Dividend

The profits that the Company has been earning so far and that it expects to earn after the additional Plant and Machinery go into production would, in the opinion of the Directors, be sufficient to cover payment of Preference Dividend as well as an attractive rate of Dividend on the Ordinary Share Capital.

FINANCIAL INFORMATION

Auditors' Report

A copy of the report of the Company's Auditors—Messrs. G. Basu & Co., is appended below, as required under Clause 24 of Part I of Schedule II to the Companies Act, 1956.

The Directors,
Messrs. National Rubber Manufacturers Ltd.,
Leslie House,
19, Chowringhee Road,
Calcutta-13.

Dear Sirs,

We have examined the books and accounts of Messrs. National Rubber Manufacturers Ltd., as kept in Calcutta in which are incorporated the certified returns from Madras Branch (for the years ended 31st December 1954, 31st December 1955 and 31st December 1956) and Bombay, Delhi and Kottayam Branches (for the year ended 31st December 1956) for the five years ended 31st December 1956 and report that the profits of the Company are as set forth. These profits have been arrived at after charging all expenses of working, management and consultants' fees including provision for normal depreciation on the basis as allowable for taxation and after making such adjustments as in our opinion are appropriate.

G. BASU & CO.,
Chartered Accountants,
Auditors.

STATUTORY AND GENERAL INFORMATION

MAIN OBJECTS

The main objects of the Company include the manufacture and sale of Mechanical Rubber Goods, Tyres and Tubes.

All the objects of the Company are in law main objects and therefore a copy of the Objects Clause of the Company's Memorandum of Association is annexed hereto and forms part of this PROSPECTUS.

MINIMUM SUBSCRIPTION

According to the estimate made by the Directors a minimum amount of Rs. 5 lakhs has to be raised by this Issue of Shares in

order to provide for expenses under the following heads:

	Rs	Rs
(i) Purchase price of property (Machinery, Equipments and Land) ..	...	4,00,000
(ii) Preliminary Expenses and Commission ..	...	Nil
(iii) Repayment of money borrowed in respect of the foregoing matters ..	...	Nil
(iv) Working Capital ..	...	Nil
(v) Any other expenditure:		
Brokerage ..	55,000	...
Expenses of Issue ..	45,000	1,00,000
	...	5,00,000

OTHER PREVIOUS ISSUES

This is the first Issue of Shares to the public; no Shares were issued to the public during the two preceding years. No Share or Debenture was issued during the two preceding years for consideration other than cash.

No premium has been charged on any Share of the Company during the preceding two years nor is any to be charged on this issue.

OPTION TO SUBSCRIBE

No contract or arrangement has been or is proposed to be entered into whereby any option or preferential right of any kind will be given to any person to subscribe to any Shares out of this Issue, except as under:

In consideration of the supply of technical information under the Agreement as referred to in item (1) under the heading "Material Contracts" the Company has granted to Goodyear Tyre & Rubber Co. of India Private Ltd., 209, Lower Circular Road, Calcutta, an option, exercisable during the currency of the Agreement, to purchase up to 25% of the Company's Ordinary Shares at any time issued and outstanding, at an amount equivalent to the intrinsic value of such shares to be determined by two Chartered Accountants one being nominated by each party. The said option is subject to Government sanction if required under any Government law or valid regulation.

UNDERWRITING

The Shares now intended to be issued have not been underwritten but the Company will pay brokerage as indicated below.

BROKERAGE

Brokerage will be paid to Brokers and Banks @ 15nP. per Ordinary Share of Rs. 10/- each and Re. 1/- per Preference Share of Rs. 100/- each on allotments made in respect of applications bearing their stamps. Messrs. Place, Siddons & Gough, 6, Lyons Range, Calcutta, are the Managing Brokers to this issue and will be in addition entitled to a commission 6nP. per Ordinary Share and 50nP. per Preference Share on all Shares subscribed by the public. Brokerage is estimated at Rs. 55,000/- and will be payable by the Company.

No Share Commission, whether to any Underwriter, Subscriber or to any other person was paid by the Company within the two preceding years or is now payable to any promoter or officer.

EXPENSES OF THE ISSUE

The expenses of the issue other than brokerage are estimated at Rs. 45,000/- and will be payable by the Company.

PAYMENT TO PROMOTERS

No amount or benefit has been paid or given within the two pre-

ceding years or is intended to be paid or given to any promoters, directors or officers of the Company apart from normal remuneration and reimbursement paid to such directors and officers.

MATERIAL CONTRACTS

The following Contracts not being contracts in the ordinary course of business which are or may be material have been entered into by the Company and may be inspected at the Registered Office of the Company at any time during office hours—

- (1) Manufacturing cum Distributing Agreement with Messrs. Goodyear Tyre & Rubber Co. of India Private Ltd., dated the 1st January 1954 for 5 years with the right to extend this Agreement for an additional period of 5 years.
- (2) Agreement dated the 15th February, 1957 with Messrs. Gungahur Banerjee & Co. Private Ltd., for sale of Cycle Tyres and Cycle Tubes.
- (3) Letter dated 9th September, 1957 from the West Bengal Financial Corporation for a loan of Rs. 9,50,000/-.
- (4) Agreement dated 21st February, 1957 with Mr. Kedar Nath Mookerjee appointing him as the Managing Director of the Company for a period of 5 years.
- (5) Agreement dated 3rd July, 1956 for the purchase of 7 1/2 bighas of land at 4, Paymental Garden Lane, Calcutta 15, at a price of Rs. 93,000/- entered into with Janab Ahmad Buland Akhtar.
- (6) Agreement dated the 6th July, 1955 for lease in respect of Premises No. 15, Chingrighatta Lane, entered into with Sri Anil Kumar Sarkar, Sri Bimal Kumar Sarkar, Sri Kamal Kumar Sarkar and Sri Gour Hari Sarkar.
- (7) Agreement dated the 22nd March, 1957 for lease in respect of Premises Nos. 12, 13 and 14, Chingrighatta Lane, entered into with Sri Anil Kumar Sarkar, Sri Bimal Kumar Sarkar, Sri Kamal Kumar Sarkar and Sri Gour Hari Sarkar.
- (8) Agreement dated the 29th May, 1954 for lease in respect of 54/10, Chingrighatta Road, entered into with Messrs. Dost Mohammed Estates Private Ltd.

Orders for Supply of Machinery and Equipment:—

- (1) Order No. 255 dated 27-3-57 on Messrs. Hermann Berstorff, Hannover, West Germany, for Extruding Machine valued DM. 27,000/-.
- (2) Order No. 277 dated 5-4-57 on Messrs. Leonh. Herbert, Frankfurt, West Germany, for Cycle Tyre Equipments valued £22,580/-.

(3) Order No. 281 dated 8-4-57 on Messrs. Daido Machinery Trading Co. Ltd., Kobe, Japan, for Cycle Tyre Press and Moulds valued £8,668/-.

(4) Order No. 330 dated 29-4-57 on M/s. Technoexport (Foreign Trade Corp.) Praha, Czechoslovakia, for Banbury Internal Mixer and Mixing Mill valued £24,600/-.

(5) Order No. 893 dated 24-9-56 on Messrs. Iddon Bros. Ltd., Leyland, Lancashire, England, for Bale Cutting Machine valued £1,600/-.

(6) Order No. 894 dated 24-9-56 on Messrs. Daido Machinery Trading Co. Ltd., Kobe, Japan, for Heavy Duty Breaker Mill valued £3,980/-.

(7) Order No. 895 dated 24-9-56 on Messrs. Francis Shaw & Co. Ltd., Manchester, England, for Cycle Tyre & Tube Machine valued £19,000/-.

(8) Order No. 896 dated 24-9-56 on Messrs. Hermann Berstorff, Hannover, West Germany, for Spreading Machine valued DM. 42,000/-.

(9) Order No. 393 dated 28-5-57 on Messrs. Francis Shaw & Co. Ltd., Manchester, for Spares valued £953/-.

DIRECTORS AND MANAGEMENT

The Management of the Company is vested in and exercised by Directors. The Company has no Managing Agents or Secretaries and Treasurers. The Articles of the Company provide that:

- (i) Unless otherwise determined by a General Meeting the number of Directors shall not be more than 15 or less than 3.
- (ii) The qualification of a Director shall be the holding of Ordinary Shares of the nominal value of at least Rupees One-thousand in the Company.
- (iii) Unless otherwise determined by the Company in a General Meeting such Directors shall be paid Rs. 100/- for attending every Meeting of the Board of Directors or any Committee thereof.
- (iv) The Directors may from time to time appoint from amongst themselves one or more to act as a Managing Director or Managing Directors of the Company for such time with such powers and on such remuneration as the Board may decide subject, however, to the limitation prescribed in Sections 198 and 309 of the Act.

MANAGING DIRECTOR

Mr. Kedar Nath Mookerjee is the Managing Director and shall hold office under an Agreement dated 21st February, 1957, for 5 years from 15th February, 1957 and shall be entitled to hold office on a monthly remuneration of Rs. 2,000/-. There is no provision

for payment of compensation for loss of office.

INTERESTS OF DIRECTORS

Mr. Kedar Nath Mookerjee is the Managing Director of the Company and receives remuneration for his services as such.

Mr. Nirode Gopal Mookerjee, Mr. Milan Kumar Mookerjee, Dr. Bireswar Mookerjee and Dr. Dasarathi Banerjee are employed by the Company as whole-time Directors and receive remuneration as such.

All the whole-time Directors and the Managing Director are entitled to remuneration as long as they hold office as such.

The above Directors and the Managing Director are not interested in the Company except as shareholders. Save as above no Director has any financial or any other interest in the promotion of the Company and in any other property acquired by the Company during the preceding two years or proposed to be acquired by the Company.

Messrs. Kedar Nath Mookerjee, Nirode Gopal Mookerjee, Milan Kumar Mookerjee and Dr. Bireswar Mookerjee are interested as shareholders of Messrs. Gungahur Banerjee & Co. Private Ltd., who are Selling Agents for Cycle Tyres and Cycle Tubes of the Company and also as members of Messrs. Mookerjee Estates Private Ltd., who are the owners of the building in which the Registered Office of the Company is situated under a monthly tenancy. Mr. D. N. Kapur is interested as a partner of Messrs. Place, Siddons & Gough, Brokers and Managing Brokers to this issue.

VOTING RIGHTS

The Preference Shares entitle the holders to receive notice of any General Meeting and to attend and speak thereat but do not entitle them to vote thereat unless either (1) the dividend on the Preference Shares or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the meeting or (2) the business of the meeting includes consideration of a resolution for winding up the Company or for the repayment or reduction of the Share Capital of the Company or altering the provisions of the Memorandum and Articles of Association with respect to the objects of the Company or varying or abrogating any of the special rights attached to the Preference Shares.

On a show of hands every member entitled to vote who (being an individual) is present in person or by proxy or (being a corporation) is present by a representative or by proxy shall have one vote. On a poll the voting rights in respect of the Ordinary and Preference Shares will be as specified in Section 87 of the Companies Act, 1956. There are no special conditions or restrictions attaching to

the Ordinary share capital of the Company.

No member will be entitled to be present or vote either in person or by proxy at any meeting in respect of the shares registered in his name on which any call or other sums presently payable have not been paid or in regard to which the Company has and has exercised any right or lien.

VARIATION OF RIGHTS

The special rights attached to any class of Shares may be varied or abrogated with the consent in writing of the holders of three-fourths of the issued shares of the class or with the sanction of a resolution passed at a separate meeting of the holders of those shares and supported by the votes of the holders of three-fourths of those shares but not otherwise.

RESTRICTION ON TRANSFER OF SHARES

There are no restrictions on the transfer of fully paid shares, but the Directors may decline to register any transfer of partly paid shares to a person of whom they do not approve and may also refuse to register any transfer of shares on which the Company has a lien.

CAPITALISATION OF RESERVES AND PROFITS

No reserves or profits of the Company have ever been capitalised.

REVALUATION OF ASSETS

Since the incorporation of the Company there has been no surplus arising from revaluation of assets as none has been revalued.

BORROWINGS

Subject to the restrictions imposed by Section 293 of the Companies Act, 1956, the Directors may exercise all the powers of the Company to borrow money and to mortgage or charge the undertaking, property and uncalled capital or any part thereof and to issue Debentures and other securities.

INSPECTION

Copies of the Memorandum and Articles of Association of the Company, Balance Sheets and Profit & Loss Account and Auditors' Reports, the original Consent Order of the Controller of Capital

APPLICATION FOR SHARES

Applications for Preference and Ordinary Shares should be made on the respective forms accompanying this PROSPECTUS and delivered before the closing of the subscription list. The application form together with the remittance for the full amount payable on application may be sent to the Registered Office or any of the branches of the Company's Bankers or to their Brokers. The remittance if not made in cash should be made by cheques or drafts drawn upon a branch of the Bank to

Issues, Licences issued by the Government of India permitting expansion of manufacturing capacity, copies of Contracts and Agreements can be inspected at any time during the usual office hours at the Registered Office of the Company for a period of 14 days from the date of publication of this PROSPECTUS or until the subscription list closes whichever is earlier.

INDEMNITY

Every officer or agent for the time being of the Company shall be indemnified out of the assets of the Company against any liability incurred by him in defending any proceedings whether civil or criminal, in which judgment is given in his favour or in which he is acquitted or in connection with any application under Section 633 of the Act in which relief is granted to him by the Court.

which the application and the draft or cheque is being sent. If drawn on a Bank elsewhere Bank charges at the rate of 25 p per cent. must be included in the remittance. Cheques or drafts should be made payable to National Rubber Manufacturers Ltd. and should for applicant's protection be crossed 'ACCOUNT PAYEE' only. A separate cheque or draft must accompany each application form. Allotment will be notified by despatch of an Allotment Letter but the Directors reserve the full and

uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or any balance of the application money as the case may be will be refunded to the applicant by a cheque on the Calcutta Branch of the Company's Bankers.

Share Certificates will be issued in exchange of the Letters of Allotment. Such Allotment Letters or Share Certificates will be despatched by Registered Post. Further copies of the PROSPECTUS and Application Forms will be available from the Company's Bankers and the Brokers to the issue and also from the Company's Registered Office. The shares when issued will be subject to the MEMORANDUM and ARTICLES OF ASSOCIATION of the Company, a copy of which may be inspected at the Registered Office of the Company during office hours.

Stock Exchanges

IMPRESSIVE RECOVERY

Watch-Dog Writes:

AFTER a subdued opening, stock markets have reacted sharply under the leadership of the speculative issues. Prospects of financial aid from the USA, the absence of any increase in the Indian Bank Rate and a sharp rise in active note circulation, have a bullish effect on the markets and equities, despite profit-taking at higher levels, have finished the week with handsome gains on balance.

Equities on the Calcutta Stock Exchange, after ruling quiet early in the week, staged a marked recovery towards the close.

Steady conditions were obtained on the Bombay Stock Exchange, thanks to a turn for the better in trading sentiment.

Despite steadiness in prices, turnover continued to be restricted on the Madras Stock Exchange.

On the London Stock Exchange, sentiment remained cheerful, being assisted by a number of favourable factors, including a possible easing in wage demand situation.

Calcutta

CONDITIONS on the local Stock Exchange remained quiet early in

the week and operators were generally inclined to liquidate their holdings following the news that the Government of India had no intention of reducing the excise duty on cloth. Revival of the rumours with regard to the rise in the Bank Rate was another contributory factor.

From mid-week, however, the market took a turn for the better and prices staged a steady and sharp recovery due to heavy bear-covering, thanks to the Finance Minister's statement in the Lok Sabha with regard to the prospects of getting sizable foreign aid to implement the second Plan. The absence of any increase in the Bank Rate also contributed to the upward movement in prices. Despite slight profit-taking at higher levels, the market finished at the best levels for the week.

Business in the Gilt-edged section continued to be on a restricted scale, demand being mostly confined to the short-dated issues. Small selling pressure was, however, evident in medium and long-dated issues. 3 per cent 1986 Conversion Loan opened steady at Rs 71.10 and, after touching a low of

Rs 70.80, finished the week better at Rs 70.95.

In the Banking section, Punjab National turned a shade quieter at Rs 65.50 against Rs 66.25 due to profit-taking, while United Commercial remained very steady at Rs 55.50.

Activity in the Jute section was restricted in the absence of follow-up support. Operators were rather worried over the gloomy prospects of the coming jute crop in view of the drought conditions prevailing in certain areas. However, selected scrips continued to receive good support at steady levels on the belief that the profit position might continue to be better as many of the mills were reported to have completed the process of modernisation and rationalisation schemes. Anglo-India changed hands at Rs 149 to Rs 151; Howrah at Rs 16.87 to Rs 17.25; Kinnison at Rs 128 to Rs 131; National at Rs 19.80 to Rs 20.25 and Rs 34.75 to Rs 35.25.

The improvement in sentiment, that was noticed in the Coal section, was well maintained. Hopes were entertained that the expansion in the private sector would have to be increased. Burrakur were taken upto Rs 22.75 from Rs 22.12; Bengal upto Rs 230 from Rs 227 and Amalgamated upto Rs 15.50 from Rs 15.00. Central India changed hands at Rs 6.31 to Rs 6.37 and Western Bengal at Rs 5.87 to Rs 6.06.

Tea shares continued to rule better, although profit-taking at higher levels caused a slight set-

back in prices towards the close. The encouraging working results by most of the companies, better prices still obtained at the auctions and the prospect of the supply and demand position being almost a balanced one—all these factors enthused operators to go in for buying of selected scrips. Baghmari were taken upto Rs 20.81 from Rs 19.25; Basmatia upto Rs 25.37 from Rs 25.19; Grob "A" upto Rs 26.00 from Rs 25.25 and Huldibari upto Rs 21.00 from Rs 20.31, to ease off at the close to Rs 20.68; Rs 25.12; Rs 25.00 and Rs 21.00 respectively. Brooke bond had buyers at Rs 18.12 to Rs 18.15; Rungamattae at Rs 61.50 to Rs 62.00 and Gohpur at Rs 22.50 to Rs 25.56.

Quieter advices from the commodity market had an adverse effect on the Sugar section where enquiry continued to be poor. In an otherwise dull section, the only two bright spots were Belsund and SKG having some support upto Rs 10.25 and Rs 9.30 from Rs 10.19 and Rs 9.25 respectively.

Textile scrips lacked any consistent support. The statement of the Commerce and Industry Minister discounting any change in the pattern of excise duty on cloth adversely affected sentiment. Prices, however, steadied up a little towards the close on the feeling that the Government decision not to reduce the excise duty had put an end to the prolonged suspense and, to that extent, it might lead to a revival of demand for cloth in

(Continued on page 935)

OLYMPUS

(Continued from page 922).

deeply exercising a large number of people; and Mr Nehru, with his almost instinctive sensitiveness to the public mood and with his keen sense of relative importance of public issues, chose to direct the attention of his colleagues in the parliamentary party to this important question. His lead will go a long way in bringing the question into proper focus.

The other important question that Mr Nehru discussed at the meeting of the Parliamentary Congress Party was the fruits of Mr Krishnamachari's visit to the US and other Western capitals. Mr Nehru is reported to have been of the view that the main results of the trip were the intangible ones of removing misapprehensions and misunderstandings and creation of a favourable atmosphere. While discouraging any immediate expectations of a spectacular kind, Mr Nehru is reported to have given a clear indication of the possibility of long-term financial assistance from the US. The presence in New Delhi now of Mr G. L. Mehta, the Indian Ambassador to the US, and his almost continual consultation with the Finance Minister are

taken by observers here to mean that certain definite courses of action are being plotted.

Meantime, encouraging reports of the success of the delegation of industrialists that visited the US and other countries are being received here. The private sector would seem, according to these reports, to have done quite well in its efforts to secure the necessary external finance. The estimated assistance from the Import and Export Bank is of the order of Rs 100 crores. There is also reported to be good prospect of assistance from the International Co-operation Administration of the US Government, and the International Bank for Reconstruction and Development.

The next few days will reveal fuller details of the precise re-orientation of the priorities of the Plan, and something approaching a final definition of the much talked of "core of the Plan" should become available. Mr Krishnamachari, who has been observing a studied silence—it may be a case of once bitten, twice shy—may be obliged by Parliamentary insistence to let us share his secrets up to a point. The Planning Commission are reported to have more or less finalised their views on the revised shape of the Plan. It is also reported that, in this final form of the

ORIENTAL INDUSTRIAL INVESTMENT CORPORATION, LIMITED.

NOTICE is hereby given that the FOURTEENTH Ordinary General Meeting of the ORIENTAL INDUSTRIAL INVESTMENT CORPORATION, LTD. will be held at the Registered Office of the Company, 56 Aga Khan Building, Dalal Street, Fort, Bombay on Thursday the 5th December 1957, at 3 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts for the year ended 30th September, 1957.
2. To declare dividends on the Preference Shares and Ordinary Shares as recommended.
3. To elect Directors in place of Sir Rustom Masani and Mr. K. U. Advani who retire by rotation, but are eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.

NOTICE is also hereby given that the Transfer Books of the Company will remain closed from 28th November 1957 to 5th December 1957, both days inclusive.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
K. U. ADVANI PRIVATE LTD.,
Secretaries.
Bombay, 31st October, 1957.

STOCK EXCHANGES

(Continued from page 934)

the immediate feature. Jayshree changed hands at Rs 6.50 to Rs 6.56; Kesoram at Rs 11.06 to Rs 11.37 and New Victoria at Rs 1.44 to Rs 1.50.

Price movements in the Engineering section were rather irregular due to alternate buying and selling. Against the week-end closing of Rs 19.02, Indian Irons opened better at Rs 19.12 and, after improving further to Rs 19.15, receded gradually to Rs 18.75 on selling pressure. Thanks to the emergence of bull support and heavy bear-covering, the scrips recovered gradually to Rs 19.60, to finally close at Rs 19.54. In sympathy, TEXMACO were taken upto Rs 17.40 from Rs 17.10. In the Mundhra group, Jessop turned quiet at Rs 23.75 against Rs 24.06 and Richardson at Rs 8.12 against Rs 8.87. Burn met with some demand upto Rs 330 from Rs 323 and Britannia upto Rs 13.00 from Rs 12.87.

The Miscellaneous section provided many bright spots. Prominent were Indian Cable having changed hands at Rs 25.25 to Rs 25.62; Indian Copper at Rs 2.99 to Rs 3.05; Orient Paper at Rs 24.75 to Rs 25.60; Titaghur at Rs 32.12 to Rs 32.56; India Steamship at Rs 11.62 to Rs 11.87; Dunlop Rubber at Rs 20.00 to Rs 20.25; National Carbon at Rs 23.50 to Rs 23.62; Hindustan Motor at Rs 6.19 to Rs 6.31 and Aluminium Corporation at Rs 9.87 to Rs 10.06. In the Mundhra group, B.I.C. were on offer at one time down to Rs 4.35 from Rs 4.70, to improve at the close to Rs 4.65. Osier moved narrowly between Rs

Plan, the budgeting has been tighter and less given to large assumptions of a merely hopeful sort. The foreign exchange content of the Plan has reportedly been the object of particularly chastened study. The Finance Minister is meeting the State Finance Ministers next week, and presumably the "core" will emerge in a tangible form at the end of their deliberations.

The Communist opposition is working overtime to rake up the question of Mr Krishnamachari's alleged unfriendly references to Communist countries in his interview with The New York Times. But its plans to have the matter discussed in Parliament in the form of a joint censure motion by opposition parties are encountering heavy weather, because the PSP is unwilling to play the Communist game of making the Finance Minister the sole target. The PSP would much rather that the matter was dealt with as divided counsel, inconsistency and incoherence in Government policy. At the moment, there is no clear indication what shape the big clash between the Finance Minister and the Communist Party will take, but there is no doubt that it will take place in some form in the near future. Connoisseurs of parliamentary jousting are looking forward with some eagerness to the event.

3. To appoint Directors in the place of the retiring Directors, including Sir Asoka K. Roy, who retires by rotation, and, being 71 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him. And in this connection to consider and, if thought fit, to pass the following resolution, of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

To be Proposed as an Ordinary Resolution.

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation".

The Share Transfer Registers of the Company will be closed from 12th December, 1957 to 24th December, 1957, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO.
(PRIVATE) LIMITED,
Managing Agents,
Chartered Bank Buildings,
Calcutta, 4th November, 1957.

NOTES:—

- (a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.
- (b) The Dividends, if declared, will be paid on or after 8th January, 1958, to those shareholders so entitled whose names appear in the Company's books on the 24th December, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT.

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Sir Asoka K. Roy have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

[November 16, 1957]

BALANCE-SHEET REVIEWS

(Continued from page 908)

10,000 from Rs 25,000. No provision is, however, made for Investment Reserve against Rs 45,000 previously.

Nonsuch Tea

The Nonsuch Tea Estates Limited, belonging to the Harrisons & Crosfield group and having its plantations in Coonoor (Madras), has done very well in the year ended June 30, 1957. Even with a slightly lower average price for tea sold, it was possible to report a considerably higher level of earnings; because the cost of production, on account of the larger crop, was very much lower. The outturn of tea in 1956-57 was 1,038,396 lbs against 688,872 lbs in 1955-56. The cost of production was 120.31 cents per lb against 154.05 cents per lb while the average price realised was 273.36 cents against 274.63 cents.

The value of 1956-57 tea sales naturally rose to Rs 28.03 lakhs from Rs 18.86 lakhs. The net profit before providing for taxation, as a result, was sharply higher at Rs 14.67 lakhs against Rs 7.7 lakhs. The company has, however, had to provide large sums towards Taxation, both Central and State. It is not clear why there has been such a sharp rise, because the company's estates are situated in Coonoor, in the Madras State, and the increase in its Agricultural Income Tax was only modest. As it is, between income tax and agricultural income-tax, over 75 per cent of the total earnings are accounted for. The provision for Indian income-tax is Rs 4.72 lakhs (Rs 1.8 lakhs) and Agricultural Income-tax Rs 3.9 lakhs (Rs 1.33 lakhs). Out of the balance, a sum of Rs 72,000 (Rs 1 lakh) has been transferred to the Development Reserve. There is no transfer to Special Reserve against Rs 5,000 formerly. It is stated that no provision has been made for Depreciation as such on fixed assets, as, in the opinion of the Directors, the balance in the Development Reserve will be adequate for this purpose. The final dividend of 10 per cent is to be paid. This, with the interim dividend of 10 per cent, makes 20 per cent for 1955-56, the same as for 1955-56. The effective distribution, however, should be considered slightly higher as only the final dividend for 1955-56 was paid on the capital increased by the issue of bonus shares for Rs 6.6 lakhs. Thus, the paid-up capital at the end of 1956-57 stood at Rs 23.10 lakhs against Rs 16.50 lakhs. Both the interim and final dividends in respect of 1956-57 are payable on the capital increased as above. The dividend amount required is Rs 4.62 lakhs against Rs 3.96 lakhs on the former occasion.

Blue Mountain Estates

Belonging to the same group, Blue Mountain Estates Limited has, however, not been able to report the same improvement in earnings as, even with a good coffee crop, there was a decline in the outturn of tea on account of labour trouble

and adverse weather conditions. The net profit, before providing for Taxation and Depreciation, for the year ended June 30, 1957 was, therefore, only Rs 13.33 lakhs against Rs 12.18 lakhs in 1955-56. The profits for the earlier year have, however, been reached after allowing for a donation of Rs. 2 lakhs for the C. M. Kothari Trust. It can be claimed all the same that the actual experience in 1956-57 was better than in 1955-56 as larger sums have been received since the closing of the accounts from the Coffee Pool as bonus payments. The advantage of these sums will naturally be reflected in 1957-58. The amount set aside towards depreciation is Rs 30,174 (Rs 78,238). But, even with only a slight increase in net profits, the provision for Taxation is sharply higher at Rs 6.2 lakhs (Rs 4.4 lakhs). It has been possible, however, to pay a dividend of 12½ per cent from the capital increased by the issue of bonus shares against 15 per cent on the former occasion. The paid-up capital ranking for the dividend is higher by Rs. 15 lakhs at Rs 52.5 lakhs.

The tea crop, as stated above, was lower at 1,062,072 lbs. against 1,079,741 lbs. for 1955-56. The crop for the last season included 87,665 lbs. of tea manufactured out of purchased leaf. But, the coffee crop constituted a record in the history of the company at 13,918 cwt. against 11,102 cwt. The estimates for the current year provide for a tea crop of 10.3 lakhs lbs. and a coffee crop of 13,380 cwt. The company took over the Guernsey Tea Factory Company (Private) Limited as from April 11, 1957.

Mysore Tobacco

The Mysore Tobacco Company Limited has reported the largest profits for the year ended March 31, 1957. In fact, the earnings could be said to constitute a record in the history of the company. Even though there was a decline in the quantity of cured leaf from the company's barns, sales realisations were maintained at a higher level by the production of quality leaf yielding higher returns to the company. The quantity of cured leaf produced was thus lower at 1,454,804 lbs against 2,109,058 lbs. There was, however, an increase in the quantity of tobacco acquired from the private curers to 1,777,273 lbs from 771,362 lbs. The value of sales thus rose to Rs 36.26 lakhs from Rs 31.27 lakhs. The net profit, before providing for Taxation and Depreciation, was Rs 7,75,735 against Rs 6,98,124 for 1955-56. The amount set aside to Depreciation is lower at Rs 91,694 against Rs 1,35,326. But, there is a sharp increase in the provision for Taxation to Rs 3.6 lakhs (Rs 3 lakhs). Even so, it has been possible to transfer larger sums to reserves. The Reserve Fund got Rs 80,000 (Rs 40,000) and Dividend Equalisation Fund Rs 80,000 (Rs 50,000). The ordinary dividend has been maintained at 15 per cent.

CLIVE STREET GOSSIP

(Continued from page 918)

have called forth more happiness. Let me end by wishing Mr Nehru many happy returns of this day and expressing the hope he will live to see the fruits of unceasing present endeavours.

I think the time has come when we can cease applauding each new instance of Indianisation that takes place in the so called diehard British firms. When matters are proceeding smoothly, and when the process is being put through without fuss, I hesitate to touch on this topic. For, let us recognise that if we have a feeling of undue gratification, it would be because we were not quite certain of the calibre of the Indians who were thus "promoted". And, frankly, the time is past when foreign firms consider it necessary to pay "lip service" to the Government desire to effect Indianisation. Merit alone counts, and so, if Mr Jag Mohan Lal is now in line to succeed Mr N. D. Harr's as Chairman of ICI, we would be unfair to ICI and unkind to Mr Lal if we merely saw in this the process of Indianisation that I have just referred to. As a Chartered Accountant who has proved his worth to the company, Mr Lal, to put it simply, is considered the best man for taking on the Chairmanship of ICI. Thus, our congratulations to ICI for recognising merit, and to Mr Lal for possessing such capabilities.

Another world organisation which has a new Chairman is the General Electric Company. Mr Leslie Gamage, after having been with GEC for 38 years, succeeds Sir Harry Railing as Chairman and Managing Director. Mr Gamage has been on GEC's board since 1925, and his most important work is considered to be his role in the encouragement of exports—both for Britain and for GEC.

EAVESDROPPER.

WORLD OF COTTON

(Continued from page 921)

CLOTH AND PIECEGOODS: Steady conditions prevailed in the Bombay Piecegoods market. Although the offtake by the consuming centres had not yet broadened, dealers were hopeful that demand in the coming weeks would be better in view of the paucity of supplies in the upcountry markets. A redeeming feature of the Government's decision not to reduce the excise duty on cloth is, that it ends the prolonged suspense and, to that extent, may lead to a revival in up-country bookings in the immediate future.

Meanwhile, the production of mill-made cloth, during October, is provisionally placed at 422 million yards. During the first ten months of the current year, the industry has produced 4,455 million yards as against 4,397 million yards in the corresponding period of last year.

The latest available figures place the unsold stocks with the mills, for October, at a new high of 3.91 lakh bales as against 3.56 lakh bales in the preceding month. Now, a reduction in the excise duty has been ruled out; and textile circles

feel that serious efforts should be made to step up the country's exports of cloth, so that the current stocks can be reduced sizably.

While the trading conditions in the domestic markets are not satisfactory, activity on the export front has been slightly better. Inquiries from Sudan are reported to be satisfactory. The joint-venture Corporations in Burma are likely to receive import licences for a substantial quantity of textiles in the very near future. The prospects of shipping a large quantity to this country appear to be bright. Better business is also reported with Indonesia.

WILL THE GOVERNMENT REALLY RESIST INFLATION?

(Continued from page 913)

instances in a position to increase wages without having to raise their prices, thanks to the lower cost of their raw materials. But if, as seems probable, the decline in world commodity prices should become reversed, they will not be in a position to reduce wages in order to maintain their prices. Wage reductions are almost inconceivable nowadays, so that a recovery in the commodity markets will mean a further increase in the prices of manufactures.

One of the leading British industrialists, Lord Chandos, has put forward the suggestion that there should be a general agreement between employees and employers, providing for an annual increase of wages by 2½ per cent during the next five years. Whether such a prearranged uniform wage increase would tend to stimulate productivity is open to doubt. But Lord Chandos is one of the most influential figures behind the British political scenes, and the possibility of official backing being given to his scheme cannot be dismissed out of hand.

The feeling of uncertainty about the industrial outlook is likely to continue until the outcome of the railway wages dispute becomes evident. Meanwhile the Stock Exchange and sterling remain under the influence of that feeling. A large proportion of investors who realise their holdings continues to keep their funds in the form of bank deposits, pending future developments.

THE PENINSULA

(Continued from page 924)

It is natural that a State confronted with any kind of difficulty is tempted to point to the Central Government as an easy scapegoat. Very courteously one or two members in the Madras Assembly sought to rope in the Centre as guilty of default in food assistance. The charge, for all that one knows, is ungenerous. Even the creation of a food zone is largely due to the initiative of the Central Government. At least in the interest of the Second Plan on whose fortunes, the prestige no less than the contentment of the nation vitally depends, the Central Government are keen on ensuring that no area undergoes suffering through food shortage; and no price is considered too high for meeting in full the commitments implied.

a pilfer-proof package for every product !

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.

A METAL BOX
PILFER-PROOF CONTAINER

The MB Key Opening Can has both the top and bottom double sealed on for maximum protection.

The can is opened by winding off a strip round the can with a special key.

The lid fits back accurately after opening—an effective reseal. It is impossible to disguise the fact that the can has once been opened.

For the Investor

What's Good for General Motors

Investment Gossip:

A friend from Bombay complains that Watch-dog is not reporting in detail, as he once used to do, the play of forces in the Stock Exchanges.

I plead guilty to the charge, if that means that I have not been recording each rumour and counter rumour that regularly flow across from Dalal Street to Lyons Range, and vice versa.

But the trouble is, that it is far from the duty of a scribe for the Investor to take note of every stray rumour about the market place; especially is this the case when the rumour is all too plainly the frenzied imaginings of speculative laments.

As an instance, I might refer to the "standby" rumour of the Stock Exchanges. In recent weeks, two specific upward movements in prices were halted. The reason? The whisper was going round in Dalal Street that Bank rate was to be raised in India.

I will now prove my case that the stock exchanges continue to be dens of the operators rather than the havens of the investors.

Since his return from his triumphant tour, Mr G. D. Birla has made no fewer than three speeches in the Gateway city.

Each one was chockful of statements and sentiments which augured for the brightest possible prospects for the private sector.

But, did prices look upward? I scarcely need provide the answer to the question.

Of course, as I see it, there is a reason. The professionals always prefer bear operations; and the reason therefor, as far as Calcutta is concerned, is notorious. As for the investors, they still have the tendency to mark time. They are minded to wait until Mr T. T. Krishnamachari comes out with specific statements calculated to put fire into the investor's heart and health into the investment climate.

There is another sense in which I can point to the obtuseness of stock exchange behaviour. Lately, Government have announced continued protection to the automobile and textile machinery indus-

tries. Are Hindustan Motors, for that reason, resurgent? Or Texmaco presenting an advancing front? The answers, again, are no.

Ultimately, however, the state of the investor is to be judged by the response he makes to new share issues. In this light, the investor will be judged—and I am sure will prove himself—by the manner, extent and magnitude of subscriptions to Philips and National Rubber. Both have a foreign glamour to them, it is true. National Rubber, it may be recalled, has an extremely valuable, not to say profitable, arrangement with Good-year.

One last word. I gather that General Motors are ready—and perhaps keen—to operate once more in India. What hitch there is relates to the already existing agreement with Studebaker. But, if General Motors do return to India, it will be the best possible fillip to the flow of American capital to India. After all, the adage made popular by Mr Wilson, ex-Secretary for Defence, was that what was good for General Motors was good for the country. What's good for General Motors will be good for other American investors, too.

ER§

Fall in Textile Profits

Balance-Sheet Reviews:

THE adverse conditions prevailing in the cloth market are fully reflected in the working results of the textile mills. Among other things, which have reduced the profits, are high prices of cotton, stores, colours and chemicals. The fall in profits is also attributed to increasing competition in cotton textiles in Pakistan and due to consumable materials and stores, which were already in short supply as a result of the stringent import policy of the Government.

While it is felt that the statements made by the Ministers concerned should set at rest the rumours current in the market place for some time past and that

there might be an increase in the offtake from upcountry centres, it is pointed out, at the same time, that the cotton mills would not be able to maintain the same rate of progress as in recent years unless the pace of internal consumption is accelerated and exports of both cloth and yarn are stepped up. It is also evident that the accounts of cotton mills for the year, which is drawing to a close, will show a steep fall in profits. It is certain that this will lead to a reduction of the general level of dividends except in the case of a few leading mills.

In the case of the Morarjee Goudas Spinning & Weaving Company Limited, the profit for the year ended 30th June 1957 is lower

than in the previous year. The profit for the year ended 30th June 1956 was ₹15.52 lakhs, as against ₹13.61 lakhs in the previous year. Apart from setting aside a sum of ₹13.61 lakhs, the Depreciation amount is reduced to ₹6.96 lakhs from ₹18.45 lakhs and the provision for Taxation to ₹1.00 lakh from ₹8.00 lakhs. After transferring a sum of ₹8.02 lakhs from General Reserve, the directors have been able to recommend the dividends, the Ordinary dividend being reduced to ₹14 from ₹15 per share. Sales of cloth, yarn and waste have totalled ₹3.23 crores as against ₹3.51 crores.

ER§

Investment Briefs:

Anderson Wright has recommended a dividend of 4 per cent on the Ordinary shares for 1956 as against nil in 1955.

Indian Cable has maintained the dividend at 15 per cent for the year ended 31-3-1957.

Midnapore Zamindari has again passed over the dividend for the year ended April, 1957.

Killick Industries, Bombay, have maintained the dividend at 11 per cent for the year ended 30th June, 1957.

ER§

at Rs 21.09 lakhs, as against as much as Rs 29.69 lakhs in the previous year. Apart from setting aside a sum of Rs 13.61 lakhs, the Depreciation amount is reduced to Rs 6.96 lakhs from Rs 18.45 lakhs and the provision for Taxation to Rs 1.00 lakh from Rs 8.00 lakhs. After transferring a sum of Rs 8.02 lakhs from General Reserve, the directors have been able to recommend the dividends, the Ordinary dividend being reduced to Rs 14 from Rs 15 per share. Sales of cloth, yarn and waste have totalled Rs 3.23 crores as against Rs 3.51 crores.

The Sutlej Cotton Mills Limited has, however, maintained the dividend at Rs 6 per share for the year ended 31st March, 1957 despite a fall of Rs 12.54 lakhs in the net profit to Rs 16.79 lakhs, after providing a sum of Rs 5.28 lakhs (Rs 7.09 lakhs) for Depreciation and Rs 50.55 lakhs (Rs 68.86 lakhs) for Taxation. The directors have provided a sum of Rs 9.00 lakhs for General Reserve. Sales have totalled Rs 3.02 crores as compared to Rs 2.96 crores in the previous year.

The financial position of the company is, however, sound with Reserves and surplus totalling Rs 3.91 crores as against a paid-up capital of only Rs 15.00 lakhs. The shares are nominally placed at Rs 75 at which level the yield works out to 8 per cent.

ER§

Amalgamated Coalfields

The Amalgamated Coalfields Limited has maintained the dividend at 12½ per cent for the year ended 31st March, 1957. Raisings are higher at 853,379 tons against 834,805 tons, while despatches are lower at 855,642 tons against 861,759 tons. The net profit, before providing for Depreciation and Taxation, amounts to Rs 15,44,508 against Rs 15,41,631 in the previous year. The Depreciation amount is raised to Rs 5.45 lakhs from Rs 5.36 lakhs. After transferring a sum of Rs 4.50 lakhs from General Reserve and Rs 25,000 from Benevolent Fund, the directors have provided Rs 1.28 lakhs (Rs 4.16 lakhs) for Taxation; Rs 6.76 lakhs (nil) for Appellate Tribunal Award and Rs 3.50 lakhs (nil) for Contingency Reserve. Sales are shown at Rs 1.51 crores against Rs 1.32 crores.

ER§

Central India Coalfields

The Central India Coalfields Limited has also maintained the dividend at 50 p per share for the same year. Raisings are shown at 156,342 tons against 162,721 tons and despatches at 155,456 tons against 154,307 tons. Sales have risen to Rs 26.45 lakhs from Rs 22.73

HIGHLIGHTS

Does the past performance of the jute goods industry indicate an inability on the part of businessmen to rise to the occasion?

On the contrary, recurrent crises have been boldly met and successfully overcome.

Is the present threat of overseas competition so awesome, that there is no prospect of India being able to increase its jute goods exports?

Far from such a position, it is India which is taking the steps to improve the competitiveness of Indian jute goods.

Is there a basis for planning for increased jute goods exports, in any sort of Export Plan?

Certainly, but certain prerequisites have, however, to be met.

What are these prerequisites?

Modernisation, rationalisation, raw jute self-sufficiency and a futures market.

Has India progressed toward providing these prerequisites?

Yes, save in respect of a futures market. What, then, are the prospects?

The near certainty that, all going well, jute goods can become even more potent exchange earners, and thereby constituting plan savers.

More Tea Results

Five more Tea companies—Dhunseri, Hantapara, Kotamullai, Methoni and Tukvar—have presented their reports and accounts for 1956. Out of these, only Dhunseri, Hantapara and Methoni have been able to recommend higher dividends, thanks to increased profits. The following tables show the crop outturn, average price realised, net profits earned and the dividends recommended as compared to the previous year:—

CROP (In Maunds).	1956.	1955.
Dhunseri	7,590	7,325
Hantapara	35,878	34,882
Kotamullai	16,675	16,115
Methoni	10,570	11,215
Tukvar (in lbs.)	734,924	709,403

AVERAGE PRICE (Per Lb.)	Rs. a. p.	Rs. a. p.
Dhunseri	2 4 2	1 12 4

Cowcoody Estates

Mainly on account of an increase in working expenses, it has not

been possible for the Cowcoody Estates Limited to maintain earnings for the year ended June 30, 1957 at the level of the previous year. Both the coffee and cardamom crops were higher, the coffee crop being 2,502 cwt. against 2,381 cwt. and cardamom crop 752 1/2 lbs against 538 lbs. The net profit, before providing for Taxation and Depreciation, for 1956-57 Rs 2,71,411 against Rs 2,92,319 for the previous year. The provision for Depreciation is Rs 9,316 (Rs 6,896) and Taxation Rs 85,000 (Rs 24,900). It has been possible to transfer only Rs 23,210 (Rs 1,39,280) to the General Reserve. The final dividend of 25 per cent makes, with a similar interim dividend, 50 per cent for the whole period, the same as on the former occasion. The amount carried forward is considerably lower at Rs 26,405 against Rs 74,741 brought in. The estimates for 1957-58 provide for a coffee crop of 109 tons and a cardamom crop of 840 lbs. Against the paid up capital of Rs 2,55,350 there is a General Reserve of Rs 2.5 lakhs. In 1953, the issued capital was increased from Rs 51,070 to Rs 2,55,350 capitalising reserves and issuing bonus.

ERs

Ganges Rope

The Ganges Rope Company Limited has raised the dividend from Rs 11.50 to Rs 12.50 per share for the year ended 31st March, 1957, thanks to an increase in profits from Rs 1,14,899 to Rs 2,02,912. Sales are, however, lower at Rs 58.82 lakhs as against Rs 63.53 lakhs in the previous year. The Depreciation amount is raised to Rs 92,884 from Rs 83,344 and Taxation provision to Rs 2.00 lakhs from Rs 6,000.

ERs

Waterfall Estates

Waterfall Estates Limited has been able to report earnings in the year ended June 30, 1957. The larger output of coffee of the Coovercooly Estates has, obviously, contributed to the gratifying results. The output of coffee in all the estates in 1956-57 was as much as 16,172 cwt. against 6,995 cwt. in 1955-56. The output of tea, on the other hand, was slightly lower at 9,60,099 lbs against 11,25,700 lbs. It is said that this decline was due to adverse weather conditions and greater attention to plucking of finer tea. With the result, the sales of tea were not proportionately lower.

(Continued on page 952)

Exchange Earner—Plan Saver

The Scope for Increased Jute Goods Exports

Is it being optimistic or constructive to put down the target for jute goods exports, over the Second Plan period, at a level that is less than the figure for 1955? The answer, of course, is in the negative, but this is exactly what the Planning Commission have done, in cursorily dealing with the role of jute goods as exchange earners in a short paragraph of 57 words. In envisaging an annual average of exports at 875,000 tons, the Planning Commission have explained their diffidence at setting a higher objective by pointing out that "competition from other jute manufacturing countries is likely to be felt increasingly over the coming years". We readily concede that there is not only the prospect but the certainty of Pakistan rapidly expanding its production; and we admit that this would constitute, if not a serious, at least a substantial threat to shipments by the Indian jute goods industry. But the expectation of competition should arouse the Indian businessmen, with apposite assistance from Government, to put in train measures which would enable this country successfully and triumphantly to withstand such competition as might emerge. Instead, the Planning Commission would appear to have been overcome by what can only be called a defeatist mentality. We, for one, are not prepared to accept the proposition that the Indian industrialists are incapable of enterprise or that they will not be able to rescue the jute goods industry from its present predicament. For, if we were thus to have a lack of faith in this industry, the long term view cannot be other than the jute goods industry being overtaken by the same fate which annihilated the indigo industry.

At this stage, we may pause to ponder over the performance of the jute goods industry in respect of some of the obstacles which, in the past, it was called upon to overcome. The first threat in recent history, which indeed appeared at the time to spell nothing short of disaster, was the crisis that obtained when India devalued its currency, but with Pakistan deciding to effect no change in the value of its own rupee. The time was 1949, and although India figured as the most prominent producer of jute goods, the indigenous production of raw jute was so low that there appeared to be no alternative to the wholesale closure of IJMA mills. We then urged, it may be recalled, that we should look upon the non-devaluation by Pakistan as being a heaven sent opportunity rather than as the death blow to the jute goods industry. We had maintained that it would be within the capacity of this country sharply to augment the production of raw jute. We urged that the Indian objective should be, as expeditiously as possible, to become independent of Pakistan for our supply of raw jute. That we did tide over this difficult period, that Indian raw jute production has increased beyond the expectations of all save this journal, and that the Indian jute goods industry survives to this day, are all testimony to the first important crisis faced by the jute goods industry since independence, and to the first occasion when the Indian businessmen, Government and agriculturalists displayed by action their determination that the jute goods industry was no dead industry.

By January 1951, jute goods appeared once more to be assured of reasonably good prospects over the short term future. Then came decontrol, and the frenetic orgy of speculation in the Calcutta markets. Prices doubled in a day; and, during the period of control, when the Korean War brought forth a stockpiling demand for jute goods, it is to be regretted that Indian shippers gouged their overseas customers. Not only was goodwill lost, but some customers as well. In Australia, more attention was given to bulk handling methods, which meant the permanent loss of some markets for jute goods. In America, the high price of gunny permitted paper bags to supplant jute bags; here, too, some markets were permanently lost.

In due course, normalcy returned to prices; demand picked up, but irreparable damage had been done. However, by the end of 1952, exports of jute goods had gradually risen. In that year, a very high level of purchases by the Argentine helped to absorb Indian output which otherwise might have been rendered surplus. But, again, disaster struck. In November 1952, with no properly functioning futures market for jute goods, conditions and circumstances conspired to present an opportunity for a "kill" in the market by speculative elements. A bull squeeze the like of which was not known before so disrupted market behaviour that our foreign customers were again alienated; the Phatka had to be closed because of over-speculation, and jute goods were again in the doldrums. Since that time, a strident increase in indigenous consumption of jute goods has enabled the full absorption of Indian production.

Meantime, there has been one important factor which seems to have been overlooked by jute goods interests everywhere. This factor lies in the general expansion in economic activity throughout the world. Agricultural production is higher now than ever before; as a corollary it is undoubtedly true that, even though some of the agricultural produce is being bulk handled, the world consumption of jute goods has also increased. So, in this assessment of the role of jute goods as an exchange earner and Plan saver, there are two factors which are of overwhelming importance. The first is, that the Indian jute goods industry has recurrently faced crises, but has managed to overcome each one of them. The second is, that the total world demand for jute goods is bound steadily to be upward. In this last context, we may add that we believe that the chances of jute goods being ousted by some synthetic packaging material, on the lines of the displacement of indigo by synthetic dyes, are comfortably slim. There is one more factor which we may examine. This concerns a definition of what we mean by overseas competition. If by this is understood the emergence of Pakistan as a steadily increasing producer of jute goods, we can accept it. But we must be clear in our minds that the so-called continental competition, which was so overpowering in the period between 1949 and 1952, is now largely a thing of the past. For, Pakistan is not making it easy for its foreign customers to buy raw jute, and the costs of production of the continental mills, for all the modernised

Indian Finance

Established 1928
November 23, 1957

"The Wise Man in His Attitude towards the World has neither Prejudices nor Prejudices. He is on the side of what is Right."—The Apostle of Goodness

equipment that they have, compare unfavourably with India. If there are some markets which are, as it were, reserved to continental and Dundee mills, it is by reason of the specialities, the special constructions, which they manufacture. In the standard varieties, it is India and Pakistan which have the field to themselves. During that particular period, 1949 to 1952, there was extraordinary competition from the continental mills for a unique reason: the dollar gap was the problem of the day, and continental governments did not hesitate to subsidise jute goods exports for the dollar earnings which they brought. The subsidy of exports in this wise no longer continues. As we shall remark later, far from any fear of the continental mills competing with India, it should be the objective of IJMA mills to fight it out with the continental manufactures in their own markets.

We may now state what the target for jute goods should be. In our view, the target for earnings from jute goods over the period of the Second Plan should be Rs 715 crores as against the Planning Commission's figure of Rs 610 crores. In presenting the Export Plan in Indian Finance of June 22, 1957, we had stated that, "against the Second Plan expectation of 875,000 tons a year, our supposition is that jute goods exports would rise to just under 1,000,000 tons". We are glad to find that the Export Promotion Committee (EPC) has, in its Report, accepted the Indian Finance target; for, the Report mentions that, with a concurrent increase in raw jute production, it should be practicable "to step up exports to a million tons a year". The target thus stated, it remains to prove that it is capable of being attained; secondly, we have to take account of factors which would support the prospect of jute goods exports rising to one million tons; and thirdly, we have to enumerate the various measures to be taken toward this end.

We may first explain why we may expect an increase in consumption and why, therefore, we can plan on an increase in exports. Our information is that, firstly, there is increasing industrial use of jute goods in America. Secondly, with world economy expanding in every way, it seems to us not at all unreasonable that the demand for jute goods should also rise. Thirdly, we gather that the IJMA is offering every help in repairing used burlap bags. This reconditioning facility has tended to make burlap much more competitive as against other packaging materials. Fourthly, and most importantly, there are certain developments in America which augur for the opening up of a new market of vast dimensions. We understand that experiments have been conducted for the utilisation of tarsoaked hessian as temporary foundation for small irrigational canals and drains. It has been American practice hitherto to use cement for this purpose. But, with these experiments in jute goods proving a success and with jute goods very much less expensive than cement, there is reasonable prospect of a new and large demand arising for burlap from America. Fifthly, there is also the fact that, with the enlargement of trade between India and

countries in the Communist camp, we can expect these nations to show increasing interest in Indian jute goods. Indeed, this last is a point which, mentioned often in the columns of Indian Finance, has been referred to by the EPC, whose Report states that "there are distinct possibilities of increased exports of jute fabrics to the USSR, several countries in Eastern Europe, China and Latin America". We believe that, as a result of these five factors, and given the drive and initiative in holding onto and capturing fresh markets in jute goods that the IJMA has recently been displaying, we should quite confidently expect to achieve the target of Rs 143 crores annually from jute goods exports.

However, there are a number of measures that have to be taken to enable jute goods to attain such a target. Simply stated, the two fundamental requisites for the industry are a reduction in costs and therefore in prices, and a diversification of the lines of manufacture. If jute goods are to be made even less expensive as packaging material, Government and the industry in this country will have to plan their action on four fronts. In respect of the first factor, modernisation, we must remember that the period of greatest expansion in the industry was in the early years of this century. It was inescapable that the plant and machinery, subject as they had been to the enormous war effort, would be obsolescent. Thus, modernisation is a prerequisite for reducing costs. Fortunately, Government have been aware of this need; and have sought, through the National Industrial Development Corporation, to assist the industry in its modernisation programme. The EPC has recorded the fact that "a number of mills have already been partially or fully modernised". We may, therefore, take it that considerable progress has already been achieved in the first prerequisite for bringing down jute goods prices—modernisation.

The twin to modernisation, rationalisation, is the second factor. Here, it is not only a question of freeing the industry from the burden of redundant labour. It is also one of the industry being freed from the uneconomic manufacturing units. Thus, on the one hand, we suggest Government must, notwithstanding the sympathy that they have for labour, nevertheless accept as inevitable some small unavoidable retrenchment of labour. On the other hand, as the EPC points out, limited hours of working and sealing of a percentage of looms do not constitute "a very healthy state of affairs for a major export industry". The Committee goes so far as to suggest that, "if the different jute mills could

cooperate in this matter, a number of uneconomic and old fashioned mills could be closed and the labour so displaced employed by the modernised mills working three shifts". In suggesting that, as raw jute production increases, more and more mills should work three shifts, the Committee has recommended "this proposition for the serious consideration of the jute industry and the Government".

The third factor is, at this stage, in need of no detailed comment. For, the Indian Finance view that the target for raw jute production for the Second Plan was far too low has now gained universal acceptance; and the target has, subsequent to the publication of the Second Plan, been revised upward. An adequate supply of raw jute, for expanding production needs, is quite clearly vital to any plan for increasing the export earnings from jute goods.

Finally, we may mention that there is the need for a futures market for jute goods. In the present set up, jute goods prices are far too vulnerable to the proclivities of speculative elements. Until there is a hedge market available to safeguard alike the manufacturer and the shipper, we can never be sure of stability in prices. We shall not here cover repetitive ground and cite the various authorities who are keenly alive to the need for a futures market. In this regard, it is unfortunate that so much delay should have occurred in implementing what was a forthright recommendation of the Jute Enquiry Commission.

There is one more point that we have to touch upon. This is a suggestion addressed to the IJMA mills, who should bestir themselves into being something more than merely manufacturers of the standard varieties of jute goods. As the EPC has pointed out, "with our long experience in the manufacture of jute fabrics, it should not be difficult for us to produce these special varieties at competitive prices". We already know of a few instances where jute mills have embarked upon manufacture of special constructions. We strongly advocate even greater efforts at such manufacture.

We may point out that the basis on which we have anticipated an increasing demand for jute goods comprises entirely reasonable suppositions. Moreover, the measures we have listed as being necessary for enabling the jute goods industry to meet such enlarged demand for jute goods are eminently practicable. So, the conclusion must be that a target for jute goods exports at Rs 143 crores is realistic and, therefore, in the circumstances of our present problem of foreign exchange, mandatory.

A Fair Division

IT is seldom that a body entrusted with the task of dividing revenues among different spending authorities is able to produce a scheme satisfying to every one concerned. The division of revenues in a federal State is a classic example of this difficulty. The latest Finance Commission can congratulate themselves that they have been able at least to indicate larger allotments than the Commission which reported previously to all the States.

Income tax in India, as could be seen from the figures of collection for the last ten years, has become one of the most rapidly expanding sources of revenue. As the tempo of economic development increases bringing with it an all-round and progressive rise in the number of tax payers, and tax evasion becomes socially more reprehensible and administratively easier to combat, the resources available to the Indian Union by way of income tax can well reach the region of Rs four to five hundred crores of rupees a year.

Of this important source of revenue, the States have now been offered 60 per cent of total collections. Six years ago they received only 50 per cent. The previous Commission raised it to 55 per cent and the present one headed by Mr K. Santanam has made it 60 per cent. The recommendation has been accepted by the Government. This measure of increase in the State's share is also just what was demanded by the majority of the State Governments including those of Andhra Pradesh, Assam, Bombay, Madhya Pradesh, Orissa and Uttar Pradesh.

A few States did of course ask for an even larger share and some for the inclusion in the divisible pool, of corporation tax, the tax on Union emoluments and the surcharge on income tax levied for Union purposes, demands which militated against the provisions of the Constitution and consequently rejected outright by the Commission. A change to the advantage of the States endorsed by prior approval by a majority among them should

naturally be welcome to both the Union and States. Where protests are still heard, as for instance, from West Bengal it is over the criteria applied. West Bengal and Bombay seem to continue to cling to the rather outworn argument of the sources of collection. Two successive Commissions have effectively disposed of this argument. Little could be said against the commission's conclusive statement that amidst the growth of other sources of urban revenue claims based on population are untenable and that the principle of collection has no validity in the context of the economic integration of the country and the disappearance of barriers to inter-State trade. By reserving 10 per cent of the State's share of the divisible Union excise duties for adjustment outside the 90 per cent shared on population basis, the Commission make a reasonable concession to considerations like relatively higher consumption between one State and another.

A larger slice of the Union Government's revenue through excise duties will also go to the States. The old proportion has been reduced from 40 per cent to 25 per cent but this reduction is more than compensated by a widening of the range which now includes sugar, tea, coffee, paper and vegetable non-essential oils. This change is in conformity with the general trend in federal finance in most countries of the world, of a gradual increase in the federal collection and distribution of revenues. The latest announcement that the Union Government would be levying additional excise on sugar tobacco and cloth in lieu of sales tax now collected by the States takes this trend further.

Why the Union Government should function as a collecting sirkar for the States for more and more items of revenue is a pertinent question. There is a plausible plea that for the majority of State Governments, resources and responsibilities show wide mutual gaps; and as such a permanent reallocation designed to bridge this gap would be desirable. The answer to this argument does not seem to have gained the currency it deserves. The sales tax is being evaded to a colossal extent in some States. In quite a few, even land revenue collections are in arrears. Why this should be so, no body knows, or cares to think about.

The Central Government are being called upon every now and then to come to the financial rescue of the States facing difficulties on some account or other. Even the best friends of the States cannot claim that their tax efforts have been uniformly zealous. Central collection and distribution is the only possible answer to this uncomfortable position. That special grants, which continue to form a vital part of the financial relations between the Centre and the States, are indispensable, is a consequence of the inherent comparative weaknesses of certain States and the persistence of special liabilities. Grants to meet the latter, as for instance refugee rehabilitation, are tapering.

Under the changes now accepted, the Union Government will on the whole be surrendering to the States about Rs 52 crores more than at present, on the basis of the current figures of revenue. The amount thus given over is considerably more than the surplus presumed for 1957-58. If, as the Finance Commission hope, all the fourteen States are able to balance their revenue budgets with the aid of the increased income from the divisible pool and the extra grants, there is scarcely any cause for regretting a larger transfer of funds.

The Commission seem to think that a revision of the Constitutional provisions concerning the financial relations between the Union and the States, is desirable. There is something to be said for uniformity in procedure. Under the present set up, the subject is a

matter for decisions by Parliament, by the President and by the Executive. But this division of authority makes for flexibility, provides for urgencies which cannot always be anticipated and thus imparts a measure of simplicity too.

Possibly, the Commission might also be thinking of the tendency of the State Governments to exploit Article 275 and ask for more and more of the grants in aid provided thereunder. It is tempting for State Governments to inflate budgetary expectations with a view to secure unduly large allotments of the plan

expenditure and then having failed to raise the promised revenues, start requesting for grants to meet the deficits. The Finance Commission also have come up against such demands. The principles the Commission have framed for grants in aid are intended to see that they take largely a residuary form of assistance, when designed to meet a revenue gap. When certain purposes are already provided for and the responsibilities involved shouldered by the State Government or by agencies in the Centre, grants are to be ruled out.

A Challenging Assessment

THE Report of the Food Grains Enquiry Committee might give the impression that nothing new has been discovered in the process of the diagnosis of the problem. The Committee, however, has not sat in vain. Though almost all the facts and reasonings contained in the Report had come up in some form or other previously, this is the first time that a precise and lucid analysis of all the aspects of the food problem as it has emerged since the advent of the First Plan is made available.

Incidentally, it is not disappointing to see that there has been a gradual elevation in the standards of food consumption, particularly among the poorer classes, which is one of the most vital aims of the Welfare State. The Committee has drawn attention to the increasing staying power of the average peasant, who is now able to keep his harvested produce with him for a longer time and in larger quantities than before and thus secure a better market.

The Committee stresses the obvious when it points to the overwhelming urgency of population control. That national food self-sufficiency is not considered likely to be attained

for a few years to come is surely a disappointing estimate. But in the light of the latest food statistics, it can scarcely be denied that the Committee is realistic. Two to three million tons are found to be the annual imports needed to meet internal shortage.

The prospect of additional production in the Second Plan, even with greater effort, is much less than what the Planning Commission have envisaged. Against 15.5 million tons more, the Committee thinks that 10.3 million tons would be very much nearer the mark. This assessment is undoubtedly damping, though it is qualified by the recognition that "if full use is made of all our resources, it may still be possible to reach closer to the target."

In the organisational sphere, a top level Price Stabilisation Board and another food grains stabilisation body with one or two smaller agencies like a special Subsidiary Food Division in the Union Ministry of Food and Agriculture have been recommended to keep watch, frame policies and enforce a variety of steps falling permanently within an orbit of strategic controls.

This Report should induce some stern though sad reflection. The assumption that

the Second Plan will proceed on the basis of a near self-sufficiency in food has to be abandoned. What is worse, even at the stage of the commencement of the Third Plan, food self-sufficiency might remain a fairly distant possibility, under the conditions of development assumed by the Food Grains Committee. While a number of eminently workable suggestions have been put forward by the Committee for keeping the distributive process in trim and free from lapses as far as possible, on the production side, the popularisation of subsidised food, of diets habitually comprising more than one food grain, control of population etc, are all of a long-term character. These do not provide an answer to the immediate situation. The relief obtainable even on a long-term basis is uncertain.

In these circumstances, it becomes obligatory for the nation to get ready for a new, tremendous effort for the achievement of a goal, which was thought well within reach just three years ago. Programmes, big and small, on the national, State, District, Taluk and village levels have to be launched to supplement the efforts for food production. It is certainly not beyond human effort in this country to attain a balance between food resources and population, which could eliminate the need for any heavy annual import.

The vagaries of the monsoon notwithstanding, if every individual takes it upon himself as a national responsibility to contribute by ideas or by physical work to this top-priority endeavour, both on the negative side of curbing demand for food generally and for scarce commodities in particular and on the positive side by making two blades of corn where one or none grew, the problem could be solved even within the period of the Second Plan. If it is not done, the country will come up against a recurring impediment of a fairly formidable character, at every stage in its planned development.

1857-1957

Criticism Refuted

Mr G. R. Kamath's address to the press conference in Calcutta serves to cut a great deal of ground off the feet of unfriendly critics of the Life Insurance Corporation. There is no denying the fact that the Corporation had to face a brief period of transitional difficulties; these are now becoming things of the past.

Business this year, has been running at a rate 20 per cent above that of the corresponding period for the previous year. Already Rs 180 crores has been booked since the end of October and the Life Insurance Corporation Chairman hopes that the figure will rise to Rs 250 crores in the succeeding two months. If attained this figure will compare favourably with the peak, private insurers had attained at Rs 238 crores in 1955.

For the next year the prospect is necessarily brighter. A streamlined field organisation is expected to concentrate much more on older areas and to extend its wings over neglected ones. The Janata policy now in a limited experimental stage, will surely be converted into a programme on massive national scale. Mr Kamath also referred to the steps which are being taken toward bettering incentives for field officers and a more closely linked service among them.

*

Social Security and Cost

The decision of the Union Government to make its pension scheme applicable to railway employees is a gesture of generosity which must go a long way to quench the excitement and gains which a section of the employees seek to secure through an all India strike. The National Federation of Indian Railwaymen has welcomed the pension scheme; a unanimous reaction among the employees may also be hoped for.

Editorial Notes

While some details of the scheme are published, many are not known.

A Railway Ministry Communiqué says that it is difficult to estimate the financial implications of the change, since the relative cost of the provident fund scheme and of the pension scheme, as affected by various factors, has not yet been calculated. For employees over thirty years, retiring as class four staff, an additional gratuity is also under contemplation.

There could be little doubt that the extra expenditure involved would amount to a pretty big sum. With the elaborate staff that the Railway Ministry has in its Accounting and Financial Departments, there is no reason why the total cost of the new scheme could not have been estimated before hand.

On problems like the expectation of life after retirement and the extent of casualties in the course of service, Life Insurance Companies in India and abroad have made reliable assessments. Figures relating to India can be had for the asking from the LIC. The fact that the Government look upon the scheme as primarily one of improved social security does not obviate the need for a prior knowledge of the financial commitment.

Companies in the Eastern Region

The review by the Regional Director, Company Law Administration, Mr V. Satyamurthi of the working of the Companies Act, in the Eastern Region reveals that 199 companies with an authorised capital of Rs 14,90,03,400 were registered in the Eastern Region which comprises West Bengal, Assam, Bihar, and Orissa. Of the new companies seven are Public Companies with an authorised capital of Rs 5,20,00,000 and 184 Private Companies with an authorised capital of Rs 9,70,03,400. The review is for the period from April 1, 1957 to September 30, 1957.

With West Bengal claiming to be the most industrialised State in this region, it was only natural that she should account for the large part of the new registrations, the total being 168. Of this the Public Companies numbered six with an authorised capital of Rs 4,20,00,000 while the Private Companies were 162 with an authorised capital of Rs 8,88,03,400. The corresponding figures for the period of six months commencing from April 1, 1956 to September 30, 1956 were 19 Public Companies with an authorised capital of Rs 5,17,50,000 and 134 Private Companies with an authorised capital of Rs 3,74,33,500.

Among the new companies there are four firms with a capital exceeding Rs 1 crore. They are, the Belani Ores (Private) Ltd, with a capital of Rs 1,00,00,000, the General Industries Society Ltd with a capital of Rs 1,00,00,000, the National Instruments (Private) Ltd, with a capital of Rs 3,00,00,000 and the

Ashok Paper Ltd with a capital of Rs 3,00,00,000.

The industry-wise distribution of the new Private Companies shows that a majority of them have chosen processing and manufacture as their field of economic activity, the total number of such firms being 72. Commerce has attracted the next biggest number—57. The number of concerns which have chosen transport, communication and storage is 4 while construction and utilities have accounted for about 11 of the new companies. Of the new Public Companies two are concerned with processing and manufacturing and one each with agricultural and allied activities, and commerce.

The number of companies that went into liquidation in West Bengal during this period, were 39 and included 10 Public Companies with authorised capital of Rs 2,51,15,000, the rest being Private Companies with their capital at Rs 3,18,40,000. Two Public Limited Companies with a total authorised capital of Rs 7,00,000 and nine Private Limited Companies with a total authorised capital of Rs 67,75,00,000 were finally dissolved during the period.

The report also brings out that about two hundred and thirty-six cases were filed against Companies and directors during the period for such charges as failure to file balance sheets and to adopt the Balance Sheets in General Meeting as required by Section 131-134 of the Indian Companies Act, and failure to hold General Meeting as required under Section 76 of the Act. Unauthorised loans to Directors and Managing Agents and submitting of false statements in the annual returns were the causes for legal proceedings against two or three companies.

As for the other regions, Assam claimed 12 Private Companies with an authorised capital of Rs 13,60,000 and Bihar one Public Company with an authorised capital of Rs 1,00,00,000 and five Private Companies with an authorised capital of Rs 25,20,000. In Orissa during the same period five Private Companies with an authorised capital of Rs 43,20,000 were incorporated.

The number of companies that went into liquidation during the period in these States were one Public Company with an authorised capital of Rs 5,00,000 in Bihar, two Public Companies and eight Private Companies with an authorised capital of Rs 7,00,000 and Rs 21,00,000 respectively in Assam and two Private Companies with an authorised capital of Rs 2,50,000 in Orissa. The number of companies that were finally dissolved in these States were three Public Companies with an authorised capital of Rs 7,00,000 in Bihar, two Public Companies with an authorised capital of Rs 75,00,000 in Assam and one company with an authorised capital of Rs 6,00,000 in Orissa.

The lack of similar information for the other regions which might enable a comparative study is to be regretted, especially in view of the great value and significance of such figures for future guidance. Mr Satyamurthy deserves a special word of praise for having set an example which is certainly worthy of emulation by his counterparts in the other regions.

Japan's Example

Last week, two experts one Indian and another Swedish, addressed the staff and students of the Demographic Research and Teaching Centre, Bombay. Professor C. Chandrasekhar emphasised how in Eastern countries just now populations were going up not on account of an increase in birth rate but owing to the decline in death rate. In India, the birth rate has virtually stagnated over the last three decades and more.

Professor Gunnar Myrdal of Sweden recalled the completely different situation in European countries a generation ago of a declining birth rate and the need to check it from growing further down. This striking contrast renders practically useless for India the European experience in the matter of population control.

In Asia Japan claims to have halved its birth rate within a decade. It is calculated that in spite of a succession of successful Five-Year Plans, if the growth of population were to keep the same pace as now, all that could be hoped for by 1986 is a meagre 14 per cent increase in India's per capita income. This is a dismal picture and must stimulate determined effort to prevent growing numbers from neutralising the benefits of hard earned economic development.

World of Finance

At the Busy Season's Threshold

FIVE Federal Reserve Banks have so far announced, in America, a reduction in the rediscount rate. Across the 49th parallel, in Canada, a falling off in new constructions has impelled the reduction in the rate of interest charged by a specialised institution, which provides advances against house building. Here, in India, the slack season as such is running its course for slightly longer than the norm, but there has, nevertheless, been recurrent apprehension in some circles that the ensuing busy season may witness an increase in the Indian Bank rate. Fortunately, as we recorded in the last week's article in this section, there has been a categorical statement on the floor of the Parliament that there is no intention, at least in the present circumstances, of raising Bank rate. At the same time, in Bombay, the Reserve Bank Governor felt it advisable to meet bankers in that city with a view to indicating to them the broad pattern of policy that would have to be adopted during the 1957-58 busy season; and the burden of Mr H. V. R. Iengar's statement was that the central banking authorities desire that Scheduled Banks generally display restraint, while in no way withholding funds for what is called the productive sector. At the busy season's threshold, it would be useful to analyse the Indian monetary situation and, in that light, to assess what appears to be the declared Reserve Bank attitude. Of the busy seasons since the beginning of the First Plan, two seasons appeared, at their eye, to present a much more than normal stringency; the first of these was the 1951-52 busy season, which at the time was thought would present special difficulties consequent on raising of the Indian Bank rate in November 1951. The second "abnormal" busy season was the 1956-57 one, when complications arose because the Scheduled Banks were already over-extended at the eve of the busy season. It is in comparison to these two periods that an appraisal should be made of prospects during the 1957-58 busy season.

It needs to be recognised, at the outset, that the severity of the two "abnormal" busy seasons proved, in the event, to be much less than had been apprehended. In both cases, it was the apposite help made available by and secured from the Reserve Bank which enabled the banking system to tide over what otherwise might have been periods of exceptional stringency. For the moment, we need not concern ourselves with the 1951-52 busy season, since the problem then largely related to

meeting a situation wherein, as against an increasing demand for funds, the Scheduled Banks were experiencing, far from any augmentation, a decline in their Deposits. Today, that situation no longer holds true, since accretions to Deposits are taking place at a spectacular rate. Nevertheless, it needs also to be noted that the 1956-57 busy season partially

	October 26, 1956.	April 26, 1957.	Change.	October 25, 1957.
State Bank:				
Deposits	229.60	299.15	+69.55	367.00
Borrowings	9.00	0.51	- 8.49	...
Giltedged	96.15	94.07	- 2.08	143.93
Advances	129.76	183.38	+53.62	165.64
Advances/Deposits Ratio (56.5)		(61.3)	...	(45.1)
Other Scheduled Banks:				
Deposits	874.38	932.84	+58.46	1028.94
Reserve Bank Borrowings	48.81	72.50	+23.69	29.77
Giltedged	275.38	250.44	-24.94	250.02
Advances	830.38	724.54	-105.84	702.29
Advances/Deposits Ratio (72.1)		(77.7)	...	(68.3)

It will be seen that the State Bank had no difficulty whatever during the 1956-57 busy season. Its increase in Deposits, over the period, substantially exceeded the rise in the level of Advances. So much so, the State Bank even found it possible to reduce its borrowings from the Reserve Bank at the peak of the busy season. A glance at the figures for October 25, 1957 suggests that the State Bank will apparently experience even less difficulty in tackling the 1957-58 busy season. For, while Deposits show a rise of Rs 137 crores over the previous twelve months, Advances are marked higher only by Rs 36 crores. Thus, the Advances Deposits ratio is placed at 45.1 per cent at the eve of the 1957-58 busy season as contrasted with 56.5 per cent at the eve of the 1956-57 busy season. However, attention needs to be drawn to the fact that, meantime, the State Bank has utilised Rs 47.78 crores of the new Deposits in addition to the giltedged portfolio. To this extent, the availability of Deposits for expansion in Advances is restricted. In spite of this fact, the State Bank should be able without strain to accommodate an increase of another, roughly, Rs 25 crores in Advances from its Cash Balances. For, Cash Balances on October 25, 1957 worked out to over 20 per cent of Deposits, as against the ratio on October 26, 1956 of something less than 10 per cent. Last year, at the end of December, Advances had risen only by Rs 11 crores. The really steep increase during the 1956-57 busy season occurred during the period January to March 1957, when Advances went up by Rs 35 crores. If the last year's experience is repeated, the State Bank should be relatively

presented a similar difficulty in the sense that accretions to Deposits fell short of the expansion in the demand for funds. It is from this point of view—the question whether the Deposit resources of Scheduled Banks will be found sufficient to meet the expansion in demand for funds—that we need to appraise the monetary figures on the threshold of the busy season; and, in so doing, it would be useful, for comparative purposes, to study the figures relating to the 1956-57 busy season. The following table sets out the pertinent figures, as for the State Bank and as for the other Scheduled Banks, over the 1956-57 busy season and at the eve of the 1957-58 busy season.

(In Crores of Rupees).

	October 26, 1956.	April 26, 1957.	Change.	October 25, 1957.
State Bank:				
Deposits	229.60	299.15	+69.55	367.00
Borrowings	9.00	0.51	- 8.49	...
Giltedged	96.15	94.07	- 2.08	143.93
Advances	129.76	183.38	+53.62	165.64
Advances/Deposits Ratio (56.5)		(61.3)	...	(45.1)
Other Scheduled Banks:				
Deposits	874.38	932.84	+58.46	1028.94
Reserve Bank Borrowings	48.81	72.50	+23.69	29.77
Giltedged	275.38	250.44	-24.94	250.02
Advances	830.38	724.54	-105.84	702.29
Advances/Deposits Ratio (72.1)		(77.7)	...	(68.3)

free of strains and stresses until some time early in 1958. Meantime, it is to be expected that there will be further accretions to the Deposits of the State Bank. During the last busy season, the State Bank's Deposits rose by Rs 70 crores. Then, during the 1957 slack season,

they rose by another Rs 68 crores. Although a moiety of this is comprised by US Counterpart Funds, it would still be permissible to assume that, during the course of the 1957-58 busy season, the State Bank's Deposits should rise by, say, Rs 68 crores. In that event, at the peak of the 1957-58 busy season, the State Bank's Deposits might be placed at Rs 425 crores. If we were to assume that the State Bank would be able comfortably to increase its Advances Deposits ratio to 60 per cent, the total of Advances at the peak would, on the basis of Deposits rising to Rs 425 crores, be placed at Rs 255 crores. This means that, in absolute terms, the State Bank should be able to finance an expansion of Rs 90 crores in Advances without much difficulty. At this juncture, we should hasten to point out that, in this appraisal, the hypothesis that the State Bank should be able to increase its Advances to Rs 255 crores does not by any means indicate that we expect the State Bank's Advances to rise to that level. Of this, more later.

Taking, next, the figures of the other Scheduled Banks, it may be noted that the increase in Advances during the 1956-57 busy season exceeded the accretions to Deposits. Consequently, a draft had to be made on the Reserve Bank for enlarged borrowings to the extent of Rs 23.69 crores; and, besides, it became necessary for the other Scheduled Banks to effect sales of

MORE FOREIGN EXCHANGE
FOR THE NATIONAL PLAN

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

**United Bank
of India Ltd.**

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

[November 23, 1957]

giltedged to the Reserve Bank for Rs 25 crores. The moot point, in the case of the other Scheduled Banks, is whether, during the 1957-58 busy season, they will be similarly faced by an insufficient increase in deposit resources. We may state, at the outset, that we believe that the other Scheduled Banks may conceivably be compelled to have recourse to the Reserve Bank. However, it is unlikely that the Reserve Bank will agree to purchasing giltedged from the other Scheduled Banks. All of the "extra" resources will have to be found by way of borrowings from the Reserve Bank. As in the case of the State Bank, the other Scheduled Banks are more favourably placed in their Advances Deposits ratio on the eve of the 1957-58 busy season than they were on the eve of the 1956-57 busy season. However, there is one important difference, in that the other Scheduled Banks, in spite of the augmentation to Deposits, start out the 1957-58 busy season with a volume of giltedged investments which is lower by Rs 25 crores than the figure which obtained at the beginning of the 1956-57 busy season. To this extent, the other Scheduled Banks will be having additional funds available in the form of cash resources to finance Advances. Secondly, the other Scheduled Banks start out with a much lower level of borrowings from the Reserve Bank; and there are grounds for believing that the figure of Rs 29.77 crores on October 25, 1957 relates, largely, if not wholly, to the accommodation taken by the Exchange Banks. It is, consequently, possible to suggest that there is comfortable margin for borrowings during the ensuing busy season. Thirdly, the other

Scheduled Banks have added to their Deposits much more substantially than the State Bank. The accretions during the 1956-57 busy season amounted to Rs 58.46 crores; and, during the 1957 slack season, there was a further increase of Rs 98.10 crores. We may, with some confidence, assume that, during the course of the 1957-58 busy season, additions to Deposits of the other Scheduled Banks will work out to Rs 71 crores. In that contingency, the Deposits of the other Scheduled Banks would be placed at Rs 1100 crores at the peak of the 1957-58 busy season. On the assumption that the Advances Deposits ratio will rise by the 1957-58 peak to 75 per cent, the total of Advances of the other Scheduled Banks would, at that time, be placed at Rs 825 crores. In other words, on the basis of a 75 per cent Advances Deposits ratio and on the assumption of Rs 71 crores increase in Deposits in the course of the busy season, the other Scheduled Banks would be having the total of Advances at a level of Rs 825 crores at the peak of the 1957-58 busy season. It may be stressed that the hypothetical ratio is lower than the actual peak touched during the 1956-57 busy season. From the foregoing, it will be clear that, by and large, if necessary, the State Bank and the other Scheduled Banks put together can provide for an expansion in Advances for an amount around Rs 215 crores. We have now to see whether, in fact, the expansion in Advances during the 1957-58 busy season is likely to prove as substantial as this. Since the intensification of demand for funds is a recent phenomenon, we have to be extremely careful in drawing

(Continued on page 977)

No Signs Yet of Busy Season

That last week's sharp rise in Active Notes was due to month early disbursements, and not signifying the first evidence of the busy season, is borne out in the latest Reserve Bank returns, which disclose a drop of Rs 3.94 crores to Rs 1487.04 crores in Active Notes. Rupee Coin has also returned from circulation for Rs 0.58 crores. In the result, the Reserve Bank's cash has improved by Rs 4.51 crores to Rs 26.96 crores.

But the pressure of payments has been severe as far as the Central Government are concerned. There are indications of deficit financing for a considerable amount. On the one hand, Rupee Securities in the Issue Department have been marked up by Rs 9.23 crores at Rs 970.65 crores; on the other, Investments in the Banking Department have risen by Rs 10.96 crores to Rs 239.91 crores. Thus, sales of ad hoc in favour of the Reserve Bank, and constituting deficit financing, may have been for an amount exceeding Rs 20 crores. In spite of such replenishment of resources, the Centre's balances are lower by Rs 3.23 crores at Rs 51.63 crores. The State Governments record a two fold improvement in their position, their balances rising by Rs 2.03 crores to Rs 8.19 crores and their borrowings declining by Rs 2.76 crores to Rs 48.56 crores. Other Deposits are placed at Rs 111.00 crores against Rs 111.93 crores last week.

Member banks have also substantially improved their position vis-a-vis the Reserve Bank. Their Reserve Balances, which had declined steeply in the previous week, have recovered by Rs 7.35 crores to be placed at Rs 102.15 crores, Rs 4 crores odd of this being due to the State Bank. Then, the Reserve Bank's Other Loans and Advances are marked lower by Rs 2.51 crores at Rs 59.24 crores.

Lastly, against the expansion in currency constituted by deficit financing as revealed in the rise in

Rupee Securities in the Issue Department, there has been a countervailing contraction against Foreign Securities by transfer to the Banking Department. But, after transfer of Rs 9.94 crores, Balances Held Abroad show a rise of only Rs 4.95 crores; and so, the foreign exchange depletion has been of the order of Rs 5 crores.

The State Bank's return for November 15 is largely featureless except for the indication of the continuance of the slack season in a decline in Advances. Deposits have been drawn upon for Rs 4.36 crores, and are placed at Rs 361.08 crores. Advances are lower by Rs 2.46 crores at Rs 158.94 crores. The decline in Deposits notwithstanding, the presumable encashment of Other Assets, which have been halved from Rs 17.28 crores to Rs 8.87 crores, has added to cash balances by Rs 3.66 crores to Rs 53.17 crores.

The Scheduled Bank statement for November 8 is notable for the impress of month early disbursements, which have caused a decline in Deposits for the first time since the week ended August 16. But, if regard is had for the fact that the State Bank in that week reported a decline of over Rs 4 crores in Deposits, it will be seen that the other Scheduled Banks have actually added to theirs, since Scheduled Bank Deposits show a drop of only Rs 1.59 crores to Rs 1398.65 crores. The total of Advances is reduced by Rs 2.38 crores to Rs 854.39 crores. Borrowings from the Reserve Bank are again lower by a little more than Rs 1½ crores at Rs 22.90 crores. There is a sharp decline of Rs 11.38 crores in cash balances, but this is largely on account of the State Bank, which in the relevant week had disclosed a decline of Rs 8.18 crores in cash balances. Finally, the other Scheduled Banks would appear to have purchased giltedged from the Reserve Bank, since the portfolio shows a rise of Rs 3.49 crores to Rs 407.37 crores.

'Leakage' of Financial Information

By PAUL EINZIG

DURING the first half of November even the excitement caused by Sputnik II was overshadowed by the interest which allegations of leakage of information on the recent increase of the Bank Rate aroused. At one time it looked as though the incident might develop into a major clash between Government decided upon the appointment of a Tribunal of Enquiry so that the controversy has been diverted into the judicial sphere, which is as it should be. Since the matter is now sub judice it would not be fair to comment on it even in a publication which is outside the jurisdiction of United Kingdom Law Courts. It may not be without interest however, to take this opportunity for surveying the general situation in Britain with regard to official secrets affecting financial matters.

There can be little doubt that generally speaking the British

authorities can safeguard remarkably well their secrets that are liable to affect the Stock Exchange or foreign exchanges. The secrecy of the Budget in particular is proverbial. Apart from the Chancellor of the Exchequer only the Prime Minister and possibly one or two members of the "Inner Cabinet" know what the Budget is going to contain. The remaining Cabinet Ministers are informed on the eve of Budget Day. The number of senior Treasury officials who know about it is very small.

The Chancellor, before making changes in taxation, must of course consult the departmental Ministers concerned, some senior Government officials, and even representatives of outside organisations which would be affected by the change. On the occasion of the interviews with such people the Chancellor is there, however, to receive information and not to give any. The fact

November 23, 1957]

INDIAN FINANCE

959

that he asked the opinion of trading organisations about the possible effect of an increase of the Purchase Tax for instance, does not mean that he has decided to make such an increase, and those who act on the opposite assumption are liable to regret it. During the months before the Budget a wide variety of suggestions is considered and only a few of them are likely to be incorporated in the Budget. Having received advice from all quarters the Chancellor makes up his mind at the latest moment practicable, and keeps his secret to himself.

Instances of Budget leakages are very few and far between. There was one during the 'thirties which led to the resignation of a Cabinet Minister. The premature disclosure of some items of his Budget to the Political Correspondent of an evening paper led to the resignation of Dr Dalton in 1947, even though the information only reached the public a few minutes before the changes were announced in the House of Commons, and there was no evidence of any speculative operations resulting from the disclosure. That in spite of this Mr Attlee accepted Dr Dalton's resignation shows the importance attached to the sanctity of Budget secrets.

Following on the nationalisation of the Bank of England in 1946 changes in the Bank Rate became a matter for Treasury decision. Technically it is still the Court of Directors, who decide on the Bank Rate at their weekly meetings on Thursdays just before noon. They faithfully go through the gestures of deciding on the Bank Rate even though their decision must invariably be based on the instructions received by the Governor from the Chancellor of the Exchequer. So long as the decision rested with the Bank of England there was hardly ever any suggestion of leakage because the Bank has a well-established tradition for secrecy. The windowless wall that surrounds the building symbolises the Bank's attitude towards the outside world. Nor is there any reason to believe that now that the decision is a matter for the Government, the Chancellor is any less secretive about the Bank Rate than he is about his Budgets. In this respect too, he may listen to the advice of his officials and others but does not communicate to them his decision.

There is, however, one chink in the armour of Bank Rate secrecy. It is the practice of announcing Bank Rate changes on Thursdays. On one occasion the Chancellor made a 'revolutionary' change by making the announcement on Tuesday following on an emergency Meeting of the Court of Directors. The summoning of such a meeting is liable to become known, however, and for this reason the authorities reverted to the old practice of announcing Bank Rate changes on Thursdays only. Now this has a grave disadvantage. Usually the Chancellor announces various other Government decisions at the same time as he announces Bank Rate changes. Such changes, which in olden days were almost the only instrument of monetary policy, are

now usually part of the batch of fiscal or other measures pursuing the same disinflationary or other ends.

It is usually known in advance when the Chancellor is about to make an important announcement, even if the nature and details of the announcement remain a closely guarded secret. And if it becomes known that some such announcement will be made on a Thursday it is widely assumed—usually correctly that it will be linked with a Bank Rate change. For this reason

even in the absence of inside information, it has come to be considered reasonably safe to speculate on a Bank Rate change whenever it becomes known that the Chancellor intends to announce some new measures on a Thursday.

There can be two possible remedies to this state of affairs. The existing practice under which the Court of Directors of the Bank of England goes through the gestures of deciding about the Bank Rate could be discontinued. Such a solution would conflict, however, with

the British habit of continuing the outward forms of traditional practices long after they had ceased to have any inner meaning. The alternative would be for the Chancellor to avoid as far as possible to announce any major policy measures on Thursdays. After the experience with the recent Bank Rate announcement, this is probably what will be done, not in order to prevent non-existent leaks but in order to prevent speculation from being based on a high degree of probability.—(Copyright).

Here comes the 7-15...!

People in the South say: "Set your watch by the TVS buses—they are always exactly on time". Building a reputation like this for punctuality and efficiency is no easy matter...it takes a lot of supervision, skilful planning and technical experience.

Behind the scenes are the TVS workshops, where the largest private transport fleet in the South is regularly serviced and maintained. On converting their fleet from Petrol to Diesel engines, a heavy duty crankcase oil was needed. Shell Rimula Oil 30—an oil with a high additive content—has been chosen for this job, and TVS tell us that they are very pleased with its performance.

T. V. Sundram Iyengar & Sons in Madras State is one of the many Industrial undertakings—large and small—which have come to rely on lubricants bearing the Shell or B.O.C. name and trade mark.

Amendments to the Pakistan Insurance Act

THE Insurance Act of India, 1938, was adopted by the Pakistan Government following partition. Since then the climate of Indian Insurance has undergone vast changes. Elaborate amendments were proposed, discussed and examined threadbare, and finally the Insurance Amendment Act, 1950, was passed incorporating therein changes in insurance law of far-reaching character. Apart from stringent categorisation of approved investments for life fund, rigid rules and regulations were framed incorporating "modus operandi" of limitation of expenses. The provisions have had far reaching effect on Indian Insurance. On the whole, the provisions for limitation of expenses seem to have worked well, although the provisions have unleashed unsocial forces following scramble for business. In the year 1956, life insurance was nationalised and almost simultaneously the Government of India went into deliberations in formulating 'Code of Conduct' for general insurers containing, amongst others, the important provisions of no credit system and advance payment of premiums. The provisions of the "Code of Conduct," although voluntary in character, based as they are on an undertaking given by the Boards, have all the compulsion that may be desired and on the whole, seem to have worked well. Indian general insurance seems to have turned the corner so far as malpractices are concerned and liabilities arising from outstanding premiums.

These have been noted with interest by the Pakistan counter-part of the Indian insurers. The Pakistan Association for many months was endeavouring to grapple with problems similar to that of India but worse relatively considered and established quite a number of sub-committees to go into the deteriorating tariff situation. The sub-committees made various proposals and submitted several schemes which unfortunately could not find unanimous acceptance in Pakistan. The Government of Pakistan, however, have now, it appears, taken the initiative and have proposed radical remodeling of the Pakistan Insurance Act. In this undertaking, they have naturally been benefited by the tortuous course of Indian legislation and the Indian Code of Conduct and the climate that has since been introduced following the inauguration of the Code and the effect following the amendments. The proposed amendments to the Pakistan Insurance Act are therefore largely in line with Indian amendments. The new sections 40A, 40B and 40C provide elaborate provisions about limitation of commissions and limitation of expenses.

Thus, whilst in the case of life insurance 25% of the first year's premium and 15% of the second year's renewal premium and 10% of the third year's renewal premium and thereafter 5% of each renewal premium, are payable on the policy, except for companies of 10 years standing or less where the commission may go upto 35%, in general insurance the commission has been limited to only 10% of the premium payable under the policy and a further commission of not exceeding 5% is payable to the insurance agent with the permission of the Controller of Insurance provided the agent introduces a minimum premium income of Rs 30,000 in respect of all classes of business and fulfils certain other conditions as may be prescribed. It will be observed that in this aspect the Pakistan legislation is at variance with the Indian for in India the commission is limited to 15% for non-marine and 10% for marine business. In Pakistan the commission is 10% throughout except for an agent securing a premium income of Rs 30,000 for which an overriding commission of 5% is payable. How the proposed law will break through the various pools that are likely to be formed to get the 5% overriding has, however, not been clarified. It is, however, assumed that on experience rules and regulations will be framed which will deter such pooling of business through a particular intermediary.

In regard to limitation of expenses, the rules are precisely the same as that of India, both in life and general. Pakistan has possibly done well in taking advantage of India's experience, although every insurer in India will testify that the rules regarding limitation of expenses, where the quantum of expenses is fixed by the quantum of direct business written in India, have unleashed unsocial forces following from inevitable scramble for business. The resultant malpractices have again to be arrested and hence the elaborate 'Code of Conduct.' It will thus be seen that a vicious circle has been created by legal enactments and to counter the vicious circle near legislation in the shape of voluntary 'Code of Conduct' has been in force for some months in India. The obvious lesson to be learnt from this is to fix expenses on a different method rather than on direct business. It is to be hoped that the Pakistan Government in prescribing the rules will naturally endeavour to counter the bad effects of Indian legislation and the consequences following therefrom.

The other important provision is contained in Section 64A which

Your Savings Now Serve A Double Purpose...

They provide you with a nest-egg.

And, when you send your spare monies

provides for advance payment of premium. This is a very important section. The outstanding position of Pakistan Insurers is so unsatisfactory that the Government of Pakistan have decided to bring the advance premium payment clause in force from the 1st of December, 1957. The authorities consider that this new provision in this Act is of so great importance that it has to be implemented as soon as possible. Whilst they are not proposing to bring this into force by an ordinance the government consider that an undertaking to observe the new section should be called for from all insurers, and the Central Committee of the Insurance Association of Pakistan have agreed on behalf of members that an undertaking from each member's Board of Directors should be supplied to the Controller of Insurance as early as possible. The undertaking is required to be furnished by the 15th November, 1957, for transmission to the Controller of Insurance. The undertaking follows almost verbatim the wording of Indian regulations

on the subject and the exceptions and relaxations are identical with that of the provisions now in force in India.

It will be noticed that the undertaking is only in respect of payment of premiums. Pakistan Government have not thought fit to obtain from Insurers undertaking in terms of the other provisions of the Indian 'Code of Conduct.'

It can only be hoped that after incorporating the best in Indian Insurance law the Pakistan Government will be able to arrest the deteriorating tariff position, the malpractices, and the outstanding premiums which have been, for many years, the bane of Pakistan insurance. The Pakistan Government under the proposed regulations reserve to themselves the power of investigations. Experience will be the guide, and it can be hoped that after some months of working in terms of the present legislation it will be possible to formulate definite views about the climate of insurance, both life and general, in Pakistan.

World of Insurance

Janata Policy

INSURANCE is a community service. It keeps the economic fabric of the community in a state of constant repair. The economic fabric of India covering the entire community spread over the sprawling length and breadth of India must necessarily be vast, but only a little fringe of it has so far been insulated with the cover of insurance. This has resulted in large patches in the thinly woven veil, thus tearing the economic fabric of the country almost to shreds. The Life Insurance Corporation of India, born only a year ago, has taken upon itself the challenge, and it is now engaged upon the daring task of keeping the fabric in a state of constant repair. This it can only do by carrying the message of insurance to the far corners of the country. This challenging task it has attacked with all earnestness by inaugurating its scheme of what is known as "Janata policies."

The Janata policy scheme is essentially simple in character. Indeed, simplicity is its best selling value, for it must be easily understood and easily saleable. Under the scheme, only the endowment assurance policy with or without profit will be issued. The maximum age at entry is limited to 45. The terms of Policy will be 10, 15, 20 or 25 years, subject to maturity age or premium ceasing at age not exceeding 60. The sum assured shall not be less than Rs 250 and not more than Rs 1,000 on any one life. There will be no medical examination in the case of lives aged 35 or less at entry; a short medical report will be required in the case of other entrants. The risk will be covered in all cases for the full amount from the outset.

For the convenience of policyholders, two methods have been devised for the payment of premiums: (i) by affixing stamps in the Premium Collection Book and (ii) by entering the premium paid to a collecting agent in the Premium Collection Book. In regard to the first, after the first premium is paid in cash in yearly, half-yearly or quarterly instalments at the Branch Office, a Premium Collection Book will be issued to policyholder. On this, stamps of various denomination, which can be purchased from any office of the Corporation or from authorised agents, can be affixed for payment of subsequent premiums according to the convenience of the policyholder within the days of grace. The date on which the stamps are defaced at the office of the Corporation, the receipt thereof entered in the book will be deemed to be the date of receipt of premium. This stamping procedure has, however, been held over for the time being till such time as the Corporation is in a position to obtain a clearer view of its opera-

tional snags in the light of experience.

Regarding the second, the method is almost similar. The first premium shall be paid in cash at the Branch Office of the Corporation. On receipt of the premium, a Premium Collection Book will be issued to the policyholder, which will contain space for recording receipts of subsequent premiums by an authorised agent of the Corporation. If premiums are paid through collecting agents, monthly instalments are also allowed. For convenience to policyholders, collecting agents will call for collection at mutually arranged time and place.

The scheme is primarily intended to reach the untapped human resource. That the untapped resource is colossal will be evident from a perusal of the census figures. According to the 1951 Census, the population of India was 360 million, of which 105 million were self-supporting persons and about 40 million were earning dependents. Of the self-supporting persons, 71 million were agriculturists and 33 million non-agriculturalists.

These statistics indicate that the present number of insured persons may be estimated at 5 million, which is as low as 5 per cent of the potential number of persons who need life insurance protection for the benefit of their dependents in case of premature death. The remaining 95 per cent, whose need for insurance may be considered the highest, has so far not been touched. The Janata policy is the beginning of a calculated probe which, carried to logical ends, is likely to cause a revolutionary change in the fatalistic economic outlook of rural and industrial India.

The progress of life assurance under the company regime, although phenomenal, was, however, mainly concentrated in urban areas. Revolutionary changes in the political, social and economic spheres in this country have ushered in a new era of hope and prosperity for the neglected masses—teeming millions who daily toil in the field and factories and are engaged in the production of national wealth. In fact, the whole outlook has undergone a change of vast importance, and the common man is now virtually the ultimate repository of all powers. It is he who produces national wealth, and his economic well-being and security remain the first charge on the nation. The Life Insurance Corporation of India, with a view to bringing the message of insurance to all classes of the population in the country, has introduced the Janata Policy. On its success will, therefore, largely depend the economic stability of the common man. The lease of the Janata policy has, thus, to be reinforced and all fissures effectively sealed.

An apology of a small policy was in force during the company regime. This was mainly transacted through the Provident Societies. As at 31st December 1955, there were 71 such Societies and the new business was a little over Rs 2 crores with a total business of a little over Rs 5 crores all over India. The premium received during 1955 amounted to a little over Rs 6 lakhs. The insurance fund was a little over Rs 1 crore. Of the 73 companies whose valuation results have been appended in the Insurance Year Book, 29 were deficit companies. It is quite evident from a perusal of the balance sheets of these companies that only half-hearted attempts were made to touch the small wage-earners. No success was achieved because the insurance outlook and salesmanship in the company regime were mainly urban in character. The lapse ratio of these Provident Societies was unconscionably high; this was so because there was no workable machinery for collection of premiums, which were of small denominations, and agents confined their activities to procurement of new business and earning the first year's commission. What contributed to the success of Industrial Insurance in the West was a well-conceived plan of collection at the door step by Collection Agents, who, generally, are salaried workers. The Corporation has very wisely provided for such collection, but the machinery created for the task does not appear to be objectively conceived.

Indeed, the success of the Janata Policy scheme will depend on regular collection of premiums, which is the vital core of all industrial life assurance. In England the Industrial Assurance Act, 1923 covers essentially what is contemplated in the Janata Policy of the Life Insurance Corporation of India. In industrial life assurance, the emphasis is on collection of premiums, where premiums are collected by means of collectors. Needless to say, the laborious process of collecting small sums of money is bound to be expensive and the high expense of transacting industrial assurance in the UK, which has been one of the two major problems facing industrial assurance, is intimately associated with the employment of a small army of collectors. Since expense is the core of the problem of industrial life assurance, various schemes have been tried, and although considerable success has been achieved in reducing the expense at which industrial life assurance is carried on, it would not be fair to claim that all that is necessary in this regard has already been accomplished.

The original method of remunerating the agent in the UK appears to have been the payment in some form or other for the new business obtained, combined with a percentage of the premiums collected week by week. Scared by the high expense ratio of this method, the largest companies have introduced what they term a 'block system', the effect of which is that the collectors are paid a salary going up

with an increase in the amount collected, but not increasing in strict proportion. Consequently, as the amount collected by one man increases, his remuneration also increases but the ratio which bears to the total of premiums collected decreases.

The method of remuneration would, therefore, seem to be the core of the problem for the success of the Janata Policy or any scheme of industrial assurance. Mere payment of salary to the agent or the inspector would not be sufficient. The salary should be so devised as to increase with an increase in the amount collected but not increasing in strict proportion.

The Life Insurance Corporation of India would do well to give thought to the problems associated with the sale of business, for, whilst business must be sold at the widest possible scale, it must also sufficiently stimulate the Inspectors and agents to effect sale of business. In the method adopted for devising a compromise between the two will lie the success of the much commended Janata Policy.

As the Janata Policy scheme of the Corporation is still in its Pilot Project stage and working within a frame-work which is still to be tested by actual experience, it would be unfair to be too critical of the results so far achieved, but organisational orthodoxy of the type followed in ordinary life business organisation would, in our view, be a less helpful device for Janata Policy simply because in this type of work procurement and collection should be integrated into a comprehensive organisational pattern in which the worker gets his due not merely for the business secured but also for the increasing quantum of renewal premium he collects. In the ordinary business, the worker traditionally cares for the first year's premium, while the renewal part of it is left to help itself. In Janata business, this would be fatal, while ordinary agents would also be less attracted by its consequent unattractive return in terms of earning.

World of Tea

Accumulation at Calcutta Port

IT is learnt that there is now a large accumulation of Tea at the Calcutta Port as a result of an increase in arrivals. Although production is some 30 million pounds behind that of last year, arrivals in Calcutta warehouses, from April 1 to October 23, 1957, totalled 2,246,674 chests as compared to only 1,778,840 chests in the corresponding period of last year. Arrivals by steamer particularly were ahead of last year by 295,664 chests. Of this figure, the increase of 187,369 chests resulted from arrivals during last month.

The increase in arrivals was more than the steamer companies could cope with through Tea Transit Sheds, which had to receive teas at various other points in the Calcutta Port. As a matter of fact, at the end of October, as much as 127,118 chests were stored at Tea Transit Sheds as compared to only 58,188 chests during the same time last year. Besides this, there were 136,000 chests afloat, waiting to be unloaded and, in addition, about 115,539 chests were afloat enroute to the arrival points from upcountry.

Meanwhile, in the Export Sale, offerings were 54,971 packages. There was a strong and general demand. Commonest sorts and Clean Common descriptions again met with an active enquiry and advanced by about 2 to 4np per pound. Black Fannings, although a strong feature, were generally sold at about last rates. Medium Assams of orthodox manufacture received fair support at about last rates. There was a better demand for BOPs in this category.

CTC Assams with useful and improved liquors were sold well at prices which were often up to 20 np per pound dearer; but the poorer kinds were a weak feature of the sale and eased by 15 to 25 np with some withdrawals. Legg-cut teas were well supported and prices were generally firm to dearer. Whole Leaf grades met with a good demand at rates which tended dearer, while Darjeeling teas and Tippy sorts were sold well. Following rates were quoted:—Clean Black Pekoe Rs 2.30; Plain BP Rs 1.70 to Rs 1.82; Medium BP Rs 1.76 to Rs 1.80; Medium Fannings Rs 1.86 to Rs 1.90; Best CTC Assam BP Rs 3.00 to Rs 3.50 (nominal) and Best Assam CTC Fannings Rs 2.80 to Rs 3.00 (nominal).

In the Internal Sale, offerings were 17,591 packages of Dusts. Quality was again of an ordinary 'rales' description. Orthodox grades from all districts continued to be well supported and prices were generally firm with Commonest kinds frequently being dearer. There was an irregular demand for CTC

Assams and, with less activity being shown by exporters, the larger grainy kinds were often easier, particularly where liquor showed a decline. The best bright liquoring invoices met with competition; but generally at easier rates. The smaller powdery medium kinds with useful liquors did not usually share the same decline. Following rates were quoted:—Medium Doars Dust Rs 1.76 to Rs 1.78; Medium Assam Grainy Dust Rs 1.76 to Rs 1.80; Medium Assam CTC Dust Rs 2.05 to Rs 2.20 and Best Assam CTC Dust Rs 2.70 to Rs 3.00 (nominal).

Also, 2,751 packages of Leaf grades were offered for internal consumption. There was a fair demand, although prices for orthodox grades often moved in buyer's favour.

In the Colombo market, offerings were 6,253,236 pounds. Demand was generally quieter except for the best quality teas. There was again a limited selection of Nuwara Eliya teas with quality occasionally showing an improvement and prices were dearer. Among high-grown teas, Uva teas continued to decline in quality, while Dimbula types were very well maintained. Among medium-grown teas, all mediums came to a much lower market. Good liquoring Fannings were firm; but poorer high-grown Fannings eased somewhat. At the off-grade sale, useful liquoring teas were sold readily at about last rates, while poorest types of Fannings and Broken Mixeds were easier.

In the Cochin market, eight lakh pounds of Dusts were offered for internal consumption at the auction held towards the end of last week. Although there was useful demand, prices were irregular and easier all round. Milled Dusts were 10 to 15 np per pound lower, while Mediums were up to 20 np below last rates. Best liquoring sorts were, however, sold well. The next Dust Sale will be held on the 26th November, 1957.

Despite the fact that shipments of tea from the Chittagong Port, during September 1957, showed an improvement, exports to foreign countries were reduced to a mere trickle. Total shipments, during the month under review, improved to 4.28 million pounds from 4.22 million pounds in September last year. While shipments to Karachi were more than double at 4.28 million pounds as compared to 1.72 million pounds in September 1956, exports to overseas countries declined sharply to 1,800 pounds from the high level of 2.5 million pounds. Total shipments, in the first nine months of the current year, amounted to 31.74 million pounds as compared to 32.42 million pounds in the corresponding period of last year.

November 23, 1957

World of Jute

Lack of Overseas Enquiries

THE markets for both Raw Jute and Jute Goods have continued to rule weak and prices have declined further from last week's levels. The decline in prices, especially of Sackings, is more pronounced. This is mainly due to the fact that, barring scattered interest in Cornsacks and Woolpacks from Australia, sackings have been neglected. Moreover, as the gradual switch-over of looms from hessian to sacking manufacture, that has been taking place during the past few months, has increased the output of the latter category, the market is now facing a heavy selling pressure.

As far as Hessians are concerned, their prices have fallen relatively less in sympathy with sackings. As a matter of fact, there was a slight improvement in prices at one stage on reports of interest from America; but when business did not materialise, rates fell back. Even the encouraging burlap consumption and the stock figures in the USA during last month have passed unnoticed. The fact, that foreign buyers who had purchased only for their immediate

requirements might enter the market to replenish stocks, seem to have been overlooked.

The main cause of the weakness of the market has been the lack of overseas enquiries. Buyers on behalf of foreign countries were anticipating this break in prices and had been postponing entering into commitments earlier. Buying was cautious, as consumers desired that the lower trend should be sustained.

Basically, the market appears to be sound due to the low stock position. Although overseas buyers have no encouragement to place orders for the forward deliveries owing to the pressure on the credits, business with them can be expected only on a month-by-month basis. In the opinion of most of the trade circles here, the placing of large orders for delivery six months in advance may be a thing of the past for the time being. Some circles are, however, of the opinion that the current rates will be sustained and possibly work higher in the coming weeks. They base their views on expectations of increased

buying for the remainder of the year.

There are also other factors which have contributed to the present weakness of the market. There is no longer any scarcity of certain constructions and all categories are freely available at reasonable prices. In view of the improvement in the productivity of jute mills, it is hoped that the output in the coming months may rise even without unsealing looms. It is also hoped that prices will settle down to buyer's favour in as much as raw jute prices are also forced down.

Arrivals of the new crop have continued to be in small quantities and all imports are easily absorbed; but prices, nevertheless, have moved down. Total arrivals for the four months July-October 1957 have fallen from last year's corresponding figure by more than 1.56 lakh bales, making an overall decrease in arrivals, from both India and Pakistan, of 1.56 lakh bales. Total consumption of raw jute, so far this season, is 1.97 lakh bales. Thus arrivals are short of this figure by 3.33 lakh bales. Despite this big gap between total imports and consumption, mills are still reluctant to buy at the prevailing levels.

There is a general opinion that arrivals will increase further in the coming weeks and there will be a break in prices, when once the harvesting season is over. The report, that the jute-press workers in East

Pakistan have resumed their work again after the recent strike, has also raised the hope that raw material from that quarter will soon be coming in. It is, therefore, quite natural that dealers in raw jute are now eager to dispose of their stocks and reduce prices at every stage to attract buyers. Thus, with mills continuing their policy of taking up only small quantities each day and, in the absence of large-scale buying, rates can be considered as only nominal. Assam Bottoms are quoted around Rs 27.25 per maund, for November-December delivery.

Following are the price trends of jute goods:—

	Week's Opening	Week's Closing
	Rs.	Rs.
Hessians:		
40" x 10 ozs.		
Ready	41.55	40.80
December	41.60	40.95
Jan.-March	41.65	41.10
40" x 8 ozs.	34.19	33.75
40" x 7½ ozs.	31.69	31.37
Sackings:		
B. Twills:

World Overseas

US Notes

IT appears now that the United States may have come to a pause in the largest capital investment boom in its history. The McGraw-Hill Company, a leading publisher of business journals, concludes in a preliminary survey of business plans that investment in new plant and equipment will decline 7 per cent next from this year's peak. But few economists see in this cause for undue alarm. If it materializes, it would be the first decline in such investment in four years, and a levelling-off was bound to come sooner or later.

In any case, capital spending, the survey indicates, still would aggregate \$36,000 million next year, about equal to the 1956 total and a full 20 per cent above the 1955 total. Thus, business outlays would continue to be a formidable source of economic strength.

A close look at the McGraw-Hill report leads to other reassuring conclusion. At this date, most companies are planning to spend as much in 1959 as in 1950—an indication that business confidence remains high and that no marked economic downturn is anticipated. Moreover—and this may turn out to be the report's most significant aspect—the majority of the companies surveyed plan to maintain

or increase their expenditures on research and development next year. Using past experience as a guide, this means that there may well be another substantial increase in capital spending after 1959, when these research and development programmes begin to bear fruit. All this certainly belies the probability of any long-term decline in capital investment.

It is well to remember that the current investment boom has been running strong throughout the post-war period, and has shown sustained vitality. Only in two of the past ten years were dips in business outlays, and these proved to be both moderate and brief.

In the last decade, American industry has put nearly \$270,000 million into new plant and equipment, and in that time manufacturers have raised their productive capacity 72 per cent. Today, American industry is producing for a defence programme well in excess of \$40,000 million, and, at the same time, it is turning out a multitude of goods for a civilian economy more than eight times that size. But while manufacturers have been setting new production records, their vast post-war expansion and modernization programmes have raised their total productive capabilities to the point where capacity for the moment exceeds demand.

Over-all manufacturing operations now are running at an estimated 82 per cent of capacity, while industry generally prefers a 90 per cent rate for maximum efficiency. Thus, the manufacturing sector plans the largest cutback in plant and equipment outlays next year—some 16 per cent. It should be noted, however, that the projected capital investment dip will not hit all lines of business. Electric machinery producers actually plan to increase their outlays 13 per cent, public utilities 3 per cent, the petroleum industry one per cent.

Meanwhile, economists note, expansion in other sectors of the economy may well offset the anticipated 2,500 million drop in capital investment. Home building, for instance, is showing new signs of vigour. Defence spending may increase. And state and local government outlays, largely for schools, roads and other public facilities, can be expected to rise some \$3,000 million—about in line with the average annual rise of recent years.

All in all, therefore, most economists view the projected drop in capital outlays with considerable equanimity. It should have only a limited effect on the nation's total economic activity, and it will give other sectors a chance of catch-up in orderly fashion with the remarkable post-war growth of American industry.

*

Britain

Several facts about United Kingdom business activity in the first nine months of 1957 now stand out

clearly, and three of them have an obvious bearing on the new economic measures announced by the Chancellor of the Exchequer, Mr Peter Thorneycroft, in September.

The first is that demand of nearly all kinds remained persistently strong, in spite of the steps already taken to restrict it. With the end of petrol rationing, for example, expenditure on consumption by the general public rose sharply; more was spent not only on motoring but on food, tobacco, clothes and durable household goods, and outstanding hirepurchase debt began to rise again.

This recovery in consumption spending was accompanied by a continued rise in capital expenditure on new plant and machinery, particularly in manufacturing industry, by higher investment in stocks, and by sharp acceleration in the pace of expenditure on the railway modernization programme.

It is true that there was evidence to suggest that demand might not continue to grow at this rate. The growth of investment in manufacturing industry was slackening, there were signs that the increase in consumer expenditure was gradually being overtaken by higher prices, while real expenditure on goods and services by the Government and by local authorities had already fallen. But there is no doubt that home demand remained extremely strong during the first half of 1957.

This rise in demand—and exports, too, were still growing—was reflected in national output. Production rose quite sharply in May, with the passing of the Suez crisis and the end of strikes in the ship-

building and engineering industries: the output of capital goods continued to increase, and there was a marked recovery in the output of consumer goods.

The rise in production has been maintained and improved. In August it was 5 per cent. above that a year earlier, but over the period production increases have been more than matched by the increase in money incomes. During the first half of 1957, compared with the same period of 1956, output of goods and services rose by around 2 per cent., while money incomes—wages and profits—rose by 5 per cent. The result was a rise in the final prices of all goods and services of 3 per cent.—a rise which was mostly due to the increase in internal costs. Since June, retail prices have gone up on last year by 4 per cent.

This rise in demand, output, and prices was accompanied by an extremely strong external payments position. In the first half of 1957, despite the special strains on oil and shipping income produced by the Suez crisis, there was a current

payments surplus of £125,000,000—only a little less than the £159,000,000 achieved in the first half of 1956. In the 12 months to June of this year, the payments surplus amounted to £211,000,000 against a surplus of only £57,000,000 in the previous 12 months.

The volume of exports has continued to rise, more than making up for the cost of special oil imports and the general rise in imports needed to back the growth of industrial production; it has risen further in the third quarter, in which there is also likely to have been a further recovery in invisible income. But it must be admitted that the rate of growth of exports is slackening, and that the fall in import prices which is helping to strengthen the current trade balance could lead to export difficulties if it goes further.

As a result of this strong trading position, the Sterling Area's gold and dollar reserves rose by £88,000,000 in the first half of 1957. This was an extremely encouraging result, since it was achieved in

spite of a sharp rise in long-term investment abroad—mainly due to the purchase of dollar securities by United Kingdom residents through Sterling Area free markets. It was made possible by an improvement in short-term capital account and in particular due to the rebuilding of London balances by Sterling Area countries.

Since June, of course, there have been fresh changes in short-term capital account. The United Kingdom trade balance has continued to improve, but the gold reserves fell sharply in September. This fall, though partly due to seasonal elements in the trade of other sterling countries, was mainly the result of the burst of currency speculation which followed the revaluation of the French franc.

It was feared for a time that the German Deutsche Mark might be revalued upwards, and that sterling might be devalued; funds were taken away from London, foreign traders were slow to pay their bills and quick to demand payment. Sterling became weak, and the gold reserves fell.

But short-term capital movements of this kind can be reversed fairly quickly. The British and German Governments reaffirmed that they had no intention of changing their exchange parities, the meeting of the International Monetary Fund passed without incident, Mr. Thorneycroft announced new economic measures designed to strengthen sterling. The pound became stronger almost at once, and there was a small reflux of foreign exchange in the last week of September.

In October money began to flow back into its normal channels quickly. The Sterling Area gold and dollar reserves rose by \$243,000,000—actually a rise of \$126,000,000 when account is taken of the \$250,000,000 drawn from the Export-Import Bank and the \$133,000,000 paid to the European Payments Union in respect of September. On top of this, there was a £9,000,000 surplus with EPU in October—the best result for this month since 1952.

A large part of this rise in the reserves must be put down to currency rather than to commercial transactions, and large part of the gold lost in August and September has yet to be recovered. But things are moving in the right direction. The first response to Mr. Thorneycroft's new measures has been satisfactory.

★

BALANCE-SHEET REVIEWS

(Continued from page 952)

Value of tea sold amounted to Rs 22.67 lakhs against Rs 24.49 lakhs, while there was a sharp increase in the value of coffee sold to Rs 23.35 lakhs. As a result, the net profit, before providing for Taxation and Depreciation, was as much as Rs 21.46.358 against Rs 12.09.508 in 1955-56. The charge on account of Depreciation is Rs 72.453 (Rs 68.384). The provision for Taxation is naturally higher at Rs 10 lakhs (Rs 4.7 lakhs). It is explained that this provision would have to be even larger, but for the fact that the burden of taxation in Mysore is lower than in Madras. The company's experience would have, however, been worse if the estates were located in Kerala.

A sum of Rs 5.27 lakhs (nil) has been transferred to General Reserve and Rs 1.5 lakhs (nil) to Dividend Equalisation Reserve. The ordinary dividend is payable on a capital increased by the issue of bonus shares for Rs 10.5 lakhs to Rs 31.5 lakhs from Rs 21 lakhs. The ordinary dividend requires Rs 3.93.750 against Rs 3.15 lakhs on the former occasion. The estimates for 1957-58 provide for a tea crop of 11.75 lakhs lbs and a coffee crop of 8.800 cwts. of which Coover cooly Estates will account for 7,500 cwts. The company acquired the entire shareholdings of Kesinurthy Estates Private Limited for Rs 8.53 lakhs. This company earned a profit of Rs 1.77.378 in 1956-57. A crop of 1639 cwts of coffee is harvested. It is indicated by the Chairman that, as a result of the acquisition of coffee estates in Mysore, the position of the Waterfalls has improved to a great extent.

OVER the difficulties of the Second Plan, it would appear that we are working ourselves into a frenzy of cold feet. I know I am mixing my metaphors, but the extravagance of desperation I see around me can be adequately described only in some such terms, though it involves some violence to language. All around me, I see a profound desire to take the opportunity to abandon even such efforts as we would have had to put in, Plan or no Plan. All this talk about the "core" and the "inner core" (which are, even after Mr. Nehru's speech in Parliament, yet to be defined) has only served to encourage the feeling that the strenuous effort needed for pulling yourself by the boot strap can now be relaxed. The powerful inertia of the undemanding torpor of a stagnant economic life has its inevitable attractions in a context in which everyone seems to imply that hard work will take you nowhere in particular. As for authority, it seems to be plagued by a kind of anxiety neurosis which makes it merely run around in circles. The consequence has been a progressive clouding of the vision that originally inspired the Plan, a creeping paralysis of action and a steep deterioration of the morale of the people.

★

If our efforts to get anywhere by planned development should succeed at all, it is of utmost importance that the present atmosphere should clear. Let us recall certain basic facts about our present predicament. In the first place, even while the Plan was being formulated, it was realised that our resources will be extended to the full and the efforts that will have to be made will be of the most exacting kind.

★

The reason for our extending our resources to the utmost and for asking for the utmost sacrifice and effort from our people was that it was in a sense the minimum we could aim. This proposition is true even today and is not inconsistent with our present intention to reduce this "irreducible minimum". If, for a variety of reasons, we are now obliged to rephase the Plan and to postpone certain of our original projects, the Plan has to that extent been a failure for which we shall have

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please!"
—As You Like It.

to pay disproportionately as we get into the Third and Fourth Plans. This, and not our present difficulties, is the real setback to our Plan. Let me put the dilemma of our situation in another way: There is a theoretical case for a man who gives up the job of economic development of a backward country with an ever increasing population, as an apparently hopeless job. There is also a theoretical case for the man who asserts that the logic of the present world economic forces is such as to make inevitable a progressive widening of the gulf between the standard of living of the developed and undeveloped countries. Thirdly, there is an arguable case for the position that an underdeveloped country can get out of its present stagnation only by submitting to the most appalling kind of dictatorship.

★

But all these three propositions are counsels of despair and are quite rightly rejected by those who subscribe to the philosophy behind Indian planning. Indeed, we cannot but do so, for, the consequence of accepting the first two is to abandon all effort at amelioration of our people and the consequence of accepting the last proposition is to give up some of the most valuable things in our way of life.

★

So, what we attempt to do is to devise practical modes of action that would, by an almost superhuman effort, give us just the lead that would enable us to beat in course of time the somewhat grim logic of the propositions I indicated earlier. That is to say, as practical idealists (in contrast to theoretical pessimists) we try to devise methods by which we shall create, step by painful step, the necessary conditions that will belie these propositions. Thus, a simultaneous attempt at development and control of population may, in the course of half a century, conceivably disprove the pessimism of the first proposition. Again, an enlightened policy on the part of developed nations facilitating a continuous flow to underdeveloped countries of capital and technical skill may in course of time reduce the gap in technical and financial resources and thus make the second proposition meaningless. Thirdly, if efforts at de-

mocratic planning as those of India achieve a measure of success, then the superstition that development has to be paid for in slavery would also disappear from this world.

★

The task of disproving the apparently irrefragable logic of those propositions, though difficult, is not impossible. After all, seemingly immutable "laws" of economics have been reduced to nonsense in the past, largely as a result of efforts of practical idealists. Laissez faire, no less than the theory of class struggle, had, when they were first propounded, the same appearance of finality as Newton's laws of motion. These have now been reduced to anachronisms, by Fabian socialism and their equivalents elsewhere. Similarly, there is absolutely no reason why twenty five years from now the combined wisdom of Government of the world should not make for the progressive reduction in inequality of prosperity among the nations.

★

But the real difficulty in making this possible is the time factor. As I said, given time, these devoutly to be wished for consummations may occur. But it is not merely lapse of time that would make them possible: active and unceasing efforts toward realising them alone would help us achieve them. And what is even more of a problem, is that every moment's delay in activating the economy of underdeveloped countries makes the imparting of self propelling power to it more and more difficult as time slips by. This is the central dilemma of the Indian planners. In other words, if you abandon, for whatever reason, your effort to give a real momentum to the development of our economy in the Second Plan, it would mean not merely that the Third Plan is put off by a little while. It means that the Third Plan is made impossible in advance to a very great extent. The logic of the economic propositions I enumerated earlier has time on its side. And, unhappily, it has time, if you will excuse a pun, on both its sides; that is to say, both the past and the future are on its side. Not merely the accumulated inequality of the past, but also the future is with it, unless the immediate future is made to work on the side

of the practical idealists who will be enabled to fill it with that kind of economic success that will weaken the sheer power of inertia possessed by economic inequality.

★

Therefore, time is of the essence of Indian efforts, and that was the reason why the Second Plan was apparently so ambitious in its scope. That is the meaning of the assertion that we could not have attempted less. We have, like the Queen in Alice in Wonderland, to run faster and faster to stay in the same place and, perhaps, move a little, very little ahead. And what is more, if you don't move that little ahead, we will for ever stay where we are, no matter how hard we run ten years from now.

★

So, complacent Cassandras of yesterday who are now gloating over their foresight have really no reason to congratulate themselves. Even supposing they were right and we are now obliged, owing to reasons at least some of which were beyond our control, to go slow in certain directions, that is an unfortunate thing to have happened. And the damage to future development by this reduction in tempo is going to cost us much more than what we would have had to put up, if things had gone according to original expectations.

★

Sometimes, foreigners see these things better than we do, because we are too preoccupied with the details of our difficulties. It is true that it would be a foolish thing to try to jump out of our skin in attempting the impossible: but often, we may mistake the difficult for the impossible, because the difficult is asking what we may, at the moment, think is too high a price. The foreigner, because of the comparative freedom from immediate issues, sees the thing clearly. I should like to commend to my readers in this connection certain very interesting points made by Mr. Leon H. Keyserling, former Director of the Council of Economic Advisers to the President of the United States, in his address to the members of Parliament in New Delhi last week. This is what he says about complaints about the alleged over-ambitious nature of our Plan: "I have neither

TARGETS

FOR STEEL

STEEL

IS THE STARTING POINT

Use steel only when
you must today,
there will be more tomorrow.

Six million tons a year is India's immediate target for steel—the absolute minimum for her present needs. Eighteen million tons is the target for the Third Five Year Plan—it can be done. India's deposits of iron ore, with the highest iron content in the world, can last a hundred years. Adequate supplies of metallurgical

coal and other raw materials abound. The combination of technical skill and high quality materials makes India the world's cheapest producer of steel. IISCO's immediate target—eight hundred thousand tons of finished steel and two hundred and eighty thousand tons of pig iron.

sympathy nor patience for those in India, and even less those from overseas, who sound the brazen bugle of retreat to the effect that India's economic plans are over-ambitious and, therefore, impractical. To be sure, some phases of your Plans may be over extended, and others relatively under extended.... But viewed as a whole, what India is attempting on the economic front is far short of your urgent needs and well within the bounds of your country's essential potentials for growth and achievement."

Most of us imagine that the United States has always been having a far higher standard of life than we have had. Mr Keyserling dispels such notions by giving a very striking instance of what happened to his own part of the country: "In early youth, I lived in an isolated rural farm area of about twenty thousand people, on a small island in the United States. As I look back to that period, my memory recalls that in this community of my youth the standards of living for almost all of the people were not greatly

different from what I have been seeing in some villages and some rural areas of India today. The basic flow of food, clothing, and shelter was meagre almost beyond description. There were no schools, no doctors, no light, no water supply in the modern sense, no hard surfaced roads, and no such commodities, as, for example, ice. And yet within a short space of time before I reached middle age, the same rural area and thousands of others like it in the US have been lifted to a standard of living which by practical measurements would

be regarded as very high in most parts of the world today".

This revelation of the state of parts of the US only a short while ago should have come as a shock to many. The moral of the transformation, too, may seem a little easily drawn. But the need for relentless effort at self amelioration can hardly be put in a better way.

Mr Keyserling also puts the logic of assistance from comparatively well-off foreign countries, especially the US, admirably. He is cautiously optimistic, and in this he is in the company of Mr T. T. Krishnamachari, about the possibility of flow of capital from the US to India. And he lists certain basic conditions for the flow of such help which strikingly confirms what I have been saying in these columns from time to time. He lists them in the form of four questions: "First, is the country seeking to obtain capital from the US engaged in a task which commends itself on fundamental human grounds, namely, the lifting of the living standards of people and the advancement of social justice? Second, is the country seeking to obtain capital pursuing well-conceived and well integrated economic policies which offer fair prospects of being successful and therefore reasonably assure the repayment of the invested funds? Third, is the country seeking to obtain this capital fundamentally fair and friendly in its dealings with the country from whom funds are sought? And, fourth, is the country seeking to obtain this capital committed to the basic principles of individual freedom and human dignity....?"

Mr Keyserling himself conceded that India meets these criteria well, though he would like the second criterion met even better than it is. Now, I would, in my turn, ask of America to understand the logic behind the fundamental identity of political attitudes between the two countries (to which Mr Keyserling refers) and also to the logic of the economic propositions I listed earlier. For, the progressive inequality in this world is the greatest single factor for political instability. In the US, this aspect of the matter is almost always made somewhat crude, by making it an overt issue of Communism vs. anti Communism. It is true that one of the forms that this economic inequality may take is that of consolidation of Communism in the less fortunate parts of the world. But inequality, whatever form it takes, is something that cannot but be a grave source of anxiety to those who are comparatively well off. So it is that it is necessary for the US to help nations like India disprove the logic of the second of the propositions I enumerated at the beginning of this Gossip.

Come,
meet my friends—

invites Adipocere

(Pronounced 'adi-po-saire')

After being refined into quality petroleum products, I am transported to the market. Here, through a well organised distribution system, I finally come to meet you—the consumer. Before I do that, however, you must meet my friends who bring me to you.

Stanvac, working through its Sales Offices, dealers and agents located throughout the country, is a good example of a well-knit organisation which markets me in my various forms. Its dealers and agents are an important element in the distribution chain. They are efficient and independent businessmen—big and small—who supply quality petroleum products so vitally needed by you. Stanvac helps these dealers by way of free advice and training their personnel to give efficient and courteous service to the customer.

By helping these enterprising businessmen to progress in their chosen field, Stanvac plays a significant part in the fast developing economy of the community and, indeed, of the nation as a whole.

Gateway Gossip

The Conquering Delegation

BY all accounts, it is a conquering delegation led by Mr G. D. Birla which has returned home after a triumphant tour of America, Britain, France and the Federal Republic of Germany. When one talks with individual members of the delegation, one senses a feeling of ebullience. When the delegation left, with the announced intention of doing no more than to clarify such misunderstanding as overseas investors might have about the Indian economy and the private sector's part in it, I am afraid that I succumbed to the trepidation that Mr Birla and his team would find theirs an uphill task. Moreover, I was apprehensive that individual members of the delegation might stray from their objective, and instead apply themselves to exploiting the opportunity for discussions on specific projects that they might have had. I am in a position to assert that all my fears have been belied, and that there was a rare display of team work and unity of purpose in concentrating upon talks and discussions intended to lift the veils of misunderstanding. If overtures were made at all, they were essentially of an exploratory nature and stood to benefit the private sector as a whole. In particular, there are two aspects of such tentative endeavours which I may bring to the attention of readers.

The first, as Mr Birla remarked in his address at the Rotary Club early this week, was the prospect of utilising the Export-Import Bank as a source for foreign exchange credits. I am a little hazy on this point, because I have a suspicion that credit extended by the Export Import Bank is available only for the purchase of American commodities. I may be wrong in this regard, but it really does not matter since,

as Mr Birla has stated, the higher cost of American equipment is more than offset by its superior quality. I understand that the facilities of this institute are being freely availed of by many a country. India, however, has so far appeared to have been ignorant both of the resources for loaning of the Bank and the understanding consideration given to propositions by the institution. There is a case for the appointment of a liaison officer for keeping in intimate touch with the Export-Import Bank; and, since the credit needs thus secured would be in behalf of the private sector, I would suggest that the Federation of Indian Chambers of Commerce and Industry should take this matter up with Government for posting its representative in America.

The second avenue of credit, admittedly as a short term proposition, is comprised by private American banks. Here, presumably, financing will be undertaken only of industrial raw materials and other similar articles. I imagine that the transaction would be somewhat on the lines of refinancing of bills for a period between twelve and fifteen months.

The foreign exchange credit that we may be able to obtain from these two sources may be anything like \$200 million. However, the liability to meet this commitment is not likely to extend beyond, say, a period of fifteen months; thus, the foreign exchange commitment will have to be met within the period of the Second Plan, and we, therefore, come up against the difficulty of adding to our foreign exchange obligations even in terms of the Second Plan. This, however, is only apparently so. For, the commodities which we could import under these two heads could be restricted by Government to imports which we would anyhow have had to make. For example, if the commodity in question is cotton, import is inevitable. To the extent that we get credit for fifteen months, it is surely an advantage. Moreover, akin to a running overdraft with a bank, India should be hopeful of maintaining a credit in foreign exchange to the tune of roughly \$200 million. In this view, it is certainly worth our Government's while, even as it affords fine media of credit for the private sector, to examine more closely the prospects of concluding such arrangements with the Export-Import Bank and private American banks.

In the few days that Mr Birla has spent in this Gateway City since his return, he has been busy assessing in public the endeavours not only of his delegation but also

of Mr T. T. Krishnamachari. Mr Birla paid tribute to TTK as having dispelled many of the misunderstandings in America as to what was thought to be an unfriendly attitude on the part of Government to the private sector. The only specific figure that Mr Birla mentioned related to his expectation that India would obtain foreign aid and loans from America for \$250 million. For the rest, he contented himself with a broad analysis of the atmosphere that prevailed in the get-together with the foreign businessmen and with an appraisal of particular countries from the point of view of their capacity to invest funds in India.

Of America, Mr Birla says that the businessmen there showed a willingness to invest a "substantial amount". Similarly, Mr Birla holds out good prospects from France and Germany. As far as Britain is concerned, he blandly asserted that, in view of the tight money conditions, in that country, we could not expect anything beyond sympathy. So, on the whole, the leader of the industrial delegation is not worried about foreign exchange as far as the private sector is concerned.

However, he has made the interesting point that the path to progress in India is completely blocked because, while "the private sector is stuck up due to the scarcity of internal resources, the public sector is held up for want of foreign capital". A day later, at the

Rotary Club, presumably having in mind the foreign exchange requirements of, as it were, the public sector, Mr Birla stressed that "this country simply could not develop without foreign aid". On the last point, Indian Finance would doubtless wish to join issue. That qualification lies in an intensification of the export drive. But, by and large, what should engage our attention at the present time is the admittedly favourable reception that the private sector seems to have had in its search for foreign capital. Since this is true, I should think that Government should seriously consider the advisability of setting in train measures which will help the private sector in obtaining what today is difficult for it—internal resources. Is it too much to hope that the 1958-59 Budget will take cognisance of this need to create the climate in which the private sector can not only develop, but also secure more by way of internal funds to embark on further expansion?

At a time when the country as a whole has been overcome by the ennui of depression arising from difficulties thrown up by the Second Plan, it is heartening that Mr Birla should have realised the importance of giving a lead to the country in the form of a much more cheerful assessment of prospects. Gateway circles have no doubt that Mr Birla has gained immensely in stature as having led a conquering delegation.

EDITORIAL NOTES

(Continued from page 956)

There is a tendency to view modern methods of population control with a large measure of scorn and ethical superciliousness. Unless such an attitude gives way to rational understanding of what is desirable and possible in this particular field, the dreams of improvement in material welfare reflected in contemporary national efforts will just remain so.

Vegetarianism and Monkeys

The Vegetarian Congress not quite unexpectedly has given the authorities a rebuke for allowing export of monkeys from India. Having sought to establish that vegetarianism is economically and hygienically preferable, the Congress proceeded to advocate a policy of strict non-violence covering almost the entire animal kingdom.

This advocacy has provoked some caustic comment on the illogicality of the argument raised. After all if man takes it upon himself to protect the weak against the strong not only in his own community but in the vast animal world as well,

the range and character of the obligation will become unbearable if not often ridiculous. The entire animal species exist on a broad basis of survival of the fittest. It is no use attempting to protect the lamb from the lion, when the human lambs themselves are often made to pay the price of their relative physical or intellectual inferiority.

Nonviolence which the Congress sought to uphold and preach passionately must be a reciprocal creed if it has to succeed. The Government of India certainly do not seem to look on the export of monkeys from the standpoint of foreign exchange; humanity itself is indirectly served by the research carried out on these animals. Nor is polio demonstrably a monopoly ailment for non-vegetarians. The Prime Minister has assured that the monkeys exported from India are ensured protection from needless torment. While the virtues of vegetarianism might be uncontested the best attitude that vegetarians could adopt appears to be one of hearty co-existence with the lovers of animal food.

Bombay Review

Foreign Aid

On his arrival at Bombay Mr. G. D. Birla the leader of the industrial delegation which toured the United States, disclosed that he had already succeeded in securing substantial aid from the US for several projects. He indicated a sum of 250 million dollars as the minimum that would be available to India from the United States. At the same time Mr Birla ruled out any miraculous results in the near future.

Much more important however, is what the industrial delegation had done to allay the misapprehensions in the minds of the foreign financiers and businessmen about our economic policy and also to answer the many complaints about the fiscal and taxation measures of the Government of India. Thus the delegation's important task was to prepare a climate among business circles abroad with a view to attracting investments, know-how and industrial credits. And Mr Birla claimed a fair measure of success in creating such an atmosphere which he said could be exploited usefully in securing further credits.

Mr Birla's analysis of the cause of the inability of the private sector in attracting foreign investment is one which the authorities would do well to study. According to him it is not the reluctance as such on the part of foreign business men, to invest in India but the lack of good basis for seeking credit which stands in the way. Thus it is the lack of internal resources with which to start a project which prevents foreign participation in the country's development on a large scale. But Mr Birla is optimistic about creating a capital market in the country.

Analysing the position on the balance of payments sector Mr Birla pointed out that it is made up of two aspects.—(1) lack of adequate resources to meet the liabilities already undertaken by the Reserve Bank of India to supply foreign currency for the purchase of foreign equipments made so far by the public and private sectors and (2) lack of resources for the future needs of the country to fulfil the Plan. For the first one Mr Birla suggested by way of remedy the raising of a loan immediately on the Governmental level from foreign governments or in the private markets and the deferment of the payment in respect of purchases already done. For the second he suggested the promotion of exports and attracting foreign investments and commercial credits.

Mr Birla's view on the attitude of the Government of India towards the private sector, is in refreshing contrast with that of some of his own colleagues, while the latter

had never failed to raise a scare about private sector being in danger at the very slightest move of the Central Government which might hit the private sector in any place. Mr Birla is satisfied about the good intentions of the Central Government, and confident about the safety of the private sector.

Food Situation

The food situation in the Bombay State is marked by the continuing shortage of rice. Even the official spokesmen have admitted the rice situation to be really a difficult one. To meet this situation the Government are thinking on lines of a modified system of rationing in respect of rice. Mr S. G. Kazi the Minister for Civil Supplies, indicated at a news conference in Bombay, that preliminary administrative arrangements for the issue of identity cards to about 800,000 families in Greater Bombay are being put through by the Government at a rapid pace with the object of launching a rice distribution system by the end of the year.

According to the system the card-holders would be allowed to buy only rice from the fair-price shops. The actual quantity that would be so distributed to each family would depend on the availability of supplies and this is not a fixed but varying one. The issue of identity

cards is calculated to close the loophole in the present system, which enables the same individual to purchase repeatedly from a shop any number of times.

Pending the introduction of the card system the Government are exploring possibilities of giving more rice to the people, and the State Government have approached the Union Ministry of Food for an increased quota of rice and had also asked the local traders to import more rice from neighbouring surplus States especially Madhya Pradesh.

Mr Kazi tracted the difficult situation in regard to rice to national factors and pointed to the limited supplies allowed to the State by the Centre. While during October and September a quota of 6000 tons and 10000 tons was allowed, for November, this was reduced to 5000 tons. All the same the Minister emphatically denied any possibility of rationing being introduced since he believed that the very question of rationing involved great psychological complications.

Though the rice situation according to Mr Kazi was not alarming he did not anticipate any rapid or remarkable improvement in the rice position. The card system in such a context is expected to minimise the difficulties of the people to some extent. Mr Kazi also stated that the Government had formulated a scheme to reduce the long queues for food grains in the city.

GATEWAY MARKETS

Groundnut Better: Castor Weak

THE markets for Oils and Oilseeds, after initial weakness, showed signs of stability, although Castor-seed was an exception. Groundnuts rallied under shortcovering, aided by better upcountry advices with most of the buying credited to Rajkot account.

Groundnut futures continued to attract major interest despite the imposition of a special margin on purchases. This was mainly due to the persistent strength in the spot section. The strength in the market was also aided by the delayed arrivals of the new crop, which turned out to be smaller than earlier estimates. February delivery started at Rs 163.37 and, after touching a high of Rs 164.75, finished the week at Rs 164.62. In the ready section, Bold quality was quoted at Rs 33.12 and Groundnut Oil at Rs 19.50.

Although Castorseed showed a further fall from last levels under renewed liquidation prompted by

discouraging spot advices, the extreme decline was checked by profit-covering. The initial weakness of the market was mainly due to the discouraging outlook for exports of castor oil. May delivery opened quiet at Rs 152 and, after improving at one time to Rs 153.00, receded again to Rs 151.50 at the close. Ready was quoted at Rs 31.37 and Castor Oil, commercial quality, at Rs 17.25.

Linseed and Cottonseed sections, however, registered some improvements. Cottonseed February delivery moved between Rs 101.50 and Rs 104.50, to finish at Rs 103.50. In the Linseed section, May delivery closed at Rs 31.81 after touching a high of Rs 31.87 and a low of Rs 31.69. Ready was quoted at Rs 30.62.

Gold & Silver

Weakness persisted in the bullion market following increased receipts,

lack of demand in the ready section and more offerings. Silver declined with offerings, induced by lower upcountry advices and slow spot demand. Arrivals were estimated at 25 bars and offtake at 10 bars. Posh delivery moved between Rs 183.94 and Rs 184.69, while the spot rate was quoted around Rs 182.75.

Gold came under the influence of increased arrivals of unrefined metals. Arrivals and offtake were estimated around 5,000 and 2,000 tolas respectively. Mangsir delivery changed hands at Rs 108.06 to Rs 108.40 and Posh delivery at Rs 108.19 to Rs 108.56. Ready was quoted at Rs 108.06 to Rs 108.37, while sovereign remained steady at Rs 70.25.

Non-Ferrous Metals

Conditions in the Non-Ferrous Metal market ruled generally steady, thanks to different rumours with regard to licensing and better London advices. Copper ready was quoted at Rs 163 per cwt. There is a feeling that, with good consumption and foreign reports rather good, the market will remain steady for some time to come. Zinc was quoted around Rs 58 per cwt. More arrivals are expected by the end of the month and may ease the supply position. Lead ruled unchanged at Rs 71 per cwt. It is reported that there are no appreciable stocks in the market. Tin ruled better at Rs 127 per quarter.

On the London Metal Exchange, copper was quoted at £186½ per ton. Consumer interest was reported to be moderate. Zinc was quoted at £87½ per ton. Lead turned weak at £82 per ton as against £86½ quoted in the previous week, mainly due to reports of higher rate of offerings from Russia in Europe. Tin remained very steady at £730 per ton. The threatened strike in Singapore is reported to have been postponed and the Russian offerings have, of late, shown some increase.

Yarn

Listless conditions continued to prevail in the Yarn market. Turnover was limited with prices developing an easier tendency in the absence of any support. Reports from upcountry markets indicated that the demand for rayon cloth was low and the wholesale dealers were inclined to cut down prices.

Stocks of Staple-Fibre yarn were also reported to be heavy, particularly in the Punjab, and many weavers were trying to dispose of the stocks even at reduced prices.

The market for Cotton Yarn also ruled dull. The persistent weakness of the market was attributed to the poor offtake by weavers in the face of sustained selling pressure emanating from mill quarters.

World of Cotton

Irregular Price Movements

PRICE movements in the Bombay Cotton futures market were rather irregular last week on alternate buying and selling. Early in the week, conditions remained quiet and values reacted under profit-taking and lack of support on reports of increasing arrivals of the new crop in the terminal markets, while spinning mills appeared to be reluctant to augment their stocks. Also, price trends in the upcountry markets remained downward. With the result, buying enthusiasm was limited despite better performance of other commodity markets. Values, however, developed a steadier trend towards the close under sustained short-covering finding sellers limited.

In general, caution became the keynote of trading and many mills preferred to buy only on a hand-to-mouth basis. The Government had refused to reduce the excise duty on cloth despite the industry's complaint of heavy accumulation of stocks in the past four months. A section of the trade, therefore, felt that the outlook for textiles and for cotton was not so bright as was expected earlier.

Moreover, reports from the cotton export front were equally discouraging. Contrary to earlier expectations, Japan and China were not ready to buy Bengal Deshi cotton from India on account of cheaper varieties available from Pakistan and America. Continental buyers were also delaying their purchases on the hope that the Government of India would soon reduce the excise duty. With the result, ICC Jharilla March declined steadily to Rs 695.75 from a high of Rs 703.50, to finish the week at Rs 703.25.

The Spot section ruled comparatively steady with local and Ahmedabad mills evincing interest in new crop Khandesh and Berar Jharilla.

On the export front, superfine Bengal Deshi cotton continued to draw the attention of customers.

In the foreign section, good business was reported done in spot lots of American and East African varieties. Sudan cotton was also in moderate demand, subject to the issue of licences.

Meanwhile, it is understood that the Sudanese Government have decided to reduce the export duty on Sudan cotton by 3.75d per pound. The duty hitherto was 7.50d per pound. It is further understood that the variation arising out of the reduction in export duty on Gezira types would be on Gezira Board's account, while the variation in export duty on private estate types would be on buyer's

account. With these substantial reductions, Sudan cotton has indeed become an attractive buying proposition for Indian mills.

Unfortunately, in view of the foreign exchange difficulties, the Government of India may not be able to sanction further import of this cotton at any rate for the time being. There is, however, a feeling that it would have been very hopeful if both India and Sudan could come to some satisfactory arrangement in this regard very soon.

Meanwhile, importers are eagerly awaiting the permission to bring

American cotton under the PL 663 and 480 programmes. Although the licensing under the PL 663 programme has automatically come to an end on October 31, attempts are being made to extend the period by three months to December. The Government announcement to that effect is soon expected.

STATISTICS:

Indian mills consumed, during September, 399,125 bales of domestic and 49,310 bales of foreign cotton. In the same month last season, consumption of Indian cotton was 377,978 bales and that of imported cotton 53,732 bales.

Total stocks of cloth with the

mills are estimated at about 601,000 bales comprising 391,000 bales of unsold and 210,000 bales sold, but not yet taken delivery of. Total stocks represent about two months' production.

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market advanced steadily on trade and commission house buying along with short-covering, prompted by the strength in the nearby December position. While the weather in the cotton belt improved with generally dry conditions prevailing, traders appeared to pay more attention to the cur-

Finance Commission's Report

THE second Finance Commission appointed by the President under Article 280 of the Constitution have submitted their unanimous Report. A copy of the Report together with a memorandum of Government accepting the recommendations was laid on the table of the Lok Sabha last week. In the accompanying memorandum, Government have indicated that early steps, including legislation, (which will be put through in the current session) will be taken to implement the recommendations.

The principal recommendations of the Commission may be summarised as follows: a total of Rs 140 crores (as against Rs 100 crores recommended by the first Finance Commission) is to be transferred annually from central revenues to the States from the current financial year. This will comprise the States' share of the divisible pool of income tax and excise levies, and grants in aid from the consolidated fund of India. As regards taxes on income other than Corporation Tax and tax on federal emoluments, the States will get in future 60 per cent instead of the present 55 per cent. This amount is to be distributed among the various States as to 90 per cent (instead of the present 80 per cent) on the basis of the population and as to the balance on the basis of collections. This is sure to stir old and interminable controversies. The reason for decreasing the weightage for the place of collection (which is sure to dissatisfy States like West Bengal and and Bombay) is perhaps that such a criterion has certain elements of invidiousness: A registered office of a big manufacturing industry may be in Calcutta, while the actual work may be in another State. It is perhaps questionable how the registered office should qualify better as a source of income (and therefore of tax on it) than the actual work-site itself. A new considera-

tion also finds some discussion in the Report. The new provincial taxes on Sales and Motor Vehicles, and electricity duties, Entertainment and amusement taxes to which the urban population make a larger contribution make the relatively urbanised and industrialised States financially stronger than the States with large tracts of rural areas with teeming population.

As regards excise duties, the Commission have increased the number of items, the levies on which are divisible between the States and the Centre. Besides the old items of matches, vegetable products and tobacco, five new items—sugar, coffee, tea, paper, vegetable and non-essential oils—are now included in the list. The percentage of the net proceeds to be given to the States has, however, been reduced to 25 instead of the old 40 per cent. The division inter se will be on basis of population. Another recommendation, is that, in lieu of the sales tax on textiles, sugar and tobacco given up by the States, the Centre will pay the States the current estimated yield therefrom (Rs 32½ crores) to the States to be distributed partly on the basis of consumption and partly on the basis of population. The Commission have also recommended grants in aid to the extent of Rs 40 crores to eleven States (the unfortunates being Bombay, Madras and Uttar Pradesh). Other recommendations relate to a reduction of interest on loans to States, etc.

As was anticipated, the Report is an able document and covers a wide and controversial field with a detailed understanding of the problems involved. In some respects, the Commission's tasks are thankless since, however generous on the whole to the States the recommendations may be, there were bound to be individual States with a grouse. And human nature being what it is, the grouse is sure to be louder and more articulate than the gratitude. The certainty of dissatisfaction is all the greater since what is being complained of is not any invidiousness as such, but the unsoundness of the criteria adopted. And, as principles are involved, the debate will be endless. In fact, there never was a Finance Commission in the world whose findings satisfied every body concerned on all points, and therefore both the Central Government and the Finance Commission would have by now developed the necessary modicum of cynicism to take with equanimity the shrill protests from affected quarters. Indeed, the protests of the affected interests, though loud, are bound to be somewhat halfhearted for two reasons: firstly since the principles of divisions are endlessly debatable, they may feel that

nothing much could be extracted from the Central Government. Though attempts will doubtless be made to have it appear that the principles have a sinister motivation to do them out of their legitimate dues, no one would take such attempts seriously. Moreover, the States who stand to benefit by the present dispensations would be alert enough to see that the advantages they have secured are not allowed to slip through their fingers by successful assaults on the basic principles by the disgruntled States.

Secondly and more importantly, even the dissatisfied States cannot but acknowledge two things: firstly, the present Finance Commission have shown themselves more keenly aware of the problems of States' finances as a whole and have been more considerate toward their needs than any other body entrusted with similar tasks in the past. Indeed, the most remarkable thing about the present Report is the light it throws on the changing pattern of public finances in India. I shall deal with this aspect presently; but the point I wish to make now is that, unlike the past, when awards for disposition of the divisible pool used to give the impression of being the result of an unequal fight between the Centre determined to give as little as possible and States determined to extract as much as possible, today, the Finance Commission, no less than the Central Government, recognise the impact of planning and development on the finances of the States and are willing to help them as much as possible. Thus, as a result of the present Commission's award, which diverts a sizable proportion of the central revenues to the States, the Budget of the Centre for 1957-58 has been thrown awry. But, from the over all point of view, this should not matter very much. In any case, the solicitude of the present Commission to the needs of the States as a whole should make halfhearted, any protests on individual scores.

Then, it is not merely that the general tenor of the recommendations has been favourable to the States as such: it is also that States with grouses on one set of principles adopted have stood to benefit by another set of principles adopted (with corresponding detriment to other States) and so they cannot reasonably protest overmuch on their particular misfortune. West Bengal has voiced its disappointment on the increased weightage to population in the allotment of divisible pool among various States. (West Bengal's grievance is particularly keen because the Commission have not only not accepted their proposition, but have actually increased the weightage for population.) As against this denial, West Bengal has been favoured with massive grant in aid, because

of its special problems and chronic deficits. Madras, Uttar Pradesh and Bombay, on the other hand, have been considered as not qualified for grant in aid. Thus, not only do the grievances of the States cancel each other out: even within the one State, a denial is compensated by a different kind of gift. Not even Solomon could devise a system that would have achieved anything more satisfactory than this.

There is another aspect of the matter. As will be evident from the recommendations, the quarrel about the divisible pool of income tax will, in the view of the Commission, be less and less important, since the great source of tomorrow's revenue will be excise levies. This is bound to be because of the declared intention of broadening the base of taxation in the country. We saw a spectacular instance of this in the 1957 Budget, in which 23 commodities were subjected to excise levy, as against a mere 13 in 1952. (The corresponding revenue yields are Rs 260 crores and Rs 83 crores respectively). As the present tendency to increase the number of such items gains ground, and as the other current tendency to displace Sales Tax by excise levy gathers momentum, the principle of divisible pool will be excise revenue. Since excise levy is sure to yield much more than the combined Sales Tax yield on these commodities (because of the plugging of the current scandalous evasion of that tax), both relatively and absolutely the gain of the States would be considerable. In any case, division of income tax will progressively cease to be a serious bone of contention between the States and the Centre.

As I said earlier, the pattern of public finance that is revealed by the Commission's Report is such as to make distinctions between the finances of the State and that of the Centre more and more unreal. Central planning has made inescapable large drafts by the States on the Centre by way of grants in aid, share out of Central revenues and other receipts by the States euphemistically called loans. This should not matter, were it not for the fact that the States are thus encouraged to take the line of least resistance and not explore such sources of revenue as are there. The performance of the States in the matter of doing their part in the raising of the financial resources has been lamentable. It may be claimed by the States that these sources are inelastic; and, if Sales Tax also is to be progressively displaced by Central excise levies, the States would have practically no tax gathering functions. But the Commission nevertheless emphasise that there has been a disconcerting deterioration in net receipts from tra-

North Indian Notes

Progress of Air Corporations

The fourth annual report of the two corporations, the Air-India International and the Indian Airlines Corporation, during 1956-57 discloses steady progress in all directions. In the financial sphere the progress has been substantial. While for the Air India International this is reflected in the increase in the operating profit from Rs 6.54 lakhs in 1955-56 to Rs 87.90 lakhs and the increase in net profit from Rs 3.78 lakhs to Rs 38.42 lakhs, for the Indian Airlines Corporation this is reflected in the reduction of loss from Rs 119.40 lakhs in 1955-56 to Rs 108.79 lakhs in 1956-57.

Though the reduction of loss by the I.A.C. does not appear to be great this was because of the diversion of the additional resources to meet the rise in wage bill to the extent of Rs 84 lakhs and for providing an additional Rs 27 lakhs for depreciation on account of the introduction of new aircraft. But the report emphasises that the I.A.C. succeeded during the year in developing revenues and economies of an order the net effect of which is almost equal to the deficits of the past.

The operating revenue of the Air-India International for the year 1956-57 amounted to Rs 964.88 lakhs against Rs 676.53 lakhs in the previous year, while the revenue of the I.A.C. was Rs 861.35 lakhs as against Rs 808.60 lakhs in 1955-56. The increase of Rs 52.75 lakhs in the revenue of the I.A.C. was due to the popularity of the night air-mail service which the report said registered record earning of about Rs 138 lakhs during 1956-57.

The capital of the Corporation stood at Rs 9,66,49,671 at the close of the year under review and was made up of capital received from the Government of India, Rs 7,03,15,000 and outstanding liability on account of compensation bonds and cash in compensation, Rs 2,63,34,671. In addition the loan liability of the Corporation to the Union Government stood at Rs 3,86,19,304.

The I.C.A. fleet during the year consisted of 64 Dakotas, six Sky-masters, 12 Vikings and eight Herons and carried 571,106 passengers which represented an increase of nearly 70,000 over the previous year. The cargo carried a recorded decrease from 53,856 tons to 50,194 tons while mails increased from 4997 tons to 5221 tons.

The recent ban imposed by the Government of India on foreign travel by Indians other than for essential medical, business or educational purposes, is likely to hit the business of the Air-India International in view of the fact that half of the passengers, which it carries are Indian nationals. In assessing the future prospects the report

has therefore drawn attention to this. The other body i.e. the I.A.C. is faced with an uncertain future in view of the recent introduction of costlier aircrafts and the rise in the wages bill.

Foreign Capital Investment

Shri B. R. Bhagat, Union Deputy Minister for Finance, gave out the figures for new foreign investment for the year 1956 at Rs 223.68 lakhs. Considering the immense scope the country offers for foreign capital as also the immediate needs for such capital to implement the Second Five Year Plan, this figure looks very low. This figure it is to be noted does not cover investment in branches of foreign companies, investments made out of retained profits, investments in oil refineries and a major part of investment in the shape of goods.

Manufacturing accounted for the major part of the foreign investment with a total of about Rs 215.48 lakhs, while trading attracted an amount of Rs 7.24 lakhs. In manufacturing itself the distribution of this capital is marked by a concentration in four industries. Iron and steel products accounted for nearly 4th of the total investment with a figure of Rs 53.78 lakhs while the sugar industry was a close second with a share of 49.45 lakhs

NORTH INDIAN MARKETS

Rise in Sugar Production

ACCORDING to the Indian Sugar Mills Association, the total Sugar production during the season 1956-57 (November 1956 to October 1957) is 20.26 lakh tons as against 18.62 lakh tons during the last season. The offtake from factories during October was 1.78 lakh tons as against 1.47 lakh tons in the corresponding month of last year. Total despatches of indigenous sugar from factories, during the current season, is 21.21 lakh tons (including despatches for export) as against 17.48 lakh tons last season. Closing stock with the factories, as on the 31st October 1957, was 4.58 lakh tons as compared to 5.42 lakh tons on the corresponding date last year.

Meanwhile, conditions in sugar markets have continued to remain depressed as crushing for the new season has already begun in some of the factories in Uttar Pradesh. Barring the Punjab, demand from the consuming centres is slack and

of rupees. Automobiles and accessories occupied the third place with an amount of Rs 44.63 lakhs and heavy chemicals came fourth with an amount of Rs 22.63 lakhs. The other important industries which attracted foreign capital in any sizeable scale were cotton goods, machinery and machine tools, and building and building materials, the actual figures being Rs 16.76 lakhs, Rs 8.40 lakhs and Rs 4.74 lakhs respectively.

The countrywise distribution of this foreign capital investment that has flowed into India during 1956, brings out the preponderant share of the United Kingdom which accounted for more than half of the total investment, the actual amount being Rs 134.16 lakhs. The United States of America had only a small share, worth about Rs 13.33 lakhs while West Germany's share stood at Rs 14.67 crores. The countrywise distribution also brings out the fact that the total foreign investment contains an element, which is in the nature of repatriation of Indian capital from British East Africa to the tune of nearly Rs 50.41 lakhs. Thus strictly speaking this does not represent foreign investment from that country. The other important sources of foreign capital during the year were Switzerland and Belgium. The countrywise break-up of the figures points to the scope for tapping foreign capital from the countries, which are at present having only a small share.

the export of the sweet commodity. Reports suggest that the Sugar Mills Association has evolved certain proposals to be placed before the Government. The suggestions are said to include exports through a monopolistic body and the imposition of a levy of Rs 2 per Bengal maund on the entire production of indigenous sugar with a view to meeting the losses that may be incurred due to exports at lower prices.

The Khandsari market at Hapur rules quiet in line with the crystal section. Rates are quoted at Rs 27 to Rs 31 per maund, according to quality.

Gur

Prices in the Hapur Gur market were nearly maintained at last levels. Daily arrivals of new gur increased to an average of 5,000 maunds; and there was a good demand from Gujarat, Saurashtra and Delhi. Old stocks were estimated around 4,000 maunds.

New arrivals are expected to increase further. Cane supply to the factories have also begun. Old Kotha gur is quoted at Rs 11 and new gur at Rs 13 to Rs 14.12 per maund.

In the Muzaffarnagar market, prices showed a slightly easier tendency and daily arrivals went up to about 8,000 maunds. New Chakku quality was quoted at Rs 15.50 to Rs 16.50 and Pansera at Rs 14.25 to Rs 14.50 per maund.

Foodgrains

In the Hapur market, prices of Foodgrains ruled generally steady. Wheat prices improved slightly in line with the bullish trend in the prices of maize and bajra, which attracted good seasonal demand in the face of poor arrivals. The Rice market also ruled steady despite increased new crop arrivals. Gram prices also registered modest gains as local stocks with the trade were small. Maize and Bajra were very much in request and prices of these improved further in the face of poor arrivals. Barley and Bejher were, however, quiet for want of support. Pulses continued steady although ready demand was slack. Arhar prices improved slightly, loss of crop being the main contributory factor.

Mixed conditions were noticed in the Delhi grains market. After early easiness, Wheat prices improved, while the demand for Rice was good. Barley was soft for want of enquiry. Increased arrivals caused a setback in Maize and Bajra. Urad was slightly steadier due to the better offtake.

Madras Review

In Defence of the Flag

THE Madras Legislative Assembly Session which commenced on October 25 adjourned sine die on November 16. This session is likely to be remembered most in connection with two unhappy questions. The Mudukulathur disturbance and the Dravida Kazhakam leader's attempt to discredit the Constitution and the National Flag. At least the more senior members of the Assembly, irrespective of party, seem to regret sincerely the circumstances which compelled the Assembly to occupy itself with these two questions.

The Mudukulathur incidents continued to haunt the deliberations all through and even on the last day of the session the Speaker had to give a ruling on an adjournment motion by one of the members to discuss an official publication dealing with the happenings. The echo of the Madras legislative discussions on this subject may be heard in Parliament too, sooner or later.

The issue of insult to the Constitution has revealed more ominous symptoms than most people dare to acknowledge. In the course of its passage in the Assembly, one of

the members suggested that the Chief Minister should have a private discussion with the leader who proposed to burn the National Flag and the Constitution.

This suggestion came from one who has a considerable following in the legislature and in the State. Any such move, which of course the Government promptly turned down, would have indicated a clearly lukewarm attitude to the Constitution on the part of the State Government and a readiness to seek and understand the possibilities of any logic behind the proposed insult. It was certainly wise on the part of the Ministry to have refused to do anything with that proposal.

But that does not complete the story. The member who made the suggestion has by implication dissociated himself from the new piece of legislation which the Assembly had undertaken to meet an embarrassing situation. The Dravida Munnetra Kazhakam is a progeny of the Dravida Kazhakam. It is a party which makes no secret of its aim of establishing a separate State for Tamil Nad and of making it 'Dravidian' in every aspect of its

The Peninsula

functioning. To borrow a well known term customarily applied to another context, the DMK is fellow traveller with DK, as far as respect for the Constitution goes. Only in the light of this presumption, its leader's move for personal talks between the two leaders could be understood.

Speaking on the Bill for the Prevention of Insults to National Honour in the Legislative Council, one member recalled how a campaign of hatred against one community and of everything North-Indian was being pursued in Tamil Nad in the past 25 years and how the victimised community had been patiently brooking many insults and threats. If any such campaign had been directed on any other community Tamil Nad would have become another Mudukulathur.

That in this respect there is what one might call a settled strain and tension is too well known to need any extra evidence. In the outlook of the DK leader, the Brahmin, Sanskrit and North Indian are all equally reprehensible and have to be kept out of Tamil Nad, by any means. This new form of apartheid is different from the one being practised on South African only to the extent that a political party practises it instead of the Government. Its impact on the victims is often none the less intolerable for this difference.

The more this unpleasant fact is sought to be hushed up and let alone, the more the scope for mischief and the possibility of the tension breaking into a serious outburst. Dr A. Lakshmanaswami Mudaliar regrets that a measure like the present one has to be brought forward by the Government. He is worried about the impression that would be created outside the State and outside India.

Governmental indifference to a most disagreeable and dangerous situation has gone too long and has taken the character of a most unjustifiable neglect of the State's obligation to protect the freedom and integrity of the individual. An eminent educationist and public figure like Dr Mudaliar should also be knowing that the mere concealment of an awkward fact is far from helpful. It has to be faced and fought.

It is most deplorable that pernicious ideas like Sanskrit versus Tamil or North Indian versus South Indian are being permitted to develop in a political soil which receives nourishment from several sources. A considerable section in Madras, in no way contaminated by regional or caste feelings, do think that in the matter of economic development the requirements of South India do not receive the attention they deserve.

On the question of the introduction of Hindi as the State language

of India, a sophisticated level of the population in Madras is quite reasonably irritated over the policy being pursued by the Union Government. The present Congress Party in Madras, itself is composed of leaders who do not have a uniform measure of loyalty to the party tenets. There is also truth in the allegation that at least for purposes of electioneering, caste differences are exploited by political leaders in Madras.

Various reasons like these have combined to undermine the emotional loyalty of the population of Madras to the concept of national solidarity and to the symbols which proclaim and elevate it. The grouse that South India was not properly recognised in the documentary films on the freedom movement is still lingering in the minds of innumerable people.

The result is that even when a gross and intolerant insult to the Indian Constitution and the Indian National Flag is attempted by a misguided individual and his followers, the excitement and anger the attempt provokes in the rest of the community falls far short of what could be expected in a people with a strong and uniform sense of national fellow-being. Here is a problem which a mere legislative enactment will be totally incapable of tackling. It is time that leaders in Madras and elsewhere sit up and start examining how to deal with it.

South Indian Notes

Reform of Local Bodies

In a White Paper on reorganisation of local administration in Andhra Pradesh, the State Government, have decided to constitute Block and District Councils to take over the entire body of the existing District Boards' services and functions in both the Andhra and Telengana regions, and render unnecessary the retention of District Boards under the existing District Boards' Statutes.

The move for such a change in the local administration originated with the call of the Planning Commission for developing the Village Panchayats as the nucleus for planning and execution of schemes under the national extension and community development programmes. The District Boards were found to be too unwieldy to take over the role of such effective democratic bodies as they were not organically linked with the Panchayats. For the purpose of evoking the enthusiasm and harnessing the energy of the people for work of national reconstruction, it is hoped to link the Panchayats with the popular organisations at a higher level.

The Statutory Block Councils would be set up for each National Extension Service and Community Development block with Presidents of Panchayats within the block as ex-officio members. These Block Councils can take over all the functions and services within their respective jurisdictions now managed by District Boards and the process would be completed by the end of the Second Plan when the entire State would be covered by the blocks.

The Block Council would have Standing Committees for subjects like agricultural production, animal husbandry, small-scale industry,

finance and taxation, co-operation, water supply and drainage. These Standing Committees would obviate the need for a large body like the Block Council meeting frequently. The budgets of the panchayats would be submitted to the Block Councils and the latter would have the power to direct within specified time any panchayat to modify its budget in such a manner as the Council considers it necessary.

The Block Council would be entrusted with all development functions including minor irrigation works, roads, medical and public health services, welfare of backward classes, fixation of wages statistics, watch and ward in rural areas, excise, etc. The Councils would have all the sources of revenue which now belong to the District Boards within their respective blocks; namely: (1) three-fourth of land cess; (2) two-fifths of the duty on transfer of property (3) Education Cess; (4) all items of Panchayat revenue in non-Panchayat areas; and grants from State and Central Governments, including funds for running the various services as may be entrusted to the Block Councils by the Governments.

At District levels, there would be a District Council with Presidents of all the Block Councils, all M.L.As and M.P.s elected from District and District heads of Development Departments. The main functions of this body would be to examine and approve the budgets of Block Councils within a specified time, attend to the distribution of District grants to blocks, co-ordinate and consolidate the block plans and to supervise the activities of Block Councils. Thus the Block and District Councils proposed to take over the entire body of the existing District Boards' services and functions in both Andhra and Telengana.

Bright Future for Andhra

After completing the first year of its existence the integrated State of Andhra has emerged with added political stability and administrative uniformity, and thus the foundations of an efficient government have been firmly laid. The year has been filled with events which the Government can justly be proud of, such as the agreement with Mysore on the construction of the Tungabhadra high-level canal, the first major move towards an accurate land census, the decision to extend the nationalisation of transport gradually, the move, to form development boards at N.E.S. block level in place of district boards, all of which should go a long way in making the State a prosperous region.

The various measures that are being taken up for implementation by the State Government, reflect genuine concern for promoting speedy economic development of

the region. For instance though the financial position of the State is far from enviable, with a revenue deficit of about Rs 5.48 crores for the current year, the expenditure on the development programme and the nation-building activities, has been kept up at an increasing tempo, and for this purpose an all-out effort is being made to step up the small savings drive.

In the field of agricultural production the emphasis is laid on increasing the production of food and consequently more and more acreage is being brought under irrigation. All the major and medium projects in the Andhra region except four medium projects completed during the First Plan period are taken as continuing schemes in the Second Plan. These schemes, are supposed to benefit an area of about three lakhs acres in Kri-

(Continued on page 975)

SOUTH INDIAN MARKETS

World Rubber Prospects

IT was mentioned earlier in these columns that natural Rubber production in India touched a new peak in September, 1957. As a matter of fact, production to the end of September was also the highest for that period in any of the previous years; and it amounted to 15,594 tons as compared with 15,404 tons during January-September, 1956. The gap between indigenous production of natural rubber and the manufacturers' requirements, at the end of September, was to the tune of 8,307 tons as against 6,295 tons at the corresponding time last year.

Meanwhile, a state of uncertainty prevails in the world rubber market. Even the fact that Russia has taken up a good deal of rubber over the past few weeks has not been able to lift the gloom very much. The result has been falling prices; and the spot price in London has dropped below 24d per pound for the first time over a year.

The one encouraging feature of the market just recently has been the continued buying by Russia; but the purchases, that are being made by this country, have been so restrained and scattered. But, at least, the heavy surplus, which was such a threat to prices a few weeks ago, has now been removed even though there is apparently still a fair amount of rubber available. This, no doubt, has improved the prospect of an upturn in the market once the economic outlook begins to brighten.

A substantial improvement in the market will, however, have to await

a marked re-entry of factory buyers in the US and Europe. This, in turn, is unlikely in the present state of uncertainty. But, car output in the US has risen quite sharply just recently as production of the 1958 models has got under way. The motor industry in West Europe has also presented a more impressive picture in the last few weeks.

Pepper

The new Pepper season has just commenced. According to the reports issued from Cochin, non-seasonal and irregular rains at the flowering period has done some damage to the new crop. Growers in south Kerala, therefore, apprehend that the size of the 1957-58 crop may be smaller than that for the previous season. Although the rains of the past few weeks were beneficial to the standing crop, they may delay the ripening of the fruits.

Preliminary estimate places the new crop at about 22,000 tons as compared with the last season's 23,000 tons to 24,000 tons. With the heavy fall in the price of pepper, growers are losing their interest in the expansion of pepper cultivation. The result may be a stagnation in production, if not a gradual decline. In the absence of price incentive, the growers cannot be expected to take measures by themselves to raise production to serve the larger interest of the nation.

In the Alleppey market, the rate was quoted at Rs 550 per candy for superior old stock quality and Rs

**BENARES ELECTRIC LIGHT AND
POWER COMPANY, LIMITED.**

NOTICE

Notice is hereby given that the Annual General Meeting (being the Fifty-eighth Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 16th December, 1957, at 11-0 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the fifteen months ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that a special Notice as defined in Section 190 of the Companies Act, 1956,

has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—
"That Sir Josna Ghosal, who has attained the age of 86 years, be and is hereby appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:
 - (a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-years ended the 31st December, 1956 and 30th June, 1957.
 - (b) That the Articles of Association of the Company be altered in manner following:
 - (i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:

"82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors."

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings."
 - (ii) Article 87 shall be deleted and the following new Article substituted therefor:

"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special."
 - (iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor:
 - (iv) Article 176 shall be deleted and the following new Article substituted therefor:

"176. At every Annual General Meeting the Direc-

tors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company."

- (v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor:
- (vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor:

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 10th December, 1957, to the 16th December, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED
S. GUPTA
Director,
Managing Agents.

SOUTH INDIAN NOTES
(Continued from page 973)

shna, Guntur, Nellore and Antapur districts. The progress of the biggest multi-purpose project Nagarjunasagar has also been commendable. The project is expected to cost nearly Rs 122 crores.

The power generating capacity is also sought to be increased by 2.25 lakh k.w. As a result power consumption is likely to go up from eight units per capita at the end of the First Plan period to 20 units per capita by the end of the Second Plan. Further about 417 new towns and villages would be electrified. Work on the Nizamsagar hydro-electric project is proceeding apace while the steam thermal station at Hyderabad is also awaiting expansion.

The industrial policy is aimed at encouraging the major, medium, small-scale and cottage industries. The actual achievements of the State Government in this field relate to the expansion of the Andhra Paper Mills at Rajamundry, and the Government Ceramic Factory at Gudur, the starting of the Sri Venkateswara Paper and Straw-board Mills at Tirupati and the establishment of the co-operative sugar factories including one at Telengana.

THE INDIAN CABLE COMPANY LIMITED

The Directors have decided to recommend at the forthcoming Annual General Meeting of the Shareholders to be held on the 27th December 1957, Dividends for the year to 31st March 1957, as follows:—

- Dividend on Cumulative Participating Preference Shares @ 12½% free of Income Tax.
- Cash Bonus on Cumulative Participating Preference Shares @ 2½% free of Income Tax.
- Dividend on Ordinary Shares @ 12½% free of Income Tax.
- Cash Bonus on Ordinary Shares at 2½% free of Income Tax.

By Order of the Board,

B. J. WOODLEY,
CHAIRMAN.

Calcutta,
5th November, 1957.

THE INDIAN CABLE COMPANY LIMITED

NOTICE is hereby given that the Thirtieth Annual General Meeting of the Shareholders of The Indian Cable Company Limited, will be held at the Registered Office of the Company, 9 Hare Street, Calcutta, on Friday, the 27th December 1957, at 11 O'clock in the forenoon, for the following purposes:—

- To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1957.
- To declare Dividends.
- To elect a Director.
- To re-appoint the firm of Messrs. Lovelock & Lewes of 4, Lyons Range, Calcutta, Auditors of the Company for the current year and to fix their remuneration.

As Special Business.

- In pursuance of Section 228 (1) of the Companies Act, 1956, to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the accounts of the Branch offices of the Company at Bombay, Ahmedabad, Am-bala, Jamshedpur, Kanpur, Nagpur, New Delhi and Secunderabad, and fix their remuneration.
- In pursuance of Section 228 (1) of the Companies Act, 1956, to appoint the firm of Messrs. Fraser & Ross of Madras for the purpose of auditing the accounts of the Branch offices of the Company at Madras, Bangalore and Coimbatore, and to fix their remuneration.

To consider and if thought fit pass the following resolutions with or without modification:—

As an Ordinary Resolution.

- "That the accounts of the Branch office of the Company at Karachi, Pakistan, be not audited under the provisions of Section 228 (1) of the Companies Act, 1956".

As an Ordinary Resolution.

- "That the Board be authorized to offer new Ordinary shares for subscription for cash at such price as may be determined by the Board to the persons on the Company's Register of Members on such date as may be fixed by the Board in the proportion of one new Ordinary share for every two shares, Ordinary and/or Preference, held by each such member on the said date (no fractional entitlement being given for the odd share in the case of any holding of an odd number of shares) with the right to renounce all or any of the shares so offered to him in favour of any other person or persons, whether members of the Company or not, and with the right to apply for additional shares not taken up by members to whom they were originally offered or their renounees."
- "That such offer and the issue of the new Ordinary shares be made in such manner and on such terms, consistent with (a) above, as the Board may, in its absolute discretion, determine."
- "That the Board be authorized to dispose of any of the said new Ordinary shares not taken up in response to the offer in such manner and at such price as it thinks most beneficial to the Company".
- "That the Board be authorized, if it thinks fit, to arrange for the issue to be underwritten on such terms consistent with the provisions of the Company's Articles of Association in that behalf, as it may determine".

(b) "That such offer and the issue of the new Ordinary shares be made in such manner and on such terms, consistent with (a) above, as the Board may, in its absolute discretion, determine."

(c) "That the Board be authorized to dispose of any of the said new Ordinary shares not taken up in response to the offer in such manner and at such price as it thinks most beneficial to the Company".

(d) "That the Board be authorized, if it thinks fit, to arrange for the issue to be underwritten on such terms consistent with the provisions of the Company's Articles of Association in that behalf, as it may determine".

The Share Transfer Books of the Company will be closed from the 14th December 1957 to 27th December 1957, both days inclusive. Dividends, if any, declared at this meeting will be payable to Shareholders registered on the Company's Books on the 27th December 1957, or their mandates.

By Order of the Board,

B. J. WOODLEY,
CHAIRMAN.
9, Hare Street,
Calcutta, 5th November 1957.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE INDIAN STANDARD WAGON COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office, 12, Mission Row, Calcutta, on Monday, the 16th day of December, 1957, at 11-30 A.M. for the purpose of considering and, if thought fit, passing with or without modification the following resolutions, namely:—

- (As a Special Resolution): That the Authorised Capital of the Company be increased from Rs. 40,00,000/- to Rs. 60,00,000/- by the creation of 80,000 new Ordinary Shares of Rs. 25/- each.
- (As a Special Resolution): That the Articles of Association of the Company be altered in manner following:—
In Article 4, the figures "40,00,000" and "80,000" be deleted and in the same Article the figures "60,00,000" and "1,60,000" substituted therefor.

3. (a) That it is desirable to capitalise a sum of Rs. 19,49,250/- being part of the undivided profits of the Company standing at the credit of the free Reserves and accordingly that the said sum of Rs. 19,49,250/- be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 16th day of December, 1957, holders of the 77,970 issued Ordinary Shares of Rs. 25/- each in payment in full for 77,970 new Ordinary Shares of Rs. 25/- each and that such 77,970 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of one new Ordinary Share for every one issued Ordinary Share held on the 16th day of December, 1957, by such persons respectively and that the said Ordinary Shares so distributed shall rank in all respects pari passu with the existing Ordinary Shares save and except that they will not participate in dividends declared in respect of any period ending on or before the 31st March, 1957, and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholders and not as income.

(b) That pursuant to the above resolution and in satisfaction of the said special capital bonus the Directors be and they are hereby directed to allot and distribute 77,970 new Ordinary Shares of Rs. 25/- each credited as fully paid up amongst the persons who are on the 16th day of December 1957, holders of the 77,970 issued Ordinary Shares of the Company in the proportion of one new Ordinary Share for each one issued Ordinary Share held by them.

(c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to the duplicate engrossment of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 16th day of December 1957, by some person to be appointed by the Directors in that behalf under Article 168 of the Articles of Association of the Company.

The share transfer books of the Company will be closed from the 7th December 1957 to the 16th December 1957, both days inclusive.

NOTE: A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

Stock Exchanges

LISTLESS TRADING

Watch-Dog Writes:

ACTIVITY in stock markets has been generally restricted during the week under review. The buying spree, which developed a few days ago, seems to have ended; and operators are now taking a cautious view.

Trading on the Calcutta Stock Exchange was generally dull and prices developed a sagging tendency due to nervous bull liquidation.

Although equities on the Bombay Stock Exchange tended to sag on selling pressure, the closing tone was a shade better.

On the Madras Stock Exchange, selected Planting scrips ruled firm on expectation of higher dividends by certain companies, while Textile scrips met with moderate enquiry.

The decline in prices on Wall Street checked the recent advance on the London Stock Exchange and the general appearance of the market at the close was irregular.

On Wall Street, only a few issues, notably Aircrafts and Missiles, managed to extend their recent gains.

Calcutta

DULL and quiet conditions were witnessed on the local Stock Exchange and prices, in the absence of any fresh incentive, developed an easier trend due to general liquidation. Operators entertained fears that any foreign loans which India might get would carry high interest rates. Also, the news, that President Eisenhower had tentatively decided against a proposal for sanctioning a large loan to assist India's economic development plan, was bearishly interpreted. Above all, the Finance Minister's speech that the Centre could make only marginal additions to its tax effort and that it was imperative for the States to raise more resources, caused nervous liquidation, resulting in a sharp setback in prices. The market finished the week on a hesitant note.

Gifted securities displayed a steadier tendency although the volume of business continued to be small, mainly due to shortage of scrip. Medium and long-dated issues, however, continued to meet with some selling pressure. 3 per cent 1986 Conversion Loan opened at Rs 70.90 and, after improving at one time to Rs 71.18, receded again at the close to Rs 71.06.

Although activity was restricted, Bank shares remained fully steady. Hind changed hands at Rs 33.50.

Sentiment in the Jute section continued to remain depressed following a further fall in jute goods prices. Moreover, operators seemed to be worried over bleak prospects for the new jute crop. Anglo-India were the only steady feature, having sustained support upto Rs 152 from Rs 150. Alliance were marked down to Rs 85 from Rs 91; Belvedere to

Rs 70.50 from Rs 88.00; Champdany to Rs 126 from Rs 133.50. Kinnison to Rs 127 from Rs 131 and Nuddea to Rs 33.25 from Rs 35.00. Howrah changed hands at Rs 17.00 to Rs 17.25, while National receded at the close to Rs 19.50 after opening at Rs 20.05.

Coal shares came in for selective support; but turnover remained restricted as operators were inclined to await the decision with regard to the price revision for the commodity. Bengal met with buyers upto Rs 227 from Rs 224 and Bur-rakur upto Rs 21.87 from Rs 21.75. Central India changed hands at Rs 6.28 to Rs 6.44 and Western Bengal at Rs 5.87 to Rs 5.94.

The tendency of prices in the Textile section was not uniform. Fears of smaller profits by most mills in a year of rising manufacturing costs and cloth accumulation kept shares subdued. Dunbar were on offer at Rs 125 against Rs 131 and Kesoram at Rs 10.75 against Rs 11.00. Cownpore were, however, enquired upto Rs 5.37 from Rs 5.25 and Jayshree upto Rs 6.40 from Rs 6.31. New Victoria were nearly maintained at Rs 1.44.

Tea shares continued to be an active counter although price movements were rather irregular. The main inspiration for giving support at every setback in prices was derived from the better working results issued by many gardens and the higher dividends recently announced by most of the companies. Most prominent scrips were Brahmaputra changing hands at Rs 3.25 to Rs 3.81; Brooke Bond at Rs 17.68 to Rs 17.81 c.d.; Bishnauth at Rs 20.00 to Rs 20.87; Eastern Cachar at Rs 4.50 to Rs 4.62; Jayshree at Rs 9.25 and Patrakola at Rs 146 to Rs 149. Hasimara, after improving to Rs 22.75 from Rs 22.50, receded at the close to Rs 22.00 on profit-taking.

Price movements, in the Engineering section, were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments till mid-week. After opening steady at Rs 19.54, Indian Irons improved to Rs 19.56 at which level renewed liquidation caused the rate to recede gradually to Rs 18.72 at the close. In "kerb" trading on Friday, there were even sellers, at one time, at as low as Rs 18.66, to quote later better at Rs 18.80. In sympathy, TEXMACO were marked down to Rs 17.00 from Rs 17.32; Jessop to Rs 22.00 from Rs 23.50 and Richardson to Rs 8.19 from Rs 8.62, to finish the week better at Rs 17.05; Rs 22.87 and Rs 8.19 respectively. Burn lost three points at Rs 327 with Brath-waite better at Rs 27.12 against Rs 27.00.

Except Orient Paper and Indian Copper which were pushed down to Rs 24.75 and Rs 2.98 from the high levels of Rs 25.60 and Rs 3.08 respectively, prices in the Miscellaneous section ruled generally steady

with enquiries confined to selected scrips. India Steamship met with good demand upto Rs 11.87 from Rs 11.56; Hindusthan Motors upto Rs 6.34 from Rs 6.21; Aluminium Corporation upto Rs 10.00 from Rs 9.75 and Gillanders upto Rs 11.81 from Rs 11.70. Indian Cable changed hands at Rs 25.37 to Rs 25.62; B. I. C at Rs 4.43 to Rs 4.60; Dunlop at Rs 20.12 to Rs 20.37; National Carbon

at Rs 23.44 to Rs 23.56 and Indian Aluminium at Rs 12.75. Osler were nearly maintained at Rs 3.12 and Rallis at Rs 28.50. Metal Box firmed up to Rs 28.25 from Rs 25.75 and Martin Burns to Rs 23.37 from Rs 23.00. IBP turned a shade quieter at Rs 25.56 against Rs 26.00. Sone Valley Cement were on offer at Rs 4.90 following the dividend being halved to 3 per cent for 1956.

WORLD OF FINANCE

(Continued from page 958)

conclusions from past figures. Nevertheless, two points are noteworthy. Firstly, the expansion in Advances during the 1955-56 busy season worked out to Rs 177 crores. Secondly, the relative figure for the 1956-57 busy season—which at the time had been thought would present much greater strain—was actually less, at Rs 148 crores. However, the expansion during the 1956-57 busy season occurred in spite of no contraction in Advances during the 1956 slack season. So, it may be suggested that the real expansion in Advances during the 1956-57 busy season was composed of the actual increase recorded and the notional increase that would have occurred if the contraction had taken place during the 1956 slack season. From this point of view, we may note that the contraction in Advances during the 1957 slack season has worked out to Rs 42 crores. On this reasoning, the minimum expansion in Advances for which the banking system should be prepared—on the assumption that this minimum is placed at the needs that were presented during the 1956-57 busy season—would work out to Rs 148 crores, representing the increase in the last busy season, plus Rs 42 crores, representing the slack season contraction in Advances that will, as it were, be made good during the ensuing busy season. In other words, the monetary authorities should make their calculations on the footing that expansion in Advances during the 1957-58 busy season may be around Rs 190 crores. Against this, as we have already seen, and provided the various assumptions we have given are borne out, the capacity of the Scheduled Banks in respect of an increase in Advances is around Rs 215 crores. This leaves a fairly comfortable margin, so much so, that it obviates the need for the monetary authorities to be apprehensive of any undue stringency during the 1957-58 busy season.

All this, let it be stressed, is in the nature of a hypothetical assessment of banking trends as they may obtain in the course of the next few months.

We have cited more figures than we normally would in a hypothetical article of this nature. But our purpose has been to show thereby that the problem during the 1957-58 busy season is scarcely likely to consist of an inadequacy of resources on the part of the banking system. If, in such a background, there is talk often

enough of a likely increase in Bank rate or of anticipated monetary stringency, it is entirely conceivable that the country will talk itself into a monetary stringency. This, of course, is what has to be avoided at all costs.

So, we should like to suggest to the monetary authorities that there is no need to be unduly apprehensive of intolerable strains cropping up during the 1957-58 busy season. There is, thus, no need for the Reserve Bank to iterate the desirability for Scheduled Banks to show general restraint in their Advances. Moreover, we have to be particularly on guard against restricting Advances in spheres which might retard production; this, let it be stated, is recognised by the authorities. However, at a time when the country is making every effort to increase agricultural production, it is wrong to decide in advance that credit on foodgrains will be restricted. Indeed, the time may have come when, similar to the action taken late last year, the restrictions against foodgrains have to be removed. We should like to emphasise that selective monetary control has proved itself eminently successful in Indian circumstances. Inflationary pressures in foodgrains were controlled in four weeks, while America with a tight money policy could not contain inflation in four years. Flexibility—but at the same alert and continual watchfulness—is the essential attribute for the successful functioning of selective monetary control in India's economy.

CLIVE STREET GOSSIP

(Continued from page 966)

And, as for us, this fundamental situation should make us realise that the rephrasing of the Plan is a bitter pill that we may have to swallow in view of present difficulties, and not a welcome escape from burdensome duties. I have a feeling that the pruning of the Plan is evoking at the moment the same degree of enthusiasm as the inclusion of more and more projects is said to have evoked when the Plan was originally formulated. It would appear that there is some danger of the entire Plan being pruned off. The pruning, if it should be done at all, should be restricted to the most unavoidable. Otherwise, the price to be paid for a spree in pruning may well be incalculable.

EAVESDROPPER

[November 23, 1957]

SOUTH INDIAN MARKETS

(Continued from page 973)

150 to Rs 500 for the new season variety, according to quality. In the Kozhikode market, Wynaad was quoted at Rs 635 and the Country variety at Rs 615, both per candy. In the New York market, values for black pepper advanced a quarter cent per pound, reflecting tightness in origin offers and firmer prices when quoted. Malabar spot was quoted at 24½ cents and Sarawak spot at 24 cents per pound.

Coffee

The Coffee Board has released, for export, 525 tons of Coffee out of the 1956-57 crop. Tenders are due on December 3. The lots allotted for America consist of 300 tons of Robusta Cherry variety.

The lots for export 'to any destination' are made up of: 2 tons of

Monsooned Basanelli; 12 tons of Monsooned Triage; 153 tons of Arabica Cherry Flats; 12 tons of Arabica Cherry PB; 7 tons of Arabica Gleanings Flats; 4 tons of Arabica Estate Pounded Gleanings Flats; 24 tons of Arabica Estate Pounded Flats and 14 tons of Robusta Cherry 'A'.

Groundnut

The Groundnut market in Madras continued to rule steady on reports of restricted arrivals due to rains. Total arrivals last week were only about 200 tons and consisted mostly of the peanut variety. Small crushers bought some quantities and business was reported done at Rs 166 per candy.

In the Groundnut Oil section, prices remained almost unchanged

despite the announcement of a special margin imposed by the Forward Market Commission. This was mainly due to the fact that there was a tendency for prices to move up even with small demand. Calcutta interests were rather reserved due to difficulties in railway bookings. The rate for the ready position was quoted around Rs 345 per candy.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were restricted. Commission houses were reported to be putting up prices, while shippers found it difficult to operate. Arrivals of Buff and Calf hides were also restricted and there was a moderate clearance.

On the export front, trading was rather irregular. There were en-

quiries for Kips; but the price factor was holding up normal flow of business. The general feeling in the market was that kip supplies would become restricted in the next few weeks.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were restricted. There was a moderate clearance.

In the export section, there was a good enquiry and business was reported done in goat skins 11/12 lbs fifths at 10 sh 7½d and 8/9 lbs fifths at 12sh 3d. There was all-round demand for inferior fifths in prime classes. In Sheep skins, prime classes met with a steady demand. Commons met with moderate enquiry in 7/8 lbs. Some business was reported done in 7/8 lbs fifths and inferior fifths at 7sh 9d and 6sh 9d respectively.

OLYMPUS

(Continued from page 970)

ditional sources of revenue like irrigation and electricity. And performances in public undertakings like transport have also been not satisfactory, resulting in accumulation of losses: even the comparatively simple task of collection has been allowed to deteriorate, resulting in steady increase of arrears in revenue. If irrigation, the chief benefactor to people under the First Plan, is not to get some recognition from the people in the form of some tax, surely, the principal moral of the Plan, namely that we must, each one of us, pay, in ever so small

a measure, for prosperity, has not been brought home to the people. The Commission have made a real attempt to give the States a chance to set their houses in order and put an end to deficit budgeting by diverting large funds from the Centre. With this assistance, the State must now make a determined effort to raise the finances required from them under the Plan. An evasion of this concomitant of the generous gesture of the Centre in this matter is to show oneself not alive to the responsibilities of serious Government.

rent tightness in open market supplies of good quality cotton. Prices, however, reacted slightly towards the close under week-end profit-taking. Middling Spot was quoted at 36.39 cents per pound.

X

CLOTH AND PIECEGOODS:

Prices in the Bombay Piecegoods market remained practically unchanged. Although lack of any substantial improvement in the offtake was causing some concern to the dealers, hopes were still

WORLD OF COTTON

(Continued from page 969)

entertained that the conditions would improve perceptibly in the course of the next few weeks.

On the export front, conditions remained unchanged and only modest enquiries were reported from several foreign destinations. Sudan, however, proved an exception by accounting for a better turnover. Although business with Burma was rather subdued, hopes were entertained that it would improve substantially as soon as the results of the tenders were announced.

a pilfer-proof package for every product !

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories: on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.

A METAL BOX
PILFER-PROOF CONTAINER

The MB Key Opening Can has both the top and bottom double sealed on for maximum protection.

The can is opened by winding off a strip round the can with a special key.

The lid fits back accurately after opening—an effective reseal. It is impossible to disguise the fact that the can has once been opened.

For the Investor

Week-end Weakness

Investment Gossip:

THE week-end ended on a weak note as a result of sustained selling pressure in the Mundhra scrips. Within 24 hours, Jessops had lost Rs 1.50 to be placed at Rs 21.25; BIC fell by 75 nP to Rs 3.95 and Richardson Cruddas was marked lower by more than a point at Rs 5.30.

For a second reason, the air was gloomy in Lyons Range it became known that Howrah Jute was passing over its dividend, and the share promptly shed Rs 1.50.

Such depression, like Asian flu, has a tendency to spread. Indian Irons, which had been marked up to Rs 19.74, could not stand firm in such an environment; on Friday, the closing slipped to Rs 19.50 and, after hours, went down further to Rs 19.40.

Some weeks ago, I reported that Mr Eisenhower's health had a direct bearing on Wall Street movements; this was again confirmed during the week, when the American President had a "little stroke".

What, however, is strange is that the Calcutta Stock Exchange's improvement in prices on Thursday was explained by one broker friend as deriving from a like improvement in Mr Eisenhower's health.

There is one more development which was of importance to stock exchange behaviour. I refer to the "massive" support that Mr T. T. Krishnamachari received from the Prime Minister and the Home Minister.

Any hopes that the Communist party might have had of bunging a spanner into the works must now be deemed to have been dispelled. The little flutter, in the interview affair, has passed off; and everything returning to normalcy.

In such a manner has the stock exchange been disarmed of what proved last week to be one of its "standby" rumours—an alleged resignation by the Finance Minister.

As to immediate prospects for the markets, they would depend, I suppose, on what the future holds for the Mundhra scrips. But knowledgeable circles in the Stock Exchange say that rockbottom has already been touched, and there are therefore but slim chances of any further sharp declines.

HIGHLIGHTS

The gilt-edged market is fully steady; which is as it should be, since New Loans, whether of the Central or of the State Governments, have been for relatively modest sums this year.

Scheduled Banks are more than comfortable in their cash position: this is consequent to the spectacular increase in Deposits and the slack season decline in Advances.

Lyons Range is speculating on what kind of action New Delhi can or will take to restore healthy conditions in the Mundhra group.

₹₹₹

Investment Notes:

THE scheme, put forward recently by the Dalmia Cement (Bharat) Limited to convert the Deferreds into Ordinary shares of Rs 10 each in lieu of every four Deferred shares of Re 1 each, has been approved by the three classes of shareholders. The scheme is to be confirmed by the High Court.

Radhakrishna Mills Limited will be convening a general meeting on the 27th December 1957 to consider the issue of 50,436 equity shares of Rs 25 each as bonus; 16,812 equity shares of Rs 100 each and 16,712 "B" class equity shares of Rs 50 each for cash at par.

According to a statement made by the Union Finance Minister in the Lok Sabha, the number of Joint Stock Companies, as on the 30th September 1957, was 30,678. Of these, the number of Public Limited Companies was 9,342 and Private Limited Companies 20,047. Companies, limited by guarantee and associations,

not for profit, accounted for the remaining 1,289.

The total investments made by Life Insurance Corporation in the various industries in the country amounted to Rs 11.09 crores during the period September 1956 to the end of August, 1957. Of this amount, Rs 10.76 crores were invested in the private sector and the balance in the public sector.

The following is the breakdown of total investments, industry-wise (all in lakhs unless otherwise stated):—Banks Rs 75.99; Cement Rs 1.29 crores; Chemicals and Pharmaceuticals Rs 30.81; Coal Rs 1.89; Electricity Rs 51.55; Engineering Rs 1.58 crores; Mining Rs 12.46; Paper Rs 43.89; Plantations Rs 8.64; Shipping Rs 4.87; Steel Rs 1.47 crores; Cotton Textiles Rs 97.78; Jute Rs 9.43; Rayon Rs 7.22; Miscellaneous Rs 3.03 crores and Sugar Rs 27.96.

Investment Briefs:

Port Shipping Company has recommended an interim dividend of 60 nP per share for the year ended 31-12-1957.

Sodepur Glass has passed over the dividend for 1956.

The Tata Hydro-Electric companies have recommended the following ad-interim dividends for the half-year ended September 1957:—Andhra Valley Rs 30; Tata Power Rs 30 and Tata Hydro Rs 3 (all on Ordinary shares).

Midnapore Zemindary has again passed over the dividend for the year ended 13th April, 1957.

Excellent Results of Gillanders Tea Group

Balance-Sheet Reviews:

DESPITE the difficult conditions generally experienced by the tea industry, most of the tea companies, whose accounts have so far been released, have revealed excellent working results for 1956. Seven more tea companies, in Gillanders Arbuthnot group, have presented their reports and accounts this week. The following table shows the crop outturn, average price realised, net profits earned and the dividends recommended as compared to 1955:—

	Crop (In Maunds)		Average Price (Per Pound)	
	1956	1955		
Ananda-Bag	7,333	6,260	3 0 0	2 7 11
Betjan	9,548	8,798	3 1 11	2 9 3
Jutilbari	10,594	8,952	2 12 10	2 3 1
Gairkhata	12,938	10,941	2 5 6	1 14 1
Selimbong	2,532	2,271	3 12 5	3 1 0
Talpo	5,205	4,594	2 2 10	1 12 2
Tengpani	7,619	7,466	3 1 1	2 6 10

Net Profit Before Depreciation & Taxation

Ananda-Bag	5,11,111	1,61,763
Betjan	7,14,192	2,93,509
Jutilbari	4,83,949	—94,635
Gairkhata	3,13,930	—1,63,228
Selimbong	91,910	1,236
Talpo	1,06,787	—56,908
Tengpani	4,43,233	1,38,584

Dividend Per Cent

Ananda-Bag	12½	10
Betjan	25	20
Jutilbari	10	NIL
Gairkhata	10	NIL
Selimbong	NIL	NIL
Talpo	5	NIL
Tengpani	10	7½

Ranicherra Tea

This company, in McLeod group, has also raised the dividend from 15 to 20 per cent, thanks to a substantial increase in the net profit from Rs 3,86,355 to Rs 5,86,410 for 1956. The Depreciation amount is reduced to Rs 68,190 from Rs 1.19 lakhs, while Taxation provision is raised to Rs 1.62 lakhs from Rs 1.47 lakhs. A sum of Rs 2.00 lakhs is set apart for Building and Machinery Reserve. The crop outturn is lower at 11,813 maunds against 12,684 maunds, while the average price realised is higher at Rs 2-5-0 against Rs 1-14-0 per pound.

₹₹₹

Ethelbari Tea

The Ethelbari Tea company has recommended a dividend of Re 1 per share as against nil in 1955; and this is possible only after a transfer of Rs 1.30 lakhs from Reserve. The net profit amounts to Rs 84,268 as against Rs 21,468. The Depreciation amount is raised to Rs 48,325 from Rs 33,796, while a sum of Rs 21,543 is provided for Taxation. Thanks to the transfer mentioned above, the directors have also recommended a dividend of Rs 14 2/7 per share for 1955. The crop outturn is higher at 6,460 against 5,817 maunds, while the average price realised is Rs 2-9-0 per pound.

₹₹₹

Sone Valley Cement

It would be recalled that Messrs Martin Burn Limited, former managing agents of the company, had resigned with effect from 1st August, 1956 and the management was taken over by the Poddar group. The company's accounts for 1956 reveal a net profit, before providing for Depreciation, of only Rs 3,47,538 as against as much as Rs 9,19,429 in the previous year. Cement output is also lower at 174,630 tons against 195,000 tons, while despatches are shown at only 173,187 tons against 195,374 tons. Sales have declined to Rs 1.11 crores from Rs 1.25 crores. In respect of allocations to Funds, the Depreciation amount has been raised to Rs 4.60 lakhs from Rs 3.68 lakhs; and no provision is made for Taxation as against Rs 2.35 lakhs previously. The directors have, however, transferred a sum of Rs 4.50 lakhs from General Reserve and provided a sum of Rs 1.50 lakhs for Taxation for 1956 and recommended a dividend of 3 per cent against 6 per cent.

According to the directors' report, the Government of India have granted a licence to the company for substantial expansion, which shall have an installed capacity for the manufacture of 231,000 tons of Portland cement per annum. The company has applied to the Indus-

So, the member banks would surely welcome short term investment; and what could be better for this purpose than Treasury Bills, made available at public auctions?

World of Finance this week suggests that public auctions should recommence; and the article points out that there are other benefits as well from such recommencement.

INDIAN FINANCE [November 30, 1957]

trial Finance Corporation for a loan of Rs 1 crore for implementing its projects of expansion and renovation. The application is still pending.

£R\$

Saran Engineering

Thanks to an increase in sales from Rs 28.48 lakhs to Rs 30.41 lakhs and in net profit from Rs 3,68,352 to Rs 5,32,736, the Saran Engineering Company Limited has raised the dividend from 25 nP to 40 nP per share for the year ended 31st March 1957. All allocations to Funds have been raised—Depreciation from Rs 2.00 lakhs to Rs 2.50 lakhs; Taxation from Rs 60,000 to Rs 1.50 lakhs and Rehabilitation Reserve from Rs 75,000 to Rs 1.30 lakhs.

£R\$

Gourepore Company

The difficult conditions generally experienced by the jute industry are fully reflected in the working results of the Gourepore Company Limited. Support from the consuming markets did not keep pace with the industry's increased production during the first half of 1956. With the result, prices for finished goods were depressed to economic levels.

Although sales have risen to Rs 2.90 crores from Rs 2.61 crores, the net profit for the year ended 31st March 1957 amounts to Rs 6,73,962 as against Rs 7,44,075 in the previous year. After transferring a sum of Rs 4.80 lakhs from various Reserves, the directors have provided a sum of Rs 3.38 lakhs for compensation to ex-employees and Rs 1.36 lakhs in respect of taxation on Pakistan account. The dividend on the Ordinary shares is reduced to Rs 2.50 from Rs 10.00 per share.

£R\$

Nuddea Mills

This company, in the same managing agency group, has incurred a loss of as much as Rs 3,92,082 for the year ended 31st March 1957 as against a loss of only Rs 1,35,501 in the previous year, although sales are higher at Rs 2.34 crores against Rs 2.18 crores. The Depreciation amount is reduced to Rs 4.72 lakhs from Rs 5.68 lakhs. After transferring a sum of Rs 9.50 lakhs, the directors have set apart Rs 83,107 for compensation to ex-employees. The dividend is, however, passed over as against 1 per cent in the previous year.

Ahmedabad Advance Mills

The working results of the Ahmedabad Advance Mills Limited, for the year ended 30th June 1957, are rather disappointing, reflecting the constant rise in the cost of production and the crippling effect on the cloth trade of the country brought about by the drastic increase in excise duty. Although sales of cloth, yarn and waste have shown a rise to Rs 2.04 crores from Rs 2.10 crores, the net profit, before providing for Depreciation and Taxation, amounts to only Rs 1,54,066 against as much as Rs 24,16,679 in the previous year.

The Depreciation amount is reduced to Rs 1.50 lakhs from Rs 10.40 lakhs, while no provision is made for Taxation against Rs 65.00. After transferring Rs 2.50 lakhs from General Reserve, the directors have provided Rs 10,000 (Rs 8.33 lakhs) for Gratuity Reserve and reduced the dividend on the Ordinary shares from Rs 12 to Rs 5 per share.

£R\$

Coorla Spinning & Weaving Company

The Coorla Spinning & Weaving Company Limited has, however, made a gross profit of Rs 21.36 lakhs for the year ended 31st March 1957 as against Rs 16.98 lakhs in the previous year. Out of this, the directors have provided Rs 6.93 lakhs for special Depreciation though no provision was made under this head last year. Transfer to General Reserve is higher by Rs 1.25 lakhs at Rs 4.25 lakhs, while the dividend and bonus are maintained at Rs 7.50 and Rs 5.00 per share respectively. Sales are shown at Rs 1.56 crores against Rs 1.35 crores.

The company's programme for reorganisation and renovation of the mills continued; and Rs 15.22 lakhs were spent on installation of new machinery during the year under review.

£R\$

Belapur Sugar

The Belapur Company Limited has announced bumper results for the year ended 30th September 1957 with both the profit figure and the quantity of sugar produced constituting an all-time record for the company. The net profit shows a substantial rise from Rs 33.33 lakhs to Rs 49.94 lakhs after providing Rs 2.57 lakhs for Depreciation.

Exchange Earner—Plan Saver

Internal Consumption vs. Tea Exports

ALTHOUGH it recently ousted jute goods as the most important earner of foreign exchange, tea should not, for a variety of reasons, figure in our calculations as being of dominating importance over the long term view in India's foreign trade. Indeed, from this standpoint we cannot seriously quarrel with the target set by the Planning Commission at an annual average of Rs 127 crores from exports of tea. While the Export Promotion Committee (EPC) has, in its Report, taken cognisance of some of the difficulties that stand in the way of tea exports, it has at the same time suggested implicitly that there is some scope for augmenting earnings from tea. However, the complexities involved are revealed in the fact that the Committee has not, possibly because it was unable to do so, come up with a specific figure as comprising the enhanced target for tea export. Our own view, which was advanced in the Export Plan, was that India should be able, by and large, to maintain its annual average over the Second Plan at Rs 142 crores, or the actuals for 1956. Such a target would appear to be inconsistent with our agreement with the Planning Commission that the scope for enlarged exchange earnings is small. We shall seek here, firstly, to assess the complications that we have referred to; secondly, to clarify the reasoning on which we have postulated the higher target; thirdly, to indicate that the target is capable of being achieved; and, fourthly, to draw a distinction between the short term and long term prospects for tea.

In recent years, the fortunes of the tea industry have fluctuated sharply. A year of prosperity has more often than not been followed by a season in which demand tended to be disappointing and in which losses rather than profits were the lot of the industry. In their report for 1956-57, J. Thomas and Company Private Limited have suggested that "it has been the shortage of stocks, particularly in the UK, which has forced the tea market to fluctuate to the disastrous extent known in recent years". Possibly, this is not the only reason—but, at any rate, it is an important reason. However, we should think that, in the case of tea more than in respect of any other commodity, the assessment of world production by consumers has had a powerful bearing on the price which they were prepared to pay. So, to a substantial extent, prices of tea have been at the mercy of a new set of laws, the operation of resistance by the important consumers to the belief that "notional" supplies, in particular seasons, exceeded estimated demand. In fact, however, such a stand is untenable, since the increasing outturn by the major producers has always been fully absorbed. Nevertheless, notional overproduction has tended to be a psychological block affecting attitudes and policies in respect of tea. For example, world tea production has risen from a level of under 1,000 million lb in 1946 to 1,462 million lb in 1955. Over the same period of time, export shipments from the producing countries have gone up from 678 million lb to 946 million lb. While, at one stage, it was feared in this country that the resumption of tea production by Indonesia would severely affect Indian exports, this has not been the general experience in spite of

Indonesia adding to the world supply by around 100 million lb. Simply stated, we would suggest that demand for tea, or tea consumption, has kept satisfactory pace with the increase in production. However, notwithstanding such an experience in export shipments, there is currently a wave of apprehension in this country about the strident increase in tea production being achieved by East Africa. We may state here that there is sufficient reason for such apprehension in this regard. For, the East African competitiveness of adverse significance to India because its outturn consists largely of the so called common teas, which variety constitutes the bulk of Indian production; and, in respect of these common teas, the landed cost of East African tea is said to be two shillings per lb—which is less than even the cost of production in many estates in North India. So, what India fears is not overproduction, but production at a much more competitive cost. Besides, there have been reports of such countries as the Argentine and Persia sending teas for sale at the London auctions. All these are suggestive of a narrowing market for Indian common teas, which go to make up around 60 per cent of our production.

What, however, is being overlooked is the fact that the estimated potential of East Africa for increasing its production is scarcely 30 million lb. As against this, in the period between 1946 and 1956, absorption of tea has risen by over 35 million lb a year in the non-producing countries. It is true that the 1946 level was much lower than the 1939 figure of 916 million lb. So, in broad terms, the period between 1946 and 1951 may be said to have constituted the recovery of production, and also of consumption, to the pre-war level. But then, in the years thereafter, world consumption has continued to expand, though perhaps at a somewhat slower pace. And yet, if the figures of the major producers alone are taken into account, the expansion in world consumption is not far short of the 35 million lb annual average that is to be discerned in the period from 1946. We would, in the light of the experience of recent years, suggest that there are reasonable grounds for believing that the expansionary trend in world consumption will continue to be witnessed.

Unfortunately, for all that world consumption may be rising, there is the prospect that the cheaper price of the East African common teas will inevitably depress the prices of Indian common teas. So much so, it may prove uneconomic for Indian tea gardens to export their common teas at prevailing prices. In a word, there is the danger that Indian common teas will be priced out of world markets. The qualification that we should make to such an assessment is that the process of prices of Indian common teas being adversely affected is likely to be more or less long drawn out. But it is significant that, over the short term, world demand will permit of Indian common teas being sold at economic prices. This is the first important consideration that we must bear in mind—namely, that East Africa has not yet quite spelt the deathknell for Indian common teas.

At this juncture, we should like to advance the view that, from a long term perspective, India's exports of tea will inescapably decline.

Indian Finance

Established 1928
November 30, 1957

"Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

On the one hand, there will be a reduction in shipments because of the price factor that we have referred to. On the other hand, there is also the fact that availability of surplus Indian tea for export will be diminished. We may examine at some greater length the second consideration that we have just mentioned. The method—not wholly satisfactory—of estimating internal consumption is to deduct export shipments from the crop. On such a basis, the annual average during 1936-38 placed internal consumption at 88.9 million lb. By the triennium 1945-47, the annual average of internal consumption had risen to 195.2 million lb; but this included figures for Pakistan, and so the annual average in the next triennium, for India after partition, declined to 153.6 million lb. In the six years since then, the annual average has risen by nearly 70 million lb to 221.9 million lb. If past statistics are any guide, we should anticipate the annual average of internal tea consumption rising to 291 million lb by the end of the Second Plan. There is the distinct possibility that this target will not only be attained but even exceeded. While, in this wise, internal consumption may rise to a level around 300 million lb, the target for tea production has been put down by the Second Plan at 700 million lb; that is to say, tea available for exports would, at 400 million lb, be less than the quantum exported from India in all the years since 1947-48, except 1955-56. This would suggest the need for revising upward the Second Plan target of 700 million lb, which indeed is a need clearly recognised by the EPC in its report. However, the Committee has warned against recourse to coarser plucking for increasing production. The EPC has consequently recommended that the acreage under tea should be increased. Unfortunately, this is easier recommended than implemented. Since independence and up to 1955, the area under tea has risen only by 141,000 acres, or a rise of less than 6 per cent in seven years. We are afraid that the apparent conclusion is that Indian production cannot prove to be sufficient for maintaining exports at, say, the 1956 level and, at the same time, satisfy the full extent of internal demand.

Moreover, we have to take account of the fact that many, if not most, of the estates need to be replanted. Indeed, we cannot rule out the possibility of a reduction in tea production. Thus, even the Planning Commission's target of 700 million lb is likely to prove difficult of achievement. In the current year, for example, tea manufactured in North-East India up to the end of October was nearly 30 million lb lower than the corresponding figure for 1956. While this is partly offset by an improvement of 13 million lb as at the end of September in South India, the fact is that the outturn of tea during 1957 is proving to be at a perceptibly lower level. This, however, has not induced higher prices for tea, because the outturn by three of the other major producers—Ceylon, Indonesia and East Africa—has been considerably higher. Then, there is also the fact that shipments from India have been substantially lower in the current year. Here, again, the poor performance of North Indian tea is partly mitigated by better shipments from Cochin.

Let us pause briefly to take account of the points thus far indicated. There is, as we have stated, scope for placing the annual target of earnings from tea exports at the 1956 figure of Rs 142 crores. At the same time, there is evidence of stiffer competition for common tea which would presage declining shipments from India. In the third place, there is the prospect that estimated tea production in 1961 will be insufficient for catering to the enlarged internal demand while maintaining exports at the levels of recent years. This pinpoints the necessity for increasing production, but all available evidence would suggest that it would be hard for India to raise production over the short term. We may now proceed to indicate whether and how we may expect to maintain the exchange earnings at Rs 142 crores, the markets that we will be able to tap toward this end, the measures that will be necessary to foster exports in this wise, and the manner in which the problem of additional production should be tackled.

The first step must be to offset some of the advantage that secures to East Africa by virtue of the cheaper cost of production of its common teas. This could be done, as the EPC has pointed out, by an understanding consideration of the plight of the common teas. Presently, the imposts which inflate export prices include: (i) the tea cess at 4 nP per lb; (ii) the Assam Carriage Tax and West Bengal Octroi, each at one anna per lb; and (iii) the export duty which now works out to 6 annas a lb. It would appear that not much can be done in respect of the first two, since the tea cess benefits the industry directly and since the two State levies are an important source of revenue for the respective State Governments. So, if at all some concession is to be obtained for common teas, it has to be under the head of export duty. The EPC has suggested that the first thing to do in this regard is to define common teas as being those varieties which sell below Rs 1.50 per lb. Obviously, a rider is necessary to the effect that the price level for determining common teas may itself have to be revised from time to time, in consonance with the changes in tea prices in the world. Once common teas are so defined, the next step is to effect a reduction in the export duty, say, by 12 nP per lb for common teas. However, Government will have to make the arrangements to ensure that no substitution occurs in respect of such common teas sold at the Calcutta auctions and shipped out of country. To this end, the EPC has suggested that arrangements should be made "for movement in bond of auctioned consignments up to the shipping stage".

While this concession of 12 nP may not be sufficient to render Indian common teas fully competitive with East African teas, it should nevertheless be obvious that the common teas will be more "saleable". It is in this manner that we can ensure that there is no untoward decline in Indian exports of common teas.

But, since there will inevitably be a reduction in the export earnings from common teas, we have now to see whether and how the exchange earning from all teas is maintained. We would suggest that tea gardens should be encouraged in every way to improve the quality of their tea, so that a steadily larger proportion of Indian output is of quality and medium varieties. In such a case, even with a lower volume of exports, the earnings from tea would still be maintained. In particular, in this context, we would suggest that replanting must be vigorously encouraged. The costs in this regard are heavy, and it is possible that many estates will not be able to afford it. The question should be examined whether a special government agency should be set up to afford financial assistance in replanting; and incentive to this end could be

provided by special concessions in respect of expenditure incurred on replanting.

We will now briefly consider whether India could maintain its export shipments at a level between 400 million lb and 450 million lb. As we have already seen, there is reason to believe that the demand for tea has kept satisfactory pace with increase in production. To this is added the fact that India particularly should attempt to intensify the efforts at exports to the Communist countries. There is no reason why Russia, for instance, should not be persuaded to purchase increasingly of Indian teas. In the last year, business was on a fairly satisfactory scale. But the reports are that, in 1957, Russia has largely abstained from the Indian market. Perhaps, on a governmental level, the possibility of a long term agreement for export of tea, on the basis of prevailing prices each year, should be pursued. In the ultimate analysis on this question, what matters is the fact that there is little cause to apprehend that world consumption may suddenly stagnate or decline. On the contrary, consumption can be said to be bound to increase, and it is up to this country to participate in the increased import demand of the consuming countries.

Finally, we would suggest that the target for indigenous tea production has now to be thought of in terms, not merely of the Second Plan, but of the Third Plan. For, there is not much scope for additional production from existing acreage, and what additional production we may have as our objective must come from new plantings. On the long term view, there can be no doubt that there will be an enlarged market, internally for common teas and externally for quality teas. It will devolve upon the Indian tea industry to take cognisance of such steady augmentation in prospective demand and to plan accordingly for an increase in acreage. In conclusion, we admit that it will be difficult for India to attain a target of Rs 142 crores from exports of tea; but it is not an impossible objective, and so long as it is not that, it is the responsibility of the Indian authorities to explore every avenue that might ensure the achievement of such a target.

Improvement in Britain's Terms of Trade

By JOHN KINGSLEY

THE state of Britain's trade balance depends not only on the amount of goods she buys and sells abroad, but on the prices she can charge and the prices she has to pay. If the price of imports goes up while the price of exports remain unchanged, more goods will have to be exported to pay for the same amount of imports as before. If, on the other hand, import prices fall in relation to export prices, Britain can step up her imports of foodstuffs and raw materials without causing any deterioration in the trade balance. The combined effect on Britain's trading position of movements in average export and import prices is measured by changes in the terms of trade.

The sharp improvement in Britain's terms of trade which has taken place during the past six months has provoked a good deal of comment. Since April alone, they have improved by eight per cent, and are now probably more favourable to Britain than they have been for 10 years. Changes as sharp and as sudden as this naturally attract attention, but they can prove misleading if considered in too short a perspective.

Since the war, there have been three distinct stages in the movement of international trade prices. The first extended to the peak of the Korean war boom in 1951; the second to the

smaller Suez peak in the early months of this year; the third seems to have just begun.

In the first stage, the cost of British imports rose steadily. By 1949, import prices were nearly 40 per cent, above their 1946 level; by 1951, pushed further first by devaluation and then by the commodity boom set off by the Korean war, they were more than double their 1946 level.

Export prices rose too, however, during this period, but very much less rapidly, and the result was that Britain had to sell more goods abroad to finance her imports. The terms-of-trade index, which rises when the position deteriorates, rose from 93 in 1946 to 100 in the following year, to 108 in 1950, and to 123 in 1951.

The second stage was marked by a gradual return to more stable price conditions. Import prices dropped back, a little in 1952 and a good deal in 1953, but remained well above their pre-Korea level. Export prices followed import prices, but at some distance behind. They rose in 1951, reflecting the higher cost of raw materials, and rose further in 1952, but in 1953 dropped back, like import prices, to a level higher than their pre-Korea level. For the next three years both export and import prices continued to rise, but slowly and in step. The terms of trade remained stable at their 1953 level until the middle of last year.

At this point, the pattern becomes more complicated. In the first place, the gradual rise in the price of goods exported—particularly engineering goods—accelerated, while import prices weakened. The terms of trade improved sharply in the third quarter of 1956. But in the fourth quarter, with the blocking of the Suez Canal and the general disruption of trade, import prices (particularly of oil) jumped sharply; the terms of trade returned to the level they had held since 1953.

The artificial rise in import prices, however, was relatively short-lived and the reaction sharp. Most import prices had passed their peak by April of this year, and have since fallen considerably. Export prices, however, continued to rise until last month, when the intense competition which exists in markets for engineering goods made itself apparent for the first time. As a result of these divergent movements, Britain's terms of trade have improved since April by eight per cent.

Two points emerge from this bird's-eye-view of price movements since the war. One is that the recent fall in import prices is partly a reaction from the artificially high levels of the Suez Canal crisis, and partly the reflection of a trend which emerged in the third quarter of last year. The other is that Britain's terms of trade are now more favourable than they have been since the war.

It seems likely that one important reason for the weakening of raw-material prices has been the slackening of the rate of economic expansion in the industrialized countries. Unless the primary producing countries are in a position to offset lower prices by higher sales, their income must suffer. The decline may not be serious, and will affect some countries much more than others, but it may well reduce their ability to import manufactured goods.

For a time, primary producers may tend to offset the fall in their incomes by drawing on reserves and by borrowing. But if the fall continues, they may eventually be forced to cut back imports.

There is a risk here that the welcome expansion of world trade over recent years may be checked in the process. But there can be little doubt that stable or, indeed, falling prices will powerfully reinforce the steps taken by Britain and other mainly manufacturing countries to maintain the value of their currencies.

Editorial Notes

Coal Target

The report that the Coal Development Corporation is coming up against difficulties in pushing ahead toward the target of production in the public sector is disturbing. In contrast, the private sector collieries which are now responsible for about 90 per cent of the total output have been able to record very satisfactory progress during recent months. According to the Joint Working Committee of the Coal Mining Associations, production in the private sector for the first half of the year 1957 represents an annual rate of increase to the extent of 20 per cent. The performance is creditable, particularly, in view of certain difficulties which are not equally shared by the public sector collieries. On the whole, the State collieries have no problem of stock accumulation. The private collieries are differently placed; the raisings are considerably ahead of wagon supplies and from the figures available, the stocks at the pit heads sometimes run to as much as 3 million tons or even more.

It is somewhat comforting to find that in the matter of exploitation of new mining areas, a wider latitude is now being given to the private collieries. The main problem, however, apart from wagon shortage, which has become almost chronic, relates to the utilisation of inferior grades. It is impossible to confine production to the grades which are in greater demand. Until this problem of utilisation of the lower grades of

coal gets under control, the collieries will have to put up with bottlenecks of some kind or other. The Coal Price Enquiry Committee is reported to have suggested another interim increase. For a complete rationalisation of the price structure of coal, the report of this Committee could be expected to provide adequate guidance. As coal is a vital ingredient in the hard core of the plan, a little more briskness in tackling the problems of the industry is called for.

Showing the Door to Dowry

The Andhra Pradesh Assembly has to be congratulated on passing a Bill against dowry, for the first time in India. Many communities, where dowry has for long been regarded as a social oppression and a curse, have shown reluctance to dispense with it simply out of the sheer force of tradition.

Those among parents or among marrying couples who do not seek or give dowry differ from others in that they do possess the courage to break a tradition. A law which prohibits dowry does not always lead the social outlook but imparts to it a practical strength which has been lacking. Having given Hindu women the right to share property, the dowry system in the Hindu community is now a blatant anachronism. That it continues to be extensively practised with no sense of guilt and often with pride and elation speaks only of a general unawareness of basic economic realities for the affected communities.

The late Vithalabhai Patel once said that the Sarda Act was the only good which the British Government did to India. The anti-dowry Bill in Andhra can take a second place to the Sarda Act, though it has come under a different political set-up. By exempting reasonable presents given to the bride or bridegroom from its scope, the measure acquires an extent of tolerance which would not only make it generally acceptable but undermine the temptation for evasion. The earlier the subject becomes a matter for all India legislation, the better for this country.

*

A Timely Concession

A long-standing demand from the business community has now been accepted by the Government, by their decision to allow a full rebate of the import duty paid on raw materials used in articles which are exported. Hitherto, only seven-eighths of the duty was allowed by way of rebate. To start with, 22 items, among which textile fabrics, engineering products and chemicals figure predominantly, would be covered by the new rate of concession. Several

other products are being examined for inclusion in further instalments.

A rebate of the same extent is also to be allowed in the case of products bearing only excise duties. Where both an excise duty and a customs duty enter into the cost of a manufactured product, a composite rate of rebate is envisaged. Where a flat commodity rate is difficult, individual manufacturers' products will have separate rates. A rate once fixed will be in force for six months.

This step is intended to make Indian exports more competitive in point of price. It should also be possible for the Government to do something in the direction of simplifying procedure. There have been instances where applications for rebates were kept pending for over twelve months. The small businessman in particular, often lacking the means to cope with the intricacies of foreign trade and customs routines is frequently the victim of extraordinary delay in the matter of recovering dues. While it is for the Government to expedite disposal of applications, it is also time that the smaller exporters organised themselves into groups for common purposes.

*

The Small Banks

Mr N. V. Gadgil, Vice-Chairman of the State Bank of India, has put forward a suggestion for the amalgamation of small banks with strong and more viable units. He describes the existence of a number of local banks with small resources at their disposal as a disquieting feature. There is indeed an obvious case for making every weak unit in whatever sphere strong. In the case of banking, the new pattern of demands from the economy laying emphasis on the financing of the industry, reinforces the inherent claim advanced on behalf of greater strength.

The small banks, however, are generally considered to be a boon in places where larger organisations do not care to peep in or their branches are regarded as unduly red tape ridden. It is worthwhile to examine if the servicing functions of a small local bank could not be combined with the strength and resilience of larger organisations, through either local amalgamation or amalgamation over a fairly compact area. The State having become the guardian and protector of increasingly larger areas of economic activity, blazing new trails in every direction, it must be possible for such medium sized banking institutions to function on profitable levels.

It would be rather cruel to think of the small banks as a complete survival. The colossal national or State organisations which probably Mr Gadgil wants the small banks to be replaced with have a certain unwieldiness and routinisation, freedom from which makes the small local institutions invariably preferable to many types of customers. Till we reach a state of complete State socialism, it is useful to keep the small men and

small units functioning as far as possible independently in every sphere of the economy.

*

Plastics in Lighting

Dr W. F. Harper, an international authority on illumination who is on a visit to India, recounted, at a meeting with press men at the ICI head office, Calcutta how in Britain traffic accidents had been reduced by about a third by improved street-lighting. He hoped that what was possible in Britain would be possible in India also where there was the additional advantage of starting later and therefore able to absorb much of the experience already gained in the different parts of the world.

Dr Harper, who represents the British Plastic Federation on the National Illumination Committee, appears to be impressed with the prospect of introducing new synthetic and plastic materials in lighting. In the United States, in Germany and in several other countries, plastic fittings for lighting purposes have gained extensive vogue; in India, these materials should have a like future.

Indian plastic products have assumed an increasingly important role in the country's exports. Dependence on basic raw materials is being reduced by the manufacture of the more important items domestically. In Bombay, one firm has already started large scale production of polystyrene. In Calcutta, another similar venture for the production of polythene is expected to be ready by the end of 1958. The utilisation of plastic materials for a widening range of products has come to be looked upon as a measure of the growth and diversification of a modern economy.

A Plea for Treasury Bill Auctions

The Reserve Bank has lately stepped up its selling rate for the 3½ per cent 1965 by 10 nP to Rs 97.50. This is a sign and symbol of the improved tone and sentiment in the gilt-edged market, the cause of such a state of affairs being largely derived from the "starving" of the gilt-edged market in the sense that, on the one hand, the Centre's New Loan did not place too large a parcel of new bonds for public consumption and, on the other hand, the State Governments virtually abstained from the New Loan market. Although, at the time that the Centre's New Loan was floated, it appeared that public support was largely lacking, we may state here that the Scheduled Banks have since then been steadily purchasing gilt-edged from the Reserve Bank. At the week ended August 2, or on the eve of the 1957 New Loan, gilt-edged investments of Scheduled Banks were at a level of Rs 332.42 crores. At the week ended November 15, the relative figure had risen by nearly Rs 75 crores to Rs 407.32 crores. If we have regard for the fact that subscriptions to the New Loan from the Life Insurance Corporation and other entities would have been for a minimum of Rs 25 crores, it is clear that, gradually, the Reserve Bank has been able to pass on to the Scheduled Banks the full extent of securities represented by the 1957 New Loan. However, lest there should be the impression that the Scheduled Banks generally have, as it were, played the game, it needs to be pointed out that the bulk of the additional investments is comprised by an increase of roughly Rs 60 crores in the portfolio of the State Bank of India. But the important point is that the full extent of the cash and conversion subscriptions must by now be presumed to be in the hands of the public, as distinct from any purchases made by the Reserve Bank at the time and held by the central banking institution. Consequently, it has happened that scrip available for the snow-balling funds of Provident Fund institutions has been far from adequate to meet this special demand. The continuing demand for gilt-

edged—which, we may add, bids fair to be in sustained evidence—is helping the creation of such conditions in the gilt-edged market as would enable the formulation of a sound borrowing policy for Government. At this stage, it would be useful to study, in broad terms, the availability of scrip with the Reserve Bank for being sold on tap. Unfortunately, there is no way of knowing what the Reserve Bank's holdings of Treasury Bills are. But it should be permissible for us to work back, as it were, from available figures relating to deficit financing. At the beginning of the Second Plan, Government of India Treasury Bills outstanding amounted to Rs 595 crores. In the first year of the Second Plan, deficit financing as measured by the increase in ad hocs outstanding amounted to Rs 240 crores. Since then, in 1957-58, Treasury Bills outstanding have risen from Rs 836 crores to Rs 1026 crores on November 15. Thus, deficit financing during the current year has already amounted to Rs 190 crores. We may say that, by and large, the bulk of the ad hocs sold during 1957-58 is likely to continue to be held by the Reserve Bank; for, there is no indication that the Reserve Bank has resold Treasury Bills to entities such as State Governments. Indeed, the current showing of State Governments in the returns of the Reserve Bank suggests strongly that the States will not have been able to muster much by way of surplus resources for investment in Treasury Bills. It is, possibly, no exaggeration to suggest that well over 90 per cent of ad hoc Treasury Bills outstanding is being held by the Reserve Bank. From this viewpoint, we may now have a look at the latest figures of the Reserve Bank holdings of Indian Government securities.

Firstly, as far as Investments in the Banking Department are concerned, they cannot, by statute, include any Treasury Bills. So, the figure of Rs 261.48 crores as on November 22 represents wholly what are to be defined as marketable securities. Then, in the Issue Department, Rupee Securities are

placed at Rs 982.29 crores. Our presumption is that something like Rs 900 crores of this represent ad hoc Treasury Bills. Thus, the total of marketable securities held by the Reserve Bank may, on a very rough approximation, be around Rs 340 crores. In this context, as far as composition of the holdings is concerned, we have to bear two separate factors in mind. The first relates to the maturities within the next four years. Outstanding loans, due to mature between the present time and August 1, 1961, are of the order of Rs 410 crores. This, however, includes Rs 50.36 crores in respect of the 3 per cent 1958, for which conversion facilities were offered in terms of the Centre's New Loan for 1957. We have been vouchsafed no information as to the amount of 1958 Loan that was tendered for conversion, but it is perhaps permissible to estimate the outstandings until 1961 (excluding 3 per cent 1958 tendered for conversion) at around Rs 375 crores. While both the Reserve Bank and the Scheduled Banks have in recent years sought deliberately to concentrate their holdings in near-dated maturities, it is possible to assess the prospective holding of the Scheduled Banks. Securities held by the Scheduled Banks at December 1956 and maturing within a period between one and five years were placed at Rs 135 crores. This is the figure that we have to deduct from Rs 375 crores—which was the estimated level of outstandings of loans maturing up to 1961. So, the non Scheduled Bank holdings of the near maturities may be said to be around Rs 240 crores. This amount of Rs 240 crores is presumably held by the Reserve Bank, the Life Insurance Corporation, Provident Fund institutions and cooperative bodies. We are disposed to the view that the Reserve Bank holdings are likely to be around Rs 200 crores for the reason that the other entities that we have mentioned are not averse to holding longer-dated stocks. By a process of elimination, and on the presumption that the Reserve Bank would not be prepared to effect any sales of maturities up to 1961, the amount of gilt-edged available from the Reserve Bank is, roughly, around Rs 140 crores. The second criterion that we must bear in mind is the fact that, both in respect of the 1956 New Loan and the 1957 New Loan, the Reserve Bank had to take fairly large parcels of the issues offered. A very rough estimate—confirmed in respect of the 1956 New Loan, but still a guess as far as the 1957 New Loan is concerned—would be that the Reserve Bank purchases of the 1956 and 1957 New Loans, at New Loan time, might have been between Rs 80 crores and Rs 100 crores. The gilt-edged so purchased would have included 3½ per cent 1962, 3½ per cent 1967, 3½ per cent 1974, 3½ per cent 1987 and 4 per cent 1972.

We may now permit ourselves a discussion of the sales that might

have been effected by the Reserve Bank from such holdings. Firstly, Scheduled Bank purchases from the Reserve Bank, after the closure of the lists for the 1957 New Loan, have amounted to, roughly, Rs 40 crores. It seems likely that the gilt-edged sold by the Reserve Bank would largely have comprised 3½ per cent 1987. In the second place, as far as the gilt-edged that may have been bought from the Reserve Bank by the Life Insurance Corporation and Provident Fund Societies is concerned, it is reasonable to suppose that the sales would have been in the 3½ per cent 1974 and the 4 per cent 1972 stocks.

On such an assessment, it is possible that the Reserve Bank's holdings of marketable securities, excluding maturities up to 1961, would include, perhaps, only relatively small parcels of 3½ per cent 1967, 3½ per cent 1974 and 4 per cent 1972. Of the loans remaining, it is probable that only two lend themselves to sales through tap. These are the 3½ per cent 1964 and the 3½ per cent 1965. This, perhaps, explains the information vouchsafed that the two loans which are steadiest in the market are the 3½ per cent 1964, which is quoting firm at the Reserve Bank selling rate, and the 3½ per cent 1965, on which the Reserve Bank has raised its selling rate.

We trust that we have been able to indicate that the marketable securities held by the Reserve Bank, although around Rs 340 crores, are effectively likely to be a fraction of that. Meantime, there is hardly any doubt that there is unsated demand for gilt-edged from the public. For this reason, we would make the suggestion that Government should now recommence sales of Treasury Bills in favour of the public. We know that the threshold of the busy season cannot by any means be considered the most opportune time for recommending such public sales of Treasury Bills. But, the other circumstances—and in particular the paucity of floating stock, the steady demand for gilt-edged and the possible smallness of Reserve Bank holdings of marketable securities—demand that the potential scope for investment in gilt-edged is satisfied by the sale by Government of Treasury Bills.

There is much, besides, to commend the idea of public sales of Treasury Bills at this juncture. In the first place, the Scheduled Banks themselves may wish to invest a moiety of their cash balances in interest bearing obligations, but they may be reluctant to purchase gilt-edged as such, since they might be apprehensive of an ensuing demand for Advances necessitating either sales of gilt-edged or borrowings at a later stage. If Treasury Bills were available to them,—which, incidentally they would be able to sell back to the Reserve Bank in time of need—they would by no means keep a level of cash balances that, on the

latest reckoning, is placed at Rs 197 crores, or nearly 15 per cent of their Deposits. In the second place, the public sales of Treasury Bills will, in a subtle manner, discourage an expansion in Advances for other than productive purposes. To the extent that a larger proportion of banks' resources are tied up, the banking system will be more resistant to demands for accommodation for what may be non-essential purposes, particularly if their

resources are already gainfully employed. In the third place, it should be possible for Government to use the instrument of public Treasury Bills to influence the structure of interest rates in a manner which fosters Government's borrowing policy for the Second Plan as such.

In brief, we commend the idea of the recommencement of public Treasury Bill auctions at an early date.

Hefty Deficit Financing

THE 1957-58 busy season seems still to be held at bay by the apparent continuance of the powerful influences that were released by the 1957 slack season. Every economic indicator, except the Government's need for funds, points to slack season conditions continuing to hold sway. The returns of the Reserve Bank for the week ended November 22 reveal a drop of Rs 6.14 crores to Rs 1480.90 crores in Active Notes. Furthermore, Rupee Coin has returned from circulation for nearly Rs 1 crore, and the Reserve Bank's cash balances have risen by Rs 7.11 crores. This is the second consecutive week in which a decline has taken place in Active Note circulation, after the sharp rise of over Rs 20½ crores in the week ended November 8, which was due to month early disbursements. At this same time last year, however, similar conditions had been experienced with Active Note circulation showing a drop for two consecutive weeks. The contrast lies in the position of the Scheduled Banks. In the latest week, the Other Loans and Advances of the Reserve Bank are marked lower by Rs 4.36 crores at Rs 54.88 crores; and this is the seventh consecutive week in which a decline has been recorded under this head. Last year, in the week ended November 23, Other Loans and Advances had shown contrary trends. Secondly, in the latest Reserve Bank returns, the Reserve Balances of member banks have improved by Rs 7.08 crores to be placed at the new peak level of Rs 109.23 crores. In the corresponding week of November 1956, Reserve Balances of member banks were barely steady. Thirdly, the Reserve Bank's advances against usance bills have declined for the fourth successive week with a drop of Rs 4.57 crores to Rs 15.10 crores. Last year, in the relevant week, they had risen by more than Rs 4½ crores. In a sense, it may be said that the continued slackness in the current year is derived from the extremely comfortable position of the Scheduled Banks, consequent to a very substantial increase in their Deposit resources.

But, as we have remarked, Government felt the pinch in regard to their own ways and means position. In the latest returns of the Reserve Bank, there is evidence of deficit financing with a rise both in Rupee Securities and under Investment. Rupee Securities have been

marked up by Rs 11.64 crores at Rs 982.29 crores; and there has been countervailing transfer from Foreign Securities in the Issue Department to Balances Held Abroad in the Banking Department; secondly, Investments in the Banking Department have also gone up by Rs 20.57 crores to Rs 261.48 crores. So, there is an indication of heavy deficit financing, since the Rupee Securities held by the Reserve Bank have risen by more than Rs 32 crores. At this stage, it is interesting to note that, since the week ended March 29, Rupee Securities held by the Reserve Bank have risen by Rs 237.58 crores. It is known that deficit financing up to November 15, 1957 in the current financial year amounted to Rs 190 crores; and, in the latest returns of the Reserve Bank, there is evidence of roughly Rs 30 crores deficit financing. Thus, it would appear that the Reserve Bank holdings of marketable securities have, during this period, risen by Rs 17 crores. This, however, is easily explained. The Scheduled Banks sold, between the end of March and the beginning of August, some Rs 15 crores of investments, presumably to the Reserve Bank. Thus, deficit financing and gilt-edged purchased from Scheduled Banks during the latter half of 1956-57 busy season and the first half of 1957 slack season together constitute the increase in the Rupee Securities held by the Reserve Bank since March this year. So, it is apparent that the Reserve Bank has been able to effect the sale of such securities as it may have purchased of the Central Government's 1957 New Loan.

The Centre has thus been forced to have recourse to deficit financing because of some payments that had to be made to the State Governments. While the Deposits of State Governments are higher only by Rs 1.25 crores at Rs 9.44 crores, it is to be noted that the latest returns reveal a substantial reduction of Rs 20.81 crores to Rs 27.75 crores in the indebtedness of State Governments to the Reserve Bank. Such a reduction could scarcely have taken place without the receipt from the Centre of some substantial payments. It is possible that the Reserve Bank should have suggested to the Central Government that, following upon the acceptance by Government of the Finance Commission's recommendation of a larger allocation from

the divisible pool, and in view of the far from satisfactory ways and means position of the State Governments, the Centre should make over to the State Governments a further tranche from the divisible pool (the first tranche was presumably paid immediately after the New Week loan. The State Governments, in that week, showed an improvement of over Rs 13 crores in their balances with the Reserve Bank).

Lastly, after transfer of Rs 11.64 crores from the Issue Department, Balances Held Abroad are marked higher by Rs 8.30 crores. This shows that the foreign exchange depletion during the week amounted to Rs 3.34 crores.

The return of the State Bank for the week ended November 22 scarcely shows any sign of the advent of the busy season. Deposits are higher by Rs 1.26 crores at Rs 362.34 crores. Government investments are unchanged; the total of advances is higher by Rs 0.13 crores and Cash Balances have

improved by Rs 0.98 crores to Rs 54.15 crores.

The statement of Scheduled Banks for November 15 discloses a fairly substantial decline of Rs 8.59 crores to Rs 1390.06 crores in Deposits. This is noteworthy in that it is only the third time in this year when a decline has taken place in Deposits during two consecutive weeks. Moreover, it is the sharpest decline to have occurred, except during New Loan week. Nevertheless, borrowings from the Reserve Bank have been further reduced by Rs 2.06 crores to Rs 20.84 crores, which is the lowest such level in nearly two years. Cash Balances are more or less unchanged at Rs 197.11 crores; and so, too, with Investments, which are placed at Rs 407.32 crores. The total of Advances shows a decline for the third consecutive week with a substantial fall of Rs 9.77 crores to Rs 844.62 crores. In the relevant week of last year, Scheduled Banks had reported a small increase in their Advances.

Revival of Gold Hoarding

By PAUL EINZIG

THERE has been during recent weeks a noteworthy revival of demand for gold. The flight from the French franc, resulting from the political and economic difficulties of France, was the most obvious cause of the increase in gold hoarding. The Paris market price of gold underwent a sharp rise, and the premium on gold coins

over their bullion value widened considerably. Gold smuggling into France, especially from Switzerland, has increased considerably. But the revival of demand was not confined to France, nor was it entirely on private account. Several Governments deemed it advisable to convert into gold part of their foreign exchange holdings.

MORE FOREIGN EXCHANGE FOR THE NATIONAL PLAN

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

United Bank of India Ltd.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

WANTED a General Manager for The Andhra Bank Ltd, only persons with a minimum of ten years administrative experience in a Scheduled Bank need apply before 15th December 1957, stating age, qualifications, experience and salary required.

Apply to:—The Managing Director,
THE ANDHRA BANK LTD.,
MASULIPATAM (Andhra Pradesh).

The reason why this demand did not result in a more pronounced rise in the London market price of gold—which is still a shade under the U.S. official buying price of \$35 per ounce—lies largely in the resumption of the export of Soviet gold. The reappearance of bars marked with hammer and sickle during the closing months of the year seems to have become an annual event in the bullion market. It seems to be connected with the Soviet Government's policy of increasing the supply of consumer goods without having unduly to curtail the production of capital goods required for military and industrial purposes.

The revival of official and private demand for gold may be explained to some extent on the ground of

the decline in world commodity prices and other symptoms of a business recession. The view is widely held in London and elsewhere that in face of the threat of a really serious recession the United States authorities may be inclined to reconsider their refusal to increase the official price of gold. Beyond doubt, an increase of that price would go a long way towards bringing about a revival of business and a recovery of commodity prices. Even so, it seems most unlikely that the official American attitude would change on this matter.

For one thing, the threat of a substantial recession is not sufficiently grave to call for such a drastic measure. There are ample supplies of weapons in the armoury

of United States monetary policy which could be employed long before the Administration and Congress could be persuaded to change the official price of gold. That act has a disadvantage compared with other devices: it is virtually irreversible. Most other measures could be reversed at short notice as and when recession fears become once more overshadowed by inflation fears. But it would not be easy to restore the price of gold to \$35 after it has been raised.

The reappearance of Soviet gold in Western Europe is another reason why an increase of the American price is unlikely. To raise the price of gold at a moment when the U.S.S.R. is exporting some of its output would amount to a free gift by the U.S.A. to the

U.S.S.R. And it would take quite a considerable improvement of American-Russian relations before such a gift would become conceivable.

Over and above all, inflation fears are sufficiently strong to discourage a move that is bound to increase inflationary pressure. Many British quarters which were until quite recently strongly in favour of an increase in the official American buying price of gold have now reconsidered their attitude, owing to the realisation that any change that would make it easier to inflate with comparative impunity should be avoided at all costs. And there can be no doubt that a higher U.S. gold price would facilitate inflation.

In the first instance, such a change would expand the potential basis of credit in the United States. Even if a corresponding change in reserve requirements and other monetary devices could neutralise the effect of the increase in the bookkeeping value of gold on the volume of credit, the expansion of the potential basis of inflation would produce a considerable psychological effect. Assuming that an increase in the American price of gold would be accompanied by an all-round increase in the official prices of all Bretton Woods countries, it would mean that the gold reserve position would become easier everywhere. But the removal of one of the few remaining barriers to inflation in the United States would be of particular significance, owing to the important part played by the United States in world economy. Anything that makes for inflation in the United States makes for inflation in the whole free world.

Moreover, in the case of Britain a revaluation of the gold reserve and an increase in the dollar proceeds of gold exported by the gold producing countries of the Commonwealth would materially reduce pressure on sterling. This would mean that the Government would no longer have the same inducement to resist inflation. The chances are that it would be inclined to yield to pressure to relax its recent measures against inflation instead of reinforcing them.

The American price of \$35 is one of the few remaining fixed points in our fluid post-war world. Most exchange parities have changed since 1945, and the domestic purchasing power of all currencies has depreciated. So long as the basic trend remains as inflationary as it at present, the American buying price is looked upon as one of the few remaining bulwarks against runaway inflation. Although its maintenance inflicts unfair disadvantage on gold producing countries and inconvenience on countries with inadequate gold reserves, the choice is between alternative evils, the number of those experts who feel that in existing conditions the evils attached to the maintenance of the \$35 price are smaller has increased under the influence of the unrelenting wage inflation of recent months. (Copyright)

World of Jute

Easier Trend Continues

THE markets for both raw jute and jute goods have continued to rule weak and prices, especially of the latter, have registered a further decline from last week's levels. Although the jute goods market tried to recover in mid-week on reports of good shipping instructions, prices receded again due to selling pressure at the close. The only relieving feature of the week's trading was the comparative steadiness in sackings, while hessians declined on reports that it was unlikely that any steamer would be available for shipments to Argentina.

The main cause for the persistent weakness of the market is the continued lack of enquiry from overseas buyers, who are hoping that prices will soften further with the pressure of the new crop arrivals in

the market. Moreover, scarcity of ready goods is a thing of the past. Goods, not only for the ready position, but also for all deliveries, are now offered freely. This is emphasised by the selling pressure from mills in the forward position. While mills are thus eager sellers for all deliveries, neither shippers nor dealer are showing any interest. With the result no genuine business is done and price movements are mainly influenced by the speculative activity in Phatka.

Although the decline in prices is more pronounced in hessians than in sackings, hopes are still entertained that the USA will, sooner or later, be forced to enter the market to replenish their run-down stocks of burlap, especially when a shortage of hessians is anticipated due to

a change-over of looms to the sacking production.

Again, stocks of burlap in the USA have registered a decline to 219 million yards—the lowest touched for the year—from 267 million yards in January. With stocks so low, there is a fair possibility of enquiries from the USA in the near future.

Except for small enquiry in Cornsacks and Woolpacks from Australia, hardly any business is done in the sacking section. But, a good deal of covering business is still reported on the hope that the growing economic activities in the country will increase the internal consumption and thus compensate any loss of overseas demand for this category of goods.

With dwindling interest on the part of mills, prices in the Raw Jute section have also eased further from last levels. Mills are confining their purchases to meet their immediate requirements although dealers are eager for more business.

At the present time, paddy harvesting is in progress and this has, naturally, brought about a reduction in supplies coming forward.

The present drop in imports can, therefore, be considered temporary, as arrivals are expected to increase when the harvesting season is over. On'y small business has taken place during the week:—Assam and Northern Bottoms at Rs 27.50; Assam and Northern Middles at Rs 29.75 and Dalsee Mesta Bottoms at Rs 25.00 to Rs 25.25, all per maund for one month delivery.

Following were the price trends of jute goods:—

		Week's Opening	Week's High	Week's Closing
Hessians:		Rs.	Rs.	Rs.
40" x 10 ozs.				
Ready	..	41.00	41.00	40.25
December	..	40.95	41.65	40.50

ACC HONOURS THE CODE

3

"Employers owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible."

Code of conduct—FORUM OF FREE ENTERPRISE

As an employer of labour the ACC can well point with satisfaction to the salary/wages and other emoluments paid to its employees and to the many welfare activities voluntarily undertaken over the years.

To take salary/wages first, compare these figures of ten years:

	1945-46	1955-56
No. of employees	17,500	29,000
Salary/wages & amenities	Rs. 127.3 lakhs	Rs. 421.5 lakhs

Thus while the increase in the number of employees was 66%, the increase in the salary/wages, etc. for the same period was over 230%!

As for welfare activities, employees of the ACC's 17 factories and two collieries have for a long time been enjoying a large number of amenities for their security and social welfare, namely: provident fund and gratuity; schools, hospitals and dispensaries, creches, canteens, cinemas, clubs, playing grounds; welfare and benefit fund, and co-operative societies.

All these benefits have been provided out of a consciousness of social obligation. The ACC believes that a well-paid, well-looked-after, happy and contented employee is the best employee.

World of Tea

Fall in General Demand

CONDITIONS in the Calcutta Tea market, which had been better during the past two weeks, turned a shade quieter this week. There is less general demand and prices have developed an easier tendency.

Initially, reports showed that there was a broadening of enquiry from the UK and the Middle East. Considering the low British stocks as well as the shortfall in the world crop following adverse climatic conditions, it was expected that enquiries from the UK would improve soon. It was also felt that, if Russian buying in the Colombo market gathered further momentum, the market in India might receive a further boost. Domestic buyers had also been very active and, for the first time, export buyers were seen to be operating in the Dust Sale. Above all, reports that Egypt would be buying an additional 2.4 million pounds of Indian tea for immediate delivery lent further strength to the market.

Despite the current steadiness in prices, the long-range outlook continues to be discouraging. This view has been emphasised by the Chairman of Messrs Harrison & Crosfield who thinks that, at the rate at which the overall production of tea in the world continues to expand, it will be difficult to find an outlet for the surplus tea. He estimates that the 1957 world output, with the exception of China, may prove to be some 40 million pounds in excess of that in 1956. Also, there is the distinct

possibility of stronger African competition. At current prices, producers in Africa are reported to be making profits, while those in India, Ceylon and Pakistan have been losing money. This apart, there is every prospect of an increase in African output. Against this, absorption in the main consuming centres of the world appears to show little change over the past year.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were as much as 60,552 packages. A strong feature of the sale were CTC Assams which were dearer for those with useful liquors. The more ordinary liquoring types were rather irregular and were sometimes easier. Commonest sorts met with a good enquiry at about last rates, while Clean Common descriptions received less support and prices declined by 6 to 8 nP. Black Fannings also met with less support and these declined by 2 to 4 nP per pound.

The weakest feature of the sale were Medium Assam BOPs of orthodox manufacture and these eased by as much as 20 to 30 nP with appreciable withdrawals. Those with bright liquors were, however, sold well. Whole Leaf grades and Stylish BPSs were fully firm to dearer. Darjeelings and Tippy sorts received fair support at prices which were often easier. Following rates (per pound) were quoted:—Clean Black Pekoe Rs 2.40; Plain BP Rs 1.64 to Rs 1.66; Plain Fannings Rs 1.72 to

Rs 1.76; Medium BP Rs 1.70 to Rs 1.74; Medium Fannings Rs 1.82 to Rs 1.84; Best Assam CTC BP Rs 3.10 to Rs 3.50 (nominal) and Best Assam CTC Fannings Rs 2.90 to Rs 3.10 (nominal).

In the Internal Sale, offerings were 20,453 packages. There was a good general demand at lower rates. Commons and Mediums declined by 4 to 8 nP and occasionally more. The best liquoring kinds in this category remained about steady. Non-wither Dooars were a strong feature and were fully firm and at times dearer. The few best CTC sorts with good liquors, which were on offer, were firm to dearer; but the more ordinary kinds were up to 15nP lower and sometimes more.

Flavoury Darjeelings realised high prices, while the remainder were irregular and generally easier. Following rates were quoted:—Medium Dooars Dust Rs 1.74; Medium Assam Grainy Dust Rs 1.74 to Rs 1.78; Medium Assam CTC Dust Rs 2.00 to Rs 2.10 and Best Assam CTC Dust Rs 2.70 to Rs 3.00 (nominal).

Also, 3,984 packages of Leaf grades were offered for internal consumption. There was a good demand at irregularly easier rates.

In the Export Quota section, rate was quoted steady at 18½nP per pound and business was reported done at this level.

A total quantity of 1,875,000 pounds were offered in the Cochin market. There was a strong general demand, particularly for Low Mediums and Medium Broken and Fannings; and these advanced irregularly by 5 to 10 nP per pound. In some cases, higher advances were even registered. There was a greater demand for Fannings than in recent weeks. Best Liquor-teas were easier, although a few selected invoices of top quality were sold well. Whole Leaf grades were irregular. Orange Pekoes

declined; but Pekoes and flowery Pekoes were fully firm to dearer. Following rates were quoted:—Plain BP Rs 1.45; Low Medium Rs 1.45 to Rs 1.60; Medium Rs 1.55 to Rs 1.75; Good Medium Rs 1.75 to Rs 2.00 and quality Rs 2.10 to Rs 3.85.

In the Colombo market, offerings were 6,323,859 pounds. There was a good demand; but quality was inferior and prices were generally lower. There was a good demand for all grades of Nuwara Eliya teas and prices were higher where quality showed an improvement. Offerings of high-grown teas showed a fairly sharp fall in quality, particularly from Uva. Among medium-grown teas, coloury Medium BOPs with useful quality were generally dearer. Prices of low-grown teas were generally irregular and showed a decline of 5 to 10 cents per pound. Demand for high and medium-grown Fannings was distinctly quieter and prices fell by 30 to 50 cents per pound for the better sorts.

Ceylon has produced 27.20 million pounds in October as compared to 21.00 million pounds in September and 27.70 million pounds in October last year. Total production for the ten months ending October 1957 amount to as much as 333.40 million pounds as compared to only 301.10 million pounds in the corresponding period of last year.

There was a noticeable easing in values in Mincing Lane, although demand was good. Trader quarters regard this as indicative of the decline in quality, which normally begins at this time of the year. The top quality invoices, however, continued to command high prices and prices for these ranged from 9½sh to 12sh per pound. But, the quality of top quality descriptions is now dwindling, because of seasonal factors. A lot of the teas (Continued on page 1019)

For you, the best—Bhai Sahib !

Do you know how many cups of Brooke Bond Tea are drunk every day in India? Over 5,50,00,000 cups! And, what is more, every cup contains tea that is fresh and uniform in quality guaranteed in every Brooke Bond packet.

This is no magic but the result of a sound plan—the plan that aims to give you the best tea you can buy.

The network of our modern factories makes this guarantee possible and ensures that you get Brooke Bond Tea that is satisfying from the first sip to the last.

FACTS ABOUT BROOKE BOND'S FIVE FACTORIES:

Number of packets produced per week	... 2,10,00,000
Number of nails used per week	... 250,000
Steel strapping used per week	... 70 miles
Paper used per week	... 2,240,000 yards

* One of our largest godowns holds 10,000,000 lbs. of tea

The Automobile Industry

THE Rajya and Lok Sabha debates last week on the Commerce Minister's Bill to amend the Indian Tariff Act to continue the protection given to the automobile industry drew attention to the fact that though the progress achieved has on the whole been noteworthy, the industry is still far from a stage of development where it can hold its own against foreign competition in a free market.

The automobile industry in India has had rather a late and shaky start; and, in terms of numbers of vehicles produced, the progress during the first few years of this decade has been slow and hesitant. In fact, viewed only in terms of numbers, there was no progress at all. Thus, while in 1951, the number of cars and trucks run off the assembly line was 22,272, the relative number fell to 15,288 and 13,920 in 1952 and 1953 respectively.

The figures, however, are misleading, because the industry was, during this period, slowly transforming itself from one concerned mainly with the assembly of parts manufactured abroad to one manufacturing the parts indigenously—a process which is still going on. Before 1953, when the Tariff Commission undertook the exhaustive enquiry into the conditions obtaining in the industry, and when the Government, on the recommendations of the Commission, took the first comprehensive and positive steps to promote the manufacture of automobiles in India, conditions were not far short of chaotic. Since 1954, however, when the Government's decision to restrict the number of manufacturers and models took effect, progress has been more even. In 1955, production rose to 23,088 units; and, in 1956, the figure was placed at 32,138.

It is quite obvious, however, that, viewed against the background of the size, population and road mileage of the country, the figures are pitifully small. A comparison with other countries, both area-wise and population-wise, makes this uncomfortably clear. Thus, the number of vehicles per square mile is 37.9 in the UK, 17.3 in the USA, 10.7 in France and 5.2 in Italy; in India, it is only 0.2. Cars per 100,000 of population work out to 6,995 in the USA, 5,375 in France and 1,442 in Italy; for India, the relative figure is only 76.

It is not possible to say with any degree of precision when the figures of car production will show a closer approximation to those of the industrialised nations of the West. How long it will be, will

depend on a number of factors—not all of which can be controlled or even foreseen by either the Government or the industry. The Tariff Commission's recent enquiry and recommendation for continued protection suggest that the period may be fairly long.

Judging from the remarks of Mr Manubhai M. Shah during the debate, it would appear that Government did not quite accept the Tariff Commission's assessment of the immediate prospects of the automobile industry in India. Mr Shah appeared to be much more optimistic, and stated that it was a safe assumption to make that, by the end of the Second Plan, the firm foundation of a healthy and growing automobile industry will have been laid.

Whether that happens will, in the last analysis, depend on whether the production of vehicles increases sufficiently to make each unit economically viable. The Tariff Commission's opinion is that, for any particular type or model, an annual production figure of 5,000 was the very minimum to make the manufacturing unit an economic proposition. On that basis, production in India, assuming that no further models or types are brought out, needs must be at least 75,000 a year. But production in 1957 is not expected to be much higher than 32,000. It is reasonable, therefore, to doubt whether, in the course of the next 3½ years, annual production has the capacity to more than double its present rate.

Unless, however, that happens, there is no chance of prices coming down. And unless prices come down, the demand will not grow enough to ensure a certain and rising market. In the opinion of several speakers in the parliamentary debate, this basic dilemma of the automobile industry can be solved only if Government further cut down the multiplicity of models and types of cars, which has been the bane of the infant industry. Mr Shah, in replying to the debate, gave no indication that Government intended doing so.

The automobile industry is one of the few industries of its dimensions—in terms of capital investment—which has been left to the private sector, for the current Plan at any rate. As such, it offers a challenge to private enterprise to prove its economic resourcefulness and creative productivity. If the challenge is to be met successfully, the industry must not only put forward a concentrated and planned effort, but will also need a farsighted and consistent policy on the part of the Government.

State Trading Corporation

The State Trading Corporation of India (Private) Limited, New Delhi, was registered on the 18th May, 1956. The authorised capital is Rs 1 crore, divided into one lakh equity shares of Rs 100 each. The paid-up capital was initially Rs 5 lakhs; it was raised to Rs 10 lakhs in October 1956; and to Rs 1 crore in March, 1957. The share capital has been wholly subscribed by the Government of India.

The Corporation has been established, in the main, to organise and effect export's from, and import's into, India of all such goods and commodities as the company may, from time to time, determine and to do all such other things as are incidental or conducive thereto.

Mineral Ore have constituted the major portion of the Corporation's export business. Limited quantities were shipped by the management on the Corporation's account; substantial assistance was afforded to shippers to augment exports; and firm contracts for the sale of 2.8 million tons of iron ore were concluded. The Corporation entered into a long-term arrangement with the Japanese steel mills, providing for the sale of 7.2 million tons of iron ore, spread over a period of five years, against which 1.3 million tons were contracted to be supplied in 1957-58 at a price, fair both to the buyer and the seller. Another contract was concluded with Metalimex, Prague. A virtually new market was developed in Europe by the contract for the sale of 1.75 lakh tons to Italy.

A small beginning was made in organising the sale of Chrome Ore by concluding a contract for the sale of 6,400 tons to a new buyer—the China National Mineral Corporation.

Indian handicrafts have figured prominently in the Corporation's exports to the USSR and Czechoslovakia. Salt has been exported to Indonesia. Tea has been exported to the German Democratic Republic and taste for Indian Coffee is being cultivated in the Soviet Union.

The Government of India have entrusted to the Corporation the task of acquiring cement from manufacturers, importing it from abroad, and distributing both indigenous and imported cement at an equalised price. The total loss on imported cement has been of the order of only Rs 48 lakhs; but the cement account shows a surplus of Rs 5.01 crores, the disposal of which awaits the instructions from the Government of India.

The activities of the Corporation are fully reflected in the accounts for the year ended 30th June, 1957. Total turnover has been of the order of Rs 10 crores. Turnover in cement on Government agency account was over Rs 55 crores. The gross profits, on account of trading, aggregate to Rs 35.42 lakhs. The net profit works out to Rs 22.63 lakhs. The Board has recommended a dividend of 6 per cent and to carry forward the balance of Rs 0.63 lakhs to the next year.

Dunlop Rubber

To have grown up to a size which entitles it to be called Asia's largest rubber manufacturing enterprise from humble beginnings just two decades back is an achievement with few parallels. It remains to the lasting credit of the Dunlop Rubber Co to have been linked with such an achievement.

It was Dunlop again which blazed the trail in the manufacture of rubber products, especially rubber tyres in the country, the first factory having been set up some 21 years ago at Sahaganj, in West Bengal for the production of rubber tyres. The factory was officially opened in November 1936.

The major development in the Dunlop Rubber Co in the recent past, has been the process of diversification in production that has been zealously fostered with the inauguration of the First Plan. As

US Notes

ECONOMISTS here are beginning to undertake some thorough studies of the impact of imported merchandise on the US consumer market.

It is a fact, of course, that the United States is the world's leading producer of consumer goods. Yet it also is a fact—one that may be getting rather belated recognition—that consumer goods from abroad are invading the US market in ever-increasing volume.

Anyone wending his way through the well-stocked shelves of large American retail outlets—and many small ones, too, for that matter—will find merchandise from just about every part of the world. The list is practically endless. There are, for instance, toys from Germany, cutlery from Sweden, furniture from Denmark, handbags from Italy, cameras from Japan, sporting goods from Switzerland, handicrafts from India, wooden stools from Yugoslavia.

And on American streets are seen in growing numbers the many foreign-made automobiles that are winning the favour of American motorists. So popular have imported goods become, that American merchants are going out of their way to publicize them.

Almost any day in some major city one can find evidence of special promotion campaigns, backed by heavy advertising budgets, for goods from some other part of the world. And everywhere, one finds retailers agreeing that consumer goods from abroad are playing increasingly important parts in their merchandising plans.

Actually, the dollar value of imported consumer goods does not loom large when compared with the total value of US imports, which set new records in 1955 and 1956 and is on its way to another record this year. Less than 10 per cent of the products entering the United States find their way directly to retail shelves; industrial goods and commodities still account for the major share.

But the sale of imported goods at the retail level takes on a more obvious significance when one studies the individual breakdowns rather than the over-all figures. Here are the percentage increases, for the importation of some consumer items into the United States.

Comparing the first six months of 1957 with the same period of 1956: steel cutlery, up 15.2 per cent; woolen wearing apparel, 61.1 per cent; silk apparel, 10.4 per cent; leather footwear, 28.2 per cent; leather gloves, 75 per cent; artwork, 28.3 per cent; photographic goods, 20.9 per cent; toy and athletic goods, 17.4 per cent; clocks and watches, 6.9 per cent. And these are just a few of the many kinds of consumer products entering the United States.

Some retailers, in fact, find that as much as 40 per cent of their sales of some items is made up of imported merchandise. Actual sales vary from store to store and from item to item, of course. But most department and specialty stores say that nearly five per cent of their total business, on the average, is accounted for by imported goods. What is more, merchants agree that this percentage is virtually certain to rise. The sale of foreign merchandise in the United States has proved to be good business all around.

Foreign manufacturers have been finding a receptive and expanding export market for their products, and American retailers have been meeting a growing consumer demand for imported products. So good has this business become, in fact, that more and more American retail outlets are sending their buyers abroad to purchase goods for sale in the United States. Some are ordering foreign merchandise to specifications they believe will best suit American tastes.

Selling to the United States, as to any country, has its risks, of course. But the record shows that it is well worth the risks for foreign manufacturers and exporters interested in tapping the vast potential of the American consumer market.

Britain

IF there was one thing the Colombo Plan was promoting successfully, it was the spread of co-operation and friendship among member countries in Asia, the Marquess of Reading said in an interview in London. He has recently returned from a one month visit to the Far East during which he went to Saigon, Viet-Nam, as head of the British delegation to the Colombo Plan ministerial conference—the first such meeting to be held outside the Commonwealth.

Lord Reading said the Plan had certainly caught the imagination of the people of Asia, because of the absence of any politics in the set-up. "There are no conditions for joining, which the Asian appreciates greatly," he explained, "and this is enabling the Plan to do a useful job".

One thing which caught his eye was the remarkable way that countries receiving aid under the Plan and becoming self-sufficient were, in turn, becoming donor countries by helping their less fortunate neighbours. This was an interesting sign of the way the Colombo Plan was promoting co-operation in Asia.

He was particularly pleased with the marked friendliness towards the British wherever he went in Burma, Cambodia, Laos, and Thailand. Lord Reading paid goodwill visits to these countries on behalf

of the British Government, and discovered there a passionate desire to learn English.

He said that Britain's contribution to the Colombo Plan was largely technical, and "whatever we are doing is very much appreciated by the governments concerned. In Saigon, I saw a veterinary centre which had been fully equipped by Britain under the Plan which was proving very beneficial. In Rangoon, I saw machinery and equipment from the United Kingdom sent to engineering and polytechnic colleges which they were very pleased to receive".

Lord Reading said that despite increasing trade competition with other Western countries in the Far East, Britain, through the Colombo Plan, was doing her best to help, and the member countries appreciated her efforts.

The Plan, he said, had been extended to countries outside the Commonwealth, and though there were several difficulties in catering to the needs of all—because the different countries were moving at various speeds, according to the resources at their command and also because of the uneven distribution of population—it was doing a very useful job.

United Kingdom overseas trade showed its usual seasonal revival in October compared with September, although imports rose more sharply than exports, according to a Board of Trade announcement confirming the provisional figures for October issued earlier.

British exports, at £271,800,000, were over £25,000,000 more than in September; and re-exports, at £11,200,000, were £1,500,000 more. Imports rose in October by nearly £45,000,000 to £353,100,000. The visible trade deficit rose by £18,000,000 to £270,100,000.

Fuller information on the October trade figures, expanding provisional data published earlier in the month, enables an analysis of why the trade gap increased as it did (writes a London correspondent). Although there was no failure of exports, inasmuch as they showed the usual seasonal revival, their performance in October was somewhat disappointing compared with the normal recovery in exports at this time of the year.

The shortfall seems to have been spread over a large number of commodities and markets, although certain aspects stand out, such as a considerable drop in deliveries of ships and boats (always a sharply fluctuating item) and a fall in shipments to France and India—resulting from the new rigorous import policies of those countries.

But these aspects only account for a moderate part of the shortfall. More than a single month's figures are, however, needed to establish any definite change of trend.

The main feature of imports in October was the high level of arrival of plant, machinery and vehicles, and textile and other manufactures. Imports of steel and of chemicals and rubber also increased. This confirms the earlier supposition, when the provision figures were published, that much of the in-

crease in imports was connected with industrial expansion in the United Kingdom, and to this extent the increased imports should be reflected in increased exports later on. Much depends in this context on the course of world trade in the near future.

The imports and export price indices fell by one point each to 103 and 111 respectively in October, so that the terms of trade (the ratio of imports prices to export prices) remained unchanged at 93 (1954 equals 100).

STUDY OF TAX SYSTEM

By GORDON CUMMINGS

Senior revenue officials from 14 countries are at present in the United Kingdom on a ten-weeks' study of the British taxation system. After having attended a series of lectures, they are now gaining firsthand experience by working in different offices.

The whole course has been organised by the British Council. The four officers from India, taking the course under the Technical Co-operation Scheme of the Colombo Plan, are: Mr S. K. Bhattacharjee, Secretary, Central Board of Revenue, Ministry of Finance, New Delhi; Mr R. S. Chadda, officer of special duty, Central Board of Revenue, New Delhi; Mr V. S. Desikachari, inspecting assistant commissioner of income-tax, Mysore State and Mr S. V. Deva, appellate assistant commissioner of income-tax, New Delhi. Their studies, which began on October 6, will end on December 14.

The British people pay quite a lot of taxes one way or the other but top of the list comes income tax. Income tax produces almost one half of all the Government's tax revenue. And something like two out of every five of the population pay it.

The way of levying the tax has been developed over a period of more than 100 years and it has stood the test of time in no uncertain way. The cornerstone of the system is this: changes—which may be in the rates of tax, in allowances, or in the methods of assessment—are invariably made annually. The Chancellor of the Exchequer outlines these changes in that great annual event—the Budget. But the Parliament must approve before they become law.

The operation of an income tax system falls of course into two main parts: assessment and collection.

The British authorities divide the great bulk of income into three different kinds. First there is property—houses, offices, factories and other buildings. The owner of property is liable to income tax on what is known as the net annual value. Or to put it more generally, the net rental value. Whether an owner lets his property or occupies it himself, this net annual value is counted as part of his income.

Second comes business profits. The profits of business organisations—companies, partnerships or one-man concerns—are assessed

INDIA & PAKISTAN

THE wisdom or morality of President Eisenhower deciding to seek re-election last November is the issue that, I suppose, is now uppermost in the minds of the American people. Possibly, nothing much need be read into the latest indisposition which affected Mr Eisenhower early this week. It may be that the chill that he acquired in greeting the King of Morocco set off a chain action which led to and evidenced itself in a physical ailment. But we can never be sure—not least the medical profession—that the mild stroke or whatever it is that has laid the American President low might not have stemmed from the acknowledgedly heavy burden of responsibility that rests upon the shoulders of the chief American executive. Now, perhaps, is as good a time as any to have second thoughts, not merely on the presidential election of 1956, but also on the man who is today in the limelight, because he is next in line of succession to Mr Eisenhower.

Inevitably, there will be a good deal of agonising reappraisals in America about the 1956 presidential elections. For Mr Eisenhower's part, the main question will be whether he was justified in listening to the persuasions of his advisers in standing for a second term. For the life of me, I cannot imagine a soul like Mr Eisenhower aspiring or being greedy for power. I do not think that there was any thought of glory motivating his decision to seek re-election. A sincere man, he must have felt that he had a duty to his country and to discharge that duty as he saw fit. That meant that, in the unceasing search for peace, the person of Mr Eisenhower should once more be at the helm of the US ship of state. It was this desire, this earnest anxiety to serve the cause of peace, which must have impelled Mr Eisenhower to take the decision that he did. He knew that death might overtake him, but then as Shakespeare said, death is something that will come when it will come. Perhaps, a powerful urge to serve the cause of peace made it easier for Mr Eisenhower to believe that, in this mid-twentieth century, a man with a heart condition is almost as good as the next man. So, I should imagine that Mr Eisenhower has a free conscience; he did not belittle

his physical disability, but offered himself as a candidate with all possible reservations, even going to the extent of saying that, if he should feel at any time that his health would not permit him to continue in office as President, he would so inform the American people. No, this heart-searching that I have talked of is not going to cause any trouble to Mr Eisenhower.

I cannot say the same thing of the millions of Americans who are, I cannot but believe, as guilty of the cult of personality as Stalin's followers were. I am quite sure that there are many who voted for Mr Eisenhower, but who were not quite sanguine about the Republican party's choice for the office of Vice-President. Such voters, who defeated the Democratic candidate, must now be turning over in their mind the proposition that it was they who voted for Mr Nixon as a prospective incumbent. Will the conscience of such as these rest easy? It is hard to tell, but as I shall show later, there is much less cause today for apprehending that Mr Richard Nixon is not good presidential material than there was, say, 18 months ago. Nevertheless, these Americans, who could be classified as pro-Eisenhower but anti-Nixon, may justifiably be troubled by the thought that they are in part to blame for the setback in the health of Mr Eisenhower.

For, there is no room for doubt that the American President today carries greater worries and anxieties than any other statesman in his rank in the world. The period from the entry of America into World War II was in itself an arduous strain upon the chief US executive. It is, however, not fair to suggest that President Roosevelt was a victim of the Second World War, since he had been doing poorly in health for some time before and since death itself came for him scant months before the allied victory. Moreover, I suppose the strain of the war period was organisational rather than anything else. The American mainland was never in danger, though American lives were being lost. The President's responsibility was directed to an all out diversion to war production, and the distribution of such weapons to the allies. Then, we have

chronologically the seven years that Mr Truman served in office, and it is no exaggeration to say that Mr Truman was called upon to face a situation and take decisions which involved greater mental strain. I refer, for example, to such things as the decision to use the Atom bomb against Japan, the commencement of the cold war, with all its psychological racking of the nerves, and the outbreak of hostilities in Korea. But, what strain there was, Mr Truman was able to bear, because he could always be confident that supremacy rested with America, that the US was still stronger than Soviet Russia. By this time, world history came to a poise wherein the battle of nerves had become more acute, where it was a question of unending assessment of the other camp's armed might and technological advancement, where the nerves were always taut; and, in such a situation, Mr Eisenhower succeeded Mr Truman as President.

The strain upon Mr Eisenhower proved the greater because it was all too clear that there was a split within his own party, that there was a split in the country in the sense that the American people wanted him as President, but the democratic party for Congress. In the mounting tension of cold war politics, in the befouled air of power politics, the great responsibilities shouldered by Mr Eisenhower took their toll and thrust a coronary attack upon the person of Mr Eisenhower.

Mr Eisenhower is a courageous man, and he recovered his health and his strength. It was at such a time that Mr Eisenhower was persuaded, in a manner that I have already discussed, to seek re-election. Did the American people have the right to bow down a man, for all that he was willing, with a backbreaking load of responsibilities, especially when that man had a heart condition? Yes, the American people, such of them as were for Mr Eisenhower but against Mr Nixon, must now be wondering whether they in part are responsible for dealing, if not death, disability to Mr Eisenhower.

As I said, there can be no question of doubt as to the wisdom or

unimpeachable morality of the decision of Mr Eisenhower himself. But, of the wisdom or morality of the American electorate, I have stated my doubts. Now, we have to discuss the third entity that should also be—or is it too heartless for that?—sore beset by having on its conscience the health, if not the life, of Mr Eisenhower. I here refer to the Republican party, to whom it was abundantly clear that, for success in the 1956 presidential elections, Mr Eisenhower was indispensable. I have not ceased wondering whether the party did not use, in the worst sense of the word, Mr Eisenhower. Otherwise, Mr Eisenhower should surely have received much more support than he has done from Republican Congressmen. The shabby treatment that has been accorded to Mr Eisenhower, partly owing, no doubt to the fact that he will not be able to run for a third term, lends plausibility to the view that the Republicans wanted Mr Eisenhower in 1956 for a figurehead. The 1956 elections left behind, one almost gets the feeling that Mr Eisenhower has been transformed into a lame-duck President. Can the party be accused of homicide or attempted homicide in persuading, for its own petty reasons, Mr Eisenhower to lead the party to victory in 1956? I shall not try to answer this question here.

In this situation, there are two silver linings to the storm clouds raised by the 'slight stroke'. The first is that, apparently, the indisposition is far less grave than it appeared to be at an earlier stage. To the extent that Mr Eisenhower's health has not received a serious setback, the free peoples of the world have cause to rejoice. Nevertheless, it is patent that the President will have to take things easy. For example, the psychological prop that West European countries hoped to receive from the presence of Mr Eisenhower at the NATO 'summit' talks in Paris during the middle of next month will no longer be available for the simple reason that the President will not be able to undertake the trip. This is a great pity, because the successful launching by Russia of the two Sputniks has military significances which, it had been hoped, Mr Eisenhower would be able to deal with. (The launching of these Sputniks, I may add here, may conceivably have been

[November 30, 1957]

one of the causes of the setback in Mr Eisenhower's health. For, it presages the achievement of supremacy by Russia in a particular field, and Mr Eisenhower must have felt that his personal prestige has been affected, because Russia has beaten America at his own erstwhile profession in the military field. Not merely Laika, but Mr Eisenhower as well may be deemed to have been powerfully affected by Sputnik II.

Th's apart, one cannot really say that this disability will greatly handicap Mr Eisenhower. For, the fact is, unpalatable though it may be in some quarters, that Mr Eisenhower has been content to be a part-time President, in the sense that he has himself tried deliberately not to put too much of a strain on his health. So, from one point of view, the status quo may be said to be maintained in the

extent of the administrative chores undertaken by the President, notwithstanding the stroke suffered by Mr Eisenhower.

However, political circles are abuzz with speculation about what may be an unprecedented step for Mr Eisenhower to take. This concerns his earlier emphatic assertion that he would not hesitate, if he felt that he was not up physically

to performing the chores of President, to resign from that office. What is more, the manner in which Mr Nixon has conducted himself in recent months may make it easier for Mr Eisenhower to take such a unique decision, since he can be reasonably confident that Mr Nixon has gained the necessary stature to fulfil adequately the duties of what has been called the world's most important job. It is perhaps premature to speculate on this particular matter, since it is unlikely that Mr Eisenhower will make up his mind one way or the other before he has had a chance to gauge the progress or otherwise of his recovery from the stroke.

Be that as it may, it is of heartening significance to the free world—and this is the second silver lining—that Mr Nixon is far from the man that he was three, four years ago, when he was immersed in controversies. He no longer is identified with the isolationist wing of the Republican party. He is instead a strong supporter of the international wing. Mr Nixon has come out as stridently in favour of foreign aid without strings, and he has also been careful not to involve himself in needless controversy. Moreover, he appears to be wielding a much greater influence over the party. The manner in which he intervened in a delicate political situation in California has testified both to his political acumen as well as the grasp that he now has over the party politics as such. I fancy that Mr Nixon is now a much more acceptable figure, both in America and outside, than he ever was before.

The free world has an instinctive sympathy for Mr Eisenhower, was shocked when the news of the stroke first came, is now relieved that the disability is not a grave one, and awaits the decision that must be made by so conscientious a man as Mr Eisenhower.

This little anecdote may make mouths water in parts of India, but I can't resist the temptation, and so readers in such places as Bombay and Madras will, I am afraid, have to bear with me. It appears that there was this man—neatly dressed, a gentleman if ever there was one—who walked into a bar in Greenwich Village, New York that it. He didn't waste any time, asked the bartender for a shot of scotch; and this connotes, I may inform the reader, whiskey in an ounce glass, served neat or straight. Upon the stuff being placed before him, the gent grasped the shot glass tight in one fist, closed his eyes, used the other hand to grip his nose, and poured the scotch down his throat. The bartender, who was watching the proceedings, asked belligerently, "Whassa matter? Think we gyp you with poor stuff?" The answer came fast, "I have to drink the whiskey the way I do, because if I saw it real close, or smelled a whiff of its fragrance, it would make my mouth water, and that would dilute the whiskey." Obviously, an Irishman.

Gateway Gossip

The Killick Group of Industries

THE Killick Industries symbolise the pioneering enterprise of British merchants in India, who could conceive of an organisation stringing up manufacture and trade in several commodities. As has happened in many similar industrial federations of this kind developed during the British regime, the Killick Group has now passed into Indian ownership.

But the general principles and outlook of management have been so little affected as to give the impression—to those who do not care to look at the names of the Directors—that there has been scarcely any change at all anywhere. It is in the continuance of the sober and balanced traditions which have stood the challenge of several decades that the assurance of sound future for these firms rests.

The Killick Group covers a wide range of industrial lines as cotton and silk textiles, electricity generation and supply, manganese ore, coal, cement and light engineering industries; the subsidiaries cover shipping, import, service of machinery, consumer articles, etc.

On the occasion of the centenary, it would of interest to recall some of the small beginnings out of which the present far-flung organisation has come into existence. The Kohinoor Mills, which are now a bye-word in the textile market, was founded in 1896 with an original issued capital of Rs 16 lakhs; and started operating as a spinning mill. Today, the total production capacity of the Kohinoor Mills is about 32 million yards of cloth and 9½ million yards, of which over 2 million yards of cloth are exported to overseas markets.

The Ahmedabad Electricity Company Limited, which is one of the biggest thermal power stations in South East Asia, had its genesis in a small diesel station of 282 Kwts in 1915. By 1960, the power station is expected to have an installed capacity of 187,500 Kwts. This

ANGLO-INDIA JUTE MILLS CO., LD.

Notice is hereby given that the Share Transfer Books of the Company will be closed from 16th to 30th December, 1957, both days inclusive.

By Order of the Board,
DUNCAN BROTHERS & Co., LD.
Managing Agents.
Calcutta 26th November, 1957.

Company can claim a commendable part in the industrial development of the City of Ahmedabad. It had its own share of financial trouble for a time but these have been overcome and it undoubtedly belongs to the group of industrial concerns to which the investor with moderate means is invariably attracted.

The process of expansion of the Ahmedabad Electricity Company is still going on. Two switch houses and 26 substations are now under erection and are expected to be commissioned during the current year.

This Company has also not lagged behind in the matter of developing labour welfare and technical education. Facilities for imparting practical training to candidates sponsored by Government agencies are being offered and selected members of the Company's own engineering staff are being sent for advanced studies to foreign countries.

In the field of labour relations and welfare, Unit Production Committees do very useful work. Lately, the Company has set up a Health Committee to carry out research work on the health of the employees' children. Baby shows, children's welfare exhibitions, subsidised housing etc., are among the other features worth mentioning in this connection.

It is significant that the expansion of electric power in Ahmedabad has a parallel counterpart in that of the textile industry. The Ahmedabad power station also supplies bulk power to the Bombay State Electricity Board's North Gujarat Electric Grid, apart from the villages and farms around the city of Ahmedabad which are supplied by the Company itself.

Likewise Surat's ancient Gold Thread and Jari industry has progressed with the growth of the Surat Electricity Company, another unit of the Group.

The Killick enterprises are pioneers in branch line railways. In all they sponsored nine feeder lines, in the undivided Punjab in the North West, in Gujarat in Western India, in the Vidarbha region in the enlarged Bombay State and in Bengal in the East. All but one, the Central Provinces Railways Co., Ltd., have passed over to the State.

In the field of mineral development, the Shivrajpur Syndicate, has been mining and exporting manganese ore for more than fifty years. During the five year period 1952-56, the value of the manga-

nese ore exported by the Company has been about Rs 7 crores, earned mostly from the dollar area. The Hingir-Rampur Coal Co. Ltd., had its share of contribution to the development of coal.

Again the Killick enterprises lent their hand in the building up of cement production by the A.C.C. Combine.

More recently, the Group became conspicuous in contributing to the phenomenal growth of the engineering industry. The Light House Branch Engineers Steel Files from the renowned Sheffield Firm of John Baker and Sons Ltd., enjoy an established reputation in the Indian market, and this brand of steel file after acquisition of the trade mark and Patent Rights is

now manufactured by Killicks in the Industrial Estate of the House at Chandivli, near Bombay. The Indian product has been shown to compare favourably with the original Sheffield product.

The Chandivli Industrial Estate of the House of Killick with its extensive factory space, bids fair to become an important industrial nucleus, with a manufacturing range extending to Nuts and Bolts, Dogspikes and Coach Screws, Cement paints etc.

In this background, there is sure ground for the hope that this organisation will continue to show the same strength and resilience, and adapt itself to the opportunities no less than to the challenges of the future.

Food Situation

Among the many measures that the Bombay Government have in view in its fight against the persisting shortage of foodgrains the expeditious implementation of the warehousing scheme is to get top priority. This was disclosed in the course of the address of the State's food Minister Mr S. G. Kazi to the members of the Walkeshwar-Mahalaxmi Group of Social Welfare Committee.

Mr Kazi also hinted at the possibility of a curb being imposed on feasts and parties as a measure to check excessive consumption of foodgrains in the State. But excepting for its austerly value the extent to which such a curb would relieve the situation can only be negligible. It is indeed deplorable that the wholesale traders even in this hour of national crisis should feel no compunction in carrying on their trade in a way utterly detrimental to the public interest. Mr Kazi held them responsible for creating an artificial shortage by means of hoarding and lashed out at them for their non-cooperation in not having stood by the Government in tackling the food situation and further hinted at socialisation of the wholesale trade as the ultimate weapon against such nefarious practices. And socialisation would be justified if the public interest, especially in such a vital matter of food, is held to ransom.

The other causes for the food shortage were listed as increased purchasing power of the people, the inflation arising out of deficit financing and the cultivators' increased staying power which enables them to stock their produce till it fetched a better price. Mr Kazi also disputed the Asoka Mehta Committee's estimate of the deficit of the Bombay State in regard to food at 17,00,000 tons and pointed out that this was on the high side, the actual deficit being only to the extent of 12,00,000 tons.

Though the food situation has by no means turned the corner, Mr Kazi was confident that the difficulties could be tideed over. In this connection he pointed out that the food grains from the surplus areas such as Vidharbha and Marathwada would be requisitioned to meet the needs of the deficit regions, the balance being met from stocks of imported foodgrains supplied to the State. The Government have a scheme for distribution of foodgrains through cooperative societies and therefore Mr Kazi appealed to the people to form such societies.

Advice to Private Sector

Addressing the Commerce Graduates' Association at Bombay Mr G. D. Birla stated that too much

dependence on the Government was a big factor which were against development in the country and that the businessman who depended on the State for progress of the business and industry was enemy No. 1. For the industrialist and capitalist that he is, this might sound unorthodox to many of the members of his scribe and is clearly out of tune with their way of thinking. But for the latter who never lose an opportunity to find fault with the Government for anything which goes wrong in any part of the national economic sector this is a sound piece of advice serving as it does to de-emphasise the negative approach which is all too common with our businessmen.

Mr Birla tried to corroborate his views with reference to the present stalemate in the textile industry. Though he admitted the presence of other causes such as heavy taxation, Mr Birla was of the opinion that the situation could have been remedied if only the businessmen had done anything by way of market research. He pointed out that if there was an unsold surplus of nearly five to six per cent with which the industry is at present loaded it could have been avoided if the businessmen had done something to ascertain the wishes of the consumers. He contrasted this sad state of affairs with the resourcefulness of the American businessmen whom Mr Birla would find to be in very

intimate touch with the consumer to the point of creating new tastes in them. Mr Birla urged the need for a sample survey of the needs of the consumers, both Indian and foreign.

Mr Birla was also highly critical of the so-called business tactics of the Indian businessmen which consisted in merely reacting to the speeches of the Prime Minister and the Finance Minister and buying and selling scrips according to the trend of these speeches. He characterised such behaviour as speculative and hence unbecoming of the industrialists, they are. Mr Birla commended the example of the US businessmen who according to him went about their business without worrying about what the Government were doing.

About foreign aid Mr Birla was hopeful of some favourable response from the Western countries excepting UK which is itself in a tight condition which precludes any possibility of help coming from that country. But he was emphatic about the necessity to raise internal resources to serve as a basis for seeking foreign capital. Mr Birla's views about the place of the cottage industry were unbiased and were based on what he himself saw in the countries which he visited recently. He said that the cottage industries could not act independently and that they could survive only as feeder industries to major industries and cited the instance of about 20,000 small units feeding the ten major industries in Pittsburgh.

GATEWAY MARKETS

Mercury Soars

THE steady rise in Mercury prices, that had been noticeable during the past few weeks, has gathered further momentum during the week under review. In the Bombay market the rate is quoted at as much as Rs 1,850 per flask as against only Rs 1,350 quoted just after the announcement of the import policy for the current period.

The marked strength in the metal is attributed to the acute paucity of stocks. Although the Government have allowed quotas for mercury imports during the October-March period, the facility has been nullified due to the unrealistic choice of the basic period on the strength of which quotas are granted. It is pointed out that the basic period includes years from 1952-53 to 1955-56; but there has been almost no imports during these years. Hence, there is little possibility of the country receiving fresh supplies. Traders have, therefore, suggested

that the Government should modify the period suitably to include years from 1945 to 1955.

*

Non-Ferrous Metals

In sharp contrast to the behaviour of the metal abroad, the Copper market in Bombay presented a firm front with the spot price being quoted at Rs 160 per cwt. The market strength in this particular metal has been attributed to strong rumours that the Government are considering revision of the current period's import policy in respect of non-ferrous metals, particularly copper.

While these rumours have imparted a bullish sentiment to the market, the firmness is also aided by the shortage of the spot metal. There are fears that the paucity of supplies may become more acute on account of the delay in receiving fresh shipments. A section of the

trade, however, is not inclined to give credence to these rumours in view of the issue of import licences for copper and zinc. Zinc is quoted at Rs 56.50 per cwt; Lead at Rs 70 per cwt and Tin at Rs 118 (per quarter). On the London Metal Exchange, Copper is quoted at £173; Zinc at £66; Lead at £79; and Tin at £730 (all per ton).

*

Oils and Oilseeds

Quiet conditions were witnessed in the Oils and Oilseeds markets following lower advice from Rajkot and other terminal markets and weakness of the ready section. The only exception to the general trend was Linseed, which staged a brisk rally on reports of enquiry for linseed oil from overseas buyers. Linseed May delivery finished at Rs 32.56 after starting at Rs 31.96. Ready was quoted at Rs 30.75 and Linseed Oil at Rs 15.87.

There was built liquidation and speculative selling in the Castorseed section although prices showed a marked recovery towards the close in sympathy with Linseed. May delivery, after touching a low of Rs 152.50 from Rs 153.50, finished at Rs 154. Ready was done at Rs 31.37 and Castor Oil, commercial quality, at Rs 17.06.

Reports of increased arrivals of the new crop prevented a sharp rise in prices in the Groundnut section. February delivery, after receding at one time to Rs 161.87 from 162.50, recovered at the close to Rs 163.37. In the ready section bold quality was quoted at Rs 33.00 and Groundnut Oil at Rs 18.87.

In the Cottonseed section, February delivery changed hands at Rs 103.50 and Rs 104.50.

*

Gold & Silver

Mixed conditions were noticed on the Bullion Exchange. Prices eased on liquidation due to lower advices from the ready section and higher receipts from the interior. Arrivals and offtake were estimated at 4,000 and 2,000 tolas respectively. Mangsir delivery moved between Rs 108.19 and Rs 108.52, while Posh delivery closed at Rs 108.34. Ready changed at Rs 108.06 to Rs 108.12. Sovereign remained steady at Rs 70.25.

Silver started higher and ruled firm following better offtake in the ready market and speculative buying. Arrivals and offtake were balanced at 15 bars. Mangsir delivery moved between Rs 183.37 and 183.50, while Posh delivery closed at Rs 184.37. Ready changed hands at Rs 182.94 to Rs 183.44.

The Yarn market presented a somewhat better appearance last week. Art Silk Yarn and Staple-

(Continued on next page)

World of Cotton

Recovery in Prices

REPORTS of improved activity in the spot section has a bullish effect on the Bombay cotton futures market. Opening quiet, prices slipped back to some extent on reported arrivals of about 20,000 carts of the new crop in the terminal centres. Thereafter, there was a notable rally on the emergence of buying by upcountry centres, viz., the Punjab and Delhi. Moreover, consistent reports of heavy buying in spot and hardening ready prices gave fresh fillip to the sentiment. Sellers had, therefore, to cover their outstanding, with a view to minimise the loss. Again, mill buying broadened to a marked extent for all popular varieties.

Above all, rumours of a possible release of a further export quota led to speculative purchases and short-covering. Rumours of a substantial reduction in Sales Tax on cloth and the reappearance of cloudy weather in some cotton areas also aided the bullish sentiment. ICC Moglaj Jharilla March delivery opened steady at Rs 708.50 and, after advancing to Rs 712.00, receded again at the close to Rs 705.25 on profit-taking.

The spot cotton market was steady with good business reported done in Khandesh and Berar Jharilla new crop. New crop Punjab and Vijay were also in demand and some interest was shown in Kalyan and Surti varieties.

On the export front, super-fine Bengal and Zoda continued to attract buyers.

In the foreign section, fairly good business was reported done in Sudan, subject to the issue of licences. Spot lots of American and East African varieties also changed hands.

Meanwhile, the mill industry seems to be perturbed over the recent trends in the licensing of foreign cotton. Under the existing arrangements, imports are allowed subject to a small quantitative ceiling and also on the basis of "first-come-first served". This results many of the traditional consumers of both Egyptian and Sudan cotton being deprived of their normal share.

While it is generally recognised that, due to the present foreign exchange restrictions, the Government are not in a position to draw up a long-term programme for import of foreign cotton and allow mills sufficiently long time to buy cotton at advantageous terms, it is nevertheless felt that some revision is necessary in the present licensing procedure, so that consumers of foreign cotton are not left high and dry.

In this connection, it is suggested that mills should be permitted to submit their applications within, say, 10 days from the date of an-

nouncement. If the total applications so received exceed the quantitative ceiling fixed, import licences may be issued in proportion to the applicants' consumption of a particular cotton allowed for import during a basic period. This suggestion, it is said, will go a long way in providing the traditional users of foreign cotton with a major portion of their share, if not full.

*

STATISTICS:

Exports by rail from 1st September to 21st November 1957 were 63,512 bales. Estimated mill consumption, during the same period, was 301,994 bales as compared to 306,193 bales in the corresponding period of last season. Estimated stock of raw cotton, held by exporters, dealers and mills, on the 21st November, was 428,246 bales as against 430,556 bales on the corresponding date of last year.

*

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market, after initial steadiness, developed a reactionary trend towards the close. The initial steadiness was mainly due to short-covering in nearby December, prompted by an absence of transferable notices along with an accumulation of trading buying orders. Demand was, however, quickly satisfied as increased hedging centred in nearby March and May deliveries and also profit-taking encountered little support. Middling Spot was quoted at 36.65 cents per pound.

Traders generally look for large sales since there is a good volume of better quality cotton available from the CCC stocks. The supply of the 1957 crop is reported to be tight due to adverse weather.

*

LIVERPOOL COTTON MARKET:

Values on the Liverpool cotton market tended to harden a little with further local and some commission house buying, being encouraged by the official spot and weekly sales of 36,273 bales against the previous week's 33,231 bales. Light hedging was absorbed and, in the absence of selling pressure, the market closed steady.

*

CLOTH AND PIECEGOODS:

Conditions in the Bombay Piecegoods market remained quiet. Fresh demand from upcountry centres was at a low ebb. Hopes were, however, entertained that the Government was likely to provide a measure of relief in the excise duty when steps were taken to merge the Sales Tax with the excise duty. How far these hopes will actually materialise remains to be seen.

On the export, conditions were, however, better. Shippers have re-

ported that better enquiries have emanated from Sudan, East Africa and Ethiopia. The UK is reported to have booked moderate quantities of medium greys. There are also reports that the Indonesian authorities are likely to issue import licences in the near future.

*

GATEWAY MARKETS

(Continued from previous page)

Fibre yarn showed little improvement, while Cotton yarn was neglected.

The slight improvement in Art Silk yarn prices was mainly due to the announcement that the Government would provide quotas for the import of raw silk on the basis of export of pure silk under the

scheme drawn up by the Silk and Rayon Textile Export Promotion Council. Under the scheme, the Council envisages the grant of a quota for import of raw silk to an exporter at the c.i.f. value equal to 66 2/3 per cent of the f.o.b. value of exported pure silk fabrics. With the effective utilisation of the import facilities, the Council expects to achieve an export target of Rs 50 lakhs for silk fabrics within six months of the operation of the scheme.

In the Cotton yarn section, however, prices declined further following poor demand for cloth, depressed conditions in power-loom factories and easy trend in raw cotton. Some spinners were even inclined to reduce their prices.

Debate on the Plan

LAST week's Parliamentary debate on the Second Plan appeared at times in danger of dying from sheer inanition. The fault was not entirely of the participants: for one thing, being a resumption of a debate that was held over from the last session, it suffered from a certain scrappiness and lack of cohesion. References to points made in the last session seemed somewhat remote, especially when most of the listeners had forgotten what they were. The more conscientious dredgers of the last session's discussion had to state what it was that was said then, and then proceed to answer it. Secondly, though the situation as regards the Plan prospects remains substantially the same as it was two months ago, events in the intervening months had made some of the points made earlier somewhat outdated. Mr Krishnamachari's visit to Western Capitals and the consequent hopes of foreign exchange aid were factors relevant to the discussion, but which earlier speakers had not dealt with. But points made in earlier speeches had to have the courtesy of an answer; and, in extending this courtesy, the debate itself was made somewhat remote in parts.

Another reason for the scrappiness was the dispersal of the relevant subject matter over several separate debates. The foreign exchange position was again before the house in a different form, when the bill to amend the Reserve Bank Act to lower the limit of foreign securities holdings was considered. As though this were not enough, Mr Bharucha introduced the same subject over again by wanting to debate separately the question of the propriety of having dealt with this matter in the form of an ordinance. Mercifully, no separate discussion was allowed. Mr Krishnamachari's statement in Parliament two weeks ago on his mission abroad is to be debated later in the session separately. He must indeed be a demon of originality, who could speak on all these occasions and contribute something of importance and something that has not been said before on each of these occasions.

And yet, this is only the foreign exchange aspect of the Plan. There is still the purely internal aspect of the Plan. This too is dispersed over different occasions. The food situation, with special reference to the Asoka Mehta Committee's report, is to be debated on Thursday. And there have been demands to discuss the Finance Commission's report. Since the legislation required for giving effect to some

of the recommendations of the Commission is to be put through during the session, there is bound to be further discussion of the subject of internal resources and the performance of States in raising fresh resources. All these are but aspects of the Plan; and, therefore, a full dress debate on the Plan itself loses much of its special significance. Some may be saving their powder for other occasions, and others may find the prospect of saying the same thing over and over again so uninviting as to make them refrain from taking part in any of them at all.

Yet another factor that made the debate lacking in punch was the dispersal of criticism over too large an area. It is true that on a subject like this it is inevitable that the discussion should range far and wide, but the consequence is that the impact of the criticism loses its force.

Another reason that made the debate somewhat disappointing was the basic uncertainty on all the important points involved. The much talked of core and inner core of the Plan are not yet defined. What precise form the rephrasing of the Plan will take is, even after the speeches of the Prime Minister and the Finance Minister, still not clear. Similarly, nothing useful could perhaps be said about the foreign exchange aspect of the Plan unless more data on the extent of foreign aid that is likely to be available are before us. In the absence of all these particulars, there is an element of shadow boxing in all the discussion of the Plan. It is true that an element of guess work is involved in these matters at the best of times; but, in a context in which we are trying to set right certain alleged over estimation of our resources, it is necessary to have all the facts before us.

It would be unfair to blame the Government for this uncertain state of affairs, for, they themselves have not yet finalised their rethinking on the Plan. The basic uncertainty is with regard to the precise extent of foreign help. Mr Krishnamachari may have some general ideas on the subject, but more exact data will be available only when the officials now pursuing the matter are in a position to report the final prospects. That was why Mr Krishnamachari asked his colleagues in the Parliament to wait till the Budget session to have final details of the streamlined Plan.

The circumstances for useful debate, at the present moment, did not therefore exist. That ex-

plains the somewhat general terms in which the whole subject was discussed. And when some member wanted to serve up something that was not a rehash of old arguments, he had to say something that sounded, on the face of it, almost absurd.

To this category belongs Mr Bharucha's amendment which irritated Mr Nehru so much. Mr Bharucha's suggestion was, in the words of Mr Nehru, "that at the end of the Plan there should be a breathing space, when we don't plan and rest". Put this way, the suggestion does sound somewhat odd and, as Mr Nehru pointed out, it is like asking us to stop blood circulation for a while. What Mr Bharucha meant was perhaps nothing more than the much canvassed "extending" of the Plan over a longer period. I do not think that Mr Bharucha meant anything so silly as that it is planning that is responsible for all our troubles and therefore if we stopped planning, we shall get back into an even keel. It is obvious that you do not stop economic forces from functioning merely because you do not choose to take note of them for two years.

Mr Nehru's own speech was, as was perhaps unavoidable, couched in the most general terms. He said that the Plan is not overambitious considered in the light of our requirements, and he also made the point that the rephrasing is something for which we may have to pay for later. He affirmed that whatever form the rephrasing takes, the basic structure of the Plan will remain.

He also dealt with the question of agricultural production and said that the target of additional food production should be 15 million tons. He referred to the Asoka Mehta Committee's estimate of maximum expectation of increased food production at 10.3 million tons, but said that he himself believed that this could and should be bettered. He was particularly caustic about the tendency to look to Government help for everything. He said that, even in drought-affected areas, it should be possible for people to grow short term crops, and since the production is for consumption, market economy does not come into the picture. Such resourcefulness is not even considered because of the habit of looking to Government for everything.

Another point made by Mr Nehru was the neutralising effect of population increase. Increase in population, decrease in death rate, increase in per capita consumption of foodgrains are all making food production a problem

of apparently ever increasing hopelessness. Population control is a matter that should go hand in hand with increased food production.

Mr Krishnamachari's speech during the debate gave some broad indications of the final shape of the Plan, though even he asked his listeners to wait till the Budget session for most exact data. According to him, the original financial target of Rs 4800 crores will be sought to be achieved, though this would mean, in the changed circumstances, that we would be getting less in return than what we had hoped for. But the "core of the Plan", that is to say, that portion of the Plan with the "growth potential" will be seen through. The relevant considerations in determining the core are: first, the extent of advance already made in particular projects. Projects in which we have made considerable advances will have to stay in the core. To abandon them now would be a costly folly. Secondly, projects like those of the railways, major ports, steel, coal and ancillary power directly related to "growth potential" will automatically form part of the core and will be attempted to be completed according to schedule. Thirdly, no new commitments outside the core will be undertaken except against specific external assistance, foreign investment or deferred payment terms.

If the foreign exchange necessary for the core of the Plan is available, then the projects will be completed and their performance in terms of increase in national income will not be, according to the Finance Minister, far short of the original estimates. If this guess of the Finance Minister is correct, then there is perhaps no need to make any heavy weather about the contemplated pruning. But Mr Krishnamachari has added an important proviso for the automatic assumption of this result ensuing from our efforts. The condition precedent for the realisation of this hope is that increase in food production in the Second Plan period will be satisfactory enough to make large drafts on foreign exchange for food imports unnecessary and domestic inflationary pressures manageable. So, the key to the success of the Second Plan is still agricultural production. The duty of the States in this matter is clear and it is to be seen how they rise to the occasion.

Regarding internal resources, Mr Krishnamachari said that deficit financing should be restricted to about Rs 900 to Rs 1000 crores. He indicated that the measures of taxation introduced by him are

North Indian Notes

State Trading Corporation

The first year's working of the State Trading Corporation shows a net profit of Rs 32.63 lakhs on a capital investment of Rs 1 crore. This is purely on trading account and excludes its earnings on account of agency commission and service fees.

The gross profit of the Corporation on account of trading aggregated to Rs 35.42 lakhs which was mainly made up of earnings from iron ore and manganese ore which contributed Rs 21,62,340 and Rs 10,44,755 respectively. The other important sources of earnings under this heading were chrome ore, shoes, caustic soda, raw silk, coffee etc. As against this the Corporation sustained a loss on two items—import of soda ash and export of woollen fabrics as a result of which the net profit was reduced to Rs 32.63 lakhs. The cause for the loss on soda ash was the attempt of the Corporation to maintain steady distribution prices in spite of violent fluctuations in international prices and interruption of supplies arising from the difficulties over the Suez.

The Corporation's activities include besides trading, servicing functions such as the bringing together of buyers and sellers, assisting them in implementing business contracts and using its good offices in settling disputes. It also assists Government Departments and industrial entrepreneurs to procure essential plant and machinery. As a result of such activities the Corporation was able to earn a sum of Rs 69 lakhs being the total of agency commission and service fees earned. Receipts on account of interest and other miscellaneous items totalled Rs 5.76 lakhs.

On the expenditure side, the administration, establishment, travelling allowance contingencies, audit and depreciation etc amounted to Rs 13.32 lakhs. Further a provision of Rs 64.15 lakhs was made for provident fund and other staff benefits, destination risks in respect of minerals and other items of trade, bad and doubtful debts, contingencies, income tax and corporation tax. The building fund amounted to Rs 20 lakhs, insurance fund to Rs 2 lakhs and general reserve fund to Rs 4 lakhs.

The export business of the Corporation consisted mainly of mineral ores and its efforts at widening the scope for exports of manufactured goods met with only limited success. All the same it is worth noting that due to its efforts new markets had been developed for Indian shoes and woollen fabrics as well as for

Indian handicrafts and salt. This is an indication that the initial difficulties inherent in the formative stage of its working are being got over. What the Corporation had done in the first year of its working was to stabilise its own working methods and to put its business on sound foundations. The report hopes for a better account in the coming years.

Prohibition

If in spite of the fact that the drink habit has never been as strong or rampant in India as in other countries with hardly ten per cent of the population being still addicted to it, it should be considered as something to be condemned and stopped, the case for it has to be built not around the moral and religious pressures against it but on considerations of national health and economy. The rationale for prohibition, in this light, rests at least so far as India is concerned, on the wastefulness inherent in the drink habit which in this country is more prevalent among the working classes, who can afford such reckless expenditure only at the cost of ultimate ruin to their welfare and the consequent necessity to conserve their hard-earned wealth which when it is spent on intoxicating liquors brings in practically no countervailing benefits.

It was this point which was brought into focus by Pandit Pant the Union Home Minister in the course of his address at the concluding session of the Prohibition Week observed by the Delhi Committee.

Pandit Pant pointed out that prohibition was an economic necessity for India in view of what it could do to check wasteful expenditure by the working classes and said that it was necessary to stop these people from their liquor habits in order to ensure that their families were well clothed and their children well fed.

Economic considerations again are what should decide for a very cautious approach in regard to further extension of prohibition. The financial implications of the policy of prohibition are being grimly driven home in some of the States in which it had been enforced. Though speakers were not wanting at the conference who would prefer recourse even to executive fiat to enforce total prohibition in Delhi, Pandit Pant was more sober and less impassioned in his approach to the problem. He stated that it should be brought about more by persuasion than by law which he said would bring in its trail greater vices such as bootlegging and smuggling, and pointed out that with Punjab and UP on either side which are wet areas now, Delhi would become the breeding ground of bootleggers. Unless it is preceded by intensive propaganda so as to create a favourable climate of opinion, the enforcement of total prohibition would prove to be a difficult job.

Already something had been done to discourage the drink habit in Delhi by reducing the number of liquor shops, making the sale of liquor costly and stopping its sale in bars and restaurants. But complete prohibition is likely to affect the cosmopolitan life in Delhi and cause a lot of inconvenience to the foreign tourists.

NORTH INDIAN MARKETS

Lac Exports

EXPORTS of Lac to foreign countries have been on the increase. For instance, exports from India have fetched foreign exchange worth nearly Rs 9.5 crores in 1957 as against only Rs 6.7 crores in 1953-54, thanks to the Export Promotion Council which has been set up with Government assistance to maintain and promote exports. Measures have also been adopted to remove unhealthy speculation in this commodity.

Measures are also adopted for increasing the production of lac including the setting up of regional farms, intensified campaign to popularise cultivation of lac and imparting of training in cultivation. Bihar, Madras, Uttar Pradesh, West Bengal, Orissa, the Punjab and Madhya Pradesh have been given

financial assistance for increasing the output.

Meanwhile, the shellac market in Calcutta has been ruling quiet with Pure TN quality quoting around Rs 79 per maund as against Rs 84 quoted a fortnight ago. The present fall in price is mainly due to monetary tightness. As the holding power of the market is very limited, whatever supply is coming forward is pressing the price downward. Buyers from UK appear to be very cautious and the credit stringency has probably kept their buying on a hand-to-mouth basis.

Foreign demand, especially from the USA, has been running at a normal level and exports have been maintained at around 40,000 packages a month. Shipments from Calcutta, during the month, till

the 22nd were 39,768 packages, comprising 21,104 packages of shellac; 16,060 packages of seedlac; 767 packages of buttonlac and 1,837 packages of other varieties.

In respect of the crop, there is a feeling that the yield of the Bysakh crop will be more than that was previously estimated. It is expected to amount to 8 lakh maunds; but the Katki and Kusmi crops are believed to have been seriously affected by adverse climatic conditions.

Sugar

Conditions in the Sugar markets remained generally steady last week, thanks to a good demand from the consuming centres. Trade circles are awaiting the Government's policy regarding exports.

Crushing for the new season has already started. The production, in the current season, has amounted to 0.56 lakh tons up to 15th November 1957 as against 0.43 lakh tons in the corresponding period of last year. Total offtake, including quantities despatched for exports, was 0.72 lakh tons. Stocks with the factories, as on the 15th November, were estimated at 4.13 lakh tons.

Following rates (per maund) are quoted in the Hapur market:—Meerut (D/28) Rs 32.87; Mansoorpur (E/29) Rs 34.37; Shamli (D/29) Rs 32.75; Daurala (C/28) Rs 33.37; Amroha (D/29) Rs 32.25; Bijnore (E/29) Rs 32.12 and Simbhauli (E/29) Rs 33.

The Khandsari market recorded some gains for the new quality, the production of which has begun in some centres. Rates were quoted, at Rs 28 to Rs 32 per maund, according to quality.

Gur

In the Hapur market, new Gur arrivals mounted to an average of 7,000 maunds daily last week. Ready demand was fairly good and loading facilities were easy, resulting in the total offtake of the quantity reaching the market.

Balti quality was very much in demand from Gujarat side and is fetching a premium of about Rs 2 per maund. New gur is quoted at Rs 13.00 to Rs 13.50, while Balti is quoted upto Rs 16 per maund. Old gur stocks are put at about 4,000 maunds.

Foodgrains

Quiet conditions prevailed in the Foodgrains market. In the Hapur market, wheat prices were mostly unchanged. The market for Rice, however, ruled quiet, thanks to increased arrivals of the new crop. Gram ruled quietly easy in line with Maize and Bajra prices. The markets for Barley and Bejher remained depressed as seasonal de-

The Peninsula

A Doleful Address

THE Cochin Chamber of Commerce founded in December 1857 should ordinarily be regarded as celebrating its centenary in 1957. Mr W. E. Northey, President of the Chamber would however like to call it the 99th occasion. He has his reasons which are not very pleasing. In his Presidential address at the Annual General Meeting, held on 25th November he had to express himself "more in the way of criticism and fears for the future than satisfaction of the progress and achievements during the year."

Mr Northey's address is definitely doleful. He could summon a good

bunch of unwholesome facts; on the national front, the food self sufficiency anticipated as a sure basis for the Second Five Year Plan has turned out to be treacherous. The Second Plan has come up against other difficulties as well. In Kerala, the labour situation according to Mr Northey, is anything but helpful. The spate of labour unrest, primarily attributable to the rise in the cost of living and in several States to the promises made by political parties for election purposes has now subsided, but not before it "washed away all standards of discipline". In Kerala, in particular there is a surfeit of unions and union leaders functioning for purely political purposes. Mr Northey finds in the new taxation measures both on the Central and State levels, in the expanding activities of the State Trading Corporation and in the uncertainty of the future of the private sector in certain fields the arguments for the indictment of the existing economic situation. In Kerala, the nationalisation of the tea industry was a part of the election programme of the Communist Party.

The State Trading Corporation originally started with the purpose of trading with Communist countries on a limited scale has been extending its wings steadily "and is trying to enter into most of the important items of export, import and internal trade of the country and to secure a monopoly in order to make the maximum possible profit without risks." In this development the President of the Cochin Chamber sees a threat of disruption of business and serious loss to the private sector.

In one important respect, the structural development of the Port of Cochin, Mr Northey has reason to feel satisfied. Four new berths are under construction and will be ready for use by the middle of 1959; a second coal berth is to be completed by the end of 1958. Work on two more ware houses and a new wharf, a transit shed at the boat-train pier, a continuous concrete platform at the existing coal berth and a berth at Fort Cochin are among the projects scheduled to be taken up shortly. These improvements achieved and anticipated have enabled the Cochin Port to show a better record in the matter of handling of steamers and cargo than most other Indian Ports.

Whether the same thing could be said of the future, appears doubtful. According to Mr Northey's survey trade has been increasing rapidly; but communications are not improving to a corresponding extent.

Already there have been instances of some diversion of trade from Cochin to Madras. For these, the non-availability of wagons of the up country railpoints, results not only in costly diversions but in a deterioration of quality owing to long stay in transit, which in turn can have unfriendly effects on total exports.

The complaints of preferential priorities for movement on Government account and for goods belonging to State Trading Corporation have been raised from different quarters in India. The Bharat Chamber of Commerce recently alleged that manganese ore belonging to private parties was not getting sufficient wagons, while iron ore sent by the State Trading Corporation was being given preference. Mr Northey also voices the same type of complaint. "It is not only comfortable but disconcerting to find that some of the goods given priority for movement on Government account, and, I include, the State Trading Corporation in the term Government are ones, for which the private exporter can get no priority. There seems a serious threat that an increasing large portion of the available wagons will be monopolised by the Government and the State Trading Corporation."

He wants the Central Government to review the policy as regards priorities. There are a few other things to be done too, in the field of communications to and around the port, the roads leading to and from the port have to be widened in places and sign posts installed. In many places, a more rigorous system of traffic control is deemed necessary. Buses stopping anywhere they like, pedestrians and cattle, should be subjected to more restraint on movement. A plea is also thrown in, on behalf of better water supply for Ernakulam and Mattancherry and Fort Cochin, a need which has become extremely acute since the transfer of the innumerable Central offices of the Travancore Cochin and more recently the Kerala Government to the area.

While the Chamber President's dissatisfaction with the general labour situation in Kerala and certain aspects of national industrial policy calls for remedial action, his complaints against the fiscal policy and the expansionist tendency of the State Trading Corporation are not likely to secure any steps in relief, beyond what is already being done in respect of the sales tax. Complete centralisation of the sales tax seems rather out of the question. In particular commodities the Central Government have undertaken to levy excise duty in place of the sales tax, a change which both private business and State Governments have welcomed.

The State Trading Corporation which claims success in different fields is not likely to retract; on the other hand the Food price Committee has suggested the gradual socialisation of trade in food grains. Similar suggestions for other commodities are also being pressed on the Central and State Governments. Where Mr Northey's pleadings are strongest, is in respect of the need for equal treatment between the State and the private trade in the allocations of wagons and for other facilities.

When the declared policy is clearly in favour of uniform treatment of both in every respect, administrative discrimination of any kind should be checked then and there. It is a pity that in the field of labour relations counsels are divided and the Government are groping to discover the best form of administrative machinery.

Cochin is now fast developing as a Commercial Port, a naval centre, an administrative headquarters and let me add, a centre of Kerala culture, which it had always been. When I speak of Cochin, I mean Ernakulam too. The development of this City in a balanced way must be the first concern of the State and the Central Government. It would be a great pity if political or other considerations interfere with the attitude of the State or of the business community.

Finances of Mysore

Though the reaction of most of the States to the recommendations of the Finance Commission has not been uniformly appreciative, the one exception to this has been Mysore. The impact of the Commission's recommendations, so far as Mysore is concerned, would be an improvement in its financial position to the extent of about Rs 6 crores annually. The State's share of the divisible pool of Income-tax and Excise Duty proceeds, Central grants share of the tax on railway fares and the additional excise duties on certain commodities in lieu of the sales tax among other things account for the increased net allocations to the State. Naturally the State have reason to be satisfied with the recommendations of the Commission.

The recommendations of the Commission had come as a timely relief at the present stage of the State's financial position. For the revenue deficit alone amounts to about Rs 9.36 crores and the gain which has accrued as a result of the recommendations of the Commission should go to alleviate the severity of this burden to a substantial degree.

Talking to Pressmen Mr Mariappa the State's Finance Minister pointed out that the additional grants the State was getting was the largest for any State and also substantial. At the same time he told that he was very serious about implementing some of the obligations which the Commission had enjoined upon the State governments such as uniform taxation measures and economy in administrative expenditure. He also paid a tribute to the Finance Ministers of the other States for having accepted the recommendations of the Commission which have not benefited them to the same extent as it had benefited Mysore, without demur.

The greatest service the Commission had done to the States was to recommend liberalisation of terms of loans issued by the Government of India. Till now loans used to be granted on the basis of schemes and the rates of interest and terms of repayment varied widely.

The total allocation to Mysore State as a result of the recommendations of the Commission has been estimated at about Rs 12 crores by Mr Mariappa. In lieu of the sales tax the additional excise duties on certain commodities like mill-made cloth, tobacco and sugar the State's present income of rupees one crore was guaranteed and they would also share in the

balance, the percentage being 5.13. The State would also share the tax on railway fares to the extent of 4.45 per cent of Rs 66 lakhs.

Aggrieved Planters

Addressing the 100th annual meeting of the Cochin Chamber of Commerce, Mr W. E. Northey was highly critical of the attitude of the Government towards the private sector and regretted that though the private sector had performed much better than the public sector it was regarded as something to be plundered or killed at convenience. In this connection he cited the fiscal measures such as the compulsory borrowing of the accumulated reserves of the companies, the introduction of wealth tax, the increased super-tax on excess dividends and the threatened increase in the bonus share tax as indicative of the lack of concern on the part of the Government for the safety and health of the private sector.

The agricultural income-tax of the Kerala and the Madras Governments also came in for severe criticism at the hands of Mr Northey. He pointed out that the combined incidence of the Central and State taxation on the plantation industry was such as to preclude expansion of the plantation industry which was left with insufficient funds for their maintenance. To restore uniformity and coordination in the taxation and to preserve the industry's potential as a continued source of revenue,

Mr Northey suggested that the Central Government levy one income-tax on both agricultural and non-agricultural income and share the proceeds with the States.

He suggested a similar solution for the present troubles arising out of the existence of various inter-State and intra-State sales tax, and argued that the Central Government should levy a tax on the first sale at a uniform rate throughout the country so as to replace the State levies. The application of the wealth tax to corporations and agriculture was according to Mr Northey unjust in so far as it was not related to the yield from the wealth assessed but remained a fixed annual levy.

Mr Northey also uttered a warning about the possible effects of the single point sales tax of 5 per cent imposed by the Kerala Government which he said would ruin the trade of Cochin by causing diversion of tea from Cochin market and loss of revenue to the State Government.

Mr Northey put the labour situation on the same par as the taxation measures, as a source of anxiety and worry for the private sector. Deploring the behaviour of the labour leaders in the State, Mr Northey said that the labour leaders were more actuated by political motives rather than trade union codes. He urged the need for evolving a common formula acceptable to both sides, by the Centre, employers, and labour leaders. Mr Northey also did not conceal his scepticism about the practicability of carrying the Second Plan through without adequate pruning and stated that it was based on a wrong appreciation of the food situation.

SOUTH INDIAN MARKETS

Coffee Export Outlook

THE prospects for Coffee exports now appear to be bright. Although Poland and Czechoslovakia are getting their requirements from the Brazilian markets, the introduction of Indian coffee into East European countries has met with a reasonably satisfactory response. Besides, Russia, East Germany, Poland and Czechoslovakia, other countries negotiating with India for the purchase of coffee are Yugoslavia, Belgium, Norway, Sweden and West Germany.

However, the export prospects may not be so bright as in the past two seasons, mainly for two reasons. One is, that the quantity available for export will be lower. The other is, that the downward trend in prices of mild coffees is expected to assume larger proportions next year

in view of the expected increase in world production.

According to the estimates now made, the 1957-58 season's world production of Green Coffee will amount to 50.4 million bags, showing an increase of 8.9 per cent over the previous season's output. Among the countries, that are expected to have a larger crop, are Brazil, Ethiopia, Kenya, Uganda and Tanganyika.

Meanwhile, new records are established in India's production, consumption and exports in the season just ended. The respective figures are 41,453 tons, 25,249 tons and 12,990 tons and the comparative figures for last season are 34,042 tons, 23,900 tons and 7,475 tons respectively. Although the export allocation was high as 15,320

tons, the Coffee Board could sell only 12,990 tons for export out of the 1956-57 crop to the end of October. This has raised the carry-over to the next season to over 9,000 tons as against 6,000 tons from the previous season's crop.

Following were the range of prices (per cwt) at the auction held at Mysore towards the end of last week:—Plantation Peaberry Rs 225.70 to Rs 240.90; Plantation A Rs 225.15 to Rs 230.10; Arabica Cherry Peaberry Rs 172.80 to Rs 193.90; Arabica Cherry Flat Rs 169.20 to Rs 183.90; Robusta Cherry Peaberry Rs 172.90 to Rs 179.60 and Robusta Cherry Flats Rs 171.25.

Pepper

Pepper markets have displayed a steadier tendency following rumours that some of the East European countries, perhaps Russia, have bought a couple of hundred tons for shipment during January-February at Rs 105 per cwt f.o.b. Moreover, heavy rains in the pepper belts and fair demand in ready are mainly responsible for the present hardening tendency of prices. In the Alleppey market, the rate is quoted at Rs 550 for old stock and Rs 350 to Rs 537.50 per candy for the new season variety. In the Kozhikode market, Wynaad is quoted at Rs 640 and the Country variety at Rs 620 per candy.

In Singapore, the rate, after touching Str. \$63, has improved to Str. \$66. Stocks are rather heavy; but they are reported to be in strong hands.

The New York market has remained inactive with the rate hovering idly around 24½ cents per pound. Grinders are buying hand-to-mouth.

Groundnut

Prices in the Madras Groundnut market suffered a sharp setback and the rate for peanut varieties was quoted at Rs 152 against Rs 167 per candy. Arrivals were large, estimated at over 600 tons.

In the Groundnut Oil section, the rate for the ready position declined to Rs 331 from Rs 345 per candy. Crushers were offering fairly large quantities, while vanaspathi interests did not show any interest.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were rather restricted last week and clearances were, therefore, small. There was no change in Buff Calf and Cow Calf sections.

On the export front, trading with the UK became more difficult as shippers were quoting an advance of 2d to 3d per pound. There was some enquiry for market quality 8-8½ lbs upto 45½d for selected marks. Trading in the Calf section was quiet.

mand for these was slack. Jowar prices eased slightly as the new crop started reaching the market. Pulses also reduced an easy trend as ready demand was dormant.

The Delhi grains market also ruled quiet and prices developed an easier trend although Rice was slightly steadier due to restrictions on movements from the Punjab. Following reports of increased arrivals of the new crop, Baria ruled easy in the absence of buyers. Maize was also soft for want of buyers. The Bombay grains market pre-

sented a quiet appearance. Trading in Rice reflected an easy undertone with the prices of several varieties registering an overall decline of about Rs 5 per candy. This was attributed to the inclination of the part of the dealers to effect sales following increased arrivals. In the Coarse grains section, Jowar ruled quietly steady; and there were moderate arrivals of the new crop from Madhya Pradesh and Khandesh. Among Pulses, Gram ruled steady with the Punjab quality being placed at Rs 114 per candy.

THE INDIAN STEEL & WIRE PRODUCTS LIMITED

NOTICE

NOTICE is hereby given that the Twenty-second Annual General Meeting of the shareholder of THE INDIAN STEEL & WIRE PRODUCTS LIMITED, will be held at its registered office No. 7, Wellesley Place, Calcutta-1, on Monday the 30th December, 1957 at 3-30 P.M. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Manufacturing and Profit & Loss Account of the Company for the year ended 31st March, 1957.
2. To declare dividend and cash bonus on Ordinary shares of the Company.
3. To appoint a director in the place of Mr. B. B. Ghose who retires by rotation and is eligible for reappointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 14th December to 30th December, 1957, both days inclusive.

By Order of the Board
of Directors
INDRA SINGH & SONS
PRIVATE LIMITED

20th November, 1957

Note:—(1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and that a proxy need not be a member.

- (2) If dividend on shares and cash bonus, as recommended by the Directors, are passed at the Annual Meeting, the payments will be made on or after 10th January, 1958 to those shareholders whose names are on the Company's Registers on the 30th December, 1957.

WORLD OVERSEAS

(Continued from page 1006)

yearly by well-tryed rules, rules which lay down those items which count as income and those which count as proper business expenses. Except in the case of new concerns or those which are closing down, income tax is assessed on the profits for the previous year. In other words, the tax which the British businessman will be paying this year is based on the profits he made in 1956.

Third and lastly wages and salaries, the incomes of the folk who are employed. And they range from directors of great business to labourers. The method used here is quite a famous one—Pay-As-You-Earn. It's called PAYE for short.

For fifteen million tax-payers in British PAYE does take some of the sting out of paying income tax. As its name says, it is, literally, "pay as you earn". That is, employers deduct income tax from wages and salaries as they are paid. There are none of the difficulties of paying tax months after money has been earned—and spend!

The PAYE way of taxing is simple, too. Depending on individual circumstances, every income tax-payer is entitled to one or more allowances to set against his or her income. There is the personal allowance, which, rightly, is more for a married man than a single person. There are allowances for children, and for help given to elderly or sick relatives with only small incomes. And there are also allowances for such things as life insurance premiums, contributions to pension funds and national insurance. And there is a further allowance which is given against earned income. Finally, after deducting all the allowances due, tax is paid on the balance of income—but at graduated rates.

Naturally, tax-payers have to put on record the allowances due to them. So every year they send details to their tax office. Here they are helped by the tax inspector who sends them a simple little notice some weeks before the start of each income tax year (that is roughly from April of one year to March of the next). This notice, which is called the notice of coding, sets out all the allowances to which the tax-payer may be entitled—with one exception. That is the earned income allowance which is accounted for in another way.

When the Inland Revenue offices receive the completed forms back from the public they work out what is described as the code number. This number, which takes account of allowances and so on, fixes the amount of tax payable each week or month.

Before the start of the income tax year the local tax office sends to all employers in its district a list of the code numbers of their employees. Incidentally, the use of these codes ensures that information about the family circumstances of employees is not passed on to the employers; it remains confidential. The tax office also sends employers a tax deduction record card

for each employee and a set of tax deduction tables.

These tables are another important link in the system. They show the accumulated tax due week by week on a wide range of earnings, under the different code numbers.

And so, on pay day it is quite a straightforward job to work out the tax that is due from the individual employee and to deduct it from his wages or salary. The employer, by the way, pays the net total of all PAYE tax deducted over to the tax collector every month.

PAYE has some other advantages, too. If earnings fall or are stopped—say, through illness or unemployment—the tax-payer gets the refund that's due to him. Again, if changing circumstances call for a change in his allowances, all he has to do is let the tax office know, and a new code number is issued for him.

Another simple agreement looks after changes in jobs. The employee takes with him the form showing his code number together with his earnings and tax paid to date and his new employer carries on the PAYE deductions.

Although Pay-As-You-Earn was started 14 years ago, no basic change has ever had to be made to it. This proves that the system is working smoothly and efficiently.

OLYMPUS

(Continued from page 1012)

likely to yield a total of Rs 800 crores over the five year period. He will also make substantial funds available to the States out of the Centre's revenue. For the rest, the States must now endeavour to raise the additional resources needed for the internal targets. The yield from these efforts and the surpluses from the Railways which Mr Krishnamachari expects to be larger than what was originally estimated will enable the financing of a quarter of the Plan outlay.

Mr Krishnamachari is disappointed with the performance of market loans and small savings. He believes that "the capital market will improve by and by". But, as has often been mentioned in this journal, the strategy for making a success of borrowing is still a long way from being adopted by the Government. If that is done, there is no doubt whatever that the resources needed will be available to Government.

SOUTH INDIAN MARKETS

(Continued from previous page)

In the Tanned Skins section, arrivals of both Goat and Sheep skins were slightly better and the market was steady.

In the export section, trading was on the same scale as in the previous week with practically little change in export rates.

The London Public Auction will begin on December 2. According to some reports, 5 lakhs tanned Goat skins and 5½ lakhs Sheep skins will be offered for sale.

THE PUNJAB NATIONAL BANK LIMITED

"Shree Niwas"

8, Underhill Road, DELHI

Notice for Issue of Bonus Shares.

By an Ordinary Resolution passed by the shareholders of the Punjab National Bank Ltd., at the Annual General Meeting held on the 22nd June, 1956, it was resolved that, subject to the sanction of the Controller of Capital Issues, a sum of Rs. 37,50,000 lying in the Share Premium Account be capitalised by the making of a scrip issue to shareholders in proportion to the number of shares held by them as on a date to be fixed by the General Board of Directors.

As the consent of the Controller of Capital Issues has since been received the Directors, in their meeting held on 19-11-1957, have decided to issue 1,50,000 shares of Rs. 25 each as Bonus shares to the persons whose names appear on the Register of Members as at the close of business on 17-12-1957 in the proportion of three shares for every seven shares registered in their names at the close of business on the said date.

To overcome the difficulties likely to arise out of the issue of a large number of fractional certificates and to be experienced by the shareholders in dealing in such certificates, the Directors, in exercise of the powers vested in them vide Article (88-B)(2) of the Bank's Articles of Association, have decided that while allotting Bonus shares fractions be ignored and the aggregate of the shares in lieu of such fractional shares be allotted to Sardar Bahadur Sardar Mohan Singh, a Director of the Bank, upon trust, and for the benefit of the shareholders who would have been entitled to such fractional shares, and upon further trust to sell the said shares and distribute the proceeds thereof amongst the shareholders who would have been entitled to fractional shares in the proportion in which they would have been entitled thereto.

The Bonus shares which are now being issued will be entitled to the final dividend which may be declared by the Bank out of the profits for the year ending 1957 but shall have no right or claim to the interim dividend for the current year already declared and paid by the Bank in September, 1957.

The Transfer Books of the Bank will remain closed from 12-12-1957 to 17-12-1957 (both days inclusive).

By the Order of the General Board of Directors,
R. L. TULI
Secretary.

Dated: 22nd November, 1957.

NOTE:—Share-holders are requested to intimate any change of addresses, immediately to the Bank.

BHATKAWA TEA COMPANY, LIMITED

NOTICE is hereby given that the 57th Annual General Meeting of the Shareholders of Bhatkawa Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company on Saturday, the 21st December, 1957, at 11-15 A.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act 1956:—
"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company."

Special Notice dated 15th November, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge is presently a Director of Amluckie Tea Co. Ltd., which is a subsidiary of McLeod & Company Limited, the Managing Agents to the Company, and he is an associate of the Managing Agents within the definition in Section 2(3)(c) (1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 9th December, 1957 to 21st December, 1957 both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 22nd November, 1957.

NOTE:—1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and

vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 30th December, 1957, only to those members whose names are registered in the Books of the Company on 21st December, 1957, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED
(INCORPORATED IN ENGLAND)**5% Rupee Debenture Stock 1970 Interest for the half-year ended 31st December, 1957.**

Approved contractors who have already made a permanent deposit of Rs 1000/- with the Controller of Stores need not pay the Earnest Money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the Tender.

S85 GENERAL MANAGER

Stock Exchanges

ACTIVITY CONFINED TO SPECULATIVE SCRIPS

Watch-Dog Writes:

STOCK markets have generally presented a steady front during the week under review although price movements have been rather erratic due to alternate bouts of buying and selling. Rumours of a possible increase in the retention price of steel have caused a sharp recovery in Indian Irons with which the other speculative scrips have moved up in sympathy. Conditions elsewhere have shown little change in restricted turnover.

Except for a sharp recovery in the speculative issues and a setback in Mundhra group of shares, price movements in other counters on the Calcutta Stock Exchange were insignificant. Trading on the Bombay Stock Exchange presented an erratic pattern with Steels holding steady, while Textile and Miscellaneous scrips generally tended to sag.

There was some expansion of business in Planting issues on the Madras Stock Exchange. Textiles met with small activity.

Quiet conditions prevailed on the London Stock Exchange with insufficient business to give the market any definite trend.

Wall Street closed strong, showing a broad front of gains ranging mostly to three points or so.

Calcutta

CALCUTTA. NOVEMBER 29.

THE local Stock Exchange started the week on an uninspiring note and, lacking fresh interest, price movements were confined to a narrow range in a reduced turnover. In general, dealings were cautious and the Finance Minister's indication of fresh tax efforts in future to fulfil the Plan caused a setback in prices on a broad front.

Thanks to the rumours of a possible increase in the retention price of steel, the market took a turn for the better in mid-week when the speculative and selected scrips recorded a sharp recovery under the lead of Indian Irons. Turnover, however, continued to be restricted.

The Gilt-edged market continued to rule firm although higher levels could not be retained till the close due to profit-taking. The demand, which was concentrated on the short-dated issues, appeared to have spread to some of the medium-dated scrips, resulting in a further improvement in prices. 3 per cent 1986 Conversion Loan opened steady at Rs 71.12 and, after firming up to Rs 71.62, receded at the close to Rs 71.00.

In sympathy, Bank shares firmed up a little, enquiry for Punjab National being more marked following

the consent of the Controller of Capital Issues to issue bonus shares in the ratio of 3:7. United Commercial moved up to Rs 53.25 from Rs 55.50.

Except for a few nibbling purchases made by the Life Insurance Corporation, buying interest in the Jute section was completely lacking. A further fall in jute goods prices and the uncertain outlook for the new jute crop induced operators to book their profits at the higher levels. Anglo-India changed hands at Rs 150 to Rs 152; Barnagore at Rs 86 to Rs 91; National at Rs 19.40 and Ganges at Rs 51.50 to Rs 53.25. Howrah were, however, marked down to Rs 16 from a high of Rs 17.25 with Nuddea moving narrowly between Rs 32.50 and Rs 33.00. Champdany were offered at as low as Rs 120 against Rs 126 and Lawrence at Rs 85.50 against Rs 78.

In the Coal section, there was a general disposition amongst operators to await the Price Revision Committee's recommendations before entering into fresh commitments. Bengal changed hands at Rs 223 to Rs 229; Burrakur at Rs 21.50 to 21.75 x.d.; Central India at Rs 6.31 to Rs 6.43 and Equitable at Rs 23.12 to Rs 23.56. Western Bengal, however, closed quiet at Rs 5.75 against Rs 5.94.

In contrast to the past few weeks, the Tea section recorded only very few dealings. Operators seemed to be worried about a reported move by the West Bengal Government to adjust Agricultural Income-Tax in such a manner as would compel the tea estates to pay taxes at enhanced rates. They feared that any further increase in taxation would make the industry suffer a loss, especially when the demand for the commodity was falling short of production. Brahmaputra were, therefore, on offer at Rs 3.31 against Rs 3.50 Betjan at Rs 23.50 c.d. against Rs 24.25; Dhunseri at Rs 13.00 against Rs 13.56; Grob "B" at Rs 13.00 against Rs 13.50; Hasimara at Rs 21 against Rs 22.12; Hudibari at Rs 19.75 against Rs 21.00 and Dufflaghur at Rs 32.50 against Rs 34.00. Rungamtee and Jaysree were, however, well maintained at Rs 64.00 and Rs 9.37 respectively.

Sugar shares were generally neglected and prices displayed a sagging tendency due to continued quieter advices from the commodity market. Balramore were on offer at Rs 6.50 against Rs 6.70; Bilsund at Rs 10.19 against Rs 10.25 and Cawnpore at Rs 14.06 against Rs 14.56.

Little or no interest was shown in the Textile section. Kesoram, after improving at one time to Rs 10.87 from Rs 10.75, receded again at the close to Rs 10 x. d. N.W. Victoria hovered idly around Rs 1.40.

Price movements in the Engineering section were rather erratic due to the speculative activity in Indian Irons. Against the week-end closing of Rs 18.72, Indian Irons opened higher at Rs 18.92 and, after advancing further to Rs 19.62 on rumours of a possible increase in the company's retention price, receded again at the close to Rs 19.49 due to profit-taking on lack of confirmation. In "kerb" trading on Friday, there were even sellers at Rs 19.45 with buyers at Rs 19.43.

In sympathy, TEXMACO receded to Rs 17.15 after touching a high of Rs 17.45 from Rs 16.92. The setback in the Mundhra group of shares was more pronounced, Jessop having declined to Rs 21.19 from a high of Rs 23.12 and Richardson to Rs 6.58 from Rs 8.36. Britannia met with some enquiry up to Rs 13.12 from Rs 13.06 with Indian Standard Wagon firming up further to Rs 182 from Rs 178 following the bonus issue decision.

The most outstanding feature in the Miscellaneous section was Orient Paper which, after being taken up to Rs 25.60 from a low of Rs 24.70 on rumours of the increase in dividend from Rs 1.25 to Rs 1.50 per share for the year ended 30-9-1957, receded at the close to Rs 25 due to profit-taking. Tita-gur opened steady at Rs 33.00 to ease off at the close to Rs 32.50. Indian Copper were a narrow market, moving between Rs 2.98 and Rs 3.03. National Carbon changed hands at Rs 23.12 to Rs 23.25; NCCO at Rs 24.12 to Rs 24.75; Hindustan Motors at Rs 6.17 to Rs 6.25; Aluminum Corporation at Rs 9.69 to Rs 9.87; Hindustan Lever at Rs 13.56 to Rs 13.70; Phillips India at Rs 13.06 to Rs 13.50; Indian Cable at Rs 24.75 to Rs 25.12 and Alkali Chemicals at Rs 12.87 to Rs 13.00. In Mundhra group, BIC were offered at as low as Rs 4.00 against Rs 4.47 and Osier at Rs 2.87 against Rs 3.10. Among other scrips, India Steamship were a firm feature at Rs 11.81 with BBP quoting around Rs 1.82.

INDEX NUMBER OF WHOLESALE PRICES IN INDIA
Review for the Week Ended November 9, 1957.

The official wholesale price index (with the year ended March, 1953 as 100) advanced by 0.6 per cent to 109.6 during the week ended November 9, 1957 as compared with 108.9 (revised) for the earlier week. The index was also higher by 0.8 and 1.4 per cent respectively when compared with the corresponding weeks of a month back and a year ago.

The index for 'Food Articles' moved up by 0.7 per cent to 108.3 as compared with 107.6 (revised) for the earlier week due to higher prices of Onions at Nagpur (+3%), Gur at Muzaffarnagar (new crop) (+23%) and at Ahmadnagar (+7%), Oranges at Madras (+23%), Fish at Bombay (Pomfret) (+15%), Arhar at Bombay (+13%), Rice at Chhian (+10%) and at Nagpur, Tri-vandrum and Nandgarh (+6% each), Pepper Black at Calcutta (+9%), Wheat at Kanpur and Eggs (+8% each), Coconut oil and Tea (+4% each), Maize, Mung, Groundnut oil and Cardamoms (+2% each) and Jowar and Bajra (+1% each) notwithstanding a fall in the prices of Rice at Ranchi (-14%), at Marara (-8%), at Shimoga (-7%) and Jaodhar and Kotma (-6% each), Gur at Patna (-10%), Fish at Calcutta (-9%) and Milk at the same centre (-7%), Ghee and Black Pepper both at Madras (-5% each).

Coffee (-4%), Cloves (-4%), Chillies (-2%) and Barley, Raft, Potatoes and Salt (-1% each).

The index for 'Tobacco' remained at its last week's level of 98 as none of the prices showed any variation. The index for 'Fuel, Power, Light and Lubricants' also stood unchanged at its previous week's level of 114.6.

Higher prices of Groundnuts at Hyderabad (+11%), Skins raw at Kanpur (+7%) and Rapeseed at the same centre (+6%), Copra at Alleppey (+8%), Jute raw and cottonseed (+2% each) and Linseed and Hides raw (+1% each) were responsible for pushing up the index for 'Industrial Raw Materials' by 1.7 per cent to 116.3; the prices of Tanning Materials (Avaram Bark) at Madras (-14%) and Lac (-2%) showed a fall. The prices of Zinc and Tin (-2% each) and Coir yarn (-1%) declined while those of Linseed oil (+2%) and Copper (+1%) indicated a rise and in the result the index for 'Intermediate Products' advanced slightly by 0.2 per cent to 106.0.

Index Number of Wholesale Prices by Group and Sub-Group of Commodities. (Base: 1952-53=100).

WORLD OF TEA

(Continued from page 1003)
now coming forward are of "rain" manufacture and this has been reflected in lower values. Tea stocks in London, as on the 15th November, were 128.81 million pounds as compared to 127.66 million pounds in the previous week. Total amount to be landed, on the same date was 15.66 million pounds. Deliveries, during the week, totalled 11.62 million pounds, and landings were 12.77 million pounds. Total afloat was 39.90 million pounds, including 23.73 million pounds from Calcutta; nil from Chittagong; 5.56 million pounds from Cochin; 4.00 million pounds from Colombo and 610,000 pounds from other Ports. The average price realised, during the past weeks auction, was 61.50d per pound as against 62.51d in the previous week and 73.15d in the corresponding period of last year.

Indian Finance LIST OF QUOTED SHARES

Review for the week ended November 16 1957

A rise in the prices of Paper and Newsprint and Oilcakes (+2% each) and Cycles (+1%) was neutralised by a fall in the prices of Jute Manufactures (—1%) and the group index for 'Finished Products' stood unchanged at the earlier week's level of 109.1.

lakhs against Rs 8 lakhs. The allocation to Housing Reserve is doubled to Rs 10 lakhs, while Gratuity Reserve is lowered from Rs 2.00 lakhs to Rs 80,000. Sales have shown a substantial rise from Rs 1.48 crores to Rs 1.89 crores.

The opening of the new factory by the Dunlop Rubber Company at Ambattur near Madras is to be welcomed and should go a long way in filling the shortfall in production with any future increase in demand. The items that are scheduled for manufacture in this new unit include trucks, bus, and cycles. It is expected to go into production by the end of 1958. Similarly the original factory at Sahagunji is also awaiting an expansion programme.

The Story of Oil—4

Buried power

'Rock Oil' is the literal translation of the Latin words 'petra' and 'oleum' which make up the name petroleum. Trapped underground in the cells and fissures of porous rock, petroleum is a raw mineral consisting of liquid crude oil and natural gas. These are usually found together, and between them they are a major source of power for the world today and the basis of thousands of commodities useful to mankind.

Petroleum is a mixture of substances called hydrocarbons. These are chemical compounds made up of the elements carbon and hydrogen (the former heavy, the latter light in weight). Hydrocarbons vary widely in nature and contain. Most are liquids at ordinary temperatures, but some are gases and others solids like bitumen.

Despite popular belief, this petroleum does not collect in large underground pools. If it did, exploration and discovery would be comparatively easy. Instead it lies, usually with a quantity of salt water, in layers of solid looking porous rocks closed in by walls or caps of non-porous rocks which prevent it escaping. There are three main types of oil-trap—the 'anticline', an arch-shaped upward fold in the earth's rock layers; the 'fault', or fracture in the earth's crust whereby a non-porous layer has slipped to cut off a porous layer; and the 'stratigraphic' trap, where because of changes in the type of rock a porous layer becomes sealed off by non-porous rocks.

Thus, when geologists begin their search for oil, they start with the knowledge that certain types of rock formation are more likely to yield oil than others.

The drawing at the top shows the inside shape of an anticline. Compression has buckled up the earth's crust, squeezed it into these folds. The other illustration is of a fault, a dislocation in rocks. Two sections of the earth have been forced in different directions until they cracked, slipped out of position, and upset the alignment of all the rock strata involved. The black section indicates oil-bearing rock.

Assam Oil

A full-scale petroleum industry

Indian Finance

Investor's Supplement

November Brings Improvement in Sentiment

AN ordinance was issued to reduce the foreign currency reserve to be held by the Reserve Bank; in effect, this meant that the holdings of the Reserve Bank's gold and foreign securities could be run down to Rs 200 crores, providing Rs 116 crores be held in the form of gold. The difficult foreign exchange position was also reflected in the decision by Government to restrict the issue of licences for steel imports. In New Delhi, it was gathered that the Assam Oil Company was unable to secure a foreign loan for meeting the cost of the oil pipe line. In such a situation, the Calcutta Stock Exchange nevertheless ended the week on a steady note, and the Bombay Stock Exchange showed appreciation in values despite profit taking.

2 & 3

Over the week end, Mr A. P. Jain reveals that the US secretary for Agriculture, Mr Benson, had suggested the possibility of barter deals with the USA in respect of India's food problem. In New Delhi, Mr H. M. Patel stated that smuggled gold confiscated by Government had added to the gold holdings of the Reserve Bank by Rs 2 crores. It was reported that 12 countries had agreed to participate in talks on the jute trade to be held at Dacca toward the end of the month.

4

The stock exchanges, however, fell prey to profit taking, and prices fell both in Bombay and in Calcutta. At the tea market, however, there was a good general demand at the export sales.

5

Mr A. P. Jain outlined India's food problem at the FAO Conference in Room. The feature of the Calcutta stock exchange was another improvement in the tea section, apparently in response to the strong and active demand at the internal tea sales. Bombay shares were quietly steady.

6

A big gold haul was made at the Dum Dum Airport. Active note circulation declined during the week. It was reported in New Delhi that an agreement had been reached with Japan to quadruple export of iron ore to that country. At Burnpur, a new coke oven plant was lit by Sir Biren Mookerjee, signifying the satisfactory progress of the Indian iron expansion programme. Strangely, however, at the Calcutta settlement Indian Iron declined somewhat, though the settlement rate was 90 nP higher

than the previous settlement rate. Bombay shares were irregular.

7

The Calcutta Stock Exchange, on encouraging Bombay advices and aided by the speculative issues, displayed a steadier trend today. Opening the day higher at Rs 18.92, Indian Irons moved around that level and closed the day at Rs 19.10. The Bombay Stock Exchange was steadier in a restricted trading session on account of Lunar eclipse.

8

Because of the pruning of the Second Plan in view of foreign exchange difficulties, the Madras Government impressed the Centre that the proposal to set up an aluminium plant in Mettur, using the bauxite deposits of the Shevry Hills, should not be shelved. The early firmness encouraged by reports of institutional support could not be maintained on the Calcutta Stock Exchange. Due to the end of accounts, the trading in the Bombay Exchange was mostly of a squaring up nature and the market ruled steady.

9

An agreement between India and the USSR was concluded at New Delhi on the disbursement of the Rs 60 crores credit offered about two years ago.

10

Mr Nehru said that while it would be difficult to state the outcome of the TTK mission precisely, he gave a clear indication to the Congress Parliamentary Party that long-term financial assistance from the USA is expected, although not of the scale India may like it to be.

11

Mr G. R. Kamat, Chairman, Life Insurance Corporation of India, said at a press Conference in Calcutta that the Corporation's contribution toward financing of the Second Plan during 12 months beginning September 1, 1956 amounted to about Rs 349.7 million. The speculative issues in Calcutta Stock Exchange marked a sharp recovery and conditions elsewhere remained steady with selective Tea shares changing hands at higher prices, and more business was done in this section. On encouraging Calcutta advices and on rumour of Bonus issue for Century, the Bombay market ruled steady.

12

With heavy unloading in the speculative issues, an easier tendency prevailed on the Calcutta Stock Exchange. In the absence of any fresh support and widespread profit-taking, the Bombay Stock Exchange presented a rather subdued tone.

13

Price of selective issues recovered on buying support in the Calcutta Stock Exchange on reports in institutional support. An irregular trend prevailed in Bombay.

14

Widespread gains were recorded on the Calcutta Stock Exchange on the announcement by the Union Finance Minister at the Lok Sabha that sizable foreign aid was expected. Opening high rate Rs 19.22 Indian Iron was marked at Rs 19.40 in later dealings. Steady conditions prevailed on the Bombay Stock Exchange.

15

The Calcutta Stock Exchange ended the week on a steadier note with more attention directed toward the speculative shares at improving levels. Indian Irons closed at Rs 19.54 on fresh support.

18

As a result of the reported decision of the Conference of State Finance Ministers to replace sales tax on cloth, sugar and tobacco by an additional Union excise duty, it is learnt the consumer in many parts of the country will pay substantially less for these commodities. Dull but quiet steady conditions prevailed on the Calcutta Stock Exchange. Due to absence of any fresh incentives and due to lack of support, listless conditions prevailed in Bombay.

19

A high-power board was suggested by the Food Committee to stabilise prices. The Calcutta Stock Exchange showed little change, business being restricted and price movements irregular except for a slight recovery in the speculative issues.

20

The World Bank and nine other US and Canadian commercial banks made a joint loan of \$35.5 million to the Tata Iron and Steel Co. With activity restricted owing to clearing adjustments, prices where changed were lower; narrow fluctuations characterised the Calcutta Stock Exchange.

Price Trends during November, 1957	1076

Owing to lack of support and scattered selling in absence of any fresh incentive, prices in Bombay tended to sag.

21

The Calcutta Stock Exchange witnessed another featureless session, prices generally moving around previous levels in listless trading. The Bombay Stock Exchange ruled quiet, but thereafter gradually improved.

22

An all-round recession in prices, particularly in speculative issues, was noticed in Calcutta on reports that India may not be able to obtain a large loan from America. Feelings were damped by fears of a smaller American loan; and rumours of more taxes by the Finance Minister and settlement consideration were causes for the easier tendency in Bombay.

24

The Export Promotion Committee's recommendation of import duty rebate on exports was accepted by Government and applied to 22 items.

25

The International Conference at Dacca suggested the need for stability in jute prices. The week, however, opened on an uninspiring note, with both Bombay and Calcutta showing a quiet tone.

26

President Eisenhower was reported to be ill, and Wall Street crashed. The news, however, was received late in Calcutta, where speculations were fully steady. The undertone in Bombay was also good.

27

Calcutta seemed to think that Mr Eisenhower's illness was not significant, and speculations gained ground, while, in Bombay, shares were steady.

28

The excellent progress of Mr Eisenhower was responsible for another sharp improvement in Calcutta prices, though Bombay was erratic.

29

With no fresh developments, the undertone turned easy in Calcutta and Bombay.

30

Government announced a special issue of Rs 30 crores in the 3½ per cent 1962 Loan; and, although this news was received late, general opinion was that the markets had less cause to apprehend a rise in the Bank Rate.

INDIAN FINANCE

December 7, 1957

ultimate loss of Rs 1.18 lakhs after writing off loss brought forward from previous year, Debenture issue expenses. Zinc Smelter Project, cost of acquiring Zawar Mines and Goodwill, and making provision for Wealth Tax.

The working results of the company is indicated by the comparative figures for two years as given below (in tons):—

	1956-57	1955-56
Ore raised	86,825	72,268
Ore Dressed in Mill	85,415	53,440
Flotation Concentrates Produced:		
Lead	4,143	3,097
Zinc	7,660	5,107
Lead Ingots Produced	2,663	2,143
Silver (in tolas)	2,48,021	2,29,024
Sale value of finished products (Rs)	87,93,512	51,40,259

According to the directors' report, development work at the Zawar mine is going on as per programme and considerable progress has been made in footage developed. The target of current development programme is production of 1,000 tons run-of-mine ore per day by 1960; and much of this will depend on adequate finance and import licences for machinery and equipment being available during this period.

In this connection, it would be recalled that the company recently decided to convert the Deferred shares into Ordinary shares. According to the award of the Arbitrator, Deferred shares are to be converted in the ratio of three deferreds into one ordinary share. The conversion will be effected as soon as formalities in the matter are gone through. After the conversion is given effect to, the subscribed Ordinary capital will be 5 lakhs in number. Permission from the Controller of Capital Issues has been obtained for the issue of further 10 lakhs Ordinary shares. These shares or part thereof will be offered to the existing ordinary shareholders as 'right shares'. The directors will proceed to issue the same in due course. The additional capital will be necessary for carrying out the expansion programme at the Zawar mines.

₹ Rs

Anglo-India Jute

Despite an increase in sales from Rs 5.01 crores to Rs 5.15 crores, the Anglo-India Jute Mills Company Limited has reported a net profit, after providing for Depreciation of Rs 10.00 lakhs (Rs 10.25 lakhs), of only Rs 2.72 lakhs for the year ended 31st March 1957 as against as much as Rs 7.21 lakhs in the pre-

vious year. No provisions have been made for Taxation, General Reserve and Machinery Replacement Reserve as against Rs 2.25 lakhs; Rs 5.00 lakhs and Rs 1.00 lakh respectively. The dividends on the Ordinary and Preference shares have been recommended only after transferring a sum of Rs 3.00 lakhs from the Machinery Replacement Reserve. The Ordinary dividend is maintained at Rs 7 per share.

According to the directors' report, the installation of electrical equipment at the Middle Mill was completed and modernisation of this mill was also continued as planned. Three-fourths of the spinning capacity of the same mill is now fully modernised. The directors have planned to concentrate production in the modernised mills to the maximum extent possible.

Engineering Goods and Export Prospects

AMONG the exports from the Indian Union engineering goods did not occupy a noteworthy place until recently. Far from being a source of dissatisfaction and disappointment, this circumstance symbolises a new phase of industrial development, and a pattern of economy and foreign trade which is replacing the one in which India had to be content with exporting industrial raw materials and getting back finished goods, except, of course, in the case of jute. Engineering goods are now being referred to as non-traditional exports, in view of their recent entry into our export market; at the same time, they are also regarded as one of the new hopes of the future. They would fulfil present expectations even when the entire world gets industrialised.

For the time being, it is justifiable to think of the Asian and the African markets, where India's engineering products mostly sell, as more or less a permanent avenue. As conditions obtain today, these markets will continue to expand and respond to the promotional activities dictated from India, because the area is industrially less advanced than India and because there are territorial and sentimental ties which confirm the general preference Indian goods often enjoy.

The prospect of engineering exports to the markets now available in Asia and Africa will also have to be thought of in the longterm spirit. With the gradual political emancipation of one country after another, the springs of economic nationalism are also being tapped. Sooner or later, every one of these countries will start planning for industrial development; already, both independently and under the auspices of international association, Ceylon, Burma, Indonesia, Egypt and Sudan, among others, have formulated plans for building up industries, sometimes even to the extent of overlooking national shortages in basic raw material sources.

Looking forward beyond another quarter century, it must be possible to envisage developments which might completely transform the pattern of East-West economy. This possibility, too, instead of being a cause for concern, must be one for further hopes from the standpoint of the export potential the area represents. A glance at the geological map of Asia and Africa, to the extent data are available, will show how widely dispersed resources are among the various countries. In India, there are inherent advantages arising from the possession of resources which are expected to last for centuries: Iron ore and manganese ore, and the current expansion in steel production. When industrialisation on the continental scale takes place, the value of these advantages must be more than what it is now. That industrialisation carries with it scope for expansion of future trade, is amply evident from the experience of Western Europe. All that is required is the capacity for prompt and thorough adjustments in the pattern and technique of production, as dictated by changing circumstances.

This reference to longterm considerations is an answer to those who are inclined to feel that industrialisation of Asia and Africa might block the entry of Indian goods. The great flaw in this argument of despair is that it does not take into account the ever growing

demand of a population, which not only increases numerically, but also develops its demands for more and newer goods, with every rise in the standards of living.

The one great advantage with engineering goods is that we know where we can sell them and where it is impossible to sell them. It is indeed pleasing to see Australia, the UK and the USA purchasing some cutlery or aluminium ware from India; and West Germany coming in for goods made of stainless steel. These stray purchases should not raise rosy visions of West Europe, America or even Australia becoming large scale purchasers of Indian engineering products. We may even go further, and say that Indian competition is something which the Western countries have reason to dislike. And if they are already trying to meet it in respect of certain commodities, it is just within the rules of the game. Some of these countries may always be open for artistic products or those of small scale industries for which markets could certainly be cultivated with zeal and profit. It is only realistic to view the relatively under developed countries of Asia and Africa as forming a staple market for engineering goods from India.

A commodity-wise breakup of export markets should easily confirm this position. Whether it be in agricultural implements, brass or copper wires, automobile parts or diesel engines, cutlery, lamps or steel trunks, we find almost the same set of countries figuring among the export markets, countries such as Aden, Afghanistan, Burma, Belgian Congo, Ceylon, Fiji, Indonesia, Iran, Iraq, Kenya, Kuwait, Lebanon, Malaya, Mauritius, Mozambique, Nigeria, Oman, Saudi Arabia, Sierra Leone, Singapore, Somaliland, Sudan, Tanganyika and Thailand. Even in these countries, competition is not wholly absent. In more than one case, foreign participation in Indian engineering industry has been at the price of a complete reservation of certain markets against the Indian product for specified periods. This is one of the conditions which the Government might now be thinking of attempting to soften, in favour of India.

The Export Promotion Committee (EPC) has been alive to the importance of engineering goods in India's exports on a longterm view. Thus, although the current foreign exchange earnings from engineering goods is only Rs 4 crores a year, the Committee has devoted more than 3½ pages toward the discussion of the prospects of engineering goods; and this compares with the two and half pages occupied by a discussion of the role of jute goods. Moreover, the Committee is to be congratulated on an approach to engineering goods that bespeaks a full understanding of the scope for export of engineering goods. The first point that has been made by the Committee is that, although engineering goods occupy only a nascent place in the list of Indian exports, a start has already been made with the successful sale of miscellaneous hardware, light engineering and durable goods to overseas customers. The Committee has overlooked mentioning that engineering goods exported from India already exceed 100 different items. The exports range from aluminium ware to diesel engines. It is understood that

engineering goods earned Rs 3.3 crores of foreign exchange during the first 9 months of 1957. What, however, is significant is not the value of the exports, but the range of the items exported. The EPC has realised that the economic development of countries in South East Asia, West Asia, and East and West Africa is likely to raise "their demand for consumer goods of all kinds". So, our assessment of the prospect before engineering goods can only be on the basis of their proving, in the long rather than the short term, to be substantial exchange earners for this country. However, while the prospects of substantial earnings necessarily lies at some distant date, it is necessary to appreciate that the steps to foster exports have to be taken even at the present day. This is a matter to which the Committee has addressed itself, and we may now therefore, with profit, analyse the EPC's views on engineering goods.

At the outset, as the report points out, exports will not rise "if prices are not competitive and our quality not good". What is worse, since the Indian engineering industry is itself in its infancy, as it were, production in many fields is possible today only with the protection of a tariff wall. All too clearly, thus, on the question of price, many an Indian engineering product is likely to be more expensive than similar commodities available from the industrialised countries of the West. Here, the Committee has drawn attention to what is essentially a vicious circle. For all that a particular industry might be benefited by a tariff wall—indeed, because of the existence of such protection—costs of production for such industries are likely to be high. On the one hand, production can be planned only on the basis of the existing internal demand. So, when the output planned is lower, it is hard to effect economies in the cost of production; and so long as costs of production are high, the level of prices at which the commodities sell are also likely to be such as to induce consumer resistance. That is, until the producer can raise his output, he cannot reduce his price; but unless prices are lower, he cannot raise production, because demand would not increase. What complicates matters is that, in certain cases, where a protected commodity has a large internal market, "the manufacturer does not bother too much about maintaining standards or quality because he knows that anyhow the Indian market will have to depend on his goods only". The EPC suggests that a possible solution would lie in planning installed capacity, at the very inception, on a basis such that a certain proportion is to be exported. In this context, there will be need not only for the manufacturer to maintain certain high levels of standards, but also for that which is unique to engineering goods: this comprises the ready supply of spare parts and the appointment of agents abroad to provide after sale service.

But, in a situation where the total export market for 120 different items amounts to only Rs 4 crores annually, it would be difficult, if not impossible, for individual industries or entrepreneurs or businessmen to set up the sales and service organisations abroad. Consequently, the Committee has suggested that, in overseas sales, "our industrialists should organise themselves into an association and

[December 7, 1957]

jointly undertake the measures for sales promotion abroad".

In this discussion of the prospect before engineering goods, regard must be had for one factor which we have already mentioned. That factor lies in the manner in which the Indian engineering industry is itself developing. More often than not, foreign collaboration enters the picture; and, frequently, such collaboration postulates that, in exchange for technical know-how and for the use of brand names, the Indian manufacturing unit will not only be liable to pay royalties, but would also undertake to desist from exports for a specified period of time. There can be no doubt that foreign collaboration enables industrialisation to be accomplished more expeditiously. But it is time that both the Indian manufacturer and Government recognise the obstacle that is comprised by any agreement not to export. On the part of the manufacturer, it means that export markets are not available to him as an avenue by which he could raise his production and therefore reduce costs. On the part of the Government, it means that a significant source of foreign exchange earnings is closed to this country. The EPC has recommended that future agreements between Indian industry and foreign collaborators should not be permitted to contain a clause prohibiting exports from India; in exceptional cases, such a clause would be allowable, but even here, such a ban on exports should be for a period not exceeding five years.

At this stage, let us recapitulate the factors which are of hopeful significance in the context of Indian exports of engineering goods. Firstly, there is the goodwill that we have in this part of the world. Secondly, there is the fact that freight rates from India to our potential markets are lower than the shipping costs between the Western sources of industrial goods and these potential markets. Thirdly, and most importantly, the Indian competitiveness in engineering goods undoubtedly lies in the fact that the basic raw material, steel, is possibly cheapest produced in India. We shall not concern ourselves with the first two factors; for the moment, it is the third factor that needs some detailed comment.

We have to distinguish between the cost of production of Indian steel and the selling price of steel in this country. The latter is inflated to the extent of the "subsidy" necessary to meet the cost of the much more expensive imported steel. This differential between cost of production and selling price has been with us for many years, but, we are fortunately at long last, in sight of the prospect of such differential being eliminated. The target for steel in terms of the Second Plan was, it is true, worked out on the basis of anticipated demand. However, since the formulation of the Second Plan, it has become increasingly clear that indigenous production may conceivably—and at least for some time—exceed internal demand. This explains the reiteration by the Finance Minister, on many occasions, that he looked to steel as an exchange earner. The point that we should like to make is that it is still not too late to plan on an increased export of engineering goods, such as to utilise the anticipated "slack" in steel production. It is clearly preferable to export engineering goods rather than the raw material, steel itself. Once indigenous production exceeds indigenous demand there can be even less—there can be no—justification for the present system of retention prices and selling prices for steel. So, presuming that, toward the end of the Second Plan, steel will be available to consumers at a price that is not much higher than the retention price, it follows that the Indian engineering industry will be able to get its raw material cheaper. That, however, is for the future. What we have to concern ourselves with is: what is to be done now?

We have three specific suggestions to make. Firstly, drawback of excise duty on billets should be allowed on the steel utilised for the manufacture of goods that have been exported. Secondly, as the EPC has recommended, a drawback should also be granted in respect of the differential between selling price and retention price, but after taking into account "equalised" freight, on steel that has gone into the production of engineering goods shipped abroad. Thirdly, as representatives of the industry examined by the Committee have requested, exports should be fostered by increasing the extra quota given by Government

Code for Discipline in Industry

A SUB-Committee of the tripartite Indian Labour Conference in July drafted a Code for Discipline in Industry in an attempt to tackle the growing indiscipline in industry to which the Labour Minister in his opening speech had drawn pointed attention. This draft Code was recently considered and slightly amended by the Standing Labour Committee, also a tripartite body, and it is now to be placed before the employers' and workers' national organisations for ratification. If ratified, the idea is that the organisation concerned should take appropriate action against any of its members who indulges in action against the spirit of the Code.

The intention behind the Code is sound enough and everything possible should be done to make both sides of industry aware of the need for the disciplined settlement of differences and for honest implementation of agreements and awards. A study of the working of the Code, however, makes one wonder whether it may not defeat its own purpose. No one can quarrel with a statement of general principles to which employers and workers should adhere in their relations with each other; but when it comes to specifying in more detail what either should or should not do, we find ourselves getting into deep water. Even the directive principles of the Constitution have proved too rigid for a developing economy, for example in the matter of language and prohibition. All too frequently, the Constitution is quoted to justify some line of argument before an industrial tribunal, so that one is tempted to feel that anyone can read what he likes into it, just as "the Devil can quote Scripture for his guide." The same thing will happen if the Code is accepted in its present form.

What is one to make of Clause I, to which both management and unions agree?—

"That no unilateral action should be taken in connection with any industrial matter and that disputes should be settled at appropriate level."

What is "an industrial matter"? If the manager asks a worker to move to another machine, is that "unilateral action"? The two phrases are quite impossible of any exact interpretation, and are therefore most obviously dangerous and liable to lead to more disputes rather than less.

Among those clauses to which management is to adhere is, first,

"not to increase work-load unless agreed upon or settled otherwise."

Now, at a time when increased productivity is a necessity for the country's economic survival, to place in the most prominent place the phrase "no increase in workload" is dangerous, even though it has been slightly modified. What exactly is meant by no increase in workload, of course, nobody knows, but the worker has a clear enough idea that he can argue that any change in his work is increasing his workload, and it is

—which is now 33-1/3 per cent against export of engineering goods—to 100 per cent. At first glance, it would appear that the acceptance of one suggestion will negate the need for the other two. We should stress, however, that, having in view the longer term planning required for improving our exchange earnings from engineering goods, it would be desirable for Government to implement all three suggestions.

In fine, we may say that the prospect is of engineering goods proving to be exchange earners and plan savers, not in the current quinquennium, but in the Third Plan.

most noticeable that even among office staff in Calcutta the phrase has caught on, so that, though there may be no increase in his hours of work, and though he may be quite capable of doing the work required of him within the ordinary hours, a clerk will complain of increase in workload if he is asked to undertake some additional duty, when he may know full well that his time was not fully occupied before. In general, it is sound industrial relations to discuss any major changes with the workers before they are introduced, but day-to-day changes simply cannot be discussed beforehand and are naturally left to the discretion of the departmental manager. Until there is a clear definition of what is meant by "increase in workload", the phrase should not be used in a document such as this.

Among the unfair labour practices which the management is to bind itself to eschew under the Code is "victimisation of any employee and abuse of authority in any form". Here is another gloriously vague clause which can lead to endless argument. Since it is very seldom that the bounds of a manager's authority are laid down in writing, how can one decide that he has abused his authority? In general parlance one knows what is meant. Domineering behaviour toward workers is an abuse of authority. It has to be remembered, however, that nowadays unions are inclined to argue that management cannot do this or that because it is not in the Standing Orders. Objections have been raised to the superintendent of a factory giving instructions, because this officer was a new appointment and was not mentioned in standing orders, which referred only to the manager. When there is such a strongly legalistic approach to industrial relations as at the present time, we cannot use phrases, even in a general enunciation of principles, which are open to dispute on interpretation.

Finally management in the Code binds itself to

"take appropriate disciplinary action against its officers and members in cases where enquiries reveal that they were responsible for precipitate action by workers leading to indiscipline."

It is quite true that much good can be done in industrial relations by management being honest and taking to task officers responsible for provoking their subordinates, but how can one speak of officers being "responsible for precipitate action by workers leading to indiscipline"? There is a chain of events leading to any case of indiscipline. One cannot say that someone was assaulted in a factory because the supervisor annoyed the workers. One can say that the officer's foolish attitude may have been a contributory factor, but one cannot say that he was responsible for the assault. That would be to give every irresponsible worker an admirable opening for avoidance of all responsibility for his actions. We must use words with more precision if they are not to land us in trouble.

Editorial Notes

Political Crisis in Pakistan

The drift toward political chaos in Pakistan, discernible from the date Mr Liaquat Ali Khan was assassinated and now showing signs of an alarming speed, can only cause despondency in the minds of all who desire a stable and firm foundation of the democratic way of life in Asia. It required no particular acumen and foresight to have predicted a month and a half ago, when Mr Suhrawardy was unceremoniously thrown out, that the coalition Government of the Muslim League and the Republican Party would find it hard to get along together and rule the country.

With its demand for a fourfold division of the one-unit West Pakistan, and its support to "joint electorates" while it shared governmental powers with Mr Suhrawardy and his Awami League before it changed sides, the Republican Party is committed to a course, in the two most controversial issues before the country, which is directly opposite to what the Muslim League, its partner in Government, has always professed to follow.

At the time that the present Government was formed, the Republican Party gave an undertaking to President Mirza that it would abide by the latter's decision regarding its demand for a division of the one-unit West Pakistan. The leaders of the Party perhaps expected that, in return, the Muslim League would not press for the introduction of separate electorates—at least for some time. However, during the few weeks that he has occupied the Prime Minister's post, Mr Chundrigar has given no signs

that he has any intention of showing any such forbearance. Almost from the very beginning, he started campaigning for the introduction of separate electorates; and, during his recent tour of West Pakistan, he spoke publicly against the Republican Party—his partner in the Government—on more than one occasion.

It is reported that the crisis has been averted for the time being by the strong intervention of President Mirza, who had to hurry back home, cutting short his European tour. He is reported to have threatened resignation and also to have thought about bringing the army in to control the disturbances in Karachi, before the leaders of the Muslim League and the Republican Party agreed not to press their divergent views to a point precipitating a showdown.

Such threats, even if acted upon later when the inevitable quarrels break out again, can hardly solve the problems which beset Pakistan. How long the present uneasy and unstable four party coalition Government in Pakistan will continue, is anybody's guess. But whether it is there or not till the promised general election next year, unless the unseemly scramble for power which goes by the name of politics in Pakistan is abandoned by its leaders, the outlook for Democracy there will continue to be gloomy.

The news from Pakistan adds to India's anxiety and concern. For, it is in India's own interests that a stable and democratic Government should emerge in its neighbour State.

Five Million Jobs

It is reported that the Japanese Liberal Democratic Party, which runs the Government today, has drawn out a plan calculated to create five million jobs. Generally speaking, the plan aims at a few major shifts in Japan's industrial and agricultural production and a steep increase in exports. The extent of unemployment in Japan is probably more than even this ambitious plan seeks to meet, though the back of it will be broken, if the plan is to succeed in full.

The Indian Union, faced with an unemployment situation which is worse in certain respects, might find it rewarding to secure the details of this plan and make a thorough study of them. Here, the Second Plan which was originally scheduled to absorb into new jobs at least about 10 million persons has hitherto proceeded at a disappointing pace.

From the steel plants and from the big multi-purpose projects, we hear of surplus personnel in thousands. Particularly, in West Bengal, Kerala, and UP the unemployment situation has apparently worsened. The Japanese have a way of succeeding, where most of the other nations feel helpless and the mammoth plan which they have

drawn up to solve the problem which in character and dimensions is comparable to that of India and it may afford some guidance to this country as well. At any rate, it is worth a close study.

Production Before Welfare

For the first time an investigating team on Community Projects has laid its hand on the genuine core of the problem which has hitherto obscured a correct appraisal of achievement. The report of the study team headed by Mr Balwantrai Mehta asks for an immediate shift from welfare activities to the more demanding aspects of economic development. Welfare activities are obviously easier to carry on, more spectacular in effect and consequently of greater popular appeal. Constructive economic activity involves more trouble and more planning.

But as long as the success of the Projects is determined by the elusive yard stick of welfare rather than by concrete additions to production, the projects cannot be deemed to have made a permanent contribution to the national economy. This recommendation, therefore, has to be accepted in all earnestness and faith.

Mr V. G. Rao, one of the members of the team, has also suggested the abolition of the Central Ministry of Community Development. The Prime Minister has come forward with a prompt and challenging defence of this Ministry's work; and it seems unlikely that Mr Rao's views will gain acceptance at the hands of the Government. The form of top level control is after all of relatively minor significance, provided correct policies are pursued. It is these which are wanting. It is also fallacious to think that really productive activity will not secure public co-operation in a full measure.

In fact, the chances are more, as for such activities, the results would quickly be reflected in the improving incomes and standards of living of the population concerned. What is heart-rending is that colossal sums have already been spent without adequate results. A change in the pattern of expenditure and a more rigorous accounting are immediately called for. Until then, the Community Projects will not be capable of yielding the benefits expected of them.

The Naga Unit

The assumption by the Governor of Assam of the Administration of a separate Naga Unit, is reported to have received the formal blessings of the people of Assam. It cannot, however, be denied that the separation of over six thousand square miles of strategic territory which formed part of the province for several centuries could be a matter for rejoicing for the Assamese. Recent strained relations between the Nagas and the plainsmen might have softened the pang of parting.

From the standpoint of the Indian Union, some good results are likely to follow a measure which concedes in substance the principal demand of the cooperative section among

the hill tribes. Phizo, the rebel leader stricken by paralysis and in perpetual search for hideouts, is unmoved even by this somewhat drastic step. He seems to have reaffirmed his resolve for fighting the Indian Union again.

During the debate on the Bill on behalf of a separate Naga administrative unit, more than one member in Parliament spoke of the international interest in the future of this area and the manner in which the Government of India dealt with the present situation. That all this interest is surely not friendly and some of it has also taken actively antipathetic forms is by no means a secret.

What kind of new political aspirations separation from Assam has implanted in the minds of the Nagas will be known only in course of time. It can be that they develop a strong bias toward complete independence. If so, it would be obviously suicidal to the Indian Union to encourage that bias, whatever might be the measure of cultural freedom the new Administration permits to the tribes. After securing for them freedom from the control of the Assam Government, it must now be the endeavour of the authorities both on the spot and in Delhi to see that the leaders of the hill tribes are gradually coaxed into steady and unflinching loyalty to the Indian Union.

In Kashmir and in Goa, the Government of India have paid dearly by their undue concern for international opinion. They cannot afford to commit the same mistake with regard to an area where extraneous pulls are alleged to be in existence and whose very situation is of momentous importance. The Naga Unit is a new direct charge for the Union Government which has to be cultivated most carefully and sternly with an unfailing eye on considerations of the territorial solidarity of the country.

The New Era: Borrowing from Strength

THE following Press Communique was released to the public last week end:

"As it appears that there is a demand on the part of institutional investors and the market generally for short-term investment, the Government of India have decided to create a further issue of 3½ per cent Bonds 1962 for Rs 30 crores.

"The securities will be available for sale on Government account by the Reserve Bank of India through the usual procedure for the sale of special issues at prices to be ascertained from the bank."

This comprises a further issue of an already existing loan, the 3½ per cent 1962, which was floated in 1956 and which attracted subscriptions to the tune of Rs 57.27 crores. On the assumption that the created issue of Rs 30 crores is in due course passed on to the public, the outstandings of the 3½ per cent 1962 will amount to Rs 87.27 crores. In that event, the loans maturing in 1962—it would be the first year of the Third Plan—will be just over Rs 160 crores. Again, as at present and inclusive of the created issue, loans maturing during the Third Plan quinquennium will be of the order of Rs 700 crores. This compares with maturing loans during the Second Plan of Rs 430 crores. It will thus be seen that, so far, the borrowing programme under the Second Plan has not substantially added to the liability of meeting maturing loans during the Third Plan; indeed, the only loan thus far issued during the Second Plan, and which comes up for redemption during the Third Plan, is the 3½ per cent 1962. It may not be premature to study this aspect of the question, that is, the pattern of maturities of the existing loans, especially since the creation of Rs 30 crores of the 3½ per cent 1962 augurs for the beginning of a new era in Government's borrowing. It is this last aspect that we shall study first, before we appraise ourselves, in broad terms, of the pattern of maturities.

It is extremely gratifying, we may state without further ado, that Government have at long last bestirred themselves into framing what we have said to be the beginning of a new era in their borrowing programme. Conspicuously, gilt-edged policy during the First Plan and the period till now of the Second Plan has been woefully weak-kneed. As against a target of Rs 1,130 crores gross postulated by the Second Plan, the Centre's New Loan in 1956-57 realised only Rs

158 crores. Fortunately, in that year, the receipts from borrowing were augmented by Rs 68 crores representing record subscriptions realised by State Government loans issued in that year. Thus, the total realisations during 1956-57 of Rs 226 crores more or less worked out to the annual average envisaged by the Second Plan. Consequently, we should have thought that Government would have been emboldened to set their sights high. Unfortunately, the rather extended position of the banking system, on the eve of the 1956-57 busy season, dashed to the ground any hope of an immediate planning on a bolder scale for gilt-edged borrowings. So much so, in the Budget for 1957-58, credit was taken only for a new market loan of Rs 100 crores; and, since provision was made for repayment of the loan maturing in 1957—the 3 per cent Victory Loan 1957, with outstandings of Rs 31.5 crores—it appeared that Government, in May this year, hoped to secure only Rs 68.5 crores by way of new cash. Moreover, the State Governments were advised not to approach the market during the current year. Only two States—Bombay and Mysore—chose to disregard the advice and floated loans for an aggregate of Rs 9 crores. Since the Centre's New Loan in 1957 realised Rs 106 crores, the total of gross borrowings in the second year of the Second Plan, excluding the present created issue, works out only to Rs 115 crores against the annual average target of Rs 226 crores.

However, since the 1957 New Loan, which was issued in August, conditions in the money market have improved greatly, not least in response to measures taken by Government themselves. One aspect of the improved condition of the money market lies in the spectacular increase that has been recorded in the Deposit resources of the banking system. Since the New Loan week, and as at November 22, 1957, the Deposits of Scheduled Banks have risen by Rs 77 crores. The other aspect, derived directly from the energetic efforts taken by the Reserve Bank to curtail the volume of Scheduled Banks' credit, relates to the substantial decline that has taken place in Advances during the current slack season. Between the busy season peak and August 2, 1957, Advances fell by Rs 56 crores. Since the New Loan week, and up to November 22, 1957, Advances have declined by another Rs 42 crores. Thus, the additional resources of the banking system, by way of increase in Deposits and

decline in Advances, have been of the order of Rs 120 crores since the issue of the 1957 New Loan. Inevitably, this has rid the money market of an atmosphere of stringency, and money rates have declined. Normally, by the third week of November, a hardening in money rates is already discernible, but, in the current year, for a variety of reasons, the money market continues to be easy.

At this stage, we may point out that, in August, we had stated that the target for the New Loan was much too low, since conversion facilities were being offered for the 3 per cent 1958 as well. Since outstandings of the 1958 Loan amounted to Rs 50.36 crores, it appeared as if Government were extremely diffident about their ability to secure new cash from the market; and the published results of the 1957 New Loan confirmed, as it were, Government's apprehension, for, cash subscriptions aggregated only Rs 61 crores as against the minimum of Rs 68.5 crores that would have been necessary in terms of the Budget estimate. Here, again, the picture has changed substantially subsequent to the 1957 New Loan. The Scheduled Banks' subscriptions to the New Loan as such could be said to be around Rs 40 crores, and the change in the Investment portfolio of the Scheduled Banks in this behalf was recorded by the week ended August 30. Thereafter, repayment in respect of the maturing 3 per cent 1957 Loan was effected in the first week of September, and the return of Scheduled Banks for September 6 disclosed that the holdings of the member banks in the maturing loan were for an amount around Rs 6 crores. Then, between September 6, 1957 and November 22, 1957, a further increase of Rs 43 crores has taken place in the gilt-edged investments of Scheduled Banks. This meant, by and large, that the equivalent of the Reserve Bank's probable subscription to the 1957 New Loan, by cash and conversion, had been passed on to the Scheduled Banks. However, such sales by the Reserve Bank would not have benefited the Central Government as such. Thus, though it is correct to say that the public at large has absorbed an additional Rs 43 crores of gilt-edged, it would be incorrect to state that the Central Government have disposed of an additional Rs 43 crores of securities. Nor does this fact of purchase of gilt-edged since the 1957 New Loan much matter, since, by a strange coincidence, the Scheduled Banks had sold Rs 43 crores of securities between September 1956 and the eve of the 1957 New Loan. Thus, the gross figure of gilt-edged borrowings during 1957-58, inclusive of the special issue just announced, would be Rs 145 crores. Though this is substantially less than the annual target, the mitigating fact is that, by a combination of circumstances including what amounts to virtual abstention from approaching the mar-

kets during the 1957 slack season in any substantial manner, the gilt-edged market is now properly conditioned for being receptive to a much more ambitious borrowing programme. The second favourable fact is that, with conversion facilities offered during the current year for the 3 per cent 1958 Loan, maturing obligations in the next Budget year will be very much less, and will, therefore, pave the way for conversion in advance being invited for the 3 per cent 1959-61.

We will now revert briefly to a study of maturities that face Government during the rest of the Plan period. While we have been vouchsafed no information as regards the amount of the 3 per cent 1958 that might have been tendered as subscription to the 1957 New Loan, there are some clues which will help us to determine this figure. The relevant facts for this purpose are:—

- (1) The outstandings of the 3 per cent Victory 1957 Loan amounted to Rs 31.5 crores at Budgettime;
- (2) Scheduled Banks' holdings in the 3 per cent Victory 1957 which were repaid in cash may be estimated to be around Rs 6 crores;
- (3) The total receipts to the 1957 New Loan by way of conversion amounted to Rs 45 crores.

Arising from (1) and (2), and provided that entities other than the Scheduled Banks converted the bulk of their holdings in the 3 per cent Victory 1957 loan, the amount of 3 per cent 1957 tendered for conversion should have amounted to roughly Rs 25 crores. Since the total receipts by conversion are placed at Rs 45 crores, it follows that the 3 per cent 1958 tendered for conversion would be for something like Rs 20 crores. On this basis, the loans that mature during the rest of the Second Plan period and amounts of their outstandings would be as follows:

	(In crores)
4½ per cent 1958-68	5.86
3 per cent 1958	30.36*
3 per cent 1959-61	113.66
4 per cent 1960-70	63.30
2½ per cent 1960	46.63
Total	259.81

*Approximately, because this figure is an estimate.

It will be seen, thus, that the liability for maturities during the rest of the Plan period is Rs 259 crores. Since refinancing for approximately Rs 171 crores has already been accomplished in two years, the refinancing of Rs 259 crores in the next three years should not present any difficulty. Indeed, if we are to interpret the creation of the special issue as indicating on the part of the Government a determinedness to act as resourcefully in their borrowing policy as they did during the war, the Second Plan target o

1085

Rs 1180 crores from borrowings should not be a matter of any anxious concern. On the contrary, just as the money market had an insatiable demand for gilt-edged during the war, which could be met only by the recurrent creation of special issues, so, too, Government must ensure the conditions in which the gilt-edged market will be in such fine fettle as to evoke hereafter sustained and increasing demand for gilt-edged. The stepping up of the Reserve Bank's selling rate on the 3½ per cent 1965, to which we referred in our last week's article, was certainly a step in the right direction. Adroit open market operations by the Reserve Bank would help to re-create the pattern of gilt-edged market which existed during the war.

At this juncture, we may state that this special issue of Rs 30 crores of the 3½ per cent 1962 should find ready buyers among the Scheduled Banks. We understand that the selling rate has been fixed at Rs 97.75, which would mean that it has been fixed on the basis of the market price. If Government are anxious that the special issue should expeditiously find its way into the hands of the public, an announcement that the selling rate will be stepped up week by week, not merely by the quantum representing the interest, would facilitate the "sell out" of the special issue in, say, two weeks time; also, it would pave the way for the sale of more securities, and the augmentation of the Second Plan target for borrowings.

In their choice of the 3½ per cent 1962 for the special issue, Government have shown a nice judgment of what is in demand in one sector of the gilt-edged market. The Scheduled Banks may have preferred Treasury Bills for investment of idle funds, but they will not by any means be inimical to a short-term, five year issue. We fancy that, as the gilt-edged market improves in tone and sentiment, it will be possible for Government gradually to draw out the period of maturity. In this regard, it is worth noting the maturity pattern in the quinquennium relating to the Third Plan.

	Rs.
1961-63 2½ per cent 1961	57.01
3½ per cent 1961	75.29
	132.30
1962-63 3½ per cent 1962	75.87
3½ per cent 1962	87.27*
	163.14
1963-64 3 per cent 1963-68	116.17
1964-65 3 per cent 1964	30.33
3½ per cent 1964	158.18
	188.51
1965-66 3½ per cent 1965	103.68

*Inclusive of the created issue of Rs 30 crores.

We would suggest that future created issues directed at the

banking system could conveniently be in the 3 per cent 1963-65 and the 3½ per cent 1965. These are the two years during the Third Plan period in which the maturities are, relatively speaking, not so heavy. The created issues would, of course, be on top of a medium term New Loan to be issued each year. In 1956, the medium term was an eleven year loan. In 1957, the medium term was a ten year loan. We suggest that we cannot have such a retrogression. That is to say, provided that the money market conditions, with the suitable assistance of Reserve Bank directives, present no recurrence of an over-extended position for the banking system, the New Loan in 1958 should include a medium term maturing in 1969. The 1959 New Loan should, in order to improve the terms vis-a-vis the Government, mature in 1971. In the last year of the Second Plan, it may be possible to have the medium term loan further drawn out, on a 13 year basis, with maturity in 1973. The three years that we have just mentioned are all free. Moreover, it would still allow 1968 and 1972 to be years favourable for special created issues during the Third Plan.

While we welcome the created tranche of the 3½ per cent 1962, we should take this opportunity of suggesting that, though Government have correctly sized up the demand from institutional investors for a short term loan, that demand also exists for a longer term loan. If, in recent weeks, the gilt-edged market has been experiencing an inadequacy of floating stocks, this demand for gilt-edged is in large part due to the institutional investors comprised by provident fund societies, co-operative bodies and the Life Insurance Corporation. While it is true that the Reserve Bank has an adequacy of longer dated scrips for passing on to this class of investors, it seems to us that it would further the borrowing programme of the Second Plan if, in the present circumstances, and in the foreseeable future, Government should create a special issue for sale through tap directed specifically at this class of investors. Our own view is that two existing longer dated scrips, the 4 per cent 1972 and the 3½ per cent 1974, will both of them lend themselves for the creation of special issues. Then, of course, over and above the medium term New Loan, there should be a longer dated issue each year. We will not presume at this stage to suggest what the longer dated issues should be; but, in concluding, we would again suggest that the gilt-edged market will suffer no conflict if, besides, the public sale of Treasury Bills is recommenced. In the present state of the money market, there is everything to be said in favour of such recommencement, and this is a subject that we dealt with at great length in the last week's article. We shall not repeat those arguments, except to the extent that we would like to

reiterate our view here that the Treasury Bills could be an instrument through which Government could exercise a salutary influence on the structure of interest rates. As we have said before, we are hopeful that the created tranche of the 3½ per cent 1962 presages the evolution of the borrowing policy that we have repeatedly been asking for, a borrowing policy that we have felt is a sine qua non for the success of the Second Plan. Such gilt-edged policy, we may state, must be based on a pattern of borrowing from strength by the Government; and such borrowing from strength will in

turn be facilitated if gilt-edged policy includes:

- (i) Progressively favourable conditions to Government in New Loan floatation;
- (ii) Creation of special issues from time to time for meeting the demand from Scheduled Banks;
- (iii) Creation of longer term special issues for the other institutional investors;
- (iv) A medium term New Loan each year directed at Scheduled Banks; and
- (v) A longer term New Loan each year for the other institutional investors.

Slack Season Continues?

That slack season conditions continue to dominate the money market is the unambiguous conclusion to be drawn from the latest bank statements. According to the returns of the Reserve Bank for November 29, notes in circulation have declined for the third successive week, with a drop of Rs 2.24 crores to Rs 1478.66 crores. Rupee Coin has also returned from circulation for the third successive week, the relevant head having been marked up by Rs 0.41 crores in the latest returns. In the result, the Reserve Bank's cash has been augmented by Rs 2.64 crores to Rs 38.71 crores. In the Issue Department, both Foreign Securities and Rupee Securities are unchanged.

In the Banking Department, it is to be noted that Investments have

been marked down by Rs 1.80 crores to Rs 259.68 crores. Thus, far from any deficit financing, some small element of open market sales seems to be indicated. Since the State Bank has not purchased any securities in the week ended November 29, the impression is further fostered that no deficit financing would have taken place in the latest week. However, we have to await the return of the Scheduled Banks for November 29 before we can be sure on this point, since, conceivably, the Scheduled Banks might have purchased gilt-edged in that week. However, it is possible that, after the heavy deficit financing during the week ended November 22—the figure is now known to be around Rs 35 crores—the Central Government, especially in the last week of

the month, would not have felt a pressure upon their resources such as to necessitate sales of ad hoc in favour of the Reserve Bank. Nevertheless, the Centre's balances have been run down by Rs 2.25 crores to Rs 50.94 crores. In the case of the State Governments, an improvement in their balances by Rs 1.87 crores has been matched by an increase of Rs 1.27 crores in their indebtedness to the Reserve Bank. Other Deposits continue to be more or less stationary at Rs 110.31 crores.

The Reserve Balances of member banks are, it is true, slightly lower at Rs 109.02 crores against Rs 109.23 crores. Since the State Bank in the relevant week increased its cash-in-hand and with the Reserve Bank by nearly Rs 4 crores, it would seem that the other Scheduled Banks have suffered a drain on their Reserve Balances of such a magnitude. Unless the Scheduled Banks have started feeling the pressure of the busy season in the last week of November—which is not quite what is suggested by the Reserve Bank returns for November 29—the decline in the Reserve Balances of the other Scheduled Banks might presage the purchase of gilt-edged from the Reserve Bank. The Scheduled Banks, nevertheless, appear to have reduced their indebtedness to the Reserve Bank since the latter's Other Loans and Advances have shrunk by Rs 2.75 crores to Rs 52.13 crores. Nearly Rs 1 crore of this decline can be directly traced to the Scheduled Banks, as the Reserve Bank's ad-

vances against usance bills are marked lower by Rs 0.97 crores at Rs 14.12 crores.

Lastly, Balances Held Abroad are lower by Rs 3.37 crores at Rs 29.30 crores. The decline in foreign balances between the last week of October and the last week of November works out to Rs 17.61 crores. This compares with a drain of Rs 25.42 crores between the last week of September and the last week of October.

The return of the State Bank for November 29 records a small decline of Rs 0.44 crores to Rs 361.90 crores in Deposits; and this is the first time since April that a decline in Deposits has occurred in the last week of a month. We draw attention to this point, because it is our hypothesis that accumulating Deposits with the State Bank on account of US Counterpart Funds appear to be credited in the last week of each month. It is too early to conjecture on whether the last phase of the current accumulations under Public Law 480 must now be deemed to have ended. Other Liabilities have recorded a sharp increase of Rs 2.69 crores to Rs 12.15 crores. It is worth noting that this head, Other Liabilities, has shown a gradual and uninterrupted week by week increase, except during the week ended September 13, from the beginning of July. At the beginning of July, Other Liabilities stood at Rs 5.63 crores. Cash Balances have been marked up by Rs 3.33 crores at Rs 57.48 crores. The total of Advances

marked a fractional decline of Rs 0.66 crores to Rs 158.43 crores. Government Securities are practically unchanged at Rs 153.97 crores.

The return of the Scheduled Banks for November 22 reveals a rise of Rs 4.90 crores to Rs 1394.96 crores in Deposits. What is intriguing is that, at a time that is normally the threshold of the busy season, a decline has been registered under Demand Liabilities, while Time Liabilities have risen substantially. Since the beginning of November, Demand Liabilities have declined by Rs 27.31 crores, the while that Time Liabilities have gone up by Rs 22.03 crores. If the busy season had really set in, it is the reverse process, an augmentation

of Demand Liabilities at the expense of Time Liabilities, that would obtain. The present phenomenon, therefore, may be taken to be indicative of the continuance of slack season conditions. Equally significant is the reduction of nearly Rs 4 crores to Rs 16.88 crores in the indebtedness of Scheduled Banks to the Reserve Bank. Thirdly, the total of Advances registers a fall for the fourth consecutive week, being marked Rs 2.84 crores lower at Rs 841.78 crores. Lastly, Cash Balances have improved by Rs 6.63 crores to be placed at Rs 203.74 crores.

By all accounts, the slack season influences continue to hold sway over the money market.

Soft Money in US Helps Sterling

By PAUL EINZIG

FOR some weeks sterling has now been above its parity of \$2.80, and the Exchange Equalisation Fund has been able to recover some of the gold lost in August and September. Indeed, there were days in November when sterling was almost unobtainable in Zurich. It would be highly gratifying if we were justified in claiming that this improvement has been the result of some fundamental change of the economic situation for the better. Unfortunately any such assumption would be over-optimistic. The October balance of payments figures of the United Kingdom were unsatisfactory and there is no reason to suppose that November would produce a striking improvement in this sphere. The deterioration of the balance of payments of the other Sterling Area countries, brought about by the decline in world commodity prices, is causing growing concern in London. Nor has the drain on the sterling balances of Sterling Area countries come to an end.

The cost of living continues to rise slowly but steadily. Output statistics are so disappointing that the statisticians have come under criticism. There are no indications that the trade unions intend to abandon or scale down their wage demands. Although there are no major strikes at the time of writing, the truculent attitude of labour is indicated by a number of minor strikes. At one of the nationalised coalfields there is an unofficial strike, because the National Coal Board is not prepared to compensate the miners for their loss of bonus payments resulting from their earlier strike! This may sound like one of the large crop of jokes produced nowadays about the impossible attitude of industrial workers but unfortunately it happens to be true.

A slight softening in the attitude of the unions are not sufficiently distinct to warrant optimism. Nor could the improvement of sterling be accounted for on the ground of any noteworthy improvement in the political outlook, domestic or international.

It seems, therefore, that the explanation lies not in factors directly affecting Britain and sterling but in factors affecting other coun-

tries and their currencies. Sterling is harder because other currencies appear to be softer. The reduction of Bank rates in the United States has given rise to optimism in continental foreign exchange markets about the prospects of sterling. The view is taken that, since the United States authorities are now reflation, while the British authorities are still disinflation to some degree, sterling should improve in terms of dollars. Likewise, there are indications that wages and prices in Western Germany are on the increase, which again is a bull point for sterling.

As a result, there has been a fair amount of covering of short positions in sterling during November. This is helpful as far as the immediate position is concerned. But the existence of a large short position in sterling constitutes a substantial hidden reserve, and its reduction through bear covering does not improve sterling's future prospects. Should some adverse factor arise—such as another devaluation of the French franc, or a major strike, or a crisis in the Middle East—the fact that the short position in sterling today is much smaller than it was two months ago means that there will be much wider scope for a new wave of speculative selling of sterling.

This may sound like the application of the definition of a pessimist as one who, when descending a steep slope, is gravely concerned with the prospects of having to climb up that slope again, in contradistinction to the optimist who, when struggling uphill, is rejoicing about the prospects of soon being able to descend again. But while the attitude of optimists and pessimists does not affect the gradient of the slope, it does affect the psychological and material conditions on which sterling depends. Should the present wave of optimism result in a strengthening of the gold and dollar reserve, it would tend to encourage the trade unions to insist on their wage demands, and it would also tend to encourage employers to concede those demands on the assumption that they would be able to add the higher wage to their prices. The

World of Business

Sindri Fertiliser Factory

IN the background of the general concern about the food position in the country, the annual Report of the Sindri Fertilisers and Chemicals Factory for the year ending March 1957 makes cheerful reading. The financial picture drawn by the figures is bright and full of hope for the future.

The gross profit during the year amounted to Rs 4.10 crores, showing an increase of Rs 0.34 crores. A dividend of Rs 85 lakhs has been declared at the rate of 5 per cent on the invested capital of Rs 17 crores. After providing Rs 1.91 crores for depreciation, Rs 32 lakhs for Reserve for Repairs and Renewals, Rs 40 lakhs for Taxation Reserve and Rs 45 lakhs for General Reserve, and after utilising Rs 13.5 lakhs for paying interest on the

loans from Government at 4½ per cent and, finally, after payment of the dividend, the net profits amount to Rs 20 lakhs against Rs 18 lakhs last year.

Production figures are no less encouraging. The quantity of ammonium sulphate produced was 333,705 tons, an increase of 7,643 tons. A monthly production of 32,397 tons was achieved in October 1956, establishing a record daily average of 1,045 tons. The despatches of fertilizer were also larger at 361,082 tons, against 317,534 tons in the previous year. The Report reveals that there has been uniform progress in the expansion scheme and in the extension of training services.

The importance of chemical fertilisers in an impoverished and un-

derdeveloped country, with an overwhelmingly predominant rural economy, can hardly be overemphasised. In the present context of the national effort to increase the national income, and in view of the pivotal position which food production occupies in the scheme of things designed to bring about a successful outcome of that effort, the importance assumes an even larger import.

Till recently, Indian agriculture had depended for nourishment of the soil almost wholly on farmyard and organic manure. The low productivity of Indian soil makes it clear how inadequate such manure is. It could not be otherwise, in a country whose cattlewealth is notoriously poor. The extensive use of chemical fertilisers can alone make good the deficiencies of the soil in nitrogen, phosphorous and potash, and thereby lay the foundation on which a programme of augmentation of food production can be built rapidly.

Rapid and spectacular though Sindri's production has been during the few years of its existence, it is still far short of the requirement of

the country. It is estimated that, by the end of the Second Plan, nearly 1.8 million tons of nitrogenous fertilisers in the form of ammonium sulphate and over 720,000 tons of phosphatic fertilisers in the form of super phosphate will be used, against 610,000 tons and 105,000 tons respectively in the last year of the First Plan.

There is, of course, no question of Sindri providing the only source of chemical fertilisers. The three factories proposed to be set up will contribute to a large measure to fill the gap between production and anticipated consumption. But Sindri will always have pride of place as the leader in the production of chemical fertilisers. The Rs 11 crore expansion scheme, when completed, will raise the existing capacity by over 60 per cent. When that is done, and the other factories start production, India will not only be self sufficient, but will also be able to export fertilisers. In such an eventuality, Sindri and all those who have been responsible for its efficient management will have earned the grateful thanks of the country.

coastline, to rival the 3,800 mile (6,080 kilometers), Pacific coast, the 11,700 mile (18,720 kilometers) Atlantic coast, and the 6,400 mile (10,240 kilometers) Gulf of Mexico coast.

It will provide a 2,340 mile (3,744 kilometers) direct water route from the heart of America to the sea, touching along the way on eight US states from Minnesota to New York.

This is bound to bring new importance to US and Canadian inland ports. But more than that, it will help strengthen the commercial ties between other countries and a mid-western American hinterland that comprises—in both farm and industrial output—nearly half of the world's productive economy.

The increases in imports were mainly in mineral fuels, base metals, and machinery. A large part of the increase was taken by Canada, whose imports rose by £363,000,000 to £2,074 million.

Separate returns issued by the Board of Trade in London show a continued favourable trend in Britain's trade with India at the end of October this year, when imports into the United Kingdom increased by more than £12,000,000 and exports to India by over £6,000,000 compared with the 10 months ended October 31, 1956.

The Abstract, which brings together in one volume the basic trade statistics of the Commonwealth and Sterling Area countries up to 1956, discloses that imports into India rose by 21 per cent from £55,000,000 in 1955 to £610,000,000 the following year.

In addition to analyses of imports and exports for each country, the summary tables provide a background showing the trade of the area as a whole, and aspects of other important related subjects such as production and consumption, prices of major sterling exports, and indices of the value and volume of trade.

For the first time, tables are included showing the balance of payments of each of the main Commonwealth countries, direction of

trade and commodity analysis for the non-Commonwealth sterling countries, and the commodity pattern of United Kingdom trade according to the standard international trade classification.

The Statistical Abstract shows that intra-Commonwealth imports were practically unchanged in value and amounted to two per cent less than total imports in 1955. Intra-Commonwealth exports rose by £100,000,000 in value in 1956, but were also two per cent less than total exports in the previous year.

Total Commonwealth imports in 1956 amounted to £10,045 million—a rise of almost £600,000,000 over 1955, while total exports rose by £625,000,000 to £8,682 million.

The increases in imports were mainly in mineral fuels, base metals, and machinery. A large part of the increase was taken by Canada, whose imports rose by £363,000,000 to £2,074 million.

Britain

World Overseas

US Notes

THE last of a fleet of more than 100 ocean-going cargo ships this week started on their eastward journey from inland US ports along the Great Lakes, bound for destinations abroad. For the St. Lawrence River system, navigation link between the five lakes and the Atlantic Ocean, will be closing its gates to overseas shipping for this year in another week or so, in anticipation of the icing and generally unfavourable weather conditions that lock this passage each winter.

But as they sail away, these ocean carriers are leaving behind them the most successful season that have ever enjoyed—a cargo record unsurpassed in lake annals. The estimates are still unofficial, of course, but they put the tonnage in and out of the lakes this year at some 40,000 tons about last year's 375,000 tons. This would bring the export-import total to a record of 615,000 tons—the first time the 600,000 ton mark has been exceeded.

This season, three new lines entered this thriving inland trade. Most of the lines today ply the ocean routes between America and Europe. But among the newcomers is one which establishes a new, direct Great Lakes-Mediterranean service.

All this reflects, of course, the soaring volume of US trade with the rest of the world. But traders here also see the cargo increase as an indication that shippers the experimenting with Great Lakes navigation routes in anticipation of the opening of the new deep-channel St. Lawrence seaway in 1959. And this interest is expected to increase next

year, as the seaway's opening draws closer.

The only important work remaining to be done on the seaway, which being developed jointly by the US and its northern neighbour Canada, involves dredging a 27-foot (8.1 meters) channel along 114 miles of rapids to replace the present shallow canals. The 27-foot depth, which compares to the New York harbour's 45 feet (13.5 meters) will be standard for the seaway when completed, and will take ocean-going freighters of 10,000 tons—all but the largest. At its 27-foot depth, the seaway will be able to handle an estimated 50 million tons of cargo a year—far above even this year's record total.

A miniature seaway actually exists today, of course. But its capacity is dedicated by its 14-foot canals, (4.2 meters) which permit ships of only 1,800 ton maximum to reach the lakes from the ocean. Yet even under present conditions, these small and specially built freighters are able to make substantial profits on the Great Lakes run. And this can only suggest the success expected to come from the enlarged seaway.

There will be some limitations, of course. Ice will still block the seaway for at least four months of the year. Some cargoes, like ore, can be stockpiled; but others, like grain and machinery, are too perishable or too fragile. Nevertheless, the lower costs involved in direct waters shipments to and from ports in other parts of the world may well find the seaway taking all the overseas transportation it can hold.

Thus, the seaway in effect will give the US a new 4,300 mile (6,880.6 kilometers) northern maritime

World of Jute

A Depressed Atmosphere

FOR the fourth week in succession, trading in the Jute Goods market has remained dull with prices touching fresh lower levels, due to renewed selling pressure in the complete absence of any enquiry from overseas buyers.

Near-delivery Heavy Goods are readily available, making the ready position weak. It is, therefore, no wonder that mills are keen for business in the forward position. This has caused heavy unloading in the Phatka market with weak holders anxious to sell even at falling prices. The only relieving feature is the fact that Hessians have shown a greater degree of confidence.

Generally speaking, a depressed atmosphere has pervaded the mar-

ket as overseas buying is conspicuous by its complete absence. Scarcity of ready goods, which was once the main prop of the market, is now over; and goods for all deliveries are available. With the result, mills have been eager sellers, while shippers appear to have lost all interest.

Some consolation is, however, derived from the fact that burlap stocks in the USA have fallen low. Present stocks, at 219 million yards, are now at the lowest level for the year. It may be added that stocks have been showing a steady decline from the beginning of the year when they were as much as 267 million yards. It is, therefore, expected that enquiries from that country will be forthcoming very

shortly. There are some indications in support of this belief.

Traders in New York are now in no mood to lower their rates any further on the belief that prices will hold with more chances of climbing than of slipping. This may probably be the reason that the rates of Hessians for forward deliveries are quoting higher than for the ready position.

Again, shipments have continued to be satisfactory, as indicated by the gross figures based on shipping bills represented for the period from November 1 to November 25. Hessians are shown higher at 27,048 tons and sackings at 33,388 tons as against only 18,885 tons and 24,103 tons respectively in the corresponding period of the previous month. A decline in stocks, at the end of last month, is, therefore, considered a certainty.

With dwindling interest, prices in the Raw Jute section have also eased from last week's levels. Mills are showing buying interest only in cheaper fibres, the better grades

being neglected. The only exception is Daisee, the demand for which far exceeds the supply. On the other hand, sellers have continued to be reserved, because of the wide disparity between prices in upcountry agencies and those quoted in Calcutta. Following nominal rates (per maund) are quoted:—Assam Bottoms Rs 26.50 Northern Bottoms Rs 26.25 and Daisee Bottoms Rs 29.25, all for December/January delivery.

Following were the price trends of jute goods during the past three weeks:—

Hessian:	Dec. 6th	Nov. 28th	Nov. 21st
40" x 10 ozs	39.70	40.25	40.82
40" x 8 ozs	33.00	33.80	33.75
40" x 7½ ozs	30.50	30.81	31.37
Sackings:			
B. Twills	110.00	112.12	112.85
Hy. Cees			
(Green)	110.50	111.75	113.00
Cornacks	108.75	110.50	111.35
Cubans	140.00	142.50	143.00
A Twills	134.00	134.75	135.50
L. Twills	127.50	129.00	128.75
D. W. Flour	129.00	121.50	134.00
Sugar Twills	126.00	128.00	129.00

market was again easier for all descriptions. Commons, orthodox Doars and Assams were also easier although these did not share in the decline to the same extent. There were fewer invoices of good liquoring CTC Assams on offer. The grainy types with useful liquors were sold well at about last rates; but the plain liquoring descriptions and those with fibre were 10 to 20 np easier. There was only limited demand for the Darjeelings on offer and prices were generally easier. Following rates were quoted:—Medium Doars Dust Rs 1.68; Medium Assam Grainy Dust Rs 1.63 to Rs 1.70; Medium Assam CTC Dust Rs 1.95 to Rs 2.05 and Best Assam CTC Dust Rs 2.70 to Rs 3.00.

Also 2,481 packages of Leaf grades were offered for internal consumption. All types were again generally easier. The few invoices of Green Tea, on offer, also shared the general trend of the market.

In the Export Quota section, rate showed a steady decline to 15 np per pound from the week's opening level of 18 np. At the close, there were buyers at only 14½ np with sellers at 15 np per pound.

In the Cochin market, 750,000 pounds of Dusts were offered. The market opened to a good general demand, which strengthened as the auction progressed. Nilgiri Dusts were irregular, but were generally sold at fully firm rates. Good Mediums found useful support and were firm and sometimes dearer. Mediums from Travancore came to a strong market and, towards the close, were quoted 5 to 10 np per pound dearer. Teas from Wynaad followed a similar trend. Milled and Residual descriptions advanced by 5 to 10 np following keen competition. There was more enquiry for Black Grainy Dusts and these were sold well.

The Colombo auction, scheduled for December 2, has been postponed indefinitely due to the dockworkers' strike. Meanwhile, outturn of tea in Ceylon, during October

1957, is fractionally lower at 27.2 million pounds as compared to 27.7 million pounds in October last year. Total production of tea, for the ten months ending October 1957, is, however, higher at 333.5 million pounds as compared to 301.1 million pounds, showing an increase of 32.4 million pounds over the corresponding period of last year.

At Sale No. 13, held in Chittagong this week, offerings consisted of 6,665 chests of Dusts and 21,762 chests of Leaf grades. Although the quantity of Dusts was not large, the market was always dearer.

Leaf offerings were the highest yet in the history of the Chittagong auction and, with the crop known to be continually falling behind, buyers took the opportunity of securing such stocks as possible in order to cover themselves during the period when there are no sales. As a consequence, prices were dearer by As 4 to As 5 per pound except for Whole Leaf grades and Tippy sorts, which were about As 2 dearer. Legg-cut Fannings shared in the general advance, while the polished grades were slightly dearer.

In London auction held this week, offerings were 27,902 packages, including 24,968 packages of Northern India teas. Except for the few selected invoices of best liquoring teas, there was less demand and the market was irregular and easier. Doars teas were particularly slow of sale and were a penny to 2d per pound down. Low Medium and Common teas met with a fair demand at the lower level of prices, which was about ½d per pound lower than last week. Clean Common Broken Pekoe was quoted 3sh 0½d.

Tea stocks in London, as on the 22nd November, were 130.44 million pounds as compared to 128.81 million pounds in the previous week and 94.83 million pounds a year ago. Landed between 16th and 22nd November were 13.42 million pounds, while deliveries were 11.79 million pounds.

TO the professional student of affairs (who, to tell the truth, is a prig at heart), last week's debate on the motion to censure the Finance Minister was something of a special gift. Almost from the word "go", the proceedings provided him with just the sort of opportunities he was waiting for. There was practically no end to the morals he could point; and if he was also, as I am, a professional scribe, to the possibilities of adorning his tale. But the vexing thing about drawing morals (as all moralisers, from Aesop onwards, have doubtless realised) is that the moraliser himself has (except for obvious professional purposes) no use for them. The question therefore is, how many of the lessons that I shall presently draw from last week's debate have really gone home to those to whom it ought? Do practising politicians learn by experience? Or are they, like the rest of the world, as green at the end of it all as at the beginning? This, again, will be one of the subjects on which the political moralist will hold forth. Really, there is no stopping him!

Let me take for a starting point that queer thing—parliamentary democracy. The subject is not, as one may fancy, too remote to the present occasion. The point is this: By all accounts, we are in the midst of certain economic tasks of almost overriding importance to our future; and, to judge by doleful comments from all quarters, things are not going too well with them. With such serious business before it, our sovereign Parliament spends quite a considerable amount of time and energy discussing principally a newspaper interview given by the Finance Minister. The facts relating to this interview are somewhat confused, but on the crucial question on which the opposition expressed themselves deeply concerned, namely, whether there had been any basic changes in the policies of the Government, the most categorical reassurances had already been vouchsafed. And yet, it was considered expedient to have a regular debate in which the matter was discussed in great detail. And this was done, not by any subterfuge, but the regular machinery provided by the system.

Does this mean, as some people have claimed, that, in a democracy,

Parliament is essentially preoccupied with trivialities and the real tasks of governing are done elsewhere and by others? Is Dickens (who was, if you remember, a Parliamentary reporter before he became a novelist) justified in his withering contempt for the "talking shop"? How far is Bernard Shaw's view tenable, that Parliament is an expensive club paid for by the governed with no particular good to themselves? These questions are not answered in simple terms. But, the balance of advantage, it can be said without hesitation, lies in having a system in which those in power are continually, and even repetitively, made answerable for everything they do and everything they say. The apparent loss in man hours involved in such a procedure is more than compensated by the wide-awake sense of responsibility it would instil in those in authority by possibilities of pitiless public scrutiny.

Of course, the parliamentary system is a game that is, for the most part, played according to rules. The objection of people like Shaw was really to the fact that the serious business of Government should be considered in terms as frivolous as those pertaining to the playing field. But then, Shaw is being somewhat obtuse in this matter. In the first place, however distasteful to austere spirits like Shaw, the fact is that appurtenances of governance have obvious cathartic functions. The nature and degree of the "kick" they expect out of the spectacle of their governors at work depend upon the temperaments and accidents of history of the people concerned. Some are content with the thrills of a game played according to rules (at least outwardly), and others want the more complicated experience of a poetic drama with a gorgeous cast, or perhaps a ballet. By and large, conventional democracies are content with "association of football" in their expectation of parliamentary thrills. Totalitarian regimes provide stronger fare in the form of ritualistic denunciation of former leaders or orgiastic bouts of self criticism. The Twentieth Congress of the Soviet Communist party was not exactly a parliamentary occasion even according to Russian rules, but it

certainly was the first night of the play in which the real rulers of the country formed the star cast. We know how, before it was over, the whole gamut of tragic emotion was run through by people all over the world.

Shaw would perhaps answer that if you wanted a first rate dramatic experience, the sensible thing to do would be to see a production of St Joan, and not watch the cheap melodrama of Stalin's fall. Again, he may even be willing to consider this a more serious attitude to politics than the one that is associated with parliamentary democracy. But chacun a son gout, and Shaw cannot prevent any man from taking his drama or his amusement where he finds it. In any case, if democracy is not as satisfactory a purger of pity and terror as totalitarianism, it is also a less ruthless blood-letter.

But perhaps the more serious objection to the trappings of parliamentary vigilance is a certain hypocrisy involved in it. In l'affaire Krishnamachari, the Communist party worked itself into an indignation over the alleged selling the pass by the Finance Minister. How much of this emotion was genuine and how much of it ersatz? Folks unkind to the Communists aver that the whole thing was as phony as any such thing can be. They even go so far as to suggest that such perversion of a democratic convention is precisely what you should expect from Communists who submit, for reasons of expediency, to democratic forms. This latter assertion is something that needs qualification. For, experience of party politics at home and elsewhere would indicate that others would themselves employ as readily the kind of tactics that is now deplored in the Communists without their being charged on that account with ulterior disloyalty to democracy itself. It is part of the game, and the rules permit such ruses since, by definition, the role of the opposition is to dislodge the party in power by all means open to it. Take a recent instance in Great Britain. The Conservative Government's pamphlet on the need for main-

taining the value of the pound contained an unguarded confession of comparative prosperity under the Labour regime in 1947. This has been seized upon by the Labour party as an unsolicited gift for its electioneering purposes. Likewise, Sir Winston Churchill's notorious broadcast in 1945 and Mr Bevan's famous reference to Conservative "vermin" were both, in their original intentions and the use their opponents made of them, classic instances of political gaffes and their permissible use in party political manoeuvres. It is generally conceded that both Sir Winston's broadcast and Mr Bevan's crack cost their respective parties millions of votes and possibly the chance of becoming the next Government. So, there was nothing surprising in the Communists choosing to turn Mr Krishnamachari's interview with The New York Times correspondent into party political account. Unfortunately for them, their effort failed ignominiously.

The reason for this turn of events is worth analysing. In the first place, Mr Nehru's clear and unambiguous exposition of the real state of affairs did more than anything else to clear the air. He stated in categorical terms that there is no question of our resiling from our position of non-involvement for any reason whatever; indeed, it is a position that is forced on us by the very circumstances in which we are placed and, even in practical terms, there is no conceivable advantage for which it could be bartered. Moreover, it is unthinkable that India should, at any time, Plan or no Plan, do anything that will compromise its principles. These fundamentals governing India's conduct were stated firmly and without equivocation by Mr Nehru; and, as I said, this was principally responsible for the clearing of the air. Which, again, goes only to prove that, when all is said and done, even in politics the only tactics that really pays is complete candour.

Mr Nehru did not try to extenuate anything in Mr Krishnamachari's account; he also conceded with easy grace that there was no question of any imputation of motives to the correspondent who inter-

A motor oil so good
it cuts petrol consumption

up to **15%**

CALTEX

RPM

**20-40 SPECIAL
WORKS FOR
YOU LIKE THIS**

when you start your car

you need the performance of a 20 oil

Every time you start, your engine needs a light, quick-lubricating 20 oil. Bearings are then instantly protected, petrol is not wasted overcoming friction caused by a heavier oil, excess power is not drained from the battery.

ten minutes later

you need the performance of a 30 oil

As your engine warms up it needs a SAE 30 oil—an oil with more "body" to resist the increase in engine temperature. At this stage, a lighter 20 oil would not give complete protection or maximum performance, a SAE 40 oil would be too heavy.

twenty minutes later

you need the performance of a 40 oil

Out on the open road your engine will operate more efficiently with the full-bodied protection of a SAE 40 oil.

RPM 20-40 SPECIAL meets engine requirements during all stages, gives extra protection at full throttle and ensures cooler, smoother running all the time.

RPM 20-40 SPECIAL gives you these important benefits:

1. Up to 15% increased mileage per gallon
2. Up to 33% less consumption of oil
3. Quicker, smoother engine response during warm-up
4. Less drain on battery
5. Minimises wear
6. Meets passenger car and truck manufacturers specifications
7. Can be used in all weathers, all seasons, all driving conditions

viewed the Finance Minister. Mr Nehru left the precise details of the event open and said that, in these matters, it is perfectly possible that there was some misunderstanding because of the imperfect meeting of minds. On occasions such as these, he said in effect, words that are charged with significance to the listener may be wholly innocuous to the speaker. All this speculation was so reasonable and expressed with such tentativeness by Mr Nehru that the Communists found their thunder emptied of all terror before their very eyes. By the simple expedient of stating the real position of the Government and conceding the possibility of a misunderstanding (which he was now clearing), Mr Nehru skilfully knocked the stuffing out of the Communist pretension that they were solely motivated by a desire to ascertain the correct facts.

But, apart from this, one other circumstance made the Communist debacle almost inevitable. It is the importation into the debate of what can only be called cold war stances. It is true that we are an uncommitted nation, but such is the pervasive influence of the cold war that, even in India, there is some sort of a shadow boxing on strictly cold war patterns. Either by design or by accident, the Communist censure motion came to be discussed along with the debate on the Finance Minister's statement on his trip abroad. This was almost an open invitation for the kind of polarisation of attitudes implied in the cold war. Mr M. R. Masani, discussing ostensibly the chances of American aid for the Second Plan, fastened himself on some of Mr Krishna Menon's utterances in the United Nations. He went to discuss at great length the impression he has gathered from Americans that they would prefer a less prickly representative from India in their midst. He implied that if there were any distortion of India's neutrality, it was the doing of Mr Krishna Menon who, he alleged, appeared by his words and deeds to confirm American misgivings about our professed centrality in international controversies.

Once the debates took this turn, it was inevitable that Mr Hiren Mukherjee should feel called upon to defend Mr Krishna Menon; and when that happened, any chance of getting the vast majority of the "uncommitted" parliamentarians to take the rival allegations seriously was lost for ever.

Not unnaturally, Mr Nehru seized upon precisely this circumstance to point to the centrality of his Government's position, and to make the cold war responsible for the persistent misunderstanding of his Government, which meant by extension, of both Mr Krishnamachari and Mr Krishna Menon. Mr Nehru spoke at some length on this subject. When he

goes to Russia and responds spontaneously to the friendliness around him, and says something about his leaving "a bit of his heart there", all manner of sinister meanings are read into the words. Likewise, while in the US, he expresses his joy at the fact that India and the US have a common devotion to the ideals of Lincoln and Jefferson, and there is a flutter behind the Iron Curtain. These "cold war reflexes", as he accurately described these reactions, bedevil the whole world and no wonder you are not able to open your mouth without tying yourself in unexpected knots.

Put this way, the charge is completely unanswerable. Moreover, Mr Nehru fortified his position by being completely detached about the doings of his colleagues. He dissociated himself completely with some of the remarks that Mr Krishna Menon made in the United Nations. Having done that, he was on firm ground when he defended his colleagues as true spokesmen of his Government's views. And when he also made the further point that the members of his Government had, despite basic identity of views, significant differences in outlook and temperament which were scrupulously respected by him as a true democrat, he dealt the final blow to Communist sophisms.

Two other circumstances conspired to ensure the complete success of the Government. One was the brilliant strategy adopted by that wily old parliamentarian Mr Pant (who was magnificently aided by Mr Frank Anthony) in taking the battle into the camp of the Communists themselves. More by suggestion than by anything else, he implied that the Communists would prefer the failure of the Second Plan for their own purposes. He dropped dark hints about secret documents seized and so forth, of which Mr Pant cunningly said he did not want to make much! Indeed, in an argument that was rather specious, he said that the Communists oppose the rephrasing of the Plan because they felt that the original Plan is too ambitious to succeed and would therefore give them just the handle they need! Thus put on the defensive (a position, by the way, in which a Communist is always uncomfortable), the Communist opposition foundered completely.

The other adventitious aid to Government was the almost unaccountable lapse of taste on the part of so seasoned a parliamentarian as Acharya Kripalani. What little chance of being heard with respect the opposition censure motion had, completely disappeared when so respected a man as Mr Kripalani allowed himself to use certain unfortunate expressions. May be these did not touch the core of his arguments; but it was

Gateway Gossip

The Food Situation

THE Gateway city has during the last week hit the newspaper headlines in connection with the political demonstration organised by Maharashtra Samiti on the occasion of Prime Minister Nehru's arrival in Poona to unveil the newly erected statue in honour of the Maharashtrian hero Sivaji, whose history is unfortunately become the subject of an unseemly controversy. But the more alarming news to come from that quarter is the critical situation in regard to foodgrains that presently obtains in the Bilingual State. Though food shortage is almost a universal phenomenon which has not spared any part of the country, the food situation in this State is a matter for serious concern in view of the fact that the State has presented, since the inauguration of the new bilingual set-up, inflammable material which could catch fire at the least provocation.

The serious food situation is a product of many factors—some beyond any human control, while others have in them the trace of legislation passed in places beyond the frontiers of the State, and which paradoxically enough is meant to avert the very same disaster which now stares Bombay in the face. Bombay has traditionally been dependent on the supply of foodgrains from Andhra which, among all the States in India, has always been surplus in food resources even in the midst of unforeseeable adverse factors. This year, the food shortage being widespread and acute in two of the Southern States, Mysore and Kerala, an arrangement had to be devised to meet a situation which, if unchecked, would have given a free hand to all sorts of anti-social elements to profit at the expense of public interest. What was needed was some arrangement which could check the strange phenomenon of the food resources of even the deficit States such as Mysore from being diverted from their natural markets obtaining in the State itself, not to speak of the diversion of the surplus of Andhra Pradesh food to places far removed from its traditional channels in South India. An answer to this was found in the creation of a separate zone for the South. Besides the curb that this promised to put on the disruption of the normal trade in foodgrains in the South, the self-sufficiency that was immanent in this scheme, at least in respect of the demand from the South for food, influenced the official decision in favour of such a scheme. Under this arrangement, the movement and transport of foodgrains beyond the borders of the zone—which incidentally comprised the four Southern States of Andhra Pradesh,

Madras, Mysore and Kerala—came to be prohibited except under a licence. The alarm cries that are heard here about the lack of sufficient foodgrains are a faint echo of the official confabulations between the representative spokesmen of these States that preceded the creation of the South Food Zone and the heat that marked the legislative proceedings devoted to its discussion.

The effect of this could have been offset only by increase in the production of foodgrains in this State. Unfortunately for Bombay, the climatic factors have chosen a most inauspicious time to register their non-cooperation in the drive to make up the shortfall in food requirements. For, the latest reports about food production have a tragic tone about them, in view of what is feared to be a fall in production of foodgrains following an unfavourable monsoon. The failure of rain has more than ordinary significance in view of the fact that a major portion of foodgrains in the State is raised as part of the Kharif crop, which can now be taken for lost. In normal times, the Kharif crop accounts for near about five million tons out of what can be taken to be the overall annual production at about 7.75 million tons.

As a result of the unfavourable factors, the Kharif crop is expected to amount to only 4.41 million tons against an estimated figure of five million tons for the last season. In percentage terms the fall works out to 18. The major casualty in this misfortune was the Kharif jowar crop, which is feared to have declined by about a third of the normal outturn. The production of jowar during the last season stood at about 1.85 million tons. Other crops such as paddy have fared none too well, paddy having suffered to the extent of 10 per cent. But a friendly bajri crop and a normal maize crop have made the position far easier than it would have been otherwise. A redeeming feature in this sad situation is the relief that has been reported of the Kharif crop from the attack of insect pests, the incidence of which on crop yields normally ranges between 5 and 10

per cent. This is particularly heartening, since generally the incidence from attack by insect pests is also at its highest when climate factors turn unfavourable, and therefore suggests that the freedom from insect pests is not a fortuitous relief but one secured by conscious and deliberate planning.

I may here emphasise that the remarking of the boundaries of the State has in no way contributed to make the situation what it is to-day. The enlargement of the territories of the State, with the increase in the number of mouths that has to be fed, has been paralleled by a proportionate increase in the acreage under foodgrains and in the production of foodgrains. The increase in acreage under foodgrains that has followed is about 44 per cent, and this has been matched by a slightly more than corresponding rise of 45 per cent in the production of foodgrains.

The actual effects of the unfavourable climatic factors have been to wipe out the achievements that were made under the First Plan in increasing agricultural production. The trend in production of foodgrains under the First Plan in the State had been uniformly upward, and increased from 3,918,600 tons in 1951-52 to 6,142,200 tons in 1954-55, the fourth year of the Plan. That this reflected an improvement in agricultural productivity would be borne out by the fact that, while production in the previous year was only 5,754,700 tons from 31,684,100 acres, even with a reduced area in the next year at 30,486,400 acres the total outturn rose to 6,412,200 tons. The reduced production that is reported this year marks the reversal of this upward trend in production.

Crop-wise, the production of rice increased by 20 per cent while that of wheat rose by 30 per cent. The reduction in the production of rice that has earlier been referred to has naturally told upon the total production of foodgrains in the State. But more significant is the fall in the production of jowar, because jowar is the most important crop in terms of the total quantity and it was the great fall in production of this particular crop that has more than any other thing,

aggravated the difficulties in regard to food supplies in the State.

The food situation now presents a challenge to the resourcefulness and the administrative efficiency of the authorities. Relief has to be rushed to all the drought hit areas, and this is no mean task, considering that such areas are most inconveniently situated in the remote corners of the State. To name a few, Kutch, Rajkot, Bhavnagar, Baroda, Nasik and Ahmednagar are in need of prompt help.

Evidence of the alertness of the authorities is available in the speeches of the Minister for Civil Supplies, Mr Kazi. Already, he has hinted at the possibility of socialisation of the wholesale trade in foodgrains with a view to checking the malpractices by wholesale traders. The introduction of family identity cards is also a welcome measure in that it would ensure that repeated purchases from fair price shops are not made by people. The expeditious implementation of warehousing schemes to which Mr Kazi referred in one of his speeches should also go a long way in bringing the situation in hand.

Am I too optimistic in suggesting that the civic consciousness that has always been the most important characteristic of this city, will help to mitigate what is a by no means comfortable or comforting situation in foodgrains?

CLIVE STREET GOSSIP

Bombay Review

Gateway Notes

Economics of Atom

Inaugurating the 11th technical meeting of the Indian Institute of Metals and a five-day symposium on rare metals organised jointly by the Atomic Energy Department of the Government of India the UNESCO and the Institute, Dr H. J. Bhabha, Chairman of the Atomic Energy Commission said in Bombay that a study of the economics of power generation in India has revealed that in most parts of the country atomic power would be economical.

The significance of this discovery for the future industrial development of India is far reaching and should profoundly alter the very course of industrial development in the country. The industrial development of India has so far proceeded on the basis of power generated from coal transported over long distances. The dependence on coal to supply the power needed by the various industries has reduced the process of industrial development in the various regions to a costly adventure in view of the heavy freight involved in the transport of coal to places far removed from the original sources of supplies. In this connection Dr Bhabha pointed out that if at present the cost of electricity produced from coal was not higher it was because of the fact that the transport of coal was heavily subsidised.

An alternative source of power supply and one which would result in a great saving in such unremunerative transport cost as coal involves at present and which would also reduce the price for the power that the industries so greatly need, is what the discovery of the possibility of power generation from atom promises to bring in. More than making power generation cheaper, the saving in the use of railway wagons that this would make possible should give the much needed relief to the railways the demands on which from other goods is likely to increase in the wake of the development. The prospects for the industries that are now experiencing a power shortage owing to underestimates at the time of original planning are also bright and should result in economy in operation.

Referring to the production of atomic energy in India Dr Bhabha said that steps were being taken to produce all the materials required in this country in due course. A heavy water plant was being set up at Nangal where the cost of the product would be very low—lower than in America which was the cheapest in the world.

Mr K. C. Mahindra speaking on 'Research and Industrial Development' said that State-sponsored research should mainly be confined

to fundamental research and pleaded for larger allocations for research which he said should not suffer for want of funds. He also suggested that industrialists voluntarily impose on themselves a cess for promoting applied research.

*

Aid to Small Industries

Encouragement and promotion of small industries as a vital part of the national economic sector and as tending to mitigate the problem of unemployment in the country is one of the accepted policies of the Government and forms an important plank in the national economic policy. The problem of developing such industries on healthy and sound lines is one of finding the capital and finance and of exploring new and more markets for the goods turned out by this sector. The establishment of the various State financial corporations was in fulfilment of this need for institutionalising the sources of credit which may be easily accessible to the small industries. Thus the extent and manner of the financial assistance rendered by these corporations ultimately determine the pace of progress of the small industries.

That these corporations are functioning in the way expected of them was vouched by Mr H. V. R. Ienger, Governor of the Reserve Bank of India when he addressed the two-day conference of representatives of the State Financial Corporations in Bombay last week. He expressed satisfaction with their

working which he said was gratifying without being spectacular. But he underlined the necessity for co-ordinating the working of the various agencies and for streamlining the organisational and administrative set-up.

Mr Ienger commended the example of Japan for the institutionalised credit service which it provided and pointed out that unlike loans disbursed by the Government departments institutional finance was more prompt and effective and less infructuous. It should therefore be the aim in our country also, to institutionalise the credit service if the small industries are to play their allotted role in providing more employment. The role of the Government departments in the promotion of small industries would be the provision of technical service such as the supply of raw materials, finding markets etc.

The major step that has been taken to bring about a system of institutional credit for the benefit of small industries was the establishment of the State Bank of India. The bank is living up to its role and has organised pilot projects in different parts of the country with the object of channelling loans to small industries. In places where the State Bank has no branches the credit is sought to be given through the medium of co-operative urban bank. In the interest of efficiency in the disbursement of such credit, co-ordination between the work of the various agencies is a matter of vital importance. One of the tasks before the conference was to consider ways by which such co-ordination could be most effective.

GATEWAY MARKETS

Yarn Market Fairly Active

THE Yarn market has remained fairly active during the week under review. While prices have not shown any material improvement, the undertone has remained very encouraging except in the case of Cotton yarn.

Better sentiment in Art Silk Yarn is attributed to growing scarcity of tenderable yarn with stockists. This means, that the statistical position has now begun to assert itself. Scarcity is now being felt and prices have been rapidly advancing. In the case of 75 deniers, there is utmost scarcity and, as a result, prices have advanced to the extent of As 4 to As 6 per pound and, even at these prices, actual users are not able to get supplies in satisfactory quantities. Similarly, scarcity

is being felt in other deniers and qualities.

In the case of Staple-Fibre yarns, particularly in 2/40s bright, which was hitherto neglected during the past many months, prices have begun to improve due to improved enquiries from important consuming centres, such as, Surat, Ludhiana, Bhagalpur, etc. On the whole, prices have improved to the extent of six pils per pound.

There has, however, been absolutely no improvement in Cotton yarn prices as demand continues to remain very slack, mainly due to the absence of satisfactory sales of cloth produced by handloom as well as powerlooms. It is reported that, since stocks of cotton cloth have increased with several mills, it has

seriously affected the sales of handloom cloth which, in turn, has unfavourably affected the sales of cotton yarns.

In fine and super-fine varieties, however, prices have remained fairly steady, while prices of coarse and medium counts have a tendency to decline further.

*

Oils and Oilseeds

The markets for Oils and Oilseeds gave a mixed performance. Trading in the Castorseed section remained subdued in the absence of overseas enquiry. May delivery moved narrowly between Rs 149.00 and Rs 150.75, while ready was done at Rs 31.25. Castor Oil, commercial quality, was quoted at Rs 16.81.

Groundnuts were comparatively steadier with rumours of further export quota for groundnut oilcake aiding sentiment. As arrivals were fairly large, there was little incentive to go "long" at higher levels. February delivery changed hands at Rs 160.12 to Rs 161.62. In the ready section, ready Bold quality was quoted at Rs 32.00 and Groundnut Oil at Rs 18.56.

Linseed was a firm feature in an otherwise easy market, following reports that business had been done with the UK in linseed oil at prices ranging from £110 to £112 per ton. May delivery changed hands at Rs 32.19 to Rs 32.31. In the ready section, the rate was quoted at Rs 30.87 and Linseed Oil at Rs 16.37.

In the Cottonseed section, February delivery between Rs 98.25 and Rs 100.

*

Gold & Silver

Sentiment on the Bombay Bullion Exchange remained subdued. In the absence of impressive demand in ready section and weakness in other commodity markets, "longs" appeared to have liquidated their holdings, resulting in a sharp fall in prices.

Arrivals and offtake of Gold were estimated at 4,000 and 3,000 tolas respectively. Mangsir delivery changed hands at Rs 108.37 to Rs 108.56 and Posh delivery at Rs 108.44 to Rs 108.50, while ready was done at Rs 108.44. Sovereign was quoted at Rs 70.62.

Arrivals and offtake of Silver were estimated at 15 and 30 bars respectively. Mangsir delivery changed hands at Rs 198.25 to Rs 198.56 and Posh delivery at Rs 183.12 to Rs 183.44. Ready was quoted at Rs 182.87 against Rs 183.00.

*

Non-Ferrous Metals

Conditions in the Bombay Non-Ferrous Metals market ruled generally steady. Copper ready was quoted steady at Rs 156 per cwt due

(Continued on page 1100)

World of Cotton

Bombay Review

Futures Slump: Spot Easy

ACTIVE selling by bears on the Bombay Cotton futures market caused a sharp fall in values during the week under review. Increasing arrivals at the terminal markets, weaker advices from upcountry centres and increasing stocks of unsold cloth with the mills acted as bearish factors. Reports of early arrivals of Vijay cotton this season further sapped the morale. Above all, apprehensions were held that cotton consumption would be low this year in view of stagnant conditions in the cloth market. The unusual delay in export quota announcement was also a contributory factor.

Thus, speculators, professionals, commission houses and spot interests rushed to liquidate their holdings. With the result, rates fell headlong although some resistance was seen at lower levels. ICC Jharilla March, after touching a low of Rs 688.50 from Rs 705, finished better at Rs 691.50.

The Spot market ruled easy in sympathy. There was an around fall in the prices of leading Indian varieties, both locally as well as at upcountry centres. Although the new crop Vijay, Surti, Khandesh, Berar, Jharilla and Punjab styles evoked some mill enquiries, they were at lower rates.

On the export front, business was dull and prices remained almost unchanged. Some quarters also appeared to be optimistic about a reduction in the export duty following a similar reduction in regard to Cotton Waste.

In the foreign cotton section, American spot lots and floats attracted customers. Ahmedabad and Southern mills evinced interest in Sudan cotton, subject to licences. Rumours were current that the Government of India had planned to bring another 10,000 bales of Egyptian cotton in the near future.

Meanwhile, textile mills are reported to have suggested to the Government the need for restricting imports of sterling area cottons to varieties of stapling 1 6/16" and not 1 3/16" and above. It was pleaded that such a step would facilitate import of American cotton which the country had been receiving under the economic aid programme. Mills are also said to have suggested that import licences should be issued to individual mills on the basis of their consumption during the nine-month period (January-September) and that they should be given three months' time to make their purchases against their individual quotas. It is considered that these suggestions would, to a very large extent, eliminate the possibilities of licences falling into wrong hands.

The Government of India have extended the contracting and delivery periods for import of American cotton under P.L. 665 upto March 31, 1958 and June 15, 1958 respectively. No licences will be issued under P.L. 480 under further notice.

Trade response to the issue of import licences has, however, been very poor and only a negligible business was reported done. This is mainly due to the comparative cheapness of BP/52 and Sudanese varieties (new crop), which are available at between Rs 1,200 and Rs 1,475 per candy as against Rs 1,550 for Good Middling American cotton.

The shortage of foreign exchange has compelled the Government of India to give priority to American cotton, which is coming in the form of economic aid. But, rumours are current that a small quantity of East African and Sudanese cottons will also be permitted on account of their relative cheapness. As a matter of fact, a substantial business in new crop East African cotton has already been put through by importers, subject to the availability of import licences.

*

STATISTICS:

Exports by rail from 1st September to 28th November 1957 were 68,920 bales. Estimated mill consumption in Bombay, during the same period, were 327,194 bales as against 332,338 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 29th November 1957, were 417,249 bales as against 428,196 bales on the corresponding date of last year.

*

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market ruled steady. Support was confined to purchase by the trade on the scale-down. Reports of improved weather in the cotton belt was the factor behind the selling in the nearer positions. Middling Spot was quoted at 36.20 cents per pound.

*

LIVERPOOL COTTON MARKET:

On the Liverpool cotton futures market, demand for high-grade cotton continued to be the main feature of trading. In the ready section, turnover was mainly in USA cotton of middling and higher grades which, in spite of an increase in the local spot rates, could still be bought for immediate delivery below replacing vaules.

*

CLOTH AND PIECEGOODS:

Trading in the Bombay Piecegoods market continued to remain dull as enquiries from the consuming centres were not encouraging. Although prices maintained a steady level, it

was said that several dealers were willing to dispose of the goods at slightly lower rates in respect of bulk orders; but buyers were reported to be scarce.

In the circumstances, traders are eagerly awaiting further developments over the question of the removal of the Sales Tax and the imposition of a surcharge on the excise duty. They feel that the abolition of the Sales Tax will go a long way in stimulating demand from the upcountry centres.

Enquiries from overseas buyers were moderate, although offtake by East Africa was reported to have slightly improved. Inquiries from Indonesia were restricted.

Meanwhile, a trade delegation from the Sudan is expected to visit this country shortly with a view to exploring the possibilities of exporting more cotton to India. Trade circles feel that, if India were to receive a larger supply of the Sudanese cotton, it may also be possible to export more cloth to that country.

Problems of Rural Development

LAST week was released here the Report of the study team for Community Development and National Extension Service appointed in December, 1956 by the Committee on Plan Projects. At first sight, it may seem that this is but another example of the familiar bureaucratic ruse of shelving inconvenient problems: a committee to produce a Report of respectable bulk which few will have the heart to read and, therefore, the hardihood to criticise. (Mr. Nehru himself, for instance, confessed with engaging frankness at a press conference that he had not read this particular

Report!) Moreover, community development programmes, more than any other practical endeavour of Government, have been the subject of frequent and, in some respects, continuous appraisal by a variety of agencies. There is, for example, the annual survey of the Programmes Evaluation Organisation examining closely the performance of the community projects administration. There is also Parliamentary scrutiny, which is both pitiless and detailed. With such multiplicity of counsel, it would appear that there was little need for another committee to examine the working of these projects. It might have also seemed that there is little that could have been said anew on the subject. Readers of the Report will be agreeably surprised to find that the last prognostication at least is wrong.

One reason why it is possible to examine the performance of the community project administration and still have some useful suggestions to make is the fact that it represents in some respects a revolutionary departure from accepted notions on rural development, and Government's functions with regard to such endeavour. The idea of integrated development of the resources of the countryside, with the active cooperation and participation of the village folks themselves, was never seriously attempted to be translated into practice until about four years ago. The organisational and administrative problems connected with such endeavour can be imagined to be simple only by people who have no experience of practical administration. In many ways, the problems are more complex than not only routine administration, but also of the newer tasks of administration like running industrial enterprises. The latter have at least the organisational experience of private enterprise at home and abroad to draw upon. Moreover, the unconventional nature of the tasks of running a steel mill is nothing compared to some of the revolutionary demands made by the administration of rural development. In the former, the readjustments required are of a sort that requires no basic modification of acquired attitudes. Moreover, the number of people involved being comparatively small, the task of readjustment is simple. But people involved in an endeavour of rural development are obliged to submit themselves to fundamental changes in their notions of their tasks. Such changes are not only confined to those who act as

the direct agencies of the changes contemplated, but also in the beneficiaries of such changes—a circumstance entirely absent in the administrative tasks connected with running industrial enterprises.

It is, therefore, inevitable that a great deal has to be learnt by trial and error and by actual experience in this endeavour of rural development. In the last five years in which the community project idea has been at work, a great deal that is good has been done, but performance has been indifferent and even poor in large areas where the idea is in operation. Among those responsible for the detailed tasks of the endeavour, initial enthusiasm has often been followed by a noticeable dampening of ardour when circumstances did not bend themselves automatically according to their hearts' desire. Failings, organisational and human, came up to the surface and these, it must be said to the infinite credit of the administration, have been sought to be manfully grappled. Five years' working has given the broadest indication of the kind of problems involved in this endeavour and this should offer some guidance in the formulating of the future course of action. The Balwantrai Mehta team has now evaluated this quinquennial experience and has made some important suggestions.

The most important problem thrown up by the last five years' experience is the one connected with the basic organisational structure of the endeavour. The problem is both tough and delicate. Rural India has had no real co-operative social life for centuries for a variety of reasons. The task was, therefore, to reactivate the rural community and to bring home to it its plain duties to itself: self-help was the lesson to be inculcated but paradoxically this had to be done by official agencies. This would mean the continuation to an extent of the old tradition of pandering to the old habit of looking up to Government for everything. In other words, Government had to set in motion a process which will have the two fold purpose of rousing the villagers to a sense of their own duty to themselves and then slowly disappear from the scene. There is doubtless an element of the absurd in the fact that a process of liberation from craven dependence upon officialdom has to be initiated under official auspices. But we may not mind this, since practical idealists are not too bothered with appearances. If our efforts will bring about desired results, we may be quite content to be figures of fun (of course, when that happens we shall no longer be figures of fun).

But the practical danger of the old habits merely being perpetuated by this expedient is very real. One of the suggestions of the Mehta Committee is the abolition of the distinction that is now recognised among various stages of development. There are recognised at present three phases of community development, the NES, the intensive development and the post-intensive development stages. The idea behind this distinction is that the villages would have gathered sufficient developmental momentum of their own by the end of the intensive phase to make further official support unnecessary. Apparently that calculation is wrong. It was found by the Mehta Committee, as also by the Programmes Evaluation Organisation in their last report, that projects that were in the post-intensive development stage were filled with frustration as they found that they have suddenly been deprived of the funds and facilities they were enjoying during the intensive development phase. Of course, if, as a matter of fact, the period for the creation of the necessary self propelling momentum is too short, there is no use shutting our eyes to it and persisting in the present distinction between various theoretical stages of development. But this situation brings home to us the difficulties in the way of trying to end the dependence on officialdom by official agencies. The villagers, to judge by the failure of the current experiment in this regard, apparently still consider community development as an official responsibility, and the moment it is handed over to them, they shirk it and lapse into old indifference. I am not saying this in any carping spirit, but the point is worth remembering when glib criticism of the community project administration is indulged in by folks who have no real conception of the problems involved.

The question of decentralisation of the community projects administration is likewise beset with almost intractable difficulties. The Mehta Committee has made detailed recommendations on the subject. It has suggested the scrapping of the present system of tagging development to the district administration, and entrusting it to elected bodies of villagers. These are to be called Panchayat Samithis and are to consist of persons elected by the groups of villager panchayats in the block area, and they are to have funds of their own and administer the whole developmental programme more or less autonomously. Their annual budgets are to be scrutinised by what is named as the

(Continued on page 1102)

North Indian Notes

Community Development

The report of the Committee on Plan Projects points to many defects and weaknesses in the working of the community development programmes and has called for measures to redefining the objects of the movement and to change the pattern of its phasing. Thus there is the confession that the movement has not been productive of any substantial benefits in the way of raising agricultural productivity which it was the object of the movement to promote, commensurate with the propaganda that had been made in its behalf and the money and attention that had been bestowed.

One of the major factors that has detracted from its complete success has been its preoccupation with welfare activities with its emphasis on the provision of amenities to the comparative neglect of activities of a developmental nature. The Committee has therefore called for a shift of emphasis in the programme from the provision of amenities to economic development, and has indicated an order of priorities such as drinking water, improvement of agriculture and animal husbandry, co-operative activities, rural industry and health.

The different phases of the programme has also been marked out in complete disregard of the availability of funds, and this had the effect of slowing down activities in the different phases, to the point of making the post-intensive blocks a mere picture of inactivity and frustration. The Committee has therefore recommended the abolition of the distinction between the three phases of the community development programme namely the N. E. S. stage, the intensive development stage, and the post-intensive development stage.

The lack of adequate funds and trained personnel makes it highly problematic whether the movement could be extended to the whole country without making further demands on financial resources in-avoidable. The Committee is in favour of scaling down the coverage of the movement during the course of the Second Plan and has suggested that the period within which the entire country could be covered by this project should be extended by three years.

The weakest spot in the programme according to the Committee relates to the development of rural industries for providing employment to the unemployed and it has suggested planned co-ordination in the working of cottage, village and smallscale industries so that they do not cut at and pull down each other.

The other recommendations of the Committee relate to the need for establishing a closer link between the gramsevak and the village panchayat, the former functioning as the secretary of the village panchayat, and for reducing the pomp and show in the meetings and seminars organised by the blocks. The Committee has also stressed the need for confining the role of the Central Government in matters assigned to the States to that of assisting the States with finances, co-ordinating research, and consultation.

between the gramsevak and the village panchayat, the former functioning as the secretary of the village panchayat, and for reducing the pomp and show in the meetings and seminars organised by the blocks. The Committee has also stressed the need for confining the role of the Central Government in matters assigned to the States to that of assisting the States with finances, co-ordinating research, and consultation.

Shipping

The Rail-Sea Co-ordination Committee has in its report made a number of recommendations for the future guidance of the shipping industry in the country. Most important it has called for urgent steps to ensure the attainment of the target of 4.12 lakhs of G. R. T. for the coastal and adjacent trades as otherwise the 'increasing demand for additional transportation facilities is expected to put a severe strain on the vessels.

The Committee has further recommended an increase in the rates on coastal freight and in the rates on coastal freight rates on coal by about 15 per cent and this recommendation has been accepted by the Government though a similar recommendation to enhance the rates on salt was not found acceptable. As a result of this increase in freight rates the total returns to the shipping companies are expected to increase. The Committee has thought it fit to make a suggestion that the

rehabilitation allowance that would accrue to the companies to the tune of Rs 37.14 lakhs as a result of the increase in freight rates should be put into a fund to be utilized for purposes of rehabilitation and for building up of reserves.

The Committee is also in favour of a positive policy of diversion to the sea and rail-cum-sea route of certain items of traffic. According to the Committee this question of allocation of different description of traffic as between rail and sea routes should be dealt with by a sub-committee of the Central Transport Board.

The Committee has also pointed to the need for rationalisation of the freight structure in regard to shipping. But it does not see any necessity for a standing machinery for this task of revising rates. Any variation of rates should as far as possible be confined to slight increases or decreases without involving violent changes in the present structure.

An organisation in the Directorate-General of Shipping for the collection and maintenance of necessary statistics in appropriate forms for purposes of cost estimates is one of the recommendations of the Committee. It has besides argued for the granting of concessional terms for loans advanced for purchases of ships for coastal operations and for preferential facilities at ports for general cargo ships on the coast as also for the grant of concessions to coastal shipping in regard to port dues. A rationalised sailing schedule with a view to ensuring regular sailings and calls at as many ports as possible is also called for.

NORTH INDIAN MARKETS

A Better Turn in Sugar Markets

SUGAR markets, which had been ruling quiet during the past many weeks, have taken a turn for the better with prices showing a slight recovery from the recent low levels, thanks to reduced pressure from both dealers and mills. Demand from the consuming centres has also been fairly good. The reported decision to abolish Sales Tax on the commodity and to replace it by additional excise duty has also a favourable effect on market sentiment.

Meanwhile, traders are eagerly awaiting the announcement of the Government's policy with regard to exports. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Jaswant Rs 33.25; Simbhauli Rs 33.25; Daurala Rs 34.05; Mowana Rs 34.25; Amroha Rs 32.50 and Mansoorpur Rs 34.81.

In the Meerut market also, prices have developed a hardening tendency due to good demand from many quarters. Bold grain is quoted at Rs 33 and small grain at Rs 33 per maund.

In order to give impetus to the export of sugar products, the Government of India have further simplified the procedure for the grant of rebate on excise duty on the sugar used in the manufacture of these products.

The Khandasari market also rules firm. In Meerut, rates are quoted at Rs 30 to Rs 32 per maund, according to quality.

Gur

In the Hapur market, new Gur arrivals averaged 6,000 maunds daily and all these were easily absorbed

following good demand from the consuming centres and comfortable loading facilities. With the result, stocks of new gur have not yet been built.

Total arrivals of gur, from the beginning of this season, were estimated at 120,000 maunds as compared to 105,000 maunds in the previous year. Balti quality is in good demand from Saurashtra at Re 1 premium over the usual Pansera quality. Pansera is quoted at Rs 13.50; Balti at Rs 14 and old stock at Rs 10.50, all per maund.

Foodgrains

Quiet conditions were witnessed in the Hapur Foodgrains market. Increased arrivals of 'kharif' grains were the main depressing factor. According to a rough estimate, between 3 and 4 million tons of foodgrains, mostly rice, have been lost as a result of the drought which had hit an area of nearly 170,000 square miles.

Wheat average quality has recorded a modest fall of 25 NP, while farm quality remains unchanged at Rs 17. Heavy quantity of imported wheat is reaching Hapur to be kept as reserve stocks for the lean period which is yet to follow.

The market for Rice rules quiet; and new crop arrivals are increasing. However, rice position all over the country is tight due to heavy losses to crops in several Northern States.

According to the Commonwealth Economic Committee Rice Supplement, the rice crop is expected to be largely maintained this season. World exports of rice in the third quarter of 1957, as far as can be gathered from statistics available, show a downward trend from the high level of the first two quarters. Smaller crops are, however, indicated in the Western Hemisphere.

Maize and Barja have recorded a fall of about 50 NP per maund following increased arrivals of the new crop. The market for Pulses remains depressed as outside buying enquiry is dull.

The Bombay market presented an easy appearance. The downward trend in Rice prices has gathered fresh momentum with several qualities declining by Rs 5 to Rs 7 per candy. This is attributed to the heavy inflow of the commodity from Madhya Pradesh, while traders are eager to unload their stocks in view of the reported improvement in the arrivals of the new crop in the growing areas. In the Coarse grains section, Jowar moved down by Rs 7 per candy as demand was small. Prices of Bajra also receded by Rs 5 to Rs 7 per candy with the new crop from Uttar Pradesh being placed at Rs 130 to Rs 134 per candy.

A Zonal Economic Council?

THE twenty-ninth Annual General Meeting of the Andhra Chamber of Commerce held at Madras, on November 30 provided an occasion for a friendly exchange of views on many pressing problems of the economy between representatives of private business and of Government.

Before entering on the subjects discussed at the meeting one might refer to the very happy impression created by the presence of Mr K. Kamaraj, Chief Minister of Madras as the President of the occasion. His presence is symbolic of the fact that political separation has not left any serious impact on the multi-lingual pattern of business in the Madras State, as also in the neighbouring areas.

As far as trade and industry is concerned, States Reorganisation has been slurred over and it is pleasing to reflect that some of the most vital links between the various linguistic groups are still being maintained intact and these function as a scarcely recognised bond of mutual good will and understanding. Incidentally, a number of offices belonging to the Andhra Government also continue to be located in Madras. For those who

care to emphasise the opportunities for regaining a complete restoration of the old amity between Andhras and Tamils, even the existing social and economic environment in the Madras City and several other areas provides ample cause for encouragement.

The Andhra Chamber of Commerce can claim the unique distinction of having ventured a delegation to Far Eastern countries a couple of years ago and some of the ideas given in the report of this delegation have subsequently formed the starting point for positive action in respect of the promotion of exports. It is also significant that the Chamber has now a membership of about 900 in South India.

The Presidential address of Mr Venugopal inevitably touched on some of the pressing problems of the day relating to the national economy. It is a theme on which unbiased assessment is now possible and there are certain facts which are too inescapable to be overlooked or misunderstood. Mr Venugopal cited one or two which are also less well known. While expressing satisfaction that progress in industrial production was being

satisfactorily maintained in spite of various new taxation measures, he pointed out how in respect of cotton textile and a number of other items, stocks have been accumulating, a point which should arouse anxiety. The price of yarn has fallen, so also for textiles.

On the side of food production, he was sceptical of the benefit to be derived from the land reforms which were being pursued by various State Governments, unless the Governments took care to supply seeds, manures, ploughing implements etc and also assured an adequate return for the produce. The strong division of opinion in the country on this subject could be seen from the move by some members from Andhra in the Rajya Sabha to discuss the inadequate enthusiasm and pace of land legislation. Of course, what Mr Venugopal thinks of is not the annulment of such legislation which is out of the question but its supplementing by suitable administrative measures and timely assistance to the farmers.

In a situation in which imports are confined to the most unavoidable minimum it is rather strange that the President of the Chamber pleads for greater check on imports of non-essential goods. He is surely on safer ground, when he pleaded for export promotion measures, both short-term and long-term, on a more vigorous footing.

Recently, the Governments have been taking a number of steps which have the effect of stimulating exports and removing bottlenecks. There is a general assurance of expeditious supply of wagons for movements of export cargo. Full rebate on customs and excise duties on the raw materials which go into the manufacture of export production is also available. Besides, there is the Export Risk Insurance Corporation.

The President of the Andhra Chamber advocates a few other important steps. He sees advantage in the formation of a Rupee Bloc, which would facilitate trade with countries in a position to open Rupee accounts. He would like to have an overall ceiling on the export of commodities in which the conflict between domestic and export demand is felt. This ceiling should apply separately for each principal port. According to him, the arrangement will remove the impediments in the way of genuine and efficient exporters.

Another idea which he is impressed with is the formation of A Southern Zonal Economic Council under the aegis of the Zonal Council already functioning. As the Governments of Madras, Andhra and Kerala are already trying to find out the ways and means of developing their own industries, the Economic Council which is envisaged

by Mr Venugopal will be in a position to coordinate schemes, to think in terms of common interests and "to place before the Centre the rightful claim of the South Zone."

The latter is one of those suggestions which is likely to gain momentum and receive the enthusiastic approval of the business community in the South. It will be recalled that the idea of Dakshina Pradesh found the warmest support from businessmen who could instinctively see more than any one else the advantages of automatic co-ordination over a wider area than a linguistic state.

The Zonal Council by its very nature is incapable of functioning with as deep and continuous an interest in economic matters as the particular requirements of the area at present call for. An Economic Council affiliated to it can turn out to be of immense good, by providing a focussing point, a common medium and a platform for the economic aspirations of South India.

Mr Nityananda Kanungo, Union Minister for Commerce, who inaugurated the annual meeting, emphasised the extraordinary urgency of export promotion and pointed out how the Government wanted every one to lend his effort to the job in his own sphere. Referring to the grievances of the private sector voiced by the Chamber President, Mr Kanungo recalled the recent debate on the Plan in Parliament, which showed that even if the present Government were to accept the idea of totalitarianism which it certainly did not and would never do, the progress of industrialisation would not be possible without stimulation of private enterprise.

According to him, the Government have cared to step in only where venture capital was not likely to come forth; he instanced the State Trading Corporation. He wanted private trade to wait and see whether the State Trading Corporation would prove to be its friend or foe.

Turning to the charge that the economic needs of the South were comparatively neglected, Mr Kanungo sought to draw a comparison between Uttar Pradesh and Madhya Pradesh on the one hand and South India on the other in respect of industrial growth over a period of five years. In his analysis, there was so much to be taken up immediately which was beyond anybody's power and therefore this sense of neglect would linger for sometime. Planning was intended to apply the necessary correctives then and there as far as possible.

Mr Kanungo also explained why India chose to be a producer of heavy machinery. This was done

(Continued on page 1102)

South Indian Notes

University Education

The charge against University education in India that it had tended to encourage an overspecialisation of studies with detrimental effects on character moulding and cultural development is not a new one. Under the system that has been existing proficiency in the specialised field of studies was attained at the cost of ignorance in the other subjects which did not come under the curricula of studies. Official concern at the sad drift of university education first found expression in the report of the Radhakrishnan Commission which drew attention to the need for inclusion of general education to counteract the old tendency.

It was with a view to exploring ways of rectifying the old mistakes that a 24-man team of University teachers was sent abroad. Mr Govindarajulu, Vice-Chancellor of Venkateswara University who headed the team presented a report to the General Education Conference that is being held at Hyderabad. Mr Govindarajulu described the background of University education in India and pointed to the conditions that necessitate the introduction of a system of general education in the various Universities. He stated that the kind of general education that should be introduced should be specially designed to suit the needs of the different areas of knowledge such as humanities, social science and science. He outlined a system under which general education would be introduced in the pre-university course and the first two years of the three year degree course the third year being wholly available for the area of specialisation.

Though the need for general education has been recognised the pattern will have to be evolved in accordance with the particular needs of the different Universities and therefore a uniform pattern is not held to be desirable. But to avoid the prospect of such education becoming too general Mr Govindarajulu pointed to the need for dovetailing such a system with scientific and technological education.

Mr Horace Taylor Morse of the University of Minnesota a member of the American team also pointed to the great scope for improving general education in the country and said that Gandhiji's concept of basic education represented a correct approach to the problem. He also made a plea for creating a separate department of general education or at least for a co-ordination to be in exclusive charge of such matter. Among other things he pointed to the need for frequent meetings and seminars, for making

general education a compulsory subject and to give it equal weightage with other subjects, and for making available a wide range of reading material.

Coffee Exports

Coffee is one of the important plantation crops of the South and is a valuable foreign exchange earner. The export surplus for the current season amounted to about 15,155 tons of which nearly 14,138 tons had already been sold. The important foreign sources of demand are West Germany, USA, France, and some other Western countries. But there are still impediments to the sale and movement of coffee to those countries. Thus an investigation into the problems that confront the export trade in coffee is desirable in the interest of increasing the foreign sale of our coffee. The need for a delegation to visit the Western countries to explore possibilities of new markets was voiced by Mr K. Srinivasan, Chairman of the Coffee Board in the course of an address to the members of the Board.

Mr Srinivasan also pointed to the need for shift in propaganda from the domestic front to the foreign front in view of what he felt to be the stabilised position that has been attained in the internal market. A situation in the internal market has been attained where an increase in consumption can be expected to take place almost automatically even without the aid of propaganda. In fact Mr Srinivasan even referred to the necessity for playing down internal consumption in the interest of increasing exports. The rise in exportable surplus reinforces this necessity for sustained propaganda in foreign countries to effect more sales there.

The production of coffee for 1957-58 is expected to be lower by about 5000 tons than in the previous year, actual production being estimated at about 37000 tons. Unfavourable climatic conditions such as disappointing and erratic monsoon and heavy rains in the picking season which gave greater room for pests to multiply was responsible for a diminished crop in the season.

In view of the export possibilities of this crop the question of development of coffee cultivation on scientific lines assumes great importance. The Coffee Board is responsible for initiating such schemes and has already embarked on this in right earnest. A total sum of Rs 2,32,452 has already been sanctioned of which Rs 2,16,952 would be spent on the promotion of intensive cultivation and Rs 15,400 on extensive cultivation.

Mr Srinivasan also referred to the adverse effects of some of the land reform measures that are being initiated in some of the States especially Kerala where because of the unsettled state of the land tenures loans to certain classes of

landed interests are made difficult. In the matter of price policy, Mr Srinivasan pointed to the decision of the Board to keep it at a stable level in spite of the increase in some of the cost items such as labour wage rates, and the emoluments of the staff.

SOUTH INDIAN MARKETS

Rubber Output and Offtake

ACCORDING to the figures released by the Rubber Board, production of Rubber has shown a further increase in October, while consumption has declined by more than 300 tons. Stocks with the estates have risen substantially, while those with the manufacturers have declined by more than 200 tons. Following are the comparative figures (in tons):—

	Oct.	Sept.	Aug.
Production	2,768	2,712	2,941
Consumption	2,320	2,668	2,664
Stocks with the			
Estates	5,619	4,459	3,269
Stocks with the			
Manufacturers	3,246	3,456	2,555

Following is the full summary with regard to production, consumption, imports and stocks (in tons):—

Opening stock as on 1-10-57	7,895
Add production in October	2,768
Imports during October	522
Total	11,185
Less:	
Consumption	2,320
Exports	Nil
Stocks with the Estates, dealers & manufacturers as on 31st October, 1957	8,865
Stock of synthetic rubber as on 31st October, 1957	1,665
Total stocks	10,490

Production, during the remaining two months of the year, is not expected to catch up with the initial loss. Even then, the year-end output in India may be slightly higher than last year's. This will leave a normal deficit of rubber, since manufacturers are consuming at a rapidly increasing rate.

Coffee

Coffee picking has begun and there are several attempts at estimating the next season's crop. The Chairman of the India Coffee Board has estimated the crop, now being picked, at 37,000 tons—5,000 tons lower than the previous crop. Meanwhile, world producers of coffee are reported to be alarmed at the weight of production. There is even an attempt to restrict

exports to 38 million bags out of 42 million bags produced in an effort to hold the price levels. The present production is half a million bags in excess of last season's world output.

Pepper

The Indian Council of Agricultural Research has sanctioned a scheme for pepper development in the Mysore State. Under this scheme, loans will be advanced to growers to bring new lands under pepper crop, while seeds and plant materials will be supplied at concessional rates.

At present, about 21,000 acres of land in Mysore are under pepper cultivation. The new scheme aims at bringing about an additional 3,000 acres of area.

Meanwhile, the pepper market in Alleppey is ruling steady with the rate quoted at Rs 556.25 per candy for superior old quality and Rs 400 to Rs 537.50 for the new season's variety. In the Kozhikode market, Wynad quality is quoted at Rs 630 and the Country variety at Rs 615 per candy.

Groundnut

The Madras Groundnut market has continued to rule quiet with the rate for the new crop easing off further to Rs 148 from Rs 152 per candy. Arrivals last week were about 400 tons; and local crushers and Calcutta interests have been operating for only small quantities.

In sympathy, prices in the Groundnut Oil section have also eased to Rs 310 from Rs 326 per candy for the ready position. Calcutta interests took up only small quantities.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides continued to be restricted. It was reported that some lots were being cleared at considerably higher prices. Arrivals and clearances of Buff hides were restricted. In the Calf section, prices were firmer by 6 NP per pound due to restricted arrivals.

**JUBBULPORE ELECTRIC
SUPPLY COMPANY, LIMITED.****NOTICE.**

Notice is hereby given that the Annual General Meeting (being the Sixty-first Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 30th December, 1957, at 3-40 p.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

(a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 30th September, 1957.

(b) That the Articles of Association of the Company be altered in manner following:—

(i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:

"82. In addition to any other meetings, General Meeting of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors.

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings".

(ii) Article 87 shall be deleted and the following new Article substituted therefor:

"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All

other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special".

(iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor:

(iv) Article 176 shall be deleted and the following new Article substituted therefor:

"176. At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company".

(v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor:

(vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor:

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 24th December, 1957, to the 30th December, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend and vote instead of himself.

29th November, 1957.

NOTE: A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

ORIENT PAPER MILLS LIMITED

NOTICE is hereby given that the Thirtieth Annual General Meeting of the ORIENT PAPER MILLS LIMITED will be held at the registered office of the Company at Brajrajnagar in the district of Sambalpur (Orissa) on Monday, the 30th December, 1957 at 4 P.M. for the following purposes:—

- (a) To receive and consider the Report of Directors and to adopt the audited Accounts of the Company for the year ended 31st March, 1957.
- (b) To declare dividends on Preference and Ordinary Shares.

(c) To elect Directors.

(d) To appoint Auditors and to fix their remuneration.

As Special Business:—

(e) To consider and, if thought fit, to pass, with or without modification, the following resolutions as Special Resolutions:

(i) "RESOLVED that the Directors be and they are hereby authorised to enter into a contract on behalf of the Company with the Upper Ganges Sugar Mills Ltd., an associate of the managing agents of this Company, providing for the purchase of Bagasse by the Company from the said associate company on the terms and conditions set forth in the draft contract produced at the meeting and initialled, for identification, by the Chairman and which is hereby approved."

(ii) "RESOLVED that the Directors be and they are hereby authorised to enter into a contract on behalf of the Company with the Oudh Sugar Mills Ltd., an associate of the managing agents of this Company, providing for the purchase of Bagasse by the Company from the said associate company on the terms and conditions set forth in the draft contract produced at the meeting and initialled, for identification, by the Chairman and which is hereby approved."

(iii) "RESOLVED that the Directors be and they are hereby authorised to enter into a contract on behalf of the Company with the Gwalior Rayon Silk Mfg. (Wvg.) Co. Ltd., an associate of the managing agents of this Company, providing for the purchase of Salt Cake, Sodium Sulphide and other chemicals by the Company from the said associate company, on the terms and conditions set forth in the draft contract produced at the meeting and initialled, for identification, by the Chairman and which is hereby approved."

The Register of members and the Share Transfer Books will remain closed from the 16th to 30th December, 1957, both days inclusive.

Explanatory Statement:

Item(e): Considering the inadequate availability of bamboos to meet the increasing requirement of raw materials for manufacture of paper by the Company, it being intended to use Bagasse as a raw material in the manufacture of paper, the Company approached the

Upper Ganges Sugar Mills Ltd. and Oudh Sugar Mills Ltd. two of the largest sugar mills in the country, for supply of Bagasse which they are agreeable to supply to the Company. Further the Company requires large quantities of Salt Cake, Sodium Sulphide and other chemicals for use in the manufacture of paper. The consumption of these chemicals has now substantially increased consequent upon the expansion of the Company's mills. Considering the great demand for these chemicals in the country vis-a-vis the limited supply thereof, it is considered expedient to enter into a contract with the Gwalior Rayon Silk Mfg. (Wvg.) Co. Ltd., who manufacture the said chemicals and are agreeable to supply the same. As all the aforesaid companies are associate companies of the managing agents of the Company, approval of the shareholders is necessary to enter into the required contracts with them. The above resolutions have, therefore, been circulated for obtaining the requisites sanction to enter into contracts with the said associate companies. Each of the draft contracts to be entered into with the said companies can be inspected at the registered office of the Company and also at 8, India Exchange Place, Calcutta, any time during business hours. It may be noted that Shri G. Prasad, a Director of the Company, is a shareholder in the Oudh Sugar Mills Ltd., Upper Ganges Sugar Mills Ltd. and also in the Cotton Agents Private Ltd., who are the managing agents of the Upper Ganges Sugar Mills Ltd. and Oudh Sugar Mills Ltd., and a Director of Birla Gwalior Private Ltd., who are the managing agents of Gwalior Rayon Silk Mfg. (Wvg.) Co. Ltd., and Shri A. L. Goenka is an executive of the Cotton Agents Private Ltd. and the said sugar mills.

By Order of the Board,
**PER PRO BIRLA BROTHERS
PRIVATE LIMITED.**
G. D. Makharia,
Managing Agents.
8, India Exchange Place,
Calcutta, the 29th November, 1957.

N.B. (i) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The dividends, when declared, will be payable to registered shareholders as on the 30th December, 1957 on or after the 20th January, 1958.

[December 7, 1957]

THE TITAGHUR PAPER MILLS COMPANY, LIMITED.

This Notice is issued in supersession of the Notice issued on 4th November, 1957.

NOTICE is hereby given that an Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 P.M. on Monday, the 30th day of December, 1957, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March 1957, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors, including Sir Asoka K. Roy, who retires by rotation, and, being 71 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution, of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is appended below.

TO BE PROPOSED AS AN ORDINARY RESOLUTION.

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation."

4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 18th December 1957 to 30th December 1957, both days inclusive.

By Order of the Board,
F. W. HEILGERS & Co. (Private)
LTD.
Managing Agents.
Chartered Bank Buildings,
Calcutta, 2nd December, 1957.

NOTES:

- (a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

- (b) The Dividends, if declared, will be paid on or after 14th January, 1958, to those shareholders so entitled whose names appear in the Company's books on the 30th December 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT.

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Sir Asoka K. Roy have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

AMLUCKIE TEA COMPANY, LIMITED.

NOTICE is hereby given that the 81st Annual General Meeting of the Shareholders of AMLUCKIE TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 30th December, 1957, at 3-00 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company."

Special Notice dated 25th November, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge is presently a Director of this Company which is a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company, and he is an associate of the Managing

Agents within the definition in Section 2(3)(c)(1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors and fix their remuneration.
- The Share Transfer Books of the Company will be closed from 20th December, 1957 to 30th December, 1957, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents,
3, NETAJI SUBHAS ROAD,
CALCUTTA, 4th December, 1957.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.
2. Payment of the proposed Dividends, if declared, will be made on or after 10th January, 1958 only to those members whose names are registered in the Books of the Company on 30th December, 1957, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE EAST INDIAN COAL COMPANY, LIMITED.

(Incorporated in England with Limited Liability)

NOTICE IS HEREBY GIVEN that the One Hundred and Fifth Ordinary General Meeting of the Company will be held at the Head Office of the Company, 4, Clive Row, Calcutta, on Monday, the 30th December, 1957, at 3 O'clock in the afternoon for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and pass the Accounts for the year ended 30th April, 1957.
2. To declare a Dividend.
3. To elect a Director.
4. To fix the Auditors' Remuneration.

The Share Transfer Books of the Company will be closed from the 18th to the 30th December, 1957, both days inclusive.

Dated this 29th day of November, 1957.

JAMES FINLAY & CO., LIMITED,
Managing Agents,
2, Netaji Subhas Road,
Calcutta, 2nd December, 1957.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

GATEWAY MARKETS
(Continued from page 1092)

to shortage of ready metal although the shortage was expected to be relieved by the arrival of a steamer. The market for Zinc remained unchanged and the rate was quoted at Rs 55 per cwt. There is nothing special to report in Lead, which hovered idly around Rs 70 per cwt. Tin was quiet at Rs 125 per quarter.

Opinion with regard to tin is still divided as to whether the present lower support price of £730 per ton should be changed. The majority view seems to be that any further reduction in the price will affect production schemes considerably. It is also felt that the operation of the "Buffer Pool Stock" can maintain prices at the present levels for a week or so and that they can be maintained for a longer period, if necessary, by financing additional buffer stock purchases by raising capital against current holdings.

On the London Metal Exchange, Copper spot was quoted steady at £183 per ton, although there was no improvement in consumption. Zinc was quoted at £65½ per ton against £66½. Consumers were reported to be buying on a hand-to-mouth basis, while many mines were reported to find it difficult to operate profitably at the current levels. Lead ruled steady at £79½ per ton. In Washington, the Tariff Commission is continuing its hearing on the petition for higher duties of lead and zinc. Tin remained unchanged at £730 per ton and the Buffer Pool continues to lend its support.

December 7, 1957]

Stock Exchanges

DULL CONDITIONS PERSIST

Watch-Dog Writes:

STOCK markets have witnessed another week of dull trading, and narrow fluctuations in prices have kept the turnover meagre. Minor flutter in values, occasioned by scattered support, has proved short-lived. Sentiment is, however, constructive and there is very little inclination to be on the bearish side.

Apart from a remarkable recovery in the speculative and the Mundhra group of shares, price movements elsewhere on the Calcutta Stock Exchange were insignificant.

On the Bombay Stock Exchange, dull conditions were obtained, partly due to settlement considerations and partly to operators' attitude to await fresh incentives.

On the Madras Stock Exchange, turnover was at a low ebb. While planting issues met with moderate activity, the general trend was indecisive.

Prices on the London Stock Exchange tended to drift and failed to establish any decisive trend.

Wall Street closed barely steady with a predominance of mostly small fractional losses at the close.

Calcutta

Calcutta, Friday Evening.

STARTING the week on an uninspiring note and lacking fresh incentive, the local Stock Exchange presented listless conditions and price movements were confined to a narrow range. Professional operators seemed to be worried over the uncertainty about the outlook for the second Plan and the mode of

raising the requisite funds on the domestic front. Sentiment was also affected, partly by the most disappointing results published by the jute mills in the Jardine Henderson, James Finlay and Bird groups.

On the other hand, investors appeared to be in no mood to enter into fresh commitments and awaiting the forthcoming annual general meeting of the Associated Chambers of Commerce on the 14th December. The only redeeming feature of the week's trading was a sharp recovery noticed in the Mundhra group of shares, which were subjected to heavy selling pressure early in the week.

The Glitged section ruled generally steady and enquiry was mostly confined to short and medium-dated issues, while price trends in long-dated loans were easier due to the predominance of sellers. State Loans, however, continued to be in good demand. 3 per cent 1986 Conversion Loan opened at Rs 70.80 and, after improving at one time to Rs 71.75, receded at the close to Rs 70.75.

Bank shares remained firm at last levels on suggestions of excellent working during the current year.

Jute shares remained depressed with prices developing an easier tendency due to heavy selling pressure following the reports of substantial losses incurred and the passing over of dividends by jute mills for the year ended 31.3.1957. The persistent weakness of the jute goods market and the uncertain outlook for the new jute crop were also contributory factors. Except Anglo-India which were maintained at Rs 152 following the maintenance of dividend and National which were supported upto Rs 20-30 from Rs 19.40, other shares recorded substantial declines in prices. Most prominent were Alliance being offered at Rs 80 against Rs 85; Champdany at Rs 116 against Rs 121 and Union at Rs 101 against Rs 128.

Howrah, after dipping to Rs 15.94 from Rs 16.50, finished better at Rs 16.12.

Coal shares came in for selective enquiry although there was a general disposition to await the Price Revision Committee's recommendations. Bengal met with good support upto Rs 231 from Rs 223 and New Beerbhoom upto Rs 14.56 from Rs 13.75. Burrakur closed better at Rs 22.00 after touching a low of Rs 21.75. Equitable changed hands at Rs 23.25 to Rs 23.75.

The Tea section recorded only few dealings and prices generally tended to sag on lack of buying. This was mainly due to the reports that the Central Government had informed the tea interests that no reduction in the export duty was under consideration for the present. Lower prices obtained in the week's

auction were another contributory factor. But, for the encouraging working results released by some more companies, the decline in prices would have been more pronounced. Brahmappootra were marked down at one time to Rs 2.47 from Rs 3.37; Bishnauth to Rs 19.00 from Rs 19.62; Hasimara to Rs 20.75 from Rs 21.00 and Jayshree to Rs 9.00 from Rs 9.37 to finish better at Rs 2.56; Rs 19.25; Rs 21.62 and Rs 9.31 respectively.

Although enquiry in the Sugar section was limited, a few scrips managed to regain some of the lost ground in view of the proximity of dividends. A bright feature was Balmppore which had some buyers at Rs 6.50 to Rs 6.56.

Textile scrips were in doldrums due to apathetic sentiment. Cawnpore moved narrowly between Rs 5.06 and Rs 5.19; Jayshree between Rs 6.31 and Rs 6.50; Kesoram between Rs 9.68 and Rs 10.00 and New Victoria between Rs 1.37 and Rs 1.44.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons when, in turn, were subjected to heavy selling pressure early in the week. There was, however, a remarkable improvement in sentiment towards the close, being influenced by a sharp recovery in the Mundhra group of shares. Against the week-end closing of Rs 19.49, Indian Irons opened higher at Rs 19.58 and receded gradually to Rs 19.36 at which level some bear-covering and bull support caused the scrip to recover again to Rs 19.66, to close finally at Rs 19.57. The settlement rate was fixed at Rs 19.44 as against last settlement of Rs 19.21.

In sympathy, TEXMACO improved to Rs 17.20, to recede at the close to Rs 17.05. In the Mundhra group, Jessop recovered at one time to Rs 2.87 and Richardson to Rs 8.31 from the low levels of Rs 21.31 and Rs 6.56, closing finally at Rs 22.12 and Rs 7.25. Braithwaite changed hands at Rs 26.56 to Rs 26.62; Burn at Rs 309 to Rs 312 and G. K. Williams at Rs 28.81 to Rs 28.94.

Miscellaneous issues ruled generally steady. The only exception to the general trend was Jardine Henderson which were depressed to Rs 59 from Rs 73.50 following a sharp reduction in dividend from Rs 7.50 to Rs 2.50 per share. Orient Paper were taken upto Rs 25.40 from Rs 25.00 and Shree Gopal upto Rs 15.23 from Rs 14.62, while Titaghur closed better at Rs 32.93 after touching a low of Rs 32.69. Indian Copper were marked down at one time to Rs 2.89 from Rs 3.00, to improve steadily towards close to Rs 2.94 on better metal market advices. The company's proposal to issue right shares had no effect on Indian Cable, which met with good investment demand upto Rs 25.94 from Rs 25.12. Dunlop Rubber changed hands at Rs 20.19 to Rs 20.37; Indian Aluminium at Rs 12.44 to Rs 12.75; Aluminium Corporation at Rs 9.81 to Rs 9.74; Hindustan Motor at Rs 6.13 to Rs 6.31; Philips India at Rs 13.31 to Rs 13.87; Sanyo Valve at Rs 4.47 to Rs 4.69; Rohas at Rs 17.25 to Rs 17.50 and Alkali Chemicals at Rs

11.62 to Rs 11.94. India Steamship was a very firm feature at Rs 11.81. NICCO moved narrowly between Rs 24.44 and Rs 24.75.

In Brief

The shares of Philips India Limited are now quoting at Rs 13.62 as against the issue price of Rs 12.50. It is stated that the amount of subscription from Bombay alone will be enough to meet the needs of the company. On this basis, the feeling is that applicants for 50 shares may get an allotment of 20 shares and those for 100 shares may get 30 shares.

The shares of TEXMACO have been enlisted on the forward list of the Bombay Stock Exchange. The unit of trading is 100 shares.

Indian Hume Pipe Company has applied to the Controller of Capital Issues for permission to issue equity shares and/or Debentures of the total value of Rs 30 lakhs. The decision is awaited.

Premier Automobiles Limited, Bombay, has declared the completion of the 55,000th vehicle in its factory. Meanwhile, the company has maintained the dividend at Rs 6 per share for the year ended 30.6.1957.

Among Jute companies, Howrah and Reliance have passed over the dividends for the year ended 31.3.57. Anglo-India has just maintained the dividend at 7 per cent for the same year.

Orient Paper has raised the dividend from Rs 1.25 to Rs 1.50 per share for the year ended 31-3-57.

T. I. Cycles of India has raised the dividend from Rs 6 to Rs 10 per share for the year ended 30.6.57. Bombay Cycles have maintained the dividend at Rs 1.75 per share for the year ended 31.3.1957.

Amalgamated Electricity has raised the dividend from 7½ to 7 per cent for the year ended 31.3.57.

National Rolling & Steel Ropes have maintained the dividend at 60 nP per share for the year ended 30-6-1957.

S. E. RLY. TENDERS

Sealed tenders are invited for supply of the following materials:—

Tender No. CS/PC/3591R/D/25 for supply of 13042 Nos. Cotter for C.I. Plate Sleeper Type W.M.R. as per CE's Drg. No. EM/1081A.

Tender forms are obtainable from the office of the undermentioned at Garden Reach, S.E.Rly., Calcutta-23 (PC Section) on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S.E.Rly., Garden Reach, Calcutta-23 by local firms. Earnest money is Rs 500/-. Tenders will be accepted upto 12 noon on 3-1-58. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the earnest money deposit receipt with the tender.

S89. CONTROLLER OF STORES

[December 7, 1957]

OLYMPUS

(Continued from page 1094)

Zillah Parishad, consisting of the president of these Samithis and district officials. The technical staff of the development blocks will, however, be under the district collector. The Gram Sevaks will be the secretary of the Panchayat Samithi. There are a few other recommendations on the functions of the Panchayat itself into which I need not go now.

Quite conceivably, this idea will work better than the present arrangement in which an over-worked collector is taking developmental work as part of his other duties. It is also attractive from the point of view of decentralised democratic participation of developmental work. Quite apart from its virtues as a more efficient administrator of community development, it may well turn out to be an extremely valuable experiment. As a source of nourishment to the grass roots of democracy, this may turn out to be a significant experiment. But the practical difficulties in the way of success of this idea should not be underrated. There is also a certain element of inconsistency in the study team's attitude. If dependence on official patronage is still strong, so strong in fact as to make it necessary to slow down the pace at which responsibility for development is to be transferred to the villagers themselves, how can it be said that the villagers are already capable of taking over the whole of the administrative functions of community development? Of course, it will be said that the difficulties of post intensive phase projects were due to the withdrawal of funds, whereas the panchayat samithis will have sufficient funds. But even so, the readiness for self help cannot be allowed to be a factor of available funds. Indeed, the whole point about self help is that it brings out the best in you in the most unpromising of circumstances.

Then again, there is the question of finding persons of sufficient calibre for the tasks of running the samithis. The study team mentions this difficulty, but thinks that it is a needless fear. In its view, "the country has found competent persons to take charge of its affairs at other levels; the need and circumstances of the block level body will discover adequate personnel within its area". It is to be seen whether this is not too confident a reading of the situation.

And, finally, as pointed out by the dissenting member, the gram sevaks' role in the new set up is such as to make him less and less a practical guide to the villager and more and more a desk official. The changed role is in some respects a pointer to the kind of routine administrative jungle in which the village samithi itself may find it if it does not take care.

But, as I said, the suggestion is original and worth a trial. It has the virtue of attempting to eliminate the obtrusive official from the scene. Since the ultimate aim is to do precisely this, the experiment may throw up the one solution that we are groping for.

BALANCE-SHEET REVIEWS

(Continued from page 1080)

Nangal Fertilizers & Chemicals

Nangal Fertilizers & Chemicals (Private) Limited—a Government of India undertaking—has presented the first annual report for the period ending 31st March, 1957. Out of the company's authorised capital of Rs 30 crores, Rs 1,28,84,000 were subscribed and paid-up during the period. A further allocation of Rs 50 lakhs was received in March 1957 in lieu of which shares were issued in April. After making the necessary disbursements, the year closed with a cash balance of Rs 79.77 lakhs.

A site of about 500 acres has been selected for the location of the factory on the western bank of the Sutlej. The plot plan of the factory has been finalised in consultation with the Technical Consultants. The selection of the factory site involves the laying of a railway siding from the Nangal Dam railway station, situated on the eastern bank across the Nangal Dam bridge. Considerable progress has been made towards the provision of this essential facility. The steel required for fabricating girder spang has been arranged for, rolled and delivered to the Amritsar railway workshops. Care has been taken to ensure that the entire job is completed and the railway siding is laid up to the factory site within a period of six to eight months at the least, well before imported plant and machinery for the factory start to arrive at the site.

In the light of the progress made up to date and, with the ordering of the more important plants, the directors have reasons to be confident that, with the possible exception of the heavy water plant, they will be able to achieve their objective of bringing the factory into production by the time the full quantum of reserved Bhakra power becomes available.

THE PENINSULA

(Continued from page 1096)

because of the saving in cost of goods and services which would occur within the span of a few years. He described the present pace of development in India as an 'industrial revolution' and pointed out that the period of transition from the colonial economy to the economy of independence could be shortened only according to the measure of effort put forth by the people particularly in the sphere of finding savings. The capacity to provide adequate national investment which in our case means the extent to which we could stint ourselves for finding savings would determine the duration of the transition.

SOFT MONEY IN US HELPS STERLING

(Continued from page 1086)

stronger sterling becomes the less the Government will feel impelled to maintain and reinforce its disinflationary measures, but for which any wage increases could easily be passed on to the consumer.

The Government now seems to be inclined to adopt a reasonably firm attitude in face of wage claims by its own employees. Moreover, the annual Treasury scrutiny of departmental estimates of expenditure for 1958-59 is based on the declared principle that if it is inevitable to spend more in one direction, a corresponding amount has to be cut down in some other direction.

To what extent this principle will be enforced in practice remains to be seen. But evidently the Government is now prepared to go further than merely to limit the volume of bank credit and await the result. Fortunately for the Government's political future, the Opposition has discarded all pretence at a statesmanlike attitude in face of the national danger of non-stop inflation. The Government's disinflationary efforts are opposed in every direction, in the hope that their inevitable unpopularity would help the Socialist Party to victory at the next election. But this attitude rests on a misjudgement of the mood of the country. The Government is likely to be forgiven for a great deal, if only its disinflationary drive produced the desired results.

(Copyright).

SOUTH INDIAN MARKETS

(Continued from page 1097)

On the export front, trading was difficult on account of the high prices quoted by Madras sellers. Common market qualities in 5/54 lbs were even offered at 3sh to 4d above London levels. Business in 8/84 lbs runs was done at 48d and fourths at 44d.

In the Tanned Skins section, arrivals of both Goat and Sheep skins showed no change. There was, however, a fair clearance although prices was generally 6 NP per pound lower.

On the export front, business was restricted. Tanners of prime quality goats were asking increased prices for all weights and selections.

The market for Raw Hides ruled firm.

WORLD OVERSEAS

(Continued from page 1087)

Miscellaneous textile manufactures showed a slight increase from £10,231,125 during the period under review last year to £10,400,452, while cotton yarns and woven fabrics rose by nearly £2,000,000—from £6,691,563 to £8,627,200.

Other commodities which the United Kingdom purchased from India showing increases on last year's figures were: crude fertilizers and crude minerals, excluding fuels, £1,871,182 (£1,521,387 in 1956); metalliferous ores and metal scrap, including manganese ore, £3,796,338 (£2,171,078); miscellaneous textile fibres, £1,083,437 (£794,412); and wool and other animal hair and

tops, including raw sheep's—and lambs'—wool, £3,976,873 (£3,685,384). Cotton purchases showed quite a substantial drop from £3,198,399 at the end of October 1956 to £2,077,969 on October 30 this year.

India continued to show interest in industrial goods, and she bought £38,057,070 worth of machinery (other than electric) during the period under review as compared with £37,721,497 in the same period last year. Her purchases of electric machinery, apparatus and appliances increased from £18,024,635 to £13,016,290, but those of railway vehicles dropped from £5,899,708 to £5,259,971. On the other hand, India's purchases of road vehicles and aircraft increased from £9,860,539 to £14,332,490.

India, however, bought less chemicals during the period under review—£14,729,000 compared with £15,403,962 in 1956. Her purchases of rubber manufactures also dropped to £915,722 from £956,399.

a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:

Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

OPEN
TOP
CAN

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

The secret of Popular Poplin — Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label... but your customers don't know the 'behind the scenes' story that ensures the complete reliability of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for you!

Look for
'SANFORIZED'
on the label

Issued by Cluett, Peabody & Co., Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.
For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

For the Investor

The Mundhra Affair

Investment Gossip:

IN the past fortnight, the Mundhra affair has been exciting interest for more than one reason. For many months now, what was known as the Mundhra group of shares (principally Jessops and British India Corporation) has been oscillating violently; and though, in these scrips, it is Lyons Range that has substantial and direct stakes, Dalal Street used to regard them as investment stocks until recent changes in control took place. And, more recently, Bombay, too, has acquired a vital stake since it became known that Life Insurance Corporation has invested over a crore of rupees in shares belonging to the Mundhra group. How, why, and at whose instance so big an outlay was made in this group, has remained a mystery. Such information as has become known in sundry stages in recent days has not helped to the unravelling of the mystery.

Such, at any rate, was the impression created by last week's debate in the New Delhi Parliament. Ministerial spokesmen admitted that the amount involved is nearly Rs 1½ crores; and Opposition speakers not only questioned the wisdom, but indulged in insinuations that undermined the bonafides, of LIC's Investment Committee.

The intriguing question is: what part has the Investment Committee played in the decision to invest in Mundhra shares on a substantial scale? Did the proposal originate in the Committee? Which member, if any, took the initiative in bringing up a proposal of this kind?

Business circles are finding it difficult to frame answers to these questions. In the ordinary course, investment suggestions will emanate from Mr L. S. Vaidyanathan, the Managing Director, dealing with the disposal of the accruing funds. Those who know LSV have no doubt in their minds that he, for his part, would never have taken the initiative in recommending Mundhra shares whose violent pregrations were not likely to appeal to an official who, for decades, has been guided by Safety First Criteria. If it could not be LSV, which other member of the Investment Committee could have

brought up the question so persuasively as to lead to a decision to invest Rs 1,25,00,000?

The opinion strongly prevalent in certain circles here is that the initiative to invest in Mundhra shares did not come from the Investment Committee. In such circles, it is even believed that the decision to make this investment was made outside this Committee; and that, in due course, the Committee was apprised of the fait accompli.

£ R\$

Investment Notes:

ON the Calcutta Stock Exchange, NICCOs have firmed up to Rs 24.81 from Rs 24.50, thanks to the maintenance of the dividend at Rs 2 per share on the increased capital for the year ended 31-3-1957. According to the directors' report, sales in the current year are satisfactory and the prospects are good. It is expected that, in the coming months, production will be augmented and the setback, suffered during the lock-out period, will not be very much felt.

The Joonkotte Tea, in Kettlewell Bullen group, has proposed to capitalise Rs 4.7 lakhs out of the Reserves and issue 48,000 Ordinary bonus shares of Rs 10 each in the ratio of one for every four shares held. The Government's approval has been obtained and the final decision is expected to be taken at an extraordinary general meeting. To be held on the 26th December.

It is learnt that the issue of new shares by Larsen & Toubro Limited has been oversubscribed. The company is making steady progress. In view of the uncertainty over the developments on the import front due to foreign exchange difficulties, the company is progressively expanding its manufacturing capacity. Sales for the first 8 months of the current financial year are reported to be higher by about 50 per cent. On the Ahmedabad Stock Exchange, New Shorrock and Shorrock Spinning are quoted higher at Rs 885 and Rs 990 respectively. These companies are reported to have received the sanction from the Government for the issue of bonus shares. New Shorrock will be offering one Bonus share for every three shares held and Shorrock Spinning one for every two shares held.

(Continued on page 1134)

HIGHLIGHTS

The history of gilt-edged borrowings in India since the 1920's would make enthralling reading.

Moreover, a study such as this would offer up many lessons in the context of the borrowing programme under the Second Plan.

In particular, the interconnection between the interest rates and the success of the New Loan stands startlingly revealed.

Thus, during the period of ascending rates, the realisations from New Loans fell.

On the other hand, in a period of descending interest rates, subscriptions to New Loans increased considerably.

While, in this regard, the period till 1939 is itself sufficiently indicative, the history of gilt-edged during the war offers added proof.

Excellent Corporate Results

Balance-Sheet Reviews:

AMONGST a number of balance-sheets received this week, the working results of the Orient Paper Mills, Indian Cable Company, Paper Mills, Indian Cable Company, Indian Steel & Wire Products, Indian Plastics, India Steamship Company, National Rolling Mills and T. I. Cycles of India are encouraging. The dividends have been increased in a few cases, thanks to increased profits.

£ R\$

Orient Paper

In the case of the Orient Paper Mills Limited, the production during the year ended 31st March 1957 is somewhat higher than that of the previous year. Sales have risen to Rs 4.46 crores from Rs 4.02 crores, while the net profit, before providing for Depreciation and Taxation, amounts to Rs 1.24 crores against Rs 1.22 crores. This would have been still higher, but for the increase in the cost of production.

In respect of allocations to Funds, the Depreciation amount is raised

to Rs 30.00 lakhs from Rs 12.00 lakhs, while a sum of Rs 15.00 lakhs is provided for Deferred Taxation Reserve. Taxation provision is reduced to Rs 40.00 lakhs from Rs 43.00 lakhs and Dividend Equalisation Reserve to Rs 10.00 lakhs from Rs 18.38 lakhs. No provisions are made for Renewals and Repairs Reserve and Development Reserve against Rs 7.00 lakhs and Rs 17.00 lakhs previously. The dividend on the Ordinary shares is, however, raised to Rs 1.50 from Rs 1.25 per share.

The directors have, in their report, stated that one of the two new paper machines, under erection, has been commissioned after the end of the financial year and is working satisfactorily. The erection of the second machine has also substantially advanced and it is expected to go into production shortly.

The programme for modernisation and extension of the Board Manufacturing Plant, the new turbine, the Water Filtration Plant, the Pulp Bleaching Plant and the Electrolytic Bleaching Plant for the

For, the effort in borrowing called for during the war resembles closely the borrowing programme that will need to be implemented for the Second Plan.

For an assessment of gilt-edged since the 1920's, and for the lessons that this period offers us, read this week's Special Study on gilt-edged.

The Story of Oil—4

Exploring for oil

It is impossible for anyone to say exactly where petroleum will be found. It accumulates in isolated subterranean traps, and these are what the oil-explorers seek, rather than the oil itself.

It must first be decided where conditions in past geological time have favoured the formation of oil. This is usually land which was once the site of an ancient sea. Having selected a likely area, the next step is to survey the surface, mapping exposed rocks and searching for any oil which has seeped to the surface.

The geologist is all the time patiently searching for signs that could point to the existence of underground rock traps. Traps suitable for an accumulation of oil consist of porous rocks in which the oil (if any is there) is hemmed in on all sides by non-porous rock. Clues

to such buried structures may be found in the banks of rivers and streams, for here the earth's rock layers are often exposed to view, enabling the geologist to calculate their age and measure the directions in which they slope beneath the surface. The rocks may contain the fossilised remains of plants and animals that lived millions of years ago, when crude oil was being formed.

Aerial photographs help the geologist too. They reveal a surprising amount of geological evidence, even in densely wooded country, enabling him to map the differences in rock structure.

When all surface sources of information have been exhausted, the next step in the search for oil is to explore deep beneath the surface of the earth. The science which makes this possible is known as geophysics.

Assam Oil

A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

manufacture of Caustic Soda and Chlorine have also started functioning. The installation of Pulp Preparation plant and other ancillary plants is progressing satisfactorily. Arrangements have been made for taking power from Hirakud Dam to meet the additional power requirements of the mills.

£ R S

India Steamship

Despite the troubles of Suez and the consequent handicaps, the freight earned by the India Steamship Company Limited, during the year ended 31st March 1957, is the highest at Rs 6 crores against Rs 5.26 crores in 1955-56 and Rs 4.01 crores in 1954-55. The gross profit comes Rs 1.67 crores against Rs 89.61 lakhs. The directors have, after providing Rs 48.36 lakhs (Rs 41.50 lakhs) for Depreciation; Rs 15.00 lakhs (Rs 1.42 lakhs) for Taxation Reserve; Rs 35.00 lakhs (Rs 15.00 lakhs) for General Reserve; Rs 7.26 lakhs (nil) for Fleet Replacement Reserve and Rs 23.75 lakhs (nil) for Divi-

dend Equalisation Reserve, maintained the dividend at Re 1 per share for the year.

As indicated in these columns earlier, the authorised capital of the company will be raised to Rs 5 crores from Rs 3 crores. As a result of this, the Preference capital will remain unchanged at Rs 75 lakhs, while the Ordinary capital will increase to Rs 4.25 crores from Rs 2.25 crores. It is proposed to utilise the Premium Reserve of Rs 24.99 lakhs for the issue of bonus shares after obtaining the sanction.

£ R S

Indian Cable

The Indian Cable Company Limited has reported excellent working results for the year ended 31-3-1957. The rise in sales from Rs 6.15 crores to Rs 6.37 crores is reflected in the net profit which, after providing for Depreciation and Taxation, amounts to as much as Rs 49.64 lakhs against only Rs 42.92 lakhs in the previous year. Apart from

setting aside a sum of Rs 15.00 lakhs for General Reserve, the Depreciation amount is raised to Rs 15.67 lakhs from Rs 14.47 lakhs and Taxation provision to Rs 10.00 lakhs from Rs 3.50 lakhs. Reserve for Replacement of Fixed Assets is maintained at Rs 5.00 lakhs. Even after these increased allocations, the directors have found it possible to maintain the Ordinary dividend at 15 per cent for the year.

The directors have under consideration a proposal to make a further issue of Right shares in order, mainly, to provide the necessary additional working capital required for the increased production resulting from the expansion projects. It is stated that the new Ordinary shares should be offered to both the existing Ordinary and Preference shareholders in the proportion of one new ordinary share for every two ordinary and/or preference shares held. The details of the issue, if authorised by the shareholders at the annual general meeting, will be announced later.

Karanpura Collieries

Following a substantial decline in profits, the Karanpura Collieries Limited has passed over the Ordinary dividend for the year ended 28th February 1957 as against 5 per cent paid in the previous year. Raisings are lower at 145,448 tons against 150,031 tons and despatches at 145,991 tons against 148,818 tons. Sales are higher at Rs 24.92 lakhs against Rs 22.49 lakhs; but the net profit, after Depreciation and Taxation, amounts to only Rs 77,072 against Rs 1,94,966 in the previous year. The directors have provided Rs 1.30 lakhs (Rs 1.40 lakhs) for Depreciation; Rs 64,000 (Rs 32,000) for Taxation; Rs 18,200 (Rs 47,200) for Taxation Contingency Reserve and Rs 26,200 (Rs 2,900) for Development Rebate Reserve.

subscriptions totalling Rs 9.45 crores, only Rs 4.81 crores were accepted.

The third loan, issued in January 1933, was a 4 per cent 1943 at Rs 98. The lists were to be kept open only between January 23 and January 26, applications were to be in cash or in Treasury Bills, and the offer was limited to Rs 15 crores. In fact, however, the lists had to be closed in two hours, with applications totalling Rs 24.8 crores. All cash subscriptions were rejected.

The fourth loan was a 4 per cent 1960-70 and was to be conversion loan only, in respect of 5 per cent 1929-47, 5 per cent 1933 and 6 per cent 1933-36. The conversions totalled Rs 33.8 crores.

Significantly, in this annus mirabilis for Government borrowing, the yield offered on Government's New Loan was reduced from 5.8 per cent to 4.5 per cent. At the beginning of the financial year, outstandings of the 6 per cent 1933-36, 5 per cent 1933 and 5 per cent 1929-47 totalled Rs 70.8 crores; at the end of the year, the outstandings had been reduced to Rs 17.4 crores. The most substantial proof of an improving response to Government's market loans in a period of descending interest rates is offered by the 1932-33 experience.

In 1933-34, the rate of interest was further reduced with an issue of 3½ per cent 1947-50 at Rs 96. The New Loan consisted of a cash section and a conversion section, the offer in each case being limited to Rs 15 crores. The loan announcement stated that the cash section would be kept open for two days; but the subscription lists were closed in two hours, with applications totalling Rs 15.6 crores; in the case of the conversion loan, the list was closed on the appointed day of May 2, when the realisations totalled the target of Rs 15.2 crores.

In 1934-35, there was a second issue of the 3½ per cent 1947-50 at Rs 98-8. Against the limit of Rs 32 crores, subscriptions totalled Rs 25.1 crores. The second loan issued was a 3 per cent 1941 at Rs 99; the lists were kept open only for two days, and the realisations were placed at Rs 10.7 crores. It may be remarked that it was the first 3 per cent loan since July 1896.

In 1935-36, a 3 per cent 1951-54 was issued at Rs 96-8. The subscription lists were opened on August 5 and were to close not later than August 10 with a limit of Rs 32 crores. The lists were closed within a few minutes, as cash subscriptions totalled Rs 16.5 crores and conversions of 5 per cent 1935 and 6½ per cent 1935 amounted to Rs 13 crores.

In 1936-37, the rate of interest was further lowered with an issue of a 2½ per cent 1948-52 at par for Rs 12 crores. The subscription lists opened on May 26 and closed in a few minutes.

There was no New Loan in 1937-38.

In 1938-39, the New Loan was a 3 per cent 1963-65 at Rs 98. The total of applications was Rs 32.3 crores, and the issue was over-subscribed in 5 minutes.

In 1939-40, a second issue of the 3 per cent 1963-65 was made at Rs 98. The target of Rs 15 crores was achieved in the one day that the lists were kept open.

FOURTH PHASE—PROGRESSIVELY ADVANTAGEOUS TERMS TO GOVERNMENT
We now come to the war years, constituting the Fourth Phase in India's recent gildedged history.

(1) 1940-41. The First Defence Loan took the form of 3 per cent 1946 Bonds issued at par and redeemable at Rs 101. These Bonds were available on tap from August 1, 1940 till January 25, 1941. The issue price was Rs 100 between August 1 and August 10. Thereafter, the prices were increased every week by 9 pips per cent so as to cover the weekly net interest accruing on the Bonds. Total realisation from the First Defence Loan amounted

to Rs 44.34 crores. The sale of these Bonds was discontinued on January 25, 1941; but its place was taken, as from February 1, 1941, by a Second 3 per cent Defence Loan 1949-52. While the First Defence Loan was redeemable at a premium of a rupee, the Second Defence Loan was repayable at par. The latter had also a later maturity period. It was, likewise, sold through the tap on the same basis of issue prices as was devised in the case of the First Defence Loan. Between February 1 and March 31, 1941, the Second Defence Loan realised total subscriptions amounting to Rs 3.47 crores.

(2) 1941-42. The 3 per cent Second Defence Loan 1949-52, which became available on tap towards the end of the earlier financial year, continued to be sold up to February 14, 1942. Total subscriptions between April 1, 1941 and February 14, 1942 amounted to Rs 55.59 crores. Including the subscriptions in 1940-41, the Second Defence Loan fetched Rs 59.06 crores.

Mention must also be made of the conversion facilities to holders of some of the rupee counterparts of the sterling loans. Option was given to convert into the existing 3 per cent 1951-54 or the existing 3 per cent 1963-65. As a result, Rs 16.79 crores of 3 per cent 1951-54 were issued and Rs 16.01 crores of 3 per cent 1963-65.

(3) 1942-43. On July 4, 1942, a Third Defence Loan was announced. The New Loan was in the form of a re-issue of the 3 per cent 1951-54 (first issued in 1935). It was available on tap from July 8, 1942 and continued to be available on tap throughout the financial year. As the interest on the loan for the first full half-year was payable on September 15, 1942, the opening price of the loan from July 8 to July 11 was fixed at Rs 100-10-8, increasing thereafter by 8 pips per cent weekly. The total subscriptions to this loan up to the end of March 1943 amounted to Rs 40.27 crores.

In addition, on October 1, 1942, Government announced a further issue of the existing 3 per cent loan, 1963-65. The issue price was fixed at Rs 95 per cent. The list of subscriptions was opened on October 3 and closed on October 15. Total subscriptions amounted to Rs 15 crores, the Reserve Bank taking as much as Rs 11.95 crores.

Thirdly, there was a steady investment of new money, especially by institutional investors, in Government loans through the machinery created and developed in connection with the repatriation of sterling debt. The amount realised from the sale of rupee counterparts amounted to Rs 48.14 crores.

(4) 1943-44. The Third Defence Loan, whose list was opened in the earlier financial year, was available on tap up to June 30, 1943. Subscriptions to the loan in this financial year amounted to Rs 14.54 crores. Total subscriptions to the Third Defence Loan were Rs 54.80 crores. The closing of the tap sales

An Indian Finance Special Study

of the Third Defence Loan was followed by the announcement of the Fourth Defence Loan, which was a 3 per cent loan, 1953-55. The new loan was made available through the tap; and the issue prices were on the same basis as in the case of the previous loans. Total subscriptions to the loan up to the end of the financial year amounted to Rs 110.85 crores.

Second, simultaneously with the announcement of the Fourth Defence Loan, a further issue of the 3 per cent 1963-65 (fourth issue) was also announced. The issue price was fixed at Rs 95-8 per cent. The amount on offer was Rs 15 crores. The list opened on July 3, 1943 and closed on July 10. Actual subscriptions amounted to Rs 15.21 crores.

Third, on October 16, the issue of a new 3 per cent Funding Loan, 1966-68, was announced. The list opened on October 22. The issue price was fixed at Rs 98. The list closed on October 26, 1943. Total subscriptions amounted to Rs 25.12 crores. On January 10, 1944, in response to continued demand for longer-dated loans, a special issue of Rs 50 crores of the 3 per cent 1966-68 was created. Fourth, sales of rupee counterparts amounted to Rs 78.05 crores.

(5) 1944-45. The Fourth Defence Loan, which had been on tap since July 3, 1943, was closed at the end of the previous financial year; but the overflow of subscriptions accounted for Rs 3.73 crores as received in 1944-45. Total realisations from the Fourth Defence Loan were, thus, Rs 114.55 crores.

Second, from April 1, 1944, the 3 per cent Victory Loan 1957 became available on tap. The issue price was fixed at Rs 100-2-8 during the first week, increasing thereafter at 8 pips per week. The loan continued to be on tap till February 17, 1945. Total subscriptions amounted to Rs 112.82 crores.

Third, to meet the demand of Banks for a short-term security, Government announced, on June 2, 1944, the creation of a special issue of the existing 2½ per cent loan, 1948-52, to the extent of Rs 50 crores.

Fourth, to meet the demand for a long-term security, a third issue of the 3 per cent Funding Loan, 1966-68 was created early in October to the extent of Rs 35 crores.

Fifth, following the closure of the First Victory Loan on February 17, 1945, announcement was made on March 13, 1945 of the issue of the 3 per cent Second Victory Loan, 1959-61. The list was opened with effect from March 19. Total subscriptions up to the end of the year amounted to Rs 6.15 crores.

Sixth, sales of rupee counterparts accounted for Rs 14.95 crores.

The following table is the final corrected list of subscriptions to Defence Loans (including small savings) for each of the years in the quinquennium 1940-41 to 1944-45.

(In Lakhs of Rupees)					
	1940-41	1941-42	1942-43	1943-44	1944-45
3½ Six-year Defence Bonds:					
(a) First Series	71	...	...	...	71
(b) Second Series	44.43	...	...	20.00*	64.43

					838.58

*Includes amounts taken up by the Government of India in the Cash Balance Investment Account.

If the above facts and figures are closely scrutinized, the following points emerge as the salient features of the strategy adopted

for maximising receipts from public borrowings for financing the war.

A. Government financed the war mainly on

An Indian Finance Special Study

a 3 per cent basis. The two exceptions were the higher rate paid on tap sales of 3½ per cent (undated) Paper issued as counterpart of repatriated sterling loans, and the lower rate paid on the tap sales of 2½ per cent loan, 1948-52, specially created to meet the demands from Banks for a short-dated security.

B. Improvement in the terms of borrowing was secured through raising the periods of maturity of successive fresh loans. There were four Defence Loans and two Victory Loans, the maturity period rising in a crescendo. Thus, the First Defence Loan was a 1946 stock. The Second Defence Loan was a 1949-52 stock. The Third Defence Loan was a 1951-54 stock. The Fourth Defence Loan was a 1953-55 stock. The First Victory Loan was a 1957 stock. The Second Victory Loan was a 1959-61 stock. The maturity was, thus, stretched out from six years in the case of the First Defence Loan to fifteen years in the case of the Second Victory Loan, taking the earlier maturity date in the case of the latter.

Indeed, without coal much of our industrial and commercial life would be brought to a standstill. What's more, the coal industry must continue to grow if it is to keep in step with the country's expanding demand.

and in the progress of this vital industry, the Life Insurance Corporation of India plays a significant part. As the largest institutional investor in the country, it channelizes the savings of millions of policy-holders.

By investing funds in the coal industry, the Life Insurance Corporation benefits the Policy-holder in two ways. Directly, by ensuring a secure investment with profitable returns. Indirectly, by fostering an enterprise basic to the national economy.

Life Insurance Corporation of India

Name of Security	Total Subscriptions (In Crores of Rs)
3 per cent 1946	66.14
3 per cent 1949-52	59.16
3 per cent 1951-54	54.80
3 per cent 1953-55	114.58
3 per cent 1957	112.82
3 per cent 1959-61	6.15
3 per cent 1963-65	30.21
3 per cent 1966-68	110.12
3 per cent Non-terminable Loan	148.73

F. The flow became a flood in 1943-44 and 1944-45. Public borrowings fetched Rs 315.82 crores in 1943-44 and Rs 224.92 crores in 1944-45. The figure for 1944-45 could have surpassed that for 1943-44 but for (a) 100 per cent immobilisation of excess profits, (b) "Pay-as-you-earn" income tax collections and (c) sales of gold and silver.

G. Total public borrowings in 1940-45 amounted to Rs 833.58 crores. This gives an average of approximately Rs 167 crores a year. In the light of the experience in 1943-44 and 1944-45, and taking the special circumstances (already referred to) in the case of 1944-45, the annual average may be said to be of the order of Rs 300 crores. It was in these two years that the full effects of the large defence expenditure were felt.

Drift in Pakistan

Pakistan politics are once again in a turmoil, thanks to the falling out of the Republican party on the separate electorate issue. Mr Chundrigar, of course, resigned, but present indications are that he will also be heading the next Government. To that extent, it is true that there may be no change in the Premiership, but nevertheless the fall of the Government would appear to be analogous to the nonchalant ringing of the changes in that country.

We may be sure that neither President Iskandar Mirza nor his Western friends will be happy at the recurrent crises that seem to be overtaking Pakistan. From Mr Mirza's point of view, while the weakness of the political element insinuates the increasing power of the military, he should be sorely troubled by the manner in which each attempt at democratic Government is being foiled. For, it is clear that Pakistan today is showing itself to be incapable either of producing a military dictatorship such as exists in some of the countries of West Asia or of achieving what is glibly called controlled democracy. In so far as democratic government needs to be an essential characteristic of an ally of the Western Powers, we can presume that Mr Mirza will be anxious to avoid a flagrant or blatant military dictatorship. But the alternative is to have a stable government, although politically not powerful, which would be supported by and constitute the mouthpiece of a military junta; and this is what will be comprised by controlled democracy. But all current indications are that governance in Pakistan is one just of drift.

Editorial Notes

The present crisis, caused as it has been by the electorate issue, is a strong indication that the exercise of their franchise by the Pakistan masses has received a further postponement. More than a decade has passed since Pakistan's independence, but it looks as if two will elapse before general elections are held. This is sure to arouse anxiety in Pakistan's Western allies, and particularly in America. For, inevitably, the far from comfortable political situation in Pakistan will distort the kind and nature, and even significance, of the support that America may give. In a word, Pakistan will be grouped together with Formosa, with South Korea and with South Vietnam as continuing to exist by courtesy of American aid.

And yet, in the peculiar circumstances of Pakistan, a military dictatorship alone may put it on the way to democracy. Until the economic base is strengthened, political stability is not likely to be achieved; and that economic base appears likely to be achieved only with the apt assistance of a strong government, even if that should be in the form of a military dictatorship.

★
Pipe Line for India

It is heartening that, ultimately, Government and the Burmah Oil and the Assam Oil Companies should have come to terms on the establishment of two refineries and on the building of a pipe line for oil. Negotiations have, in this matter, proved extremely volatile and we were never sure, until the announcement last week, that some sort of agreement would be reached. While the decision to set up the refineries and build a pipe line are in themselves to be welcomed for the exploitation that they will enable of the Assam oilfields, there are various other aspects of the matter which, too, are extremely comforting. For, it has resolved what might have turned out to be a crisis caused by inter-State rivalry. Now, both Assam and Bihar are to have refineries, and the provincial ambitions of the two States have been fulfilled. Again, the agreement is timely in the sense that, at a juncture when this country is anxious to attract foreign capital, Government have been able to persuade two sterling companies to make fresh investment in this country. While the details relating to this agreement are not yet available, it is intriguing to note that the two refineries are to be owned by the State and run as part of the public sector. The two oil companies have agreed to form a rupee company for exploiting reserves in Nahorkatiya, Hugrijan and Moran. The most satisfying aspect to emerge from

the agreement is the offer by the Burmah Oil Company to advance a sterling loan of £ 10 million to the rupee company for meeting some of the foreign exchange costs involved.

At this stage, particular attention needs to be drawn to the acquiescence of the oil companies in the Indian decision to have the new refineries in the public sector. For, the world oil companies have until recently tended to look upon such prospective participation by governments as encroachment into their field. However, the world politics in oil have changed considerably in recent times, and particularly since the nationalisation of the Suez Canal. As an instance, we might cite the willingness of an Italian company to enter into an agreement with a West Asian country, by which all costs of prospecting were to be borne by the Italian company, although profits were to be divided in a specified proportion. The national aspirations of the underdeveloped countries—and it is these which are the prospective and proven sources of oil—demand, in the present circumstances, such participation by the governments concerned.

From whatever point of view we consider the latest developments in Indian oil, there is room only for complete satisfaction.

★
Trouble in Indonesia

Events in Indonesia have taken a grave and unfortunate turn with Government threatening, through its Foreign Minister in Paris, to break off relations with the Netherlands unless matters could be normalised. The definition of what was normal was forthcoming from Dr Subanbri, when he stated that the relationship should be free from the "interference which exists at present". He was also led to remark that the Indonesian concept of amicable relations was comprised by the ties between India and the UK. It serves little purpose to enter into a discussion of the causes which have led to the current deterioration of political conditions in Indonesia. But there is very little doubt that a country that has but recently achieved freedom from colonial rule harbours—with the striking exception of India—a psychological resentment against the erstwhile ruler. We hasten to add that we are not suggesting that the bitterness which today characterises relations between the Netherlands and Indonesia stems from merely such resentment. At the same time, we cannot be quite sure that the Dutch attitudes have not exacerbated what was already a delicate position. Lastly, the internal politics in Indonesia may also have compelled the Government to save face by adopting a sterner policy.

Be that as it may, there can be no gainsaying the regrettable extremes to which such policy has been carried. The vigorous controls over Dutch firms, the ending of the franchise for the KLM Lines, the hint that Dutch consulates will be asked to close down, the warning that diplomatic ties may be severed—all these are almost fanatic in their total impact.

It is significant that there should have been reports of overtures made to this country for, if not mediation, at least intervention to minimise the conflict and friction in the current series of disorders. In the second place, this is a fresh indication of the political instability that generally seems to hold sway in West, South and South-East Asia—again, always excepting India. Unfortunately, that political instability is itself founded to a considerable extent on the difficulty of advancing from an acute economic backwardness. So, a vicious circle is found out of which it seems hard for any of the countries to escape. The solution, of course, lies in the enlightened provision of every kind of economic assistance to strengthen the economic base of the countries concerned. No puppet Government—which is what would be constituted by external support in merely political or military terms—can succeed in imparting stability, political or economic, to a nation. The foundation has necessarily to be in the economic sphere. In this context, we may wonder whether a series of unconnected events, not excluding the launching of the Sputnik by Russia, will not arouse in the free nations of the industrialised West a correct realisation of the need, for their part and on their part, to concentrate upon the strengthening of the economies of the underdeveloped world.

World of Finance

More Comfortable Position
of Scheduled Banks

WITH the availability of details in respect of Scheduled Bank's returns, it is possible to assess the position of the three entities comprising the member banks and also to suggest the scope for the separate entities to deal with the demands likely to arise in the course of the 1957-58 busy season. As on a former occasion, we present in the form of a series of four tables the breakdown figures relating to Deposits, Borrowings, Cash, Giltedged Holdings and Advances, together with the ratios of the last three to Deposits. The three dates for which figures are taken are: (i) October 26, 1956 re-presenting the beginning of the 1956-57 busy season; (ii) April 26, 1957 constituting the peak of the 1956-57 busy season; and (iii) October 25, 1957 which must be presumed to be the official beginning of the 1957-58 busy season.

On the overall picture, there are two important points to note. On the one hand, the Deposit resources of Scheduled Banks are at a much more comfortable level on the eve of the 1957-58 busy season, thanks to accruals during the earlier 12

months amounting to Rs 231.96 crores. The second point is that, although Advances have, in absolute terms, risen over the year by Rs 107.58 crores, the ratio of Advances to Deposits is placed at 62.2 per cent on the eve of 1957-58 busy season as compared with a very much higher level of 68.9 per cent that obtained last year at this time. Thus, firstly, by virtue of the fact that Deposit resources are larger, the Scheduled Banks have more lendable funds. Secondly, to the extent that the starting point of the Advances ratio to Deposits is much lower, there is to that extent elbow room for the Scheduled Banks to increase their Advances. In this regard, it may be noted that, on the basis of the Advances ratio rising to the same level as last year, or 68.9 per cent, Scheduled Banks, even on the present Deposits, could increase their advances by Rs 93 crores.

But we must have regard to the fact that, during the last busy season, accruals to Deposits amounted to the considerable figure of Rs 128 crores. An apposite proportion of such likely accruals during 1957-58 is also presumably available for expanding Advances. Moreover, the ratio of Advances to Deposits rose by the last busy season peak to 73.7 per cent; and, on that basis and at the current level of Deposits, Advances could be allowed to rise from the October 25, 1957 figure to Rs 1029 crores—or an expansion, over the busy season, amounting to Rs 160 crores. Against this, we may note that the actual expansion in the last busy season was placed at only Rs 148 crores. This would seem to suggest strongly that, even in the contingency that Deposits do not rise spectacularly during the current busy season, the banking system will nevertheless be able to manage an expansion in Advances of roughly Rs 160 crores, though we must add the proviso that this could be enabled only with the suitable assistance of the Reserve Bank. Such assistance could easily be by way of advances against usance bills. Since such advances account for the bulk of total borrowings from the Reserve Bank, we need not at the present time differentiate between the two but we shall use the latter figure. In this context, it is testimony to the comfortable position of Scheduled Banks that their Cash Balances have improved by Rs 58 crores over the year, such that the ratio to Deposits has gone up from 8.8 per

cent to 11.1 per cent. So, it is to be presumed that the extra element under Cash Balances is freely available for disposition in the form of Advances. Then, there is also the fact that borrowings from the Reserve Bank are placed roughly at half of the level that obtained on the eve of the last busy season. Thus, in the event that, due to unforeseen reasons, the money market is afflicted by undue stringency, the Reserve Bank could always replenish the resources of the banking system by increasing facilities under the usance bills scheme.

While such is the impression to be gained from a study of the figures for all Scheduled Banks taken together, certain qualifications must be made on the basis of the position of the three different entities.

As far as the Exchange Banks are concerned, while there is an apparent increase in Deposits over the year of Rs 52.46 crores, it needs to be realised that a moiety of this is accounted for by an increase in borrowings from banks, which, in the present tables, have been included under the head of total Deposit Liabilities. The figure for October 1956 in respect of borrowings from banks was Rs 12.41 crores. At the end of October 1957 the relevant figure exceeded Rs 34 crores. Thus, the increase in net Deposits

(Continued on page 1131)

State Bank Takes up Rs 20
Crores of Tap Issue

The returns of the Reserve Bank for the week ended December 6, would suggest that, finally, the 1957-58 busy season has got off to its start, even after making allowance for the fact that these returns undoubtedly include an element of

distortion constituted by month early disbursements.

Active note circulation has shot up by Rs 31.09 crores to Rs 1509.25 crores. This is the sharpest rise in active notes to have occurred since

Inflation Through Arbitration?

By PAUL EINZIG

THERE are indications that the firmness displayed by the Government in respect of wage demands by railway employees and National Health Service employees has not failed to impress the trade unions. It is true, there is no weakening in their wage claims, but they now appear to be less bellicose in the matter of enforcing those claims. While a month ago threats of strikes were made as a matter of course, in recent weeks there has been more talk in trade unionist circles about submitting the wage claims to arbitration. Instead of applying brute force, they are thinking of resorting to a much more subtle method to achieve

their end. They are afraid that in existing conditions strikes are apt to be prolonged and costly, and their outcome is apt to be doubtful. So they may prefer to become law-abiding and agree to a peaceful settlement of their disputes, by submitting them to arbitration.

Employers and employees are represented in equal numbers on tribunals of arbitration, and the chairman is appointed by the Minister of Labour from a panel of "impartial" persons such as academic economists, lawyers, retired senior officials, etc. For all practical purposes it is almost always the chairman whose decision

matters, for the representatives of employers and employees naturally support their respective sides.

This means that, should the wage disputes of the major industries be submitted to arbitration, it would be the choice of chairmen of the tribunals that would determine Britain's economic trend. There is no recognised set of rules on which the arbitrators can base their decisions. Each chairman has to elaborate his own set of principles. Some of them may want to make wage increases dependent on productivity. Others may want to aim at "fair" differentials between wages in various branches of industry. Others again may consider it their duty to maintain real wages by adjusting money wages to the increase in the cost of living. Decisions

may represent a compromise between these and other principles.

Will the arbitrators be willing and able to base their decision on the overriding requirements of the national economy? In many cases an unanswerable case can be made out in favour of granting wage increases, viewed from the point of view of the particular groups of employees concerned. But the sum total of these unanswerable cases is inflation. No doubt some arbitrators will be fully alive to this aspect of the problem. Even so they may take the view that their job is not to run the economic policy of the country but to secure fair deal to the group of employees whose fate they are called upon to determine.

The linking of wage increases to (Continued from page 1120)

World of Tea

Auctions Still Unsettled

TEA auctions are again unsettled this week. A lot of the teas now coming forward is showing a decline in quality; and this has been a factor contributing towards lower prices generally obtained. The abundance of supplies has also played its part in dampening the sentiment.

The output of tea in Northern India in November is placed at 46.89 million pounds, which is 0.7 million pounds lower than that in November last year, when there was a voluntary restriction on the crop. The lower output is also attributed to an early onset of the winter season. Total output, during the year up to the end of November, amounts to 509.50 million pounds as compared to 538.63 million pounds in the corresponding period of 1956, showing a decline of as much as 29.1 million pounds.

In spite of a substantial shortfall in crop, the quantity of teas sold on the Calcutta market, to the end of November, shows an increase. The Leaf sales totalled 1,062,000 packages as compared to 1,054,000 packages for the previous season, while the Dust Sales were 15,000 packages ahead of 1956.

In the Export Sale held in Calcutta this week, offerings were 63,751 packages which met with a poor and irregular demand. There were appreciable withdrawals of teas in all categories. Internal buyers gave some support to the Commonest descriptions, which declined by 6 to 8 nP per pound. Clean Commons, Medium BPs and PFs were fully 10 nP easier.

Once again, a weak feature of the sale were the medium BOPs and OFs, which eased by 20 to 30 nP except for the few invoices with bright liquors which were sold well. The better liquoring CTC Assams received fair support, but these declined by 20 to 30 nP, while those with indifferent leaf and liquors were difficult of sale. Non-wither Dooars also participated in the general decline.

Darjeelings met with a very limited demand and were often withdrawn, while Whole Leaf grades and Tippy teas were sold well although at irregular rates. Following rates were quoted:—Plain BP Rs 1.50 to Rs 1.52; Plain Fannings Rs 1.54 to Rs 1.56; Medium BP Rs 1.56 to Rs 1.58; Medium Fannings Rs 1.60 to Rs 1.64; Clean Black Pekoe Rs 2.25 to Rs 2.30; Best Assam CTC BP Rs 2.80 to Rs 3.00 (nominal) and Best Assam CTC Fannings Rs 2.60 to Rs 2.80 (nominal).

In the Internal Sale, offerings consisted of 20,800 packages of Dusts for which there was restricted demand, which weakened as the sale progressed, particularly for CTC Assams. Prices for orthodox descriptions from all districts were up to 6 nP lower at the beginning of the

sale, but eased further and were upto 10 nP lower at the close. There was a better demand for black leafy exportable grades, suitable for the Middle East; but these usually shared in the general decline in prices.

CTC Assams were a weak feature of the sale and there were fairly numerous withdrawals of teas in this category. The best liquoring descriptions were up to 40 nP lower

at the close, while medium CTC sorts were between 20 and 25 nP easier. Following rates were quoted:—Medium Dooars Dust Rs 1.58 to Rs 1.60; Medium Assam Grainy Dust Rs 1.60 to Rs 1.64; Medium Assam CTC Dust Rs 1.80 to Rs 1.90 and Best Assam CTC Dust Rs 2.40 to Rs 2.65.

Also, 1,551 packages of Leaf grades were offered for internal consumption. There was a fair demand at irregular rates.

In the Export Quota section, the rate touched a low of 8 nP from the opening rate of 14 nP, to finish the week better at 12 nP. Business was reported done between these levels.

A quantity of about 2,100,000 pounds of Leaf teas was offered for export at the auction held in

Cochin last week. Quality showed a decline from the previous auction, particularly amongst the high-grown teas. Low Medium Broken and Fannings met with a fair enquiry at rates 5 to 10 nP below last rates. Medium and good Medium teas were irregular and declined by 10 nP per pound. Best Liquoring teas were the weakest feature of the sale and prices were 30 to 40 nP easier and there were a number of withdrawals. Whole Leaf teas were also easier, but sold more readily at the drop. There was an improved enquiry for Tippy sorts.

In the Colombo market, offerings were 5,914,839 pounds. Prices of Nuwara Eliya teas were lower for the small quantity on offer. Uva teas are now becoming very green.

World of Jute

Successive Decline in Stocks

THE Jute Goods market, which had been ruling weak during the past few weeks, has taken a turn for the better, thanks to the release of the stock figures. Stocks, which stood at 116,000 tons—highest for the year—at the end of June, had been

showing a steady decline to 76,000 tons at the end of October. At the end of November, they have shown a further decline of 4,700 tons to 71,300 tons—the lowest for two years—which compare with as much as 101,700 tons at the end of November

last year. At this stage, it will be interesting to study the stock and production trends during the last five months (figures in thousand tons):—

STOCKS			
End of:	Hessian	Sacking	*Total
November	26.0	35.5	71.5
October	29.5	37.5	76.0
September	30.3	39.1	77.0
August	34.8	51.1	82.5
July	36.3	63.6	108.4

PRODUCTION			
November	33.4	53.2	91.9
October	31.7	47.1	83.5
September	33.7	47.8	86.0
August	33.9	43.1	81.9
July	35.6	45.0	85.9

*Includes also Other Varieties.

From the comparative figures, it will be clear that stocks, apart from a steady decline, have been running substantially lower than a month's production. Again, production, especially of sackings, have been showing a rise, indicating thereby that the mills have been switching over more looms to the production of these classes of goods during the past few months. Despite this fact, the decline in stocks has been more pronounced in sackings than in Hessians, reflecting a steady increase in internal consumption of the former classes of goods.

It may, however, be added that, owing to the continuous transfer of Hessians looms to the manufacture of heavy goods, the proportion of production of the latter has increased in comparison to Hessians. There is, therefore, no longer any squeeze in the ready delivery position of sackings; and this is being reflected in prices. Speculators have been trying to unload stocks on an unwilling market and depress prices. It is, however, encouraging to note that, while the prices of ready goods have been touching new low levels, more attention is being paid to the forward delivery position as prices are lower and considered attractive.

In contrast, the rates for the forward positions in Hessians are higher than those for ready goods. Moreover, in comparison to sackings goods, the decline in the prices of Hessians is insignificant. This is mainly to the strong possibility, entertained in market circles that, in the near future, there will be more enquiries from the USA in view of the low stocks there. As a matter of fact, preliminary figures for November show that shipments of Hessians and, to some extent, sackings, have sharply recovered after the setback recorded in October; and this trend is expected to be maintained during the coming months.

Marketwise, for obvious reasons, Hessians have shown a greater degree of confidence as enquiries have already started flowing in from the USA. This is reflected in the higher rates quoted for forward delivery than for the ready position. It is generally felt that conditions in the market, which have now taken a slight turn for the better, will be still better in the coming weeks. This may probably be the reason that mills are not keen sellers at the present levels, except perhaps for forward Hessians, which are showing a premium over ready.

The Raw Jute section, however, rules practically unchanged, although mills are showing only limited interest. This is mainly due to the fact that, during the current season, the raw jute crop in India as well as Pakistan is reported to be as large as last year; but arrivals have lagged behind for one reason or another. It is, therefore, felt that arrivals will increase considerably in the coming months. Moreover, raw jute prices in Pakistan are reported to have fallen sharply due to lack of overseas demand.

The Re-rolling Industry

The Steel-Re-rolling Industry, Electric Furnaces and Steel Foundries constitute an important sector of heavy industries of the country and as such their development on sound lines is basic to the industrial progress of the country. A Six-member Committee was therefore set up by the Government of India in July 1956 and was asked to ascertain the raw material requirements, the kind of expansion that is possible having regard to the availability of raw materials in the future, suggest ways and means of improving the efficiency of these units, assess the additional capacity that it may be desirable to set up, indicate suitable locations for the new units having regard to the importance of promoting regional development and other relevant considerations such as transport facilities and raw material supplies and formulate principles which should govern the examination of the applications for setting up of re-rolling mills.

In its report the Committee has drawn attention to the great shortage experienced by the units working on the basis of billets which had consequently to restrict their operations to single shift and even less. Their total requirements of billets which has been estimated by the Committee at 1,458,024 tons per annum is far ahead of even the anticipated availability of billets for 1960-61 at 876,250 tons. Therefore the Committee has recommended that billet supplies should be regulated in the manner which does not disturb the existing pattern of distribution. The Committee has further urged that the Government should make special efforts to get from steel producing countries, through trade agreements or otherwise as much billet supply as possible to supplement the indigenous production to enable the re-rollers to work on an economic basis. In the event of adequate supplies being not available the Committee has recommended that the allocation should be on the basis of capacity recently assessed.

In the matter of creating new capacity the Committee was of the view that there was scope for new capacity in the areas where there was at present a deficiency, such as Andhra, Assam, Bihar, Madras, Mysore, Kerala and Orissa.

The Committee's other recommendations relate to the necessity to revise the existing classification of re-rollers in favour of one which recognises only two categories on the basis of the type of raw material used namely billets or scrap, and also the desirability of giving encouragement to the steel foundries to expand their capacity to 36,000 tons per annum from the present level of 21,000 tons.

subject to a detailed technical assessment of the mills.

Tata Chemicals

Addressing the Eighteenth Annual General Meeting of the Tata Chemicals Ltd, Mr J. R. D. Tata, Chairman of the Company referred to the impressive progress made by the Company and pointed to the improved sales which resulted in an increase of a little over Rs 9.5 lakhs in the taxable profits of the Company. Mr Tata proudly claims the new liability to income tax as indicative of the stability that has been attained in the operations of the Company.

As regards actual production, that of sodium bicarbonate went according to schedule while that of soda ash fell short of expectations

because of a bottleneck at the finishing end. He attributed the progress so far made to the policy of the Government for the orderly import and distribution of soda ash and caustic soda. But he expressed doubts about the prospects for the current season in view of what is feared to be a shortage of fresh water supplies.

The Tatas have also in view the expansion of capacity for increasing the production of such items as soda ash, caustic soda. These schemes have reached a stage where only the needed finances have to be secured for their execution, the technical aspects having been already settled. The schemes are estimated to cost about Rs 424 lakhs. While part of the funds that are required would be secured by the issue of ordinary shares for which the approval of

ACC HONOURS THE CODE

3

"Employers owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible."

Code of conduct—FORUM OF
FREE ENTERPRISE

As an employer of labour the ACC can well point with satisfaction to the salary/wages and other emoluments paid to its employees and to the many welfare activities voluntarily undertaken over the years.

To take salary/wages first, compare these figures of ten years:

	1945-46	1955-56
No. of employees	17,500	29,000
Salary/wages & amenities	Rs. 127.3 lakhs	Rs. 421.5 lakhs

Thus while the increase in the number of employees was 66%, the increase in the salary/wages, etc. for the same period was over 230%!

As for welfare activities, employees of the ACC's 17 factories and two collieries have for a long time been enjoying a large number of amenities for their security and social welfare, namely: provident fund and gratuity; schools, hospitals and dispensaries, creches, canteens, cinemas, clubs, playing grounds; welfare and benefit fund, and co-operative societies.

All these benefits have been provided out of a consciousness of social obligation. The ACC believes that a well-paid, well-looked-after, happy and contented employee is the best employee.

THE ASSOCIATED CEMENT COMPANIES LIMITED

THE CEMENT MARKETING CO. OF INDIA PRIVATE LIMITED

being some of the difficulties of prospective foreign investors in India as anticipated by the Birla Delegation. I am sure these are not particularly harassing in India and certainly not beyond the wits of determined persons to get over.

*

There remains, therefore, the question of taxation. On this question, if press summaries of the Birla Delegation's Report are not misleading, there is an interesting contrast in emphasis between the De-

legation's Report and Dr Lokanathan's Report. The Delegation's principal thesis seems to run along the following lines: There is no limit to the extent of flow of capital from the US and West Germany if such capital could be matched by corresponding Rupee capital. But, says the Delegation, the real difficulty is the finding of necessary matching domestic capital because of the difficulties of the domestic capital market where, owing, among other reasons, to penal taxation, very little saving is left for investment.

I do not want to make much of this argument, but does this not suggest that the foreigner is not particularly bothered by the fear of taxation, but wants an assurance of sound domestic participation in anything he chooses to start here? In other words, he is willing to put up with anything by way of taxation which the local investor himself finds not too onerous to bear. What is good enough for you, he seems to say, is good enough for me. What he really seems to be anxious is to have Indian vested interest in his undertaking so that any zeno-

phobic acts in the future may be neutralised. To put it differently, if in the dim future a less reasonable government is at the seat of power and puts through expropriatory measures, then he does not want to be left "holding the baby". Such expropriatory acts may even be made respectable by pretending that it is in the interest of the nation to have "foreign exploiters" bundled away without ceremony, and the explanation may be accepted without protest by the people at large. (Whether justified or (Continued on page 1133))

ERW* STEEL TUBES

fill a basic need in industry

IN the developing tempo of industrialisation in India, the part that ERW steel tube plays cannot be overemphasised. The bicycle industry is entirely dependent on it. Motor cars, locomotive boilers and transformers are some of the highly specialised industries which require ERW steel tubes in large quantities. It is in extensive use in body building and interior furnishings in buses, trains and ships. Its use in home and office furniture is becoming increasingly popular. ERW steel tubes combine great strength with exceptional lightness.

For nearly thirty years Tube Products Limited, Oldbury, have been the principal suppliers of ERW steel tubes to India, familiar to the trade as TRU-WEL tubes. Now these world famous tubes are produced in India by Tube Products of India Limited. Promoted as a joint venture between Murugappa & Sons, Madras, and Tube Investments Limited, Birmingham, U. K. (through their subsidiary, Tube Products Limited, Oldbury, Birmingham), Tube Products of India Limited

supply these tubes in increasing quantities. Murugappa & Sons, who lead in India's cycle industry with their composite manufacturing unit in the T.J. Cycles of India Limited, promoted and worked in collaboration with Tube Investments Limited, are happy that yet another important industry of great magnitude has been developed and worked to the satisfaction of their customers.

* Electric Resistance Welded

Factory at Avadi

Tube Products of India Limited, "Swastik House" 106, Armenian Street, Madras-1

TRU-WEL steel tubes have played a decisive part in the evolution of the slim, light and immensely strong cycle of today.

Cooling tubes for transformers - an example of electrical equipment to which TRU-WEL tubes provide a foundation of dependability.

Flawless accuracy and uniform finish make TRU-WEL tubes ideal for locomotive boilers.

TRU-WEL tubes are as essential as ever to the modern motor vehicle. Their applications range from small tubes for radiator covers to outside tubes for rear axle casings.

Gateway Gossip

Road Transport

SPEAKING at the annual meeting of the Bombay branch of the Indian Roads and Transport Development Association held here last week, Mr A. D. Dhingra, the Acting Chairman, expressed himself in very critical terms on the road transport policy of the State Government. He confined himself to three main points, namely, the meagreness of the allocation made by the Bombay Government for road transport development in the Second Plan; the necessity for creating a separate highways department to be in exclusive charge of matters connected with road development; and the urgency of developing the Bombay-Thana and the Bombay-Ghodbunder Roads. But, in the elaboration of these points, he revealed such a keen perception of the fundamentals of the road transport problem as it exists in Bombay at present and as it is likely to become at the end of the Second Plan, that the subject would bear a detailed discussion.

I may now deal with the first point: the inadequate allocations for road development under the Second Plan. Under the First Plan, out of a total allocation of Rs 130 crores for the whole country for purposes of road development, Bombay alone accounted for about Rs 19 crores and this was quite in proportion to its needs as a highly industrialised State. But, under the Second Plan, even though the total allocations for the whole country have been raised to Rs 246 crores, the allocations in Bombay had not only been not raised in proportion but had been reduced to a figure much below that of even the First Plan: the actual figure is Rs 16.8 crores.

It does not require much of logic and much less of economics to see that a transport system, if it is to bear twice as much the volume of goods as its normal capacity would allow, would require at least twice as much funds for enlarging its capacity. Naturally, Mr Dhingra has been provoked to the question the sufficiency of the transport system that will emerge at the end of the Second Plan. But I will go a step further and ask how at all is it possible to increase production, both industrial and agricultural, under a system which does not ensure even the minimum mobility of factors of production?

What strikes me as strange is that, of all States Bombay, which is highly industrialised, which prides itself on being progressive in all respects, and which, for this reason at least, would have been

expected to evince a keener interest in the matter of road development, should err in such a vital matter, in such a gross way and that, too, in solitary company. For, it has no parallels elsewhere in the country. One would have thought that the transport bottlenecks left as a legacy of the First Plan would have sufficiently impressed, on those responsible for road transport development, the necessity for larger allocations in the absence of which such difficulties and bottlenecks would only have been intensified, inflicting severe damage to the State's economy. Mr Dhingra has rightly pointed out that the resulting damage would be too much for the small-scale industrialists and agriculturists to bear and would lead to grave industrial and agricultural unrest. Obviously the highway of the Second Plan presents dangerous curves and sharp bends—and the authorities do not appear confident of their carmanship.

The second point raised by Mr Dhingra is important as having a bearing on the efficiency of the transport system. Road development is a highly specialised job which requires the dedicated service and undistracted attention of its technical personnel. The PWD as at present constituted has its hands full of so many things to be done that it cannot do justice to the requirements of a developing road transport system. Its engineers, who are always fitting from one branch of service to another, can hardly be expected to measure up to the demands of a service which requires more of specialised training. In such circumstances, the creation of a separate highways department is the only wise step that is open if efficiency is to be one of the basic criteria of road transport policy. Mr Dhingra has, in this connection, assured us that the saving in money that this would make possible would more than counterbalance the cost in setting up a new department. Such an experiment is not going to be a leap in the dark. For, other States like Madras and West Bengal have already blazed the trail for Bombay to follow. And, in West Bengal, there is even a Minister solely in charge of roads. The experience of these States is by no means disheartening, and motorists have testified to the superiority of the roads in these States, which Mr Dhingra attributes mainly to the existence of a separate highways department.

Mr Dhingra contends that the Government's ignorance of the basic principles of road transport is only matched by their negligence

in developing some of the well-known roads in the State, such as the Bombay-Thana Road and the Bombay-Ghodbunder Road. The former alone carries a greater volume of traffic than any other road in India thrice as great as the number of vehicles in the whole of East Punjab and six times that of the vehicles in Orissa. Besides, it is the only means of ingress and exist for the 40,000 vehicles in Bombay city for the transport of goods and passengers from the city to the hinterland.

According to Mr Dhingra, the rehabilitation of the Bombay-Thana Road can be planned only on the basis of a generous gesture on the part of the Central and

State Governments. For the Bombay Municipality, under whose jurisdiction a large part of the road remains, is too overburdened and undercapitalised to be in a position to undertake the task singlehanded.

But Mr Dhingra has made a proposal for the three entities—the Municipality, the State Government and the Central Government—to come to an arrangement to share the financial cost of the scheme of improving the road; and he is also hopeful that the industrial establishments situated near about the road could be persuaded to meet the major cost of acquiring the land needed for widening the road.

"I know the answer!"

Of course, he does—he knows that the paper for his books is made at the Titaghur Paper Mills.

For 75 years the makers of Elephant Brand papers have supplied fine quality printings and writings for every type of educational publication.

Titaghur paper has brought the benefits of education within the reach of millions, and continues its service to the younger generation.

Bombay Review

Gateway Notes

Power Production

It is rather strange that the electricity industry in India on the development of which the industrial progress of the country is so closely bound up, should, so long, have not appeared to the Government as deserving of sympathetic consideration at their hands. The taxation policy of the Government had practically left it with little funds to expand either their capacity or to invest in new ventures.

Mr S. K. Patil's statement that the Government would go all out to meet the demands of the industry with regard to the vexatious tax problem would therefore go a long way in clearing the atmosphere which has been befogged by anxiety about the uncertain attitude of the Government. Mr Patil who was inaugurating the annual meeting of the Federation of Electricity Undertakings of India was highly appreciative of the contribution made by the private wing of the industry which accounted for about 43.7 per cent of the total generating capacity last year.

The progress made by the electricity industry in the course of the First Plan would be evident from the fact that while on the eve of the First Plan the power generation

capacity in the country was only 2.3 million KWs it had increased to 3.4 million KWs at the end of it. The target for the Second Plan has been fixed at 6.9 million KWs. On per capita basis the power generation in India was 17 KWs just before the First Plan which had gone up to 25 KWs by the end of it. As a result of the implementation of the programmes under the Second Plan for power generation the per capita production is further expected to move up to 56 KWs. Even this increased power generation that is to result at the end of the Second Plan cannot bear comparison with similar figures for other countries which are highly industrialised. For example in Norway the per capita figure amounts to 6610 KWs, for Canada 4860 KWs, for Sweden 3470 KWs and for US 3320 KWs.

The significance of the electricity industry in the country is greater in

view of the need for developing the rural countryside. Before the First Plan the number of villages having benefits of electricity was only 3000 out of a total of 560,000. Their number went up to 6500 at the end of the First Plan. This is sought to be still further raised to 16,000 by the end of the Second Plan. Even then the number of villages that would be left out would be great. With a view to ensuring successful implementation of the targets fixed, the Government of India had recently addressed communications to the State Governments urging them to help the licensed commercial undertakings in this respect.

Mr K. G. Milne, Chairman of the Federation of Electricity Undertakings of India in his speech pointed out that a successful electrification programme required some form of subsidy and said that such a scheme of subsidy should also provide for some financial assistance to the Commercial Licencees.

Non-Ferrous Metals

Conditions on the Bombay Non-Ferrous Metal market remained generally steady, but quiet. The Copper section maintained a healthy tone as the major portion of the recent arrivals of the metal were reported to have been directly moved to upcountry centres. The rate was quoted at Rs 157 per cwt. Lack of demand caused a quieter tendency in the Zinc section where the rate was quoted at Rs 54 per cwt. Heavy arrivals of the metal were another contributory factor. There was nothing to report about Lead, which hovered idly around Rs 69 per cwt. The tone of the Tin section was firm and the rate was quoted better at Rs 129 per quarter, thanks to better overseas advices.

On the London Metal Exchange, the rate for Copper was quoted a shade easier at £182 per ton against £182½ following the announcement of the Italian Government to release copper. Zinc was quoted at £61½ per ton against £63½, mainly due to lack of consumer demand. Lead showed a fall to £70½ from £73½ per ton, mainly attributed to calling of tenders by the Board of Trade to sell the first lot of 7,200 tons of the metal from the Government stock-pile. Tin was quoted steady at £730 per ton. Latest reports indicate that the International Tin Council has decided to introduce Export Controls on Tin. It is believed that the permissible export has been fixed at 27,000 long tons for the first period 15th December 1957 to the 14th March, 1958.

GATEWAY MARKETS

Linseed Oil in Demand

ON the Bombay Oilseeds Exchange the Linseed section reflected consistent strength throughout the week under review with both spot as well as futures recording a sizable advance on short-covering and steady support, inspired by the upward trend in linseed oil prices abroad. Sizable business has been put through with the UK and the Continental countries at around £114 per ton against £110 per ton a fortnight ago.

It appears that trade estimates of linseed crop in Canada, USA and the Argentine have been revised downward. The possible scarcity of oil has induced bears in London to cover their sales. Production in American countries is expected to show a decline of 10 per cent as compared to previous estimates, while the Communist countries are likely to enter the London market for linseed oil. For obvious reasons, Linseed May delivery firmed up to Rs 32.44 from Rs 31.87, while ready was quoted at Rs 30.52 and Linseed Oil at Rs 18.69.

Although the absence of overseas business in Castor Oil and the reduced demand for spot supplies adversely affected the behaviour of the Castorseed section, prices staged a marked recovery towards the close on prospects of castor oil business with Russia. Castor May delivery opened at Rs 143 and, after touching a low of Rs 142.50, recovered at the close to Rs 144. Ready was quoted at Rs 29.50 and Castor Oil, commercial quality, at Rs 15.25.

Firm's not on this Railway's list of approved Contractors must enclose a valid Income Tax clearance certificate with the tender.

Bombay Review

World of Cotton

Panicky Conditions

THE Cotton market in Bombay was in a state of nervousness during the major portion of the week under review, although a slight recovery in prices was noticed towards the close. A wave of selling pressure forced the Jharilla March contract at one time to Rs 612, showing a fall of about Rs 30 per candy, to finish better at Rs 676.25. This sharp decline in price was largely speculative, caused by the rumoured inability of a leading speculator to honour his commitments.

The unsettled conditions in Bombay naturally caused serious concern to growers in Vidarbha, Khandesh and Madhya Pradesh as they found it difficult to dispose of their new crop. Moreover, reports from upcountry centres indicated that daily arrivals were heavy, while mills were found to be reluctant to augment their stocks in view of the stagnant conditions prevailing in the cloth market. The absence of export enquiries, rumours about a deterioration in the quality of new crop in Khandesh and the early marketing of the Vijay crop also aided the bearish sentiment in the market.

The morale of the Spot market was also shaken and prices declined by about Rs 10 per candy. Leading spot houses turned aggressive sellers as arrivals in the terminal markets were heavy.

In the foreign section, spot lots of American and East African cottons were in demand with some business also reported done in Sudanese cotton. Importers were reported to have put through sizable business in these growths, expecting permission to import sterling area cottons.

STATISTICS:

The all-India second estimate of cotton for 1957-58 puts the area at 16,211,000 acres as against the corresponding adjusted estimate of 16,018,000 acres for 1956-57. This shows an increase of 193,000 acres as compared to last year. The increase in area has been shared mainly by Bombay and the Punjab among the different varieties of cotton, the increase in area has occurred mostly in Dholleras, Broch-Vijay and Surti. A considerable decrease has, however, been reported under Jharilla, Oomras, Gaorani and Malvi varieties.

Although this year's crop is estimated higher at 51 lakhs bales in some quarters, the statistical position of cotton is still in favour of a rising trend. Granting that exports are allowed to the extent of

3 lakhs bales, the carry-over for the new season is expected to continue unchanged at 20 lakh bales. Imports, this year, are estimated at 5 lakh bales.

Exports by rail from 1st September to 5th December, 1957 were 74,205 bales. Estimated mill consumption in Bombay, during the same period, were 349,726 bales as against 356,568 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 5th December 1957, were 405,045 bales as compared to 421,117 bales in the corresponding date of last year.

CLOTH AND PIECEGOODS:

Cloth markets, both in Bombay and Ahmedabad, have, once again, relapsed into inactivity. It was pointed out that upcountry dealers were not willing to make any large-scale commitments at the moment in view of the Government's move to replace the Sales Tax on cloth by a surcharge on the excise duty in the near future. Moreover, the trade appeared to be confused over the implications of some aspects of the new measure.

In these circumstances dealers were not lifting goods from the mills although sales had already been effected. The quantity of such stocks with the mills is reported to be increasing to 2.20 lakh bales at the end of last month from 2.14

lakh bales at the end of October. The quantity of unsold stocks with the mills is, however, a little lower around 3.87 lakh bales as compared to 3.91 lakh bales.

Trade circles point out that there are no indications that the offtake will improve in the near future unless the Government clarifies the position without delay.

Conditions on the export front have remained practically unchanged. The results of the Burmese tender for the supply of cloth are eagerly awaited by the shippers. Fair enquiries are reported to have been received from Sudan, while some business is reported done with East Africa and West Africa.

Appearances...and a pair of pears

PEARS, like appearances, are deceptive. You can't tell their quality by gazing at them. Moral: If you're buying pears, taste them first.

But testing by tasting gets you nowhere if, for instance, you are buying soap. For that (and most packaged goods, too), sensible shoppers have a surer guide to quality: they go by a name they can trust, a brand they have used and found reliable.

For nearly 70 years, people have trusted Hindustan Lever products because their high quality has been unvarying. And they trust because we test.

At Hindustan Lever, we examine all our products at every stage of manufacture. We make sure that they stand up to storage: we 'create climate' in a laboratory to observe them under all weather conditions. We check their performance by using them as you do in the home.

All this means 1,200 tests a week on products like Lifebuoy Soap, Dalta Vanaspati and Gibbs SR Toothpaste—familiar products because they are so widely trusted, and trusted because they are tested.

Hindustan Lever serves the home

Foreign Capital Prospects

LAST week was released here the Report of the Industrial Delegation which recently visited the US, Canada, the UK, France and West Germany under the auspices of the Federation of Indian Chambers of Commerce and Industry. Readers will recall reports of the activities of this delegation from time to time. During the period the Finance Minister was in the US, the Industrial Delegation was also there and it was able to complement the good work done by the Finance Minister in placing Indian policies, especially in their economic and fiscal aspects, in the proper perspective. After completion of the tour, the Delegation has put down its impressions of the climate of opinion in the countries it visited, in so far as it affected the possibilities of foreign co-operation in the task of industrialising the country.

Many of the conclusions recorded here are familiar enough, since a good many of them have been expressed before, both at home and abroad. Some of them are controversial, like the suggestion for use of extended bank credit as a sort of created money to fill the gap between savings and investment. But, on the general need for providing suitable incentives for foreign investors and the lines along which it ought to be done, the Delegation's views will be shared by very many outside business and industrial circles.

Refreshingly, unlike many utterances in this regard, the Report is basically optimistic about the

possibilities of foreign assistance and co-operation in securing the necessary finance,—at least for the private sector. In categorical terms, the Report states: "There is no limit to the amount of commercial credits that may be available from abroad; it is the climate and the availability of capital in India itself that shall dictate the amount of finance that we can obtain from abroad." The Delegation also states that American interest in the making of new investments in this country is greater now than ever before, and that credits for industrial schemes may also be forthcoming from France and West Germany.

Elaborating what it means by the "climate" in India, the Delegation lists certain aspects of our economic policies as pursued at the moment which act as deterrents to a flow of capital into this country. Contrary to general feeling in the country, it was found by the Delegation that there was not much "political hostility" in the US and elsewhere. There were, however, many misgivings and doubts "on the economic front", some not based on facts and others somewhat exaggerated on a slender basis of facts. The Report pays a warm tribute to the Finance Minister for the able way in which he cleared these misunderstandings of Indian policies, and makes the modest and yet deserved claim that the Delegation itself did its best to remove the misgivings about our economic situation. But, the Delegation feels,

there is still a vast amount of genuine misgiving based on facts. Among these were the fears of nationalisation (on which the Finance Minister had certain sensible things to say while in the US), some of the taxation measures like the Wealth Tax, especially on companies, the compulsory deposit schemes, double taxation, fear of labour trouble, and too much interference from Government. These are familiar complaints, and listed thus would appear to be a formidable deterrent. But, on detailed examination, it will be found that each of these measures has in actual application mitigating factors. Thus, the incidence of Wealth Tax on companies is negligible and the exemptions available for compulsory deposits are wide enough to include most of the really productive endeavours. All the same, it can be argued that, if the financial results from these measures are of negligible quantity, there is then no need to impose them at all. This is an argument that needs consideration by authority. The case for Wealth Tax on companies has never been very strong and it is worth Authority's while to consider whether it should not be scrapped in the next Budget. The compulsory deposit scheme, it appears to me, is scaring only because of the complicated nature of the provisions. Even provisions detailing the qualifications for exemptions are so worded as to put off study by a prospective beneficiary. In actual practice, I believe not many companies with real productive objectives will suffer. (Of course, it is too early to say this with statistical backing, since the impact of this measure is yet to be assessed). But there is one thing that Government can do by way of concession. Rules have so far been framed only for deposit of current profits. The scheme for deposits out of past reserves, which was also contemplated, has not yet been finalised. It would be a good idea, in the context of attracting foreign capital, to drop it quietly. (On second thoughts, not quietly, but with a lot of fanfare!)

Apart from direct deterrents, the misgivings of foreign investors are related by the Report to the difficulties of the domestic private sector. The argument runs somewhat along these lines: India can expect investment from abroad (especially the US and West Germany) only if it can match with rupee capital the foreign capital sought for. For the raising of this rupee capital, it is necessary to create conditions for capital formation in the country by permitting sizable quantities of personal and corporate savings.

This, according to the Delegation, is made difficult by current economic and fiscal policies of the Government. The Government's present tax policies, therefore, need revision, and Government should also reconsider their monetary policies, especially in their relation to the regulation of volume of credit and money that should be allowed to operate in the money market.

The first objection has already been touched upon by me in discussing its impact on foreign investors here. Mutatis mutandis, they apply to Indian investors also. As regards the suggestions on the regulation of the money market, the situation is more complicated. The fact that certain hitherto foreign owned companies have had no difficulty in having their equity issues absorbed by the capital market would seem to indicate that savings are not as scarce as it is sometimes suggested. Secondly, while blanket credit control is certainly not indicated in the present circumstances of the country, selective control to regulate movement of funds along desirable channels is the plain duty of any monetary authority. Indeed, from the point of view of increasing production, this becomes an inescapable duty, since, (for example) funds aiding the hoarding of foodgrains (besides abetting inflationary tendencies) take away to that extent funds needed for other productive purposes.

The Delegation was primarily interested in exploring possibilities of foreign capital for the private sector; and, on this subject, the Report has some interesting things to say. It recommends the increasing use of the United States Export Import Bank by importers of capital goods. The Delegation found this institution "extremely reasonable and sympathetic" and likely to "help the Indian Private Sector most". This bank lends five hundred million dollars a year. The rate of interest is about two per cent less than those obtaining elsewhere. Finance is available up to 60 per cent of the cost of goods and only the remaining 40 per cent has to be arranged by mutual agreement between the American supplier and the Indian buyer. There are certain conditions regarding time limits, but these are not of a sort that cannot be made less onerous by discussion; and, in any case, the advantages to be had by contact with this bank far outweigh other considerations.

The Report is, not unnaturally, rather noncommittal about the possibility of Government help from the US. "As far as we could gather, the

North Indian Notes

Foreign Aid

The industrial delegation which visited some of the Western democracies including the USA, has in its report stated that the extent of foreign capital that may be available, is contingent on the availability of matching internal capital. About the sources of such capital the delegation is more hopeful about USA, than any other country which it visited and has noted that the American outlook has changed for the better in regard to the attractiveness of India as a ground for fruitful enterprise. Chances of getting capital from the United Kingdom have been discounted in view of what is felt to be a lack of surplus capital in that country.

Though the American Congress had appeared to the delegation as being not particularly disposed to help India with dollar loans the delegation is confident of such loans and credits being arranged on a Government-to-Government basis, and has estimated the likely amount that may be forthcoming from America at an annual figure of about 100 million dollars.

The delegation is satisfied about the attitude of foreign investors towards India which, it points out, is to some extent marked by certain misgivings and doubts about certain lines of Government's policy such as nationalisation, some of the tax measures particularly wealth tax, compulsory deposit scheme, double taxation etc. And in this connection it refers to the good impression created in foreign minds by the Finance Minister in the course of his tour in connection with the Commonwealth Finance Ministers' conference, about the profitability that awaits foreign participation in India's economic development.

The delegation has also made certain recommendations calculated to create a capital market in the country and also remove any obstacles that may stand in the way of foreign capital coming to the country. In line with the former aim, it has argued for a liberalised monetary policy to suit the needs of industrial development and has further suggested that the N.I.D.C., the I.F.C., the Refinance Corporation, the I.C.I.C.I. and the banking system should be reorganised for the creation of a capital market.

The delegation has further recommended that the Government should allow royalty rates to be settled by mutual agreement between the American manufacturer and the manufacturer in this country. The delegation is optimistic

about the responsiveness of the US Export-Import Bank to the demands of Indian private sector.

The delegation has drawn attention to the importance of productive capital as against projects of welfare expenditure. In its view a productive investment to the tune of about Rs 4000 crores has an income generation potential of Rs 1600 to Rs 1800 crores which in per capita terms might come to about Rs 40 to 45.

Harijan Welfare

THE latest report of Mr L. M. Shrikant, Commissioner for Scheduled Castes and Scheduled Tribes, which was placed before the Lok Sabha last week, points to the poor progress made in eliminating the disabilities to which they have been subjected on grounds of caste. Such practices as stopping Harijans from riding on horse-backs in marriage ceremonies, putting on gold and silver ornaments, use of sugar in marriage feasts and the use of common cremation grounds still remain to be wiped out.

Even in regard to welfare measures the progress in certain States has been far from satisfactory being practically nil in certain places. And the report recognises that the tempo in the first year of the Second Plan has received a setback in comparison with that of the last two years of the First Plan.

Only in the field of education has it been possible to make some headway. All the same it has been pointed out in the report that it is not easy to get all elementary schools for Scheduled Castes and Scheduled Tribes converted into full-fledged basic schools.

NORTH INDIAN MARKETS

Shellac Steady

DESPITE the fact that American buying is not sustained, the Shellac market in Calcutta continues to rule steady with the Pure T. N. quality quoting Rs 80 per maund against Rs 76.50 in the previous week. The main inspiration is derived from the reports that exports have been encouraging during this year. Exports of lac, during the year, have shown a 50 per cent rise as compared with 1953-54. Shipments, during the current month till the 6th, were as much as 7,274

The economic development of these castes and tribes though found to have been satisfactory have not so far touched an important part of the backward classes, namely scavengers and sweepers. The scales of pay and the working conditions of them are anything but uniform. The report also points to the desirability of taking certain measures that would contribute to put them on a better economic footing, such as the filling up of vacancies for scavenging work by non-scheduled castes and the distribution of the waste lands and bhoodan lands among scheduled castes and encouragement to cottage and village industries.

But the most important step that the report says would contribute to the economic development of them in a substantial way is the formation of forest cooperative societies of tribes for the exploitation of forest wealth which is the mainstay of the tribal people. Equal importance is attached to the programme for the economic development of tribal areas by means of soil conservation and irrigation.

The report has also suggested some new terms so as to remove the stigmas attached to the use of such words as "Backward Classes" and backward classes department. It has further suggested that thorough surveys should be made to assess correctly how far the practice of untouchability has disappeared with regard to main matters, such as access to public places, access to hotels and hair-cutting saloons, entry into places of worship and segregation in respect of houses. The report has recognised the need for carrying on intensive propaganda with a view to educating the public in the injustices of these practices and evoking their support in the drive to eradicate them.

to popularize the growth of lac and also imparting the necessary training in the method of cultivation. Above all, the various State Governments have provided financial assistance to the cultivators with a view to boosting up the output.

On the London market, however, buying continues to be on a hand-to-mouth basis and prices have fallen rather heavily. December delivery is quoted at 178sh per cwt with sellers at 138sh.

Sugar

Sugar markets have reflected steadier conditions. In the Calcutta market, rates are moving between Rs 36.00 and Rs 38.50 per maund, according to quality. In the Bombay market, rates have rallied by Rs 4 bag to Rs 111. In the Hapur market, demand from the Punjab is fairly brisk and ex-mill delivery prices have recorded some gains for some varieties.

The main contributory factor for the general improvement in the markets is the reduced selling pressure by both dealers and mills on account of the encouraging behaviour of the markets in North India. The reported decision of the Government of India to abolish Sales Tax on the commodity and to replace it by additional excise duty has also exercised a favourable effect on the market although the actual change is not likely to be effected before January next.

Crushing for the new season in Northern India is in full swing and factories are getting enough cane to crush to their maximum capacity.

Gur

Thanks to the increase in new gur arrivals in all the markets, Gur prices have developed a slightly easier tendency despite a good demand from the consuming centres. Arrivals at Hapur are at an average of 6,000 maunds, which are all being lifted due to easy loading facilities. Old stocks are estimated around 1,000 maunds.

Foodgrains

Quiet conditions are witnessed in the Hapur Foodgrains market. Wheat prices are quoted at Rs 15.62 for the average quality and Rs 17 for the farm quality. Rice prices have recorded a fall of Re 1 per maund for some varieties due to increased arrivals of new crops in the markets. The market for Pulses rules quiet. Despite good arrivals and support, Malze and Bajra prices have remained mostly unchanged. Gram and Jowar prices have eased slightly on reports of increased stocks. Pulses have also recorded an easy trend as outside buying enquiry for Peas and Arhar is dormant.

The Peninsula

Justifying the South Food Zone

AS the Pongal day is drawing nearer, all Madras is busy preparing to put on a festive appearance as befits such an important occasion. In the excitement of the celebrations the sombre feelings created in the minds of the people of the State by the Mudukulathur tragedy would for the moment be forgotten and temporarily committed to the limbo of memory. Even the communal frenzy released by the Dravida Kazhagam that has presently been agitating the public mind would be given a back place in the reckoning of the public. Falling as it does at the end of the harvesting season, the Pongal festival symbolises a sense of achieve-

ment and is also partly an anticipation of future prosperity and wealth. It is not always that the festival coincides with a season of abundance. But this year, thanks to a benign weather the day marks the culmination of a season that has been rich and fruitful.

As far as the State Government are concerned, they can draw consolation for more reasons than one. The satisfaction of being less dependent on other areas for the supply of the State's needs would be a powerful stimulant to greater efforts which would find reinforcement from the fear of the public wrath that is sure to descend on their heads at any possible failure

of future seasons. But the real core of the benefits is made up of the saving in money that the Government would otherwise have been called upon to incur to relieve the misery and suffering that would have followed a failure of the season and more importantly the general wellbeing among the cultivators that is an unfailing feature of favourable crop. But equally significant, though less intangible, is the welcome respite which it would afford to the ministerial spokesmen, from the harrowing attacks of an unsympathetic opposition, when it could plan ahead undistracted and work toward similar results in the future.

The picture as it emerges is one stretch of bright patch. Official eye witnesses who visited the fields have

testified to a uniformly good harvest. Tanjore, the granary of the South is again abundant with grains. An area of 1,400,000 acres is estimated to have been under paddy in this district and the total yield is expected to reach a figure of 650,000 tons. The other important food producing districts in the State, such as South Arcot and North Arcot, have also reported a rich harvest of about 400,000 tons each. Ramanathapuram district has always been in the rear of agricultural production, being credited with a total of 100,000 tons.

All these add up to an estimated total production of about 2,984,000 tons. One result of such an abundance is that the State is singularly free from any scarcity pockets with which almost all the other States are at present busily engaged. Into this picture, the continuing falling trend in the production of millets comes as a disturbing element. The official explanation seems to be that it has lost in the competitive race to other crops like cotton, groundnuts and chillies, and is thus symptomatic of a shift in the pattern of agricultural production which, had it not been for the serious food situation in the country, would have been a matter for gratification.

In the neighbouring State of Mysore, the official reaction to the season's production of foodgrains runs in terms of a paradox. The hopeful feelings that are evoked by the prospects of a surplus to the tune of about 300,000 tons—calculated on the basis of a per capita consumption of 12 ounces a day—instantly take on sombre shade when the basis of calculation is altered on the liberal side. Thus, calculated on the basis of a per capita consumption of 16 ounces a day, the food situation would disclose a shortage of about 500,000 tons.

The trend in production of foodgrains in the State has on the whole been favourable. Paddy, the major crop of the State, has registered a slight increase in production. The jowar crop, which occupies the second place in respect of total area, has taken the first place in respect of actual performance and in spite of adverse weather in a large portion of the former Mysore State, its production is expected to be extraordinarily good. Evidently the big increase that has been reported of its production in the Bombay Karnatak has more than made up for its failure in other places. The other cereals such as ragi, bajra, wheat and small millets, have not been lagging behind, and almost all these crops have fared well. In short, the season signals the continuation of the upward trend in the production of foodgrains started in the second year of the First Plan. The index

In Industry PHILIPS do a good job!

INDIA'S industries have the heavy responsibility of ensuring the country's economic freedom; and to ensure top efficiency, they need the most modern aids available.

For these aids, our industries can rely on organisations like Philips who offer their world-famous products and experience to every industrial undertaking.

Whether it's a range of products for industrial application, a light bulb for an office, or planned lighting for a factory... or whether it's a sound system for staff entertainment in canteen and factory, it's certain to be a good job well done through Philips.

South Indian Notes

Food Production in Andhra

The production of foodgrains in Andhra Pradesh which is known as the granary of the South has been reported to be satisfactory. The anxious thoughts that would have been provoked by the floods in various parts of the State have therefore turned to be unfounded. Even so the crop is expected to be below last year's level. But this is explained as the inevitability of normal hazards which are beyond human control.

Production of foodgrains in Andhra has been on the ascendant since 1951-52, and has risen from 38,86,000 tons in that year to about 55,20,000 tons in 1956-57. There was also a parallel increase in the total acreage under foodgrains which rose from 27,576,000 acres in 1951-52 to 30,000,000 acres in 1956-57. Rice has contributed more to this increase in acreage and production than any other crop, the total acreage under it having increased from 5,725,940 acres in 1951-52 to 7,104,000 acres in 1956-57 and production from 2,417,810 tons in the former year to 3,304,000 tons in 1956-57. The important crop to have suffered reduction in acreage is jowar. Diversion by ryots to other commercial crops is the explanation offered for this phenomenon.

This year's yield of foodgrains would have been greater but for the damage done by floods in parts of Andhra Pradesh such as Nellore, and Chittoor. The attack from insect pests in other parts such as Krishna, Guntur and Adilabad accounted for a further reduction. But the fall in production in spite of these two sources of trouble has not been considerable.

The total estimated acreage under the three principal crops namely rice, jowar and bajra is: rice 4,73,000 acres jowar 2,633,900 and bajra 1,273,400. The respective figures for the last season are 4,759,000, 2,726,900 and 1,329,200. Now it would be seen that the slight decrease in production that has been reported this season is explained by the reduction in acreage under foodgrains for the current season as compared to last year's.

Notwithstanding the normal produce of the season Government authorities seem to be worried about the prices of foodgrains. They seem to fear that in view of the absence of the normal increase in the production of foodgrains prices of foodgrains would not come down. How far this comes to be true would depend on the production of foodgrains in other States and if foodgrains in other States that should happen that these States make less demands on the supplies from Andhra there is no reason

why the price level should not move sympathetically.

Self-sufficiency in Cotton

Cultivation of cotton in India has so far proceeded on the narrow grooves of short staple varieties. But the indigenous cotton textile industry has been nurtured on a mixed diet of several varieties not all of them being grown in the country. The demands of cotton have therefore had to be met by imports. The problem of self-sufficiency in cotton is therefore one of popularising the cultivation of long staple varieties. The lee-way that has to be made up is considerable if it is remembered that the Indian mills at present consume imported cotton to the tune of about 6½ lakh bales a year.

It was this necessity of increasing the cultivation of long staple cotton which figured prominently in the discussions of the eighth conference of the Indian Central Cotton Committee which was held at Coimbatore last week. Mr M. Bhakthavatsalam, Minister for Agriculture in the Madras State, inaugurating the conference pointed out that although improved varieties of cotton were available as a result of the research in all major cotton growing States in the country, the lee-way in respect of supplies of cotton of staple length 1.1/8" was still great.

Mr Bhakthavatsalam expressed the hope that with the development of the various irrigation cum hydro-electric projects the Indian Central

Cotton Committee would be able to reach the revised target of 65 lakh bales by 1961. Already in Madras under the First Plan the production of improved strains had increased from 3 lakh bales to 3.6 lakh bales and this is sufficient ground for optimism about reaching the target of 4.5 lakh bales fixed for the Second Plan. At least in the interest of improving the balance of trade which is possible only on a basis of severe import restrictions, development of long staple varieties of cotton is urgent.

Success in adapting such varieties to our soil is contingent on the results of the scientific research that is being carried on by the Central Committee. It is a challenge to the scientists of the country and Mr Bhakthavatsalam remarked that even if we were not abreast of other countries in matters like inter-continental ballistic missiles India should take the lead in revolutionary achievements in agriculture.

Presiding over the conference Dr B. N. Uppal, Commissioner for Agriculture, Government of India said that in the breeding of new staple varieties sufficient attention had not been given to the fibre strength and he therefore called for a clear understanding of the specific relationship between the length and strength of the fibre with the aid of a deeper study into cotton physiology. He also stressed the necessity to tackle with greater agility, measures against pests and adopt better agricultural practices to improve the yield of cotton per acre.

SOUTH INDIAN MARKETS

Coconut Oil Dearer

COCONUT OIL has touched a peak level of Rs 630 per candy (655 lbs) in the Cochin market. Until the import policy for the third quarter of the year was announced, declining prices worried the market; but now the soaring prices have given a headache, both to the producer and the consumer in India. Although prices have now slightly eased, they are still ruling high. In the Kozhikode market, the rate is quoted at Rs 610 per candy.

Short supply is the real issue behind this unprecedented increase in prices. This is a lean production period in Kerala and, with the result, the indigenous supply is very limited. As imports are restricted, a tight supply situation has developed. It does not, however, appear that the record increase in prices has affected demand to any appreciable extent until now. Dealers

say that, despite such a high price, there are very good orders from North Indian and upcountry markets.

The world market is also experiencing an upward trend in coconut oil prices, but to a much lesser extent. In the London market, buyers are restricting their purchases as much as possible. Since sellers are not pressing their oil, the price is not difficult to maintain. The world price is Rs 1,500 per ton or Rs 455 per candy. Thus, there is a difference of Rs 175 between the local and world prices. In Ceylon and Malaya, the rates have gone up by 10sh per ton.

Pepper

Exports of Pepper have been showing a steady rise. According to figures released by the trade in

Cochin, exports amounted to 986 tons in September as compared to 555 tons in the corresponding month of last year. Thus, during the eleven months of the 1956-57 season, exports from India have amounted to 14,157 tons, showing an increase of 1,773 tons over the corresponding period of last season. This increase in exports is mainly due to Indian pepper's entry into certain new markets including Czechoslovakia, Poland, Bulgaria, Rumania, East Germany, Denmark and Switzerland. Of late, the Soviet Union has also been importing sizable quantities. Still, the USA is the chief market for Indian pepper. Her imports are not increasing in proportion to the fall in prices or increase in imports into other countries.

Meanwhile, reports of latest political situation in Indonesia have pushed up pepper prices in the Indian markets. In the Kozhikode market, Wynaad quality is quoted at Rs 635 and the Country variety at Rs 610 per candy.

Coffee

The forecast of 1957-58 crop, as recently revised, stands at 37,000 tons consisting of 24,000 tons of Arabica and 13,000 tons of Robusta variety. Out of this, a quantity of 7,810 tons is provisionally set apart for export, subject to review in January-February next.

For home consumption in 1958, the quantity estimated and provided for, is 28,451 tons, consisting of 12,098 tons of Plantation; 3,857 tons of Arabica Cherry and 12,496 tons of Robusta.

Releases of coffee, in the internal market, amount to 23,737 tons for the period January to November 1957 as against 22,114 tons in the corresponding period of last year.

Out of 15,155 tons allotted for export from the 1956-57 crop, the quantity, which remains to be sold, is only 586 tons. The Coffee Board is taking all possible steps to keep up the quantity of coffee intended for export. The Board has also decided to establish a department for testing coffee in the cup and to obtain the services of a competent tester from abroad for this purpose.

Groundnut

The Madras Groundnut market continued to rule quiet. Arrivals last week were about 300 tons and, apart from small buying by local crushers, business was meagre. The rate for the new crop declined to Rs 144 from Rs 149 per candy.

In the Groundnut Oil section, the rate for the ready position was quoted around Rs 305 against Rs 309 per candy. Calcutta interests alone were operating. The rates for the forward positions showed a small decline.

India Steamship Company Limited

Shipping as Foreign Exchange Earner

Need to Raise Development Rebate to 40 Per Cent

Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), the Chairman,
Enumerates Some Problems Facing Indian Shipping

The following is the speech delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), the Chairman of the India Steamship Company, at the Annual General Meeting held on the 6th December 1957:—

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March 31, 1957, have been in your possession for some time. With your permission I shall take them as read.

TRADING EXPERIENCE

The Directors' Report shows that the freight earned during the year was Rs. 6,00,17,168 as against Rs. 5,26,11,831. The freight carried in the Liner trade was 4,88,266 freight tons as against 5,07,773 in 1956. The total number of round voyages made during the year was 22½ as against 26½ in the previous year. The less number of voyages is accounted for by the fact that owing to the closure of the Suez Canal the ships had to go round Africa instead of coming through the Mediterranean. The higher freight earned in spite of the fewer voyages is to be attributed in part to the fact that our modern ships are faster and partly to the surcharge on freight rates consequent on the longer voyage entailed. The delay at ports continued as in the previous year and the turn-round of the ships took a much longer time than should normally be the case. It must therefore, be a matter of satisfaction to you as it is to me that in spite of these handicaps the Company made a net profit of Rs. 1,07,21,588 after providing for depreciation.

DELAY AT PORTS

During the four months of the current year ships had to wait in Bombay, Madras and Calcutta over long periods to find a berth for unloading or for loading. The position became so acute that the Conference Lines considered the possibility of levying a surcharge on the freight to and/or from India to the U.K. and the Continent. Similar suggestions were made by other Conference Lines trading to other ports. I am glad to inform you that owing to the vigorous steps that have been adopted by the Port Authorities and the constant vigil that was exercised by the Transport Ministry to bring about a healthy situation in the

ports, delay in finding berths for ships has virtually been eliminated and it is possible, certainly in Bombay and Madras and even in Calcutta, subject to draft restrictions, for a steamer to find a berth on arrival. So far as labour conditions are concerned a special Committee has reported on the piece rate system that may be introduced and while Government have agreed to the policy of piece rate system and have in fact accepted it for Bombay, it is regrettable that owing to the attitude taken by certain labour leaders it has not yet been found possible to introduce the scheme at the Calcutta port. From every point of view, that of shipowners, stevedores and most of all labour itself, I consider the piece rate system with proper safeguards to be the only solution for avoiding conflicts and ensuring fair wages to dock and port labour.

PROGRESS

I referred last year to the two ships—'Indian Resolve' and 'Indian Resource' which had been added to our fleet, one in March, 1956 and the other in June, 1956. Since then another ship the 'Indian Splendour' which was delivered in May, 1957 has augmented the fleet. We have thus at present twelve ocean going vessels and one Coastal vessel. Another ship is being completed in the German shipyard and it is expected to be delivered towards the end of March, 1958. The Company has ordered a further four ships, two of which are expected to be delivered at the end of 1958 and two at the end of 1959. They will be built at the same German Shipyard. Besides these the Hindustan Shipyard Private Ltd., has an order from the Company to build a vessel of 5,500 tons, the keel of which is expected to be laid shortly.

We are deeply grateful to the Government for the financial assistance by way of loan which they have given and which has enabled the Directors to plan this programme and to arrange deliveries at appropriate dates so that your Company will have the minimum requisite number of ships to maintain a regular service on the India/U.K./Continent run. However, since at the instance of the Government we ply ships to the Black Sea to enable the movement of exports to and imports from the Soviet Union and in particular the imports of plant and machinery re-

quired for the Bhilai Steel Plant, the number of ships that will be available for the India/U.K./Continent trade will still be short of the target that we have aimed at, namely 18 ships by the end of 1960. It is hoped notwithstanding the financial difficulties in regard to foreign exchange it will be possible for the Government to enable us to complete this programme in the time indicated. I need not enlarge on the foreign exchange saving that will result from more Indian ships plying on the Overseas trade.

EARNINGS AND DIVIDENDS

The Directors' Report shows the earnings of the Company and the net profit that has been made by the Company during the year. The Directors have decided to declare a dividend of Re. 1/- per Ordinary Share making a 10% dividend and the usual dividend on Preference Shares. The Directors have also proposed that the share premium collected may be distributed with the sanction of the Government as Bonus Shares to the Shareholders at the rate of one share for every ten shares held. It will be observed that the Directors have provided funds for a General Reserve which now comes to Rs. 1 crore, a Fleet Replacement Reserve which will stand at Rs. 26 lakhs, a Dividend Equalisation Fund and a Taxation Reserve. There has been some suggestion that a larger amount of dividend may have been distributed. The Directors, however, feel that taking a long range view a cautious policy is preferable and I hope you will agree that the allotments suggested are in the best interests of the Company. In order to prevent any wrong impression being created, I would, however, like to add that the current year may from the results so far obtained, prove as satisfactory as the year under review.

SOME PROBLEMS OF INDIAN SHIPPING

(a) **Development Rebate**—The Shipping Industry of any country engaged in Overseas trade is subject to world-wide international competition. It cannot be protected or safeguarded by tariffs or quota limitations as the industries of a country can be. I have referred in previous speeches to the assistance given by several countries to their National Marine.

This assistance takes various forms from downright operational subsidy to loans without interest and exemption from taxes. We are thankful for the loans that the Government of India have granted to Indian Shipping at a comparatively low rate of interest and the Development Rebate of 25% which has been sanctioned. The cost of obtaining new ships which can fairly stand comparison in speed, in cargo handling facilities and in other directions is increasing and bears no relationship to the cost only a decade back. If Indian Shipping interests represent to the Government of India that further consideration may be given to questions like Development Rebate, it is in no ungracious spirit that the request is made. The Government of the United Kingdom have in the last Finance Act raised the Investment Allowance (which corresponds to the Development Rebate) from 20% to 40% in order to maintain the Mercantile Marine of the country in the best possible state of adequacy and efficiency. I trust that taking a long range view of the position of Indian Mercantile Marine, our Government would give consideration to the question of equating the relief in this direction with at least that given to the most powerful National Marine of the world.

(b) **Expansion of Shipping**—Shipping companies all over the world have adopted as a basic policy of existence, the continued and phased programme of adding to their tonnage not merely to replace ships which have to be scrapped or sold as uneconomic units for their trade but also to meet the legitimate needs of shippers. Your Company has made a modest programme of phased expansion to meet both these needs. There are difficulties of foreign exchange, which, I readily recognise, seem to come in the way of Government's consideration of assisting such expansion, notwithstanding its sympathy. Shipping companies have pointed out with considerable force that they earn foreign exchange far more rapidly than any other local industry and that such earnings—invisible income as it is called—form the hard core of the solution of the balance of payments in many countries. They have also suggested that for the time being the foreign exchange earned by Indian

Shipping may be earmarked for the development of Indian Shipping both Coastal and Overseas.

(c) **State Trading Corporation and Shipping**—Indian Shipping companies have been very much concerned to learn, with what exactness it is difficult to state, that the State Trading Corporation contemplates entering into their field and has otherwise seriously jeopardised their interests. I offer no opinion on the policy of State trading though at the inception it related to inter-governmental trading only. I am concerned only with that aspect of the State Trading Corporation's activities which cuts across or impinges on the legitimate interests of Indian Shipping. Indian Shipping companies have constantly addressed the Government to have their point of view represented before trade agreements involving shipping are concluded. It is a matter for regret that while shipping interests are closely kept in touch with various issues facing the Government like the Suez Canal crisis, in the United Kingdom, Holland, Italy, France and Germany and while their advice is sought on all occasions, Shipping interests in India are not taken into confidence by Government and not consulted on such issues as deeply affect them. It is most desirable that in tackling these shipping problems Government Departments should take into confidence the Indian Shipping companies who have undoubtedly wide experience in these matters. It is understood that in some cases at least the State Trading Corporation has made contracts for the sale of bulk commodities such as ore on an f.o.b. basis which means that the importing country can completely shut out Indian Shipping in such trade. I trust that this subject will receive consideration by the Government at the highest level.

Another issue that has confronted the Shipping companies is the proposal stated to be receiving active consideration, of Government chartering ships to carry the export and import trade organised by the State Trading Corporation. That this cuts across the principle so clearly and emphatically laid down by the Transport Minister last year will be obvious. The Hon'ble Minister for Transport said 'I may state very clearly that it is not our intention that shipping in the public sector should run in competition on routes in which existing private shipping companies have established themselves.' When it is added that these chartering activities of the State Trading Corporation may even cut across those of shipping in the public sector itself, the position becomes so Gilbertian that further comment seems to be needless.

It has been suggested that the rates charged by Conference Lines are greater than the rates obtainable through chartered tonnage. In the first place Indian Lines, it can be proved beyond dispute,

have successfully fought for lower rates in the interest of the trade of the country and have brought about reductions in such rates. Secondly, it can be equally clearly demonstrated that till recently chartered tonnage was far more costly than tonnage carried by Conference Lines and Government or the shippers have been spared the payment of vast sums of money by entrusting the freight to Conference Lines. Thirdly, it is always possible to get a special quotation from Conference Lines if Government gives a guarantee of shipping only through Conference Lines their required quantities. Lastly, it must be clear to Government as a shipper of large tonnage over a long period that it cannot adopt the policy of some occasional shippers who take a short range view and try to obtain a small initial advantage by resorting to charters when charter rates are comparatively low.

Shipping companies have pleaded more than once that a co-ordinated and consistent policy may be adopted by all departments after full consultation and that shipping interests may have the opportunity of giving their experience and placing their knowledge at the disposal of the departments concerned at an inter departmental conference. I hope fervently that such a conference will be held to the mutual advantage of both interests.

FOREIGN SHIPPING AND RESTRICTIVE PRACTICES

I have so far referred to internal factors and policies. These assume even a more grave aspect when they are considered in conjunction with the handicaps of Indian Shipping through the restrictive practices which foreign shipping adopt without logic to protect vested interests. The Indian trade is a happy hunting field for the foreign shipping of numerous countries. Neither their initial entry into the Indian trade nor the extent of shipping tonnage employed by some of them has any relationship to the trade subsisting between India and such countries. In fact some of them have hardly any interest in such trade and yet the fleet that they employ and their ever increasing demand for the employment of more tonnage is in inverse ratio to the interests that their nations have in the Indian trade. The problem has assumed serious proportions and the stage has come when it should be firmly tackled. The exclusion of Indian Shipping from the trade of countries like Burma and Ceylon, from the trade from ports on the direct route to the United Kingdom and the Continent such as Aden, Port Sudan, Alexandria and onwards, has been mentioned more than once. The rejection of the application of Indian Lines for membership of these turncoated conferences has been 'justified' on the ground that there is adequate tonnage serving these trades; yet when it comes to the Indian trade approval

is readily granted to more and more Lines coming in or increasing their fleets notwithstanding the fact that there is often over tonnage in the trade. It is a situation that cannot and ought not to be tolerated further. If the policy of freedom of the seas is accepted it should be real and effective and should not be used for protecting vested interests.

THANKS

We owe a debt of gratitude to Shri Lal Bahadur, the Minister of Transport whose re-entry into the Cabinet we heartily welcome and whose acceptance of the Transport portfolio we specially appreciate. His interest in Indian Shipping is deep and abiding and we are grateful for such interest. We also welcome Mr. Gupta the Secretary of the Department who has experience of shipbuilding and so of Shipping. We are thankful to other officers in the Secretariat to Dr. Nagendra Singh the Director General of Shipping, his deputies and assistants from whom we have continued to receive advice and assistance.

TRIBUTE

During an extremely difficult and anxious period it is a pleasure for me to record that the Company has been well served by all its officers afloat and ashore of all ranks and by its Agents and Brokers. On your behalf and on behalf of the Directors I wish to convey our thanks to all of them for their good and enthusiastic work throughout the year.

We have received during the year the loyal support of shippers both overseas and in this country for which we are extremely thankful. We have tried our best through expansion of our tonnage with high speed vessels to provide the services they need and expect and I believe we have in some measure built up a reputation for reliability and a reasonably careful handling of cargo entrusted to us.

I wish to thank you gentlemen for your attendance at this meeting and to share your hope that the Company will prosper in the years to come with the enthusiastic co-operation of our staff.

I shall be glad to answer any questions which Shareholders may wish to ask regarding to Accounts.

NOTICE

STATE BANK OF INDIA

NOTICE is hereby given that the Principal Register and the Branch Registers of the State Bank of India will be closed for transfer of shares from Thursday, the 2nd January 1958 to Saturday, the 25th January, 1958, both days inclusive.

B. P. PATEL,
Managing Director.

Bombay,
The 27th November 1957.

WORLD OF FINANCE

(Continued from page 1115)

would appear to be very much less than the Rs 52 crores that is shown in the table. It is, instead, around Rs 31 crores. In the second place, exchange banks' borrowings from the Reserve Bank are almost as high as they were on the eve of 1956-57 busy season. Thirdly, however, they have added something like Rs 8 crores to Cash Balances. Finally, the Advances Deposits ratio is some 13 per cent lower at Rs 215.59 crores. Largely speaking, it seems safe to suggest that the scope for an increase in the Advances of the Exchange Banks will be something more than last year—but not much. In round terms, we would not go wrong in estimating this prospective scope at, say, Rs 20 crores.

As far as the State Bank is concerned, the position has in every way improved almost beyond recognition. The increase in Deposits amounts to the spectacular figure of Rs 137.40 crores; but, the major portion of this presumably relates to accretions of funds under Public Law 480, and their eventual payment to the Central Government may deplete the resources of the State Bank. This, however, is not a contingency that we need to apprehend over the near future and, for that reason, the factor is not here taken into the reckoning. On the basis of Deposits as at the eve of the 1957-58 busy season; on the assumption that the Advances Deposit ratio can safely be permitted to rise to something like 60 per cent; and, thirdly, in the contingency that Deposits are stationary at the current level, the State Bank could still increase its advances to a figure of Rs 220 crores. In broad terms, this means that the State Bank could, without difficulty, expand its Advances from the October 25 level by, roughly, Rs 55 crores.

We come, finally, to the other Scheduled Banks. It is noteworthy that there has been a real and considerable increase in their Deposit resources, the rise over the year exceeding Rs 100 crores. At the same time, the Advances Deposit ratio is lower at 62.4 per cent against 64.1 per cent last year. On the assumption that Deposits are unchanged, and in the event that the Advances Deposit ratio is permitted to rise to the 1956-57 busy season peak of 72.2 per cent, the remnant Scheduled Banks would find manageable, on their present resources, Advances at a level of Rs 563 crores. This means an increase of roughly Rs 75 crores over the level obtaining at the beginning of the busy season.

Summing up, it will be seen that, between the three entities put together, an expansion in Advances of the order of Rs 150 crores should prove a manageable affair for the Scheduled banking system. On this basis, we urge again that the Reserve Bank authorities need not unduly concern themselves with any apprehensions of stringent conditions of an untoward nature in the money market during the 1957-58 busy season.

STATE BANK TAKES UP Rs. 20 CRORES OF TAP ISSUE

(Continued from page 1115)

the week ended April 5; and, in that week, the impetus to note circulation was given by the end of fiscal year disbursements of the Central and State Governments. Secondly, Rupee Coin has gone out into circulation for Rs 2.48 crores, which is the largest outflow to have occurred during the current year. Currency has been expanded for Rs 10 crores against Rupee Securities by transfer from Investments in the Banking Department. So, the Reserve Bank's Cash Balances have been run down by Rs 23.08 crores and, at Rs 13.63 crores, are at their lowest level since the week ended May 10.

It is noteworthy that the Reserve Balances of Scheduled Banks are sharply lower by Rs 30.52 crores at Rs 78.50 crores. While the bulk of this—over Rs 26 crores—appears to be accounted for by State Bank, for reasons which we shall shortly note, the balance of the decline would indicate that the other Scheduled Banks have had to draw upon their Reserve Balances to meet the demand for funds.

It may be stated here that, during the week ended December 6, the created issue of 3½ per cent 1962 Loan was available on tap, on Government account, from the Reserve Bank. It would appear that the State Bank has purchased two-thirds of this issue, and it is this fact which would account for a sharp decline in the Cash Balances of the State Bank which, in turn, has affected the Reserve Balances of member banks.

Thus, we may presume that the Central Government would have received roughly Rs 20 crores on account of the purchase by the State Bank of the 3½ per cent 1962. But the Centre's balances are marked higher only by Rs 5.69 crores at Rs 56.63 crores. It is clear that Government disbursements have been heavy and that, but for the created issue and sales thereof, deficit financing would have had to be considerable. Deposits of State Governments also show the impress of heavy disbursements. In spite of increase in their borrowings by Rs 6.22 crores to a figure of Rs 35.24

crores, the State Governments have suffered a drain on their balances to the extent of Rs 4.68 crores. It is intriguing that Other Deposits show an untoward rise of Rs 5.74 crores, but no hypothesis in explanation suggests itself.

While, as we have already indicated, the sharp decline in the Reserve Balances of member banks suggests busy season pressure, on the one hand, and subscriptions to the created issue by the State Bank, on the other, the Scheduled Banks nevertheless seem to be fairly comfortably placed, since the Reserve Bank's Other Loans and Advances show a further decline of Rs 2.32 crores to Rs 92.81 crores. The Reserve Bank's advances against Usance Bills are marked lower by Rs 1.71 crores at Rs 12.41 crores—this is the ninth successive week in which a decline has taken place under this head.

The return of the State Bank for December 6, is noteworthy for the impress felt of the purchase by the Bank of Rs 20 crores worth of securities in the created issue of 3½ per cent 1962. Investment in Government securities has been marked up by Rs 19.54 crores at Rs 173.51 crores. Deposits are lower by Rs 1.18 crores at Rs 360.72 crores. This decline, together with the rise of Rs 2.83 crores to Rs 161.28 crores in the total of Advances, may be said to indicate the pressure of month early disbursements. As a result of the month early disbursements and the busy season demand, Cash Balances have been drawn on to the tune of Rs 25.86 crores; and, at Rs 31.62 crores, they are at their lowest level since the week ended June 15.

NOTICE

Notice is hereby given that the Thirty-sixth Annual General Meeting of the Shareholders of The Singareni Collieries Co. Ltd., will be held on Monday, the 30th of December, 1957, at 4 p.m. at the Registered Office of the Company, "Meher Manzil", Khairatabad P.O., Hyderabad-Dn., to transact the following business:—

1. To confirm the Minutes of the Thirty-fifth Annual General Meeting of the Company held on 21st September, 1956.
2. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st December, 1956.
3. To approve the re-allocations of excess accumulations in the Company's Depreciation Fund and for transferring a sum of Rs 10 lakhs from the General Reserve to Dividend Equalisation Fund.
4. To sanction the declaration of a Dividend.
5. To approve Charities and Donations paid by your Directors.
6. To appoint Directors in place of:—

- (a) (1) Shri T. M. Jagtiani,
- (2) „ C. Damodar Reddy,
- (3) „ Pannalal Bansilal,

who retire in accordance with Section 256 (1) & (2) of the Companies Act 1956 and Article 93 of the Articles of Association of the Company and being eligible offer themselves for re-election.

(b) (1) Shri R. Prasad,
- (2) „ Syed Kazim,

who retire under Section 262 of the Companies Act 1956 and Article 98 of the Articles of Association of the Company, and being eligible offer themselves for re-election.

By Order of the Board,
For & On Behalf of the Singareni Collieries Company Ltd.,
Industrial Trust Fund,
Govt. of Andhra Pradesh,
R. DWARKA PERSHAD,
Secretaries.

NOTE:

1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote, instead of himself, and that a proxy need not be a member.
2. Subject to the Directors' recommendation being accepted, Dividend Warrant will be posted on 1st February, 1958.
3. Shareholders are requested to give immediate notice to the Company of any change of address.

WORLD OF TEA

(Continued from page 1117)

while many teas from Western Districts are also becoming plain. There was, therefore, active competition for the best available

quality and prices of BOPs, were often 10 to 20 cents per pound dearer. Among medium-grown teas, coloury Broken were sold well at a decline of about 10 cents. Demand for low-grown teas were rather irregular with Middle Eastern sorts generally 10 to 15 cents lower. The best high-grown Fannings were again dearer, but there was a poor support for other kinds.

In London auction held this week, 27,407 packages, including 26,196 packages of Northern India teas, were offered. The market opened with a quiet tone and prices for most kinds receded by about a penny to 2d per pound. As the sale progressed, buying became restricted and demand weakened considerably. The better Medium and Plain sorts were lower by ½d to 1d; but the poorer Medium and Plainest teas were often a penny to 2d easier. Best quality kinds met with a very irregular market and, in many cases, these were sold at below brokers' valuation. Clean Common Broken Pekoe was quoted at 2s 1½d per pound.

Tea stocks in London, as on the 29th November, were 128.44 million pounds as compared to 130.44 million pounds in the previous week and 26.42 million pounds a year ago. Landed between 23rd and 29th November were 9.46 million pounds, while deliveries during the same period were 11.46 million pounds.

WORLD OF JUTE

(Continued from page 1118)

Only small business is reported done during the week in:—Assam Bottoms at Rs 27; Cuttack Bottoms at Rs 29; Dhurri Bottoms at Rs 28.75; Northern Bottoms at Rs 26.50; Dalsee Mesta Bottoms at Rs 24.50 and Blinn at Rs 23.00, all per maund for December-January delivery.

Following were the price trends of jute goods:—

	Previous Week	Week's High	Week's Closing

December 14, 1957]

THE BHULANBARAREE COAL CO., LTD.

Notice is hereby given to the Members of the above named Company that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the 100th Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, India Exchange, Calcutta on Friday the 27th December, 1957 at 2-30 p.m. for the following purposes:

- (1) To receive, consider and approve the Audited Accounts of the Company for the year ended 31st December, 1956, the Balance Sheet as that date and to receive the Directors' and the Auditors' Reports thereon.
- (2) To appoint Directors in place of those retiring.
- (3) To appoint the Auditors and fix their remuneration.
- (4) To consider and if thought fit to pass with or without amendments the following resolution which will be proposed as Ordinary Resolution:—

"RESOLVED that the resignation of Messrs. F. W. Heilgers & Co. (P) Ltd., from the Managing Agency of this Company with effect from 31st December, 1956, be and hereby accepted."

- (5) To consider and if thought fit to pass with or without amendments the following resolution which will be proposed as Special Resolution.

"RESOLVED that the remuneration of the Directors for attending Board meetings be increased from the present rate of Rs. 100/- for each meeting to be divided between all the Directors attending the meeting to the rate of Rs. 50/- for each Director for every Board Meeting attended by him.

- (6) To transact any other competent business.

The Share Transfer Register of the Company will be closed from 13th to 27th December, 1957, both days inclusive.

By Order of the Board,
N. L. KANORIA,
Director.

NOTE—(1) A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

(2) Explanatory statement pursuant to Sec. 172 of the Act for Item No. 5.

The Directors remuneration of Rs 100/- for every meeting to be divided between all the Directors

OLYMPUS

(Continued from page 1126)

present as provided under Article 116 of the Articles of Association of the Company is inadequate, considering the change in value of money which had taken place since fixation of the remuneration at the time of incorporation of the Company in 1906. The sanction for the increase in remuneration has already been obtained from the Government of India.

SHREE GOPAL PAPER MILLS LIMITED.

NOTICE is hereby given that the Board of Directors of the above Company have declared an interim dividend of Rs. 4/- (free of Income-tax) per First Preference Share and an interim dividend of 62 nP (free of Income-tax) per Ordinary Share for the calendar year 1957. Dividend Warrants will be made out in the names and addresses of members standing registered in the books as on 14th December, 1957, or their mandatees.

Register of Members and Share Transfer Books of the Company will be closed from 15th December, 1957 to 23rd December, 1957 (both days inclusive).

Holders of Blank transfers are advised to have the Shares registered in their names in time before the closure of the books.

By Order of the Board,
Karam Chand Thapar & Bros.
Private Ltd.,
Managing Agents.

12, India Exchange Place,
Calcutta,
7th December, 1957.

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials:—
Tender No. CON/GM/40/HC/57 for supply of 8,50,000 Rft. Casing C. P. Teak Wood—1.3/4" x 13/16" (Section) with 2 grooves size 5/16" x 1/2" as per C.M.E.'s Drg. No. 3358A and 8,50,000 Rft. Capping C. P. Teak Wood 1.3/4" x 1/4" as per C.M.E.'s Drg. No. 3358A. Tenders will be opened at 12 noon on January 15, 1958.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Railway, Garden Reach by local firms.

Earnest money of Rs 1,000/- is to be deposited with the Chief Cashier, S. E. Railway, Garden Reach, Calcutta-23 and receipt obtained should accompany the tender together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1,000/- with the Controller of Stores need not pay the earnest money.

S94 General Manager.

Congress, being economy-minded, and not politically very favourable to India, was in no mood to approve a big loan to India at this stage. But the sizable help we are likely to get from the International Bank for Reconstruction and Development and the other semi-governmental institutions will go some way to give relief and we have also reason to hope that, ultimately, with a suitable approach, the Congress, too, may agree to sanction a loan to this country. In the opinion of the Delegation, the government can safely expect from this quarter alone every year about 100 million dollars or a little more for such projects as are not of an industrial nature". Presumably, these comprise agreements on supply of surplus agricultural commodities. Such help, while quite useful, would still leave our main problems unsolved.

The Delegation's Report is an interesting and important document well worth the close study of Government. There can be no doubt that the Delegation's labours have been worth while. While in America, Mr. G. D. Birla and his associates in this Delegation did a fine job of explaining the Indian point of view to the Americans. Now that they are back, they have given in this Report a realistic appraisal of the views of persons in a position to help. Other corroboration of these findings is also available. It is to be seen how far all this new and more precise knowledge of prospects of assistance from abroad will modify current official thinking on the subject. The final version of the Plan promised in February, as also the actual Budget proposals for 1958-59, will give some indications on the subject.

THE PENINSULA

(Continued from page 1128)
number of production with 1952-53 as the base is a scale of ascending order, the figures being 127.1 for 1953-54, 142.4 for 1954-55 and 148.6 for 1955-56.

Notwithstanding the increase in the production of foodgrains it has not fallen to the lot of Mysore to have a complete deliverance from scarcity pockets. The districts to be affected by such conditions are Mysore, Madhya Pradesh, Bangalore, Kolar and Tumkur. The relief works that the State Governments would be called upon to undertake to mitigate the suffering have necessarily to be on a massive scale in view of the largeness of the area so affected. Considering that it was the Bombay Karnataka regions that fell under such conditions last year, the incidence of this year's adverse factors only points to a change of fronts. The relief operations have already been started and a total of Rs 24,50,00 has been sanctioned.

The situation would have been generally satisfying were it not for the presence of certain contradictory elements which remain out of tune with the rising trend in

production. For even after the successful season is harvested, it is feared by officials in Madras that the prices of foodgrains would remain obstinately and unsympathetically elusive. Such misgivings about the price factor seem to be based on what the Government consider to be the persisting disruption of the movement of foodgrains within the South Zone in a manner detrimental to Madras. In this connection it is pointed out that the incursions of the Kerala Government into the food stocks of Madras have gone on unabated, while the movement of rice from Andhra, which alone could have made up for the depletion, was stopped. But the explanation hardly suffices, because the foodgrain dealers have testified to an abundance of stocks on their hands. Strength is added to this argument by the continuing tendency of the prices to spiral even in the face of governmental action to flood the fair price shops with supplies. Under such circumstances, the Government seem to be thinking in terms of requisitioning stocks from Tanjore. This would be coupled with an appeal for a change in food habits, since, in official calculations, a recent switch to rice in part accounts for the increase in the prices of foodgrains.

The position in respect of foodgrains that now obtains in the areas comprising the South Zone is sobering and thus justifies the apprehensions of the authorities who conferred for its creation. If the situation in some areas should not reveal signs of improvement to the extent expected, some readjustments within the Zone itself should be capable of bringing them in line with the other areas. No doubt, the States not coming within the purview of the Zone had found it difficult to reconcile themselves to the zonal arrangement, since it had meant to them the closing of a traditional source for supplementing their resources and stocks. But even these latter may feel benefited to the extent that the Zone has stood between them and a worse national fate.

CLIVE STREET GOSSIP

(Continued from page 1122)

not, he may quote the fate of Dutch enterprise in Indonesia at the moment as a warning). All these difficulties will be averted if there is matching Indian participation. If there is to be any expropriation at all in such cases, it would have to be of the blatant Communist kind in which all property, domestic or foreign, will be taken over without any compensation. This risk, he is willing to take.

All this does not mean that Indian taxation should not be re-examined with a view to seeing whether incentives by way of tax reliefs should not be offered to the prospective foreign investor. In this connection, the views expressed in Mr. Lokanathan's study deserve the most careful consideration. The discussion of these views, I shall hold over for the next week.

EAVESDROPPER

Stock Exchanges

DULL BUT STEADY

Watch-Dog Writes:

EXCEPT for a few bright spots, conditions in stock markets have remained generally dull in the absence of any fresh incentive and the volume of business is much restricted. Some operators hold the view that the present uncertainty may continue until the Budget, while others are inclined to hope for the best.

On the Calcutta Stock Exchange, more attention was directed towards the Engineering and Miscellaneous sections, while price movements in other counters were confined to a narrow range.

A dull trading pattern persisted on the Bombay Stock Exchange. Steels moved sluggishly, while Textiles were subdued. Miscellaneous issues showed a mixed trend.

The general tone on the Madras Stock Exchange was cheerless and prices moved within a narrow range.

Prices on Wall Street showed a mixed trend. While there was little change in Motors, Oils, Metals and Steels, Shipbuilding shares rose sharply.

★

Calcutta

Calcutta, Friday Evening. BUSINESS on the local Stock Exchange remained generally dull and restricted last week. Professional operators were reluctant to extend commitments either way, while investors remained out of the market, because of the many uncertainties of which those relating to the next Budget seemed to be one major factor. They were also anxious to hear whether the Prime Minister would have something new to say at the ensuing meeting of the Associated Chamber of Commerce that would help improve the investment outlook.

Some operators in the market, however, held the view that Mr. Nehru was unlikely to make any startling announcement of changes in Government policy towards the private sector and that the present uncertainty might continue till the Budget. There was not, however, much selling pressure as operators were fighting shy of going short and inclined to hope for the best.

The comfortable position in the money market and the reports of suspension of some of the sales of short-dated issues imparted a steadier tone to the Gilt-edged market. State Loans also attracted some attention. 3 per cent 1956 Conversion Loan opened at Rs 70.90 and, after improving at one time to Rs 71.25, receded again at the close to Rs 71.00.

Trading in the Banking section was featureless, although prices were well maintained. United Commercial changed hands at

Rs 58.75 to Rs 59.00, while Punjab National were quoted at Rs 66.50.

Sentiment in the Jute section continued to remain depressed and almost all shares succumbed under selling pressure following the disappointing working results and the passing over of dividends by many mills for the year ended 31.3.1957. The only exception was National which were taken up to Rs 21.90 from Rs 20.25, thanks to cornering activity. Howrah were offered at as low as Rs 14.87 against Rs 16.06; Ganges at Rs 50 against Rs 53; Megna at Rs 82 against Rs 84.50; Nuddea at Rs 30.50 against Rs 33.00 and Budge-Budge at Rs 70 against Rs 73. Alliance and Champdany were nearly maintained at Rs 80 and Rs 98 respectively.

Coal shares came in for selective enquiry; but the volume of business continued to be restricted. Bengal and Burrakur were well maintained at Rs 232 and Rs 22 respectively, while Amalgamated changed hands on the ex-dividend basis at Rs 14.50 to Rs 14.60. Equitable were a bright spot, having forged ahead to Rs 24.75 from Rs 23.87. Central India were done at Rs 5.81 to Rs 6.00; Western Bengal at Rs 5.65 to Rs 5.75 and South Karanpura at Rs 8.69 to Rs 8.94. New Beerbhoom were a firm feature at Rs 14.81.

Trading in the Tea section continued to be on a restricted scale in view of the downward trend in the auctions, particularly in the case of Common teas. However, selected scrips received good support at steady levels following the flow of encouraging working results and the news that Egypt had contracted to purchase another 1,500 tons of tea. Most prominent were Brahmapootra changed hands at Rs 3.12 to Rs 3.56; Betjan at Rs 23.75 to Rs 23.87 c.d.; Brooke Bond at Rs 15.00 to Rs 15.25 x.d.; Dhelakhath at Rs 20.75 to Rs 21.00; Gohpur at Rs 19.50 to Rs 20.00; Hantapara at Rs 110 to Rs 120 and Methoni at Rs 16.19 to Rs 16.25.

The continued absence of any encouraging news from the cloth market had an adverse effect on the Textiles section where there were more sellers than buyers in evidence. Jayshree were on offer at as low as Rs 6.12 against Rs 6.25 and Kesoram at Rs 9.44 against Rs 10. Bowreah were, however, better at Rs 112 against Rs 105.

Sugar shares were completely neglected due to fears that dividends for 1956-57 would be lower than those for 1955-56 and the doubts expressed in some quarters with regard to the prospects for exports during the current season. The only two bright spots were Bensund having some buyers up to Rs 12.00 from Rs 10.06 and Ram-

nugger Cane being well maintained at Rs 19.00.

Engineering shares ruled generally steady, although price movements were rather irregular due to the speculative activity in Indian Irons. Against the week-end closing of Rs 19.57, Indian Irons opened lower at Rs 19.48 and receded further to Rs 19.41 at which level renewed bear-covering pushed up the rate at one time to Rs 19.77. But, the news of a strike at the company's Burnpur Extension Works caused a sharp setback to Rs 19.52, to recover again at the close to Rs 19.57. Similarly, TEXMACO closed better at Rs 16.85 after touching a low of Rs 16.80 and a high of Rs 17.20. Burn had support up to Rs 314 from Rs 309 Indian Standard Wagon up to Rs 192 from Rs 186 and G. K. Williams up to Rs 29.31 from Rs 28.94. Braithwaite were a shade quieter at Rs 26.31 against Rs 26.56, while Britannia improved at one time to Rs 12.62 from Rs 12.44, to ease off again at the close to Rs 12.50.

Following the encouragement derived from the reports that progress for the stable functioning of the companies under the group was under way, the Mundhra group of shares staged a sharp recovery from the recent low levels, although profit-taking erased some gains at the close. Jessop recovered to Rs 24.06 from Rs 22.56 and Richardson to Rs 8.12 from Rs 7.00, to finish the week at Rs 23.19 and Rs 7.87 respectively.

The Miscellaneous section provided a few firm spots on considerations of dividend and the release of excellent working results by some companies. Most prominent were Orient Paper which, after ruling very firm at Rs 25.40 following the increased dividend, receded at the close at Rs 25.20 on profit-taking. Shree Gopal were supported up to Rs 15.37 from Rs 15.25 following the announcement of an interim dividend for the current year. Titagur were taken up to Rs 33.25 from Rs 32.62 following the increase in dividend by As 4 per share. Indian Cable met with good investment demand up to Rs 26.25 from Rs 26.06, to finish the week at Rs 25.75 on profit-taking. NICCO were keenly sought after up to Rs 24.81 from Rs 24.50 following the maintenance of the dividend on the increased capital.

National Carbon changed hands at Rs 23.37 to Rs 23.87; Aluminium Corporation at Rs 9.87; Indian Aluminium at Rs 12.37 to Rs 12.56; Hindustan Lever at Rs 19.62 to Rs 19.81; India Steamship at Rs 10.69 to Rs 10.81; Phillips India at Rs 13.75 to Rs 13.87; National Rubber at Rs 5.62 to Rs 5.69; Rohtas at Rs 17.00 to Rs 17.25 and Hindustan Motors at Rs 6.12 to Rs 6.19. Metal Box ruled firm at Rs 26.31 and Martin Burns at Rs 23.56 against Rs 26.25 and Rs 22.94 respectively. Angelo Brothers met with some enquiry up to Rs 18.38 from Rs 17.94 on strong advices from the shellac market. The news of the strike notice given by mine-

workers caused Indian Copper to slip down at one time to Rs 2.80 from Rs 2.94, to finish better at Rs 2.84. In the Mundhra group, BIC turned quiet at Rs 4.15 against Rs 4.55 and Osler at Rs 2.37 against Rs 2.93. In the managing agency group, Jardine Henderson had sellers at Rs 59.

★

FOR THE INVESTOR

(Continued from page 1107)

The shares of Shree Ambica have shot up by nearly Rs 30 to Rs 584. It is understood that a settlement has been reached between the company and the former management to the effect that Lal Mills will become a subsidiary of Shree Ambica Mills. According to the settlement, some 12,000 Ordinary shares, held by the members of the old management, are to be transferred at an agreed price of Rs 50 per share.

224

Investment Briefs

Titagur Paper has raised the dividend from Rs 2.12p to Rs 2.37 per share (including a bonus of 62 p) for the year ended 31-3-1957. Among the Jute companies, Hukmchand has reduced the dividend from Rs 2 to Rs 1.50 and Khardah from Rs 10 to Rs 8 per share, for the year ended 31-3-1957.

Among Tea companies, Amluckie has raised the dividend substantially to 50 per cent from 19 per cent, while Kaliti has again passed over the dividend, for 1956. Bababudin Coffee has maintained the dividend at 25 per cent for the year ended 30-6-1957.

THE MYSORE SPG. & MFG. CO. LIMITED.

NOTICE OF 90TH DIVIDEND.

NOTICE is hereby given that the Directors by virtue of the power vested in them under the Articles of Association have determined to pay an Interim Dividend of Rs. 3/- per Ordinary share of Rs. 50/- and a Dividend of Rs. 1-2-0 per 4½ Cumulative Preference Share of Rs. 50/- for the half year ended 31st August 1957.

The Dividend will be payable at the State Bank of India, Bombay, on and from Monday the 10th February 1958 to those shareholders whose names stand on the Register of Members on the 27th January 1958. The dividend warrants will be made negotiable at par at the State Bank of India, Bangalore.

The Transfer Books of the Company will remain closed from the 27th January 1958 to the 4th February 1958 (both days inclusive). By Order of the Board, N. SIRUR & CO. PRIVATE LTD., Managing Agents, V. N. CHANDAVARKAR, Managing Director.

Registered Office:— Temple Bar Building, 70, Forbes Street, Fort, Bombay, 10th December 1957.

*After transferring Rs 1,10,000 from General Reserve. Capital:—Authorised Rs 30,00,000. Subscribed Rs 9,00,000 in 90,000—ordinary shares of Rs 10 each.

BALANCE-SHEET REVIEWS

(Continued from page 1110)

previous year. The Ordinary dividend has been stepped up from 4 to 6 annas per share.

The directors are making every effort to improve the working of the company. Messrs Birla Gwalior Private Limited have been appointed as managing agents of the company with effect from 1st April, 1957 and the necessary sanction from Government, in this respect, has been received.

224

Jardine Henderson

Substantial losses incurred by all the jute mills and the fall in the prices obtained for the plain teas produced by a number of estates in the company's agency situated in Cachar and Dooars, are fully reflected in the working results of Jardine Henderson Limited for the year ended 31st March, 1957. Although sales have risen to Rs 15.59 crores from Rs 13.13 crores, the net profit, before providing for Depreciation and Taxation, amounts to Rs 45,99,434 as against Rs 49,56,428 in the previous year. Apart from setting a sum of Rs 5.00 lakhs for Dividend Equalisation Reserve, the Depreciation amount is raised to Rs 1.37 lakhs from Rs 1.32 lakhs; Taxation to Rs 14.00 lakhs from Rs 11.90 lakhs and General Reserve to Rs 5.00 lakhs from Rs 2.00 lakhs. The dividend on the Ordinary shares is, however, reduced to Rs 2.50 from Rs 7.50 per share.

224

New Manbhoom Coal

Thanks to a substantial rise in profits, the New Manbhoom Coal

Company Limited has recommended a dividend of 5 per cent for the year ended 31st March 1957, after the lapse of a long period. The net profit, after Depreciation and Taxation, amounts to as much as Rs 1,03,277 as against only Rs 20,864 in the previous year. The directors have, after providing Rs 1,500 for Wealth Tax, reduced the Depreciation amount to Rs 83,340 from Rs 88,282.

The directors have, in their report, stated that the requisite machinery for stowing has now arrived and it will be put into operation in the ensuing financial year. Furthermore, the Stowing Board has sanctioned the project for increasing the production of higher-grade metallurgical coal. This will naturally result in the improved working of the colliery in the future.

224

Deccan Sugar

While there is general anxiety to know how the sugar companies have fared in the season just now ended, it is encouraging to note that the mills in South India have done very well. On account of the longer season and larger crush the output has been considerably larger. As the greater production has also been moving rather easily into consumption, even with a slightly lower recovery higher earnings have been reported. The Deccan Sugar and Abkhari Company Limited has earned a net profit, before providing for taxation and depreciation, for the year ended May 31, 1957 of Rs 31,47,672 against Rs 26,56,935 for 1955-56. Sales were Rs 2.36 crores against Rs 2.28 crores.

(Annual General Meeting on 20-12-57 at 4 p.m. Books closed from 13-12-57 to 20-12-57).
*After transferring Rs 1,10,000 from General Reserve. Capital:—Authorised Rs 30,00,000. Subscribed Rs 9,00,000 in 90,000—ordinary shares of Rs 10 each.

*After transferring Rs 35,000 from General Reserve.

The amount set aside to depreciation is slightly lower at Rs 4,93,801 against Rs 5,48,070 previously. But the provision for taxation is sharply higher at Rs 17,05,211 (Rs 9,55,211). Included in the same is a transfer to the taxation equalisation reserve amounting to Rs 2.20 lakh (Rs 2.30 lakhs). The provision towards wealth tax is Rs 30,000 (nil). The larger tax provision has naturally cut into the transfers to other reserves. The capital reserve gets Rs 30,000 (Rs 45,000) and the general reserve Rs 3 lakhs (Rs 5 lakhs). The dividend equalisation reserve does not get anything against Rs 2.5 lakhs formerly. The ordinary shareholders, however, are benefited as, apart from the interim dividend of 5 per cent on the old capital, a final dividend of 12 per cent on the increased capital is to be paid. This works out to 14.5 per cent on the old capital. The dividend amount is, therefore, very much higher at Rs 5,77,680 against Rs 2,97,800 previously.

Early this year 3,98,400 ordinary shares of Rs 5 each were offered to the existing shareholders at par in the proportion of one share for every share held. The offer was made on May 7, 1957 and by July 3, 1957 the whole issue had been taken up by the members of the company and the shares allotted to them. It was a condition of the offer that new shares should rank equally with the existing ordinary shares in all respects. Together with the preference capital of Rs 7 lakhs, the total share capital of the company is now Rs 48.84 lakhs.

Samakot Factory worked for a longer period. The total quantity of cane crushed was 1,18,881 tons and sugar produced 10,822 tons, both records for the factory. The

average recovery was 0.22 per cent lower at 9.26 per cent.

The Pugalur Factory worked for a special season, besides the main season, during the period August 1, 1956 to October 5, 1956. 53,797 tons of cane were crushed and 5,007 tons of sugar produced. The average recovery was 9.31 per cent. In the main season, the quantity of cane crushed was 1,55,080 tons and sugar produced 15,402 tons. The average recovery was 9.93 per cent. The quantity of cane crushed and sugar produced during 1956-57 in the main season are both records for the factory. The encouraging results for the last accounting period has naturally been well received by the factory.

224

Western Bengal Coalfields

The Western Bengal Coalfields Limited has maintained the dividend at 50 p per share for the year ended 31st March, 1957. Sales are shown higher at Rs 34.25 lakhs against Rs 31.17 lakhs, while the net profit, after Depreciation and Taxation, amounts to Rs 2,54,181 against Rs 2,19,468 in the previous year. Apart from providing a sum of Rs 25,000 for Wealth Tax, the Depreciation amount is reduced to Rs 2.15 lakhs from Rs 3.08 lakhs and Taxation to Rs 53,928 from Rs 1.90 lakhs.

According to the directors' report, the Pit Nos. 3 and 4 were closed down from October and two new Pits are being sunk at the Samla Manderboni Colliery. They hope that raisings from these Pits can be commenced sometime by the middle of next year. Besides this, new arrangements are being made to extend working sections and thus augment the raisings from the existing Pits.

a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:

Ghee	Breakfast foods	Vanaspatti and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

"Dear Sirs ..."

This is an important letter for it may close a big deal, or open a new account. More letters, estimates, indents, ledgers, bills, cheques and receipts—all these add up to prosperity provided the essential raw materials are available. In business there is no more essential raw material than paper.

For 75 years The Titaghur Paper Mills Co. Ltd. have been among the largest producers of fine quality papers. The makers of Elephant Brand Papers remain as pioneers in the forefront of the Industry.

TITAGHUR PAPER

The Titaghur Paper Mills Company Limited, Calcutta-1

For the Investor

Weak-kneed Reaction

Investment Gossip:

MARKETS are weak-kneed in reaction to the Mundra developments over the last week.

This is a strange paradox, since one would expect that the appointment of administrators or special officers to such units as Jessops and Richardson and Cruddas would evoke confidence about future working.

But the market interpretation is, to say the least, novel. It is pointed out that the Lok Sabha has had a heated argument about the Life Insurance Corporation's investments; that members decried the large proportion of accruing funds that were diverted to the private sector; and that the investments may not have been wholly wise.

It follows, they say, that the LIC, once bitten, will be twice shy of future investment. On the one hand, the Investment Committees are expected to be greatly chary of recommending particular scrips. On the other hand, the Corporation itself is expected to dip much more sparingly into the market.

So, the argument is rounded off, the funds of the LIC will not be available for the kind of strident market support which was so much in evidence during the last year or so. And it is undoubtedly true that the stray recoveries in share prices that occurred, particularly since the Budget in mid May, have been due in large part to LIC purchases.

It would, however, be wrong to think that the Mundra affair is solely responsible for the enervated atmosphere in Lyons Range and Dalal Street. The fact of the matter is, that there are so many imponderables—as I noted a few weeks ago—that the operators continue to hold that their policy must necessarily be to wait.

£ R \$

Investment Notes:

Killick Industries Limited, which has just completed 100 years, has been continuing the expansion of its activity. There is a proposal to raise Rs 25 lakhs with a view to financing certain specific projects. Although no decision is yet made, it is possible that an application may be made to the Controller of Capital

Issues for the necessary permission. Joonktolee Tea has decided to issue Bonus shares in the proportion of four for every one share held and "not one bonus share for every four shares held", as mentioned in these columns last week.

It is understood that Premier Automobiles Limited has a proposal to issue Debentures worth Rs 2 crores, carrying interest at 6½ per cent per annum, redeemable in 10 years. The object of the issue is for meeting the company's expansion programme. Meanwhile, the company has maintained the dividend at Rs 6 per share for the year ended 30th June, 1957.

Forest Industries (Travancore) Limited has decided to reduce the capital from Rs 40 lakhs to Rs 25 lakhs, subject to the confirmation by the Court. Such reduction will be effected by reducing the value of the shares from Rs 4 to Rs 2.50 each by the refund of Rs 1.50 per share on the 4,98,100 shares issued and subscribed.

The Mangalore Electric Supply Company has gone into liquidation. The resolution with regard to the winding up of the company has already been passed at a meeting held recently.

Periakaramalai Tea has obtained the permission from the Reserve Bank of India, Madras, for the issue of bonus shares to non-resident shareholders. The last date for the receipt of renunciation letters is 31st December, 1957.

Investment Briefs

Indian Wood Products Limited has announced an interim dividend of 10 per cent for the year ended 30-9-1957, payable on or after 29th January, 1958.

Associated Cements have recommended a dividend of Rs 9 on the fully paid and Rs 3.375 on partly paid-up shares for the year ended 31-7-1957.

Hindustan Sugar has maintained the dividend at Rs 15 per share for the year ended 30-6-1957.

£ R \$

Indian Galvanizing

Although the plant in Bombay continues to do well, the uneconomic working of the Calcutta factory is fully reflected in the working results of the Indian Galvanizing Company for the year ended 31st December, 1956. Sales have shown a rise to Rs 1.59 crores from Rs 1.28 crores. The accounts, however, reveal a loss, after providing for Depreciation of Rs 3.23 lakhs (Rs 3.13 lakhs), of Rs 5.97 lakhs as against a net profit of Rs 4.80 lakhs in the previous year. The directors have recommended dividend only on the Preference shares, passing over the Ordinary dividend against 10 per cent paid in 1955. After transferring Rs 4.33 lakhs from taxation provision no longer required and Rs 2.30 lakhs from Stock Reserve, there is a balance of Rs 90,233 to be carried forward to 1957.

The directors have stated that the future prospects of the company will depend on the availability of steel.

Excellent Results of Titaghur Paper

Balance-Sheet Reviews:

THE Titaghur Paper Mills Company Limited has produced excellent working results for the year ended 31st March 1957, thanks to the satisfactory progress made in the current stage of the renovation programme and the increased production. Sales have risen to Rs 7.04 crores from Rs 6.50 crores, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 127.80 lakhs as against only Rs 108.38 lakhs in the previous year. In respect of allocations to Funds, the Depreciation amount is raised to Rs 24.15 lakhs from Rs 15.57

lakhs; Taxation to Rs 46.06 lakhs from Rs 32.88 lakhs and Taxation Contingency Reserve to Rs 4.75 lakhs from Rs 4.50 lakhs. The New Mill Project Reserve is maintained at Rs 21.00 lakhs. Development Rebate Reserve is reduced to Rs 2.00 lakhs from 4.75 lakhs and Dividend Equalisation Reserve to Rs 1.50 lakhs from Rs 2.50 lakhs, while no provision is made for General Reserve against Rs 1.00 lakh previously. The dividend on the 'A' and 'B' Ordinary shares is raised to Rs 2.37 (including a bonus of 62 nP) from Rs 2.12 nP per share, while the Preferred Ordinary dividend is maintained at 10 per cent.

HIGHLIGHTS

Mr W. H. S. Michelmores made a brilliant speech the other day, at the annual meeting of the Associated Chambers of Commerce.

It was refreshing to hear from him a categorical dissociation from the sentiments—the "Jeremiad"—of some of his predecessors.

The sympathy for the Indian plan for development, the determination that the Chambers,

for their part, will participate as fully as they can in this progress—these highlighted Mr Michelmores's address.

Mr Nehru, on the same occasion, skilfully avoided being specific on future development and the private sector's role in it.

Instead, he chose to focus the spotlight upon agricultural production as being central to the

success of India's endeavours.

However, the Prime Minister iterated the broad division of responsibility into three categories: the State's, the private sector's and the "mixed" economy.

For Indian Finance's comment on this important annual occasion, see the Leading Article.

The Gaps in Transport

The proceedings of the Transport Conference held in New Delhi, under the auspices of the Federation of Indian Chambers of Commerce and Industry, underline for yet another time the persistence of a basic problem for the economy. While it is comforting to note that the allotment for Railway development has recently been revised upwards, even this revision does not assure adequacy of transport, particularly for goods, at the end of the Second Plan Period. Programmes for the construction of new lines are not likely to be taken up in full. In spite of the reassuring observations from the Railway authorities, bottlenecks are still being complained of in respect of the movements of coal and ores.

The Delhi Conference has taken in its sweep the transport problem in its entirety. The suggestions made for increasing wagon loads and goods trains, for quicker movements, for review of facilities available at the breaking of gauge and transshipment, for advance intimation of wagon arrivals and for a general tightening of security measures, mostly fall within the scope of efforts already being pursued by the railway administration.

Greater urgency should perhaps be attached to the need for the completion of the national high ways, for, putting more trucks and lorries on the roads and for moving vexatious inter-State and inter-regional restrictions on motor transport. Even in Eastern India, where the highest concentration of railway tracks obtains, considerable relief could be sought by the quick development of alternative means. For Orissa a vast development is in sight under Indo-Japanese cooperation, which involves a coordinating programme of opening up river, rail and port traffic.

Editorial Notes

Even more urgent are the needs of shipping. It was pointed out at the Conference that nearly Rs 140 crores is being drained out annually on foreign shipping services. In shipping no less than in road transport, uncertainties do exist over the future role of the private sector. The State Trading Corporation is reported to be chartering ships of its own. It is only reasonable to indicate as precisely as possible how far private trade could hope to flourish in this sphere for any specific period, so that both the sectors could contribute freely, to a task which has necessarily to be shared in common. The Delhi Conference has reiterated the plea that the policy of reserving 75 per cent of the capital and cent per cent of the management of Indian shipping to Indians should be strictly adhered to.

*

Finance for Small Business

A small team of US businessmen lately in India has been exploring prospects for the promotion of small and medium sized enterprises in India on the basis of joint financial partnership between the US team and Indian businessmen. The US team which seeks to function under the title of "Private Enterprise Incorporated" will put 25 per cent of capital in a limited company, an Indian financier an equal percentage and the businessman who either already owns a business or is seeking to build up one the remaining 50 per cent. The latter will have the option to buy up the financiers' interests whenever he finds it suitable. The return on the capital will be shared in the form of profits in appropriate proportions.

Mr William L. Graham of Wichita, Kansas, Mr Page Lamoreaux, a Cadillac-Pontiac automobile dealer and cattle rancher in Northern California and Mr E. A. Jyring, a top architect and engineer from Hibbing, Minnesota, are the sponsors of the scheme. They claim to have secured the co-operation of a few top ranking Indian businessmen. They also hope that many American industrialists and small investors would be attracted to this kind of participation in Indian enterprises.

The scheme has the obvious merit of seeking to provide to a particularly needy section of Indian industry a substantial part of capital, on conditions which are fair and even generous. There are a few untapped fields where the investment of US capital in small enterprises can also be linked up with marketing of the products concerned. The US has lately started evincing a lively interest in food products, of a type which could be exported without cutting deep into the domestic supplies of staple commodities.

"Festina Lente"

"Festina Lente" is the watchword which the Romans would surely have as advice for us, particularly in respect of the highly controversial language problem. Counsels are divided as to whether Hindi should speedily be ordained as the national language of this country. Understandably, the Northern States—even here, some dissident voices are to be heard—are vehement in their call for a speedy switchover to Hindi. The rest of the country, however, and particularly West Bengal and the Southern States has, in a fundamental sense, been more dispassionate in its approach to this issue. Educationists are nearly unanimous in their minatory exhortations against any undue haste in the adoption of Hindi as the official language. The practical posers which are so clearly realised by the educationists are the least part of the deterrent to expedition in the matter. What counts for more is the danger that unheeding and relentless pressure at forcing Hindi upon this country may deal out grievous and irreparable damage to the economic progress which we so badly need to achieve. For, as Sir A. Lakshmanaswami Mudaliar pointed out the other day in a speech at Calcutta, any monkeying—it is nothing less than that, according to august and eminent men of letters of this country—with the language issue may disable a whole generation of Indian youth from performing their predestined task. This fact, the threat to the progress of India if precipitate action is taken in respect of Hindi, more than any other is an argument for proceeding slowly—and with caution.

*

Change in Cyprus

The retirement of Sir John Harding from the Governorship of Cyprus offers an opportunity for a fresh attempt to solve the tragic disputes which have darkened the lives of the common Cypriot citizen for the last four years.

The question of freedom for the island has now become so involved and has accreted to itself such passionate memories of violence and bitterness that a change in personnel cannot, perhaps, be regarded as a strong enough ground for hoping that the tangle will be solved. But personalities do count and Sir John Harding had in the course of the unhappy years of his rule, come so inseparably to be identified with a policy of ruthless repression and no compromise, that his retirement from the scene may make the atmosphere slightly clearer and attempts at solving the problem may now have a slightly better chance of success.

Sir Hugh Foot, the new Governor apparently realises this and spoke on arriving to take up his new

post, of disaster coming "if we neglect the opportunity before us".

The opportunity is certainly there but whether the parties to the dispute will grasp it is more than one can confidently say. Archbishop Makarios, who is now busy in New York for the United Nations debate on Cyprus does not seem to be in a mood for compromise on his stand of freedom and ultimate union with Greece.

He has, moreover, reacted violently to the reported NATO proposal for setting up a missile base in Cyprus. In a statement he has declared that such bases, if set up before the grant of freedom to the island will be liable to be attacked by the nationalists—an unfortunate, if understandable, thing to say at just the present moment.

It is easy for India to sympathise with a people struggling for independence but India has also an almost instinctive repulsion towards the adoption of violence as a means of settling disputes. The Archbishop, while he can be sure of the Indian Government's support for a just and peaceful settlement of the question of freedom for the Cypriots, must also be aware that nothing is more certain of forfeiting that sympathy and support than acts or statements which might be construed as incitement to violence.

The British Government, on their part, have also not given any indication so far of eagerness to avail of the opportunity. Lifting of the ban on the Archbishop's entry to Cyprus at this juncture would have helped immensely to create an atmosphere of goodwill for the ruling country. It is quite futile to talk of settlement and at the same time refuse to conduct negotiations with the one person who can claim to talk on behalf of the most important party in the dispute.

World of Finance

Busy Season Starts?

HAS the 1957-58 busy season finally begun? Does its late onset indicate that it will be less than normally severe? Or is it likely that the demand for funds will be more greatly concentrated over the shorter duration of the busy season? While the answer can be given to the first of these questions, there can be little besides speculation as to the last two. We may state, at the outset, that, although money rates have not appreciably hardened either at Bombay or at Calcutta, the distinct impress of busy season indicators is to be found in the latest bank returns. What those indications are, and how they are suggestive of the onset of the busy season, are analysed later in this article. For the moment, it would be useful to enter into a brief discussion of the other two questions that we have posed at the beginning of this article.

In the first place, the demand for funds generated by the accelerating pace of industrial development is likely to aggravate the seasonal pressure for funds that is normal in the period November-April. But, as against such increased demand from the industrial sector, we have to bear in mind that, in the second place, there is likely to be an abatement in the accommodation sought by trade and commerce consequent to the very severe import restrictions which have been imposed since the end of last year. It is permissible to suggest, in broad terms, that the increase in demand under the first head will be offset by decline under the second head. But the under the second head. But the crux of the busy season pressure for funds may be said to be derived from the finance necessary for the

movement of crops. Here, it is much too early to conjecture on the bountifulness or otherwise of the agricultural crops now awaiting harvest. Indeed, the only specific indication that we have is in respect of sugar, where the out-turn by the manufacturing industry seems well set for an increase over the previous year. To that extent, some augmentation of demand in respect of financing crops is to be anticipated. Here, again, however, the Reserve Bank's decision, as recently announced, to continue to keep credit tight for foodgrains may be relied upon to offset such increase in demand for agricultural funds. So, all in all, we have a set of factors which appear to offset each other. And the result may be that the total expansion in advances during the current busy season may prove to be much less than presently anticipated, and almost certainly less than in the last busy season. Thus, from the starting point of Rs 867.93 crores at the end of October 1957, advances may rise, by the busy season peak, by an amount less than the Rs 160 crores presently expected. In this context, it is also noteworthy that, in the six weeks since the "official" start of the busy season, there has actually been a contraction in advances exceeding Rs 22 crores. It is not unlikely, in this view, that the total of advances at the peak of the 1957-58 busy season should be placed at a level below Rs 1000 crores—or showing an increase, over the 1956-57 peak, of scarcely Rs 60 crores. This compares with the increase recorded at the end of the 1956-57 busy season over the 1955-56 busy season of Rs 138.74 crores.

Switch from Demand Liabilities to Time Liabilities Continues

The latest Reserve Bank returns disclose that the busy season has, at long last, begun. Thus, although there is not evidence of any substantial increase in note circulation, the fact that Advances of Scheduled Banks have, after quite a considerable while, risen again should indicate that the busy season is now in progress. Nevertheless, as far as the Scheduled Banks are concerned, their position continues to be comfortable. This, of course, is because their deposits have risen so magnificently during the course of the 1957 slack season. Secondly from the standpoint of Government disbursements, it is to be noted that there has been no deficit financing for the third consecutive week. This would indicate that the resources from the

point of view of the Central Government have been adequate, possibly because their resources were swollen by receipts on account of tap sales of the created issue of 31 per cent 1952 amounting to Rs 30 crores. This issue, we may note, is now generally reported to have been sold out at the tap price of Rs 97.75 to Rs 97.80. However, it has to be conceded that the bulk of the created issue would appear to have been taken up by the State Bank. In its return for December 6, the State Bank disclosed that its investments in Government securities had risen by Rs 20 crores, indicating almost certainly its own absorption of the 31 per cent 1952. Subsequently, the reports are that the balance has also been sold. However, the

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank will provide from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SISTA-5-58-15

Scheduled Bank returns for December 6 do not indicate any addition on the part of the Scheduled Banks in excess of the purchases of the State Bank. So, it would appear that the purchases of the other Scheduled Banks, if they have taken place at all, have been during the week ended December 13.

The returns of the Reserve Bank for December 13 disclose an increase in note circulation for the second successive week, with an expansion of Rs 3.37 crores to Rs 1512.62 crores. This, together with an outflow of rupee coin for Rs 0.25

(Continued on page 1175)

Progress of Disinflation in Britain

By PAUL EINZIG

IT would be premature to try to express an opinion about the effectiveness of the British disinflationary policy inaugurated with the increase of the Bank Rate to 7 per cent on September 19th. There are, however, a few indications which justify some degree of

guarded optimism. The most hopeful sign is the Government's own attitude towards wage demands in Government departments and in industries controlled by the Government. In addition to the recent rejection of the claims put forward by National Health Service

[December 21, 1957

employees the claims of the employees of the nationalised British Railways and of the British Broadcasting Corporation have been flatly rejected.

Moreover, the Government has embarked upon a campaign of exhortation to induce industrial firms to lower their prices or at any rate to abstain from raising them. Both the Prime Minister, Mr Macmillan, and the Chancellor of the Exchequer, Mr Thorneycroft, have been making speech after speech, emphasising the imperative need for passing on to the consumer the benefits of technological improvements instead of dividing them between employees and shareholders. It remains to be seen whether this campaign will produce the desired effects. But judging by past experience employers are more

likely to be influenced by official
exhortations of this kind than
employees.

It seems, therefore, at least possible that the first step towards effective disinflation in Britain will be a disinflation of profits. Under the influence of pressure by the Government many firms are likely to cut their profit margins in order to contribute their share towards the effort to check the wage price inflation. Whether the Trade Unions will be inclined to follow this example seems highly doubtful judging by past experience. Although they always insist on higher wages whenever there is an increase in profits, they would be most indignant if anyone dared to suggest a lowering of wages following on a decline of profits. The most that can be hoped for would

be that they might moderate their wage demands.

The profit disinflation may result in all-round disinflation, not so much through the willingness of Trade Unions to follow the employers' example as through the effect of lower dividends on spending. Already there are indications of a more cautious spirit among the higher-income groups. The luxury hotels of London are not nearly as crowded as they have been in recent years. There is a noticeable decline in the activities of various luxury trades. This is the result of dividend cuts by a limited number of companies. The actual totals involved in these cuts are not sufficiently large to make an appreciable difference in the volume of spending. They have produced, however, a psychological effect far

in excess of their material effect. Whenever a firm reduces its dividend shareholders of many other firms regard it as a warning that this is liable to happen also in respect of their incomes. So the evidence of lower dividends and even of lower profits, tends to discourage expenditure by many people whose incomes have not as yet been affected.

It is true the direct effect of this new trend on the cost of living is negligible. It only affects the demand for articles which play a very subordinate part in the cost of living index. On the other hand, the fall in demand of the higher income groups is likely to produce widespread effect through the operation of the 'multiplier'. There is spending by employees engaged in luxury trades and by those who in turn depend on the spendings of these employees. There is also likely to be a decline of capital expenditure in luxury trades. It may take a little time before this indirect effect becomes evident. But its operation may become in due course an influence of some importance.

Whether these symptoms are in themselves sufficient to discourage industrial firms from conceding wage demands remains to be seen. For the present there is as yet no indication of any decline in the spendings by the lower-income groups. Christmas trade in districts catering for these consumers is brisker than ever. Possibly under the influence of their mass demand employers will continue to grant wage increases on the assumption that they will have no difficulty in adding the extra cost to the prices of their goods. If this should be so in respect of the large majority of firms the Government's existing disinflationary measures would be doomed to failure. In that case the Government will have to reinforce the existing measures of credit squeeze in order to ensure a reduction of demand. Having tackled the problem from the production end without success, it will have to attempt to deal with the situation from the consumption end. This would mean a reinforcement of restrictions on instalment selling and an increase in Purchase Tax. Possibly it may mean budgeting for a surplus to mop up purchasing power. It may also mean the accentuation of the economy drive in Government departments. This together with a lowering in the official ceiling fixed for the volume of credit, may produce the desired results.

The Government now seems to display genuine determination to carry its disinflationary policy to successful conclusion. Such is its unpopularity in the country that it stands to lose very little politically by adopting further unpopular measures. Its ultimate political fate depends on the success of its disinflationary policy, so that it is a question of life and death to ensure success. And in any case, if the worst came to the worst, Ministers may feel that they may as well be hanged for a sheep as for a lamb.—(Copyright).

December 21, 1957]

World of Tea

Slight Improvement in Demand

THAT Tea prices had weakened considerably during the past few weeks is a known fact. The most disquieting feature was that there were heavy withdrawals in the absence of buying support. The average price of export teas, sold in the Calcutta auctions during last month, was 39 nP per pound lower than that of November 1957. The overall price average of 1957 season teas, sold to the end of last month, was 24 nP lower from the previous season. There has also been a drastic fall of 38 nP in Dust sale price average this season.

As far as foreign buying was concerned, Russia had shown virtually no interest and the UK buyers took very small quantities. Internal buyers were also sitting on the fence. Apart from the dearth of credit, which was the major restraining factor, they were inclined to buy on a hand-to-mouth basis in the belief that the supply was going to be excessive in this season.

Meanwhile, the Committee of the Tea Association of India, Calcutta, have pointed out that the proposed enhancement of the rate of Agricultural income-Tax in West Bengal will affect the tea companies having gardens in the State of West Bengal. The "Common" variety of tea, produced in the Dooars and Terai areas in the State, are now generally selling at below the cost of production and the producers concerned are incurring heavy losses. The Government of India have also recognised the difficulties of teas belonging to this category and the question of providing relief to such teas is now under their consideration.

But, the sudden turn in the market, during the week under review, is due to better support forthcoming from the outmarkets than in recent weeks, while internal buyers are operating freely for Plain and "teas for price". In the Export Sale held in Calcutta this week, offerings consisted of 63,441 packages. The market opened 2½ to 10 nP easier; but the demand improved as the sale progressed. Plain and-Medium BPs closed only 2 nP below last week's rates, while plain Fannings were about steady. Medium Fannings tended to be dearer.

A weak feature of the sale were Low Medium BOPs which generally eased by 10 nP; but there was improved demand for medium BOPs and Orange Fannings, particularly for those invo'ces with brighter liquors which were sold well. The better CTC sorts received quite good support, although these were 20 nP easier. The poorer sorts with in-different liquors received less enquiry and there were some withdrawals. Whole Leaf grades received rather irregular support, but generally sold

at about last week's rates. Tippy sorts were sold well. Darjeeling teas met with only a fair enquiry and were at times up to 20 p easier. Following rates were quoted:—Clean Black Pekoe Rs 2.25 to Rs 2.30; Plain Broken Pekoe Rs 1.48 to Rs 1.52; Medium Broken Pekoe Rs 1.54 to Rs 1.58; Best Assam CTC BP Rs 2.60 to Rs 2.80; Plain Fannings Rs 1.54 to Rs 1.60; Medium Fannings Rs. 1.64 to Rs 1.68 and Best Assam CTC Fannings Rs 2.60 to Rs 2.60 (nominal).

In the Internal Sale, offerings were 19,720 packages of Du's. There was a better general demand which improved towards the close of the sale. Black clean grades were a strong feature and were generally dearer. The other orthodox descriptions were about firm when the sale closed, with the exception of the smaller useful liquoring grainy kinds from Assam which were a little irregular with an easier tendency.

The better liquoring CTC Assams met with more demand and were frequently dearer; but the plainer liquoring fibrous descriptions were again a weak feature of the sale and were sometimes up to 15 nP easier. Following rates were quoted:—Medium Doars Dust Rs 1.60 to Rs 1.62; Medium Assam Grainy Dust Rs 1.62 to Rs 1.66; Medium Assam CTC Dust Rs 1.80 to Rs 1.90 and Best Assam CTC Dust Rs 2.45 to Rs 2.70.

Also, 2,460 packages of Leaf grades were offered for internal consumption. There was only a fair demand and prices for most descriptions tended easier.

In the Export Quota section, rates moved rather irregularly between 10 and 16 nP per pound and business was reported done at all the levels.

The next Export and Internal Sales will be held on the 6th and 7th January 1958 respectively.

About 800,000 pounds of Dusts were offered in the Cochlin market. The sale opened to a fair demand, but prices were irregularly easier all round. Milled Dusts and Low Mediums were irregularly 5 to 10 nP easier; but Medium Dusts declined by 10 to 15 nP per pound. High-grown Dusts met with a fair enquiry, but prices were generally 20 nP below last rates.

Tea stocks in London, as on the 6th December, were lower at 128.11 million pounds as compared with 128.44 million pounds in the previous week. Stocks on the corresponding date of last year were 75.55 million pounds. Landed between 30th November and 6th December were 8.28 million pounds while deliveries during the same period were 11.21 million pounds.

As the crow flies

I'm nobody's fool. As smart as they come, I could teach anything in feathers a thing or two—and even teach *you* when it comes to flying.

But A-I-I.—they're a different proposition! Like me, they too fly swift and straight. And although I hate to admit it, they're a trifle faster than I am. So let them fly your goods to Tokyo. Air-India flies to Bangkok, Hong Kong and Tokyo twice a week—Every Sunday and Thursday. Fly as the crow flies. Be first on the market.

Stephen House, 4, Dalhousie Square East, Calcutta.

Outlook for Hessian

that burlap consumption in US has amounted to only 340 million yards as against 391 million yards in the corresponding period of last year. Operators are naturally upset by the continued lack of interest in hessian in USA which is one of the principal consumers of this category of jute goods. The facts that November which is usually a month of large offtake has closed with a low total and that November-end stocks have been placed at a comparatively lower level have engendered the apprehension that USA might have made a radical change in its attitude towards hessian imports. In simple

absence of foreign enquiries.
Hessian 40" x 10 oz Ready lost
37 nP to come back to Rs 40.08
while B Twills dropped full one
point to be done at Rs 108.25.
April-June Hessian 40" x 10 oz
receded to Rs 40.25 and B Twills
to Rs 107.30.

Monday found the market in a gloomy mood consequent on the knowledge that burlap consumption in US during November had been at a meagre level with stocks also showing no substantial increase. Though mills showed interest at prevailing levels' only small business in ready positions could be concluded. Hessian 40" x 120 oz Ready lost another nearly half point to come down to Rs 39.55 while B Twills dropped yet another point to be marked down to Rs 107.25. Similar declines were noticeable in the forward positions with Hessian 40" x 10 oz April-June at Rs 39.80 and B Twills at Rs 106.90.

Rumours of some business with US helped Hessian to maintain its upward movement on Wednesday and Hessian 40" x 10 oz Ready made further headway to Rs 39.85. B Twills Ready also showed a slight improvement at Rs 106.50 in sympathy. April-June 40" x 10 oz was done at Rs 40 while B Twills for the same position was placed at Rs 106.40.

The table below shows the price trend during the week:

	Week's Opening	Week's Closing
	Ra.	Th.
Hosiery:		
40" x 10 OK		
Ready	49.45	49.25
April-June	49.70	49.00
Sackings:		
B Twills:		
Ready	109.25	109.50
April-June	109.37	109.40
Heavy Oes Green	109.25	109.40
Cornsnacks	109.50	109.50
Cubans	137.50	133.50
A. Twills	133.50	130.00
L. Twills	125.25	123.50
D. W. Flour	129.50	129.00
Sugar Bags	124.50	123.00

The jute goods market opened quietly steady but after midweek developed a distinctly easier undertone on persistent selling pressure. Toward close, however, there had been some recovery. But for some selling pressure in sackings in the Fatka, the goods market ruled generally unchanged on the opening day. Mills showed little interest at prevailing price levels. Hessian 40" x 10 oz Ready closed at Rs 40.45 while B Twills was finally placed at Rs 109.25. In the forward positions April-June 40" x 10 oz Hessian was quoted at Rs 40.70 while B Twills closed at Rs 108.37. Prices developed an easier tendency on Friday due to speculative selling brought about by continued

The raw jute market ruled quiet most of the time but when the raw jute arrival figures for the last month were made available the undertone became easier with prices showing a declining trend. Over the week Assam Bottoms declined by one point to be finally placed at Rs 26.50 per maund.

FROM one point of view, the timing of the publication of Dr Lokanathan's study on Taxation and Foreign Investment is perfect. This part of the year is traditionally the period when germinal ideas about the coming Budget are supposed to rear their ugly heads in the mind of the Finance Minister. The months ahead will see their slow transformation into the monstrous things we know as taxes every year. This year, the Finance Minister's customary cerebration of budget ideas has had special urgencies imparted to it. One of them is the need to make up his mind about the final shape of the Plan and to define more precisely the corresponding sources of finances for it. The latter task will, in its turn, involve a reconsideration of not only domestic resources—their adequacy and so forth—but also those aspects of our policies that impinge on the availability of foreign resources. In formulating his views on the last subject, the findings of Dr Lokanathan and his colleagues of the National Council of Applied Economic Research are sure to be of inestimable value to the Finance Minister.

These findings deserve the closest examination, and such an examination will be appearing in these pages shortly. I shall, however, confine myself here to certain broad considerations bearing on the issues raised by the book. The scope of Dr Lokanathan's study is well defined and, if one may say so without any pejorative implication, narrow. The narrowness of the compass arises in two ways: in the first place, in the words of the study itself, it concerns itself with 'one aspect of our tax laws—their import upon present and potential foreign investors in India'. In other words, as a discussion of our tax policies, its curiosity is limited to but one aspect. On the other hand, from the point of view of foreign investment, taxation is only one of the many elements that determine the flow of foreign investment into India. There are obvious points where aspects of taxation policies not considered here come into conflict with the requirements of a policy designed to encourage the inflow of foreign capital. Perhaps the most exasperating thing about developmental planning is the

adjustment of competing and sometimes conflicting tasks, all of which seem inescapable. Considered in the domestic context, there is a fairly arguable case for most of the taxation measures (both individually and in their totality) that the present study considers as possible disincentives for foreign investment in India. There is first of all, the need for the maximum extension of domestic resources for the Plan, which involves the stretching of taxable limits to the maximum. Secondly, as an integrated tax system with incentives for deploying one's economic resources along socially useful lines, the present Indian experiment, of taxing income, expenditure, capital gains and wealth at the same time, is of revolutionary significance. It is true that this claim is somewhat exaggerated on the basis of actual performance. The first requisite of such an integrated system is a low incidence of tax on income, say a maximum of 45 per cent as suggested by Dr Kaldor. This is absent in the current Indian taxation system. (Here again, you have an example of the planner's dilemma I mentioned earlier: the competing aim of more immediate revenue has made nonsense of the equally fundamental requirement of an integrated tax system). But, by and large, the domestic justification of many, if not all, of the present taxation policies is on a fairly firm ground.

But then, as the present study shows, and as Mr Krishnamachari discovered for himself when he went out on what he called his mission of "self-education", these measures do act in a way that inhibits desire to invest in India. It may be that many of these inhibitions are not reasoned reluctance, but are due to causes such as a psychological encounter with unfamiliar tax laws. The actual jeopardy to potential investors from the Expenditure Tax is negligible. But the very notion of taxing spending is something new, and India is the first country in the world to attempt it. The fear of the unknown deters many from examining it at all. As a matter of fact, the provisions of this enactment are so liberal that it is unlikely to touch any potential investor. For one thing, it applies only to individuals and Hindu undivided families, and most of the

potential foreign investors are not likely to be either, though, of course, the personnel of corporate bodies may have something to worry about on this score. And even here, special allowances are permitted for foreigners resident in India and, as shown in this study, a person with a gross income of Rs 80,000 will not pay any tax even if he spends the whole of it. And if his income is Rs 200,000 and he spends the whole of it (which would be most unlikely) he will pay a tax of 2.63 per cent. Thus, it is seen that the actual liability that is likely to be imposed by this tax on foreign personnel is almost nothing.

But there are other aspects of our taxation laws whose terrors for potential foreign investors are not so imaginary. But before I go on to deal with some of them, I should like to refer to one particular related matter. Just as there are aspects of taxation policies other than their effect on foreign investment, there are inducements for foreign investments which brave the most chilling reception given it by domestic tax laws. I mentioned some of them last week: the spirit of enterprise which finds in the very unpromising circumstances a challenge to its ingenuity; the compulsive forces of an enlightened policy of economic self interest considered in the global context and beyond the immediate future; and, lastly, a warm and sympathetic interest in the Indian experiment of democratic planning. These considerations do act as over riding incentive for many foreign investors, and they do credit to their generosity as much as to their economic good sense. And one of the smaller mercies vouchsafed the planner in his dilemmas of reconciling the needs of domestic policies with those of the demands of efforts to attract foreign investment is precisely the existence of this circumstance. Ultimately, therefore, modification of tax laws in one direction or the other is really dependent upon a pragmatic assessment of the needs of the situation. A really flexible approach to the whole question is the only equipment that will help the planner.

Let me now turn my attention to the question of the effect of certain provisions in our tax laws

that have a bearing on fresh foreign investment. In my view, the chief end of any scheme of encouragement of foreign investment should be to provide a selective but positive inducement for the kind of investment we want. In other words, not every kind of enterprise will find encouragement, but only those that have a direct bearing on the development of the bases of our economy. Otherwise, we may quite conceivably be cluttered with the kind of enterprises that would produce a good many things we have been doing well without all these days, without any particular sense of privation: an offer to set up a factory for making television sets has no attraction for us. A second consideration in this regard is that, as far as possible, domestic initiative and enterprise should not be placed at a discount, by giving too preferential a treatment to foreign investors.

Let us consider how far, within the framework of these criteria, the present provisions in the Act are inducements for foreign investors to come to India. The most important concessions are provided by Section 15B, Section 56A, Section 10(2) vi(a) and 10(2) (ib) of the Indian Income Tax Act. More recently, important concessions on taxation of interest in respect of extended credits given to Indian enterprises by foreigners have also been given. Related to these are exemptions given to foreign technicians who are employed in enterprises in India.

It cannot be denied that, in principle, these concessions add up to a sizable inducement to any person wishing to start productive enterprises in India. Section 15C exempts from income tax and super tax, for five years, the profits from new industrial undertakings up to a maximum of 6 per cent of the capital employed in it. The dividends attributable to the exempted profits are likewise immune from income tax and super tax. Section 36A extends the principle of exemption of dividends from new industrial undertakings in significant directions. It provides that no super tax shall be payable by a company on its dividends received from an Indian company formed after 31st March 1952, if the company is engaged in

Now is the time to trade with South East Asia

Rising standards of living open new markets for Indian goods

In South East Asia, as elsewhere, what you can sell depends on what the people need—their ability to buy. The Indian Overseas Bank with branches in several strategic centres has made a special study of this important growing market and can help you solve your trading problems

manufacture of products of basic importance to our economy (twenty such enterprises are listed in the Section itself). It also extends this concession to old companies in so far as they relate to dividend attributable to profits earned by new capital raised and employed in such enterprises. The section is of particular relevance to foreign investors because intercorporate dividends from an Indian subsidiary are normally subject to heavy super tax in the hands of the foreign principal. If the Indian company is engaged in the kind of activity that is approved under this section, then the foreign principal pays no tax at all. Secondly, the section extends the life of the exemption beyond the five years given under section 15C.

Likewise, the development rebate and depreciation allowances extend the principle of selective encouragement of desirable investment in India. None of these is particularly discriminatory against domestic endeavour. And, as far as the foreign investor is concerned, these are particularly attractive as shown by a chart in this study. If a foreign company, be it one with a branch or a subsidiary or minority shareholding in an Indian company, comes under these provisions, then it does not pay any tax (apart from tax on excess dividends), even if the entire profits are distributed as dividends.

Dr Lokanathan's study gives detailed analysis of the tax burden on different classes of investors in India and points out the relative onerousness on foreign enterprises with branches in India and minority shareholding in India. There is apparently no special reason for this discrimination (at least as regards the branch establishment vis-a-vis subsidiary) except perhaps accidents of unrelated amendments from time to time. (Indeed, in one important respect, a branch is better off than a subsidiary). Dr Lokanathan has made a number of recommendations for removing these anomalies and other disincentives, the most important of which is reduction of super tax on branches and the elimination of super tax of intercorporate dividends. Among his other suggestions are: excess dividend tax should be calculated with reference to the total capital employed instead of the paid-up capital as at present. This is a wholly sensible suggestion, since reserves not referable to fixed block and special purposes are as much capital as the original paid-up capital. Likewise, his objection in principle to the taxing of bonus shares has my whole-hearted sympathy. (By the way, there is a curious omission in the book of the most important reason for Government's wanting to tax bonus shares. It is that the issue of bonus share is one way of avoiding super tax on dividends, since the issue of bonus share does not involve release to the shareholder of any part of the company's assets).

There can be no serious quarrel with most of Dr Lokanathan's conclusions regarding the disincentive propensities of certain provisions in our taxation laws. On the other hand, as I pointed out, the provisions of the Act that are designed to encourage industries of the sort we want, do take the sting out of most of other unattractive provisions. Thus, intercorporate dividends do not suffer taxes in the case of companies that qualify under Section 15C and 58A. This involves discrimination against companies that do not thus qualify for exemption and, in my view, this is as it should be. If incentives are to be given, they can and should be given only to companies that we want. Therefore, if changes are to be made in existing laws (as for instance in regard to excess dividends and bonus shares and compulsory deposits and so forth) these should be confined only to what might be called Section 15C and Section 58A enterprises.

There is just one other aspect of tax incentives discussed in this study that I should like to refer to. Dr Lokanathan's study makes the point that some of the provisions of the tax laws of capital-exporting countries may offset the effects of precisely those provisions of Indian tax treatment which otherwise prove most attractive. Gateway Gossip

Shipping Stranded in Mid-sea?

EVER since the foreign exchange difficulties have familiarised the people with what is known as the hard core of the Plan, the shipping industry has been in constant public focus. Even though the acute port congestion that had loomed like a nightmare in official minds had become a dim memory, interest has been revived by the report of the Rail-sea coordination Committee. The speech of Mr Lal Bahadur Shastri, Union Minister for Transport and Communications, at the National Steamship Owners' Association in this city reflects the crystallisation of the official thinking that was set in motion by the foreign exchange difficulties and the call of the Rail-Sea Coordination Committee for urgent measures to realise the targets fixed for shipping under the Second Plan. Mr Shastri has in his speech revealed some new lines along which the Governmental shipping policy will be oriented; and, for this reason, the speech can be said to mark a turning point in the development of the shipping industry in this country.

First and foremost is the decision of the Government to establish a non-lapsable fund from the annual contributions from the consolidated fund of India and such amounts as may be determined from time to time by the Union Government. All time by the Indian shipping companies to the Indian shipping companies and all payments by way of interest on these loans would be credited to this fund instead of being merged with the general revenues. The purpose of instituting such a fund, Mr Shastri explained, is to provide the rupee resources for financing the purchase of further shipping tonnage. It has been claimed in this connection by Mr Shastri, that as a result, an additional sum of Rs 7 crores would be available for shipping development. But how far this would make for smooth sailing for the industry in the course of the Second Plan, is still debatable, considering that what prevents its development is the non-availability of the foreign exchange complement without which any addition to the tonnage capacity is difficult to envisage. The effect of the new step is to fix a ceiling to the development that the industry might be called upon to achieve and its significance lies in the distant future when the foreign exchange front can be expected to be less difficult.

It is not evident how the foreign exchange resources would be got, and even Mr Shastri himself was not definite about it and was only hopeful of success in procuring the needed resources. Though the Government were expecting loans from USA, Japan and Germany—these, Mr Shastri said, would go a long way toward overcoming the foreign exchange difficulties—it was not made clear how the projected development would be proceeded with in the event of the non-materialisation of these loans. No doubt, Mr Shastri indicated some lines by which the shipping companies could themselves find part of the foreign exchange resources, and mentioned the deferred payments scheme, under which foreign exchange payments would commence only after 1961, and other arrangements such as the utilisation of foreign exchange proceeds of existing vessels for acquisition of fresh tonnage, raising of foreign exchange by mortgaging the assets to foreign banks and utilisation by the shipping companies of the net freight earnings of their newly acquired overseas vessels. But the scope for adding to the resources by these methods is not very great in view of the extremely limited capacity of the vessels. The net freight earnings of the Indian shipping companies would come up only to a fraction of the total that would be needed for attaining the targets fixed. Further, if the Government expect these companies to secure part of the foreign exchange, it would only be fair that they should not be tied to their coastal moorings by Governmental strings and should be given the freedom to operate the tonnage as and where they liked. According to Mr Shastri, such a step is irreconcilable with the Government's undertaking to ensure a minimum tonnage by Indian ship-owners for coastal operations which, it is pointed out, is far short of demand. Fair as it sounds, the price that is paid for this would be measured by the loss of foreign exchange.

While finance is something which is beyond the Government's power, what Mr Shastri deplors is the lack of coordination between the Department of Transport, on the one hand, and other Ministries of the Government of India concerned with imports and exports on the other. This is a matter to which the authorities seem to have suddenly awakened and is, unfortunately, an index of the complacent attitude of the Government. This leakage is now sought to be plugged by the appointment of liaison officers in public and private sectors for the work of coordination and effective contact with the importing and exporting departments. The port development plan which, among others, forms the hard core of the Second Plan is faced with the same prospects as shipping development and is dependent on outside decision in respect of its foreign exchange needs. The prospective

source for this is the World Bank and a decision is still hanging fire. Connected with the question of developments is the problem of avoiding the port congestion that took an alarming turn some months back.

Mr Shastri also referred to certain other decisions of the Central Government bearing on the development of shipping in the country. The decision of the Government to reduce the interest rate on coastal loans from 4½ per cent should reduce the cost of investment for the shipping companies and would contribute to development of coastal shipping in the country. Similarly, the increase in freight rates by 15 per cent that was done in accordance with the recommendations of the Rail-sea Coordination Committee would also strengthen the capital basis of the shipping industry. The question of opening facilities for repair of ships is in the Committee stage. Similarly, the proposal to pay construction subsidy on a percentage basis in respect of ships built in the Vishakhapatnam Shipyard is also under the consideration of the Government. About the possibility of the private sector being allowed a share in shipbuilding, which is reserved

to public sector under the Industrial Policy Resolution, Mr Shastri was not quite definite and said that the question would be considered on its merits. The suggestion of Mr Shastri that the shipping companies should reserve a certain percentage of their profits for ploughing back into the industry or for being contributed to the shipping development fund so as to be reinvested in the purchase of ships, if acted upon by the shipping companies would narrow the gap between the resources and the demands upon them.

It is still uncertain how far the Second Plan targets in respect of shipping would be achieved, though the whole provision of Rs 37 crores made in the Second Plan remains fully committed. If one were to go by what happened under the First Plan, a note of pessimism is inescapable. For, the First Plan target of 600,000 GRT is yet to be achieved, the present tonnage being only 570,000 GRT. The target for the Second Plan is fixed at 900,000 GRT. The financial bad weather into which the industry had run is far from completely cleared and the industry is still in mid-sea with no sufficient help to make its way safely to harbour.

Power Supply

The position of the electrical industry in India bears little relation to its importance as a source of power so much needed by the industries and which is in comparative shortage in many parts of the country which are remotely situated from deposits of coal. In view of the capital-intensive nature of the industry it has also failed to qualify to be considered the hard core of the Plan and had been relegated into second place. In these circumstances it is at least desirable that the existing undertakings should be ensured conditions to operate in an atmosphere free from anxiety about their future.

The speech of Mr M. J. Maneckji, Chairman of the Association of Electricity Undertakings, Bombay, reveals a state of affairs of the industry in the State which is hardly conducive even to the maintenance of the normal supply of power to the public. The equity values of expanding undertakings which had been in the doldrums for sometime past had defied even the most liberalising factors that were set in motion by the Government consequent on the amendment to the Electricity (Supply) Act. Mr Maneckji suggested that if the industry could be enabled to make provision for Deferred Tax Liability the bearish influence would wear away. But he was particular that in so doing, new difficulties should not be created for the industry.

Another problem before the industry is the extremely low level of the prices of electricity supplied for public consumption. Mr Maneckji has, in this connection, pointed out that the increase in the price of electricity since the Second World War has been disproportionately lower than the increase in the prices of commodities in general the increase in the latter being hundred times as great as that of the former. Thus the industry is caught in the undercurrents of public antipathy to any increase in the price of electricity and this according to Mr Maneckji has undermined the capacity of the industry to raise equity capital which is the only source of finance left to it. He has therefore urged the need for educating the public into the nature of the industry and for creating a climate of understanding which would enable the undertakings to sell power at economic rates. Mr Maneckji also made a plea for liberalising the policy in respect of the acquisition of undertakings under the State Government's declaration of 1947, and has prayed for an extension of 10 years. In this he is on strong ground because in the present context of shortage of re-

sources, such acquisition would only have the effect of displacing Licensees without any addition being made to the new assets.

He also deprecated the tendency on the part of the State electricity Board to supplant Licensees in respect of consumers already served by the latter and of restricting Licensees' development by the Board seeking to reserve bigger loads which could normally be serviced by Licensees, and said that such a policy would end only in duplication of facilities. Another point of complaint was the disparity in Grid Tariffs as between the Licensees and the State Electricity Board's direct consumers.

The reorganisation of States as a result of which some parts of the former Bombay State passed to the New Mysore State has added to the difficulties of the Licensees functioning in the Bombay-Kar-

natak regions which now come under the jurisdiction of the Mysore State. They are faced with what looks like a system of double taxation, being subject to the Electricity Duty as in Bombay as also to the Mysore Sales Tax. At the same time he expressed satisfaction with the way in which the various State Governments were administering the law governing the regulation of electricity.

Referring to rural electrification Mr Maneckji pointed out that what had so far been done had only touched the outer fringe of the problem and indicated the magnitude of the problem of rural electrification by saying that the capital outlay involved in laying the distribution lines alone would exceed Rs 3,000 crores. The Second Plan visualises an outlay of Rs 75 crores on the electrification of small towns and villages and the tempo of development, Mr Maneckji said, would be quickened if Licensees were afforded financial assistance.

GATEWAY MARKETS

Oilseeds Prices Generally Maintained

THE markets for Oils and Oilseeds ruled generally steady, the only exception being Cottonseed. After initial quiet spell, values steadily rallied on short-covering under the leadership of castorseed where sentiment was influenced by the prospects of Russian business.

Castorseed futures reflected a steadier trend, thanks to rumours that the Government would grant a sizable concession in the export duty on castor oil in order to promote exports from the country. The strong spot position resulting from comparatively small arrivals also encouraged the operators to lend support. May delivery opened at Rs 145.75 and, after touching a high of Rs 147.75, receded again at the close to Rs 144.75 on profit-taking. In the ready section, the rate was quoted at Rs 30.25 and Castor Oil, commercial quality, at Rs 15.25.

Sentiment in the Linseed section was also well maintained, being inspired by the improved outlook for exports of linseed oil. May delivery opened at Rs 32.25 and, after touching a high of Rs 32.50, finished at Rs 32.31. Ready was quoted at Rs 31.50 and Linseed Oil at Rs 17.37.

A decline in world production of linseed in 1957 by 15 per cent as compared with 1956 is forecast.

World production is estimated at 143.8 million bushels as against the 1956 figure of 168.7 million bushels. However, the 1957 estimate is still one-fifth larger than the 1950-54 average.

Rumours of an imminent export quota for HPS variety and groundnut oil provided the main bullish influence for the Groundnut section. February delivery opened at Rs 161.87 and, after touching a low of Rs 159.75, finished better at Rs 160.62. Ready Bold quality was quoted at Rs 33 and Groundnut Oil at Rs 18.37.

In the Cottonseed section, February delivery changed hands at Rs 98.50 and Rs 100.

Gold & Silver

On the Bombay Bullion Exchange, Silver made moderate progress with most of the demand emanating from Calcutta. Sentiment was also aided by better offtake. Arrivals and off-take were estimated at 9 and 20 bars respectively. Unrefined metal receipts amounted to 5 bars. Posh delivery moved between Rs 183.56 and Rs 183.81 and Maha delivery between Rs 184.25 and Rs 184.44. Ready was done at Rs 183.00 to Rs 183.62.

Gold also hardened slightly in sympathy with silver. Arrivals

and offtake were estimated at 2,000 and 3,000 tolas respectively. Unrefined metal receipts amounted to 2,000 tolas. Posh delivery changed hands at Rs 107.87 to Rs 108.19 and Maha delivery at Rs 107.75 to Rs 108.00. Ready was done at Rs 108.44 to Rs 108.56. Sovereign was quoted at Rs 70.25.

Non-Ferrous Metals

With the exception of Copper which continued to rule steady, conditions in other sections of the Non-Ferrous Metal market ruled generally quiet. Copper was quoted at Rs 159 per cwt; and there was more demand for the metal in the complete absence of deliveries of supplies either from the Ordinance Factories or Directorate General of Supplies and Disposals. The Zinc section continued to rule weak with the rate hovering idly around Rs 54 per cwt. There was nothing special to report in Lead, which was quoted around Rs 69 per cwt. Tin remained rather quiet at Rs 129.50 per quarter on reports of healthy stock position.

On the London Metal Exchange, Copper was quoted at £185 per ton as against £182, thanks to a certain amount of Continental demand. The holdings of the metal by the Italian Government are estimated to be about 40,000 tons out of which about 20,000 tons are proposed to be released. Zinc improved to £82½ from the lowest level of £81¼ per ton. But, there is a belief that the British Government may release further quantities of the metal from their stockpile. Lead was quoted at 72½ per ton. A depressed tone has continued to persist in this section and any recovery from the present level may be possible only when the Tariff question is settled. Tin remained static at £731 per ton. The introduction of Export Quotas and the authorisation to the Buffer Stock Manager to operate in the middle price range, i.e. £780 to 830 a ton, leads one to believe that the primary objective of the market is to achieve stability.

Yarn

Listless conditions continued to prevail in the Yarn market, and prices moved within a narrow range on alternate buying selling. Prices of Art Silk yarn improved further, particularly of Italian goods, on fresh demand from upcountry centres. Nylon yarn also improved to some extent on rumours that the Government would impose a higher import duty on it. Prices of Staple-Fibre yarn ruled, however, easy despite good upcountry demand.

The Cotton yarn market remained dull in the absence of any support and prices showed a modest decline.

World of Cotton

Nervousness Continues

NERVOUSNESS in the Bombay cotton market continues unabated. Traders are still puzzled about the future course of prices. It was at first felt that the reduction in the excise duty would help the industry to dispose of its accumulated stocks in the coming months; but a section of the trade has pointed out that the industry will have to pay more by way of additional excise duty for replacing the Sales Tax. Also, reports from upcountry centres have indicated that first pickings in Vijay and Surti tracts are not satisfactory as regards both grade and staple. Shippers' demand for exportable varieties has also been very low and prices have declined further. Again, the financial stringency and heavy arrivals of the new crop do not allow prices to go up. In the futures section, turnover was only 10,000 bales. ICC Moglai Jharilla March opened at Rs 683.50 and, after improving at one time to Rs 685.75, reacted to Rs 675.50, to finish the week better at Rs 676.50. The Spot market was steady with mills evincing interest in new Khandesh, Jharilla, Vijay and Surti varieties. Some quarters felt that the recent decline in prices had gone far enough and that the present levels offered a good buying opportunity.

On the export front, there was no demand for Bengal and other short-staple varieties as shippers were not able to put through any fresh business.

In foreign cottons, there was fairly good interest. Trade circles were awaiting full details in connection with the imports of Sudanese and Egyptian cottons.

It is now learnt that the Government of India will soon announce quotas for the import of 40,000 bales of these varieties and that the mills will be permitted to buy their requirements from both the countries. It, however, appears that the Sudanese cotton will be chosen by many mills on account of the lower rates prevailing. The Government of India appear to hold the view that imports of cotton from Sudan will promote exports of textiles to that country.

As far as Egyptian cotton is concerned, importers have, it is reported, suggested that this cotton can be secured at lower rates if payment is made in sterling, mainly due to the fact that Egypt gives large discounts for payment in that currency. It is, however, doubtful whether the Government will allow payment for Egyptian cotton in sterling.

STATISTICS:

Exports by rail from 1st September to 12th December 1957 were 79,193 bales. Estimated mill con-

sumption in Bombay, during the same period, were 374,086 bale as against 381,733 bales in the corresponding period of last year. Stock of raw cotton, held by exporters, dealers and mills, on the 12th December, were 408,937 bales as compared to 423,054 bales on the corresponding last of last year.

NEW YORK COTTON MARKET:

Prices in the New York cotton futures market advanced on active dealings. Commission house and New Orleans buying in the new crop trading months found offerings scarce with demand stimulated by expectations that the loan would

be higher on the 1958 cotton crop. Weather conditions over the cotton belt were also dry and cold.

Traders attributed to the rise to a number of factors including the prospective decline in surplus cotton stocks this season, the shortage of desirable cotton from the 1957 crop and expectations of a higher loan on the 1958 crop. Middling spot was quoted at 36.75 cents per pound.

LIVERPOOL COTTON MARKET:

Vales on the Liverpool cotton futures market improved by a few points on trade covering and investment support, which absorbed scattered mill hedging. Dealings, however, remained subdued and the market closed quiet.

CLOTH AND PIECEGOODS:

Expectations that, with the integration of Sales Tax with the excise duty, some material relief would be provided have been falsified even though the excise duty on medium cotton cloth has been reduced from As 2 to As 1½. The additional excise duty, which has been proposed, mostly nullifies this relief, while the additional duty of 13 nP on super-fine cloth per square yard is considered rather heavy in proportion to the present incidence of Sales Tax.

However, the cut in the excise duty on medium varieties by half an anna, as a temporary measure, is likely to improve the demand for

(Continued on page 1174)

Steel is the starting point in a country's progress towards economic self-sufficiency. In India today there exists a wide gap between requirements and production of steel. While the present annual production is only 1,430,000 tons, by the end of the Second Five Year Plan the country will need at least 6,000,000 tons a year.

The public and private sectors have joined hands to narrow this gap by the establishment of three new

Excise Duties and State Finances

THREE related matters received parliamentary attention last week. One was the consideration of a bill for the replacement of States sales tax on certain commodities by an additional excise levy by the Centre and their distribution among the States. Two other bills concerned themselves with allied subjects. These were the Union Duties of Excise (Distribution) Bill and the Estate Duty and Tax on Rallyay Passenger Fares (Distribution Bill). All the three bills were offshoots of the Finance Commission's report.

The bill seeking to levy additional excise duties on Sugar, Tobacco and Mill Made Textiles is the culmination of a longdrawn out public discussion. The difficulties and anomalies arising out of a multiplicity of taxes on these commodities at all stages have been a matter of great exasperation to trading circles. They have repeatedly been asking for some kind of order in this jungle of taxation. Besides the burdens, the amount of paper work and accounting involved in efforts to keep on the right side of sales tax authorities in the States was distracting. As a consequence of this wide-spread discussion, the Central Sales Tax Act was passed authorising the Centre to declare certain categories of goods as of special importance to inter-State commerce or trade. The result of the inclusion in this list and the imposition of the present uniform excise on sugar, etc., is that, if any particular States should choose to impose any sales tax on these commodities after 1st April 1958, its rates are subject to the restrictions mentioned in the said Act. As a matter of fact, this contingency is not likely to arise as the matter of excise levy to replace States sales tax has long been the subject of discussions between the Centre and the State Governments. Last December, the National Development Council (of which, among others, the States Chief Ministers are members) came to the unanimous conclusion that sales tax on these commodities should be replaced by an uniform "surcharge" on excise duties to be distributed on the basis of consumption. It was also agreed that the current revenues from these sources to the States should not be adversely affected and should be so guaranteed by the Centre. The manner of distribution of this 'surcharge' should be left to the decision of the Finance Commission.

The probable revenue results of the levy may be briefly recapitulated here. Sugar is to be subjected to a new excise duty of Rs 3 and 31 Naye Paise per cwt, the expected revenue yield from which is Rs 12.18 crores. Taxes on superfine, fine and medium and art silk textiles are at varying rates and the expected yield is about Rs 21.90 crores. Tobacco, bidies, cigars and cigarettes (which are divided into eight varieties attracting taxes from Re 1 per thousand to Rs 21.5 per thousand) are to yield a total of Rs 7.40 crores. Incidentally, Mr T. T. Krishnamachari took the opportunity of introducing the bill to announce a reduction, as a temporary measure, of the existing excise on medium cotton fabrics from 2 annas per square yard to 1½ annas per square yard. This was done in response to the demand of the industry which was getting restive with the accumulation of stocks with the mills.

The total revenue from the new excise levies is put by Mr Krishnamachari at 'a conservative estimate' of Rs 35 to Rs 39 crores in a full year. The States will receive from the Centre on the current rates Rs 7 crores more than what they themselves were realising from these commodities by way of sales tax. This result would follow despite the fact that the proposed levy by the Centre will be lower than the rates of sales tax in most of the States. This somewhat paradoxical result is due to the near certainty of complete elimination of evasion under the new dispensation where the taxes were levied and collected at source, and the absence of any statutory exemption of minimum turnover. It is notorious how widespread the evasion of sales tax at levels was and the plugging of this loss is one of the chief mints of the idea.

Another interesting consequence of the new levy would be the conferment of substantial benefit to the consumers in most parts of the country. Consumers in States like Andhra Pradesh and Madras, where multi-point sales tax obtains, will be particularly benefited, though people in other States also will stand to gain to the extent by which the new levy is less than the existing sales tax rates. As far as trade is concerned, it cannot but wholeheartedly welcome this new arrangement since it does away with the need for extensive accounting, large staff for the purpose of preparing returns for several sales tax authorities and expert guidance on the aspects of sales tax law and procedure. Of course, the ubiquitous sales tax evader may find the new arrangement an inconvenience since he will be obliged to forego the sales tax he was so far collecting from his customers. But, even among this tribe, if one was

of the sort that merely evader evaded the tax without himself mulcting the consumer for the tax he was not going to pay (and thus getting double benefit) he need not bother about the new arrangement. Indeed, he may have some cause to rejoice, for the new system makes a lawful citizen of him. Of course, he has to lose some of the edge in competition he possessed all along over the honest sales tax payer, since it would no longer be possible for him to tell his customer that he will not insist on sales tax if the customer played ball and did not insist on a cash memo. But this deprivation is something that is far preferable to the constant fear of being caught by the Sales Tax authorities.

Therefore, there is every reason why this long overdue measure should receive wide support both within and without Parliament. At least as far as the honest section of trade is concerned, it would welcome the extension of this principle to as wide a range of commodities as possible. Indeed, from reports of the proceedings of the Associated Chambers of Commerce currently holding their joint session in Calcutta, it would appear that they have specifically requested the brin-

ging into the scope of Central taxation of this kind "products of all industries other than those making non-essential consumer goods". Among the advantages canvassed for this suggestion is possibility of determining the tax burden on a particular industry on All-India basis, and the reduction of collection overheads at States level. Objection to this somewhat attractive proposition is likely to emanate from the State Finance Ministers who would consider this a further attempt at eroding their slender sources of revenue.

As regards the distribution of the excise duty in lieu of sales tax among the States, the bill seeks to embody the recommendations of the Finance Commission in this regard. Along with the other bill dealing with the basis for distribution of the regular excise levies on a variety of commodities, this gives the pattern of sharing of the proceeds. Readers will recall that the Finance Commission recommended that the reduction of the percentage of State's share in Central excise duties from the present 40 per cent to 25 per cent. The commodities involved so far were matches, tobacco, vegetable products. To this list the

Transport Under Second Plan

Addressing the transport conference convened by the Federation of Indian Chambers of Commerce and Industry, Mr. Lal Bahadur Shastri, Union Minister for Transport and Communications, stressed the need for finding a quick and speedy solution for the transport problems of the country. Inadequacy of transport it was pointed out, would be a serious bottleneck frustrating all other efforts at development.

Mr. Shastri disclosed that for co-ordination in the solution of transport problems, the Government were contemplating the setting up of a road and inland water transport advisory committee besides the present Transport Advisory Council which was proposed to be renamed as Transport Development Committee. This committee would include in its membership non-officials dealing with the various means of transport.

In the matter of construction of roads the target of mileage under the Second Plan has been fixed, for metalled roads, at about 1,44,000. This is well in excess of the Nagpur plan target of 1,23,000 miles. As regards nationalisation of goods transport it was pointed out that it would be delayed and that the moratorium which ends with the Second Plan would be extended to the third. Mr. Shastri however added that the Government were prepared to give the matter a reconsideration in the light of future developments.

With a view to increasing the tonnage of Indian shipping the

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. PA/CS/634/GB10 for supply of Chicks bamboo made of round seasoned bamboo sticks newar bordered & diagonally bound lined with blue cloth & leather bound at the corner complete with ropes, Pulley & eyelets for hanging.

Tender Forms are obtainable from the Controller of Stores, Garden Reach, Calcutta 23, on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 13.1.58 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender. Earnest Money is Rs. 300/.

S96 CONTROLLER OF STORES

Government have taken a number of steps and are also thinking in terms of obtaining ships on deferred payment terms or by securing loans from banking institutions. Similarly the Government propose to depute an experienced officer to Vishakhapatnam to see if any short-term measures could be taken for dealing with the problem of congestion there. The question of improving the navigability of the Buckingham Canal, an important waterway with 150 miles lying in Madras and 60 miles in Andhra, is also being considered and for this purpose it has been suggested to the two State Governments that they should conduct a joint traffic survey of the canal by way of

preparing the groundworks for the execution of the programme of improvement.

Mr. Babubhai M. Chinai President of the Federation of Indian Chambers of Commerce and Industry who spoke earlier deprecated the tendency to divide the subjects coming under the category of transport into rigid compartments and called for an integrated approach to the question of development of transport in the country. Mr. Chinai made a plea for the creation of a national agency responsible for an integrated transport policy and appealed to the States to give their whole-hearted support to such a scheme. He also urged the Government to give high priority to the question of establishing a second shipyard in the country.

NORTH INDIAN MARKETS

Quiet Trend in Foodgrains

QUIET conditions have prevailed in the Foodgrains market during the week under review, thanks to the bright prospects for the 'rabi' crop and the expectation of imports from overseas countries. In this connection, the Union Food Minister has announced that 700,000 to 800,000 more tons of foodgrains will be imported this year from the USA and Canada over and above 1.5 million tons from the USA and Burma under PL 480 and other agreements. The new imports from the USA will be out of allocations originally made under PL 480 for cotton, tobacco and milk products. Regarding imports from Canada, about 120,000 tons of wheat is expected to arrive this month and early in the new year under the Colombo Plan Agreement. The first shipment of this wheat is due in Bombay on December 19 India's wheat imports, before the monsoon, are likely to total 1.5 million tons.

Meanwhile, Wheat prices, in the Hapur market, are quoted at Rs 15.62 per maund for the average quality and Rs 17 for the farm quality. Daily arrivals are small due to cloudy weather and rains.

The market for Rice rules quiet. An early decision about the fixation of reasonable procurement prices for the new crop is envisaged by the Union Food Minister. Prices of Maize and Bajra are unchanged due to good consumer demand in the face of good arrivals from east Uttar Pradesh. The markets for Barley and Bejher have developed an easy trend for want of support and comfortable supply position. Gram prices are quiet, while Pulses are ruling easier as demand for Peas and Arhar is dormant.

The Delhi grains market also rules quiet. Following the news of more imports from the USA and Australia, demand for wheat has dwindled down. Similarly, rice rates are also easy. Despite better prospects for the new crop, Gram rules steady. Barely has appreciated by about 50 np per maund due to small arrivals. There has been good seasonal off-take of Maize and Bajra which have produced a rally in rates.

The Bombay grains market has presented a bearish appearance with cereals and pulses recording an allround decline on increased selling, induced by the rising tempo of the marketing of the new crop. Consumer buying is restricted to immediate requirements. With the result, the market lacks strength even at low levels.

Sugar

The Sugar market rules steady at Hapur. Following rates (per maund) are quoted:—Rohana (E-29) Rs 32.75; Mansoorpur (B-29) Rs 34.75; Laksar (B-29) Rs 34.37; Shamli (B-28) Rs 33.75 and Meerut (D-28) Rs 33.25.

Crushing has started earlier this year and production of indigenous sugar, up to November 30, 1957, amounts to 1.35 lakh tons as against 1.16 lakh tons in the corresponding period of last year. Stocks with the factories, as on the 30th November, were estimated at 4.11 lakh tons.

Reports from various parts of Uttar Pradesh indicate that the cane crop has received a distinct setback due to drought in eastern

districts and heavy floods during monsoon months in western districts. The total cane supply is roughly put at 15 per cent less when compared to last year. The poor cane crop coupled with better prices of gur and Khandsari are expected to reduce the total sugar output in the State.

Despite good demand from the consuming centres, Khandsari prices have developed an easier tendency following increased production of new quality. Rates are quoted at Rs 26 to Rs 31.50 per maund, according to quality.

Gur

Arrivals of Gur, in the Hapur market, are modest due to cloudy weather and rains. Demand from the consuming centres is reported to be not very brisk; but entire arrivals are readily lifted and there have been no stocks of new gur. Total arrivals, from the beginning of the season, are estimated at 162,000 maunds, the corresponding figure for last year being 190,000 maunds.

CLIVE STREET GOSSIP

(Continued from page 1160)

tractive to private foreign investors". This anomalous and somewhat disturbing state of affairs arises because of the existing rules regarding double taxation reliefs granted by those countries. Since income doubly taxed alone qualifies for exemption at home, no exemption from home taxation is available for income from India that India does not tax. (From this, some may be disposed to argue that there is, therefore, no need to give any incentives for investment at all since the real incentive is already there in the exemption provided by the home country! I have no space to show up the fallacy of this argument, but this study shows that such an argument is fallacious). It is of utmost importance to neutralise this blunting of the edge of our incentives. The only way to do it would be to devise double taxation of mutual or unilateral double taxation reliefs on already taxed income. The Indo-Pakistan double taxation avoidance agreement is an excellent model. Once certain categories of income are to be exclusively taxed by us, any exemption that we may choose to grant such income would leave it immune from taxation by the other country. From the point of view of incentives, the conclusion of such agreements is in some respects more urgent than minor tax reliefs.

The Peninsula

Lakkavalli Project

THE setting up of the Irrigation and Power Team headed by Mr. N. V. Gadgil to investigate into the working of the Lakkavalli Project in the Mysore State was evidence of the sense of urgency that is being brought to bear on the implementation of the various projects included in the Second Plan. The team itself evinced this sense of urgency in the method of its working; and its practice of issuing interim reports from time to time was calculated to avoid unnecessary delay in the implementation of its recommendations that might otherwise have crept into it.

The Team was set up by the Committee on Plan Projects (COPP) at the suggestion of the National Development Council that possibilities should be explored of securing economy and efficiency in the utilisation of financial and other scarce resources. Its terms of reference included, besides, study into the phasing of the construction with a view to ensuring timely utilisation of benefits accruing from the project and to accelerating the accrual of benefits; assessment of the progress made in construction; examination of the possibility of decreasing the dependence upon imported materials and equipments; and appraisal of the steps taken by the authorities for fixing and realising the water rates, betterment fees or any other rates. The findings and recommendations of the Team are of such nature as to justify the calculations that suggested to the COPP the necessity for instituting such an inquiry.

The Lakkavalli Project is designed to utilise the waters of the Bhadra River for irrigating a vast area of land in the Mysore State and for harnessing it for the generation of electricity. This is sought to be done by impounding about 90,000 million cubic feet of water. The irrigation works consist of two sluices on either bank of the river, the one on the Left Bank Channel being designed to irrigate an area of nearly 18,500 acres while the sluices on the Right Bank Channel are expected to benefit an area of about 215,500 acres. The total irrigational capacity being 234,000 acres. The installed capacity for power generation is 40,400 kw. Power stations are being erected on either side of the bank, the one on the right bank consisting of two machines each rated at 7,200 kw and utilising the waters to be discharged into the right bank canal, the other on the left having one machine of 2,000 kw. and utilising the waters to be discharged into the left bank canal. Besides two machines of 12,000 kw. The firm peak output of power that these are capable of producing even

in the leanest year is estimated at about 25,000 kw.

After ten years of work on the project, the left bank canal is nearly complete and is opened for irrigation. The work on the right bank of the canal is well advanced, the arrears being in respect of the construction of a tunnel nearly 2½ miles in length. The completion of this tunnel is expected to take nearly two years and would depend upon the release of the necessary foreign exchange by the Government of India for the purchase of special machinery worth about Rs 30 lakhs to Rs 40 lakhs.

The working of the project reveals a fine blend of the best engineering talent that is native to Mysore and a system of administration that is remarkable for its efficiency. The administrative system is a three-tier arrangement of three entities, namely, a Consultative Committee of Engineers, a High-powered Committee of Administrators and Engineers and the Chief Engineer. The responsibility for details of designs and technical execution is shared between the existing Chief Engineers and the other engineering talent in the State; and, as the report points out, this has the effect of enhancing the confidence of the administrative agencies in the final designs and plans for execution which, in turn, enables expeditious implementation. The Team has therefore commended this administrative system for adoption in projects of similar character.

Another outstanding feature of this project is that its construction has been so phased as to result in the accrual of benefits even before the whole project will have been completed. Already, the left bank canal has been completed and is open for irrigation. Similarly, Section 1 of the Right Bank Canal, which commands a culturable area of about 50,500 acres, is expected to be ready for utilisation a year earlier than the scheduled time without extra cost.

The features of design and construction are thoroughly modern. The ratio of the cost of establishment to the total cost of the project works out at 4 per cent, which is considerably lower than the 10-12 per cent ratio considered desirable by the Nagpal Seminar of Engineers. The cost of masonry and excavation is also remarkably low. But this is likely to be offset by the high cost of constructing storage dams and of the main canals which passes through difficult terrain and involves heavy rock cutting. But the departmental administration that is a feature of this construction work has added to the quality of the

work and this has been combined with maximum economy in expenses.

The thoroughness that characterises every facet of the work in the implementation of the project is seen in the number of surveys conducted such as that into the soil and health of the area so as to forestall the evil effects of introducing wet cultivation in the area. Further, scarce materials like cement and steel are being economised to the maximum and the bulk of the masonry is all in lime mortar. The project was originally estimated to cost about Rs 17.75 crores but, due to alteration in the quantities of work which is likely to increase with the increase in the scope of the project, the cost is also expected to go up to Rs 24-25 crores.

The Team has in the course of its investigations found for improving work in some fields as well as for expediting work in others, and has therefore made the necessary recommendations. For example, the creation of an additional post of Superintending Engineer to be in charge of the construction of the channel tunnel and the Malebennur and Davangere Branches on the Right Bank Channel is recommended with a view to expediting work

in connection with its construction, since it has been found that the present Superintending Engineer has been overburdened with work to enable him to give his personal and concentrated attention to the job. Similarly, the setting up of a Central Designs Office to prepare designs and of a separate organisation for purposes of inspection of the field research is considered desirable in the interest of enhancing the quality of the work of the technical personnel.

The Team has also found certain items of extravagant expenditure some pieces of earth-moving machinery, such as tractors and power shovels, have been found to remain idle for most part of the year. The rate of work in connection with the rubble masonry has also been found to be capable of being increased to 15,000 cft a day from the present level of 13,000 cft.

In the matter of irrigation management, the team has called for an effective control so as to ensure economical use of water, and has besides pointed to some scope for increasing of water rates on this project. The pattern of the Bombay Public Works Department has been

Import Policy

Addressing a press conference in Ernakulam, Mr. Morarji Desai, Union Minister for Commerce and Industry explained how the import policy that is being presently pursued by the Government is attuned to the problem of promoting the industrialisation of the country which is the basic objective of the Second Plan. He pointed out that, what was done in the import sector was to impose restrictions on imports so as to make the best use of the limited foreign exchange available with them in order to maintain continuity of supply of raw materials to the existing industries and to ensure the employment potential of such industries.

Analysing the reasons for the decline in the foreign exchange reserves of the country Mr. Desai said that the Government's attempt at expanding the economy without due considerations being given to the repercussions of such attempts on the economy, was responsible for the present low level of foreign exchange. He indicated that if such adverse effects were to be avoided in future the old steps would have to be given up in favour of a more cautious one. At the same time he claimed that the import restrictions recently imposed had not done much damage, except for creating some difficulties in the matter of obtaining certain foreign manufactured consumer goods.

Referring to the question of open general licensing system that was in vogue previously, Mr. Desai said that it did not operate to the interest of the economy and that under it, it was difficult for the Government to keep track with imported goods. But he maintained that because of the restrictions imposed on the imports into the country the Indian manufacturers had received a fillip to increase production and improve their quality.

Referring to the production of newsprints in the Napa Mills, Mr. Desai said that the production was being increased and that the 15 per cent target for imported newsprint was arrived at after agreement with the newspaper establishments. He also assured that the quality of such products as razor blades and other consumer goods the imports of which have been practically stopped would be maintained and improved.

Mr. Desai also pointed to the lack of a proper atmosphere in Kerala for the manufacturers to carry their industries and to open new ones and called upon the authorities to ensure the proper conditions to attract new ventures. He also pleaded that encouragement should be given to small-

scale industries in the interest of tackling the problem of unemployment in the State, and suggested that the fishing, coir and cashew industries of Kerala should be reorganised with this end in view.

University Education

Speaking at Coimbatore Mr. C. D. Deshmukh, Chairman, University Grants Commission deplored the great fall in the standard of education in the universities in the country and called for efforts to arrest the fall and to effect improvements, as otherwise, he feared the attempts to improve the standards in other fields would prove futile. He also pointed out that the pace of literacy in the country was slow and warned about the danger of lapses into illiteracy of even those who had learned the three R's.

The remark of the Union Public Service Commission that the students of the secondary schools in the country did not show even a grasp of the subjects or any signs of having assimilated the subjects they were taught, is a sad commentary on the quality of the material in the secondary schools. In such circumstances it is inevitable that the degeneration should spread into the universities also. The magnitude of the problem was indicated by Mr. Deshmukh, when he said that 75 per cent of the young men who went in for university education were not teachable at all.

Referring to the work of the University Grants Commission, Mr. Deshmukh said that they had hopes of effecting improvements in some directions such as, lecture halls, laboratories equipment and purchase of books and also of bringing about some amelioration in the conditions under which teachers were called upon to work. But he expressed doubts about the possibility of the whole amount of Rs 27 crores that had been sanctioned for university education forthcoming. But he pointed out, that even in the absence of the full amount, there was scope for improvement, on the basis of a change of attitude on the part of the teachers and students and the university authorities. In this connection he pointed to the need to curtail the number of holidays and the duration of vacations which he said would enable them to do something during the period that would be added in this way.

Touching on the economic problems of the country Mr. Deshmukh drew a sharp contrast between the standards of output in our country and that of Germany and Japan which had suffered great

destruction consequent on the Second War. and he commended the example of these two countries for their hard work and industry which had enabled them to make progress in economic development and in rehabilitating their war-torn economies. In the light of

the growing pressure of population in the country which at its present rate of growth would, according to Mr. Deshmukh, reach a figure of 800 million in about 35 years, the need for such increase in productivity and avoidance of wastage is very great.

SOUTH INDIAN MARKETS

Spurt in Pepper and Copra Prices

THE wave of political unrest in Indonesia has had strong reactions on world commodity markets. In India, several commodities have been affected on the view that the disturbed conditions in Indonesia may hamper regular outflow of that country's export items, more especially pepper and copra prices.

Pepper prices have firmed up from the recent low levels in sympathy with Singapore where the rate has risen from Str. \$64 to Str. \$68 for black and from Str. \$96 to Str. \$104 for the white variety. Buyers in New York, who were until now inactive, started their buying, the rate hardening to 26 cents from 25 cents per pound. In the Alleppey market, the rate for the old quality is quoted at Rs 550 per candy and Rs 400 to Rs 525 for the new season stuff.

The firmness in prices is mainly influenced by the view that competition from Indonesia to Indian pepper in the world market will be considerably reduced in the coming months. A section of the trade, however, feels that this may make no major difference to Indian shipments as Indonesian competition, even in the normal course, starts only around May.

Also, traders in Singapore realise that the political and economic uncertainties in Indonesia are not likely to act as a bullish factor, because the Indonesian Government is likely to bring down pepper along with other plantation products to Singapore and sell them at the best market price for earning foreign exchange or for barter against any consumer goods. It is also felt that the pressure of smuggled pepper on Singapore is likely to increase, as traders in Indonesia will like to bring down their goods to a safer place like Singapore.

Meanwhile, exports of pepper from India have been maintained at a higher level than in the previous year; but the average Indian export is only about 13,000 tons. The level of Indian production is rising; but it is not likely to have exceeded 25 to 26 thousand tons at the highest. The output next season may not exceed this figure and may very well be about 2,000 tons less.

As far as Copra is concerned, the price has already gone up by Rs 150 per candy in Singapore following the Indonesian unrest. Soap and vanaspathi factories in India are naturally perturbed by this rise as it has come at a time when the Government have the intention to allow imports worth Rs 1.5 crores. But, the easy trend in Copra and Coconut Oil in India have cried a halt as importers are reluctant to part with their stocks except on their own terms. About 50 per cent of India's copra imports are from Singapore.

Rubber

Prospects for an increase in Rubber production are not bright; and this year's total output may be very nearly the same as last year. Manufacturers expect the total consumption to be around 35,000 tons for the year; but this may not be reached. The gap between demand and supply has been widening every year and is estimated at around 20,000 tons. The Rubber Board has, therefore, stressed the need for regular imports with a view to easing the supply position. It is understood that the Government of India will permit rubber goods industry to import about 12,000 tons of natural and synthetic rubber in the first half of next year.

The question of revising the price of rubber is likely to come up before the Tariff Commission sometime in 1958. The current price of Rs 160 per 100 pounds was fixed three years ago and the cess carrying the price to Rs 155.75 was added later. While growers are inclined to ask for a rise in the price on account of highest cost of production, the rubber goods industry pleads that the rise in prices, if any, will tell adversely on the export of rubber goods. It remains to be seen what the Government will decide in this matter.

Meanwhile, the Committee of the Colombo Rubber Traders' Association has decided to suspend indefinitely rubber auctions from December 16 until conditions in the export section of the Colombo Port return to normal. Trade sources have, in

(Continued on page 1172)

THE INDIAN GALVANIZING CO. (1926) LTD..

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the Thirty-first Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Wednesday, the 8th January, 1958, at 12 noon, to consider the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to declare a dividend, to transact other ordinary general business of the Company and the undermentioned special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contracts between the Company and its Managing Agents and Associates of its Managing Agents as defined by Section 2(3) of the Companies Act, 1956 drafts whereof have for the purpose of identification been subscribed by the Chairman of this meeting be and the same are hereby approved and the Directors are hereby authorised to execute the said Agreements on behalf of the Company with all convenient despatch:

1. With Balmer Lawrie & Co. Ltd., (the Managing Agents of the Company)—

for purchases of such engineering stores, electrical installation and electrical stores, oils, greases and insecticides, metals, cement and such other requirements and services including shipping, clearing and forwarding and travel arrangements and other services in which the Managing Agents regularly trade or do business and which the Company may require for the purpose of its business:

2. With Balmer Lawrie & Co. Ltd., (the Managing Agents of the Company)—

for sales of such metal containers, windows and other metal products and services in which the Company regularly trades or does business and which the Managing Agents may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

3. With Bridge & Roof Co. (India) Ltd., (an Associate of the Managing Agents)—

for purchases of such goods and services in connection with the fabrication and erection of structural steel-

work and buildings and other services in which the Associate regularly trades or does business and which the Company may require for the purpose of its business:

4. With Bridge & Roof Co. (India) Ltd., (an Associate of the Managing Agents)—

for sales of such metal containers, windows and other metal products and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

5. With British India Electric Construction Co., Ltd., (an Associate of the Managing Agents)—

for purchases of such electrical switchgear, apparatus and electrical stores and services in which the Associate regularly trades or does business and which the Company may require for the purpose of its business:

6. With British India Electric Construction Co., Ltd., (an Associate of the Managing Agents)—

for sales of such metal containers, windows and other metal products and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

7. With The Bengal Flour Mills Co., Ltd., (an Associate of the Managing Agents)—

for sales of such metal containers, windows and other metal products and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

8. With The Bengal Paper Mill Co. Ltd., (an Associate of the Managing Agents)—

for sales of such metal containers, windows and other metal products and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 24th December, 1957, to 8th January, 1958, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
D. Manson,
Secretary,
Managing Agents.
21, Netaji Subhas Road,
Calcutta,
3rd December, 1957.

NOTE:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

JESSOP AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN that the TWENTY-FIFTH ANNUAL GENERAL MEETING of the Members of Jessop & Co., Ltd. will be held at the Registered Office of the Company on Thursday, the Ninth day of January, 1958, at 10.30 o'clock in the forenoon, for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Directors and Auditors, for the year ended 31st October, 1956.
2. To declare a dividend.
3. To re-elect retiring Directors.
4. To appoint as a Director Sir Dhiren Mitra, who is 66 years of age and in view of his age is not eligible for appointment unless such appointment is approved by a Resolution of the Company in General Meeting.

In this connection to consider and, if thought fit, to pass the following Resolution, of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

To be proposed as an Ordinary Resolution:—

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Dhiren Mitra and that he be and is hereby appointed as a Director of the Company."

5. To re-appoint the Auditors.
6. To transact any other business of an Ordinary General Meeting.
The Ordinary Share Transfer Registers of the Company will be closed from 26th December 1957 to

9th January 1958, both days inclusive.

By Order of the Board,
A. K. THAKUR
Acting Secretary.
63, Netaji Subhas Road,
Calcutta,
13th December, 1957.

NOTES:—

(a) A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 1st February, 1958, to those shareholders so entitled whose names are registered in the Books of the Company on 9th January, 1958, or to their Mandataries.

No applications for Dividend Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

Sir D. N. Mitra was Solicitor to the Government of India for many years, and is a Director of many important Companies. His experience and advice will be of very considerable value to the Company.

THE HOWRAH-AMTA LIGHT RAILWAY CO. LTD.

NOTICE is hereby given that the Board of Directors has sanctioned payment of dividend on 5% Cumulative Preference Share Capital of the Company for the half-year ending 31st December, 1957. Payment will be made on or after 1st January, 1958, to those Preference Shareholders whose names appear on the Company's Register on the 31st December, 1957, or to their mandataries.

By Order of the Board,
MARTIN BURN LTD.
K. Chatterton,
Director,
Managing Agents.

Calcutta,
The 16th December, 1957.

BURN & COMPANY LTD.

NOTICE

Notice is hereby given that the Board of Directors has sanctioned payment of the dividend on 6% and 7% Preference Shares of the Company for the half-year ending 31st December, 1957. Payment will be made on or after the 10th January 1958, to those shareholders whose names appear on the Company's Registers on the 31st December, 1957, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.
S. Gupta
Director,
Managing Agents.

12, Mission Row,
Calcutta,
16th December, 1957.

Killick Industries Limited

Industrial Atmosphere Deteriorates

Company Well Poised for Prosperous Development

Mr E. D. Sheppard, the Chairman, Hails the Centenary of the House of Killick

Addressing the Annual General Meeting of the Killick Industries, Limited, Mr. E. D. Sheppard said:—

This year 1957 is of very special significance to the House of Killick, for it was a hundred years ago that Messrs. Killick and Nixon arrived in Bombay and started the business that so proudly carried their names. Though the firm of Killick, Nixon & Co. was discontinued in 1948, the two new Companies Killick Industries Ltd., and Killick Nixon & Co. Private Ltd., between them undertook the work started by the founders and fostered through the years by succeeding generations, and it is fitting that in this memorial year, Killick Industries Ltd., having acquired ownership of Killick Nixon, the family is united again. Thus although the corpus is changed, we may say that the spirit of Killicks has been preserved for a century past. May this spirit of unity in our family, of service to the nation, and of courage to face the future, continue to pervade our thoughts and actions in the years that lie ahead.

In my speech last year I tried to examine the implications of the impact which the pursuit of a "Socialistic Pattern of Society" would have on industrial development, and hence on the affairs of your Company. I had then forecast that, if the pursuit of this goal was continued along a path of increasing State control and diminishing individual responsibility, the results would not be happy. It is with a sense of sorrow and concern for the future, and not in any spirit of pride in the vindication of one's forecast that one sees these fears being realised as the Second Plan runs its course. Around us we see a growing deterioration of business confidence, and the onset of apathy amongst those whose function it is to promote and develop industry. If this sapping of morale and of faith in the future was confined only to large business houses, it would not be so dangerous, but unfortunately it is reflected at every point of the Industrial Society. The producer, the consumer, and the investor, whether big or small, is today lacking the virile faith needed to face the challenge of the future.

What are the reasons for this lack of confidence? Let us examine them.

Firstly there is the numbing frustration which an endless series

of tax measures each following closely on the heels of the other, have produced among industrialists and shareholders, though one cannot but have a profound respect for the imaginative brain which has welded into one whole such a divergent and almost contradictory set of taxes. The Finance Minister has succeeded in performing a balancing feat on the tight rope of national finance which would be the envy of the most nimble witted. In an economy as over-extended as ours is, there is little scope for the introduction of incentives, yet this is what the last budget has succeeded, albeit in a minor way, in doing. The total of Income Tax and Super Tax at the highest salary level has been reduced from 92% to 77%, thus making possible the retention of some measure of enthusiasm in the managerial class for harder work and greater endeavour, but a price has been paid for this concession, a price which might well result in crippling incentive altogether. The price, of course, is the introduction of the Expenditure and the Wealth Taxes. But it is the Wealth Tax on companies particularly which can have no possible justification, either moral or material. If ever there was a measure designed to grab money irrespective of justice or reason, this tax is surely it.

The combined rate of Income Tax and Super Tax and Surcharge on Companies has been increased from 43.4 to 51.5 per cent. In addition, companies have to pay special taxes on dividends, on the issue of bonus shares, on the non-distribution of profits, on capital gains, on their net assets, and as if that were not enough are then required to deposit a part of their reserves under the Compulsory Deposit Scheme. It is just not possible for companies to bear this fantastic burden of taxation for very long, particularly at a time when they are required to carry out an expansion of their productive capacities in terms of targets set by the Second Plan, far in excess of those which normal commercial practice would dictate. The sum effect of such taxation is virtually to eliminate the possibility of raising equity capital in the investment market for new ventures because of the levels to which even the soundest shares have declined. It has been estimated that since August 1956 shareholders are poorer by 200 crores of rupees.

Almost as disturbing as the taxes themselves have been the inordi-

nately long periods which have elapsed between the framing of taxation proposals and their ultimately becoming law. During the many months out of the last twelve when the country has been virtually without a definite tax structure it has been impossible for any would-be entrepreneurs to finalise their plans.

Further, all these facts combined have deprived us of the entry, in any significant measure, of foreign capital, and of the technical skill and advice which goes with it, and which in the past have often been of great assistance to Indian Industrialists.

Secondly, there is the ever-widening scope of the activities of the State Trading Corporation. The avowed objectives for which the S.T.C. was founded—namely to trade with Communist Nations and to augment exports where the existing trade channels were inadequate—were wholly laudable, but they have far exceeded this charter. Their entry particularly into the cement and manganese ore business was quite unjustifiable as these were being efficiently run by private enterprise. The specious reasons given for the S.T.C.'s intrusion do not bear examination and the objectives sought to be achieved could well have been reached without the S.T.C.'s intervention.

Further, in these commodities the S.T.C. incurs no risk, makes no organisational effort in promoting trade and yet takes unto itself an altogether disproportionately large share of the profits.

It is of more than passing interest that at the Meeting of all the Commonwealth Chambers of Commerce held in London earlier this year, the policy of State Trading was roundly condemned without one single dissentient voice.

I would like, however, to make it clear that we have no quarrel with those entrusted with the management of the S.T.C. Our objection is fundamental and concerns only the policy which requires them to carry out such duties.

Thirdly, there is the sad deterioration of Law and Order in many parts of the country with which unfortunately is bound up the question of Labour Relations.

In a recent pronouncement the Hon'ble Shri Morarji Desai, the Union Minister for Commerce and Industry, stated that "If industrialists expect to get so many things

from the State, then they must be prepared to provide the money for these through taxation". No one can take exception to the underlying premise of the argument of the Hon'ble Minister which is that no State can provide services for the community which are beyond its capacity to finance. But the first service any taxpayer in any country expects, and rightly so, is the protection of life and property and the preservation of law and order. Here in India all industrialists are in fact paying to the State a very high rate of taxation, as I have already pointed out and in return are not, in some cases, being provided with even the elementary degree of security that is a prerequisite to the conduct of business and industrial growth.

Serious labour indiscipline at the Hingir-Rampur Colliery for some time past culminated in a violent riot in June this year when our Colliery Manager was murdered by the workers. This dreadful incident took place several months ago, and we are still waiting for effective action to be taken to punish the murderers and to be assured of the protection that is necessary to prevent a repetition of the tragedy.

In the Free World today it is inevitable that trade unions acquire great strength—sometimes a dangerous strength—which is frequently misused. No one will deny the value of strong and healthy trade unions effectively organised to champion the cause of their members. But trade unions subject to little or no control, and those under bad influences are an increasing menace to the community. Whereas again no one will deny the right of a man to withhold his labour in order to voice a genuine grievance, yet there can be no excuse for violence and hooliganism being employed as the means of doing so.

The plain fact of the matter is that the time is long overdue for a show down with this type of labour organised and led in this manner and towards these ends, and yet it continues to be protected and mollified by those in authority. Without reference to even elementary economics, Unions of this type put forth demands based on what labour wants without any consideration as to what it is entitled to receive. They continue to make these claims, whether justified or not, and by strong arm methods ensure

that they are granted. And who is to blame them? Why should they not continue to use these methods of getting what they want when the methods themselves have been continuously successful? The formality of conciliation having taken place, it is so much simpler to refer demands to adjudication rather than for the Governments concerned to incur the odium of telling labour that it has gone too far and must withdraw. What then does it matter to labour if their demands and the methods of approaching them are basically immoral so long as they get results?

I will not examine further the question of labour indiscipline as here, like in other countries, this has a political slant and I have no desire to bring politics into my speech. But the other two measures to which I have referred—increased taxation and expanded S.T.C. activities with their damaging effect on the People's Sector—have been introduced solely and wholly to provide money for "The Plan" or rather for that part of the plan which falls in the State Sector.

Before we proceed to examine the Plan and the results that are expected to flow from it, let it be quite clear that it is a composite plan and if either Sector fails then the Plan fails.

The doctrine that the Plan is inviolate has been thrust down one's throat, although it has been plain for months past that a process of stretching it out has become inevitable. The main constituents of the Plan may not be significantly changed, but they will certainly take longer to complete. This is a heavy industry plan for within the total set aside for industrial development rather more than half is to be spent on the production of steel, and the greater part of the remainder on industry to manufacture capital goods.

We are told that—come what may—the "hard core" of the Plan will be carried through. What is the "hard core"? In one word it is steel. Steel, and coal and power with which to make it and railways to transport it, in effect just steel. Of what avail will this steel be if the People's Sector is to be prevented from erecting the secondary and tertiary industries to use it? We shall be told that it can be exported, but it is axiomatic that an essential prerequisite to a profitable export trade is a flourishing home market. Therefore, if only the "hard core" is carried through, the Plan, as such, will still not succeed.

The question, therefore, that faces the country today is how far can this concentration on Heavy Industry be pushed? Undoubtedly among our planners and Economic thinkers there is a school, and a very powerful one, who would push the heavy industry concept to its utmost limits. This is of course an enormously expensive business as has been shown by the rate at which the nation's foreign exchange reserves have run down

and moreover, throws the Plan out of balance. We are still waiting to see how the planners and those in authority are going to react now that difficulties have occurred and the Plan is getting bogged down in a succession of crises. The Finance Minister has returned from his tour of the U.S.A., Canada, the U.K. and Germany, during which no man could have made more valiant efforts to procure the exchange we require. In the light of the information he has gleaned a decision will need to be taken very soon as to whether the Plan is to be adjusted to manageable proportions or whether a forlorn attempt is to be made to fulfil it even at the cost of imposing methods of austerity and compulsion.

Having said this, let us also look at the other side of the picture. If we had been content to increase the national product only in relation to the available resources of the country, or those which could be readily obtained, it is doubtful whether the total volume of planned investment activity would have been more than half of what has actually been embarked upon. It is clear that the Second Plan is deliberately aimed at achieving far more than the available resources of the country will admit of, and that this is sought to be justified by the pressure of social obligations and the need to do sufficient for the people, quickly enough, to prevent them from turning to other than democratic methods to quench their frustration.

Another fundamental paradox in the Plan is the pre-occupation with heavy industry on the one hand and cottage industry on the other. In the result it seeks to achieve a compromise between the intensive use of capital to make steel, to dam rivers, to raise coal and develop Railways, and the pressure to put to productive and gainful employment the hordes of willing but unemployed workers who populate our countryside and do not find work for more than three or four months in the year. No one can have anything but the deepest sympathy with people who are faced with the resolution of such fundamental dilemmas, and the responsibility for evolving Economic policies which are to succeed in spite of them. At the same time we of the People's Sector of the Nation's Economy, cannot help but be perturbed at the way things are going, for, in a planned Economy, the whole future of our own businesses is inextricably mixed up with government decisions.

There is no doubt that in the course of time India is going to be a great industrial power. The principal resources are available, iron ore, coal, mineral wealth, hydro-electric power, and a large mass of people prepared to work for comparatively low wages, and here let me say, that the unschooled peasant of India has already in the Indian Army given abundant proof of his capacity to acquire mecha-

nical skill and technical competence with good equipment and training. The mistake that we are making is a mistake of timing. There is too much made of this business of competitive co-existence with countries of other ideologies. A great deal of the haste and the rashness which has been applied to our planning has been due to this. As a result, through this planning and through much of the legislation and taxation which goes with it, conditions have been created in which a proper generation of the vigour and power of Free Enterprise is no longer possible.

In the modern world, some form of social organisations are of course inevitable if man is not to go back to the disorder of unbridled individualism, but all organisations must be for the benefit of the individual and not the individual for the benefit of the organisation. By the same token let us be very clear that the Plan is for the people and not the people for the Plan. If the needs of the two come into conflict with one another then it must be the Plan and not the people to give way.

No one wants the Plan to fail. If the economic choices that now confront us seem difficult, it must be remembered that they are infinitely simpler than would be the political and social consequences of a Plan that failed because it got out of hand. Today the pressures of the Plan are being demonstrated very clearly in a rise in domestic prices and the constant threat of inflation. It is now—though somewhat belatedly—well understood that, if the food front is not firmly held, and gets out of control, all the benefits of heavy industrialisation would vanish in a trice, and all talk of increasing real incomes be rendered meaningless. To say that an endeavour to double the per capita income over a period of 17 years of a people as poor as ours is not ambitious, is a statement that no one would deny, but to go on and say that unless the impossible pace set for these five years is maintained, that revolution would follow is most certainly not justified. The people of India, and particularly its peasants are sturdy beings of good sense. Their devotion to the soil they till and the values they cherish, have wrought an iron frame which is not going to be bent or twisted by a lengthening of adversity. This is not the link in the chain that will break. If the chain snaps, it will be the weakest link that will give way first; and that will not be the common people of India, but its educated leaders. If these great sons of our soil have the leadership which they merit, then it is certain that they will be prepared to accept whatever length of time may be necessary to bring about the economic betterment that they undoubtedly deserve, but in a manner that does not in the meantime endanger their own traditional democratic free Indian way of life. Anyway, who is to say that it will take 17 years to double

the per capita income, and that we must therefore get off to a start with a false burst of speed which will leave us spent and trembling before half the race is run? It would be more prudent to start at a pace which will allow us to go steadily on and complete the course. The pace of scientific advancement is such that today weapons for economic betterment are being placed in the hands of under-developed countries which were never available to the countries of the West during their struggle for industrialisation. It may well be that these breath-taking advances of science will enable us to achieve the increased standard of living even more quickly than the 17 years at present envisaged. What however is certain is that neither these techniques nor any other measures will help us if we push the country to calamity by whipping it up to a speed which it is not capable of sustaining.

It would not be sensible nor would it be patriotic for any one in the country to gloat over the miscalculations of our planners and the consequential difficulties of the Finance Minister. The probability that something would go pretty wrong with the Second Plan might be said to have been built into it from the very start. What one can and should legitimately criticise is the attitude that is adopted towards those honest, able and patriotic Economists and Industrialists who have from the very beginning had the courage to say that the Plan was incapable of fulfilment within the country's resources in the time set for it, and consistent with the maintenance of the democratic principles enshrined in our Constitution. It is tragic that those in power are prepared to label these good men as anti national defeatists, while those who blindly shout their approval of every official measure from the house tops, are lauded as patriotic pillars of the Private Sector.

One of the objectives to be sought from the completion of the Plan is the creation of the Welfare State, the absolute desirability of which has always so far been taken for granted and without question.

Let us however pause for a moment and examine the progress of the Welfare State in the U.K. where it has been established for some yards and the effect it has had on an important section of the citizens.

A sample survey recently conducted in a leading University revealed a remarkable and disturbing state of affairs. Of the students questioned, 38% said either that they were seriously thinking of emigrating as soon as they have completed their course, or else had already firmly decided to do so. These young people are among the most intelligent, most highly educated and the most enterprising in England. They are people who are willing to make their own arrangements and to

[December 21, 1957]

take their own risks. And they are under no illusions about life in a strange land. Many of them have worked overseas during their long vacations and are familiar with the disadvantages and possible hardships that emigration might entail.

This is a serious position. Britain is doing everything to provide the best education for the best brains, and the service of the best brains is urgently and increasingly needed in England. How then does it come that nearly half of those so trained immediately take themselves somewhere else and add to the progress and prosperity of another country? The reason is that they are fleeing from the Welfare State. They have strong practical objections to it. They realise that it is financed out of crushing taxation and they know from the experience of their fathers that the weight of taxation comes most heavily on people like themselves. The whole system of taxation, rebates and subsidies, works against the educated and enterprising middle class. Worse still it is precisely meant to

work that way. Whereas fifty years ago the man who forged ahead and made a great name and a great fortune for himself was admired and respected, today he is regarded with envy and resentment. More than the monetary penalties of the British fiscal system is this envy, and the assertion of the superiority of the mediocre which is driving young people of talent and vigour abroad. They want to go to a country where they can forge ahead without provoking sulky hostility. They want to feel that a life's work of exceptional quality and usefulness will not be held against them. They want to escape from a socially stifling atmosphere and to get away from a country where no exceptional talent is gladly recognised. If this draining away of Britain's best brains continues to increase, then the mass of British people will be brought in the end to recognise that while they cannot do without the direction and services of the elite, the elite can very well do without them.

This is a lesson which can be learnt with advantage in other parts of the world.

Turning now to the affairs of your own Company, you will have seen that it has been necessary to withdraw Rs. 2 lakhs from the Equalisation of Dividends Reserve in order to maintain the usual dividend. The principal cause of this is extra provision for taxation of Rs. 3.28 lakhs—of which Rs. 1.77 lakhs is in respect of the previous year—due to the 1957 Finance Act. You will recall that I foresaw this possibility when addressing you last year. Another reason is that due to the change in the accounting years of two of the Electricity Companies, no Agents' Commission was received from the Surat Electricity Co. Ltd., during the period covered by the Accounts. This would have amounted to about Rs. 1.1 lakhs. Consequent upon the necessity of closing the accounts of all the Electricity Companies on 31st March each year, your Directors are considering altering the Financial Year of your Company so that it will close on 30th November in future instead of 30th June as at present.

Otherwise, the Accounts are self-explanatory and have appended to them the Accounts of your Sub-

siary Company, Killick Nixon & Co. Private Ltd.

The progress of our plans for Industrial Development has been detailed in the Directors' Report and other projects are under consideration.

The continued expansion of your Company's activities has of course necessitated capital investment and a point has now been reached when further finance is needed. This matter has been receiving the attention of your Directors and although no decision has yet been reached it is possible that an application may be made to the Controller of Capital Issues for permission to make a new issue of Ordinary Shares next year.

As regards the future, I would only say that your Company is well poised for prosperous development. It is only political policies which threaten to impede fruitful progress.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to Shareholders.

Centre. After all, the insistence on the repayment would merely mean in an extreme case, taking with the left hand what you give with right hand. But precisely because of the blurring of the frontiers of Central and State finances, the tendency on the part of the States not to take their fiscal duties seriously is all too evident. Therefore, the formal keeping in abeyance of the right to enforce obligations to pay the loans taken would obviate the need for providing for them in the annual budgets of the States. This is sure to take the edge off the desire to find the funds that would otherwise have to be found.

There is doubtless an element of make-believe in the present relationship of an importunate creditor and a conscientious debtor. But it has its uses as a provider of incentives for the States' efforts and raising the necessary funds. This is perhaps the reason for the Finance Minister's reluctance to accept readily the Finance Commission's recommendations in this regard.

*

SOUTH INDIAN MARKETS

(Continued from page 1184)

th's connection, pointed out that this is the most precarious position reached for a long time and, if the Port congestion continues, many mid-country rubber estates will have to close down as producers will be unable to draw advances from shippers to finance production. The slow-down in the Port is attributed to union rivalry and discontent among workers over new rates of pay.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were restricted, while clearances were as usual. Arrivals of Buff hides were also restricted, and prices con-

nued to rule firm. In the Calf section, arrivals were poor and rates were quoted 6 nP per pound higher.

On the export front, business with the UK was restricted although some business was reported done in odd lots. There was enquiry for single tannage 5/5½ lbs in premium marks at 65d, 57d and 45d for runs, fourths and fifths respectively. In other weights, 10/12 lbs were enquired for at 40d. Inferior fifths showed no change.

In the Tanned Skin section, arrivals of both Goat and Sheep skins were on the same level as in the previous week and there was very little change in prices.

In the export section, trading in prime class Goat skins was limited on account of the higher prices that Madras tanners were asking. In Sheep skins, conditions were quiet on account of the rather poor London auction. Some business was reported done with France in 6/7 lbs at 28sh 9d for three months' shipment.

*

THE PENINSULA

(Continued from page 1187)

suggested for emulation by the Mysore Government.

Finally, the Team has recommended that the Government of India should make available without undue delay the necessary foreign exchange that is needed for the import of the essential materials like steel as also the other funds for work on the balance of the job that awaits completion.

Though the Team has done an excellent job of its work will have been amply rewarded only when the recommendations are expeditiously implemented by the Government. The present food situation, marked by a shortage and rise in prices, is additional reason for making an all-out effort to complete the project as early as possible consistent with the availability of resources in the country.

December 21, 1957]

T. I. Cycles of India Limited

Further Expansion Approved by Government

Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon),
the Chairman, Reviews Progress of the Company

The following is the speech delivered by the chairman, Sri A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), at the Eighth Annual Meeting of the T. I. Cycles of India Ltd. held on 12th December, 1957:—

Gentlemen,

I am very happy to welcome you to this the Eighth Annual Meeting of the T. I. Cycles of India Ltd. The Directors' Report and Audited Accounts and Balance Sheet for the year ended 30th June, 1957, have been before you for some time and with your permission I shall take them as read.

The year under report has been one of continued progress and development. In my speech last year I referred to the fact that your Company was permitted by the Government to manufacture 2 lakhs bicycles and 1 lakh set of bicycle components. I am glad to inform you that with the present installed capacity we have been able to reach the target for the manufacture of cycles during the year but the manufacture of cycle components have fallen a little short of expectation. I have no doubt that during the current year the target with respect to both cycles and cycle components will be reached. We have sought permission of the Government of India to further increase the manufacturing capacity of bicycles and bicycle components and we have just received the necessary authorisation of the Government.

The demand for Hercules Cycles has increased along with the increase in our manufacturing capacity. The trade and the consumer has shown a preference to quality production on which I have emphasised on more than one occasion.

The bicycle being the main means of transport for the middle and poorer classes it is not surprising that the demand for bicycles has gone up and the estimate of the Tariff Commission has had to be revised. The Tariff Commission estimated that by the end of the Second Five-Year-Plan, i.e. 1960-61 about 1.5 million cycles will be required. In view of the fast growing demand the Development Council for Bicycles which is in close touch with the market through the manufacturers who are members of the Council and through Government officials directly connected with the promotion of this industry, has estimated that this target will have to be revised to 2 million by 1960/61. It is in the light of these facts that your Directors have approached the Government for a further increase in their manufacturing capacity both for bicycles and bicycle components.

I am glad to inform you that the permission sought for has been granted. Your Directors are now thinking of ways and means by which the necessary plant and equipment for the increased production of cycles can be obtained from abroad.

It must be gratifying to anyone who has followed the fortunes of this industry that it is one of the few industries that has fulfilled the expectations of the First Five-Year Plan period and hopes to attain the targets proposed for the Second Five-Year Plan. In 1947 the bicycles produced in the country numbered 49,000. In the year under review the established manufacturers output is estimated to be over 700,000.

The Company has kept in view the quality production for which Hercules cycles are noted. It is a matter of concern, therefore, that there have been some cases where inferior goods produced by some small units have been palmed off as Hercules parts, i.e. as components manufactured by your Company, with the name of Hercules on such components. We have taken legal action under the Patents Act in a couple of cases but I trust this unfair and illegal practice will be eliminated.

The progress that has been made in the manufacture of bi-cycle components for our factory has been quite satisfactory. We have also wherever possible used such components as are not manufactured by us but are locally produced. While we were only a short time ago getting an allowance of Rs. 80 per cycle for importing parts worth that amount, we are now getting only Rs. 7-8 for import of such bicycle components as are not manufactured in this country—a sure indication of the progressive development of indigenous production.

I referred last year to the progress that has been made in the construction of the administrative building. I am glad to inform you that the building has been completed and from January 1957 the administrative offices are located in this building.

The Development Council consisting of manufacturers and Government representatives continued to function during the year. This Council has been doing quite useful work and there is a free exchange of views between the representatives of manufacturers and Government and the problems of the manufacturers are brought to the notice of the Government across the table and are better understood than they would be by correspondence.

One of the Managing Directors—Mr. A. M. M. Arunachalam and the Works Director—Mr. B. A.

Forsyth, are members of this Development Council representing your Company.

Mr. A. M. M. Murugappa Chettiar is the President this year of the Association of Cycle Manufacturers and his advice will no doubt be greatly appreciated by the members of the Association.

You will be glad to note that quite happy relations exist between the labour employed in the factory and the Management.

I referred last year to the piece work system that was introduced after some difficulty. It is gratifying to note that this system is greatly appreciated now and the workers find that they can earn more while working during the same period.

We have received assistance and advice regarding our manufacturing programme from our British Collaborators, Tube Investments Limited, and Hercules Cycle Company, the value of which cannot be exaggerated. The Company is deeply grateful to both these companies and to the technical experts of the companies who have visited the factory and helped us in our plans of expansion.

I would like to conclude by again expressing our deep thanks to the Government of Madras and to the Government of India for the help, assistance and encouragement that we have continuously received from both the Governments during the years. The Minister for Heavy Industries and other Ministers, both State and Central, have assisted us with their wise advice and counsel. We, for our part, have tried to play the game and I trust that both the State Government and the Central Government have noted with satisfaction not merely the progress that the Company has made on the manufacturing side but the amenities that we have provided for the workers and staff. I should also like to thank sincerely the supervisory staff and the factory workers as well as the office staff for the enthusiastic co-operation that we have received from them.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. PA/178/GB6(7)57 for supply of Sheets Plywood size 8'-0" x 4'-0" x 3/16" to Indian Std. Specification No. 303 moisture proof, 3 plies Grade MPF1.

Tender forms are obtainable from the office of the undermentioned at 11, Garden Reach Road, Calcutta-23, on remittance of Rs 2/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta 23 by local firms. Earnest money of Rs. 1000/- is to be deposited with the Chief Cashier, S. E. Rly., Garden Reach, Calcutta 23 and receipt obtained should accompany the tender together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs. 1000/- with the Controller of Stores need not pay the earnest money.

CONTROLLER OF STORES
S98

THE BENGAL FLOUR MILLS CO. LTD.

NOTICE is hereby given that an Interim Dividend on the shares of the above Company of 12½%, free of Income Tax, for the year ending 31st December, 1957, was declared by the Board of Directors on 13th December, 1957, payable on or after 28th December, 1957 to those Members whose names are registered in the Register of Members of the Company on the 28th December, 1957. Dividend Warrants will be despatched to Members and no application to the Company is necessary.

The Register of Members of the Company will be closed from 23rd December, 1957 to 28th December, 1957, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,

OLYMPUS

(Continued from page 1165)

Commission had added sugar, tea, coffee, paper and vegetable non-essential oils. The increase in number of commodities has more than offset the reduction in percentage and indeed at existing levels of taxation, the transfer to the States will have to be about Rs 7 crores.

Besides the above, the additional excise levy in lieu of sales tax is to be shared in a different way. Since this is to displace a former source of revenue of the States and the present arrangement is a merely the transfer of the tax gathering function to the Centre, the States are

to get 99 per cent of the net proceeds of these duties. (The one per cent at present is the share of the Union territories). Out of the 99 per cent, 25 per cent of the duty on sugar and tobacco is to be distributed among the States (except Jammu and Kashmir) in the same manner as the basic Central excise levies. The balance of the net proceeds is to be distributed among the States on the lines recommended by the Finance Commission. As far as textiles are concerned, the bill provides for the adoption of the scheme of distribution recommended by the Commission.

During the debate, the subject of the recommendations of the Commission on the loan liabilities of the States came in for some interesting comment from TTK. It will be recalled that the Commission had suggested that the existing loan liabilities of the States to the Centre should be consolidated into two loans, one repayable on the expiry of 15 years and another on the expiry of 30 years from 1st April 1957. This was not unnaturally considered by the Finance Minister as something that is likely to "jeopardise a r-o-aly" the Centre's ability to finance the present and future Five Year Plans, especially the capital needs of the States themselves. He proposes to consider this particular recommendation more fully in the coming months and expects to be able to give the Government's final decision on the question during the Budget session.

The Finance Minister's predicament deserves some sympathy. Of course, recent trends in State finances are such as to make these adjustments more a matter of book-keeping entries than anything else. A fifteen or thirty year moratorium may not, therefore, entail any serious real embarrassment to the

SHAW WALLACE & COMPANY LIMITED

Dividend on Preference Shares

The Directors have declared a Second Interim Dividend of 3%, less Income Tax, on the Company's Preference Shares in respect of the year 1957, payable to Members whose names appear in the Preference Share Register on the 15th January 1958. Warrants will be posted on or after that date to the addresses or in accordance with the instructions, recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 8th to the 15th January 1958, both days inclusive.

By Order of the Board

[December 21, 1957]

December 21, 1957]

THE TELOJAN TEA COMPANY, LIMITED.

NOTICE is hereby given that the 36th Annual General Meeting of the Shareholders of The Telojan Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 16th January, 1958, at 3-30 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. D. P. Kanoria, the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider and, if thought fit, to pass the following resolution:—
"That Mr. S. K. Mukherjee be and is hereby appointed a Director whose period of office is liable to determination by retirement of Directors by rotation."

The Share Transfer Books of the Company will be closed from 3rd January, 1958 to 16th January, 1958, both days inclusive.

By Order of the Board,

McLEOD & CO., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 18th December, 1957.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 27th January, 1958, only to those members whose names are registered in the Books of the Company on 16th January, 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

Mr. S. K. Mukherjee was appointed by the Board as an Additional Director in August 1957 and vacates office at this Annual General Meeting under Article No. 111 of the Company's Articles of Association and Section 260 of the Companies Act, 1956. The resolution mentioned in item No. 5 of the above Notice is intended to effect the re-appointment of Mr. Mukherjee as a Director liable to retirement by rotation.

BAGHMARI TEA COMPANY, LIMITED

NOTICE is hereby given that the 39th Annual General Meeting of the Shareholders of Baghmari Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 16th January, 1958, at 3-10 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. O. N. Goenka, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. O. N. Goenka be and is hereby re-appointed a Director of the Company."

Special Notice dated 12th December, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. O. N. Goenka is presently a Director of this Company which is a subsidiary of McLeod & Co., Ltd., the Managing Agents to the Company, and that, therefore, he is an associate of the Managing Agents within the definition in Section 2(3)(c)(1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director liable to retirement by rotation by a Special Resolution, of which Special Notice has been given to the Company.

By Order of the Board,

WORLD OF COTTON

(Continued from page 1163)

these varieties. Moreover, the rebate of six pence per yard given to mills in respect of excess production is to be withdrawn from January 1, 1958.

The replacement of the Sales Tax by an additional excise duty is likely to stimulate demand from the consuming centres. Dealers are, therefore, confident that the outlook will definitely improve in the near future.

On the export front, however, conditions are not quite encouraging. Shippers have reported that there are only stray enquiries from foreign countries. There are reports that India may not be able to ship textiles to Burma on any significant scale for another two months.

Stock Exchanges

NERVOUS AND JITTERY

Watch-Dog Writes:

NERVOUS and jittery conditions have generally prevailed in stock markets during the week under review. The announcement of additional excise duties in lieu of sales tax, the absence of any announcement by Mr. Nehru with regard to the changes in Government policy towards the private sector as expected, the uncertain short-range profit outlook for almost all industries, the new developments in the Mundhra affair and the fears that the LIC might not enter the market for some time to come—all these factors have caused nervous liquidation, resulting in the prices developing a reactionary tendency. The closing tone was, however, a shade better, thanks to better Bombay advices.

Equities on the Calcutta Stock Exchange developed a downward trend on renewed offerings being influenced by weaker advices from Bombay.

On the Bombay Stock Exchange, the entire list developed weakness as bears came out to hammer down prices due to lack of any support. Madras interests were also reported to be heavy sellers in most of the popular scrips.

Conditions on the Madras Stock Exchange were far from encouraging. There were only moderate enquiries.

The London Stock Exchange remained dull and very unsettled, reflecting the somewhat disturbing US economic situation.

Wall Street closed barely steady. At the finish, the list showed only a minor on-balance gain for the week.

Calcutta

Calcutta, Friday Evening.

ALTHOUGH the local Stock Exchange started the week on a steady note, prices developed a reactionary tendency from Tuesday onward due to lack of any support and renewed offerings, being influenced by weaker Bombay advices. The announcement of additional excise duties in lieu of sales tax, the uncertain short-range outlook for almost all industries in view of the effects of high taxation, the unsatisfactory labour situation, the new developments in the Mundhra affair and the fears that the LIC might not enter the market for some time to come—all these factors kept away buyers.

Professional operators believed that the present uncertainty in the market would continue until the Budget, while investors were in no mood to extend commitments, especially when they had already subscribed heavily to the recent new issues. But for the reports

that the USA might shortly provide India with roughly 300 million dollars, the downward trend in prices, noticed till Thursday, would have been carried till the end of the week.

Prices in the Gilt-edged section, displayed a steadier tendency, being influenced by the easier conditions prevailing in the money market. However, buying orders were difficult to execute due to shortage of scrip. 3 per cent 1986 Conversion Loan opened at Rs 71.00 and, after improving at one time to Rs 71.25, receded again to Rs 70.60, to finish the week better at Rs 71.00.

In the Banking section, an outstanding feature was Hind which spurred to Rs 45 from Rs 33.50 on rumours of the amalgamation of the bank with the Bank of Baroda. Punjab National hardened further to Rs 67 from Rs 66.50, while United Commercial changed hands at Rs 57.75 to Rs 58.00.

Except for renewed cornering activity in National, Jute shares continued to remain depressed with more sellers than buyers in evidence. Accumulated stocks, lower advices from the sunny market and the uncertainty over US off-take following recession fears in that country, were all contributory factors. National, after being taken up to Rs 21.50 from Rs 21.35, receded again at the close to Rs 21.10 on profit-taking. The only steady features were Anglo-India and Champdany which met with some support up to Rs 151 and Rs 99 respectively. However, Kamarhaty were on offer at as low as Rs 80 against Rs 83; Howrah at Rs 13.81 against Rs 14.87; India at Rs 95.50 against Rs 120 and Khairah at Rs 80.50 against Rs 120.

Coal shares were generally steady although enquiry was selective. Burrakur, after being marked up to Rs 22.12 from Rs 22.00 on settlement considerations, receded again at the close to Rs 22. Bengal changed hands at Rs 228 to Rs 231; Central India at Rs 5.84 to Rs 6.00 and Western Bengal at Rs 5.44 to Rs 5.50. Equitable were well maintained at Rs 24.62.

Despite the improvement in demand at this week's auction, especially from abroad, and the news of Egypt having made a further contract to purchase 1,500 tons of tea, sentiment in the Tea section, remained depressed with prices developing an easier tendency. Fears were entertained that the current season's working would be adversely affected as producers of Common teas were reported to be making losses. The only relieving feature was the renewed support lent to the scrips of the Assam garden. Most prominent were Brahmaputra changing hands at Rs 2.94 to Rs 3.37; Brooke Bond at Rs 14.69 to Rs 14.81; Bishnauth at Rs 18.87 to Rs 19.12; Jayshree at Rs 8.87 to Rs 9.06 and Methoni at Rs 15.44 to Rs 15.62. Gungram were, however, marked down to Rs 108 from Rs 134, while Delhakhat were a steady feature at Rs 20.37.

Little or no activity was noticed in the Textile section, as the relief in excise duty on medium cloth was below market expectations. Jayshree were on offer at Rs 9.4 to Rs 6.00 and Kesaram at Rs 9.25 against Rs 9.50.

Sugar shares were practically neglected. The announcement of the additional excise duty on the commodity and the fears that the dividends, to be declared by companies for the 1956-57 season, would be lower than for the previous season, were the contributory factors. The only scrip, which met with some enquiry, was SKG being done at Rs 8.85 to Rs 8.94.

Of all the sections, Engineering was the worst affected and prices developed a sagging tendency under the lead of

Indian Irons which, in turn, were subject to settlement adjustments till mid-week. The closing tone was a shade better, thanks to reports of some purchases made by the LIC. Against the week-end closing of Rs 19.57, Indian Irons opened lower at Rs 19.28 and receded gradually to Rs 18.22 on selling pressure, to finish the week better at Rs 18.58 on bear-covering. The settlement rate was fixed at Rs 18.80 as against the last settlement of Rs 19.44.

In sympathy, TEXMACO were at one time pushed down to Rs 15.40 from a level of Rs 16.70; Jessop to Rs 21.75 from Rs 22.37 and Richardson to Rs 6.94 from Rs 7.81, to improve at the close to Rs 15.90; Rs 22.12 and Rs 7.31 respectively. Burn turned quiet at Rs 311.50 against Rs 314; Marshalls at Rs 4.50 against Rs 4.62 and G. K. Williams at Rs 29.12 against Rs 29.31. Indian Standard Wagon changed hands on the ex-right basis at Rs 98.

Miscellaneous issues moved in sympathy with the general trend of the market. Selling pressure caused Orient Paper to slip down at one time to Rs 24.00 from Rs 25.10 and Titaghar to Rs 32.50 from Rs 33.12, to improve at the close to Rs 24.30 and Rs 32.75 respectively. Shree Gopal were quiet at Rs 15-12 against Rs 15.31. India Steamship met with sustained support up to Rs 10.87 from Rs 10.69. I. Copper, after touching a low of Rs 2.75 from Rs 2.86, improved to Rs 2.81 on better advices from the metal market. Indian Cable eased off to Rs 25.37 from Rs 25.75; Dunlop Rubber to Rs 20.12 from Rs 20.37; Rohtas to Rs 15.25 from Rs 15.69; Rallis to Rs 28.25 from Rs 28.50 and BBP to Rs 1.72 from Rs 1.79. Sone Valley and BIC were nearly maintained at Rs 4.44 and Rs 4.05 respectively. National Carbon closed better at Rs 24.00 against Rs 23.87 and so also NICCO at Rs 24.81 against Rs 24.75.

WORLD OF FINANCE

(Continued from page 1155)

crores, has been met from the Reserve Bank's cash in the till.

The Centre's Deposits are lower by Rs 1.10 crores at Rs 55.53 crores, suggesting that their disbursements have been heavy, since their balances were replenished by the sales of the 3½ per cent 1962.

The return of the State Bank for December 13 reports a sharp rise of Rs 4.86 crores to Rs 365.58 crores in Deposits. Cash Balances have improved by Rs 1.25 crores to Rs 32.87 crores. The total of Advances is higher for the second consecutive week by Rs 1.33 crores at Rs 162.61 crores.

The return of the Scheduled Banks for December 6 discloses a decline of Rs 2.27 crores in Deposits to Rs 1392.77 crores. This is presumably on account of month early disbursements. It is also noteworthy that the shift from Demand Liabilities to Time Liabilities continues, the former being placed Rs 8.36 crores lower at Rs 714.22 crores, while the latter is higher by Rs 6.09 crores at Rs 678.55 crores.

Borrowings from the Reserve Bank have been reduced by Rs 2.50 crores at Rs 13.75 crores. Cash Balances are sharply reduced by Rs 24.39 crores to Rs 177.91 crores. This is on account of the State Bank; so, too, is to be ascribed the increase of Rs 18.87 crores to Rs 427.69 crores in Investments. This, of course, relates to the State Bank purchase of the created issue.

Lastly, the Advances of Scheduled Banks have been marked up by Rs 5.53 crores to Rs 844.51 crores—again, doubtless due to month early disbursements.

BALANCE-SHEET REVIEWS

(Continued from page 1152)

subscription was Rs 30 lakhs and the amount subscribed was far in excess thereof, the directors proceeded to the allotment of shares. The total equity shares allotted are 4,68,184 and the preference shares 14,220. The total issued capital is: Ordinary Rs 70 lakhs and Preference Rs 30 lakhs. Of the total issue of Rs 1 crore, shares of the value of Rs 71,11,400 have been subscribed. The expenses to the issue were estimated at Rs 3 lakhs and the total amount spent was Rs 2.99 lakhs. The accounts for the year ended 31st March 1957 reveal a net loss of Rs 19,383. There being no business

since taking over the assets, no depreciation has been charged.

According to the directors' report, the Hotel building at New Delhi has now gone up to the 6th floor. The construction of the building cannot, however, be completed due to various factors. Every possible effort is being made to maintain the present progress and they hope that, in spite of all the difficulties, the entire project is expected to be completed at a very early date. The company has completed the taking over of the Oberoi Palace Hotel, Srinagar, with effect from 1st April, 1957.

a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:

Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

For the Investor

1957: A Bad Year for Investors

Investment Gossip:

EVEN a scribe who is habitually accustomed to looking on the bright side of things, cannot, I am afraid, bring himself to describe the year that is just ending as having been happy for the investor. And that is putting it mildly. In fact, 1957 has been a bad year. More, it has been a disastrous year. It will not do to mince words on an occasion like this, when we are trying to assess the performance of the stock exchanges over a period of 12 months. Where, however, I can, and do, qualify such description of 1957 is on the point whether such a recession in values as obtained during 1957 was justified. I am clear in my mind that, undoubtedly, while there has been reason enough for some sapping of confidence, that the depths to which prices have sunk are unconscionable, having regard to the many specific favourable developments.

First, however, let us note down the causes underlining the weakness of stock exchanges during 1957. By far the most grievous blow—a blow from which, I need hardly say, the stock exchanges have not yet recovered—was the 1957-58 Budget of Mr. T. T. Krishnamachari. The erosion of confidence was not so much due to the extent to which the individual investor would be experiencing a higher tax burden as by the psychological shock that has been administered by such revolutionary imposts as wealth and expenditure taxes.

Second, I must hasten to point out that, if the investor has seen a depreciation in the value of his holdings, he owes such an unhappy circumstance more to the machinations of speculative elements than to any intrinsic downtrend in the economy or in the industrial activity. The investor has not had his tax burden greatly increased—and the psychological shock that I spoke of has had a ruder impact on the operators rather than on the investors. Market men lost no time, in raising their shrill cries of dismay. The bear trend definitely set in, and the forward counters especially received rough treatment.

Third, it will not do to gloss over the repercussions that have emerged from the Finance Minister's 1957-58 Budget. I can appreciate that the

taxes were necessary, that the tax effort was necessary. For, it is only with such endeavours, such imposts, that revenue can be vouchsafed for the successful implementation of the Second Plan. To wish that TTK might have been kinder is to have indulged in wishful thinking. What he did was the least that he could do.

Fourth, it surprises me that the advances in industrial production and the upsurge in industrial profits have not at least partly offset the bearish influence of the Budget. I am surprised, but, not shocked. For, I have always held the view that stock exchanges, in a bear phase, refuse to appreciate any favourable developments.

Fifth, however, there is no gain-saying the fact that one important industry has been in the doldrums during 1957. This is the cotton textile industry, and the belated relief in the matter of the excise duty is hardly sufficient to rescue the industry wholly from the trials and tribulations that it has recently been undergoing. May one hope that the consolidation of the sales tax with excise duty will enable smoother functioning, will, in fact, pave the way for a recovery in its fortunes and destiny?

Lastly, while 1957 has been a bad year, may I, in concluding, wish my investor friends that 1958 will prove to see a heartening change in sentiment and climate, such that their experience will be one of appreciating share values as against the dismal depreciation during 1957.

£ R S

Investment Notes:

IT is learnt that about one hundred shareholders of the Tata Iron & Steel Company Limited have urged the management of the company to issue bonus shares in the ratio of one share for every four shares held by capitalising the Share Premium Accounts to mark the completion of 50 years of its existence. The management is reported to have told them that their representation will be placed before the Board for consideration.

The Andhra Cement Company has finally decided to increase the authorised capital from Rs 1 crore to Rs 2 crores. The capital structure will be as follows:—17,25,000 equity shares of Rs 10 each; 2,50,000 6 per cent tax-free cumulative First Pre-

ference shares of Rs 100 each and 2,50,000-7 per cent tax-free cumulative Second Preference shares of Rs 10 each.

Midland Rubber has obtained the permission from the Controller of Capital Issues for the issue of bonus shares in the ratio of one share for every two shares held.

The shareholders of the Savamalai Estates have passed the resolution to sub-divide the Rs 10 shares into shares of Rs 2 each.

Bengal Paper has announced an interim dividend of 6 per cent on the Ordinary shares for 1957, payable on or after the 15th January, 1958.

Jessop Results

Balance-Sheet Reviews:

THE recent weakness in the shares of Jessop & Company is justified by the directors' report for the year ended 31st October, 1956. A dividend of 12½ per cent has been recommended on the increased Ordinary capital as against 30 per cent on the original capital. The net profit, after providing for Depreciation and Taxation, amounts to only Rs 25.88 lakhs as against Rs 27.01 lakhs, while sales have declined to Rs 6.56 crores from Rs 6.73

A question of quality

THE man who has sound taste and judgement, who knows that to buy the best is in the long run more economical, will wear only Binny's fabrics. For over three generations Binny's have been studying the requirements of such men in their efforts continually to improve the quality of their fabrics—by trained skill and craftsmanship and by applying the latest technical developments in textile manufacture.

HIGHLIGHTS

What sort of year was 1957? From the stock exchange point of view, as Watch Dog has pointed out, it was a bad year. On the other hand, from the money market point of view, it has been a year of spectacular progress.

But it is not our purpose here to analyse the different aspects of 1957, which lend themselves to different readings.

The sentiment that we would like to advance

at this stage is what Eavesdropper expresses: that the valediction for 1957 has to be in somewhat sombre terms.

Such is the situation not in respect of internal but of the international picture.

Nuclear madness is upon us, and reason and logic are attributes that are very much at a discount—at least among the world politicians.

When will the world realise that we are not

in a nuclear age, but in the nuclear stalemate age?

When will the world consequently wake up, and set about the evolving of satisfactory understanding precedent to peaceful co-existence?

The future will see only one war more: the war that annihilates mankind. The time is here and now for the world to disavow that such a war will ever take place.

INDIAN FINANCE

December 28, 1957

crores, reflecting the closure of the company's metal department in August.

As regards allocation, Taxation claims as much as Rs 45.65 lakhs against only Rs 20.26 lakhs; Depreciation Rs 5.10 lakhs against Rs 5.25 lakhs and General Reserve Rs 7.25 lakhs against Rs 9.25 lakhs. Special Reserve is, however, maintained at Rs 4.75 lakhs. The working results by themselves do not warrant a reduction in dividend and the directors are said to have felt it expedient to conserve the resources of the company.

According to the directors' report, Mr H. D. Mundhra advised the Board in 1956 that he wished to bring Messrs Richardson & Cruddas Limited and Messrs Duncan Stratton Limited under the control of Jessop & Company. Mr Mundhra stated that he and his associates then held about 70 per cent of the shares of this company and held over 80 per cent of the shares in each of the other two companies, both of which are engaged in engineering work.

The directors considered that it would be in the interest of this company to have in Bombay and Madras facilities for the manufacture of component parts of Sluice Gates and Cranes, etc., and, accordingly, it was agreed to purchase shares in Richardson & Cruddas.

In November 1956, further contracts to the value of Rs 60.24 lakhs were made for the purchase of 2,17,000 additional shares in Messrs Richardson & Cruddas. These contracts were made with Messrs Rameshwar Daga & Company, a firm of registered stock brokers, recommended to the company by Mr Mundhra.

The money was paid to Messrs Rameswar Daga & Company in November 1956; but the share scrips were not delivered to the company. This position was not known to any of the other directors for several months. When it became known, the position was discussed on numerous occasions with Mr Mundhra, who gave his personal assurance and undertaking that the money would be returned to the company.

Mr Mundhra stated that, due to the serious fall in the values of securities on the Calcutta Stock Exchange, he had not yet been able to keep his promise to cause the money to be restored to the company, nor had he been able to give any security for this amount. In view of Mr Mundhra's promises, the directors are making continuous

efforts to recover the money amicably; at the same time, advice is being sought as to what other steps should be taken in the interest of the company.

Agarpara Jute

In common with other jute mills, Agarpara Company Limited has reduced the dividend from Rs 5 to Rs 2.50 per share for the year ended 31st March, 1957. Thanks to a rise in sales from Rs 2.28 crores to Rs 2.49 crores, the accounts reveal a net profit, after Depreciation, of Rs 1.34 lakhs as against a loss of Rs 5.91 incurred in the previous year. A sum of Rs 2.60 (Rs 2.57 lakhs) is set aside for Depreciation. The dividend for the year under review was possible only after transferring a sum of Rs 75,000 from General Reserve, while the previous dividend was paid after transferring as much as Rs 7.50 lakhs from General Reserve.

224

Tea Results

Three more Tea companies—Baghmari, Bormah Jan and Dibrugarh, in McLeod group, have presented their reports and accounts for 1956. Baghmari has raised the dividend from 10 to 25 per cent and Dibrugarh to 30 from 20 per cent, while Bormah Jan has reduced the dividend from 20 to 15 per cent. The following table gives the particulars relating to the crop outturn, average price realised and the net profits earned as compared with 1955:—

	CROP OUTTURN (IN MAUNDS)			
	1956	1955		
Baghmari	10,453	9,155		
Bormah Jan	6,480	7,703		
Dibrugarh	7,323	7,245		

	AVERAGE PRICE (PER LB)			
	Rs	As	Ps	Rs As Ps
Baghmari	2	6	6	2 1 10
Bormah Jan	2	6	10	2 3 8
Dibrugarh	2	10	2	2 5 10

NET PROFIT AFTER DEPRECIATION AND TAXATION			
Baghmari	3,49,701	—	2,007
Bormah Jan	1,42,373	1,02,350	
Dibrugarh	2,64,475	1,39,229

The Outlook for the New Year

ADDRESSING his colleagues of the Congress Parliamentary party on the eve of their dispersal for the winter recess, Mr Nehru is reported to have urged them to be "cheerful and to carry a word of cheer to their constituents". It is a piece of advice that might well be, and probably was, addressed to a far wider audience. During the last year or so, encounter with difficulties has had the effect of making many among us lose the perspective in which our current problems have to be viewed. As Mr Nehru pointed out, our economy is basically sound and our present difficulties are quite simply the agonies of development. It would have been possible for us to avoid many of our current tribulations if we were willing to forego for ever a great deal of what we consider desirable for our people. Rightly setting our face against any such easy way out of our present dilemma, we have decided to pursue our charted journey with determination, resourcefulness, imagination and above all a good humoured tolerance of present trials.

The real objection to the mood of desperation that is overtaking certain sections of our people is that it interferes with the determination to face the very difficulties that are deplored. None wishes difficulties to be minimised, or people kept in the dark about them. But too exclusive a preoccupation with them and too insistent a reference to them tend merely to sap the morale of the people without in any way rousing them to face them. If every reference to the heavy weather the Second Plan is facing is followed by a reference to the achievements under the First, and the hopeful message that there is no reason why we should not overcome problems before us, there would be no cause for the complaint that the present mood is one of defeatism. As it is, it is hard to avoid the feeling that the great deal of the current pessimism is due to a desire to shirk the real demands of the Plan.

By now our immediate problems have defined themselves with some precision. One is the need for tackling the internal inflationary situation created largely by the failure of agricultural production to keep pace with the large doses of development investments injected into the economy. The only real answer to the problem is increased production, and however long and however cleverly we talk about it, we cannot get away from it. The only way to achieve this is to instil in the mind of our people the overriding importance of their making a real effort to achieve a massive increase in food and other agricultural production. Unlike any other problem, this is soluble wholly by real effort of will. We are not entirely without the external equipment of achieving success in this effort. Over a period of years, and especially during the First Five Year Plan, the necessary institutional framework has been erected. Most important among these is the community development apparatus which has been in existence for about six years. From the point of view of physical aids to production, the whole of the First Plan was oriented specially toward creating these very things. The massive irrigation projects erected at great cost and the fertilizer plants are all there to be

put to maximum use. There is evidence that neither the institutional nor the physical aids to greater production are being put to the maximum use of the people. The least that Parliamentarians could do is to bring home to their constituents their basic duties in this regard. To do this must be their most important New Year resolution.

The second problem we are up against is foreign exchange shortage. Here, the usefulness of the effort of the individual citizen is somewhat limited. But, even there, with the fruition of the series of measures designed to reduce imports, to increase export earnings and to interest friendly foreign countries in

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

our Plans, our difficulties may be overcome in due course. Here, all we need to have is a sense of proportion about the actual extent of our difficulties.

But basically the problem is one of morale. Leaders of men must realise that you do not get the best out of a people by telling them in advance that their efforts have every appearance of being doomed to failure. The mood that ought to be created is one of readiness to laugh at difficulties, even though the laugh is a little wry. In wishing our readers a New Year of strenuous but happy endeavours, we would commend to them Mr Nehru's seasonable advice: "Be cheerful and carry a word of cheer to your fellow men".

Sugar and Sugar Cane

THE Sugar industry is perhaps one of the few happy instances about which it can be predicted that the target set for it in the Second Plan will be achieved well before the target date. The target of sugar production has been fixed at 2,250,000 tons for the Second Plan period which is 450,000 tons more than the First Plan period. In the First Plan the initial target of 1,500,000 tons was revised after the sudden increase in sugar consumption following decontrol in 1951-52 and a new target set at 1,800,000 tons. Actually the industry produced more than this and registered an increase of 86 per cent over the pre-Plan average production. It is interesting to compare this percentage with similar percentages for a few other industries which are, 12 per cent for jute, 33 per cent for iron and steel, 40 per cent for cotton textiles, 58 per cent for paper and 78 per cent for cement.

If the rate of progress in the coming year does not fall very much behind the average rate of progress during the last five years it may well be that the target set for the Second Plan will be reached before the end of 1958-59, i.e. two years before the target date. Not many industries will do that.

Paradoxically, however, there are serious drawbacks in the structure of the sugar industry in India. The most important of them is the poor average yield of sugarcane per acre in the country. Whereas the average yield is 62 tons in Hawaii and 56 tons in Java, in India it is only 25 tons which is about the lowest in the world, despite the fact that India has the largest area under sugarcane cultivation and has the largest annual production in the world. The sugar industry, spectacular as has been its growth during recent years, can grow even faster if the yield of sugarcane could be increased to averages which approximate production in other countries—a proposition which is by no means unreal or even particularly ambitious. In fact there are tracts in certain parts of the country capable of producing as much as 70 tons per acre.

Sugarcane being one of the most important cash crops, occupies a vital place in the economy of rural India. About 20 million agriculturists and workers depend for their prosperity on the sugar industry and improve-

ment in the method and results of sugar cultivation will mean a better and a rising standard of living for many millions of persons. It is essential therefore, that suitable efforts on the basis of a concerted plan were made in this direction.

At the 24th meeting of the Committee, which was inaugurated by H. H. Shri Jayachamaraja Wadiyar, the Governor of Mysore, last week, most of the speakers dwelt on the problem of increasing the per acre yield of sugar cane in the country and emphasized the need for speedy implementation of the schemes for intensive cultivation.

The progress in the production of sugarcane has not even remotely been as fast as in the case of sugar, and the hope expressed for the latter about fulfilling the target earlier than the target date cannot be entertained in the case of sugarcane. The Second Plan provides for an increase of 28 per cent in sugarcane production by 1960-61 as compared to the actual increase 3.6 per cent achieved during the First Plan. Cane production in the base year of the First Plan was 5,600,000 tons while the actual production in 1955-56 was 5,800,000 tons, as against which the target set for 1960-61 is 7,800,000 tons.

The target, it is to be remembered, has to be achieved without a substantial extension of the area under cultivation. In fact, considering the gravity of the food situation in the country at the present moment, many speakers at the meeting suggested that the Government's policy should actually aim at a shrinkage in the area under cultivation making room for the production of food crops. In any case, the target can only be reached if intensive cultivation was introduced and followed by growers in a major portion of the present area under cultivation.

The recommendations of the Mysore meeting of the Central Sugarcane Committee deal with most of the main aspects of the problem of sugarcane production. If the Centre and the States make a concerted effort to implement the recommendations, it will not be long before the sugar industry—already a valuable foreign exchange earner—will be able to claim pre-eminence in the rate of progress amongst the established industries in India.

[December 28, 1957]

'Democratic' Discontent

Discontent with the working of democracy in Asian countries was born almost simultaneously with the advent of political freedom to them. In quite a few, democracy all these years has remained nothing more than a barren slogan and an empty form. At the Commonwealth Parliamentary Conference held at New Delhi recently, a number of Asian leaders including Mr Jawaharlal Nehru spoke on the need for discovering new concepts and institutions to suit conditions in this continent. That was indeed an occasion on which the critics of contemporary democratic institutions were content to discuss generalities without proceeding to suggest how changes could be introduced.

Since then Mr Jayaprakash Narain, addressing a meeting of the Congress for Cultural Freedom, went deeper into the subject and examined how the 'pressurised progress' toward industrialisation in India might lead to the establishment of a dictatorship. His second thoughts on this prospect were however, less forbidding. The comparative inefficiency of the Indian people, their reluctance to take to extreme courses of action and their instinctive resistance to collectivisation of land are, according to Mr Narain, reasons which should militate against the advent of a dictatorship. All the same, he finds it silly to give vote to a person of the status of Mr Nehru and an equal vote to a beggar in the street.

Mr Narain's hope is inclined toward village autonomy and Panchayat rule. Decentralisation of power has gained favour in other quarters as well, as a solvent of even more pressing economic problems. But there again, no conclusive view is admissible as from time to time the crudities and in-

Editorial Notes

justices of the management of public affairs by Panchayats are being pressed home in several States.

Meanwhile, a ginger group led by Mr K. D. Malaviya has been formed within the Congress Party. This group has come into existence with the avowed purpose of strengthening the Congress organisation by creating a real unity through ideological consciousness and through discussions and research on current problems, and training cadres, of helping to solve the problem of replacing the ageing, leading strata of the Party.

If the functioning of this group turns out to be inimical to the eventual solidarity of the Congress, it proposes to disband itself promptly. This kind of ginger group with an unusual combination of purposefulness and self effacement can be a laudable experiment, provided it keeps its conduct strictly in correspondence with its aims and it receives the constructive sympathy of the elders, whose gradual replacement is among its principal aims.

*

Forewarning on Food

The Reserve Bank of India has in recent months been applying the screw fairly tightly on advances from the Scheduled Banks against food grains and the latest directive is intended to see that the restrictions are effective to the maximum extent, at a time when the prospect of food grains output remained uncertain. There can be no denying the fact that the directives of the Reserve Bank are responsible for curbing speculation to a large extent. But in a situation of overall shortage, a mere check on bank credit would not be sufficient either to cushion prices or enable release of supplies in convenient proportions over a period.

Some measure of direct control over stocks would become indispensable, if sharp fluctuations in supplies have to be averted; it is these fluctuations which make the average consumer's lot miserable at times. It cannot also be overlooked that the buffer stocks under Government control are not always dependable for the function they are built up for. The recommendations of the Foodgrains Enquiry Committee are now before the Government. As a large annual deficit is expected this time, it rests with the authorities in the Centre and in the States to decide on suitable measures sufficiently before the anticipated shortages materialise.

In the South, there is some obvious dissatisfaction with the movement of foodgrains under the zonal arrangement. It would be a misfortune if such dissatisfaction is not cleared in time and complete inter-State understanding established, if necessary with agreed

revisions on commitments, so that in the event of a critical situation, every one could act with zeal and conviction.

*

Labour in Kerala

In spite of repeated invitations from the Kerala Ministers, industrialists outside the State are understandably reluctant to take risks until the results of the new labour policy on industrial relations are more clearly evident. The taxation policy likely to be pursued by the State also affects the climate of investment. Alone among the States in the Union, Kerala produced a surplus budget, by stepping up the rate of agricultural income-tax and the sales tax. The agricultural income tax may affect only big landowners and the plantations. But the reactions of planters to taxation determine the climate of investment just as their campaign against the Government's labour policy.

The Government's Labour Policy, and especially the role assigned to the police in agrarian and industrial dispute, is coloured by ideological considerations. The Chief Minister, in his introduction to the publication, "Kerala on the March", has observed as follows: "The biggest obstacle which the Trade Unions, the Kisan Sabhas and other mass organisations of the working people have been facing is the fact that all former Governments have been using the police in order to suppress the legitimate activities of these mass organisations."

A break with this practice of the Government in the use of the Police Force was, therefore, considered to be of utmost importance by us when we assumed office. Accordingly, the officers and men of the Police Force were told that the settlement of Industrial and Agrarian disputes was not the job of the Police, but that of the Labour and similar other departments. The preventive provisions of the law should be used only when there was a real threat of imminent breach of the peace. The Government claim by their various measures, they are working out the basis for a long term industrial truce.

Wage Boards have been established for a number of industries, and a large number of pending disputes have been settled. The Statistics of labour disputes that have been settled after the Communists assumed office makes impressive reading. Out of 3,087 disputes till the end of September, including 804 disputes pending on April 1, 1957, 2,708 disputes were settled, 77 disputes referred for adjudication and 8 for arbitration. The major disputes settled by the intervention of the Labour Minister were the dispute in the FACT, dispute regarding bonus in the planting industry for 1955 and

1956, disputes between contractors and toddy tappers in the Athikad area, dispute in the Aluminium Factory at Kundara, and dispute between agricultural workers and their employers in the Kuttanad area.

*

Coal Prospects

The gloomy calculations which till recently held the field in respect of the long term future of India's coal industry have been most agreeably upset by the latest discoveries of rich reserves of coal in many parts of India. Referring to this development, Mr D. C. Driver, in his speech at the 12th Annual General Meeting of the Coal Consumers' Association of India, quite properly pleads for a revision of the entire outlook and inspiration behind the very rigid rules and regulations and legislation about the mining and opening up of new mines and the conservation of coal.

According to him, the nationalisation of the existing collieries in the private sector has been rendered unnecessary by these new finds especially when most of the important collieries in the private sector are likely to get exhausted and production in the public sector scheduled to exceed that of the private sector in another decade.

This plea is also backed by the very successful efforts of the Fuel Research Institute to reduce the demand on washed coking coals. No less important from the standpoint of the overall supply and demand for fuel for national consumption is the work which has been done at the Institute for the utilisation of Indian coals for low temperature carbonisation, the extraction of diesel oil from tar oils through hydrogenation, making

World of Finance

No Terrors in 1957-58
Busy Season

AS 1957 draws to its close and as the 1957-58 busy season commences, we nevertheless continue to witness two welcome developments. On the one hand, the gilt-edged market is holding fully steady, and Reserve Bank is indeed raising its selling rate on a number of counters. On the other hand, money rates are still easier than what might be expected at this time of the year. How are we to reconcile this relative strength in the gilt-edged market and the maintenance of call money rates at around the slack season level with the indisputable onset of the 1957-58 busy season? We may note here that the demand for funds is already in evidence in respect of financing the busy season needs, and also to be witnessed in a drawing upon the Reserve Bank for meeting such advances on the part of the Scheduled Banks. We may briefly appraise the current situation in respect of money rates, gilt-edged prices, onset of busy season and borrowings from the Reserve Bank.

In the first place, there can be no doubt that the Scheduled Banks generally are much more comfortable than they were a year ago, on the eve of 1956-57 busy season. At that time, all the three entities representing the banking system—the Exchange Banks, the State Bank of India and the other State Bank of India—stood in need of Scheduled Banks—stood in need of recourse to the Reserve Bank for replenishing their resources, because they started the busy season with an already overextended position. Today, the only entity which is overextended is the Exchange Banks. Both the State Bank and the other Scheduled Banks have had such accretions to Deposits that they do not feel the pinch. It is fair to state that, with a plenitude of funds in the call money market, even the incessant demand from the Exchange Banks has failed to distort unduly the structure of interest rates in this sphere. However, as the busy season progresses, and as the presently spare resources of the State Bank and the other Scheduled Banks become utilised in the expansion of advances, it is possible that a more telling pressure will be exerted by the banking system upon interest rates in the call money market. At this point, we may wonder whether the monetary authorities intend to take any step which will prevent such undue pressure being imposed upon the market.

In the first place, the firmness in gilt-edged prices has stemmed from the virtual abstinence of Govern-

ments from market borrowings in the current year, accompanied as this phenomenon was by a spectacular increase in the Deposit resources of Scheduled Banks. Moreover, the other institutional investors like the Provident Funds have also had accumulating funds with them, and they have been hard put to it to secure their requirements of gilt-edged. In assessing the situation correctly, the Government created and disposed of a special issue of Rs 30 crores of 3½ per cent 1962; and, meantime, the price of 3½ per cent 1962 has firmed up to Rs 97.80 against Rs 97.60 a month ago. While the capacity of Scheduled Banks to absorb gilt-edged between now and the onset of 1958 slack season may be doubtful, it may be taken as more or less certain that there will be a distinct unsated demand on the part of the other institutional investors. This demand can be met either by tap sales from the Reserve Bank or by the creation of a special issue. As far as gilt-edged prices during the rest of the busy season are concerned, it hardly seems likely that, in a fashion similar to last year, selling pressure will be forthcoming. While it is true that, with the purchase of gilt-edged in recent weeks, the Scheduled Banks have considerably added to such holdings, it is still doubtful whether the Scheduled Banks will either desire or need to dispose of gilt-edged in order to meet the pressure of busy season finance. With the absence of selling pressure by the banks, a downward trend in gilt-edged prices appears to be ruled out. If, besides, good demand should obtain from the other institutional investors, gilt-edged prices may even record some improvement. In that case, however, the call money rate and gilt-edged yields would be showing contrary trends. But, since Government appear to have recognised that a healthy gilt-edged market is vital to the implementation of a sound borrowing policy, we may be hopeful of apposite measures taken to ensure that there is no untoward distortion of the general structure of interest rates by any undue increase in the call money rates.

In the third place, the onset of the busy season is indicated in the beginning of an upward trend in the Other Loans and Advances of the Reserve Bank and in its advances against usance bills. But the qualification is necessary that, quite possibly, the expansion under these two heads so far recorded may be largely owing to the requirements of the Exchange Banks. But, from the point of view of

Notes in Circulation, the busy season has still to get into its stride. Over the next few weeks, it is possible that Notes in Circulation do not rise as rapidly as might be expected, but this may be due to import restrictions and credit restrictions which, together, might this year slow down the tempo of the busy season.

In the fourth place, the Reserve Bank's advances against usance bills, since the beginning of the current busy season, have actually declined by nearly Rs 8 crores. In the corresponding period of last year, the Reserve Bank's advances against usance Bills had gone up by Rs 9.20 crores from Rs 40.29 crores to Rs 49.49 crores. Clearly, the accretions to Deposits during 1957 have been of sufficient size to enable the Scheduled Banks

largely to do without recourse to the Reserve Bank. But, as the busy season progresses, some increase in bank borrowings from the Reserve Bank is inevitable. On the one hand, the Exchange Banks may alone account for borrowings against usance Bills to the tune of Rs 35 crores to Rs 40 crores. On the other hand, the other Scheduled Banks may also need temporary assistance. But it may be taken as more or less certain that borrowings from the Reserve Bank at the 1957-58 busy season peak will be much lower than the level that obtained at the peak of 1956-57 busy season.

Summing up, it may be said that the 1957-58 busy season will pose fewer terrors and involve less of hardship for the banking system. (Continued on page 1202)

GOVERNMENT OF INDIA

I. 15-YEAR ANNUITY CERTIFICATES - SECOND SERIES
(Free of Indian Income-tax)

Annuity Certificates securing a monthly payment of Rs. 25, Rs. 50, Rs. 100 and Rs. 200 respectively for a period of fifteen years will be available from the 2nd January 1958, until further notice at issue prices given below:—

For monthly payment of Rs.	25	issue price of Annuity Certificate Rs.	3,325
do	Rs. 50	do	Rs. 6,650
do	Rs. 100	do	Rs. 13,300
do	Rs. 200	do	Rs. 26,600

These certificates will be available to INDIVIDUALS only and no applications will be entertained from or on behalf of institutions, firms or corporations.

The maximum amount that may be invested in the certificates will be

For an individual—	Rs. 26,600 (or Rs. 28,000 inclusive of holding of 1st series).
For two individuals jointly—	Rs. 53,200 (or Rs. 56,000 inclusive of holding of 1st series).

Monthly payment will commence after expiry of one calendar month from the date of receipt of the purchase price. Such payment will be free of Indian income-tax and will not be taken into account in calculating the total income of the holder for the purpose of income-tax.

Annuity Certificates will be accepted for safe custody by Public Debt Offices and monthly payments remitted to the holders, if so desired.

Applications will be received at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi; branches of the State Bank of India, State Bank of Hyderabad and Bank of Mysore Ltd. conducting Government treasury business; and treasuries and sub-treasuries in India at places where there is no such office of the Reserve Bank of India or branch of the State Bank of India, State Bank of Hyderabad and the Bank of Mysore Ltd.

: II. 4 PER CENT TEN-YEAR TREASURY SAVINGS DEPOSIT
CERTIFICATES

(Free of Indian Income-tax)

From 2nd January 1958 and until further notice deposits for Treasury Savings Deposit Certificates will be received in multiples of Rs. 50/- instead of in multiples of Rs. 100/-.

Deposits will be refundable at any time after the expiry of one year from the date of deposit at certain discount.

The other terms and conditions of issue etc. will be the same as at present.

Deflation Through Exhortation?

By PAUL EINZIG

UNTIL recently the object of the Government's disinflationary drive was usually to halt the rise in prices. During recent weeks, however, both the Prime Minister and the Chancellor of the Exchequer repeatedly urged business firms to lower their prices. Their main argument was that the decline in the costs of their raw materials during recent months should be passed on to the consumer without delay. In addition they re-emphasised the well-worn argument that the consumer should benefit by cuts in costs through technological progress. So far the response to these appeals has been less than satisfactory. The National Association of Manufacturers issued a statement amounting to a rejection of the appeal. And retail prices of many goods continue to rise day after day. The cost of living index rose another point in November making a rise of 4 points over twelve months.

There is, of course, always a time lag between the decline in the wholesale prices of raw materials and the decline in the retail prices of manufacturers. The goods manufactured with the aid of raw material bought before the decline of their prices have to be sold at the existing prices. Most firms have fairly substantial supplies of raw materials, so that it may take months before manufactures produced with the aid of cheaper raw materials emerge from the pipeline. In the meantime increase in the cost of transport, fuel and above all labour, may offset and more than offset the decline in the cost of raw materials. This is what has been happening, to some extent at any rate, during recent months. In a large number of instances manufacturers anticipate further wage increases which will necessitate an increase in the selling price of their manufactures. They feel that there would be no

point in making cuts now only in order to make increases in a few months time. In particular they are naturally anxious not to change the retail prices of nationally advertised goods too frequently. So in face of the decline in their cost of production with cheaper raw materials they adopt an attitude of "wait and see".

Even though the initial response to the Government's plea has been negative the idea behind the new effort is decidedly sound. It may contribute to some extent at any rate towards discouraging employers from granting wage increases. Their appeal to the unions in favour of wage restraint had a distinctly hostile reception but employers have more reason than trade unions for responding to exhortations by a Conservative Government. And even though it would be too much to expect industrialists and merchants to carry their political sympathies so far as to renounce a substantial part of their profits in response to the Government's appeal, possibly to some extent they may harden in

face of wage demands in order to avoid at any rate, further increase of their prices.

The restrictive practices under which manufacturers can force retail merchants to abstain from cutting the prices of their products have come in for a good deal of renewed criticism under the influence of the Government's new campaign. It is pointed out that recent legislation while outlawing collective restrictive practices has reinforced restrictive practices by individual firms. It has become much more difficult for trade associations to impose and force re-sale price maintenance but re-sale price maintenance adopted by each individual firm for its own products, has now become enforceable by law courts. It is argued that this has reduced considerably the chances of price cuts resulting from competition between retailers.

There can be no doubt, however, that during the prolonged period of a non-stop inflation re-sale price maintenance has tended to slow down the rise in retail prices

World Overseas

US Notes

UNITED States trade with the rest of the world is the subject of a searching analysis in four studies published this week by the Department of Commerce.

The studies were prepared originally, several months ago, to be explicit, for a Congressional Subcommittee examining various phases of US Foreign trade policy.

The title of the first of the four studies, 'Role of Foreign Trade in the US Economy' is virtually self-explanatory. The study points out that the families of at least 4.5 million Americans gain their livelihood from foreign trade in production or services for export markets, handling of imported goods, and initial processing of imported materials.

Export, of course, serve a rather obvious function from a business viewpoint; they mean additional sales, jobs and earnings. But for the economy as a whole, the study notes, an even more significant role of export perhaps is to help pay for imports, foreign investment, and assistance to other countries. Thus, exports become an efficient means of obtaining goods not otherwise available in the United States, or

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials:

Tender No. CON/COS/27[P & M] 205[B for supply of 2 Nos. Bore Hole and deep well pumps centrifugal (volute) Type—Bore hole dia. 8", output 10,000 G.P.H. at 150 ft. head from all causes, complete with Diesel Engine and Accessories. Tenders will be opened at 12 noon on 22-1-58. Offers subject to Import Licence being granted or recommended will not be considered.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S.E.Rly., Garden Reach, Calcutta-23 by local firms.

Tender forms should accompany the receipt for earnest money of Rs 360/- from the Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs 1000/- with the undermentioned are exempted.

S100 CONTROLLER OF STORES

producible domestically only at higher cost in terms of human capital and natural resources.

In this light, imports are at least as important as exports to economic progress. For they are essential in many cases to keep factory wheels turning, and they add to the efficiency of the economy and the variety of goods available to American consumers.

The growth of US markets abroad and US demand for foreign goods are described in the second study, 'Recent Developments in US Foreign Trade'. This report notes that US trade with other countries has expanded substantially in the last few years, following the brief letdown after the Korean War.

US Commercial—that is, non-military exports—came to \$17,300

million in 1956 or 41 per cent above the 1953 total. US imports came to \$12,600 million in 1956, or 16 per cent above the 1953 total. And while prices rose during the period, the trade gains were nearly as great in volume as in dollar value.

The expansion of US imports, the report points out, stemmed principally from a 15 per cent rise in purchases of foreign raw materials for industrial use. In addition, there was a steep rise of 60 per cent in imports of finished manufactures, with automobiles and producer equipment leading the gains in this category.

The third study, 'Role of the United States Tariff and the Effects of Changes in Duty Rates,' notes that the average US rate on dutiable imports now amounts to 12 per cent as against more than 50 per cent before the US trade agreements programme was launched in 1934. It notes, too, that about nine-tenth of dutiable goods now enter the United States at lower duties as a

result of trade agreement concessions.

The study concludes, therefore, that reciprocal tariff reductions in the United States and abroad have contributed markedly to the international marketing of goods. And this contribution has been enhanced, it observes, by the creation in 1947 of the General Agreement on Tariffs and Trade (GATT) which put reciprocal tariff cutting on a multilateral basis.

The fourth and final study, 'International Comparisons of Tariff Levels, Their Nature and Significance,' discusses the difficulties of comparing tariff levels of various countries, although such comparisons are frequently injected into debates on trade policies in the United States and elsewhere. The study points out, for instance, that because of varying economic conditions and production and sales situations, even an identical rate of duty on an identical commodity may have a very different significance in different countries.

EFFICIENT INSULATION

part of the pattern
of India's
industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in insulation, we shall be glad to serve you.

Britain

Reporting the worldwide activities of the Crompton Parkinson group of electrical-engineering companies at the 44th annual general meeting just held in London, the chairman, Mr Albert Parkinson, said that in India the picture remained one of intense activity.

He added that the economic advisability of India relying, to the greatest extent possible, on home-produced manufactures is facing their factory 'with a challenge which it is doing its utmost to meet, in the interests of that country.'

'The purchase of a site near Bombay has now been completed', Mr Parkinson said, 'and building work has commenced on a new works which will greatly improve the capacity of the Indian manufacturing company'.

Mr Parkinson also disclosed that during the year Crompton Parkinson had become interested, with

other leading British companies, in a consortium which has as its purpose the supply of a complete motor-tyre factory to the USSR which would be the largest of its kind in Europe. He explained that a contract had already been signed, and senior executives of the company had visited Moscow for discussions.

In the field of atomic power, Crompton Parkinson has joined, as a founder-member, the Atomic Power Construction Co. Ltd. which now has available all the technical, productive, and financial resources necessary to enable it to take a leading part both in the expansion of the United Kingdom atomic-power programme and in the export of nuclear-power equipment.

MUSICAL PRODUCTS

Expansion of its activities in India is also reported by Electric and Musical Industries (EMI) Ltd. —a group better known under its trade mark of 'His Master's Voice'.

In the annual report of the chairman, Mr J. F. Lockwood, presented at the general meeting in London, it is stated that in India total sales for the year ended June 30th moved slightly upwards, with increases in all three of the main products made in the group's Indian factory, where 1,700 workpeople are employed. Improved sales are achieved in gramophone records, radio sets, and radiograms. The sales of professional recording equipment and tapes, mainly to All India Radio and other Government departments, also rose during the year.

EMI interests cover most European countries as well as the Commonwealth and extend to the United States and South America, and concern a variety of recording and electronic equipment, radio and television and household appliances.

The group has now entered the field of photographic printing, and has obtained the marketing and manufacturing rights in the East-

ern Hemisphere for the Logetronic system. This method greatly increases the value of aerial survey pictures and X-Ray negatives. Cinema films can be balanced quickly and easily for exposure variations, and even amateur snapshots will yield the best possible results without skilled or individual handling.

British makers of rails, sleepers, and fishplates are to supply Indian Railways with equipment worth £2,250,000 during 1958. It will consist of 30,000 tons of rails, 15,000 tons of steel sleepers, and 1,000 tons of fishplates.

*

DEFLATION THROUGH EXHORTATION?

(Continued from page 1188)

rather than accentuate it. Since retailers were under obligation to sell the goods at the prices fixed by manufacturers they were prevented from taking advantage of inflated demand and of temporary shortages in supplies by raising their prices above the figures stipulated by their suppliers. The manufacturers themselves were reluctant to change too frequently the prices thus fixed. Any change in the prices was a major operation and it was worth while for producers to cover out of profits some increase in their costs rather than resort to price increases too soon after the previous increases.

After a turn in the trend of retail prices, re-sale price maintenance will become an obstacle to the desired downward adjustment. Precisely because manufacturers want to avoid too frequent changes they will maintain their prices at the higher level until the decline in the costs has become relatively substantial and until they have become reasonably certain that the trend will not be reversed. Should there be a downward trend of prices the Government is bound to be pressed to act on its own exhortation by removing this obstacle to prompt price reductions.

The main obstacle to price reductions is however, the feeling that the consumer is both able and willing to pay the higher prices. In order to be effective the exhortations should be addressed therefore to the ultimate buyer without whose cooperation the campaign cannot possibly be successful. The root of the trouble is that the lower income groups having more money than they ever had before are inclined to indulge in indiscriminate spending. Unless and until they can be persuaded to resist price increases by refusing to buy the goods whose prices are raised, it will be very difficult to induce manufacturers to cut their prices in spite of the decline in the cost of raw materials. They will continue to prefer to use the amounts saved on raw materials for conceding further wage demands. The ultimate remedy lies in the hands of the consumers.

**OBEROI HOTELS
INDIA & PAKISTAN**

I AM afraid that the customary valediction for the year that is on its way out has to be in somewhat sombre terms. Looking back, we see both in the international and the domestic scene developments that have tried sorely our instinct of self preservation, and the prospect for the coming year does not appear to be too easy. Though the quick succession of the marvels of science has somewhat taken the edge off wonder at fresh laurels won for it, the Soviet launching of earth satellites during this year has taken the breath of the whole world. It is a sad commentary of the prevailing mood of mankind that this significant advance in man's mastery over nature should have been greeted with misgiving and suspicion by large sections of the world's population. Though the point of no return in nuclear stalemate has been reached long ago, these new developments have stirred anew cold war animosities and suspicions. As recently as Mr Bevan's spectacular volte face, the theory of the great deterrent based mainly on the superiority of the western powers supposedly had over Russia in the matter of technology was tacitly assumed. Now that this assumption has been somewhat humilatingly shown to be unfounded, the need for basing the prospects of world peace on the more secure foundations of diplomacy and negotiated agreements has once again been demonstrated. But the depressing fact—demonstrated as recently as last week—is that the West is only tardily and reluctantly willing to base its policies on these foundations. The final communique of the Nato conference at Paris last week has no doubt expressed itself in favour of pursuing negotiations with Russia, but the emphasis is still on military answers to Soviet challenge. This is evidenced by the decision—not unanimous—to make arrangements for bases in the Nato territory for the intermediate range ballistic missiles and to pool atomic weapons. The discouraging aspect of this kind of reluctant readiness to negotiate is that the West has once again failed to snatch the diplomatic initiative which the Soviet Union has never lost since the day it seized it when it achieved atomic equality. By a curious irony, during the period in which the West has steadily been losing its technological superiority over the Soviet Union, it has also

Clive Street Gossip

It must have been
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

steadily allowed the diplomatic initiative to slip into the hands of the Soviet Union. Thus, Mr Khrushchev is able simultaneously to boast of Russia's possession of intercontinental ballistic missiles (while the West is still talking only of intermediate range weapons of this sort) and to make the most spectacular and seemingly reasonable overtures of peace. In his most recent seven-point programme for world peace, he is able to list a number of things that the majority of the peoples of the world consider as not only desirable but inescapable. These are: firstly, the stopping of the manufacture of Atomic and Hydrogen weapons by the three powers that now know how to do it; secondly, agreement not to station atomic and hydrogen weapons on the territory of East and West Germany, thirdly, the acceptance of the proposal for the creation of an area of disengagement; fourthly, an agreement to reduce the number of military personnel; fifthly, the conclusion of a non-aggression pact between the Nato and Warsaw treaty powers; sixthly, an agreement to work out a modus vivendi in the Middle East; seventhly, the end of war propaganda.

*

It is quite conceivable that Mr Khrushchev is quite sincere in his protestations of a desire for peace, many in the West may not wholly unreasonably have their doubts on the point. In their view, Mr Khrushchev is making these proposals precisely because he knows that they will not be acceptable to the West without detailed qualification. This may be so, but what kind of diplomacy is it which allows itself to be so easily outmanoeuvred? It may be that there are a thousand catches in the proposal and a million snares in the attitude. But diplomacy consists in evading the catches and avoiding the snares and yet getting the desired object beyond it. As it is, the attitude of the West resembles that of the Anglo-Saxon of the old chestnut, who walks into a curio shop determined not to be outwitted by the native and returns uncheated, but empty-handed.

*

The moral, of course, has been frequently drawn: and it is one that was relevant even in the days of supposed technological and

military superiority. And at a time when no one pretends to believe in this myth, it is even more so. To say this is not to be guilty of any cold feet or desperation about the present technological situation, (indeed, I consider some of the manifestations of despondency over Soviet success in Sputnik launching and the failure of the American Rocket experiment as somewhat grotesque; in some respects, it is even more grotesque than the earlier assumption of permanent superiority.) The moral is: The stalemate in nuclear power makes any attempt at a final decisive and catastrophic encounter between the two colossal quite unthinkable since it would mean simply the annihilation of the whole world. The tacit acceptance of this somewhat provisional limit to our folly gives us two alternatives to regulate our mutual suspicion and hatred in less self annihilating ways. One way to do this would be the traditional way of settling our quarrels by conventional "minor" wars of the sort that were waged till the dropping of the atomic bomb. The objections to this method (which has found many advocates, especially in the US) are many. In the first instance, the "minor war" of the proportion of the Second World War or even the Korean or Indo-Chinese wars can be contemplated with equanimity only by people who do not visualise the destruction of life and property involved in them and the near bankruptcy of the nations embroiled in them. (One of the horrid by-products of the climate of an atomic age has been the coolness with which the misery of catastrophic proportions generated by a nuclear war is viewed. The corrosion of compassion involved in this is heart-rending.) Secondly, it is foolish to pretend that conventional wars will be fought with other than atomic weapons. Nato forces, and presumably the Warsaw forces, are now provided with tactical weapons with atomic war heads. And now, ballistic missiles are already part of the conventional armoury. Thirdly, it is far from certain that atom and hydrogen bombs themselves will not be used in a "local war", the recent revelation that American planes were circling the British Isles carrying hydrogen bombs during normal patrol duties coming as a rude shock to many.

Dassanagar, Howrah.

The most disturbing thing is that the responsibility for taking the fatal decision is as yet unlocalised, though vague assurances of prior consultations and so forth are given from time to time. But Mr Dulles is reported to have said in a speech in Chicago that the use of the deterrent may sometimes have to be resorted to even in cases of "anticipated aggression" and the decision may have to be taken by the Commander on the field. You need have no greater instance of the reduction to absurdity of the theory and profession of deterrent consultation. There is no assurance whatever that, in the highly wrought atmosphere of alarms and excursions in an internationally inflammable situation, the wrong decision may not be taken by nothing more than an oversight. When that happens, nothing that we can do later can undo the damage done.

*

There is one other fatal objection to the argument of a preparedness for small wars within the protective framework of nuclear deterrent. The cost of maintaining a deterrent of sufficient terror and simultaneously providing yourself with the conventional armaments, radar equipment for detection of enemy attacks, and making civil defence arrangements would be quite unaffordable for most countries. Already, the defence requirements of the UK are putting a severe strain on its resources, and this is true of most other countries including the Soviet Union. Therefore, there is no sense in accepting a situation in which even with a deterrent you have to be prepared for a minor war.

*

The only other alternative is diplomacy. It seems but common sense that the only way to extract the fullest value out of the nuclear stalemate is to make use of it to obtain agreement on those questions on which there is deep division between the two camps. While no one is wanting the West to be outmanoeuvred by the Soviet Union, it is equally plain that the present drift toward an endless race in armament manufacture is the last word in helplessness. There are many aspects of the Russian offer that are worth looking at. Take, for instance, the question of creating

an area of disengagement, which has roused much interest even outside communist circles. Mr Hugh Gaitskell, leader of the British Labour Party, wants the idea examined. And Mr Kennan, one of the most acute students of current affairs and a former US ambassador to Moscow, has commended the idea in his Reith lectures over the BBC, London. Mr Kennan gives the grim warning that the "decision to rearm Germany will make any Russian withdrawal from Germany and Central Europe unthinkable for once and for all for reasons of

sheer military prudence, regardless of what the major powers might be prepared to do." The Nato decision to provide for an arsenal of a variety of weapons for the members is therefore a step in the wrong direction. But something may come out of this expressed willingness to promote, "preferably within the framework of the UN", any negotiation with the USSR likely to lead to the implementation of the proposals made at the London disarmament conference and the willingness to examine other proposals in this regard from whatever

source they may come and, lastly from the willingness to seek at Foreign Ministers' level to resume contact with the Soviet Union (should they turn down the earlier suggestion). But the present position is, on the whole, not of a sort that will make us hope that the New Year will bring the much needed reduction in international tension.

There is one suggestion I should like to make to the West which may, apart from all else, have the effect of electrifying the world. Why should not the West agree

to the Russian suggestion of abolishing nuclear tests from the first of January next? I know Mr Nehru's request in this regard has been politely turned down by Mr Eisenhower. The reason given by the American President does not appear to be wholly sound. He said that the willingness to give up the right to test atomic weapons can only be part of the larger settlement over the inspection, manufacture and stock-piling of such weapons. Here, it would appear that the President is not taking into account the law of diminishing returns from the purely military point of view that is in operation in the matter of production of such weapons. The stoppage of tests would not upset the present balance of power which, in any case, is such as not to allow the West to be caught napping. On the other hand, a proposal to consider the abolition of these tests would have an immense psychological value on the whole world. For, these tests have come to have a sinister import of their own, apart from their ultimate usefulness in perfecting a weapon of ultimate destruction. Their biological consequences have evoked widespread concern among the peoples of the world. The President need not even agree to suspend the tests. Even a decision to consider the Soviet suggestion for negotiation over suspension of the tests would be a gesture of immense value at this juncture. It would be a New Year gift to humanity well worth making and may conceivably be the beginning of an era of negotiation for peace.

Having got attached, as it were, to the Commonwealth Parliamentary delegation first visiting Texmaco and then the Statistical Institute, I had a very good opportunity of hearing the opinions of a cross-section of the leading political personalities of the Commonwealth countries including Ghana, Nigeria, British Guinea, the UK and Canada. I found the Africans as a rule more interested than the rest in the social and cultural aspects of India, our customs, manners, education and refugee re-settlement, and they expressed themselves almost without exception in excellent English. What struck me even more was that these men, aside from Mr Hayford of Ghana, were all of them remarkably young and had all the time their alert wits about them. With such political leaders, one felt, the young African countries have a very good future before them. At Texmaco, again, I saw youth in leadership with the bold and dashing Mr K. K. Birla at the top of the great enterprise. With perfect self-assurance, he explained the details of the works and its expansion programme for the enlightenment of all. Texmaco's future, the conviction came to one, could not be in better hands. At the Statistical Institute, where the party was met at lunch by

Gateway Gossip

Killick's Centenary

THE exotic origin of industrial entrepreneurship in India was more or less a historical accident, being one of the inevitabilities of foreign domination of the country. But that some of these concerns started at the beginning of the latter half of the last century should have survived and exist today with added strength owes much to the minds that conceived of such projects and the hands that shaped and guided them through the many uncertainties that beset the path of an undertaking at every stage of its growth.

Killick Industries is one of those few which have a century-old tradition of having been associated with the industrial development of the country. Its present Chairman, Mr E. D. Sheppard, while addressing the 10th ordinary General Meeting of the company, proudly recalled the year

1957 when Messrs. Killick and Nixon arrived in the Gateway city and started the business which is being continued under the former's name even now. The current year is important to Killick Industries for another reason; for, it witnessed the union to the parent body of the Killick Nixon and Co. Private Ltd., which had been following an independent path since 1947.

Naturally the centenary celebration also provided an occasion for a probe into the future of the company and the Chairman's speech, which was devoted to an analysis of the economic policies of the Government which largely determine the scope for private enterprise in the country, reflected concern at the increasing encroachment of the Government into the field of the private sector. The growing deterioration of business

confidence, Mr Sheppard attributed to the attempt of the Government to spread their control to all forms of economic activity without consideration for their capacity to kill incentives in the course.

The wealth tax was the special object of his attack and, in this connection, he points out that what has been given to the managerial talent of the country by means of reduction of Income-tax and Super tax at the highest salary level has been taken away by means of the Wealth and Expenditure taxes. Though he is not wanting in appreciation for the Finance Minister's genius in having welded the multifarious taxes into one unified whole, he is still unreconciled to the necessity for the spate of new tax measures such as special taxes on company dividends, on the issue of bonus shares, on the non-distribution of profits, on capital gains, on their net assets, etc. His chief objection to these taxes is that they have undermined the capacity of industrial concerns, especially new ones, to raise equity capital in the investment market. Such criticism runs in the true tradition of the spokesmen of the private sector. But it should be borne in mind that most of these are in the nature of emergency measures calculated to fetch the Government the necessary funds for the prosecution of the many major schemes of the Second Plan, which are conceived to strengthen the industrial basis of the country and, as pointed out by another stalwart of the private sector in the country, Mr G. D. Birla, they would quite likely be dropped when the country would have reached a stage in its industrial growth to warrant their ultimate abolition. The only one charge that could reasonably be made against them is that they scare away the much needed foreign capital from the country on which depends the emergence of what is known as the hard core of the industrial structure in the country, which is at present practically underdeveloped.

Mr Sheppard has further drawn attention to the phenomenon presently witnessed in England where, according to him, young men in universities seem to have been forced to make a decision in favour of emigration to evade the crushing taxation that the intelligentsia has to bear. The example is a little far fetched and it is still doubtful whether the reasons that have prompted them to take such a step should bear the impact of governmental decisions on economic policy. Apart from that, such an attitude need not necessarily follow in conditions that are entirely different as in India. A

Bombay Review

developing economy provides much better opportunities and holds out much greater scope for the fruitful occupation and employments of its youth.

Mr Sheppard is also greatly perturbed at the deterioration of discipline among industrial workers in the country. He is opposed to settling disputes between employers and employees by means of adjudication and wants the Government to "incur the odium of telling labour that it has gone too far and must withdraw." How far this would work to the satisfaction of all concerned is disputable in view of the peculiar structure of trade unions in the country which are polarised on ideological and

Technical Education

Addressing the 36th annual session of the Institute of Engineers (India), Bombay Centre, Mr Maganbhai Desai Vice-Chancellor of Gujarat University observed that the Indian Universities would sooner or later have to consider imparting technical education in regional languages and the sooner this was done the better. It is his view that such a change is warranted for the reason that it would facilitate original contribution to the development of technology in India. He expressed in categorical terms that unless the technological faculty also fell in step with the humanities and gradually switched over the regional languages medium of instruction it could not be either effective or progressive.

He also made a plea for developing a branch of engineering having a rural bias, and recalled the recommendation of the Radhakrishnan Commission on University Education which in its report had emphasised the need for a technology suited to India's rural economy. He also commended the system of training young men for vocations like engineering, technology and medicine which obtained in UK. In those countries such training was undertaken by institutions of engineers, doctors etc., with the universities having little to do in this. He pointed out that the Institute of Engineers also could greatly add to its prestige by becoming a faculty which trained engineers.

Mr G. R. Vartak the newly elected Chairman in his address outlined the measures whereby technical education could be made more effective and practical. It was pointed out that by suitable adaptations in teaching courses the requirements of industry and the practical professions could be met if cooperation was forthcoming from technical institutions on the one hand and industry and professional engineers on the other. He also deplored the lack of interest of the industrialists in the country in the matter of engineering instruction. He also urged the need for the Institute to set up small committees in colleges and polytechnics to see if syllabi would improve the quality and output of these bodies.

Mr Vartak also suggested a five-point scheme for solving the problem of urban housing. The scheme requires the following five conditions for its success: the Government should help by offering cheap land; they should corporate engineers in the vicinity to suggest practical structures keeping in view sanitary, climatic and monetary considerations; as far as practicable cheaper materials should be utilised; the Government and local authorities

should make housing more economic for the people by reducing or revoking octroi and sales tax on housing materials and finally modular construction and standardisation of materials should be attempted.

★

Role of Women in Indian Society

The political backwardness of India has been a product of mass illiteracy of the peasants who forms larger slice of the population and the rather unimportant role played by Indian Women in the public life of the country. The many social inhibitions that operated in the past against their participation in the public life have become worthless anachronism and the constitution in the true democratic spirit which runs through every aspect of it has given women of the country also their rightful place in the public life of the country and in the conduct of the many services and functions connected with the administration of the country.

It is in this spirit of equality of sexes that many women of distinction and repute have been appointed to positions of responsibility. But this would not be correct index of the role that the women of the country are playing in the affairs of the country and even now only a few have taken advantage of the

constitutional opportunities that have been thrown open to them. This inconspicuous role played by women in the country was underlined by Mrs Sarladevi Sarabhai in the course of her presidential address to the thirteenth biennial conference of the National Council of Women in India which was inaugurated in Poona by Dr. R. P. Paranjpye the Vice-Chancellor of Poona University.

Explaining the role of the National Council for Women Mrs Sarabhai said that the Council was the culmination of the successful efforts of some leading women to organise themselves on an all-India basis. The Council is affiliated to the International Council for Women and enjoys consultative status with the United Nations Organisation. Mrs Sarabhai also stressed the non-political and non-sectarian outlook of the Council and said that its object was humanitarian work such as freeing women and children from all kinds of disabilities. She exhorted the women to take up the challenge of national reconstruction and pay more attention to the problems of women and children in the rural areas than they did at present.

Dr Paranjpye in the course of his address paid tributes to the work of Mahatma D. K. Karve in awakening social consciousness in the country about the miserable conditions of women but reminded the women that the efforts begun by such social reformers have to be continued by them.

to Rs 159.75. Ready Bold was quoted at Rs 32.00 and Groundnut Oil at Rs 18.12.

In line with the easy tendency in castorseed and groundnut, the Linseed section ruled quiet. May delivery moved narrowly between Rs 31.56 and Rs 31.62. Ready rate was quoted at Rs 30.75 and Linseed Oil at Rs 16.87.

In the Cottonseed section, May delivery changed hands at Rs 94.00 to Rs 95.50.

★

Gold & Silver

A sharp spurt in Silver was the main feature of trading on the Bombay Bullion Exchange. This was largely attributed to the sustained bull support and bearing covering as a result of complete stoppage of arrivals of Tibetan silver coins due to the winter. Moreover, with the marriage season ahead, shrewd operators were reported to be gathering speculative contracts at lower levels. Arrivals and offtake were estimated at 26 and 10 bars respectively. Unrefined metal receipts totalled 4 bars. Posh delivery moved between Rs 185.44 and Rs 186.50 and Maha delivery between Rs 185.94 and Rs 187.00. Spot changed hands at Rs 185.12 to Rs 186.12.

Gold also registered a small but notable improvement on persistent short-covering, stimulated by the seizure of a huge contraband supply. Arrivals amounted to 2,000 tolas as against an offtake of 3,000 tolas. Unrefined metal receipts totalled 2,500 tolas. Posh delivery changed hands at Rs 108.06 to Rs 108.19 and Maha delivery at Rs 108.03 to Rs 108.19. Sovereign was quoted at Rs 70.25.

★

Non-Ferrous Metals

Quietly steady conditions prevailed in the Bombay Non-Ferrous Metal market. Copper was quoted very steady at Rs 163 per cwt, thanks to the reports of shortage of ready stock in the local market. Zinc hovered idly around Rs 54 per cwt in the absence of any fresh influence. The Lead market was devoid of any activity, the rate being quoted at Rs 65 per cwt. With no new developments either in London or Singapore, Tin was static at Rs 129 per quarter.

On the London Metal Exchange, Copper was quoted at £178½ per ton against £180½ in the previous week; Zinc at £62½ against £63½; Lead at £73½ against £74 and Tin at £730 against £730.

In the case of copper, news has been received that Konnect is contemplating a 12 per cent cut in production in some of their mines.

World of Cotton

Increased Selling in Futures: Spot Quiet But Steady

THE partial recovery, that was noticed in the Bombay Cotton futures market immediately after the announcement of the reduction in excise duty on medium cloth, proved short-lived; and prices have sagged under increased selling pressure with the majority of buyers sidelined. The increasing tempo of arrivals and the weaker upcountry advices have continued to demoralise sentiment. With funds locked up in huge stocks of cloth, mills are also reluctant to increase their stocks of raw material, while many of them have been adopting a hand-to-mouth policy, pending a clearer picture of conditions in the cloth market.

A section of the trade believes that the basic outlook for cotton has not changed. Although heavy arrivals in the Punjab, Vidarbha and Khandesh areas, during the past few days, have made some mills to believe that the total crop will be in the neighbourhood of 52 lakh bales, the industry's requirements of raw material also tend to move up. The output of cloth has been increasing every month and the present slow conditions in the cloth market are considered to be of a temporary nature. Meanwhile, ICC Jharilla March delivery, after touching a fresh lower level of Rs 658.75, finished the week better at Rs 659.75.

In sympathy, the Spot section ruled quiet although demand continued for new crop Khandesh, Berar and Punjab varieties. Ahmedabad mills are reported to have purchased moderate quantities of Kalyan and Vijay cottons.

On the export front, some business was reported done in superfine Bengal and Yellow pickings.

In the foreign section, spot lots of Americans and Africans changed hands. There was a fair demand for the Sudanese cotton for shipment in December. The Government announcement of an import quota of 30,000 bales of stapling 1-3/16" from sterling area countries has been welcomed by the trade. It is pointed out that higher-staple cotton from Sudan, Egypt, Peru and East Africa can be imported; but mills are inclined to buy a large quantity of Sudanese cotton.

★

COTTON CONSUMPTION

According to the latest available figures, consumption of Indian cotton during October—the second month of the current season—at 372,781 bales shows a moderate

decline of about 26,000 bales over the previous month's figure of 399,125 bales. Total consumption of Indian cotton consumed, during the first two months of the current season, amounts to 771,906 bales, showing an increase of nearly 24,000 bales over the figure for the same period last year.

★

NEW YORK COTTON MARKET

In the New York cotton futures market, demand for current crop months was mostly inspired by return of unfavourable weather over the cotton belt with considerable rain reported in the eastern and central belts and sharply lower temperatures in the north-west portions. Forward deliveries were influenced by the reports that there would be no major changes in farm legislation next year. Middling Spot was quoted at 36.65 cents per pound.

LIVERPOOL COTTON MARKET

Prices on the Liverpool cotton futures market improved in quiet trading due to local and trade support, being encouraged by the announcement of lower United States ginnings. Offerings were confined to scattered hedging. Sudan futures were inactive.

★

KARACHI COTTON MARKET

The Karachi cotton market ruled easy. The absence of demand from Japan and China, the pressure of new crop arrivals and the slackness of domestic spinner demand—all these factors contributed to the easiness in prices. Sind Deshi was quoted at Rs 72; Punjab Deshi at

(Continued on page 1201)

It's 1,000 miles across the room...

RATTLE, clatter, thump goes the toy engine at the little boy's heels... rattle, clatter, thump across the room. And, to him, it's a thousand-mile trip! So what's vital to him is movement and speed.

To us, at Hindustan Lever, speed and distance are no less important. For you, we cover thousands of miles every day — every inch of India's 35,000 miles of railroad, for instance.

But before our products are despatched, we must consider how they will travel. Plane or train? Road or waterway? Handcart, head-load or mule-train? The answer depends on a great many factors — for instance, on the kind of territory those goods must cross and how soon they must arrive.

But arrive they must — and arrive in the best condition. For people have come to trust the goods we make — things like Sunlight Soap and Vim, Rexona and Dalta Vanaspati. The need for these products is growing — everywhere, all the year round.

We take trouble to satisfy this need — and so add another service to the service that the goods themselves perform. We add the service of regular supply.

**Hindustan Lever

Amendments to Companies Act

LAST week was placed in Parliament the Report of the Committee appointed by the Government of India to review the working of the new Companies Act and recommend amendments to it. As will be recalled, this committee was appointed in May last under the chairmanship of Mr A. V. Viswanatha Sastri and it has been touring the country during the last few months, eliciting public opinion on the subject. The Committee has now completed its labours and, in its Report, has recommended substantial changes in about twenty sections and a host of minor changes in about 180 sections.

From the beginning, the Committee's usefulness was recognised to be of somewhat limited character. For one thing, as the Committee rightly points out, reappraisal of the economic and social assumptions behind the original act was beyond the scope of its terms of reference. In any case, it would have been too early to go into that matter. Indeed, even in the limited task of examining the structure of the act and of making suggestions for its simplification, the Committee was inhibited by the fact that the act has been passed only about a year and half ago, after detailed study of the entire subject. In the Committee's view, though it would have been possible to arrange the act in a different way, the balance of advantage lay in the present scheme and arrangement. One of the most important considerations that weighed with Committee in this regard was the practical

inconvenience that would be caused by too detailed an amendment at this juncture. The act is one of the most complicated pieces of legislation on the statute book. The obligations and duties cast by the act on shareholders, directors, auditors and other officers of the company are onerous and complex. The task of familiarising oneself with them itself must have taken quite a considerable time, and involved the services of a variety of experts. The forms, statements, and endless accounting procedures provided by the act form a labyrinth and it is only after months of study that those concerned with company management have succeeded in finding their way about it. Suggesting any serious structural changes in the provisions of the act at this stage was, therefore, quite definitely out of the question.

All the same, there was need for the appointment of this Committee because, despite the detailed discussions that preceded its enactment, the Companies Act revealed in its short period of operation serious lacunae and procedural difficulties in actual practice. There were a number of provisions which were rather vaguely and ambiguously worded, and these needed clarification. The majority of changes suggested by the Viswanatha Sastri Committee are of this clarificatory nature. Though as many as 200 sections have been recommended to be modified, substantial amendment has been suggested only in respect of twenty. And, even of the remaining 180 sections, the

majority of changes are designed to remove obscurities and clarify the intentions of the legislature. A few others are directed toward removing practical difficulties complained of by managements: some of these were the result of somewhat trivially technical requirements, which we could do well without. Another category of recommendations suggests exemption from the rigour of the law of certain classes of institutions, nominally companies, but in actual practice not likely to need the kind of surveillance the act takes powers for. The suggestion in this regard is the vesting in the Government of power to grant exemption in deserving cases, such as Chambers of Commerce, Clubs and other non-profit making associations from the rigid requirements of the law in regard to the holding of annual general meetings and election of directors, the age of directors, holding of board meetings, etc. This is sure to cut down quantities of paper work both for the companies concerned and the Company Law Administration. Similarly, many provisions that seek to hold the directors strictly answerable by time limits within which sanctions are to be obtained, etc., (e.g., Section 249: time limit for obtaining sanction of general meeting for the appointment of sole selling agents, and Section 301: for recording of particulars of contracts in which directors are interested) are recommended to be relaxed.

Difficulties of banking companies in carrying out the requirements of some of the provisions of the act (Section 292 and 293, for example) are recognised and relaxations recommended. It has been suggested that the provisions of these sections should be amplified by explanations to facilitate delegation of lending and borrowing powers to certain officers of the company.

In regard to accounts of companies, a number of amendments have been proposed in order to remove difficulties in interpretation of some of the terms used in the form of the balance sheet prescribed under the Act. Fuller disclosures in the account of certain matters, such as remuneration to managerial personnel and contributions including contributions to political funds, made for purposes not directly relating to the business of the company (of which more anon) are also recommended. The Committee has given a revised model of balance sheet for companies incorporating these suggestions.

Other suggestions are designed to make the Company Law Administration smoother and more

expedient. For instance, it has been suggested that Central Government should acquire power to appoint their own company law prosecutors for conducting prosecutions arising under this Act. They should also acquire power to direct or authorise any person to prefer an appeal from an order of acquittal passed by any court in a company case. These are sure to make prosecutions more expeditious and effective, since an expert body thoroughly familiar with the companies Act will be in charge of it.

Two important changes suggested by the Committee must now be mentioned. The first relates to

Working of Railways

Inaugurating the seventh meeting of the National Railway Users' Consultative Council in New Delhi, Mr Jagjiwan Ram, Union Minister for Railway, recounted the many features that characterised the working of the railways in the current year and said that the most outstanding feature was the increased rate of loading that was possible this year. The increase was as much as 6 per cent on broad gauge and 9.6 per cent on metre gauge. The increased rate of loading had enabled the railways to meet the demand for transport in a much larger measure. The loading especially in the Bengal and Bihar coalfields reached a figure of 3984 wagons a day which represents a record never before reached by the railways. This augurs well for the successful implementation of the many projects under the Second Plan. As a result of the increased activity of the railways in carrying more loads the outstanding registrations awaiting clearance had been reduced. In terms of wagon loads such outstanding registrations stood at 65334 on broad gauge and 26814 on metre gauge on November 30th of this year. The corresponding figures for January 31st, 1957 were 70381 and 109545 respectively.

In regard to passenger traffic, Mr Jagjiwan Ram was less confident and held out no hopes about the Ministry being able to reduce the prevailing overcrowding to any appreciable extent. All the same he claimed that within the available resources it had been possible to provide some extra passenger transport capacity. The actual passenger transport capacity during the year reached a figure of 192263 on the broad gauge and 117951 on the metre gauge. The corresponding figures for the previous period were 189800 and 117100. Though the increase has not been pronounced Mr Jagjiwan Ram explained that the aim of the Government was to ensure that the resources which are and which will become available as so used that such overcrowding as is inescapable is fairly evenly distributed instead of being particularly heavy in certain areas and on certain trains.

The drive to avoid wastage of food stuffs in this hour of national food shortage, has been extended to the catering in the trains also and in this connection Mr Jagjiwan Ram pointed out that a reduction in the quantities of cooked rice and chapatties in the standard meal from the present level of 20 ozs to 16 ozs in respect of the former and from 10 ozs to 8 ozs in respect of the latter has been ordered. He also explained that the price of the standard meal could

not be changed in view of the general background of the prices of commodities in the country.

Referring to the increased facilities sought to be given to the travelling public the Railway Minister pointed out that six new types of sleeper-cum-sitting coaches having a two tier arrangement have been introduced both on the metre and broad gauge on certain selected trains on various railways. He also invited the views of the Council in regard to the merits of the new types of coaches that have been introduced.

Removing Port Congestion

In his report on the inquiry into the demands of the port and dock workers which was submitted to the Union Government, Mr P. C. Chaudhury has recommended a number of measures to avoid congestion in ports, of a type that prevailed in all the major ports of the country some months back. The short-term measures that have been suggested are increase of overside discharge by more lighters, procurement of additional mechanical appliances, reduction of free days allowed to importers for clearance of cargoes, higher demurrage charges for unloading cargo, greater utilisation of minor ports, staggering of Government imports and gearing up of administrative and technical set-up.

Revision of the basic minimum scale of pay of class IV employees

NORTH INDIAN MARKETS

Sugar Exports

RECENT reports, that a quota of 2 lakh tons of sugar has been allowed for export during this year by the Government of India through the Indian Sugar Mills Association, are described in official circles as incorrect. It is understood that the Government have not fixed any particular target for the export of sugar from production during the crop year 1957-58.

As was made clear recently in an answer to a question in the Lok Sabha, Government's policy is to permit export of as much surplus sugar as is possible, taking into account the production during the year and the demand for domestic consumption. The Indian Sugar Mills Association, which acts as the sole exporting agency for the crop year 1956-57, is able to sell about 1.53 lakh tons, out of which about 1.46 lakh tons have already been shipped.

in all ports to Rs 30-35 is one of the important recommendations, the ostensible purpose behind this being to enlist the co-operation of the port labour. The additional cost that this would involve, it is pointed out, could be offset by effecting economies and carrying out administrative reorganisation. A system of payment by result is considered desirable in respect of certain classes of employees. The general impression that the port congestion, that occasionally occurs, is solely due to low labour output is also denied though the leeway that has to be made up in improving output is admitted to be considerable.

The report also refers to circumstances when congestion in ports becomes inevitable as for instance in the period immediately following strikes or go-slow tactics and when foreign shippers rush their consignments in anticipation of import restrictions. Regulation of the flow of cargo in and out of docks is considered all-important and this it is pointed out, would call for the co-operation of all the interests concerned.

Among the other things considered necessary to guard against port congestion the provision of a sufficient number of lighters by port administrations is greatly stressed. Installation of mechanical appliances and equipments of a labour-displacing type is countenanced only to the extent that might be necessary to meet sudden or seasonal increase in traffic without congestion.

up by about 50 nP per bag. The main contributory factor for the hardening tendency in prices is the report that the Deccan mills are not able to give their quotations in the absence of saleable supplies with them. They are stated to be waiting for the balance of the quota, which has been slightly delayed this time. It is expected that the release order will be issued soon.

Gur

In the Hapur market, arrivals of Gur, which had been small at an average of 2,000 maunds per day, have now increased to 5,000 maunds. Demand at higher rates is slack; but, as loading facilities are easy, entire arrivals are readily lifted. With the result, there is no stock of gur. Total arrivals, from the beginning of the season, are estimated at 180,000 maunds, the corresponding figure for last year being 235,000 maunds. Following rates (per maund) are quoted:—Pansera quality Rs 12.25 to Rs 12.87 and Balti Rs 13.50.

In the Muzaffarnagar market, prices have recorded a small decline due to an increase in arrivals. Khurpura is quoted at Rs 13.25 to Rs 13.50 and Pansera at Rs 13.75.

Foodgrains

Mixed conditions have been noticed in the Hapur Foodgrains market. Wheat prices have recorded fractional gains, the average and farm qualities being quoted at Rs 15.75 and Rs 17.25 per maund respectively. The market for Rice, however, rules quiet. Despite good seasonal demand by consumers, Maize and Bajra have eased fractionally due to increased arrivals. Prices of other coarse grains are depressed on lack of demand. The Pulses section has recorded a quiet trend as outside demand for peas and arhar is slack and the condition of the standing crop is reported to be good.

Quietly steady conditions have prevailed in the Delhi grains market. Wheat prices have shown a fall of about 50 nP per maund as buyers are lacking on reports of better crop prospects. Rice prices have been showing a rising tendency as there are only few sellers, while stockists seem to expect a further rise in the rates. Barely is firm as a result of good demand. Maize, Urad and Moong are also in good demand and their rates have risen by 50 nP per maund. Among Pulses, Gram and Urad have eased slightly for want of buyers.

The Government decision to impose restriction on the export of rice from Madhya Pradesh and the Eastern districts of Uttar Pradesh has a favourable effect on the Rice sec-

"English Ever, Hindi Never"

"ENGLISH Ever—Hindi Never" is the slogan invented by Mr P. Kadanda Rao, a veteran and well known public worker and the senior member of the Servants of India Society, for the Convention held at Madras on December 23 to protest against the acceptance of Hindi as the official language of India. This Convention had as its sponsors and participants some of the leading lights in the public life of South India.

Mr Mirza Ismail inaugurated the Convention. Dr Ruthnaswami was the Chairman of the Reception Committee and Dr C. P. Rama-

swami Iyer the President. Members of almost all the political parties took part in the Convention. Among those who sent messages of good will and encouragement were Dr M. R. Jayakar and many others of renown.

The immense crowd which this Convention attracted evidenced the universal interest prevailing in South India on this subject. And in some measure also the extent of feeling aroused by the policy of the Union Government. The main speakers, without exception men of the highest calibre, status and reputation, could, however, deal with the subject in a most dispassionate manner and in a spirit comparable to that of a trained senior scientist tackling a research problem.

There was no effusion of words, no attempt to play to the gallery and none to exploit public sentiment. Even in a perfectly detached and objective manner, the leaders could convey the implications of their attitude to the question of official language, the dangers inherent in the present policy of the India Government and the inescapable need for giving it up.

Dr Ruthnaswami insisted that the question should be discussed to the exclusion of all irrelevant issues and he defined the issue before the Convention as whether or not the use of English as official language facilitated administration or whether substitution of any other Indian language would be more useful than English as an instrument of administration. The Official Language Commission, arguing in favour of Hindi, has pointed out that the country's administration was now being carried on in a language not understood

by 90 per cent of the people. To this Mr Ruthnaswami's reply was that it was not better to have the administration conducted by people, of whom 80 per cent were illiterate. He recalled the use of Latin as the language of official documents in the West for a long time and the wholesome traditions and conventions of administrative work introduced by the use of English in India. Referring to the Madras Government's decision to recognise English and Hindi as the language of administration, he warned against the inordinate delays which would result from translations at every stage and also of the possibility of Hindi driving out English under the operation of something like the Gresham's Law.

Mr Mirza Ismail was more vehement; he did not question the sincerity and excellence of the motives which inspired the proposal for the introduction of Hindi as the official language of the country and he also conceded that there was the desire to foster the consciousness of unity, behind that move. But he could never understand that Hindi would fulfil that purpose; on the contrary, it might have the opposite effect to what was intended. He said that the move, instead of promoting unity was increasing disunity and creating deep antagonisms. In his opinion, Hindi would never become a truly national language in India, as a language was national in its own right, by historical process and natural acceptance. He described the study of Hindi in other areas as laudable but artificial. Apart from the internal disunity another inevitable result of the imposition of Hindi would, in Mr Mirza Ismail's view, be the isolation of India from the commercial, cultural, political and social life of the world. He would like the question of the official language to be left to time, without anyone trying to force a decision.

Dr. C. P. Ramaswami Iyer, in a speech full of humour and sarcasm, sought to point out how the Hindi which was being pushed forward was an infantile language, and in trying to impose that language the Government were actually going against the concerned directive in the Constitution.

He explained: Article 351 of the Constitution made it clear that Hindi was a language "which is not made, but is in the making". It was still growing and was expected to grow and it was not a language which could be said to be a language in the sense that Sanskrit or Latin, Greek, English, French, Persian or Arabic were. Article 351 was a special directive which had no statutory force and

on which one could not go to a court"—This Article runs: It shall be the duty of the Union to promote the spread of the Hindi language, to develop it so that it may serve as a medium of expression for all the elements of the composite culture of India...."

Mr C. Rajagopalachari felt sorry that even obvious things were not seen by men who were apparently moved by passion. He appreciated the need more than anyone else for a single national language, if India had one; but the present situation was different. He said that it was uneconomic, impolitic and foolish to throw away the advantages derived through the use of English for a hundred and fifty years. He wanted South India to put up a united opposition to the move in favour of Hindi. Unless there was unity in this respect, others would not listen. He also pointed out that Madras Ministers were absent in the meeting not because they had no sympathy with its purpose but just because they felt that party discipline disabled them to participate.

As far as the State Governments in the South are concerned, in Madras they have favoured what might be described as the co-existence of Hindi and English. In Kerala, the present Communist Government have not raised any

Promotion of Savings

In the course of a talk with Pressmen Mr N. V. Naidu National Savings Commissioner disclosed that a new scheme i.e. a cumulative time deposit scheme, by which deposits of a minimum of Rs 5 could be a paid a month for a period of five or ten years bearing an interest of three and three-fourths per cent free of income tax would be introduced by the Central Government before the next financial year. This is increasing evidence of the Government's determination to leave nothing unexplored in its attempt to reach the targets that have been fixed for small savings under the Second Plan.

Under the scheme the money could be realised at the end of the stipulated period in a lump sum, while in the event of death the amount deposited till that time

would be paid with an interest. This would require the nomination by the depositor of a candidate to whom the money would go. Legislation to cover such a provision is in view by the Central Government. These deposits would not cover any risk like the life insurance.

With a view to making the national savings certificates more popular it has been decided by the Government that such certificates would be made eligible for being pledged with the cooperative banks. At present such pledging is allowed only with scheduled banks.

In point of actual result this year, the small savings campaign leaves much to be desired. Collections so far have aggregated only Rs 32 crores against a target of Rs 120 crores for the entire country. The collections last year reached a figure of Rs 63 crores. According to Mr Naidu himself the collections at this part of the year were less by about Rs 10 crores compared to last year's figures. Bombay

accounts for the highest collections so far made having reached a figure of Rs 5.5 crores. But even this is far short of the target of Rs 26 crores fixed for the State. Collections this year are expected to be higher than last year, only in Andhra Pradesh and Kerala. Further there seems to be more scope for tapping rural savings in view of the fact that last year's collections were almost entirely made up of savings from urban areas.

Referring to the zonal conferences, Mr Naidu said that their significance lay in that they had the effect of associating the State Governments more effectively with the savings campaigns and also giving more publicity to it. He was also optimistic about the possibility of the target set for the small savings campaign being realised in view of what he felt to be a greater awareness among the people about the necessity of savings. But he urged the need for infusing consciousness among the people that they were partners in the building of the country and that they should save to help the plan as a patriotic duty.

THE BENGAL PAPER MILL CO. LTD.,

Notice is hereby given that the Board of the above Company has declared the following Interim Dividends on the undermentioned shares of the Company for the year ending 31st December, 1957, payable on or after 15th January, 1958, to those members whose names are registered in the Register of members of the Company on 15th January, 1958. Dividend Warrants will be despatched to members and no application to the Company is necessary.

Ordinary Shares	6 %
Cumulative Preference Shares (Free of Income Tax)	3 1/2 %
'A' Cumulative Preference Shares (Free of Income Tax)	3 1/2 %
'B' Cumulative Preference Shares (Subject to deduction of Indian Income Tax)	3 %

Payment of these dividends is not to be regarded as an indication of the amount of final dividend, if any, which the Board may recommend. Any such recommendation can only be made when the final results of the year's working are known.

Notice is also hereby given that the Transfer Books and the Register of Members of the Company will be closed from 6th January, 1958, to 15th January, 1958, both days inclusive.

By Order of the Board,

SOUTH INDIAN MARKETS

Russian Buying of Malabar Produce

IT is reported that the Soviet Union has been buying now large quantities of black Pepper, Tea, Lemon-grass Oil, Cardamom and Cashew-nut from Kerala. There commodities, which earn for India much-needed foreign exchange are, it may be noted, usually exported in bulk to America and Europe.

This month, Russia has purchased 1,000 tons of pepper and it is likely that she will purchase another 2,000 tons in January and February next year. But, this buying has not affected the price trends of these commodities, as trading circles believe that Russia has not offered a better price. In the Alleppey market, the rate is quoted around Rs 550 per candy for superior old quality and Rs 400 to Rs 500 for the new variety, depending on ripeness. In the Kozhikode market, Wynad quality is quoted at Rs 630 to Rs 650 and the Country variety at Rs 210 to Rs 230 per candy.

Meanwhile, a comprehensive pepper development scheme for the Kerala State has been sanctioned by the Indian Council of Agricultural Research. This scheme, costing about Rs 6.10 lakhs, will be worked by the Kerala Government for the duration of the Second Five-Year Plan; but the period of

the scheme may be extended further, if found necessary. It is, however, learnt that, due to the low price prevalent in the market at present for pepper, growers are not very much interested to take to new planting of pepper vines. The question of advancing loans with a view to encouraging the growers in this direction is now engaging the attention of the ICAR.

Lifting also of other commodities like cashewnut, lemongrass oil and cardamom by Russia is larger than American purchases; but even here price trends are not affected. There are reports that there have been dull enquiries from America for these articles. It is, however, expected that, due to uncertain political conditions in Indonesia, pepper exports from that country will suffer a setback and there will be a diversion of some demand to this country.

Rubber

Once again, the London Rubber market has returned, at least for the moment, to the pattern of recent month. There is little large-scale buying and lack of support from Russian orders. In this connection, the Financial Times, London, states that the rubber

market has lost its anxiety about the long-term prospect of supplies.

About half of the increase in the world output is to be found in the figures for Indonesia, where the main uncertainty about the future supplies of natural rubber lies. Since the Islands account for over a third of world production, the disturbances in Indonesia can lead to a serious reduction of supplies. There are still some fears about the immediate shipments of the commodity.

Groundnuts

The Madras Groundnut market has continued to rule quiet with rates developing an easier tendency, the new crop being quoted at Rs 150 per candy. Arrivals average 50 to 80 tons a day; and these are taken by small crushers. Arrivals in North Arcot, South Arcot, Tanjore and Trichy districts are now, however, higher.

According to the first forecast, the area sown in the Madras State, upto July 1957, is estimated at 216,300 acres as compared with the previous estimate of 216,400 acres. The yield per acre is expected to be slightly below normal in all the districts. The total yield is estimated at 125,500 tons of unshelled nuts as against 126,100 tons estimated for the corresponding period of the previous year. This compares with 106,900 tons—the average for the five years ended 1956-57.

In the Groundnut Oil section, the rate for the ready position has declined to Rs 309 from Rs 319 per candy. With more mills in the South working, there is better offering of oil.

THE PENINSULA

(Continued from previous page)
objection to Hindi becoming the official language. There are a number of reasons for this stand taken up by the Kerala Government.

In Mysore, as the latest reports go, the present Government seem to be inclined to support any agreed move from the Southern States. The Mysore Government are surely against any hasty step but they have not persuaded themselves yet against a complete rejection of Hindi as the national language. In Andhra, the Government appear to be no less impressed with the need for opposition to the fulfilment of the dead line of ten years for the complete replacement of English by Hindi as the official language. The Madras Convention and the Committee which it has appointed have already become an impressive rallying point against Hindi.

RAJAHBHAT TEA COMPANY, LIMITED.

NOTICE is hereby given that the 48th Annual General Meeting of the Shareholders of Rajahbhat Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 30th January, 1958, at 3-10 P.M. for the following purposes:—

1. To consider the Profit & Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.

2. To declare a Dividend.

3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—
"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company.

Special Notice dated 16th December, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge is presently a Director of Amluckie Tea Co., Ltd. which is a subsidiary of McLeod & Co., Ltd., the Managing Agents of the Company, and that, therefore, he is an associate of the Managing Agents within the definition in Section 2(3)(c)(1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director liable to retirement by rotation by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors, and fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th January, 1958 to 30th January, 1958 both days inclusive.

By Order of the Board,
MCLEOD & CO., LTD.,
C. HOCKLEY

Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 27th December, 1957.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled

to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 7th February, 1958, only to those members whose names are registered in the Books of the Company on 30th January 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

GATEWAY MARKETS

(Continued from page 1194)

There are also reports that Russia has been trying to register its Zinc and Tin on the London Metal Exchange. The steadiness in Lead is attributed to sentimental encouragement from copper.

Yarn

Trading in the Bombay Yarn market continued to be listless and the actual business put through in Rayon and Staple-Fibre yarns was reported to be small. In sharp contrast, imported Art Silk Yarn continued to be firm and prices of Italian and Japanese yarns improved. Import licences for this yarn commanded increased attention with the unofficial premium rising to 55 per cent. There was also a scramble for Nylon yarn on fears that the Government would impose heavy import duty on it.

Conditions in the Cotton Yarn section continued to remain dull and uninteresting. Export enquiries were meagre and weak holders were inclined to get rid of stocks even at declining prices. Powerloom factories also showed little or no interest in coarse and medium counts.

FOR THE INVESTOR

(Continued from page 1184)

year has recorded a fall from Rs 47.71 lakhs to Rs 37.32 lakhs after providing Rs 22.71 lakhs for Depreciation against Rs 23.87 lakhs; Rs 5.75 lakhs for managing agency's remuneration against Rs 7.17 lakhs and Rs 17.01 lakhs for Taxation (including Rs 1.2 lakhs for Wealth Tax) against nil.

Out of the profit, Contingency Reserve claims Rs 10 lakhs against nil; General Reserve Rs 9 lakhs against Rs 10 lakhs; Dividend Equalisation Reserve Rs 5 lakhs against nil; Development Reserve nil against Rs 10 lakhs and Deferred Taxation Reserve nil against Rs 14.5 lakhs. Sales have, however, recorded a handsome rise to Rs 18.08 crores from Rs 14.29 crores.

The directors expect that, within a few months, the company will be commencing production of the important components for the front and rear axles for trucks. When this is done, about 72 to 80 per cent by value of the components of trucks will have been manufactured in the country.

THE TINGAMIRA TEA SEED COMPANY, LIMITED.

NOTICE is hereby given that the 33rd Annual General Meeting of the Shareholders of The Tingamira Tea Seed Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 30th January, 1958, at 3-00 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st March, 1957, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.

2. To declare a Dividend.

3. To appoint a Director in place of Mr. Max. H. Burton, who retires by rotation at the Meeting and who seeks re-election and, in this connection to consider, and if thought fit, to pass the following resolution in conformity with the provisions of Section 281 of the Companies Act, 1956:—

"Resolved that pursuant to the provisions of Section 281 of the Companies Act, 1956, Mr. Max. H. Burton who has attained the age of 66 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed in Section 280 of the said Act shall not apply to him".

Special Notice of intention to propose the foregoing resolution has been received by the Company.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th January, 1958 to 30th January, 1958 both days inclusive.

By Order of the Board,
MCLEOD & CO., LTD.,
C. HOCKLEY

Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 27th December, 1957.

NOTE:—

2. Payment of the proposed Dividend, if declared, will be made on or after 7th February, 1958, only to those members whose names are registered in the Books of the Company on 30th January 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

CLIVE STREET GOSSIP

(Continued from page 1192)

Professor P. C. Mahalanobis, the Director of the Institute and the presiding deity of the science of statistics in India, there was more time available for a discussion of the burning question of Asian-Western co-operation in the industrialisation of under-developed countries. Professor Mahalanobis was emphatic that foreign aid to India and the other countries of south-eastern Asia should not take the form of more and more plants for the manufacture of consumer goods. These, he said, did not help such countries to solve the problem of industrialisation and unemployment; they only served to make the rich countries richer by helping them garner more ready profits. His suggestion was rather that the Western countries should bring over heavy industries plants, which would manufacture industrial machinery and spare parts. Mr. Heathcoat-Amory seemed to see the point, and agreed that India should concentrate on the production of "fundamental" things, leaving precision instruments and machinery that require a high degree of scientific skill and organisation to be manufactured by the Western countries. On the Professor's suggestion that the Western countries were not interested in the industrial development of the south-east Asian region, because

★

OLYMPUS

(Continued from page 1196)

contributions by companies to political funds and the second to safeguarding of managements of companies against operations of speculators indulging in cornering operations. Both these suggestions have stemmed partly from experience and events subsequent to the passing of the Companies Act. The present provisions embodied in Section 293 permits directors to contribute "to charitable and other funds not directly relating to the business or the welfare of its employees amounts totalling up to five per cent of its profits." Companies can make even higher contributions with the approval of shareholders. On two occasions during last year, the Bombay and the Calcutta High Courts had to consider such contributions by well known companies. Certain observations made by the High Courts drew attention to the issues involved in the propriety of such contributions. Dealing with that question, the Committee makes the legitimate point that the wisdom of permitting such contribution should be considered in larger contexts than that of company law. "The case of companies cannot be considered in isolation and contributions from other sources such as bodies corporate, partnerships, societies, trusts, trade unions and even from individuals might have to be regulated or prohibited by comprehensive enactment." Leaving

the matter thus open (and thus giving a fresh lease of life to familiar controversies), the Committee suggests that the immediate purpose of ensuring the bonafides of such contributions will be served by making it obligatory on the part of directors to give details of such contribution in the published accounts of the company.

On the other question of speculative operators cornering a sufficiency of voting power and thus trying to oust managements who have seen the company through difficult days and brought it to a stage of prosperity, the Committee is very properly on the side of prudent management. Certain events connected with a well known Calcutta company last year have lent point to the suggestion made by the committee. The recommendation is to the effect that the Central Government should be empowered to suspend the voting power of holders to effect changes in the managing agency or directorate of a company, which, in the view of the Government, is likely to be prejudicial to the company's interests. The importance of such a power can hardly be overestimated in the context of the all too notorious prowling of gamblers on the outskirts of the share markets. The very presence of such a power in the act would act as a deterrent on speculative interests who would have a wholesome fear that their cornering operations may end in

nothing more than mere possession of shares. There is some likelihood of this recommendation being attacked on the specious ground of restriction of legitimate enterprise. Some may even allege that its inspiration is a desire to protect foreign interests in this country. Such wholly disingenuous arguments will cut no ice with the general public, since it is only too well aware of the predatory proclivities of these speculators. It will, therefore, whole heartedly welcome the incorporation of this amendment in the existing law.

★

GATEWAY GOSSIP

(Continued from page 1193)

political lines. Adjudication of disputes by impartial authority is the only way that is open to a Government which is harried on all sides by all denominations of trade unions having distinct political slants as opposed to that of party in authority.

Mr. Sheppard strikes an extremely pessimistic note in regard to the prospects of the Second Plan, and says that even the success in regard to the hard core of the Plan would remain largely futile if, in the process, the private sector is prevented from erecting secondary and tertiary sectors to support it. The fallacy in this argument is that it ignores the reverse side of the argument. I may put it this way: How can a secondary and tertiary sector grow without there being a primary sector to support it? It is easier to erect a secondary and tertiary sector than a primary sector. In fact, even the programmes connected with the development of the hard core of the Plan are by no mean ambitious and, compared with the resources of the country, are definitely modest. For another thing, the hard core of the Plan demands from the people little by way of sacrifice and is almost exclusively dependent on the successful culmination of foreign aid talks that have been launched with several foreign governments and institutions.

THE BRITANNIA BISCUIT CO. LTD.

Notice is hereby given that an Interim Dividend of 3% on Ordinary Shares and 4% on Preference Shares has been declared by the Directors for the year ending 31st March, 1958. The Dividend will be payable to those shareholders whose names appear on the Register of Members as on the 7th January, 1958 or to their Mandatees.

The Register of Members of the Company will remain closed from the 7th January, 1958 to the 14th January, 1958, both days inclusive.

By Order of the Board,
A. P. CHANDA,
Secretary.

Rs 69-12; 4F Roller at Rs 77-9 and Punjab Roller at Rs 79-13.

★

CLOTH AND PIECEGOODS

The Bombay Piecegoods market continued to remain inactive with no signs of any improvement in prices. Inquiries from the consuming centres were restricted. The sluggishness in activity was attributed to the fact that the incidence of the new levy was rather heavy. Hopes are, however, still entertained that the offtake will be better after a fortnight.

Conditions on the export front have, however, been better. Improved enquiries are reported from Sudan for the usual qualities. There are reports that the Sudan has been able to conclude business with foreign countries for a sizable quantity of cotton. Consequently, hopes are entertained that this country will be importing fair quantities of cotton textiles. Fair business is also reported done with East Africa, while enquiries are received from Kenya and Uganda.

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials: Tender No. CON/GM/42/WP/CE (C)/226/B for supply of (a) 12 Nos. Derricks Pine Wood 16"×16" Square of 20'-0" long and (b) 12 Nos. Derricks Pine Wood 12"×12" Square of 10'-0" long. Tenders will be opened at 12 noon on 21-1-58.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

Tender forms should accompany the receipt for earnest money of Rs 1000/- from the Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs 1000/- with the Controller of Stores are exempted.

S102 GENERAL MANAGER

THE BANK OF BEHAR LTD HEAD OFFICE PATNA

Notice

of loss of Share Certificate for 400 Preference Shares bearing distinctive no. 24501-24900 standing in the name of Shri Sri Mohan Wahi has been received. Duplicate Share Certificate will be issued if no claim is received within a fortnight.

M. M. PANDIT
SECRETARY.

21st December, 1957.

Stock Exchanges

MARKETS IN A HOLIDAY MOOD

Watch-Dog Writes:

STOCK markets have generally ruled quiet in the absence of any incentive. Dealings are few and far between and are mainly confined to squaring-up of outstanding business. With the exception of a few selected scrips which have recovered further, price trends elsewhere are generally easier.

The Calcutta Stock Exchange remained open for trading for only two days during the week and, during this period, conditions remained quiet.

The Bombay Stock Exchange wound up the year on a subdued note.

More selling was noticed in Tea shares on the Madras Stock Exchange. Bank shares maintained their levels.

Very quiet conditions prevailed on the London Stock Exchange with business even smaller than usual. The only bright spot was Giltedged which advanced on small selective investment support.

Wall Street closed barely steady with gains and losses running from fractions to around one dollar.

Calcutta

Calcutta, Friday Evening.

THE local Stock Exchange remained open for trading only on Monday and Friday during the week due to intervening holidays for Xmas. During this period, conditions remained dull on lack of any incentive. Except for a few selected scrips which staged a further recovery, prices elsewhere displayed an easier trend as operators were reluctant to enter into commitments in view of the approach of the New Year holidays and the settlement date next week.

Operators had a feeling that, with the continued uncertainty about the investment policy of the Life Insurance Corporation, the immediate outlook was not propitious for a substantial recovery and any stable rise in the share values would not be likely until the Budget proposals were announced in February next.

The improvement, noticed in the Giltedged market, made further headway during the week following the increasing demand for securities. There was good support for the short and medium-dated issues. 3 per cent 1988 Conversion Loan opened at Rs 70.94 and improved steadily at the close to Rs 71.18.

Reports of good working caused a steadier tendency in Bank shares. United Commercial were taken upto Rs 59.25 from Rs 58.50 and

Hindustan Commercial were done at Rs 10.50.

Jute shares remained depressed with prices developing a sagging tendency on renewed weaker advices from the jute goods market. The only exception to the general trend was National, which were taken upto 22.10 from Rs 21.15, thanks to renewed cornering activity. Howrah were, however, offered at as low as Rs 13.44 against Rs 14.00 and Reliance at Rs 5.75 against Rs 5.94. Champdany were nearly maintained at Rs 101 with Ganges changing hands as Rs 51.50 to Rs 52.00. Anglo-India continued to be a steady feature at Rs 146.

The uncertainty about the proposed legislation concerning mining concession rules caused Coal shares to turn dull and quiet. Burrakur were sticky at Rs 22, while Central India closed better at Rs 6.00 against Rs 5.87. Equitable were, however, quiet at Rs 24.12 against Rs 24.62 with Western Bengal changing hands on the ex-dividend basis at Rs 5.00.

Dealings in the Tea section continued to be restricted despite the improvement in the prices obtained at the recent auctions. Fears were generally maintained that the current season's working would be adversely affected as producers of Common teas were reported to be incurring losses. Grob "B" eased off to Rs 11.50 and Jayshree to Rs 8.75 from Rs 9.00. Banarhat and Birpara were the only steady features having support upto Rs 294 and Rs 100 respectively. Brahmapootra were, however, on offer at Rs 3.00 following the reports of the appointment of a Receiver to look into the affairs of the company.

Doubts expressed in some quarters with regard to the profits of companies for the season just ended and the bleak prospects for exports had an adverse effect on the Sugar section. The only firm feature was S.K.G., which received sustained support upto Rs 9.25. Samastipur Central were offered at Rs 11.50.

In the absence of any improvement in the conditions of the cloth and piecegoods markets, Textile scrips met with little or no interest. Cawnpore had sellers down to Rs 3.94 from Rs 5.19. Kesoram, after touching a low of Rs 9.25, recovered gradually towards the close to Rs 10.00 on reports of the settlement of the labour dispute.

The uncertainty about the investment policy of the LIC caused a general feeling of uneasiness

in the Engineering section. Against the week-end closing of Rs 18.58, Indian Irons opened higher at Rs 18.70; but bear selling at this level brought down the rate at one time to Rs 18.34, to finish the week better at Rs 18.32. In "kerb" trading on Friday, there were even sellers at Rs 18.34 with buyers at Rs 18.32.

In sympathy, TEXMACO were pushed down to Rs 15.50 from Rs 15.65. Jessop were only a shade quieter at Rs 22.06 against Rs 22.12, while Richardson firmed up to Rs 7.87 from Rs 7.50 on the emergence of fresh support. Burn were, however, marked back to Rs 308 from Rs 311.50, while Indian Standard Wagon remained quiet at Rs 93. G. K. Williams were quoted at Rs 29.12 and Britannia at Rs 12.25.

The Miscellaneous section provided a few firm spots on the emergence of some support at the recent low levels. Prominent were Indian Cable having improved to Rs 26.50 from Rs 26.25; Titagur to Rs 33.12 from Rs 32.94; India Steamship to Rs 10.84 from Rs 10.75 and Rohas to Rs 16.00 from Rs 15.69. Indian Aluminium; Aluminium Corporation and Phillips India were well maintained at Rs 12.62; Rs 9.87 and Rs 14.25 respectively. NICO hardened to Rs 24.75 from Rs 24.69, while Hindustan Lever turned quiet at Rs 19.87 against Rs 19.94. Indian Copper were a narrow market around Rs 2.81, while B.I.C. were freely offered at Rs 4.04. Orient Paper were slightly lower at Rs 24.25 against Rs 24.30 and Dunlop Rubber at Rs 20.00 against Rs 20.12. Osier had sellers down to Rs 1.81 against Rs 2.06. Hindustan Motor changed hands at Rs 5.62 to Rs 5.81 and Alkali Chemicals at Rs 13.25 to Rs 13.31.

NORTH INDIAN MARKETS

(Continued from page 1197)

tion of the Bombay grains market. Gurmufia and Hansa varieties have moved up to Rs 215-235 and 245-265 per candy respectively. It is, however, felt that the local supplies will be augmented by sizable arrivals in the next few days in view of the fact that the actual enforcement may take some more time.

In the Coarse grains section, prices of Jowar have moved up by Rs 5 to Rs 10 per candy on higher up-country advices. Bajra has improved by Rs 10 per candy on rumours that the Uttar Pradesh Government is supporting the prices. The demand from Saurashtra and Rajasthan have also contributed to the improved tendency.

EDITORIAL NOTES

(Continued from page 1186)

domestic coke from non-coking coal etc.

The highly rewarding revelations of nature on the one side and the equally productive work of experts in research have combined to produce a situation in which the country no longer needs to think in terms of a shortage in coking coal. On the contrary, as Mr. Driver suggests, with the expansion of the

coke industry, particularly through the Durgapur Coke Ovens, the prospect opens up of sizeable earnings through the export of coke.

In spite of certain difficulties which the coal consumers may continue to face for some reason or other, total fuel supply for domestic and industrial needs should become increasingly satisfactory in the years ahead. Mr. Driver wants the Government to consider the construction of one or more of atomic Power houses in Bombay State, the utilisation of some of the by-products of Neveil for distillation into diesel oil and the subsidisation by the Railway Board of the erection of an experimental low temperature carbonisation plant.

WORLD OF FINANCE

(Continued from page 1187)

Decline in Bank Advance

The returns of the Reserve Bank for the week ended December 20 disclose a decline of Rs 8.02 crores to Rs 1504.60 crores in Active Notes as well as the return of rupee coin from circulation for Rs 0.54 crores. This has increased the Reserve Bank's cash in the till by Rs 8.56 crores to Rs 18.58 crores.

The Centre's balances are higher by Rs 9.34 crores at Rs 64.87 crores and it is possible that this is due to the sale of the balance of the 34 per cent 1962 special issue on tap from the Reserve Bank during the week. State Governments have improved their position by an increase in Deposits to Rs 8.16 crores from Rs 4.97 crores and by a decline of Rs 1.21 crores to Rs 36.40 crores in borrowings. Other Deposits are more or less stationary.

The Reserve Bank's Other Loans and Advances have risen by Rs 6.88 crores to Rs 58.76 crores. That this relates largely to accommodation availed of by Scheduled Banks is suggested by the fact that advances against usance bills are marked higher by Rs 5.47 crores at Rs 19.81 crores.

Investments are lower by Rs 1.88 crores; possibly some open market sales. Foreign Balances have declined only by Rs 2.00 crores to Rs 22.38 crores.

The return of the State Bank for December 20 records a decline of Rs 0.82 crores to Rs 364.76 crores in Deposits. Cash Balances are slightly higher at Rs 33.18 crores. The onset of the busy season is suggested by a rise for the third successive week in the Total of Advances, which is higher by Rs 3.34 crores at Rs 165.95 crores.

The return of Scheduled Banks for December 13 records an improvement of Rs 10.12 crores to Rs 1402.89 crores in Deposits. Investments are higher by Rs 4.31 crores at Rs 432.00 crores, presumably relating to purchase of the created issue by the other Scheduled Banks. This has involved a running down of Cash Balances by Rs 3.12 crores to Rs 174.79 crores. The total of Advances has contrasessionally declined by Rs 4.04 crores to Rs 841.49 crores.

The Story of Oil—4

Exploring for oil

It is impossible for anyone to say exactly where petroleum will be found. It accumulates in isolated subterranean traps, and these are what the oil-explorers seek, rather than the oil itself.

It must first be decided where conditions in past geological time have favoured the formation of oil. This is usually land which was once the site of an ancient sea. Having selected a likely area, the next step is to survey the surface, mapping exposed rocks and searching for any oil which has seeped to the surface.

The geologist is all the time patiently searching for signs that could point to the existence of underground rock traps. Traps suitable for an accumulation of oil consist of porous rocks in which the oil (if any is there) is hemmed in on all sides by non-porous rock. Clues

to such buried structures may be found in the banks of rivers and streams, for here the earth's rock layers are often exposed to view, enabling the geologist to calculate their age and measure the directions in which they slope beneath the surface. The rocks may contain the fossilised remains of plants and animals that lived millions of years ago, when crude oil was being formed.

Aerial photographs help the geologist too. They reveal a surprising amount of geological evidence, even in densely wooded country, enabling him to map the differences in rock structure.

When all surface sources of information have been exhausted, the next step in the search for oil is to go deep beneath the surface of the earth. The science which makes this possible is known as geophysics.

Assam Oil

A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.
