illegal, pay will be withheld for those who participate.

The All-India Trade Union Congress has issued a statement appealing to workers throughout the country to demonstrate and protest against this Ordinance. It is also gathered that the AITUC will try to expand the scope of the strike and bring other Union Government employees into the picture.

Beside this juxtaposition of forces for a battle royal from the midnight of Thursday, it is yet possible to hope that the strike would be averted. This hope, though of course slender, rests on a number of circumstances; some of them far from agreeable by themselves, but scarcely unwelcome, in view of their contribution to a peaceful settlement.

A series of discussions have taken place between members of the Union Cabinet and representatives of the Federation of the Posts and Telegraphs Employees in the course of the last few days, the most important of these being the one which they had with the Prime Minister on August 6; though the discussions appear futile, they should surely have led to closer personal understanding of the differences which persist and of the difficulties felt on either side. This meeting, particularly, has revealed the extent to which the differences had narrowed and thus exposed the tragic character of a development, which even the Union leaders might, in their more sober moments, would be inclined to disapprove.

This position is restated with characteristic brilliance and clarity by C. Rajagopalachari. CR, in an appeal to the workers, which he describes as wholly "uninspired", explains how the demands raised by them have already been met almost completely and how the decision and propaganda in favour of a strike has had its psychological effect on the Government. Barring the Essential Services Maintenance Ordinance, which is a controversial offshoot of the strike situation, there is only one major point in which the Government have not conceded the employees' demand—interim relief. Ever since the Lok Sabha commenced its present session, the Government have been advancing one step after another to meet the demands of the employees, even at the cost of prestige.

At first an enquiry was promised instead of a Pay Commission. Within a few days, a regular Pay Commission was announced. Nothing was said about interim relief, when this announcement was made. Soon after, interim relief was also included in the scope of the Com-

mission's recommendations. In all his speeches, the Prime Minister has not hesitated to express consideration and sympathy for the economic condition of the lower-grade employees. The objections indicated only the difficulties of the Government and their commitments to the nation at large. Even the Circular carrying the Amendment to the Government Servants' Conduct Rules, contains instructions to senior Government Officers to pay special attention to the legitimate grievances of junior grades. Staff committees on the various Ministries are also asked to expedite the disposal of pending complaints.

It would be ungenerous to the Government to say that they are insensitive to the economic situation which has impelled the employees to ask for increased emoluments. It is equally ungenerous to the Union leaders, if their initiative in calling for a strike is described as simple political manoeuvre. As one of them explained at the meeting at Rajkot, the employees generally do not believe in and are not guided in their decision by political motives, but are inspired only by the "politics of the belly." To put it that way may be a half-truth. But half of it at least is the truth and that is what makes for a large measure of understanding between the two sides.

One of the criteria by which the Pay Commission have to proceed has a potentiality to which the Union Government employees are greatly allergic. If State and Central grades of pay are to be mutually inter-linked, it goes without saying that the result may be adverse to Central employees and can even drive a wedge between the two. There is already some speculation as to the possibility of the outcome of the Pay Commission's Report turning out to be not sufficiently satisfying to the Union employees. Some of these uncertainties and hazards undoubtedly aid prospect of a compromise, before the showdown.

CLIVE STREET GOSSIP

(Continued from page 294)

There is little more that I can or need say. What I have sought to do is briefly to indicate that the essential lesson to be learnt from the First Plan is that the Second Plan, too, must depend largely upon self help; and, in such a reading, I have thought it useful to suggest three specific spheres in which India could display its attribute of self confidence and self respect.

EAVESDROPPER

North Indian Notes

Importance of Research

The need to enlarge considerably our resources of scientific knowledge and technical skill has come to be increasingly realised after the inauguration of the First Five Year Plan. With the various development schemes getting under way, it soon became evident that unless immediate steps were taken to augment the supply of technical personnel, progress in many directions would be retarded. It took some time for the people to realise the serious drawback because of the widespread unemployment among the educated youngmen in our country. The fact of the matter was that most of the educated youngmen did not have the necessary qualification for the type of jobs that were steadily growing in number.

The emphasis on industrialisation in the Second Plan has automatically given the problem of technical education the highest priority among the schemes of development. It has become incumbent on Government to make adequate provision for future requirements in this regard. For, in the succeeding plans, the demand for technicians is bound to be much more than in the current one. As such, it has become essential that steps are taken right from now to provide adequate facilities for our youngmen for getting technical education. Schemes in this regard should be implemented as quickly as practicable because any delay now will correspondingly reduce the number of technical personnel available a few years hence.

While inaugurating the Advanced Diploma course in Pulp and Paper Technology at the Forest Research Institute, Dehra Dun, early this week, Dr J. C. Ghosh, Member Planning Commission, pointed out that the problem of technical manpower had been receiving increasing attention from Government in recent years. Technical institutions both for University first degree and diploma courses had sizably increased from 28 in 1947 to over 80 in 1956 and the latter from 50 to 123. The annual admissions had increased from 2,900 in 1947 to over 6,300 in 1956 for the degree courses and from 3,700 to 8,800 for diploma courses. The output of graduates had increased from 13,00 to 4,000 and of diploma holders from 1,450 to 4,200. The rapid advance in increasing our resources in technical manpower will be evident from the fact that whereas in 1947 there was practically no facilities for post graduate courses and research in engineering and technology, it is hoped that by 1960-61 there will be atleast 1,000 places for advanced studies.

Side by side with the training of technical personnel, sustained at-

tention is to be paid to research for the simple reason that in this fast changing world, constant research alone can help us consolidate the technological gains achieved as well as keep us abreast of the latest developments.

★

Housing

The recommendation of the Housing and Regional Planning Panel of the Planning Commission at its third meeting that housing boards should be set up in each state with powers to finance housing schemes marks a fresh approach to a problem which has been long defying solution. The First Plan had made a sizable allocation under housing. The total provision in the Second Plan in this regard at Rs 120 crores is more than three times the provision in the First Plan. Even so, it is recognised that the resources are far too inadequate because housing is such a huge problem that it requires an outlay which is far beyond our capacity to provide at this juncture. The problem, therefore, reduces itself into one of obtaining the optimum result from the available resources.

The progress made so far is not commensurate with the money and effort expended. It would appear that the slow pace is largely due to the lack of coordination between the various departments, both in the Centre and the States, who have been entrusted with the responsibility of implementing the housing programmes. Speaking during the discussion Mr V. T. Krishnamachari, Deputy Chairman of the Planning Commission,

felt that there was no coordinated approach on the question. Various departments were planning in their own way independently with the result that there had been intense competition for the limited land and resources available. The proposed housing boards may help in a careful husbanding of available resources. Mr Krishnamachari suggested that housing boards should be set up by the State Governments in every big town.

Any sizable progress, however, will be possible only if the acquisition of land for housing schemes is made easy. The problem bristles with such serious difficulties that legislation may become necessary to bring about conditions conducive to making the desired headway. The Panel has suggested that steps should be taken to amend the Land Acquisition Law, suitably in order to facilitate acquisition of land by the States for housing schemes and also peg land values. In order that the pace of progress is maintained, State Governments have been asked to embark upon a long term programme for acquiring and developing land suitable for housing in advance.

It is gratifying to note that the prospects of speeding up industrial housing have greatly improved after the recent labour conference at New Delhi. Employers have accepted the suggestion that atleast a reasonable number of houses should be built. The Panel's recommendation that Government should specially examine the question of the quantum of assistance, by way of loans and subsidy for industrial housing and the elimination of procedural and administrative delays in sanctioning such assistance will go a long way in quickening the pace of progress in this regard.

NORTH INDIAN MARKETS

Sugar Markets Quiet

CONDITIONS in Sugar markets have continued to remain dull and quiet, thanks to slackness in demand. The recent release of 1.70 lakh tons for sale in the free market has also induced some selling and prices have tended to look down. Want of loading facilities in the non-avalability of wagons has also hampered despatches from the mill centres. In the Hapur market, following rates (per maund) are quoted:—Meerut (D/28) Rs 33.87; Daurala (B/29) Rs 35.12; (B/28) Rs 34.87; Amroha (D/29) Rs 33.25; Bijnore (D/29) Rs 33; Mansoorpur (C/29) Rs 33.87 and Simbhauli (E/29) Rs 34.

Prices of the commodity have also tended to fall in foreign markets.

The London rate for British-refined sugar has declined to £50 per ton; and this may tell on India's sugar exports. Export sales of about 1.67 lakh tons have already been put through; but it is wondered whether the industry will now be inclined to adjust its export price in line with the world parity, in view of the comparatively better returns in the internal market.

The Indian Sugar Mills Association is, it is understood, now keen on fulfilling the export quota and is reported to have already made provision for losses, if any. Rumours are current that some buyers are now even reluctant to lift Indian sugar and are reported to have taken

advantage of the delay in shipment.

The Khandsari market continues to rule quiet although the demand has slightly improved due to the festive season. Rates are quoted at Rs 26 to Rs 32 per emaud, according to quality.

★

Gur

The Gur market in Hapur continues to rule very steady with prices showing further small improvements over last levels. Demand is reported to be fairly good from Bengal, Gujarat and Madhya Pradesh. Higher prices from markets in the South, where stocks have gone down, have also helped sentiment. Stocks are, however, heavy at 47,000 maunds as against 18,000 maunds in the corresponding period of last year. Rate is quoted at Rs 12 to Rs 13.25 per maund; Kotha Wet-dry at Rs 12.25 and Kotha Dry at Rs 13.25.

In the Muzaffarnagar market, prices have recorded fractional gains due to good demand from Gujarat side. Stocks here are estimated around 70,000 maunds. Chaku Kotha variety is quoted at Rs 15.25 to Rs 16.50 and Shaker Dara at Rs 15.50 to Rs 16.50, both per maund.

★

Foodgrains

Easy conditions are witnessed in the Foodgrains markets, thanks to the Food Minister's statement with regard to a scheme for the direct procurement of foodgrains from the growers on a voluntary basis. At Hapur, Wheat prices have recorded a fractional fall to Rs 15.75 per maund for average quality and Rs 16.75 for farm quality. The Government order, that stockists may be required to sell stocks at the average price for the last three months in the particular locality, has a dampening effect on Gram prices. The markets for Bareilly and Bejher also remain depressed. Jowar stocks are reported to have increased gradually with the arrivals from East Uttar Pradesh. Prices of Pulses have softened although demand has been fairly good.

A downward tendency in prices has been noticeable in the Delhi grains market. Easier advices from the Punjab have an adverse effect on the Wheat section. Gram prices have recorded a loss of about Re 1 per maund due to selling pressure from stockists. Rice has, however, a recorded a small rise on reports of shortage of stocks. A fall of about Re 1 per maund is recorded in Urad on reports of better stocks. Lacking of buying interest has caused Bajra and Jowar to ease off by 50 nP per maund.

A moderate decline in Coarse grains prices has provided the main feature in the Bombay market.

(Continued on page 306)

The Peninsula

Industrialisation of South India

WITH the setting up of the State Industries Development Committee in Madras, critics of the State Government have been deprived of many of their talking points. So far, the so called industrial backwardness of the State has been brought in on every conceivable occasion by the Opposition parties in support of their contention that the State Government have failed to make any worthwhile achievement.

Speaking during the discussion on the demands under "Industries and Cinchona" and "Capital outlay on Industries", Mr C. N. Annadurai, Leader of the DMK, said that the Government had no programme of industrial development. In support of his thesis he could only point out that in both the First and the Second Plans, Madras had not been given the allotments asked for. The facts that the rate of employment is higher in Bombay than in Madras and that agricultural labour in North India have more earning days in a year than their counterpart in the South have apparently been brought in to emphasise the charge that the powers-that-be are more concerned with the North than with the South.

It may seem strange that such charges should be seriously made but the fact remains that they are made and what is more, the critics are supported by some economists. The people, however, have demonstrated time and again that they cannot be easily misled in these matters. Moreover there are strong reasons to prove that both the Central and State Governments are doing their best to advance the cause of industrialisation of the South.

Replying to the debate on the Budget Demands, Mr R. Venkataraman, Minister for Industries and Labour, said that the Government's aim was to establish heavy, small and cottage industries. Special emphasis would be laid on the development of small scale and cottage industries because of their potentialities for affording employment to a large number of people. Steps had already been taken to exploit the natural resources of the State. Plans had been drawn up for the production of aluminium and the utilisation of the iron ore in Salem was under the active consideration of the Government. Sizable advance had been made in the production of cement and sugar. In the matter of cloth and yarn production the State occupied an important position.

In the course of his speech on the occasion of the inauguration of

the State Industries Development Committee, Mr K. Kamaraj, Chief Minister, effectively set at rest all doubts regarding the future of industrialisation of the State. The State Government have been assured of all the necessary help to realise their ambition provided the projects proposed are feasible and practicable under the prevailing circumstances in the country. Mr Kamaraj pointed out that before talking of industrialisation, it should be remembered that there were certain essential prerequisites. For a region to make progress in industrialisation, it should first be fairly rich in natural resources. Electric power must be available in fairly large quantities. Finance, Labour, and technical manpower bring up the rear. Judged from these criteria, it will become clear why there have not sprung up big industrial units in the South. It is common knowledge that coal is essential for most industries. The greatest obstacle to the setting up of industries in the South has been the absence of coal. Madras is also not rich in mineral resources. With such natural handicaps, the region has received secondary importance in the matter of establishment of industries in the schemes of entrepreneurs in the days when the Government were not interested in the industrial development of the country.

With the establishment of a national Government, hopes were raised that the industrial potentialities of the nation would be fully exploited; and these hopes have not been falsified. In the first decade after the attainment of political freedom, India has taken rapid strides in several directions. Active measures have been taken to increase agricultural as well as industrial production. The first plan very rightly placed emphasis on development of agriculture. A few multipurpose river valley projects have already been built and more are coming up. Though agriculture production has not been able to keep pace with the growing demand in the country, it is confidently expected that when the remaining multi-purpose projects are completed, the nation will not only attain self-sufficiency in food but will also have some surplus. On the industrial front, the progress has really been impressive. As against only two steel factories there will be five in a few years with the existing two expanded to produce substantially higher quantities of steel than they are now producing.

The Second Plan has placed the emphasis on the development of industries which build machines to

build machines. In other words it has been considered necessary to bestow increased attention on the setting up of heavy industries. In view of the urgent need to quicken the pace of industrialisation of the country and in view of the large capital outlay that such consummation call for, it has become inevitable that the State should participate actively in the process. The Industrial Policy Resolution emphasises clearly the responsibility of Government in the matter of promoting, assisting and regulating the development of industry in the national interest. It envisages for the public sector an increasingly active role. The responsibility for the future development has been fixed exclusively on the State or State-cum private enterprise, or exclusively private sector as the case may be.

In all the schemes of Government, the needs of regional development have always been kept in mind. In view of the paucity of coal in Southern India, high priority has been given to the multipurpose Lignite Project at Neiveli in South Arcot district. Under this project 3.2 million tons of lignite are to be produced and used for (1) generation of power in a station of 211,000 kW capacity (2) production of carbonised briquettes in a carbonisation plant of about 700,000 tons annual capacity, and (3) production 70,000 tons of fixed nitrogen in the form of urea and sulphate nitrate. The establishment of Neiveli Lignite project has greatly increased the prospects of industrialisation in Madras State.

Apart from the projects in the public sector, all feasible schemes proposed by the private sector have received the active support of both the Central and State Governments.

That the State is making steady progress in industrialisation is borne out by the fact that capital investment in industries has increased from Rs 2523 lakhs in 1955 to Rs 2735 lakhs in 1956 representing an increase of 8.4 per cent. The value of the products of industries has increased from Rs 10083 lakhs to Rs 11057 lakhs during the same period. Commendable progress has been made in the State in the matter of cement and sugar production. Cement production at present is of the order of 6,65,000 tons a year, and when the expansion of existing units and the establishment of new units, for all of which licenses have already been granted, take place, the State's cement production is expected to rise to 13,17,400 tons.

Sugar production at 130,000 tons is already sufficient to meet the needs of the State and there are

plans for establishing four more factories. There is already a well established cotton textile industry with 77 spinning mills and 27 composite mills. The State Government have recommended to the Centre to increase the production of diesel engines to 12,000 from the present level of 3000 and also assemblage of motor cycles and bicycles.

Steps have already been taken to explore the possibilities of exploiting the iron ore deposits in Salem. Government are now awaiting the results of the examination of the samples of Salem iron ore at the Jamshedpur Metallurgical Laboratory. The bauxite ore available in Salem has been found to be suitable for being utilised in the aluminium industry and active steps are being taken to put up an aluminium plant. It is, however, to be noted that the setting up of this plant is interconnected with the Kundah project which is to supply the required electric power for the aluminium plant. There is no point in being impatient about this because the production of aluminium requires a large quantity of cheap electricity so much so that it is generally considered that electricity is an essential raw material in the production of aluminium from bauxite.

The Chief Minister has now assured entrepreneurs that all the necessary support will be forthcoming from the Central Government for the starting of industries for which there may be scope in the State. The State Industries Development Committee has already constituted eight sub-committee for the following categories of industries: (1) Agro industries, (2) chemical industry, (3) engineering industry, (4) ceramics, porcelain, glass and refractories, (5) leather industry, (6) electrical industry, (7) forest industry and (8) cement and paper. The chairmen, who are all non-officials, have been empowered, in consultation with the Minister for Industries, to coopt members, technical as well as others with experience in particular industries and to submit the report within three months.

★

WORLD OF BUSINESS

(Continued from page 290)

In opening the public inquiry, into the question of continuance of protection to this industry, Mr C. Ramasubban, Member Tariff Commission pointed to the bright prospects of the industry and appealed to the manufacturers to take advantage of this situation by producing high quality products, at reasonable costs.

South Indian Notes

Cultivation of Cashewnuts

Among the few foreign exchange earners in the South, Cashewnut is one and as such its cultivation needs extension and further development. Though the cultivation of cashewnuts is more extensive in Kerala, cashew trees also flourish in the coastal regions of the Madras State. The present level of production of cashewnuts is just under 25,000 tons in the Madras State. The Second Five Year Plan has fixed a target of 45,000 tons of cashewnut production for Madras State. If this target is to be reached the present level of production would have to be nearly doubled.

The State Agricultural Department has already set about the task of achieving this. The main lines on which this would be done, were indicated by Mr A. Venkatesan Director of Agriculture, as propagation and distribution of seednuts of good quality and secondly organisation of crop competition for cashewnut.

The prize competition is open to two classes of competitors—those with holdings of less than five acres but not less than one acre and those with holdings of five acres and above. Besides, encouraging the better cultivation of cashewnuts the institution of prizes will also have the effect of popularising and extending the cultivation of cashewnuts, and it has been estimated that an area of 3500 acres will be brought under cashewnut cultivation during the year 1957-58 in the districts of Tanjore, Tiruchel, South Arcot, Chinglepet and Kanyakumari.

The use of improved seeds is expected to increase production ten per cent and therefore formation of 360 seed farms in the State during the Second Five-Year Plan period has been programmed. So far about 95 farms have been formed, distributed all over the rice growing areas in the State. New farms totalling 136 and 130 respectively will be started in 1957-58 and 1958-59. Primary seeds would be grown in these farms and would be distributed to the village farms. The seeds from the village farms would in turn be distributed to the cultivators. In this way, the entire rice growing area in the State is expected to be covered in the matter of availability of seeds in two years.

Finally, irrigation has not been lost sight of in the matter of increasing cashewnut production. A scheme of 'river pumping' with a view to benefit lands lacking in alternative modes of irrigation, is to be launched by the Government. The utility of the scheme will be highly enhanced in view of the decision of the Government to charge only nominal charges for the supply of water. The target for the year for organizing this system is six

places and work has already started in certain places. In certain other places community pumping schemes have been introduced. And steps are being taken to form an irrigation co-operative society comprising members who are benefited by it.

★

Second Five-year Plan

Speaking at Bangalore, Prof. Mahalanobis, the Indian Statistician, allayed doubts about the practicability of the Second Five Year Plan, and stressed that the Second Five Year Plan was not an over-ambitious one, but was quite within the realm of practical achievement.

Vouching for the soundness of Indian foreign trade position, and the strong position of the Indian currency Prof. Mahalanobis, explained that the exchange difficulties now being experienced were only a passing phase and that the excess of imports of heavy machinery equipment, only indicated that a few sectors were developing faster, and some others were lagging behind. In view of the increasing trend in India's exports and the strong position of Indian currency in international markets, it was pointed out, that the exchange difficulties would not last longer than two years and the statement of the Union Finance Minister was quoted in support of this view.

SOUTH INDIAN MARKETS

Pepper Recovers

PEPPER markets have taken a slight turn for the better during the week, thanks to reports of some purchases made by bulls and the absence of any further selling pressure from growers. In the Kozhikode market, Wynaad quality is quoted around Rs 640 per candy and the Country variety at Rs 615 to Rs 620 per candy.

Various factors have contributed to a recovery in prices. Continuous heavy rain in the growing areas is responsible for smaller arrivals in the main terminal market. The fear that the present trouble in Oman and Muscat may lead to further political uncertainty in West Asia has also proved a supporting factor.

In the New York market, there has been no change in values with dealings continuing light and confined to small spot offtake. Generally, interest is held around half

Referring to the resources required for implementing the Second Plan, Prof. Mahalanobis, said, that while a third of the total expenditure of Rs 7200 crores, would be needed by way of foreign exchange with which to make purchase of heavy machinery, the balance of Rs 4800 crores, would have to be met from internal sources and that unless sacrifices could be made by the people so as to raise the requisite resources, the result would be cutting down the domestic expenditure, with adverse consequences in regard to literacy, sanitation, health and employment.

Prof. Mahalanobis also pleaded for putting a stop to imports of non-essential goods, so as to raise the necessary foreign exchange that would be necessary to import the machinery for basic industries. Such imports were essential and more profitable than imports of essential goods, since by importing the machinery the country could itself produce the goods. Prof. Mahalanobis said that by investing Rs 80 crores on the purchase of heavy machines, India could produce Rs 70 crores worth of heavy machinery annually, and pointed to the example of China, which has got over its exchange difficulties in a similar way.

Finally, Prof. Mahalanobis suggested that a physical appraisal of the Plan allotments should be made and the same should be distributed properly over the Five Year Plan Period.

1966. According to the Rubber Board, applications for replanting subsidy are received for 8,497 acres, but the Board has accepted applications only for 6,232 acres.

The Board has advised planters to adopt suitable methods of "slaughter tapping" in the case of trees to be destroyed within one year and intensive tapping and application of yield-stimulants on trees to be replanted during the subsequent years.

Cashew

To step up Cashewnut production in the Madras State, the Agricultural Department has a proposal to procure seednuts of good quality and supply them to the growers at cost price. In addition, the Department has organised a crop competition for cashewnut.

For the Second Five-Year Plan, the Planning Commission has fixed a target of 45,000 tons of cashewnut production for Madras State. This will mean that, during this period, the production should be further stepped up by 21,000 tons. The Forest Department has planned to step up production by about 10,000 tons and the balance of 11,000 tons will have to be produced through the effort of the growers themselves. The Agricultural Department has, therefore, drawn up a scheme for planting of cashewnut in the coastal areas.

Groundnuts

Conditions in the Madras Groundnut market ruled a shade quieter during the past week. Arrivals were estimated at about 200 tons. The rate for superior oil-quality seeds was quoted at Rs 170 to Rs 173 per candy and the bold variety at Rs 165 to Rs 167.

Arrivals of summer crop in the South Arcot district centres have continued to be good. The standing crop in the Pollachi area is reported to be good; and first arrivals are expected early next month.

In the Groundnut Oil section, the rate for the ready position was quoted around Rs 335 per candy. Business was generally restricted as Calcutta buyers showed little interest.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate, while clearances were fair. There was no change in the Buff and Calf sections.

On the export front, trading slowed down due to the August holiday period in London. Madras sellers were anxious to accept slightly reduced level for fifties; but even this tendency did not help in making sales of lower grades. In light weights, business was reported done in runs and fourths at 52d (Continued on page 306)

Stock Exchanges

A SMART RECOVERY AFTER INITIAL RECESSION

Watch-Dog Writes:

STOCK markets, after suffering a sharp setback early in the week, have generally witnessed an alround recovery in prices towards the close. The initial weakness of the market had been mainly due to nervous liquidation as well as bear pressure, engineered by apprehensions over the possible unfavourable developments on the labour front. The uncertainty over the verdict of the Select Committee on the Wealth Tax and Expenditure Tax Bills, the shortage of foreign exchange, the congestion in Indian Ports and the absence of any sustained support from investors, were also factors that caused a bearish feeling in the market.

Towards the close, however, the news of the strike being called off and the emergence of support from the Life Insurance Corporation at

the low levels, imparted some strength to the market, resulting in a smart recovery in prices.

Equities on the Calcutta Stock Exchange, after touching fresh low levels early in the week, recovered substantial ground towards the close. Barring a few selected scrips which displayed some activity on special considerations, conditions on the Bombay Stock Exchange were generally dull.

There was moderate activity on the Madras Stock Exchange and prices showed small declines here and there.

Wall Street made a new low for the week ending with declines of mostly two points, being influenced by the announcement that a large New York city bank would raise its lending rate to 4½ from 4 per cent.

Calcutta

TRADING on the local Stock Exchange remained dull till the middle of last week when prices touched fresh low levels due to renewed liquidation in the absence of any incentive. With deliveries suspended owing to the threatened strike, operators were generally inclined to lighten their commitments. The uncertainty about the Select Committee's verdict on the Wealth Tax and Expenditure Tax Bills, the congestion in Indian Ports and the shortage of foreign exchange were also contributory factors to the depressed sentiment in the market. But for the news of the strike being called off and the emergence of support from the Life Insurance Corporation, the market would have wound up the week with substantial losses on balance.

The recovery in prices, noticed towards the close of the week, was partly due to a belief that the LIC might continue to lend its support to the market as the New Central Loans had been fully subscribed and on indications that States would not enter the capital market on any significant scale this year. Confidence in the market was, however, still at a low ebb and this was reflected in the turnover, which continued to be restricted.

The Giltedged market continued to present a dull front. In view of the comparatively better yield offered by the New Central Loans, the market was adjusting itself to the pattern of yield. 3 per cent 1986 Conversion Loan opened at Rs 71.95 and, after improving to Rs 72.20, receded again to Rs 71.41, to finish better at Rs 71.86.

Bank shares were quiet. Punjab National changed hands at Rs 59 against Rs 60, while Bank of Bikaner met with some business at Rs 20.35 to Rs 20.37.

Jute shares continued to remain depressed on lack of any support following the uninspiring trend of the jute goods market. Conditions abroad were also not quite favourable. The only relieving feature of trading was the comparative steadiness noticed in a few selected scrips, thanks to the news of a sharp decline in stocks of jute goods with the mills at the end of July. Prominent were Birlas having changed hands at Rs 15.19 to Rs 15.25; Chitavalash at Rs 11.75 to Rs 11.94; National at Rs 17.95 to Rs 18.10 and Reliance at Rs 6.50 to Rs 6.65. Gourepore were enquired upto Rs 228 from Rs 218.

The picture of trading in the Coal section, too, was discouraging. Operators were not inclined to enter into commitments in view of the disparity between the cost of production and the selling price of the commodity. They seemed to await the decision of the Coal Prices Revision Committee. Burrakur, after being offered at as low as Rs 21.62, recovered at the close to Rs 22.00 on speculative support. Bengal changed hands at Rs 220 to Rs 225; New Beerbhoom at Rs 13.53 to Rs 13.62 and East Indian at Rs 21.50 to Rs 21.75.

Tea shares continued to be featureless and sentiment was further affected by the disappointing auction results. It was also felt that the recent announcement of the increase in export duty would aggravate the position, especially of the Medium and Common grades. Dealings were, therefore, very few and prices also showed an easier tendency. Betjan changed hands at Rs 24.62 to Rs 24.87 against Rs 25.00 in the previous week; Hasimara at Rs 22.75 against Rs 23.00; Jaysree at Rs 9.50 to Rs 9.56 against Rs 9.69 and Tezapore at Rs 19.75 to Rs 20.00 against Rs 20.75. Bishnauth were nearly maintained at Rs 20.69.

The improvement in the offtake of picegoods was not reflected in the behaviour of the Textile scrips.

(Continued on page 305)

S. E. RLY TENDERS

Tenders for supply of the following items are invited:—

Tender No. PB[6]COS[90]52TLR (56) for supply of 875-Nos. Step Iron to IRS. Drg. No. CA.1137, Alt: 3.

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta-23 (PB Section) on remittance of Rs. 2/- per copy per tender (not refundable) by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Rly, Calcutta-23 by local firms. Earnest Money is Rs. 500/-. Closing date of the tender is 23-8-57 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid incometax clearance certificate along with the Earnest Money deposit receipt with the Tender.

Bank shares were quiet. Punjab National changed hands at Rs 59 against Rs 60, while Bank of Bikaner met with some business at Rs 20.35 to Rs 20.37.

THE PUNJAB NATIONAL BANK LIMITED

Shree Niwas, 8, Underhill Road, CIVIL LINES, DELHI.

NOTICE OF INTERIM DIVIDEND

The Directors of the Punjab National Bank Ltd., Delhi have decided to pay an Interim Dividend for the current year at the rate of Rs. 2.50 nP per share, free of income-tax. The dividend will be payable at the Registered Office of the Bank at Delhi on or after 2nd September, 1957, to the shareholders, whose names stand on the Register of Members of the Bank as on 24th August, 1957.

The Transfer Books and Register of Members of the Company will remain closed from 19th August, 1957 to 24th August, 1957 (both days inclusive).

By Order of the General Board of Directors,
A. M. WALKER,
General Manager.

Dated: 6. 8. 1957.

THE UNITED PROVINCES ELECTRICITY SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that the Eighty-first Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at its Registered Office No. 12, Mission Row, Calcutta on Thursday, the 29th August, 1957 at 11-0 a.m. for the following purposes:—

- To receive and adopt the Audited Accounts for the half-year ended 30th September, 1956 and the Directors' and the Auditors' Reports thereon.
- To declare a Dividend.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 23rd August, 1957, to the 29th August, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta 1
The 5th August, 1957.

EXPLANATORY STATEMENT

N.B.—This meeting is being convened to consider the accounts for the half-year ended 30th September, 1956, in accordance with the provisions of the Company's Articles of Association.

WORLD OF FINANCE

(Continued from page 285)

Such a development is to be welcomed, as it should decisively convince bankers that there is no sense in their continuing to offer high rates for Deposits. Moreover, the situation so presented is the appropriate occasion for the Reserve Bank to evolve new conventions about a liquidity ratio for banks. Such a ratio needs, of course, to be in consonance with the special features of the Indian banking system and the Indian money market. In this context, particular mention may be made of the unavailability of Treasury Bills as a component of the liquidity ratio of banks in India and of the failure of the banking system to invest in gilt-edged, over the past year or two, any portion of the new Deposits. It follows that, in respect of a liquidity ratio for Indian banks, the major elements will be comprised by unencumbered securities and cash balances.

In such a reading, it is possible that the present level of cash and unencumbered securities is already higher than any requirement that may be prescribed in this behalf by the Reserve Bank. However, the picture is somewhat obscured by the figures of the State Bank, whose holdings both of cash and of gilt-edged form a very high proportion of Deposits. If the State Bank's figures were excluded, the Investments of other Scheduled Banks, as at the end of July 1957, are seen to be Rs 238.40 crores; and it may be assumed that Rs 200 crores of this would constitute unencumbered securities. Cash balances of the other Scheduled Banks are placed at Rs 107.53 crores. The total of cash balances and unencumbered securities may be Rs 307.53 crores. This figure compares with Rs 985.11 crores, being the Deposits of the other Scheduled Banks. The "liquidity ratio" of the other Scheduled Banks is, therefore, 31.2 per cent.

But the point to note is that the cash balances of the Scheduled Banks are placed at a high level relative to Deposits, the ratio working out to 10.9 per cent. It is scarcely likely that Scheduled Banks would prefer to keep so high a level of their resources in a nonproductive form. If the future prospect is of increase in Deposits at a much swifter pace than the expansion in Advances, it will inevitably mean that there will be further accumulation of idle funds with banks. Since, we repeat, we envisage, in the immediate future, an increase in Advances as well as a decline in Advances, we should think that conditions would lend themselves admirably to the issue of a second New Loan by Government later in this slack season. Indeed, the position of Scheduled Banks will demand such a New Loan, unless Government prefer to satisfy this demand by sales through the Reserve Bank tap.

We need not here enter into a discussion of how best this evolving—and, as we see it, anticipated

—demand for gilt-edged should be met. But we have no doubt at all that Scheduled Banks must profess a much greater enthusiasm for gilt-edged than they have in recent years done. Failing such show of interest in gilt-edged, the Reserve Bank may choose to adopt Holland's grim precept, where banks are required to invest in gilt-edged the accruals from new Deposits. As we see it, briefly, there will inevitably be substantial scope for new gilt-edged investment by Scheduled Banks before October end.

WORLD OF TEA

(Continued from page 291)

per pound. At the close, there were buyers at 19½ NP with no sellers in evidence.

In the Cochin market, a little over 950,000 pounds was offered for export. Low-grown offerings showed a decline in leaf appearance; but occasionally high-grown teas reflected an improvement in quality. Whole Leaf grades met with less enquiry and these types were quoted easier with the exception of the best high-grown OPs. Plain BP was quoted at Rs 1.42; Low-Medium BOP Rs 1.60 to Rs 1.65; Good BOP Rs 2.10 to Rs 2.20 and well-made Black Leaf OP Rs 2.50.

At the auction in Colombo, offerings were 6,992,102 pounds. Demand was strong at generally dearer rates except for the poorest liquoring and stalky kinds. Delineation was Nuwara Eliya teas was fair, but prices of all grades were irregularly lower following quality. There was active demand for best-liquoring Dimbula/Dickoya BOPs, which were frequently 30 to 40 cents per pound dearer. Improved quality Uvas were also substantially dearer.

In London auction, held last week, offerings from North India consisted of only 8,582 packages, including some teas of new season's manufacture. It is also understood that the last of the Old season's invoices are virtually cleared. The New season's teas included some first-flush CTC manufacture from Assam and prices realised for these were well above brokers' valuations. Plain Broken Pekoe was quoted at 38d per pound.

EDITORIAL NOTES

(Continued from page 284)

irrespective regional traditions, by virtue of certain properties claimed for them. Over seven years of intense research at the Bangalore Institute has demonstrated beyond question their value as a useful supplementary diet and comparatively cheap at that. It is found that replacement of 25 per cent of rice in the usual rice diet by tapioca improves growth rate in man and animals

WORLD OVERSEAS

(Continued from page 292)

The British Government would also be happy to see the Colonial Development Corporation's managerial experience continuing to be made available to any newly independent Commonwealth country, without commitment of corporation funds. To assist development in colonial territories, the corporation's borrowing power will be raised by £50 million to a maximum of £150 million for medium—and long-term loans.

In the field of nuclear science, the United Kingdom will continue to give all possible assistance to other Commonwealth countries, including colonial territories, in developing atomic energy to meet their individual needs.

As a general point, the British Government considers that existing agencies and consultative and co-ordinating machinery are adequate for the purpose of fostering economic development.

In sum, the United Kingdom, proud of its contribution in the past to Commonwealth development, intends that it shall be continued, and that the well-tried principles and methods which have been used for this purpose and found effective shall be used.

Particular emphasis is placed on the provision of technical aid, and the British Government is determined to do everything possible in this field to meet the increasing requirements of the expanding Commonwealth. All this, it is considered, calls for a joint and unremitting effort by the United Kingdom and other Commonwealth countries to create an economic climate suitable for the expansion of production, of exports, and of investment.

Matters reviewed in the White Paper on the United Kingdom's role in Commonwealth development have recently attracted much parliamentary and public interest, London observers note. If there has been feeling evinced in certain quarters overseas that Britain has not been doing enough to help the Commonwealth, it should be quickly dispelled by publication of the White Paper. The figure of some £200 millions cited as representing the United Kingdom contribution to Commonwealth development annually over a recent three-year period is a not inconsiderable sum, taking into account the economic circumstances of the United Kingdom since the war.

In considering current and future policy, the Paper does not hesitate to make the point that the United Kingdom can only play its part adequately if the temptation to overtax its strength is resisted. The same point is made for all members of the sterling Commonwealth, that their policies, too, must have as a goal the strengthening of sterling.

Perhaps one of the main features of the White Paper is the conviction therein recorded that it is through the investment of pri-

vately owned funds in the Commonwealth that the United Kingdom can continue to make its most valuable contribution to Commonwealth economic development. The grounds for this are that private funds are both well adapted to risk-bearing enterprise and also, through the medium of public loans on the London market, to meeting the needs of governments for first-stage development.

A matter which has attracted some controversy is the future role of the Colonial Development Corporation. The Government has decided that it will not invest

money in new schemes in any territory after independence, as this would be inappropriate for a United Kingdom statutory corporation which is essentially concerned with the United Kingdom's special responsibility towards dependent territories.

While the United Kingdom, in sum, will continue to play its leading role in furthering economic development in the Commonwealth, it is also considered important to encourage investment from other sources. And for this, the efforts of all Commonwealth countries are of paramount importance, in order that suitable conditions for investment shall be created.

WORLD OF COTTON

(Continued from page 297)

on the part of handloom weavers to augment their stocks of cotton yarn, were also contributory factors. ICC Jharilla March, after touching a low of Rs 705.50, finished the week better at Rs 709.25.

✱

SPOT MARKET

The Spot market continued to rule steady and demand was centred in Surti, Kalyan and Jayadhar varieties.

On the export front, shippers did not show much interest.

In foreign cottons, Mwanza and Jinja varieties continued to attract customers at lower rates. Egyptian and American spot were also sought after. Stray transactions took place in Sudan and Egyptian styles; but mills preferred to wait and watch the situation, expecting a further break in the prices of these cottons. The forthcoming visit of the Sudanese trade delegation has also induced the mills to postpone their purchases.

✱

NEW YORK COTTON MARKET

The New York cotton market continued to be engulfed with many uncertainties. Uppermost in the minds of traders was progress of the 1957 cotton crop. To date, several cotton crop estimates have been released. Early next week, additional four to five will be made. The private reports, issued so far, ranged from 11,800,000 to 12,000,000 bales, which are as much as 1,000,000 bales over unofficial forecasts made a month ago. Crop and weather news remained, however, favourable. Middling Spot was quoted at 35.30 cents per pound.

✱

CLOTH AND PIECEGOODS

Conditions in the Bombay Piecegoods market remained steady and demand was better in respect of seasonal varieties. The main consuming centres were Calcutta, Bihar, Assam, Delhi and the Punjab.

There was a perceptible improvement on the export front also. Business with Burma was reported to be substantial; and prospects of further business with

this country on a large scale are considered to be bright. In anticipation of the issue of import licences by the Indonesian authorities, business for substantial quantities is reported to have been placed with the mills. Good business was also reported done with East and West Africa. The quantity of cotton goods, passed for shipment from Bombay during July, is reported to be better at 56.20 million yards as against 51.11 million yards in June.

✱

NORTH INDIAN MARKETS

(Continued from page 299)

Rice has, however, presented a steady appearance despite the issue of export permits by Andhra, while Pulses have made a mixed showing. Trading in indigenous Wheat is small with prices remaining unaltered.

✱

Shellac

Conditions in the Calcutta shellac market have ruled firm. Pure TN quality is quoted around Rs 86 per maund. Shipments, during August till the 3rd, were higher at 5,090 packages as against only 2,306 packages in the corresponding period of last month.

In the absence of any worthwhile buying interest, shellac values have, however, eased by about 5sh per cwt in the London market. TN December delivery eased from 199sh 6d, to 193sh 6d, finish better at 196sh per cwt.

✱

GATEWAY MARKETS

(Continued from page 296)

being quoted steady at Rs 86. Tin was fully steady at Rs 137. Since the replacement cost was much lower, consumers in tin were interested in small quantities only. Virgin Lead was quiet at Rs 80.

It is learnt that metal importers in the country are planning a concerted move to persuade the Government to keep imports of non-ferrous metals under OGL. It is suggested that a check on imports can be maintained by asking the importers to register all firm commitments with the authorities at the Ports immediately after the conclusion of contracts.

SOUTH INDIAN MARKETS

(Continued from page 301)

and 47d respectively. In the 10-12 lbs, there was only limited demand for runs and fourths at 38-30d; but fifths were not in request.

In Tanned Skins section, arrivals of both Goat and Sheep skins were moderate and there was fair clearance of both. Prices were generally weaker by six to twelve pils per pound.

In the export section, business was reported done in 5½-6 lbs runs at prices ranging from 14sh 6d to 14sh 9d. Small quantities of 11-12 lbs fifths were reported to have been sold at 10sh 9d. In the Sheep skins section, primes and semiprimes were steady as sellers were holding on. There was moderate enquiry for common quality Persian sheep 7-8 lbs averages.

✱

Tobacco

According to the latest figures, the all-India third estimate of Tobacco for 1956-57 puts the current year's area and production at 1,007,000 acres and 300,000 tons as against adjusted third estimate of 997,000 acres and 287,000 tons for 1955-56, showing an increase of 10,000 acres in area and 13,000 tons in production.

The increase in production has been shared by almost all the major tobacco-growing States except West Bengal. This estimate does not contain information in respect of the late variety of the crop growing in Uttar Pradesh. It also does not give information about the final position of the crop in the case of the Punjab, Kerala, Rajasthan, Delhi, Himachal Pradesh and Tripura.

✱

Bangalore Silk

According to a monthly report, issued by the Central Silk Board, Bangalore, all the varieties of Filature Silk maintained a steady trend during July, 1957. Both Kollegal and T. Narsipur, which opened the month at the identical figure of Rs 33, improved to close at Rs 34 per case. Kanakapura and Channapattana moved up from Rs 36 to Rs 37.

Fluctuations in the Charka varieties of silk were rather erratic. The price of the second quality Charka silk ranged between Rs 20.50 and Rs 23.50 and the third quality finished at Rs 22 after opening at Rs 19. A similar range of three points was maintained in the domestic quality, which would up the month at Rs 31.

The rate for spunsilk remained constant at Rs 20 throughout the month. Prices of Silk waste did not show any marked fluctuations. While the Filature silk waste ranged between Rs 3.75 and Rs 5.50, improved Charka quoted between Rs 2.12 and Rs 2.37 for the first two weeks, and at Rs 2.00 to Rs 2.25 towards the second half of the month. Rates for Pierced Cocoons quoted between Rs 2.50 and Rs 2.75 for the period under review.

says
cats
can't fly?

WHO said cats can't fly?
Why only last week, I flew all the way from Bombay to London and enjoyed every minute of it.
My exclusive berth was most comfortable; the attendants extremely courteous and helpful; the food excellent. I arrived feeling fresh and happy. I only had one complaint—there wasn't a mouse in sight! A-I-I. will have to do something about that if they want more cats to fly.
When you have cargo for Europe or U.K., send it by A-I-I.

For the Investor

Stock Exchanges for Authority's Attention?

Investment Gossip:

WORD has reached me that the cheerless condition in the Stock Exchanges has found a place on the list of priority problems that Government face and intend expeditiously to tackle. There would appear to be, if I have assessed the position correctly, a feeling of wounded amour propre on the part of the authorities at the failure of stock exchanges enthusiastically to respond to the influences of India's expansionist economy.

Let me put a few facts straight. On the basis of almost every intrinsic consideration that the investor normally takes cognisance of in his summing up of price prospects, Dalal Street and Lyons Range should now be in a frenzy of bullish fervour. Production is going up, expansion is taking place, demand is mounting, sales are soaring, profits were never higher. But the fact is, as is apparent, prices are not by any means disposed to show an improving trend.

Why?

This is as good a time as any to try to provide an answer to the question. I should make it clear at the outset that I do not agree with the generally held view that the depression in share quotations has stemmed from Government's taxation policy as well as the new tax proposals. I would, however, qualify this last statement by suggesting that there are two taxes which definitely have a bearish tinge to them from the stock exchange point of view. One is the tax on bonus issues, for which, I am afraid, I am unable to hold any brief whatsoever; but, seeing that it is apparently part of the integrated tax structure that has been brought into being, we may safely dismiss any hope of its repeal. Nevertheless, I would urge authority to consider at least a reduction in the rate of tax as a means whereby Government could achieve the desired end of toning up the investment climate. The other impost, which also, I am afraid, I cannot support, is the applicability of wealth tax to the

corporate sector. In this respect, we may indulge in some wishful thinking and look to the Select Committee accordingly to amend the Bill which is on the table of Parliament.

Explicitly, I would like to add, in the matter of Government's taxation policy, that the structure that they have created—except for the reservations that I have just made—is, to my way of thinking, entirely unobjectionable.

While, therefore, there can be no doubt that the bonus tax and wealth tax as applicable to companies may have their bearish connotation for stock exchanges, these taxes cannot be more than partly responsible. To find the root cause of the present stock exchange malaise, our diagnosis must extend to the heart of the matter.

This, undoubtedly, has substantial regard to the chaotic state of the structure of interest rates. An article in the World of Finance section studies this question, and suggests what a coherent pattern should be. For the present, I would like to point out to authority that, while the prospect of capital appreciation is surely one of the considerations borne in mind by the investor, even more important is the current yield that he gets on his investment. This yield has necessarily to be part of the pattern of interest rates. It has to be much higher than the banking rates—if the Government Loan offers 4 per cent, then, inescapably, the advance rate of banks is normally at a minimum of 6 per cent; and this means that the minimum yield expected on equities is around 7 to 9 per cent.

So, the structure of interest rates is inextricably linked with prices on the stock exchange. If, from the higher earnings of industry, higher dividends were freely permitted, the problem would be much less severe than is actually the case. But, for very proper reasons, a brake has to be placed upon the distribution of profits by companies. Hence, in the short-term view, both in its aspect of being disinflationary and in its encouragement of a ploughing back of

HIGHLIGHTS

Firstly, the national debt is very near the ceiling.

Secondly, the longest dated loan that Government can borrow is for two to four years.

Thirdly, the interest offered is the highest in 25 years.

These are three facts about the world's strongest Government—America—that in respect of its gilt-edged is forced to borrow from weakness.

Until recently, matters were no better in the United Kingdom.

There is now, however, the realisation that Bank Rate may be an outmoded weapon.

As such, there is evidence that the UK monetary authorities are carefully preparing the ground for a large refinancing operation coming up in November.

There is the prospect that the refinancing issue may be made more favourable to Gov-

profits, the dividend tax is justifiable for a year or two. However, I am afraid that a possible cause of stock exchange despondency may lie in the decision by Government not to permit any increase in the dividend on Indian Iron ordinary shares. True, Government can state in their defence that they are acting in the interests of the shareholders themselves; that is, the more the money available for internal finance, the sooner will be repaid the debts taken on by the company in respect of its expansion programme. Against this, we have to take account of the fact, firstly, that the running yield on the investment must occupy a satisfactory rung on the ladder of interest rates; and, secondly, that there is an apprehension that, once the expansion programmes are completed, the steel industry may be nationalised.

So, in the present circumstances, if Government are really anxious to revive the faltering investment climate, action they have to take must comprise:

- (i) Restoration of normalcy in the pattern of interest rates;
- (ii) Reduction in the Bonus Tax;
- (iii) Non-application of Wealth tax to the corporate sector; and
- (iv) Either an indication that a higher dividend on steel shares will be permitted, or an assurance that the steel companies will not be nationalised, say, for 15 years.

In conclusion, I offer the following extract of views on steel shares expressed by an esteemed contemporary:

"Those who argued during the recent setback in prices that the 'bull' market persisted and that this was an opportunity to pick up sound shares cheaply are now patting themselves on the back... A batch of good company results has warranted increased support for industrial equities and not least for the Steel share section. But for the political threat of renationalisation of the industry, Steel shares would not be offering yields of 7 and 8 per cent on dividends covered six or seven times over by earnings, and the financing of ever-expanding output in consequence presents acute problems. On the one hand the companies must retain the bulk of their earnings to devote to new capital investment; on the other, if they need money from the public then it must be by a 'rights' issue of Ordinary shares which must bear an attractive rate of dividend. Moreover, the threat of a State takeover is

itself an argument in favour of a more generous dividend policy to shareholders who have supported the industry's burst of freedom."

No, the quotation is not from an Indian newspaper; the extract is taken from The Sunday Times, London.

£R4

Investment Notes:

Shipping shares have presented a firm front. In Calcutta, India Steamships have steady buyers upto Rs 10.40. In Bombay, Scindia Steams have moved up to Rs 19.70 from Rs 19.35 and Great Easterns to Rs 22.50 from Rs 22.15. The main inspiration is derived from the fact that the shipping industry is receiving favourable consideration by the Government. It is also believed that further finances may be set apart to enable the industry to surpass the Second Five-Year Plan target.

Imperial Tobaccos have eased off to Rs 13.75 from Rs 14.25 quoted a week ago. The company has recommended a final dividend of only 3 per cent making a total of 7 per cent for the year ended 31-3-1957 as against 8 per cent in the previous year. Transfer Books are closed from the 9th to the 26th September, 1957. The net profit shows a substantial drop from Rs 1.86 crores to Rs 1.38 crores.

In Bombay, the Chairman of the Tata Locomotive and Engineering Company has indicated that, while no decision has yet been made, the possibility of an additional issue of equity shares, possibly in the form of Debentures convertible into Ordinary shares, cannot be ruled out.

The directors of the Bombay Burmah Trading Corporation have decided to recommend an interim dividend of Rs 11.25 per share on the Old shares (same as last year) and proportionately on the partly-paid shares. In addition to this, they have also recommended Rs 7.50 per share to be paid out of the suspense account. As they have now implemented the scheme of arrangement in regard to the extinguishment of the preferential rights of the late Mr William Wallace, hope is entertained that the company may consider splitting up the shares to enable the shareholding to be more broad-based.

In Madras, the Indian Overseas Bank Limited has proposed to issue 25,000 Ordinary shares of Rs 100 each for cash at a premium of Rs 10 each, to holders as on the 9th September, in the ratio of 1:2. The new Ordinary shares shall rank pari passu with the existing shares. A sum of Rs 25 per share with a premium of Rs 10 per share shall be payable on application and the

ernment by placing a longer maturity on the new security.

We come lastly to India, where gilt-edged is not quite in the sore straits that it finds itself in the USA.

But a study of the New Loan cash subscriptions offers an ominous lesson.

What that lesson is, and how India may yet evolve a policy of borrowing from strength, are the topics that are touched upon in the World of Finance section.

balance payable by calls at the rate of Rs 25 per share at intervals of not less than six months.

Jeyapore Sugar Company has decided to convene a meeting on the 23rd August to consider the increase of the authorised capital to Rs 1 crore by the creation of 15,000-6 per cent Cumulative Preference shares of Rs 100 each; 10,000-7 per cent Second Preference shares of Rs 100 each and 2,50,000 equity shares of Rs 10 each.

Travancore Chemical and Manufacturing Company has decided to issue 20,000 Ordinary shares of Rs 10 each, at par, to the Ordinary

and Preference shareholders in the ratio of 1:4. The company has agreed to accept letters of renunciation from sellers for a period of three weeks from 20th August, 1957.

Varying Fortunes For Tea Companies

Balance-Sheet Reviews:

FOUR Tea companies—Basmatia, Mim and Rajgarh (in Andrew Yule group) and Teen Ali (in Octavius Steel group)—have presented their reports and accounts for the year ended 31st December, 1956. Except Mim, the working results of the other three companies are excellent and the dividends in these cases have been raised from 1955 levels.

Although the crop has declined from 7,782 maunds to 7,104 maunds, the average price realised by the Basmatia Tea Company is higher at Rs 2.57 per pound against Rs 2.14. With the result, profits have risen to Rs 2.86 lakhs from Rs 2.16 lakhs in 1955. The Taxation amount has been raised from Rs 1.05 lakhs to Rs 1.22 lakhs and General Reserve from Rs 60,000 to Rs 75,000. Even after these increased allocations, the directors have found it possible to raise the dividend from Rs 1.50 to Rs 2.00 per share. The company's application with regard to the issue of bonus shares by capitalising a sum of Rs 5.10 lakhs is still pending with the Controller of Capital Issues. Estimates for current season provide for a crop of 8,000 maunds.

In the case of the Rajgarh Tea Company, both the crop and the average price realised are higher. The crop amounts to 6,013 maunds against 5,532 maunds, while the average price has risen to Rs 2.65 from Rs 2.17 per pound. With the result, the profit is more than doubled to Rs 1.89 lakhs from Rs 67,393 in 1955. The Directors have, after setting apart Rs 41,683 (Rs 51,573) for Depreciation and Rs 1.35

lakhs (Rs 62,000) for Taxation, raised the dividend to Rs 4 from Rs 2.50 per share. As in the case of Basmatia, the company's application with regard to the bonus issue is still pending with the Controller of Capital Issues. Estimates for current season provide for a crop of 6,500 maunds.

Quite in contrast, the Mim Tea Company has reported a decline in profit from Rs 65,269 to Rs 10,126 for 1956, although the crop is slightly higher at 2,092 maunds against 2,068 maunds and the average price realised at Rs 3.44 against Rs 3.16 per pound. The directors have, in their report, stated that, when the programme of slope pruning is completed by the end of 1958, larger crops will be obtainable from the garden.

The Teen Ali Tea Company, in Octavius Steel group, has reported excellent results. Despite the fact that the garden was damaged by hail on the 17th March 1956, the crop has shown a rise to 7,735 maunds, while the average price realised is also higher at Rs 2.9-8 against Rs 2-2-6 per pound. The net profit amounts to Rs 2.12 lakhs against only Rs 75,068 in the previous year. After setting apart a sum of Rs 75,000 for Building and Machinery Reserve, the Depreciation amount has been raised to Rs 60,776 from Rs 54,018 and the Taxation provision from Rs 50,000 to Rs 2.00 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend from 20 to 30 per cent. Estimates for the current year provide for a crop of 7,200 maunds.

Prospect and Retrospect

THIS year's anniversary of the attainment of freedom is unique in that it offers, not one, but three perspectives for contemplating on the nation's march. The occasion offers not merely a vantage point from which to review the doings of the past year, but also a promontory from which to view the fruits of a decade's endeavour—the nation's first since it came into its own after centuries of foreign domination. By a coincidence, this year is also the centenary of the first considerable organised protest against British rule. The simultaneity of three such views of the corridor of time enables us to supply the necessary correctives for the too exclusive contemplation of one picture or the other. The long stretch of a hundred years gives us some sense of the direction in which we have been moving, but the details are rather blurred. On the other hand, in the picture of the year's doings, it is hardly possible to see the wood for the trees. The ten year picture is just what we needed to fill in the details the first lacked and to provide the stance to see the details in the picture of the year's events.

One need not be particularly chauvinistic to emerge from such a meditation with the impression that this ancient land has the most amazing vitality of spirit; and, with the purposiveness and sense of dedication of the last ten years, it will bequeath to remoter times the splendour of its dawn. One also, let us immediately add, comes away with the uneasiness that, if the lessons of this stretch of history (as, indeed, any other stretch of Indian history) are not learned, our freedom, won at the cost of generations of patriotic effort, would not be worth a day's purchase.

To the myopic who cannot see beyond last year's events, the prospect may seem rather bleak. As has only too often been repeated in the last few months, we are in the grip of a crisis. But such crisis is not so much of circumstance as of spirit. That circumstances have been trying, no one can deny. More than even the much talked of foreign exchange stringency, the problem of inflation has been the greatest corroder of morale. The spectre of the shabby little man running round in circles to catch up with the prices is haunting the country. The only effective incantation that can exorcise this oppressive spirit is a real and massive increase in production. But this is not something that can be clearly seen in a picture that delineates a year's doings. Hence, the despondency in the contemplation of the last twelve months' economic history, despite the fact that the year also saw the symbols of potentially productive endeavours. The opening of Mayurakshi and Hirakud dams, to choose only examples in the irrigational sphere, represents the only answer to a question which no Pay Commission can ever solve.

It is despondency of this sort that the picture of a decade's achievement will dispel. Forgetting for the moment the truly breathtaking amplitude of success in the political and social endeavour of the period, and confining ourselves to the economic landmarks, we see the steady rise in production in agriculture and industry, and a planned diversification of our economy. It is true, a great deal remains

to be done, and it is also true that not as much as could have been got out of the existing facilities has been obtained. But it cannot be denied that, both in agriculture and in industry, the foundations of a strong, resilient and broadbased economy have been laid.

A hundred-year view of our immediate history sets in motion a variety of reflections. Whatever may be one's slant on the 1857 rising, with it, certainly, dates the beginning of the end of the British Empire in India. The hundred years since 1857 saw the steady rise and fulfilment of the resurgent national spirit in which there were not a few occasions when things looked much bleaker than on the eve of the second decade of our freedom. As Mr Nehru pointed out in his address, what sustained us on all such occasions was the clarity of the vision of the things we fought for. This is one important lesson of the period. Another lesson of the hundred years since the "mutiny" has its relevance to our current battles. That lesson is gleanable not only from the successes, but, more tragically, from the failures of that long drawn out era. That lesson is nonetheless relevant, for all that it is trite. It is, in a word, the need for an unclouded vision of the fundamentals and an unshakable unity of purpose backed by a feeling of common destiny for all that have the good fortune to belong to this many splendoured land.

Has this lesson been learnt? To an impartial observer, it would appear that the people as a whole do share the undimmed vision of the future that is desirable, but that such a vision is not backed up by the necessary

Indian Finance

Established 1928

Wise man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

resoluteness of spirit and unity of purpose. Ten years of freedom, following a hundred years of struggle, have not yet given us the necessary sense of collective destiny for every one from the Himalayas to Kanyakumari. There can be no greater patriotic duty to which we can dedicate ourselves on this day, than the instilling in our people of this moral of the history of the last hundred years.

The issue before the country is clear. While independence has been won, and the necessary measures for its consolidation and stability have been correctly conceived and are being energetically executed, the people at large should realise that the plans and projects in this respect could not achieve fruition solely through the initiative and by the efforts of the Government.

That is to say, Prime Minister Nehru and his colleagues could not work, so to say, in a vacuum. They can produce the results only if the plans are recognised to be the People's Plans, and if, accordingly, every section of the population makes its due contribution and strengthens the hands of the Prime Minister in every way.

India is fortunate in having the forceful and dynamic leadership of Mr. Nehru. A leader, in his return, needs, for successful functioning, resolute followers with faith, understanding and courage.

The Plan presents a challenge to each and every one of us. And each and every one of us must meet the challenge in a spirit of dharma and confidence.

British Industry's Contribution to World Trade

By SIR NORMAN KIPPING

[Sir Norman Kipping, who visited India earlier this year, describes in this special article how British industry has adapted itself to the changing conditions in world trade. In 1956 the industry's exports totalled nearly £3,172 million. India was the fourth biggest customer; her imports included £4,000,000 worth of contractors' plant.]

OF all the economic activity in the United Kingdom (that is what the economists call the gross domestic product), a mere 5 per cent is devoted to agriculture and fisheries, including forestry. Forty-two per cent is devoted to mining and manufactures. This pattern is unique among all countries. Even in the highly industrialized USA, mining and manufactures are 34 per cent of the gross domestic product.

Consequently, Great Britain is a very big buyer of food and feedingstuffs, and has therefore the most compelling reason for remaining a big exporter of manufactured goods. Oversea earnings are, for Great Britain, the

very means of life, and all her economic policies are naturally most powerfully influenced by this fact.

What success does Great Britain have? Although not quite as much as she would like, her performance is remarkable. Britain has a little under 10 per cent of the industrial capacity of the Western world. With this she secures at present some 19 per cent of international trade in manufactured goods. The USA, with half the industrial capacity, has some 25 per cent of trade. Britain's exports were valued in 1956 at nearly £3,172 million, leaving out the important "invisible exports" of insurance, shipping, tourism, and so forth.

BEST CUSTOMERS

This huge total of exports is spread, of course, over all the markets of the world, but the biggest customers in 1956 were the USA, Australia, Canada, India and South Africa, in that order, and about a quarter of all exports were sold in Western Europe. In fact, Britain's best customers are, in general, highly developed countries; the biggest of all, and a growing market, is the United States—herself the most advanced industrial producer.

This ought not to surprise us, for it is in countries with high standards of living that there is most money to spend. Poor countries are, in proportion to their size, only small importers. Consequently, Great Britain as a whole has nothing to fear from the rapid development of new countries—on the contrary, she can expect them to become even greater customers for her goods as they progress; but, of course, it will be different kinds of products that such countries will wish to buy.

Developing countries may equip themselves, quite early in their progress, to make ordinary textiles, some prepared foodstuffs, pots and pans, and then on to foundries, utility pottery, fertilizers, and so on. Soon, if their natural resources permit, they may begin to make steel and convert it into rails and building materials and sheets. But they need to import most things that are "scientific", such as machine tools, instruments, many chemicals, artificial fibres, aircraft, road vehicles, and tractors, earth-moving equipment, mining machinery, printing machinery, and countless other advanced (and still rapidly advancing) products, many of which will, for a long time, be beyond their own capacity to design and produce.

This natural course in the development of new countries is clearly reflected in the pattern of Britain's exports. For example, look at these figures:

Percentage composition of UK exports by value			
	1913	1928	1956
Cotton textiles	34	32	11
Engineering products (including vehicles)	12	16	40

GREAT CHANGE

This story of great change reflects, of course, the development of textile industries, notably in India and Pakistan, which naturally are not too popular with the corresponding industries in Britain, but which have led to, or have been accompanied by, a growth of Britain's total exports, often to the same markets.

For her future exports and their growth, Britain therefore looks firstly to her "scientific" industries, and to her pre-eminence in discoveries and developments in scientific fields, and secondly to high-quality specialized goods in the older industries such as cotton, where she has and can maintain a technical lead ahead of newer nations.

All this clearly shows that Britain can afford nothing out-of-date in her industrial methods, and explains why, especially since 1948, there has been such a vast move forward in re-equipment and mechanization, and in the introduction of countless new products and new industries. Indeed, so rapid is the rate of change that forecasts about the pattern and value of exports a few years ahead have become of doubtful value for a new reason; much that will be sold even five years from now is still undeveloped, and much that will be sold 10 years hence is today almost unimaginable.

Certainly, 10 years ago few would have dared forecast that the Calder Hall atomic

power station would have been successfully running for nine months, justifying the establishment of a £900,000,000 programme of further stations in the next few years.

Thus power from atomic sources will become a significant factor in Britain's fuel budget many years sooner than forecast, strengthening her economy at many points. And note that these new stations are not to be mere copies of one another. Their design and construction is in the hands of five great groups of companies, each pursuing its independent line of development and so ensuring that the advantages of scientific and technological competition will be given free rein.

In the field of radioactive isotopes, Britain remains the biggest exporter in the world, and I am told that the rate of development in this field is one new application a week.

AIRCRAFT AND ENGINES

Turning to aircraft, Britain has captured world markets for gas-turbine aero-engines, Rolls-Royce alone having orders for over 2,000, which is well over half the outstanding orders in the world. And the de Havilland Gyron, Rolls-Royce Conway, and Bristol Olympos engines have, of course, the highest thrust figures in the world.

As to aircraft themselves, 372 Viscount turbo-prop airliners have been ordered by 34 airlines, six Governments, and five private organizations, a considerable proportion in Canada and the United States; and 220 of these have been delivered. Now the Britannia turbo-prop airliner is getting into her swing—70 were sold or on order last year, five for a US airline; 34 Comet IV pure-jet airliners were on order, 14 for a US operator; and now Trans-Canada Air Lines have ordered 20 Vickers Vanguard turbo-props, with an option on four more. This order is of special interest as being the largest single commercial dollar export order since the war, the total value (with spares) being £24,000,000.

Then, of course, Britain is making Gnat fighters and Canberra bombers for India, Sea Hawks and Hunter trainers for the Netherlands, Pembroke transports for Denmark, and helicopters and Heron airliners for many countries.

Other engineering products cover such a varied field that any full survey is beyond the scope of this article.

I will pick out for mention the manufacture of contractors' plant—earth-moving equipment and other associated machinery. The development and output of this type of plant has been remarkably rapid since the war, and has reached now some £80,000,000 a year, almost a half of which is exported. India last year was a buyer for £4,000,000 of this plant, including portable air compressors.

A British firm has recently produced one of the largest walking dragline excavators in the world, with a bucket of 20 cu. yds. capacity on a 282 ft. beam. This is used for open-cast coal mining, a field in which 9,000 men do work which, by the methods of last century, would have taken 500,000.

Britain is producing, too, an increasingly wide range of crawler tractors, which used to be supplied exclusively by the United States. A British firm has produced a tractor-towed "train" which carries out the whole process of soil stabilization, pulverizing the soil to sufficient depth, spreading and mixing the additive and compacting the mixture in a single traverse of the site.

REMARKABLE DEVELOPMENTS

Of many remarkable achievements in the electrical field, the transatlantic telephone cables made in England and laid by a British

cable ship are a remarkable example. The quality of speech transmitted by these cables is almost perfect. Now work is going on for the design and manufacture of a power cable to link Britain with the continent of Europe.

Equally remarkable developments have occurred in machine tools, office machinery, electronic control gear of many types and in great variety, mechanical handling equipment, air-conditioning machinery, agricultural machinery, machines for making synthetic fibres, spraying machinery, Diesel locomotives, and even in prefabricated buildings, and all are contributing notably to British exports.

But the older industries, too, are changing rapidly. Lancashire is becoming increasingly the centre of a textile rather than a cotton industry. There have been remarkable developments in the application of new finishes to cotton fabrics, such as in "no iron" cottons, in which Lancashire was easily first in the field. "Terylene" was a Lancashire discovery.

Britain consumes 21 per cent of the total free world wool clip, a larger amount than any other country. She is the world's largest producer and exporter of wool tops, and except for the USA is by far the biggest producer of worsted yarns and of woven fabrics. Britain's share of the total world trade in woollen goods is 35 per cent, and of course the woollen manufacturers, besides cotton users, are big consumers—in new mixtures and blends—of the new man-made fibres and of new finishes.

To take an example from metals: in the space of 25 years, the consumption of the British aluminium industry has grown from 25,000 to some 400,000 tons a year. This is the equivalent of more than 1,000,000 tons of steel, more than one-eighth of this being directly exported, and of course much more of it goes into products which are themselves exported, such as ships, vehicles, and electrical products. Britain now has in service her first two all-aluminium bridges, while she has pioneered the use of aluminium in constructing large structural members, such as the huge hangars at London Airport, and the booms of very large dragline excavators.

There remain many industries unmentioned: chemicals, full of new developments in plastics, drugs, artificial fibres, solvents, dyestuffs, corrosion-resisting treatments, and so on; telecommunications, radio, electrical components; paper-making, printing, bookbinding; the great motor industry, Diesel engines, bicycles; building materials, glass, metal windows; fine pottery and domestic and electrical ceramics.

Throughout, British industry is expansionist in feeling and scientifically and technically advanced, and sees clearly that its future rests upon its ability to retain its leadership; to be always ahead in this sense of the developing countries and so to be able to supply their needs, as they develop, for the very means by which that development can be achieved.

INVESTMENT

Finally, a word about investment. No man can invest anything but his savings, and no country can invest at a greater rate than it can accumulate surpluses in its balance of payments in international trade. British industry strives to make this surplus larger and believes it will succeed, and there will then be no hesitancy to invest the larger sum.

The choice of where to invest, and in which forms of development, is of course mainly a matter of individual choice by the enterprises and individuals concerned, and is made on the basis of factors such as political and economic stability, confidence in freedom from political interference (in particular, the possible risk

of expropriation), levels of taxation, working conditions for British technical and other staff, profitability, and so on. Developing countries, therefore, face a competitive position as between themselves as to the conditions they can offer to attract the investor, and it really is not much use blaming him if these important considerations are overlooked.

For India, very many British firms and countless individuals who know her feel

warmth and sympathy, though at the present time many have understandable doubts about her intentions and ability to make the economic readjustments which her economic position requires. My personal expectation is that she will do so, and surmount the hump of difficulty of the next few years. My plea to her is to face the facts as they affect the attraction of foreign capital, and to act accordingly.

The Multi-lingual Tangle

THE Report of the Official Language Commission provides fresh testimony to the uncomfortable fact that life in free India is becoming more and more complicated day by day and, for vast numbers of people, frequently uneasy. If the Commission's Majority Report were to be accepted, a new and bulky chapter of coexistence with all its agonies will be added to the book of contemporary national life.

While no restrictions are sought to be imposed for the present on the use of the English language for any of the purposes of the Union, all India services and agencies like the railways, posts and telegraphs, excise, customs and income tax departments are to evolve a measure of "permanent bilingualism". This stipulation is further explained as the use of Hindi for purposes of internal working and the use of the regional language in public dealings in the respective regions. What the Commission describe as bilingualism will actually be trilingualism, as English and Hindi will continue to coexist for internal and regional purposes, a circumstance which might inspire prayers for cutting down the transition to as brief a period as possible even by those who see infinite virtue in the status quo.

The University Commission and all the State Governments are in favour of the regional language being made the medium of instruction from the primary to the post-graduate classes. The Official Language Commission want at least a reasonable measure of knowledge of Hindi for every member of and aspirant for Union Services the only exception being those already in service and above forty-five, even for whom a "comprehending knowledge" of Hindi is insisted on. Nor are State Government employees exempt from this obligation. This is, however, confined to those ranks and categories of officers who will have to deal with Hindi communications from the Union and other "Hindi" State Governments. Stenographers and typists acquainted with English alone will have to cultivate the new linguistic medium.

From the time of the changeover, which the majority in the Commission believe feasible within the time limit set by the Constitution, the Supreme Court is to function only in Hindi, the only deviation being in respect of the issue of processes to parties in non Hindi regions, where the translation in the local language will accompany the original. The High Courts "will be facing both ways" with a Hindi face turned up toward the Supreme Court and with a local language face to look down to the District, Sub-Divisional and Munsiffs' Courts, all functioning completely in the regional languages. The decrees and processes of the High Courts will have to be at least in two languages, Hindi and the regional language and, if they choose, the High Court judges can deliver judgments in Hindi, English or in the regional language—provided translations are also made available. The entire statute law of the country, as also the statutory orders, rules, etc, issued under any law passed by the Parliament or State legislatures, will also be in Hindi.

Besides, Hindi is to be made compulsory at

the secondary stage of education all over the country, though the time for the introduction of compulsion is left to the discretion of the State Governments. English will continue as the second language and as a language "of comprehension" instead of as a literary language, as it is now being taught. After due notice, Hindi is to take its place as an alternative medium to English in the competitive examinations in all India Services.

Two out of the twenty-one members of the Commission, Dr Suniti Kumar Chatterjee and Dr P. Subbarayan, have appended dissenting notes, challenging the major assumptions of the Majority Report and questioning the political wisdom of replacing English as the language for "pan Indian affairs" by Hindi, a language which, in their estimate, is not sufficiently worthy of that role. Dr Subbarayan would have English as the permanent medium of instruction at University stage, though its scope might be restricted to scientific, technical and technological subjects. In its present status, he would like English to continue for a very much longer time than the majority, endorsing the Constitution, think desirable.

The two dissenting notes undoubtedly reflect overwhelming sentiment in Bengal and Tamilnad. It is more logical to argue, as Dr Subbarayan appears to have done, that the political troubles of the Indian Union will be aggravated if the introduction of Hindi were to take place at the pace suggested by the Majority Report, than to see opportunities for disintegration if the linguistic changes proceeded less speedily and more cautiously. The Majority Report warns that tardiness in the implementation of the measures necessary for according the official language of the Union its true place for subserving the unity of India could be countenanced only at the nation's peril.

It is heartrending to hear the Prime Minister referring to current events in Assam, Rajasthan and the Punjab and interpreting them as signs of disintegration in the country. It is, therefore, equally pleasing to see that both the majority in the Official Language Commission and the minority of two have stuck to the most appropriate criterion in suggesting the character and pace of the changes each thinks desirable.

But, in suggesting exactly contrary courses for meeting the requirements of national integration and stability, they have set an unenviable problem for the Parliamentary Committee which is to sit in judgment over the Report. The multilingual character of the Indian Union has already given enough torments to justify indifference or excuse shortsightedness or haste in the matter of further changes. That the people of several States are unable to view with sympathy the provision in the Constitution for the complete replacement of English by Hindi as official language within the next eight years, is as much an emotional as an intellectual reaction. It should be clear by now that a mere Parliamentary majority in favour of certain steps is not tantamount to corresponding popular approval.

The principal claim for Hindi rests on its being the language of the largest single group in India. The Commission have to be congratulated for rejecting the plea for thrusting a South Indian language down the throat of the Hindi speaking population as a compulsory subject for study. To ask the Hindi speaking population to acquire knowledge of another regional language may equalise the burden, but will in no way simplify matters for the non Hindi speaking people. Even the latter should be thankful that their brethren elsewhere have a comparatively easier time in this respect.

The real objection of the non Hindi speaking people to the Constitutional provision springs from positive reasons. They fear that, apart from the need to study a new language and become proficient in it—if at all they have to compete for all-India services and professions—there will be an immediate lowering of standards everywhere if a comparatively undeveloped and inadequate language such as Hindi is installed as the official language of the Indian Union. We are afraid the Commission have not met this objection. At least, that is the impression to be gathered in a study of the press summary of the Report. Mixed up with this objection is the emotional cry against linguistic imperialism, which, whatever might be its justification, is an extremely serious factor to reckon with.

Willynilly, some excellent precedents are being set up to satisfy the regional aspirations of India. The President, for instance, has established the practice of celebrating the Independence Day in a Southern city and the Republic Day at New Delhi. Such gestures and precedents would stifle the growth of grievances, relevant or irrelevant. Placed as we are, certain exceptional circumstances have to be squarely faced in all their awkwardness.

A common national language is indeed desirable, if not indispensable, but, when every Indian language—and there are, unfortunately, fifteen of them—claims a status of near equality, it would certainly be wiser to accommodate the presence of another which, by general acceptance, has contributed a great deal to the sense of national awakening and unity, has served as an effective instrument of national education and international contacts, and even now remains acceptable to the intellectuals of all linguistic groups. The Prime Minister, more than any one else, should realise the force of the argument and the sentiment behind the plea for the retention of English as a common national medium for a much longer time than the majority of the Official Language Commission would approve of.

In so doing, he will be only endorsing a view point which a number of other eminent Indians like Mr C. Rajagopalachari, Sir K. S. Krishnan, Mr M. K. Jayakar, Sir Lakshmanaswami Mudaliar, Sir C. V. Raman and Mr K. M. Munshi have strongly upheld. It is interesting to hear the Chief Minister of Kerala appealing to the Hindi teachers and workers of his State to work with missionary zeal for the spread of Hindi. In every State, the spread of knowledge of Hindi has been taken up in the same spirit and it is silly to think of any regional opposition to the Hindi language as such (except among one political group in Tamilnad) or to the adoption of the Hindi language as a common medium, when the time does become ripe for that status. It is, therefore, both in the ultimate interest of those who advocate the cause of Hindi and in accordance with the convictions and wishes of those who resist a hurried change that the Majority Report of the Commission should be suitably modified before the national legislature takes action on it.

Back to Problems

While the threat of a strike by Union Government employees has disappeared, the broad economic problems which engendered that threat are unsubdued. It is no use disguising the fact that the choking prospect of a general wage increase for the Second Plan period, which the Tripartite Labour Conference let out by the front door, has now got in again by the back door.

The assurance of industrial peace given by representatives of labour at the Conference may not be spoiled by the temptations raised by the gains in prospect for the employees of the Union Government. But the assurance may involve new conditions and a different level of cost. Productivity and economy thus assume more than the usual significance.

Once wages and salaries refuse to be frozen, the only hope for the economy lies in the direction of increased productivity, not only for labour but for employees of all grades and categories.

Per capita productivity, when it cannot be improved through retrenchment, may yield to the only alternative possible, the stoppage of further recruitment till new levels of individual output are attained. Even here the path is not without thorns. If the screw is applied from the price-end, the entire task for the economy will become more manageable.

A Troubled Sultanate

The little war which is now going on in the Middle East principally of Muscat & Oman has begun to reveal dark potentialities. The British Government have offered military assistance to the ruler who is facing a revolt led by the Imam of Oman. Britain's military assistance proceeds from certain treaty

Editorial Notes

obligations to the ruler. In the circumstances of the present feud, the Imam naturally challenges Britain's right to interfere. Britain also seems somewhat half-hearted or, it may be, misguided by its army experts. Last week it was reported that the Imam's men arrested the advance of the combined forces of the Sultan and the British.

In the United States there is general disapproval of the conduct of Britain in lending direct military help to the Sultan and a British official spokesman has endorsed the US view that the more the operations prolonged, the greater the risk of further complications. The Soviet Government have not concealed their ire over the developments and have asked their ambassador in Cairo for the details of Britain's treaty relationship with the Sultan.

Private Air Lines

During the debate on the demand for grant for Communications, the Minister for Civil Aviation made a rather rare offer to the private sector. He asked private operators to open up new air routes wherever possible, for which they could expect Government support. State Governments too could come forward with their own independent Corporations, to assist the expansion in routes, which the Indian Air Lines Corporation obviously likes to share with others.

The background of this offer is slightly intriguing. Mr Humayun Kabir says that his Ministry has found it difficult to connect a number of important centres by air. An 'all-up' air mail service was to have been introduced as early as 1949. Actually, a number of feeder ground services continue even today. As the Government-owned air lines corporations have obvious advantages and facilities, which private operators can hardly hope to have, the Ministry's failure to develop a full net-work of branch and feeder lines is not explicable, except in terms of cost.

If it is really that, then the private operator will look for extra inducement or at least a clear assurance of non-interference with the sphere he develops, for a specific term of years. In the absence of such an assurance, the Government's offer is likely to go unresponded for sheer lack of conviction and the fear that any day a promising new line may be quietly taken over by the State.

Malayan Independence

It is a happy coincidence that the Malayan Independence Day falls in the same month as India's. On August 31, Malaya would be declared an independent nation, with Britain continuing to discharge certain commitments mutually agreed to. It is no secret that there are anx-

ous misgivings about the future of the seven lakh and odd Indian settlers in Malaya under the forthcoming independent regime. These misgivings are reflected in the leaders of the Indian community in Malaya trying to stress the fact again and again that Indian settlers had been making outstanding contribution to the economic development of Malaya.

In South Africa, in Ceylon, in Burma and in many other countries, people who went out from India can claim a similar record. This circumstance, however, has not ensured a uniformly happy future for them. In Malaya itself, the Indian section of the population does not quite approve of some of the provisions of the constitution and the attitude of some influential Malayan leaders.

Out of the total population in Malaya of a little over six million, the Malays constitute nearly half, the Chinese about 2½ million and Indians ½ million. The Indian percentage is too small to be able to make any decisive impact on the shaping of Malayan politics, though along with the Chinese the combination would match the Malayan group. Such an alignment on a purely initial basis will surely not help any body in Malaya and has therefore to be ruled out as unwise, if not altogether impractical.

As far as possible, the Indian settlers have to identify themselves with the rest of the population and be a cementing rather than a discordant force. The Commissioner of the Federation of Malaya in India has issued a statement in which he points out that there will not be racial discrimination in his country and everyone born in Malaya on or after the birth of independence would be entitled to the full rights of Malayan citizenship. This assurance is welcome. For the rest, the Indian settlers may hope that future events will shape agreeably.

The State and Education

The present controversy over the Kerala Education Bill and the alignment of opinion in it place the Congress Party in a rather awkward situation. The principle that the State should have undisputed voice in the education of its youth is now nowhere seriously challenged. Through grants, through inspection and audit, through prescription of text-books and similar exercise of authority and control in various other forms, direct or indirect, even non-Communist States have come to possess a power over the moulding of young minds which have appeared unimaginable a century ago.

If it is argued that a Communist Government would be keen on friendly indoctrination of students, it is also possible to point to non-Communist States where instruction steers clear of political and social ideas considered dangerous to

the status quo. In Kerala, the extension of authority into the private educational institutions has not commenced with the advent of the Communist Government; it started much earlier. The present Chief Minister reminds us that almost a similar measure as the present one was contemplated by his predecessor in office.

It is largely inevitable that the Opposition parties in Kerala should try to make capital out of whatever discontent is provoked by the Education Bill. In the present context, the attitude of the Congress has to be guarded, lest an uncompromising stand might be interpreted as arising from the fear that the Communists have come to stay in power for all time. In a Welfare State, education has to be brought progressively under State control and almost every aspect of it under direct state guidance and supervision.

The fear of indoctrination of a particular creed hostile to the Congress should not blind the party to the early possibility of its restoration to office, when it could start undoing whatever mischief its rivals might have done. It has to be admitted that many of the private institutions have all along been excellently managed. But that does not prevent the State coming in, as a matter of principle.

To imagine that the population of Kerala would en bloc be converted to the Communist faith, if the private schools came under the Government, which itself is only a remote possibility, is an insult to the intelligence of a highly sophisticated people. After all, there was no indoctrination by the Government before the elections. Besides, what about the State-run schools and colleges now?

Giltedged in the USA

As Mr Humphrey makes way for Mr Robert B. Anderson to succeed him as the Secretary of the Treasury, an assessment is appropriate of the tasks to which Mr Humphrey had addressed himself and of the success which attended his efforts. The first objective that Mr Humphrey had when he came to Washington was to "stretch out" the maturity of Government Loans. Secondly, it was intended to reduce the national debt of America. Thirdly, it was hoped to effect some saving in the cost of servicing the debt. Judging by events, it must be recorded that the force of circumstance prevented Mr Humphrey from attaining any of the three targets. In the first place, the average maturity of the debt has actually shrunk since the Republican Administration came into office; but the saving grace is that the rate at which there has been a shortening in the maturity has been slowed down—between 1948 and 1952, average maturity fell from a little over 6 years to a little under four years; and, since then, the average maturity has fallen somewhat further. In the second place, far from any decline in the national debt, there has been a rise since 1952, and the national debt, at \$273 billion, is very near the statutory ceiling of \$275 billion. In the third place, servicing of the debt involves an interest cost of roughly \$7½ billion; and, since 1952, the average rate of interest has risen from 2.4 per cent to 2.8 per cent. To what extent the gradually unfavourable trend in giltedged is due to the administration's tight money policy must remain a matter of debate. However, it would not be out of place broadly to review the legacy that Mr Anderson has received from his predecessor.

Of the \$273 billion of national debt, \$79 billion is held by Government in various funds and by the Federal Reserve System. The debt "held" by the general public is, thus, \$194 billion. The five main classifications of holders of Government Loans are: (1) commercial Banks, \$59.4 billion; (2) individual holders of savings bonds, \$50.1 billion; (3) individual holders of giltedged loans, \$16.5 billion; (4) Corporations' investments in giltedged, \$15.5 billion; and (5) insurance companies, \$12.8 billion. Since this is to be an assessment of giltedged, the figures relating to small savings can be disregarded. Giltedged outstanding is for an amount of \$127.2 billion. What makes Mr Anderson's job difficult is the fact that, in his first year of office, he will face \$50.6 billion of maturities; and, within the next five years, another \$30.8 billion of securities are due to mature.

But, Mr Anderson can disregard an amount of \$22 billion, which represents weekly issues of Treasury Bills. He has to concern himself, in the next 12 months, with maturities of giltedged for \$28.6 billion. Since, quite recently, the Treasury successfully refinanced maturing securities for \$24 billion, it would apparently seem that Mr Anderson's is not an uphill task. But this is to overlook the fact that the conversion loans offered by the Treasury have maturities of four months, one year, and two to four years. Unless there is a radical change in the Treasury's monetary policy, it is quite certain that the refinancing to be done by Mr Anderson will consist merely of a short term postponement in the sense that the conversion bonds will again come up for redemption within the next four years.

All too clearly, giltedged in America has come to a stage when there is bleak prospect either of reduction in the servicing charge or an improvement in the maturity pattern.

In the UK, on the other hand, money rates are easing and the giltedged market shows signs of improvement. It may be recalled that early in May, when the Treasury Bill rate had steadily declined to a low of £3-14-9 per cent, expectations were held of a further reduction in Bank Rate. Thereafter, however, the Treasury Bill rate rose to a level of £3-18-5.15 by May 31. Since then, the Treasury Bill rate has again declined to £3-16-4.7 per cent. Simultaneously, giltedged prices have improved; and, with a rise in the Financial Times index of Government securities over the week to 83.02 from 82.17, the index has touched its highest in the last month and a half. Government policy has helped this rally in prices by taking care to see that no new giltedged issue is offered.

Obviously, the authorities are carefully preparing the ground for the very substantial maturity due in November this year. The 2½ per cent Serial Funding Stock 1957, which comes up for redemption, has outstandings placed at £503 million. The Government broker is encouraging, and succeeding in his efforts, a switch to longer dated maturities and accepting as part of the swap transaction holdings in the 2½ per cent 1957. With open market operations of this kind, the departments will be able to take up the bulk of the refinancing issue. However, since the intention would be gradually to pass on the refinancing stocks to the public at large, the terms and conditions of the new issue would have to make it a sufficiently saleable scrip.

Nevertheless, since the UK monetary authorities seem well placed to borrow from a position of relative strength, the hope is being entertained in some circles that, although the interest rates will have to conform to the existing structure, the terms of the new loan would be made more favourable to Government by the issuance of a considerably longer dated stock. It is, however, too early to say whether, by the time the refinancing loan is issued, the mess of the Treasury's own making over the last two years or so will have been cleared.

Conversions have been slightly smaller than we had anticipated, but this may be simply because the Reserve Bank, in examining the cash subscriptions, chose to hold on to its 1958 securities. Be that as it may, while the source of 'conversion subscriptions' is likely to remain a secret incapable of being unraveled, the latest bank returns offer some clue as to the source of the cash subscriptions.

Giltedged in India

The doldrums affecting American giltedged must, we suggest, serve as a warning to the Indian financial authorities of the parlous plight which would face Government's loan programme unless a sound policy for market borrowings is evolved. The richest country in the world is, as we have seen, baulking at a very high cost of servicing the debt; and, in the United Kingdom, too, a school of thought has sprung up which is decrying the inutility of Bank Rate as a monetary weapon and which has been suggesting that a high Bank Rate has, far from helping the economy in any way, had the contrary effect of increasing the cost of servicing all kinds of British debt. Before, however, we examine India's giltedged position from this point of view, we may broadly analyse the performance of the 1957 New Loans.

On the face of it, the 1957 New Loans are undoubtedly a modest success. Subscription lists closed on the second day; the target was more than attained. The total realisations amounted to Rs 105.97 crores, and allotment is to be made in full. Conversions accounted for Rs 44.99 crores, and cash for Rs 60.98 crores. The medium term 3½ per cent 1967 attracted a slightly higher volume of subscriptions at Rs 58.92 crores against Rs 49.05 crores for the 4 per cent 1972.

These are all figures which are in line with what had been expected.

Higher US Interest Rates and Sterling

By PAUL EINZIG

THE increase in the Bank rate of four Federal Reserve Banks to 3½ per cent must be welcomed as a disinflationary step the effects of which are likely to be felt well beyond the borders of the United States. Provided that the measure proves to be effective within the American economy, it will contribute to some degree towards slowing down, if not halting altogether, the world-wide inflationary trend. For a stiffening of resistance to inflation in the United States is likely to force the hands of other countries—foremost among them the United Kingdom—to abandon their complacency in face of the common danger.

One of the reasons why the British Government, and to a more or less extent many other Governments, were taking recently the line of least resistance against inflation has been the absence of any undue pressure on their currencies during recent months. And

the reason for this absence of pressure has been the existence of an inflationary trend in the United States. Even though the extent of that trend has not been nearly as strong as in Britain, it has been strong enough to prevent the development of a strong pressure on sterling. Domestic demand in the United States has been sufficiently strong to obviate the necessity for American industries to concentrate unduly on an export drive by means of price cutting.

It is true, a world-wide scarcity of dollars has developed during recent months, but its extent has not been sufficiently pronounced to compel the British Government to adopt really drastic defensive measures to protect sterling. So long as wages inflation is proceeding also in the United States, the British balance of payments is not threatened sufficiently to impel the British Government to face up to

In the first place, of the total of Rs 61 crores—in round figures—of cash subscriptions, the Reserve Bank clearly accounts for Rs 15 crores. The Investment portfolio of the Reserve Bank, in the Banking Department, has marked a rise of Rs 14.81 crores; since, with the receipt of cash subscriptions, the Centre's balances are very comfortably placed, we can rule out the possibility that the marking up of Investments would relate to deficit financing.

In the second place, the return of the State Bank for August 9 reveals a very sharp fall of Rs 22.73 crores in cash and balances with the Reserve Bank; and, at the same time, the Other Assets of the State Bank have gone up by Rs 19.52 crores to Rs 27.19 crores. It may be presumed that the sharp rise in Other Assets has regard to the inclusion under this head of the "kutchra" receipts given by the Reserve Bank in behalf of State Bank subscription to the New Loan. In due course—surely, within the next week or two—the giltedged investments of the State Bank will be marked up by a figure around Rs 20 crores. And this, we believe, represents the magnitude of State Bank subscriptions in cash to the 1957 New Loans.

In the third place, we have to take account of the subscriptions from the other Scheduled Banks. This, however, is an examination (Continued on page 331)

the realities of its own inflationary situation. The increase of interest rates in the United States result in a material reduction of American savings inflation, there would soon be repercussions on the British balance of payments position. The dominant American industries feel

they can no longer depend on virtually unlimited domestic demand they focus their attention to foreign markets. The expansion of British exports, which continued in spite of the non-stop rise in British cost of production, would then encounter strong resistance. In particular, British exports to the

Dollar Area would cease to expand and might even decline. Deplorable as such developments would be from the point of view of the British economy, the change would be in the right direction provided that it would compel the British Government to take domestic inflation more seriously. It is a

misfortune in disguise that the accentuation of the inflationary increase in British wages has failed so far to affect perceptibly the British balance of payments. There are, of course, the usual symptoms marking the beginnings of the seasonal pressure on sterling. But the relative strength of the balance of payments continues to convey the impression that it is possible to indulge in an orgy of wages increases with comparative impunity. The fact that the amount of gold lost during July was negligible must have encouraged trade unions to proceed with their claims.

Possibly the Government itself would, in its heart of hearts, welcome a balance of payments crisis, which would provide obvious justification for taking unpopular but necessary measures. So long as sterling is not actively menaced it would take a considerable dose of political courage to reinforce the existing ineffective disinflationary measures to an extent to which it would be necessary to make them effective. Thanks to the beneficial effects of the American inflationary trend, the British worker can continue to live in a fool's paradise. It is true, his rising wages means rising cost of production and rising cost of living. But so long as sterling holds its own in the foreign exchange market, there is no evident and imminent danger that would induce him to moderate his demand. And the general public would regard strikes arising from resistance to wages claims as a bigger evil than a further deterioration in the purchasing power of sterling.

The question is, will the half per cent increase in American Bank rates produce the desired effect on business trends in the United States? Judging by the British experience, it would be far from safe to take this for granted. It depends on whether there will be a sufficient tightening of credit conditions to compel the American industrialists to resist wages demands. In Britain a much more pronounced increase in interest rates was unable to produce such an effect. This was because higher interest charges were simply added to the cost of production, and the industrial firms raised their selling prices. To the extent to which this could not be done, the existing high taxation of corporation profits moderated the actual loss arising from high interest rates.

Such is the balance of power between employers and labour in Britain that the trade unions are able to enforce wages increases even during periods of declining profits. Industrial firms are more afraid of losses resulting from strikes than from a decline in their earnings if they should be unable to add the higher wages to their selling prices. There is of course a marked difference in the degree of overfull employment in Britain and the United States, and also in the degree of taxation. It remains to be seen whether the difference is sufficient to make higher interests more effective than they have been in Britain.

Delays in your accounts department can slow down your organisation — hinder its growth

COMPTOMETER — the world's fastest, most accurate Adding-Calculating Machine — can handle all your figure work most efficiently!

WHATEVER THE SIZE OF YOUR ORGANISATION, an efficient accounts department is the nerve-centre of your business. Backlogs or bottlenecks will be reflected in poorer turnover, slow growth of your business. That is why progressive organisations everywhere employ Comptometers for fast, efficient, accurate accounting. Why not ask us for a FREE demonstration today?

Here's what Brooke Bond India Private Limited has to say about Comptometers:

"We have used your Comptometers for over 34 years and find them an invaluable part of our accounting system. We have now 22 Comptometers which give us entire satisfaction."

Calcutta, 11th July 1957

COMPTOMETER:

You can count on it for speedy, easy, accurate operation. An automatic control key prevents erroneous operations.

COMPLETE COMPTOMETER SERVICE

P. N. Ganesan & Sons who have taken over the Felt & Tarrant Offices in India are equipped to offer you the same quick, efficient repair and maintenance service as before. You'll get a spare machine when yours is taken for repairs. They'll train your staff free of charge to become skilled Comptometer operators. Every Comptometer you buy carries with it a guarantee, against any manufacturing defect, for one year. Write today to any of our offices for demonstration:

MADRAS: No. 12/13 Angappa Naick Street, P. O. Box No. 1257
CALCUTTA: P-35 Royal Exchange Place Extension, P. O. Box No. 2372

NEW DELHI: Lala Sriram Building, Connaught Place, P. O. Box No. 49
KANPUR: 11/209 Sm. Parbati Bagla Road, P. O. Box No. 78
SECUNDERABAD: 8062-A Kingsway, P. O. Box No. 27

P.N. Ganesan & Sons

Sole concessionaires in India for world famous Comptometer, Comptograph, Walther Calculator and Comptometer Dictation Machines hitherto marketed in India by Felt & Tarrant (India) Company

COMPTOGRAPH

It records as it calculates. It's the fastest machine in its class, and yet so moderately priced. Anybody can work it.

COMPTOMETER DICTATION MACHINE

Dictate, listen, transcribe, erase and re-use... it enables you to get through your correspondence in half the time.

WALTHER CALCULATOR

Multi-purpose calculator that can calculate anything... cubic contents, percentages, area, volumes!

World of Jute

Statistical Position

THE production of jute goods during July has increased by nearly 6000 tons over that in the previous month. The higher output has evidently been due to the larger number of hours worked in the month when they totalled 209 as compared with those in June of 1955.

As against 80,100 tons in June, production in July has amounted to 85,900 tons. Output of hessian is higher by 3,300 tons at 35,600 tons, with that of sacking also up by 2,700 tons at 45,000 tons. Production of other categories has, however, declined by 200 tons to 5,300 tons. In the corresponding month of last year total production had amounted to 94,100 tons for 200.5 hours made up of 34,300 tons hessian, 52,900 tons sacking and 6,900 tons other varieties.

Taking the two sets of figures pertaining to production and stocks for July, it will become clear that the month has been quite a satisfactory period for jute goods trade and industry. The month has begun with an opening stock of 116,000 tons. This together with the production of 85,900 tons has brought goods to be disposed of to 201,900 tons. As the month has closed with a stock of 108,200 tons, it is to be presumed that 93,700 tons have been disposed of during the month.

This would indicate that despatches during July have been nearly 25,000 tons higher than in June when they amounted to 73,200 tons. While it is true that a part of this sharp increase is to be attributed to the improvement in the traffic position in the Calcutta Port last month, it may also be permissible to hazard the guess that foreign enquiry has been fairly satisfactory during July.

After earlier steadiness brought about by the news of a larger-than-expected decline in goods stocks at the end of July, the jute goods market developed a sagging tendency in sympathy with easier raw jute prices. The closing tone was easy.

The easier trend seems to be the outcome of a growing feeling among marketmen here as well as buyers overseas that the current jute crop, though late, will be larger than that in the previous season. Such a view has derived support from reports that bumper harvests will be reaped in both India and Pakistan. The large arrivals of the old crop toward the close of the last jute season indicates the anxiety of holders to dispose of their stocks before the new crop moves into the market.

In the course of the last few days, prices in the Calcutta jute goods market have declined sharply all

along the list. Hessian 40" x 100z Ready which was quoting last Thursday at Rs 42.25 closed on Tuesday this week as low as Rs 41.50. B Twills Ready has recorded an even sharper decline from Rs 115.20 to Rs 112.90. In the raw jute market, sellers have become keen for business and are anxious to conclude business even by discounting rates. The fact that mills are keen for forward business indicates that they are anticipating rates to decline further presumably due to a belief that raw jute will become cheaper than it is now.

It may now be expected that foreign enquiries especially for hessian from US may show welcome improvement. Reports from New York indicate that during July US buyers were content to limit their forward commitments in the hope of further concessions. A contributory factor seems to be the fact that at that time the Calcutta market had been completely under the control of speculators. The decline in goods prices in the past few days may well attract considerable attention from this quarter.

The jute goods market began the week on a steady note helped by news of a decline in stocks with mills. Hessian 40" x 100z Ready opened at Rs 42.25 with B Twills quoting Rs 115.20. In the forward positions, 40" x 100z Oct-Dec was placed at Rs 42.12 with B Twills at Rs 112.75.

Despite lower advices from the raw jute section, the goods market continued to rule steady due to settlement considerations. Shortage of delivery orders kept prices up. Hessian 40" x 100z Ready was well maintained at Rs 42.28 while B

Twills declined to Rs 114. Elsewhere Hessian 40" x 100z Oct-Dec was quoted at Rs 42.06 while B Twills remained unchanged at Rs 112.75.

On Monday the market witnessed a slight reactionary tendency in Hessian which was subjected to selling pressure by speculators in the fatka. Due to speculative manipulations B Twills did not lose much ground. Hessian 40" x 100z Ready came down to Rs 41.95. B Twills was done at Rs 113.65. In the forward positions, Hessian 40" x 100z Oct-Dec was done at Rs 41.82 with B Twills 60 nP lower at Rs 112.15.

An around decline in price levels was noticeable on Tuesday in sympathy with the easier tendency in the raw jute section. Mills were heavy sellers in forward positions. Hessian 40" x 100z Ready declined further to Rs 41.55 while B Twills reacted sharply to Rs 112.90. Elsewhere Hessian 40" x 100z Oct-Dec lost 82 nP to be on offer at Rs 41.50 B Twills was on offer as low as Rs 111.50.

The following table shows the opening and closing prices of the week:

		Week's Opening Rs.	Week's Closing Rs.
Hessian:			
40" x 10 oz.			
Ready	...	42.25	41.50
September	...	42.33	41.48
October-Dec.	...	42.12	41.44
40" x 8 oz.	...	34.50	34.30
48" x 7 1/2 oz.	...	32.25	31.87
Sacking:

World of Tea

Uncertain Marketing Outlook

ADVERSE weather conditions in some of the tea-growing districts and the good care taken in plucking and manufacture are fully reflected in the output figures of North-East India teas for July. The output has declined to 79.64 million pounds from 81.28 million pounds in the corresponding month of last year. Total output so far, in the 1957-58 season, amounts to 189.62 million pounds as compared to 207.64 million pounds in the corresponding period of last season, showing a sharp decline of 18.0 million pounds. The output in the current season is also lower by 8.8 million pounds as compared with the average of 198.46 million pounds, realised during the last three years.

In general, the uncertain marketing outlook seems to have now scared buyers. The congestion at the Calcutta Port is causing anxiety, and fears are entertained that buyers may shift to more competitive teas as a sequel to shipping difficulties. The Indonesian crop is reported to be better, while East

Africa is supplying adequate quantities.

For the time being, buyers are waiting to see how the North Indian crop is going to develop. Already, it looks like being a rather poor year for best quality teas and consequently the demand for these types has been very keen in all the main marketing centres.

In this connection, Messrs J. Thomas & Company, in their monthly report, says:

"that, although Darjeeling has produced some useful flavoury teas, the standard of cup quality from all other districts is below 1956, largely due to the unfavourable climate conditions. Leaf appearance can, however, be described as fully satisfactory. Good quality teas will probably remain in short supply and a general decline in the standard of quality is to be expected in the coming month."

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 59,907 packages. There was a strong and general demand; but

buyers again paid close attention for quality. The very best CTC types were sold well, often at dearer rates. The more plainer teas of this description were up to 20 nP per pound easier. Plain and Low Medium teas met with a fair enquiry, but were from 4 to 6 nP easier. Plain Fannings, however, received more support and were often dearer. 'Teas for Price' were keenly competed for and were fully firm.

Bright liquoring non-wither Dooars were dearer, but again plainer teas of this description were easier. The Darjeeling teas, on offer, were mostly plain in quality and these were generally easier. There was again less demand for Tippy teas, while Whole Leaf grades were easier by about 10 nP per pound. Following rates were quoted:—Clean Black Pekoe Rs 2.20; Plain BP Rs 1.70 to Rs 1.75; Plain Fannings Rs 1.56 to Rs 1.60; Medium BP Rs 1.84; Medium Fannings Rs 1.85; Best CTC Assam BP Rs 4.00 and Best CTC Fannings Rs 4.50 to Rs 5.00.

In the Internal Sale, offerings were 20,414 packages of Dusts. There was a much better demand for almost all descriptions, particularly for plainer liquoring sorts from all districts, which were about firm. The brighter liquoring CTC Assams were frequently dearer, but the remainder were again a weak feature of the sale. Orthodox kinds

from this district were up to 6 nP per pound lower with the exception of the powdery descriptions which were well supported.

Non-wither Dooars were a popular feature and were sometimes up to 4 nP dearer. Orthodox descriptions from Cachar and Dooars tended to be easier. Following rates were quoted:—Medium Dooars Dust Rs 1.50 to Rs 1.55; Medium Assam Grainy Dust Rs 1.55 to Rs 1.65; Medium Assam CTC Dust Rs 2.20 to Rs 2.25 and Best CTC Assam Dust Rs 2.40 to Rs 2.90.

There was a fairly good general demand for the 1,001 packages of Leaf grades offered. The few lines of Green teas were sold well and generally realised valuations.

In the Export Quota section, rates moved between 19 1/2 and 20 1/2 nP per pound and business was reported done at these levels.

In the Cochin market, a total of about 1,200,000 pounds was offered. Quality from all districts was barely maintained. There was only a limited enquiry and prices were generally 10 to 15 nP per pound lower and withdrawals were heavy. The few invoices of best Nilgiris came to a strong market, selling at firm to dearer rates. All other high-grown teas were, however, in poor demand and were easier, their Broken's often proving difficult of sale.

Coloury Mediums again met with fair support; but eased up to 10 nP

per pound. The thinner Mediums and Low-grown found buyers scarce and, if sold, it was a drop of up to 15 nP. Black Leaf Broken and Fannings followed the downward trend and were an irregular 5 to 12 nP. easier. Whole Leaf grades found little enquiry. The strong feature of the sale was the demand for the few Tippy sorts on offer which realised attractive prices. Following rates were quoted:—Plain BP Rs 1.30; Low Medium BOP Rs 1.40; Medium BOP Rs 1.50; Good BOP Rs 1.90

to Rs 2.00 and well-made OP Rs 2.50. At this week's auction held in Colombo, offerings were 7,000,515 pounds. There was an active demand and prices were again dearer except for the lowest grades. There was a wide selection of Nuwara Eliya teas with quality showing some improvement. The quality of high-grown teas from Uva continued to improve and all grades met with keen competition at prices which were often considerably higher. The best available

Dimbula-Dickoya Broken grades were also 10 to 20 cents per pound dearer, while plainer sorts advanced by 5 to 10 cents. Pekoes from Western districts were only steady. Useful liquoring high and medium-grown Fannings followed the lines of corresponding BOPs. In the off-grades section, poor-leaved Dusts and Broken Mixeds were again easier; but useful liquoring sorts came to a dearer market. Proposals to prevent the production of inferior tea and to set up

machinery for the further development of the tea industry is the highlight of the new Tea Control Bill recommended to the Ceylon Cabinet. The Bill proposes to vest in the Tea Controller greater powers which will enable him to inspect the accounts of dealers and tea producers and to restrict the buying and selling of waste tea. It also proposes restrictions on exports of high and medium-grown teas to the London tea market to ensure that good quality tea is available for the local auctions.

SERVING THE NATION

In the new India of today, I.A.C. is playing a vital role — providing the swiftest, most convenient means of transportation, and seeing that you get the finest service!

I.A.C.'S TURBO-PROP

VICKERS VISCOUNT

ushers in a new age of air travel

NEW VISCOUNTS for I.A.C. mean the finest in speed and luxury for you. Powered by four Rolls-Royce turbo-prop engines, the Vickers VISCOUNT flies above the weather... while you relax in armchair comfort in the fully-pressurised cabin. The swiftest, smoothest flying you've ever known! The new Vickers VISCOUNTS will soon be introduced on all I.A.C. trunk routes.

YESTERDAY AND TODAY

Over the years, I.A.C. has rapidly improved and extended its services — and today, its large fleet of planes links towns and cities throughout the country. Only a few decades ago, air travel was a rich man's luxury — now, you can fly to almost anywhere in India at comparatively little cost.

COMFORT FIRST AND FOREMOST

With I.A.C., passenger-comfort is of paramount importance. Trained hostesses take excellent care of you throughout the flight; you get free transport to and from the airport, free baggage allowance, and meals are served en route!

FLYING IN THE FOREFRONT OF THE NATION'S PROGRESS

LOOKING around me on the eve of the tenth anniversary of our emergence as a free nation, I find that the current national mood is hardly of a sort that will do justice to our considerable achievement in an eventful decade. All around me, I hear nothing but muted misgiving about our ability to pull through. The Plan and the difficulties it is encountering and the steady erosion of the bases of livelihood by inflationary pressures have apparently gnawed the zest out of any self gratulatory frame of mind. Only the other day did we narrowly escape a major dislocation in national life and, though a formal orgy of discontent was spared us, the hangover of the excitement of avoiding it is still very much there. Everywhere, we hear talk of crisis and breakdown, and something akin to a paralysis of will has seized a large body of our countrymen.

The question that one would like answered is, how much of all this weariness is a passing mood and how much of it a permanent attitude. For, if it were nothing more than a momentary feeling of exasperation with the cussedness of circumstance, we need not bother overmuch. But, if it is symptomatic of what Dr Radhakrishnan the other day called a "crisis of character", then, plainly, we have every reason to worry. To my mind, the present frustration is, to a large extent, the result of immediate difficulties, and its relation to particular traits of our national character is somewhat remote. This is not to say that there are not around us manifestations of deeprooted inadequacies of national character, which in their sum constitute a severe test of our resourcefulness as a nation. These will and should, no doubt, form part of the introspection that is traditionally the duty on days of national commemoration.

Such an exercise in introspection this year is of somewhat more than usual significance, since there is a decade's achievement to contemplate and a generation's experience to assimilate. It is often said that a span of ten years is nothing in the life of a nation, and judgments based on such meagre data as a nation's deeds in a decade are likely to be lacking in perspective. This is only half true. I believe that a reckoning of the

possibilities inherent in a people can, with some approximation to accuracy, be based on a ten years' achievements. A shorter period, perhaps, would not allow for tendencies to manifest themselves, but a decade is long enough for a nation to show of what mettle it is made.

But there is another objection which is more formidable: and that is the absence of an historical perspective in a contemporary assessment. We are not only too near the events, but we have made them. In a sense, therefore, we are assessing ourselves, and nothing is more blinding than self love. Moreover, we are part of the events. The analogy of flux occurs readily in thinking of events in India in the last ten years, but one realises its more than usual appositeness only after a little thought. I think that it would be true to say that, decade for decade, year for year, minute for minute, and moment for moment, there has been no decade in our history in which such unceasing and largely creative change has taken place. There are some who would say that, considering the number of points in our collective life that have been subjected to the pressure of change, it is perhaps the dizziest period in social dynamics of any country. Such a claim is perhaps arguable, but I am content with the less immodest claim I have made earlier. A complete appraisal of the sum of the changes effected by these pressures on our social life requires an effort of imagination even for a person who has not been the subject of such pressure himself. And, to a person who has such pressure himself, it is even more difficult. All the same, I shall attempt it here.

When one does attempt this kind of appraisal, one does discover a pattern of development in the multitudinous changes that have taken place since 1947. One also discovers that the sum of the changes sought—and effected, to some extent—makes sense both as part of our immemorial way of life and as an expression of desirable social philosophy. One also discovers examples of revolutionary experiments in the art of living together, and of institutional resourcefulness. Doubtless, I shall be told that there has been much wastefulness, of endeavours

that have led us to social dead ends and economic alleys. But, even after making allowances for these, I have no doubt that, when viewed from, say, that fateful year, 1984, the last ten years of our lives will be reckoned among the most fruitful in our history.

Is this a tall claim? Well, consider some of the landmarks. Let us forget, for the moment, the transfer of power itself, since it can legitimately be put down to the endeavours of an earlier era. I shall also say nothing of the innumerable political fruits of the last decade—the Constitution, the fundamental rights, the directive principles and the apparatus of a welfare state. I shall refer only to the consolidation of the whole country into an administrative whole by the abolition of the princely states and then the subsequent incorporation as constituent units of India. This is, in any reckoning, an event of first importance in Indian polity. I fear that the true significance of the achievement is not realised by many both within and without the country. Again, the obvious and the insistent onslaughts in the years since independence on the idea of India as a nation have made us wonder whether the idea will survive the assaults. But nothing can take away Sardar Patel's unique achievement in translating into a palpable political reality what had but been the dream of poets and puranikas, the concept of Bharata Varsha or the Arya Vartha. Even the energetic Lord Dalhousie had not brought India under a single constitution or provided it with a single focus of loyalty.

From the social point of view, neither the exasperating delay nor the vexatious failures in individual programmes can take a jot away from the sense of dedication that the present leadership has shown toward social rehabilitation, especially of the unfortunate expatriates from Pakistan. Secondly, the massive changes effected in the personal law of the Hindus together constitute a major exercise in social engineering. Many an ancient wrong has been righted, and sociolegal sanction has been given for a way of life more in consonance with enlightened social conscience. Even if reckoned only in terms of the centuries of social

deadwood, now cleared by the new Hindu code, it is a remarkable achievement.

And the economic sphere? Here it is that the immediate experience of less than a year is likely to distort perspective. But, take your stance at some distance from last year, and look steadily at the whole period. People are so out of love with the Plan at the moment, that they are likely to forget the substantial achievements of the idea of planned economic development. You do not need the statistical data about increase in national income and product to see the obvious fruits of planned endeavour. To be able to point to mistakes, even expensive ones, in this endeavour is not to deny either the considerable physical achievements that have taken place or the sense of dedication of the nation to its appointed economic tasks.

And, what is even more important than the actual changes in the social, political and economic fields, is the steady and coherent vision of the kind of life that is sought to be brought about by these changes, the infinite institutional and other resourcefulness in the means employed. I have said it before, and I will say it again, the most exciting thing to an uncommitted intellectual about the present stage of Indian development is the promise it has of a society that will be peopled by men and women who have come to satisfactory terms with the insistent demands of the community in which they live, without doing violence to the law of their being. I am not so overweening as to claim that such a society is just round the corner, but, what I do claim is that all our actions are inspired by such a vision. Even our seemingly contradictory actions, whether they are in fact so or not, are explicable only in terms of such an ideal. Visions of vast steel mills are interspersed with bucolic dreams of the villagers at the spinning wheel. Do they go together? By all rules of the text book and known experience of mankind, they do not. Many argue on this basis, that they will not. But the Indian experiment is being conducted on the assumption that they will. Whatever you may say of such a

notion, you cannot say that it is not new.

Of institutional unconventionality and experimentation in Indian life of the last ten years, you can give innumerable examples. Many of these, it is true, are not particularly Indian, but we, more than many another nation similarly situated, have shown a readiness and even eagerness in adopting

them. Consider, for example, the variety of institutions we have evolved for channelising productive enterprises under state auspices. We have, of course, made mistakes in all these, but we have now a whole series of institutional frames for such activities. Or, again, consider the innumerable forms of international participation in our developmental tasks. Or, take the countless credit insti-

tutions we have created. It looks to me as though productive endeavours, even of the private sector, would steadily forsake their conventional sources of finance in favour of these new institutions. All these are indicative of truly inventive fertility in the face of new situations.

Of one experiment in social dynamics that the last ten years

have seen, it is legitimate to claim both revolutionary significance and exclusive Indian inspiration. I am thinking of the Bhoodan movement. Its sociopolitical implications can hardly be exaggerated, and a nation that can invent such a canny instrument of social action will, in my view, never be completely overwhelmed by events.

Thus, reckon it whichever way you will: chalk up quantitatively the number of things we have attempted to do, and the number of things we have done. You will find that, never in our three thousand odd years of recorded history have we attempted to do so much and done so much within a comparable period. Of, if you wish to discard the quantitative or physical measurement, evaluate the last ten years as the projection of a vision of life in community. Examine critically the social ends that we have been attempting to achieve. You will find the basic impulses based on moral idealism of the highest kind. It is not my claim that our actions have ushered in the values enshrined in our vision, or that actuality has approximated the aspiration. But it has all the time tried to do so. Or, employ yet another mode of judgment. Consider the equality of the people and leadership to the demands made on them by the circumstances in which they are placed. The finding would be that, though there is much that is still appalling in the lives of our people, there has been heartening vitality and inventiveness in institutional and other devices to meet the challenges.

To my kind, therefore, there is no doubt whatever that this ancient land of ours will reach the fullest amplitude of its greatness in the not distant future. The vision that inspires our action is steady and unblinding, and our actions, however faltering, are not petty. Almost the only obstacle in the realisation of this dream is the basic weakness in national character, which the "mutiny" (whose centenary has coincided with this anniversary) exposed in some of its aspects. With an almost inexhaustible capacity for assimilation, the Indian temperament is cursed with a factiousness that has made for centuries its dream of an Arya Vartha a mere intellectual nostalgia. Now that resolute men with courage and idealism have brought it into being, petty men who cannot look beyond their nose are trying to disintegrate it by factional squabbles. A wide intellectual tolerance and a lack of social cohesion are perhaps the worst combination in a people you can think of as an equipment to withstand foreign incursions. A little more intolerant, you would not have allowed the foreigners to get past even your intellectual horizon, much less accepted them as fellow countrymen. A little more united as a nation, you would have ousted

General Insurance as a Foreign Exchange Earner

A promotion council for the export of insurance service has been suggested by Mr R. M. Desai, Chairman, Indian Insurance Companies Association, Bombay, in his speech at the last Annual General Meeting. Mr Desai expressed concern at the dwindling foreign exchange resources of the country. It would be necessary, he said, to step up our exports—both visible and invisible. Insurance, banking and shipping, according to him, have an important role to play in this respect. He advocated operation of insurance in foreign countries and said that the IICA had decided to set up a wing in the Association consisting of member companies who might be directly or indirectly interested in overseas operation.

It is well known that commencement of operations in foreign countries by Indian general insurers calls for a substantial outlay to meet preliminary expenses, statutory deposits and underwriting reserves to inspire confidence in the foreign clientele. Mr Desai called for 'greater facilities and added incentive'—presumably from the Government—to enable Indian insurers to probe overseas. The current foreign exchange difficulties are, in themselves, a bar to the transfer of funds for preliminary expenses, even though current expenses in the long run may earn good dividends. Quite a number of Indian insurers have the capacity and the ability to probe in the markets of Far East and neighbouring areas. It is to be hoped that permanent longterm advantages to the country will weigh with the exchange control authorities.

The Indian Reinsurance Corporation is a good corrective to the foreign exchange imbalance. Mr Desai estimated the drain out of the country by way of reinsurances placed abroad at a crore of rupees. The Indian Reinsurance Corporation cannot obviously plug the hole altogether. It can narrow down the gap, however, indeed by its mechanics of trading, it has already commenced to narrow the gap. Its final contribution toward plugging the hole will be evident more clearly after sufficient time has been allowed to the Corporation to entrench itself.

In his speech, Mr Desai welcomed the recently promulgated Code of Conduct for general insurers—a norm of behaviour laid down by the Executive Committee of the General Insurance Council, which was the centre piece of controversies for many months. Mr Desai considered the Code as a great assistance to general insurance to continue as

'free enterprise in the private sector'. A considerable volume of opinion in the country, on the contrary, considers the Code as a great erosion to free enterprise. The Code is based on distrust and certain presumptions. Its undertaking is in the form of a mortgage of company management to the Executive Committee. It is, therefore, hard to agree with Mr Desai that it is a contribution to general insurance to continue as a free enterprise. On the contrary, the Code, to many, is more a hindrance than a help and contains more implications that meet the eye. It has been variously suggested, not without logic, that the Code is only a preparatory act and that the views of the Government of India will be known only when the Code has been able to standardise company management and accounts.

Reviewing the rating structure, Mr Desai pointed out that a further reduction in fire rates is likely in 1958, after the loss experience of the Companies for the last three years has been tabulated and examined. He also gave out the information that the Tariff Committee is also examining the question of reducing the 'Third party' and 'Act only' motor insurance rates and of putting up rates for the 'comprehensive private car' cover in Delhi and Bombay areas, where the loss experience is very bad and warrants a substantial increase.

Some suggestions were made by Mr Desai for stabilising the insurance market. According to him, it would be necessary, for a period of 2 or 3 years, for competition to secure one another's business to be avoided. Such a course, though it might appear to retard the expansion of business of some of the well managed companies, is very necessary, according to Mr. Desai, to establish general confidence that no company would lose by adhering to the Code of Conduct. He, therefore, suggested to established insurers, besides conserving their own business, to devote their energies entirely to creating new business so that, on the one hand, wasteful competition for business already in the books of the Companies would be lessened and, on the other, new business which would otherwise have remained unexplored would be brought on the books of the Companies. Mr Desai indicated, in this connection, the magnitude of the economic development under the Second Five-Year Plan and suggested to the companies to look to the new reservoir rather than to engage in wasteful competition in securing one another's business.

This suggestion is not entirely new, although it is perhaps, the first time that the Chairman of the IICA has publicly blessed the idea. This is, again, a measure contrary to the ethics of free enterprise and is calculated to bar the free operation of competition. Competition breeds service. The new approach, somewhat monopolistic in character will be an unnatural bar to the growth of many companies and is likely to arrest progress. In any event, the new suggestion is unlikely to succeed unless it is unreservedly endorsed by all general insurers, foreign and Indian, operating in India. There is no need to swear by the new Code; nor is the Code dependent on such an agreement. By itself, the Code is elaborate. Judgment on its operation should be reserved till the Code has been given a fair trial.

Another aspect to which Mr Desai drew pointed attention was the abolition of the Principal Agency system. In accordance with the terms of Section 42 B(1) of the Insurance Act 1938, as amended, the Principal Agency system is coming to an end on 31st August 1957. Mr Desai viewed the abolition as particularly unfortunate, more so at the present juncture when major efforts are under way to put the insurance business on a sound and healthy footing. With the diversion of business formerly controlled by Principal Agents from the channels through which it was normally received. Mr Desai felt that there might ensue a scramble for business leading to unhealthy practices which insurers are now striving hard to eliminate from the market. It might also lead, observed Mr Desai, to additional expenses of insurance companies who would have to set up their branch offices to provide for the direct servicing of business at places previously served by Principal Agents.

Latest advices from Delhi indicate that the extension of Principal Agency was on the agenda of the Lok Sabha. In this particular matter, the trade was unanimous in representing to the Government of India in asking for its extension. Good reasons were adduced. The Principal Agency system has, no doubt, a sobering effect on the rather unsettled climate of procuratorial cost in general insurance. It serves also to answer Mr Desai's plea of non-diversion of business, which he supported, for stabilisation of the market. On a small remuneration, that is to say, an overriding commission of 5 per cent, Principal Agents have so far been playing a useful role. Its abolition would thus serve little purpose and would unleash forces which might have very prejudicial effects on market stability. Various factors, within and without the control of the insurers, had already eroded the

climate of stability. Abolition of Principal Agency will be a further erosion. It would also mean loss of income tax revenue to the Government.

It is now freely aired in knowledgeable circles that the Principal Agency system will not be renewed, although the specific reasons for the decision are not yet known. The Government, it is understood, are examining the issue of permitting firms to hold ordinary licensed agencies and to get commission on "own case business."

An important omission in Mr Desai's speech—he being a spokesman of the private sector—is the position of Government subsidising companies vis-a-vis private companies. It is well known to Mr Desai how the Life Insurance Corporation of India is entering the equity market and how business is being channelled to Government companies by the investment policy of the Corporation. It is also known to him that Government business under Plan projects or under the disposal of the Government of India are available either to the IICA Pool, in which Government companies get 50 per cent, or to the Government companies themselves. Mr Desai was of the view that successive Five Year Development Plans leading to rapid industrialisation of the country would mean a large increase in general insurance business. He should know, however, that the Plan projects would inevitably benefit the Government companies much more than private companies. The favours thus extended to a few companies, simply because ownership of these companies accidentally came to the Life Insurance Corporation of India, constitute a discrimination quite contrary to the ethics of a democratic welfare state. To this, the mind of the spokesman of the private Indian insurers should have been drawn.

Mr Desai concluded his speech by emphasising the need for trained personnel qualified to give efficient service. This is more necessary now than ever, for, companies are now required to give covers to suit the fast changing needs of our modern progressive world. Mr Desai also urged the necessity of proper publicity of general insurance. He was of the view that this was more necessary in India, where general insurance was so little known.

The following gentlemen constitute the Committee of the Indian Insurance Companies' Association, Bombay, for the year 1957-58:

Mr P. V. Patel (Chairman), Mr M. S. Dastur (Vice-Chairman), M. J. Dagby, Mr K. C. Desai, Mr S. R. Idgunji, Mr R. S. Mehta, Mr M. G. Mody, Mr Mohanlal Valji, Mr H. D. Vasudeva and Mr B. R. Mody.

A TOWER OF STRENGTH

In India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

A member of the
Burmah Group of Oil Companies

ASSAM OIL COMPANY

Gateway Notes

Food Production

Presiding over the seminar on agriculture and animal husbandry at the Agricultural College in Poona, Mr Vasant Rao Naik, Minister for Agriculture, Bombay State, disclosed that a pilot scheme had been launched in five talukas where credit facilities had been extended to cultivators regardless of their credit-worthiness to induce them to take up the intensive Japanese method of paddy cultivation. In this scheme, credit had been linked up with marketing. On the success of this experiment the scheme is likely to be extended to other paddy areas.

This makes a new departure from accepted canons for the granting of agricultural credit, and is in a sense a measure of the concern of the Government, in regard to the food situation and its determination to tackle it without delay. The restriction of the new schemes of liberal credit to cultivators who practise Japanese method of cultivation is evidently based on what is generally recognised to be the immense potentialities of Japanese method of paddy cultivation for increasing the output per acre. Further, in view of the comparatively greater shortage of rice than any other food crop, it is only wise that paddy should get priority.

Explaining the Japanese method of cultivation, Mr Naik said, that it consisted of first, collective application of all known methods of improved cultivation; secondly intensive propaganda for adoption of all improved methods, thirdly provision of sufficient credit facilities and fourthly making available supplies of improved seeds, fertilisers and implements.

Inaugurating the seminar, Mr Sri Prakasa, Governor of Bombay, made a few interesting suggestions to lighten the burden of work of the cultivator. It was pointed out, that a straw hat of the type in Assam, and dark glasses might be introduced to protect the farmer from the heat of the sun. Use of shoes for the peasant to keep mud and slush from his naked feet while at work was also suggested.

The Governor said that it was really tragic that India which was essentially an agricultural country with 80 per cent of the people living on the land should be unable to produce the food needed to feed its population. The Governor also referred to the seasonal unemployment of agriculturists and stressed the need for making arrangements which would enable the farmer to utilise the spare time usefully.

Reducing Congestion in Port

Signs that suggest that the critical point with regard to the congestion in the Bombay Port, is safely passed are evident in the present line-up of vessels in the port area. While at the height of congestion more than 40 steamers lay in the anchorage awaiting berths in one of the city's three docks, the number has in the past two weeks been less than 30 on any day.

Though the worst phase of the congestion is over, the scope for accelerating work to reduce congestion still further, seems to be great and it is even felt that if the pressure on the port is to be relieved to any appreciable extent, food ships would have to be diverted on a large scale. But it is gratifying to see that there is no slackening of efforts by either the shipping or the labour interests in achieving a further easing of the situation.

The clearance of food grains seems to have got the first priority. For the automatic unloading of foodgrains from ships which have been lying idle in the dock, an electric elevator, the first of its kind to be operated in India, is being installed and would be pressed into service soon. Further the bagging in the holds of ships themselves of food grains brought in bulk has

started. The number of ships carrying food awaiting berths in the docks at present is 14 and they carry an aggregate amount of 40,000 tons of food grain. With a view to avoid further congestion of food ships fresh arrivals are sought to be diverted to other ports in the country.

Mr S. C. Sheth, the Secretary of the Stevedores' Association has brought forward some new suggestions to accelerate the pace of clearance. He is of the view that if workers were allowed to work overtime during the change-over from one shift to another in the rainy season the congestion in the port could be reduced. He has also recommended increasing use of mechanical aids to labour like electric cars, folk lifts and mobile cranes, with a view to increasing output.

Mr P. D'Mello, the Transport Dock Workers' Union General Secretary has also offered a number of suggestions to expedite removal of goods from the docks and loading and unloading operations. The proper stacking of goods with the help of trained sorters, removal of merchandise from the sheds and open areas to warehouses after the expiry of "free days" the procurement of more tractors to avoid delays in the handling of iron and steel and heavy packages, separation of export and import cargoes in different floors, the use of cranes to their fullest capacity, are some of the suggestions made by Mr D'Mello.

GATEWAY MARKETS

Export of Rayon Fabrics

INDIA's Rayon textile industry, which hopes to achieve the Second Plan production target of 350 million yards, has started a vigorous drive to secure new export markets for its productions and to produce internally more of the raw materials it needs. Production of rayon cloth in the country has risen steadily from 181.2 million yards in 1954 to about 251.86 million yards in 1956. Exports have also risen, showing an increase of 13 per cent.

But the industry is facing stiff competition from Japan in many of the overseas markets. The industry is, however, confident that there is scope for India to carve out a better share in the export trade. The industry has also been urging the Government of India to give full drawback of import duty and refund of excise duty to promote exports and to grant special import licences for yarn against exports of art silk fabrics.

Meanwhile, easy conditions have continued to prevail in the Bombay

Yarn market. Both Art Silk and Staple-Fibre yarns have declined further from last levels in the absence of support. The spot has also witnessed a fall of about an anna per pound in many counts. Staple-fibre yarns have declined by about half an anna per pound.

In the Cotton Yarn section, only limited business is reported and prices have declined further on account of the pressure of sales by weak holders. Reports from the South have indicated that mills are pressing sales at lower rates, while export business is getting increasingly difficult. Adverse reports from cotton and rayon cloth markets have also aided the bearish trend.

According to the latest figures, the textile industry has produced 1,042 million yards of yarn during the first seven months of the current year as against 947 million yards in the corresponding period of last year.

Metals

The Metal market has continued to rule weak, thanks to the issuance of ad hoc licences to actual users and established importers and the reports of heavy arrivals. Copper Ready is quoted lower at Rs 174 (per cwt); Zinc at Rs 75 (per cwt); Lead at Rs 85 (per cwt) and Tin at Rs 137 (per quarter).

Oils and Oilseeds

The markets for Oils and Oilseeds remained depressed barring occasional rally on short-covering. Favourable weather reports from most growing areas and the consequent optimism regarding new crop accounted for a general easiness in the market with traders inclined to press sales at higher levels.

Castorseed September delivery finished at Rs 165.12 and May at Rs 150.25 after touching high levels of Rs 166.12 and Rs 152.25 respectively. In the ready section the rate was quoted at Rs 33, while Castor Oil, commercial quality, is quoted at Rs 18.87.

In the Groundnut section, February moved between Rs 148.25 and Rs 149.50 and August between Rs 167 and Rs 167.75, to finish at Rs 148.50 and 150.25 respectively. Ready Bold was quoted at Rs 35 and Groundnut Oil at Rs 19.50.

Linseed September started at Rs 28.62 and finished at Rs 28.87. May delivery closed at Rs 28.44 after touching a high of Rs 28.56.

In the Cottonseed section, September moved between Rs 108 and Rs 109.25 and February between Rs 90.50 and Rs 91.25 to finish at the former levels.

Gold & Silver

While futures prices were maintained in both the metals on the Bullion Exchange, spot silver was inclined to be softer on reports of increased receipts of unrefined metal. Bhadon delivery closed at Rs 182.00 after touching a high of Rs 182.44 and a low of Rs 181.87. Ready moved between Rs 183.19 and Rs 182.62, to finish at Rs 182.75.

In the midst of off-season conditions, the demand for ready silver has remained smaller than the receipt and the inflow of silver coins from Tibet has continued unabated, though on a restricted scale. Arrivals amounted to 2 bars as against an offtake of 10 bars. Unrefined metal receipts were heavy at 31 bars.

Gold, however, rules firm on lack of sufficient offerings and reduced Mysore sales by tender. Bhadon delivery finished the week at Rs 108.06—the highest touched being Rs 108.44. Ready hovered narrowly around Rs 108.25. Sovereign ruled very steady at Rs 70.37. Arrivals amounted to 1,000 tolas as against an offtake of 3,000 tolas. Unrefined metal receipts totalled 2,500 tolas.

World of Cotton

Egyptian Growths in Demand

THE Cotton market has witnessed an unusual rush for Egyptian cotton this week. Within three days of the Government's permission to import 10,000 bales from that country, the supplementary quota has been exhausted. Import applications are reported to have come mainly from Bombay and Ahmedabad since upcountry traders have found it difficult to apply within such a short time.

The permission came at a time when prices had declined by over Rs 125 per candy in Egypt, good Karnak being offered at around 49d per pound. Purchases made, subject to import licences, were, therefore, confirmed before prices showed an upward trend. Mills appear to be eager to augment their stocks of Egyptian cotton. With the result, additional imports, if permitted, will also be taken by them.

As a matter of fact, the Government of India have decided to permit the import, with immediate effect, of a further quantity of 10,000 bales of Egyptian cotton of staple length 1 3/16" against the special payments procedure. The licensing of this quantity and other procedural details will be the same as for the earlier quantities of Egyptian cotton already permitted for import.

The trade has, however, been complaining about the delays in the issuance of import licences for Egyptian cotton. It is learnt that it takes about anything from 12 to 20 days or even more from the date of application to get licences. This position is aggravated by the entry of State Trading Corporation in the sphere of Egyptian cotton imports for purposes of registering the contracts entered into by Indian importers with the Egyptian shippers. Any delay, in this connection, will evidently be detrimental to mill buyers inasmuch as they will, for want of import licences in time and consequent loss of shipping opportunities, lose the benefit of the present Egyptian export duty, which is due to be increased by about Rs 120 per candy, effective for shipments from September 1, and the 13 per cent discount available on shipments up to and including August 31.

Meanwhile, the textile industry is also awaiting permission to import Sudanese cotton, which has also declined in line with Egyptian varieties. Rumours are current that imports may be permitted only on rupee account. The question may, therefore, come up for discussion when the proposed Sudanese trade delegation visits India sometime this month.

It appears that the Sudan Government are anxious to ensure, before sending the delegation to this

country, the actual market conditions and the price of which Indian mill buyers are likely to be interested in bulk purchase of Sudan cotton. It is quite likely that this may be obtained by the Sudan Government through observes of private shippers to this country in the near future. After hearing the assess-

FUTURES MARKET

The Cotton futures market continued to remain depressed for lack of fresh incentive. Good crop prospects due to satisfactory rainfall, reports of dull conditions in the ready section and reported accumulation of stocks on the cloth front—all these factors cause prices

to recede. Towards the close, however, mild short-covering aided a small rally. The turnover was 10,000 bales. ICC Mogial Jharilla opened at Rs 697.50 and, after touching a low of Rs 690, finished a shade better at Rs 692.75.

SPOT MARKET

The Spot section was listless as there was only a small volume of (Continued on page 332)

Delhi Review

Official Language

IF the publication at this juncture of the Report of the Official Language Commission is any indication, authority seems to have a queer sense of timing. Considering that the Report was submitted over a year ago and it was not published so far for some reason or the other, one does not understand the reason for this mortal hurry in putting it across to the public at this stage. Already, the country is riven with sectional and factional frustrations of various sorts. Language, as an instrument of dissension, in particular, has been active in various forms; only the other day, some towns in Bombay State were calling attention to their disappointment over the present disposition of the State's boundaries. And, in the Panjab, an agitation is going on for the last two months or so over the propriety and expediency of the use of particular languages and particular scripts. To judge from reports, this is an agitation that is steadily corroding such resources of political sanity as the State possesses, and law and order are being constantly strained, with grave repercussions on the attempt to build firm democratic traditions. Meantime, our over unfriendly neighbour is busily plotting embarrasments for us, lying shamelessly abroad about our acts and fomenting sabotage inside our country. Economically, the country is passing through a difficult phase, and that we have just been mercifully spared a serious dislocation in national life by the timely calling off of the strike by Postal and other employees of the Central Government.

One would imagine that our hands were full with immediate tasks which needed our undivided

attention and undistracted unity of purpose. And it is at such a moment that Government have, almost perversely, chosen to stir yet another hornet's nest by releasing to the public the far from unanimous recommendations of the Official Language Commission. Inevitably, much energy and time will be spent by all concerned in a controversy that has little immediate relevance, but which has a great potentiality for impairing the kind of well integrated patriotism that is the need of the hour.

Some observers here feel that, in this seemingly inept timing, there is perhaps more than meets the eye. I shall presently have something to say about the controversy in the Report itself about "incipient Hindi Imperialism", but, over a period of years, people from non Hindi speaking areas have watched, with a varying degree of uneasiness, attempts by Hindi enthusiasts to hustle Government into adopting Hindi for official and other purposes. And this uneasiness has often become positive dismay at the apparent success of such endeavours. Many observers have seen in the official attitude to the whole question either a disquieting anxiety to propitiate Hindi interests or (at their more suspicious moments) a secret connivance at such manoeuvres. Half-serious quips like "India, that is Bharat, that is U.P...." acquire sinister overtones on such occasions. Uncharitable and probably incorrect though the assumption may be, the feeling among non Hindi circles here is that the publication, at this moment, of the Report represents the success of Hindi interests to bring matters to a head straightaway.

The Report itself, as I said earlier, has not been unanimous, and the differences have been such as to emphasise regional orientations on the subject. Thus, on the central recommendations, the two principal non Hindi members have sharply differed from their majority colleagues. And these two dissidents are, significantly, for one reason or the other, perhaps the best qualified for a task of the nature entrusted to the Commission. Dr Suniti Chatterjee is a noted authority on Indian linguistics and, therefore, particularly qualified to speak on the adequacy of a language for any purpose. More importantly, he has been, long before present orientations on the subject crystallised, of the view that Hindi should ultimately emerge as the lingua franca of India. I remember his persuasive little pamphlet on the subject, published in the early years of the second world war by the Oxford University Press. So, he cannot be lightly charged with a closed mind on this subject. The other dissident is Dr Subbarayan, who is the only person on the Commission, besides Dr Kher himself, who has had major administrative experience. Indeed, as a member of the pre war Madras Cabinet headed by Rajaji, he was responsible, as education Minister, for the introduction of Hindi in Secondary School curriculum. Dr Chatterji has advanced weighty linguistic reasons for the proposition that Hindi has not developed enough for it to be generally and compulsorily adopted for official and other purposes. Dr Subbarayan has reinforced his views by citing responsible opinion from educationists and other public men, notably from Mr Rajagopalachari and Sir C. V. Raman.

The Commission have travelled widely beyond their immediate task of discussing the suitability of Hindi as a language for official purposes and dealt with such matters as media of instruction in educational institutions. On these, as indeed, on the entire subject matter covered by the Report, there are bound to be differences of opinion. Curiously, it is possible to argue that the majority view has not suggested anything drastic. For instance, the Commission consider that the language provisions in the Constitution are "practical, wise and comprehending". But, on the specific and troublesome question of the timing of the replacement of English completely by Hindi as the official language of the Union, the majority is cagey. Its view is that "it is neither necessary nor possible to prognosticate and pronounce" whether a general changeover from English to Hindi would be practi-

cable in 1965. This would appear to leave the question very much open, but the general tenor of the Report and particular emphases in the findings and recommendations underscore the view that the majority want the replacement as early as possible. The only comment one can make on this aspect of the matter is that the Commission had before them an extremely practical solution of this problem which would have avoided the appearance of the seeming evasion of the specific question. I am thinking of the suggestion made to the Commission by the Government of Madras. It will be recalled that the Madras Government's memorandum suggested that, as at present, both English and Hindi should be considered as official languages of the Union for another fifteen years after 1965, with the progressive displacement of English over a period of twenty years. A definite suggestion like that would have set at rest the uncertainty about the precise way in which the mind of the majority of the Commission was working. As it is, despite the vagueness on the crucial question, even their fellow members have been obliged to interpret the particular recommendations for the progressive displacement of English by Hindi as indicative of a desire to force the pace of natural development.

The minority view is that the question of progressive use of Hindi for the official purposes of the Union should be kept in abeyance for the time being. According to them, "it should finally rest with the different States using their own different regional languages to decide, after Hindi has been voluntarily adopted by them and a knowledge of it spread, to what extent Hindi can be used for communication between the Union Government and the State Governments and between one State Government and another". They also add that nothing should be done by the Centre without obtaining from the legislatures of the non Hindi States a clear indication of views of the speakers of the various regional languages. The immediate effect of the im-

Development of Shipping

The debate in the Lok Sabha on the Transport Ministry's Demand for Grants has indicated that provided the requisite funds are found, the Second Plan target for shipping can be even exceeded. For, according to Mr Lal Bahadur Shastri, Minister for Transport and Communications, the conditions in the world shipbuilding industry are quite favourable for intending purchasers. The price of ships has declined and what is more shipyards in foreign countries are prepared to take new orders. Therefore, Mr Shastri is of the view that India should avail of this opportunity and try to place large orders for ships overseas. He says that steps should be taken to reach the one million ton mark in the current plan period itself.

Coming to hard facts, however, one finds that the way toward the attainment of the target itself is not quite smooth yet. It has been pointed out by Mr Shastri that a sum of Rs 50 crores will be required to attain the target of 9 lakh tons fixed by the Planning Commission under the Second Plan. It is, however, gratifying to note that Government is drawing up a comprehensive programme for the acquisition of additional shipping tonnage. Mr Shastri has suggested that a Shipping Development Fund be set up. The Fund may be started with a small sum of Rs 10 crores or Rs 12 crores only, and the same amount may be advanced to this Fund in each of the next four years. This would meet the gap of about Rs 50 crores required for acquiring just over 200,000 tons of extra shipping by 1961 to meet the Second Plan target.

That India is making the best use of the resources available for increasing its shipping tonnage will be evident from the progress made in the last ten years. Whereas in 1946 no Indian ship plied on the overseas routes, today we have as many as 47 ships aggregating 3,20,000 tons. Coastal tonnage has also increased from 127,000 tons to 240,000 tons. A significant development has been the addition of two tankers. The acquisition of yet another tanker is part of the future development programme.

★

Low-Income Housing

One of the chief elements of welfare, in its material and economic sense is housing and real progress in welfare will only be made to the extent that housing also makes proportionate headway. In India, the acute shortage of housing is indicative of the leeway that the country has to make up in the achievement of the national objective of welfare state.

The Second Five Year Plan has set up a target of 68,000 houses to be built as part of the low income housing scheme. But the working of the housing scheme has brought to light various defects, which have detracted from its steady progress and utility. Particularly, individuals wishing to build houses for themselves have to face various difficulties in the matter of securing developed plots of land, getting plans approved by local bodies, obtaining building materials and having loans sanctioned by the appropriate authorities.

With a view to ensure rapid progress in the housing scheme, the Government of India have relaxed some of the conditions for the sanction of grants under the low income housing scheme, operated by the Ministry of Works, Housing and Supply. Under the new dispensation State Governments and local

bodies are authorised to sell whether outright or on a hire-purchase basis and to let out houses built by them, under the scheme, to persons entitled to such benefits, subject to the condition that the sale or renting out would be on a no-profit no-loss basis and that not more than 25 per cent of such houses will be given to the State's employees. The Public institutions have also been allowed to do the same thing with reference to their staff.

It has been made obligatory on the State Government to earmark at least 10 per cent of the funds made available to them under the scheme for disbursement directly or through cooperative societies to eligible individuals desirous of building houses for themselves.

Further the existing restriction on the grant of assistance to local bodies in regard to quantum of allocation as well as the maximum assistance permissible per house will be removed.

★

OLYMPUS

(Continued from previous page)

plementation of the majority recommendations would be, in the view of Dr Subbarayan, "the immediate imposition of Hindi on non Hindi speaking people leading to confusion in public life as a whole". Whatever one may think of the general trend of the minority report, this view at least must weigh with the Union Government. Confusion in public life and disruption of normal avocations are two things that we can hardly afford at the present moment. That such fears of disruption are only too well founded, can be seen by the current controversy in the Punjab. The lesson of the agitation there is particularly telling in this context, for, it is the Hindi enthusiasts who are conducting it against alleged linguistic imposition on them. It would be precisely such an imposition by Hindi itself that the non-Hindi people resent. Surely, you cannot impose the kind of tyranny that you yourself resent when it is allegedly sought to be imposed on you. Hence the need for avoiding any kind of action like that generated by the States Reorganisation. Charges of "Hindi Imperialism", to which references have been made in the minutes of dissent, may or may not be imaginary. But political realism will have to reckon with the near unanimity in non-Hindi speaking areas, especially in Bengal and the South, over the alleged expansionist aims of Hindi enthusiasts. A country with pressing problems of a practical kind can hardly afford another bout of internecine clashes inspired by linguistic chauvinism. The Government will, therefore, be wise to let this Report well alone for some time to come. There is time enough to fashion an official language after our heart's desire when our present problems loom a little less large.

★

Sugar

Sugar markets have continued to rule quiet. According to the Government view, the chances of exports of the commodity now are slim due to fall in world sugar prices. The bulk of sugar exports from India go to West Asian countries. Out of a sale of 1.14 lakh tons for export upto April 30 this season, actual exports were 34,000 tons, while 14,000 tons went to West Asian countries alone.

Following mill-delivery rates (per maund) are quoted in the Hapur market:—Meerut (D/23) Rs

33.75; Simbhuai (E/29) Rs 34; Daurala (B/29) Rs 35.19; (B/28) Rs 34.94; Amroha (D/29) Rs 33.25; Bijnore (E/29) Rs 33; Mansoorpur (B/29) Rs 35.37 (C/29) Rs 34.35 and Modinagar (B/29) Rs 34.87.

According to the latest figures, production of indigneous sugar amounted to 20.19 lakh tons upto July 31, 1957 in the current season as against 18.35 lakh tons in the corresponding period of last season. Total offtake, including quantities despatched for exports, was 15.90 lakh tons. Stocks with the factories, as on the 31st July 1957, were 9.57 lakh tons.

Prices in the Khandsari market have recorded some gains, thanks to increased demand for festivals. Rates moved between Rs 28 and Rs 32 per maund, according to quality.

NORTH INDIAN MARKETS

Steady Trend in Grains Prices

STEADY conditions have prevailed in the Foodgrains markets during the week under review. The main contributory factor is the report that rainfall has been very deficient all over West Uttar Pradesh, "kharif" crops of maize, bajra and jowar having suffered on that account. The Government of India may begin to purchase grain on a large scale to build stocks, including more than a million tons of rice, when the crops start flowing into the market in November-December period. Moreover, large quantities of foodgrains have continued to arrive in the country from abroad. During the period from January to July 20, 1957, a quantity of 19.21 lakh tons of grains is reported to have been imported, while 6.3 lakh tons of wheat and rice are now on the way to India from the USA and Burma.

In the Hapur market, Wheat prices have recorded fractional gains, average quality being quoted at Rs 16.12 per maund and the farm quality at Rs 17.25. Rice has also recorded small gains, Basmati being quoted at Rs 28 to Rs 30.50 per maund, according to quality. Gram prices have advanced on the Punjab advices. Barley and Belher have, however, remained steady at last quoted levels. Harvesting of early-sown Maize has begun to arrive in some areas.

Peas continued to rule steady due to good demand from East Uttar Pradesh. Demand for Arhar is, however, quiet, the rate hovering

idly around Rs 11.50. Prices of other pulses remain mostly unchanged.

Barring Wheat and Gram, the Delhi grains market rules quiet. There has been a good demand for wheat, resulting in prices showing small gains. Rice has shown a loss of Re 1 per maund due to better arrivals. The market for Coarse grains rules quiet with prices registering a fall of about 50 nP per maund. Among Pulses, Gram has improved slightly in line with the rise in other grains.

The Bombay grains market has shown a mixed trend. Trading in Rice is featured by a modest rise in qualities grown in Andhra, while the tendency in all other varieties remains quiet. There is little fresh to report in the Wheat section. Trading in Pulses is marked by a fresh weakness of about Rs 5 per candy in the price of Gram.

Madras Review

Development of Atomic Power

SPEAKING at the Society of Electrical Engineers, Mr V. P. Appadurai, Chief Engineer for Electricity, Madras, indicated that an atomic reactor to produce electricity might be established in Madras by 1965. Such a possibility will be received with great enthusiasm in this part of the country. At the present

juncture, the position as regards supply of electricity is not very satisfactory. Being largely dependent for its power requirements on hydro-electric schemes, Madras is obliged to regulate supply of electricity to consumers when there is a failure of the monsoon. It is, however, anticipated that with the

completion of the Kundah hydel project and the Neivell project, the power resources of Madras will be greatly augmented. If the negotiations that are now going on with the Kerala Government for the diversion of the waters of the west-flowing rivers in that State are successful, the position will improve further.

Though it is true that the schemes already completed and on hand will be able to cater to the power needs of the State in the immediate future, the fact that all the available resources have already been taken up for exploitation, makes it necessary for Government to look to fresh sources of power in order to provide for the increase in demand consequent on the improvement in the standard of living and the increasing tempo of industrialisation.

The rapid progress made in our country in recent years in atomic research has brought within reach an almost inexhaustible source of electric energy. Since its inception in 1954, the Atomic Energy Department of the Government of India has taken long strides and it is confidently anticipated that by 1962, India will have made a beginning in the utilisation of the atom for the generation of electricity.

The immense possibilities of the harnessing of thermonuclear energy to peaceful uses will be evident from the fact that as against the production of about four Kilowatt-hours of energy from one pound of coal, the yield from one pound of uranium—the fuel used in the atomic process—will be as much as 10 million Kilowatt-hours. Apart from the enormous quantities of energy it helps to produce, the new knowledge has opened up vistas which have remained mysteries. A boon to mankind when it is put to peaceful uses, it has a horrible aspect as well. The atom bomb and the hydrogen bomb have shown what sort of catastrophe that may befall mankind if the boon is misused. As far as India is concerned, it is solely interested in the peaceful uses of atom. Replying to a recent Debate in the Lok Sabha Mr Jawaharlal Nehru declared in unmistakable terms that India would in no event use atomic energy for destructive purposes.

During the past few years, commendable progress has been made in the world toward putting atomic power to the good of mankind. Both in England and Russia atomic plants are already generating electricity. It is now generally accepted that an atomic energy plant is an economic proposition.

The tremendous possibilities of using atomic energy for civil purposes have naturally engendered keen interest in India which is endeavouring to draw abreast of the

industrial nations of the world as quickly as practicable. For, atomic energy can help greatly quicken the pace of industrialisation by its promise of abundant supply of electric power. Conventional sources of power in our country are no doubt large but they cannot be considered to be large enough judged from our future needs.

The active interest evinced by the Government of India has already borne good results. A swimming pool type of reactor called 'Apsara' built entirely by Indian engineers has been in operation for the past one year. Two other reactors are in the process of being set up. The Atomic Energy Department is now working on a 15 year plan for the development of atomic energy. In the meantime research work in the atomic field has been remarkably rapid and good and has won recognition among atomic scientists all over the world.

In the development of atomic energy the Government of India have decided from the very beginning that they should not depend too much on outside sources because of the possible repercussions on their freedom of action that such dependence may bring in its train. The rapid progress made in atomic research in the country has greatly encouraged Government to pursue an independent policy. The Atomic Energy Department is expanding fast. As against Rs 1 crore spent in 1954, Government are spending about Rs 12 per annum for the department now. So far about 260 persons have been given training, and it is hoped that very soon the figure will reach the 1,000 mark.

As for the essential fissionable material, India has a sizable quantity of Uranium ore though the presently available quantity may not be considered large enough to meet our requirements in full. It is, however, gratifying to note that we have vast quantities of thorium which can be used for working the reactors in the second state.

Mr Nehru has pointed out that there are regions in India which are in sore need of power supply. The fact that the cost of transport of coal is heavy will make the setting up of atomic energy plants in these areas an economic proposition even now. To emphasise the need for developing additional sources of power in India, Mr Nehru has said that if by any chance power consumption in India reaches a level comparable with that in the US, our conventional sources of power will be used up in the course of a generation. Apart from the theoretical as well as the practical necessity of keeping abreast of this new realm of knowledge and discovery, there is this aspect, that it is likely to be of the utmost importance for us in India to utilise atomic power for peaceful purposes.

Madras Review

Rationalisation of Sales Tax

Sales tax, though the most prolific and elastic source of revenue to the State Governments, had at the same time come to be a cumbersome and burdensome levy at least from the point of view of the poor consumer and the small dealer. Lack of uniformity as between different States in the matter of levy has hampered inter-state trade and has been a source of vexation to traders. In view of the increasingly heavy reliance made on it by the State Governments and the indiscriminate imposition of the same on every conceivable item of expenditure of the consumer rationalisation of the sales tax structure has become a matter of urgent importance.

Though the need for such rationalisation has been felt almost everywhere, with the solitary exception of Madras no other State Government have felt inclined to take the first steps in that direction. In Madras, following some readjustments in the sales tax levies with reference to certain items, as announced in the budget for 1957-58, the Government appointed Dr P. S. Lokanathan to look into the question of sales tax structure.

In his address to the Madurai Ramnad Chambers of Commerce Dr Lokanathan has indicated some lines of reform in the present sales tax structure in the State though the investigation is yet incomplete.

Firstly, it has been suggested that the rates of sales tax should be uniform at least in neighbouring states. This is calculated to remove the present barrier to the smooth flow of inter-State trade, which a lack of uniform rates of levy has created. Dr Lokanathan is of the view that the Southern Zonal Council should be able to take up this matter.

Secondly, a division of authority with regard to assessment and appeal is according to Dr Lokanathan desirable, if sales tax administration is to be simplified. Insistence upon payment of contested tax before making an appeal is also expected to make for quick administration.

In regard to single-point levy Dr Lokanathan reserved his verdict in its favour, and pointed out that its extension could be encouraged only after observing its satisfactory performance over a period of years. In this connection, he said that far from being simple as people took it to be, it tended in cases to become onerous and resulted in greater hardship to traders and consumers.

As for the scope for reducing the rates, Dr Lokanathan said, that this could be done, if the Government could track down the tax-evaders, who account for a loss of revenue to the Government to the tune of nearly Rs 200 crores. Thus the interesting thing about sales tax seems to be that it is partly in the nature of a penalty paid by the poor man for offences of which he is absolutely innocent.

*

Land Mortgage Banks

The impoverished state of Indian agriculture has been attributed among other things to lack of institutional credit, both short term as well as long term. The natural reaction to this analysis of cause and effect has been the attempt to speed up and intensify the growth of institutional credit which invariably implies cooperative credit. In the field of long term credit for agriculture this attempt has crystallized in the formation of land mortgage banks. Such land mortgage banks have been set up in various parts of the country and a few have been in operation since a fairly long time.

The Central Land Mortgage Bank in Mysore is one of the oldest of such banks in the country having been established in 1929 following the recommendation of the Malnad Improvement Committee. The progress it has made since its inception has been such that from its jurisdiction being limited to about four taluks at the beginning, it has now grown to include nearly 98 primary land mortgage cooperative societies having a jurisdiction over the entire new Mysore State.

The Bank at present has an authorized share capital of Rs 50 lakhs and a membership of 97 with a paid up share capital of Rs 8,81,000. Following the recommendation of the All India Rural Credit Survey Report, the State Government have contributed a sum of Rs 10 lakhs towards the share capital besides a subvention of Rs 10,000 for the appointment of special staff exclusively for land mortgage work.

Outlining the policy of the bank, Mr R. Ananthraman its President said that steps had been taken to enable the bank to issue loans for productive purposes and referred to the pilot scheme which is under way, for an economic survey of rural indebtedness in one or two heavily indebted villages in each district in the new Mysore State, with a view to discharging all the indebtedness of the people in those villages.

The State's Second Five Year Plan has set up a target of Rs 300

lakhs under the issue of long term loans. The bank has already dispelled doubts about the feasibility of the target by sanctioning loans in the first two years well in excess of the quota. As against a quota of Rs 20 lakhs for the first Year of the Plan, the bank has sanctioned Rs 43 lakhs while Rs 60 lakhs have

been sanctioned for the second year against a quota of Rs 40 lakhs.

In the issue of loans, the bank has felt the need for a progressive outlook, and therefore, the policy has been liberalised so as to make available loans not only for productive purposes but also for redemption of old debts.

SOUTH INDIAN MARKETS

Coffee Production

ACCORDING to the Coffee Board, the actual receipts of the 1956-57 Coffee crop into the Pool were 41,200 tons as against the estimate of 42,000 tons. The preliminary estimate of the 1957-58 crop still stands at 35,750 tons.

A total quantity of 2,149 tons was released during last month in the internal market through the various channels, including the Propaganda Department and Co-operative Societies, bringing the total offtake, till the end of July, to 14,737 tons as against 13,718 tons in the corresponding period of last year.

The price line for coffee has been, by and large, held fairly steadily over the past three years. Thus, the average Pool sale price was Rs 217.31 in 1955 and Rs 213.44 in 1956 and, for the period from January to July 1957, Rs 219.15, all per cwt., ex-works ex-bags. The prices have, however, shown a tendency to go up since June, 1957.

Out of the total quantity of 15,155 tons, allotted for export from the 1956-57 crop, 9,234 tons were sold up to the end of July 1957; and tenders have been invited for 956 tons for sale to be held on August 13. The balance will be 4,965 tons, which includes 600 tons set apart for monsooning; 500 tons for sale to the USA and 771 tons for sale to Sweden, Finland and Australia.

*

Pepper and Ginger

The markets for Pepper and Ginger remain generally neglected in the absence of any buying support from overseas buyers. In the Alleppey market, the rate for pepper is quoted at Rs 587.50 and Ginger at Rs 300 per candy. In Kozhikode, pepper Wynaad quality is quoted at Rs 635; Country variety at Rs 590 to Rs 620 and ginger at Rs 290 to Rs 300, all per candy.

India's export trade in these two commodities is, however, expected to show some significant changes this year. While shipments of ginger will practically double to about

10,000 tons, those of pepper will go up by at least 1,500 tons to 15,000 tons. Export figures have indicated that, while the USA will retain its share of 50 per cent of total exports of pepper from India, the share of Red countries will go up to 40 per cent, the balance being shared by Italy, Aden, Sudan and many other countries. Morocco has been re-exporting black pepper to European countries, while Egypt has been buying more from India on rupee account.

In the case of Ginger, shipments are high due to a bumper crop of about 16,000 tons this year. Exports are shared mainly by Saudi Arabia, Sudan, Syria and other Middle East countries. Traders are, however, worried about the move in the Kerala State to raise the Purchase Tax on the two commodities by 2 to 4 per cent.

Advices from New York state that sellers of Pepper have lifted their prices following the broader demand which has now developed; but buyers have been resisting the higher prices. Malabar and Lampong spot are quoted at 27½ cents per pound and Sarawak at 27 cents. In the London market, black Sarawak is quoted at 19½d per pound, while Malabar spot is nominally quoted at 210sh per cwt.

*

Cashew

The Cashew market continues to rule quiet. Although American demand is normal, there is a tendency to wait for a fall in prices. The future trend of the market, therefore, depends on the ability of processors to hold off from selling below 50 cent per pound.

Russian buying has not been marked this year. Moreover, a large number of processors, who supplied to the Russian order, are reported to have not been paid as delivery has not taken place. A substantial portion of these stocks, exposed to the monsoon conditions, may, therefore, be required replacement. The real cause of weakness for Indian cashew is the large increase in the supply of almonds in the world nut market.

Tata Locomotive & Engineering Co. Ltd.

Problem of Securing Adequate Funds

Industrial Strife—Part of Communist Pattern

Mr J. R. D. Tata, the Chairman, Holds out Prospect of Rights Issue

Summary of the speech delivered by the Chairman, Mr. J. R. D. Tata, at the Annual General Meeting of the Shareholders of the Tata Locomotive and Engineering Company, Limited, on Monday, August 12, 1957.

Addressing the Twelfth Annual General Meeting of Tata Locomotive and Engineering Company, Limited, the Chairman, Mr. J. R. D. Tata observed that the all round progress made and the satisfactory profits earned by the Company during 1956-57 had enabled the Directors to recommend an increase in the dividend to 8%.

The provision of adequate funds to finance the growing operations was today one of their main problems, said Mr. Tata. "By the nature of the industries in which we are engaged," he added, "and the circumstances peculiar to this country in the matter of essential supplies and bought-out items, it is necessary for us to maintain substantial stocks of raw materials and bought-out components. This locks up large funds as can be seen from the considerable amount of borrowings shown in the balance sheet. In addition, we still have a large amount of capital expenditure to incur in the next few years as we proceed with our current manufacturing and expansion programmes. Although, in the long run, the funds provided from year to year out of allocations to depreciation and various reserves will substantially cover the total amount of capital expenditure so incurred, the heavy commitments during this year and the next make it necessary for us to raise additional finance in the very near future. While no decision has as yet been made, the possibility of an additional issue of equity shares, possibly in the form of debentures convertible into ordinary shares cannot be ruled out."

The Company's commitments to deliver locomotives at the rate of 100 complete units per year from the beginning of 1958 would be fulfilled and possibly improved upon. The Chairman added that with the increase in output, further improvement in efficiency and fuller utilisation of available capacity it was expected that the costs would come down to a satisfactory level despite the recent steep increases in the costs of materials and in wages.

Mr. Tata observed that in India as elsewhere a gradual but inevitable movement towards the "die-

selisation" of rail transport was taking shape, and said, "As and when oil in adequate quantities is discovered within the country, the process is bound to be accelerated. As mentioned in my speech last year, our works are exceptionally well equipped to undertake the manufacture of diesel locomotives. The Railway Board have recently issued enquiries for a fairly substantial number of such locomotives and we propose to respond to this enquiry in collaboration with our technical associates, Messrs. Krauss-Maffei A. G., and Messrs. Daimler-Benz A. G. We are in this regard fortunate in our association with both these firms, for Krauss-Maffei are leaders in the field of main line diesel hydraulic locomotives, while the Daimler-Benz range of high efficiency diesel engines are ideally suited to rail traction. If our expectations ruffitify, we can look forward to a long period of continued collaboration with, and service to, the Indian Railways, even after the cessation of steam locomotive manufacture."

The Automobile Division was nearing the end of the second stage of development strictly according to schedule and despite the many complicated problems affecting supplies and operations the Company was confident that the manufacturing programme would be maintained.

Referring to the popularity and dominant position in the market of the Tata-Mercedes-Benz commercial vehicles the Chairman said that they had no doubt of the ability of these vehicles to withstand any competition they might have to face. Mr. Tata expressed gratitude to Government for their decision to sanction to the Company its reasonable requirements of foreign exchange for plant and equipment to implement its approved manufacturing programme. This would enable the Company to complete its plans by the end of 1959 when the Company was expected to be in a position to produce almost entirely Indian-made diesel truck and bus chassis. With the completion of this programme the foreign exchange saved each year would be larger than the aggregate amount spent for the purchase of plant, machinery and equipment for the Automobile Division.

Mr. Tata welcomed the decision of the Government of India to give the automobile manufacturers in the country a reasonably free hand

to fix the prices within the overall limits, with a return of 10% on cost subject to general supervision and check by the Government as this would go a long way towards providing an effective incentive for the rapid development of the industry.

In conformity with the Tariff Commission's views, the Company had submitted to Government a scheme for doubling once again the capacity of the Automobile Division and bringing it upto 12,000 vehicles per year. Mr. Tata said that the Government of India have informed the Company that the scheme would find acceptance provided suitable credit arrangements could be made to stretch out the foreign exchange expenditure over a period of years.

The Chairman hoped that the Government of India would in due course also enable the Company to diversify the output of its Automobile Division by manufacturing other types of vehicles such as light commercial vehicles, cars and diesel engines for various uses. Such diversification would promote efficiency and reduce costs. "The best warranty that we can offer to Government for the fulfilment of these objectives in due time," said Mr. Tata, "is our actual performance in the fulfilment of the initial programme of manufacture of trucks and buses on which we are now engaged."

Continuing, Mr. Tata said, "On the recommendation of the Tariff Commission, the Government of India have decided to grant protection to the automobile industry for a period of ten years. Our present manufacturing programme will have been completed long before the end of this period. We hope also, before that time, to be well on the way to completing the expansion plan as well as further plans for other products. In effect, it is our intention to build up in this country, as rapidly as circumstances and the authorities concerned will permit, a self-contained and highly efficient automobile industry."

"We have also taken steps to implement other recommendations of the Tariff Commission, so far as they relate to us, amongst which is the extension of hire-purchase facilities, with the collaboration of our bankers and insurers, to the buyers of Tata-Mercedes-Benz vehicles."

Mr. Tata informed the meeting that the construction of the Steel Foundry—unquestionably the most

up-to-date in the country—had been virtually completed. The production of castings in the Alloy Iron Foundry for the Automobile Division was expected to commence according to schedule.

Referring to matters of personnel and labour, Mr. Tata said that it was disappointing to note that in the year under review there had been a tendency on the part of certain sections of workmen to take matters in their own hands. "Our men," observed Mr. Tata, "are amongst the highest paid in the engineering industry. They enjoy excellent conditions of work in a fine integrated factory equipped with the best machinery and equipment to which we are continuously adding." "The capital investment per employee in our Company," added Mr. Tata, "is probably the largest in the industry. Our employees have a fine and safe future before them, but it is time they realised that the Company's continued ability to pay high wages and provide the maximum of amenities and job security depends on high productivity which, in turn, requires that the workers put in a reasonable day's work."

"Although some progress has been made, we are not satisfied with our present standards of productivity which, in the case of the Locomotive Division, have been criticised in the past by the Tariff Commission as comparing unfavourably with those at Chittaranjan. We are pursuing our efforts to achieve a satisfactory labour output but these will be in vain unless our employees and their Union co-operate with us. I am sorry that such co-operation has shown signs of weakening in recent months rather than the opposite, and I particularly regret that, in spite of its responsible and mature leadership, the Union has recently aggravated the lack of discipline by instigating the workers to down tools for a few hours in each shift mainly, it seems, as a protest against their not having been consulted in regard to the quantum of bonus declared this year. This action was, I feel, particularly unfair as the figure of bonus proposed to be declared was in fact disclosed to the Union some time before the publication of the Report and Accounts and the total amount distributed is twice that of last year and proportionately much in excess of the corresponding increase in dividends."

"As our manufacturing programme develops and an increas-

August 17, 1957]

ing proportion of the contents of our products are made in our Works, our results will depend increasingly on the work and productivity of our own men. Nothing could bring greater benefit to them as well as to the Company and its shareholders than a sound and cordial relationship between Management and Labour based on mutual understanding, respect and co-operation. I sincerely hope, therefore, that our workers and their Union, with both of whom we are anxious to maintain the most cordial relations, will take a correct and responsible view of the situation and will co-operate with the Management in their own long-range interests as well as those of the nation."

The Chairman referred to the satisfactory progress of the Apprentice Training Scheme and of the arrangements with the Company's technical associates for imparting higher practical training in their factories abroad to the Company's personnel. "We attach the greatest importance," he said, "to the efficient recruitment and training of young engineers which we consider as a vital part of our programme of development. We are trying to make every young man who comes to us feel he is well looked after, his worth recognised and every chance given to him to equip himself, at our expense, for a successful, imaginative and rewarding career."

The Chairman expressed appreciation of the valuable services rendered by Mr. Y. N. Sukthankar and Mr. V. T. Dehejia as Directors of the Company. He also expressed appreciation of the services rendered by Dr. Heinrich Korschman, General Manager of the Company from October 1951 to the end of April 1957 when he retired for reasons of health and of Mr. F. G. S. Martin's ready compliance with the Management's request to take over again temporarily the responsibilities of the post of General Manager. The Chairman then expressed his thanks to his colleagues and to all the members of the staff for the year's excellent work.

"Since this speech was written," said Mr. Tata, "the labour situation at Jamshedpur has, I regret to say, taken a serious turn. On the 5th of August, a minor matter concerning the temporary transfer, many weeks earlier, of three men, without loss of pay, from one section of the Auto Division to another in accordance with established practice, was made the excuse for an illegal lightning strike which had obviously been well planned in advance, accompanied by violent behaviour towards German supervisors on the part of the ring leaders."

Mr. Tata said that the instigators had acted without the support or knowledge of the recognised Union. They refused to listen to Union representatives and insisted on being represented by a communist group.

Continuing, Mr. Tata said, "A serious aspect of the situation is that the trouble is clearly not an ordinary trade dispute, which could be settled in the normal way by negotiation with the Union concerned, but a deliberate attempt on the part of Communist leadership to disrupt operations at the Telco Works. There is evidence that this incident is part of a larger plan to disrupt the working of the whole of the industrial complex of Jamshedpur."

Mr. Tata observed that industrial strife formed a part of the traditional pattern of Communist action throughout the world, and that if they had failed up to now to achieve their ends in the Steel Works at Jamshedpur, it was because of the strength and success of the Tata Workers' Union and the good sense of the workers themselves.

A secondary but important issue to which Mr. Tata drew the attention of the shareholders was the situation in Jamshedpur and elsewhere of foreign technical staff brought to India to assist the country in the establishment and development of new industries. It was impossible, he said, to exaggerate the contribution made by these technicians to the successful establishment of the industry. The German supervisors at Jamshedpur had been greatly upset by the prevailing indiscipline and violence. It was pointed out by Mr. Tata that if discipline was not re-established and maintained, the Company's operations would be paralysed and the completion of the programme of progressive manufacture, essential to the full establishment of the Locomotive and Automobile industries and to the resulting saving of large amounts of foreign exchange, would be seriously delayed. Mr. Tata pointed out that this situation applied not only to Jamshedpur but to other Companies and centres in India where new equipment and processes are being introduced with the assistance of foreign experts.

Mr. Tata expressed the hope that the highest authorities in Central and State Governments, whose attention had been drawn to this matter, would take a firm stand in Jamshedpur and everywhere in India where the Congress Governments are in power and that they would make clear by word and action their determination to protect the industrial life of the country.

At the conclusion of his speech, Mr. Tata issued a note of warning and said that if this conspiracy to sabotage the country's progress was allowed to succeed at Jamshedpur and elsewhere, not only would the economic crisis looming before the country be aggravated but law and order and the peaceful and democratic development of the country would be imperilled.

(Note: This is not a report of the proceedings at the above Annual Meeting)

WORLD OF FINANCE

(Continued from page 317)

that we shall have to defer until the next week, when the return of the Scheduled Banks for August 9 will be available. Nevertheless, we may record it here that the cash subscriptions of Scheduled Banks, excluding the State Bank, have not been for a large amount. The Reserve Bank and the State Bank, between them, have tendered new cash for Rs 35 crores; and the balance of cash subscriptions is scarcely Rs 26 crores. The general opinion seems to be that the subscriptions of other Scheduled Banks have been for an amount around Rs 10 crores; and the general feeling is that the Reserve Bank authorities, not surprisingly, feel put out at the lack of enthusiasm from the banking system.

Obviously, the remaining Rs 16 crores is attributable to the Life Insurance Corporation, provident fund institutions and other entities. It is, we may add, this element of Rs 16 crores of subscriptions which will have exerted a pressure upon the Deposits of the banking system.

We would like to emphasise here that, even though cash subscription at Rs 61 crores exceeds the figure that we had earlier suggested at around Rs 50 crores, there is sufficient evidence to show that Government should be disappointed at the volume of new cash attracted by the 1957 New Loans. For, new cash, at Rs 61 crores, falls short of the Rs 68 crores which was taken credit for in the Budget for 1957-58. Moreover, even this level of Rs 61 crores was attainable only after the Reserve Bank had presumably put in Rs 15 crores.

So, it would not be incorrect to suggest that there are two sides to the medal representing the 1957 New Loans. One side presents a face of apparent success, as measured by the early closure of the lists and the full subscription of the loan. The other, however, may be said to consist of the apparent failure of the New Loan, as indicated by the lukewarm interest from Scheduled Banks and the need for the Reserve Bank to subscribe in cash for Rs 15 crores, so that the cash target could be fulfilled. The perplexing question that the Reserve Bank authorities will undoubtedly be in the process of examining is: Why have Scheduled Banks, in spite of their threefold affluence—rising Deposits, comfortable cash balance and declining Advances—been so conspicuously lacking in their enthusiasm and, therefore, their support for the 1957 New Loans?

The answer, of course, lies in the fact that the fundamental interest rates are awry. So long as the structure of interest rates continues to be utterly chaotic, we cannot expect either revived or strengthened Scheduled Banks' interest in gilt-edged or the framing and implementation by Government of a sound borrowing policy. For example, banks have to pay

slightly more than 4 per cent for their borrowing needs; and the return that they get on the medium term loan—the 4 per cent 1972, we may be sure, will hardly have appealed to Scheduled Banks—is less than the interest that they have to pay for their borrowings. We trust that what we have just said will not be misinterpreted as implying that we believe that the relative lukewarmness of Scheduled Banks is traceable to the interest offered on the New Loans being too low. Indeed, the yield is too high—but, as compared to the structure of interest rates, it is too low. This seems a paradoxical statement to make, and there is the danger that we may be misunderstood as suggesting that the only solution lies in maintaining an upward differential between the yield on the New Loan and interest rates. For, if such a policy were to be adopted, nowhere in sight is the extent to which interest rates might rise.

We would emphasise that the problem has to be tackled in its fundamentals. The fundamentals in this case would comprise the various interest rates that are tied in with banking. Traditionally and conventionally, the basis for such rates is supposed to be Bank Rate. India's gilt-edged difficulties arise because the Bank Rate is not, in such manner, the fundamental basis.

Elsewhere, and we would cite the instance of the United Kingdom, Bank Rate is properly the central point of the structure of interest rates. These are not, it is true, an officially laid down structure of interest rates. But, in the United Kingdom, the healthy practice of conventions followed by bankers has imbued the structure of interest rates with an orderliness that is admirable. On the basis of Bank Rate at 5 per cent, the other banking rates are as follows in the United Kingdom:

	%
Bank Rate	.. 5
Deposit Rates (Maximum)	
Bank	.. 3
Discount Houses	.. 3
Money	
Day to day	.. 3½—3¾
Short periods	.. 3¾
Treasury Bills	
2 months	.. 3 13/16
3 months	.. 3¾
Discount Rates	
Bank Bills:	
60 days	.. 4—4½
3 months	.. 4—4½
4 months	.. 4—4½
6 months	.. 4½—4¾
Fine Trade Bills:	
3 months	.. 5½—6
4 months	.. 5½—6
6 months	.. 5½—6½

Where convention is unavailing, because the banking system cannot or is not willing to act in concert, there is all too clearly the need for official initiative to ensure normalcy and orderliness. Here, we have the example of Australia,

where the maxima for rates paid by banks as well as the interest rates charged on Advances are prescribed by the monetary authorities. In our view, there is the inescapable need for India to adopt the example either of Britain or Australia. That is to say, it is only if the banking system fails of itself to institute the voluntary measures necessary to vouchsafe a coherent pattern of interest rates, that the Reserve Bank should, in discharge of its responsibilities and duties, exercise such greater regulation over the banking system by prescribing minima and maxima for rates.

We would like to amplify our earlier remark that the false solution is for the central banking institution to effect this correction in interest rates by steadily increasing the yield on New Loan issues. For, what would happen then is that each increase in yield offered would automatically bring the then existing interest rates into conformity and would therefore raise the cost of borrowings for banks. Banks, paying more for their money, would seek to make good the higher borrowing costs by earning more; and they would do so, not by investment in a giltedged issue which offers a higher return, but by the more "reliable" method of increasing their Advances. Furthermore, by the very act of raising the yield on a New Loan, Government would have caused depreciation in the existing giltedged issues, and the banking system, faced with this depreciation in its holdings of giltedged, would merely have its reluctance for new giltedged investment fortified and reinforced.

While we would not hesitate to say that we think that the Scheduled Banks have, as it were, "let down" the Government, in so far as they have in recent years diverted hardly any proportion at all of their accruing Deposits to new investments in giltedged, we suggest that it would be wise on the part of the monetary authorities to recognise that they themselves are responsible for such a state of affairs.

Let us also recognise that we can even less afford a dear money policy than America can. A successful borrowing policy may be said to be a sine qua non for implementing the Second Plan. A dear money policy induces the exactly opposite result. It is no good for Government to console themselves with the thought that the higher interest paid on Treasury Bills returns to them in the form of Reserve Bank profits. And it is an illusion to think that higher interest rates, in their applicability to the banking system, merely increase the earnings of banks, and will therefore return to Government; for, the higher interest rates go merely to satisfy the higher expenses that would arise.

All this, we are afraid, is a dreadfully vicious circle. We may soon find ourselves in a position as unenviable as that of America, where Government cannot borrow for a

term longer than two to four years. We have, perhaps, commented upon the New Loan in sharper tones than is our custom—but we would stress that the criticism does not stem from any desire to be destructive of official policy; on the contrary, it is derived from the sense of duty that we have, to urge, cajole and persuade the adoption of constructive suggestions.

The lesson, as we see it, to be drawn from the 1957 New Loans is unambiguous in that the subscription figures are a testament to the havoc that can be caused by chaotic interest rates; but that lesson will serve this country well, if as a result the monetary and banking authorities are provoked into taking swift action to restore orderliness and normalcy in the structure and pattern of interest rates. In broad terms, interest rates as we would like them to evolve—either as a result of conventions adopted by the banking system or as a consequence of directive action by the Reserve Bank—is roughly on the following lines:

Bank Rate ..	4
Inter bank call money ..	1½
In the slack season ..	2½
In the busy season ..	3½
Rates for term money ..	3½—3¾
Treasury Bill rate ..	2½
Yield on short dated ..	3
Government securities ..	3½
Yield on mediums ..	3½
Yield on medium longs ..	4
Yield on long dated ..	4
High grade debentures ..	5
High grade preference ..	6
(subject to tax)	
Blue chip equities ..	5 to 6
(free of tax)	

This structure that we have envisaged is for a start; and there must be dynamism in the sense of a progressive decline in interest rates.

Sharp Rise in Banks' Borrowings

The returns of the Reserve Bank for the week ended August 9 bear, as can be expected and already discussed, the impress of the Centre's New Loan for 1957.

The Central Government's Deposits have risen sharply by Rs 33.52 crores to Rs 85.48 crores. Moreover, balances of State Governments have been marked up by Rs 13.73 crores to Rs 60.98 crores. Apparently, this rise in the balances of State Governments is due to payments being made by the Central Government. Thus, it may be stated that Government's balances had improved during the week by over Rs 47 crores. Since cash subscriptions to the New Loan were for an amount of Rs 60.98 crores, it is evident that disbursements on Government account have been quite heavy, resulting in a net drain on resources to the tune of roughly Rs 14 crores.

The rise of Rs 14.81 crores to Rs 280.41 crores in Investments of the Reserve Bank is a measure of the cash subscriptions of the cen-

tral banking institution to the New Loan.

The carry over of the demand for money arising from month early disbursements has led to an increase in Active Notes to Rs 1516.10 crores from Rs 1499.99 crores. Rupee Coin went out into circulation for Rs 0.62 crores. Consequently, the Reserve Bank's cash has declined by Rs 17.23 crores to Rs 18.69 crores.

Month early disbursements, as well as the demands of the New Loans, have caused a substantial change in the figures relating to member banks. Banks' balances with the Reserve Bank are sharply lower by Rs 23.19 crores at Rs 85.13 crores; but, as confirmed by the statement of the State Bank for August 9, this is wholly attributable to the State Bank's drawing down of its balances, possibly in respect of its own cash subscriptions to the New Loan. However, member banks would also appear to have been compelled to seek large scale assistance from the Reserve Bank. For, the Reserve Bank's Other Loans and Advances have risen by the steep amount of Rs 33.03 crores to Rs 102.21 crores. Two thirds of this increase relates to advances taken by Scheduled Banks against Usance Bills, the relevant figure rising by Rs 22.50 crores to Rs 54.37 crores. While an accurate reading in respect of this change must await the return of the Scheduled Banks for the relevant week, it seems possible that the large volume of new borrowings was due more to the need to make good the drain in resources arising from non banking subscriptions to the New Loan, than to any need on the part of member banks for funds with which to invest in the New Loan.

Finally, Foreign Balances have again been sharply eaten into, a fall of Rs 8.81 crores having occurred during the week. We may add that our view, that the last week's steep decline in foreign balances was presumably because of the drawing by Burma of its loan from India in the form of sterling, has since been confirmed by the Finance Minister in Parliament.

The return of the State Bank for August 9 suggests that the New Loan subscriptions of the State Bank are in the environs of Rs 20 crores. For, cash balances have receded by Rs 20.42 crores to Rs 46.78 crores; indeed, the decline in cash and balances with the Reserve Bank is even sharper at Rs 22.73 crores. Since the State Bank would have obtained only a temporary receipt for such subscriptions, the investment portfolio is yet to reflect the size of the new investment. However, the magnitude of the increase in Other Assets—which have risen by Rs 19.52 crores to Rs 27.19 crores—possibly represents the volume of State Bank subscriptions. Deposits are lower by Rs 0.86 crores at Rs 327.43 crores; and the total of Advances shows a small rise of Rs 1.37 crores to Rs 170.98 crores. Lastly, there

is an intriguing decline of Rs 0.89 crores in Government securities; we may wonder whether this represents the extent of the 3 per cent Victory 1957 Loan that was held by the State Bank at the time when the securities were tendered for conversion.

The return of Scheduled Banks for August 2 records a decline of Rs 2.91 crores to Rs 1307.73 crores in Deposits. The decline in Deposits of other Scheduled Banks must have been even sharper since, in the relevant week, the State Bank increased its Deposits by Rs 2.76 crores. There is, once again, the ominous switch from Demand Liabilities to Time Liabilities—the former is lower by Rs 13.12 crores at Rs 728.80 crores, while the latter is placed Rs 10.21 crores higher at Rs 578.93 crores.

Cash balances have marked a further sharp increase of Rs 17.68 crores to Rs 186.40 crores. The bulk of this must be accounted for by the other Scheduled Banks, since the State Bank's increase in cash balances in that week was for Rs 6.02 crores. Finally, the total of Advances has marked another fall of Rs 1.50 crores to Rs 883.60 crores; and this is wholly on account of the State Bank, which had reported a decline in Advances of Rs 2.11 crores in the week.

WORLD OF COTTON

(Continued from page 325)

business. Local spinners sought small lots of quality cotton like Vijay, Surat and good-staple Jhari-lla. Mill enquiry was noticed of new crop Punjab, Berar and Khandesh varieties at lower levels.

NEW YORK COTTON MARKET

Prices on the New York market advanced initially following the publication of the first Government crop report of the season. The production figure was slightly more than 100,000 bales below trade expectations and induced some commission house and local buying. Dealings were only moderate on the advance with the trade awaiting the announcement on the 1957 loan rate. Latterly, all deliveries moved into new lows for the week under a flurry of New Orleans selling. Spot was quoted at 35.20 cents per pound.

CLOTH AND PIECEGOODS

The Bombay Piecegoods market presented a steady appearance. Dealers felt that, on account of the withdrawal of the strike, the offtake would broaden in the coming weeks. Demand was noticed in respect of almost all varieties of cloth. Enquiries emanated mainly from South Indian centres, Calcutta and Delhi. Mills continued to receive orders for forward delivery and several units are said to be booked till the end of October.

On the export front, conditions were slightly better. Fair business was reported done with East and West Africa, while demand from Burma was also good.

BHARAT NIDHI LIMITED

NOTICE

The Annual General Meeting of the shareholders of Bharat Nidhi Ltd., will be held at the Constitution Club, Curzon Road, New Delhi, on Wednesday, the 18th September, 1957, at 3.15 P.M. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year 1956.
2. To declare dividends on Preference and Ordinary Shares.
3. To elect a Director in the vacancy caused by the retirement by rotation of Shri B. P. Khaitan, who, being eligible, offers himself for re-election.
4. To elect a Director in the vacancy caused by the retirement by rotation of Shri Shital Prasad Jain, who, being eligible, offers himself for re-election.
5. To appoint Auditors for the current year and fix their remuneration. Messrs. Sodhbans & Co., Chartered Accountants, retiring Auditors, being eligible, offer themselves for re-election.
6. As special business to consider and if thought fit, to pass, with or without modification, the following resolution:—

"RESOLVED that the Books, Registers and other Documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Section 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10.30 A.M. and 12.30 P.M. (I.S.T.) on each business day except when the registers and books are closed under the provisions of the Companies Act, 1956 or the Articles of Association of the Company upon 24 hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected. Provided, however, that the Register required to be maintained under Section 307 of the Act, shall be open for inspection of the members of the Company between the times above mentioned only during the period prescribed by sub-section (5) of Section 307."

By Order of the Board

J. B. JAINI
Manager

New Delhi,
6th August, 1957.

EXPLANATORY NOTE:—

Approval of the shareholders is sought to specify the hours of inspection etc. as set out in the Resolution above which is allowed by The Companies Act, 1956.

DALMIA CEMENT (Bharat) LIMITED

DALMIAPURAM

CIRCULAR

Note:—This Circular is meant for only the Shareholders holding ORDINARY SHARES of Rs. 2/8/0 each, both old and new. However, for their information a copy each of this Circular is being sent to the other Shareholders also.

ALL THE SHAREHOLDERS ARE HEREBY INFORMED THAT:—

1. The Extra-Ordinary General Meeting of Shareholders held on 4th July, 1957 has passed the RESOLUTION mentioned in the notice of the meeting dated 1-6-1957. Thus, in short, the meeting has decided that the Ordinary Shares of Rs. 2/8/0 each be consolidated into Ordinary Shares of Rs. 10/- each and that the holders of the former Shares be issued certificates for Ordinary Shares of Rs. 10/- each on surrendering certificates for their Ordinary Shares of Rs. 2/8/0 each.
2. Certificates for Ordinary Shares of Rs. 10/- each in exchange of the certificates for the old Ordinary Shares of Rs. 2/8/0 each will be issued after 31st October, 1957. All the transfers of Ordinary Shares of Rs. 2/8/0 each received till 31-10-1957, will be entertained. Thereafter, if any transfer of Ordinary Shares of Rs. 2/8/0 each is received it will be returned and the transferee will have to obtain from his transferor a fresh transfer deed for the corresponding Ordinary Shares of Rs. 10/- each.
3. New Ordinary Shares of Rs. 2/8/0 each are also to be consolidated. The allottees of these Shares will therefore be issued, as stated in the Explanatory note to the notice of the aforesaid meeting of the Shareholders held on 4-7-1957, certificates for Ordinary Shares of Rs. 10/- each and not the Ordinary Shares of Rs. 2/8/0 each actually allotted. The certificates will be issued after 31-10-1957. As in the case of the old Shares, one Ordinary Share of Rs. 10/- will be given against four Ordinary Shares of Rs. 2/8/0 each allotted.
4. No transfer of the new Ordinary Shares of Rs. 2/8/0 each also will be effected after 31-10-1957. In the mean time transfers will be effected against the letter of allotment and the relative transfer deed duly executed and stamped.
5. If a Shareholder holds old Ordinary Shares of Rs. 2/8/0 each, which are not a multiple of four, or if the number of new Ordinary Shares of Rs. 2/8/0 each allotted to him is not such a multiple, he will be issued a fractional certificate representing one fourth of an Ordinary Share of Rs. 10/- in respect of each of the Shares in excess of the maximum possible multiple of four.
6. The fractional certificates will be renunciable and will have to be exchanged with Ordinary Shares of Rs. 10/- each. For the exchange either four fractional certificates or certificates in the number which is exact multiple of four, will have to be sent. Whosoever produces the fractional certificates, will be given one Ordinary Share of Rs. 10/- against each four fractional certificates. Till exchange of the fractional certificates with full share's dividend in respect of the fractional Shares, will be paid to those in whose names fractional certificates are issued.
7. In order that the Shareholders who are issued fractional certificates may not meet with any difficulty, the Managing Agents have agreed to buy from or sell to, the Shareholders fractional certificates at the rate of Rs. 2/8/0 per fractional certificate. No Shareholder will be able to buy from or sell to the Managing Agents more than THREE FRACTIONAL CERTIFICATES and the last date for that purpose will be 31-12-1957.
8. Shareholders are requested not to send certificates of their Ordinary Shares of Rs. 2/8/0 each for exchange with certificates for Ordinary Shares of Rs. 10/- each before 31-10-1957.
9. For exchanging with certificates for Ordinary Shares of Rs. 10/- each, the letters of allotment of the new Ordinary Shares of Rs. 2/8/0 each should also be sent after 31-10-1957.
10. As the Shareholders will appreciate, it will be more convenient to issue certi-

ificates for the new Preference Shares as well as Ordinary Shares at one and the same time. As such, the allotment letters for the new Preference Shares of Rs. 10/- each for the purpose of exchanging them with Share certificates should also be sent after 31-10-1957.

For DALMIA CEMENT (Bharat) LIMITED

P. T. HINDUJA
Registrar, Share Department

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials:

Tender No. CON/GM/29/67/WP/D/57-58 for supply of (1) 18,900 Nos. Bolts M.S. with nuts 1/2" dia x 12" long to CE's drawing No. 12659/1 and to IRS Specification M5-CI.II (Current); (2) 38,600 Nos. Washer triangular spiked 3" x 3/16" to CE's drawing No. 12659/1 and to IRS Specification M5-CI.II (Current); (3) 15,400 Nos. Holding down bolts without clip but with washer 7/8" dia x 10" long to CE's drawing No. 10880/1 and to IRS specification M5-CI.II (Current) and (4) 170 Sets Fishplates ordinary 90 RBS and 75 BN (RI, RO, LI, LO) to CE's drawing No. 11036 sheet No. 3 and to IRS Specification T.6-54.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms. Tenders will be opened on September 11, 1957 at 12 noon.

Earnest money of Rs 1,000/- is to be deposited with the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23 and the receipt obtained should be enclosed with the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1000/- with the Controller of Stores need not pay the earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S58 GENERAL MANAGER

CLIVE STREET GOSSIP

(Continued from page 322)

them when they tried to overwhelm you. It is this paradoxical combination that has made Indian history a cautionary tale of the consequences of lack of national integration. It is a combination that still has great potentiality for mischief. It is perhaps the only reservation I want to make, to an almost automatic assumption of a glorious future, for our country.

EAVESDROPPER

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Fortieth Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Wednesday, the 11th September, 1957 for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March 1957 and the Directors' and Auditors' Reports thereon.

2. To declare a dividend on the Ordinary Share Capital to be paid on or after the 24th September 1957, to those shareholders whose names appear in the Company's Register on the 11th September 1957 or to their mandatees.

3. To appoint Directors in place of those retiring. In this connection notice is hereby given that two Special Notices as defined in Section 190 of the Companies Act, 1956, have been received by the Company under Section 281 of that Act to move the following Resolutions at the meeting:—

"That Sir P. P. Ginwala be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

"That Dr. N. N. Law be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors and fix their remuneration.

5. As Special Business:

To consider and, if thought fit, to pass, with or without modification, the following Resolution of which Special Notice has been received:—

"That the age limit specified in Section 280 of the Companies Act, 1956, shall not apply to Mr. T. Leslie Martin and this meeting hereby approves any appointment of Mr. Martin as a director of the Company which may hereafter, whilst this Resolution remains in force, be made by the Managing Agents pursuant to Article 108 of the Company's Articles of Association."

The Share Registers and Transfer Books of the Company will be closed from the 4th September, 1957 to the 11th September, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
P. C. LIVERSIDGE,
Managing Director,
Calcutta.
17th August 1957.

Stock Exchanges

DULL AND LIFELESS

Watch-Dog Writes:

QUIET conditions have once again prevailed in stock markets and whatever activity there is, is mostly of a squaring-up nature. Sentiment is affected by reports of little prospects of relief in regard to provision of Wealth Tax on companies.

Operators are equally concerned about reports concerning scrapping of provision, linking foreign exchange resources to note issue and its possible effects abroad. No change in the market sentiment is expected until the findings of the Select Committee are published.

With activity further reduced by holiday influences, the Calcutta Stock Exchange witnessed a featureless session last week when prices receded to fresh lower levels on renewed offerings.

Activity on the Bombay Stock Exchange was mostly of a squaring-up nature and price movements were generally restricted.

On the Madras Stock Exchange, trading was generally dull and only small enquiry was noticed in all the counters.

Prices on Wall Street declined sharply and losses ranged from fractions to more than two dollars.

Calcutta

THE local Stock Exchange started the week on a quiet note and, in the absence of any support, prices receded to fresh lower levels on renewed offerings, although the closing tone was a shade better due to some enquiry at lower levels. In general, anxiety with regard to the report of the Select Committee on Wealth Tax, due to be submitted shortly, kept the operators in a more or less inactive mood. Anxiety was also shown about the foreign exchange position, especially in view of official talk about cutting the reserves to back paper currency. Doubts were also expressed whether it would be possible for companies to maintain their satisfactory working results in view of the import cuts and the deterioration in the labour situation.

With the result, there was renewed liquidation and selling pressure, resulting in prices seeking lower levels. The only relieving feature of trading was a slight recovery noticed in a few selected scrips at the close of the week, thanks to some investment support at the lower levels. The market finished the week minor gains on balance.

The Giltedged market continued to be in doldrums with pressure concentrated on 3 per cent Conversion Loan, which touched a new low of Rs 71.06 from Rs 71.86 and finished the week a shade better at Rs 71.25.

Bank shares ruled quietly steady. Allahabad came in for some business at Rs 367; Hindustan Commercial at Rs 8.25 to Rs 8.37; Hindustan Mercantile at Rs 9.75 to Rs 9.87 and Bank of Bikaner at Rs 18.

Jute shares continued to be a neglected counter where dealings were very few in view of the anxiety caused by the congestion in the Calcutta Port. National met with some speculative support upto Rs 18.00 from Rs 17.75 and Megna upto Rs 83 from Rs 82. Chitavalah were slightly better at Rs 12.12 against Rs 11.94, while Champandya were offered at as low as Rs 95 against Rs 98; Budge-Budge at Rs 70 against Rs 72 and Barnagore at Rs 73 against Rs 78.50. Coal shares were equally dull. Operators were awaiting the decision of the Coal Prices Revision Committee, before entering into fresh commitments. Thanks to the sustained speculative support, Burrakur were well maintained at Rs 22 till the close. Bengal showed a partial recovery to Rs 221.50 from Rs 219 with Western Bengal moving narrowly between Rs 5.47 and Rs 5.53. New Beerbhoom were, however, on offer at Rs 13.37 against Rs 13.44 and Central India at Rs 5.81 against Rs 6.00.

Textile scrips developed acute weakness in the complete absence of any support. The improvement in the offtake of piecegoods had no effect on sentiment as operators entertained fears with regard to earnings for the current year. Kesorams had sellers at Rs 12.94 to Rs 13.00 and Dunbar at Rs 130 against Rs 146.50. New Victoria were nominally quoted around Rs 1.61, while Jaysree met with some enquiry at Rs 6.37 to Rs 6.69.

The Tea section continued to record only few dealings with prices developing a sagging tendency. Apart from a feeling that the recent increase in export duty would aggravate the position of common and medium grade teas, the uncertain marketing outlook and the fears that overseas buyers would divert their attention to more competitive teas, due to shipping difficulties, also seemed to have scared shareholders.

Amongst the few dealings reported were Brooke Bond, being offered at Rs 18.62 against Rs 18.75 in the previous week; Bishnauth at Rs 20.19 against Rs 20.69; East India at Rs 21.43 against Rs 22.12; Methoni at Rs 19.25 against Rs 20.62; Patrakola at Rs 150 and Telipara at Rs 134 against Rs 141. The comparatively steady features were Hasimara having support upto Rs 23.00 from Rs 22.60; Jayshree upto Rs 9.50 from Rs 9.43 and Tukvar upto Rs 12 from Rs 11.87.

Sugar shares met with little or no interest on quieter advices from the commodity market. The only three steady features were Belsund having buyers upto Rs 10.81; Carew upto Rs 7.25 from Rs 7.19 and SKG upto Rs 9.81 from Rs 9.69.

The steady decline in prices, noticed till Tuesday, would not have been arrested, but for the lead given by Indian Irons or Bombay advices. Against the week-end closing of Rs 19.42, Indian Irons opened lower at Rs 19.36 and receded gradually to Rs 18.84 at which level some short-covering and replacement buying caused the scrip to recover again to Rs 19.20, finishing the week at Rs 19.10. In sympathy, New shares moved down at one time to Rs 18.00 from Rs 18.48, to improve at the close to Rs 18.06.

A very firm feature in this section were G. K. Williams, which met with consistent support from investors. The scrip, after forging ahead to Rs 29.00 from Rs 28.56, finished the week at Rs 28.81 on modest profit-taking. TEXMACO receded to Rs 17.20 from Rs 17.55; Richardson to Rs 11.81 from Rs 13.25 and Marshalls to Rs 5.19 from Rs 5.34, to close better at Rs 17.22; Rs 12.00 and Rs 5.25 respectively. Jessop moved between Rs 22.37 and Rs 22.50 and Britannia bet-

ween Rs 13.25 and Rs 13.56. Indian Standard Wagon remained very steady at Rs 176.

Although price movements in the Miscellaneous section were irregular, the undertone remained generally steady. Following were the price trends:—

	Week's High	Week's Low	Week's Closing
Titaghar	33.62	33.12	33.14
Orient	24.60	24.30	24.30

I. Copper	3.31	3.25	3.26
B. B. P.	2.77	2.72	2.75

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

At a Meeting of the Directors held on the 13th August 1957, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 26th September 1957, the payment of a final dividend for the year ended 31st March 1957, of 3% (free of Income Tax) on the issued Ordinary shares, payable on the 28th September 1957.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,37,94,641.

Two interim dividends, each of 2% (free of Income Tax) amounting in total to Rs. 60,64,000 in respect of the year to 31st March 1957, were paid on the 25th September 1956 and the 28th March 1957 respectively.

After paying the final dividend amounting to Rs. 45,48,000 and allocating Rs. 1,23,370 to Capital Reserves and Rs. 30,49,386 to Fixed Asset and Stock Replacement Reserve, the amount carried forward will be Rs. 25,04,159.

The Directors also declared a first interim dividend of 2% (free of Income Tax) in respect of the year to 31st March 1958, payable on the 28th September 1957.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 26th September 1957 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on the 28th September 1957. The share transfer books of the Company will be closed from the 9th September to the 26th September 1957, both days inclusive, and transfers received in order at the registered office of the Company up to the 7th September 1957 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,
J. R. BLAIKIE
Secretary

Virginia House,

Namaste, Bhai Sahib !

Can you spare us a minute, please? We would like to talk to you, Bhai Sahib, about an important topic—TEA; especially India's tea and, even more particularly, the tea you and your family drink.

Tea, as you know, is no ordinary harvest. You would have to visit gardens, factories, speak to our tea tasters and call on shops in towns and villages with our salesmen to understand this complex and fascinating business of producing and selling tea.

Yet tea is important to you—because you spend your hard-earned money on a packet of tea and you are entitled to judge whether you get a fair bargain.

Important to India because tea sold abroad provides money—Rs. 143 crores in 1956—to help the Government with its Five Year

Plans and the excise on tea provides still more money—Rs. 35 crores—for your welfare and your children's future.

You will see, Bhai Sahib, that we have kept ourselves till the last... Brooke Bond! We have a vital role to play in the tea industry and we believe you will find it interesting to learn all about us, too.

Issued by
Brooke Bond India Private Limited

Regular cargo service between INDIA-U.K.-CONTINENT and also INDIAN COASTAL service

Managing Agents: LIONEL EDWARDS (PRIVATE) LIMITED, "INDIA STEAMSHIP HOUSE," CALCUTTA

From a Neighbour

If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city.

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers

and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Good Wishes to Rourkela

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

THE TATA IRON AND STEEL COMPANY LIMITED

For the Investor

The IISCO Accounts

Investment Gossip:

IT is a pleasure to be able to review the latest accounts of the Indian Iron and Steel Company Limited; but, of course, this our pleasure is circumscribed by the fact that Government found themselves "unable" to agree to an increase in dividend, for which the directors had again approached the Government.

So, before we take up for study the accounts as such for 1956-57, it would be appropriate if we noted a few general remarks on this aspect of the company's working. I would like again to stress what I had written last week: and that is, that Government have been strangely shortsighted in their decision on the dividend. Indeed, I may go so far as to say that their attitude reveals a care for the naya paisa at the expense, unfortunately, of the rupee.

The ostensible reason given by Government, contained in a letter which has been published together with the accounts, is that, "in view of the difficult position with regard to financial resources in general", and also because of "the necessity for conserving all the available resources until the expansion schemes are completed", Government think it inadvisable to permit an increase in the dividend.

Apart from the justice of the case to which I shall refer shortly, I do not think it has been clearly understood that the arbitrary pegging of the dividend has had an impact that is not restricted to Indian Iron shares alone, but which has extended to the investment climate generally. When Government themselves are paying more for the money they borrow, it stands to reason that the structure of interest rates all along the line should reorient itself one step higher on the ladder; and that means that share prices will be on the basis of a slightly higher yield than has obtained until then. If, in this light, the dividend is "frozen" should it be any wonder that Indian Irons slipped down in share quotations? And, if we remember that Indian Irons are the key scrip,

not only in Lyons Range but in Dalal Street, is it any matter of surprise that share values generally should be depressed?

At a time when much is being made of the necessity for the implementation of Plan targets, it would indeed be a regrettable development if the evolving conditions make it difficult for capital to be raised in the open market; and this, I am afraid, is exactly what is happening and what might be aggravated—if Government do not take the corrective steps.

What is most unfortunate about the whole matter is that the amount at stake, to influence the market either way, is scarcely Rs 13 lakhs. That is all that would have been necessary, by way of an increase in the distribution, to galvanise the morale of the investor.

This Rs 13 lakhs compares with sales of over Rs 27 crores; with net profits of over Rs 9.4 crores; with labour's emoluments of over Rs 7½ crores; with a tax liability of nearly Rs 3½ crores. The one figure is in lakhs; all the others involve crores.

One finds it difficult to believe that an increase in the dividend by 25 nP would have placed a great strain on the company's resources; and Government seem to find it difficult to appreciate that dividend freezing will inevitably adversely affect the investment climate.

Then there is the equity and justice of the affair. As the detailed study of the balancesheet figures will show, labour has immediately and substantially benefited from IISCO's higher earnings; the managerial remuneration has also shown an increase although, in the latest year, it is somewhat lower; Government find their revenues rising in geometrical proportion; and, with the system of retention prices, the company is besides called upon to subsidise imported steel, so that the consumer may derive an advantage. If IISCO is, it is because of the shareholders who had put in their

money originally; and, if IISCO is today earning much more, it is because profits, which could have been distributed as dividend, have been retained and ploughed back. So, the shareholder is the one unfortunate who is asked to be satisfied with the status quo.

True, there is the consideration of the "growth" characteristics of his shareholding. At some stage in the future, when all debts have been paid off—and always provided that Government do not, at that time, choose to nationalise steel in this country—the shareholder will be supremely well off. But, for the investor, as for any other individual, current earning—or the yield he gets on his shareholding—must bear some reasonable proportion to his stake. And what troubles the investor more than anything else is the anxiety that even the "growth" may be siphoned off by, say, higher rates of capital gains tax and the like, by the time that the shareholding really appreciates in value.

I cannot sufficiently emphasise the need for Government to re-frame what I might call their steel dividend policy; and my suggestion is: permit a good and handsome interim dividend for 1957-58.

Sales continue to record an upward trend. As against Rs 26.99 crores in 1955-56, they have increased to Rs 27.12 crores during the year under review. The sizeable improvement in sales that has taken place in recent years will be evident if one looks at the relevant figures for the years 1953-54 and 1954-55. From only Rs 17.36 crores during the former year, sales had jumped to Rs 24.55 during the latter year.

The net profit, before tax, depreciation and transfers to Reserves, is, strangely enough, almost the same as in the previous year at Rs 9.43 crores. This compares with Rs 9.45 in 1955-56, Rs 8.33 crores in 1954-55 and Rs 4.48 crores in 1953-54.

There has been a substantial increase in the provision for taxation. As against Rs 2.88 crores in 1955-56, the relevant figure for the period under review has gone up to Rs 3.19 crores. The provision under this head was Rs 2.25 crores and Rs 61 lakhs in the years 1954-55 and 1953-54 respectively.

As increase is also noticeable in the provision for Depreciation. In the latest year, depreciation is

higher at Rs 1.35 crores and compares with Rs 1.20 crores in 1955-56. While in the previous year (1954-55) the figure was the same, it stood at only Rs 80 lakhs in 1953-54.

Turning to the Balance sheet, it is found that the paid up capital is placed at Rs 7.88 crores with Rs 5.18 crores accounted for by ordinary shares. The share premium account is placed at Rs 61.45 lakhs. A new heading makes its appearance, termed Ordinary Share Issue Account which is placed at Rs 22,42,169. This represents the net amount of application monies received upto the 31st March 1957 against the offer of 51,83,708 further ordinary shares offered for subscription at a price of Rs 13-8 per share to the holders of the existing Ordinary shares at the 11th March 1957. The offer was made on 12th March 1957, and remained open over the company's year end. Accordingly, the balance sheet for 1956-57 has taken into account the net amount of application monies received upto the 31st March 1957. The offer has since been oversubscribed.

Perhaps the most interesting entry in the entire Balance sheet is that found against Capital work in progress. The figure in the current balance sheet is placed at Rs 11.24 crores as against only Rs 3.92 crores in the previous year. Though the 1955-56 figure looks small as compared with the present one, it will be seen that it is more than three times higher than in 1953-54 when it was placed at Rs 1.29 crores. A major portion of the amount is under 1953 Extension, which absorbs Rs 10.57 crores. The directors have pointed out in their report that good progress continues to be made on the 1953 Extension programme. Provided adequate increased supplies of coal are assured, the first additional blast furnace is expected to be commissioned by the end of 1957.

Stores are placed at Rs 4.57 crores as against Rs 4.22 crores in 1955-56. Stocks and work-in-progress are substantially higher at Rs 4.08 crores as compared with Rs 3.05 crores. Outstandings are slightly lower at Rs 2.43 crores.

Loans and advances are again substantially higher at Rs 12.09 crores against Rs 6.80 crores in the previous year. It may be pointed out here that this item last year recorded a very steep rise from Rs 80.61 lakhs in 1954-55.

(Continued on page 375)

HIGHLIGHTS

Where did the money come from? Well, partly from the Scheduled Banks, other than the State Bank. Then, there was the State Bank which, thanks to its "windfall" Deposits, had a lot of spare cash.

Third, you might say that the Life Insurance Corporation held itself in readiness with, as the Spaniard might put it, mucho dinero.

Fourth, we should think that the Reserve Bank acted as agent on behalf of some of the affluent State Governments.

There were, next, the others—the provident fund institutions, the municipal bodies, etc.

All in all, they mustered Rs 60 crores in cash; and, on the promise of Government to repay in 1967 (or 1972, depending on the securities subscribed for), money has flowed in for the New Loan, 1957.

But was the New Loan a success? Over the last year, Scheduled Banks' Deposits have risen by, say, Rs 200 crores.

In the past twelve months, disinvestment by Scheduled Banks in Government securities was for, say, Rs 30 crores.

New money for the New Loan from Scheduled Banks: leaving out the State Bank, hardly Rs 10 crores.

It is an open secret that Scheduled Banks attach more importance to the "stability" of their investments than to the interest they might earn.

The fear of capital depreciation, therefore, weighs more than any cupidity aroused by the lure of a higher interest.

These are matters which we, for the present, would leave to the turn over in his own mind.

Meantime, World of Finance this week provides a more detailed factual assessment of the 1957 New Loan.

Investment Notes :

On the Calcutta Stock Exchange, Jute shares, which remained neglected for long, have now taken a turn for the better, thanks to the recommendations made by the Select Committee on the Wealth Tax Bill. Howrah's have improved to Rs 16.37 from a low of Rs 15.18; National to Rs 17.65 from Rs 17.50; Megna to Rs 85 from Rs 82; Bally to Rs 141 from Rs 125 and Barnagore to Rs 82 from Rs 73.

That the jute industry has been doing rather badly for sometime past is a known fact. On account of the difficulty in doing simultaneous business at a profit, many units have not been able to report satisfactory earnings. As a matter of fact, a good number have worked at a loss and only nominal dividends have been paid on the Ordinary capital out of Reserve Funds. There is a general feeling that those mills, who have incurred losses for any particular period, will not be liable to the Wealth Tax and, as a result, the working results of such mills will be better.

The shares of Fort William Jute are quoted around Rs 18.12. This company has recommended a dividend of 15 per cent on the increased capital for the year ended 31-3-1957 as against 17½ per cent on the old capital. In this connection, it would be recalled that, in January 1956, the company increased its capital by the issue of bonus shares for Rs 7 lakhs. According to the directors' report, the major portion of the scheme to equip the mill's with modern machinery upto spinning section with high-speed frames has been completed.

The Gwallor Rayon Silk Manufacturing Company is, it is learnt, has decided to give a rebate of two annas per pound on all contracts entered into from August 1, 1957 until the end of the year, provided the goods against the same are positively lifted and paid for within this period.

The National Bank of India Ltd., Calcutta, has received the following advice from its Head Office in London:—

"At the Meeting of the Board of Directors held on 13th instant an interim dividend was declared for the year 1957 of 7½ per cent less income tax at 8/6d. in the £, payable on and after 19th September."

£R\$**Investment Briefs :**

Mysore Chemical Manufacturers maintained the dividend at 20 per cent for the year ended 31-3-1957.

Madras Safe Deposit Company has raised the dividend from 4 1/16 to 5 per cent for the year ended 30th June 1957.

Coorg Tea has recommended a final dividend of 20 per cent, making 30 per cent for the year ended 31-3-1957 as against the same in the previous year.

Balamadies Plantations have raised the dividend from 10 to 12½ per cent for the year ended 31-5-1957.

Ashok Leyland**Investment Special :**

We invite the attention of our readers to the attractive new offer of equity shares by Ashok Leyland Limited. The relevant prospectus, which is published elsewhere in this issue, gives full information regarding the terms and conditions of the offer to the public of 988,688 equity shares of the nominal value of Rs 49,43,440 at par payable in full at the rate of Rs 5 per share with application which should be for a minimum of 100 shares.

The new shares will rank for dividend and voting rights and for all purposes pari passu with the existing shares except that they will be entitled to participate in any dividend declared for the year 1957 at the next Annual General Meeting of the company or by way of interim dividend or by way of final dividend paid for the year 1957 in respect of the new shares shall be in proportion to the length of time, being part of the year 1957 during which the capital thereon is paid up and in proportion to the capital respectively paid up thereon and will thereafter rank pari passu as to dividends and in every respect with the existing shares. The company paid a dividend of 6 per cent free of tax on its equity capital for 1956.

The authorised capital of the company is Rs 2 crores. With the subscribed and paid up capital as on the date of this offer at Rs 98,27,390, all in equity shares of Rs 5 each. The company is now offering for subscription 20,34,522 equity shares of Rs 5 each totalling Rs 1,01,72,610. Of this amount, the company's foreign collaborators, Leyland Motors Limited of Leyland, Lancashire, have agreed to take shares of the nominal value of Rs 52,29,170. The total nominal amount of the present issue thus available for subscription to the public in India is Rs 49,43,440.

While Leylands were prepared to subscribe to the new issue on the basis of their quota, the remaining shareholders could not put up the required sums. As a result, it has been considered justifiable to invite public subscriptions. As the foreign exchange content of the extent of expansion is expected to be more than earlier estimates, the Central Government have agreed to increase the share of Leyland Motors, UK, in the issued capital to 49 per cent from 40 per cent, which was the figure till recently stipulated. This gives a value of Rs 52.29 lakhs for Leylands holdings.

The amount of Rs 1.02 crores, which is expected to be raised by the new issue is to be utilised to the extent of Rs 50 lakhs on the construction of the balance of the building programme and the purchase of additional factory equipment, Rs 25 lakhs toward repayment of monies borrowed and

Rs 23 lakhs toward working capital. The remaining sum will be utilised for meeting new expenses, contingencies, etc.

The company is raising the additional capital for financing its expansion programme which has as target the production of a total of 2,500 heavy duty commercial vehicles per annum. The present capacity is about 1,000 vehicles per annum. The growing popularity of Ashok Leyland vehicles with transport operators in India—sales of Comet trucks, which were 159 in 1953, are expected to reach 1,000 in 1957—has encouraged the company to embark upon its expansion plan with confidence. In this decision, it has presumably been influenced by the bright prospects for heavy duty vehicles sales in India in the immediate future. With the nation presently engaged in achieving the big targets set under the Second Plan, the demand for transport facilities has already reached huge proportions. It is expected that the pressure from men and material awaiting transport will increase further in the next two or three years when the development schemes get into full stride. It has become long evident that the Railways, even after all their expansion programmes are completed, will not be able to cater to the entire transport needs of the nation. A substantial portion of the goods has necessarily to be moved by road, if transport bottlenecks are to be avoided. Heavy duty commercial vehicles in large numbers will, therefore, be required if road transport is to be enabled to play its vital role.

The important place occupied by Ashok Leyland in the vital sphere of transport will become evident when it is noted that this company has been assigned by the Government of India the role of manufacturing heavy duty commercial vehicles.

A significant feature of Ashok Leyland's expansion programme is that it is almost completely free from the uncertainties created by the present acute shortage of foreign exchange in our country. For, the cost of imported capital equipment necessary for the expansion programme is expected to be met by the issue of equity shares of the company to Leyland Motors Ltd., UK.

It is explained that it will be the endeavour of Ashok Leyland to establish, over a period and beginning with the Leyland "Comet" chassis designed for gross loads upto 12 tons, the manufacture of a range of commercial vehicles comparable to the range offered by Leyland Motors Limited in the UK and including the manufacture of the Leyland range of diesel engines.

It is also explained that, in due course, it will be the company's object "not only to produce for

the Indian market but also to export to overseas markets."

The company is assured of its requisite resources as the whole issue is underwritten by the Industrial Credit and Investment Corporation of India Limited.

£R\$**Investment Forum :**

Reader H. L. Harrison Writes:

In your issue of the 17th August, 1957 under the heading of For the Investor, you produced a very interesting article on what the Central Government should do to rehabilitate Stock & Share values.

In column 3 of this essay you give four recommendations. The first reads—

1. "Restoration of normalcy in the pattern of interest rates;" but, you do not show how this can be done.

I am writing from my memory (your files will doubtless have the actual figures) and you will find that, between 1929 and 1931, the Government of India Loans (6 per cent tax free 1930-31-32) were all standing at a discount and Treasury Bills were yielding 7½ per cent. The 3½ per cent old Government Paper was quoted under Rs 50.

These figures were not peculiar to India, as there was a world depression following the Wall Street collapse.

After that date, many Governments acquired control of the money markets and, in 1946, the Central Government of India reduced their borrowing rates to 2½ per cent repayable in 1961. This was going too far in the opposite direction, and rates have been slowly climbing since that date. We are now on a 4 per cent basis; but, if the USA Federal Government have to refund 75 per cent of their outstanding debts in the next 6 years, it stands to reason that borrowing rates MUST GO HIGHER. Therefore, as you rightly appeal to reason, shares to be attractive will have to show higher returns.

On the other hand, inflation should work in the opposite direction: namely, to higher share values.

Your article does NOT state how a Government can restore normalcy in the pattern of interest rates.

Can it be done NOW?

★

DISCHARGE OF 3 PER CENT VICTORY LOAN—1957.

The outstanding balance of the 3 per cent Victory Loan, 1957, is repayable on September 1, 1957, and no interest will accrue thereon from that date. As, however, September 1, 1957, falls on a Sunday, the discharge value will be paid on the preceding working day, viz., August 31, 1957. To facilitate discharge of the loan on the due date, holders may tender their securities at the Public Debt Office, Treasury or branch of the State Bank of India at which they are enforced/registered for payment of interest on or after August 21, 1957. Full details of the procedure for obtaining discharge value can be obtained on application at any of the above offices.

Mettur Chemical & Industrial Corp., Maintains Dividend**Balance-Sheet Reviews :**

THE Mettur Chemical & Industrial Corporation Limited has reported excellent working results for the year ended 31st March, 1957 despite the power-cut and certain other difficulties experienced by the company. Sales have shown a substantial rise to Rs 36.89 lakhs from Rs 87.28 lakhs, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 19,17,701 as against Rs 16,11,677 in the previous year. Apart from maintaining the General Reserve at Rs 60,500, the Taxation amount has been raised to Rs 7.00 lakhs from Rs 4.75 lakhs. A sum of Rs 6.31 lakhs (Rs 6.51 lakhs) is provided for Depreciation. The directors have recommended a final dividend of 7½ per cent, same as in the previous year.

According to the directors' report, the output of Caustic Soda, during the year under review, was only 3,771 tons as against 4,332 tons, mainly due to power-cut. The production of Stable Bleaching Powder was, however, kept up as high as possible, at 4,093 tons. The combined production of the main products—Caustic Soda, Bleaching Powder and Liquid Chlorine—was higher at 8,762 tons, showing an increase of 218 tons over 1955-56. The production of Vanaspathi and vegetable oils was lower at 1,642 tons as against 1,935 tons on account of the high prices prevailing for raw oil with the partial failure of groundnut and sesame crops.

The balance of Rs 1.75 lakhs in the second series Debentures, due to the IFC, was fully paid off, in addition to the instalment of Rs 1 lakh due on the first series debentures.

The working of the Travancore-Cochin Chemicals Private Limited, Alwaye, was quite satisfactory. The directors expect to realise the same dividend of 5 per cent for this year. Also, for the first time, they expect an yield on their investments in the Mount Mettur Pharmaceuticals Limited, Madras, which has now reached the stage of declaring a dividend.

£R\$**Kettlewell Bullen**

Despite a decline in earnings, Kettlewell Bullen & Company Limited has raised the dividend on the Ordinary shares from Rs 4 to Rs 5 share for the year ended 31st December, 1956. The item 'By Commission' is shown at only Rs 7.60 lakhs as against Rs 11.55 lakhs and 'Salaries and wages' at Rs 35,086 against Rs 1.57 lakhs. The net profit, before providing for Depreciation and Taxation, amounts to only Rs 10,56,129 as against Rs 12,96,889 in the previous year.

In respect of allocations to Funds, a sum of Rs 1.00 lakh is set apart for Investment Reserve, while no provision is made for General Re-

serve against Rs 2 lakhs previously. The Depreciation amount has been reduced from Rs 21,952 to Rs 10,775 and Taxation from Rs 7.40 lakhs to Rs 5.90 lakhs.

£R\$**More Tea Results**

Murphulani and Engo Tea Companies, in Andrew Yule group, and Guelle and Teesta Valley, in Davenport group, have presented the reports for 1956. Thanks to a substantial increase in the net profit from Rs 2,58,740 to Rs 4,15,851, the Murphulani (Assam) Tea Company has been able to raise the dividend on the Ordinary shares from Rs 1.25 to Rs 2.00 and on the Preferred Ordinary shares from Rs 1.75 to Rs 2.50. The Depreciation amount has been raised to Rs 27,201 from Rs 16,277; Taxation to Rs 1.75 lakhs from Rs 1.19 lakhs and General Reserve to Rs 1.50 lakhs from one lakh. The crop for the year is slightly higher at 5,244 maunds against 5,162 maunds in 1955 and the average price realised at Rs 3.05 against Rs 2.47 per pound. Estimates for the current year provide for a crop of 5,500 maunds.

The Engo Tea Company has incurred a loss of Rs 13,178 as against a loss of Rs 48,282 in 1955. The amount set aside for Depreciation is higher at Rs 27,682 against Rs 19,030. The debit balance carried forward to next year is Rs 30,748. The crop amounts to only 2,454 against 2,659 maunds while the average price realised is slightly higher at Rs 1.96 against Rs 1.67 per pound. Estimates for the current year provide for a crop of 3,000 maunds.

In Davenport group, Guelle Tea Company has reported satisfactory working results. Although the crop is lower at 2,852 maunds as against 2,947 maunds, the average price realised per pound is higher at Rs 3.01 against Rs 2.11. With the result, the net profit, before providing for Depreciation and Taxation, amounts to Rs 51,689 as against a loss of Rs 18,361 in the previous year. The sum set aside for Depreciation is lowered from Rs 44,454 to Rs 22,273. The dividend is passed over again. The debit balance carried forward to next year is Rs 5,922.

Thanks to a higher crop of 4,828 maunds against 4,506 maunds and the rise in the average price from Rs 2.62 to Rs 3.17, the Teesta Valley Tea Company, in the same management, has reported excellent results. The net profit amounts to as much as Rs 3,43,463 as against only Rs 1,34,313 in the previous year. Apart from setting aside a sum of Rs 1.00 lakh for Renewals and Additions Reserve, the Depreciation amount is raised to Rs 45,085 from Rs 35,225 and Taxation to Rs 1.00 lakh from Rs 38,755. Even after these increased allocations, the directors have found it possible to raise the dividend from 15 to 25 per cent for the year.

Birla Jute

The Birla Jute Manufacturing Company Limited has maintained the dividend at Re 1 per share for the year ended 31st March, 1957, though the gross profit is lower. In the Jute Mills section, the profit has declined to Rs 13.16 lakhs from Rs 29.44 lakhs after providing a sum of Rs 2.88 lakhs (Rs 3.30 lakhs) for Depreciation. Sales are slightly higher at Rs 3.95 crores as against Rs 3.87 crores.

In the Calcium Carbide department, the profit amounts to Rs 1.96 lakhs after providing a sum of Rs 4.18 lakhs for Depreciation. In the previous year, there was a loss of Rs 27,701 after depreciation provision of Rs 5.14 lakhs.

In the Staple-Fibre section, the loss amounts to Rs 99,315 after providing for Depreciation of Rs 96,867. Thus, the overall net profit, after providing Depreciation of Rs 8.03 lakhs in all the three departments and taxation provision of Rs 4 lakhs as against Rs 9 lakhs, comes to Rs 12.77 lakhs as against Rs 12.44 lakhs.

With regard to the trading conditions, the directors have pointed out that it was a difficult year for the jute industry. The capacity of the Carbide furnace is increased from 10 to 25 tons per day. The new Carbide furnace with larger capacity will go into production by early 1959. The Staple-Fibre spinning plant went into production only in March 1957. The Cement plant at Satna is expected to go into production from July next year.

£R\$**India Linoleums**

India Linoleums Limited is a subsidiary of Birla Jute Manufacturing Company. This company has fared well during the year ended 31st March, 1957. After providing Depreciation of Rs 4.99 lakhs; Rs 52,332 for Doubtful Debts Reserve and after adjusting the debit balance of Rs 93,804, the profit of Rs 25,139 is carried forward. Sales have fetched Rs 22.91 lakhs.

Prospects are good in view of the ban on imports of Linoleum floor-cloth.

£R\$**Karanpura Development**

As was announced in the last report, the litigation in connection with the suit, instituted against the company by the Raja of Ramgarh, has now been brought to a successful conclusion. But, the cost of a severe drain on the company's resources, due to legal expenses, is largely responsible for the loss incurred by the company during the year ended 31st December, 1956.

The accounts reveal a loss of Rs 52,343 as against a net profit of Rs 1,681 in the previous year after providing a sum of Rs 4,009 (Rs 5,000) for Depreciation. After transferring Rs 2.00 lakhs from General Reserve, the taxation provision is raised to Rs 1.60 lakhs from only Rs 573. The dividend is

passed over against 10 per cent. Dividend, in the previous year, was paid after transferring a sum of Rs 3.00 lakhs from General Reserve.

£R\$**Puthutotam Estates**

Puthutotam Estates have reported a sharp decline in earnings for the year ended 31st March, 1957, mainly as a result of higher working expenses. The net profit amounts to only Rs 4.39 lakhs as against as much as Rs 6.86 lakhs in the previous year. The amount set aside to Depreciation is Rs 44,279 (Rs 34,123) and Taxation Rs 1.75 lakhs (Rs 2.45 lakhs). It has not been possible to transfer any sum to General Reserve against Rs 1.5 lakhs previously. The Ordinary dividend is, however, maintained at 10 per cent.

The outturn of tea is 2.43 lakh pounds, as against the estimate of 2.5 lakh pounds. The average realised is Rs 1-13-7 per pound. The Coffee crop harvested is 177.2 tons (Arabica) and 45.75 tons. (Robusta). The Cardamom crop is much higher at 27,614 pounds.

£R\$**Cauvery Spinning & Weaving Mills Ltd.**

The Cauvery Spinning and Weaving Mills Ltd. has been able to do better in spite of the fact that working for the year ended March 31, 1957 was adversely affected by serious labour trouble such as strikes and lockouts, which necessitated the complete closure of the mills in the first quarter. The larger profits for 1956-57 have been made possible by the coming into production of an additional 7,200 spindles from September last year. It is also indicated that the prices realised for yarn were remunerative. The company has an expansion programme under implementation and it is expected that an additional 6,400 spindles will be working before the end of next month, when the full complement will be 31,200 spindles.

The net profit, before providing for taxation and depreciation, for the year under reference was appreciably higher at Rs 10,73,604 against Rs 5,12,595 for 1955-56. The amount set aside for depreciation is higher at Rs 3,95,340 against Rs 2,43,920. As a result, the provision for taxation is very much higher at Rs 2.2 lakhs (Rs 5,000). Even so, it has been possible to transfer to the Debenture Redemption Reserve as much as Rs 3 lakhs against Rs 1 lakh. A higher dividend of 9 per cent against 7½ per cent previously is to be paid. The distribution for 1954-55 was 6½ per cent. The amount carried forward is higher at Rs 96,659 against Rs 58,798 brought in.

£R\$**Sri Ranga Vilas**

Like the Pankaja Mills, there would seem to be other units too in South India which have not been able to function properly on account

of the rather poor efficiency of the existing plant and machinery. In these cases, modernisation and replacement of worn-out machinery have been long overdue. But, for some reason or other, the necessary capital expenditure has not been incurred. In the case of Sri Ranga Vilas Ginning, Spinning and Weaving Mills Ltd, it is not as if the requisite resources were not available, though it may be necessary, like other medium sized units, to raise additional capital to meet the balance of requirements.

With the result, in the year ended December 31, 1956, it has not been possible for the company to earn sizable profits even though the general experience of the industry has been satisfactory. The net profit, before providing for taxation and depreciation, amounted to Rs 4,00,984 against Rs 6,22,030 for 1955. The provision for depreciation is slightly higher at Rs 2,00,024 (Rs 1,61,079). But it has not been possible to transfer any amount to the Reserves against Rs 2 lakhs formerly to the Machinery Replacement Reserve. Even so, the ordinary dividend has had to be reduced to 14 per cent from 16 per cent previously. The amount carried forward also is lower at Rs 12,133 against Rs 21,523 brought in. It is stated in the Directors' Report that the old machineries are being reconditioned and that, "due to condition of the machineries, the company could not earn better profits." The present installed capacity is 36,368 spindles of which 4,664 are new spindles. The number of looms is 88.

The paid up capital of the company is Rs 15.03 lakhs, while Reserves amount to Rs 16.45 lakhs. The net block stands at Rs 23.24 lakhs.

₹₹₹

Pullangode Rubber

After the increase in supertax rates on agricultural incomes in the Kerala State, there has been anxiety to know the exact incidence on the profits of plantations located in that State. It is agreed that the revision in the proposed rates is substantial. Estates having profits over Rs 5 lakhs would be adversely affected. The reduction in the dividend of Pullangode Rubber and Produce Company

Limited to 5 per cent for the year ended March 31, 1957 from 15 per cent for the previous year came as a disappointment to the stock market. It is true that the company issued additional capital in the form of ordinary shares at par toward the end of last year, in the proportion of one new ordinary share for every two shares held, and the dividend of 5 per cent on the increased capital might be said to be the equivalent of 7½ per cent on the old capital. But the halving of the dividend, all the same, has led to the feeling that planting shares might not continue to be favoured as before. There has recently been a switchover to industrial securities.

The net profit, before providing for taxation and depreciation, of Pullangode, for the year under reference, was Rs 3,22,861 against Rs 3,49,566 for 1955-56. The amount set aside to depreciation is Rs 34,202 (Rs 27,008), while the provision for taxation was very much higher at Rs 1,44,620 (Rs 1,17,100) even with lower profits. The provision for rubber replanting is Rs 41,738 (Rs 42,830). After paying the ordinary dividend referred to above, the amount carried forward is Rs 89,503 against Rs 79,202 brought in. The rubber crop realised was lower at 6.12 lakh lbs against 6.28 lakh lbs for the previous year and the all-in-cost was sharply higher at 126.80 cents per lb against 114.76 cents per lb. On the other hand, the average price realised was only slightly higher at 146.84 cents against 145.57 cents per lb.

₹₹₹

Bonus Issues

The announcement of bonus issues by Cochin Malabar and Malankara Produce has led to the expectations that other plantation companies also might follow suit. In the case of coffee and rubber companies particularly, available resources can be capitalised easily as there is no need to pay penal taxation in respect of bonus issues. Even tea companies are thinking in terms of issuing bonus shares. It is reported that Periakaramalai Tea has applied to the Government for the issue of bonus shares. Cochin Malabar Estates will be issuing one bonus share for every two shares held and Malankara Rubber and Produce Company one share for every two shares held.

Unsurpassed Creditworthiness

THE climax of crisis mongering in regard to the difficult foreign exchange position faced by India in the second year of the Second Plan may be expected to coincide with the departure for Washington early next month of the Finance Minister, Mr T. T. Krishnamachari. By then, it is to be anticipated that India's foreign exchange reserves will, at the current rate of depletion, be reduced to a level around Rs 350 crores. Unquestionably, action would then become imperative either for securing fresh reserves of foreign exchange or for an amendment of the Reserve Bank of India Act to do away with the statutory minimum prescribed of Rs 400 crores as currency cover. While, thus, we foresee action as being necessary in the third or fourth week of September—strangely, matters would come to a head around the eighth year to the week after the devaluation in 1949—it has undoubtedly become necessary at the present moment to give constructive thought to the problem and to make an objective appraisal of prospects. We may be sure that the authorities will have been pondering on this problem, and we can equally take it for granted that both the likely solutions will be receiving the attention and study of the Finance Minister. For our part, we welcome such strenuous examination of a problem, a solution for which, by any reckoning, is central to the successful implementation of the Second Plan. However, we apprehend the possibility that, on an all too superficial assessment, the advice may be tendered to the Finance Minister that India has no choice but to extend the begging bowl in outstretched hand. We trust that our apprehension will be belied; but, in any event, we think it desirable that Mr Krishnamachari should, when he has discussions with the executives of the World Bank and the International Monetary Fund, be able to do so from a position, not of abject weakness, but of positive strength.

We may recall that attention to India's foreign exchange position was first drawn by commentators within this country; and a section of interests, which believed that, in the Second Plan, India was trying to bite off more than it could chew, seized upon this fact to restate its view that the Second Plan, already floundering, would inevitably sink. We need hardly say that the opinion mooted by such interests did not mention the possibility that the quicker than planned depletion of foreign exchange resources in the first year of the Second Plan would correspondingly enable new production ahead of schedule. In itself, such self denunciation masquerading as realism would have been bad enough. What was worse is the fact that aspersions thus cast on India's ability successfully to implement the Second Plan have been responsible for the belittling of India's stature and reputation in the world's money markets at a time when, with good and sound projects, we were ready to approach them. Typical of the comment that was made by a world press unambiguously inimical to India is the remark by The Sunday Express, when Mr Nehru was in London for the Commonwealth Prime Ministers Conference, that he would "be asked bluntly to put the brake on his Plan". However, we are glad to note that even the dark

clouds conjured up by our Indian Jeremiahs have attached to them a silver lining of no small significance. Responsible press opinion has, most hearteningly, taken a level-headed attitude on the problems that India faces. Nicholas Davenport, writing in The Spectator, deplores the good deal of "ill-natured criticism" that has been directed at India for running down its sterling balances so swiftly. In stating that a financial crisis threatens, Mr Davenport remarks that "we ought to do everything possible to help India". This help should be forthcoming because "the whole Western world needs...the survival of a democratic India in a potential totalitarian and Communist Asia, and this survival depends on the success of her economic plans."

On the other side of the Atlantic, responsible opinion is on the same lines. A. M. Rosenthal writes in The New York Times of India's great adventure. It is the adventure, in Mr Rosenthal's words, "of men trying, as best they can, peacefully, to create order from turmoil, unity from divergence, decency from degradation, progress from stagnation". Like Mr Davenport, Mr Rosenthal is in no doubt as to the importance of India's adventure. But the trouble about the American attitude is, he points out, that Americans do not "really get excited until a crisis is prominently headlined and then we get fire engines out and rush in with sirens screaming". A crisis threatens, but, says Mr Rosenthal, "it is not as easy to see as a coup d'etat or rebellion and nobody seems to be manning the fire engines".

It would, consequently, be no error of judgment on the Finance Minister's part if, in his confabulations, he relies upon the other side to evince interest in India's economic position, appreciation of what we are trying to do, and a desire to render us all possible help. In the light of such circumstances, there can be no excuse for India to be diffident or craven or faint-hearted in its approach. On the contrary, we can justly claim that, in the loans that we are trying to arrange, we are negotiating from a position of strength.

This position of strength, which we have just ascribed to India, has both its tangible and intangible aspects. Dealing with the former, we may state that the arrangements that India now stands in need of are entirely businesslike. Fundamentally, the Second Plan comprises a number of individual projects, big and small; but where the Second Plan differs basically and importantly from the First Plan, is in the fact that the foreign exchange component of the new projects is much more substantial than was the case in the first quinquennium of India's planned endeavours. In deed, it is this fact which accounts for the centrality of foreign exchange in the overall scheme of resources. While it is not a handicap in the sense that the capital machinery that we seek is hard to come by, the problem arises because we cannot from our current earnings achieve a sufficient surplus to meet the additional import costs postulated by the capital machinery that we need. We may state here that it is scarcely necessary to refer to specific figures; nor is this the apposite place to puzzle over the magnitude of the anticipated balance of payment deficit over the Plan period. What

is relevant is that the imports are being made against specific projects which, in the foreseeable future, will go into production and therefore manufacture the goods for which we at the present moment have to rely on imports. Undeniably, such a state of affairs imposes a strain upon India's current trade balance.

There is, however, another point of view from which these same facts should be understood. The total cost of the Second Plan—leaving aside, for the moment, some of the targets allotted to the private sector—is likely to be in the region of Rs 5,200 crores. The so called "foreign exchange" element accounts for very much less than one third of this total cost. This means that two thirds of the Plan is to be implemented by India with Indian capital and Indian resources; since, in each individual project, there is, as it were, "counterpart" work to be done by India, the achieving of new production may be said to be composed of an element, on the one hand, of the creation of new asset and, on the other, of the acquisition of new asset by capital imports. It is the sum of the two that constitutes the total new asset. In this light, every individual project will, inclusive of the "imported" element, possess an adequacy of assets for obtaining a loan on a satisfactory margin. It is, we may add, from this viewpoint that we suggest that India can on the basis of tangible assets seek to borrow from a position of strength.

At this stage, we have to reckon with the question of India's ability to liquidate, on the due dates, the foreign exchange liabilities that will be incurred. In this context, also, we should avoid any use of specific figures so as to ensure an assessment, not from a narrow outlook, but on the larger, overall scale. Moreover, we think it is to stress the obvious to state that, with industrialisation, there should be a twofold improvement in our balance of payment. Firstly, with the setting up of "capital" machinery industries, India's dependence on imports for this type of machinery will, to the extent of this indigenous production, be reduced; and, correspondingly, our import bill under this head will diminish. Secondly, there is the positive aspect as well of new production that is in excess of indigenous demand and needs; and this should enable potential supplies earmarked for export which, it is apparent, would augment India's exchange earnings. Finally, in this regard, we may mention that, if the foreign exchange liability can be expressed in terms of a loan to be repaid in seven years, the additional foreign exchange that we shall be requiring for the purpose would be, roughly, of the order of Rs 200 crores per annum. If the Second Plan envisages an increase in the national income of 25 per cent and of an improvement in industrial production of per cent, we do not see any reason why India's ability to improve its exports by, say, 30 per cent, should be a matter of doubt.

More important, however, than the tangible asset is the intangible asset that India possesses but which, all too strangely, seems to be quite forgotten by the world at large. This concerns India's creditworthiness. In all our history, India has never repudiated a loan; nor have we asked for a remission of any part

Indian Finance

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

of it or for additional time in which to meet our liability. The record of India in this respect is unsurpassed. As an instance, we would refer to the return by India of the Lend-Lease silver that was taken from America; on the due date, India announced the completion of arrangements for the repayment in full of the silver in kind. Secondly, whatever might have been our plight, India in its generosity entered into an agreement with Burma last year for giving a loan of Rs 20 crores. The loan lapsed; meantime, India's foreign exchange position had become more acute; but, when overtures were made to this country for a fresh agreement to be drawn up, under which we were more-over asked to make available part, if not all, of the loan in foreign currencies, we honoured the moral commitment that we had earlier undertaken. So much so, as the Finance Minister last week revealed in Parliament, the suspension of the minimum of Rs 400 crores of foreign securities as currency cover was precipitated by the drawing by Burma of Rs 10 crores in the form of sterling.

This creditworthiness on India's part is the most important intangible asset on the basis of which Mr Krishnamachari can use his persuasive arguments. As we have earlier remarked, there is sound reason to hope that the institutions that we approach for help will be receptive to the propositions that India can place before them. We shall here restrict ourselves to the approach that can be made to the World Bank, on the one hand, and the International Monetary Fund, on the other; and we shall indicate the basis on which we can reasonably look forward to an understanding consideration by these two institutions of the Indian point of view.

Taking first the International Monetary Fund, a study of the purposes for which the institution was set up will reveal that India can in justice claim to receive from the IMF the best help that it is capable of. The purposes of the Fund, as enumerated in the Articles of Agreement, include the following:

To promote exchange stability, to maintain orderly exchange arrangements among members, and to avoid competitive exchange depreciation;

To assist in the establishment of a multilateral system of payments in respect of current transactions between members and in the elimination of foreign exchange restrictions which hamper the growth of world trade.

To give confidence to members by making the Fund's resources available to them under adequate safeguards, thus providing them with opportunity to correct maladjustments in their balance of payments without resorting to measures destructive of national or international prosperity.

We may here record the ready sale of currencies to the extent of half of India's quota by the International Monetary Fund since the beginning of 1957. It may be assumed that the very fact that sales were effected to the extent of half the quota, in place of the customary 25 per cent, offers evidence of the IMF's recognition that the aid sought by India is not only fully in consonance with the purposes of the IMF but also fulfils the canons on which it considers applications in this behalf.

Furthermore, although Dr Franz Pick recently described the Indian rupee as a sick currency, other authoritative assessments of world economic conditions have stated unambiguously that India is very high on the list of currencies which have, in the course of the last decade, suffered the least depreciation in their purchasing power. But, because there has been a rapid decline in India's foreign exchange holdings, the external value of the rupee has been rendered somewhat vulnerable.

However, we would like to take this opportunity of rebutting the view advanced in some quarters that the swift drain on foreign exchange resources will have caused a flight of foreign funds away from the Indian rupee. To this statement, we need no more than remark that the magnitude of short-term foreign funds invested in India has for long been negligible. If exchange stabilisation is one of the avowed purposes for which the IMF's apposite aid can be called upon, the second criterion that has to be fulfilled by a member country is that the replenishment of foreign currency reserves should be consequent to temporary maladjustments in the balance of payments. In this respect, also, India can point out that it is the temporary import surplus arising from the extraordinary import needs of a developing economy which is at the root of our foreign exchange problems.

In drawing attention to these two aspects of the IMF's purposes, we would suggest that India should plan to seek extraordinary aid from the International Monetary Fund. Already, we have the precedent of Britain, in whose case the IMF concluded arrangements amounting to 100 per cent of Britain's quota. India, we feel, should similarly approach the International Monetary Fund for the drawal of the balance of \$ 200 million of India's quota. Moreover, negotiations should be set afoot for purchase of currency from the IMF for, if it is possible, an amount even exceeding India's quota. In this context, we may point out that, undoubtedly, the creditworthiness of the member country will also be taken into consideration. India's record in this respect is eminently satisfactory. Full repurchase has been made of the \$ 100 million of foreign currencies that we purchased from the IMF in 1948. The Finance Minister will, it is hoped, be giving this question his personal study and attention.

The second institution from which we can hope to obtain foreign exchange resources for the Second Plan is the International Bank for Reconstruction and Development. The "reconstruction" characteristic of the institution, which is commonly known as the World Bank, has long since been completed. It stands to reason that the IBRD will now be concentrating on financing "development". It needs to be recorded that the World Bank has generally shown itself to be sympathetic to loan applications emanating from this country. Indeed, as at the end of 1956, the number of separate loans that have been advanced to India totals nine; and only two countries, Nicaragua and Brazil, have received a larger number of loans. However, from the point of view of the amount that has been obtained, India has been exceeded neither by Nicaragua nor by Brazil.

For the future, the specific projects against which India could negotiate for loans from the World Bank, and especially in respect of the Railway Plan, could be for an amount around \$ 800 million. However, the available resources of the World Bank, as at the end of 1956, are just above the \$ 500 million mark. Nevertheless, we can hope to secure the full extent of our needs against specific projects

from the World Bank, since we could expect the World Bank to raise additional resources by open market borrowings.

While the practicability of the projects and the ability of the country to meet its obligations are important criteria by which the World Bank judges the applications that it receives, it is interesting to note that there are other intangible considerations as well. For example, a World Bank publication points out that "creditworthiness is not determined by economic forces alone"; indeed, "it is determined, also, by the intangible factor of the country's attitude toward its foreign debts". The following paragraph is extremely significant:

"A country which shows a willingness to maintain debt service at the expense, if necessary, of sacrifices in consumption standards is plainly a better credit risk than a country, even with a potentially somewhat stronger economy, which does not treat its foreign obligations with equal seriousness. In this connection, the past debt record of the country is significant. To be sure, events have sometimes made defaults inevitable, but in such cases the attitude of the country to its obligations, and the sort of settlement it has made or offered to its creditors, are valuable guides in judging credit for future loans. The Bank is convinced that its loans are likely to be most effective, and repayment prospects therefore brightest, where the government shows a serious and courageous approach to its economic and financial problems and regards the maintenance of both internal stability and external credit as important means of promoting the country's long-term development."

India fulfils every one of these considerations. Secondly, it is even more interesting to note that "one of the principal reasons for creating the Bank was to have an agency which would accept the special risks inherent in international investment in cases where, by reason of those risks, private investors were unwilling or unable to act unaided". India fulfils this criterion as well, since we do not seem to be attracting foreign private investment at a fast enough pace.

In concluding, we would point out that, in the Second Plan, what is at stake is, as Mr Davenport has stressed, the survival of a democratic India. Mr Rosenthal also warns that "an Asian political equation that can be proved only by final disaster" is that "Communist China plus a Communist India equals a Communist Asia". So, the basis of the strength from which India can press its claim for the most understanding help from the IMF and the World Bank is:

- (1) the practicability of its projects;
- (2) the extraordinary character of the foreign exchange problem;
- (3) the scrupulous honouring of international obligations;
- (4) the unsurpassed creditworthiness, proved time and again, of this country; and
- (5) the battle in behalf of individual liberty for which the aid is sought.

The Wealth Tax

IN a way, the Select Committee Report on the Wealth Tax Bill has considerably removed, in effect, the main differences between the proposals in the Kaldor Report and those in the Bill. The Kaldor Report suggested that the Annual Tax on wealth was to be levied on and payable by an Individual, a Hindu Undivided Family and a Partnership. In other words, it was to be strictly a personal tax. The Wealth Tax Bill, on the other hand, includes a company amongst

the assesseees and thus aims at taxing corporate bodies as well.

The Select Committee Report does not, it is true, recommend that a company should be excluded from the purview of the Tax, but it has recommended such a large number of concessions to a company that the resultant effect is to whittle down considerably the fiscal impact of the proposals in the Bill for taxing companies.

The most important of such concessions is the so called tax holiday for new companies by which a new company will be exempt from paying the Wealth Tax for five years. As for companies established before the commencement of the Wealth Tax Act, the recommendation is that the tax holiday period will be computed "from the date of its establishment as if this Act had been in force on and from the date of its establishment".

The next concession proposed is for exempting companies which undertake substantial expansion. Such portion of the assets of a company which are used and utilised for the purpose of expansion are to be excluded from the valuation of the net wealth of a company.

The third important concession recommended is to exempt companies which suffer a loss in the previous year for any particular assessment year, even though the net wealth on the valuation date may far exceed the minimum taxable limit.

The recommendation for a further concession adds a few others to the list of specified categories of companies, besides those mentioned in the Bill, which are to be altogether exempt. The Bill proposes that the Wealth Tax shall not be payable by a Banking Company, an Insurance Company, and by a finance company registered under The Companies Act 1956 "where the Central Government has made or agreed to make to the company a special advance for the purpose (i.e. for financing private industrial enterprises in India) or has guaranteed or agreed to guarantee the payment of moneys borrowed by the company from any institution outside India". The Select Committee recommends that shipping companies and companies registered for charitable and religious purposes should also be similarly exempt.

Yet another concession recommended is for intercorporate investments, the recommendation being that shares held by one company in another company be excluded from the computation of net wealth.

It is evident that this long list of concessions (there are others for Individuals and HUFs) will considerably reduce the scope and extent of the Wealth Tax. In fact, two of the members of the Select Committee—both belonging to the Congress, be it noted—have expressed the view that the exemptions have so greatly reduced the scope of the Bill that "it may hardly fulfil the desired objectives", the objectives being the covering of the gap left in the revenue due to the reduction of the Maximum Scales of Income Tax and Super Tax and yielding of "an equal amount of additional revenue to the exchequer consistent with the country's avowed goal of the attainment of a socialistic pattern of society". Two other members of the Committee have expressed themselves in even stronger language and have said that "the Bill as it had now emerged from the Select Committee would become virtually infructuous".

The Select Committee Report reflects, as does the debate in the House following its presentation, the sharp differences of opinion that are known to exist amongst the members of the Congress Party. It is clear that the majority of the members in the Committee, while not going so far as to agree with Mr M. R. Masani that the imposition of the levy on a company is "bad in principle and contrary to national interest", have nevertheless gone far enough to concede to the critics of the Tax the substance of their major objections.

Whether or not the view that the Select Committee has defeated the purpose of the Bill is correct, the immediate worry for the Government will be about the anticipated loss of revenue as a result of the concessions. According to one of the many minutes of dis-

sent, the Finance Minister had himself admitted that, as a result of the Committee's changes, the yield from the tax would decrease by Rs 3 crores over the estimated yield.

It has been claimed that the shortfall would be made up as a result of the yield from the levy of the tax on the wealth of the ex-Rulers of the former Indian States. It is not clear how this claim is made. The original Bill did not exempt the wealth of the Rulers from Taxation nor did it provide for any special concessions for them. The Select Committee, on the other hand, has recommended certain special concessions to the Rulers, for example, that one building will be excluded from the valuation, and that only a portion of the Rulers' jewellery will be taken for computation of net wealth. It has been stated, in explanation, that the Finance Minister's original estimate of the expected yield from the Wealth Tax did not take into consideration the cases of the Rulers. If that

My Country and my People

By ELLSWORTH BUNKER

IT is an honour for me to be able to talk to you today while you are celebrating the tenth anniversary of Indian independence.

On this occasion I would like to offer my personal good wishes and those of my Government to you, the people of India, and to the leaders of your Government.

I have been asked by All India Radio to talk to you about "My Country And My People." But before I go into my subject I would like to recall to you the sympathy and support which the Government and the people of the United States gave to India's independence movement. We warmly welcomed India into the family of nations. And since 1947 we have watched with ever growing interest your courageous efforts to attain economic as well as political independence. That interest has not been passive. My country and my people are glad that we have had some share in the great democratic experiment of your five-year plans.

Separated as we are by half a world, the differences between our two countries and our two peoples are obvious. Too often overlooked, it seems to me, are our many similarities.

We are the world's two largest democracies. Both of us gained our freedom after years of colonial rule. People tend to forget that Americans were colonialists for more than 150 years. We both believe in a government of law. We both recognise and support the worth and rights of the individual. Our written constitutions bear many resemblances to each other.

But all of these are political things and I do not intend to talk politics. I want to talk about what has made America and Americans.

I have often been told that the genius of India is its "unity in diversity." I believe the phrase also can be applied to my country and my people with complete accuracy.

For the American is a composite of many cultures, many nationalities and many racial strains. All of us in the United States stem from forebears who came to America from other lands—some of them as long as 300 years ago but most of them much more recently.

These forebears came from every part of the globe. They came for varying reasons: to escape wars, religious persecution and economic oppression. But they all had one basic reason too: they wanted to be able to do and be what they wanted.

is so, it was a very surprising thing to have happened.

Whatever be the final revenue effects of the concessions recommended in the Select Committee's Report, now that the final stage has been reached for making the levy of a tax on annual wealth a statute of the land, the problem of actual administration will assume more and more importance, on which, after all, depends to a great extent the speedy and smooth collection of revenue.

The Wealth Tax Act, particularly in the form in which it is to operate in India, is a revolutionary measure in the field of taxation. For its successful implementation, it will require administrative efficiency and understanding of a high order amongst the personnel of the department which will administer it. It is to be hoped that the Government will devote more attention than they have hitherto done to streamline the administrative set up, the necessity for which was heavily underlined in the Kaldor Report.

They came by the millions. From 1820 to 1955 more than 40,000,000 persons from other lands came to the United States to make their homes. That is more people than the total population of my country in 1870.

They spread from coast to coast and from border to border. They learned—and sometimes invented—American ways. They sent their children to American schools and colleges. They entered every trade, business and profession. They married with the descendants of peoples from other lands. And they added to the American scene the peculiar geniuses of their homelands.

While I was preparing this talk I looked through our Embassy telephone directory. I found among our American personnel at least 15 nationalities represented, names from such varied places as Norway, Spain, Poland, Lebanon, France, Ireland and others. Such a variety of national backgrounds is usual among groups of Americans. If you look through the telephone directory of any city in the United States you will find even more diverse national backgrounds represented.

But whatever the backgrounds, they are Americans.

What changed these people from Englishmen, Frenchmen, Dutchmen, Poles, Irishmen, Italians, Germans, Swedes? Colonists have gone out to other parts of the world and retained their national traits and habits.

The principal thing which changed them, I believe, was the vast American continent. We have a large country. From Eastport, Maine—our easternmost projection—to Point Arena, California, it is nearly 3,000 miles. From the southernmost point in Texas to the Canadian border it is 1600 miles.

This huge land mass—more than 3½ million square miles—to be settled, tilled and developed played a major role in the emergence of the American as a new kind of people in a new kind of land.

The distinguished American historian, Frederick Jackson Turner, wrote: "The peculiarity of American institutions is the fact that they have been compelled to adapt themselves to the changes of an expanding people—to the changes involved in crossing a continent, in winning a wilderness, and in developing... out of the primitive economic and political conditions of the frontier into the complexity of city life."

[August 24, 1957]

When Turner wrote those words in 1893 the frontier had just been declared "closed" by the US Census Bureau. In other words, there was no longer an "edge" of the settled area of the country, as there had been for 283 years of our history.

For those 283 years there had been the lure of free land for the man with the courage and perseverance to take it. America for the landless millions was but another word for opportunity.

In settling the free lands, remote from the amenities of civilization, the American developed many of the traits which are now characteristics: initiative and self-reliance, adaptability, a stubbornly held regard for his own worth, a recognition of the need for cooperative effort, the habit of hard work, and an open-handedness which at times approached profligacy.

Some of our critics say that the American also developed into a materialist and become a victim of standardization.

There is no denying that we have sought material things nor that we gained them, partly, by standardization. However, if I were to let it go at that I would be guilty of a great oversimplification. Standardization is one of the gifts that America has given to the world. But it is only a tool, a means to a larger end: the organization of production and the distribution of material wealth.

This has been achieved under a constantly developed economic system with distinctive characteristics of its own: an economy of high wages, but also of high production, resulting in low costs which being passed on to the consumer, created an expanding market for goods.

This development has taken place under a system of government laws and regulations which have in effect laid down the rules of the game. Basically, they say this: "We insist on fair and open competition and observance of the rules. Within the limits we have set up you can go ahead—the more efficient you become the better, and there are no limits on your growth or your efforts so long as you keep within the rules."

The result of all this has been something which I like to call our competitive incentive system.

This system has acquired certain other attributes, one might almost say convictions.

One is that well-paid, contented workers, with security for themselves and their families, are the most productive workers.

Another is that business has a social responsibility to the community in which it lives.

A third is that business must be able to show that it can perform essential public service better than it can be done by other methods, and, if it does not, some other system will replace it. American business has accepted the challenge. This economic system has produced in the United States a high standard of living, perhaps in a material sense the highest yet enjoyed by man. And it has allowed us to share our material progress. It has enabled the United States, for example, to provide more than 25,000 crores of rupees for the rebuilding of a war-torn world and to help new nations on the road to freedom and security.

But we do not look upon these material possessions as being good in and of themselves. It is only as extensions of the individual, as they enable man to increase his power and scope, to lead to a fuller, more significant life, spiritually as well as materially, that they attain value.

I said earlier that I felt "unity in diversity" was an appropriate phrase for America and Americans. The presence in American society of an almost bewildering number of races, creeds, attitudes and ideas we believe is a great asset. We are 48 states, each with its own set of laws and courts and even separate licensing systems for doctors, lawyers and automobile drivers. I believe that this is good. This diversity is an expression of our freedom.

Our people are as diverse. My home is in Vermont, one of the New England states where the winters are long and snow plows are needed to keep the roads open three or four months of the year. The Vermonter is inclined to be cautious and sceptical. He tends to look people over carefully before accepting them.

Hence Vermont's population is small by any standards—less than 400,000. We had more than 300,000 a hundred years ago. There is a standing American joke that there are more cows than people in Vermont—and it's true. We produce a large part of New England's milk supply.

At the other end of the country is growing and optimistic California whose population, now more than 13 million, has doubled since 1940. The state is so large that its climate varies from the subtropical and desert to Alpine. Its cities vary, too, from huge and sprawling Los Angeles, home of the motion picture industry and growing industrial centre, to San Francisco, one of the most cosmopolitan of American cities.

DISPUTES between employers and workers are an inevitable feature of an economy functioning on a non-totalitarian basis. Only where the State is in complete control of production and distribution and individual freedom rigorously subjected in theory and in practice to the requirements of State policy, could these disputes be avoided. To the extent that the ruling concept of economic equality between individuals and between different production groups does not stimulate a fair or full output, the carrot and the stick are both being used for rectification, even under totalitarian regimes. Modern sociology has not evolved a sufficiently effective body of principles or practices to obviate discontent and the consequent differences between the various agencies employed in economic activity.

At present, the capitalist and the communist countries alike are showing anxiety to perfect methods and systems under which the different elements contributing to production could get along harmoniously, in mutual good will and habitually inspired by a faith in the fairness of the social order in which they function. While the problem is common to both types of economy, the capitalist economy has naturally to reckon with more frequent and more disagreeable manifestations of it, which is the price paid for individual initiative and freedom. This basic fact is worth cherishing both by employers who complain against the bad behaviour of the workers and by workers who complain of unfair treatment by employers. The environment of freedom which makes industrial disputes and their reasonable manifestations possible is a priceless asset.

Where either side is tempted to take extreme and uncompromising positions, it is frequently due to a lack of understanding of all the factors contributing to the material well-being which all sections share. In

In the 3,000 miles between Vermont and California there is just as much diversity; the great plains with their magnificent farms; the mountain areas of the west, rich in minerals and scenic beauty; the Appalachian chain which extends from Maine to Georgia, the eastern seaboard with its cities and industrial might.

The people of these areas have absorbed the environment around them. A Kentuckian in many ways is as different from an Oregonian as a Punjabi from a Bengali.

But with all of this diversity there is an essential unity in our nation. We all believe in the basic principles set down by the fathers of our country who made our constitution to "secure the blessings of liberty to ourselves and our posterity."

We are by no means perfect. But we are striving to live up to what our great President, Abraham Lincoln, said once about the makers of the constitution:

"They meant to set up a standard maximum for a free society which should be familiar to all, and revered by all, constantly looked to, constantly laboured for, and even though never perfectly achieved, constantly approximated, and thereby constantly spreading and deepening its influence and augmenting the happiness and value of life to all peoples of all colours everywhere."

[This is the text of the speech made by His Excellency Ellsworth Bunker, US Ambassador to India, over All India Radio in connection with Independence Day celebrations]

Avoidable Strains

countries like India, where two rival political ideologies are in incipient clash, labour-management relations is one of the most convenient spheres for its expression. In Jamshedpur perhaps could be seen the combined presence of both. In the addendum to his speech at the Annual General Meeting of the Tata Locomotive & Engineering Company Limited, Mr J. R. D. Tata refers to an illegal lightning strike obviously well-planned in advance, accompanied by violent behaviour toward German supervisors on the part of labour leaders. During the disturbances, fortunately short-lived, two German technicians were manhandled which has led to a general sense of personal insecurity among the large number of foreign technicians cooperating in the expansion schemes of the Tatas in different branches of the steel and associated industries in Jamshedpur.

Mr J. R. D. Tata points out that though the strength and success of the Tata Workers Union and the good sense of the workers themselves in the Steel Work have kept the communist leadership off from the industrial citadel of Jamshedpur, in the outskirts this leadership has made headway. In sympathy with the TELCO strike, the Tin Plate Company workers also laid down tools. Arguing that the cause of all this was trivial and irrelevant, Mr Tata asks the Congress Government in power to make clear by word and action their determination to protect the industrial life of the country. The appeal is accompanied by the warning that if the Government failed in their duty in this respect, the consequence on the political and economic life of the country would be perilous.

It is indeed ironical that in the concerns managed by the Tatas, workers should resort to indiscriminate strikes. As Mr J. R. D. Tata claims, the Tata workers enjoy the

Workers and Management

Now that it is decided that after another two years, workers' participation in industrial management is to be extended on a national scale, it is necessary to see that the foundations are properly laid. The Government have announced a few industries as eligible for the initial experiment contemplated; shortly, the list of individual undertakings will be published. In the Tripartite Labour Conference, the broad outline of the scope and functions of the joint councils was settled. Working class leaders have not only welcomed the proposals but given assurance of active co-operation. The experiment promises to have an auspicious start.

From the outset, one risk has to be guarded against. If labour welfare, training and productivity were to be the sole concern of the joint councils, their description as councils of management would be misleading. These functions do form a small part of management for any industry but these are already being carried out in a number of industries through administrative machinery, which provides for regular consultation between employers and workers. The method may be a little more simple in the proposed form, but does not offer any substantial extension of authority for the workers.

If it is the aim of the Government to encourage co-operative enterprises in industry, the scope of the councils of management should be widened. If it is not, there is a great deal to be said in favour of the status quo being left undisturbed. The proposed experiment would be more useful, if it were to be a model for the shape of things to come in the

future; otherwise it may even lead to new frustrations on the part of the workers and to frequent tug-of-wars between the workers' and the employers' representatives in the joint councils.

★

President in Kerala

The spectacle of the Communist party in power in one of the States of the Indian Union is by no means uniformly pleasing. Many observers, drawing guidance from the professions and practices of Communist leaders in other countries have reluctantly prophesied evil out of this unique political set-up. The Union Government and the Government of Kerala have both been trying to deal with each other with the maximum understanding and accommodation.

Dr Rajendra Prasad's being the President of the Indian Union, and for that reason above party, cannot wipe out the instinctive and strongly-embedded loyalty to the Congress woven into his emotional texture through long and distinguished association. His compliments and assurances to the State Government on the occasion of the Independence Parade at Trivandrum have to be understood in this light. Describing the present regime in Kerala and at the Centre as an example of co-existence, not only to the country but to the other nations of the world as well, he assured the people of Kerala on behalf of the Union Government that in their efforts to solve problems, their case could count on the Centre's sympathy and helpful consideration.

The Chief Minister and his colleagues were quite warm in the reception accorded to the President, during his brief stay in the State. Communists have their own way of looking at the value of co-existence, as a party creed. Whatever be it, there can be no doubt that the President's visit to Kerala and his friendly and sympathetic observations on the conduct of the Government have facilitated further smooth adjustments between the two parties, as long as the present situation lasts.

★

Indian Tea Abroad

Generally, three circumstances contribute to the contraction of an export market. Out of sheer political animosity, a country can shut out imports from another. Home produced products can supplant imports. The shortsightedness and greed of manufacturers and dealers in the exporting country may undermine the reputation of the concerned products

and eventually lead to loss of markets. In Indian tea, the second and third circumstances seem to operate.

Mr U. K. Ghosal, Chairman of the Indian Tea Board, who recently toured countries in South Africa, narrates bitter experience. In Sudan and Egypt, Indian tea has lost ground, which Mr Ghosal puts down to consignments of poor quality. Obviously some prominent exporters to these two countries have been playing a tricky game, without realising its suicidal impact. Sudan and Egypt are among countries which may be counted as politically most friendly to India. To spoil the reputation of Indian goods in these countries is an economic and political sin, which the Government of India must never tolerate.

In Kenya too, the demand for Indian tea is diminishing. The reason however, is less unpleasant. Kenya has started producing its own tea on a larger scale and aims at self-sufficiency. In Pakistan, the factor mentioned at the beginning is unfolding itself. In a campaign organised for the boycott of Indian goods, Kashmir and the canal water issues are enlisted to assist the cry of swadesi.

★

Pak Political Bouts

Amidst the incessant political intrigues and manoeuvres in Pakistan, it is scarcely possible to predict the turns in individual fortunes, which alone seem to matter in that young and controlled democracy. Mr Suhrawardy's political stock has somewhat slumped after his gainless foreign sojourn. In East Pakistan, his own erstwhile colleagues have tended to drop out one by one and a fairly strong group under a leader of stamina and standing is now firmly ranged against him. In West Pakistan, he is no longer persona grata with President Iskander Mirza, who obviously has long started regretting the backing he gave to Mr Suhrawardy. Between the two, co-existence seems to have become mutually intolerable.

If writings in the Dawn are a clue to the real direction of events, the President is endeavouring very earnestly to supplant Mr Suhrawardy with Dr Khan Sahib. Personally, the latter has elements of stability which, particularly in the present set up in Pakistan, Mr Suhrawardy never had. The change, therefore, may not be unwelcome in Pakistan and elsewhere.

But to credit a Ministry which comes in the place of one headed by Mr Suhrawardy with any sure prospect of longevity would be to under-rate the East Pakistan leader's political insight and inge-

nuity. Though changes of personalities in the Pakistan Government are not going to alter seriously settled attitudes toward foreign countries, particularly India, certain changes can be expected to reflect small adjustments in relations. For this reason, the present trends in Pak politics are not altogether unwelcome.

★

Sales Tax Reform

Dr P. S. Lokanathan, who has been asked by the Madras Government to suggest modifications in the structure and administration of sales tax in the State, has outlined certain proposals. Proceeding on the basis that the rates of sales tax should be uniform at least in neighbouring States, he wants the Zonal Council to take up the question and suggests that the Madras Government should take the initiative by calling a conference of representatives of the States around.

His proposals fall into two categories, those which seek to simplify the administration and those which are intending to contribute to uniformity in rates. Among the first are the separation of assessing and appellate authorities, the non-payment of protested tax till an appeal is decided and reducing the obligation of small dealers to show to the authorities only the purchase account instead of sales account as is now the case. The principles implied in these suggestions are unquestionably sound and we are sure that the author has worked out all the practical details involved.

As for uniformity, Dr Lokanathan's second preference to equal levels in neighbouring States has one flaw. There is no State which is not a neighbour to another. If uniform rates have to be beneficial in the desired measure, they should be equal for the entire country. For certain goods like cotton textiles, the dealers' handicap would be removed, only if producing States lying wide apart adopt the same rates for sales tax. Possibly, what is thought of as regional uniformity, which is better than different rates for every State.

In the way of uniformity lies another big hurdle. When the business community asks for inter-State uniformity in sales tax, the expectation is that wherever rates are comparatively high, the Government will agree to bring them down. This expectation is not likely to be fulfilled, as long as the sales tax is counted upon as a most remunerative source of income for the States.

At present the Constitution makes a difference between the States in the matter of the power for the levy of the tax on commodities declared essential by Parliament. To some extent, the resulting grievance of the handicapped is offset by higher rates of levy on the permitted groups. In these circumstances, the initiative of a single State may not go far. The attempt should, therefore, be laid on an all-India basis, with regional reforms sought after as the second best.

World of Finance

Reverse Ad Hoc

NEW Loan subscriptions have, as anticipated by this journal, involved a greater strain upon the resources of the banking system this year than was the case in respect of the 1956 New Loan. The impact of the 1957 New Loan, as measured on the figures relating to the Scheduled Banks, is as follows:

- (1) There has been a sharp and substantial decline of Rs 25.90 crores in Deposits.
- (2) Borrowings from the Reserve Bank have had to be increased by Rs 31.50 crores, while indebtedness to the State Bank rose by Rs 1.33 crores.
- (3) Cash Balances have been run down to the tune of Rs 25.78 crores.
- (4) Finally, there is the negative inference to be gleaned from the fact that the total of Advances, far from showing an increase, has actually declined by Rs 1.61 crores.

We may now note the extent of the impact caused by the New Loan in 1956:

- (1) Deposits fell by Rs 12.29 crores.
- (2) Borrowings from the Reserve Bank rose by Rs 15.50 crores, while indebtedness to the State Bank was marked higher by Rs 0.69 crores.
- (3) Cash Balances were marked lower by Rs 5.51 crores.
- (4) The total of Advances registered a decline of Rs 3.26 crores.

We may, at this stage, note that the cash subscriptions to the 1957 New Loan were placed, in round figures at Rs 60 crores as compared with Rs 77 crores in 1956. On the face of it, it seems paradoxical that a smaller volume of cash subscriptions should have had a greater impact upon Scheduled Banks' resources. But, as we pointed out four weeks ago, we had indicated that Scheduled Banks would, notwithstanding the lower volume of cash subscriptions, be put to greater strain. For, the fundamental fact that had to be borne in mind in respect of the 1956 New Loan was that, of the cash subscriptions, as much as Rs 50 crores was accounted for by the Reserve Bank. Secondly, it was also a near certainty, on the eve of the 1957 New Loan, that the State Bank subscriptions would be for a handsome amount. So, on the one hand, the "windfall" subscriptions from the Reserve Bank of last year could not be expected to be repeated; and, on the other hand, the State Bank,

which had subscribed for scarcely Rs 5 crores in 1956, could be counted upon to raise its allocation substantially.

In other words, the extent of "non Reserve Bank" cash subscriptions has been much larger during 1957. Analysing the Scheduled Banks' figures, we may suggest that the magnitude of the decline in Deposits offers a rough clue as to the amount of what we may call non-banking cash subscriptions to the New Loan. However, this has to be qualified by the fact that the Scheduled Banks' figures for August 9 would have included some element of the impact of month early disbursements. We may, therefore, presume that, very roughly, Rs 20 crores represents non-banking cash subscriptions.

Normally, we might have expected that, with the exceedingly comfortable position of cash balances, the Scheduled Banks would not have been discomfited by the steep fall in Deposits. But it is not difficult to see why Scheduled Banks could not or were unwilling to run down their cash balances, and why they have instead chosen to resort to large scale borrowings from the Reserve Bank. We have to bear in mind that, in the second week of August, the threat of a nation-wide strike was very real. Consequently, we may presume that member banks would have taken due precautions to make provision for the contingency that remittance facilities might, in the event of a strike, be affected. So, it is possible that the cash balances were not merely in the coffers of the industrial city branches but were more widely dispersed than is the custom, among the smaller and country-wide branches. Although the strike was averted, we should think that there was not time enough for the smaller branches to remit the excess cash balances with which they had been provided. Possibly, this accounts for the fact that, of the rise of Rs 31.50 crores in borrowings from the Reserve Bank, only Rs 22.50 crores represent borrowings against Usance Bills. Such a sharp increase in borrowings against securities is obviously a measure of the extremely temporary nature of the help thus taken from the Reserve Bank. If we carry this argument a little further, we would see that, in the subsequent few weeks, as the cash balances return from the smaller branches, the member banks could normally be expected to reduce their borrowings from the Reserve Bank. Indeed, as we shall see later, the trend toward reduction of borrowings has already started, on a

substantial scale, in the week ended August 16.

All that needs to be noted in respect of the very substantial decline in cash balances of Scheduled Banks is that this is almost wholly accounted for by the State Bank; and, as we noted last week in studying the State Bank return, this presumably represents the extent of State Bank subscriptions to the New Loan.

The inference to be drawn from the fact that the total of Advances has not risen is that the public has not felt disposed to avail of advances from the Scheduled Banks in order to subscribe to the New Loan; and the implication is, that the New Loan has not greatly appealed to the public at large.

The State Bank's subscriptions to the New Loan are not reflected in the return of the Scheduled Banks for August 9; and this is in line with the view that we expressed last week. However, the rise of Rs 5.68 crores in Investments of Scheduled Banks may be taken to indicate part of the subscriptions of member banks other than the State Bank. It may be recalled that, in 1956, the investment portfolio of Scheduled Banks rose by Rs 15 crores in three stages; in the week of the New Loan, the rise was of the order of Rs 5 crores. In the next week, they rose by a further Rs 2 crores; and in the subsequent week, there was a rise of Rs 8 crores, representing largely the subscriptions of the State Bank. If, as we can expect, the New Loan subscriptions similarly get reflected in Scheduled Banks' Investments in three stages, the State Bank's subscriptions may be included only in the week ended August 23; and this, indeed, is borne out by the State Bank return for August 16, which continues to show Other Assets at a high figure and Investments in Government securities unchanged. However, the investment of the other Scheduled Banks is likely more or less completely to be reflected by the week ended August 16; and the rise in the portfolio between August 2 and August 16 will roughly indicate the subscriptions of the other Scheduled Banks.

Summing up, we would still maintain that the bulk of the cash subscriptions to the New Loan must have emanated from: (a) The Life Insurance Corporation; (b) The State Bank of India; and (c) The Reserve Bank of India, acting on behalf of some State Governments.

We may now turn to the study of the Reserve Bank returns for the week ended August 16. Not surprisingly, active note circulation has gone down by Rs 7.65 crores to Rs 1508.45 crores. Rupee coin returned from circulation for Rs 0.57 crores, and the Reserve Bank's cash in the till has gone up by Rs 8.12 crores to Rs 26.91 crores.

There are rather intriguing changes in the Banking Department. Most important of these

is the sharp fall of Rs 29.75 crores to Rs 250.66 crores in Investments. Secondly, the Centre's balances have been marked down by Rs 15.26 crores to Rs 70.22 crores. Thirdly, balances of State Governments have recorded a steep decline of Rs 14.07 crores to Rs 2.83 crores. We would think that these three changes are interconnected. As far as we can make out, the decline in the Centre's balances may have been owing to the cancellation of ad hoc Treasury Bills; and, with reverse ad hocs for Rs 15 crores, Rupee Securities in the Issue Department would have gone down by this amount. Since the Reserve Bank apparently desired to keep its cash at a level around Rs 27 crores, we are to infer that transfer would have been effected of marketable securities from Investments in the Banking Department to Rupee Securities in the Issue Department. This would account for Rs 15 crores of the decline in Investments. Secondly, it is also possible that the more affluent State Governments utilised the bulk of their cash balances to purchase securities from the Reserve Bank; and this would account for the balance of the decline under Investments.

Scheduled Banks have apparently been able to liquidate some part of the additional debt that they had incurred in New Loan week. For, the Other Loans and Advances of the Reserve Bank are lower by Rs 14.63 crores at Rs 87.58 crores; and Advances against Usance Bills have been marked down by Rs 8.75 crores at Rs 45.62 crores. This strongly suggests that member banks have also liquidated a substantial portion of the borrowings they had made from the Reserve Bank against giltedged in the previous week. Balances of member banks with the Reserve Bank have also declined by Rs 9.25 crores to Rs 75.88 crores; presumably, with the strike averted, Scheduled Banks have felt it possible to reduce their balances with the central banking institution.

Finally, for the first time since the first week in April, the decline in Balances Held Abroad is for a small amount; Balances Held Abroad have gone down by Rs 0.89 crores to Rs 16.62 crores. However, we have no manner of knowing whether the smallness of the fall is due to receipt of foreign aid or to the achievement, at last, of a near balance in trade. If, in the next few weeks, foreign balances should hold more or less steady, we would have some ground for believing the second theory to be correct.

The return of the State Bank for August 16 does not have much to offer. Deposits are lower by Rs 0.50 crores at Rs 326.93 crores. Investments have yet to be marked up as a result of the State Bank's subscriptions to the New Loan. The total of Advances has moved down by another Rs

4.28 crores to Rs 166.70 crores. It is, however, noteworthy that there has been a fresh decline of Rs 4.13 crores to Rs 42.65 crores in cash balances, and that Other Assets have gone up by another Rs 7.63 crores to Rs 34.83 crores. The ostensible inference is that the size of the increase in Other Assets over the last two weeks represents the magnitude of State Bank subscriptions. However, we doubt this; and we shall know, by next week, the extent of new cash invested in the New Loan by the State Bank.

The Scheduled Banks' return for August 9, as already analysed, reveal a drop of Rs 15.90 crores to Rs 1281.83 crores in Deposits. Cash balances are lower by Rs 25.72 crores at Rs 160.62 crores. Investments are marked higher by Rs 5.68 crores at Rs 338.10 crores. Borrowings from the Reserve Bank have risen sharply by Rs 31.50 crores to Rs 68.83 crores. Indebtedness to the State Bank has also risen by Rs 1.33 crores to Rs 4.73 crores. Finally, the total of Advances is marked lower by Rs 1.61 crores at Rs 881.99 crores.

Franc Devaluation and Sterling

By PAUL EINZIG

THE financial measures announced by the French Government on August 10 amounted to a 20 per cent devaluation of the franc. It is true, the official parity remains unchanged. But most imports and all exports, both visible and invisible, will be affected in exactly the same way as if the franc had been devalued to the extent of 20 per cent. Exporters and foreign visitors of France will receive 20 per cent more for the foreign currencies they sell to the banks. Importers except those of essential raw materials—and French visitors to foreign countries have to pay a surcharge of 20 per cent. At any rate this is what the somewhat involved arrangement means in practice. Moreover, the former 'black market' in foreign currencies will be legalised, so that the

depreciation of the franc has been officially recognised.

The surprising thing is not that the franc was devalued early in August 1957 by 20 per cent but that it was not devalued much earlier and to a higher degree. The history of the 'thirties' when the successive French devaluations were, to quote M. Paul Reynaud's memorable words, 'too late and too little', appears to have repeated itself. It cost France considerable sacrifices to defer the devaluation which could with benefit have been undertaken a year or two earlier. And the 20 per cent cut leaves very little safety margin that would enable France to be free of pressure for a prolonged period, just as sterling was free of pressure for a while after the devaluation of 1949.

However, it would be ungracious and ungrateful not to pay tribute to the French people and to the successive French Governments for the courageous fight they had put up in the interests of a lost cause. To resist devaluation is to resist inflation. And every Government which makes a genuine effort resist inflation deserves a vote of thanks, not only from its own citizens but from the world at large. For in the light of the experience of recent years it has become obvious that inflation is an international trend which tends to gain in strength each time a country yields to its relentless pressure. It would be easy to criticise France for having been too obstinate in trying to avoid the inevitable. But a country which gives in too easily to pressure to devalue invites fresh speculative attacks on its currency. The fact that the franc was defended for nine years against heavy odds may possibly discourage further attacks against it—at any rate for the time being. For this reason the 20 per cent cut may possibly prove to be sufficient. Speculation, having won its victory, will seek new targets for its next attack.

The wave of pessimism which had contributed towards the creation of conditions in which the French Government had no choice but to devalue is now focused on sterling. To some extent the British balance of payment may be directly affected by the French measures. British exports to France will be reduced as a result of the 20 per cent surcharge on French imports, and

Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax clearance certificate with the Tender.

S61 Controller of Stores.

1907 - 1957

THE INDIAN BANK

Celebrates its
GOLDEN JUBILEE THIS YEAR

Started in 1907, in a modest way, by men of courage and vision, its present stability and strength have been reached by a policy of prudent management and discriminating participation in trade and commerce. With a paid-up capital of Rs. 63,83,130, deposits of Rs. 32,56 crores and working funds of Rs. 48.00 crores and

its network of branches in important areas, the Bank is fully equipped to render its constituents every kind of banking service. With agents and correspondents in all important centres of the world, the Bank offers comprehensive facilities for Foreign Exchange Business and other overseas transactions.

D. P. PARTHASARATHY
Secretary
Head Office: Madras.

Branches throughout the South and in the major cities of India, Ceylon, Malaya and Singapore.

K.1/18

French exports to Britain and to other countries buying British goods will be stimulated by the 20 per cent bonus. Since, however, the extent to which French industries compete with British industries is relatively small, this effect is likely to be relatively moderate.

On the other hand, it would be a mistake to underrate the possible psychological effects of the French devaluation on sterling. Once more the events have proved that official denials of intentions to devalue cannot be taken at their face value. There is bound to be a widespread feeling that sterling is likely to be the next currency to go. It is true, the basic situation of Britain is incomparably stronger than that of France. The British Budget is balanced, while the French Budget has a huge deficit in spite of the heroic cuts of expenditure decided upon recently by the French Government. And the British balance of payments, too, is at the moment more or less balanced, while France has a large import surplus. Britain's gold reserve is incomparably stronger than that of France. More.

(Continued on page 371)

World of Jute

Raw Jute Supply in 1957-58

The jute markets have ruled easier during the past week. Hessian 40"×10 oz Ready has declined from Rs 41.50 to Rs 40.80 while B Twills Ready has dropped Rs 4.10 to come back to Rs 111.00. Assam Bottoms which was done at Rs 28.50 per maund a week ago is now on offer at Rs 27.00 per maund. A marked decline is noticeable in Pakistani Cuttings which has come down by six points to quote at Rs 84 per bale of 400 lbs. It is evident that the sharp decline in the prices of this category of raw material has been largely responsible for the comparative weakness of sackings. For, with cuttings selling at current low levels, mills will be able to cut down substantially the cost of production of heavy goods.

The present easier tendency in jute markets has stemmed from the growing belief that the raw material supply position will be much more comfortable than has been earlier considered probable. Some indications as to the size of the current season's world jute crop has come from Pakistan. A Press Note issued by the Government of East Pakistan last week places the crop for the season 1957-58 in that country at approximately 6 million bales. As there is a carry-over of about 300,000 bales the available crop during the current season is

likely to be 6.3 million bales. The Press Note further points out that if the river level continues to be low and harvesting is delayed, there is a likelihood of the crop being increased by another 200,000 to 300,000 bales.

Referring to the effective demand, the Press Note says: "The position of demand for Pakistan jute for this season as far as it can be seen is that India may take about 800,000 bales, overseas countries about 4 million bales, home consumption including the mills about 1.2 million bales." It concludes that no apprehension need be there for adequate supply of jute to the mills at home and abroad.

As far as the Indian jute crop in 1957-58 is concerned we have as yet little data. But we have positive indications which should enable us to arrive at a broad conclusion. Stocks of raw jute with IJMA mills and press house represented by CBJA at the beginning of July amounted to 10.56 lakh bales. As it is now generally accepted that the current season's crop will not be smaller in size than that of the last season one may not be far wrong if one places the 1957-58 Indian jute crop at 53 lakh bales. For the time being, we may also assume that the carry-over from the previous season is about 2.5 lakh

bales. Thus the total supply, excluding arrivals from Pakistan, will add up to nearly 66 lakh bales. Even supposing that raw jute import from Pakistan will be on the same level as that of last year, the total availability will be increased to 72.5 lakh bales. As against this we have only to provide for a total demand of 62.2 lakh bales.

Indications are that the output of fibre from the current crop in India may as well "show a welcome rise from the beneficial effect of fertilizers distributed extensively this year under the Government of India's scheme for promotion of jute cultivation.

The prospects of raw jute supply from Pakistan also seem to be much more satisfactory than had been the case last year. The Press Note from the Government of East Pakistan to which reference has been made above indicates by implication that conditions will be made conducive for a larger offtake by India. It expects that India may take raw jute to the tune of 8 lakh bales. It has also further pointed out that a part of the increase in output as a result of the continued low level in rivers and late harvest, will be accounted for by larger purchases by India.

★

The jute goods market opened the week on a quiet note and in subsequent days, ruled easier on selling pressure. On Monday prices in earlier dealings touched new low levels. With a prominent operator coming in as a buyer at the lower levels, the market recovered slightly to close as follows: Hessian 40"×10 oz Ready 41.15 B Twills Rs 113.00. Elsewhere Hessian 40"×10 oz

Oct-Dec was placed at Rs 41.15 with B Twills for the same position at Rs 110.25.

B Twills were marked down sharply on Tuesday on heavy selling pressure. It would appear that with Pakistan Cuttings pushed down sharply to Rs 84, operators had taken the view that cost of production of heavy goods would become low. As against previous closing of Rs 113 B Twills Ready was pushed down to Rs 111.70. Hessian also ruled quiet in sympathy. Hessian 40"×10 oz ready eased to Rs 40.80. In the forward positions Hessian 40"×10 oz Oct-Dec was done at Rs 40.75 and B Twills at Rs 109.00.

While the fatka had been pre-occupied with settlement considerations, the undertone in the goods market turned easier with B Twills encountering renewed selling pressure. B Twills Ready declined to Rs 111.00 with the Oct-Dec position placed at Rs 107.75. In the hessian section, the undertone was comparatively steadier with Hessian 40"×10 oz Ready at Rs 40.80 and Oct-Dec at Rs 40.20.

The following table shows the week's opening and closing rates:—

	Opening	Closing
Hessian:		
40"×10 oz Ready	41.15	40.80
40"×10 oz Oct-Dec	41.15	40.20
Sackings:		
B Twills Ready	113.00	111.00
B Twills Oct-Dec	110.25	107.75
Hy Cees Green	113.50	112.00
Cornsacks	116.50	116.75
Cubans	138.50	136.00
A Twills	138.50	137.00
L Twills	126.50	124.00
DW Flour	130.50	128.50
Sugar Bags	127.50	125.50

Clean Black Pekoe Rs 2.20; Plain BP Rs 1.78; Plain Fannings Rs 1.70; Medium BP Rs 1.90; Medium Fannings Rs 1.90; Best CTC Assam BP Rs 4.00 and Best CTC Assam Fannings Rs 4.50 to Rs 5.00.

In the Internal Sale, offerings were irregular and the poorer sorts easier; but better liquoring Medium CTCs were well supported and prices frequently showed considerable advances. Other Assams were firm and sometimes dearer, particularly the plainer liquoring sorts.

There was keen competition for common and plain Doars and prices were sometimes 6 nP per pound dearer. Non-wither Doars were generally firm. Following rates were quoted:—Medium Doars Dust Rs 1.55 to Rs 1.60; Medium Assam Grainy Dust Rs 1.60 to Rs 1.70 Medium Assam CTC Dust Rs 2.15 to Rs 2.30 and Best Assam CTC Dust Rs 2.50 to Rs 2.90.

Offerings of Leaf grades were 1,083 packages. The market was irregular and CTC Assams on offer were a weak feature and considerably easier. There were a few Green teas on offer and these met with a fair demand and sold below valuations.

In the Export Quota section, rates moved between 20½ and 21 nP per pound and business was done at these levels.

World of Business

Shipping Problems

Congestion, Construction, Coordination

In his address to the Eleventh Ordinary General Meeting of the Shareholders of the Bharat Lines Limited, Mr C. R. Srinivasan, the Chairman of the Company, touched on the three most outstanding problems of Indian shipping. He referred to the congestion in the ports, the uncertain boundary between private and public enterprise in shipping and the inadequacy of Indian shipping tonnage. Congestion in the ports is much less acute now than it was a month ago and the Government are now very much alive to what should be done to avoid a recurrence of the problem.

The figures mentioned by Mr Srinivasan, however show that past experience was clear and was not acted upon with sufficient alacrity. In 1954, the total retention cost due to the congestion equalled in value to full time operation of an 8,000 DWT ship for a period of 179 days. In 1955 it had increased to 299 days and in 1956 to 398 days. These continuous annual increases betokened a trend which could have served as a warning. That warning, alas, was not heeded to, in spite of the additional one implied in the fact that an expanding economy invariably came up against serious transport bottlenecks.

Mr Srinivasan takes the Government to task for still neglecting certain aspects of work without which shipping congestion can

never be adequately met; he is not aware of any efforts to survey and service minor ports on India's long coast line, which over a long period of neglect have fallen into disuse. Mr Srinivasan is thinking of the innumerable centres where coastal trade had flourished at varying periods in history and which, after the advent of the British and the development of new forms of transport, had gradually sunk into oblivion. These centres provide a potential which could be turned into fine little ports of call for small and medium sized vessels and country-craft mechanised and manually operated. Though the Government might be having this kind of idea in their minds, the fact that no blue print or programme has yet been announced justifies a timely reminder.

In a country which spends about Rs 60 crores annually on foreign shipping freight, the problem of increasing national tonnage is undoubtedly the most urgent. As to how the shipping tonnage at the disposal of India could be expanded is a matter on which there is no unanimity. There are two alternatives before the country. One is to build ships domestically at a very fast pace and hope to achieve self-sufficiency thereby; the other is to purchase ships from wherever it is available.

Mr Srinivasan thinks that as far as the coastal trade is concerned, the Government must come to the

aid of private enterprise and should help in the acquisition from the Government of the United States a few of the 'Moth Ball' Liberty ships on lend-lease terms. Having sounded some of the American interests concerned during his recent tour, he has reason to believe that the "prospects are good, if a proper approach is made".

In the choice between the construction of ships in India and purchases abroad, the decisive considerations are time and cost. Ships constructed at Visakhapatnam are subsidised by the Government and thus involve, in the narrow sense, a financial loss. Against this there is the question of the development of a basic national industry, the economic and strategic freedom involved and similar considerations. US Liberty ships which, it is gathered, are available as a genuine surplus, may be a good bargain.

If as the Chairman of the Bharat Lines suggests, lend-lease terms can be secured, it will be a way of meeting the delay involved in the construction of a sufficient number of ships in India. After all, at Visakhapatnam only two ships are being built simultaneously. The capacity of the yard is estimated as between 2.5 and 3 ships per year at the maximum, a rate at which national self-sufficiency will have to be considered extremely remote.

The Government have decided to establish a second ship yard. Last month a team of British experts were in India, they inspected a number of sites on both the east and west coast and are believed to have offered the Government certain tentative suggestions. Another mission is expected after whose visit and report, the Government of India would probably take up the question for final decision.

The construction of a Second ship yard does mean inevitable delay. A hasty or ill-considered decision may cause the country much more ultimately than what a few months of delay might result in. There is thus no point in trying to expedite the proposal at a hot pace. What is relevant in this context is that even with a second ship yard, the shipping targets laid out for the Second Plan are not likely to be achieved in full.

Assuming that the Visakhapatnam ship yard would be completing another 12 ships during the rest of the Second Plan period and the foreign contracts on behalf of India for 30 ships would also be met in full at the end of the Second Plan, India would be having 179 ships (at the beginning of January 1957 the number of ships owned by Indian Companies was 137). This figure is short by 21 of the target of 200 fixed for the end of Second Plan. As the construction of the second ship yard itself is still in the stage of discussion, it is nearly certain that the target for the Second Plan will not be realised in full.

Mr Srinivasan has also raised the issue of the precise scope for private shipping concerns. The Government naturally would like to defer a final clarification, especially when so much else regarding the future of Indian shipping remains tentative. Two vital decisions have already been taken by the Government and all shipping companies must welcome this. A separate shipping development fund is being set up. The wealth tax will not apply to shipping companies. These two decisions reflect the sense of urgency with which the Government view the needs of the shipping industry and a realistic appraisal of the special handicaps of private enterprise in this sphere.

World of Tea

Improved Demand: Better Prices

AS has already been mentioned earlier in these columns, the outlook for Tea continues to be mainly influenced by expectations of excessive supply, while buyers' preference for quality in tea auctions in India and London has become a settled fact. Tea gardens, therefore, seem to be in a hurry to dispose of their products as is evidenced by the fact that, despite lower North Indian output of 189.62 million pounds during the current season up to July, arrivals in Calcutta warehouses, in the four months ended July 1957, have risen to 809,747 packages from 730,967 packages in the corresponding period of last year.

Except for quality varieties which continue to attract good enquiry, other styles are almost stagnant with little demand in the face of increased supply. In this connection, the London 'Statist' states 'that good quality teas will fetch a substantial premium towards the end of the year; but the quantity of ordinary teas will be too great to fetch high prices.'

The inflow of the new crop to Britain has not yet increased, mainly due to the Port congestion in Calcutta. Over the next few weeks, however, more first-flush teas will be coming up for sale in London and only those second-flush teas, which are frown down from the gardens, are expected in London before the end of September.

Demand in London auctions has generally been good and prices have tended to rise or at least have not fallen. It is possible that this is only temporary, for new arrivals have been at a seasonally low point. The tendency can, therefore, be reversed when there is a larger quantity of tea afloat in the UK. Until arrivals of the new crop increase, Mining Lane will have only one North Indian sale a week instead of two. Stocks in the UK, as on the 9th August, were only 129.76 million pounds as compared to 133.07 million pounds in the previous week week and 112.15 million pounds on the corresponding date of last year.

Meanwhile, productions in South India, Ceylon and Pakistan have

shown a mixed trend in July. Outturn in South India is estimated at 9 million pounds as compared to 7.5 million pounds in July last year. Total production, for the seven months of the current year, amounts to as much as 81.6 million pounds as against only 72 million pounds in the corresponding period of 1956. Outturn in Ceylon, for the same period, is higher at 257.5 million pounds as against 228.4 million pounds in the corresponding period of last year. Production in Pakistan, for the current season up to July, amounts to only 15.13 million pounds as against as much as 20.64 million pounds.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 41,322 packages. There was a strong and general demand. 'Teas for price', particularly the Fannings descriptions, were a strong feature although enquiry for these weakened towards the close of the sale. Black Doars BOPs and OFs were well supported at generally dearer rates although Low Mediums with indifferent liquors were easier.

There was good support for BPSs which generally appreciated in value, while Whole Leaf grades were generally firm. Apart from the very best, CTC types were easier by 20 to 30 nP per pound. There was good demand for Tippy teas, but Darjeelings were generally easier. Following rates were quoted:—

World Overseas

US Notes

The recent upsurge in the United States Agricultural exports is not an isolated phenomenon. While U.S. shipments of farm products abroad have reached a new peak, so have similar shipments by other producing countries. "The world as a whole," notes the US Department of Agriculture, "is trading more agricultural products than ever before." The obvious conclusion—one in which the Agriculture Department concurs—is that special programmes to sell US farm products abroad have not disrupted established markets for these goods.

Reviewing export trends of 52 farm commodities, the Department estimates the value of US agricultural exports in 1956 at \$4,700 million, figured in constant prices.

This was an increase of \$1,600 million over the 1955 total. At the same time, other producing countries were stepping up their own agricultural exports by \$500 million to a record high of \$16,600 million. There is more to these figures than meets the eye. The rise in agricultural exports from other countries has continued at a high rate for some years. The annual increase has been about \$500 million in the past three years, and was up to \$1,000 million in previous years. US exports, on the other hand, lagged badly from 1951 to 1955, while exports from other sources were making steady gains.

Revisions in US farm export policies have been undertaken in an attempt to regain a more competitive position for US farm products. Thus, the Agriculture Department observes, the larger increase in US exports in 1956 represented, in effect,

partial 'readjustment of the situation of the past several years when foreign exports increased more than US exports.' The Department points out that the increases in farm exports by other countries have embraced a wide variety of products, including many of the most important. The only significant declines in foreign exports during the past year have been in cotton, wheat and soybeans. And in each of these, special circumstances have been involved.

"These declines," the Department explains, do not mean that US expansion has been at the expense of other countries' marketings. Lower foreign shipments of cotton, for instance, have been mainly due to the smaller quantities available for export. As a matter of fact, exporters in other countries are moving practically all their available cotton this year, and will have little left above normal carryover by the end of the marketing season. Lower foreign shipments of wheat have been the direct result of winter freezes in Europe, coupled with a smaller exportable surplus in Argentina. Thus, to an increased

degree, larger exports from the United States have helped many countries to meet their agricultural needs. As an example, last year's gains in US wheat and fruit shipments to such countries as the United Kingdom and the Netherlands resulted mainly from short crops in some other exporting areas, including France. And France, itself a net exporter of wheat in previous years, had to import large quantities from the United States to help cover its domestic requirements and its export commitments. This year, however, the European wheat crop seems to be shaping up well, and world cotton stocks are being rebuilt. The chances are then, as the Agriculture Department notes, that US farm exports may drop off somewhat in the year ahead.

★

Important American shipping executive seems little danger of excess tonnage resulting from huge volume of new vessel construction now under control around the world. This optimistic view was expressed here last week by Walter L. Green, Chairman of the American

[August 24, 1957]

straight from Mr Nehru, for, he shares with Jefferson not only this attitude but also a certain moral didacticism, not to mention the gift of a lucid and quietly passionate English style.

The question that would naturally arise is: "What is it that prompted Jefferson to enunciate, twenty five years after the revolution, a foreign policy of such determined neutrality, or, as it would be called these days, neutralism? Secondly, how far is India justified in the context of today in following a policy that was considered appropriate for the US in the early days of the 19th century? The answers to these things are that Indians consider that the instincts that prompted Jefferson to want to avoid getting

mixed up with the squabbles of Europe were the sound ones of self preservation, and precisely the same instincts drive us to adopting the same policy. As Mr Bunker said, we have had a colonial past, and if it is one thing that a person with such past is almost pathologically afraid of, it is the return of the earlier status in some form or other. Conditions in the early years of the 19th century in Europe were, from the American point of view, the same as the world situation is today from our point of view. Two big powers, England and France were engaged in deadly combat, one a democracy, and the other a totalitarian regime with insatiable expansionist ambitions. The rest of Europe was aligning itself with one or the other of the two

combatants more or less helplessly. And America, mercifully separated by the Atlantic and proud and jealous of its newly won independence and almost limitless scope for development, would have nothing to do with these quarrels in the old world. Time has perhaps mellowed the deadly nature of the struggle during the Napoleonic wars, and legends have made a schoolboy hero out of Napoleon. But one has only to read Tolstoy or Hardy or even some of the little tattle of the period in text books of history to realise that Napoleon in his day was as abominated as Stalin in his own. Little children used to be made to obey orders by raising the bogey of Bonaparte in the same way—to choose a most unfair analogy—that Senator McCarthy

used to try to frighten American people by raising the bogey of Communism.

In any case, there is close correspondence between the attitudes of the two countries in the early years of independence. Such correspondence extends even to details of personal attitudes. For instance, the early Nehru's hypnotised admiration of the Soviet Revolution has its parallel in Jefferson's early attitude to the French revolution. And, as for subsequent events, Jefferson described his attitude almost in Mr Nehru's words. "The European war is one with which we meddle not, and which we wish to avoid if justice to all parties and from all parties will enable us to avoid it."

Have times changed since then? I think, not much. In its own days, the Napoleonic war was as completely global (it had, for instance, its echoes in India) as the cold war of today is. And Indian vulnerability today is, if anything, greater than was American in those days: for, the Atlantic was a greater natural safeguard against aggression then, than are the Himalayas today. Thus, our neutrality is based as much on sober assessment of geopolitical reality as on other considerations. And we have excellent American precedent for our point of view.

These strands in our respective history have been brought to public notice time and again, notably by Mr Chester Bowles. Yet, such is the selective blindness induced by mass media of communications, basic truths remain unnoticed, while a great deal of tendentious rubbish hits even the languid eye of the modern newspaper reader. Mr Bunker, in his broadcast talk to which I referred earlier, has attempted, in the manner of his predecessors in office, to bring to focus the things that bind. And, what is more important, he has made the point that, while there is much that is different in our ways of life, the things that bind us are of the essence of our ways of life. And that is something that is worth repeating as long as there is a single Indian or American who does not understand it.

I can do no better than to conclude as Mr Bunker has done: which is to quote from Abraham Lincoln. This quotation, I may add, reflects the ambitions of America as it also gives a clue to the aspirations of India:

"They meant to set up a standard maximum for a free society which should be familiar to all, and revered by all, constantly looked to, constantly laboured for, and even though never perfectly achieved, constantly approximated, and thereby constantly spreading and deepening its influence and augmenting the happiness and value of life to all peoples of all colours everywhere."

Bombay Review

Gateway Gossip

Red Infiltration at Jamshedpur?

WE have been fortunate enough in having averted a national strike by Government employees which, while it might not have been permitted to paralyse the economic life, would nevertheless have been considerably disruptive. In common with the Bengali or Madras, the Gateway citizen has heaved a sigh of relief. But we in Bombay have had dispelled any complacency over the situation which might consequently have seized some of us. The labour situation still warrants the most prudent, and, at the same time, most resolute, sort of policy by Government. It was Mr J. R. D. Tata who was responsible for thus giving us a jolt even before the first feeling of relief at the aversion of the national strike had waned. The occasion was the annual general meeting of the Tata Locomotive & Engineering Company Limited; and Mr Tata was so troubled by new developments that he felt it necessary to take the unusual course of making additions to the prepared text of the speech. I may say that Mr Tata's remarks deserve greater attention, since he has not confined himself to the experience of or situation obtaining in TELCO alone; rather, he is quite clearly anxious about labour in the perspective of the Second Plan. Although this seems to me partly a political question, which deserves editorial comment, I cannot forbear from referring to this aspect of Mr Tata's speech, although, necessarily, I shall have to make my remarks brief.

The TELCO workers are, as the Chairman observed, "amongst the highest paid in the engineering industry". Their future is assured, their prospects good. Notwithstanding this, poor productivity continues to blight, in particular, the locomotive division; and, if, on the last occasion that I wrote about TELCO, I mentioned that we had been mercifully spared a debate on the relative performance of Chittaranjan and TELCO, Mr Tata has thought it desirable to draw attention to the criticism of the Tariff Commission that locomotive productivity compared unfavourably with Chittaranjan. His point is that no improvement in productivity can be vouchsafed without the co-operation of labour. Not only is such co-operation as existed on the wane, but, adds Mr Tata, "in spite of all its responsibility and mature leadership, the Union has recently aggravated the lack of discipline by instigating the worker to down shift mainly, it hours in each shift mainly, it seems, as a protest against their

not having been consulted in regard to the quantum of bonus declared this year". If the TELCO Chairman is pained, he has sufficient reason; firstly, the bonus proposed was intimated to the Union some time before the publication of the accounts and, secondly, the total amount distributed is twice that of last year.

If Mr Tata is concentrating far longer than is usual on the labour aspect of the company's working year, it is because, with the programme for progressive production in many of the TELCO departments, there will correspondingly be greater reliance upon Indian labour. Nothing could bring greater benefit, says Mr Tata, "than a sound and cordial relationship between management and labour based on mutual understanding, respect and co-operation".

If the reader thinks that the TELCO Chairman's remarks are warmer than is his wont, he will be surprised by the even greater heat of the additions to the prepared text. After the speech was written, the labour situation at Jamshedpur had taken a serious turn. There was an illegal lightning strike, "which had obviously been well planned in advance"; and violent behaviour was directed by the ringleaders at the German supervisors. What is particularly alarming is that the strike was instigated by elements in defiance of the representatives of the recognised union; and, indeed, the instigators "insisted on being represented by a Communist group". Mr Tata sees in this something far more than an ordinary trade dispute: "A deliberate attempt on the part of Communist leadership to disrupt operations at the TELCO Works". What was worse, the TELCO Chairman stated that there was evidence that the incident was "part of a larger plan to disrupt the working of the whole of the industrial complex of Jamshedpur". A by no means insignificant aspect of the matter is the maltreatment received by the German technicians. The German supervisors, said Mr Tata, had been greatly upset by the prevailing indiscipline and violence; and we are to infer that, should there be a recurrence of such incidents, it may become difficult for India to secure the help of foreign technicians.

Mr Tata, in concluding, voiced the hope that the Central and State Governments would take a firm stand in this respect, and that "they would make clear, by word and action, their determination to

protect the industrial life of the country." The ominous note on which Mr Tata ended his "ad lib" speech was that, if this "conspiracy to sabotage the country's progress was allowed to succeed at Jamshedpur and elsewhere, not only will the economic crisis looming before the country be aggravated, but law and order and the peaceful and democratic development of India would be imperilled".

There can be no doubt that labour has generally, both in India and outside, tended to become not only more dictatorial, but somewhat unreasonable as well. England already faces an acute problem in this respect; and, in this country, the original impetus to mounting labour demands has, sad to say, been given by the Government themselves in that, in the first years of our freedom, labour legislation was heavily—and sometimes unfairly—loaded in favour of labour. The wind that was sowed in the early years of independence has now raised a whirlwind that Government find it difficult to contain. However, there can be no two opinions on the need in this country for Government to take a firmer stand in labour policy than they have heretofore done.

I trust I have not encroached overmuch into the domain of the leading articles section; to justify this Gateway Gossip, therefore, I will need to report on the other matters—in the earlier parts of the speech—touched upon by Mr Tata. Most important of the points made from the point of view of the investor, concerns TELCO's expansion programme and the manner in which it is to be financed. It was stated that the allocation to depreciation and reserves would "substantially cover" the capital expenditure so far incurred.

But the heavy commitments taken on recently have raised the prospect of additional finance being sought in the very near future. Mr Tata hedges his remark by saying that no decision has yet been taken, but "the possibility of an additional issue of equity shares, possibly in the form of debentures convertible into ordinary shares, cannot be ruled out".

From the point of view of production, all news is as satisfactory as the shareholder could wish. The company expects to fulfil its commitment to deliver locomotives at the rate of 10 complete units a year from the beginning of 1958; indeed, this target may possibly be exceeded. The gradual but inevitable movement toward dieselisation of rail transport would find TELCO particularly well placed, since the TELCO Works "are exceptionally well equipped to undertake the manufacture of diesel locomotives". In stating that TELCO is fortunate in being associated with two German firms of the highest repute, Mr Tata expressed his confidence that, if "our expectations fructify, we can look forward to a long period of continued collaboration with and service to the Indian Railways even after the cessation of steam locomotive manufacture".

Secondly, in respect of the Automobile Division, the second stage of development was proceeding strictly according to schedule. While on this subject, the TELCO Chairman mentioned that the total foreign exchange expenditure incurred on the import of plant and equipment would, in each year of full production, be more than compensated by the saving in foreign exchange once the development programme is completed. Implementation of Second Plan

The acute shortage of foreign exchange coupled with the high price of essential commodities has aroused renewed widespread discussion in the country on the Second Plan. It has been maintained by some that all the present troubles have issued from the attempt at implementing the ambitious targets set under the Second Plan. The solution, therefore, lies in spreading the schemes over a longer period so that there will be no need for Government either to worry unduly about the foreign exchange gap or to impose crushing new taxation on the business community thereby killing incentive.

It is, however, gratifying to note that Government are determined to go ahead with the development programme despite the seemingly insuperable obstacles in the way. The existence of the obstructions has been fully realised and action has already been taken to overcome them. It has been now generally recognised in the country that the task calls for hard work and arduous sacrifice.

Speaking in Bombay last week Mr N. V. Gadgil drew pointed attention to the fact that the Second Plan had been the result of deep thought and long discussion at all levels and the nation had accepted it. The difficulties noticed had arisen because both the main assumptions of the Plan had proved wrong. The international situation had turned out to be far from easy and the internal price levels had gone up by leaps and bounds. According to Mr Gadgil if the powers-that-be had only been vigilant, prices could have been kept fairly stable.

The difficulties now encountered should not, however, be allowed to slow down the pace of developmental activities. The main objectives of the Plan have to be kept intact confining the work of the pruning knife to non-priority sections. With the maximum possible economy in all directions and with the wholehearted cooperation of the people, there is every possibility of the targets being realised.

Mr Gadgil thinks that, having accepted the objective of a socialist pattern of society, the nation has inevitably to forge ahead with its work of making the hardwon political freedom meaningful to the people at large in the country. At the present juncture the task can be accomplished only by a revolutionary use of the Constitution. The large sums of money required for the Second Plan must be found. Indirect taxation must be accepted as a patriotic duty. At the same time Government

should take active steps to reduce the economic and social inequalities in the country by imposing tax on wealth and ostentatious expenditure and by tightening estate duty.

Every scheme both in the public and private sectors should be reviewed in the context of the present shortage of foreign exchange with a view to draw up a list of priorities. An important point to which Mr Gadgil has drawn attention is the fact that the private sector is responsible for 92 per cent of national production. In this view, it would appear that he is not far wrong when he says that private enterprise has not played its part atleast as effectively as it should. There is also reason to believe that the sharp rise in the prices of essential commodities including foodgrains in recent months is partly due to the unsocial activities of some traders. In this regard Mr Gadgil's advice that by talking to the people and not talking at them as most of our leaders are doing, the people's cooperation can be enlisted on the side of the implementation of the Second Plan.

*

Peaceful Uses of Atom

The discovery of atom has opened out vast fields of fruitful endeavour in all branches of science, such as physics, chemistry, metallurgy, biology and the various engineering sciences. It is but proper that young aspirants of science in our country, should have the facilities, for the development of their scientific talents, in the new directions made possible by atom. The Training School for Atomic Scientists and Engineers, recently set up in Bombay represents the fulfilment of the desire for an institution which could provide such opportunities and facilities. The School at present has a strength of 170 trainees drawn from all parts of the country. The School owes its birth to the dynamic and untiring efforts of our atom Scientist Dr H. J. Bhabha, and is conducted by the Department of Atomic Energy.

Inaugurating the School Dr H. J. Bhabha, told the staff and trainees that they had opportunities for scientific fulfilment and outstanding scientific work in the service of the country which no previous generations in India had.

The school not only gives training but also provides a number of jobs for the trainees depending upon their performance. The two highest category of jobs available in the school, Dr Bhabha pointed out, were that of Junior Research Officer and Junior Scientific officer. Without derogating from the

great potentialities and long-run benefits of the new lines of study, in connection with the peaceful uses of atom, which would be taken up at the school, it should be said that in the present industrial condition of the country the discovery of the use of atom for the generation of electricity is of greater significance. The feasibility of this proposition has been established and according to Dr Bhabha it should be possible to generate power from atom at a cost of 0.7 anna per unit. Considering that the cost of power generation from coal-fired stations at places remote from coal-fields such as Ahmedabad, Delhi and Madras, stands more or less on the same level as that from atom, erection of atomic power stations in these areas, would render them

independent of coal, resources of superior varieties of which are estimated to be rather limited in our country which therefore demands careful conservation.

The installation of a million kilowatts atomic power station in India is already under contemplation. Dr Bhabha, has vouched for the technical feasibility of the target being realised by 1965, subject to the financial and economic impediments, if any, being smoothly got over.

Opinion in the country is unanimous about the necessity of developing atomic energy for constructive purposes and at the recent debate in Parliament, almost all the members pleaded with one voice for providing the necessary funds, required for work in connection with atomic energy.

GATEWAY MARKETS

Metal Markets Weak

THANKS to expectation of shipments before the end of this month, prices in the Non-Ferrous Metals market developed a downward trend during the past week. In Bombay, Copper ready was quoted lower at Rs 174; Zinc at Rs 74; Lead at Rs 85 (all per cwt) and Tin at Rs 136 (per quarter). In Calcutta, Copper electrolytic declined to Rs 171.50 from Rs 173; fire-refined to Rs 171 from Rs 172.50; Zinc to Rs 72.50 from Rs 74.50; Lead to Rs 72 from Rs 73.50 and Tin to Rs 551 from Rs 555 (all per cwt).

Importers in Bombay envisage a substantial improvement in the supply position of almost all non-ferrous metals during the next fortnight in the light of scheduled arrivals from abroad. It is estimated that the total requirements of Copper, to be received in the current month, will amount to 2,000 tons—nearly half of the quantity from Rhodesia and the balance from other countries. The quantity of Zinc to be cleared is likely to amount to about 1,750 tons, while the estimated supplies of Lead are 400 to 500 tons. The inflow of Tin is also stated to be normal.

The bulk of the imminent arrivals represents shipments against ad hoc licences, issued to established importers towards the end of last month. The prompt issue of licences by the Port authorities has helped considerably in securing fresh supplies. Besides, it is reported, that a few actual users have already been granted import licences in line with the amended policy of the Government, and

more actual users are scheduled to obtain their licences in the next few days.

For obvious reasons, prices in the metal market have been developing a downward trend during the past few days. It is, however, felt that there will not be any major fall in prices in view of the uncertainty regarding Government's import policy for the next licensing period.

On the London Metal Exchange, Copper, after advancing at one time to £213½, receded at the close to £212½ per ton. It is reported that the USA has produced 35,000 tons more copper during the first half of the year as compared with the corresponding period of last year. Zinc has firmed up to £76½ per ton from £74½, mainly due to reports of curtailment of production in many of the mines in the USA. Producers are of the view that any further recession in prices will render production unattractive. Lead remained practically unchanged at £93½ per ton. Tin ruled steady at £744½ per ton. The Buffer Stock compulsory support price is £730. Market circles do not expect any further setback.

*

Gold & Silver

On the Bombay Bullion Exchange, the Silver section remained depressed with occasional feeble rallies meeting with persistent general liquidation. Lower Calcutta advices and talk of increased Tibetan arrivals adversely affected sentiment. Forward rate was quoted at Rs 181.62 and ready at

(Continued on next page)

World of Cotton

World Prospects

WITH only a week left for the end of the 1956-57 season, preliminary talks about the free world Cotton situation and the possibility of the US pressing sales of her surplus on world markets next year have started. According to the International Cotton Advisory Committee, the situation in many cotton-growing countries was by no means as favourable as during the 1955-56 season. Exports declined to an estimated 6.7 million bales from a record 9.4 million bales in the previous season. Imports of American cotton had, however, increased 'out of all proportion to the 1955-56', mainly due to the US pricing policy and sales for local currencies under US Public Law 480.

Outside the United States, special arrangements to move cotton have also again been important instruments of trade policy in certain exporting countries. First and foremost is the decided improvement in the United States position, which is reflected in the end-of-the season carry-over. A year ago, this country was holding 14.5 million bales or nearly double the rest of the 'free world' together. Exceptionally heavy exports, however, caused disappearance to exceed production by well over three million bales; and stocks, as on the 1st August 1957, are expected to have been around 11.3 million bales.

With prospects of a further reduction in production during the present season and substantial sales already made under the new export programme, there is every likelihood that stocks will again decline during the 1957-58 season. Aggregate production outside the USA declined from 16.1 million bales to 15.7 million bales. This, together with the fact that exporting countries' stocks on August 1, 1956 were almost at a minimum, resulted in a marked reduction in the amount of cotton available for export. Outside the USA, consumption is presently estimated at 20.7 million bales, showing an increase of no less than 1.4 million bales over the 1955-56 level.

The Commodity Credit Corporation in the US was able to dispose of a large part of surplus cotton by offering 'aid' cotton to various countries, arranging cotton loans and sell it at comparatively cheap rates. Sterling area countries, therefore, fear that the process will continue next year as well.

The consumption of cotton is expected to increase in India, Pakistan, Burma and Japan; but will be offset by lower consumption in the USA and some countries in Europe. The textile industry continues to expand in Korea, Turkey and many

countries in Asia. Consequently, the supply position is likely to remain unchanged at 49 million bales of which the share of the US will be about 23 million bales.

Judging from this year's consumption, the Indian textile industry is likely to require about 52 lakh bales of cotton next season, comprising about 48 lakhs bales of indigenous growths and the balance from foreign countries. The cotton output is not expected to exceed 53 lakh bales. The overall consumption of domestic cotton, during the first ten months of the season, is, higher by 2.85 lakh bales at 38.96 lakh bales.

Meanwhile, the Government of India are said to be considering the question of effecting a reorientation of their licensing policy regarding raw cotton exports so as to give equality of opportunity to every person desirous of exporting cotton. However, this move has not found favour with established shippers, who feel that it may have adverse repercussions in the country's export trade. It remains to be seen to what extent the case of established shippers will carry conviction with the Government.

*

FUTURES MARKET:

The forward cotton market shed their dullness and exhibited a better tone during the week on reports of heavier rains in the Muglai tracts and the Punjab which, it was felt, would damage the crop if they continued for a longer spell. Shorts hurried to cover and there was moderate bull support. ICC Jharilla March started at Rs 691.50 and hardened to Rs 698.50 at the close.

*

SPOT MARKET:

The Spot market continued to rule steady with spinners' enquiries increasing for Vijay, Jaydhar, Laxmi and other popular varieties:—

In the foreign section, some business was reported done in East African, Sudanese and Egyptian varieties. Following rates were quoted:—Bengal Rs 675 to Rs 745; Oomra Rs 760 to Rs 775; Dholera Rs 805 to Rs 815; Jharilla Rs 810 to Rs 850; Vijay Rs 1,020 to Rs 1,030, AR/BP/52 Rs 1,540 to Rs 1,550; ER/Bushoga Rs 1,430 to Rs 1,440 and Karnak Rs 2,260 to Rs 2,350.

*

NEW YORK COTTON MARKET:

On the New York cotton futures market, prices drifted lower in early dealings with part of the presley attributed to continued favourable weather and crop news. After extending the loss to 10 points, the market developed a mild rallying tendency towards the close. Distant

and October deliveries moved into new lows for the week under scattered commission house liquidation, while other months drifted narrowly. Middling Spot was quoted at 35.20 cents per pound.

*

LIVERPOOL COTTON MARKET:

Trading on the Liverpool cotton futures market was slow with New York advices providing no fresh feature and buyers finding offers reserved on the further weakness of the forward exchange rate. Sudan futures were inactive.

*

CLOTH AND PIECEGOODS:

Conditions in the Bombay Piecegoods market ruled steady. Hopes were still entertained that demand

from upcountry centres would broaden in the course of next few days. Calcutta is expected to be in the market for Pujah purchases in the near future.

On the export front, there was a modest improvement. Ceylon was reported to have booked some business in cheaper varieties of cloth. In view of the visit of the Burmese trade delegation, prospects of a larger business with Burma appears to be good. There are even reports that there is a possibility of a bulk deal with this country under a tripartite agreement according to which cloth will be exported against the supply of cotton from America. Enquiries from East Africa were on a restricted scale and there was moderate demand from Sudan.

*

GATEWAY MARKETS

(Continued from previous page)

Rs 181. Arrivals and offtake amounted to 53 bars and 13 bars respectively.

The Gold section commenced on a disappointing note in unison with the counterpart; but latterly succeeded in recouping the losses on encouraging spot demand from Madras as well as locally. Arrivals and offtake amounted to 3,000 tolas and 5,000 tolas respectively. Forward rates moved between Rs 107.31 to and Rs 107.75, while the ready rate was quoted at Rs 107.56 to Rs 107.69. Sovereign remained practically unchanged at Rs 70.25.

*

Oils and Oilseeds

The market for Oils and Oilseeds ruled generally steady last week. Castorseed showed modest improvement on balance with local enquiry for castor oil. Reports from the export front were a little better, with the UK and the Continent displaying a broader interest. The USA, however, continued to be unresponsive on reports of offers of Brazilian first pressure oil at 18 cents per pound. Castor-seeds September closed at Rs 165.75 and May at Rs 150—the lowest levels touched being Rs 165.25 and Rs 149.25 respectively.

The Groundnut section lacked strength. Turnover was only 8,000 candelis. Buyers were hesitant to support the market at the higher levels in the light of the favourable weather reports from most growing areas. February delivery closed at Rs 146.12 and August at Rs 163.25.

Trading in the Linseed section was featureless. September delivery finished at Rs 28.75 and May at Rs 28.56.

Cottonseed was aided by cheerful performance of the cotton market. September delivery was

Yarn

The Bombay Yarn market took a slight turn for the better, thanks to some covering business on fears of a further cut in imports for the October 1956/March 1957 period. Prices improved by 2 to 3 per cent. In the ready section, prices remained mostly unchanged, except for some varieties which declined by 2 to 3 nP per pound.

Imports of Art Silk Yarn into Bombay amounted to 15,84,860 pounds in July as against 17,16,273 pounds in the previous month. Imports of Staple-Fibre yarn amounted to 10,72,653 pounds; but those of cotton yarn showed an improvement from 97,107 pounds to 1,22,144 pounds. Total imports of art silk yarn, during the first seven months of the year, amounted to 2,03,06,737 pounds; of staple-fibre 79,09,620 pounds and of cotton yarn 7,53,692 pounds.

*

WORLD OF TEA

(Continued from page 358)

In the Colombo market, offerings were 6,957,514 pounds. Quality showed some improvement and there was again active demand at dearer rates. Selection of Nuwara Eliya teas was more limited with quality showing some improvement, particularly from the Kandapola district. Uva teas continued to improve in quality and there was an attractive selection. Prices for all grades were considerably higher. Dimbula teas also showed some improvement and were irregularly dearer. Prices of Fannings generally followed the trend of the corresponding Broken grades. There was strong demand for Off-grades. Powdery Dusts were easier.

Olympus

Changes in Wealth Tax Bill

THE Select Committee's Report on the Wealth Tax Bill presented to the Lok Sabha at the weekend contains a whole series of concessions designed to meet specific objections raised against particular clauses of the Bill in its original form. So controversial and unconventional a fiscal measure was bound to improve by second thoughts and detailed counsel. And, in this particular case, the Select Committee went to more than usual trouble to ascertain public reactions to the Bill; it heard oral evidence from as many as 17 associations and considered as many as 31 written memoranda from associations and individuals all of which—again, rather unusual procedure—are to be placed on the table of the House. The time originally allowed the Select Committee for reporting was found inadequate in view of the detailed consideration called for by the Bill and cheerfully given by the Select Committee. It was, therefore, allowed further time and the Bill has had the benefit of close scrutiny in the light of public suggestion. The result of this conscientious once over has been to remove a great many of its features that were objected to while preserving intact the structure and basic assumptions of the Bill.

The idea behind a tax on wealth is threefold. First, of course, is the insatiable hunger for more revenue that modern governments have. One can perhaps hardly blame them, in view of the things that are expected of them these days. As further rationalisation of this predatory instinct of the state, may be offered two unexceptionable social ends. One of them is the reduction in social and economic inequality this promotes. This is a justification that has particular force in a country like India, which reputedly has at once the richest and the poorest men in the world. Secondly, the function of the Wealth Tax is to bring into productive use a great deal of inert wealth, at least in order to earn the income that will pay the tax on itself. This is theoretically sound and attractive, since our whole object is to activate wealth into multiplying itself in socially useful forms by making sterility in wealth unattractive and selfliquidating. For, a form of wealth, however inexhaustible, that does not increase itself and keeps on paying the Wealth Tax will ultimately have to reduce itself to nothingness. Of course, this argument assumes knowledge on the part of the taxing authorities of the existence of these sterile

hoards. But that is an administrative challenge, which has nothing to do with the basic assumptions of the measure.

From all these points of view, the measure was considered inevitable in the present Indian context. Its actual form as originally presented contained certain features which were open to objections from the point of view of strict canons of fiscal good manners. The most serious of them was the levy of this tax on corporate bodies. It appeared to many, as it did to Mr Masani, a dissenting member of the Select Committee, that such a levy was "bad in principle and contrary to national interests". It is considered iniquitous because it involves a form of double taxation—once in the hands of the company and then again in the hands of the shareholder as the owner of the shares. It is considered a serious disincentive to capital formation because of the fresh and recurrent burden it imposes. It is also pointed out, in this connection, that even Professor Kaldor, whom many supporters of the measure invoke as an inviolable oracle, did not consider corporate wealth as a legitimate source of this tax. But the argument on the other side is practical: as things obtain in India today, the pretence of a corporate body having a life of its own wears rather thin in the majority of cases. The sensible thing to do, therefore, would be to include the limited company as a wealth tax assessee, but to moderate the rigours of the tax in the case of companies whose direct participation in increasing the productivity of the country is beyond doubt. This, the Bill as amended by the Select Committee has done in a large measure.

The most important of the changes from this view is the tax holiday for new companies for a period of five years. These are available, not to all companies, but only to "industrial undertakings", which means those companies directly contributing to an increase in real production. This concession is available also to existing companies in respect of assets used for expansion of their production. The second set of recommendations that show concern for productive and nationally valuable undertakings in the private sector is the one that completely exempts certain new categories of companies from Wealth Tax. While banking and insurance companies had been exempted from Wealth Tax in the original Bill itself, this concession has now been extended to shipping companies, to companies registered for charitable and religious

purposes and to finance companies which have obtained financial assistance or guarantees from Government in raising their working capital for the purpose of financing private industrial enterprises in India.

The other concessions extended to companies are designed to meet some of the other objections based on equity and the need to avoid disincentives. For instance, a company suffering losses in a particular year will not be obliged to pay any Wealth Tax for that year. Again, no company will be obliged to pay Wealth Tax out of its capital, since the tax shall never exceed the amount of profit for the year. Certain categories of assets describable as intercorporate investments, like shares held by one company in another, are not includible in the computation of the total net wealth. Likewise, shares in a company which has no wealth tax to pay are also not includible in computing a person's total wealth.

Another argument against the Wealth Tax, especially on companies, was its possible adverse effect on foreign investment; this has been met by exempting foreign nonresident companies 50 per cent of their investments in India from the purview of this tax. A wholesale exemption of all foreign companies would be open to the objection of discrimination against indigenous endeavour. Hence this compromise.

In a measure of such complication and far reaching inroads into vested interests, the lawmaker is always on the horns of a dilemma: whether he should make the law for the honest man or for the dishonest man. Each one of the concessions now announced has been designed to meet valid objections to the original Bill, even though they may not have gone as far as some would desire. But almost every one of them is sure to yield—and indeed suggest—to the sharp and practised tax dodger modes of evasion. The concession to companies suffering losses, for example, is sure to give a fresh lease of life to the practice of buying fictitious losses, whose attractions from the point of income tax evasion were somewhat nullified by successive amendments. Likewise, share shuffling is sure to reach new proportions in order to benefit by concessions to the so called "intercorporate investments".

So much for concessions to limited companies. Of the concessions to individuals and Hindu undivided families, the most important is that relating to the wealth of ex-rulers. The rights and wrongs of taxing at all this category of wealth are sure to be

debated for a long time, but, in the prevailing mood of the country, no government can afford to be too fussily conscientious about them. In any case, in arguments of this sort, the uneasiness about present equivocations over promises of fiscal immunity is effectively silenced by the somewhat specious argument that such promises ought never to have been given at all. But certain small mercies have been shown the ex-rulers in that one residence of theirs and jewellery that can be identified as belonging to the State will not enter the computation of their total wealth. As for less exalted individuals, there are some concessions. For instance, though they may have to pay tax in respect of even their residential house, some concession is to be allowed to rural dwellings. In the computation of net wealth, you will have excluded a maximum of Rs 10,000 for tools used in your profession or vocation. Other items of sentimental and noncommercial value will also be excluded, but not jewellery. This inclusion of jewellery must be a sore point with many who had seen in it a convenient sieve through which much can be slipped.

As for Hindu undivided families, substantial concessions have been afforded. The exemption limit for this category of owners of wealth has been raised by Rs 1,00,000 to Rs 4,00,000. There seems to be some ambivalence, if not actual contradiction, in the attitude of Government toward this category of assessee. While concessions shown to them in income tax assessments are being taken away and Mr Krishnamachari expressed himself very strongly against them as a source of evasion, he has apparently agreed that they need special consideration in so far as Wealth Tax is concerned. One need not perhaps grudge this concession, but for the old fear of its providing a loophole for evasion. It is quite conceivable that we may suddenly find erstwhile estranged brothers kissing and making up, because, contrary to popular opinion, Hindu joint family may be brought into existence by volition on the part of those who could have, but have not, lived as a joint family. All that needs to be done is a declaration by the persons concerned to become joint and "the throwing into the common hotchpot" of their individual assets.

The minutes of dissents, and there are as many as nine of them, largely cancel each other out. The arguments, too, are familiar. It does not seem likely that they will significantly influence the final shape of the Wealth Tax act.

North Indian Notes

Broadcasting in India

The debate on the voting of the budget grant for the Information and Broadcasting Ministry afforded the Minister, Dr Keskar, an opportunity to announce or rather reaffirm the Government's decision on two important points concerning broadcasting in India.

The first is about commercial broadcasting. Dr Keskar said that the Government were quite decided that introduction of commercial broadcasting would not be beneficial for our country. The Government will not, therefore, allow commercial broadcasting in India.

The second and more important point concerns the creation of an autonomous body on the lines of the BBC which will be in sole charge of broadcasting and which will be entirely free from control by the Government. Dr Keskar said that the Government were against the handing over control of the AIR to any such body at the present moment. The time was not ripe yet as the AIR is in a formative stage. "When once broadcasting is stabilised and developed, and if in those circumstances we feel that the AIR SHOULD BE AN AUTONOMOUS body, it can be done so but I do not think the time has yet come for making the change".

Under conditions obtaining in India at present, the Government's decisions on both the points are correct ones. The AIR's performance, whether looked at from the point of view of its excellence as a medium of instruction or as that of entertainment, has, it is true, been far from what could have been wished. The AIR broadcasts hardly ever reach the standard one normally finds in the BBC broadcasts. But whatever the reasons for the comparatively poor performance of the AIR, the remedy will not lie in handing its control over to an autonomous body—not certainly at the present moment. It is a fact, regrettable though it is, that the country will be hard put to, find a group of persons who have in themselves administrative qualities of a high calibre, a comprehensive vision of the potentialities of this powerful medium of education and entertainment, and a passionate zeal to make the radio a habit of delight to all. There are persons with imagination enough to make broadcasting a work of creative achievement and there are persons with rare administrative skill and experience but there are few with both at the same time.

Apart from the paucity of right personnel, there is the fact that the AIR's expansion has been very rapid in the last 10 years and it is still expanding rapidly. It may not be a wise policy to make a

complete change in the administration of the AIR at this juncture.

As regards the question of commercial broadcasting. Dr Keskar was justified in expressing apprehension about a possible fall in the standard of broadcasting should commercial broadcasting aim, as it necessarily will, at the widest possible audience by putting up programme which appeals to the lowest common denominator in the matter of taste and cultivation among the people. Even in Britain with its tradition of excellence in broadcasting, the results of commercial television have not been very encouraging. In our country, commercial broadcasting is almost certain to corrupt and lower the taste of the listening public.

While, therefore, the Government's decisions on these points are to be welcomed, it has to be pointed out at the same time, that the quality of the AIR broadcasts leaves much to be desired. The presentation of news and the feature broadcasts display a deplorable lack of imagination. There is complete absence of any controversial discussion and the point of view of the oppositionist and the dissenter is never given. The result is that a flat dullness seems to engulf whatever is spoken over the AIR.

If Dr Keskar wants the AIR to play a vital and entertaining role in our lives and if he wants the country to support and endorse the Government's decisions, he must devote more time and attention to improving the quality of the AIR broadcasts.

Handicrafts

A drive for the revival of handicrafts, is part of the scheme for improving the lot of the people in the countryside. The place of handicrafts in Indian economy is by no means insignificant and a great part of the rural economy is dependent on them for their very livelihood. Though the products turned out have lost none of their economic utility the present position of the handicrafts is by no means satisfactory.

The Government is now committed to the policy of protecting the industry from further decadence. To create a new appeal for the products of the handicrafts, new designs have to be evolved and training centres created.

The central points in the Government's scheme of assistance to the handicrafts are the establishment of training centres, improvement of designs, and provision of marketing facilities. Several such schemes have been recently approved by the Go-

vernment of India and a sum of Rs 13.66 lakhs by way of loans and grants have been sanctioned for implementing them.

The distribution of the grants and loans are broadly in accordance with the present position of the various handicrafts in the States. The Mysore Government has been given a grant of Rs 54,000 for the establishment of a vocational school of arts and crafts to be set up by the Janata Shikshana Samiti in Dharwar for giving training to artisans in carpet-weaving and embroidery and in the making of cane and bamboo articles and dolls.

Similarly a grant of Rs 16,000 has been made to the Madhya Pradesh Nari Kalyan Sahakari Samiti for its scheme of providing training to workers in mat-weaving at Indore. The Institute of Art-in-Industry in Calcutta, and the Benaras Hindu University have also been given similar grants.

The Madras Government have been sanctioned a loan of Rs 2 lakhs towards the working capital needed by the Victoria Technical

Institute for the development of handicrafts.

There are besides these training centres, five pilot training centres maintained by the Handicrafts Board. Three of these are in the Madras State and the other two in Mysore. The financial needs of these are also being met by a grant of Rs 1.45 lakhs.

The design centres of which there are five in the country, are all of them maintained by the Handicrafts Board with the exception of the one at Lucknow which is maintained by the Uttar Pradesh Government. A grant totalling Rs 4 lakhs has been sanctioned for the centres maintained by the Board, while for the centre at Lucknow a separate grant of Rs 2 lakhs has been made.

The marketing structure so far as the handicrafts are concerned, allows room for improvement by means of standardization and organisation of cooperatives. For this purpose, grants have been given to Bombay and Orissa.

NORTH INDIAN MARKETS

Sugar Subdued

SUGAR markets have continued to rule quiet, thanks to the absence of any good support. Except for spot sales for festive season, despatches to the consuming centres were small. In order to meet the demand of the South, the Central Government have permitted a special quota of 40,000 tons of sugar for free sale there. Out of this quantity, 25,000 tons will be sent from Uttar Pradesh and Bihar and the rest from factories in the South. According to trade circles, this quantity will fall short of the requirements.

It is felt that a release of one lakh tons would have successfully broken the firm trend in the commodity in that region. The demand has already been increasing there on account of the festival season, while stocks are limited due to transport and other difficulties.

According to the Indian Sugar Mills Association, sugar production during July was 5,000 tons, bringing the total production upto 31st July of the season 1956-57 to 20.19 lakh tons as compared with 18.57 lakh tons in the corresponding period of the previous season. Offtake during July was 1.63 lakh tons as against 1.74 lakh tons in July, 1956. Total offtake of indigenous sugar, during the nine months of the current season, comes to 15.90 lakh tons as compared to only 12.70 lakhs in the corresponding period of 1955-56. Closing stock of sugar with the

factories, as on the 31st July 1957, was 9.56 lakh tons as against 9.92 lakh tons on the corresponding date of last year.

Meanwhile, mill-delivery prices of sugar have displayed a mixed trend in the Kanpur market. Following good demand from Calcutta and eastern parts of the country, ex-mill rates of east Uttar Pradesh factories have shown a steady rise, while prices for factories in central and western range are slightly depressed for want of support.

Prices in the Muzaffarnagar market have eased for some varieties. Latest ex-mill delivery rates are quoted in the Kanpur market:— Kanpur quality D/28 Rs 36.37; (D/29) Rs 36.50; Balmampore Rs 33.75; Hardol Rs 34.25; Champaran Rs 35.25; Pratapud Rs 35; Hasanpur Rs 34 and Morera Rs 34.75.

Following rates (per maund) are quoted in the Hapur market:— Rampur (B/29) Rs 35.62; (C/29) Rs 34.62; Mansoorpur (B/29) Rs 39.94; Shamli (B/29) Rs 35.50; Daurala (B/29) Rs 35.19; Amroha (D/29) Rs 33.19; Bijmore (E/29) Rs 33; and Meerut (D/28) Rs 33.75.

Gur

Revival of demand from the consuming centres and an increase in prices in the markets in the South, where new arrivals have begun, have accounted for a steady trend

(Continued on page 374)

[August 24, 1957]

PROSPECTUS

1. A copy of this Prospectus has been filed with the Registrar of Companies, Madras, for registration as required by Section 60 of the Companies Act, 1956.
2. Consent of the Central Government has been obtained to this issue by two Orders No. F. 21 (34)-CCI/55 dated 27-9-1955 and No. F. 21 (67)-CCI/56-286 dated 19-3-1957, of which complete copies are open to public inspection at the Registered Office of the Company at Ennore, Madras. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any Scheme or for the correctness of any of the statements made or opinions expressed with regard to them.
3. The subscription list will open at 10-30 a.m. on Friday, the 23rd day of August, 1957, and will remain open until Friday, the 6th day of September, 1957, unless closed earlier at the discretion of the Directors but not before Friday, the 30th day of August, 1957.

ASHOK LEYLAND LIMITED

(Incorporated under the Companies Act, on 7th September, 1948.)

AUTHORISED CAPITAL

The Authorised Capital consists of 40,00,000 Equity Shares of Rs. 5/- each

Rs. 2,00,00,000

SUBSCRIBED AND FULLY PAID UP

19,65,478 Equity Shares of Rs. 5/- each

Rs. 98,27,390

leaving a balance of 20,34,522 Equity Shares of Rs. 5/- each available for subscription

Rs. 1,01,72,610

5. Particulars of the issues of Capital, all in Equity Shares of Rs. 5 each, which have been made during the past two years are given in the statement contained in paragraph 19 of this Prospectus.

This statement shows that at the date of this Prospectus Equity Shares of a total nominal value of Rs. 31,29,410 remained unsubscribed from previous issues. Of this amount Rs. 10,82,720 is reserved to be taken up by Leyland Motors Limited of Leyland, Lancashire, and Rs. 20,46,690 is available for issue at the discretion of the Directors.

At a General Meeting held on 6th June, 1957, it was resolved to issue a further Rs. 70,43,200 nominal in Equity Shares of Rs. 5 each for payment in full at par and that of these shares Rs. 28,17,280 nominal be offered to Leyland Motors Ltd., and the balance, viz. Rs. 42,25,920 nominal be available for issue at the discretion of the Directors.

Pursuant to these Resolutions, the Directors have offered to Leyland Motors Ltd., who have agreed to take up shares of the nominal value of Rs. 52,29,170. The amounts payable in respect thereof will be subscribed in cash from time to time by Leyland Motors Ltd., normally as and when payments are made to them by the Company in respect of deliveries of Capital equipment. This amount of Rs. 52,29,170 includes Rs. 13,29,170 additional to the amounts mentioned in the preceding paragraphs as reserved for Leyland Motors necessary to bring the eventual total holding of Leyland Motors and other overseas holders in the equity Capital of the Company to 49% in accordance with arrangements recently agreed with Government.

The total nominal amount of the present issue is therefore Rs. 49,43,440, viz. Rs. 1,01,72,610, the total unsubscribed capital, less Rs. 52,29,170 to be subscribed by Leyland Motors Ltd.

9,88,688 Equity Shares of the nominal value of Rs. 49,43,440 are accordingly offered to the Public in terms of this Prospectus for subscription at par payable in full at the rate of Rs. 5 per share with application.

The shares now offered will rank for dividends and voting rights and for all purposes *pari passu* with the existing shares except that they will be entitled to participate in any dividend declared for the year 1957 at the next Annual General Meeting or by way of interim dividend or by way of final dividend so that the total dividend paid for the year 1957 in respect of the new shares shall be in proportion to the length of time, being part of the year 1957 during which the capital thereon is paid up and in proportion to the capital respectively paid up thereon and will thereafter rank *pari passu* as to dividends and in every respect with the existing shares.

6. The Shares of the Company already issued are dealt in and are officially listed and quoted by the Madras Stock Exchange Association Ltd., Madras. An application has been made to the Madras Stock Exchange Association Ltd., Madras, for permission to deal in the shares now being offered and in due course for an official quotation.

7. Application for shares should be made for a minimum of 100 shares on the Form accompanying the Prospectus and delivered before the close of the subscription list to the Company's Bankers, namely:

- (i) The State Bank of India—at all their branches in the Madras Circle and at their Branches at Bombay, Delhi, Calcutta, Hyderabad, Nagpur, Cuttack, Patna, Lucknow and Bhopal.
- (ii) Grindlays Bank Limited at any of their branches

together with a remittance for the full nominal value at Rs. 5 per share.

DIRECTORS

1. Sir A. RAMASWAMI MUDALIAR, K.G.S.I., D.C.L. (Oxon)

OBJECTS OF THE COMPANY

9. The Company was incorporated in 1948 under the name of Ashok Motors Ltd., which was subsequently changed to ASHOK LEY-

August 24, 1957]

LAND LTD., to assemble, manufacture and trade in motor cars, motor buses and trucks, diesel engines and all kinds of motor vehicles, their parts, components and accessories.

The main object of the Company as contained in the Company's Memorandum of Association is as follows:—

To carry on the business of manufacturers, assemblers of, dealers in, hirers, repairers, cleaners, storers, warehousemen, of motor cars, motor cycles, cycle cars, motors, scooters, motor buses and lorries, trucks, tractors, cycles, bicycles and carriages, launches, boats and ships, vans, aeroplanes, hydroplanes and other vehicles and conveyances of all description for carrying passengers or their personal goods, commodities, produce, cargoes and other things on land or sea or by air (all hereinafter comprised in the term "motors and other things") whether propelled or assisted by means of petrol, spirit, steam, gas, electrical, animal or other powers, and all engines, chassis, bodies, turbines, tanks, tools, implements, accessories and other things, materials and products used for, in or in connection with motors and other things.

The Company obtained a certificate of commencement on 14.12.1948 and has been carrying on business since then. Initially, the Company was engaged in assembling Austin Cars and trucks. In 1950, the assembly of Leyland Commercial vehicles was added to its activities. Steady progress was made in the volume of production and Ashok Motors Limited became recognised throughout India as one of the pioneers of a new industry.

When in 1953, the Government of India, on the advice of the Tariff Commission, selected five firms as the approved Manufacturers of Automobiles in India, Ashok Motors Limited, now Ashok Leyland Limited, was one of the five. At that time, the Company was assigned *inter alia* the role of manufacturing heavy duty commercial vehicles. It was decided in the latter part of 1952 to discontinue the assembly of Austin vehicles and to concentrate on the production of Leyland Heavy Duty Commercial vehicles for passenger and for goods transport.

A phased manufacturing programme for the production of Leyland "COMET" Chassis was submitted to the Government of India and approved in March 1954. The Company expressed its intention to extend manufacture to the complete range of Leyland Commercial vehicles in due course. Leyland vehicles are world renowned and Leyland Motors Limited of Leyland, Lancashire, England, are one of the largest manufacturers of heavy duty buses and trucks. Their range, including vehicles manufactured by subsidiary Companies in their group, covers buses for every type of duty including the

clutchless high performance Royal Tiger Worldmaster Chassis with underfloor engine designed for gross loads up to 15 tons, operating as a single deck passenger vehicle and the "Atlantian" double deck bus which is the most advanced vehicle of the class in the world today, with seating capacity for 78 passengers. In the goods range, lorries are available for loads up to 60 tons and includes single vehicles such as the "Octopus" which without any form of articulated trailer can accommodate gross loads up to nearly 25 tons. All these chassis are powered by the famous Leyland range of direct injection 6-cylinder diesel engines.

The objects before this Company therefore are, commencing with the Leyland "COMET" Chassis, designed for gross loads up to 12 tons, to establish the manufacture of a range of Commercial vehicles comparable to the range offered by Leyland Motors Limited in the United Kingdom and including the manufacture of the Leyland range of diesel engines. In due course, it will be the Company's object not only to produce for the Indian market but also to export to Overseas markets.

DEVELOPMENT

10. Under the Agreement dated 5-12-1955, planning of production including manufacture of jigs and fixtures was to be under taken by Leyland until competent staff could be trained in India, the services of Leyland Technicians were to be available to assist with the training of staff and the development of efficient material control, planning and production control in India, and facilities were to be provided at Leyland for the training of Indian personnel.

By the end of 1955, initial planning being complete and the delivery in India of machine tools, jigs and other factory equipment having commenced, implementation of the manufacturing programme was started. Progress since then has been continuous and at present after a little over one year from the inauguration of manufacture, 15.80% of the c.i.f. value of the Leyland "COMET" is produced in Madras.

FINANCIAL BACKGROUND

11. In the original agreement dated 5-12-1955 concluded between the Company and Leyland Motors Limited of Leyland, Lancashire, with the approval of the Government of India, it was provided that the eventual contribution by Leyland Motors might be Rs. 80 lacs, i.e. 40% of the Company's authorised capital of Rs. 2 Crores. Pursuant to this arrangement, the capital has been increased from time to time until the paid up Ordinary Capital amounted to approximately Rs. 95 Lacs, of which Leyland Motors held Rs. 38 lacs. The sanctions granted by the Controller of Capital Issues provide for issue upto 40% of the capital to non-resident shareholders.

INDIAN FINANCE

FOREIGN EXCHANGE

13. The Company does not anticipate any problem in the provision of foreign exchange for meeting the cost of imported plant, etc. necessary for the expansion programme to be financed from the present issue, since the cost of imported capital equipment is expected to be met by the issue of Equity Shares of the Company to Leyland Motors Ltd., in the U.K., as hereinbefore mentioned.

PROSPECTS AND PROFITS

14. Except in respect of the year 1955, the Company has paid a dividend annually since its inception. The year 1955 was exceptional in which heavy items of non-recurring expenditure, such as the payment of compensation to Managing Agents, writing down the value of Austin Spares since the assembly of Austin vehicles has been discontinued, made it inexpedient to declare a dividend. The working results for 1956 were good and a dividend of 6% free of tax was paid after making provision for taxation and depreciation and after placing Rs. 1.5 lacs to Reserve.

Sales of "COMET" trucks which amounted to 159 in 1953 have steadily increased and are expected to reach a total of 1,000 for 1957, which, in the Company's planning was regarded as a level of production and sales which would achieve economic results. The rising demand leads the Company to proceed with its plans to increase capacity to 2,500 vehicles per annum, and, given reasonable trading conditions, the Company expects to be in a position to continue to pay Dividends on the capital as increased as the result of this issue.

Leyland vehicles are noted for their long life. The average life of those now being put on the roads is estimated at a minimum of 12 years. In many cases Leyland vehicles remain in service for 20 years or more. After two or three years service replacement of worn parts commences during routine overhauls. There will, therefore, during the coming years, be a considerable increase in the sale of spare parts which will have a beneficial effect on the Company's ability to make reasonable profits.

15. The following is a copy of the report of the Company's Auditors Messrs. M. S. Krishnaswami & Jagannathan and Messrs. Suri & Co., Chartered Accountants:

ASHOK LEYLAND LIMITED

Ennore, Madras

We have examined the accounts of Ashok Leyland Limited for the five years ending 31st December, 1956, and in accordance with the provisions of Clause 24 of Part II of Schedule II of the Companies Act, 1956, we report as follows. A summary of the Profit & Loss Accounts of the Company for these years together with the adjustments to be made is given hereunder:

Year ended 31st December.	1952. Rs.	1953. Rs.	1954. Rs.	1955. Rs.	1956. Rs.
Sales, closing stock and miscellaneous revenue	2,04,52,081	1,76,98,569	1,50,05,753	2,48,49,469	4,28,78,648
Non-recurring item for which adjustment is necessary:					
Profit on sale of assets:	14,017	42,645	398	8,282	14,909
	2,04,66,098	1,77,41,214	1,50,06,151	2,48,57,741	4,28,93,557

Madras Review

Administration of Kerala

ALL eyes were turned toward Kerala last week. For President Rajendra Prasad had chosen to honour the State on the occasion of the Independence day by his august presence in conformity with his decision to spend the Independence day at State capitals by rotation. He went through a crowded programme during the four days of his sojourn in the State. Warm welcome awaited him wherever he went and it was obvious that Dr Rajendra Prasad was happy to spend the national day amongst such kind people and in the idyllic environment that the State provided.

The President gave expression to his happiness in his address at the Independence Day Parade in Trivandrum. Incidentally it was the first occasion that a President of the Indian Union took salute at an Independence Day Parade in the State's capital. Kerala, said the President, though the smallest in the country, was quite rich in respect of human and material resources. But like several other States, it was also faced with many problems. Over-population was the foremost among the problems that required to be tackled urgently. The President was, however, confident that the State would be able to overcome the difficulties as

the Centre was always there ready to lend a helping hand. "On this occasion," said President Rajendra Prasad, "let me assure you, on behalf of the Union Government, that in all your efforts to solve your problems, your State can count on the Centre's sympathy and helpful consideration."

Apart from the President's visit, Kerala has been attracting quite a good deal of public attention on other counts as well. Recently, Mr Shriraman Narayan, General Secretary of AICC, startled the entire country by his report on the law and order situation in Kerala. Since then, there have been numerous reports about the growing lawlessness in the State, especially in the Plantations.

Another development that has aroused widespread public interest in the State's affairs is the Kerala Education Bill which seeks to nationalise education. As this measure raises fundamental issues and in course of time may be followed by similar bills in other States, it has become a common subject for discussion all over the country. It would appear that most educationists in the country are opposed to the idea of the State appropriating to itself the responsibility of running all educational institutions.

The State-aided schools have gone yeoman service and there is now no compelling reason for interfering with their working in such a drastic fashion as envisaged in the Bill. It has been pointed out that as the Kerala Education Bill applies to recognised schools which do not get any aid from Government, there should be some ulterior motive behind it. It is also apprehended that by bringing the entire educational system directly under their control, there will be nothing to prevent the State Government from indoctrinating the school children with their own political ideologies. Hence there are grave dangers inherent in a situation that may be created as a result of the putting of such a measure on the Statute Book.

In reply to the criticisms levelled against them, the Communist Government of Kerala point out that their policies are governed by the urgent need to ameliorate the condition of the common man. That they are trying to bring about basic changes in the administrative set up in the State is not denied. But it is explained that such changes are sought to be carried out only with a view to enable the Government to reach the objective of the socialist pattern of society. The recent changes in the policy governing the Police department have, therefore, to be viewed in the wider context of reform of the adminis-

The Peninsula

trative set up. Similar changes in other departments are under the active consideration of Government. "The notorious red-tapism and bureaucracy at every level of administration—the universal complaints of corruption at all levels of administration—the unimaginable lack of contact between the personnel in the Government services and the common people—the great amount of centralisation of power at the level of Central and State Governments—the absence of democratic elements at levels of administration below the State—these and other evils and defects of the system have to be remedied as quickly as possible if the nation is to advance along the path of socialism which has now been actually accepted by all the elements in the political life of our nation as the national objective."

While there will be general support for the main aim behind the changes sought to be brought about by the Kerala Government, it is doubtful if the manner in which the reform is being carried out will meet with public approval. In their zeal for improving the lot of the common man, the Kerala Government should not forget that they are in power because they have agreed to work under the Constitution which guarantees certain inalienable rights to the individual.

Referring to the changes made with regard to the duties of the police, the Chief Minister has declared that his Government's policy is based on the firm conviction that the relations between the workers and the capitalists, the peasants and the landlords, the debtors and the creditors etc., are relations which should primarily be settled between those classes. The Labour Department and other arms of the Government machinery of conciliation, adjudication and arbitration are there to help the parties reach an amicable settlement.

But from what has already taken place as a result of the implementation of the reform with regard to the police department, it would appear that workers have interpreted it as an open invitation to them to take the law into their own hands. Mr Nambudripad is quite right in maintaining that the police are not there to help the employers coerce the workers. But they should be always available at hand to see that neither side coerces the other. By telling the police that it is none of their business to look into the disputes between workers and employers, the Kerala Government have exposed plantation owners to grave dangers. Whether employers coerced workers with the help of police or not, there seems to be little doubt that hereafter coercion of employers will become a common phenomenon.

WORLD OVERSEAS

(Continued from page 380)

loping the new bauxite deposits found in the Came York district of Queensland.

The Government has also announced its intention to dispose of Joint Coal Board's mining enterprises in New South Wales.

The Government is retaining its interests in Trans Australian Airlines, Qantas Empire Airways, the Commonwealth Shipping Line, Commonwealth Hostel Ltd., and the Overseas Telecommunications Commission.

OIL TANKER PROJECT IN SOUTH AUSTRALIA

A proposal by the Broken Hill Proprietary Co. Ltd., and Ampol Petroleum Ltd. to build tankers at Wyalla, South Australia, has been submitted to the Australian Government. Future activity is likely to be contingent upon a subsidiary.

The tankers planned will each cost £ 2,000,000, and will be in the 24,000 tons class. The shipyards at Wyalla are the largest in Australia, and are capable of constructing the vessels. According to the Ampol Company, final decision on the matter rests on a number of factors, including whether the Government will subsidise the difference between Australia and overseas shipbuilding costs.

At present Ampol Petroleum Ltd., is having a 25,000-ton tanker built overseas, at a cost of £2,000,000 and as an Australian company it would prefer to place its orders in Australia.

OIL COMPANY'S £1,278,000 PROFIT

Vacuum Oil Co. Pty. Ltd. of Melbourne made a net profit of £1,278,000 for 1956, but did not pay any dividend to its overseas shareholders. The profit was retained in the business, and with loans from affiliated and shareholder companies, is being used to finance additional storage, and transport facilities and other needs.

Vacuum Oil has been established 62 years in Australia. The Company has large holdings in companies now searching for oil in Papua, and in New South Wales.

108 AUSTRALIANS HAVE INCOMES IN EXCESS £50,000 A YEAR

Australia, with a population of 9,533,000, has 108 citizens with incomes of over £50,000 a year and 104 in the £40,000 to £50,000 group. These exclude the salary earners. In terms of occupations figures from the latest report of the biggest group among high income earners, representing 39 of the 108 who earned over £50,000 and 68 of the 104 who earned over £40,000. Property owners earning £50,000 and over totalled 32, and they had 15 in the next group. Two professional men, and two in manufacturing, were in the highest bracket.

South Indian Notes

Fixing Prices of Foodgrains

The main theme of the 20-page memorandum submitted to the Foodgrains Enquiry Committee by the Andhra Government is that in the fixing of prices for foodgrains due consideration should be given to the economic condition of the producer. It is pointed out that prices of foodgrains should be studied always in relation to the price levels of the commodities that are usually purchased by the producer. In Andhra it has been found that in recent years prices of cereals as compared with some other commodities commonly used by the farmer, have been lower. Even where there has been a rise in the price of cereals, such a rise has been less than what has happened in the case of other commodities. The inescapable conclusion is that agriculturists have been paying higher prices for the commodities they buy than what they get for their produce.

The Andhra Government are justified in asking for an economic price for the producer because the State's economy is largely dependent on agricultural production. Andhra's views in this regard merit the closest consideration in view of the fact that it is a supplier of foodgrains to other regions. Even at present it has a disposable surplus of 6 lakh tons and this feature has enabled the Union Government to form the Southern Rice Zone which, with the surplus available from Andhra, has become self-sufficient in rice. It is estimated that with the completion of new irrigation schemes, Andhra will have surplus foodgrains to the tune of 11½ lakh tons by 1961.

The memorandum points out that if Andhra is to continue to play the role of a supplier of foodgrains to deficit areas, steps must be taken from now on to effect a balance between commercial crops and food crops. In this regard it is emphasised that some suitable machinery should be devised by which Government will be able to induce the large landowners to grow only those crops which are considered desirable in the larger interests of the State.

Leather Industry

The leather industry is one of the big foreign exchange earners in the country, ranking fourth with about Rs 25 crores by way of foreign exchange. As such, the essential problem confronting the industry is one of finding new foreign markets for its products and this necessarily involves planning of internal production in accordance with the needs of foreign buyers. It is a matter for gratification that the Government

are aware of the possibilities for further developing the industry which would add to the foreign exchange resources of the country and in recognition of this need have set up an Export Promotion Council, in Madras.

Speaking at the inaugural ceremony of the Council Mr K. Rangaswami Chairman of the Council and Joint Chief Controller of Imports and Exports explained the objects of the Council as being one of mobilizing the voluntary cooperation of the trade for improving the condition of the industry.

Mr Rangaswami pointed out that the problem of the industry was not only one of finding new markets, but also one of changing the character of the present exports, which were confined to semi-finished skins and hides. Stressing the need to export manufactured items, Mr Rangaswami said that certain items like boots and shoes were already figuring in the exports. With a view to organise steady markets in countries where Indian leather

is in demand and also to infuse confidence in customers, it was pointed out, that pre-shipment inspection and quality control were necessary. One of the objects of the council is to devise the appropriate methods of quality control of leather intended for export.

Mr Rangaswami, also expressed gratification at the cooperation and encouragement received from the Government in developing the industry along new lines.

Mr A. J. John, Governor of Madras who presided called upon those engaged in the industry to take advantage of new methods of production and technology, and said that a study of market conditions in foreign countries, an appreciation of their needs and information about the latest market trends in prices would be necessary to develop the export trade.

Mr K. Kamaraj, Chief Minister of Madras, who inaugurated the Council appealed to those engaged in the industry to pool their resources, experience and knowledge of research to produce not only tanned leather but finished products.

SOUTH INDIAN MARKETS

Export Promotion Council for Leather

A Leather Export Promotion Council—the eighth in the chain of Export Promotion Councils—has been set up by the Government of India. This newly-formed Council will find out ways and means for the export of finished leather products which, besides providing more employment in the country, will also earn valuable foreign exchange.

The leather industry is one of the chief foreign exchange earners. With the inauguration of the Leather Export Promotion Council, the trade can look forward to further expansion of leather exports. The industry is, therefore, asked to take full advantage of new methods of production and technique which will enable it to increase exports.

The industry earns over Rs 25 crores annually in foreign exchange. With the scientific and technological improvements in tanning and finishing processes, a sizable addition to the foreign exchange can be expected through this industry. The Council will take necessary steps for organising a steady market in the Middle East and Africa where the demand for finished leathers

like boots, leather bags and trunks are great. The Council will also work to achieve diversification of exports and to establish more direct trade relations with the importers and actual users in the Continent and elsewhere.

Meanwhile, arrivals of Cow hides, in the Madras market, were moderate, while clearances took place at acceptable prices last week. Arrivals of Buff and Calf hides were, however, restricted with prices ruling steady.

On the export front, trading was quiet on account of the holidays in England. One or two operators were reported to have reduced their rates by one penny per pound, particularly in 8/8½ lbs and 10/12 lbs. Conditions in the single tannage section were very firm with supplies restricted. In the Calf section, there was enquiry for single tannage, particularly in inferior selections.

In the Tanned Skins section, arrivals were moderate and there was very little change in prices. In the export section, there were large enquiries for Prime Goats; but only

small business was reported done due to very firm prices asked by Madras sellers.

Reports from London indicate that, on account of the strike at the wharf, it will be impossible to include the cargo by s.s. 'Clan Mackinlay' in the forthcoming auctions. The quantities catalogued are to be 460,000 goat skins and 550,000 sheep skins.

Groundnut

The market for Groundnut ruled generally steady although turnover was small. Arrivals averaged 30 to 40 tons per day; and these were taken up by small crushers. The rate for superior oil-quality seeds was quoted around Rs 162 and the bold variety at Rs 158 per candy.

Reports from South Arcot district centres show that mill-owners of that district and of Salem, Coimbatore and Madurai districts are buying the large arrivals there. In the Pollachi area, digging operations of the early-sown crop have begun. The outturn is expected to be in the region of 35,000 to 40,000 tons.

In the Groundnut Oil section, the ready rate was quoted at Rs 323 per candy. Calcutta interests evinced some buying interest in ready position.

Rubber

Rubber output in South India, during June last, amounted to only 750 tons—the lowest of any year since 1951. Two important factors have contributed to this heavy loss in production—the heavy monsoon rains and the cutting down of trees for replanting.

For the first five months of the year, production was keeping ahead of last year's. But, by the end of June, the situation was reversed; the production figure of 9,042 tons for the first half of the year compares with 9,631 tons in the corresponding period of last year. Thus, production shows a decline of 589 tons.

Consumption, on the other hand, is higher during the period. The total offtake of the manufacturers amounted to 15,751 tons as compared with 14,199 tons during the corresponding period of 1956. Thus, the gap between indigenous production and consumption, at the close of first half of the year, was as wide as 6,709 tons as against 4,568 tons towards the end of June, 1956. This gap was partly covered with imports, which amounted to 4,201 tons.

Prospects for production may be slightly better in the second half of the year. There will, however, be a wider gap between indigenous production and consumption this year; and more imports will become necessary.

incorporated in the Bhavnagar State: The Liability of the Members is Limited

URGENT NEED FOR SURVEY AND SERVICE OF MINOR PORTS

Mr. C. R. Srinivasan's address

Following is the speech delivered by Mr. C. R. Srinivasan, the Chairman of the Bharat Line Limited, at the Eleventh Ordinary General Meeting of the shareholders of the company held on the 17th August 1957 at Kundan Kunj, Bhavnagar:

Members have great pleasure in extending to you a cordial welcome to the Tenth Ordinary General Meeting of the Company. The Directors' Report and the audited Balance Sheet and Profit & Loss account have been in your hands some time now. I trust I have your permission to take them as ad.

These accounts have been prepared in conformity with the provisions of the new Companies Act and that accounts for the somewhat bulky volume placed in your hands. A number of resolutions have to be passed as Special Resolutions following the directions of the new Act. You might remember that in referring to these provisions last year I said that in parts it imposes a vexatious burden on freedom of enterprise. These seem to have registered in the right quarters and Government have now appointed a committee to go into the question of revision of the Companies Act. The Committee is now collecting data and it may take me time for final proposals to emerge; but I hope that, as a result of this inquiry, reforms wherever needed will be forthcoming in adequate measure.

The Second Five Year Plan to cover and recondition the economy of the country was cast, as you are aware, on a more ambitious scale, with the emphasis shifted to the industrial sector. The first year of the Second Five Year Plan has concluded and there are now definite indications that the size of the Plan may well be beyond the resources at our disposal. Fresh taxation measures on a wide front have been introduced and their disturbing effects both among the investors and the business community are clearly discernible; there are many who have begun to wonder whether the gains are not more than offset by the losses. Students of Public Finance will concede that there is a limit beyond which it would be wise to push the present generation for the benefit of succeeding generations. It is a moot question whether we have reached that limit in the name of rationalisation of the tax-structure. Apart from this, the need of the moment is servicing the Second Five Year Plan, and it is relevant to point out, is

not so much internal resources as inter-national resources. We have run almost to the end of our accumulated foreign exchange resources and unless ways and means are found to replenish these resources, I am afraid, need will presently arise to rephase the Second Five Year Plan in respect of priorities and preferences. Meanwhile, the Private Sector has been advised to seek extended credit facilities for the import of capital goods and it is becoming increasingly clear that foreign exchange releases will be severely rationed and restricted during the next few years. It is against this background that one has to judge the prospects of industrial expansion of the country in the coming years. Throughout the year under report money continued to be tight and in the closing months of the year credit facilities for established business were beginning to be rationed. In the share market there was a psychological malaise which cramped and cabinised normal investments with the result that few new floatations ventured on the market. In my view, the time has arrived when concrete and constructive steps should be taken to restore the confidence of the business community and re-charge them with faith and hope.

This applies with equal force to the shipping industry. In an expanding economy transport, it is obvious, will prove the bottleneck and therefore every means of transport, whether it is by road, rail or sea, should be tuned and made to service the economy. The acquisition of new bottoms for sea transport calls for large investments and even if funds are available, unless there is sufficient assurance that its economy will be protected in actual working, there will be little temptation to advance and adventure further. Repeated representations, for example, have been made that the prevalent freight rates were uneconomic, but the tardy relief that was doled out in grudging measure was offset by fresh demands from Labour. Now that there is a separate Minister in charge of Transport and Communications, may we hope that he will be fully seized of the picture and take steps to render prompt relief wherever necessary. In addition to the Eastern Shipping Corporation already operating, a Western Shipping Corporation, similarly state-owned, directed and controlled, has been integrated. In this context, it would be wise clearly to define the bounds of the private and the public sectors in the shipping industry. So far as coastal trade is concerned, if private enterprise is to give of its

best, it should be enabled substantially to increase its tonnage. This is possible only if Government come to their help and it can be done if sustained efforts are made by the Government to acquire from the Government of the U.S.A. a few of the Moth-Ball "Liberty" Ships on lend-lease terms. As one who has just returned from America and had opportunities to take soundings in this respect, I believe the prospects are good if a proper approach is made.

It is not my intention this year to review in detail the specific problems pertaining to the shipping industry and catalogue our misery. I will only say that conditions at the ports show no signs of improvement. I pointed out in 1955, that the total detention cost due to port congestion during 1954 equalled in value the full time operation of an 8000 D.W.T. ship for a period of 179 days, or nearly six months, for our Company; the 179 days that I referred to had increased to 299 days in 1955 and 398 days in 1956. I agree that in

an expanding economy this is bound to happen with the limited resources at our disposal. I wonder, however, if any efforts have been made to survey and service minor ports on our long coastline which, over a long period of neglect, have fallen into disuse. This is a matter of urgency and importance and will repay attention.

The working of the Company and its financial position have been well brought out by the Directors of the Company in their Report in your hands and I trust you will find them satisfactory.

I shall now conclude expressing my thanks for the uniform co-operation I have received from my colleagues on the Board as well as from the Management and I again bear testimony to the good work of the staff both ashore and afloat. I now formally move that the Directors' Report and the audited Balance Sheet and Profit & Loss Account for the year ended 31st December 1956, already duly sent to the Shareholders, be and are hereby adopted.

NORTH INDIAN MARKETS

(Continued from page 367).

In our prices. Stocks at Hapur are estimated at as much as 30,000 maunds as against only 18,000 maunds in the corresponding period of last year. Following rates are quoted:—Kotha Dry-wet Rs 11.75 and dry Rs 12.75 per maund.

Fair to heavy rains, during the week, have proved beneficial to the standing cane crop, which has hitherto been suffering for want of rains. Crushing of new cane will begin in the first week of October.

Foodgrains

Steady to firm conditions have prevailed in the Foodgrains markets. In the Hapur market, Wheat prices have scored fresh gains, to be quoted at Rs 16.50 per maund for the average quality. As current arrivals are not sufficient enough to meet the day-to-day requirements, the price trend is bullish.

The market for Rice has continued to rule steadier although the stock position is reported to be satisfactory. Gram has recorded some gains due to firmer Bombay, the Punjab and Madras advices. Peas have continued to be in good demand from east Uttar Pradesh and Bihar. The markets for Barley and Bajra have remained steady.

Fairly good rains, during the week, have proved very beneficial to the standing 'kharif' crops of Maize, Jowar and Bajra. Harvesting of early-sown maize crops has begun in some areas and arrivals of the new crop are expected to begin soon.

The Bombay grains market has presented a quiet appearance. Trading in Rice has been featured by a modest improvement of Rs 2 to Rs 3 per candy in certain varieties on account of higher advices from Madhya Pradesh. Traders are, however, cautious in entering into commitments. There is hardly any fresh development in the limited trading in indigenous Wheat, which has been ruling quietly steady. In the Coarse grains section, Jowar has re-

flected an easy tendency in the midst of restricted demand with the arrivals remaining fairly good.

Shellac

The Calcutta Shellac market continues to rule steady with Pure TN quality ruling at Rs 88.50 per maund. Shipments during August until the 14th were 18,147 packages.

The London market rules firm on small covering and trade buying, influenced by the news that offers will remain restricted at Calcutta due to continued shipping congestion in the Port and difficulties in securing cold storage space. TN December delivery is quoted higher at 210sh 6d per cwt.

SOUTH INDIAN MARKETS

(Continued from page 373).

Coffee

Coffee appears to be moving into a period when statistically it should be in better supply than for some years. In recent seasons, consumption has been pushed up against production and has kept prices very high indeed. Now, however, the expansion programmes, which this period of prosperity has encouraged growers to undertake, should be affecting the size of the crops. A surplus may appear this year and remain for some seasons.

The improvement in the supply position will, however, not begin for a few months yet. At the moment, Columbia is the only major producer of mild coffee with supplies to sell; and this state of affairs will continue until the new crops in the other mild coffee-producing countries start being available in the autumn.

In these circumstances, there is every indication that buyers will be able to get their supplies more cheaply later in the year, especially as Columbia is now making a strong bid to enforce its minimum support price.

August 24, 1957]

FOR THE INVESTOR

(Continued from page 347)

The distribution of Revenue for the year expressed in the form of percentages is as follows:

	per cent
Materials	29.1
Working Expenses	16.6
Employees	23.5
Administration	1.2
Depreciation and Repairs	10.5
Taxation	7.4
Reserves	2.2
Distributable profit	—
Total %	100.0

The Production figures of Steel and Despatches are as follows:

	1956-57	1955-56
Output of Steel Ingots	443,721	452,910
Total of Saleable Steel	443,721	452,910
Despatches of Steel were as under:		
Bars	43,930	44,141
Structurals	93,422	85,406
Black Sheets	51,557	56,128
Galvanised Sheets	50,539	62,242
Coils	1,815	2,128
Blooms and Slabs	110,949	135,641
Billets	420,471	451,591

Well, there you have it: the balance sheet figures and the profit and loss accounts are all eminently satisfactory. If these were to be the only criteria, the stock exchanges should be booming. But, as I have remarked earlier, the dividend, too, is important.

It is in this regard that the Government communication to the company is ominous. For, its inference is clear that Government are not disposed to any increase in dividend until the expansion programmes are completed.

There is, however, one matter which it is encouraging to note. This is the transfer of Rs 50 lakhs to a new head of Reserve called the Dividend Adjustment Account. The Directors' Report remarks that this is a provision for "possible future adjustment of dividend on the recently increased Ordinary Share Capital of the Company". This is roughly equivalent to 10 per cent of the face value of the new capital; and we may take it as certain that dividends on the increased capital will be maintained at the rate of one rupee a share.

The last word must inevitably be an appeal in behalf of the investor: and that is, that Government should, if they wish to reactivate the investment climate, revise their attitude to the IISCO dividend.

ES&S

Investment Cleanings

(Report by the Company's Consulting Engineers on the progress at the 30th June 1957, of the 1953 Extensions Works at Burnpur and the Gua Ore Mines.)

The 1953 Extension Programme at the Works at Burnpur and in the Mines at Gua is now in full swing. The whole of the preparatory work for this scheme and much of the Civil Works has been completed. At present many varied shipments of equipments and plant are being received in Calcutta and at the various work sites. Whilst much progress has been made in many respects there have been and

will be unavoidable delays due to various causes beyond our immediate control.

The Suez Canal trouble gave considerable anxiety to our Contractors and delays in important shipments of materials necessitated by the closure of the canal. There have been labour troubles in America where such of the structures for the Ore Handling equipment have been fabricated with the result that at the Mines at Gua we are still awaiting some of the vital conveyor sections. It is hoped, however, that some of the larger units will be commissioned before the year has ended and the position regarding some of the main items of our Extensions programme are given herewith.

COKE OVENS

Progress on the installation of the first battery of Coke Ovens known as No. 8 unit is very satisfactory and the Contractor is confident that we shall have additional coke producing facilities before the end of this year together with the increased volume of by-products which will be produced, particularly sulphate of ammonia and benzol. The various gas mains and other services are being constructed in line with the demands of the Coke Oven construction. The new Acid Plant is scheduled to go into commission in August when an additional 90 tons of Sulphuric acid per day will be produced.

BLAST FURNACES

Very good progress is being made on the construction of the first Blast Furnace unit known as No. 4. The stoves which provide the hot blast for this furnace are completed, the shell of the furnace is also completed and the refractory lining is in progress. The charging equipment is now on site and is being erected and preparations are in hand for the various gas and hot blast mains to take care of the air and gas requirements of the stoves and the furnace. To provide the blast required for this furnace two large steam driven Turbo Blowers are necessary, and a start has now been made on the erection of these units and a new boiler went into commission some two months ago. A second boiler will be steaming in August so there will be sufficient steaming capacity to take care of the new Turbo Blower demand.

An extensive system of pumps, valves and piping is required for each Blast furnace which require approximately 3,500 gallons of water per minute for cooling purposes alone and the installation of these pumps and pipe lines is now proceeding satisfactorily.

Three Concrete Cooling Towers each capable of dealing with 1,000,000 gallons of water per hour to cool down from 110° to 90° F are now almost completed.

To accommodate the pumps a new Pump House has been built with which is incorporated a main works sub station and a control room for all the electrical gear required for the Gas Cleaning Plant. The Gas Cleaning Plant is an electrostatic installation whereby the gas is

cleaned in its dry state by means of passing a high voltage current across the steam of gas. The Gas Cleaning Plant unit is designed to handle 15,000,000 million cu. ft. of gas per hour and clean it to a greater degree of purity than the usual atmospheric air.

BESSEMER PLANT

For the increased iron output from the Blast Furnace Department and to assist in the conversion of this into steel, a third Bessemer Converter will be installed. The foundations for this vessel are completed and the vessel will be erected during the next few months.

Extension to the Bessemer Plant building is progressing at the North end. A section has been completed and preparations are in hand to install a new 110 ton capacity overhead crane in this particular building. Further north of the Bessemer Plant extensive buildings have been completed to take care of ladle repairs and also for the storage of expensive refractories.

MELTING SHOP

Work is proceeding in the Melting Shop on the conversion of a Mixer into an active melting furnace. The installation of valve gear and the necessary alterations to the firing arrangements are now in hand. Foundation work has also been completed for two new large melting furnaces and extensive structural additions to the Melting Shop building have been completed at the North end. Building extensions are also proceeding at the South end. Altogether approximately 4,000 tons of steel work for the Bessemer Plant and the Steel Melting Department have been erected this year.

To improve internal transport facilities 6 Diesel Electric Locomotives have been purchased and two of these are now in service giving excellent results.

Additional new equipment consist of machine tools installed in the new and enlarged Maintenance Shops to the value of approximately Rs 13,00,000.

ROLLING MILLS

Three new Soaking Pits are now 50 per cent completed. Additional ingot stripping capacity will be taken care of by the additional overhead Stripper Crane now being prepared for erection.

ORE MINES

At Gua the Ore Handling and Preparation Plant consists in the main, of four parts, that is the Crushing, Screening, Conveying and Storage of the ore as received from the mine face. The mechanical equipment is designed to handle approximately 1200 tons of run of mine ore per hour, and in the Crusher Plant at present four huge crushers each being driven by a 290 h. p. motor are being installed. The Crusher House building has been completed and erection of the conveyor structures is in hand.

All the screening equipment is on the site and at the lower level at the loading station an extensive part of the Ore Reception Bunkers has been completed. With the new system of the Ore Bunkers and their pneumatically operated gates, it is expected to be able to load a train of approximately 2,000 tons of ore in little over half an hour.

The equipment for the getting of the ore consists of large percussion type drills, electrically driven mobile shovels and a fleet of 15 ton end tipping diesel driven trucks. The trucks are on the site ready to go into operation and the first of the large electrically driven shovels or diggers has been despatched from America and will be erected and put to work in the course of the next three months.

Stock Exchanges

PARTIAL RECOVERY AT CLOSE

Watch-Dog Writes:

REOPENING after the holidays, stock markets have generally ruled weak with the easier trend in prices gathering momentum on renewed offerings. The recommendations, made by the Select Committee on the Wealth Tax Bill, have caused great disappointment to operators. However, with the abatement of selling pressure coupled with some short-covering, equities have staged a slight recovery towards the close although the improvement in prices is not pronounced.

Sentiment on the Calcutta Stock Exchange remained depressed till Wednesday; but bear-covering in the speculative issues, due to settlement considerations, resulted in a slight recovery.

Equities on the Bombay Stock Exchange opened weak, but rallied gradually on short-covering and some replacement buying at the close.

There was only moderate activity on the Madras Stock Exchange. Planting issues ruled generally steady, while other industrials met with selective support.

Although trading on the London Stock Exchange was quiet and selective, Industrials looked generally firm.

Wall Street closed firm with the market showing a majority of gains, ranging mostly to a point or so.

*

Calcutta

QUIET conditions were once again witnessed on the local Stock Exchange last week. With activity further reduced, the drift in prices continued till Wednesday due to renewed offerings, reflecting disappointment over the report of the Select Committee on the Wealth Tax Bill. Sentiment was also affected by various other factors. Mainly amongst these were, the anxiety about the steady decline in commodity prices, particularly in jute and tea, unrest among industrial workers and the deterioration in political relations with Pakistan.

Scattered short-covering coupled with some bull support at lower levels, however, aided a partial rally towards the close. Nevertheless, the entire list finished easy with fair-sized declines. The only relieving feature of the week's trading was a broadening of enquiry in the Jute section where a few scrips staged a marked recovery from the recent low levels. The market finished the week on a hesitant note.

The market, for Gilt-edged securities continued to remain dull and

the volume of trading was limited. Official support was on a very meagre scale and confined to short-dated loans. 3 per cent 1986 Conversion Loan opened at Rs 70.95 and after improving at one time to Rs 72, receded again to Rs 70.75, to finish the week better at Rs 71.12.

In sympathy, Bank shares ruled quiet. Hind met with some business at Rs 32.25; Bank of Bikaner at Rs 18 and Allahabad Bank at Rs 366 to Rs 368.

Jute shares, which remained neglected for many weeks past, took a slight turn for the better, thanks to the concessions in the Wealth Tax Bill. There was a feeling that those mills, who had been incurring losses in any particular period, would not be liable to the Wealth Tax. Another contributory factor for the improvement in sentiment was the renewed weakness of the raw jute section where prices had been developing an easier tendency. It was felt that mills hereafter would not find it difficult to do simultaneous business at a profit. Scrips, which staged a marked recovery from the recent low levels, were Howrah being taken up to Rs 16.37 from Rs 15.18; National upto Rs 17.65 from Rs 17.50; Megna upto Rs 85 from Rs 82; Anglo-India upto Rs 136 from Rs 133; Barnagore upto Rs 82 from Rs 73 and Bally upto Rs 141 from Rs 125.

There was very little doing in the Coal section as operators were still awaiting the decision of the Coal Prices Revision Committee. Central India, New Beerbhoom and Western Bengal ruled comparatively steady, having support upto Rs 5.94; Rs 13.37 and Rs 5.63 respectively. Burrakur, after ruling very steady at Rs 22 during most part of the week on speculative support, eased off at the close to Rs 21.75. Bengal moved narrowly between Rs 215.50 and Rs 218 with South Karanpura offered at as low as Rs 8.19 against Rs 8.87.

Textile scrips were generally listless despite the reports of improved conditions in the piecegoods market. Kesoram were offered at one time as low as Rs 12.06 from Rs 13.00 and Jayshree at Rs 6.19 from Rs 6.69, to finish the week better at Rs 12.25 and Rs 6.31 respectively. New Victoria lost nearly half a point at Rs 1.37.

Tea shares were no exception to the general trend of the market. Dealings continued to be very few and prices also showed a sagging tendency due to general selling pressure. Operators seemed to be much worried about the gradual fall in the prices obtained at the auctions, especially for the common grades. Fear, were also entertained

in some quarters that overseas buyers might shift their attention to more competitive teas. Thanks to the better results obtained at week's export auction, prices of a few selected scrips showed a small recovery from the low levels touched early in the week. Prominent amongst these were Brahmapootra having recovered to Rs 4.62 from Rs 4.50; Banarhat to Rs 328 from Rs 319; Bishnauth to Rs 19.44 from Rs 19.12 and Hasimara to Rs 22.25 from Rs 22.12. Dauracherra changed hands at Rs 9.75 to Rs 9.87 and New Samanbagh at Rs 17.75 to Rs 18.00.

Sugar shares came in for selective support. Darbhanga were maintained at Rs 22.50, while Balram-poor changed hands at Rs 5.25 to Rs 5.37.

In the absence of any interest, Engineering shares were generally marked down further from last levels under the lead of Indian Irons. However, some bear-covering, in view of settlement considerations, caused scrips to recover some of the lost ground towards the close. Against the week-end closing of Rs 19.10, Indian Irons opened lower at Rs 18.84 and receded further to Rs 18.58 on renewed liquidation, to finish better, on Wednesday, at Rs 18.74 at which level the settlement rate was fixed. From Thursday onward, dealings took place on the ex-dividend basis and the scrip

PRICE TRENDS

	Week's High	Week's Low	Week's Closing
Titaghur Paper	33.19	32.87	32.87
Orient	24.10	22.50	22.70
I. Cable	24.75	24.25	24.31
N. Carbon	25.75	25.37	25.44
Rohas	18.12	18.00	18.00
I. Aluminium	13.31	12.75	12.87
Aluminium Corp.	11.44	11.03	11.31
I. Steamship	10.44	10.22	10.30
I. Copper	3.22	3.03	3.06
Sone Valley	5.69	5.62	5.69

changed hands at Rs 17.90 to Rs 18.10, to finish the week at Rs 17.70. New shares were pushed down at one time to Rs 17.73 from a high of Rs 18.06, to close at Rs 17.84.

Among other Engineering scrips, TEXMACO touched a fresh low of Rs 16.05 from Rs 17.22; Jessop Rs 21.94 from Rs 22.37 and Richardson Rs 11.44 from Rs 12.00, to close better at Rs 16.10; Rs 22.56 and Rs 11.56 respectively. Burn were cheaper at Rs 316 against 325, while Braithwaite hardened to Rs 27.81 from Rs 27.50. Marshalls were a narrow market around Rs 5.25.

Following were the the settlement rates, the figures shown within brackets being last settlement rates: Indian Irons Rs 18.74 (Rs 19.42); New shares Rs 17.84 (Rs 18.48); TEXMACO Rs 16.15 (Rs 17.55); Orient Paper Rs 22.50 (Rs 24.85); Indian Copper Rs 3.04 (Rs 3.26); Burrakur Coal 22.00 (Rs 22.00) and National Jute Rs 17.60 (Rs 18.10).

Although price movements in the Miscellaneous section were rather irregular due to alternate buying and selling, most of the scrips managed to emerge with minor losses on balance.

THE MYSORE SPINNING & MANUFACTURING CO., LTD.

NOTICE TO SHAREHOLDERS.

NOTICE is hereby given that the Sixty-fourth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort Bombay, on Friday, the 20th September, 1957, at 4.30 P.M. for the purpose of transacting the following business:—

- To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 28th February, 1957.
- To declare a dividend and bonus.
- To appoint Directors in place of those who retire but are eligible for re-appointment.
- To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 24th day of August, 1957, to the 18th day of September, 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

(The holders of the 4½ Cumulative Preference Shares of the Company have no right to be present or to vote either in person or by proxy in respect of their holdings of such Preference Shares at the above Annual General Meeting).

Detailed Notice of the above Meeting is being published in the Press and is also being posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & COMPANY
PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Bombay,
12th August, 1957.

N.B.—The Dividend and Bonus when declared will be made payable at the State Bank of India, Bombay, on and after Friday, the 27th September, 1957, to those shareholders whose names stand on the Register of Members on the 24th August, 1957. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

Industrial Information

HIGHER INDUSTRIAL OUTPUT IN FIRST QUARTER OF 1957

Industrial production in India during the first quarter of 1957 was appreciably higher than the output during the preceding three months as well as the corresponding quarter of 1956.

This increase was reflected in the index of industrial production (1951=100) which during the period was appreciably higher than the index for the whole of 1956 and for the corresponding period of the year. The industries which recorded higher outputs included coal, finished steel, cement, aluminium, automobiles, sewing machines, cotton textiles and yarn, electrical goods, jute manufactures, superphosphates, tyres and tubes, salt, sugar, vanaspathi, paper and paper boards, plywood, tanned hides and leather footwear and razor blades.

During the quarter, a number of new factories went into production and some of the existing units expanded their capacity under schemes approved under the Industries Act. These cover the manufacture of rayon, soda ash and caustic soda, zinc strips, dyestuffs, automobile parts, drugs and medicines, glass tubes and mineral wool.

Licences were granted during the three months period for setting up 40 new industrial units, for substantial expansion of existing units of manufacture of new articles in 169 cases and for carrying on the business of existing undertakings in three cases.

The production of cement during the quarter was 13.78 lakh tons—an increase of eight per cent as compared with the preceding quarter and of 12 per cent as compared with the corresponding quarter of last year. One more unit came into production during the period and installed capacity was utilised to a greater degree.

The output of finished steel during the period stood at 3,46,000 tons which was slightly higher as compared with the preceding quarter and the first three months of 1956. There was, however, a negligible fall in the production of pig iron. During the period 10,799,000 tons of coal were mined showing a small increase over both the comparable quarters.

MORE CLOTH

The production of cotton textiles totalled 1,372 million yards—nine per cent above the level attained in the first quarter of 1956 and one per cent over the preceding quarter. The production of yarn rose by 13 per cent as compared with the corresponding quarter and recorded a nominal increase over the preceding quarter. The output of jute manufactures, which was 2,54,000 tons, was slightly higher than in

the preceding quarter but 10 per cent below the level of the first quarter of 1956.

The production of razor blades which amounted to 109 million during the quarter, showed a spectacular rise over the corresponding quarter, when the production was 41 million, as well as the preceding quarter which had an output of 87 million. Nearly 42,000 sewing machines were manufactured as compared with 35,400 in the preceding quarter and about 31,200 in the corresponding period of last year. There was a remarkable spurt in the production of machine tools the value of which was nearly Rs 51 lakhs during the quarter as compared with Rs 18.5 lakhs in the preceding quarter and Rs 20.5 lakhs in the corresponding period. The production of power driven pumps, calico looms and ring spinning frames was higher than in the two comparable periods whereas the output of diesel engines was higher as compared with the corresponding quarter but slightly lower than in the preceding quarter.

The number of automobiles manufactured during the period was 9,339 as compared with 8,347 in the October-December 1956 period and 7,545 in the first quarter of 1956. About 1,91,000 bicycles were manufactured during the period as compared with 1,20,000 in the corresponding period of 1956. The output was slightly lower as compared with the preceding quarter.

Among electrical industries the output of electric fans, lamps, power transformers, storage batteries, electric motors and house service meters was appreciably higher as compared with both the preceding and corresponding quarters. The production of dry cells, and radio receivers showed some decline as compared with the preceding quarter but was higher than the corresponding quarter.

SUGAR AND VANASPATI

The production of sugar totalled nearly 11 lakh tons as compared with about 10.5 lakh tons in the comparable period of last year. Vanaspathi production increased to nearly 82,000 tons from 59,000 tons and 73,000 tons in the preceding and corresponding quarters.

In the chemical group of industries, production of super phosphates, liquid chlorine, soap and rayon yarn was higher than in both the comparable periods. The output of ammonium sulphate which stood at 102,000 tons was slightly above the level attained in the corresponding quarter of 1956 but below that of the preceding quarter. Both soda ash and caustic soda recorded increases as compared with the first quarter of 1956 but a slight decline in relation to output of the preceding quarter.

CONSUMER PRICE INDEX FOR JUNE INCREASE AT 13 CENTRES

The consumer price index numbers for working class (base shifted to 1949=100 except where otherwise indicated) increased at 13 centres during June 1957, according to the Labour Bureau, Government of India.

The maximum rise of 6 points each was recorded by the index for Cuttack and Bhopal (base 1951=100), which stood at 115 and 105 respectively. This was mainly due to sharp rises in the food and miscellaneous group indices for both centres. The index for Jabalpur and Mercara (base 1953=100) appreciated by 3 points each to 111 and 121 respectively, for Ajmer, Jharia and Kharagpur by 2 points each to 98, 98 and 110 respectively and for Berhampur, Ludhiana, Akola, Beawar (base August 1951 to July 1952=100), Satna (base 1953=100) and Delhi by 1 point each to 105, 97, 97, 97, 100 and 115 respectively.

In this group of centres, the food group index appreciated at 11 centres, the fuel and lighting index at 8 centres, the clothing index at 5 centres and the miscellaneous group index at 10 centres.

The index for Gauhati and Tinsukia declined by 1 point each to 103 and 117 respectively mainly due to a recession in the food group index for Gauhati and in the food, clothing and miscellaneous group indices for Tinsukia.

The index for Jamshedpur, Silcher and the Plantation Centres (base January to June 1949=100) showed only fractional variations and stood at 113, 113 and 107 respectively.

The provisional all-India index number appreciated by 2 points to 111 during June 1957.

SCHEMES FOR MANUFACTURE OF VITAMINS

A number of schemes for the manufacture of vitamins have been approved by the Government of India.

Two of the schemes are for the manufacture of synthetic vitamin 'A' from lemongrass oil which is available in the country. Each of these schemes envisages an annual production of 10 million mega units of vitamin 'A' of the value of Rs. 50 lakhs.

The production of shark liver oil, which is rich in vitamin 'A', has more than doubled during the last two years. The production in 1956 was 59,500 gallons valued at about Rs 14.3 lakhs as against 27,158 gallons as against 27,158 gallons in 1955 valued at over Rs 6.5 lakhs. Shark liver oil is produced by three Government factories in Bombay, Kozhikode and Trivandrum.

A licence has been granted to a firm under the Industries (Development and Regulation) Act, for the manufacture of vitamin B-12. It will have a capacity of 1.2 Kg per year valued at Rs 12.37 lakhs. Production is expected to commence by March next year.

Another scheme submitted by a firm for the manufacture of vita-

mins B-1, B-2, B-6, C and D is now under Government's consideration. The question of producing some of these vitamins under the State-owned National Industrial Development Corporation is also being examined.

Licences have also been issued to two firms for the production of two other vitamins, nicotinic acid and amide. The total capacity will be about 15 tons per year. One of these has already gone into production.

ISI CERTIFICATION MARK FOR DDT FORMULATIONS

The Indian Standards Institution has granted a licence to Messrs Gely Insecticides Private Ltd., now incorporated in Messrs Tata-Fison Private Ltd., Bombay for the use of the Certification Mark of the Institution on DDT dusting powders, and DDT water dispersible powder concentrates.

The Certification Marks, consisting of the monogram of the Indian Standards Institution and number designation of the Indian standards inscribed in the top side of the monograms, will certify that these products conform to all the requirements given in the relevant Indian standards, namely IS:564-1955 and IS:565-1955 respectively.

The above Certification Marks will either appear in stencilled form on the containers or will be printed on labels applied to the containers.

This is the first licence issued to a manufacturer of DDT formulations. It is expected that the DDT formulations of other manufacturers would also be covered by the scheme in due course.

India requires large quantities of DDT formulations in combating disease, rearing animals and saving plants from pest nuisance. The production of the materials is continuously increasing.

The presence of the Certification Mark on these products would help the consumers in obtaining supplies of ensured quality. If any consumer has any complaint about the quality of DDT formulation bearing the Certification Mark, he may immediately contact the licensee as well as the Indian Standards Institution, 19 University Road, Delhi.

SPECIFICATION FOR MULTIPURPOSE GREASE

The Indian Standards Institution has just published a specification for multipurpose grease, no. 1, 2 and 3 (IS:1002-1957).

This specification prescribes the requirements and the methods of test for multipurpose grease for three grades suitable for automotive as well as industrial use for the lubrication of plain as well as ball and roller bearings. The grades 1 and 2 are principally intended for use where high-pressure greasing equipment is employed.

It is hoped that this specification will assist the users in procuring a suitable quality of greases.

Copies of this specification are now available for sale at the Indian Standards Institution, 19 University Road, Delhi 8 and also at its branch offices in Bombay, Calcutta and Madras.

WROUGHT ALUMINIUM AND ALUMINIUM ALLOY TUBES STANDARD ISSUED

The Indian Standards Institution has published the specification for wrought aluminium and aluminium alloys, tube for general engineering purposes (IS: 738-1956).

This standard, forms part of a comprehensive series of Indian standards for wrought aluminium and aluminium alloys in various forms for general engineering purposes. It covers requirements for drawn tubes made from three grades of aluminium and from ten aluminium alloys in various conditions.

The standard prescribes the general requirements of the material and the specific requirements such as chemical composition, condition and mechanical properties applicable to each grade.

Copies of the standard can be had from the Indian Standards Institution, 19 University Road, Delhi-8, and from its branch offices at 40-A, Cawasji Patel Street, Fort, Bombay, P-11 Mission Row Extension, Calcutta and 23 Nungambakkam High Road, Madras.

SPECIFICATION FOR LEATHER PUMP BUCKETS

The Indian Standards Institution has published an Indian standard specification for leather pump buckets made from vegetable tanned leather (IS: 1015-1956).

This specification prescribes the requirements such as material for manufacture, shrinkage in water, cupping test, breaking test, etc. It is hoped that this specification will assure supply of suitable quality of leather pump buckets for use in water systems at normal temperature.

Copies of this standard are now available for sale at the Indian Standards Institution, 19 University Road, Delhi-8 and also at its branch offices at 40-40A, Cawasji Patel Street, Bombay-1, at P-11, Mission Row Extension, Calcutta and at 23 Nungambakkam High Road, Madras-6.

DRAFT STANDARD FOR BAYONET LAMP HOLDERS

The Indian Standards Institution has circulated, for eliciting comments a draft Indian standard specification for bayonet lamp-holders.

It covers both metal-cased as well as insulated lamp-holders and prescribes dimensional requirements and materials considered suitable for their manufacture. It also prescribes tests for determining their quality.

The bayonet lampholder industry in India has all along enjoyed tariff protection. It has, however, been felt that this industry is fairly established and the Tariff Commission has, therefore, decided that there is no need for the protection after the end of this year.

This draft standard, when finalized, is expected to meet the long-felt need and help the industry in producing uniform quality goods.

Attention of the industry is particularly drawn to the dimen-

sions of the lampholders included in this draft. The manufacturing practice in this country has been largely following the FPS system so far.

In view of the decision of the Government of India to gradually change over to the metric system, the industry is requested to confirm the acceptability of the metric values given in the tables of this draft, so that these values could be rationalized and the inch values could be deleted ultimately.

Comments on the draft may be sent before October 26, 1957 to the Indian Standards Institution, 19 University Road, Civil Lines, Delhi-8.

EXPORT OF STEEL ARTICLES

"Manufacturers desirous of taking advantage of the Export Promotion Scheme announced early this month should hereafter apply to the Engineering Export Promotion Council, India Exchange, (7th Floor), Calcutta-1, for reimbursement of Iron and Steel used in exported articles," says a Press Note issued by the Ministry of Steel, Mines & Fuel.

In November 1952 the Government of India introduced a scheme for making special allotments of steel to the manufacturers of iron and steel articles in order to promote the export of such articles. On August 7 this year, the Government decided to further liberalise the scheme and laid down a procedure for the allotment of additional quantities of iron and steel to manufacturers who export iron and steel articles.

ISI CERTIFICATION MARK FOR CEMENT

The Indian Standards Institution has recently granted a licence for the use of its Certification Mark for portland cement to the India Cements Ltd., Sankarnagar, Talaiyutha, District Tirunelveli.

The Certification Mark, consisting of the monogram of the Indian Standards Institution and number designation of Indian standard being inscribed in the top side of the monogram, will be applied to gunny bags in which cement manufactured by the firm is to be packed.

The Certification Mark will certify that contents of the bag satisfy all the requirements given in IS: 269-1951 Indian standard specification for ordinary, rapid hardening and low heat portland cement.

The use of the Certification Mark for cement is a great step taken by the Institution in making available to the common consumer goods of standard quality.

If there is any complaint regarding quality of cement packed in a bag bearing the ISI Certification Mark, it may be brought to the notice of the licensee as well as the Institution 19, University Road, Delhi.

METHODS OF TEST FOR SPARKING PLUGS

The Indian Standards Institution has just published a standard giving

methods for testing the performance of sparking plugs (IS:1062-1957) used in high tension spark ignition system of internal combustion engines, excluding aircraft engines.

This standard is being issued as an adjunct to another Indian standard, to be published shortly, giving the dimensional details, performance characteristics and other requirements to be satisfied by sparking plugs.

The manufacture of sparking plugs is of comparatively recent

origin in the country, but the industry has made appreciable progress and this has led the Tariff Commission to recommend to the Institution to lay down standards for the products of this industry.

Copies of the standard can be had from the Indian Standards Institution, 19, University Road, Delhi-8 and also from its branch offices at 40/40A Cawasji Patel Street, Fort, Bombay-1; P-11 Mission Row Extension, Calcutta-1; and 23, Nungambakkam High Road, Madras-6.

Index Number of Wholesale Prices in India (Revised Series) Review for the week ended August 3, 1957

The official wholesale price index (with the year ended March 1953 as 100) advanced further by 0.7 per cent to 113.2 during the week ended August 3, 1957 as compared with 112.4 (revised) for the earlier week. The index was higher by 1.3 and 7.4 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

The index for 'Food Articles' rose by 1.4 per cent to 113.7 as compared with 112.1 (revised) for the previous week due to increases in the prices of cardamoms in Calcutta (+21%), Onions at Nagpur (+20%), Potatoes (+15%), Milk, and Tea for internal consumption (+11% each), Rice at Varanasi (+9%), Wheat at Bahraich (+6%), Ghee in Madras, Gur at Muzaffarnagar and Black Pepper in Cochin (+5% each), Malze and Oranges (+3% each) and Barely, Ragi, Mung, Cashewnuts and Betelnuts (+1% each). The prices of Onions at Delhi (-10%) and in Calcutta (-8%), Masur in Bombay (-9%), Rice at Ranchi (-8%) and at Hailkandi (-7%), Wheat at Delhi, Bajra at Hissar, Arhar in Bombay and Eggs (-8% each), Tea for export (-4%), Jowar and Gingelly oil (-2% each) and Gram and Mustard oil (-1% each), however, moved down.

The index for the 'Liquor and Tobacco' group remained stationary at the previous week's level of 9.20.

The index for the 'Fuel, Power, Light and Lubricants' group moved down slightly from 114.7 to 114.6 as a result of a decline in the price of Castor oil (-2%).

Higher prices of Lac (+5%), Linseed and Rapeseed (+2% each) and Cotton raw, wool raw, Gingelly seed and cottonseed (+1% each) raised the index for the 'Industrial Raw Materials' group by 0.2 per cent to 122.2 as compared with 122.0 (revised) for the previous week although the prices of Tanning Materials in Madras (-11%), Castorseed (-3%), Bamboos (-2%) and Jute raw, Silk raw and Groundnuts (-1% each) showed declines.

The index for 'Intermediate Products' stood at 108.9 as compared with 109.0 for the earlier week. The prices of Brass (-2%), Tin (-1%) and Zinc (+1%) showed variations during the week.

The prices of general chemicals (+2%) and Oilcakes (+1%) were marked up while those of Jute Manufactures and Cycles (-1% each) showed a fall and in the result the index for 'Finished Products' stood at 108.9 as compared with 109.0 in the previous week.

INDEX NUMBER OF WHOLESALE PRICES BY GROUP AND SUB-GROUP OF COMMODITIES. (Base: 1952-53=100).

For the Investor

Evanescent Stability?

Investment Gossip:

After one of those pauses that we have got used to witnessing so often on the Indian stock exchanges, sentiment took a turn for the better over the last week.

It all began with the debates on the 1957-58 Budget. First reactions were not too encouraging, since it appeared that concessions offered in respect of the Wealth and Expenditure Taxes were offset by increased liabilities under other changes in these two taxes.

But, thereafter, we have had a steady outpouring of statements that could not do other than cheer up and hearten market sentiment.

For example, there was the categorical assertion made by Mr T. T. Krishnamachari that no new tax proposals were likely for the rest of the Plan-period.

Secondly, he came out strongly against the taxation system that had obtained heretofore. Even if income-tax rates were to be raised to 99 per cent, TTK said that the additional revenue therefrom would scarcely be Rs 2½ crores.

It is in this light that a more resilient tax structure has been built up, "so that in time of need, we may have 10 per cent or 20 per cent surcharge for a year or two—and the person who pays will pay willingly, because he knows it will be only for a short time".

There is, I suggest, a good deal that could be read between the lines of what the Finance Minister has thus said. Firstly, Government are clear in their minds that stepping up the rates will not yield any substantial extent of new revenue. Moreover, if the rates are at a high level, elasticity for securing of additional revenue over a short-term emergency period is not to be found.

So, the interpretation is possible that, in due course—it may take a period of long years—the outlook is for a gradual reduction in rates, so that, in particular years, in times of need, the rates could be stepped up sharply to secure a sharply higher level of revenue.

The next point made by TTK is that taxation policy should be nicely balanced in the form of a system of restraints and incentives appropriate to a democratic set

up. Indeed, the tax system as it has emerged is "intended to serve the objectives of equity, higher incentives and a measure of progressiveness in the tax structure".

TTK has besides stressed that, in effect, in the context of 1957-58 Budget, "the tax payer knows precisely his liability, not only for the current year, but more or less for the Plan-period as a whole".

The Finance Minister could scarcely have been more explicit in his statement on tax policy.

In another context, TTK gave tangible proof of Government's intention to provide incentives where necessary. In announcing that the exemption limit, in respect of surcharge, is to be raised "by the amount of dividends, if any, received on equity shares, subject to a maximum of Rs 1,500", Mr Krishnamachari has offered a concession to the small investor. He said, in this regard, "It is worthwhile providing an incentive for these persons to invest in the equity capital of companies".

Finally, the Finance Minister has justifiably claimed that Government have been actively and in their own way trying to tone up the investment climate. Referring to the investments of the Life Insurance Corporation by open market purchases, TTK said that they had introduced "an element of stability in a market where stability is an extremely evanescent thing, and, therefore, what has been done by the Corporation in this regard is something that has been done well".

I am happy to note that the response from the stock exchanges, to statements like these of the Finance Minister, has been on the right lines. I hope that the improvement in stock prices will be maintained.

Burmah-Shell Refineries

Investment Special:

The Burmah-Shell Refineries Limited has reported an eminently satisfactory year of working in its accounts, just released, for 1956. The income from refining went up sharply from Rs 9.70 crores to Rs 16.47 crores. Although expenses also rose somewhat, particularly in respect of consumption of stores and spare parts, which have moved up from Rs 0.69 crores to Rs 2.01

crores, the gross profit, has risen steeply from Rs 6.06 crores to Rs 10.91 crores.

The provision for taxation is Rs 3.10 crores against nil. General reserves get Rs 5.11 crores as compared to a transfer of Rs 2.81 crores to the taxation equalisation reserve last year. The dividends absorbed Rs 3.02 crores, leaving Rs 5.15 lakhs to be carried forward.

The balance sheet shows an ordinary capital of Rs 13.82 crores. Against this, the general reserve is placed at Rs 6.13 crores, and the taxation equalisation reserve at Rs 1.79 crores. Additions to block during the year have been of the order of Rs 4½ crores and, includ-

ing construction works in progress, the value of the net block is Rs 22.43 crores as compared to Rs 20.86 crores as shown in the previous balance sheet.

The important point made in the Directors' Report is that crude oil processed amounted to 2,351,266 long tons, yielding 2,189,265 tons of finished products. Secondly, a process for improving the quality of kerosene, the Edeleanu processing unit, came into operation during the middle of last year. Finally, it has been stated that the company communicated to Government its willingness to forego the duty protection of 2 annas per imperial

More Tea Results

Balance-Sheet Reviews:

SEVEN more Tea companies have presented their reports and accounts for the year ended 31st December, 1956. Of these, Huidibari and New Chumta, in Davenport group, have reported excellent working results, the former having doubled the dividend to 25 per cent and the latter raising the dividend from 15 to 25 per cent. In Duncan Brothers group, Carron has raised the dividend from 7½ to 10 per cent, while Kunchunpore and Poobong have passed over the dividends again for 1956. Rungamatttee has, however, been able to maintain the dividend at 20 per cent. Miamallay Tea, from the South Indian planting group, has reduced the dividend from 25 to 18 per cent for the year ended 31st March, 1957. The following tables show other details relating to these companies:—

Companies:	CROP (In Maunds)		Year under Review		Previous Year

Bridge and Roof Company

Thanks to increased production and sales, Bridge & Roof Company (India) Limited has reported a

Gondalpara Mill

Despite the difficult trading conditions generally experienced by the jute industry due to continued disparity between the prices of raw jute and manufactured goods, the Gondalpara Mill has been able to show a marked improvement in the results for the year ended 31st December, 1956. Sales have shown a rise to Rs 1.94 crores from Rs 1.27 crores, while the net profit, before Depreciation and Taxation, amounts to as much as Rs 6,36,334 as against a loss of Rs 3,03,235 incurred in the previous year. Apart from providing a sum of Rs 18,720 for Taxation and Rs 15,000 for Wealth Tax, the Depreciation amount has been raised to Rs 1.42 lakhs from Rs 1.00 lakh. The directors have recommended a dividend of Rs 50 per share as against nil in the previous year. There is a credit balance of Rs 11,510 which is carried forward as against a debit balance of Rs 3.96 lakhs brought in. In this connection, it would be recalled that, at a meeting held on the 28th March 1956, it was deci-

Banks to reduce Advances against foodgrains, has been respected.

So, for reasons which have been given, the Reserve Bank has now called upon Scheduled Banks to reduce the level of advances to Rs 800 crores by the end of the slack season.

Have Scheduled Banks played the game?

If we go by what the Reserve Bank apparently believes, the answer to the question must be in the negative.

The Reserve Bank, it seems, is not satisfied that its directive, calling upon Scheduled

Why this is desirable, in the international perspective, is examined in a despatch from Bombay, in Gateway Gossip.

Why Scheduled Banks may have found it difficult to reduce Advances against foodgrains, is a question that is dealt with in the World of Finance section.

INDIAN FINANCE

August 31, 1957

ded to increase the authorised capital from Rs 10.80 lakhs to Rs 1 crore by the creation of additional 3,92,000 Ordinary shares of Rs 10 each and 50,000 Preference shares of Rs 100 each. At the same meeting, resolution was passed for the sub-division of the existing paid-up capital into equity shares of Rs 10 each; but the same would not be given effect to, pending the completion of the change of name and style of the company. According to the latest report, the necessary sanction, in this connection, has been obtained to change the name and style of the company to "The General Industrial Society Limited".

₹ ₹

Sen-Raleigh Industries

Sen-Raleigh Industries of India Limited has reported excellent working results for the year ended 30th September, 1956. Production, during the year, has increased by about 50 per cent, while the demands and orders for the company's products have continued to be steady. In February 1957, the company received permission from the Central Government for substantial expansion of its capacity for the production of bicycles and components. Schemes are now well in hand for these expansions.

Despite a substantial reduction in the price of the company's bicycles, which came into effect in the year under report, sales have shown a substantial rise to Rs 1.66 crores from Rs 1.14 crores, while the net profit, before Depreciation and Taxation, amounts to as much as Rs 21,12,396 as against only Rs 16,75,119 in the previous year. In respect of allocations to Funds, the Depreciation amount has been raised to Rs 6.76 lakhs from Rs 5.68 lakhs and General Reserve to Rs 1.50 lakhs from Rs 50,000. A sum of Rs 2.00 lakhs is set apart for "Reserve for Repayment of Loan" in order to liquidate the company's loan from the Industrial Finance Corporation of India.

Also, a sum of Rs 4.00 lakhs is set aside for Machinery Replacement Reserve which, together with the amounts written off as Depreciation, will enable the company to meet the extra expenditure, if any, on this head in future. The Reserve of Rs 1.60 lakhs for Depreciation on Investments covers the major part of the deficiency in the market value as compared to the cost of the investments held by the company. No provision is, however, made for Taxation as the

profits of the company are still not taxable; but a provision of Rs 45,000 has been made for anticipated Wealth Tax.

The paid-up capital of the company has increased by about Rs 5.75 lakhs during the year. The entire balance of the unsubscribed share capital and shares forfeited in previous issues had been reissued and these are now fully subscribed and paid-up on date. The IFC of India has sanctioned a further loan of Rs 15 lakhs which, when received, will enable the company to carry out most of the remaining proposed schemes of expansion including manufacture of Freewheels and Bottoms Bracket Axles.

₹ ₹

Mysore Chemical Manufactures

In spite of several handicaps, very good results have been achieved by the Mysore Chemical Manufactures Limited during the year ended 31st March, 1957. Production of Copper Sulphate, which is the main product of the company, has been stepped up to 1,882 tons from 1,150 tons. Sales of the company's products have shown a marked rise to Rs 31.47 lakhs from Rs 22.76 lakhs, while the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 4,57,320 as against only Rs 2,86,253 in the previous year. The Depreciation amount has been reduced to Rs 64,707 from Rs 76,443, while the Taxation provision has been raised to Rs 2.20 lakhs from Rs 1.09 lakhs. The dividend is, however, maintained at 20 per cent.

The present authorised capital of the company is Rs 5 lakhs, divided into 30,000 Ordinary shares and 20,000-6 per cent, tax-free, Cumulative Preference shares, both of Rs 10 each. The company's business has increased considerably for the past one year after the resignation of the previous managing agents. It is considered by the directors that the present paid-up capital of Rs 5 lakhs is not adequate for meeting the increased production and there is not sufficient working finance to run the industry. They have, therefore, thought it prudent to increase the authorised capital to Rs 15 lakhs by the creation of one lakh additional equity shares of Rs 10 each, to be issued from time to time at their discretion on such terms and conditions as they think fit.

The Tax Structure

THE Select Committee is to be congratulated on the amendments it has proposed to the wealth and expenditure taxes. On the whole, these amendments represent a most reasonable and realistic compromise between the various points of view which found expression in the course of the debate on the budget proposals. It is still arguable whether a wealth tax on companies could not have been dispensed with. Under less pressing circumstances, the Finance Minister might not have thought of this tax at all. As it is, the need for funds, a strong public sentiment and the requirements of an integrated tax structure combine to rule out the possibility of a whole-sale exemption of companies.

The next best has been done by the Select Committee, mostly confirming the assurances given earlier by the Finance Ministry. A wealth tax holiday for new companies for five years, concessions for companies undertaking expansion and for others in respect of losses incurred in the year prior to any assessment period, the complete exemption of banking, insurance and shipping companies, companies registered for religious and charitable purposes and an important category of financing companies, as also of inter-corporate investments, represent a sound and practical limit beyond which it might be at least politically inadvisable to proceed at present. Even these exceptions are described by a few members of the Select Committee, not outside the Congress Party, as defeating the desired objectives of a wealth tax.

The new concessions proposed on the expenditure tax are not one-sided. While the exemptions are many, certain items of expenditure have been newly roped in. The Committee thinks that gifts and donations should be included in the purview of the tax. When the Finance Minister tells us with evident mortification that persons known to be millionaires are dying technically penniless, the inclusion of these two items for the purposes of the tax cannot be objected to on economic or on moral grounds, especially when the Committee is also anxious to ensure that expenditure incurred by way of customary hospitality or being of a trivial or inconsequential nature would be left alone.

The proposal to levy the tax on the basis of a minimum income from all sources after payment of taxes, instead of on the basis of a minimum total income as assessed under the Income Tax Act, derives its justification for the same reason. In most cases, the difference in yield between the two bases suggested, the original one of a minimum total income of Rs 60,000 and the Select Committee's amendment favouring a minimum net income of Rs 36,000, will not be considerable. The more liberal exemption proposed on individual expenditure and expenditure by Hindu Undivided Families and their co-parceners springs from the wholesome recognition that persons accustomed to a high standard of living deserve consideration and should be given some time to adjust themselves to the new economic environment and the taxation measures which it has called for.

Amidst the general complaint that the best type of persons are more often than not reluc-

tant to enter political life, the imposition of a tax penalty on those who seek elections is likely to deteriorate the quality of our legislatures. That penalty is withdrawn by the Select Committee, as far as expenditure tax goes. A varied assortment of economic and social purposes is to be discerned beneath the exemptions offered for expenditure on products of cottage industries, payment of premia on certain types of insurance policies, purchase and maintenance of livestock, expenditure for any public purpose of a charitable or religious nature and on certain types of entertainment.

Some of the other modifications suggested by the Committee appear to be more vulnerable on the ground of the scope open to tax evasion, though these exemptions can be defended on the criterion of broad social equity. The Committee suggests that expenditure incurred on the maintenance of parents, medical treatment of the assessee or his dependant and the foreign education of the latter should also be kept out of the scope of the tax.

The offer of exemption on expenditure up to Rs 10,000 incurred outside India by non-Indian residents of India is obviously intended to reduce the burden of a class of tax-payers, by no means negligible in numbers, who have recurrent personal or domestic obligations which the citizen of the country is invariably free from. This concession along with what the Finance Minister has offered, in respect of the income tax on interest on borrowings from abroad, represents a gesture which is bound to be appreciated by the foreign investor and industrial personnel serving in India.

There are three other changes of a major character in the taxation proposals. One is the inclusion of a children's allowance for income tax up to a total income limit of Rs 20,000, beyond which even the marriage allowance is to be withdrawn. Another is the increase in the exemption limit for surcharge in the case of individuals and Hindu Undivided Families in respect of unearned income, by a maximum of Rs 1,500 acquired through dividends from equity shares. The third is an increase in the price of postal covers from 13 nP to 15 nP.

The first can claim to be an indirect incentive to family limitation. The second was explained as a stimulant to the small investor. Actually, in India, the person who attracts this exemption can better be classified as the medium investor, who, outside the institutions,

Indian Finance

Established 1928

August 31, 1957

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

is becoming increasingly the most conspicuous among the holders of equity shares. The third, the increase in the price of postal cover, is undoubtedly the least popular of all the new proposals announced, though the card and the inland letter are likely to enjoy better preference.

The innumerable concessions figuring in the final budget for the current year would not have been there, if the Government were unduly ruffled by present difficulties. While they have made no secret of these difficulties, there is scarcely any reluctance to accommodate viewpoints which are costly, from the point of view of the Exchequer. Though Mr Krishnamachari feels compelled to express a desire to restore the original position in respect of the wealth and expenditure taxes, in the event of yield in the current year turning out disappointing, he is at the same time anxious to see the Plan through with no more of direct taxes.

If the tax-payers as a body vindicate the faith implied in these substantial concessions, they can have the comfortable position involved in the stable assessment of liabilities over a period of years. But even if the Finance Minister's expectations are not fully realised, there is scarcely the possibility of more taxation in the next three years. Whatever subsequent changes might be proposed should be in the form of further concessions, big or small.

No one will claim that the tax structure which has emerged with the addition of the levies on wealth and expenditure has met with universal approval. Considerate critics will, however, not forget that this is the product of a highly complicated economic and political set-up where the State has to find a minimum amount of money by way of new taxation alone, effectively reconciling the interests of capital formation with those of a progressively egalitarian social ideal. Orthodox criteria applicable to industrially advanced, free economies would naturally fail to comprehend the problems of the Indian exchequer today. It is a pity that even these criteria are not accurately advanced by unfriendly critics of the present state of direct taxation in India. This week, one member claimed, quoting the example of Switzerland, that personal taxation should not exceed 85 per cent of the income. In the United States the Federal personal income tax rate is as high as 91 per cent on taxable income above 200,000 dollars. Even otherwise, no limit is sacrosanct.

Fifty Years of TISCO

THE Tata Iron and Steel Works completes this month 50 years of its service to the nation, but its genesis really dates much earlier and coincides with the birth of the Indian National Congress in the middle eighties of the last century. The floatation of the Company in 1907 was preceded by two decades of hard labour, wide exploration and careful planning, inspired and guided by the genius of J. N. Tata.

Learning from the failures of his predecessors and because of the thoroughness that characterised him, Jamsetji first set out to establish

abundant supplies of good quality iron ores, coal and other raw materials. He undertook tours of the western world to acquaint himself with the most up-to-date techniques of steel production and to meet the foremost experts of the time before he launched out on this venture. He could not in his lifetime realise his dream of a large and modern steel works, which was to form the backbone of the new India. But his mission is more than fulfilled—not only in the unquestionable success of his dream-child, the Tata Works, but also in the bold plans now formulated for the rapid expansion of the industry to six

million tons of steel by 1961, and 15 million tons by 1965.

The association of The Tata Iron & Steel Works with the national movement did not end with the early inception but continued to grow. When the question of the actual floatation of the Company came up, the usual source of finance for the major industrial ventures of the time, the London money market, fought shy of the enterprise. But undaunted, the Tatas appealed to their countrymen. Animated by the spirit of Swadeshi that was sweeping the country at the time, 8,000 Indians paid out over Rs 2 crores, the largest sum raised till then in any industrial venture in India.

It was the Indian people who again came to the rescue of the Tata Works when, in the early twenties, unscrupulous competition from overseas exporters threatened its very existence. The Company applied for protection, which was opposed by vested interests when the Tariff Board started its enquiry. It was at this time that R. D. Tata, the then Chairman of the Company, said: "We again appeal to the public opinion of the country to support our claim that the steel industry should not be allowed to perish owing to the continued dumping... the determined effort of the continental manufacturers to kill the Indian industry in order to retain this lucrative market". The people responded. Strong public opinion secured for the Company adequate protection for a period sufficient to enable it to stand on its own legs.

The Tatas accepted the responsibility that protection imposed on them. Though the profits of the Company more than doubled in 1924-25, as a result of protection, no dividends were declared and almost the whole amount was allotted to the depreciation fund. A speech made at the time by Chairman R. D. Tata has a classical ring and deserves quoting at some length. "We are like men," he said, "building a wall against the sea. It would be the height of folly on our part to give away any part of the cement that is required to make the wall secure for all time. That is why we and you (shareholders) have to use this money which we have made firstly to build up this great industry which we are making for India. And we should not even think of dividends before we have done that."

"Now, gentlemen," he continued, "I want you to listen to me very carefully. Make no mistake about this point. We hold this money in trust for you. But you yourselves hold it in trust for the Indian Nation which has, at great sacrifice to the country, and believing that the development of this industry will strengthen and further the national growth, given you in the shape of protection more than the whole of the net profit which we have made. . . . In return for this, the country expects us and you to build up as soon as possible a strong and healthy industry able in course of time to stand without protection, capable of strengthening and supporting the industrial development of India. The nation will not tolerate that we should use for selfish ends money which at great sacrifice it has given us."

The Tatas were true to their words. It was not before 1935-36, when the Company was secure on its feet, that dividends on ordinary shares were resumed. Between 1924-25 and 1934-35, the Company made a total gross profit of about Rs 13 crores, of which more than Rs 7 crores was put into the depreciation fund.

No wonder the Tata Iron and Steel Works has never ceased to develop and expand. The following table of its production statistics highlights the 12-fold increase since operation started in 1911.

PRODUCTION OF SALEABLE STEEL BY TISCO.

	Tons.
1911-12	1,000
Annual average of 1912-13 to 1916-17 (5 years)	59,000
Annual average of 1917-18 to 1926-27 (10 "	181,400
Annual average of 1927-28 to 1936-37 (10 "	495,800
Annual average of 1937-38 to 1946-47 (10 "	769,400
Annual average of 1947-48 to 1955-56 (9 "	770,900

And, today, it is in the midst of a major expansion programme. In the 30 months ending May, 1958, Tata Steel will double its capacity to two million tons. This Two Million Ton project (TMP) embraces every phase of the production process from ore-mining to steel-shaping. A total work-force of more than 24,000 is straining hard to finish the work on schedule.

The Tatas are not only striving to fulfil the pledge to give the country more and more steel; they are also producing it at a low cost. As against the import price of Rs 800 per ton, the retention price of Indian steel is only about Rs 405 per ton. During the 15-year period between 1924 and 1939, the consumer in India paid the steel company Rs 11 crores more as a result of protection than he would otherwise have done. Against this, he has for years been getting his steel at a saving of

Rs 40 crores a year on the basis of import price.

The Tata Iron & Steel Works form the vanguard not only of India's economic progress, but also of social advance. TISCO had introduced 8-hour day as far back as 1912, long before it was generally accepted in America or Europe. Leave with pay was introduced in TISCO in 1920, at a time when it was unknown either in England or in America. It was the pioneer in starting a Provident Fund scheme in 1920. England followed suit much later, and it became general in India only after 1952, when the relevant legislation was enacted.

The concern of the management for the people under its care is also evident from the look of the Jamshedpur town itself. With a population of 250,000, it is one of the best served cities in India. A sure index of the happiness and prosperity of the town's citizenry is provided by the fact that the infant mortality rate in Jamshedpur has always been well below the national average and that expectation of life in the city has increased by four years between 1939 and 1949.

Malayan Economic Development

By J. B. PERRY ROBINSON

IN the Federation of Malaya, the normal history of 1,000 years has been compressed into less than 100.

A roadless, anarchic, fever-haunted feudal backwater—which is what the Malay Peninsula was when the British went there towards the end of the last century—has become a compact, thriving, well-served modern economy with the highest per capita income in the Far East. There is no reason why the independent Federation of Malaya should not continue to grow into one of the richest and most stable of small nations.

Malaya is very small—perhaps 20,000 square miles for cultivable land, and 6,000,000 people. (When the British arrived, there was not more than a tenth of that population cultivating about a fifth of the land.) Yet it contains two primary industries which contribute substantially to the wealth of nations—more than a quarter of the world's natural rubber and a third of the world's tin.

As much Western capital is invested there as in the whole of North Africa outside Egypt.

Although rubber and tin are the mainstay of the economy, the last 10 years have seen the development of a very useful range of secondary industries. If three out of every 10 people in the Federation (of whom 48 per cent are Malay, 39 per cent Chinese, and 11 per cent Indian, Pakistani, and Ceylonese) are supported by rubber and one of them by tin, at least one of the remaining six (three of whom are still at school) subsists on secondary industry—usually a small-scale family concern.

Apart from agricultural products—food-growing for about a quarter of the country's needs, and palm oil, copra, and pineapples mainly for export—there are thousands of family or co-operative businesses in light engineering, building, printing, furniture-making and so on, which meet the greater part of the country's needs and whose expansion is limited only by lack of more advanced research and training facilities.

As it steps smoothly into independence, Malaya is well into the second year of its current development plan. A six-year development plan had been drawn up in 1950, on which by the end of 1955 some £83,000,000 had been spent.

The new plan envisages a capital investment of some £130,000,000 on development works, of which 60 per cent is for economic projects and 30 per cent for social services. This plan was drawn up following the recommendations of the International Bank mission which visited Malaya in 1954, and works totalling about £50,000,000 are already in hand.

The economic sector provides roughly £8,000,000 for agricultural development—mainly land drainage and irrigation—nearly £30,000,000 for transport and communications and £20,000,000 for industrial development, principally in the form of grants for rubbers replanting and the promotion of rural industries.

Expansion of hydro-electric power is planned, at a cost of £9,500,000. In addition to this development plan, the Federation intends to expand its armed forces, and the United Kingdom has undertaken to contribute about £14,000,000.

The Federation's financial fortunes are intimately tied to rubber, and the Malayan planners who devised this programme were, therefore, prudent to take as a working assumption a lower price for rubber than has obtained to the time of writing.

The Federation's trading position is sound, it possesses substantial surplus funds which can be set to work to promote development, and it has considerable resources of internal savings. Belonging to the Commonwealth, it can be granted access to the London money market to raise commercial loans there.

The Federation's problems would be infinitely eased if it did not have to spend about a sixth of its revenue on the unfinished war against the Communists in the jungle. The United Kingdom itself has borne, and will continue to bear, by far the greater part of the military burden, and has also undertaken to provide up to £20,000,000 over the next five years towards the Federation's share.

The terrorists, however, no longer present anything like the threat to ordered government that they did. They do not number more than a third of what their strength was at its peak. This, indeed, is a salient fact about Malaya, of great significance to her economic prospects—that she has stemmed and turned back the tide of Communist aggression.

The Pay Commission

The Government's terms of reference to the Central Pay Commission are such as to impel extreme wariness in their task. The condition that the historical background should not be overlooked implies that the Commission should not recommend changes representing any radical break with existing levels of emoluments or doing violence to the inter-relation which has evolved between the various grades of jobs. The very personnel of the Commission to some extent ensures continuity between the status quo and the prospective recommendations. The express stipulation not to lose sight of the background only reinforces that assurance.

The initial reaction on the part of labour leaders is not sufficiently cooperative. On two points, they seem to be dissatisfied. There is no representative of the employees on the Commission. There is no specific time limit mentioned for the recommendations on interim relief. The second should be a matter of adjustment. The first is, even from the point of view of labour, a handicap more apparent than real. Because, the task of the Commission is not to arbitrate or negotiate on the basis of conflicting claims but to find out all the appropriate economic facts on which alterations on pay scales could be suggested. In a way the absence of representatives of the interests involved simplifies the task, and it is not at all to be supposed that the interests of employees would suffer in consequence.

How far the omission complained of is tactically wise is another matter. Already, the Bihar Government employees are demanding another Pay Commission. This

Editorial Notes

demand is likely to spread. That the Union Government are not content with the appointment of a Commission is most gratifying. The Prime Minister's communication to the Reserve Bank on the subject of foodgrains prices reveals anxiety to tame the situation from the proper end.

It is the price level which is the greatest villain of the piece. Significantly, more than one political party has raised the demand for a continuous appraisal of wages and price levels. In Britain, a body answering this purpose was recently set up at the instance of the Government. The synchronisation of the Central Pay Commission and a national food prices committee may be seen as a rather remote unlinked counterpart.

Agrarian Reorganisation

For the first time since the transfer of power, leaders of nearly all the all-India political parties are going to meet and discuss an economic question. This meeting gains further importance from the fact that the question which will engage its attention, agrarian reorganisation, is among the most baffling and the most urgent from the national standpoint.

The all-India Sarva Seva Sangh, under whose auspices the leaders are to come together is wedded to the belief that bhoodan and gramdan now proceeding under the leadership of Acharya Vinoba Bhave provided the only answer to India's and to a large extent the world's social and economic ailments. The President of the Sangh also points out how in certain villages given over by land-lords, production has gone up twice and thrice over and litigation between the villagers become a thing of the past.

At the forthcoming conference, the ideals and claims of the Sangh could be assessed in the light of the logic and doctrines of the various parties represented. If a mere transfer of title could lead to increase in output of the order mentioned by the Sangh President, the experiment promises a miraculous solution to the most pressing problem of the day.

The application of ceilings provides an alternative. After ceilings, there will be scarcely any scope for gramdan or any inspiration for even bhoodan. The attempt to throw open these fundamental issues for free discussion by a top-ranking conference representing all the shades of political opinion is, therefore, timely and helpful. If the leaders agree on certain unambiguous and concrete proposals and recommend their implementation, State Governments would feel greatly strengthened in their efforts to push forward with land reforms.

It would be best, if amidst the existing diversity of views and decisions among the various States, some clear and politically unanimous lead is forthcoming.

Fragmented Opposition

The failure of the talks between Mr Jaya Prakash Narain and Dr Ram Manohar Lohia for the fusion of the PSP and the Socialist party is regrettable. Why at all Indian socialist leaders chose to split themselves into two camps, is unintelligible. The failure underlines the tragic political gap between the colossal but ageing Congress on the one side and the comparatively tiny Communist group at the other.

Two elections have demonstrated that on the national level, the prospect of a sufficiently effective and responsible Opposition still remains remote, a circumstance which tends normally to create unresponsiveness on the ruling party and to frustration on the opposition groups. To a large extent, the recurrence of strikes, satyagrahas and other embarrassing expressions of discontent, is the outcome of this situation. What is worse, it also leads to increasing isolation between the politics of the Centre and that of the States, where Opposition parties are emerging with mostly local complexion and aims.

To a student of federalism, this development must appear disturbing. In India, it is all the more so, because, Opposition groups try to exaggerate the conflict of interests between the States and the Centre, and, floating on the strong waves of provincialism, those between one State and another. For them, it is politically profitable to throw the blame for general economic distress on another State, near or distant, if the Centre is found to be an unconvincing scapegoat. This is exactly what is being attempted with varying degrees of success in a number of States.

The Prime Minister, of all persons, has sensed the danger in time. On Independence Day, he asked the mammoth gathering in front of the Red Fort to declare where its first loyalty lay. The occasion and the man evoked the only response possible. But the problem is not solved by these casual and conditioned demonstrations of personal loyalties. The educated classes in whom the lessons of India's uninspiring past is well soaked, must take a lead and put an end to the emotional confusion.

Export Vs Domestic Consumption

The explanations which the Minister for Commerce and Industry and his junior colleague gave

for the closing of the coffee houses run by the Coffee Board do not cohere. Mr Nityananda Kanungo described the decision as involving a reorientation of propaganda policy. Mr Morarji Desai pointed out that the Coffee Board, instead of doing propaganda, was mainly looking after these Houses, a circumstance which, according to him, led to trouble and consequent losses.

How too much attention to the coffee house could lead to trouble was not unexplained. His subsequent clarification is all the more confusing. Instead of asking the Board for doing more propaganda in India, especially when relieved of the obligation to run coffee houses, Mr Desai thinks that the Board should refrain from any serious domestic activity. His reason is that the output of coffee is small and a part of it must be utilised for export. In other words, beside the new foreign exchange difficulties, the Coffee Board has to look back on its previous record with dubious satisfaction. Domestically, it has become an anachronism.

There is a vague hint that even the Indian consumer of coffee, whether he is an old addict or a new convert under the spell of the Board's propaganda, is an economic sinner and deserves the penalty of a high price. Between the two national drinks, tea and coffee, the domestic consumption of tea is being encouraged while that of coffee is being discouraged. The requirements of foreign exchange should not obscure the fact that in many States, the population looks up to coffee as an indispensable prop. Nor is it an unedifying thought that for thousands, it has offered solace amidst the agonies of prohibition.

World of Finance

Slack Season in Full Stride

LATE in June this year, the Governor of the Reserve Bank clarified, in a circular letter addressed to the Scheduled Banks, his attitude on "certain aspects of the current monetary situation". What the Reserve Bank sought was "the exercise of some restraint" in the matter of expansion of bank credit. The provocation for this letter from Mr Iengar was, we may presume, the ominous trend of rising prices; in the face of which, the Reserve Bank promptly instituted a variety of measures that formed part of its selective monetary control over the economy. However, it would appear that some of the Scheduled Banks have been either unable or unwilling to heed such directives from the central banking institution. So, Mr Iengar may have thought it necessary, at that time, to draw attention to the broad features of the banking situation and to suggest, in consequence, that "it would be desirable for banks to pursue more cautious lending policies in the general interest of containing inflationary pressures". Secondly, Mr Iengar urged that a reduction in Advances "should be made against agricultural commodities in the slack season and generally against all commodities likely to be in short supply". The two purposes to be served by action on these lines by Scheduled Banks were, on the one hand, to minimise the utilisation of bank credit for financing activities which might aggravate inflationary pressures and, on the other hand, to bring down the advances-deposits ratio to such a level by the end of the slack season that the banking system would be in a better position to take on hand the financial requirements of the next busy season.

It is quite clear that the Reserve Bank Governor wished to drive home the need for the Scheduled Banks to extend the cooperation that he asked for. As such, in pointing out that, in the past, the Reserve Bank had freely given accommodation to member banks, Mr Iengar concluded his letter with what must be reckoned to be a veiled threat. He said, "I would like to impress on you the desirability of taking steps to reduce banks' systematic and continued reliance on the Reserve Bank, as a situation might arise calling for a review of the present arrangements regarding assistance from the Reserve Bank".

This circular letter was followed, early last week, by a conference convened by Mr Iengar, to which the leading bankers of Bombay were invited. At this conference, Mr Iengar would, we presume, have taken the bankers to task for not respecting the Reserve

Bank's directives. In particular, it would appear that the central banking institution considers that the Scheduled Banks have totally failed to reduce the level of their Advances against foodgrains, as they have been called upon to do in terms of the Reserve Bank's directive issued early last month.

Bombay banking circles have leaked out the information that they more or less have been served with an ultimatum to pay greater heed to the Reserve Bank's directives and to reduce the overall total of Advances to a level of Rs 800 crores by October end. It is in this background that we may study the progress of the slack season as recorded from the end of April. The table published elsewhere on this page gives all the relevant figures.

In the first place, it may be noted that slack season contraction of currency has this year been for a hefty amount. The decline in active notes is to the tune of Rs 78 crores; and Rupee Coin returning from circulation has been of the order of Rs 5 crores. So, it is entirely correct to suggest that, from the point of view of currency circulation, the 1957 slack season has got into full stride. The situation, however, is quite different when we consider the position of the banking system. Between the end of April and the third week in August, the Deposits of Scheduled Banks rose roughly by Rs 50 crores; and, over the same period, Advances have gone down by Rs 32½ crores. Ostensibly, then, there is evidence to show that, for their part, the Scheduled Banks have actively sought to reduce the level of Advances. Particularly is this so, if we bear in mind the fact that, between April 27, 1956 and August 17, 1956, the total of Advances fell only by Rs 21 crores. But such impression would be wrong. For, while the State Bank alone shows a decline of nearly Rs 21 crores in Advances up to the week ended August 23, all the other Scheduled Banks report a decline of only Rs 16 crores in Advances up to the week ended August 16. This would serve to indicate that Mr Iengar and the Reserve Bank are both right in charging that the Scheduled Banks have not quite played the game.

While it does not seem possible that member banks will be able to refute the charge that they have not actively reduced Advances against foodgrains, it would be useful for us to try and appreciate why the Scheduled Banks are, in this context, being lethargic. The fact is, that Scheduled Banks, in the face of the steadily increasing operating costs, not to mention the higher charge of the interest they have to pay on their

Deposits, have necessarily to utilise as large a proportion as possible of their Deposits in Advances. Their problem is rendered somewhat acute because, with the possibility of decline in gilt-edged prices, they are reluctant to increase their investments in gilt-edged. So, the only way in which they can add to their earnings is to keep the level of their Advances at a high enough level in proportion to their accumulating Deposits. In this last context, they would appear to be somewhat diffident, if not reluctant, about extending new industrial credits. For, with industry in the throes of expansion, bank finance is in some instances being utilised as medium term accommodation. Such loans, thus, are not short term in character, and the Scheduled Banks find themselves unable to effect a swift reduction in this level, if at any time they so desire. On the contrary, the so called agricultural Advances, or trade Advances, fulfil the criterion of being shortterm in character. There is, we understand, a greater disposition to extend Advances of this nature. As we see it, this confusion worse confounded in the banking system is derived from three specific causes.

(1) The chaos in the structure of interest rates which, by saddling the Scheduled Banks with higher costs in respect of interest to be paid on Deposits, impels them to seek to offset such higher expenditure by greater earnings from Advances.

(2) The lack of an organisation

Reverse ad hocs for Rs 50 crores!

The returns of the Reserve Bank for the week ended August 23 are of much more than routine interest, since they bear the further impress, in the first place, of profits of the Reserve Bank for 1956-57 and, in the second place, of changes consequent to New Loan cash receipts. The interpretation of the figures has been made a more complicated task by the very substantial slack season contraction in note circulation. Thus, our task would be facilitated if, preliminary to the extraroutine study of the Reserve Bank returns, we were to analyse the impact of the slack season as reflected in the Reserve Bank figures.

Active note circulation has, for the second time in the current slack season, declined by a level around Rs 25 crores. Active notes are marked down by Rs 24.86 crores at Rs 1483.59 crores. Rupee Coin has returned from circulation for the substantial amount of Rs 1.93 crores. Since, at the end of the previous week, the Reserve Bank's cash in the till was already at a level of Rs 26.91 crores, currency has had to be contracted in respect of the steep decline in currency circulation. This has been effected to the extent of Rs 15 crores against Foreign Securities by transfer to Balances Held Abroad in the Banking Department. Secondly, currency has also been

PROGRESS OF SLACK SEASON				
	Apl. 26, 1957	Latest Week*	Change

for medium term industrial finance, which has caused industry to utilise shortterm bank finance for expansion programmes, and which consequently has made the Scheduled Banks think twice before they extend fresh finance to industry.

(3) We must also mention here the doubt enshrouding the gilt-edged market; which, in raising the bogey of a decline in gilt-edged prices, has tended to make the Scheduled Banks keep their gilt-edged portfolios at a low level.

We have repeatedly suggested the action that should be taken by the Reserve Bank under these three heads. We do not think it is necessary to reiterate the argu-

(Continued on page 408)

Central Government, was transferred from Other Liabilities to "Other Deposits", presumably pending the audit of the accounts, after which the payment would be made to the Central Government. Such audit is usually completed by the third week of August each year; and, in past years, the return of the Reserve Bank for the third or fourth week in August has usually attested to the final disposition of Reserve Bank profits. In the latest returns, it is to be noted that there is a decline of Rs 31.33 crores to Rs 108.26 crores under Other Deposits. Presumably, then, the Reserve Bank profit of Rs 30 crores has, during the week, been made over to the Central Government. At this stage, we may remark that, four weeks ago, Other Deposits showed a fall of Rs 10 crores, which was interpreted as signifying the payment by the Central Government of the loan to Burma which was, at that time, availed of. But this would mean that the Central Government would have utilised Rs 10 crores of the profit due from the Reserve Bank to make this payment. So, there is some element of doubt as to whether, in fact, the Reserve Bank profit for 1956-57 was not higher than the Budget estimate of Rs 30 crores.

The Central Government having received Rs 30 crores, their balances with the Reserve Bank would have risen by a corresponding extent. But, in fact, the Centre's Deposits show a fall of nearly Rs 5 crores to Rs 65.30 crores from Rs 70.22 crores. Secondly, investments of the Reserve Bank, in the Banking Department, also show a very considerable fall of Rs 40.24 crores to Rs 210.42 crores. Taking both the Issue and Banking Department holdings of Rupee Securities, the decline during the week is of the order of Rs 50 crores. Quite clearly, the inference seems to be either that there have been reverse ad hocs for Rs 50 crores or that there has been a combination of reverse ad hocs and sales of securities held by the Reserve Bank for Rs 50 crores. We may recall that, in the New Loan week of 1956, the Reserve Bank figures lent themselves to the interpretation that reverse ad hocs were for an amount around Rs 40 crores. This reading was moreover confirmed by the Reserve Bank figures relating to outstanding Treasury Bills, which revealed that, in the week ended July, 20 1956, Treasury Bills outstanding were marked down sharply by, in round figures, Rs 40 crores.

So, the reverse ad hocs in the latest week conform to the pattern set last year. Also, this is indicative of the flexible use Government are making of Treasury Bills as a method of replenishing their resources. The last question that we have to satisfy ourselves about is whether reverse ad hocs are for Rs 50 crores or whether some securities have been sold to the State Governments. In this regard, it is important to note that there is an innovation in the Reserve Bank returns. For the first time, as a footnote informs us, Loans and Advances to Governments include

temporary overdrafts to the State Governments. The figure under this head, after holding steady for a number of weeks, has risen by nearly Rs 10 crores to Rs 38.81 crores from Rs 28.84 crores. It is possible that the sharp rise may be due to a reorganisation in the mode of financing for State Governments. But it is also possible to

see in this increase a payment by some State Governments to the Central Government for an amount of, say, Rs 10 crores to Rs 15 crores. Summing up, it will be seen that the Central Government would have received Rs 30 crores from the Reserve Bank and may have received Rs 10 crores to Rs 15 crores from State Governments. Thus,

with the added possibility that the Centre's receipts during the week of routine transactions may have exceeded payments, it may be suggested that reverse ad hocs have been for a total of Rs 50 crores. Confirmation in this respect should be available by the first week of October.

BRITISH OVERSEAS AIRWAYS CORPORATION

World Inflation and the USA

By PAUL EINZIG

THE recent increase in Bank rates in the United States has given people on this side of the Atlantic an unwelcome reminder of the fact that resistance to wages inflation is not a British problem but a world problem. An widespread realisation of this fact is liable to make resistance to inflation in Britain even more difficult. For one thing, since the world-wide character of the rise in costs tends

to lessen pressure on the British balance of payments, it reduces the urgency of disinflationary measures. Notwithstanding the weakness of sterling that followed the devaluation of the franc, there is nobody in London who seriously expects a devaluation this year. Inflation in the free world in general and in the United States in particular is expected to enable Britain to inflate to some degree without having to

pay the immediate penalty in the form of a grave deterioration of the balance of payments position.

If there were indications of such a deterioration, the Government would have taken firm action to check domestic consumption. As it is, no such action was considered necessary beyond maintaining the ineffective measures already in force. The rise in domestic wages and prices is allowed to continue.

In addition to the material effect of international inflation on the sterling position, the realisation that

we are more or less all in the same boat tends to produce a demoralising psychological effect. Those against firm action have now an additional excuse in support of their attitude. They argue that it would be useless for Britain alone to try to stem the world-wide trend. In spite of London's international position, Britain is, they say, no longer of sufficient importance in world economy to be able to save the world enter with her example or with her exertions. Even though the Sterling Area is liable to be influenced by Britain's action or inaction, the decisive influence is that of the United States as far as world economic trends are concerned.

For this reason, the outcome of the American effort to resist inflation is awaited in London, as indeed in other capitals, with anxious interest. If the United States should succeed in breaking the inflationary spiral, Britain would come under strong pressure to follow the example, for stability of prices in the United States and rising prices in Britain would necessarily mean a grave balance of payments crisis through dollar scarcity.

In so far as it is possible to judge from a distance, the prospects in the United States are far from promising. It seems that the United States authorities have not learnt from the mistakes of the British authorities. They have embarked on a course which indicates that they will make the same mistakes, and instead of learning their lesson at the expense of Britain they will have to learn it at their own expense.

The policy of dear money was an unmitigated failure in Britain. It was unable to check the rise in wages. Indeed it was even unable to check the expansion of credit, although it is of course always arguable that, but for the 5 per cent Bank rate, credit would have expanded to an even larger degree. The Government itself is paying a heavy price in the form of additional interest charges on the floating debt and on funded maturing loans. Its prestige as a debtor has suffered as a result of the basic weakness of the gilt-edged market. Institutional and individual holders of Government loans—the most valuable section of the community—have suffered undeserved punishment in the form of capital depreciation. The burden of mortgages and other debts has increased considerably. The result was certainly not worth the sacrifice involved.

Is there any reason to suppose that the result should be materially different as far as the United States are concerned? Indeed there are ample indications that the high cost of the dear money policy and its negative result is already becoming evident over there. The difference between British and American conditions seems to be merely one of degree. We on this side are inclined to assume that all is well in the United States because their difficulties are not

REFINERY—MY NEW HOME

rejoices Adipocere (Pronounced 'adi-po-saire')

I've been buried underground for centuries, and I'm drilled from the earth by oilmen and transported to a "tank farm" in the Refinery. At the Refinery, which is a maze of pipelines and towers, the refiners extract from me more than one thousand separate products of oil, such as the high quality gasoline that powers your car.

From the "tank farm" I am transferred to a furnace where the refiners put the heat on me.

The various processes by which I am converted to different petroleum products are collectively called "refining." I undergo three major changes: Fractional Distillation, Catalytic Cracking and Treating. In other words I am "fractionated," "cracked" and "treated".

My new life begins... keep watching these columns for what is to happen to me.

STANVAC—the name that stands for progress

Standard-Vacuum was the first to enter into an agreement with the Government of India in November 1951 for the construction of the First Modern Oil Refinery. Built at a cost of 17½ crores of Rupees, this project was completed in the record time of 18 months.

STANVAC 1, 2

World of Jute

Outlook for Indian Jute Industry

In the past ten years the Indian jute goods industry has been passing through difficult times. This is mainly because it has been till a few years ago dependent on Pakistan for the bulk of its raw material. The dependence has now been very much reduced and in the jute year 1956-57 the industry has managed to keep its mills supplied with adequate raw material with its imports from Pakistan no larger than 6 lakh tons. Only in the previous year it has imported as much as 14 lakh bales.

But when the Indian industry has been grappling with its problems, significant developments have taken place in other parts of the world. By virtue of its large production of jute, Pakistan has made remarkable progress in the setting up of a jute goods manufacturing industry of its own. In the past few years that country has emerged as a serious competitor to India in world markets. The period has also witnessed the transformation of world jute goods markets into a buyers market. High prices have come to be frowned upon by consumers who are only too ready to transfer their affection to substitute packaging materials. The Indian industry has found itself placed in the unenviable position of being obliged to sell its product well below their cost of production. The result has been that the industry has to bear losses year after year.

It has been realised that the only way out of the difficult situation confronting the industry is to

enable it to obtain its requirements of raw material at cheap prices so that it can bring down its cost of production. Government's jute policy has this as its main aim. Strenuous measures are now being taken to step up jute production in the country. Adequate financial help is being given to mills to modernise their equipment. Modernisation will also go a long way in enabling the industry to reduce its cost of production.

Speaking at the recent annual meeting of the Gunny Trades Association, Mr Hiralal Metha, has pointed out two important facts which may further shorten the period of listlessness in the Indian Jute goods industry and trade. Internal consumption of jute goods in India has stood the domestic industry in good stead. From only 110,000 tons in 1954, internal consumption has risen to 170,000 tons in 1955 and again to 193,000 tons in 1956. Mr Metha expects that in view of the increasing tempo of industrial and agricultural activity in the country such consumption will increase to 300,000 tons by the end of the Second Plan. In other words India has now emerged into one of the largest consumers of jute goods.

Referring to jute production in India Mr Metha is very optimistic and thinks that self-sufficiency will be reached much sooner than is now thought probable. According to him between the present position and self-sufficiency there is not much of a gap and the differ-

ence is represented by only an increase of half a bale per acre in yield. The average yield of jute per acre in 1956-57 has been placed at 2½ bales per acre, and if the yield is increased to 3 bales per acre, self-sufficiency will be attained. He is even confident that very soon a position will be reached when India will have a surplus of raw jute to sell to buyers overseas.

★

After earlier dullness the jute goods market became active with prices showing a firming up tendency. The improvement in sentiment seems to have been brought mainly by reports of enquiries from Russia and Burma. Toward the close of the week shippers also evinced good interest in both hessian and sackings. Hessian 40"×10 oz which was quoting at Rs 41.15 at the beginning of the week advanced to close at Rs 42.00. B Twills Ready moved up from Rs 110.50 to Rs 112.50. In the raw jute section also prices firmed up in later dealings with Assam Bottoms closing the week at Rs 29 per maund.

The earlier depression in the market had perhaps been partly induced by the fact that burlap consumption in United States in July totalled only 60.9 million yards compared with 71.2 million yards in the previous month. Burlap stocks in that country were placed at 246 million yards compared with 232.1 million yards at the end of June.

The depression was however offset to some extent by the IJMA figures of despatches during July. Total despatches had been placed at 92,699 tons as against 73,166 tons in June. Exports showed sharp increase from 62,945 tons to 80,555 tons. Exports of hessian were 37,729 tons as compared with 29,002 tons in the previous month while those

of sacking were 37,548 as against 28,522 during June. Despatches on account of internal purposes were also higher at 12,144 tons as against 10,221 tons.

Speculative covering imparted a steadier tendency to the market on Monday. Evidently speculators had been influenced by prevailing rumour of some orders from Russia. Hessian 40"×10 oz Ready firmed up to Rs 41.62 while B Twills Ready was marked up to Rs 112.00 Elsewhere Hessian 40"×10 Jan-March was placed at Rs 41.62 while B Twills Jan-March was quiet at Rs 111.00.

Tuesday witnessed profit taking in B Twills while the hessian section remained steady with Hessian 40"×10 ready at Rs 41.75 B Twills reacted to Rs 111.75. The forward deliveries were rather quiet with Hessian 40"×10 oz Jan-March at Rs 41.60 and B Twills Jan-March at Rs 110.75.

Firm conditions developed again on Wednesday when sentiment was buoyed up by reports of a tender from Burma for heavy goods. With shippers also showing interest, the entire list developed a firm tendency. A contributory factor has been the steady trend in the raw jute section. Hessian 40"×10 oz ready moved up to Rs 42.00 and B Twills to Rs 112.50. Hessian 40"×10 oz January-March was done at 42.00 and B Twills for the same position at Rs 112.25.

World of Tea

Divergent Predictions on Quality Teas

THE developments on the Tea front over the past few days have led to much speculation as to how the market will fare during the rest of the current season. The London 'Financial Times', an authoritative newspaper on economic affairs, has recently stated that there is every indication that this will not be a good year for quality teas. The London 'Statist' states that good quality teas will fetch a substantial premium towards the end of the year, but the quantity of ordinary teas will be too great to fetch high prices.

But, tea circles in Calcutta have refused to share the views that this will not be a good year for quality teas. A spokesman of the

Indian Tea Association has, in this connection, stated that there is no reason to suppose that quality tea in general will not be as good as past years. In fact, he points out, there has been a steady improvement in quality during the last few years.

The spokesman attributes the reduction in quantity of high quality teas at present to unfavourable weather conditions in North India and explained that lack of rain early in the season and heavy rains later had resulted in production drop. He adds that the planters have still continued to concentrate on quality tea and there will be no attempt to make up the present shortage at the expense of quality.

Meanwhile, an improvement in demand continues to be in evidence although prices have been showing a mixed trend. In the Export Sale, held in Calcutta this week, offerings were 58,144 packages, Plain BPs and PFs were a weak feature, but medium teas met with good enquiry, bright liquoring BOPs and OFs being appreciably higher. Plain clean black Fannings were 5 to 10 nP per pound dearer, while Commonest teas, which opened about steady, weakened towards the close.

The very best CTC Assams and those with useful liquors were sold well although CTC teas were generally an irregular feature. Non-wither Dooars with bright liquors were keenly competed for and were dearer, while Whole Leaf grades were fully firm. Tippy sorts were well supported. Following rates were quoted:—Clean Black Pekoe Rs 2.20 to Rs 2.25; Plain BP Rs 1.78; Plain Fannings Rs 1.75; Medium BP Rs 1.90 to Rs 1.94; Medium Fannings Rs 1.90 to Rs 1.94; Best CTC Assam BP Rs 4 (nominal) and Best Assam CTC Fannings Rs 4.50 to Rs 5.00 (nominal).

In the Internal Sale, offerings were 19,303 packages of Dusts. There was again a good general demand, but prices were up to 4 nP per pound easier with the exception of clean good liquoring CTC sorts, which were fully firm. There was more demand for teas from Darjeeling. Following rates were quoted:—Medium Dooars Dust Rs 1.54 to Rs 1.58; Medium Grainy Dust Rs 1.58 to Rs 1.68; Medium Assam CTC Dust Rs 2.10 to Rs 2.30 and Best Assam CTC Dust Rs 2.50 to Rs 2.90.

Offerings of Leaf grades were 1,657 packages. These met with a good demand and prices were frequently dearer. The few lines of Green teas, on offer, were sold at about brokers' valuations.

In the Export Quota section, the rate remained practically unchanged at 22 nP per pound and business was reported done at this level. Towards the close, there were sellers at only 23 nP.

In the Cochin market, a total of 1.9 million pounds of Leaf teas was offered this week. A useful demand was noticed, particularly for low-medium BOPs, which were fully firm to dearer. All other grades were

World of Business

UN: Budget and Bureaucracy

THE debate on the United Nations Budget proposals for 1958, which is scheduled to open on September 17 during the 12th session of the United Nations General Assembly, promises to be livelier than usual this year. The report of the Secretary General conveying the proposals and the report of the Budgetary Committee have put forth opposing views, and there is no doubt that both will find advocates among the delegates of the member nations.

The Budget proposals provide for \$54.72 million for operating expenses of the United Nations Organisation for 1958. This represents an increase of \$3.96 million over the current year's approved expenses. It will be recalled that the Budget proposals for 1957 presented to the General Assembly in November 1956 had provided for an expenditure of \$48.25 million for 1957. The actual expenditure exceeds the estimates and will amount to \$50.81.

In explaining the proposed increase in expenditure for 1958, Mr Dag Hammarskjöld attributes it largely to three main items, namely, \$280,000 for a conference on the law of the sea in March, \$1,250,000 for the International Atomic for Peace Conference scheduled to meet in September 1958 and 160,000 dollars for the construction of a Headquarters television and film studio. Amongst the other heads accounting for the increase are: higher cost of the payroll consequent on the proposed increase in the staff

and provision for generous increments and travel benefits (increase of \$1,600,350); activities of the office of the High Commission for refugees on behalf of Hungarian refugees (increase of \$70,000); and maintenance service and equipment (increase of \$593,500).

The growing cost of running the UN reflects partly the growth of the organization over the last eight years. The membership has risen from 60 to 81 and there has been a rapid expansion in meetings and other activities of the organization. The Secretary General, in a foreword to his Budget Report, is fairly emphatic that his proposals for a rise in the cost are necessary, if the interests of UNO are not to suffer. He writes that his figures represent "as full a measure of stability as can prudently be sought without harming the interests of the organisation".

The Budgetary Committee, on the other hand, is in favour of drastically reducing the cost. In its report, published simultaneously with the Budget Report, it has recommended substantial reductions in the proposals, and an overall cut of \$1,052,800. It wants the proposals for the \$60,000 radio station to be dropped, the estimates for staff expenses reduced by \$601,000 and a cut of \$179,800 imposed on allocations for special meetings and conferences.

Which of these two views will find favour in the General Assembly can only be known after the

debate. While the growth of the UN is a welcome development in the divided and tense world of today, and while the UN probably offers the major hope to mankind of escape from an atomic annihilation, there are, at the same time, grounds for holding that there is scope for effective economies in the cost of running it.

One of the proposals of the Secretary General is for increasing the number of the executive posts from 3,758 to 3,822. Out of this particular proposal arises, indirectly, the second point on which there is likely to be animated controversy when the Assembly meets to discuss the Budget proposals.

That point is about the nation-wise representation in the personnel in the UN Secretariat. Afro-Asian nations have a long standing grievance that representation of Afro-Asian nations, particularly in higher posts, has always been inadequate and glaringly poor. Recruitment to the Secretariat has been disproportionately in favour of European and Western nations. India has on many occasions voiced the feeling of the Afro-Asian nations in this regard and has pleaded for its redress. It is understood that this matter was discussed at the last Commonwealth Prime Ministers' Conference, and Mr. Nehru expressed his concern about the continuing imbalance in the UN Secretariat.

The UN recruiting officials, who are mainly responsible for this imbalance, claim that, on the basis of contributions to the UN budget, Afro-Asian nations are not under-represented but "over-represented", and they quote figures to support the claim.

How misleading such figures are has been pointed out repeatedly by the Indian delegates. They point out that, for the purpose of the calculations relied upon by the UN recruiting officials, only those posts which carry a policy making responsibility should be taken into account. On such a reckoning, as Mr R. Venkataraman, the Indian delegate, pointed out in a meeting of the Budgetary Committee, Afro-Asian nations are grossly under-represented.

Mr Venkataraman drew the attention of the Committee to the fact that, at the higher levels of the UN, 23 officials of the UN came from the USA, 32 or about one third from Western Europe while only 11 represented Asia and Africa. India is not interested in a few jobs for a few citizens of Asia and Africa. What it feels is that the imbalance in the hierarchy of the top posts in the UN Secretariat has an effect on UN policies, an effect which may be, and perhaps sometimes is, adverse to the interests of Afro-Asian nations.

The feeling that the imbalance should be rectified has, since the admission of Japan, Nepal, Ghana and Ceylon, become intensified and will certainly be given forceful expression at the coming meeting of the General Assembly.

The reasonableness and substance of the grievance of the Afro-Asian nations can scarcely be denied. In fact, the Secretary General in

his annual report to the General Assembly admitted that representation of the nations of Asia and Africa in the UN bureaucracy was inadequate, and, he said, plans to recruit persons from those nations the citizens of which form a disproportionately small portion of the internationally recruited part of the UN Secretariat have been made.

India, along with the other nations of Asia and Africa, will wait to see when the "plans" start taking actual effect.

WORLD OF TEA

(Continued from previous page)

Irregular and easier, particularly Fannings. Tippy teas were very strong.

Strong and active demand prevailed at this week's auction held in Colombo. The UK, South Africa and other centres operated freely. Good and best teas were considerably dearer, registering an advance in prices. Low medium-grown teas were also generally dearer. Good demand prevailed for Persian Gulf types, while other sorts were irregularly dearer.

Ceylon produced 27.90 million pounds in July, showing an increase of more than 2.80 million pounds as compared to the corresponding month of last year. Total production, for the first seven months this year, amounts to 257.60 million pounds.

In Pakistan, production was lower at 6.8 million pounds in July as compared to 7.4 million pounds in the corresponding month of 1956. Total output for the seven months of the current year amounts to only 55.1 million pounds as against 20.6 million pounds in the corresponding period of last year.

US Notes

FURTHER increases in bank interest rates last week testify to the continued stringency in US money markets. Major commercial banks in New York City and other financial centres raised their interest charges to "prime" borrowers—top business credit risks from 4 to 4.5 per cent. This move was not unexpected. It reflected the demand for money and the higher costs of both government and industrial loans. And it came at the time of year when large companies normally begin to build up their borrowing in anticipation of the usual fall upswing in business. These borrowers now must pay the highest

interest rate in 26 years. And other commercial rates already are being adjusted upward to conform with the higher prime rate.

Only a few days after the increase in the prime rate, the US Federal Reserve Board, which is in effect the nation's money manager, announced an increase in its "discount" rate, the fee it charges for loans to the hundred of banks across the land that are members of the Federal Reserve System. The increase was from 3 to 3.5 per cent, paralleling the rise in the prime rate. It affected four of the nation's 12 Federal Reserve Districts—Philadelphia, Chicago, Minneapolis, and Kansas City.

As usual, similar increases are expected in the other districts. Last

REVERSE AD HOCS

(Continued from page 401)

The last point to note in the Reserve Bank returns is a further depletion in foreign exchange resources. Balances Held Abroad, after the transfer of Rs 15 crores from the Issue Department, are higher only by Rs 8.30 crores; and the loss of foreign exchange during the week must have been for an amount of Rs 6.70 crores.

The return of the State Bank for August 23 discloses a rise of Rs 1.96 crores to Rs 328.83 crores in Deposits. Since, at the same time, Advances fell by Rs 4.50 crores to Rs 162.20 crores, cash balances, after two successive weeks of decline, are marked higher by Rs 1.65 crores at Rs 44.30 crores. The State Bank's subscription to the New Loan has exceeded all expectations: Government securities are marked higher by Rs 30.70 crores at Rs 123.91 crores. Correspondingly, Other Assets show a fall of Rs 25.48 crores to Rs 9.34 crores. It would, thus, appear that the State Bank applied for the New Loan in two stages—one being direct subscriptions, during the week ended August 9, and another, in the week ended August 16, presumably relating to purchases from the Reserve Bank.

The Scheduled Bank return for August 16 shows Deposits more or less unchanged at Rs 1281.65 crores against Rs 1281.83 crores. The total of Advances is lower by Rs 6.73 crores at Rs 875.26 crores. Borrowings from the Reserve Bank have been repaid to the extent of Rs 14.79 crores, while indebtedness to the State Bank is marked down by Rs 1.13 crores. Both these have entailed a sharp reduction of Rs 13.50 crores to Rs 147.12 crores in cash balances. Finally, investments, as anticipated in this column, do not reflect the New Loan subscriptions of the State Bank; in the week ended August 16, they show a rise of Rs 1.73 crores, suggesting that the cash subscription of the Scheduled Banks other than the State Bank has been for an amount around Rs 7½ crores.

WORLD INFLATION AND THE USA

(Continued from page 402)

as acute as ours, and because they have a superior economic strength enabling them to withstand these difficulties more easily. But the difficulties are there all the same. Some of the articles written on the subject in the American Press recently, and some of the speeches made by American statesmen, bankers and businessmen, might have been written or made in Britain. Indeed, even allowing for the British national characteristic of understatement and the American national characteristic of overstatement, it is difficult to seem much actual difference between the conditions described.

It may well be asked why the United States are not resisting more firmly to wages pressure by means more effective than higher interest rates. After all, there is no overfull employment in the United States, nor is there Socialist political resistance to effective disinflation. The bargaining position of the American industrial worker cannot be nearly as strong as that, of his British opposite number having regard to the degree of unemployment in the two countries. Why is it then that American employers cannot make a stand? Is it because of their pathological fear of a return of deflationary slump? Admittedly, it is well worth while to pay an insurance premium against it in the form of a very moderate rise in prices. But the present rise in prices is too steep even if it did constitute an insurance against mass unemployment. As a matter of fact, so far from that being the case, the accelerated pace of inflation tends to aggravate the risk of a slump rather than mitigate it.

The American authorities and business men should realise this; then they might muster up the necessary determination to resist wages inflation even at the cost of major strikes and a minor depression. The United States are in an

week's increase in the discount rate was the biggest single jump of its kind since 1937, and it put the discount rate at the highest level since 1934. The rise in the discount rate is primarily a reflection of current money and credit conditions. As Federal Reserve officials themselves have pointed out, in recent years, changes in the discount rate have tended to follow, rather than lead, changes in other market rates.

In the face of the present money demand, financial analysts feel that unless the Board had acted promptly after the rise of the prime rate, member banks might have borrowed heavily from the Federal Reserve System, thus acquiring low-cost funds to be loaned at the increased commercial rates. According to this view, the higher money costs resulting from the higher discount rate will discourage this type of borrowing, and thus hold down the supply of available credit.

In any case, it is apparent that the Federal Reserve Board, which has an independent status and

acts accordingly, does not believe the time has come to relax its monetary policies. Many economists see in this an indication that the Board's experts, who are among the most careful and astute analysts of economic trends, believe that the present prosperity will continue, and that no serious contraction of business activity is imminent.

It is interesting to note, in this regard, the striking similarities in 1956 and 1957 developments. Last year, as this, the "tightness" of money was of major concern. This year's boost in the prime rate to 4.5 per cent came only two weeks earlier than last year's hike to 4 per cent.

And last year's increase in the discount rate to 3 per cent also came shortly after the rise in the prime rate. One may question how far this type of analogy can be carried. But it may be significant, nevertheless, that 1956, despite the concern over money and credit conditions turned out to be the best year ever for the American economy.

£ R S

Haileyburia Tea Estates

In spite of the publication of satisfactory results by the Parkins group of companies, the Plantation section in the Madras market is very weak and there are more sellers than buyers for all shares. It is true that the sharp increases in the provision for taxation underline the fact that plantation industries do not have any advantage in respect of taxation but the worst prospects had been discounted greatly in present prices. The fears now relate mainly to the lawless conditions that obtain in the various estates, particularly in Kerala.

The return of tea from both the Haileyburia and Sammi Valley estates for 1956 was appreciably higher at 16.37 lakhs lbs against 15.70 lakh lbs. The cost of production was lower by 1.16 cents per lb at 150.84 cents and the average price realised was higher by 22.12 cents at 234.17 cents per lb. The net profit, as stated above, very much higher at Rs 12.49 lakhs against Rs 9.07 lakhs for the previous year. The amount set aside towards depreciation is Rs 62,799 against Rs 80,973 but the provision towards taxation was almost double at Rs 6.25 lakhs against Rs 3.26 lakhs. It has, nevertheless, been possible to pay a final dividend of 15 per cent which, with the interim dividend, of 10 per cent makes 25 per cent for the whole year, the same as for the previous year. The transfer to the development reserve of Rs 2.5 lakhs against Rs 1.75 lakhs previously has, however, been made possible by drawing in on the large amount of Rs 3,99,490 brought in from the previous accounts. The amount carried forward is very much lower at Rs 18,414.

BALANCE-SHEET REVIEWS

(Continued from page 396)

The present issue of capital is limited to Rs 3 lakhs by the issue of 30,000 Ordinary shares in the proportion of one share for every equity share held by the existing shareholders. The directors are further empowered to dispose of the unallotted shares out of the present issue of 30,000 shares, in their sole discretion, in such manner and at such prices as they think most beneficial to the company.

£ R S

United Flour Mills

A substantial rise in sales from Rs 63.99 lakhs to Rs 83.69 lakhs is fully reflected in the earnings of the United Flour Mills Company Limited for the year ended 30th November, 1956. Production of atta was 495,420 maunds as against 401,390 maunds, while the net profit, before Depreciation and Taxation, amounts to Rs 4,06,801 as against only Rs 3,41,200 in the previous year.

The directors have set apart a sum of Rs 45,122 (Rs 47,922) for Depreciation; Rs 2.34 lakhs (Rs 1.46 lakhs) for Taxation and Rs 23,494 (nil) for General Reserve. No

Life Insurance Business

Sharp Fall in 1956

A sharp fall in completed life business during the year 1956 by about Rs 50 crores compared to completed life business in the year 1955 during the company regime, and rather slow progress during the first half of 1957, are the highlights of the interim report of the activities of the Life Insurance Corporation of India placed before the Lok Sabha by the Finance Minister.

As against Rs 238.30 crores of completed new business in 1955 and Rs 236.34 crores in 1956, the sum assured in 1956 was Rs 187.69 crores. This figure, the report goes on to say, compares favourably with the 1953 figure of Rs 155.20 crores. The year 1953, the report endeavours to make out, was free from abnormalities like reduction in rates and staff insurance schemes, which largely influenced 1954 and 1955 figures and, therefore, according to the report, constitutes the correct base for comparison purposes.

In support of this view, the report specifically points out that, during the years 1954 and 1955, some of the leading insurers wrote substantial business under staff insurance schemes. Before the schemes were withdrawn in the latter part of 1955, the insurers had written business under these schemes for an amount estimated at Rs 18 crores for that year. A further factor contributing to accelerated new business in 1954 and 1955, the report goes on to say, was the sudden spurt given by estate duty policies. New business of this type in each of the years 1954 and 1955 was of the order of Rs 7 crores. Substantial reduction in rates in 1954 was adduced as another powerful reason contributing to new business in 1954 and 1955. According to the report, a large number of policyholders took out new policies with the idea of substituting them for their old policies which were made paid up. The extent of this substituted new business can only be roughly estimated. The authors of the report estimate that this factor alone may have contributed to an increase in the level of new business in each of the years 1954 and 1955 to the extent of Rs 35 crores.

The report thus makes out that a total of about Rs 60 crores (35+18+7) should be a fair estimate of abnormal business in the years 1954 and 1955. Normal business of 1954 and 1955 should thus be reckoned without this Rs 60 crores. In that reckoning, Rs 178.30 crores in 1955 and Rs 178.34 crores in 1954 should be the correct business figure in the analysis of the

report—compared to Rs 187.69 crores in 1956.

This thesis of the Corporation, in point of fact, will appear somewhat laboured. Nationalised life insurance commenced operations, it will be recalled, on a flat reduction in rate in almost all categories of life insurance by Re 1. If reduction in rate is an incentive the Corporation reaped the benefit of previous reductions with its own reduction added to it. Estate duty, again, is a permanent feature of country's economic life. The Corporation's claim that, by 1956, the initial demand had spent itself is not wholly correct. Estate duty insurance is a new adjunct of life insurance business. Even today, it is not fully understood. Correct salesmanship could have produced in 1956 and can produce even today a figure comparable to the initial demand in 1954 and 1955. On the 19th January 1956, Government of India inherited a huge legacy of company business. It is common knowledge that in the company regime placements swelled disproportionately during last three months of the years. Completion of these placements was generally effected by February and March of the next year. On the 19th January 1956, that is to say, on the day of nationalisation, Government of India inherited the last quarter of business of the previous year as a windfall legacy, and the business thus obtained was, in large measure, responsible for completion of the figure now presented.

If, therefore, so called abnormalities swelled the business figures of the company regime in the years 1954 and 1955, they played no less a part in completing the business figure of 1956 under the management of the agents of the Government of India.

Organisational and administrative difficulties in the wake of nationalisation have been adduced as further cumulative reasons for the shortfall in business in 1956. The authors of the report go on to say that, in 1956, the process of organising the Corporation's divisional and branch offices had not been completed. There was, again, according to the report, inadequacy of technical and experienced staff at the various offices. Agents and other field workers, the report points out, had not got accustomed to the new set up and the office staff had not become familiar with the procedures and methods introduced by the Corporation.

Nobody will deny that the Corporation, to start with, faced tremendous organisational difficulties

in endeavouring to coalesce in one unified whole more than a hundred and fifty companies of various sizes, having different methods of organisational procedures and book keeping. It was no less difficult to integrate the staff of the various offices with a wide variety of salary scales and allowances into well defined cadres and scales of remuneration. It needs to be pointed out, however, that the best part of 1956 was under custodians appointed by the Government, and that the custodians got all the advantages of company regime to boost premium figures and new business. The changeover from one regime to another is bound to cause dislocation with consequent fall in business. Nevertheless, the large fall is largely attributable to inexperience in business management of the custodians and the somewhat amateurish handling of life insurance, in the initial stages, by the agents of the Government of India.

This is, in large part, even the story today. Centralisation of administration has led to procedural delays which have acted as a deterrent. Theoretical bias led to planning of extraordinary rules both for acceptance of business and procurement. Rules framed were revised before the original rules could make any headway. Thus, it was once announced that an agent would have to secure business worth Rs 40,000 a year (against Rs 3,000 previously) before his term was renewed for another year. A few months later, the figure was brought down to Rs 20,000. It was announced that agents would require no licence; the order was revised later, and the fee was realised from agents with penalty. Outright elimination of 'benami' and personal agencies caused a large fall in business and made the position of field workers, who depended in no small measure on 'benami' agencies, irksome and uncertain. It should have been eliminated by stages without causing dislocation in business and procurement. The reason for all these anomalies is that nationalisation was effected abruptly without preparation of any kind. Ideological bias played most with the ruling party. Sir Chintaman Deshmukh, pressed from all sides for funds, saw in nationalisation a handy fiscal weapon. The Civil Service went the wrong way, with the result that life insurance in India, even today, is neither stabilised nor organisationally secure.

That accounts for the slow progress even in 1957, for, completed business for the first six months amounted to Rs 73.54 crores. With many new lines of life insurance, including the much publicised 'Janata Policies', the Corporation should be able to end 1957 with a creditable figure. It can only be hoped that its organisation will be primed to subserve the desired end. Principal Agency Modifications:

A Bill seeking to enable companies and firms now functioning as principal insurance agents to function in future also if they so desire

but only as ordinary insurance agents was introduced in the Lok Sabha by Mr T. T. Krishnamachari, the Finance Minister.

The Bill seeks to amend further the Insurance Act 1938.

The statement of objects and reasons of the Bill points out that, under Section 42 B of the Insurance Act 1938, no insurer can appoint or transact any insurance business in India through a Principal Agent after August 31, 1937. Individuals who have hitherto been working as principal agents can, however, continue in business as ordinary insurance agents. The statement goes on to say that the general insurance industry has suggested that the knowledge and experience of the business acquired by the companies and firms who were working as Principal Agents should not be lost. It is, therefore, proposed that the Principal Agents at present in business may, if they so desire, continue to play their part in the industry by acting as ordinary insurance agents. Clause 3 of the Bill seeks to amend the Insurance Act for the purpose.

Extension of Principal Agency on the existing terms figured prominently in the various memoranda submitted to the Government of India by the general insurance associations and in the speech delivered recently by Mr R. M. Desai, outgoing Chairman, Indian Insurance Companies Association, Bombay. Government of India, in acceding to the representations, have conceded only the form without the substance. Principal Agents so far had a margin of five per cent over ordinary agency terms. This five per cent enabled them to service ordinary agents, the clients and to maintain the personnel required to service the industry. They will no longer be able to maintain the organisation and to play their part in pooling business through ordinary agents. Managing Agency houses, who formed the main bulk of Principal Agents in the country, will, therefore, be reduced to 'own case' agencies. This is not permissible under current regulations. Presumably, this will be permitted.

The proposed amendment will, thus, permit firms and companies to hold ordinary agency appointments as against only individuals permitted hitherto, but it seems that permission will be limited to existing Principal Agents. No new appointment, even on ordinary agency terms, as Principal Agent is contemplated. Nor is there any indication as to whether the Rs 20,000 stipulation of premium income in any one calendar year for a Principal Agent to continue in business as a Principal Agent will be waived.

Section 118 of the Insurance Act, which exempts certain categories of business from the provisions of the Act, does not cover the case of a business carried on by a Government Company as defined in Section 617 of The Companies Act 1956. Clause 5 of the Bill seeks to amend Section 118 in this behalf.

THE dust raised by the blasts of criticism, when Mr T. T. Krishnamachari announced the Budget for 1957-58 is, at long last, in the process of settling down. The interim of twelve weeks, between the announcement of the new taxation proposals and the final passage of the Bill in Parliament, has been, to paraphrase Shakespeare, like a phantasma or a hideous dream. As sandstorms usually are, if I may now revert to my first metaphor, the debate largely consisted of hot air passing over dry and arid wastes. Some sand dunes changed their shape; some sand dunes disappeared, only to have others take their place. So it has been at New Delhi. Far reaching tax proposals were submitted by TTK; some of them have changed in form while, however, retaining the bulk of the original substance. Some have disappeared only to be offset by adjustments in other levies. I do not see that, from the point of revenue to be garnered in into the treasury, there has been any substantial or considerable change. True, there have been concessions. And none but the obstreperous and obstinate will deny that the concessions represent, not compromising on the part of the Government, but a fair and considered series of reliefs.

I do not intend to detail these concessions; for, it seems to me that this is the least important aspect of the Budget. What is fundamental is, not that we have had an epoch making Budget which is to raise Rs 100 crores by way of new taxes; basically, what we need to know is that, from the tax point of view, the Budget for the Second Plan has been framed in full. It is, may I suggest, the failure to look upon the Budget from this standpoint which has been responsible for much needless, futile and regrettable bickering in the country. The Finance Minister was all but crucified. In quick and easy stages, from having been the most popular Minister, the while that he held the portfolio for Commerce and Industry, he was quickly transformed, in the eyes of some circles, into the most unpopular kind of ogre. There was a concerted attack, a personal one I may add, on his capability to hold office. So much so, it has required great patience on the part of the Finance Minister to desist from tendering

Clive

Street

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

Gossip

his resignation in a huff. There has been a tendency to think that TTK has himself to thank for his unpopularity, since he was unduly harsh in his Budget proposals. Frankly, this implies that another Finance Minister might have tempered his tax proposals and may have sought less by way of new revenue. As I shall presently show, such a belief would be totally erroneous.

The first axiom that we have to bear in mind is that all Government policy is governed by the paramount consideration of the Second Plan. It was, if I remember right, some time last year, that Government (through, I think, the Finance Minister) first indicated the overweening importance of the Second Plan by asserting that India would either swim with it or sink with it. Of course, there is no thought of going under. How best we may keep afloat and how we can equip ourselves to reach the beckoning shores of industrialisation and economic progress, are matters which will have been engaging the serious consideration of Government. I suppose that, toward the end of last year, there was some distraction offered by the impending general elections. But we may be sure that, even in the midst of such preoccupations, those in authority would have come to the clear conclusion that the time lost in the general elections would have to be swiftly made up. To do so, the first thing that had to be done was to effect a crystallisation in the ideas relating to internal resources for the Second Plan. Already, at that time, the Plan was known to involve a larger overall outlay. Already, by that time, inflationary pressures were felt in the economy, thus pointing to the inescapable need for reducing the quantum of deficit financing in the scheme of resources. Inevitably, therefore, the decision must have been reached that, particularly in view of the failure of the State Governments in this regard, the tax effort on the part of the Central Government must be prosecuted without delay and with vigour, determination and imagination.

If, thus, Government were to concentrate upon new taxes, and if, moreover, the target for revenue from additional taxes was to be

stepped up, it must have been obvious that it would be necessary for Government to institute all the revenue proposals as early in the Second Plan as possible. I should think that, some time late last year, Mr Nehru himself would have decided unambiguously on this course of action. That meant it would be necessary to announce, in the 1957-58 Budget, tax proposals which would be sufficient to fulfil the tax target of around Rs 850 crores. We may presume that Mr Nehru would have made known this objective to his trusted Finance Minister. The target thus set for him, and mindful of the basic considerations in tax policy arising from the adoption by India of its objective of a socialistic pattern of society, Mr Krishnamachari went ahead and drew up tax proposals intended to raise Rs 100 crores a year.

The roof fell down on him—not least, strange as it may seem, in Parliament and from members of his own party—when the revolutionary new taxes were announced. This was being less than fair to TTK. For, there is no score on which Mr Krishnamachari can be blamed for his taxes, his fault was that, faithfully and conscientiously, he fulfilled the task that was allotted to him. The tax proposals that TTK announced were not merely the new imposts of the financial guide, mentor and steward of the Indian economy; they represented the total effort in behalf of the Second Plan, as decided upon by the country in Parliament—since, in approving the Second Plan, approval was also given to new taxes being imposed. Moreover, it was not merely a Finance Minister's Budget, but a Budget that had been decided upon by the Cabinet and by the Parliament. All that can be said is that, if there had been any other Finance Minister, the new taxes may have varied—but the total new revenue sought would have been the same.

I would like to remind the reader that, in the current year, we have had a quite unusual and lengthy intervention in the debate on the Finance Bill by the Prime Minister. At that stage, Mr Nehru felt called upon to make it clear that the Budget was not the private domain of the Finance Minister and that "the proposals that have

COMPANY LIMITED
Dasnagar, Howrah.

been put forward are the proposals, as the House must necessarily know, of the Government, and with the full support of every member of the Government". Secondly, Mr Nehru said, "this whole question of the Five Year Plan has become basic to most of our activities; it is comprehensive; almost everything goes into its scope". At the same time, there is the recognition that the Plan is to be flexible, that it is not "sacrosanct". Thirdly, Mr Nehru considered it a virtue of the proposals that an attempt was being made, in a sense for the first time, "to strike out a new line in taxation". Finally, the Prime Minister stated that, in concurring in a Budget which seemed very harsh, India wanted "to indicate to the rest of the world that we are prepared to swallow many bitter pills to retain our independence and to maintain our progress". It will be seen that Mr Nehru has not only sought to absolve Mr Krishnamachari of sole blame for the severity of the tax proposals, but he and all the members of the Cabinet also share the responsibility for what I would like to think of as the Second Plan Budget.

As I said, there has been a good deal of debate—acrimonious, bitter, complaining—about the new taxes. I am afraid such an attitude shows either that the Second Plan was not read or was not understood when it was first presented to the people. For, it was explicitly stated therein that a gigantic tax effort would be necessary. So, the present criticism betrays an unwillingness to accept the sacrifices called for by the Second Plan and ignorance as to the threat to India's political freedom if, on the economic plane, we do not achieve the progress set out for us under the Second Plan. In either case, it is a sad reflection on Indian intelligentsia.

The hullabaloo, fortunately, is in the process of dying down. On the side of Government, the present foreign exchange difficulties have provided them with an opportunity to show the flexibility in their attitude to the Second Plan; also, some of the deliberations on the Budget have enabled Government to offer concessions where reliefs, in justice and equity, were clearly indicated. We thus come to the

final stage of the Second Plan Budget, the utterances in Parliament by the Finance Minister just prior to the passage of the Finance Bill.

I do not propose to deal at all with the debate on the two new taxes, the Expenditure Tax and the Wealth Tax. Instead, I shall briefly summarise the sum and substance of what the Finance Minister has been saying over the past week. The Second Plan was an exacting one; and it could be seen through only if the maximum

effort was forthcoming from all sections of the community. In the light of the current foreign exchange difficulties, Government might be rephrasing or reallocating priorities. We would like to have weather the next year or two, particularly in the sphere of foreign exchange. But it needed to be realised that the present crisis was "a crisis of development", not "a crisis of stagnation or of confidence". There was no reason for India to feel defeatist, because our economy was "basically sound"; and Mr Nehru repeated the same

thing at a meeting of the Congress Parliamentary Party, when he said that India was economically sound. It is here interesting to note that Mr Nehru decried the notion that a socialistic pattern meant the taxing of the rich few and the distribution of the proceeds among the poor. The socialistic pattern could be achieved only by maximum production and industrialisation by adopting the most modern methods. There is another point to this need for industrialisation. If India is to incur substantial foreign exchange liabilities, under

deferred payment schemes, import policy has to be geared to the need for the manufacture of goods which we could export, the foreign exchange earnings from which could be utilised in meeting the liabilities that we incur.

★

We have had the clearest possible clarification of the rationale for the 1957-58 Budget. It is, in brief, that all Government policy is subservient to the paramount need for going ahead with the Second Plan. Now that the debate on the Budget has finally ended, it is time that the nation applied itself and its energies and efforts to the task of consolidating our political independence by economic progress and social justice. As Mr Nehru recently stated, if India is to reach its objective of a socialistic pattern of society, it will involve, for all of us, hard work.

WORLD OF FINANCE

(Continued from page 400)

ments in this context. For, basically, and from the short-term point of view, the enunciation by Mr Iengar of the Reserve Bank's attitude to the banking system is eminently correct and will, we hope, be justified by future events. Let us presume that, by the end of October, Advances of Scheduled Banks will decline to Rs 800 crores. By that time, we anticipate that Deposits of Scheduled Banks will rise to a level of, roughly, Rs 1,350 crores. In other words, by October end, the advances-deposits ratio of Scheduled Banks will be just below the 60 per cent mark. If these two developments materialise, the Scheduled Banks will be in a position themselves to rectify one of the maladjustments which currently give them pause. For one thing, the financing of the 1957-58 busy season will present no difficulty. For, on the basis that expansion in Advances over the next busy season will be Rs 200 crores, the peak of Advances would be Rs 1,000 crores. During the same period, we would expect Deposits to rise by a minimum of Rs 100 crores. So, the advances-deposits ratio, at the peak of 1957-58 busy season, would still be below 70 per cent.

In a sense, this restoration of the equilibrium in the ratio of Advances to Deposits may be said, from the national interest, to be an offshoot. The real purpose of the Reserve Bank directives is to reduce the volume of bank credit utilised for nonproductive purposes. If, as a result, the upward trend in the price situation is arrested, it will be justification enough for the action that has been taken by the Reserve Bank. For, it would be triumphant proof of the suitability and appositeness, in the Indian economic conditions, of a policy of selective monetary control; and it would also prove that the so-called orthodox anti-inflationary measures will be out of place in India.

Bombay Review

Gateway Gossip

India's Policy in World Perspective

FOR some weeks, Mr H. V. R. Iengar, Governor of the Reserve Bank, who has been meeting with bankers and money market representatives both in Bombay and in Calcutta, has not concealed his concern over the present level of bank credit in reference to the potential demand for finance in the next busy season. He has also been freely expressing his conviction that, if the Reserve Bank is to extend facilities to the scheduled banks on the same scale and with the same liberality as in the last busy season, it must needs satisfy itself that the credit base is healthy. The credit base could be considered healthy only if, in the current slack season, bank advances reveal some measure of the attributes of self liquidation. Seasonal finance is traditionally credited with this impulse of expansion between November and April and automatic contraction from May onwards. Considering that the peak of bank credit in the 1956-57 busy season was at a level of over Rs 930 crores, the 1957 slack season low must be in the vicinity of Rs 800 crores.

A reduction of over Rs 100 crores in outstanding bank credits is, in no sense, a tall order, considering that it amounts to 10 per cent of the total bank advances in the busy season. But, bankers are, understandably, pressing into service the argument that, in the last two or three years, the traditional seasonal pattern of finance in this country has undergone fundamental changes; and that seasonal distinctiveness is getting blurred. In simple terms, the bankers contend, bank credits are now increasingly influenced by the accelerated expansion in industrial production whereas, in the not distant past, they were mainly dominated by crop finance and crop movements. The Reserve Bank is equally alive to the changes which are giving the primary place to industry and relegating agriculture to a secondary place in the tenor and destiny of the money market; at the same time, it is attaching appropriate importance to the obvious fact that agricultural production and movement of agricultural produce do continue and will continue to be a significant element in the totality of busy season requirements. This element was the major factor in the old days; it is now a minor factor, but one of admitted magnitude.

To the extent, then, that the Rs 930 crores and odd of bank credits extended in the last busy season did undoubtedly contain a

proportion of facilities for agricultural needs, the process of self liquidation must continue to be in evidence in relation to agricultural finance. So, bankers cannot justifiably persist in the plea that the self liquidating character of seasonal finance is completely a thing of the past. Mr Iengar, on a study of the break up figures of bank advances, is convinced that seasonal contraction to the extent of 10 per cent will cause no disturbance or hardship, but, on the other hand, will be a vital factor in the health of the money market.

If the facilities of the money market are exploited for unhealthy speculation or anti social hoarding, it cannot be claimed that this market is functioning on healthy lines. That is why, while desiring no curtailment in the finance provided for the expansion of production, the Reserve Bank has, as and when necessary, issued directives restricting credit in those segments in which undesirable trends have been manifest. It is one thing for the Reserve Bank to issue directives. It is another thing for the banks to carry out the directives. The scheduled banks at their head offices may be fully co-operative; but have they the necessary control over the branches to ensure prompt compliance? The Reserve Bank is not satisfied with the effectiveness of the response to its directives. The warnings have been repeated by the Reserve Bank's Governor. If the warnings, too, produce no worthwhile effect, sterner action will follow. It is up to the banks to make extreme measures unnecessary.

There could be no relaxation in the pressure thus exerted on member banks until the price line responds adequately. Selective pressure sternly enforced in this way must not be construed as credit squeeze. Credit control in such spheres as reveal unmistakable evidence of inflation is an inescapable duty under any circumstances. Particularly so now, as the Prime Minister, with a kind of hunch, has sensed that liberal agricultural loans account for the high level of prices, and has taken recourse to the unusual step of writing directly to the Governor of the Reserve Bank. Also because Mr Iengar will have, at the pending annual session of the World Bank, to make out a case for the appositeness and effectiveness of the official monetary policy vis-a-vis the particular conditions of the Indian money market and the particular requirements of the Indian economy. His hands will

be greatly strengthened in this respect if bank credits decline appreciably by the middle of September, and if, as a consequence, prices tend to be definitely downward. Mr Iengar's warnings have been taken seriously by the commodity markets, which have all registered price declines. The weekly price index, too, has registered a reversal of the long persisting rise. But, the need of the situation is for more substantial and more enduring evidence.

Let us suppose that, by the time Mr Iengar confers with the World Bank's chief and officials, Bank advances in India have come down to Rs 825-830 crores, and the prices of foodgrains and of industrial raw materials have come down by ten to twelve points. With what authority and persuasiveness will he then be able to speak on the virtues of the selective monetary policy which India has been pursuing for over two years! We in India have no doubt that the harsh techniques of credit squeeze would have inflicted great damage on our productive efforts at a time when there is the utmost need to maximise production; and that qualitative credit control is the only policy suited to our circumstances and needs. There is yet no outside recognition of the practical beneficence of such a policy.

It may be taken as certain that, at the coming foregathering of

bankers and finance ministers of the world, credit policy and currency stability are the two topics which will be most discussed. The US authorities will explain how the Federal Reserve rate has been stepped up in no less than seven successive stages; how the rate for even twelve months' bonds has been deliberately allowed to rise to 4 per cent; and how the prices of bonds have been steeply declining. They will refer to all these developments as impressive testimony to the determination of the monetary authorities to root out inflation! If asked, as they are sure to be asked, whether inflation has been curbed, the US authorities can at best give a dubious answer. Those who attend these conferences cannot, however, fail to take note of the fact that public opinion on the efficiency and wisdom of official policy is far from definite.

The UK authorities will, in their turn, expound their policies and the outcome of such policies. The grim resolve in the evolving of policies and in their implementation will be admitted; but the results in this case, too, are more confusing than convincing.

West Germany will dilate on an opposite thesis. While the United Kingdom uses the Bank Rate weapon to correct a deficit in the balance of payments, West Germany adopts the same process to

(Continued on page 412)

One weapon the world can forget

It was hit-or-miss. Usually miss. Thank goodness that in the unending war against insect pests better weapons are now to hand than the unreliable fly-swatter.

To-day, Science has provided for homes, offices, stores—wherever insects are a problem—a new insect-killer of great power which gets insects *everywhere*, whether they fly or whether they crawl.

It is *Shelltox* with *dieldrin*. *Dieldrin* is a wonderful new *SHELL* insecticide, the strongest and most persistent ever known, which world health experts have proved in their fight against insect-borne disease.

Used as a space spray, *Shelltox* rapidly clears the air of insects. But it does much more. It introduces a new technique into insect-killing—brushing the liquid on to a surface so

that no insect can crawl there. This is because *dieldrin* stays effective longer than any insecticide ever before. You can now secure a room against insects simply by spraying this safe liquid on to the floors, windows, walls, cupboards, etc.

The housewife in her home, the caterer in his restaurant, the motorist in his car, the industrialist in his factory—they all enjoy the fruits of modern oil research through products which *Burmah-Shell* are distributing day and night in India.

Protection of Industrial
Property Rights

The law relating to different branches of industrial property in our country has long been considered unsatisfactory. Though there has been talk of reform for over six years now, progress is confined to the enacting of a new Copyright Act. A serious attempt had, however, been made by Government to amend the Patents Act in 1953. A new Patent Bill, materially amending the Patent law of India, was presented to the last Parliament but it was allowed to lapse. It has been explained by Government that after the preparation of the bill many suggestions had been received, several of which were considered useful and necessary. It has, therefore, been decided to bring a new bill. Justice Rajagopala Iyengar of the Madras High Court has been entrusted with the task of preparing a new bill and it is expected that it will be taken up by Parliament next year.

In regard to Trade Marks, Government have already prepared a bill on the basis of the report of the Trade Marks Enquiry Committee. It has also been stated on behalf of Government that they are actively considering the question of amending certain other Central Acts, which have a bearing on Trade Marks.

Speaking at the general meeting of the Trade Marks Owners' Association, Mr. K. T. Chandy pleaded for early action by the Government in amending the present laws relating to patents and trade marks. He pointed out that due to the inadequacy of the present provisions of the Penal Code and the Merchandise Marks Act in deterring infringements of trade marks and the use of false and misleading trade descriptions, the consumer public in general and trade mark owners were put to great difficulties.

Mr. Chandy also spoke of the need to give suitable protection to applications of origin. Associated with any measure designed to grant such protection, there must be an effort to create voluntary organisations to ensure that conditions of production in regard to a particular article in a given area were uniform. Such a step was dictated by India's increasing participation in export trade.

Mr. Morarji Desai, Minister for Commerce and Industry, who addressed the meeting, pointed out that the protection and regulation of industrial rights were not to be sought as ends in themselves but as means of achieving the economic progress of the country. He appealed to big groups of

businessmen not to pursue small producers if similarity or imitation was not material. It should be borne in mind that small producers were an essential factor in the economy of the country and that Government had to ensure that the law held a fair balance between the two.

*

Students and National Work

Addressing the new graduates at the annual convocation of the University of Bombay, Mr. T. M. Advani, Vice-Chancellor, exhorted the educated youngmen of the country to pause and think about the higher values which had no material reward. In this regard he pointed out the great work of national reconstruction that was being carried out, afforded the most suitable form of unselfish endeavour on the part of every individual. Elaborating his point Mr. Advani said that if all the young persons in the country gave just one hour per day for some national work all the financial troubles of the country would disappear in a few days. We have the inspiring example of West Germany which within the last ten years has staged a remarkable recovery from the ravages of a disastrous war. This phenomenal change has been largely brought about by the "free" labour of the youth of that country.

Referring to the conditions obtaining in the universities and

colleges, Mr. Advani stressed the urgent need for tackling the problem of over-crowding in the colleges. He pointed out that there was terrible overcrowding in colleges with the result that there was little personal contact between teacher and the taught. The remedy lay in bringing about conditions which made it possible for the majority of the students seeking higher education to take to practical courses which would be of material benefit to them and the country. Though he hoped that in the near future, the Ministry of Education and the University Grants Commission would tackle the problem effectively so that university education was sought only by a select few, it would appear that considerable time has to elapse before such a consummation can be achieved. For the task of establishing suitable institutions for imparting technical education of the type that is increasingly in demand in the country is not proving as easy as anticipated. In this connection it may be remembered that the progress of technical education has not been quite satisfactory during the First Five Year Plan period.

It would appear, therefore, that no material change can be expected in the rush for admission to colleges in the immediate future. It is no good saying that the overcrowding should be avoided. It is the duty of the Government and Universities to do their best to enable the students to face the life that awaits them with courage especially when they are unable to show the students any fruitful alternative.

touching a low of Rs 141.50, improved again at the close to Rs 142.50, the highest touched being Rs 142.87. August touched a high of Rs 158.75 and a low of Rs 158, to finish at Rs 158.50. In the ready section, Bold quality was quoted at Rs 31.75 and Groundnut Oil at Rs 189.50.

The Linseed section continued to put on a steady appearance on account of the sustained support at lower levels on optimism regarding business in linseed oil with the UK and Australia. September delivery closed at Rs 28.56 and May at Rs 28.81—the highest levels touched being Rs 28.69 and Rs 28.94 respectively. In the ready section, the rate was quoted at Rs 28.50 and Linseed Oil at Rs 15.00.

The market for Cottonseed futures displayed a quietly steady undertone in thin trading. September delivery closed at Rs 102.25 and May at Rs 88.50—the highest levels touched being Rs 103.50 and Rs 89.50 respectively.

Gold & Silver

The Bombay Bullion Exchange commenced on a quieter note, but eventually steadied up on short-covering. The continued absence of Kolar offerings together with sustained demand for the spot metal locally as well as from Madras aided sentiment in the Gold section. Bhadon delivery moved between Rs 107.00 and Rs 107.87 and Asouj delivery between Rs 107.21 and Rs 107.62, to finish at the latter levels respectively. Spot changed hands at Rs 107.94 to Rs 108.25. Sovereign was a narrow market around Rs 70.50. Gold arrivals amounted to 2,000 tolas against an offtake of 4,000 tolas. Unrefined metal receipts totalled 6,000 tolas.

Sentiment in the Silver section was rather subdued although a steadier tendency was noticed towards the close. Arrivals amounted to only 3 bars against an offtake of 35 bars, a major portion of which was railed to Surat. Unrefined metal receipts totalled 37 bars. Bhadon delivery moved between Rs 181.00 and Rs 182.12 and Asouj delivery between Rs 181.50 and Rs 182.50, to finish the week at the latter levels respectively. Spot changed hands at Rs 181.69 and Rs 182.00.

Yarn

Listless conditions continued to prevail in the Yarn market. The market for Cotton yarn also ruled weak, mainly due to a sharp fall in raw cotton and reports of accumulation of stocks of yarn with the mills in South India. There were also reports that many mills in South India were inclined to reduce their prices of yarn with a view to disposing off their stocks. These

(Continued on page 418)

World of Cotton

Accumulation of Cloth Stocks

ALTHOUGH conditions in the Bombay Cloth and Piecegoods markets have continued to rule steady and demand is noticed for almost all varieties, mills have reported accumulation of stocks with them. Stocks with the mills in Bombay alone, at the end of July, are placed at a record level of 2.28 lakh bales as compared to 1.86 lakh bales at the end of 1956. These figures, however, include even the goods which have been sold by mills, but not yet lifted by the trade. Trade circles consider that the unsold stocks of about one lakh bales compared to the monthly production of about 95,000 bales in Bombay are quite unusual. It is, therefore, difficult to say as to how the situation will be remedied; but, if the position is allowed to deteriorate further, a few more marginal units may have to close down.

Trouble with the industry started since the increase in excise duty as from 1st September, 1956 and the cloth market has not returned to normal since then. Unless measures to find outlets are taken in right earnest, the position will deteriorate further to the detriment of the interests of the industry. Official circles are of the view that the present trend of consumption of textiles shows no perceptible indication of any consumer resistance as such. It is very likely that wholesalers and retailers, who are more conversant with consumption trends, have been reluctant, in the present tight money conditions, to lock up their funds by stocking goods over and above the average pace of buying in the country. Official circles believe that mills should cut down production by working only two shifts instead of three until the glut disappears. At the present rate of consumption which shows no noticeable increase, the decision to cut down production will be worth considering.

Meanwhile, fears about damage to the new cotton crop, on account of excessive rains, have now receded. Latest reports from the Punjab indicate that the crop is progressing well. Similar conditions are reported from Gujarat, Madhya Bharat and Khandesh. Little damage is, however, feared in Gaorani and Jharilla areas where no break in rains is still reported.

For obvious reasons, rates in the forward cotton market sought further lower levels during the week under review. The Reserve Bank's move to tighten bank credit for cotton and other cash crops also provided a jolt to the

market. Although rallies of a temporary nature, due to short-covering on occasions, were noticed, the general sentiment continued to be bearish. The turnover was only 12,000 bales. ICC Jharilla March opened at Rs 679.50 and, after improving at one time to Rs 683.50, receded again at the close to Rs 676 under liquidation.

The Spot section also ruled quiet with mills reluctant to extend commitments. Delivery contracts in new crop cotton, however, started on Monday. Although seven contracts had been permit-

ted, the business put through at Sewri hardly exceeded 300 bales. The majority of traders and mills, for the time being, adopted a "wait and watch" attitude, pending a clearer picture of the restrictions imposed on the trade by the authorities.

Delivery contracts, permitted by the East India Cotton Association, have undergone radical changes. Private types or sealed samples or stamped bales of any descriptions of cotton, tenderable under the hedge contract, cotton with more than 1" staple length and exportable varieties like Bengal, Assam, Comilla, Oomra, Deshi Mathia and Mungari, will not be subject to

settlement clearing unless mutually agreed to by the parties and so stipulated in the contract. Similarly, out-station contracts are not under the supervision of the authorities. Traders, therefore, feel that speculative activity will shift to those contracts which are out of Government control. The outstation business is also likely to increase considerably since it is out of the purview of the Association.

In the foreign section, there was only moderate buying. Some enquiry was noticed for Sudanese and Egyptian styles at lower rates.

(Continued on page 421)

Indeed, without coal much of our industrial and commercial life would be brought to a standstill. What's more, the coal industry must continue to grow if it is to keep in step with the country's expanding demand.

and in the progress of this vital industry, the Life Insurance Corporation of India plays a significant part. As the largest institutional investor in the country, it channelizes the savings of millions of policy-holders.

By investing funds in the coal industry, the Life Insurance Corporation benefits the Policy-holder in two ways. Directly, by ensuring a secure investment with profitable returns. Indirectly, by fostering an enterprise basic to the national economy.

Life Insurance Corporation of India

A Listless Week

AS the debate on the Budget winds its way to its weary end, the lack of interest in the real issues involved on the part of parliamentarians is becoming more and more evident. Law making and running a country are exacting chores, and those who had imagined the fruits of electioneering too exclusively in terms of a worthwhile social amenity are finding their tasks rough going. To an observer from the galleries, it is patent that, except for a handful, the 500 Members of Parliament are finding the debates exceedingly tiresome. And with the "Crisis Psychology" seeping in, they also find them depressing. Even among those who take more than a nominal interest in the discussion, there is too obvious a tendency to run away from the real issues.

Take, for instance, the debate on the demands of the Commerce and Industry Ministry. The foreign exchange situation is quite understandably the subject of deep concern for every one. But, does that exhaust all that needs to be debated in considering the work of the Ministry of Commerce and Industry? And again, even if we should discuss it—not that there is anything fresh to be said on the subject—should a disproportionate amount of time be spent on the alleged dissipation of foreign exchange by the thoughtless import policy of the last five years? It is not as though this particular allegation has not been made before and answered. And yet, scarce parliamentary time is being wasted by repetition of these allegations and the inevitable reply from the persons concerned. Not unnaturally, both the present and the former Ministers of Commerce feel it a needless reflection on a record that was, curiously, praised at the time it was implemented. Mr Morarji Desai spoke with some warmth in defence of his colleague and dealt in detail with the various strands of the allegation. He considers the criticism of the "import muddle" as a form of escapism, if not something far worse. Critics were getting retrospectively wise, because, so Mr Desai averred, "Mr Krishnamachari has displeased them on account of some measures (probably taxation measures) he had taken on behalf of Government." Giving figures of imports since 1952, he pointed out that import of consumer goods has decreased steadily from Rs 360 crores in that year to Rs 193 crores in 1956 and it is likely to be even less this year. He thus reiterated the fact that has been repeatedly

made by all students of the subject, including the Reserve Bank, that the strain on foreign exchange has been the result of accelerated expenditure on development implied in the very basis of the Second Plan and that this was an anticipated strain, though its impact has been aggravated by external factors.

Mr Krishnamachari himself dealt with this question in his reply to the demands of the Finance Ministry. He made substantially the same point as was made by Mr Desai. Dealing with the demand for a Commission to inquire into the reasons for the depletion of foreign exchange, Mr Krishnamachari said that he was willing to "stand such a commission". But, he added, quite correctly, that any such Commission would have to condemn the people who approved the plan, because "the plan was the cause of trouble and not the policy pursued in the past".

But, apart from the rights and wrongs of that policy, what purpose is to be served by getting findings on the past import policy? The fact staring us in the face is the present foreign exchange situation, and no amount of inquisition into the causes of such a state of affairs can cure it. The inquiry can only be academic, for, no inquiry into this question can hold out any new "lessons". In economics, the number of possible courses open in a particular situation is strictly limited and they are soon learnt, at least theoretically. If foreign exchange resources are scarce, the only thing to do is either to increase them, by export earnings and other forms of acquisition of foreign funds, or to cut imports to the bone. Even on detail, the hypothetical inquiry cannot throw much light, since circumstances have changed and the ideas needed to deal with the situation now may have to be entirely different from those that might emerge from the inquiry into past conduct. So a preoccupation with the past causes of the present situation in foreign exchange scarcity is merely a species of evasion of the duties before us now.

And these duties are plain, and were indicated by Mr Krishnamachari in his reply to the debate on the demands of his Ministry. The present crisis, he rightly pointed out, was "a crisis of development" and not a "crisis of stagnation or confidence". Therefore, these difficulties have to be faced with equanimity and resourcefulness. The fact that our foreign exchange

resources are being strained by the demands of the Plan is undeniable and indeed was foreseen by the Plan itself, though various factors have added to the magnitude of the difficulties that we are actually facing. There is a general inflationary pressure on the world's economy as a whole and, consequently, the cost of imports has gone up very much. Besides, more foreign exchange has now got to be found for food imports and defence needs than was anticipated at first. The only way to deal with the situation is, on the negative side, to cut imports drastically and, on the positive side, to try and make possible a sizable inflow of resources from abroad. How this is to be done has often been debated, and this journal has indicated on more than one occasion its views on the subject. It is to be hoped that, in the present mood of defeatism, the positive and favourable factors for such an inflow are allowed to operate to the fullest possible extent. Friendly foreign countries should be impressed more by the importance of what we are doing and the success that is attending our efforts than by the spectacle of our helplessness in the face of difficulties. In any arrangement regarding the inflow of foreign resources, this is the strategy that will accord both with self respect and chances of success.

Such is the preoccupation with foreign exchange difficulties and the desire to find a scapegoat, that the other aspects of the country's economy were not dealt with at length in the debate on the demands of either the Commerce Ministry or the Finance Ministry. And such perfunctoriness extended to aspects of economy that were cheering and to those that should cause concern. For instance, Mr Manubhai Shah's impressive account of the steadily increasing industrial output and diversified progress in the industrial economy did not raise the call for cheer it should have. He pointed out that, when India became independent, the engineering group of industries was almost totally absent in the economic picture of the country. Today, we have a truly remarkable expansion of this particular group and many belonging to this group have firmly established themselves as permanent features of the Indian economic landscape. This undoubtedly cheering aspect of the economy did not seem to make any impression on the members, if one were to judge by the contents of their speeches.

Another rather curious omission in the discussion was the internal

inflationary situation. This, in some respects, is the more serious of our present economic ills, but it received but the most perfunctory attention from the members.

On the whole, the impression left by the debate on the demands of two of the most important Ministries is one of a profound unwillingness on the part of legislators to come to grips with the core of the problems that confront us. Something in the nature of the difficulties and some of the unprecedented remedies sought to be attempted seem to deter constructive thought either inside or outside Parliament. Not that there is any apparent lack of discussion. But discussion seems to be taking always the wrong turn. Take, for example, the muddle over Mr Krishnamachari's reported observations on Wealth Tax levy on individuals in the coming year at the meeting of the Congress Parliamentary Party. It was originally reported by almost all newspapers that TTK said that the rate of Wealth Tax on individuals will be stepped up next year. Later, this was officially denied as inaccurate and it was explained that all that was said was that the yield from Wealth Tax would go up next year. Now, it seems, on the face of it, an extraordinary piece of clumsiness on somebody's part. I for one cannot see the necessity of discussing at the present moment either the rates or the yield from Wealth Tax next year in precise terms. And I certainly cannot see the wisdom of talking on the subject to an audience that does not understand (if the official denial is to be accepted) the difference between the increase in the yield of a tax and the increase in its rate; and, in any case, to an audience that does not realise the importance of reticence on informal discussions of this sort. Here, again, one sees the all too obvious readiness to escape from the present: such excursions from reality cause more harm than good by creating needless uncertainties in the mind of the public.

GATEWAY GOSSIP

(Continued from page 409)

rectify a persistent surplus in the balance of payments position.

The September conference will have little of positive trends and clear conclusions to guide its deliberations. If, in such circumstances, the Governor of the Reserve Bank of India could speak up for the Indian policy's flexibility and effectiveness, it may well be a pointer and guide worthy of attention and recognition at the international level.

Labour Policy

Speaking in the Lok Sabha, in the course of the debate on the demands for grants to the Labour Ministry, Mr Gulzari Lal Nanda, Labour Minister, defined labour policy as consisting of two aspects, one having reference to the claims, rights and privileges of the working class, which he called the trade union aspect, and the other concerning the obligations of the working class to the community which he called the Community aspect. Labour legislation to be ideal should subserve these two ends.

The labour conference held in July arrived at a fair reconciliation of these two aspects, and agreement was reached on many a matter, which could, if left unsettled, undermine the industrial peace in the country. It was agreed at the conference that there should be no strike or lock-out without notice, no recourse to go-slow tactics and no deliberate damage caused to plant or property. It was also agreed that acts of violence, intimidation, coercion or instigation should not be resorted to and further that awards and agreements should be speedily implemented.

As a result of the Labour Conference, it would have been only natural to anticipate, a state of peaceful co-existence in the field of industrial relations. But so many reports of disturbances, intimidation, coercion, of officers being surrounded and in some places people losing their lives, and of murder and shooting to which Mr Nanda drew attention, would seem to suggest that labour cooperation has not been uniformly forthcoming to honour the agreements reached at the Labour Conference.

To a large extent industrial unrest could be alleviated, by speedy rectification of the legitimate grievances of the workers. In this connection, Mr Nanda, felt compelled to ask the employers not to resort to the supreme court for references on each and every occasion when an award has been decided. It was pointed out that the cooperation of labour in production could only be secured if awards were implemented without delay.

It was also disclosed by Mr Nanda, that he was thinking of setting up a special machinery in the Labour Ministry to evaluate periodically the extent of actual implementation of labour legislation in different fields. This step should go far in checking the delay in implementing the labour legislation and safeguard the interests of labour and would contribute greatly in establishing lasting industrial peace in the country.

Clarifying the position of Government employees, Mr Nanda said that so far industrial employees

were concerned, they enjoyed the same rights as other industrial workers. In regard to civil servants it was pointed out that though freedom of association was not denied, any question of direct action or strike was inconceivable. At the same time he said that their interests had to be safeguarded, which could be done by a periodical review of their condition. Provision has already been made for this.

Referring to the real wages of Indian worker, Mr Nanda observed, that though real wages had increased, compared to the actual needs of the workers, the increase meant nothing. By way of explanation it was pointed out that the limited financial resources of the Government would not permit it in going the whole hog to do the maximum for the Welfare of the workers.

Development of Railways

Speaking in the Rajya Sabha, the Union Railway Minister Mr Jagjivan Ram, expressed the confidence that it would be possible to implement the Second Five-Year Plan in respect of railway development, and pointed out that the position in regard to procurement of the required iron and steel was quite satisfactory. As against the requirement of the railways, till the end of 1959, of rails, of the order of 291,000 tons, orders had been placed for the purchase of 284,000 tons of rails already. At the same time the Minister, ruled out hopes, of construction of new lines to an appreciable extent, on the ground of scarcity of resources at the disposal of the railways, though he recognised the need for development of railways, in many parts of the country. Shortage of track and construction materials, it was explained, stood in the way of development of the railways. Dependence on foreign countries for important materials vital to the development of railways is a limiting factor in the development of railways.

The heavy dependence on foreign countries for important materials, would be relieved to the extent to which indigenous materials could be substituted for imported items. The use of wooden sleepers in place of iron and steel, is a case in point. Such substitution is desirable in view of the fact that wooden sleepers are being used even in foreign countries. The matter seems to be still in exploratory stage. But even in this case, dependence on foreign countries could not be ruled out if our forests are not to be denuded of their wealth. But at least the

financial burden of imports could be reduced to some extent.

Mr Jagjivan Ram also touched on such matters as regrouping of railways zones, labour relations and track renewals. In regard to regrouping Mr Jagjivan Ram took note of the criticism voiced by some members and recognised that there was scope for rationalisation of zones, by means of transfer of certain sections from one zone to another which would have the result of lightening the workload on any particular railway.

In regard to labour relations on railways, Mr Jagjivan Ram said that he was against a multiplicity of unions. A single Union on the railway and one federation at the top, he pointed out, would be to the best advantage of railwaymen.

In the matter of track renewals the present trend is far from satisfactory. Mr Jagjivan Ram attributed the slow pace of track renewals to shortage of materials. In this connection Dr H. N. Junzro pointed out that it was more desirable to give up construction of new lines than that existing lines should be allowed to continue to work inefficiently.

Discrimination against the South in the matter of railway development was raised in the course of the debate, and was repudiated by the Railway Minister who explained that population was the governing factor in regard to route mileage and that small route mileage on the basis of area in certain parts was due to low density of population.

NORTH INDIAN MARKETS

Rise in Sugarcane Area

THE all-India first estimate of Sugarcane, 1957-58, puts the current year's area at 5,022,000 acres as against the corresponding adjusted estimate of 4,723,000 acres for 1956-57, showing an increase of 299,000 acres. The increase in acreage has been reported by all the sugarcane-growing States, the increase being marked in the case of Uttar Pradesh. This is attributed, partly to high prices of gur at the time of sowing and partly to better irrigation facilities and seasonal conditions. Some decrease in area has, however, occurred in Andhra Pradesh and West Bengal States.

The present estimate covers the period up to the middle of June, 1957. Till then, the condition of the crop was reported to be generally satisfactory. The estimate does not cover the entire area sown with the sugarcane crop during 1957-58. Past experience has shown that the area, at the first estimate stage, forms roughly 94 per cent of the area of the crop finally reported.

According to the official figures released this week, the production of indigenous sugar amounted to 20.20 lakh tons during the current season up to the 15th August as compared to only 18.54 lakh tons in the corresponding period of last season. Total offtake, including quantities despatched for exports, was 16.86 lakh tons. Stocks with the factories, as on the 15th August 1957, stood at 8.64 lakh tons.

Meanwhile, sugar markets have continued to rule quiet, thanks to reports of increased production. Demand from the consuming centres has been slack, while the stock position is reported to be sound.

Following mill-delivery rates (per maund) are quoted in the Hapur market:—Rampur (C/29) Rs 34.50; Mansoorpur (B/29) Rs 34.75; (E/2) Rs 33.69; Daurala (B/29) Rs 35.06; (C/28) Rs 34.25; Amroha (D/29) Rs 33.00; Meerut (D/28) Rs 33.69 and Simbhauli (E/29) Rs 33.87.

Conditions in the Khandasari market remained, however, steady following good ready demand and prices, as a result, improved by a rupee per maund. Rates moved between Rs 29 and Rs 33 per maund, according to quality.

Gur

The Gur market in Hapur continues to rule quiet as out-side demand is lacking. Stocks are estimated at as much as 29,000 maunds as against only 16,000 maunds on the corresponding date of last year.

Advices from the gur areas in the South have indicated an easy trend. Arrivals of new gur have begun in some areas. Following rates are quoted (per maund):—Kolhapur Rs 16.25 to Rs 20.50; Baramati Rs 15.00 to Rs 19.75; Anakapali Rs 14 to Rs 15 and Belapur Rs 14.50 to Rs 18.50.

Foodgrains

Easy conditions have prevailed in the Foodgrains market during the week under review. Good rains, during the last few weeks, coupled with the clearing up of weather now have proved very beneficial to "Kharif" crops. Harvesting of early-sown Maize crops is in full swing, while the arrivals of the new crop will begin very soon.

The Peninsula

Plantations in the South

PROBLEMS confronting the plantation industries in India in general and in the South in particular were brought into sharp focus this week. Both the UPASI President, Mr M. S. Calderwood and the President of the Association of Planters of the State of Madras, Mr H. C. Kothari, have expressed great alarm at the growing tendency on the part of Government to look upon the plantation industries as a perennial source for tax collection. Such an attitude is all the more surprising at a time when there is an urgent need for stepping up exports. As an important earner of foreign exchange, the plantation industries have a legitimate claim to expect all possible encouragement. But the trend of official policy with regard to these industries indicates that Authority for some inexplicable reason is only concerned with the gathering of taxes in utter disregard of the repercussions of the tax burden on the national economy.

It is common knowledge that the tea industry which constitutes by far the largest section of Plantation industries, is passing through difficult times. Between ever increasing wage bills and heavy taxation both from the Central and State Governments, cost of production of the industry has gone up by leaps and bounds. As the industry is primarily dependent on export markets it has perforce to take note of world price levels. Gone are the days when Indian tea could command any price and get it. For India no longer enjoys the monopoly position in world markets she once occupied. Ceylon and Indonesia have emerged as serious competitors and in recent times there have been indications

that other countries are also steadily stepping up their tea production. It has been found that the new tea producing countries are able to land tea in the main export markets at a much cheaper price than India is able to do. This is explained by the fact that the industries in those countries are given every encouragement by their Governments. In India the position seem to be entirely different. While Authority is quite generous with their encomiums of praise for the pivotal role that the tea industry is playing in earning the valuable foreign exchange, it seems to ignore completely the fact that the industry can continue to make its large contribution only if it is enabled to compete successfully in world markets.

Even apart from its important role of an earner of foreign exchange, the tea industry can claim special attention from Government on other counts as well. It employs the largest labour force in any one organised industry in the country. The total area under tea is approximately 789,000 acres with the annual production amounting to about 650 million pounds. The Planning Commission have recognised tea's important position in the national economy. The Second Plan has laid the target of tea production at 700 million pounds and exports at 500 million pounds. As our exports now average 425 million pounds, it would appear that no serious difficulty will be encountered in attaining the targets. In this regard it is to be remembered that these calculations assume that Indian tea will meet with good demand in world markets. The answer to the question whether the tea industry will be able to

play its vital role efficiently in coming years is not quite encouraging and if the speeches of the spokesmen of the two planters' associations in South India are any indication, it would appear that serious consideration is called for from Government of the problems which continue to confront the plantation industries in the country.

Mr Calderwood has pointed out that the plantation industry in South India has passed through a period of "galvanic and far reaching changes" during the past year. "We began with the reception not long ago after our last conference, of the first of the Plantation Inquiry Commission's reports, the reports on tea. The next shock, perhaps domestic, but even more appalling, was the Gazette of the long awaited Madras State Industrial Tribunal Award. The re-organisation of States, the Plantation Inquiry Commission's report on coffee, then on rubber, the application of the Provident Fund Act to plantation and the General Election were round the corner in 1957. Efforts to adjust ourselves have been strenuous, and just as, with the help of the Government of Madras and the practical good sense of the trade unions and of our labourers, we seemed to be finding a way for the Madras industry to surmount the evils of the Award, and Mysore had achieved a reasonable settlement of its problems, we were suddenly dealt another crushing blow by the Kerala Budget and it is difficult to avoid a sense of despair."

The outlook for the Plantation industry has been rendered gloomier by many old problems which are still unsettled. The coming into power of a communist Government in Kerala where a large portion of the plantation industry is situated has engendered the fear that the industry will be wrecked by subtle economic means.

A constant worry to the industry in the country in general and in the state of Kerala in particular is the growing indiscipline of labourers. "A disastrous consequence of labour indiscipline is our inability to maintain law and order. Due to vagueness about what constitutes lawful activity by a trade union unlawful behaviour frequently goes unchecked and unpunished, and there is a growing opinion that any type of conduct practised under the guide of trade union agitation is above the law. I am not thinking only of Kerala State at the moment. The development to which I refer is showing itself in every State".

It is unfortunate that there is a growing tendency on the part of labour to take the law into its

hands when constitutional means are available to get all its grievances redressed. No democratic Government can afford to sit idle when there is flagrant defiance of law by any section of the community.

The least that the Government of India can do now is to accept the suggestion of Mr Calderwood. "I suggest a conference of all the three State Governments of the South sponsored by the Union Government, together with representatives of management and labour to draw up a code defining what constitutes legitimate trade union practice on plantations. With a clear definition the impression now existing in the minds of police, management and labour would be resolved and the rule of law and the Indian ethic of non-violence vindicated."

Labour problems and the growing sense of insecurity of private industry in the country were the main theme of Mr H. C. Kothari's speech also. Contrary to the industry's expectation that due consideration would be given by Government in dealing with the only elastic factor in determining the cost of production of plantation products, increasing rates of taxes on companies and individuals have been imposed. Though Government spokesmen have been declaring quite frequently that it is wrong to consider that the private and public sectors are in two water-tight compartments, it is not easy to believe from the treatment that is being meted out to private enterprise that Authority means what it says. Mr Kothari has pointed out that the Wealth Tax, bonus tax, higher income tax and corporate tax and the directive to deposit a large part of profits with Government provide clear indication that Government do not consider that consumer industries and agricultural pursuits deserve their fostering care. That the ordinary investor has lost confidence in the ability of the private sector to earn equitable profits after these fresh taxation is evidenced by a 20 per cent decline in share values in recent months.

Private industry, today finds itself in an unequal contest with the state sponsored public sector for whose requirements of finance Government also tap the only source left to joint stock enterprise. It is true that the private sector has been given a big role involving an outlay of Rs 2400 crores in the Second Plan. But there is no indication how Authority expects private sector to get this big amount of money especially when it seeks to deplete the available meagre resources by heavy taxation.

South Indian Notes

Educated Unemployment

UNTIL a decade ago, higher education in our country had not been considered a matter for much planning. That was largely because university degrees were only thought of as passports to Government jobs. With the coming into being of a national government in the country and the consequent emphasis on rapid industrialisation, it has been found that a majority of the graduates who come out of the universities every year are unemployable while a sufficient number of suitable personnel is not available for the kind of jobs which are growing in number as a result of the increasing tempo of development activity in the country. At the same time it has become evident that there are not enough facilities to train up the required number of technical personnel. Efforts have, therefore, been made to establish more and more technical institutions in the last six or seven years but for some reason or another the progress in this regard has not been as good as could be desired. Meanwhile, the rush of students to colleges has continued and as against 420,000 students, in the university and colleges at the beginning of the First Plan, the number is now estimated at 720,000. Of this, as many as 58,000 are students qualifying in degree and higher examinations in arts, commerce and science.

It would appear that this type of unemployment has to continue till such time the technological courses can siphon off a large number of students who seek higher education. In view of the limited scope and the consequent competition, it is not possible for all those who are fortunate enough to get jobs to reach high positions.

Mr P. V. Rajamannar, the Chief Justice of Madras, in his Convocation Address of the Madras University, has indicated how the new graduates can face the problem confronting them courageously. If they keep in mind the realities of the situation they can avoid the anguish resulting from frustration. The fact of the matter is that the prospects of employment for a large number of those who take an ordinary degree in Arts or in science are not bright, because there is already overemployment in Government departments. Private industry can absorb but a small number. It is evident, therefore, that a large number of graduates cannot hope to get the job they like or the remuneration consistent with their qualification. Mr Rajamannar advises the youngmen that "if success does not

crown your efforts or your ambitions are not realised, you should cultivate an attitude of gracious acceptance."

To help them in their difficult task he has asked them to remind themselves of their first duty toward their motherland. University men and women like every citizen should give their best to the country no matter in what position they are placed. Such a noble ideal will help face life with confidence and self-respect.

★

Development of Fishing

For reasons which are not quite clear fishing has not developed into a large industry in Madras though the scope for it is by no means little. Madras State has a coastline of about 600 miles and about four lakh acres of inland water areas. The annual production of fish in the State is about 98,000 tons comprising 60,000 tons of marine fishes and 38,000 tons of inland fishes. There is a fairly active export business which is mainly confined to the marine fishes. The entire inland catch together with a portion of the marine fishes is accounted for by domestic consumption. A significant fact is that the State's per capita consumption of fish at 10.5 lbs is much higher than the All India average of 3.9 lbs. Two inferences emerge from this: (1) that fish consumption in the State may increase sizably provided prices of fish are low and (2) that fish consumption in Madras as com-

pared with some other western countries is very low. An additional reason why fish consumption should be encouraged in South India is the low protein content of the diet in this region.

In the context of the urgent need for increasing the employment potential in the State, development of fisheries claims a special place in the programme of Government. Prosperous ancillary industries for the manufacture of fishing craft, tackle etc will be the natural corollary to flourishing fishing industry. Private industry has also ample scope in deep sea fishing.

The prospects for a rapid development of fisheries in Madras in coming years have brightened considerably with the constitution of the Fisheries Advisory Board which will function as an effective liaison between Government and the research worker.

Speaking at the first meeting of the Board, Mrs Simon, Minister for Fisheries and Local Administration has pointed out that no sizable improvement can be obtained in the development of fishing so long as the economic condition of those engaged in it remains as it is now. The fact of the matter is that the industry has been confined to individual fishermen who, due to lack of finance and technical knowledge, have not been able to adopt more efficient technique of fishing. The Minister has rightly stressed the importance of coordination between all the sections engaged in the fisheries problem. Continued research is as important as increasing fishing areas, and acquiring more vessels for inshore, offshore and deep sea fishing.

SOUTH INDIAN MARKETS

Rubber Exports from Ceylon

THE Ceylon Government have decided to lift the ban on the export of Sheet Rubber. The ban was enforced in 1953 when Ceylon entered into a five-year agreement with China for the supply of 50,000 tons of sheet rubber each year in return for 270,000 tons of rice. The Government have decided to allow shippers to sell sheet rubber in the open market, because of enough stocks to complete shipments to China under the deal for the current year.

Ceylon has to ship 11,800 tons of sheet rubber to complete this year's contract. The ban will not, therefore, be re-imposed until the end of the year. In this connection, the Rubber Commissioner has stated that he will continue to purchase rubber offered at his depots in order to ensure that pro-

ducers get a guaranteed minimum price comparable with the world market price. He will offer the following prices until further change in the world market rates:—RSS No. 1 Rs 1.09 per pound; RSS No. 2 Rs 1.07; RSS No. 3 Rs 1.05; RSS No. 4 Rs 1.00 and RSS No. 5 88 cents per pound.

Moreover, the Ceylon Government have announced a reduction in the export duty on all rubber, except scrap crepe, by 4 cents per pound. The duty on scrap crop has been increased so as to place duty on all rubber at a flat rate of 28 cents per pound. The Government have also removed the cess of 15 cents per pound, which has hitherto been used for financing Government's replanting scheme. The duty adjustments follow the Government's decision to release sheet

rubber for sale in open market with effect from the 24th August.

In India, rubber manufacturers feel that their production programme may be seriously affected this year unless imports are stepped up in view of the scarcity of raw rubber from producing areas in South India. Weather and labour troubles have affected production. Unless the industry manages to catch up in the coming four months, output may be lower than last year's.

★

Coffee

According to a report received from London, the prospect for supplies of Green Coffee should be fairly plentiful in a few months' time and that buyers may keep their purchases down to the minimum at the moment, although the improvement in the supply position will not begin for a few months yet. There is every indication that buyers will be able to get their supplies more cheaply later in the year, especially as Colombia is now making a strong bid to enforce its minimum support price. The Colombian authorities do not appear to be particularly perturbed by the low level of their sales in the last few weeks. The period in which they have the market to themselves is only limited; but it is still unlikely that they will be prepared to cut their prices very much.

Meanwhile, the India Coffee Board has released for export 1,363 tons of coffee out of the 1956-57 crop. The release will consist of the following:—735 tons of Plantation "A"; 162 tons of Plantation B; 123 tons of Plantation Triage; 149 tons of Arabica Cherry Flats; 11 tons of Arabica Cherry PB; 3 tons of Arabica Gleanings and 2 tons of Arabica Gleanings PB. Tenders are due on the 18th September, 1957.

★

Pepper

Trading in Pepper markets was rather brisk last week, drawing support from higher New York advices and exporters' enquiries. In the Alleppey market, rates were marked up to Rs 593.75 and Rs 582.50 from Rs 587.50 and Rs 581.25 per candy for Superior Palai and Thekkan varieties respectively.

The Singapore market ruled steady at round about Str. \$75 despite heavy arrivals from both Lampong and Sarawak. Some of the Chinese houses were said to be sending consignments of Lampong and Sarawak to the USA, as outright business was difficult for want of offers at replacement parity by New York dealers who were fulfilling their requirements from afloat unsold parcels. Pressure of selling from Lampong, at the moment, is not so heavy as some of the Indonesian merchants are holding

The Tata Iron And Steel Company Limited

A Half Century Of Progress * Role In The Service Of The Nation * Labour Situation In Jamshedpur *

Mr. J. R. D. TATA, The Chairman, Reviews Progress in Expansion Programme

The following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the fiftieth Annual General Meeting of the Shareholders of The Tata Iron & Steel Company Limited, on Tuesday, August 27, 1957:—

Ladies and Gentlemen,

We meet this afternoon one day after the fiftieth anniversary of the birth of our Company and of the Indian Steel Industry.

GOLDEN JUBILEE

2. The Company is today so well and successfully established as the biggest single private enterprise in the country and its largest steel producer, that we are inclined to forget the struggles and heartaches of earlier years and the difficulties which had to be overcome before and after it was brought into existence. Considering the resources and potentialities of the iron and steel industry in India as we know them today, it is not easy to realise how little they were appreciated only fifty or sixty years ago and the extent of the doubts and disbelief with which the original proposals were greeted. Had it not been for the name and prestige of Jamsetji Tata and his sons, Dorab and Ratan, backed by their faith and determination, many more years would have passed before the steel industry was established in India. Amongst the patriots and leaders of his generation Jamsetji, more than anyone else, realised that political freedom without economic and industrial strength to support and defend it would be a cruel delusion, and that the foundations of industrial power were made of steel.

3. It is proper, therefore, as we look back today upon a half century of progress, that we should pay tribute to the memory of Jamsetji Tata and also remember the part played by his sons and others who are no more, including R. D. Tata, B. J. Padshah, John Peterson, Nowroji Saklatvala and Ardeshir Dalal.

4. In the fifty years of our life we made over 22 million tons of steel, paid Rs. 175 crores in wages and bonuses, about Rs. 45 crores in dividends, well over Rs. 70 crores in taxes and Rs. 40 crores into Government's price equalisation fund. In the process we saved the

country hundreds of crores' worth of foreign exchange and are doing so today at the rate of some Rs. 50 crores a year, which will rise to about Rs. 90 crores from next year onwards. I feel we have amply repaid the country for the protection granted to the Steel Industry during the difficult years following the first world war.

5. We have had our ups and downs and have made mistakes, but through good years and bad, we never forsook the ideals bequeathed to us by the Founder or lost sight of our duty and responsibility to the country. Our Company has provided a living and dynamic answer to the charge that free enterprise cannot "deliver the goods", is only inspired by selfish motives and does not serve the needs of the people. In all humility, I think we can justly claim we have served the country consistently and well.

6. If through these many years we have overcome so many obstacles and difficulties, it is partly because even in the darkest days of our history we enjoyed the trust and the support of our staff, workers, consumers, Government and shareholders. For that we are grateful and I am glad of the opportunity to say so today. I should particularly like to express grateful appreciation for their loyalty and support to that stalwart band of shareholders who have held shares in the Company since its very inception.

7. Before I leave the subject of the Golden Jubilee of the Company, may I refer to the view expressed by some shareholders that the occasion should have been celebrated in some suitable form, such as the distribution of an enhanced dividend or bonus shares? The fact is that we are today considering the annual report and accounts for the year 1956-57, while the fiftieth anniversary of the Company's foundation falls in the financial year 1957-58. I cannot say today what the Board may find it possible to do when considering the accounts for the current year. Much will depend on the results achieved and the circumstances in which we shall then find ourselves, but I can give the assurance that the Directors will give the matter their sympathetic consideration.

SECOND FIFTY YEARS

8. Today we begin the second fifty years of our existence with confidence. We are conscious of the heavy additional burden of work and responsibility that faces us and of the many problems and difficulties ahead, but with the combination of an expanded and renovated plant and a strong and mature organisation, we hope to give a good account of ourselves.

TWO MILLION TON PROGRAMME

9. Our first and most important task is to complete the expansion of our plant and reach our two million ton target as quickly as possible. Our schedule of construction was from the start an extremely tight one. Kaiser's still hope to adhere to the original schedule, but it is too early as yet to forecast the exact dates on which each of the new units will come into full production. One unavoidable consequence of having to telescope much of the programme into one year has been a greater degree of interference with existing production than previously anticipated, the effects of which on current production are being seriously felt.

SECOND FIVE-YEAR PLAN

10. The year under review was characterized by a severe reversal in the country's balance of payments position and by the emergence of inflationary pressures which, unless checked in time, may lead to a crisis even more serious than that relating to foreign exchange. Both these developments can be traced to the same source, namely, the mounting national expenditure in both sectors of the economy under the Second Five-Year Plan.

11. The essential questions to be faced are whether the total resources available in India and obtainable abroad are sufficient to meet the rate of expenditure proposed under the Plan, and even if they are, whether the Plan can be implemented without imposing such a strain on the economy that the material benefits would be lost in the resulting inflation. If the answers to either or both of these questions are in the negative, as I believe they are, there will, I hope, be no hesitation on the part of those in charge of our economic

destinies either to prune the Plan or to phase it over a longer period, or both.

12. In view of the magnitude and urgency of the country's needs the planners were right in setting their sights high and attacking the problem with boldness. At the same time, the very complexity of the task, the difficulty of estimating precisely the costs of materials, equipment and services over a period of years, and the uncertainties in regard to political and economic trends throughout the world, made it all the more necessary to temper boldness with realism and to provide some margin for underestimates, increases in costs and other contingencies. Instead, out of the original planned investment of Rs. 4,800 crores, no less than half, or Rs. 2,400 crores, was made dependent on such uncertain factors as foreign assistance, deficit finance and further taxation over and above the additional taxation of Rs. 450 crores already provided for. The estimated expenditure has since risen to Rs. 5,600 crores or more, increasing the gap to an even larger one. Faced with such a situation, I believe the Government of India recognise that substantial adjustments of the planned expenditure are inevitable.

13. The Plan, after all, is only a means to an end, not an end in itself, and the progress we make during the current five years is only one step in a long and steady march towards our ultimate goal. If we keep our eyes on that distant target, the exact measure of the step we take in the Second Five-Year period loses some of its apparent importance. By taking a shorter and surer step today we may, in fact, reach our goal sooner and we shall certainly incur less risk on the way.

FOREIGN CAPITAL

14. Everyone, from Government downwards, recognises the crucial importance to India of foreign capital, whether in the form of aid, loans or equity. There is today an unprecedented demand for capital funds in all countries which has resulted, even in an enormously wealthy country like the U.S.A., in an acute tightness of money. It stands to reason that with local demand competing strongly for

available funds there is little inducement for foreign capital to flow to India. Our constantly rising burden of taxation and the disincentives contained in various enactments and measures hardly represent the best way to create enthusiasm abroad for investing in, or lending money to, India.

15. Yet there is in the advanced countries of the West realisation of the tremendous long-term possibilities of increased trade with India and of opportunities for investment. If our Government and Parliament realising the full extent of such possibilities were to revise some of their policies so as to generate greater confidence in the investment markets here and abroad, I believe that over the years a substantial flow of foreign capital could be induced to this country and our foreign exchange position thereby greatly eased.

STABILITY OF THE RUPEE

16. The question of foreign exchange is linked, in the Indian context, with the question of foreign balances and the value of the Rupee. In recent years the Indian rupee has shown remarkable strength which has contributed much to the economic stability of the country. The extent to which the maintenance of substantial foreign balances has been responsible for the strength of the rupee in international markets cannot be assessed with certainty, but there is no doubt that it has played a part in the confidence our currency has enjoyed. I therefore view with alarm the suggestion advanced in some quarters that such foreign balances are wholly unnecessary as a backing to our currency and that statutory requirements for the maintenance of foreign balances should be abolished.

17. Confidence in a country's currency is a delicate plant which needs to be carefully nursed and which it is difficult to grow again once it is allowed to die. Both international credit and internal stability depend upon it and there are too many historical examples of the calamitous consequences to a country and its people of a collapse in the value of their currency, to permit of any risk being taken in the matter. I am sure that our Government are fully alive to the need of maintaining public confidence in the rupee both in India and abroad.

FINANCE FOR EXPANSION PROGRAMMES

18. Coming to our own affairs, perhaps the most important matter about which I think you will be interested to hear from me today is the progress we have made in securing the balance of the funds required to finance our current expansion programmes.

19. In paragraph 14 of the Directors' Report, it has been said that the Company had initiated negotiations in the U.S.A. Your Vice-Chairman and I spent a month there in June this year, during

which we held discussions with the World Bank and with American commercial banks.

20. As before, we were received with the utmost consideration by the distinguished President of the World Bank and other Executives of that great Institution. They were good enough to agree to increase the amount of the previous loan of \$75 million by an amount equal to that which we were able to raise elsewhere subject to a maximum of \$17½ million, which is half the remaining gap of \$35 million. In order to facilitate our task they went further. They agreed to raise the amount of the present mortgage up to \$110 million, so that other lenders in the States could rank *pari passu* with the World Bank in the matter of security, and they also agreed to the prior repayment of the loans from such lenders. We are deeply appreciative of the consideration and assistance extended to us by the World Bank, without which the task of raising the necessary funds would have been well-nigh impossible.

21. With these valuable concessions and the powerful assistance of the First Boston Corporation who have been appointed the Steel Company's financial agents for this purpose, and whose outstandingly able Chairman, Mr. George Woods, is one of India's best friends abroad, we approached a group of leading commercial banks in the States with a view to securing medium term credits from them up to a total of \$17½ million. The negotiations are still proceeding between these banks and the First Boston Corporation representing us, and I hope they will fructify in the near future.

22. I should like to take this opportunity to thank the Government of India for the assistance they have given us in this matter, both by sponsoring and guaranteeing the additional loan from the World Bank and by helping us in various ways in our negotiations with the commercial banks.

23. Realising the valuable savings in foreign exchange and also in expenditure on steel used under the Plan which our expanded output will generate, the Finance Minister has, from the beginning, taken a great deal of personal interest in our expansion programme and in the means of financing it, and I wish on your behalf to express our grateful thanks to him for his support and sympathetic understanding of our problems.

24. The amount I have mentioned as being required to complete the financing of our programme of expansion is based on the assumption that the rate at which our internal savings accrue and the capital cost of the various projects in hand correspond with the estimates. To the extent that additional taxation reduces our net savings or enhanced customs and excise duties increase the capital cost of our new plant, we shall require additional funds and

we are making a representation for an appropriate increase in our retention prices.

TAXATION

25. It is relevant that I should briefly discuss here the implications of the new taxation proposals, as taxation has nowadays a major impact on the operations and finances of industry. It is inevitable that a high rate of national expenditure calls for high levels of taxation, both corporate and individual. During the First Five-Year Plan, central taxation amounted to about Rs. 255 crores. The Second Five-Year Plan, as originally conceived, visualized additional taxation of Rs. 450 crores over and above the existing levies, to which must presumably be added a part of the gap of Rs. 400 crores then left uncovered. Since then, however, the Finance Minister has indicated his intention to reduce the quantum of deficit financing from Rs. 1200 to Rs. 800 crores, while the expenditure on the Plan has increased by a further Rs. 800 crores. The total uncovered gap would thus reach the formidable figure of about Rs. 1600 crores. If any appreciable part of this gap were sought to be met by a further increase in taxation, it would place an unbearable burden on industry and commerce and deprive them of what little is now left of funds available for investment.

26. Apart from the magnitude of the additional burden of taxation proposed, the Budget for the current year presented to Parliament embodies new and unprecedented features. Of these, the one which has rightly met with almost universal disapproval is the Wealth Tax on companies. It is difficult to understand how such a measure of personal taxation can be applied to the assets of large public companies made up of contributions by thousands of shareholders, rich and poor alike.

27. The Wealth Tax on companies has been sought to be justified on the ground that in the peculiar conditions of India, very few shares in companies are owned by small shareholders. I think the best answer to this view is given in the figures recently quoted by the President of the Bombay Stock Exchange which show that on the basis of a survey of ownership of shares and securities in Bombay City undertaken by the Reserve Bank of India in 1954, 60 per cent of the shareholders of companies were persons with incomes below Rs. 8,000 a year. In the case of our own Company, nearly half of our shareholders have holdings of less than Rs. 1,000 each, while the holdings of about 87 per cent amount to less than Rs. 5,000 each. The subjection of companies to Wealth Tax will therefore hit a large section of the middle class, will result in the shareholders being taxed twice on the same assets, and will act as a powerful disincentive to save and invest.

28. Apart from the controversial nature of the Expenditure Tax and the annual Wealth Tax, these taxes together with taxes on income, will result in individual assesses in the higher brackets paying substantially more than 100 per cent of their income. In effect, in addition to the whole of their income being taken away from them, they will now be made to pay something for the right to live and work in their own country. Nowhere else in the world does such an extraordinary situation exist. I can only hope, that even at this stage, Government will revert to a simpler and less drastic scheme of taxation. The only sure method of increasing tax revenues is to provide incentives for investment which, in the train of larger profits thereby generated, will bring in larger revenues to the State.

29. As a result of the Budget proposals, the amount of additional taxation which our Company will have to bear, including excise duty on steel used in our expansion programmes, will be approximately Rs. 1 crore for the current year and corresponding amounts in subsequent years, thereby adding to the financial stringency with which the Company is already faced in implementing the Two Million Ton Programme.

LABOUR

30. Some of you will have read in the papers the remarks I made at the annual general meeting of the Tata Locomotive and Engineering Company earlier this month on the labour situation at Jamshedpur.

31. While the position in the Steel Company was generally satisfactory during the year and the Company's relations with the Tata Workers' Union continued to be maintained on a basis of co-operation and mutual confidence, the general wave of labour unrest in the country, coupled with the recent attempts of the Communist Party to disrupt the working of the industries located at Jamshedpur, has recently affected the situation in our Works.

32. One of the most discouraging features of the labour movement in India up to now has been the relatively slow progress made in building up, as in other countries, strong and stable unions well organised and staffed, endowed with substantial financial resources and enjoying the sustained loyalty and support of the workers.

33. With rare exceptions, the labour movement here has suffered acutely both from the lack of support from within and from being kept in a constant state of uncertainty and agitation by a never ending struggle for power, often in total disregard of the interests of the workers concerned. Once a union is well-established and recognised, it is made the butt of attacks and intrigues by outsiders bent upon acquiring control or establishing rival union. If the union has established sound

[August 31, 1957]

and constructive relations with employers, and even though it may, as in our case, have obtained through negotiations valuable concessions in the form of increased wages, bonuses, retiring and other benefits, job security, consultative machinery and the like, its leaders are charged with betrayal of the workers' interest and its members instigated to renounce them and to follow others who promise to get them better terms from the employers.

34. The bewildered workers who, because of the lack of education still prevailing in our country, are easily influenced by such promises and exhortations, are kept in perpetual doubt as to where their interests lie and fail to see that they are the main sufferers from their unwillingness or inability to support their proved leaders in their efforts to build up strong and responsible unions.

35. The attempts of the President of the Tata Workers' Union and his colleagues to strengthen their organisation have been obstructed for some years by a continuous and virulent campaign against them by outside parties, with Communists now in the lead. As can be seen from recent events in Telco and the Tinplate Company, these disruptive elements have succeeded in creating trouble and unrest which, if unchecked, may spread to the Steel Works.

36. All the policies and plans of the Government for developing the country and raising the standards of living of its people are based upon the achievement of a rapid and continuous rise in the output of all kinds of goods and services and particularly in industrial output. The Communists are well aware of this. In their eyes success in achieving prosperity through a mixed economy and by democratic means would be a severe set-back to their plans and must therefore be thwarted at all costs. Progress and happiness must be achieved the Communist way or not at all and they cannot afford to let success in India disprove the necessity of the totalitarian methods used in some countries which they seem to love more than their own.

37. There is evidence that their present activities at Jamshedpur are part of a pre-determined plan. Jamshedpur is one of their obvious and principal targets in the labour field, for control of the growing steel and heavy engineering industries there would provide them with a stranglehold on one of the most vital and sensitive sectors of the economy. Our information, confirmed by the recent developments at Jamshedpur, is that in the first phase which we are witnessing today their plan of action contemplates no frontal attack on the labour movement there but a series of localised incidents in each factory and neighbouring mines directed at destroying morale, fostering indiscipline and, wherever possible, at disrupting

production through slow-downs and lightning strikes. Agitation, coercion and intrigue, in the traditional pattern of Communist action, all play their part in this preliminary softening-up process. If it succeeds, the pressure will be increased and extended to other units in the next stage until the present trade union movement and its leadership are destroyed. The last step would be to take over the whole labour movement at Jamshedpur and elsewhere.

38. The main responsibility for maintaining peace and order and for preventing disruption of industrial production at Jamshedpur by subversive elements, lies with the Government of Bihar, who are fully aware of the developments and of the serious implications of any loss of production that might result from continued disruptive activity at Jamshedpur.

INDUSTRIAL HEART OF INDIA

39. Bihar, along with adjacent areas, is rapidly becoming the industrial heart of India. It is essential that its development should follow an orderly pattern based on the maintenance of industrial peace, productivity, sound trade unionism and a high degree of discipline without which efficient production is impossible. It is gratifying that the Government of Bihar, while continuing to protect the legitimate interest of the workers and to promote their welfare, fully appreciate the importance of maintaining production and good industrial relations in their State. I am sure they will find the Managements of the industries established there more than willing to co-operate with them in carrying out these objectives.

40. The Government of India are also deeply concerned in this matter, for the industries of Bihar are national industries serving the whole country, and progress or set-backs in their working will benefit or injure the nation as a whole. The Central Government are themselves building three large steel works and other plants in the area, and a number of important industries, such as the Chittaranjan Locomotive Works and the Sindri Fertiliser Factory, are owned and run by them. What happens in the area is therefore of vital importance to them, and we look to them, in co-operation with the State Governments concerned, to initiate or support measures calculated to maintain peace, discipline, productivity and efficiency in the great industries on which the future prosperity of this country so largely depends.

41. Before closing I should like to say a few words about the death of Mr. Dinsha Daji to which a reference has been made in the Directors' Report. Apart from his outstanding knowledge of Company Law and his long experience of industrial and business affairs from both of which we greatly benefited, Mr. Daji was a great

gentleman who lived a simple life dedicated to his work. We shall sadly miss his counsel and support, and I am sure the shareholders will want to join me in paying tribute to his memory and mourning the passing of a wise and learned man who, while he took a broad and human view of things, never compromised on principles.

42. I would also like to refer to the loss which the Company has suffered by the passing of Mr. A. Rajagopalan, who died on the 5th April this year. An exceptionally able and industrious officer, Mr. Rajagopalan, rose to the high position of Agent in charge of the Company's office in Calcutta. Over a period of twenty-five years he rendered outstanding services to the Company in various branches of the administration and particularly in the preparation and presentation of the Company's case in successive Tariff Commission enquiries and in important

negotiations with Government in regard to a number of intricate matters connected with finance, costs and prices.

43. Finally, I should like as usual to end on a message of thanks and appreciation to the management and all the employees of the Company at Jamshedpur and elsewhere for the hard work they have put in during the year. The tremendous amount of construction work at the Works, forming part of the Two Million Ton Programme, and the resulting complications and difficulties in maintaining normal operations, place them under a severe strain of added work, worry and responsibility. On your behalf, I thank them for their efforts and wish them all success in the completion of their heavy task.

Note: This is not a report of the proceedings at the above Annual General Meeting.

GATEWAY MARKETS

(Continued from page 410)

told adversely on the purchases by handloom and power-loom factories.

The Rayon Manufacturers' Association has informed the Government of India that the rates, fixed by the indigenous industry for the sale of its yarn for the third quarter of 1957, compare favourably with the rates at which it used to sell yarn in the previous years. They also compare favourably with the landed cost of identical yarns. The prices do not take into account the increased cost of production and they actually absorb more than 50 per cent of the excise duty. Moreover, the rates are actually lower by about 4 to 5 annas per pound than the rates quoted in the market. It appears that this communication to the Government has been a sequel to the complaint made by some representatives of the weaving industry that yarn manufacturers have fixed higher prices by taking advantage of the scarcity created by the restricted import policy.

★

FOR THE INVESTOR

(Continued from page 395).

gallon enjoyed on motor spirit production; we may recall that specific provision for such protection has been made in the agreement with Government. It has been calculated that, in a full year, the duty protection would work out to roughly Rs 2 crores.

There can scarcely be any doubt that the Burmah-Shell Refineries' accounts reveal evidence of the strident manner in which India's industrial economy, as reflected in the demand for oil and oil products, has been mounting.

£ R S

Investment Notes :

On the Bombay Stock Exchange, the shares of Orissa Cement have been admitted on the forward list with effect from the 2nd September, 1957. Dealings will be done in lots of 100 shares.

There is good news for the shareholders of the Bombay Electric Sup-

ply and Tramways Company Limited (in liquidation). It is gathered that an understanding has been finally reached with regard to the tax liability between the liquidators and the Income-Tax authorities. There are prospects for getting a final disbursement of Rs 15 by way of return of capital and about Rs 6 by way of dividend. On the whole, the shareholders will receive approximately Rs 120 lakhs.

At a meeting held by the shareholders of the Port Canning & Land Improvement Company Limited, it was resolved to take the company into Members' Voluntary Winding-up. Against the present book value of the assets worth about Rs 93 lakhs, the amount of compensation, payable by the West Bengal Government, is roughly estimated to be only about Rs 6 to Rs 7 lakhs.

It is understood that the compensation will be paid in Bonds and not in cash and will be repayable in equal annual instalments over a period of 20 years. Many shareholders have pleaded for efforts to obtain the entire compensation in cash instead of Bonds.

JARDINE HENDERSON, LIMITED

NOTICE is hereby given that an Interim Dividend at the rate of 2½%, less Indian Income-tax thereon, will be paid to the Registered holders as on the 21st October, 1957, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1958.

The Share Transfer Books of the Preference Shares will be closed from the 14th to the 21st October, 1957, both days inclusive.

By Order of the Board,
D. SMALLEY,
Actg. Secretary.

August 31, 1957]

BRITISH INDIA ELECTRIC CONSTRUCTION CO. LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the Seventy-third Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, the 20th September, 1957, at 12 noon, to consider the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to transact other ordinary general business of the Company and the undermentioned special business.

SPECIAL BUSINESS.

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contracts between the Company and its Managing Agents and Associates of its Managing Agents as defined by Section 2(3) of the Companies Act, 1956 drafts whereof have for the purpose of identification been subscribed by the Chairman of this meeting be and the same are hereby approved and the Directors are hereby authorised to execute the said Agreements on behalf of the Company with all convenient despatch:

With Balmer Lawrie & Co. Ltd. (the Managing Agents of the Company)—

for purchases of such engineering stores, electrical installation and electrical stores, oils, greases and insecticides, metals, cement and such other requirements and services including shipping, clearing and forwarding and travel arrangements and other services in which the Managing Agents regularly trade or do business and which the Company may require for the purpose of its business:

With Balmer Lawrie & Co. Ltd. (the Managing Agents of the Company)—

for sales of such electrical switchgear, apparatus and electrical stores and services in which the Company regularly trades or does business and which the Managing Agents may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

3. With Bridge & Roof Co. (India) Ltd. (an Associate of the Managing Agents)—

for purchases of such goods and services in connection with the fabrication and erection of structural steelwork and buildings and other services in

which the Associate regularly trades or does business and which the Company may require for the purpose of its business:

4. With Bridge & Roof Co. (India) Ltd. (an Associate of the Managing Agents)—

for sales of such electrical switchgear, apparatus and electrical stores and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

5. With The Indian Galvanizing Co. (1926) Ltd. (an Associate of the Managing Agents)—

for purchases of such containers, windows and other metal products and services in which the Associate regularly trades or does business and which the Company may require for the purpose of its business:

6. With The Indian Galvanizing Co. (1926) Ltd. (an Associate of the Managing Agents)—

for sales of such electrical switchgear, apparatus and electrical stores and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

7. With The Bengal Flour Mills Co. Ltd. (an Associate of the Managing Agents)—

for sales of such electrical switchgear, apparatus and electrical stores and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

8. With The Bengal Paper Mill Co. Ltd. (an Associate of the Managing Agents)—

for sales of such electrical switchgear, apparatus and electrical stores and services in which the Company regularly trades or does business and which the Associate may require for the purpose of its business, payment for such sales being due within one month from the date of the supply of such goods or the supply or rendering of such services:

it being a term of each of the above contracts that the prices at which transactions take place shall be at rates which are not less favourable to the

Company than the market rates or which are otherwise reasonable."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 11th September to 20th September, 1957, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON,
Secretary,
Managing Agents.

CALCUTTA, 19th August, 1957.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE is hereby given that the Forty-sixth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37, Chowringhee, Calcutta, on Thursday, the 26th September, 1957 at 3-30 p.m. for the transaction of the following business:—

To receive and adopt the Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon.

If considered desirable to declare a dividend.

To elect Directors.

To appoint Auditors and fix their remuneration.

The share transfer books of the Company will be closed from the 9th September to the 26th September, 1957, both days inclusive, and transfers received in order at the registered office of the Company by the 7th September, 1957, will be in time to be passed for payment of the dividend to the transferees.

The dividend, if approved, will be paid on the 28th September, 1957, to the Shareholders whose names appear on the Company's Register on the 26th September, 1957, or to their mandatees.

By Order of the Board
J. R. Blaikie
Secretary

13th August, 1957
Virginia House,
37, Chowringhee,
Calcutta

Notes:—A member entitled to attend and vote at the General Meeting may appoint a proxy, who need not be a member, to attend and on a poll to vote on his behalf. Shareholders are requested to notify the Company immediately of any change in address.

THE PENINSULA

(Continued from page 414)

Leaving out the new factor of the coming into being of a communist Government whose ideology differs fundamentally from that of the Union Government, it is to be noted that the powers-that-be in the country can possibly have no intention to cripple the plantation industry.

The appointment of the Plantation Enquiry Commission with a view to conduct a thorough enquiry into the conditions of the industry in all its sectors and make recommendations has been the result of the abiding interest that Government have in the plantation industry.

That Authority will not allow extraneous consideration to weigh with their policy has been clearly brought out by its rejection of most of the major recommendations of the Plantation Enquiry Commission. Fears of Nationalisation of the industry have been put to rest by the Union Minister for Commerce and Industry by his categorical statement in Parliament that the plantation industry will not be nationalised.

★

SOUTH INDIAN MARKETS

(Continued from page 416)

over their stock, pepper being comparatively cheaper than coffee and other commodities.

★

Groundnuts

Conditions in the Madras Groundnut market were rather quiet last week, as buyers were adopting a cautious policy on lower Bombay advices. Arrivals averaged 25 to 30 tons per day, while local crushers took up only small quantities. The rate for superior oil-quality seeds was quoted at Rs 156 and the Bold variety at Rs 152 per candy.

In the Groundnut Oil section, Calcutta interests showed only limited interest following reports of accumulation of stocks with the vanaspathi factories. The rate for the ready position was quoted around Rs 315 per candy.

★

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were moderate and there was a steady clearance. There was very little change to report in the Buff and Calf sections.

On the export front, there was no change in the trend and volume of enquiries from London. Business was, therefore, patchy. Some ordinary marks in middle and heavy weights were, however, reported to have been sold in London at 1d below Madras-asking levels. There were several enquiries in the Calf section and prices fluctuated, depending on the marks and standards.

In the Tanned Skins section, arrivals were moderate and there was fair clearance at steady levels.

In the export section, trading was restricted due to the nearness of the London Public Sale.

The markets for Raw Hides and Skins ruled steady.

BRIDGE & ROOF CO. (INDIA) LIMITED

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the Seventy-third Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 16th September 1957, at 12 noon, to consider the Profit and Loss Account for the year ended 31st December 1956, and the Balance Sheet as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to declare a dividend, to transact other ordinary general business of the Company and the undermentioned special business.

SPECIAL BUSINESS.

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials:

Tender No. CON/GM/31/WPP & M/75/B/57-58 for supply of one crane, 4½ ton lifting capacity at 20/15 feet outreach, to any one of the following alternative specification:

(a) Diesel or petrol—Electric crane or steam driven crane mounted on Broad Gauge Railway Truck, but not self propelled; (b) Diesel or petrol—Electric Mobile crane, mounted on self-propelled pneumatic tyred truck. Serviceable second hand cranes, not more than 5 years old, will also be considered.

Tenders will be opened on September 20, 1957 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

Earnest money of Rs 1000/- is to be deposited with the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta and the receipt obtained should accompany the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1000/- with the Controller of Stores need not pay the earnest money.

Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S63 GENERAL MANAGER

NORTH INDIAN MARKETS

(Continued from page 413)

At the Hapur market, Wheat prices have recorded a fall, average quality being quoted at Rs 15.87 per maund. Thanks to clear weather, daily arrivals from the producing areas have gone up to an average of 300 maunds.

Rice prices have continued to rule steady. The position of stocks of rice in the country is officially claimed to be better now than at any time during the past six months. About 40,000 tons of rice have been procured in Orissa and 5,000 tons in Andhra. Rice procurement may be extended to other surplus areas.

Quiet Punjab advices coupled with better stock position due to fresh arrivals from the producing centres have accounted for a modest decline in Gram prices. Barley and Jowar prices have also recorded an easy trend on good kharif crop prospects.

Pulses have recorded an easy trend due to slack outside buying enquiry. The market for Arhar remains stagnant with the heavy stocks lacking outside demand.

The Delhi grains market is no exception. The directive to the Scheduled Banks to reduce advances against foodgrains is the main factor for the quieter tendency. Wheat prices have recorded a loss of about 50 mP per maund. After early softness due to good arrivals, Gram rates have recovered following demand from Uttar Pradesh. Demand for Moong and Urad is lacking. Among Pulses, Arhar has recorded a rise of about Re 1 per maund.

Also, the Bombay grain market has presented an easy appearance. Reports of satisfactory rains in the growing areas and of good progress made by the standing crops have given rise to a bearish sentiment in the market with the traders expecting an overall rise in the foodgrains output.

S. E. RLY TENDERS

SALE OF PACKING WOOD

The General Manager invites tenders for the sale of 500 tons approximately unserviceable packing wood and 100 tons scrap wood available at the Wagon Erection Plant, Waltair. Tender No. S-236/S3 in this connection is obtainable from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23, on production of cash receipt for Rupees five only (not refundable) from the Chief Cashier, S. E. Railway, Garden Reach, Calcutta-23 by local firms and on remittance of the amount by money order to the Controller of Stores, S. E. Railway, Garden Reach, Calcutta-23 by outside firms. The materials may be inspected on any working day before the closing date of the tender. The closing date is 20.9.57 at 12 hours.

A SHORT-LIVED RECOVERY

Watch-Dog Writes:

STOCK markets are still in a state of depression and, with buying incentive lacking, easier conditions have continued to prevail. The credit squeeze, envisaged by the Reserve Bank, and more drastic action indicated by the authorities, have left no room for doubt among operators that credit for speculative purposes will almost be nil in the future.

Even the slight recovery in prices, noticed in mid-week following the Finance Minister's hint that there would be no further taxation till the end of the Second Plan, has proved short-lived. Whatever little support is seen from time to time is confined to either Engineering or Miscellaneous shares. The only consolidation that the markets can derive now is the fact that prices are low enough.

Except for selected Jute shares changing hands at improved levels, trading on the Calcutta Stock Exchange remained dull.

The Bombay Stock Exchange remained closed on Wednesday and Thursday. During the period it remained open, conditions were dull and prices eased on lack of confidence.

Lack of support and predominance of sellers characterised trading on the Madras Stock Exchange.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have decided to recommend to stockholders at the forthcoming Annual General Meeting that a Final Dividend for the fifteen months ended 31st March 1957 on the Company's Ordinary Stock at the rate of £2-10-0d per cent net (Tax applicable at 8s. 6d. in the £) be paid on the 30th September 1957 to those stockholders whose names are registered in the Company's Stock Register on the 12th September 1957.

Applications for transfers received in this office before 12 O'clock noon on Thursday, the 12th September, 1957, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board
I. A. MACPHERSON
Agent

VICTORIA HOUSE
Calcutta, 26th August 1957.

Wall Street closed heavy and the list showed rather evenly divided, changes either way ranging mostly to one point.

★

Calcutta

TRADING on the local Stock Exchange continued to remain dull last week. With activity further reduced in the absence of any incentive, the drift in prices continued till Tuesday due to renewed liquidation, reflecting disappointment over the Select Committee's report on the Wealth Tax Bill. The growing anxiety about the foreign exchange position, uncertainty about an adjustment in the exchange values of various currencies, the tightening up of bank credit and the deterioration in political relations with Pakistan, were also factors contributing to the depressed sentiment in the market.

In mid-week, however, equities staged a smart rally due to short-covering following the Finance Minister's hint that there would be no further taxation till the end of the Second Plan. This was, however, proved short-lived due to profit-taking and lack of follow-up support. The only relieving feature of the week's trading was the renewed support lent to selected Jute shares at improved levels. The market finished the week on an uncertain note.

The Giltedged market continued to rule quiet and business was on a restricted scale in the continued absence of any sizable support. The Reserve Bank started supporting the Conversion Loan. With result, 3 per cent 1986 Conversion Loan, after touching a fresh low of Rs 70.90, improved at one time to Rs 72, to be marked back again at the close to Rs 71.15.

Bank shares were a shade quiet. United Commercial changed hands at Rs 57.50 to Rs 58.00, while Punjab National were quiet at Rs 56.25 against Rs 59.00. Central met with some business at Rs 51; Bank of Bikaner at Rs 18.50 and United Bank of India at Rs 4.12 to Rs 4.19.

In the midst of the present dullness of the market, Jute shares provided the best section where a few selected ones hardened further from last levels due to continued support on the belief that the working conditions of the industry would improve by the recent recommendations of the Select Committee as well as by the present fall in raw jute prices. Most prominent were Anglo-India having buyers upto Rs 141.50 from Rs 139; Barnagore upto Rs 91.00 from Rs 78.50; Belvedere upto

Rs 82.00 from Rs 71; Budge-Budge upto Rs 83 from Rs 72; Dalhousie upto Rs 78 from Rs 70.50; Ganges upto Rs 55.50 from Rs 48; Howrah upto Rs 17.06 from Rs 16.37; National upto Rs 17.85 from Rs 17.45 and Standard upto Rs 60 from Rs 50.50.

Coal shares remained listless as operators were reluctant to enter into commitments, pending the announcement of the Coal Prices Revision Committee's decision. Bengal, Burrakur and Amalgamated remained practically unchanged at Rs 212; Rs 21.75 and Rs 14.12 respectively. East Indian were a shade quieter at Rs 20 against Rs 21.75, while Central India moved narrowly between Rs 5.87 and Rs 5.93; South Karanpura between Rs 8.00 and Rs 8.12 and Western Bengal between Rs 5.56 and Rs 5.75.

Except Jayshree which met with some support from special quarters upto Rs 6.75 from Rs 6.31, Textile scrips ruled generally quiet despite the improved conditions in the cloth market. This was mainly due to reports of accumulation of stocks with the mills. Cawnpore turned cheap at Rs 6.13 against Rs 6.83, while Kesoram were a narrow market around Rs 12.06. New Victoria, after improving to Rs 1.56 from Rs 1.37, receded again at the close to Rs 1.44 on lack of follow-up support.

The uncertain marketing outlook for the commodity depressed sentiment in the Tea section where dealings continued to be very few. Thanks to better results obtained at this week's auctions, a few scrips managed to score small gains at the close. Prominent amongst these were Birpara having improved to Rs 127 from Rs 113; Brahmapootra to Rs 4.87 from Rs 4.62; Banarhat to Rs 335 from Rs 328; Bishnauth to Rs 18.75 from Rs 18.69 and Dufflaghur to Rs 33.00 from Rs 32.50. Tellapara changed hands at Rs 132 to Rs 134; Patrakola at Rs 141 to Rs 135 and Telojan at Rs 24.37 to Rs 24.50.

Quieter advices from the commodity market had an adverse effect on the Sugar section where enquiry was limited. Carew moved narrowly between Rs 6.94 and Rs 7.00 and Ramnugger Cane between Rs 21.25 and Rs 21.37. S.K.G. were slightly better at Rs 9.87 against Rs 9.81.

Price movements in the Engineering were rather irregular due to alternate buying and selling, being influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 17.64, Indian Irons opened better at Rs 17.70 and, after touching a low of Rs 17.60, improved to Rs 18.14 on bear-covering, to recede again towards the close to Rs 17.94 on profit-taking. G. K. Williams touched a new high of Rs 29.12 from Rs 28.75, to finish the week lower at Rs 28.6; TEXMACO touched a high of Rs 16.25 and a low of Rs 15.90, to finish better at Rs 16.05. In Mundra group, Jessop receded at one time to Rs 22.62 from Rs 23.00 and Richardson to Rs 10.25 from Rs 11.12, to improve at the close to Rs 23.12 and Rs 11.00 respectively. I. S.

Wagon were a steady feature at Rs 175 with Braithwaite a shade quieter at Rs 27.50 against Rs 27.81.

Miscellaneous issues followed the general trend of the market. Indian Copper, after touching a new low of Rs 2.94 from Rs 3.03 on rumours of strike, at the company's mines, improved again to Rs 3.07 on reports of the dispute between the labour and the management being referred to conciliation, to finish the week better at Rs 2.99. Following were the price trends of other scrips:

	Week's High Rs	Week's Low Rs	Week's Closing Rs
Titaghur	33.25	32.37	33.25
Orient	23.70	22.70	23.25

★

WORLD OF COTTON

(Continued from page 411)

American cotton will figure prominently in the list of imported cottons this season, actual arrivals from that country till August 3 amounting to as much as 3.4 lakh bales as against only 14,387 bales for the corresponding period last season. Arrivals of sterling area cottons have, on the other hand, shown a sharp fall, receipts of Egyptian growths having declined from 2.18 lakh bales to 48,567 bales and of East African varieties from 2.19 lakh bales to 1.26 lakh bales. Sudanese cotton has also shown a fall from 1.27 lakh bales to 60,244 bales. It is generally felt that this trend will continue during the new season starting from September 1.

★

NEW YORK COTTON MARKET

Prices on the New York cotton market, after ruling easier early in the week, recovered markedly on increased trade buying and local covering. Private advices reported generally favourable weather over most of the cotton belts. Middling spot was quoted at 35.00 cents per pound.

★

LIVERPOOL COTTON MARKET

Trading on the Liverpool cotton market was much quieter last week; but prices were fairly well maintained by additional trade support and occasional mill fixations. Offerings remained limited.

★

KARACHI COTTON MARKET

After a brief spell of weakness initially, the Karachi cotton futures market registered some improvement during the rest of the week, thanks to good professional support induced by the scarcity of good quality cotton and the none too happy weather reports.

According to reports, the crop, so far, is fairly good. It is still in the formative stage and much will depend upon weather conditions during this and next month.

Oil from abroad costs valuable foreign exchange.
Oil from inside India saves it. And we must
have ever-increasing quantities to cope with the
expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil
industry working at full pressure to produce as
much oil as possible from our own oilfields. Additional
wells are constantly being drilled, yet even in an
established area they are not always productive; in spite
of modern knowledge and equipment, successful
drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the
fuel, lubricants and by-products which are so vital
to the progress and prosperity of India.

ASSAM OIL COMPANY

Investor's Supplement

Easier Conditions Prevail in August

The month of August began for the stock markets on a depressed note, the main reason for the reactionary tendency being the threatened strike by Central Government employees. In view of the serious repercussions on the life of the community in the event of the strike materialising, marketmen were reluctant to enter into fresh commitments. A contributory factor had been the unsatisfactory working report from TISCO.

All sections were featureless in Calcutta with Indian Irons losing 18 nP in the course of the day's trading to close at Rs 19.18. Under the lead of Tata Iron, values backed away moderately in Bombay. Tata Irons closed at Rs 172.75. Textiles were easier with Bombay Dyeing marked down to Rs 568.50. Selling pressure pushed down Century from Rs 429.00 to Rs 426.50.

2

Besides the threatened postal strike, operators were deeply concerned about the new taxes. While the Expenditure Tax and Wealth Tax Bills were before a Select Committee of Parliament, it was reported that quite a number of members of the Congress Party were opposed to the new taxes. Marketmen as a consequence deemed it advisable to await the final outcome of the deliberations.

Except for slight recovery in the more speculative issues, Calcutta shares were generally dull with the volume of business passing at a low ebb. Indian Irons opened at Rs 19.21 and moved up to close at Rs 19.36 being done up to Rs 19.54 after hours. The Bombay Stock market remained closed. In kerb trading Tata Iron moved narrowly between Rs 171.25 and Rs 172.50.

3

Dull conditions prevailed in the Bombay Stock Exchange. Some selected scrip however were found to be in request. While steels were steady, Textiles were neglected. Tata Iron was well maintained at Rs 172.75 while Indian Iron closed better at Rs 19.50. Among Textiles Bombay Dyeing remained unchanged at Rs 568.50.

4 & 5

The Committee of the Calcutta Stock Exchange Association resolved in an emergency meeting held on the 5th instant that in view of the threatened strike by the Postal and Telegraph employees and the cessation of Postal facilities for registration, all outstanding deliveries

were to be suspended until further notice. The resolution said that the decision regarding clearing shares would be announced later.

Stock market sentiment was swayed by the three major considerations and the net result was renewed selling pressure. The postal strike if materialised would dislocate business in general. Prevalent rumours about the wealth tax bill were not quite encouraging. It was reported that the Congress Parliamentary Party did not favour any major change in the Bill. As against the two adverse factors, there was the report that the Central Loan, the subscription list of which opened on the 5th had met with good response.

Speculative scrip were on offer in Calcutta and Indian Irons closed at Rs 19.21 after an abortive attempt to stage a recovery. In Dalal Street pivotal shares after earlier steadiness fell back on lack of follow-through support to close with moderate losses. Tata Iron lost 1½ points to be finally placed at Rs 171.25, while Bombay Dyeing declined by 3½ points to Rs 562.00.

6

Shares values displayed a sagging tendency in Calcutta. That was mainly because deliveries had been suspended as a precautionary measure against the proposed postal strike. Indian Irons after opening at Rs 19.24 and after touching a high and low of Rs 19.27 and Rs 19.12 respectively, closed at Rs 19.18. Bombay shares were steadier in comparison. Tata Iron steadied up to Rs 172.00 from Rs 171.25 while Bombay Dyeing gained 1½ points to be placed at Rs 563.50.

7

The Essential Services Maintenance Ordinance, 1957 prohibiting strikes in any postal, telegraph or telephone service was promulgated. The ordinance also prohibited strikes in any services connected with the operation or maintenance of aerodromes, or with the operation, repair or maintenance of aircraft.

The Government of India announced their decision to recognize the Native Share and Stock Brokers Association (known as the Stock Exchange, Bombay) as the Stock Exchange at Bombay.

The Stock Exchanges remained closed.

8

The National Federation of Posts and Telegraphs Employees decided

not to proceed with the proposed strike due to begin at midnight of the 8th instant. The Director General of Posts and Telegraphs announced that in view of the threatened strike in the Posts and Telegraphs Department having been withdrawn all restriction on postal, telegraph and telephone services had been withdrawn.

Trading in the Stock Exchanges was on a steadier note toward close of the day's session on rumours that the postal strike had been called off. In Bombay sentiment showed marked improvement on various encouraging rumours like higher interim dividend for Bombay Burmah, possibility of exemption of shipping companies from the purview of the Wealth Tax. Indian Irons in Calcutta after opening lower at Rs 19.06 moved up to Rs 19.36 before finally closing at Rs 19.24. In Dalal Street Tata Iron closed fractionally better at Rs 172.50 while Bombay Dyeing advanced to Rs 564.00.

9 & 10

With the calling off of the postal strike, the postponed clearing took place that day on the Calcutta Stock Exchange. Due to short covering trading was on a steady note though the volume of business passing continued to be meagre. Indian Irons on overnight support opened higher at Rs 19.42 the scrip after touching Rs 19.48 closed unchanged on balance at Rs 19.42. In Dalal Street also sentiment showed a marked improvement in earlier dealings but toward close became once again subdued due to lack of follow-up support. Tata Iron closed half point higher at Rs 173.00 while Bombay Dyeing recorded a gain of 3½ points to be finally placed at Rs 567.50.

A Reserve Bank Communique said that the total subscriptions to the two Central Government loans which were fully subscribed last Tuesday amounted to Rs 10,597 lakhs approximately, out of which conversions amounted to Rs 4,499 lakhs. The subscriptions to 3½ per cent National Plan Bonds fourth series (3½ per cent 1967) and 4 per cent loan 1972 amounted to Rs 5,692 lakhs and Rs 4,905 lakhs respectively. All subscriptions would receive full allotments, the communique added.

11 & 12

Though the fact, that the Central Loan had been successful,

imparted some steadiness, the upward movement of prices was retarded by the many other uncertainties in the investment situation. Reports that atleast two State Governments—the names of Bombay and Mysore were mentioned in this connection—would come to the market for a total sum of Rs 10 crores also imparted a subdued tendency. In Calcutta the only redeeming feature was the enquiry for selected scrips in the engineering and miscellaneous sections. Indian Iron opened lower at Rs 19.26 and was further marked down to Rs 19.18. A weak undertone was noticeable in Bombay where the list sagged with closing prices at or near the day's lowest levels. Tata Iron reacted to Rs 171.50 from Rs 173.00 while Bombay Dyeing lost 5½ points to close at Rs 562.00.

13

Speculation was rife as to the decision of the Congress Parliamentary Party on the Wealth Tax Bill. It was rumoured that the party was in favour of exempting from the wealth tax such companies as suffered losses and declared no dividends. Similar exemption was reported to have been recommended in the case of shipping, banking and cooperative companies. Sentiment was somewhat depressed by the reference by the Chairman of the Tata Locomotive & Engineering company to the growing disruptive activity of communist-led trade unions in Telco and other industries in the country.

In Calcutta the turnover continued to be on a reduced scale with prices generally displaying an easier trend. The more speculative staged a late rally mainly on the strength of Indian Irons which after an easier opening at Rs 18.94 recovered to Rs 19.14. In Bombay prices slumped in mid-session as a result of the cumulative effect of several bearish influences one of which was the lower-than-expected dividend from Bombay Dyeing. Toward close sentiment rallied somewhat on outside buying in Tata Iron, which as a consequence closed unchanged on balance at Rs 171.50. Bombay Dyeing, however, lost ground to be placed at Rs 556.00 from Rs 562.00.

14

Holiday influences restricted trading in the stock exchanges. (15th and (Continued on page 475)

Investment Gossip:

As the Monroe calculating machine said to its highly trained operator, "You can count on me", so, too, can you rely upon the Stock Exchanges to take immediate cognisance of any development, whether in the internal economy or as far away as in Timbuctoo, that has a bearish connotation.

What you cannot count on the Stock Exchanges to do is to list what are, on the contrary, features in the economy that spell a brighter outlook; I am afraid pessimism is considered (perhaps because of the money to be made "automatically", under the Calcutta Stock Exchange rules) a virtue, whereas it is a vice to put on a cheerful front.

Take, for example, happenings in the immediate past. Except for the shortsighted decision by Government not to permit an increase in the Indian Irons dividend, there have been teeming developments of favourable import.

First, there was the fact that, after the Select Committee stage, concessions were forthcoming in the 1957-58 taxes.

Second, the Finance Minister has given the categorical assurance that we may expect no new taxes for the rest of the Plan period.

Third, almost without exception, corporate results are such as to gladden the heart of the shareholder.

Fourth, expansion programmes, not least in Indian Irons and Tata Steel, are proceeding strictly according to schedule.

Fifth, Mr Tata vaguely indicated that the question of celebrating the golden jubilee with a higher dividend falls into the financial year 1957-58—a fact which I had some weeks earlier pointed out.

Sixth, notwithstanding the Government refusal to sanction a higher distribution, Indian Irons has transferred the substantial sum of Rs 50 lakhs to a reserve vclept the 'Dividend Adjustment Account.'

Seventh, even in the contingency that projects with a high element of foreign exchange may be deferred, Mr T. T. Krishnamachari has indicated that such shortfall in Plan disbursements would be made good by the fresh inclusion of new 'internal' projects.

HIGHLIGHTS

A hue and cry is presently being raised in Lok Sabha because of the "subsidy" that TELCO receives.

There are cries of righteous indignation that the national exchequer should, in such wise, be called upon to pay much more for a TELCO locomotive than an imported one would cost.

The angry complaint has been voiced that TELCO is behind schedule in its performance.

Eight, the Life Insurance Corporation continues to support the market with vim and vigour, but also with care and caution.

Ninth, in the ten months to June 1957, the LIC invested a total of nearly Rs 10 crores in debentures and preference and ordinary shares.

Tenth, the Finance Minister has also stated that funds would be available not only from the LIC, but also from pension funds, etc., for investment in public companies.

It is ten in favour, one against, as far as the factors working in the Stock Exchanges is concerned. But, to judge by Stock Exchange behaviour, it would seem to be the other way about, with the dice heavily loaded against improvement in share quotations.

Wisdom, they say, dawns slowly. Perhaps, also, stock exchange operators are not particularly anxious to be seized of the correct significance of developments in the economy.

Shakespeare once said that some men are born great, that others achieved greatness, and that a third variety had greatness thrust on them.

Some men are, to paraphrase the Bard, born with understanding; others attain realisation; and there is a residuary sort of individual down whose throat wisdom has to be forced.

Stock Exchange operators would appear to belong to the third.

£ R \$

Investment Notes:

In an otherwise dull session on the Calcutta Stock Exchange during the past few weeks, the shares of Aluminium Corporation had been receiving persistent support upto Rs 11.50 from Rs 10.94 on rumours of the dividend being doubled for the year ended 31st March 1957. At a meeting held this week, the Directors decided to recommend a dividend of 90 nP per share, which is equal to 9 per cent, for the year as against only 5 per cent in the previous year.

TELCO has proposed to issue 20,000—5 per cent Mortgage Debentures of Rs 1,000 each, aggregating Rs 2 crores to meet a part of the finance needed for the company's expansion plan. In the first instance, it is proposed to offer to a

We would refer those carping critics to a study of TISCO.

TISCO is being asked to subsidise the Indian consumer, at the present day, at the rate of Rs 40 crores a year.

Besides, the company has paid Rs 40 crores into the Steel Equalisation Fund to subsidise imported steel.

Produce More and Serve A Double Purpose

Produce more and save the monies now spent in importing the deficit in our food supply

Produce more manufactured goods and hasten the process of industrialisation which is the pivot of the FIVE YEAR PLAN

We in the Bank are fully equipped to advise and help in all matters connected with commerce and industry

K.I-21

bank Debentures worth Rs 1 crore as security against a loan to be obtained from the bank. The remaining Rs 1 crore will be issued at a later stage having regard to the company's need for funds. In this respect, an application has been made to the Controller of Capital Issues for his consent.

The production of Steel by the Tata Iron & Steel Company, during August, shows a drop of 3,500 tons at 63,100 tons as compared to the previous month. The output of Sems has dropped from 19,700 tons to 16,800 tons and that of finished steel from 46,900 tons to 46,300 tons. Pig Iron output is, however, a shade better at 88,700 tons as compared

to 88,300 tons, while the production of Steel Ingots has dropped from 88,300 tons to 85,500 tons.

In Madras, Periakaramalai Tea has proposed to capitalise Reserves and issue bonus shares in the proportion of two shares for every three shares now held, in order to bring the capitalisation cost to a more realistic figure.

The Manager, The Chartered Bank, Calcutta, has received the following cabled information from his Head Office in London:—

"Directors have declared interim dividend 7½ per cent actual subject to Income Tax. Dividend payable 27th September."

If Parliamentarians have any sense of proportion, they will not thus be making a mountain over a molehill.

Especially is this so, since the sacrifice that TISCO is called upon to bear is so heavy.

For an assessment of TISCO steel in the perspective of the Indian economy, read this week's Clive Street Gossip.

Indian Standard Wagon Maintains Dividend and Bonus

Balance-Sheet Reviews :

THE Indian Standard Wagon Company Limited has produced satisfactory working results for the year ended 31st March, 1957. Despite a decrease in sales from Rs 4.49 crores to Rs 3.83 crores, the net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 58,68,639 as against only Rs 42,89,761 in the previous year.

In respect of allocations, the Depreciation amount is raised to Rs 2.82 lakhs from Rs 1.83 lakhs; Taxation provision to Rs 35.20 lakhs from Rs 17.80 lakhs and Taxation Contingency Reserve to Rs 1.20 lakhs from Rs 80,000. General Reserve is maintained at Rs 1 lakh. The transfer of Rs 1 lakh to Development Rebate represents the balance to date of the saving in tax due to the special rebate on capital expenditure on Plant and Machinery.

The work of replacement and general rehabilitation and modernisation of the Plant proceeds. It is not entirely clear to the directors how the present import policy of Government will affect future schemes; but they have considered it advisable to provide Rs 5.25 lakhs for further replacement. The dividend and bonus on the Ordinary shares have been maintained at 25 per cent and 5 per cent respectively.

In this connection, it would be recalled that the directors decided, last year, to recommend the issue of bonus shares in the proportion of one new Ordinary share for each already issued. Accordingly, application was made to the Controller of Capital Issues for permission to capitalise reserves to the extent of about Rs 19.49 lakhs. But this application was kept in abeyance, presumably because of the then pending proposal to tax the issue of bonus shares. Although a tax of 30 per cent on bonus shares is likely to be imposed, the directors have decided to proceed with the application as originally planned. Accordingly, a sum of Rs 5,84,775 has been included in the provision for Taxation to cover this new tax.

According to the directors' report, the Works continue to be fully booked; and the outlook for the current year is not unfavourable.

Aluminium Industries

The Aluminium Industries Limited has grown considerably in stature in its eleven years of existence. Actually, the period of active production is much less. But, even during this short period, it has been possible to build up a great reputation in a pioneering field. The use of electrolytic aluminium cables for transmission purposes has come to stay. With the construction of a number of projects, the demand for cables for transmission purposes has increased considerably. About 23,740 miles of aluminium cables and a full range of cable accessories were manufactured in the company's factory in Kundara during the year ended March, 1957. The company has undertaken another pioneering venture, namely the manufacture of insulated aluminium cables. The new plant came into production as from April this year. It is stated by the directors in the report that "they are confident that the company has established a new line of manufacture making available to the customer an excellent product which will eventually result in cheaper electrification of factories and homes".

The new rod rolling mill and cable mill licensed by the Government are being established at Hirakud, Orissa. This is the first important instance of a South Indian company branching out its activities in the North. This is indeed a happy development. The entire plant and machinery required for these projects have been licensed for import while suitable land has been arranged at Hirakud and the civil works connected with the factories are well under way. The rod mill is expected to be in commission towards the end of 1958 and the cable mill early in 1959. Additional capital for Rs 20 lakhs in ordinary shares of Rs 10 each at par was raised in April last to finance this project.

There was a sharp increase in sales in 1956-57 to Rs 3.17 crores from Rs 2.09 crores in 1955-56. With the functioning of the insulated aluminium cable plant, the turnover during the current year can be expected to be much higher.

Reserve Bank Profit

ON the face of it, the profit of the Reserve Bank for the year ended June 1957 marks a 50 per cent increase over the preceding year; and this is the impression that one would get on a superficial study of the Report of the Central Board of Directors of the Reserve Bank for 1956-57. According to this Report, the net profit available for payment to the Central Government is Rs 30 crores against Rs 20 crores last year.

We are also likely to get the impression that such an improved performance is due to considerably increased income under the head "Interest". A more careful study, however, serve Bank for 1956-57. According to this 1956-57 has actually declined somewhat.

For, we must remember that the profit payable to the Central Government is arrived at after transfers to funds. In 1955-56, the transfers made to the National Agricultural Credit (Longterm Operations) Fund and the National Agricultural Credit (Stabilisation) Fund totalled Rs 16 crores. Since the Government received Rs 20 crores, the Reserve

Bank's profit, in 1955-56, may be put down at Rs 36 crores.

In the latest year, the transfers to the two funds absorb Rs 6 crores. The profit payable to the Central Government is Rs 30 crores; and, apparently, the profit before provisions is unchanged at Rs 36 crores.

But this is to overlook the fact that the Reserve Bank profit for 1956-57 includes an element of Rs 2.74 crores, which is the excess of profit realised from revaluation of gold held by the Reserve Bank, after setting apart Rs 75 crores for the Reserve Fund; and this balance of Rs 2.74 crores, the Report states, is "included in the surplus profit payable to Government".

Thus, it may be said that, leaving apart the "windfall" profit of Rs 2.74 crores, the Reserve Bank profit for 1956-57 shows a decline from Rs 36 crores to Rs 33.26 crores.

In this context, we may point out that we had foreseen this eventuality last year, when, in Indian Finance of September 22, 1956, we had ventured to suggest that the "net profit

Indian Finance

Established 1928

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the Side of what is Right."—The Analects of Confucius.

for 1956-57 may not disclose the same rising trend". Our view was based on the fact that, with the rapid depletion in foreign exchange resources, our earnings thereagainst would be adversely affected. Indeed, this point has been recorded in the Report of the Central Board. Our conclusion last year that "somewhat lower earnings are not unlikely" has, thus, materialised.

As far as the current year is concerned, we have to bear in mind the fact, firstly, that Bank Rate in this country has been raised to 4 per cent. Secondly, there are also some hopes, particularly in view of the determined action being taken by Government, that the foreign exchange portfolio of the Reserve Bank will not decline by much more. Thirdly, deficit financing during 1957-58 is likely to prove to be on a slightly higher scale than in the preceding year. In the light of these three developments, it seems to us that the Reserve Bank profit for 1957-58 should, almost certainly, be maintained on the 1955-56 level; if change there is, the profit is likely to be somewhat higher, and not the reverse.

Default and Defeatism

IN the highly eventful years since the transfer of power, the All India Congress Committee Sessions have seldom groped for important questions to discuss or decide on. In domestic and international politics alike, major issues have been cropping up from time to time, most of which claimed the attention of the Congress, which, incidentally, is, numerically and in point of power and influence, one of the biggest political parties in the whole world. When Mr Jawaharlal Nehru, offering his views on the proposed changes in the composition of the Working Committee, referred to the wholesome fact that, of the contemporary Prime Ministers, he happened to be one of the two who have been holding office for as long as ten years, he was paying the highest encomium to the party which made it possible. When the party turns to self introspection, the past record should also be kept in constant view.

It is very seldom that a young democracy secures a Government as stable and as sober as the present one in India. Mahatma Gandhi rather mysteriously wanted the Congress to be dissolved soon after the advent of independence. Had the party taken the suggestion seriously, the consequences would have been most unpredictable. Anyway, the survival of the Congress with its name, tradition, leadership and outlook in fact, has to be regarded as the greatest contributing factor to the political stability which it has been the good fortune of India to enjoy in its formative stage as a free nation.

The Congress Party has also shown remarkable resilience and adaptability, particularly during the last ten years. If the socialists are at pains to discover a clearly distinguishable set of ideas and methods for themselves and if even the communists feel that in many

respects what they have to offer even theoretically does not differ in substance from what the Government have started doing in India, the explanation has to be sought in the dynamism which the present Congress leadership has imparted to the party creed and the sincerity with which it is put into practice. In cruder terms, the Congress is still comparable to a giant holding mastery over the house he has built. In the Centre, the party wields an overwhelming majority. In all the States except one, the Congress rules. The masses look to the Congress for further redemption from social and economic difficulties and handicaps which they have been suffering for centuries. It would be untrue and uncharitable to describe the Congress as an organisation whose future would be less satisfactory than its past.

And yet no discerning student of current political trends can fail to notice a general diffidence which has crept into this huge organisation. The Congress President, addressing the AICC Session, lays the serious charge that the Congressmen have lost touch with the masses and they have no connections with the vantage points of society in general. A member from Maharashtra asserts that the people have never been as dissatisfied with the Congress as they are today. Mr N. V. Gadgil, who of course, is one of the fiercest critics of the party leadership from within, pleads for "something progressive instead of sticking to worn-out systems and policies."

It has to be conceded that the party no longer consists of single-minded fighters for the national cause, which description held good when it was assailing foreign rule. Domestic issues have undermined loyalties to the country as a whole and to the leadership claiming to represent the country; those loyalties have

yielded in some measure to those arising from limited, regional aspirations. The vantage points of society, which the President refers to, cannot be securely held by members hailing from areas whose ambitions directly collide with the counsels and the decisions of the all-India leadership.

Perhaps, it would be unfair to the Union Government to say that they have not explored all the avenues for reconciling such conflicts then and there. The problem, however, remains, of lukewarm and discontented groups within the Congress, who are unable to see eye to eye with the leadership or are frustrated in their endeavour to put across ideas and decisions taken by the party to their immediate constituents. In fact, the most pressing problem for the Congress is not so much constitutional changes or its relations with the Governments as the discovery of ideas and techniques by which regional and national aspirations could be reconciled without bitterness and conflict.

It is awkward that on political issues Congress leaders are compelled to differ openly and persistently. To express their differences freely and at the same time be able to get on under the same political umbrella is not at all unsatisfactory. But, at some stage or other, when decisions have to be taken, their attitude will have to be such as not to dry up the undercurrent of unity. Mr Dhebar's exhortations come up against this great difficulty which could be solved only by an all-round display of far greater self-denial, tolerance and foresight than has unhappily been the case, on more than one occasion. The recent linguistic agitation in Maharashtra and the demonstrations in Assam over the location of the oil refinery, are two swallows which can forebode a bad summer.

The dilemma of the Congress leaders in the States in such situations is not to be belittled. If they do not champion the local cause, they stand the risk of losing entirely. If they take the alternative course, they come up against the stand or decision taken up by the national leadership. The method of anticipating trouble, resolving conflicts between local aspirations and decisions made elsewhere or of seeking to avoid these through timely consultations with all the interests concerned and to propagandise effectively what is agreed to be the best course, might offer an escape from the nasty dilemmas which have been tending to recur on some issue or other.

The President was also thinking of the comparatively poor hold of the Congress over the trade unions. Here again, the INTUC, whose numerical strength is sometimes found to be of little practical value, cannot avoid following the tactics which any labour leadership has to follow, if it is keen on maintaining its hold on the workers, the tactics of competitive championing of demands, irrespective of the embarrassment caused to the employers, Governments not excepting, and even of relevant economic considerations. How a Congress leader can hope to cultivate a set of workers by offering to do less for them than a rival socialist or communist is a problem for which there is scarcely an effective answer, in a set-up in which collective bargaining and strikes are perfectly within the limits of constitutional propriety. This is not a counsel of despair. The aim indicated by Mr Dhebar is attainable only through well planned and laborious efforts, calling for the greatest determination, discipline and new methods of educating the workers.

The Don'ts are as important as the Dos. Mr Nehru explains how defeatism and crisis-mongering are undermining public morale and weakening the hands of the Government. On many occasions, Mr T. T. Krishnamachari also was compelled to draw attention to the incoherence in the attitude of Congressmen,

who, while on the one side display great enthusiasm for the Plan, are on the other reluctant to approve steps indispensable for its financial sustenance. In Parliament, Opposition members are not alone in maintaining that the Plan is too ambitious and has to be cut down. So far as Congressmen are concerned, this kind of criticism is a blatant violation of the commitment implied in the election manifesto.

It is true that the Government have come up against certain difficulties. For influential leaders to go about exaggerating these difficulties and asking for adjustments in the Plan to the extent of affecting its major aims is nothing short of disservice to the Government and to the nation, let alone its being suicidal to the party itself. In his capacity as a party leader and as Prime Minister, Mr Nehru rightly feels that the defeatist statements and appeals of his colleagues in the party have become a serious handicap.

This defeatism probably arises from the inadequacy of positive participation by Congressmen in such aspects of the Plan where it is indispensable. The Community Projects, by all estimates, are hungering for sufficient public association, which implies a clear call on Congressmen's enthusiasm and sense of public service. Besides, there are a number of other social welfare activities where popular leadership is woefully deficient.

In these fields, practical work offers the most promising way of regaining mass contact and support. It is the present vacuum in public association with the Projects and similar other spheres in the Second Plan programmes which engenders in the minds of leaders the pessimism and gloom which Mr Nehru rightly deplors. India's Second Plan is also intended to demonstrate that the quick economic transformation of a country is not the monopoly of communism. As the party is specially committed to make the Plan a success, every Congress leader owes a duty to himself in the matter of seeing the Plan through, by contributing his or her very best.

Criteria for Tax Policy

By an ESTEEMED CORRESPONDENT

IT is only rarely that our Ministers attempt a clear and compendious statement of the aims of public policy, partly because they are not ready to be judged out of their mouth and, even more, because they know that, in these high souled times, it is sufficient to refer to the lofty social ideals embodied in the Directive Principles of the Constitution and the march to the socialist goal. Some small minds here and there may ask for proof that current policies are related in a realistic way to these ideals. But, by and large, eloquence serves the purpose. It is well, therefore, that Mr T. T. Krishnamachari has stated the four main criteria by which to judge our taxation policy. These are:

- (1) sizable additions to public revenues;
- (2) incentives for larger earnings and more savings;
- (3) restriction of consumption over a wide field so as to check inflation and release resources for investment, and
- (4) initiation of changes in the tax structure such as can ensure responsiveness of tax yields to increased incomes and orderly development of the economy with due regard to our social objectives.

Doubtless, the principal objectives of new taxation have been chosen with an eye to the present position in the country. It would be wrong, therefore, to claim any high degree of universality for them. The scale of the additions to revenue, efficacy in checking inflationary trends and accordance with social objectives are the three points out of the four

which are too closely related to present conditions to have a wider validity. It is not always that a country has inflation to think of, while devising measures of new taxation or a scale of public expenditure out of proportion to current revenues or even the reduction of inequalities of income. And yet, to some extent, these special features of the fiscal and economic situation have come to stay. Few people can have the temerity to suggest that inflation is a passing phenomenon. It is by no means an evil necessity only for undeveloped countries. It is not a mere legacy of the war period. It has little to do with the ideology of the party in power. Nearly all countries, whatever the stage of development or the political complexion of the Government, find themselves in the throes of inflation, because mankind has not found the way of maintaining or advancing economic development without generating in one way or another the forces of inflation. The same may be said, though to a lesser extent, of the needs of the Treasury and of the urge to reduce economic inequalities. If we consider each by itself, the four criteria suggested by the Finance Minister will seem reasonable and even necessary. In the context of our needs for financing the Second Plan, any levy which may yield but two or three crores a year would hardly be worth Parliament's while to consider. We do need sizeable additions to revenue. We can ill afford to blunt incentives to earnings and savings. And neither the inflation nor the social objectives can be

[September 7, 1957]

overlooked while dealing with questions of inflation.

But these four principles taken together make a queer combination. Can it be claimed that every measure of new taxation adopted during the last one year or more satisfies all these four criteria? Or is it suggested that it is enough if a tax satisfies a reasonable number of them, say, two out of the four? If the latter is the case, it would prompt another question: Does a tax which satisfy a few of these tests, at the same time offend the others? Are all the four mutually consistent, or is a set of principles handed to us, which is individually unexceptionable but which are more or less incompatible when they are taken together?

The approach, let it be said without further beating of the bush, does not mean any idle hair splitting. The most dangerous of the present tendencies is to overlook the conflict between these objectives and to assume that a tax which appeals strongly on one ground is commendable, though perhaps to a degree, on the other three counts as well. Take, for instance, the excise duty imposed on cotton cloth last year. The addition to revenue was certainly of a sizable kind. It has also, in certain conditions, an anti inflationary value. But is it also the kind of tax that can ensure the responsiveness of tax yields to increases in incomes? One must remember in this context the plea that the excise was levied because the price of cotton cloth was already high and the tax would only divert the excessive profits from the industry and trade into the exchequer. But this would run counter to the claims that it is an anti inflationary measure, since it is only enough to deflate profits; there must be a decline in prices through decline in demand or increase in production. It helps inflation in as much as it rules out the possibility of a decline in the price to the consumer, through the mills being content with a smaller margin of profit or through a reduction of costs consequent on an expansionary demand and production. By the same token, it offends against the principle of automatic increase in revenue, in step with the increases in national income. Since the increase in excises and the rates of excise duties form so large a part of the increase in central revenues, it is pertinent to point out that a very large part of our taxation system is such as to put up the price of goods to the consumer and, therefore, belies the Government's claim to have given the fight against inflation the highest priority.

The direct taxes, the taxes on incomes and the taxes on capital wealth, do not make a better showing when they are judged by the criteria set out by the Finance Minister. In any approach to these taxes, we have, of course, to remember one essential point, namely, the importance of tax measures as a weapon against economic inequalities. In a country like India, where the inequalities are so wide, there is a strong prima facie case for steep progressive rates of taxation on income and, if we are so minded, on wealth, too. But this has to be balanced against the paramount economic consideration of providing sufficient incentives for increased earnings and savings. So long as taxes were confined to current incomes, the case for high rates of taxation on the upper brackets may be regarded as irrefutable. If all that the nation wanted was a less unequal distribution of wealth and income as they are now, nothing could be said against income taxes which leave but a small fraction of the rupee in the pockets of the tax payer. But that is no longer true. We want a fair rate of development and increase in the national income and, for this, more must be earned and saved. We want to continue to preserve private property in some form and

September 7, 1957]

make the most of a mixed economy, because opinion in the country has not changed sufficiently for more radical changes in economic sense, and impatient changes would cause serious disorganisation and economic loss to the people. What is more important, we have started to tax capital wealth as well. In these conditions, it would be hard to maintain that a progressively high rate of income tax, a tax on wealth and expenditure in the upper grades, a system of heavy indirect levies on necessities, as well as luxuries, together make up a system which is best suited to our current needs. While, no doubt, the wealth tax and the expenditure tax at the present rates are not a staggering burden on the classes concerned, they do raise the fear that our system of taxation is fast acquiring a disturbing similarity to the multipoint sales tax, in as much as income and goods are alike subject to exactions at every point in their circulation in our economic life. Horror of double taxation, no doubt, belongs to a bygone age. But one must try to visualise the impact of our tax system on the psychology and material prospects of a young man of medium means

Soviet and US Government Bonds and Savings—I

By GEORGE BENSON

A COMPARISON of Soviet bond issues with bonds sold by the US Government illustrates the basic differences between a completely controlled economy under communism and a free enterprise system.

Last April the Soviet Union announced that it was "freezing" the repayment of 260 billion rubles in state bonds which had been purchased over many years by 74 million Russian people. This amounts to 65 billion dollars at the official exchange rate. It is a drastic action indeed and wipes out the life savings of a great many Russians.

By contrast, US Government bonds, which have been issued regularly for the past 181 years—since the American Revolution in 1776—have never suffered a default. Every bond has been redeemed at face value on the date it matured.

When Soviet Communist Party Chief Nikita Khrushchev announced the plan to "freeze" Soviet savings bonds last April 10, his announcement was quickly followed by a decree of the party's Central Committee banning any repayment of the 260 billion rubles in bonds before 1977 and the decree ordered that the repayment be spread over an additional 20-year period. Such a 40-year delay in repayment, even if made as promised, amounts to virtual confiscation. Many of the Russians who bought the bonds will never live to collect the money.

Moscow's current bond manipulation is not a new Soviet fiscal device. When repayment of bonds sold in the 1920's and early 1930's proved burdensome to the Government, the Central Committee headed by Stalin moved in 1936 to postpone redemption for 20 years. In 1947 the bondholders were informed that repayment of their bonds would be deferred for another 20 years. In addition, they suffered a 67 per cent cut in the nominal value of the bonds due to a drastic devaluation of the ruble.

These experiences left many bondholders skeptical of the Soviet Government bonds they were pressured into buying in the course of annual "loan" drives.

Two years after the end of World War II, Stalin and his advisers were confronted by a critical economic situation. During the war, the consumer industries—which had always

who inherits a fair sized property in land and in shares of good companies, who can function in our economy as an entrepreneur instead of being a parasite and who is capable of earning much more than he can get from his inherited wealth. He would be a brave man who would contend that the burden of taxes to which he would be subject will not crush all incentive to production out of him. It may be that, at this stage, no Finance Minister can overlook the chances of getting twenty or thirty crores out of expenditure or wealth taxes. But it is quite a different thing to say that they take us nearer to a rational and well integrated system of taxation. It is a strange irony that, from the moment that the Taxation Enquiry Commission were appointed, the tendency to make unplanned additions to our taxes has been on the increase. If Sir Chintaman Deshmukh took the cue from the Matthai Commission and ignored the text, Mr T. T. Krishnamachari is ready to do the same with Dr Kaldor. But the need for a comprehensive examination of our public finance, on both sides of the account, in the States as well as in the Centre, cannot be denied.

operated at a minimum production level—were practically suspended in favour of heavy war production. At the same time, the workers in heavy industry had been spurred to stepped-up efforts by premium wages and other inducements.

As a result, workers throughout the USSR for the first time had a considerable amount of cash on hand and no way to spend it. Faced by mounting inflationary pressures, the Council of Ministers abolished rationing and drastically reduced currency in circulation by decreeing that all outstanding rubles should be exchanged for new rubles at a rate of 10 to one. This action sharply reduced the Soviet state debt.

Inasmuch as urban workers thereafter received their wages in the new standard currency while the smaller savings of agricultural workers were swept away, the result of the currency decree was to shift buying power from rural to industrial areas. Since 1950, the "producer's ruble"—namely, rubles earned by city workers—has been worth about twice as much as the "consumer's ruble" earned by farm labor. In short, people living in Soviet urban areas can buy consumer articles at lower prices and greater quantities than those living in rural districts.

According to observers, the 1957 decision of the Council of Ministers to reduce the state's domestic obligations by indefinite postponement of state loan redemptions reflects concern over the regime's serious economic difficulties. These stem in part from the economic disorganization in Eastern Europe, but they are mainly of Soviet internal origin. Khrushchev's sweeping economic reorganization plan is another symptom of economic malaise in the USSR.

To understand the difference between Soviet state bonds and those issued in free nations—to which the Soviet bonds bear a superficial resemblance—it is necessary to consider the objectives served by the Soviet issues.

Up to the present, the Soviet regime has used the annual loan issues for three purposes, which are based on the completely controlled economy and centrally manipulated fiscal structure of the state.

The Soviet "public loans," i.e. state bond issues, are designed to: (1) provide a source of state revenue in the annual budget plan, but

not a primary source; (2) they are a means of regulating the amount of money in circulation; and (3) they afford the only investment outlet, aside from savings accounts, for the small surplus earnings of workers.

The bulk of Soviet state receipts is, of course, provided by the heavy turnover tax (sales tax) on consumer goods and a variety of indirect taxes. All told, these bring in more than two-thirds of the state revenues.

In the annual bond subscription drives, the amount expected of the individual has been the equivalent roughly of two or three weeks' wages. Virtually compulsory payroll deductions for this purpose are made by the state agencies or other state enterprises, covering the entire personnel.

The effect of this system of practically compulsory exactions is to reduce the ruble income of the worker by 4 to 6 per cent annually. This lessens the ability of the average Soviet citizen to buy personal and household items—a desideratum in an economy marked by scarcities of consumer goods.

Loans are raised through the sale of bonds to individuals and to state institutions such as savings banks, as well as to trade unions and collective farms. Bonds sold to institutions carry an interest rate, but bonds sold to individuals offer no interest. Instead, they permit the holder to take part in two annual lotteries—sometimes three—with prizes ranging from 150 to 100,000 rubles for each prize-winning 100-ruble bond. (Under the cancellation decree, it is unlikely that there will be further lotteries.)

Inasmuch as all individual bonds since 1930 have had a maturity date of 20 years, without interest, the lottery feature was introduced to make them palatable. Before last April's cancellation, the bonds were widely used as collateral for short-term loans. As a result, bonds in sizeable quantities were traded among private individuals at large discounts, thus encouraging bond speculation.

According to estimates, the sum of the prizes paid out during the life of an annual bond flotation, if expressed as interest on the state's debt, would come to slightly less than 4 per cent. Thus the Soviet Government in effect has borrowed some 260 billion rubles for which it paid less than 4 per cent, and on which it probably will never return the principal to the lenders.

By contrast with the total bonds outstanding, the total savings bank deposits, according to Finance Minister A. G. Zverev, in 1956 amounted to only 63 billion rubles (\$ 15.7 billion at the official exchange rate).

An analysis of the 1957 budget indicates that the loss of revenue occasioned by dropping the state loans after 1958 will be compensated by increasing the turnover and indirect tax receipts.

Zverev stated further that the total number of savings bank depositors reached almost 37 million individuals in 1956. This would indicate an average savings account of 1700 rubles, or about two months' wages of the average worker. However, the range between the smaller depositors and the heavy depositors should parallel the spread in incomes.

For example, in the factory, where the wage scale runs from 800 to 950 rubles a month, the plant director or chief engineer may have an income of 40,000 rubles a month. Higher functionaries and members of the upper Communist Party hierarchy enjoy even larger incomes. Thus the Soviet savings bank depositors include high as well as low-income groups, the latter comprising the great majority of the population. Savings accounts—now that bond subscriptions are to be discontinued—afford the only major opportunity for accumulating relatively liquid savings at interest.

(To be concluded)

Foreign Investment and Domestic Saving

Mr Burke Knapp, the Vice-President of the International Bank of Reconstruction and Development, recently addressing the Economic Conference of the Organisation of the American States, specially emphasised one criterion for external investment on economic development. He pointed out that external capital inevitably tended to be drawn toward those countries which were themselves having the maximum amount of savings for domestic investment.

To avoid the impression that he was giving a homily to countries asking for foreign investment, Mr Knapp explained that this was so, not because the foreign investor took the attitude of rewarding the virtuous, but just because an adequate flow of domestic savings implied better assurance of the borrowing country's capacity to repay.

The experience of international investment does not vindicate this position completely. The foreign investor has put his funds in countries where there was hardly even a remote sense of the need for domestic savings. Even the fierce setbacks registered in consequence of the political awakening of some areas have not served to arrest such investment. In the post-war period, however, when national economic responsibilities are more widespread than before, the attitude of the foreign investor is being guided by the consideration mentioned by the World Bank Vice-President.

The estimation of a country's capacity for savings presents difficulties. In India, for instance, it is impossible to arrive at the most

Editorial Notes

reasonable level for investible savings and to achieve it. Even a highly expert agency like the World Bank looks more to the general soundness of a project for which it might decide to lend, rather than to the amount of domestic savings drawn into it. Of course, the general state of the economy is a matter which any investor is bound to take into account but that would mean much more than the amount of savings going into domestic investment. The fact that State-guided investment and credit also play a big role undermines Mr Knapp's reading of the international investment picture.

★

University and Services

The Public Services Committee has recommended that a university degree is not essential for Government jobs except for the top categories; clerks, assistants and superintendents could, in the opinion of the Committee, be recruited without any risk of deterioration in calibre, from among under-graduates, though graduates are not directly disabled for even these ranks. Indirectly, the age limit prescribed for these would have the effect of keeping graduates out.

Dissenting opinion in the Committee went to the extent of suggesting that there was no justification for insisting on a university degree for entering into any non-technical post under the Government. Had the majority taken this view, the arts degree would have forfeited all career value at least as far as Government services went.

The elimination of the degree as a necessary qualification for the vast bulk of Government jobs would surely serve to starve the urge for university education, particularly among youngsters, who are intellectually and financially no more than moderately endowed. Even without the Government taking any decision on these lines, arts colleges in some States nowadays keep their doors open to students who do not wish to enter. Economic incentives and pressures are already acting in the way the Mudaliar Committee would like the educational pattern to evolve.

All the same, the arts graduate is not likely to be scarce in the future. The opportunities, though restricted in number, will encounter a disproportionately large supply. Educational qualifications and the opportunities they open are more often sought after as much for the purchasing power they offer as for the social importance. As long as a university

degree remains a possible passport for a higher standard of living carrying with it a better social status, some congestion in the supply of graduates will be unavoidable. How far the level of general culture will be impaired by the proposed change is unpredictable.

★

New Zealand's Population

New Zealand is one among the few happy countries which are free from the Malthusian scare. The problem for New Zealand, at least for the time being, is how to regulate immigration. A higher birth rate and liberal immigration have combined to raise its population by 27 per cent in the course of the last ten years. With the employment openings far in excess of the hands seeking them, it was necessary and possible to coax migrants from Britain and other European countries partly through assistance schemes and partly through the open door policy, subject to racial restrictions.

Lately, doubts have set in as to the wisdom of permitting so lavish a flow of settlers. Economic thinking has begun to emphasise the food requirements of a larger population and of the contemporary fight against inflation. The Quarterly Survey of Australia and New Zealand Bank Limited says that the decision to reduce assisted immigrants in 1956 was motivated primarily by its likely impact on inflation.

As long as adequate fiscal and monetary steps are not taken to disinflate the economy sufficiently, the country's immigration policy cannot take a permanent character. The smallness of its population and the very high living standards already attained have, however, enabled New Zealand to curtail social expenditure in the post-war period in a more effective manner than at any previous period. While the advantages of a large population in terms of strategic and industrial potential are kept clearly in view, the problems arising from high price levels stand in the way of a long term policy.

★

Disarmament Talks

Big Power Disarmament talks received another setback this month, with Mr Zorin's disapproval of the Western proposal for a limited initial disarmament treaty. The question will shortly be taken up by the Disarmament Commission and later on by the UN Assembly, thus making up another round of what in all probability would be a highly laborious and wholly ineffective debate and discussion. The London round was half-hearted and inauspiciously set from the

very start. As the talks developed, new complications figured.

The US plan of longitudinal and latitudinal inspection zones, which was incorporated in the latest scheme put forward by the Western Powers, was predestined to be vetoed by Russia. Commander Noble's description of any complete ban on nuclear weapons as preposterous did further damage to the prospect of an agreement, if at all there had been one. Russia could plead that the inspection zone idea sponsored by Mr Dulles carefully kept out many important US foreign bases, while it included almost the entire range of a possible Russian offensive.

The condition laid down that the acceptance by other essential States such as Western Germany and progress towards the solution of the outstanding international political problems were indispensable for any further reduction in conventional armaments naturally intensified Soviet dislike of the proposals.

The stagnation of the talks and the eventual outcome reinforce the sad conclusion that disarmament is getting more and more closely interlocked with cold-war politics and consequently getting less and less susceptible to a humane solution. Complete ban of every form of nuclear weapons at one stroke is not even to be dreamt of, under present conditions.

Half-hearted attempts toward the suspension or limitation of production are stifled by mutual suspicion and a craven interpretation of risks involved. Humanity must be thankful that at least disarmament is talked about, which in a way points to the colossal waste and guilt implied in the piling up of monstrously inhuman weapons.

Interest Rates in Flux

IT would be premature to read, in the Finance Minister's declaration this week in the Lok Sabha that high interest rates did not offer a satisfactory solution for the problem of inflation, an emergence of a revolutionary change in the Government's attitude on this much vexed question. It is true that Mr T. T. Krishnamachari did refer to the harm wrought by an increase in interest rates, in that the existing loans held by investors suffered depreciation. To be sure, the Finance Minister also appeared to be clear eyed in his recognition of selective credit control as the apposite and appropriate panacea for India's economic ills. But a somewhat different picture has emerged in the delineation of the monetary and credit policy by the Central Board of Directors of the Reserve Bank in their Report for 1956-57. Thus, at best, we can merely suggest that interest rates are in a state of flux.

The central banking institution would seem to be taking great pains to enunciate and clarify the role of monetary policy in terms of a developing economy. In this light, we have in recent months been frequently given the rationale, as it were, of the selective credit controls adopted and implemented by the Reserve Bank. In particular, it has been sought to indicate that the herculean efforts at industrialisation will, paradoxically, call for both restriction and liberalisation of credit. As the Report points out, in the circumstances of the present day, when the inflationary potential in the economy is fairly substantial, "the direction of credit policy should be one of general restraint without one of general restriction and jeopardy to the functioning and progress of essential productive sectors of the economy". The monetary authorities have to be continually vigilant to prevent any intensification of inflationary tendencies in particular sectors of the economy, so that, when the need arises, they could direct the banking system to regulate bank finance in that particular sector. We have already had a number of instances where, by directive action, the Reserve Bank has tried to arrest inflationary proclivities. At the same time, especially in respect of foodgrains, the contradictory elements that have to be considered by the Reserve Bank are indicated in the directives so issued. In May 1956, the first directive made it obligatory for member banks to restrict generally advances against paddy and rice and to raise margins by 10 per cent. Four months later, in September 1956, these restrictions were extended to all foodgrains

and pulses. Then, again, in mid November 1956, with the new crop ready to move in, the restrictions on paddy and rice were withdrawn. In February 1957, the restrictions on paddy and rice were reimposed. Next, in June 1957, a new directive was issued which, in the words of the Report, was "designed not only to curb bank finance for speculative holding of stocks but also to bring down substantially the level of advances against these commodities". Thus, in a period of less than 13 months, as many as five directives were issued solely with regard to food-

grains. It is possible to interpret this quick ringing of changes as evidence of the flexibility with which the Reserve Bank is wielding its selective credit control. But, we suggest, it also reveals some extent of the mystification on the part of the central banking institution as to the response to or effectiveness of the directives issued in this context. Indeed, it is now common knowledge that the Prime Minister himself harboured the suspicion that bank credit was an important element in the rigging up of prices in food. We have had, moreover, the indication that even the State Bank has not had an easy job of recalling advances. Besides, there is the suspicion in official quarters that, although some reduction might be vouchsafed in the level of advances against foodgrains, 'camouflaged' credit—ostensibly against other commodities—was being made clandestine use of for speculative purposes in foodgrains. It is in such a background that we can understand the Reserve Bank's decision to instruct Scheduled Banks to bring down the overall level of Advances to a figure of Rs 800 crores by the end of the current slack season. We may take it that the intention is to minimise the magnitude of what we may call 'slack' Advances, that is, non-productive advances which may conceivably be diverted to speculative purposes. We are encouraged to believe that the latest move on the part of the Reserve Bank is proving to be satisfactorily fruitful. The Madras rice markets have shown, over the past month, reaction in prices. Another point which has escaped general notice is that the wholesale price index has shown a decline for three consecutive weeks: and, between the last week in July and the last week in August, the overall index has declined by 0.7 per cent. We are emboldened to think, therefore, that, by the end of the slack season, the internal inflationary forces may, at long last, have been contained, and, with a more vigorous enforcement of its directives by the Reserve Bank, which would automatically

entail a more vigilant watch on its behalf, the Indian economy may be in a much more satisfactory position to go ahead with the tasks of the Second Plan.

We may now briefly assess the present attitudes to interest rates. For the Reserve Bank's part, it has been stated that the raising of the various lending rates 'was mainly by way of realignment with the trend of the money market rates and also directed to make the structure of the lending rates of the bank internally more coherent.' The second point made out is that 'the present rates of interest reflect the high demand for credit relatively to supply and also act to restrain this high demand to some extent and consequently the increase in money supply, the rise in prices and growth of inflation'. Thirdly, the conclusion is, therefore, drawn that financial stringency 'acts as a defence against inflation.' In this context, we may recall the speech of the Reserve Bank Governor, Mr H. V. R. Iengar, some weeks ago, when he envisaged, if at all any change, an upward movement in interest rates. It is, however, interesting to see that the Report hedges its remarks about tight money by stating that 'tight money policy by itself cannot cure a significant disparity between investment and saving'.

How is this attitude of the Reserve Bank to be reconciled with the statement of the Finance Minister that a rise in interest rates offers no ready solution? As we see it, the position is complicated by, firstly, international trends and, secondly, the impending meetings of the World Bank and the International Monetary Fund, where, no doubt, India's steep import surplus will be discussed. The world trend seems to be inflationary, and

most of the countries are relying upon orthodox economics to keep inflation at bay. So, there is the prospect that, if India does not take similar steps, we would be accused of being complacent about the inflationary danger to our economy. Nor are we in a position to assert that, in the conditions of the Indian economy, a 'dear money' policy has greater potential for inflation than a 'cheap money' policy. It is only if India's experiment with selective monetary control proves an unambiguous success, and achieves a stabilisation in prices, that we can afford to go ahead with the evolution of a structure of interest rates appropriate for Indian conditions. Here, too, there is heartening evidence, as we have already pointed out, of a decline already recorded in the index number of wholesale prices. So, we should think that the interest rates are in a state of flux, and any positive changes in attitudes or policies will have to await, firstly, the successful conclusion of the experiment in selective monetary control and, secondly, the annual general meetings of the IMF and the World Bank.

It is not out of place to mention here that 'tight-money get-tough' measures have, as applied by most of the countries tackling inflation, proved to be rather less than doubtful successes. The efficacy of high Bank Rate is today being universally questioned; and, in America, a number of Congressional committees are preoccupied with investigating this monetary phenomenon. In refreshing contrast, India's selective monetary control appears to be proving efficacious. Thus, both Mr Krishnamachari and Mr Iengar should be able to offer most interesting evidence to their counterparts, at the discussions in Washington.

"Inspired" Slack Season?

The latest bank returns are noteworthy in that evidence is offered of the gathering momentum of what it would not be incorrect, in one sense, to describe as an "inspired" slack season. This descrip-

tion, of course, stems from the fact that the Indian monetary authorities—the Reserve Bank, on the one hand, and the Finance Minister, on the other—have repeatedly been asserting that, in

the current slack season, there must be a decline of considerable magnitude in the level of Advances. However, we should not fall into the error of concluding that, consequently, the indices that point to the slack season trends are, for that reason, artificial. For, there is sufficient evidence to warrant

the view that, in any case, the 1957 slack season is proving to witness conditions much easier than we have known them to be for some years past at this time of the year. The most important consideration here is that the balance of payments deficit, a phenomenon which more or less coincides with the beginning of the Second Plan, has continued unabated ever since. This, it need hardly be pointed out, has had a powerful contractionary influence on currency circulation. Secondly, it is possible to suggest that the import restrictions clamped down by Government since the beginning of this year will have reduced the magnitude of demand for financing imports. Thirdly, the abstention of State Governments from market borrowings has removed what last year proved to be the cause of monetary stringency during the slack season. Fourthly, the Central Government's 1957 New Loan has imposed a relatively lighter strain upon the resources of the banking system than was anticipated when, in the Budget for 1957-58, the target for cash subscriptions was set in the environs of Rs 70 crores. Finally, on the positive side, the heightened tempo of Government disbursements during 1956-57 has more immediately benefited the banking system in the sense of the accumulation of such funds in the monetised sector and the substantial accretion that has, in consequence, been experienced in the Deposit resources of the banking system. So, the view may be advanced that the various directives issued by the Reserve Bank for the restriction of credit against specific commodities should be considered to be no more than and no less than an extra impetus to slack season conditions. It is, again, in the same light that the Reserve Bank's suggestion that the banking system should show some restraint in its credit policy should be reckoned merely as an aggravator of slack season conditions.

Thus, the focal point of interest in the Reserve Bank returns for August 30 centres around the decline of just a shade under Rs 13 crores to Rs 1470.63 crores in active note circulation. Already, currency contraction from the 1957 peak level is for an amount of the order of Rs 125 crores; and the decline in the foreign securities holdings of the Reserve Bank has been for more or less the same amount. Rupee coin, in the latest week, returned from circulation for Rs 1.38 crores; and the Reserve Bank's cash in the till has, consequently, risen by Rs 14.35 crores to Rs 43.20 crores.

The Central Government's balances are marked lower by Rs 10.95 crores at Rs 54.35 crores, in spite of possible deficit financing for Rs 5 crores. For, Investments have been marked higher by Rs 4.97 crores at Rs 215.39 crores.

Sterling and the German Mark

By PAUL EINZIG

ALTHOUGH the fate of the recently devalued French franc is not likely to prove to be a major factor in the prospects of sterling, that of the Deutschmark is quite a different proposition. If, as is widely believed, it should be revalued in terms of gold and dollars, this would bring considerable relief to sterling. There can be no doubt that the mark is undervalued, to the almost the same degree as the franc was overvalued until its recent devaluation by 20 per cent. It is of course very difficult to measure the degree of overvaluation or undervaluation of a currency. One is strongly tempted to take the view that "the proof of the pudding is in its eating". On that basis the persistent adverse balance of France would be accepted as a conclusive evidence of the overvaluation of the franc, while the equally persistent export surplus of Western Germany could be considered as irrefutable proof of the undervaluation of the mark. The view may be over-simplified, but it may be regarded as fundamentally correct.

The undervaluation of the mark reflects the remarkable achievement of the German nation after its recovery from the destructions of war and defeat. With the aid of hard work and a degree of self-denial, the Germans have produced year after year large exportable surpluses at competitive prices. Beyond doubt, the German nation has earned the admiration of the world for having achieved such a remarkable recovery. It is gratifying to know that a nation can restore its self-respect, prestige, and power not only by means of recovering its military power but also by means of rising to the front rank of nations in the economic field.

When commenting recently on the increase of the German gold reserve to about twice the amount of the British gold reserve, a London newspaper raised the futile rhetorical question:—"We wonder who has won the war?" It would have been more to the point to ask who has won the peace—the answer to that is only too painfully obvious—and especially why and how Germany has won the peace. The lesson taught by the striking difference between the British and German gold reserves would be worth examining and worth pondering over by many millions of British workers owing to whose attitude Britain is well on her way towards losing the peace.

Germany's present economic strength constitutes a source of additional drain on sterling. German exporters have gained ground on countries all over the five continents at the expense of their British competitors. Month after month Germany collects a substantial credit balance from the clearing arrangement of the European Payments Union, while more often than not Britain has a debit balance leading to loss of gold.

interest is now allowed on foreign deposits. The German Government is admittedly making efforts to minimise the inconvenience caused by the strength of the mark. It has just deposited with the Bank of England £75 million on account of its post-war debt to the British Government. It has reduced its import duties. Even so, the gold drain towards Germany is likely to continue to cause much trouble.

Possibly the rising trend of German wages and of consumer demand, and growing expenditure on rearmament—whether the money is spent at home or abroad—may

moderate the trend. But in view of the more pronounced inflationary trend in Britain and other Western European countries, it would be a mistake to entertain exaggerated hopes.

The German Government has repeatedly and emphatically disclaimed any intention to change the parities of the mark. There is indeed much to be said from a German point of view to make no change. After all, the growing size of the gold reserve is a matter of national pride and prestige, and the Government of Herr Ade-

BRITISH OVERSEAS AIRWAYS CORPORATION

WORLD OF FINANCE

(Continued from page 486)

and deficit financing rather than open market operations would appear to have been responsible for this rise.

Balances of the State Governments have risen by Rs 2.31 crores to Rs 8.19 crores, while indebtedness to the Reserve Bank is lower by Rs 1.53 crores at Rs 37.28 crores. Other Deposits are more or less unchanged at Rs 108.58 crores.

Although the Other Loans and Advances of the Reserve Bank show a fall of only Rs 0.81 crores to Rs 74.86 crores, thus suggesting that the member banks were unable to effect any reduction in their borrowings from the Reserve Bank, it is to be noted that banks' balances with the Reserve Bank have risen steeply by nearly Rs 22 crores to Rs 102.80 crores. However, the bulk of this would appear to be on account of the State Bank. In this context, we may also mention that, in the Scheduled Banks' statement for August 23, borrowings from the Reserve Bank are shown at Rs 41.99 crores. Thus, although the level of the Reserve Bank's Other Loans and Advances is Rs 11½ crores higher than the low of Rs

63.29 crores touched in the last week of July, it may be suggested that the outstanding borrowings from the Reserve Bank may largely be due to indebtedness of the exchange banks. In this regard, according to the Reserve Bank of India Bulletin, the exchange banks' borrowings from the Reserve Bank were placed at Rs 36.39 crores at the end of June, 1957. If, consequently, there is an inelasticity about a further decline in Scheduled Banks' borrowings from the Reserve Bank, it needs to be appreciated by the monetary authorities that the reason thereof lies in the level of indebtedness of the exchange banks, the Indian Scheduled Banks largely figuring as free of debt to the Reserve Bank.

Balances held abroad have been run down by another Rs 5.58 crores to Rs 19.34 crores. Finally, advances against usance bills are shown lower by Rs 1.81 crores at Rs 35.23 crores.

The return of the State Bank for August 30 discloses a sharp rise of Rs 12.18 crores to Rs 341.07 crores in Deposits. There is reason to believe that this may represent Deposits on account of counterpart

funds arising from transactions in connection with aid under Public Law 480. In this context, it is intriguing to note that the bulk of transactions under this head have apparently taken place in the last week of each month. If it may be presumed that Public Law 480 funds, in the account of the US Embassy, started accumulating only from the beginning of this year, it will be worth our while to study the increase in Deposits of the State Bank, in the last week of each month, since January this year.

Last week of	Rs (Crores)
January	6.27
February	6.54
March	20.06
April	—5.33
May	2.81
June	8.43
July	13.28
August	12.18

The month-end increases in Deposits, thus, aggregate Rs 64.24 crores. This compares with the rise of Rs 95.31 crores since the third week in January. It is worth pondering whether the month end increases relate approximately to Deposits of US counterpart funds, and the balance of Rs 31.07 crores represents largely the increase in Deposits of other constituents.

The State Bank also reports a decline of nearly Rs 3 crores to Rs 159.23 crores from Rs 162.20 crores in Advances. In the result, cash balances are higher by nearly Rs 19 crores at Rs 63.28 crores; and this, as we have seen in the Reserve Bank returns, largely accounts for the increase in the balances of member banks with the central banking institution.

The return of Scheduled Banks for August 23 records an increase of Rs 10.61 crores to Rs 1292.26 crores in Deposits. This has been accompanied by the steepest decline in Advances in the current year, with the total of Advances going down by Rs 13.15 crores to Rs 862.11 crores. Consequently, the Scheduled Banks have been able to reduce their indebtedness to the Reserve Bank by Rs 12.05 crores to Rs 41.99 crores. At the same time, cash balances have been marked up by Rs 4.21 crores to Rs 151.33 crores. Finally, as anticipated in this column, the Scheduled Banks' return for August 23 bears the impress of the State Bank subscriptions to the New Loan. Investments have been marked higher by Rs 30.69 crores at Rs 370.52 crores; and this, in broad figures, represents the size of the increase in Investments shown by the State Bank in the relevant week.

to be got over. It is in this context that the use of old paper machines which are now available within the country has been suggested.

₹₹

Clive Buildings

The year ended 31st December, 1956 has been a quite satisfactory year for Clive Buildings (Calcutta) Limited. A number of new leases were signed on favourable terms. The full benefit of these are expected to appear in the next year's accounts. Meanwhile, the item 'Gross Rents' is shown at Rs 4.20 lakhs against Rs 4.15 lakhs, while the net profit is slightly higher at Rs 1.97 lakhs against Rs 1.94 lakhs. The Depreciation amount is raised to Rs 16,047 from Rs 16,029 and Taxation to Rs 1.08 lakhs from Rs 94,843 while Repairs Fund is maintained at Rs 20,000. The dividends, both on the Ordinary and Management shares, are reduced to Rs 5.25 per share from Rs 6.00 per share.

₹₹

Seebore Coal

The dislocation in production, due to a strike in a number of collieries in West Bengal, is fully reflected in the working results of the Seebore Coal Company Limited for 1956. Raisings are lower at 81,904 tons against 127,686 tons and despatches at 85,142 tons against 127,288 tons in the previous year. The fall in raisings was caused primarily by the working out of the Poniat and Koithi seams at Pretoria colliery and thereafter the company's raisings were confined to Lachipur colliery. The output at the latter colliery would have been higher, but for the strike.

For obvious reasons, sales have declined to Rs 13.81 lakhs from Rs

19.62 lakhs, while the net profit, before Depreciation and Taxation, amounts to only Rs 4,26,101 against as much as Rs 6,01,888 in the previous year. The Depreciation amount is reduced from Rs 1.36 lakhs to Rs 80,000; Taxation from Rs 2.36 lakhs to Rs 1.58 lakhs and General Reserve from Rs 1.00 lakh to Rs 75,000. The dividend on the Ordinary shares is reduced from Rs 2.50 to Rs 2.25 per share.

With a view to maintaining the company's production at a satisfactory level in future, careful consideration has been given to the possibilities of working the Taltore seam at Pretoria colliery and the Sonachera seam at Lachipur colliery. The latter provides greater opportunities for development on an economic basis, the Coal Board's approval in this connection having been obtained.

₹₹

Mysore Spinning

The Mysore Spinning & Manufacturing Company has reported satisfactory working for the year ended 28th February, 1957 with profits and sales showing improvements over the previous year. After providing Rs 3.93 lakhs for Depreciation against Rs 3.48 lakhs; Rs 1.22 lakhs for Gratuity against Rs 1.21 lakhs and meeting all other charges, the net profit amounts to Rs 5.11 lakhs as compared with Rs 4.94 lakhs in 1956. The directors have recommended a final dividend of Rs 3 and a bonus of Rs 3 making a total of Rs 9 per share.

Sales of cloth, yarn and waste total Rs 1.67 crores against Rs 1.62 crores. Closing stocks are shown at Rs 60.87 lakhs against Rs 40.23 lakhs.

World of Jute

Steady Trend in Jute Goods

DESPITE speculative manipulations which sometimes resulted in sharp fluctuations in prices, the undertone of the jute goods market last week has been steady. In the absence of any sizable foreign enquiries, the proceedings were dominated by speculators. Much of the fluctuation had occurred in the Sacking section as there were conflicting reports about the tender from Burma. Toward close sentiment especially around B Twills became cheerful as rumour had it that the Burma tender was not to be postponed as reported earlier. It is evident that operators' optimism has stemmed from expectations of good foreign enquiry in coming weeks. The trend of gunny shipments in the past two months has been the main contributory factor to the improvement in sentiment. The sharp increase in despatches in July coupled with the reports of good shipment in August is indicative of the fact that the traffic situation in the Calcutta port has considerably improved in recent months. Moreover this is the time of the year when foreign enquiries are usually heavy.

It is expected that the coming weeks will witness a sizeable improvement in the enquiries from

US for burlap, as operators anticipate a sharp decline in stocks of jute goods with IJMA mills as at the end of August. Buyers in US who have been holding off large purchases so far in expectation of further lower prices may not find it profitable to continue their cautious policy for long in view of the good business already completed by Calcutta mills. It is also likely that US domestic demand which had been slack during August partly due to the delay of the crops in several States will record some increase in the current month.

★

Activity in the jute goods market during the past week had been to a large extent influenced by speculations. With mills coming out as sellers in later dealings attracted by the higher levels, most of the earlier gains were erased. On reports of mills' selling of sizable quantity of heavy goods for Oct.-Dec. shipment sentiment turned quiet. Hessian 40"×10 oz Ready was marked at Rs 41.70 with B Twills Ready at Rs 112.50. Elsewhere Jan-March 40"×10 oz was marked at Rs 41.90 while B Twills was placed at Rs 112.00.

Sentiment was cheerful as speculations began to evince keen interest in the proceedings on Satur-

day Hessian 40"×10 oz Ready improved to Rs 41.80 while B Twills moved up to Rs 113.00. Jan-March 40"×10 oz was placed at Rs 41.90 and B Twills Rs 112.50. The market firmed up further on covering business by shippers following the passing over of the Due date. Hessian 40"×10 oz Ready gained another 60 nP to be done at Rs 42.50 while B Twills spurted to Rs 114.25. In the forward deliveries Jan.-March Hessian 40"×10 oz was placed at Rs 42.62 and B Twills at Rs 114.12.

In the absence of foreign business coupled with selling pressure from mills, rates eased further. Hessian 40"×10 oz receded to Rs 42.44 while B Twills ready came on offer at Rs 114. In the Forward deliveries, Jan.-March B Twills declined sharply to Rs 112.75. Hessian 40"×10 oz was also lower at Rs 42.19. Easier conditions continued to prevail on Wednesday when selling pressure from speculators was more pronounced than in the previous day in ready B Twills on rumours of the earlier tenders from Burma had been postponed. B Twill's ready moved back sharply to be finally placed at Rs 112.50. Hessian was lower in sympathy at Rs 42.00. Jan-March Hessian 40"×10 oz was placed at Rs 42.06 with B Twills further lower at Rs 112.00.

The following table shows price trends during the week:—

Hessian:	Week's opening	Week's closing
40"×10 oz Ready	Rs. 41.70	Rs. 42.00
40"×10 oz Oct-Dec.	42.06	42.35
40"×10 oz Jan-March	41.50	42.06

facture were sold well and those with quality were dearer. CTC descriptions were upto 20 nP easier, apart from the very best which were about steady. Non-wither Doars teas met with less enquiry and declined by about 6 nP per pound.

Whole Leaf grades were about steady, while stylish Assams were dearer. Darjeelings again came to an easier market and were up to 25 nP easier. Following rates were quoted:—Clean Black Pekoe Rs 2.20 to Rs 2.25; Plain BP Rs 1.68 to Rs 1.70; Plain Fannings Rs 1.70. Medium BP Rs 1.86; Medium Fannings Rs 1.90; Best Assam CTC Fannings Rs 4.50 to Rs 5.00.

In the Internal Sale, offerings consisted of 20,572 packages. There was a good general demand, but prices for most sorts were easier. Bright liquoring grainy CTC Assams met with strong export competition and prices were fully firm and frequently dearer; but the remaining CTC teas were easier, particularly the powdery sorts. The remainder of the sale declined by about 4 nP per pound, with the exception of bright liquoring Assams which were firm and occasionally dearer. Following rates were quoted:—Medium Doars Dust Rs 1.52 to Rs 1.58; Medium Assam Grainy Dust Rs 1.58 to Rs 1.66; Medium Assam CTC Dust Rs 2.10 to Rs 2.30 and Best Assam CTC Dust Rs 2.40 to Rs 2.80. Also, 1,908 packages of Leaf grades were offered. Prices of most

SUPPLY OF QUALITY JUTE SEEDS

For multiplication of quality jute seeds, seven farms have been set up—one by the Centre and the remaining six by the States in main jute-growing areas.

The Central Nucleus Jute Seed Multiplication Farm, with an area of 212 acres, was established at Panagarh in the Burdwan district, West Bengal, and started work in 1956-57 under the supervision of the Indian Central Jute Committee, Calcutta.

The West Bengal Government has established two major farms for which the Central Government sanctioned long-term loans amounting to Rs 8,11,500.

Similar farms have been set up by the UP and Assam Governments—one in each State. The Central loan granted to Assam for this purpose amounted to Rs 1 lakh.

In addition, the Bihar Government was sanctioned a loan of Rs 4,63,144 and the Orissa Government Rs 2,67,132 in 1956-57 for setting up two farms. A further loan of Rs 86,818 has been sanctioned to the Orissa Government for 1957-58 for extension of the farm in the State.

descriptions were easier. CTC teas were in little demand. There were a few lines of Green teas on offer and these were sold at about valuations.

In the Export Quota section, rates moved narrowly between 22 and 23½ nP per pound and business was reported done at these levels. At the close of the week, there were sellers at 22½ nP with buyers at 22 nP.

In the Cochin market, offerings were 1,850,000 pounds. There was a good general demand which slackened as the sale progressed. The few best Nilgiri came to a very strong market selling at dearer prices; but all other high-grown were a little weaker, shedding 5 to 12 nP per pound. Coloury Good Medium Broken and Fannings met with useful support at about last rates. Medium and Low Medium Broken were firm, but similar Fannings eased up to 5 nP. There was keen enquiry for the plainest Broken which were dearer by 5 nP; but their Fannings were often difficult of sale.

Black Leaf Broken were again well supported at fully firm to dearer rates, while their Fannings shed 5 to 8 nP per pound. Whole Leaf grades were irregular, but tended easier. Tippy teas were in strong demand and realised high prices. Following were the rates quoted:—Plain BP Rs 1.35; Low Medium BOP Rs 1.40 to Rs 1.45; Medium

World of Tea

Export Duty Unchanged

THE Government of India have fixed the price of Tea, for the purpose of determining the export duty, at Rs 2.74 per pound as against Rs 2.55 in force from August 1, 1957. There is no change in the existing rate of duty of 38 nP per pound. In this connection, the United Planters' Association of South India has requested the Tea Board to urge the Government to abolish or suspend, for a period, the export duty on the commodity to make Indian teas more competitive in the international market.

The Chairman of the Association has drawn the attention of the Tea Board to American purchase of Ceylon teas in preference to costlier Indian teas. He has pleaded for an adjustment in the scale of export duty in such a way that Common and Medium teas—less in demand, because the gulf has made buyers more discriminating—will pay less than good teas. While suggesting that the Tea Board should allot more funds to popularise tea consumption in the USA, he says that the propaganda may become more satisfactory and effective if left in the hands of producers and their organisation.

"Common teas" constitute a high proportion of the teas manufactured in India and this itself is a factor which weakens the competitive ability of this type of tea. Soil conditions and geographical factors are generally responsible for the production of Common teas, although bad plucking and bad manufacture can also be a reason. Teas exported from the African territories do not pay any export duty and can be landed in London at about one shilling per pound below Indian teas. Here again, an adjustment in the scale of export duty in such a way, that Common and Medium teas will pay less than good teas, may help Common teas to tide over the crisis.

Meanwhile, in the Export Sale held in Calcutta this week, offerings amounted to 58,776 packages. There was less general demand. Plain Liquoring descriptions were from 4 to 10 nP per pound easier. Medium BPS were again a weak feature and were from 6 to 8 nP easier. Medium BOPs and OFs of orthodox manu-

US Notes

THE Finance Committee of the United States Senate this week wound up the first phase of its broad inquiry into US monetary and fiscal policies. The investigation which had been under way for some two months is scheduled to be resumed in the fall. It was entirely fitting that the final witness to be heard before the summer recess was William McChesney Martin, Jr., for Martin is Chairman of the Board of Governors of the US Federal Reserve System, and it is this Board which is primarily responsible for formulating the monetary policies of the United States. Martin's testimony constituted a thoughtful explanation of why the money supply is tight today and interest rates are high.

It was also a vigorous defence of the Federal Reserve Board's restrictive policies in this situation. Martin believes that the mild inflationary pressures apparent in the American economy are traceable to one important fact: The country's sustained prosperity. Marked by heavy spending, both governmental and private, the resulting demand for goods and services has been both strong and incessant, leading to a strain upon human and material resources and finally to rising prices at each point in the development of an inflationary movement of this nature.

Martin pointed out demand is of sufficient strength to take the high priced goods off the market and thus keep the process going. It is his contention that this is what has been happening in the United States. Despite the fact that the cost of living has risen only a moderate 5 per cent over the past two years and that such important products as automobiles, house appliances, and many basic materials no longer present pressing supply problems, what the country continues to face, Martin insists, is an unremitting general pressure. 'As individual corporations and governments proceed with their expenditure plans buttressed by borrowed funds, they are in the position of attempting to bid for the basic factors of production—Land, Labour and Capital—away from each other and in the process the general level of costs and prices is inevitably pushed upward.'

It is this generalized pressure that comes to a head in financial markets in the form of a shortage in the money supply in relation to the high demand for funds. In such circumstances, interest rates are bound to rise. They are the economy's way of protecting itself against an excessive rate of investment or an unsustainable rate of consumption. To try to maintain

under these conditions artificially low interest rates might, in Martin's view, only invite an unbridled spending boom and a really serious inflationary problem, and creating new money to ease the current tightness of funds and hold interest rates, down that way might only have the same unhappy consequence in the end. To the extent that high interest rates induce potential borrowers to revise or postpone unnecessary spending, Martin pointed out, they tend to channel investments into needed productive facilities at a rate consistent with healthy economic growth. If 'constructive adaptations' like these are made soon enough, Martin explained they need not be large in order to restore a proper balance between prospective demand and the resources available to meet them. These are the very adaptations the Federal Reserve Board is trying to promote through fiscal and monetary policies it deems both adequate and timely.

Britain

The United Kingdom's terms of trade improved in July, it was announced by the Board of Trade in London yesterday (August 22).

The export price index rose by one point in July to 111 (1954 equals 100), while the import price index fell by one point to 108. As a result, the terms of trade (the ratio of import to export prices) moved from 99 to 97.

This improvement in the terms of trade, it is pointed out in London, is in line with a comparable trend in the same period a year ago, and to that extent has a seasonal element in it. This is particularly true of the import price index number for 'food, beverages, and tobacco', which dropped to 103 compared with 105 in June, reflecting the seasonal decrease in the prices of fruit and vegetables.

But the fall in the index number for fuels probably represents a longer-term trend. The biggest fall in the components of the import price index was, in fact, in this class, reflects the continued decline in freight rates and in the prices of crude petroleum. This could, therefore, produce a genuine easing of Britain's import bill.

The index numbers for the main classes of exports remained largely unchanged except for engineering products, the index number for which rose by two points to 112. And the increased prices are fairly evenly distributed among the items comprising this group. This increase in prices coincides favourably with the current trend of an

increase in the volume of engineering exports.

There is new hope for some of Britain's 30,000 spastics following on experience gained in the last few months at the institute opened in Hertfordshire by the National Spastics Society in January.

The object of the establishment—set up at Sherrards, a country house near Welwyn Garden City—is to prevent wastage of lives by providing basic training for spastic children to enable them to start careers in industry. It is now claimed that the mental and physical well-being of the trainees improves 300 per cent within two months.

A valuable dollar contract for the supply of propeller equipment for new Canadian turbine-powered transport aircraft has been awarded to a British firm.

So far the firm—de Havilland Propellers Ltd., of Hatfield, Hertfordshire—has not revealed the value of the equipment to be supplied. It has, however, already been stated that the Royal Canadian Air Force (RCAF) order for the aircraft in question—the Canadair CL-44—is in itself worth many millions of dollars. The propeller contract was placed after a careful comparative study by Canadair Ltd. and the RCAF of a wide range of equipment.

The CL-44, which is derived from the Bristol Britannia, is to be built in airliner, freighter, and military transport versions. It will be powered by four Bristol Orion turbine engines, and will carry 120 passengers or 45,000lb. of freight at a

cruising speed of 400 m.p.h. over a 4,000-mile range.

The propeller under order for the aircraft is 16 ft. in diameter, with four solid aluminium alloy blades. The company states that the propeller incorporates a number of new features designed to provide the highest level of flight safety combined with refinement of control.

The index of British industrial production for July is estimated provisionally at 129-130 (1948 equals 100). It was announced by the Treasury in London on August 28.

The index for July 1956 was 127. For June 1957 the index is estimated at 139, and for May 1957 a revised figure of 145 has been announced. Both these indices are, however, unadjusted to take account of seasonal variations.

The current expansion of the United Kingdom economy, it is pointed out in London, is again reflected in the July index for all industries. It is necessary to look at the series adjusted for causes of seasonal variations to be aware of the gradually climbing curve of industrial output. This shows a rise from 136 in January to 140-141 in July this year.

In the unadjusted series the same trend is discernible if a sufficiently long period is taken. Thus, in the first seven months of this year the index averaged 139 compared with 138 in the corresponding period of 1956. In the adjusted series the comparison with a year ago is even more marked, the index reading of 140-141 in July 1957 comparing with 136 in July 1956.

WORLD OF TEA

(Continued from previous page)

BOP Rs 1.50; Good BOP Rs 1.80 to Rs 1.90 and well-made OP Rs 2.55.

In the Colombo market, offerings were 6,701,632 pounds. There was active demand at generally dearer rates. There was a wide selection of Nuwara Eliya teas with quality showing some improvement and prices were generally higher. The improvement in the quality of high-grown teas continued, particularly from Uva districts. There was, however, some irregularity in the price of Dimbula types.

Among medium-grown teas, Uva teas were again considerably dearer. There was a general advance of 5 to 8 cents per pound in the prices of Medium Broken from other districts. Low-grown teas recorded a further advance of 5 to 8 cents in the prices of Broken grades with Tippy types 10 to 15 cents dearer. Fannings met with a strong demand with a marked advance in the price of Uva teas. Also, there was a strong general demand for off-grades with prices rather dearer.

In London auction, held this week, offerings were 17,531 packages, including 6,008 packages of North Indian teas. The sale passed much

on the same lines as last week with brisk bidding for all except the poorest kinds. Prices for the majority of the offerings remained fully steady; but occasional rises were recorded by the top qualities. Thin liquoring and stalky kinds were, however, slow of sale and any difference in prices was in the buyer's favour. Clean Common Broken Peko was nominally quoted at 3sh 0½d per pound.

Tea stocks in London, as on the 23rd August, were 124.3 million pounds as compared to 127.9 million pounds in the previous week. Total amount to be landed on the same date was 23.2 million pounds. Deliveries, during the week ended August 23, were 13.6 million pounds, while landings were 10 million pounds. Total afloat was 32.4 million pounds, including 22.29 million pounds from Calcutta, nil from Chittagong, 2.64 million pounds from Cochin; 7.41 million pounds from Colombo and 97,500 pounds from other Ports. The average price realised at the auction was 47.52d pound as against 49.52d in the previous week and 54.31d in the corresponding period of last year.

OBEROI HOTELS
INDIA & PAKISTAN

THE completion of the first half century of existence of the Tata Iron & Steel Company Limited has provoked many an appreciative analysis of the diverse ways in which the House of Tatas has contributed to the national economy. The starting point, of course, goes back more than fifty years, and it is to be found in the virile manner in which Mr J. N. Tata dedicated himself to the fashioning of what I may describe as the beginnings of Swadeshi industrialisation. That single fact alone, the translation into reality of J. N. Tata's dream for indigenous steel production, would be sufficient to put down the Tata name in history as one of the most important contributors to the India of today. In last week's issue, the reader perhaps might have noticed an article commemorating the Golden Jubilee of TISCO; and, in that article, attention was forcefully drawn to the original impulses in thought and action that have always characterised the Tata attitude. I shall not go over them again; instead, I should like to muse over another aspect of Tata activity that is unique.

In the over forty years that I have spent in the North, I have been fortunate to have had an intimate knowledge of the way in which prosperity began to spread out from Jamshedpur. This prosperity was based on cooperation or collaboration or association—call it what you will—between the Tatas and a partner of their choosing. Not only was steel produced from Jamshedpur, it was made certain that demand would arise for that steel and that the steel so produced would be utilised. Leaving aside the first decade and a half after the company came into existence, the exciting new developments in the new industrial heart of India were destined to make their impress powerfully felt in the early years of the 1920's.

The first World War had by then drawn to its close, and the continental countries that had been preoccupied with the conflagration had recovered from the ravages of war, and industrial production earmarked for export earnings once again was made available. So, at that point in time when the Tata Iron & Steel Company Limited had become a viable

entity, it had to face the challenge of an overseas industry that, all too clearly, was opposed to the idea of India as a steel producer. The representations then made, and the deliberations conducted by the Tariff Board, bore fruit in the form of protection being accorded to the indigenous steel industry. But protection, let us recognise, can never be a flimsy curtain behind which industry could be left free to do as it liked. By implication, protection imposes responsibility on the indigenous producer to improve his methods and to strive after higher quality, so that, in due course, the consumer would no longer need to subsidise the Indian manufacture. In the context of the early 1920's, the responsibility that had to be faced by the House of Tatas was also one that necessitated efforts to ensure the optimum utilisation of the steel being produced. This meant that new industry had to be established, and, if necessary, nurtured in its infant years, which would produce new wealth for India even as it utilised existing wealth.

Thus it was that, for the first time, the building up of auxiliary and ancillary industry connected with steel began to be carefully planned. I would hasten to point out that there is here an element of enlightened self interest as well. But, be that as it may, the Tatas were not slow to recognise the need for some manner of diversification; and, at the same time, they did not overestimate their own capacity or capability. To embark on new enterprises independently would, perhaps, have made Tatas even bigger than they are today. On the other hand, if the Tatas had chosen to go it alone, it may conceivably have happened that the House of Tatas, taking on more than it could tackle, would have been over extended. The new lines of manufacture were such as to call for the latest techniques in manufacture and production. It was commonsense, therefore, that such enterprises should be under the joint auspices of Tatas, on the one hand, and a firm of standing in the industry concerned, on the other.

It was this reliance on joint effort that was responsible for the coming into being of the Enfield Cable Company; today, we know

it as Indian Cables, and every investor recognises it to be a blue-chip. The beginnings were modest; the company was provided by TISCO with every possible facility, such as land, sanitation, water and steel billets at a concessional price. Today, Indian Cables has in its British associate a veritable giant—the British Insulated Callender's Cables. I do not think we would be wrong in saying that Indian Cables represent Success Story I.

At around the same time, with the overwhelming support of the investor, the Indian Steel & Wire Products Company Limited got off to a flying and auspicious start. The Managing Agents were Sir Lalubhai Samaldas and Messrs Hirachand and Kapadia. Unfortunately, this was to prove an enterprise that, even like TISCO, was to have aggravated teething troubles. The Tata cooperation was vouchsafed as in the case of the Indian Cable Company—no financial commitment, but every help as regards township and town facilities and supply of the raw material. I do not quite remember whether the sponsors of the company had erred in their estimation of the finance required, but it happened that, soon after its inception, ISWP found it necessary to raise a loan from the Bihar Government in the form of debentures. However, things did not improve. Losses continued to be experienced. The debentures could not be serviced. And the Bihar Government, in exercise of their right as debenture holders, sold the company. With that sale, the fortunes of the company changed in a miraculous fashion. Sardar Indra Singh was now in control and ever since then, the Indian Steel & Wire Products have enjoyed an uninterrupted period of unbounded prosperity. Something new was being made in India; something new that India needed. Indirectly, then, Indian Steel & Wire Products represents Success Story II.

Tatas then began to think of yet another industry ancillary to steel. But, in this case, the Tatas joined hands with Burmah-Shell, on the basis of equal participation, in the financial stake. The Tinplate Company was formed and the raw material was, once again, TISCO steel. It is significant that neither

Tatas nor Burmah-Shell, thought it proper or desirable that the administration or management of the company should vest in either of the financial partners. Instead, Shaw Wallace, who were at the time Selling Agents of BOC, were asked to be the Managing Agents of the company; and, to this day, they so serve.

Then there was the enterprise begun by Bombay interests, who hit upon the idea of manufacturing agricultural implements at Jamshedpur. Here, too, the original results were uninspiring. Later on, the Tatas took it up, and, today, Agrico is a useful entity with an importance in its own right.

In the pre war era, there was one more example of directly related ancillary industry springing up. In association with Nursing & Company, the Tata Foundry was formed; but the Tatas did not have any financial stake in the company. This was accomplished well before the end of the 1920's. Then there followed a very long lull, during which consolidation rather than expansion marked the activity in Jamshedpur and its environs. At the end of the Second World War, the long pause was abruptly broken. There was a new sense of dynamism in the air, fostered not least by the achievement of political independence. In a country that sought to industrialise itself, it was patent that the manufacture of pipes had to be taken on hand. In collaboration with Stewart & Lloyds, who are world famous for pipes, the Indian Tube Company was formed.

Meantime, the Tatas sponsored TELCO, which is now grown into a combine with three definitive divisions. The capacity of each of the divisions has again and again been raised, and the contribution of TELCO to the Indian economy is undoubted. In this context, I should also mention the fresh lines on which the Tatas are branching out. A plant for the manufacture of ferro manganese, at Joda, is rapidly reaching the production stage. Another enterprise, Tata sponsored, is for the production of chrome; and it, too, has made good headway.

If you ask me, I think that this is the real significance of Tatas in

the Indian economy. When you think of TISCO, it would be wrong if the picture conjured up in your mind were restricted to steel. Cables, wire and wire products, tinplate, agricultural implements, foundry casting, tubes, locomotives, trucks—these are some of the important manufactures that India today produces, thanks to the initiative shown and taken by the Tatas.

★

Besides producing the all important steel, there is another sense in which the Tatas have contributed significantly to the national economy. But, first, we may see the extent to which the national economy has helped Tatas. There

is, of course, the equity capital and the preference capital, not to speak of the deferred shares, which were subscribed by shareholders. Over and above this, the consumer was asked to subsidise indigenous production over a period of years. It has been estimated that the benefit derived from protection by TISCO over a period of 15 years amounted to Rs 11 crores. Against this, and forgetting for the moment the manufactures and products of ancillary industries, Tata steel in the Indian economy may be said to secure a saving in foreign exchange to the tune of Rs 160 crores a year, when the Two Million Ton Programme is completed. Over and above this saving in foreign exchange, which we would otherwise have had to lay out for

purchasing steel from abroad, the Indian consumer is better off to the extent of the difference between the selling prices and the cost of imported steel. It has been reckoned that, for some years now, the steel bill for the Indian consumer has been Rs 40 crores a year less because of the cheaper cost of TISCO steel. As far as TISCO is concerned, it is called upon to help out the consumer in an even more handsome manner. For, it has to sell its steel at what is known as retention prices; and the differential between the retention prices and the selling prices go to the credit of an equalisation fund, from which the excess cost of imported steel is met. I do not think it has been sufficiently realised that the Indian steel industry has

for years now been subsidising imported steel, and that the consumer has reaped a rich benefit as a result thereof. As Mr J. R. D. Tata pointed out at the last week's annual general meeting, the company can feel that it has "amply repaid the country for the protection granted to the steel industry during the difficult years following the first World War". This is, perhaps, the proper context in which I should bring up the issue of dividends. It strikes me as most unjust that, in an industry which, in prospering, spreads all round prosperity,—labour earns more, new industries get established, foreign exchange is saved, Government's tax receipts mount, managing agency remuneration in-

Communist Aim— Complete Confusion

The business classes, as well as the general public, have been somewhat slow in giving attention to those points of Mr J. R. D. Tata's recent speeches at the annual general meeting of the TISCO and the TELCO in which he dealt with the Communist menace. This is normally understandable, since the Chairman's speeches on these occasions are read for what he has to say on major policies and plans, especially at the present time and the prospects. Hints of bottlenecks or difficulties of procurement are more important. But, in the present situation, the attitude of labour to the management and to the work on hand has more than the usual importance. Both companies are well set on the road to expansion of production and a growing modernisation of methods and processes. Both have satisfied the exacting and sometimes even unkind tests imposed by a government which, in the eyes of some, is not too well disposed to private industry. But the chances of realising all these potentialities depend to a large degree on the readiness of the workers to co-operate with the managements.

The fact that the Tatas have a remarkably shining record of

treatment of labour—and labour, too, has always shown a fine sense of discrimination—does not appear to have stood in the way of extraneous elements embarking on a large programme of mischief-making. The Tatas were never unequal to dealing with the genuine grievances of labour or even their more extravagant aspirations. Among the working classes, in which you may even include a large section of white collared people, the employees in Tatas works are in every way the most fortunate lot. And, in recent times, the Tata employees have shown a readiness to count their blessings before embarking on strikes and other unwise courses of action.

All this would appear to have been changed at bottom by the activities of scheming outsiders who have been carefully trained to take full advantage of every favourable circumstance,—the inexperience of younger workers, the pusillanimity of Government and the expediences of the management. These outsiders, one need hardly say, are Communists whose aim is not the improvement of the lot of any one group of workers, but only the furtherance of their political objectives. To the workers, they appear in the garb of guardian angels. Their economic doctrines and political philosophy help them to do so. But, in reality, modern Communists have gone far away from their purpose. In the Communist countries, the Governments have flatly denied the claims of the people to higher standards of life or to a voice in public affairs. In the name of some arbitrarily drawn up plan, they deny the people the necessities and comforts of life. In the name of world Communism, they deny them freedom. It has gone on thus for the last forty years since the triumph of the Russian Revolution, and the Indian Communists have played the same tune as if nothing has happened in recent times in any of the Communist capitals. While the lords of the Kremlin see a good reason for keeping the best relations with this country and even wish it well, the Indian Communists are dismayed by the spectacle of India progressing in industrialisation without compromising any of the principles of democratic government. Further success would mean the deathknell of all the hopes of Communists, since the decay which started with Kerala would be stopped and faith in democracy would be made impregnable.

This thought it is that has been the urge to redouble the effort to impede the smooth progress of the Plan and prejudice the Government in the eyes of the people by bringing about its failure. And, given such an idea, what is more suitable as a field for such sabotage than Bihar with its coalfields, its iron ore and steel factories, its manufacture of locomotives and automobiles, its undoubted potentialities for development of heavy industries?

Mr Tata has done little less than a national service in pointing out that labour troubles in Jamshedpur and adjacent places must be watched with this sinister Communist plan in one's mind, and not alone in the traditional way of looking for points of agreement and disagreement between employees and employers. The specific instance he has given is one of a strike over the transfer of one employee of TELCO months before the strike was in the air. If it was one of the usual points of dispute, it would have been a different matter. But, to create a major crisis over a trifling transfer, there must be a larger objective in the mind of the instigators. The activity of Communist agents is also seen in the slow down strikes which are resorted to without any ostensible reason whatsoever.

There can be no doubt that, if this kind of activity is allowed to go on, none of the big factories can work according to schedule, and the consequences of such a failure on the national Plan can be easily imagined. If TISCO should fail to produce steel and TELCO to hand over to Government the 100 locomotives they have promised every year, the national economy would be brought to a standstill in more senses than one.

Can any one contemplate such a situation with equanimity? The evil must, of course, be nipped in the bud. Neither the Government of Bihar nor the Government of India can afford to look on with their hands tied by misconceived labour sympathies or needless political timidity. It is one thing to take sides in a labour dispute. It is quite another to take the side of the nation and its future against malevolent mischief-makers. They must throw themselves wholeheartedly on the side of the Plan and its production schedules.

But, with the best will, the Government cannot by themselves ensure all the necessary conditions. Workers, too, must cooperate. And, in securing their co-operation, they have to be protected from themselves. This is not peculiar to India. The USA is waking up to the misdeeds of labour 'leaders' in trade unions and other labour organisations and, before long, there will be a mass of legislation to prevent the racket such as has occurred among the teamsters'

union. Our working classes are less, and not more, fitted to withstand such rackets. They need somebody to tell them what the real intentions and aims of the Communists are. Not only should their thunder be stolen from them, but they must be shown to the working classes in their true colours. Educative campaigns without the least suggestion of class bias or interest must be carried on among the workers to convince them that the Communists are actuated not by the desire to raise the standards of life, but by the passion to increase their political power, and that their first step toward it is almost the worst—the creation of complete confusion.

Price Policy for Foodgrains

No report is so eagerly awaited as that of the Foodgrains Enquiry Committee. For it is confidently expected that the Committee's recommendations will enable Government to tackle the food problem in an effective manner. That Government's food policy needs urgent overhauling has become evident from the difficulty experienced by people all over the country in procuring their requirements of foodgrains. The remedial measures undertaken so far have failed to produce the desired result and in recent months the situation on the food front has further deteriorated.

Speaking in Bombay last week Professor B. R. Shenoy attributed the prevailing high prices of foodgrains to the inflationary expansion of money incomes among the community due to high Plan expenditure and the consequent increase in demand. Statistics proved that there was no actual scarcity as the 1956-57 foodgrains output of 68.6 million tons was very near the post-war peak production of 68.7 million tons achieved in 1953-54. The remedy, therefore, lay in taking simultaneous action on the investment and supply fronts. By reducing Government investment, inflation could be stemmed while the artificial scarcity should be effectively removed by placing the imported foodgrains directly in the market. It is unlikely that Professor Shenoy's suggestions will find favour with Government because one will result in slowing down the tempo of developmental activity under the Plan while the other is too risky a step to be tried at the present juncture.

Some indication as to the opinion in the country on the food problem has been given by Mr Ashoka Mehta, Chairman of the Foodgrains Enquiry Committee. From the statements of the large number of individuals and associations who have so far given evidence before the Committee it would appear that public opinion will not favour rationing but may approve of a method that is in between complete rationing and full freedom of private enterprise in the matter of distribution of foodgrains. The efficacy of selective credit control as regards foodgrains is doubted by many. The idea of a modified system of rationing providing for a family card system which is in vogue in Calcutta has considerable support. Most of the States have suggested the establishment of citizens committees to supervise working of fair price-shops. It is significant to note that none has suggested the handing over of the imported foodgrains to private

traders. Mr Mehta, has pointed out that the main criterion for the committee's recommendations would be the consideration that the price levels were fair to the producer, fair to the consumer and also favourable to the development of the country.

As has been pointed out by the Andhra Government in their memorandum to the committee, the fixing of price levels for foodgrains should necessarily take into account the economic condition of the producer whose interests have hardly figured in the discussions on foodgrains prices so far. It will therefore, be inevitable, that conditions obtaining in regard to commodities other than foodgrains will also have to be studied. Mr Mehta has himself said that price levels of fertilizers etc will be examined. It is to be hoped that Government will soon appoint a committee to go into the price situation as a whole so that the task of determining an equitable price level for at least the principal essential commodities can become easy and bear fruitful results.

Foreign Aid for Private Sector

Speaking on the eve of his departure to New York as a member of the Indian Industrial Delegation, Mr Babubhai M. Chinai, President of the Federation of Indian Chambers of Commerce and Industry, said that the efforts of the delegation would be directed toward two main aims. It would investigate the possibilities of enlisting the assistance of foreign interests in the matter of deferred payment for capital machinery and equipment and collaboration and or investment in specific lines of development. All participation of foreign interests in Indian industry would be on the lines of the overall industrial policy of the Government of India. The delegation also expected to get loan assistance from lending institutions in foreign countries with the help and guidance of Government.

There is every reason to expect that the delegation will make a big success of its present visit. The fact that it has the blessings of the Government should go a long way in crowning its endeavours with success. This is not, however, to minimise the task before it.

It will, by no means, be an easy matter to convince the foreign investor, financier, or entrepreneur that sanctity of private property is one of the main tenets of the Indian nation especially when interested parties are constantly

trying to raise the bogey of communism.

Hence if the task of the delegation is to be considerably lightened help should come from the business community itself. For it is they who are crying themselves hoarse that the Second Plan targets are too ambitious and that if Government persist in implementing it, the private sector will be annihilated. In their anxiety to convince Authority of the severe repercussions of the heavy taxation measures they invariably forget that India is a democracy. The Second Plan has been approved by Parliament with all its implications. True, difficulties have arisen sooner than expected

and what is worse, in a more severe form than has been considered probable earlier. Taking advantage of the sorry predicament of Government they have renewed their attempt to drive home to people what they consider as right. If by their attack they have created the impression among foreign investors that there is something seriously wrong with the Indian economy, they have only themselves to blame. Mr Chinai's words should serve as a warning to the business community and sooner they realise that any attempt to rake up matters which have been long settled will do good to none, the better it would be for them and the country.

GATEWAY MARKETS

Rally in Oilseeds

THE Oilseeds market staged a notable rally during the week under report. After a somewhat encouraging start, values made an around improvement on short-covering, attracted by the recent fall in prices. Buying by shippers on the possibility of overseas business and demand from crushers mainly aided sentiment.

The lead to the market was given by Castorseeds. In the futures section, September delivery, after opening at Rs 157.50, spurred to Rs 162.75. Similarly, May delivery closed higher at Rs 144 after opening at Rs 142. The rise in prices was attributed to the market's confidence in respect of offerings against the maturing September contract. It was felt that offers against this contract would be absorbed readily in view of the steady demand for spot castorseed. With the mills remaining active buyers of spot supplies, good lots of Madras small castorseed commanded a premium of about a rupee over the September contract. In the ready section, the rate was quoted better at Rs 32.50 and Castor Oil, Commercial quality, at Rs 19.37.

In sympathy, prices in the Linseed section improved. A fresh improvement in the export outlook for Indian linseed oil was also a contributory factor. Inquiries from the UK have been more frequently, with the rate rising from £103 to £106 per ton, c.i.f. in bulk. The major bullish factor has been the recent enquiries from Australia, which has invited tenders for a total quantity of about 1,300 tons. In the futures section, September delivery started at

Rs 27.44 and finished higher at Rs 27.81. Similarly, May delivery was taken upto Rs 28.31 from a low of Rs 28.05. In the ready section, the rate was quoted at Rs 27.75 and Linseed Oil at Rs 14.75.

Prices in the Cottonseed section developed a hardening tendency, thanks to support from upcountry centres and the Government announcement of the exemption of excise duty on cottonseed oil. This oil is at present subject to excise duty at the rate of Rs 56 per ton. With a view to encouraging the crushing of the seed for oil and in the hope that this will enable some groundnut oil to be released for export, the Government have decided to exempt, with effect from the 4th September, cottonseed oil from the whole of the excise duty leviable thereon. In the futures section, September delivery closed at Rs 99 and February at Rs 90.25.

Gold & Silver

Activity on the Bullion Exchange continued to be restricted and trading was confined to professionals. Futures were more or less maintained in rather sluggish dealings, while the spot section was inclined to be a shade quieter due to increased offerings of Kolar gold.

In the Gold section, arrivals and offtake were estimated at 2,000 tolas and 4,000 tolas respectively. Bhadon delivery closed at Rs 107.81 and Asouj at Rs 107.56, the highest levels touched being Rs 107.94 and Rs 107.66 respectively. Ready was quoted at Rs 108.12 to Rs 108.25, while Sovereign ruled steady at Rs 70.37.

World of Cotton

New Season Started

THE 1956-57 Indian Cotton season ended on August 31. The most significant feature of the season was the increase in domestic cotton consumption. It was estimated that Indian mills consumed about 4.7 million bales (400 lbs each) of domestic cotton as against 4.4 million bales in the previous season. The carryover for the new season was estimated at 19 lakh bales, including 2.95 lakh bales of foreign varieties. The carryover for the 1956-57 season was higher at 21 lakh bales.

With the 1956-57 season having come to a close, it will be worthwhile to assess the progress of exports of raw cotton from India during the season just ended. From the figure now available, it appears that the overall exports have been lower around 2.99 lakh bales as compared to 5.93 lakh bales during the previous season. This is attributed to the restricted export policy of the Government rather than to any serious setback in the outturn of crop during the season. This includes, however, shipments of Zoda and Yellow Pickings.

As usual, Japan tops the list

among the importing countries with 193,711 bales which, when compared to the offtake in the previous season at 326,931 bales, is much less. Hong Kong comes next with the offtake being 10,000 bales higher at 44,197 bales. Shipments to the Continent and the UK, however, reflect a very discouraging position. The poor offtake by these destinations may be ascribed to the shipping difficulties following the Suez crisis.

Meanwhile, reports from the Punjab, Madhya Bharat and Gujarat have indicated that the new cotton crop is making good progress under generally satisfactory conditions. It is, therefore, expected that the new crop will be considerably larger than that of the 1956-57 season. Little damage to the crop is reported only in Moglai areas and Berar; but it has failed to push up prices.

If the progress obtaining now in regard to the standing crops is any indication and provided nothing untoward happens during the next two and a half months, the trade can reasonably look forward to a crop outturn of at least 52 to 53 lakh bales. As against this, con-

sumption is likely to go up, because of the preference for Indian cotton on account of its cheapness compared to the world prices of cotton. Consumption is expected to move up to 49 lakh bales during the current season. This means, that there will be hardly about 3 to 4 lakh bales left as an addition to the carryover stocks of Indian cotton.

Nevertheless, export prospects, during the current season, may not continue to be restricted, especially in view of the growing shortage of foreign exchange. The authorities may, however be depended upon to release such export quotas as the crop outturn may justify. As a matter of fact, the Government of India have decided to license freely for exports of Assams, Comillas, Zoda cotton, cotton pickings and sweepings, yellow pickings and cotton linters, during the current season, to all permissible destinations other than Tibet and the Portuguese possessions in India. The export of Coconada cotton will not, however, be allowed for the present.

STATISTICS

Exports by rail, from 1st September 1956 to the 29th August 1957, were 377,906 bales. Estimated

mill consumption in Bombay, during the same period, was 1,327,186 bales as against 1,254,578 bales in the corresponding period of the previous year. Stocks, as on the 29th August 1957, were estimated at 463,777 bales as compared to 525,254 bales on the corresponding date of last year.

FUTURES MARKET

The cotton futures market started the week on a quiet note. Receding hopes of reduction in excise duty on cloth and vague talks over curtailment of one shift by upcountry mills contributed to a downward tendency in prices early in the week. Prices, however, rallied moderately at the close due to short-covering on reports of unwanted rains in the Punjab. Turnover was 18,000 bales. ICC Moglai Jharila opened at Rs 679 and, after touching a low of Rs 668, finished better at Rs 673.50.

SPOT MARKET

The Spot market ruled more or less steady with mills buying popular varieties. Southern mills evinced interest in the new crop Jharilla.

(Continued on page 500)

4½ per cent State Governments Loans

- (1) Government of Bombay Rs. 600 lakhs Issue price Rs. 99.75 per cent.
- (2) Government of Mysore Rs. 300 lakhs Issue price Rs. 98.75 per cent.

Both the State Governments reserve the right to retain subscriptions upto ten per cent in excess of the notified amount.

The above loans will be repaid at par on 16th September 1969. THE LOANS WILL OPEN FOR SUBSCRIPTION ON 16TH SEPTEMBER 1957 AND CLOSE ON 18TH SEPTEMBER 1957 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

The loans will bear interest from 16th September 1957. Subscriptions may be in the form of cash/cheque in respect of both the loans.

3% MYSORE GOVERNMENT LOAN 1958 will be accepted at Rs. 99.75 per Rs. 100 nominal for conversion into the new loan of that Government; interest on the securities of the loan tendered for conversion will be paid upto and including 15th September 1957.

APPLICATIONS FOR BOTH THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

- (i) At the office of the Reserve Bank of India at Nagpur, branches of the State Bank of India, branches and Treasury Pay Offices of the State Bank of Hyderabad and the Government treasuries and sub-treasuries in the case of Bombay Loan.

- (ii) At the branches of the Bank of Mysore Ltd., State Bank of India, State Bank of Hyderabad and at Government Taluk treasuries in the case of Mysore Loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Delhi Review

The Foreign Policy Debate

THE debate on foreign affairs in the Lok Sabha was more interesting for the subtle changes that have come over the nature and extent of Parliament's preoccupation with this aspect of national policy than for specific views on specific problems that emerged at the end of the discussion. Time was, in the not distant past, when discussion of foreign policy used to consume a disproportionately large slice of Parliamentary time, and had a certain priggish school-marmish air of lecturing the rest of the world. The result used to be that aspects of foreign policy that impinged on our immediate interests used to get somewhat neglected.

It is true that relations with Pakistan were inevitably discussed, but the question of Indian nationals in Ceylon (to choose a random example) did not use to receive anything more than a perfunctory attention. Again, while there was a great deal of holding forth on international conduct, there was barely any discussion of the impact of foreign policy on the economic aspects of our national policy.

These distortions of relative importance, first, of foreign policy itself in the scheme of national policy making, and, second, of various strands of the policy itself, have, to judge by the debate, been rectified to some extent. Unlike the former marathon sessions, the time taken by the debate was comparatively short. Secondly, both Mr Nehru and the other participants in the debate avoided the philosophical and ethical bases of international conduct. If I remember right, there was not a single reference to Pancha Shila during the entire debate. Participants in discussion confined themselves to hard political facts. Mr Nehru, for instance, dealt at some length with the question of people of Indian origin abroad, in itself an indication of the shifting emphasis of the real preoccupation. Again, the economic consequences of international events gained a more than cursory discussion during the debate.

One can speculate more or less successfully on the reasons for this change in the pattern of our preoccupation with the nation's policy making. One of them is surely our growing maturity in political thinking, which makes us more keenly aware of political facts and less easily taken in by political generalities. This, in its turn, is due to the forcing on our mental horizon the hard reality of national politics and economics, especially the latter. The last year

or so has seen the emergence of difficulties in the ways of the Second Plan, and the lazy evasion of discussion is no longer possible. Corresponding to this increased interest in these matters, foreign affairs have shed some of their urgency in the nation's mind. After all, the only serious challenge to our foreign policy is the evolving of a satisfactory mode of co-existence with Pakistan and that is, thanks to Pakistan's obduracy, exactly where it was years ago. For the rest, our internal problems force their attention on us more urgently than two years ago; and hence this shift in emphasis.

Another reason for the change—this time, the change in the relative priorities in aspects of foreign policy itself—is our experience of last year in the international arena. In the years since independence, our policy of noninvolvement and playing the honest broker where possible and when permitted had won for us a certain measure of esteem. This was expressed, often sincerely, in terms of extravagant praise; and, being but human, we were perhaps inclined to set a larger store by it than was called for. But last year saw some pretty raw examples of mauling of the self-interest of big powers, the most notorious of which were the Suez episode and the Hungarian uprising. In both cases, the Indian attitude seemed to the parties concerned as appallingly selfrighteous and far worse. Ironically enough, a similar attitude on earlier occasions had been praised by these very powers as both legitimate and laudable. It must be admitted that Indian opinion was inclined to be rather complacent about our international usefulness, and indispensability until last year's events showed that, where real self interest was in danger, the veneer of polite admiration was easily peeled off the real attitude of the big powers toward us. This fact was somewhat distressingly brought home to us by our almost complete isolation during the debates on Kashmir in the UN last year.

It is a lesson of some importance to have learnt—the lesson that foreign policies of nations are wily nilly based ultimately on self-interest, that it is a fact we can never get away from and that, within limits, there is nothing disreputable about it. This proposition has two corollaries: one, our own policy had better be more overtly and explicitly based on and expressed more articulately in terms of our legitimate self-interest. This means that we would not surrender to pressures, in whatever guise, that seem to take the ostensible form

of only asking India to live up to its professions.

The motives behind the sophistries of those who tried to impose a plebiscite in Kashmir last year were precisely pressure of this sort: the simulation of shocked surprise that India (of all nations, so the pretence went) should refuse to honour commitments, to submit to democratic processes, obey international morality and so forth was a sort of hoisting India with its own petard. It is true that a good deal of it was something in the nature of paying India back in its own coin for its 'officious' interference in their affairs. But, to find a reason for the motivation of these arguments is not to answer them, and in answering them we would have been less incommode at the time of Kashmir debate, if some of our own highfalutin about international morality had not been available to others to be flung at us.

The second corollary of the proposition that a nation's foreign policy is based on the requirements of its own national interest is that it is better for us not to get too deeply involved in things that do not concern us directly. It was one of the paradoxes of our policy of nonalignment that one of the first nations getting involved in attempts at solutions of various problems was India. Whether it was Korea or Indo China or Algeria or whatever else, we were the indefatigable mediator, the energetic pourer of oil on troubled waters and the ever smiling boy scout irrepressibly being useful. It is true that in none of these cases have we forced ourselves or been there without being useful. It is also true that, on these occasions, we seemed to have been the only one who had the necessary ingenuity to devise the kind of *modus vivendi* that would be acceptable to all. But, for a nation ostentatiously wanting non-involvement, these were rather gratuitous entanglements. I know that our neutrality does not mean that we conceive our role to be that of a passive spectator in a world in which we apparently can be useful. But it is necessary, and this precisely is last year's lesson, that we should, in order to avoid needless international rancour on other occasions, reduce our international usefulness to some extent.

Moreover, it is not entirely true that we have sallied forth into the international arena only when we can do something useful. We have, often in the past, held forth on events and acts even when there was nothing we could do about them. It may be that what we said was true and just, but there was no particular urgency about our saying it. We had also assum-

ed in the past, perhaps unconsciously, a larger representative capacity than we need have. India was the spokesman of the anti-colonialists of the Afro Asian bloc, of the Bandung Powers and so on. Of course, to be fair to us, such a capacity was as much thrust on us as unconsciously assumed by us. But, nevertheless, such a representative capacity was resented at other times as overweening presumption on our part.

What I am suggesting is not by any means a basic change in our foreign policy. The fundamentals of that policy are very sound and have served us well all these years, but I think we need a modification of tactics in pursuance of that very policy. As I said in the beginning of this despatch, that the necessity for some such change has been appreciated by others, too, is clear from the trend of the debate in the Lok Sabha, and also the events of the last few months. Take, for instance, the eagerness of the Government over the rights and wrongs of the Oman episode. Mr Nehru has been resisting with determination every attempt on the part of the Communist opposition (whose interest in queering the pitch is all too evident) to force out of him a statement that could be used as commitment of some sort. This reticence is undoubtedly the result of the lessons of the last twelve months.

Other indications of a change in the pattern of relative importance is the larger time now spent in discussing our own relations with the rest of the world, especially our neighbours. Of these, those with Pakistan are most important. Of course, with or without our preoccupation with other people's troubles, Pakistan would still be foreign policy subject number one—and that means, mainly, the Kashmir problem. The only change that one notices now is the steadiness with which we now draw the attention of the world to the fact of aggression in Kashmir by Pakistan, and the carefulness with which we avoid the appearance of being apologetic about our request that Pakistan ought to clear out before we can talk anything useful on the subject.

On the subject of Indian nationals abroad, especially in Ceylon, Mr Nehru's characteristically lucid analysis was an admirable piece of exposition of a complex problem. People of Indian origin abroad should make up their minds whether they want to be Indian nationals or not. If so, they are entitled to all that our constitution guarantees them; but, in that case, they can only hope to be honoured aliens in the countries in

(Continued on page 502)

North Indian Notes

Land Reforms

In spite of its primacy, as a factor, contributing to economic improvement among the cultivators the land reform movement has only partially succeeded in rectifying the oppressive features, of the old system of land tenure. In a note on the progress of implementation of land reforms, in the States, circulated to members of the A.I.C.C. Mr Gulzari Lal Nanda, Minister for Planning, has attributed this slow pace of land reform movement to social and economic pressures and conflicting attitudes.

Fixing of fair rents, effective security to tenants and ceiling on existing holdings as well as future holdings are the essential points in land reform, which cry for immediate legislation and implementation. The ceiling on holdings, would not merely reduce the disparities of income from land, but would also provide land for distribution among the landless agricultural workers, who constitute in the words of Mr Nanda, the "most disadvantaged" sections of the community. Against the increasing trend in population, redistribution of surplus land has become urgent, if unemployment is not to be accentuated. There is a solid body of opinion in the country in favour of fixation of ceilings on land holdings. Still very little has been done in this direction and even where such measures have been enacted, tardy progress in enforcement has more or less neutralised the benefits of the legislation.

Only in respect of abolition of intermediaries, uniform progress seems to have been achieved. But in this case, the measure has left a legacy of problems such as assessment and payment of compensation, survey and settlement operations, preparation of records and rights and creation of adequate revenue administration. The delay in payment of compensation has added greatly to the plight of the petty proprietors.

Even in non-controversial matters, like consolidation of holdings the lack of trained personnel and high cost involved have adversely affected progress. Therefore central assistance to the extent of 50 per cent of the net expenses incurred by the State, has now been guaranteed. This should enable the State Governments to speed up programmes of consolidation.

With a view to intensify the progress of land reform Mr Nanda has in his note urged action along lines calculated to reduce the level of rents in states where it exceeds one fourth or one fifth of the gross produce, give effective security to

tenants at the same time bringing them into direct relationship with the state and finally put a ceiling on existing and future land-holdings.

The slow progress in land reforms has also highlighted the need for proper enforcement of the land reform measures already enacted. In this regard, Mr Nanda, has pointed to the necessity for an adequate revenue administration. The administration machinery is particularly defective in such states as Andhra, Bihar and Travancore Cochin, in that, the record of tenancies has not been maintained, or is incomplete.

★

Goods Traffic on Railways

People in general and businessmen in particular will be greatly relieved to hear that the railways have been asked to work to their original Second Plan goods traffic target of 180 million tons. It is said that at last week's meeting in New Delhi, the Railway General Managers have been requested to plan the completion of their marshalling yard, track doubling and other works in time for the anticipated heavy spurt in traffic in 1959. It is now expected that as a result of the orders placed abroad by the railway steel purchase mission the position in regard to the supply of

steel will improve. The position in regard to the supply of cement and other essential materials is also said to be improving.

It may be recalled that it had been pointed out on behalf of the Railways that with the Second Plan provision cut to Rs 1,125 crores it would not be possible to carry more than 161 million tons. This meant that the balance of 25 million tons of the estimated 186 million tons of goods that will be required to be moved by the end of the current Plan period will have to be carried by other forms of transport like coastal shipping, inland waterways and road transport. In view of the undeveloped state of these alternate modes of transport in our country, it has been rightly apprehended that if the railways are not enabled to expand to such an extent as to be in a position to carry the original target of 180 million tons, serious transport bottlenecks will result in the last stages of the Plan.

It is gratifying to note therefore, that Government have decided that the Railways should stick to their original target for goods traffic. It is evident that they have come to the inevitable conclusion that the highest priority is to be given to the development of railways. It is a generally accepted theory that a country which aims at rapid industrialisation should first ensure that transport capacity is somewhat higher than the estimated level of production over any particular period.

NORTH INDIAN MARKETS

Lac Crop Estimate

SHELLAC prices, after registering rather low levels, have slightly recovered and are now keeping fairly steady. In the Calcutta market, Pure TN variety is quoting around Rs 88 per maund as against Rs 72 quoted in July and Rs 105 early in January last. Shipments have been running fairly satisfactorily and, in August, were 27,193 packages. These compare favourably with those made in the first half of the year with the exception of April when shipments declined to 22,220 packages in May. Meanwhile, the final crop posi-

tion shows that the yield from Baisaki crop is now expected to be slightly higher by 57,000 maunds, at 650,000 maunds as compared with the revised estimates. The better final figure is said to be due to higher arrivals of stick-lac at Gondia and other centres in Madhya Pradesh. Even then, the final crop is much below the last year's actual yield of 683,000 maunds and the normal 10-year average yield of 740,000 maunds. The following table shows the final crop estimates as compared to the average of final estimates for 10 years preceding 1956 (in maunds):

States	Final 1957	Final 1956	Final 1955	10-Year Average
West Bengal	105,000	111,500	153,000	169,000
Bihar	292,000	348,500	449,000	336,000
Madhya Pradesh	189,000	177,000	178,000	178,000
Uttar Pradesh	10,000	16,000	15,000	10,000
Bombay	40,000	18,000	11,000	30,000
Orissa	2,000	2,000	2,000	3,000
Other States	12,000	10,000	5,000	14,000
Total	650,000	683,000	813,000	740,000

Sugar

The bearish tendency, noted in the Sugar market last week, has gathered further momentum during the week under review. The ex-mill rates have fallen by about a rupee per bag and a further drop of Re 1 is said to be likely with the normal monthly release of the commodity which, it is expected, will be announced shortly. The declining trend is attributed to the end of the festival buying and selling pressure by the industry in Uttar Pradesh and Bihar. While markets in the South will be partly fed by the special quota announced recently, stocks in other States are reported to have risen. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Rampur (special C/29) Rs 34.37; Mansoorpur (B/29) Rs 34.69; Daurala (B/29) Rs 34.94; Mowana (C/29) Rs 34.37; Amroha (D/29) Rs 32.94; Bijnore (E/29) Rs 32.75 and Simbhauli (E/29) Rs 33.75.

Also, the outlook for the export of Indian sugar has turned bleak due to a steep fall in world sugar prices. With the availability of Brazilian sugar at prices as low as £33 per ton, c.i.f. the UK, British-refined sugar is being freely offered at £54 per ton in the Middle-East countries—the important outlets for Indian sugar. The present prices are £8 per ton below those ruling a month earlier.

While it is not possible for India to offer at these prices, British-refined sugar enjoys a preference in the Persian Gulf, Africa, Malaya and Ceylon. Furthermore, British-refined sugar commands a premium of £3 to £4 per ton over Indian sugar in these markets. Under these circumstances, it is feared that it will be difficult to ship even the contracted quantity in full, not to speak of the utilisation of the full export quota. While the total quantity of sugar contracted for sale abroad is placed at 166,000 tons so far, actual exports account for hardly more than 80,000 tons. It may be mentioned here that the Government of India have allowed exports of 2 lakh tons.

★

Gur

The Gur market ruled fairly steady. About 1,500 maunds of the commodity was reported to have been purchased for the manufacture of khandsari; and this accounted for a steady trend in prices in the Hapur market. Outside demand from the consuming areas of the South was, however, slack where arrivals of new gur have already begun.

INDIAN FINANCE

[September 7, 1957]

The Peninsula

Scientific Agriculture

ADDRESSING the members of the AICC early this week, Mr Jawaharlal Nehru declared that it was evident that increased food production had to be given the highest priority. The Prime Minister further pointed out that without increased production in a predominantly agricultural country like India, it would be impossible to achieve economic development as visualised in the Second Five Year Plan. Mr Nehru's reference to the urgent need for increasing agricultural production has evidently been provoked by the considerable difficulty encountered by Government at the present juncture on the food front.

From the very outset our planners have realised the pivotal position of agriculture in the nation's economy as is evident from the main objective of the First Five Year Plan. Agriculture and community development along with irrigation and power accounted for about 45 per cent of the total outlay. The important targets proposed in the First Plan have been realised. In the agricultural sector about 17 million acres of land have been brought under irrigation and the

index of agricultural production (base 1949-50=100) which stood at 96 in 1950-51 has gone upto 115 in 1955-56.

In the Second Plan, the target for agricultural production has been placed at 75 million tons, an increase of 15.4 per cent over the production in 1955-56. The target has now been increased to 80.5 million tons in view of the increasing demand for food and raw materials likely to be generated by the implementation of the Second Five Year Plan. In the programme for agriculture under the Second Plan it has been indicated that the planners are of the view that the satisfactory results attained during the Five Year Plan suggest that the time has come for thinking of a change in the perspective for agricultural development in the country. It has, therefore, been pointed out that it is no longer necessary to place a dominant emphasis on the production of cereal crops. In this regard, other aspects of land utilisation such as horticulture, cultivation of fodder crops etc, have to be given more attention. It would appear that here the calculations of our planners have gone wrong. The serious difficulties encountered in the country for meeting the demand for food grains even after substantial imports has shown that the emphasis in the agriculture programme should continue to be placed on the production of food grains.

Agricultural planning in India is no simple matter because more than three-fourths of the population has agriculture as its main occupation. The task has become doubly difficult because of the deplorable condition of the peasants. Till some fifty years ago the tiller of the soil never figured in the picture of the country that the then Government conjured up. The lure of the Western civilisation and the temporary eclipse of the national pride effectively clouded the incalculable harm that has been done to the most precious of all our assets. The first plan, therefore, had the tremendous task of working against heavy odds. Five years are too small a period to rehabilitate our peasantry which has been reduced to the pitiable state of not "even knowing himself".

It is no wonder, therefore, that one of the major tasks facing our national Government continues to be the regeneration of the rural economy. The problem needs to be tackled simultaneously on several fronts. The experience of rural development work in recent years has brought home the importance of research for the success of the extension work in agriculture. During the Second Five Year Plan the strengthening of research work in

institutions maintained by the Central and State Governments has been given an important place in the programme for agriculture.

The importance of agricultural education and research has long been recognised in our country though the results ensuing therefrom have remained a closed book to the majority of the peasants. The fact the agricultural college at Coimbatore is now celebrating its Golden Jubilee shows that the need for organising agriculture on a scientific basis has been thought of long ago. The present college had its origin in Saidapet near Madras as a school for teaching agriculture and experiment with new agricultural implementations and practices in the year 1856. Later on it was shifted to its present location and the foundation stone of the present Research Institute building was laid in 1907. In the last 50 years, the Institute has made significant achievements both in the sphere of scientific farming and in agricultural research. The achievements in sugarcane research have received world wide recognition. The Institute has to its credit more than 150 improved strains of crops evolved at Coimbatore and its substations.

The Central Farm, Coimbatore, is part of the Agricultural College and Research Institute. The Farm was started in 1906 with the firm object of providing facilities for the students of the Agricultural College to learn the practice of agricultural work by example and practice, and to provide the necessary land for field experiments for the experts in the Research Institute. From the very beginning the emphasis has been on the correlation of agricultural science to its practical applications. The Agricultural College at Coimbatore is the earliest agricultural institution to be started in the country.

The Government of Madras have always evinced keen interest in the development of this great institution. They have now included schemes in the State Second Five Year Plan for strengthening and upgrading the college and Institute. A sum of Rs 38 akhs has been allotted during the plan period to provide additional accommodation, staff etc. The Golden Jubilee buildings are being constructed as part of the scheme of development. In pursuance of a recommendation made by the Joint Indo-American team on Agricultural Education and research, a proposal to develop this college into a strong centre for post-graduate teaching in agriculture which will cater to the needs of students not only in the Madras State, but also in all other states of the southern region is also under consideration.

In the course of his speech, Mr M. Bhaktavatsalam, Minister for

Agriculture revealed that there was a serious drawback in the agricultural research and educational organisation in the State. The achievements of research in the institute still remain largely in the form of papers locked up safely in the archives of the institution as there are no effective means to transfer them to the people who can put them to use profitably. The Minister pointed out that such unsatisfactory state of affairs was to a great extent due to the "almost total separation of the extension wing of the Agricultural Department from the research wing." The research institute will become useful only when its achievements can regularly be transmitted to the farmers. It is also important that the institute should know the needs, suggestions difficulties and doubts of the farmers. With a view to remedying this effect the Madras Government have constituted a committee to prepare a detailed draft scheme for the integration under a single authority of agricultural education at all levels. It is expected that this committee will make recommendations "for strengthening and coordinating the work of the educational research and extension wings so that the instruction imparted in the college is in keeping with the needs of the times, the research undertaken in the institute will meet the ascertained requirements of the farmer in the field in a language which he can easily understand and in a manner which will arrest and hold his attention."

The national importance of institutions like the Agricultural College at Coimbatore was stressed by His Highness Sri Jayachamaraja Wodiyar, Governor of Mysore, when he inaugurated the Golden Jubilee Celebrations of the College. He pointed out that the country entirely depended on science and agricultural institutes to raise Indian agriculture to a pre-eminent position in solving India's food problems.

It is to be admitted, however, that our endeavours to place agriculture on a scientific basis can become fruitful only when a sizable improvement is brought about in the economic condition of the tillers of the soil. His Highness the Maharaja Sri Jayachamaraja Wodiyar has also drawn pointed attention to this urgent task. "It is no longer a problem of finding cheap finance, irrigation facilities, marketing organisations and other aids to the agriculturist, but rather one of reorientating the whole economy right from the bottom upwards. Technical advances do have their place in any plan of agricultural expansion but it is urgent to realise that our agricultural economy cannot be lifted to a higher plane of efficiency without breathing new life and hope into the hearts of the actual cultivators."

South Indian Notes

Tirupati Cotton Mills

Last week, was opened the Tirupati Cotton Mills at Renigunta in the Chittoor district of Andhra Pradesh. This is an important landmark in the industrial annals of the State. Andhra Pradesh in spite of its industrial potential of wide range, has been strangely enough known more for its abundance of agricultural produce of various kinds, than for any striking phase in industrial development. The gap between resources and actual utilisation even at present is as wide as before. But signs of change in the economic scene are fast showing up. The starting of the Tirupati Cotton Mills is one such and should open the way for more ventures of such types.

The opening of the Tirupati Cotton Mills, has significance, so far as Andhra Pradesh is concerned, beyond its general impact, on the industrial position of the State, which must have been invariably strengthened by the addition of a new industrial unit. Andhra Pradesh has presented an anomaly in its cotton textile industry in as much as the production of both cotton cloth and yarn, has been disproportionate to the production of the raw cotton. For instance the actual production of cloth in the State, has only been about 30 million yards annually against the annual total requirements of 453 million yards. Similarly the total yarn production in the State, represents only about 18 per cent of the requirements of the handlooms in Andhra Pradesh. Against this, the cotton growing areas extend to 836,000 acres, with a total production of raw cotton in 1956-57 of 132,000 bales. The scope for expanding the cotton textile industry in the State is therefore very great and the opening of the new spinning mill should have the effect of narrowing the gap, between the production of raw cotton and yarn production.

The mill has at present a spindleage of 6,000 and another 6,000 is expected to be put into commission in a few months, which would bring the total to 12,000 spindles. In the matter of location, the selection of Renigunta has only been apt in so far as the place commands full transportation advantages. The marketing problem ceases to exist. Considering the marketing possibilities of the area more mills could easily be accommodated. The share capital of the Company is widely diffused among a large section of the community. The mill which is expected to work three shifts is capable of producing 800 bales of cotton yarn per month.

Opening the new mill Mr Sanjiva Reddi, Chief Minister of Andhra

Pradesh, pointed to the most pleasing aspect of the new venture which is that most of the directors are from Madras, who have thus demonstrated that linguism is no barrier in the movement of capital and the economic development of a particular region. He also pointed to the great scope for industrial development in Andhra and assured the private sector of full Government support, if they came forward to exploit the resources of the State.

The effect of the new unit on the overall position of the cotton textile industry in Andhra Pradesh is to raise the total number of mills to 12 and to increase the total spindle capacity from 1,39,324 to 1,51,324.

The handloom industry in the Chittoor district, would get a new lease of life, since it would be assured of a steady supply of yarn turned out from the new mills.

*

Administrative Staff College

Addressing a press conference in Hyderabad last week, Dr John Matthai, Chairman of the Court of Governors of the Administrative Staff college, revealed that the college would commence its first session from December next. The method of work in the college would closely follow the pattern of the Administrative Staff College at Henley-on-Thames and would be open only to persons who were already in administrative positions whether in private industry or Government.

Dr Matthai recalled his experience when he was in Government service and when he was working for the Tatas to indicate how the administration in the two spheres functioned. In the case of Government the question of the appointment of a Deputy Director of Commercial Intelligence remained undecided even several months after the request had been made by him, but in the Tatas the question of the appointment of a Deputy General Manager was decided in a couple of days. Dr Matthai pointed out that while some delay was inevitable in Government departments because Government were answerable to Parliament, the time taken sometimes to take decisions were inordinately long. People in our country take it for granted that if they have anything to do with a Government department they should be prepared to wait for a considerable time for their business to be finalised.

But the delay in a Government department is no longer a matter that concerns only a few. The Government of India today is radically different from what it had

been ten years ago. Almost every aspect of the life of the community comes under one Government department or another and any delay on the part of the administration will immediately affect the people at large. With the rapid expansion of the public sector, the question of administrative efficiency has assumed vital importance.

Now that an Administrative Staff College has come into being it can be expected that the official red tape will lose much of its adventitious characteristics. The college will conduct three sessions in a year with the participants numbering 60 in each session. The method of work has been so designed as to utilise the practical knowledge and diversity of prior educational background of the participants. As there will be a fair admixture of people working in Government organisations and private business establishments, the participants can imbibe the good features in both the spheres.

SOUTH INDIAN MARKETS

Bangalore Silk Buoyant

THE Bangalore Silk market has reported distinct improvements in the prices last month, both in the case of Filature and Chara varieties, Kollegal and T. Narsipur filatures, which were quoted at Rs 34 per case, have improved further to Rs 35. Both Kanakapura and Channapattana continued to be quoted at the higher level of Rs 37 with the former registering a rise of Re 1 on the last day of the month. Kisan Filatures firmed up from Rs 34.50 to Rs 36, before closing at Rs 35.

A significant feature, during the month under review, was the improvement in the rate of Spunsilk yarn from Rs 20 to Rs 21. In the Charka varieties, the price of superfine was Rs 3 higher at Rs 29. A more or less similar improvement was noticed in the case of the first, second and third qualities.

There has been a corresponding appreciation in the prices of both Reeling Cocoons and Seed Cocoons. Thus, although the opening level for the first quality Reeling Cocoons was only Rs 1.47, the closing was better at Rs 2.06. In respect of second quality, the improvement was from Rs 1.56 to Rs 1.81. In the case of Mysore Cocoons, the prices ranged between Rs 2.75 and Rs 4.50.

The rates for Silk waste (all varieties) tended to remain at around the same level as in the previous month. Long Charka was, however, an exception to this and prices for this ranged between Rs 1.75 and Rs 2.00.

*

Rubber

According to a notification, issued by the Government of India, raw Rubber can be purchased by a consumer without a special licence only if his consumption did not exceed 150 pounds per year and the maximum quantity he can so purchase is only 150 pounds per year. Those, who consumed more than 150 pounds per year, should take

out a special licence from the Rubber Board on payment of prescribed licence fees. Previously, authorised consumers of raw rubber, whose consumption did not exceed 150 pounds per half-year, could buy or otherwise acquire raw rubber upto a maximum quantity of 150 pounds per half-year, without taking a special licence from the Rubber Board. This has now been superseded by present notification.

*

Pepper

Pepper markets have continued to rule steady. In the Alleppey market, rates are quoted at Rs 593.75 and Rs 585 to Rs 587.50 per candy for superior Palai and inferior Thekkan varieties respectively. In the Kozhikode market, Wynad quality is quoted at Rs 625 and the Country variety at Rs 610, per candy.

Sarawak black at Singapore, after improving to Str.\$76, ruled steady at round about Str. \$75 due to short-covering and enquiries from Europe. The general sentiment of the market, as far as White pepper is concerned, remains bullish, provided there is no unexpectedly heavy pressure of sales by Muntok.

*

Hides and Skins

In the Madras Tanned Hides market, there was a little more activity in the Cow Hides section with enquiries received for 5-5½ lbs and 8-8½ lbs average. In 5-5½ lbs, sellers were quoting higher c.i.f. prices, but offers at any advance met with little response from the UK. Arrivals of Buff hides were fair and enquiries were received at more or less unchanged prices. Arrivals of Cow Calf and Buff Calf were, however, poor. There was less demand from the UK; but prices did not show much change.

(Continued on page 501)

THE DHEMO MAIN COLLIERIES, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 27th September, 1957, at 3-30 p.m., for the following purposes:—

As Special Business.

To consider and, if thought fit, to pass, with or without modification, the following resolution, which will be proposed as a Special Resolution:

(As a Special Resolution).

"That the following contracts between the Company and its Managing Agents and Associates of its Managing Agents as defined by Section 2(3) of the Companies Act, 1956, drafts whereof have for the purpose of identification been subscribed by the Chairman of this meeting be and the same are hereby approved and the Directors are hereby authorised to execute the said agreements on behalf of the Company with all convenient despatch.

1. With Macneill & Barry Ltd. (The Managing Agents of the Company) for sales of coal, payment for such sales being due within one month of the date of supply.
2. With The Equitable Coal Co., Ltd. (An Associate of the Managing Agents) for purchases of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber, baskets, picks, shovels and other miscellaneous items which the Company may require for the purposes of its business.
3. With The Equitable Coal Co., Ltd. (An Associate of the Managing Agents) for sales of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber, baskets, picks, shovels and other miscellaneous items, payment for such sales being due within one month of the date of supply.
4. With The West Jamuria Coal Co., Ltd., (An Associate of the Managing Agents) for purchases of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber baskets, picks, shovels and other miscellaneous

items which the Company may require for the purposes of its business.

5. With The West Jamuria Coal Co., Ltd., (An Associate of the Managing Agents) for sales of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber, baskets, picks, shovels and other miscellaneous items, payment for such sales being due within one month of the date of supply.
 6. With The Gourepore Co. Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
 7. With The Nuddea Mills Co., Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
 8. With The Ganges Rope Co., Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
 9. With The Gourepore Electric Supply Co., Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
 10. With The Ganges Printing Co., Ltd. (An Associate of the Managing Agents) for purchases of printed matter which the Company may require for the purposes of its business.
 11. With Kilburn & Co., Private Ltd. (An Associate of the Managing Agents) for purchases of coal mining machinery and colliery stores, wire ropes, tarpaulins and canvas, chemicals and chemical manufactures, office equipment, diesel engines, oils and greases and miscellaneous items which the Company may require for the purposes of its business.
 12. With Kilburn & Co., Private Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
- it being a term of each of the above contracts that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

As Ordinary Business.

1. To receive and consider the Directors and Auditors Reports and the Profit and Loss Account for the year ended 31st December, 1956, and

the Balance Sheet as at that date.

2. To elect a Director.

Special Notice to propose the undernoted Resolution to re-appoint a Director who retires by rotation, as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company in which it is stated that Mr. J. B. Craig is a Director of the Managing Agents' Company and as such an associate of the Managing Agents within the meaning of the Act and a person who can only be appointed or re-appointed a Director of the Company by Special Resolution in conformity with Section 261 of the Act. To consider and, if thought fit, to pass, with or without modification, the following Resolution:—

(As a Special Resolution with Special Notice).

"RESOLVED in conformity with Section 261 of the Companies Act, 1956, that Mr. J. B. Craig be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

3. To appoint Auditors and fix remuneration.

The Share Transfer Books of the Company will be closed from 21st September to 27th September, 1957, both days inclusive.

By Order of the Board,

MACNEILL & BARRY LTD.
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta, 29th August, 1957.

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

KUMARDHUBI ENGINEERING WORKS, LIMITED.

At a meeting of the Board of Directors held today it was decided to recommend the payment of dividends for the years ended 30th November, 1956, as under:—

On Cumulative Preference Shares @5% p.a. without any deduction for Income Tax payable by the Company.

On Ordinary Shares at Sixty-two naye paise per share without any deduction for Income Tax payable by the Company.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.
F. S. Mitchell
Managing Director
Managing Agents.

Chartered Bank Buildings,
Calcutta, 29th August 1957.

WORLD OF COTTON

(Continued from page 495)

In the foreign section, Ahmedabad mills were reported to have bought a few spot lots of American and Egyptian varieties. Sudanese cotton was also in some demand.

X

NEW YORK COTTON MARKET

In quiet dealings, prices on the New York cotton futures market fluctuated narrowly. Private weather reports from most of the areas of the cotton belt were favourable. Some demand was noticed in mid-week, reflecting a better sentiment on reports that any change in cotton legislation would come too late to affect the 1958 crop situation. The market, however, turned again quiet at the close following the announcement by the Department of Agriculture that the parity price on August 15th was 36.93 cents a pound—unchanged from the figure of July 15. Spot was quoted at 35.05 cents per pound.

The US General Services Administration has announced that the amount of extra long-staple cotton, to be sold in the next five years, will be about 219,000 bales. This cotton has been released from the US stock-pile of strategic materials after the Office of Defence Mobilisation ruled that it was no longer needed since the US could grow extra long-staple cotton sufficient to meet anticipated American military and essential civilian needs.

X

LIVERPOOL COTTON MARKET

Trading on the Liverpool cotton futures market remained dull, and some liquidation by tired longs caused easiness in prices. Offtake was restricted to occasional trade calling and, with realising by professional longs, the market closed barely steady. The Sudan contract continued to be inactive with offerings at current differences still unattractive to buyers.

X

CLOTH AND PIECEGOODS

The Bombay Piecegoods market presented a better front. Dealers have reported larger turnover and feel that the activity will broaden still further in the course of the next few weeks.

On the export front, only stray enquiries were received from foreign countries. Burma is expected to evince larger interest in the near future.

Meanwhile, the Government are likely to make a further allotment of automatic looms to the mill industry for the purpose of producing additional cloth for export. Licences for about 10,000 looms have already been given and hence the new allotment is likely to cover the balance of 8,000 looms. It remains to be seen what steps the Government will take to infuse confidence in the industry, so that it can go ahead with its plans of expansion.

THE HURRILADH COAL COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 27th September, 1957, at 3-30 p.m., for the following purposes:—

As Special Business.

To consider and, if thought fit, to pass, with or without modification, the following resolution, which will be proposed as a Special Resolution:

(As a Special Resolution).

"That the following contracts between the Company and its Managing Agents and Associates of its Managing Agents as defined by Section 2(3) of the Companies Act, 1956, drafts whereof have for the purpose of identification been subscribed by the Chairman of this meeting be and the same are hereby approved and the Directors are hereby authorised to execute the said agreements on behalf of the Company with all convenient despatch.

1. With Macneill & Barry Ltd. (The Managing Agents of the Company) for sales of coal, payment for such sales being due within one month of the date of supply.
2. With The Equitable Coal Co., Ltd. (An Associate of the Managing Agents) for purchases of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber, baskets, picks, shovels and other miscellaneous items which the Company may require for the purposes of its business.
3. With The Equitable Coal Co., Ltd. (An Associate of the Managing Agents) for sales of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber, baskets, picks, shovels and other miscellaneous items, payment for such sales being due within one month of the date of supply.
4. With The Dheмо Main Collieries, Ltd. (An Associate of the Managing Agents) for purchases of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber, baskets, picks, shovels and other miscellaneous

items which the Company may require for the purposes of its business.

5. With The Dheмо Main Collieries, Ltd. (An Associate of the Managing Agents) for sales of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber, baskets, picks, shovels and other miscellaneous items, payment for such sales being due within one month of the date of supply.
6. With The West Jamuria Coal Co., Ltd. (An Associate of the Managing Agents) for purchases of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber, baskets, picks, shovels and other miscellaneous items which the Company may require for the purposes of its business.
7. With the West Jamuria Coal Co., Ltd. (An Associate of the Managing Agents) for sales of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber, baskets, picks, shovels and other miscellaneous items, payment for such sales being due within one month of the date of supply.
8. With The Gourepore Co., Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
9. With The Nuddea Mills Co., Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
10. With The Ganges Rope Co., Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
11. With The Gourepore Electric Supply Co., Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
12. With The Ganges Printing Co., (An Associate of the Managing Agents) for purchases of printed matter which the Company may require for the purposes of its business.
13. With Kilburn & Co., Private Ltd. (An Associate of the

Managing Agents) for purchases of coal mining machinery and colliery stores, wire ropes, tarpaulins and canvas, chemicals and chemical manufactures, office equipment, diesel engines, oils and greases and miscellaneous items which the Company may require for the purposes of its business.

14. With Kilburn & Co., Private Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.

it being a term of each of the above contracts that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

As Ordinary Business.

1. To receive and consider the Directors and Auditors Reports and the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 14th September to 27th September, 1957, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta, 29th August, 1957.

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

SOUTH INDIAN MARKETS

(Continued from page 499)

In the Tanned Skins section, prices of Goat skins remained unchanged, while those of Sheep skins were easier by about 12 nP per pound.

In London Public auctions, Goat skins were taken up first as usual. On the first day, prices realised were 3d to 9d lower. On the second day, prices were unchanged to 6d cheaper. On the third and fourth days, auctions continued as on the previous days; but, on the fifth day, prices sagged and were as much as 9d cheaper again. On account of the London auctions, there was very little fresh business done with overseas buyers, either in sheep or goat skins.

In the Raw Skins section, Bangalore Goat skins were easier by about Rs 10 per 100 skins, while sheep skins were easier by about Rs 30. It is reported that the only reason for the fall in prices is the monsoon defect in raw skins.

CLIVE STREET GOSSIP

(Continued from page 492)

creases, the consumer gets his steel at practically half of the imported cost—the only entity who is debarred from participating in such improved performance is the shareholder. I find it difficult to comprehend what I may call Government's steel dividend policy. It was but recently that Government found themselves unable to approve an increase in the Indian Irons dividend; and, in respect of the TISCO dividend, it is far from certain that the company will be permitted by Government to commemorate the Golden Jubilee by way of a special bonus. I would suggest that Government should revise their attitude in this behalf, especially in the light of the very handsome manner in which the steel industry has benefited all the concerned interests—saving, I repeat, the shareholder.

★

There is a final point on which I should like to think aloud. The existing steel producers, within the framework of the finance they have been able to raise, have unshrinkingly gone ahead with their development projects. It is a significant commentary on the progress of the projects that both TISCO and IISCO should be able to report a satisfactory adherence to schedules, the while that there seem to be second thoughts both about target dates and the finance involved in respect of the Government steel products. Indeed, Mr Tata has made the revealing statement that the enviable success being achieved at Jamshedpur is attracting, if not quite sabotage, at least the determined efforts of Communist elements to bung a spanner into the works. Personally, I am confident that both IISCO and TISCO will complete their programmes according to schedule. This makes me wonder whether it would not be a good idea for Government to decide to borrow a leaf from the Tatas' history books. I have here in mind the eminently correct decision by Tatas and Burmah-Shell to vest the management of the Tinsplate Company with Shaw Wallace; and I would add that, in the case of Bokaro Coal, which is a wholly owned subsidiary of TISCO, the managing agents are Anderson Wright. So, if Government really mean what they say when they profess that doctrinaire dogmatism is no part of their attitude in economic matters, I would suggest an examination of the proposition that, after all, new steel production need not, as postulated in the revised industrial policy statement, rest exclusively with Government. Surely, a way could be found whereby the experience and efficiency of the existing producers of steel would be made use of in the Government steel plants. In terms of a mixed economy, it should be possible, for a limited purpose and for a temporary spell, to have a State enterprise managed by interests in the private sector.

4. With The Dhemo Main Collieries, Ltd. (An Associate of the Managing Agents) for purchases of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber baskets, picks, shovels and other miscellaneous items which the Company

may require for the purposes of its business.

5. With The Dhemo Main Collieries, Ltd. (An Associate of the Managing Agents) for sales of coal, coal mining and engineering plant and machinery, oils and greases, ropes and cables, pipes, bolts nuts and rivets, iron and steel products, cement, bricks and other building materials, timber, baskets, picks, shovels and other miscellaneous items, payment for such sales being due within one month of the date of supply.
6. With The Gourepore Co. Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
7. With The Nuddea Mills Co., Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
8. With The Ganges Rope Co., Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
9. With The Gourepore Electric Supply Co., Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.
10. With The Ganges Printing Co., Ltd. (An Associate of the Managing Agents) for purchases of printed matter which the Company may require for the purposes of its business.
11. With Kilburn & Co., Private Ltd. (An Associate of the Managing Agents) for purchases of coal mining machinery and colliery stores, wire ropes, tarpaulins and canvas, chemicals and chemical manufactures, office equipment, diesel engines, oils and greases and miscellaneous items which the Company may require for the purposes of its business.
12. With Kilburn & Co., Private Ltd. (An Associate of the Managing Agents) for sales of coal, payment for such sales being due within one month of the date of supply.

it being a term of each of the above contracts that the prices at which transactions take place shall be at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

As Ordinary Business.

1. To receive and consider the Directors and Auditors Reports and the Profit and Loss Account for the year ended 31st December, 1956, and the Balance Sheet as at that date.

2. To elect Directors.

Special Notice to propose the undernoted Resolution to re-appoint a Director who retires by rotation, as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company in which it is stated that Mr. H. Mackay Tallack is the Managing Director of the Managing Agents' Company and as such an associate of the Managing Agents within the meaning of the Act and a person who can only be appointed or re-appointed a Director of the Company by Special Resolution in conformity with Section 261 of the Act. To consider and, if thought fit, to pass, with or without modification, the following Resolution:—

(As a Special Resolution with Special Notice).

"RESOLVED in conformity with Section 261 of the Companies Act, 1956, that Mr. H. Mackay Tallack be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

3. To appoint Auditors and fix remuneration.

The Share Transfer Books of the Company will be closed from 21st September to 27th September, 1957, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.
2, Fairlie Place,
Calcutta, 29th August, 1957.

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

NORTH INDIAN MARKETS

(Continued from page 497)

Stocks of gur in the Muzaffarnagar market are put at about 50,000 maunds and, due to slack outside demand, prices are depressed. Following rates are quoted:—Chakku Kotha Rs 14.50 to Rs 14.75; Kotha Dry Rs 15.00 to Rs 15.50 and Shakkar Dara Rs 16.50 to Rs 16.75.

Foodgrains

Quiet conditions prevailed in the Foodgrains market, thanks to the credit squeeze. At Hapur, Wheat prices ruled quiet at Rs 15.87 per maund for the average quality and Rs 16.75 for the farm quality. The market for Rice also ruled quiet as the supply position was comfortable. With increased arrivals from the producing centres, Gram prices eased by 31 nP per maund. The Uttar Pradesh Government have issued orders, under the

Essential Commodities Act, for requisition of gram and its products at the average price for the last three months in the 15 districts of the State, including Meerut. Barley and Bejher eased in sympathy. The markets for other Coarse grains also remained depressed. Due to recent rains, prospects of Urad and Moong crops have brightened; and this accounted for a fall in the prices of these commodities.

Prices in the Delhi grains market declined further last week. Due to heavy arrivals, Wheat prices recorded a fall of about 25 to 75 nP per maund. Gram was also quiet in the absence of buyers. In view of better stocks of wheat, demand for Barley was lacking. Reports of requisition of rice stocks in Bengal and good stocks in the local market caused a setback in Rice prices. Bajra and Maize were also easy in the absence of buying interest. Pulses were subdued in sympathy with other grains.

On the Bombay grains market, the Rice section reflected a downward tendency with the prices moving down by about Rs 5 per candy. Although the inflow continued to be small, dealers were found to be anxious to unload supplies on expectation of a larger crop. The market for Coarse grains continued to rule quiet with Jowar and Bajra becoming cheaper by another Rs 5 per candy.

* OLYMPUS

(Continued from page 496)

which they reside. On the other hand, if they choose to adopt the country of their residence, then, of course, India will try and see that they get the same rights as other nationals of that country.

On the other side, governments abroad should, in Mr Nehru's view, act on the same premises. A person with an Indian passport is only an honoured alien whereas people who have been born and lived their lives abroad and who are Indian in nothing but their origin, should be the full fledged citizens of the countries in which they were born and brought up. These may seem truisms, but, in practice, they are not acted upon because these impinge on particular self interests. Thus, governments are often obliged to play up to local prejudices and individual Indians abroad are not always free from the desire to eat the cake and have it too.

Mr Nehru's survey of foreign affairs ranged wider than what I have discussed, though it was not as global and comprehensive as in the past. The reasons for this, I have discussed earlier. On the whole, I think, the change is for the better. While we should certainly like to be enlightened about our Government's views on all that happens in the world, a certain shortening of the range of our preoccupation with events abroad is, for reasons discussed earlier, a welcome change of emphasis.

THE EQUITABLE COAL COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 27th September, 1957, at 4-10 p.m., for the following purposes:—

As Special Business.

To consider and, if thought fit, to pass, with or without modification, the following resolution, which will be proposed as a Special Resolution:

(As a Special Resolution).

"That the following contracts between the Company and its Managing Agents and Associates of its Managing Agents as defined by Section 2(3) of the Companies Act, 1956, drafts whereof have for the purpose of identification been subscribed by the Chairman of this meeting be and the same are hereby approved and the Directors are hereby authorised to execute the said agreements on behalf of the Company with all convenient despatch.

S. M. KRISHNAMURTHI, Manager, Calcutta

Four hundred young engineers who will man the three new State steel plants will spend six weeks at Jamshedpur before they go abroad for training.

Here at the steel city, an orientation course will acquaint them with the first essentials of steelmaking in India. And they will undoubtedly get a friendly tip or two from Tata Steel veterans.

Jamshedpur is proud to welcome these steelmakers of tomorrow.

For the Investor

IISCO Dividend Policy

Investment Gossip:

Sir Biren Mookerjee's address to the shareholders of the Indian Iron and Steel Company has left the stock market cold and sullen. It is not always possible to offer a rational explanation for market behaviour. In the present case, there is, of course, the disappointment that the Chairman said nothing on the question of dividends on the new shares. There was a vague expectation that a positive and clear reference would be made. In this background, the lack of any friendly response is understandable. As far as the immediate reaction in the market is concerned, it is not altogether ununderstandable.

But is it the end of the story, even for the time being? It is not. The part of Sir Biren's speech which refers to dividends is full of hopeful facts, giving the impression that the holders of not only the new shares, but also of the old could expect good news in the course of the current financial year. The financial position of the Company has been "strengthened to such an extent that the stage has now been passed where it could be validly contended that a small increase in the dividend distribution would in any way prejudice the finance of the cost of the expansion programmes or the due repayment of the indebtedness that is being incurred."

This fact has been pressed on the Government more than once; and though, hitherto, a larger allocation for dividend was not approved, a turning point is in sight. This time, the Government have relaxed a little. They have not chosen to accept the views of the Board in the matter; but they have indicated, at least by implication, that, once the expansion programmes were completed, the present restriction on dividends could be lifted. The 1953 extensions are scheduled for completion in the course of the current and the next year. The Chairman wants the shareholders to join in the hope that the Government would relax the control in the near future.

What is even more significant is the new turn ahead in the Company's fortunes in respect of output. Labour troubles and extension of works hampered production in recent months. Once the expansion programme is completed, a new phase of prosperity follows as a matter of course. Actually, even

now it is not so much any insufficiency of profits which stands in the way of a fuller participation of the shareholders in the continuing prosperity of the Company, as the Government's insistence that nothing should be done which might have even a remotely adverse effect on the expansion programme. There is already a sufficiency of funds for a much higher dividend. The immediate future holds the assurance of a substantial and progressive increase in profits and it is not at all unduly optimistic to say that, in the matter of dividend distribution, the foreseeable future may witness a better return to the investor.

Investment Notes:

IN an otherwise dull session on the Bombay Stock Exchange, Scindia Steams have been receiving persistent support upto Rs 19.72 from Rs 19.32. There are rumours that the company has received the permission to issue Bonus shares from the Premium Account in the ratio of one share for every five shares held.

Larsen and Toubro Limited has announced a further increase in equity capital from Rs 45 lakhs to Rs 50 lakhs, by issuing one Ordinary share of Rs 10, at par, for every nine shares held, as on October 19, 1957. Transfer Books are closed from the 4th to 19th October, 1957.

It is understood that the directors of McKenzies Limited have dropped the scheme for the payment of the bulk of the arrears of Preference dividends in the form of shares. As a sequel to the decision made by the Preference shareholders, the company seems to have proposed to pay two years' dividends on the First Preference shares and nil on the Second Preference shares instead of paying one year's dividend on the First and Second Preference stock. It is indicated that it may be possible to wipe out the entire arrears on the First Preference stock during the year ended 31.7.1957 and perhaps to give a modest sum on the Second Preference shares.

In Madras, Malankara Rubber and Produce Company has decided to issue Bonus shares to holders of Ordinary shares, as on the 14th October 1957, in the proportion of one share for every two shares held. Letters of renunciation will be accepted upto 5th November, 1957.

HIGHLIGHTS

The Budget, as we have known it in the past twelve months, is a lingering perdition, a terrifying, tedious and tortuous agony, worse than total confiscation.

At the end of it all, there is a sense that every thing and every one, including the

national economy and TTK at one end and you and me at the other end have, in the process, suffered a buffeting and badgering which have inflicted all round damage.

Eavesdropper, ever a faithful interpreter of policies and proposals connected with economic planning, is frankly worried and wearied by

the interminable chatter on taxes, and urges a plea for the restoration of the Budget to the status and decorum of an annual event.

Above all, public confidence at home has been shaken, and the country's prestige abroad has been affected.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

Fine Crop of Tea Results

Balance-Sheet Reviews:

The 1956 results of tea companies are proving to be most palatable and satisfying fare for the Investor. Though no inebriation, as in the case of 1954 profits or dividends, is likely to seize the shareholder, there can be little doubt that he will be greatly cheered. Except in rare instances the latest accounts are a half-way house between the unapproachable 1954 performances and the sobering results of the year after that.

Little point is served by an analysis in words of the accounts. The figures speak for themselves, and all relevant financial statistics of a dozen tea balance sheets received during the week are set out in tabular form at the end of this note.

There are, however, three important points to note. Firstly, the dividend distribution for 1956, as expressed in percentages, is oftentimes not strictly comparable with 1954, since bonus issues galore have taken place in the tea section. Secondly, with steadily increasing internal consumption, tea results will gradually be depending less on exports. Thirdly,

with the dividend tax liability, and in view of the balance sheet strength of most tea companies, there is prospect of a fresh batch bonus issues.

Now for the tabular statements.

The secret of Popular Poplin—Sanforized sells!

ADVERTISEMENTS take the public into the shops, make them ask for cloth with the trade mark 'Sanforized'. Experience teaches them always to look for the label...but your customers don't know the 'behind the scenes' story that ensures the complete reliability of cloth labelled 'Sanforized'.

Anytime, unannounced—our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to the rigorous international wash-test, and reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized' on every yard!

It's this kind of constant care which lies behind the success of cloth with the mark 'Sanforized'—which makes it such a seller. Such a profit-maker for you!

Look for

Used by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information 'Sanforized' Service, 96, Marine Drive, Bombay 2.

*Dividends declared in 1955 were on the increased capital by the issue of Bonus shares.

Bengal Paper Mill

It would be recalled that Balmer Lawrie & Co., Ltd., ceased to be the managing agents of the Bengal Paper Mill Company Limited on the 14th January 1957 and they were appointed by the Board, with effect from the 15th January 1957, to carry on the day-to-day affairs of the company, pursuant to the provisions of Section 298 of the Companies Act 1956.

The company's accounts reveal a substantial decline in earnings for the year ended 31st December, 1956. Despite an increase in sales from Rs 1.96 crores to Rs 2.03 crores, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 4,14,380 as against as much as Rs 15,53,700 in the previous year mainly due to the rise in the cost of production from Rs 1.61 crores to Rs 1.50 crores. Moreover, early in the year, a breakdown in the Crushing Plant created a shortage of mill pulp and it was necessary to use imported wood pulp to maintain production. Later, there was also trouble with the Recovery Plant and a consequent loss of chemicals. Thus, the improved results of 1955 were not maintained.

In respect of allocations to Funds, the Depreciation amount is lowered from Rs 9.14 lakhs to Rs 5.27 lakhs and Taxation provision from Rs 5.95 lakhs to Rs 3.95 lakhs. Although Capital Reserve is maintained at Rs 10,000, no provisions are possible for General Reserve and Taxation Contingency Reserve as against Rs 1.00 lakh and Rs 4.00 lakhs respectively set apart in 1955. Naturally, the dividend on the Ordinary shares is reduced to 10 per cent from 18½ per cent.

₹ 84

Jeewanlal Limited

This company has passed over the dividend for the fifth year in succession, although the net trading profit for 1956, at Rs 4,64,745, shows an improvement over the previous year when the company incurred a loss of Rs 99,834. Profit, during the year, from sale of Fixed Capital Assets was Rs 41,728 as against Rs 3,00,600. Thus, the net result is a profit of Rs 5,06,023 as against Rs 2,00,706 in 1955. This net profit has been applied to reduce the past accumulated losses which, as a result of this appropriation, stand reduced to Rs 12,50,291 at the end of 1956.

In conformity of the requirements of the Companies Act 1956, the (Continued on page 520)

Declining Commodity Prices

WORLD commodity prices have generally been moving downward since the beginning of the year and the main victim is non-ferrous metals. The "Economist" commodity price indicator has edged down to 89.4 (1952=100), bringing the total decline from January to 9 per cent. Apart from one week in July last year, that level has not been reached since July, 1953. On the London Metal Exchange, copper has touched a low of £183 per ton, Zinc £73 3/8, Lead £90 and Tin £737—the highest levels touched during the year being £271, £104½, £117½ and £802½ respectively. Like these metals, others are moving into a period of at least temporary surplus in supply, aluminium and wolfram being perhaps the most conspicuous.

Other commodities, too, are in excess supply. In the case of wheat and cotton, the price support system adopted in the USA has encouraged output to expand more than consumption. As far as rubber is concerned, the rising consumption trend outside the Soviet bloc was checked about twenty months ago. The rapid expansion in world output of vegetable oils has been matched by their growing use; and unusually large increases in the rate of consumption of wool has made the absorption of the growing output possible. But, with the exception of wool, supplies of most of the major world commodities are adequate to meet the present demand without forcing prices up, and supplies of many of them are plethoric.

In India, too, commodity markets have generally taken a downward course except for a brief period in the second quarter of the year due to special reasons. There has recently been a distinct inclination on the part of the cultivators and merchants to get rid of old stocks. Cotton, oilseeds and coarse grains have been the major victims, while wheat, rice, sugar and pulses have also shown moderate losses. While the prospects of a favourable output have been the major restraining factor for the markets, the immediate provocation for the fall has been the Finance Minister's warning that the credit squeeze will be extended to commodities other than foodgrains. Moreover, with hardly six weeks left for the movement of "kharif" crops, markets have naturally taken a downward trend. At this stage, it will be of interest to study the supply and demand position of the important commodities.

The weakness in metal prices has been the most dramatic. Copper, lead and zinc are being produced at an increasing rate and, at the same time, are less in demand. The excess of copper, even after the cutbacks already made, is likely to be in the region of 150,000 tons this year out of a world total production of about 3.1 million tons. In the case of tin, the excess is much less burdensome and it presents a particular case, because the Tin Buffer Stock can at present prevent prices from falling far. The surplus this year will probably be between 5,000 and 10,000 tons out of forecast production of 166,000 tons. This can easily be absorbed by the Buffer Stock. Lead and zinc are also weak, because output is increasing faster than consumption. The decline in demand for metals by the US stock-pile has been a main cause for the

appearance of surpluses, particularly because it came at a time of stagnant or falling demand and of rising production. The liberal way in which licences are being issued for importing metals is naturally helping keep down prices in India, while consumers' anxiety arising from the possibility of severe restrictions on imports appears to have been substantially allayed.

The Rubber market has been inactive and prices have tended to fall. The Russian and Chinese buying, which was so important a source of support to prices last year, has been less strong this year. Without the support of these two countries, a falling price trend is almost inevitable. For, it has already been made more certain by the tendency of consumers, particularly in the US and the UK, to adopt a hand-to-mouth buying policy. In both these countries, car production has not come up to expectations and this has lessened the demand for natural rubber, which has been facing competition from synthetic rubber.

Two important factors, which contributed to a heavy loss in rubber production in India, were the heavy monsoon rains, which resulted in the loss of several tapping days on many estates, and the cutting down of trees for replanting. Consumption, on the other hand, has been higher as compared to last year and the gap between indigenous production and consumption is being partly covered with imports. Although prospects for production may be slightly better in the remaining months of the year, there will still be a wider gap between indigenous production and consumption this year, and more imports will become necessary. In this connection, it is encouraging to note that the implementation of the ten-year Rubber Replanting Scheme for increasing production in India has begun. Against the target of 7,000 acres to be replanted in 1957, the Rubber Board has already sanctioned subsidy for 6,185 acres. Under the scheme expected to cost about Rs 2 crores, 70,000 acres of worn-out rubber lands are to be replanted with high-yielding strains over a period of ten years.

Coffee appears to be moving into a period when, statistically, it should be in better supply than for some years. In recent seasons, consumption has been pushing up against production and has kept prices very high indeed. Now, however, the expansion programmes, which this period of prosperity has encouraged growers to undertake, should be affecting the size of the crops. A surplus may appear this year and remain for some seasons. At the moment, Colombia is the only major producer of mild coffee with supplies to sell; and this state of affairs will continue until the new crops in the other mild coffee producing countries start being available in the autumn. In these circumstances, there is every indication that buyers will be able to get their supplies more cheaply later in the year, especially when Colombia is now making a strong bid to enforce its minimum support price.

India is a producer of one of the finest mild varieties of coffee in the world. There is, therefore, a common belief that Indian coffee can always find a ready market. This seems to be rather erroneous. While it may be

possible for India to sell whatever coffee it wants to export, surely is not in a position to get whatever price it wants for its coffee. For, India has no hold on the world market, because, in the first instance, its contribution to the world market is very small—its production itself is no more than 1.5 per cent of the world total. Secondly, its supplies for export are intermittent and unsteady.

The outlook for tea remains uncertain. With buyers remaining selective, reasonable prices have been paid for quality teas, while Common teas have been faring badly. The biggest buyer—the UK—has not been operating on the same scale as last year and shipments have been rather restricted in spite of a fall in its stocks. The credit squeeze combined with currency uncertainties and the prospect of obtaining cheaper teas from East Africa and Ceylon seem to be influencing buyers. At the same time, it should be a matter for concern that Indian tea is gradually losing ground in the USA.

Considering that overseas buying has become selective, it is expected that good prices will continue to be paid for quality teas; but Common teas have to be sold at unremunerative rates. The fair amount of withdrawals suggests that even lower prices may not attract buyers. With new areas of tea coming into plucking in Africa, the next five years should see an annual increase of 50 million pounds from that Continent alone. The uprooting and replanting programmes, adopted in this country, can throw another 50 million pounds on to the market in the space of one year. Production has, therefore, rapidly outstripped consumption; and one can only forecast a lower level of prices than last year.

Price movements in the Pepper markets have generally been irregular since the beginning of the year as foreign advices have been of a quiet nature. There is a lack of buying enthusiasm in the USA, which has been purchasing only on a hand-to-mouth basis in recent months. Apart from foreign competition, rising freight rates have been an impediment in the way of our exports. Although the future position of the market looks uncertain in view of the competition from Indonesia and Sarawak, it is believed that there is still scope for increased use of pepper in meat packing and food canning in countries like Australia and Argentina. Pepper is also finding a new market in the USSR and West Germany as a result of the steps taken by the Pepper Export Promotion Council. The statistical position is as follows:

	Tons
Estimated production during 1956-57	22,000
Estimated carry-over from 1955-56	4,000
Total	26,000
Less:	
Estimated export 31st July, 1957	12,000
Estimated yearly internal consumption	8,000
Estimated carry-over as on 1st August, 1957	6,000

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

Prices of Cotton have tended to weaken and there has been little sustained buying to support the market. It does not look as though world cotton production will differ much from that of the two preceding seasons. Taking the leading countries individually, the US crop, as on 1st September, 1957, is estimated at 12,713,000 bales (of 500 lbs) for 1957 as compared with last month's estimate of 11,897,000 bales and last season's final estimate of 13,310,000 bales. Yield per acre is estimated at 446 lbs against 416 lbs last month and last season's final yield of 409 lbs. The next largest cotton grower is India, which is expected to produce as much as 5.5 million bales in the 1957-58 season—700,000 bales more than the previous season—provided the seasonal conditions are favourable. Pakistan is a small contributor; yet its area of production in 1957-58 is estimated higher at 3,397,000 acres as against 3,336,000 acres reported in the first estimate of last season. Also, several other countries have made remarkable strides compared with their pre-war returns. Naturally, the cotton market in India has been displaying a certain measure of weakness. Informed quarters rule out any sizable recovery in the present level of prices barring adverse weather reports or any sizable improvement in cloth offtake.

Raw Jute and Jute Goods are no exception to the general trend of world prices. Users of jute goods all over the world have had to face stiffer competition in their respective spheres of trade, tighter credit, inflationary rise in costs and increasing foreign exchange difficulties. Moreover, expansion of agricultural output in the newly-developing countries has not necessarily resulted in a proportionate rise in jute bag usage. Payments trouble in a majority of countries has also tended to restrict the movement in trade channels of commodities generally handled in bags, while European jute industries have been hit badly by soaring raw material costs as a direct result of years of crop restriction by Pakistan. Pakistan, the monopoly supplier of raw jute to the world, has made the most of the position of being able to dictate prices to foreign buyers. Thus, prices of jute manufactures, as dictated by the world markets, do not support the price asked for by Pakistan for raw jute.

For obvious reasons, the Indian jute industry experienced the squeeze resulting from the interplay of these economic forces and came out badly mauled. The necessity to undersell Pakistan in the export markets has not been helped by the price trend for indigenous jute, which remained uneconomically high. It, however, looks as if the present dullness of the market for Indian jute goods will be only temporary, as the statistical position of both Hessians and sackings remains strong. Market observers in the USA are of the opinion that consumer buying will improve at the current levels. This belief is based on the combination of factors that consumer inventories can stand replenishing and prices are attractive, being at their lowest level since March last.

The position in respect of sugar has also changed. Thanks to the comfortable supply position following the marked rise in output, India has now emerged as an exporter of sugar. In view of the tight foreign exchange position, the authorities, too, are anxious to develop an export trade in sugar by curbing domestic consumption. But, Indian sugar has not established itself firmly in the export markets, and an improvement in quality is also desired. In the expectation that sugar exports would continue to be made in large quantities, there was, some time ago, a sharp rise in internal prices, especially as the offtake from the various producing centres was brisk. For a time, it was even feared that it might be necessary to impose some sort of control and exports might have to be restricted. In

the past few weeks, however, conditions in the international markets have changed suddenly and prices have recorded a steep decline. It is even complained that the delay in shipments has been taken advantage of by importers in foreign countries to cancel or reduce purchases. In this connection, the Indian Sugar Mills Association has stated that, up-to-date, about 125,000 tons have been shipped and a further quantity of 10,000 tons is scheduled for shipment this month.

Prices of Foodgrains have developed an easy trend, thanks to the Government's resolve to pursue a policy of more severe credit regulation. Moreover, the Government intend to build up food reserves in the country to the extent of two million tons. The present stocks are more than 0.7 million tons and, by the end of the year, the buffer stocks with the Government will be more than a million tons of wheat and rice. Meanwhile, arrivals of foodgrains and pulses have been steadily increasing at Hapur, Meerut and Delhi.

The general weakness of the commodity markets is also reflected in Oils and Oilseeds. The Government's threat to effect a drastic reduction in bank credit against agricultural commodities in the forthcoming season has also imparted an easy tone to the market. Linseed and Linseed Oil have, however, presented a consistently steady front. The broader buying interest in this commodity has been inspired mainly by a fresh improvement in the export outlook, enquiries from the UK being more frequent lately. The major bullish factor has been the recent enquiries from Australia. The outlook for Cottonseed Oil has also brightened following the Government's decision to abolish the excise duty of Rs 112 per ton. The Government want vanaspathi manufacturers to go in increasingly for cottonseed oil, so that the pressure on groundnut oil, which has a comparatively better export market, can be reduced.

Price movements in the Shellac market have been rather irregular in the absence of sustained support from overseas buyers. In Calcutta, the rate is now quoted around Rs 85 per maund—the highest touched during the year being Rs 105 in January and the lowest Rs 72 in July. Although the last estimate of the Bysakhi crop was higher, supplies of shellac may well be tight in the next few months. This is because reports suggest that the Thailand crop will be well below that of last year. Moreover, production of gramophone records, for which shellac is used, is running at a very high level, both in the UK and the USA. Consumers are, therefore, expected to enter the market soon to assure themselves of supplies.

Soviet and US Government Bonds and Savings—II

By GEORGE BENSON

The Soviet state loans bear a superficial resemblance to public loans in non-communist countries, but a radical difference is the fact that in the USSR the conditions of a loan may be changed during its life without the prior knowledge or consent of the bondholder. This happened last April. Thus the contractual obligation of the borrowing government—a basic characteristic of the true bond—is entirely lacking in the case of Soviet bond issue.

Soviet state loans invite comparison with US Government bonds. Since 1776, at the beginning of the American Revolution, bonds of various denominations have been sold to every generation of American families to finance national defence efforts, build railroads, construct canals, and pay for other

public enterprises. Since bonds were first offered for sale to the people, the US Government has never defaulted on the redemption of any issue.

The first bonds were offered to the American Colonists in 1776 through local banks. Three years later, when victory in the struggle for independence seemed remote, the value of the bonds on the open market fell so sharply that the fledgling government had to sell them for a few cents on the dollar face value.

When Alexander Hamilton became the first Secretary of the Treasury in 1787—the year the US Constitution was adopted—he was strongly advised to offer bondholders the market value, rather than the face value of the bonds.

Language and Unity

The failure of the Opposition to secure an opportunity for debating the Report of the National Language Commission, before it was referred to the Parliamentary Committee, is not altogether an agreeable development. Just as the Commission, the Committee also would represent all the interests concerned. For this very reason, the Committee may not return a unanimous verdict. The extent of dissent may vary. As far as the ultimate decision goes, the Report after scrutiny is unlikely to provide more secure guidance than when it came fresh from the Commission.

The petition signed by fifty Members of Parliament hailing from different non-Hindi States, requesting the Government to postpone the date for the complete replacement of English by another 25 years and indicating majority support from the Congress members of Parliament for the proposal, is not to be dismissed as an improper intervention. These MPs have only suggested that the readiness displayed by the Union Government to hasten slowly in the matter of changes in the all India medium should not be given up prematurely.

The move for the replacement of English by Hindi for purposes of examinations conducted by the Union Public Service Commission from 1965 onwards has been wisely abandoned. The Prime Minister took the initiative in insisting that the medium for science subjects should continue to be English in the Universities for another fifteen years at the least. The Language Commission themselves carefully avoided any precise recommendation as to the phasing of the change over to Hindi, though they accepted the target date set by the Constitution.

Unfortunately there is a growing feeling that in certain vital matters

Editorial Notes

touching public sentiment, the outlook displayed by the Centre is not always sufficiently balanced and comprehensive. The film on the 1857 freedom struggle had to be withdrawn from the public, for incorporating further information about "episodes and personages". The omission of any reference to leaders or events in South India could be plausibly played up by parties interested in creating regional discontent.

The Prime Minister, of all persons, is most aware of the lurking presence of disintegrating political forces in India. There is a sinister reference in the MPs' petition on language to the impact of hasty changes on national unity. It would be sheer folly to take up a nonchalant attitude toward aspirations and requests for postponement of changes which are irksome and inconvenient to sections, which may well turn out to be a majority among the population.

The material advantage involved in sticking to the 1965 target for the complete acceptance of Hindi as the official language in India has never been made clear by any of the advocates of the step. The risks involved in that step have been pointed out most emphatically by responsible political leaders and educationists from different parts of the country. The temptation to disregard the warning should be resisted.

Britain's Overseas Investment

In spite of the recurrent strain on its domestic economy, Britain has managed to devote a considerable part of its funds for overseas investment in post-war years. According to an official review, Britain's net long-term foreign investment totalled £650 million over the four years 1952-1955, about five-sixths of which went to the sterling area. The amount covers Government loans for commercial projects.

Besides, £575 million went out in the form of grants between 1945 and 1956 and another £544 million as loans to areas outside. Between 1951 and 1956 the colonies received £224 million as loans and grants. Over and above this, Britain has undertaken to make available £60 million from its subscription to the capital of the International Bank, for sterling loans for Commonwealth development projects between 1953 and 1959; the bulk of this allotment has already gone to different destinations.

Under the Colombo Plan, a considerable amount of private capital has been directed to South and South East Asian countries through the initiative of Britain. During the five and a half years commencing from the middle of 1948, about £103 million was invested in India from British sources. The next largest foreign source was the US with £10 million.

Though by the side of the requirements of particular regions, Britain's

overseas investment since the end of the Second World War might appear inadequate, a warmer picture arises, when seen with reference to the changing pattern of Britain's resources and income. By way of illustration, against a net income from invisibles contributing 25 per cent of the total imports in 1938, these items recorded a deficit in 1946 and '47, and in 1955 formed only 6 per cent of Britain's imports.

A Factor for Restraint

By an overwhelming majority, the Lok Sabha has voted for a Legislative Council for Andhra. As Upper Chambers are a common feature of many leading democracies, the criticism heard from the Opposition that the step is reactionary has not much force. It would not have been so, if Upper Chambers in India were not elected or had a majority of nominated members.

Nominations, both for the Rajya Sabha and the Legislative Councils in the States, of which we have already eight, have, generally speaking, gone to persons of eminence, who would not have cared to seek election and to interests which could seldom hope to secure representation through elections. The complexion of the Rajya Sabha has certainly improved with a sprinkling presence of leaders in art, literature and science; and within the limits permitted, this body has certainly acted as a sobering influence on controversial legislation.

In Andhra, the creation of a Legislative Council derives additional justification from the fact that Madhya Pradesh and Madras, both of which surrendered territories to form Andhra, have upper houses. Residuary Hyderabad never had the tradition of a Government formed from an elected legislature. It may appropriately be recalled that even Dr Rajendra Prasad was initially sceptical of adult suffrage for India. For some time, our second chambers could be expected to wield salutary restraint on the exuberance of a young democracy.

Dealing with Explosives

Three explosions in quick succession at station yards in different parts of India have compelled the Government to ban the transport of crackers manufactured at Sivakasi in South India. Explosions of this character have not been heard of before; and the agonised small manufacturer of crackers would be wondering how an explosion could take place at all. In the interest of public safety, what the Government have done is easily defensible.

The ban must, however, be temporary. Because, the interests of about twenty thousand families who have no other source of income dictate its withdrawal as quickly as possible. Public safety and

employment in Sivakasi could both be secured, if an immediate inspection is carried out of all the manufacturing units and of all the major consignments and the risky parcels destroyed then and there. For the future, the old specification for the mixture of explosives could be strictly enforced.

For all that a lay man can see, the explosions should be the result of an over-dose of dangerous chemical ingredients in the materials prepared by the cracker manufacturers, which itself may be in response to the current desire for more and more excitement on festive occasions. We hope the expert investigation will also point to more or less the same cause.

Unfair Allocation

During the discussion on the recent air crash in the North East Frontier Agency area, the Minister for Civil Aviation made the embarrassing revelation that that particular area was given over to private operators, precisely for the reason that IAC pilots regarded it too risky and hazardous. What is not good for the IAC is considered good for the private operator. If any area is found to be exceptionally risky, the safest course should be not to have flights over it and, if these are unavoidable, to put the most experienced pilots and the best type of planes for the purpose.

If the private operator is expected to thrive by confining himself to rejected areas, he will be tempted to resort to unfair means to compensate himself for the risks involved. Either the private operator should be given equally safe areas or none at all. The allocation of areas on the criterion indicated by the Minister would spoil the reputation not only of the scheduled services but of India's civil aviation in general.

Bank Advances Decline for Twelfth Successive Week

EXPANSION of currency has taken place for the unseasonal amount of Rs 15.23 crores, even after we make allowance for the fact that the latest returns of the Reserve Bank would be reflecting the impact of month early disbursements. In this context, we may note that, in the first week of August, the increase in active note circulation amounted to scarcely half a crore; and, in the first week of July, the extent of the rise was of the order of Rs 9 crores. So, it is necessary to realise the significance of the relatively sharper rise in active note circulation and, in particular, to assess whether this connotes signs in advance of a tapering off of the slack season.

According to the returns of the Reserve Bank for September 6, currency has been expanded against Rupee Securities for Rs 14.90 crores. Rupee coin went into circulation for Rs 1.20 crores. Since the Reserve Bank had an adequate level of cash balances, it could meet the higher demand for money from its cash in the till, and, consequently, currency has been contracted against Foreign Securities for Rs 14.91 crores. This is the first important clue that we have to a correct understanding of the Reserve Bank returns.

The other important point to note is that the contraction of currency against Foreign Securities has been effected by transfer to Balances Held Abroad in the Banking Department, the figure under which head has risen by Rs 12.45 crores, thus suggesting that the net loss of foreign exchange during the 'week has amounted to Rs 2½ crores. On the other hand, in respect of the expansion against Rupee Securities, it is noteworthy that the rise is not in consequence to any transfer from Investments in the Banking Department. On the contrary, Investments are also marked up, by Rs 7.75 crores to Rs 223.14 crores. Thus, the Reserve Bank's holdings of Rupee Securities, in the Issue and Banking Departments, have staged a rise of nearly Rs 23 crores. Quite clearly, the marking up of

Rupee Securities in this wise is indicative of deficit financing. But, in spite of deficit financing for possibly Rs 20 crores, the Central Government's balances are lower by Rs 2.39 crores at Rs 51.96 crores. We may, therefore, presume that Government disbursements are tending greatly to outpace revenue receipts, so much so that the Centre has had to take recourse steadily and for substantial amounts to ad hoc Treasury Bills. While, as relating to deficit financing in the last two years of the First Plan, created money was not necessarily accompanied by expansion in note circulation, the circumstances are today completely altered. There is reason to suppose that each bout of deficit financing is exerting an almost immediate pressure upon note circulation. However, the magnitude of the impact of deficit financing upon note circulation has, in the last 17 months, been mitigated by the sharply contractionary influence of the steep and continuing balance of payments deficit. In other words, the potential for an increase in note circulation has in the past tended to be largely, if not wholly, offset by a decline in foreign exchange balances. But we are now at a stage when, on the one hand, the weekly pace of deficit financing is for larger amounts and, on the other, the size of the import surplus is being reduced. Inevitably, the result of these two factors at work has been to aggravate the movement toward increase in note circulation.

Meantime, we have to take cognisance of some of the altered circumstances as relating to the banking system. In the first place, Government disbursements have for some time been tending to find their way quicker into the monetised sector; and it has thus happened that there has been a handsome accretion to the Deposit resources of Scheduled Banks. In the second place, very little of the new money that has thus come into the coffers of Scheduled Banks has been utilised in an increase in the investment portfolio. For ex-

ample, in the 17 months since the beginning of the Second Plan, Deposits of member banks have gone up by Rs 260 crores; over the same period, the rise in gilded investments of scheduled banks—including the large element of Rs 30 crores subscribed by the State Bank to the 1957 New Loan—is scarcely Rs. 23 crores. In the third place, under directive from the central banking institution, the Scheduled Banks have lately been displaying a substantial modicum of credit restraint. This is over and above the specific directives under which they were called upon to reduce the level of Advances against particular commodities which, by reason of their being in short supply, attracted speculative interest. Already, the total of Advances of Scheduled Banks is found to have declined by Rs 82 crores from the peak of Rs 936.73 crores touched in the week ended May 17. So, it has happened that the Scheduled Banks have benefited by a remarkable increase in resources, while, at the same time, experiencing a decline in the level of Advances; and, as we have seen, the new money invested in Government securities has been meagre. In the result, the cash balances of Scheduled Banks have risen tremendously.

Reverting to the Reserve Bank returns, it is to be seen that, in the week ended September 6, member banks' Reserve balances—by which is meant Deposits with the Reserve Bank of India—have risen by Rs 1.44 crores to Rs 104.24 crores. Such a position has been reached even after what would appear to be a substantial reduction in their borrowings from the Reserve Bank. The Other Loans and Advances of the central banking institution have, during the week, declined by Rs 9.81 crores to Rs 65.05 crores. The outstandings against Usance Bills have shown a fall of Rs 6.38 crores to Rs 28.85 crores, which constitutes the lowest such level since the week ended September 7, 1956. We trust that it is clear that banking conditions have been such as to enable the member banks, firstly, to reduce indebtedness to the Reserve Bank and, secondly, to increase their cash balances.

We may also note in passing that the State Governments are also feeling the strain of planned disbursements. Their balances with the Reserve Bank have been marked down by Rs 1.31 crores to Rs 6.88 crores; and this is on top of an increase in their borrowings from the Reserve Bank by Rs 3.83 crores to Rs 41.11 crores.

While it is premature to arrive at any firm conclusions on the basis of the figures now available, prudence requires that we recognise the circumstances in which the monetary indicators may show changes which are not quite in consonance with slack season conditions. For example, between the end of April and the end of August, the trend in active note circulation has been true to form. Notes

in circulation have, as behoves a slack season, shown weekly declines. But we must now be ready for the possibility that, for the remainder of the current slack season, we might witness at least a much less pronounced currency contraction, if not an occasional reversal of the trend. Indeed, if the pace of deficit financing is kept up and if, simultaneously, the drain on foreign exchange resources does not prove to be as considerable as it has been these last 17 months, we may possibly experience a seemingly contraseasonal increase in currency circulation. We should not, however, fall into the error, if such expectations materialise, of thinking that the slack season has slowed down. For, the other monetary indices—and particularly the Advances of Scheduled Banks—would continue to offer, for purposes of the slack season, the most definitive evidence.

The return of the State Bank for September 6 reveals a small drop of Rs 0.91 crores to Rs 340.16 crores in Deposits. While this has been partly offset by a fall of Rs 0.81 crores to Rs 158.42 crores in Advances, cash balances are nevertheless shown to have declined from Rs 63.28 crores to Rs 62.75 crores. This would indicate that the rise in Scheduled Banks' Reserve balances, which has already been noted, is on account of the other Scheduled Banks.

The return of the Scheduled Banks for August 30 reveals that the Deposit resources of the banking system have again crossed the Rs 1300 crore mark after going below that level during New Loan week. At Rs 1310.86 crores, Deposits have reached a new high. The increase during the week amounts to Rs 18.60 crores, of which Rs 12.18 crores can be traced to the State Bank of India. It is also worth noting that Time Liabilities, which have this year shown almost an uninterrupted and weekly rise, are now in sight of Rs 600 crores at Rs 597.03 crores. The increase that has been registered under this head during the 7 months of 1957 aggregates nearly Rs 140 crores as against a rise of under Rs 70 crores in Demand Liabilities. Secondly, the total of Advances records a decline for the twelfth consecutive week with a drop of Rs 7.22 crores to Rs 854.89 crores. In spite of this twofold improvement in their position, the member banks have reduced their indebtedness to the Reserve Bank only by Rs 1.72 crores to Rs 40.27 crores. However, it would appear that, in the first week of September, some decline of note has taken place in borrowings from the Reserve Bank. Consequently, the full benefit of the two developments has been reaped by cash balances, which have risen steeply by Rs 27.15 crores to Rs 178.48 crores; here, too, as in the case of Deposits, the State Bank accounts for roughly two thirds of the rise, having reported an increase of Rs 18.98 crores in that week.

Wider £ Margins: A Futile Device

By PAUL EINZIG

IT had been generally expected that the monthly figures of the Sterling Area gold and dollar reserves would disclose a substantial loss for August, but when the figures were announced the extent of the loss came as an unpleasant surprise to most people. It brought rude awakening to those who had entertained the illusion that, because sterling was under almost continuous adverse pressure ever since the Suez crisis, there was a world-wide short position in sterling which would prevent any further large scale speculative selling. It now seems that, even though many overseas banks and other overseas holders of sterling had reduced their holdings to a minimum before the August pressure there had been many others with liquid sterling resources that could be realised whenever a fresh wave of pessimism would develop. Moreover, the possible extent of purely speculative selling of sterling had also been grossly underrated by experts.

In this respect it is now obvious that the relaxation of the ban on lending sterling to foreign bankers was a major blunder. The Government was over-persuaded during a period of comparative calm in the foreign exchange market that it would be worth while to take this additional risk for the sake of encouraging dealings in the London foreign exchange market. It is now evident that in this respect, as in several other respects, the policy of "dash to freedom" has accentuated the pressure on sterling. There can be little doubt that the Government's Socialist opponents will exploit this mistake by intensifying their campaign to persuade the British electorate that the defence of sterling would be easier under a Labour Government free of laissez-faire ideological dogmatism.

The Government has now come under pressure to resort to the expedient of widening the margin between the upper and lower limits of the fluctuation of sterling. A margin of ten per cent is freely canvassed by the supporters of this idea. They include all those in favour of a flexible pound with no declared limits of its fluctuations. Even though the widening of the spread would not fully meet their demand, it would constitute an important departure from the Bretton Woods principle of rigid stability.

The camp of supporters of wider margins includes also all those who favour the taking of the line of least resistance in face of pressure on sterling. If these people were honest they would come out openly in favour of another devaluation, to provide a shot-in-the-arm that would enable Britain to inflate with comparative impunity for a year or two. It has long been understood that support to the idea of a floating pound was but a hypocritical version of favouring devaluation. It will no doubt be

clear before long that support to the idea of wider exchange margins is but a hypocritical version of favouring a floating pound. Those of the believers in the floating pound who now profess to be content with a widening of the margins regard this concession to their demands as a first step, to be followed by further widening of the margins beyond the proposed limit of ten per cent as and when that limit would come to be regarded as untenable.

What those who advocate wider margins fail to realise is that a pressure on sterling such as the one experienced in August would tend to bring exchange rates to the vicinity of the support point, whether that point is \$2.78 or \$2.70 or \$2.60. They believe that speculators would hesitate to go short in sterling if, as a result of the widening of the margins, they were to risk more than the present spread

between \$2.78 and the present maximum rate of \$2.82. They overlook the possibility that during a wave of distrust in sterling speculators would be inclined to take the view that, in face of the adverse pressure, the authorities might decide to widen the margin further. They would certainly be encouraged in that belief by a decision to widen margins if it is taken at a moment when sterling is subject to selling pressure. After all, it is only the first step that is difficult. If the Government shows that in the existing situation it is inclined to take the line of least resistance, speculators would not be unreasonable to assume that under further pressure a similarly weak attitude would be adopted.

One of the arguments put forward recently in support of wider margins and flexibility is that the present system of rigid stability tends to induce the Government to favour the settlement of excessive wages claims, for fear that a major strike would result in a further loss of gold. This argument is

based on the assumption that if the present support point of \$2.78 is lowered the result of a strike would be a depreciation of sterling without any loss of gold. If the Treasury does not cover the counterpart of the surplus demand for foreign exchanges, then the rate would decline to a level at which speculative buying of sterling would provide that counterpart. But, as was indicated above, it would not be safe to assume that any such speculative buying would be forthcoming above the lowered support point. During a wave of distrust the authorities would be losing as much gold if they supported sterling at a shade above \$2.60 as they are losing now by supporting it a shade above \$2.78.

Nor would a depreciation of sterling during a major strike be helpful from the point of view of preventing a deterioration of the balance of payments. The reason why a major strike would increase the trade deficit is because it would reduce the exportable surplus and it

Brahmanabad

Inside a house excavated at Brahmanabad in Sind, has been found an interesting piece of earthenware tubing. A basin like altar which probably served as the seat for bathing some household deity, is connected by this tubing to a covered drain. This tubing unlike other pipework found at various sites of the Indus Civilisation, has a corrugated outer surface, obviously as a safety measure against breakage.

Goods Stocks Lowest in 18 Months

A firm trend was noticed in the sacking section of the jute goods market from Monday, B Twills Ready which closed on Saturday at Rs 114.25 gained one point to be placed at Rs 115.25. Oct-Dec. and Jan-March deliveries were also similarly higher at Rs 114.25 and Rs 113.25 respectively. This buoyancy in sackings had been brought about by the news that at the end of August, stocks of sackings stood at 50,600 tons, showing a decline of 12,900 tons from the level of stocks at the end of July. Stocks of hessian were also lower by 3600 tons at 54,700 tons. Other varieties were unchanged at 6,600 tons. Thus total stocks at 91,900 tons were 16,500 tons lower than at the end of July when they stood at 108,400 tons. At the corresponding date of last year total stocks were 123,500 tons comprising 28,200 tons hessian and 88,600 tons sackings and 6,700 tons other varieties. It is significant to note that total stocks at the present level are the lowest in the past 18 months.

It is evident that clearance of sacking goods have been quite heavy during August. The sizable

increase has become possible because of the rapid improvement in the traffic situation at the Calcutta port in the past few weeks. Had it not been for the congestion and the subsequent delay in the movement of ships from the Calcutta port in May, June and July, the statistical position of sackings would have been found to be quite encouraging even a month ago. For it is known that during June substantial orders for sackings had been received from Ghana, Burma, Indonesia and Australia. Government of India had purchased about 33,000 bales for June and July shipment. At that time it was expected that a substantial order from Egypt for early delivery of goods was in the offing. The stock figure for sacking as at the end of August clearly indicates that this category of goods has been meeting with good support during the past few months. At the present level of 50,900 tons, sackings stocks are the lowest since February 1956 and are only about 7000 tons higher than the average monthly production of heavy goods by Indian mills. During last week there have been

reports of fresh enquiry from Burma.

Though stocks of hessian goods at the end of August have recorded a decline over the previous month, they are higher as compared with the corresponding date of the previous year when they were placed at 28,200 tons. It would appear that hessians are yet to receive the full impact of the US enquiry which is usually heavy at this time of the year. As it is now generally believed that enquiries from the US is likely to improve substantially in the course of the coming weeks it may be presumed that the industry and trade will not have much difficulty in disposing of its production in the next several months.

The jute goods market opened the week on a subdued note and in later dealings prices steadied up on covering business. With mills beginning to evince interest at the higher levels, however, rates again developed a sagging tendency. 40"x10 oz Ready closed at Rs 42 while B Twills Ready was finally placed at Rs 113.75. Elsewhere, Oct-Dec. Hessian 40"x10 oz was done at Rs 42.30 with B Twills at Rs 113.25. Jan-March Hessian 40"x10 oz was marked at Rs 41.80 and B Twills at Rs 112.00. The next day market continued to rule quiet with the difference that B Twills were steadier all along the line. The closing quotations were as follows: Hessian 40"x10 oz Ready Rs 42.00, Oct-Dec. Rs 42.20, Jan-March Rs 41.30. B

Twills Ready Rs 114.25, Oct-Dec. Rs 113.25 and Jan-March Rs 112.50.

The news that August-end stocks of jute goods with mills stood at 91,900 tons as compared with those at the end of July of 108,400 tons imparted a firm trend in the market, especially in the sacking section. B Twills Ready spurted to Rs 115.25 with Oct-Dec. and Jan-March placed Rs 114.25 and Rs 113.25 respectively. Hessians were also steadier in sympathy as follows: Hessian 40"x10 oz Ready Rs 42.20, Oct-Dec. Rs 42.35 and Jan-March Rs 42.00.

Encouraged by the sharp fall in stocks of sackings, speculators pushed up the price of B Twills further on Tuesday. B Twills Ready gained Rs 1.75 to be finally placed at Rs 117.00. The Oct-Dec. and Jan-March positions were also higher at Rs 115.50 and Rs 114.50 respectively. A reactionary tendency developed on Wednesday in the absence of foreign enquiries. Hessian 40"x10 oz Ready receded to Rs 42.30 with Oct-Dec. at Rs 42.45 and Jan-March at Rs 41.95. In the sacking section B Twills Ready was pushed back to Rs 116.25 with Oct-Dec. at Rs 114.50 and Jan-March at Rs 113.25.

After a quiet opening, the raw jute market steadied up mainly in sympathy with the firm goods market. Assam Bottoms Sept-Oct delivery which was quoting at Rs 28.50 steadily improved to quote at Rs 29.75 at one time during the week. Toward close prices slightly eased to close at Rs 29.25.

the last three years is 290.46 million pounds.

In the Export Sale, held in Calcutta this week, offerings were 67,725 packages. There was again less general demand. Plain liquoring types were from 6 to 10 nP per pound easier. Mediums, with the exception of those with bright liquors, were often up to 10 nP easier. Broken Pekoes and Pekoe Fannings, in this category, were the weakest feature of the sale. Medium BOPs were, however, generally sold well.

CTC Assams met with little demand and prices showed a decline of upto 50 nP, with quite heavy withdrawals. Whole Leaf grades were irregular and often easier. Stylish sorts and well-made BPSs, however, received good support. Tippy sorts were generally sold well. Following rates were quoted:—Clean Black Pekoe Rs 2.20; Plain BP Rs 1.60 to Rs 1.64; Plain Fannings Rs 1.64; Medium BP Rs 1.76; Medium Fannings Rs 1.80; Best CTC Assam BP Rs 3.40 to Rs 3.50 and Best Assam CTC Fannings Rs 4.00 to Rs 4.50.

In the Internal Sale, offerings were 20,000 packages of Dusts. There was a better general demand, but prices were again lower. CTC Assams were an irregular 10 to 20 nP easier although there was more support for some of the brighter liquoring grainy types. The remainder of the offerings were from 2 to 6 nP easier except for a few brighter liquoring medium Asams of which the smaller sorts were occasionally dearer. Following rates were quoted:—Medium Docars Dust

Rs 1.50 to Rs 1.56; Medium Assam Grainy Dust Rs 1.56 to Rs 1.62; Medium Assam CTC Dust Rs 2.00 to Rs 2.20 and Best CTC Assam Dust Rs 2.30 to Rs 2.60.

Also, 1,572 packages of Leaf grades were offered for internal consumption. In the Export Quota section, rates moved narrowly between 19½ and 20 nP per pound and business was reported done at these levels.

In the Cochlin market, offerings were 1,605,122 pounds. There was still a quality of low-grown rush-production teas on offer, which was of poor appearance. The quality and leaf appearance teas from the remaining districts showed an all-round improvement; but there were some plain liquoring mediums on offer. Against this, there were many useful high-grown invoices, which were sold well and above valuation. Following rates were quoted:—Plain BP Rs 1.40; Low Medium BOP Rs 1.50 to Rs 1.55; Medium BOP Rs 1.60; Good BOP Rs 2.00 and well-made Black Leaf OP Rs 2.50.

At the auction held in Colombo, offerings were 6,693,360 pounds. Quality was attractive and there was an active demand. There was a more limited selection with quality continuing to improve. Prices were generally dearer. The quality of high-grown teas showed an improvement from most districts. Dimbula type BOPs were often 20 to 30 cents per pound dearer with Uvas generally showing a further substantial advance. Among medium-grown teas, Tippy sorts continu-

World of Business

Outlook for Copper

CONSIDERING the steep fall that has taken place in the world price of copper in the past 18 months or so, it is but natural to conclude that enterprises which are concerned with the production of this metal cannot be expected to make a good showing in the coming year. Such reasoning is inescapable because the price of copper which was quoting as high as £434 per ton in March 1954 is today placed around £190.

That is why one is not much surprised when one hears Mr Patrick E.G.W. Parish declare from the chair at the annual general meeting of the Indian Copper Corporation Limited this week that the spectacular results achieved by the company during the past two years will not be repeated in the current year. In the same way his statement that there must come a point where profits end and losses begin, is not considered anything alarming. The point referred to by him is a further decline in copper prices either owing to over production or to a fall in demand by consumers.

Before we turn to the salient features in the working of the company, we may as well note another not very encouraging feature that has been mentioned by Mr Parish. Referring to the new prospecting and development of all the remaining areas of the leasehold, he has issued a caution that the results so far obtained are not conducive to any spectacular large increase in production in the near future.

From the foregoing it will be wrong to conclude that the immediate prospects of ICC are gloomy. It is here that one should turn to the company's performance last year. Despite the heavy fall in world price of the commodity, the selling prices of the company's products averaged over 1956 were maintained over the previous year. The Second point to be noted is the fact that ICC's cost of production is neither too low nor too high than the costs of producers in other parts of the world. The chairman has pointed out that at present prices ICC can expect to show a reasonable return.

Thanks to the extensive prospecting and development programme embarked upon by the company, ore milled last year has touched the record level of 421,131 short tons. It must be remembered that as a result of the implementation of the development programme, ore reserves are now estimated at 3,424,594 short tons. The company's development work continues unabated despite the fall in copper prices.

The financial and working results for the year ended December 1956 are a record in the annals of the company. The excellent results have been achieved by the increase in the selling prices, together with an increase in production of ore and copper.

The question of disposal of its production presents no problem since the company's output of copper is only about 7,800 tons as against a total demand of 40,000 tons. It is certain that any increase in the output will be readily absorbed.

World Overseas

Britain

By John Kingsley

DURING the past three weeks the pound has been under pressure in foreign exchange markets. This has puzzled a good many people both in Britain and overseas, for the United Kingdom is in surplus in its balance of payments, there is no evidence whatever that UK export prices are out of line with those of its trading competitors, and there is reason to believe that there is a pronounced upward trend in invisible earnings in the key sectors of shipping and oil.

To understand the reasons for the present currency confusion, it is necessary to go back to the French decision to make the reduction in the rate of exchange for the franc applicable over a wide range of trading transactions.

The virtual devaluation of one of the world's major currencies must inevitably upset foreign exchange markets, but part of the sudden burst of speculative selling of sterling has been based on a mistaken analogy with the events of 1947.

When most other non-dollar currencies followed sterling into devaluation. The comparison is false because sterling is widely used for making payments all over the world and a reduction in its value affected everyone's trading arrangements. The franc, on the other hand, is not an international currency in this sense, as its use is mainly confined to France and her colonies, and Morocco and Tunisia.

There is, therefore, absolutely no reason why any other country whose own basic position is sound should be forced to follow the French action.

There is, however a second—and slightly sounder—reason for the

One may not find too much to worry even on the most important point of the world price of copper. That the present level is unrealistic is now generally accepted; for it has been calculated that when copper sells below £230 per ton, the working of most producing companies will become uneconomical. Mr Parish's explanation of the present price trend leads one to hope that a recovery in copper prices will take place sooner or later. There is over production due to resumption of production by some marginal mines attracted by the high price obtained in the early part of 1956. It is logical to believe that such mines will go out of production now that prices have fallen sharply. The reduction in world output as a result of the closure of these mines may again restore the equilibrium between world demand and supply of copper.

Marks is simply that there are more pounds available than other suitable currencies. Half the world's trade is conducted in sterling, and a great many pounds become internationally available as an automatic consequence of London's position as the world's leading international financial centre.

The position in the foreign exchange markets has been somewhat eased by the official communiqué issued by the Federal German Government on August 20, which categorically denied any intention of revaluing the Mark.

Although the future of the pound was the subject of comment abroad, the British Government did not feel that the situation called for any official statement of policy. But, in response to the many enquiries coming in over the past weeks, the Government has made it clear that it has no intention of devaluing the pound; nor has it any intention of going over to a floating exchange rate or of widening in any way the margins within which the pound may move.

These official indications have already had a considerable effect. The premium paid in London for D-Marks to be delivered in three months' time, which rose to the record level of 42½ pfennigs on August 20, was down on August 27 to 22 pfennigs. The premium on US dollars for three months' delivery, which is one of the best indicators of speculators' expectations about sterling, had fallen from nearly 4 cents to just over 1½ cents.

The British authorities have every intention of using as much of their reserves as may be necessary to protect the existing exchange rate against speculative pressure—and these reserves are greater than is often realized.

In addition to official gold and dollar holdings of \$2,300 million, the United Kingdom has available an undrawn credit with the US Export-Import Bank, and unused standby facilities with the International Monetary Fund. These extra sources of gold and dollars bring the total up over \$3,500 million. And there are other third-line reserves, mainly in the shape of official holdings of dollar securities, details of which are not normally published.

The outflow of 'hot money' has dwindled rapidly during the past few days. But uncertainty is likely to persist whilst the underlying problem of monetary imbalance in Europe persists, and further losses of gold are to be expected before a solution is found. That is the price of defending exchange rates. One thing is clear: there is no profit to be made from speculating on the devaluation of sterling.

As far as the United Kingdom is concerned, two factors are paramount. The first is the very satisfactory balance-of-payments position; the second, the knowledge that if the pound could be sustained at 2.80 dollars during the far more serious Suez crisis, it can certainly be sustained during the present temporary uncertainties.

World of Tea

Disappointing Auction Results

RESULTS of this week's Tea auctions are rather disappointing as compared with the previous week. With buyers remaining selective, reasonable prices have been paid for quality teas, while Common teas fared worse. The biggest buyer—the UK—has not been operating on the same scale as last year; and shipments have been rather restricted in spite of a fall in her stocks. At the same time, it should be a matter for concern to learn that Indian tea is gradually losing ground in the USA. While imports from other countries like Ceylon, Indonesia and Formosa have been rising, those from India are on the decline.

The only country, which practically keeps up its exports with the increase in production, is Ceylon. Exports, during the first half of the year, were higher at 193.33 million pounds as compared with 174.67 million pounds in the corresponding period of 1956. The increase in exports, which was evenly shared by all countries, is attributed to the large crop, which showed an increase of 26.5 million pounds during the period under review. US was the destination for the largest share of the increase; and other countries

were Egypt, South Africa, Australia and Canada.

Meanwhile, there has been talk that the shortfall in the North Indian tea crop has not been eliminated. It will be recalled that, up to the end of July, the North Indian crop was some 18 million pounds less than the comparable period of last year. In sharp contrast, Ceylon continues to increase her production well above last year's output. By the end of June, Ceylon had raised her production by some 26.5 million pounds over the comparable period of 1956; by the end of July, production (by comparison with 1956) had been increased by some 29.3 million pounds.

According to the figures released this week, the North-Indian crop has shown a further drop of 9.7 million pounds in production during August. The output is shown at 90.92 million pounds as against 100.56 million pounds in the corresponding month of last year. Thus, total production for the period ending August 1957 amounts to 280.55 million pounds as compared to 308.23 million pounds in the corresponding period of last year, showing a fall of as much as 27.7 million pounds. The average for

BALANCE-SHEET REVIEWS

(Continued from page 512)

General Reserve and the Reserve for Replacement of Fixed Capital Assets of Rs 8 lakhs has been deducted from the net deficit of Rs 12,50,291, leaving a debit balance of Rs 4,50,290. The necessity, however, remains to build up a General Reserve of Rs 14.40 lakhs as prescribed by the Government. The company has, thus, yet to wipe off the net carry forward of the loss of Rs 12,50,291 and add a further sum of Rs 6.40 lakhs to the General Reserve before it can distribute dividends in cash. So, the directors can be empowered to recommend the payment of a dividend only and when the company has made sufficient profits to fulfil the aforesaid obligations.

In respect of allocations to Funds, a sum of Rs 1.40 lakhs (Rs 1.49 lakhs) is set apart for Depreciation and Rs 41,107 (Rs 62,258) for Taxation.

₹₹₹

Bengal Nagpur Coal

A decrease in sales from Rs 24,376 to Rs 15,869 is reflected in the working results of this company for the year ended 31st December, 1956. The accounts reveal a loss, after providing for Depreciation, of Rs 1,012 as against a loss of Rs 66,561 incurred in the previous year. The sum set aside to Depreciation is Rs 9,546 against Rs 9,705. After transferring Rs 7,875 each from General Reserve, the directors were able to recommend the dividends on the Preference shares for 1955 and 1956.

With a view to working other areas in the Bhugutdih property, approval has been obtained from the Coal Board to the opening of two quarries in Nos. 14 and 15 seams respectively. Official grading of the coal in these two quarries is now awaited before raisings are commenced. In addition, a long term scheme, which includes the installation of a plant for stowing, to work No. 10 seam is under preparation.

₹₹₹

Kalapahari Coal

In common with the workers of a larger number of collieries in West Bengal, the workers employed by the company's contractor for raising coal at Damra went on strike for a period of four weeks from the middle of September, 1956. The Award of the All-India Industrial Tribunal (Colliery Disputes) came into effect on the 26th May, 1956. In the turmoil of the strike, the siting of pumps underground was obstructed. All these factors resulted in a loss to the company for the year ended 28th February, 1957.

Raisings for the year are shown at 37,627 tons as compared with 24,100 tons in the previous year and despatches at 34,090 tons against 24,519 tons. Although sales have risen to Rs 5.42 lakhs from Rs 3.47 lakhs, the accounts, after providing for Depreciation, reveal a loss of Rs 96,674 as against a net profit of Rs 24,480 in the previous year, mainly due to a rise in colliery expenses from Rs 3.34 lakhs

to Rs 5.52 lakhs. The dividend is again passed over.

₹₹₹

Kankarrah and Kamarhatty

The difficult conditions generally experienced by the jute industry, during the half-year ended 31st December 1956, following surplus production and uneconomic prices obtained for manufactured goods, are reflected in the working of the Kankarrah and Kamarhatty companies.

The Kankarrah Company has incurred a loss of as much as Rs 11.38 lakhs as against a loss of only Rs 9.06 lakhs in the previous half-year. The Depreciation amount is reduced to Rs 75,000 from Rs 1 lakh. The dividend is again passed over. The debit balance carried forward is as much as Rs 21.37 lakhs. The directors have stated that efforts are being taken to reduce manufacturing costs and they hope that, as a result of the revised arrangements recently introduced, the working will, in the near future, return to a profitable basis. In order to overcome, to some extent, the unreliability of raw jute suppliers in matters of delivery and other contractual obligations, they have decided to set up a few Jute Buying Agencies in selected areas as a measure to ensure regular and more suitable supplies of raw material.

The Kamarhatty Company Limited has incurred a loss of Rs 5.36 lakhs as against a loss of only Rs 2.69 lakhs in the previous half-year. A sum of Rs 30,000 has been set apart for Depreciation, the same as previously. The dividend is again passed over. The debit balance carried forward is Rs 8.80 lakhs. According to the directors' report, working costs will be substantially reduced and the competitive position of the company will be strengthened during the current year.

WORLD OF TEA

(Continued from page 518)

ed to advance in price. Orange Pekoes were an active market.

The recent pattern of tea auctions was in evidence in Mincing Lane. The few new season's North Indian invoices were again strongly competed for and high prices were obtained. The top price was paid for CTC Fannings from the Dangri division, which realised 12sh per pound. Next week's auctions will contain a much bigger quantity of new season's teas as a result of which, the offerings of North Indian teas will revert to the traditional two days sale on Monday and Wednesday. The Ceylon and Southern Indian will be confined to Tuesday only.

Meanwhile, teas stocks in London, as on the 30th August 1957, were 126.03 million pounds as compared to 124.34 million pounds in the previous week and 115.29 million pounds a year ago. Landed between 24th and 30th August 1957 were 12.36 million pounds and deliveries were 10.69 million pounds.

The Call To Save

As citizens of India, you are called upon "to work wholeheartedly for the full and timely realisation of the tasks, targets and aims of the Second Five Year Plan."

The Plan has been embarked upon. Its success depends upon your providing capital for its working. In this effort no amount is too small—the man who saves a rupee and the man who saves hundreds—both are rendering national service.

Save as much as you can and entrust your savings to the nearest office of your Bank. In doing so you will help to build a new India and also create a valuable estate for yourself and your family.

would increase import requirements. Much depends of course on the nature and extent of the strike, but generally speaking it is justifiable to say that major strike would widen the trade deficit, and that exporters would not be in a position to take advantage of the stimulus given by a depreciation of sterling's exchange value. Indeed, since such a depreciation would change the terms of trade against Britain, it would tend to increase further the trade deficit. For the same volume of exports would yield less foreign exchange to pay for imports.

In such circumstances the Government would have more reason, not less, for discouraging resistance to excessive wages demands if sterling

The State Bank's local head office at Calcutta, one of the more than five hundred and fifty-five offices waiting to take care of your savings throughout India.

were made more flexible by a widening of its margins. The idea that the Treasury would view with indifference a depreciation of sterling to the vicinity of its lowered support point is clearly absurd. The chances are that on balance more gold would be lost and not less as a result of a major strike, in addition to the various disadvantages of a depreciation of sterling. For this reason it is to be hoped that the Government will not allow itself to be persuaded into the proposed experiment. It should resist the temptation of carrying out a "respectable" devaluation—which is what a widening of exchange margins in existing conditions would amount to in practice.—(Copyright).

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

WITH the passing of the Wealth and Expenditure Tax Bills by Parliament last week, we have mercifully come to the end of the apparently endless discussion of the financial proposals for the year. Since the Finance Bill has also been passed, we have now before us the final (one hopes!) picture of the financial tasks of the nation for the year. I have no intention of adding to the weariness of spirit that must have already been oppressing the reader as a result of the apparently interminable discussion of the merits or defects of these proposals. Indeed, my purpose today is to examine the wisdom and even necessity of the prolonged discussion that has just ended.

*

The country has been in the throes of discussion for over a year. In saying this, I am not thinking of the excruciatingly tiresome debates over the resources for the Plan, which has had a longer past and which has apparently an endless future. I rather have in mind the narrower discussion of actual financial proposals in the form of finance and other bills. If you remember, it all started with the mid-year financial proposals last autumn: first, it was cloth excise; later, more excise levies and then the rather unconventional proposals for compulsory deposit of reserves from profits of companies. Third in point of time came the caretaker Budget, which had its measure of discussion. And after the elections came the budget session, in which a new finance bill and Wealth and Expenditure Tax Bills were introduced and debated generally. And, to aggravate the sense of interminable debating I am complaining of, the Budget could not, owing to pressure of other business, get passed in the session in which it was introduced. So, after its introduction in May, its clause by clause discussion had to be deferred to the present session. Threads of old discussion were taken up once again; and, for yet another time, we were served up with stale rehash of all that we have heard for the hundredth time in the last twelve months. At the almost unbelievable end of it all, the nation is left with the paradoxical feeling that the worst is over whereas, of course, everything is only just beginning.

*

Take, for instance, the Expenditure Tax bill. Originally, it contained a provision to the effect that only those whose total income (as defined in the Income Tax Act)

Some may imagine that this may not be such a bad thing after all. The public is fed up to the gills with all this incessant chatter and has decided, in so far as it can, to forget it all; so, some may argue, all we have now to do is to go ahead with the practical tasks envisaged in these proposals which have now been finally accepted, in however listless a fashion. Of course, it is true that there is not much point in further controversy on these facts accomplished, and the energies of every one should be bent toward making the administration of the taxes effective on the one hand and humane on the other. But one's sense of strategy of taking the public with one should be very cockeyed indeed, if one were to consider this limp one were to consider this limp acquiescence an advantage. In my view, it would have been infinitely better if these proposals had either been spread over a period of years and discussed separately, or alternatively allowed to make their joint impact both brief and intense. As it is, the feeling that important and revolutionary changes in tax structure have been rammed down the throat is inescapable. Apart from the fact that they have been found both politically and socially unpalatable in certain quarters, the more serious objection has been that it has led to intellectual indigestion. He would indeed be a demon of intellectual rectitude and social responsibility who could claim truthfully that he has been following closely all the chameleonic changes the Wealth and Expenditure Tax bills have been undergoing since they were first introduced. At any rate, I should certainly be chary of making any such rash claim. Indeed, at the precise nature of some of even the simpler provisions of the bills, as they have finally emerged. Of course, I have not the texts of the Bills before me, and the details of the changes effected by the Select Committee and I should, if I did make the necessary collations, get my doubts clarified. But on the basis of admittedly incomplete press reports, the uncertainty remains.

For the year exceeded Rs 60,000 would be obliged to pay this tax. Then, Mr Krishnamachari announced in the Lok Sabha that this provision would be deleted. It was not too difficult to see the reasoning behind the deletion. Firstly, such a provision would be an open invitation to manipulation of total income. Secondly, it ran counter to what might be termed the principal intention of the measure. For, if tax on expenditure is aimed at discouraging expenditure, then, it stands to reason that a man who lives on his "capital" should be dealt with more curtly than a man who merely spends what he earns. Therefore, if a premium is to be placed on a situation in which a man who suffers losses in business is encouraged to live in style immoderately, in drawing on accumulation or borrowing, then the idea of compelling savings is not merely not achieved but actually defeated since savings are being spent.

*

But, as the Bill has emerged from the Select Committee and been finally passed, it would appear that the tax is leviable on people who have what is described as a net income of Rs 36,000. It would thus appear that the Finance Minister's announcement has been resiled from. Perhaps this is a concession given by the Select Committee and is the result of further rethinking and is meant to meet certain other objections to the Expenditure Tax. I am not at the moment concerned with this aspect of the matter, but rather with this quick succession of changes that makes one feel rather dizzy. If such were the position with regard to even simple provisions, how much more unsatisfactory must be the state of public awareness of the complexities involved? One need not be a rash prophet to predict that these enactments are sure to face every possible challenge that the ingenuity and resourcefulness (both of which are apparently endless) of constitutional litigants can think of and pay for. Equally certain is the fact that there are many loopholes for evasion which the wily tax dodger is sure to seize upon. None of these things has been deliberated upon in any detail before the measure was passed. It is true that such dodges and stratagems could not be entirely forestalled even in the most care-

fully legislated enactments; yet, nevertheless, it is enough to say that the measures have not had enough real detailed thought bestowed on them.

*

Paradoxically, despite this lack of real encounter with the problems involved in these enactments, there has been no dearth of discussion of these measures. The reader will recall that I had indicated earlier two possible strategies as the alternatives to the one actually adopted. One was a detailed deliberation on each of these measures separately, spread over a period of time, and their adoption one at a time. The alternative was their adoption at once without extended discussion. On the face of it, there is a seeming contradiction in the alternative counsels of perfection that I have offered. It may also be objected that, as far as the first suggestion was concerned, the requirements of the "integrated tax structure" with its automatic exposure of evasion of one tax or the other, would not have permitted leisurely legislation. There is validity in the argument, and that is why I wanted that the whole thing should have been got through quickly. What I objected to was not simultaneous legislation or detailed thinking, but interminable yapping and the clumsy ordering of legislative business which made inescapable this rehashing of old speeches session after session. The objections to the measures, no less than their virtues, remain the same now as when they were first bruited last May. And these get inevitably repeated and they have lost their edge and point because of this nagging iteration. The hypothetical strategist who believes that this attrition of resistance to the proposals by sheer ennui is an advantage is labouring under a deadly fallacy. For, he does not realise that the public is as tired of the criticism of the measure as of the virtues of the measures themselves. And, when all has been said and done, these measures in their totality (though not perhaps in detail) have a validity as the beginning in the endeavour of rationalising our tax structure. It is precisely this point that has been blunted beyond recognition by extended discussion, and that is why I object to it.

Dasnagar, Howrah.

What, then, are the morals? The last few months have been a budgetary phantasma and financial nightmare, not so much because of the excessive preoccupation of public consciousness in these measures. One felt an acute nostalgia for the days when Budgets respected legislative conventions. They put in their appearance on the last day of February unless that happened to be a holiday in which case it was presented one day earlier. The occasion had all the formal glory of the coming out of a debutante. It was looked forward to with

decorous excitement and a certain seemly flutter of heart. And, once the discussion was over, everybody relaxed and went about his business until the next "silly session" should bring in the next Budget. Now, all that is apparently over. When, last year, somebody complained about the mid-year Finance Bill, Mr Krishnamachari declared with some bravura that he would, if he felt like it, bring a Finance Bill every session of Parliament. Even he did not perhaps realise, when he said it, how utterly and even absurdly he was justifying his vaunt within a year. One can

perhaps argue extraordinary circumstances in extenuation, but any intention to make a habit of this year's practice is fraught with the greatest dangers. Some measure of stability should attach to Government's financial proposals. For, a Government that cannot normally foresee its commitments and order its resources for even a year is ill-equipped to plan for five years and thus argues itself incapable of organising planned development. Secondly, it transmits its own wobble to the rest of the economy, and these days your economy and mine cannot insulate

itself from the uncertainties of Government budgeting. Thus, however prudent and however capable of ordering your own affairs, you just cannot reap the advantage of your gifts if the Government is impractical. So, Government have a definite responsibility in the matter. Thirdly, these uncertainties benefit none but the speculator and the gambler, and the pranks of this tribe are capable of doing irreparable damage to confidence in the soundness of our economy. Therefore, what the country needs more than even assurance of no further taxation for the next few years is an assurance that some degree of regularity and conformity to convention will characterise Government's presentation to the country of their financial proposals.

★
To the discerning eye, the changes effected in the structure in the last twelve months add up to more than a mere predatory raid on the coffers of the citizens. Despite the talk of shortfall in resources, the measures devised are not merely the answer to the problem of resources, though, of course, they are partly that. They are, in fact, the beginning of a rational tax system in which, for the first time in the history of democratic planning, income, expenditure and savings are at once sought to be oriented toward socially desirable ends. In evolving a system like this, especially in the context of an undeveloped country trying to catch up, contradictions in particular ends may show themselves up. But they are not irreconcilable. For instance, incentive to save may be blunted, if you seek to tax wealth. But then, in a dynamic economy, penalising unproductive wealth may perhaps be the greatest incentive to put it to productive use. These ideas are not exactly falling on unresponsive soil, and people are willing to try them. So it is not changes as such that are daunting many among us. With greater adroitness in managing public opinion, Government will be able to make the country accept many of their proposals with greater readiness even when they involve sizable sacrifices.

★
There is one further point that I should like to touch upon, and this relates to evasion. Now, it is the explicit intention of the integrated tax structure that the creation of more "check points" will help to detect tax evasion. But, as I have said, tax evasion is both art and science nowadays. So, might not the simplest thing to do be to follow the American example? That is, give the taxpayer a long rope, and avoid harassment, and accept returns as given; but, once the taxpayer hangs himself, and he is, so to say, caught in flagrante delicto, prescribe rigorous penalties. I am glad to find that TTK has been thinking on these lines. When tax evasion is considered by some to be a virtue, the only deterrents are public exposure and gaol without the option. EAVESDROPPER

The "Pros" of Protection

WHETHER it is animus against private enterprise seeking opportunities for making itself felt in public policy or whether it is mere incapacity to balance the various considerations and adjudge the relevant facts, the recent outcry against TELCO for its alleged failure to reduce costs and for being a pampered favourite of the Government is most regrettable. In a matter like this, and when so many are heard in denunciation of policies and persons, it is hard to distinguish the charges too clearly. But the grievance seems to be that TELCO has been enjoying exceptionally favoured treatment at the hands of the Government and has nothing to show in return for it. The favoured treatment consists in the fact that the Government have been the principal financier of the company inasmuch as it has a holding of the cumulative preference shares of the company of the nominal value of Rs 2 crores, that TELCO has been allowed double depreciation allowances, that is, a special allowance in addition to those allowed under the Income Tax Act, that the price of locomotives ordered by the Government was paid in much ahead of delivery and that the price compares adversely with that of the Chittaranjan Locomotive Works or of the imported products.

All these counts would no doubt add up to a serious indictment. But their weakness lies in that the facts pertaining to different phases of the company's development are put together as if they are all true at one single point of time. No charge of financing the company can be made if it is remembered that TELCO is a public company with a total paid-up capital of Rs 7 crores. The depreciation allowances granted to the company will enable it to write down its block to a low figure in a short period. But the company is by no means its sole beneficiary. A lower rate of depreciation would only add to the production costs of a later period; and the Government can look forward to getting its locomotives at a lower price. As for the "high" prices granted to the company, it is strange indeed that people in India should begin to talk as if a buyer's market in locomotives is one of long standing or that TELCO is as old as TISCO. Locomotive manufacture is of very recent origin and if TELCO was equipped more than any other unit of private industry to attempt it, it also needed a great deal of concrete help in addition to what are known to a State enterprise which automatically obtains all the facilities it needs.

I well remember the furore that was raised in New Delhi when first the question of according pro-

tection to TISCO was mooted. It was, I may remind the reader, a time when steel was a drug on the Indian market. The western steel mills were chary of losing out any market in which they were then able to dispose of however small a proportion of their production. Tata steel faced a crisis, and it was apparent that indigenous steel making would survive only if a protective wall was built up against marauding foreign steel. The question, as now, was sought to be oversimplified by suggesting that the Indian economy would be put to needless and wasteful strain if it was called upon to pay more for Tata steel, at a time when imported steel cost very much less. I do not doubt that such legislators who opposed the idea of protection would now be eating humble pie. The real point to note is that the protection accorded after arduous discussion has now been found to have benefited, not Tata steel, but those very entities who were asked to put up with the additional bill postulated by protection. Put tersely, Tata steel earned an extra Rs 11 crores over a period of 15 years because of protection. But, since then, with Indian steel figuring as one of the least expensive in the world, it is the company which helps out the consumer by subsidising foreign steel. In the first place, on the basis of TISCO production at one million tons, the annual saving to the consumer on Tata steel alone is around Rs 40 crores. To this, we have to add besides the Rs 40 crores that has been paid in to the Steel Equalisation Fund, a sum of money which has gone to subsidise

foreign steel. There can, I think, be no gainsaying the fact that Tata steel has repaid many fold to the Indian consumer the debt due from the company on account of protection.

The issue in the case of TELCO is, as any objective Indian citizen can satisfy himself, no different from the position of TISCO in the 1920's. Production of a commodity not previously manufactured in India had to be taken in hand. The starting of a new industry inevitably means a higher level of costs. So, you could say, indirectly, to the extent of the difference between the price paid by Government for TELCO locomotives and the cost of imported locomotives, protection is being accorded to TELCO. But, already, and quite considerably, TELCO cost of production has declined. There is no reason to hold out the gloomy assertion that TELCO will for long continue to need a subsidy of this nature from Government. Meantime, India will have equipped itself with a heavy industry of primary importance. Meantime, also, India will have saved foreign exchange expenditure for a considerable amount, which we would otherwise have had to incur in order to get the locomotives that we need.

I am afraid that there has been an insufficient realisation of the advantages accruing from the arrangement under which TELCO is producing locomotives. These are, to summarise briefly, the setting up of new heavy industry; the saving in foreign exchange;

Foreign Exchange

There is a great deal of confusion among people at present about the difficulties that are being experienced by the economy on the foreign exchange sector. In the medley of confused thinking about the origin and causes of the foreign exchange difficulties, there is a strong section which finds the root cause of the present trouble in the inherent weaknesses of the Second Five Year Plan, and which therefore demands pruning the plan.

To this mix-up of what are really extraneous issues, Prof. D. R. Gadgil, Director of the Gokhale School of Economics and Politics has tried to restore perspective. Speaking at Poona, Prof. Gadgil said, that the present situation with regard to the shortage of foreign exchange resources had nothing to do with the size or the structure of the Plan. He traced the trouble to the rate of imports during the last 18 months which was almost double the average rate of imports provided for in the Plan. Evidently the situation could have been saved if the target of imports fixed in the Plan had been scrupulously adhered to.

That it has been exceeded landing the country in the present difficulties, Prof. Gadgil, puts down to lack of any proper budgeting of the foreign exchange complement of the Plan, and lack of proper coordination between licensing of imports and the watch over foreign exchange reserves. Heightened development in the private sector, which the unprecedented rate of imports implied, further led to finance of private sector investment by bank credit creation, the inflationary consequences of which are being felt at present.

In the light of the reasoning presented by Prof. Gadgil of the root cause for the present foreign exchange problem the demand made by some, for scaling down the Plan is drained of its justification. Prof. Gadgil himself, has asserted that the size of the Second Plan was neither too large nor its structure inappropriate. And he further supported the tax measures brought forward by the Finance Minister for additional revenue and said that the additional taxation imposed was of the required size.

Optimistic regarding the capacity of the large scale public sector and the large business private sector, for fulfilling the targets fixed for them, Prof. Gadgil warned of possible lopsided development in future, if, because of the present situation and the pressure generated by it, the allocations to State Governments, agriculture, small industry and small business, are to be cut. Such a development he

said would react, adversely on the employment aspect of the Plan.

Referring to the food problem, Prof. Gadgil said that the present crisis was due to the complacency of the Government and lack of preparedness in the wake of two or three successive good harvests and a declining level of international prices. Stability of food prices could only be achieved, Prof. Gadgil pointed out, if Government had a large enough stock of food grains always on hand and also had equipment and administrative apparatus with which to purchase, sell and store agricultural products at a very large number of centres scattered all over the country.

*

Underground Railway

There is now every possibility that Bombay will be the first city in the country to have an underground railway. The idea of constructing a tubeway had been mooted some considerable time ago. It is generally accepted that there is no other way open to the corporation to meet the growing traffic needs of

the city. After detailed and prolonged discussion it has been decided to seek the advice of a Japanese expert on the technical feasibility of the scheme.

Addressing a press conference last week, Mr M. G. Mohani, General Manager of the Bombay Electric Supply and Transport Undertaking, revealed that Mr Y. Higashi, Director-General and Chief Adviser of Teito Rapid Transit Authority, Tokyo, in his comprehensive report had stated that geologically Bombay presented little difficulty for the construction of the underground railway. He had further stated that the high traffic density, availability of electric power at comparatively low rates, and comparatively low rate of interest, had made the construction of and the subsequent running and maintenance costs reasonable.

The entire scheme, which consists of two parts, is estimated to cost Rs 28.59 crores. The first stage covers a distance of 4.38 miles and is estimated to cost Rs 16.05 crores, while the second stage spread over a distance of 3.78 miles will cost Rs 12.54 crores. The time required for the actual construction of each of the two stages is four years, and for both together six years.

GATEWAY MARKETS

Firmness in Oilseeds

THE upward trend in the prices of Oil and Oilseeds, noticed in the previous week, was accelerated this week although caution was discernible at bulges on reports of favourable weather conditions in some of the producing areas.

Prices in the Castor seeds section advanced on rumours of some business done with the UK. Although the USA has been an indifferent buyer in recent months, the pace of exports has been comparatively good, the total quantity shipped from Bombay alone, during the first eight months, amounting to more than 30,000 tons. On the basis of the shipments made so far and the estimated commitments of more than 3,000 tons for the next two months, a section of the trade is inclined to expect a tightening of the supply position in future, since the new crop is scheduled to be available only after February, 1958. The stocks, held by farmers, introduce an uncertain element. Besides, ideas about the new crop will be available only after the end of the year.

Meanwhile, in the futures section, Castor May delivered touched a new high of Rs 148 from Rs 145

and September delivery Rs 168 from Rs 165, to finish the week at Rs 146.25 and Rs 164.50 respectively. Ready was quoted at Rs 33.50 and Castor Oil, commercial quality, at Rs 19.62.

The Groundnut section continued to rule firm on reported shortage of rains in the producing areas. Sentiment was also aided by purchases made by interested parties. February delivery opened at Rs 144.37 and, after touching a high of Rs 147.12, receded at the close to Rs 144.37. Ready Bold was quoted at Rs 31.75 and Groundnut Oil at Rs 18.75.

The market for Linseed and Cottonseed ruled generally steady. Linseed September closed at Rs 27.50 and Cottonseed September at Rs 102.50. In ready section, Linseed was quoted at Rs 28.62; Linseed Oil at Rs 15.60 and Cottonseed Oil at Rs 17.25.

*

Gold & Silver

On the Bombay Bullion Exchange, values were initially depressed on reports of unauthorised gold arrivals and easier silver advices from up-country. The downward tendency in prices was, however, halted to-

wards the close of the week, thanks to short-covering.

In the Gold section, arrivals and offtake were estimated at 2,000 and 5,000 tolas respectively. Gold Bhadon delivery was quoted at Rs 107.53 and Asouj delivery at Rs 107.60. Ready hovered around Rs 107.75, while Sovereign was quoted at Rs 70.37 to Rs 70.50.

Arrival of Silver were estimated at 11 bars and offtake at 19 bars. Bhadon delivery closed at Rs 181.44 and Asouj at Rs 182.44. Ready moved between Rs 181.12 and Rs 181.44.

*

Yarn

Price movements in the futures section were rather irregular due to alternate buying and selling, while the ready section remained firm. Operators adopted a cautious attitude, pending a clearer picture of the import policy for the October-March period. Rumours were also current that the yarn quota for actual users for the July-September period might be pruned on the basis of Rs 1/50 per loom shift as compared with Rs 4 in the previous half-yearly period.

It was also feared that imports of Art Silk Yarn through established importers would be suspended during the October-March period. With the result, prices of various qualities of rayon goods registered a decline of about half an anna per pound. Rayon cloth manufacturers are, however, doubtful of a substantial fall in yarn prices in the near future since there are strong fears that yarn quota for the July-September period might be pruned. The only redeeming feature is the hope that the demand for rayon cloth may pick up after a fortnight.

The Cotton Yarn section remained dull with offtake continued to be limited, particularly in fine and super-fine counts. Reports of accumulation of cloth stocks and the depressed conditions in the textile market compelled handloom and powerloom weavers to be cautious about their purchases of yarn.

Metals

The weakness in the Non-Ferrous Metal market continued to persist with prices suffering a further setback from last levels. The main contributory factor was the simultaneous arrival of material booked during the days of OGL and also those against the issue of licences issued after July 1, 1957. Moreover, the spate of arrivals had been quite heavy. Tight money conditions and weakness of holders were also reported as factors that brought about an unexpected decline in prices. In the Bombay market, Copper was marked down further to

(Continued on page 226)

World of Cotton

Record Offtake of Indian Cotton

THE consumption of Indian Cotton by the textile mills of the country touched the "all-time record" of 6.50 lakh bales during the season just ended. This is more by 3½ lakh bales than that consumed by the mills during the previous season. At the close of the year, the carry-over of Indian cotton is officially estimated 18.50 lakh bales. This is much better than what was feared in view of the trade reports of heavy damage to cotton crops.

The consumption of foreign cotton, during the season, amounted to 5.70 lakh bales, bringing the figure of total consumption of Indian and foreign cotton to 52.50 lakh bales. The carry-over of foreign cotton is estimated 2.70 lakh bales, which brings the total carry-over of both Indian and foreign cotton to 21.20 lakh bales. While consumption is a record in the annals of the Indian textile industry, it also underscores the fact that, despite the progress made, the country's cotton production is only just sufficient to meet the mill consumption. This emphasises the urgent need for a much larger production.

If the season has notable gains in the sphere of production and consumption of cotton, as well as of textiles, it has also to its credit some unpleasant features, especially in the sphere of exports. Although the total quota released during the season amounted to 4 lakh bales, it was announced in two instalments. The first instalment of 2 lakh bales was announced on 5th December, 1956 and the second instalment of 2 lakh bales on the 6th February, 1957. On March 30, however, the Government of India took the unprecedented step of prohibiting all further export sales against this quota with immediate effect. This step not only resulted in causing considerable hardship to shippers, but also hurt the feelings of a number of foreign buyers. Total shipments of cotton from India, during the 1956-57 season, are not expected to go beyond the trade expectations of 3 lakh bales as compared with 6.12 lakh bales in the last season.

According to official estimates on the basis of acreage sown, the production of cotton during the current cotton year will be as high as 55 lakh bales—7 lakh bales more than the previous season—provided the seasonal conditions are favourable. Import of foreign cotton, during the current year, is officially estimated at about 7 lakh bales in view of India's commitments to take certain quantity of American cotton under the Aid Programme.

FUTURES MARKET

In contrast to previous week, sentiment in the cotton futures

market was bolstered by reported dry weather in some of the producing tracts, notably Saurashtra, Khandesh and Berar, with part of the buying movement also aided by persistent rumours of export quota. Against the previous closing of Rs 668.75, ICC Jharilla March opened higher at Rs 674.50 and steadily advanced further to Rs 689, to finish the week at Rs 687.50.

X

SPOT MARKET:

The Spot section was steady with mills evincing interest in all staple varieties.

In the foreign section, enquiry continued for East African cotton.

Some business was also reported in spot lots of American and Egyptian styles.

On the export front, shippers are awaiting the cotton export policy for the new season; but latest reports indicate that the policy is not likely to be announced till the new crop is fully assessed.

Meanwhile, the Government's permission to export freely Zoda cotton, yellow pickings and cotton sweepings has failed to impress the export trade since the export duty of Rs 100 per candy has not been abolished. Shippers have pointed out that export business in these varieties has become difficult on account of Karachi's competition and the shortage of sterling with Japan, the principal buyer.

KARACHI COTTON MARKET:

Steady conditions prevailed in the Karachi cotton market, being influenced by the expectation of better demand in the new season. Foreign enquiries were also better. Following rates were quoted:—Sind Deshi at Rs 880; Punjab deshi at Rs 77 and NT Rolier ready at Rs 83-1.

X

NEW YORK COTTON MARKET

Price movements in the New York Cotton futures market were confined to a narrow range in limited dealings. Traders were inclined to await the Government crop report for confirmation of the higher private estimates released so far. Spot was quoted at 35.05 cents per pound. (Continued on page 528)

The cane mutiny

'RISE and fall, rise and fall. I'm getting the bends,' muttered the sugar-cane furiously. 'Here I am, destined for the choicest confections in Sydney — and how do they treat me? Battered down in this hot hold, jounced and bounced around for weeks on this endless ocean. And they expect me to stay sweet. I won't stand it, I won't, I won't, I won't!' And it dissolved into a sticky pool of self-pitying tears.

Don't let your shipments turn sour on you. Send your silks and spice and other things nice by AIR-INDIA INTERNATIONAL. It's swift, safe and economical. A.I.I. flies every Monday to Sydney via Singapore and Darwin and offers easy connections to Indonesia and New Zealand.

Crisis-mongering and Constructive Thinking

THE report of the Reserve Bank of India for the year ended June 1957 has been taken by many as yet another cue for formal breast beating about the parlous plight of our economy. To an onlooker, it seems that the last ounce of desperation is being distilled again and again from the same set of economic facts by persons whom one can only describe as professional pessimists. Such people are beyond the pale of conversion. But it is of the utmost importance that people with a sense of social responsibility should make the necessary distinction between insuperable difficulties and manageable embarrassments. And having made this distinction, they should show a sufficient awareness of public psychology at home and abroad not to convert, by needless volubility, the latter into the former. It is true that such a consequence may flatter their self-esteem as prophets, since what they have foretold has come to pass, but only a man who is criminally lunatic would be complacent about such a turn of events. Of course, most people who are now critical of our economy are folks who genuinely feel that it is screwed up to a tension that it cannot bear and their gloom is genuine. But such a view is, in my opinion, unwarranted and that is what makes its iteration such tragic folly in view of the danger I just mentioned.

What are the basic facts about the economy of India at the moment? Do they constitute a formidable bundle of problems that are intractable even with the greatest determination and the most wily ingenuity or do they form a most severe but manageable series of tasks? It may be stated straightaway that, if a certain kind of text books were to be taken as the gospel on the subject, the former proposition will have to be accepted. But the consequence of such acceptance is that you will have to give up all attempts at solving all problems. But mercifully for us, economic facts have always preceded text writers and doubtless in the fullness of time the Indian experiment will find its Marshall. Meanwhile, men of goodwill and determination should find out whether the problems that face us cannot be solved by pitting our wits against them.

That real savings have not matched investment and we are consequently in the throes of acute embarrassment at the moment is true enough. But what is not true is that this disequilibrium should be fatally accepted as intractable. After all imagine what would have

happened to the US, if Roosevelt had accepted the economic situation in the thirties as beyond human capacity to repair. Therefore, the sensible thing would be to start on the assumption that given time and determination this can be solved both by domestic savings and help from friendly foreign countries, and that basically our economy is sound. That, it may be argued, is what even critics of the present situation accept. But the difference arises in the respective views on the precise elasticity of the time factor and the will to mobilise resources. May be there is difference between one critic and another, but the general impression created by the shrillness of complaint is that these folks would want the time limit for adjustment to be longer, on the one hand, and the call on effort less insistent, on the other. In other words, they would like to take the line of least resistance, by exaggerating the extent of the difficulties of the present time schedule. Of course, there is nothing sacrosanct about present schedules, but once you relax at the first demand on effort, you will never get anywhere. And what is more important, as time slips by without anything being done, the problem will become progressively more difficult until a time may come when it will be well nigh impossible.

If then, we agree that the matching of investment and savings can be done with time and effort, then the question arises about present difficulties. Both domestic inflation and adverse trade balance are in some respects the result of this imbalance. (There are, of course, other reasons for both). In such a situation and purely as a short term policy, two remedies are open to us. One is to reduce the investment and the other is to increase savings. Rather, both are open to us, and the real question is which we should adopt first. If we are to deserve any prosperity at all, the effort should be directed toward maximising savings rather than reduce investment. Of course, if it does become necessary to do the latter, it will have to be done, but not before it is clear beyond doubt that it has become necessary.

If we agree on this also, then the question is only one of dealing with popular psychology. It is on this aspect of the current discussion that I have some bones to pick with a certain type of comment that we hear these days. I am not one of those who wish to camouflage the real state of affairs from our people or even from people abroad. And after all, facts of economics impinge on the public long before

explanations for them are trotted out. But I do believe that a certain kind of comment can by itself influence economic facts precisely along lines it wrongly indicated as obtaining at the moment. If you cry 'wolf' long enough, the wolf will be at the door. Take the case of shortage of food. Statistics show that food production for 1956-57 was higher than in the year preceding and we also know that we have had sizable import of foodgrains. Of course, consumption may also have risen (which, by the way, is not a bad thing) and yet that would not account for this constant cry of shortage of foodgrains and the all too evident rise in food prices. What can be the explanation? One very obvious explanation came to me when my grocer told me the other day that I had better get my stocks for two months bought straightaway, since prices are sure to go up because of the shortage we all hear so much about. There must be literally tens of thousands of accumulations of small hoards, and no wonder with such a pressure on supply, prices do get squeezed up to unconscionable heights. It is true that this is not the sole reason for the rise in prices, but it is one, and that is the direct consequence of talk of shortage and high prices.

Or to take an example from the other principal worry of ours, shortage of foreign exchange and our rapid depletion of foreign reserves beyond the pimsoll line of currency backing. Now not until some months ago did anyone dare even whisper about the stability of the Indian rupee. But all of a sudden the rumour started circulating that the rupee is wobbling what with the improvidence of the Government of India over the sterling balances. And before we knew where we were, we were obliged to deny rumours of devaluation of the rupee and assert with some acerbity its soundness. And the very vehemence of our assertion was taken to be an indication of our parlous plight. And yet the originator of the rumour can virtuously say that he was doing nothing but drawing conclusions from our own lugubriousness about our foreign exchange reserves.

Let me make my meaning clear. In discussion of public finance, it is always delicate business determining where legitimate and even necessary inquiry ends and where confidence is being undermined by needlessly dismal cerebration. It is a nice point in the ethics of discussion on which we can endlessly argue without coming to any firm conclusion. But from the point of view of the larger interest of the country, a certain reticence in public discussion is a salutary rule. This need not imply concealment of the real state of affairs from the public. But it does imply that nothing is said, at any rate in public, that saps

faith in an economy that is by common consent sound; otherwise ill informed and interested conclusions are drawn and the chain reaction set in motion by such acts (over which we have no control) is something that we shall not be able to stop. Such disability extends not merely to acts or words of people abroad, but also to actions of our own countrymen. For instance, talk of foreign exchange crisis is taken advantage of (and one suspects, sometimes encouraged) by professional financial sharks for speculating in exchange deals; less culpably, panicky conversion of rupee assets into other kinds abroad aggravates the problem of the value of the rupee.

And the worst of it all is that such interference with the confidence of the Indian economy makes it difficult for the Government to obtain the much needed assistance from friendly countries for making up the shortfall in resources of which these people complain. No one is willing to lend to a borrower whose confidence in his own solvency is uncertain. With the best will in the world, it will be difficult to persuade people to interest themselves in the economic development of a country, some of whose influential citizens are doubtful of its ability to cope with the tasks it has set for itself. It is, therefore, of the greatest importance that nothing is said these days without realising its impact on the confidence that others have in our economy. It is a self-denial of particular relevance at the present moment since it is necessary that the Finance Minister does not have his ground under his feet cut by his own countrymen in his momentous forthcoming mission abroad.

GATEWAY MARKETS

(Continued from page 524)

Rs 157 from Rs 170 per cwt. The healthy position in Zinc was also reflected in a further fall in the price from Rs 63 to Rs 66. Lead was quoted at Rs 78 and Tin at Rs 132 against Rs 80 and Rs 135 respectively.

On the London Metal Exchange, Copper prices suffered further reverses. From £200 1/2 per ton quoted in the previous week, the rate has now fallen further to £183. The world has been going through an overproduction of copper and this alone appears to be the main reason for the continued loss of prices since the last few months. There is a belief that a revival in prices is possible only if production cuts are effected immediately.

Zinc was, however, quoted nearly steady at £73 3/8. It is reported that the General Services Administration has bought 10,000 tons of the metal for strategic stockpile during August 1957. It appears that American stockpile may continue.

North Indian Notes

Public and Private Sectors

Speaking at the first meeting of the Coordination Committee for Industrial Project in the Public Sector, Mr Morarji Desai, Minister for Commerce and Industry said he was glad that the realisation, that the public and private sectors were necessary for the overall progress of the national economy, was fast growing in the country. He considered this as a healthy sign and said it would help quicken the tempo of industrial development in all sectors. It is, however, to be admitted that there is still a small but determined section which through its spokesmen in industry, Parliament and trade bodies is trying hard to prove that the powers that be in the country are bent upon eliminating the private sector. They point to Government's taxation policy as containing ample proof of their contention. Government, they allege, have placed so many restrictions on private enterprise and have imposed huge levies that it has become almost impossible to attract investment for equities. The Finance Minister's explanation recently in Parliament that the slowing down of the flow of funds into private enterprise is not due to lack of capital but rather due to lack of confidence in particular persons is conveniently forgotten.

It is unfortunate that an attempt to discredit Government should have been made not on the basis of facts but on vague apprehensions. It has been made clear by the Industrial Policy Resolution that Government have no intention of smothering private industry. The private sector has been given an important role in the development of the country under the Second Plan. The heavy expenditure under the plan has necessitated an increase in taxation but Authority has taken all possible precautions to see that capital formation is not retarded by the new taxation measures. A number of arrangements have been made to help private enterprise go ahead with its expansion programmes.

Mr Morarji Desai has given another convincing reason why it is incumbent on Government to ensure that the growth of the private sector is not impeded. The emphasis in the Second Plan is on the production of machinery and Government are making large investments on projects like Steel plants, the Central heavy machine building plant, the heavy machine tool plant etc. Unless all industries move fast the offtake of the machinery and capital goods manufactured in the public sector heavy industries will not be sufficient to make these units economic and profitable. "Thus", Says Mr Desai, "the continu-

ous development of the industries in the private sector is as much essential for these basic heavy industries in the public sector as the development of all industries in both sectors for the overall progress of the national economy."

People who have lingering doubts about Government's attitude toward what may be called private enterprise may do well to read and read again Mr Desai's lucid exposition of Government's industrial policy. Neither the Government nor the Planning Commission have at any time considered the public and private sector in industry as anything but complementary. Both are of equal importance to the speedy economic development of the country. There is a big gap between the indigenous demand and production of machinery as current machinery and capital goods are being imported at the rate of Rs 135 crores per annum. It is estimated that by the end of the Second Plan the demand for machinery and capital goods will rise to Rs 250 crores to Rs 300 crores per year. It is evident that if the economy is to improve, the production of machinery is to increase fast. To achieve this objective it has become necessary for the State to take upon itself this great task.

*

Mineral Wealth

In the past one decade, India has made significant progress in the production and refining of mineral oil. The preliminary surveys made so far have raised the hope that

oil may be found to be in plentiful supply in the country. In view of the fact that mineral oil, if discovered in large quantities, can revolutionise the economy of the nation, it is of the utmost importance that expeditious steps are taken to speed up the work in regard to oil exploration.

It is a good augury that all the three departments which are connected with the task in one way or other are now working in concert instead of carrying on with their work independently. The Geological Survey of India, the Indian Bureau of Mines and the Oil and Natural Gas Commission have been made jointly responsible for the exploration of mineral wealth in the country. Presiding over a joint meeting of the heads and other officers of the three departments Mr K. D. Malaviya, Union Minister for Mines and oil, pointed out that active co-ordination in the activity of the three departments was imperative in any programme for the actual assessment of the nation's mineral wealth. It was more imperative now that the country had organised an intensive search for mineral oil. The most important point to be noted by all those who are entrusted with this task is that there has come a fundamental change in the main objective of mineral survey. Previously mineral survey only subserved the various foreign interests that came to the country to exploit minerals for export. The emphasis is now on the utilisation of mineral wealth for developing the nation's economy. With the inauguration of the Second Plan, exploration of mineral wealth has gained further priority.

*

NORTH INDIAN MARKETS

Grains Quiet

THANKS to the tighter credit squeeze by the banks and expectations of a bumper kharif crop, conditions in the Food grains market have continued to rule quiet. It is reported that the Central Government is thinking of extending procurement operations in respect of rice and even wheat after the next kharif harvest.

The food reserve with the Government, at present, is of the order of 7.5 lakh tons of wheat and rice, while procurement operations are confined to Orissa, Andhra and West Bengal in respect of rice and Rajasthan in respect of Gram. The West Bengal Government have issued orders providing control on production, sale and movement of rice in the State in an attempt to check the upward trend of prices.

In the Hapur market, Wheat prices have recorded a fall, average quality being quoted at Rs 15.62 and the farm quality at Rs 16.62 per maund. The market for Rice also remains depressed due to heavy rain reports, which have brightened the prospects of paddy crops. Easy advices from the Punjab and Bombay coupled with slack demand have caused a setback in Gram prices. With the arrival of new Maize in the market and the diversion of consumers' demand from Barley and Bejher to maize, prices of the former have declined to a certain extent. New maize has, however, improved by 25 nP per maund as arrivals are being delayed due to continued rains and some damage to the late-sown crop.

Peas have continued to attract good demand from East Uttar Pradesh, Bihar and Madras; but loading restrictions on the North-Eastern Railway have hampered despatches. Arhar prices have eased slightly as demand is dormant and stocks are heavy. Moong prices have declined on advices from Madhya Pradesh where new crop arrivals have already begun.

A downward trend in prices is also noticed in the Delhi grains market. Gram rates have shown small losses on better arrivals. Among Coarse grains, Bajra, Jowar, Moong and Urad have moved down by about a rupee per maund with buyers generally reserved. The market for Pulses has also exhibited a depressing trend with prices recording a fall of about 50 nP per maund.

The Bombay grains market has, however, presented a mixed appearance. Several varieties of indigenous rice have declined by Rs 5 to Rs 7 per candy; and the easy trend is attributed to continued selling by dealers in the face of subdued demand. Offtake is adversely affected, partly by the availability of cheap US fine rice, released to retailers by the Government. In the Coarse grains section, Jowar and Bajra have recorded a sizable recovery after the recent heavy decline in prices, mainly due to support extended at lower levels following steadier advices from the growing areas. Among Pulses, Moong has made a better showing with prices recovering by about Rs 10 per candy. The recovery is attributed to the reduced inflow and slightly better offtake by consuming centres at some of the terminal markets.

Sugar

Sugar markets have continued to remain depressed following a further release of 1.70 lakh tons for free sale. Moreover, selling pressure from the factories has been on the increase. With the result, the supply position has become further easy.

Also, export prospects have become bleak due to the weakness in overseas prices. In this connection, the Indian Sugar Mills Association has stated that, up-to-date, about 1.25 lakh tons have been shipped and a further quantity of 10,000 tons is scheduled for shipment this month, bringing the total to 1.35 lakh tons. Further shipments will continue since, in the case of some sales, the shipment period extends up to the end of December.

The cane crop all over West Uttar Pradesh has very much improved due to heavy rains. It is now hoped, in trade circles, that the new cane crop will, in no case, be less than last year in view of the increase in acreage. Following mill-delivery

The Peninsula

Basic Education

INAUGURATING the first National Seminar of Principals of Post-Graduate Basic Training Colleges in Coimbatore last week, Mr T. S. Avinasilingam Chettiar, former Education Minister of Madras, drew pointed attention to the urgent need for making the masses realise the great benefits of the teaching technique as adopted in basic education. Basic education was yet to become popular among the people. Several factors seemed to have contributed toward bringing about an attitude of indifference toward the new method of teaching the children. The lack of enthusiasm seemed to have stemmed mainly from the vagaries of the administration. The manner in which the basic schools were run created the impression that Authority itself had failed to grasp the philosophy of basic education. It would appear that school administrations were concerned only with the quantity of yarn etc., produced. Otherwise it would be difficult to explain the heaps of yarn dumped in corners of many offices of deputy inspectors of schools. Mr Chettiar rightly declared: "There is nothing so disrespectful to the children and the teachers as the waste of their labour".

Basic education is now the accepted pattern of our educational system. The new primary schools are of the basic type and efforts are being made to convert the existing primary schools also to the basic pattern. The idea of educating through craft and productive work was put forward by Mahatma Gandhi in 1937. Shortly afterwards it was recognised that his tentative ideas could form the basis of a system of education in accordance with the needs of India's vast rural population. The committee appointed to prepare a tentative scheme and syllabus recommended that free compulsory education should be given to all children for a period of seven years, that the medium of instruction should be the mother tongue, that the process of education should be centred round some form of manual and productive work in the shape of a craft, and that this education should be self-supporting to the extent of being able to pay for the salary of the teachers.

Two committees under the chairmanship of Mr B. G. Kher subsequently examined the possibilities of the "Basic National Education". The recommendations of both these committees were accepted by the Central Advisory Board of Education. The scheme of basic education as approved by the Government of India and the State Governments, however, differs from the Wardha Scheme in one main respect.

While the "Basic National Education" scheme insists that education should be largely self-supporting, the Government's scheme does not expect craft work in basic schools to pay for a substantial portion of the cost of basic education.

As the exploitation of craft work for educative purposes is a new idea in the field of education, it is imperative that people should be enabled to understand the salient features of the scheme. The emphasis in basic education is not on the craft because in a good basic school the child will never be conscious that he is learning a craft. When no force is applied, work acquires the characteristics of play.

Though the fact that economic self-sufficiency is not insisted upon has removed one of the main obstacles in the way of the rapid spread of basic education, there have remained other problems. It is often contended that as the bulk of what is produced in basic schools cannot be sold, basic education is wasteful and economically unsound. While it is true that the articles produced in the basic schools are more expensive than machine made articles, their disposal need not offer any insuperable difficulties provided teachers, the local community and Government take an active interest in the working of the schools. It is, however, wrong to think of basic education as a scheme of production. It is primarily a scheme of education and as such calculations of profit and loss are irrelevant. Considering the fact that the money spent on elementary education of the old type gives poor return as most of the children find what they have learnt is of very little use to them in life, the money spent on basic education should be considered as a wise investment which is bound to pay rich dividends in the shape of citizens from whom the entire community can derive strength. As the children in the basic schools are increasing their productive capacity even while they are learning, they will be better equipped to face life than those who are educated under the old system.

It is gratifying to note that the problem of the disposal of the articles produced in the basic schools has been satisfactorily solved by the Madras Government. The State Government have decided that the produce should go to the student community first to provide free mid-day meals to the children. Mr N. D. Sundaravadivelu, Director of Public Instruction, Madras, in the course of his valedictory address to the Seminar explained the steps taken by the Madras Government

to help the spread of basic education in the State. During 1955-56 more than 1000 elementary schools have been converted into basic pattern and this year Government have planned to convert a thousand more. Nearly one hundred ordinary training schools have been converted into basic ones and it is expected that by the end of the Second Five Year Plan period all training schools in the State will be converted into the basic type. The State Government have also a proposal to open a number of post-basic schools during the next three, four years. All top level officers in the districts as well as Principals and Lecturers of training colleges have been given courses of retraining in basic education. Mr Sundaravadivelu pointed out that efficient organisation of basic education was necessarily a long-drawn out process and as such it would be futile to expect spectacular results.

While it is true that there is no short cut to the progress of basic education, it is to be admitted that the present pace is rather slow. Mr Avinasilingam has given some valuable suggestions for obtaining the enthusiastic cooperation of not only the people but also of the teachers. The role of the teacher in implementing the programme of basic education is of vital importance to the whole scheme. Mr Chettiar, therefore, suggests that opportunities should be provided for in-service education for members of the teaching profession. There should be some incentive in the shape of promotion or allowance, in order to create the requisite urge among teachers to take advantage of further training.

Another important suggestion made by Mr Chettiar is that basic schools should be made into community centres. This would go a long way in impressing on the village community that the basic school is not merely a place where children are sent to learn the three R's but is a place full of interest for everyone in the locality. The basic school teacher alone can bring about this consummation. In order to enable the teacher to get into close contact with the people around the school, he must be helped directly and indirectly to view his service to the people of the village as part of his work. Mr Chettiar says that the teacher should constantly be exploring the possibilities of serving village people in all possible ways.

An important point to be borne in mind is that basic education is not concerned only with a particular age group. It is now confined to the primary stage because of the lack of adequate resources. The problem of the integration of basic education with secondary education

has, however, been receiving due attention. The Commission appointed to enquire into all aspects of the Secondary education has recommended that craft should form a compulsory part of the Secondary education. With the increasing emphasis now placed on practical and technical education in the secondary stage, it may be expected that in course of time it will be found that the disparity between the training methods in the two stages has disappeared.

★ WORLD OF COTTON (Continued from page 525)

The Crop Reporting Board of the Department of Agriculture, USA, estimates production of the 1957 cotton crop, as on 1st September, at 12,713,000 bales (of 500 lbs) as compared with last month's estimate of 11,897,000 bales and last season's final output of 13,310,000 bales. Yield per acre is estimated at 446 lbs as against 416 lbs last month and last season's final yield of 409 lbs. Ginnings, before September 1, are forecast at 973,000 running bales as against 1,513,000 bales at this time last year.

✕ LIVERPOOL COTTON MARKET:

Trading continued to be slow on the Liverpool cotton futures market. Further hedging in both contracts was partly offset by some American buying of forward deliveries. The Sudan contract closed quiet and nominally unchanged.

✕ CLOTH AND PIECEGOODS

Prices in the Bombay piecegoods market displayed a steady trend. Although the uncertainties relating to Sales Tax on cloth and reports of the threatened closure of one shift by mills continued to cause concern, turnover was slightly better with upcountry dealers making some more purchases. Traders were hopeful that business would broaden further in the next few days; but the general feeling was that the readjustment of the attitude of mills would go a long way in helping the market. One group of mills is reported to have cleared a sizable quantity of cloth effecting a small cut in prices; and this has led to the impression that the accumulation can be relieved substantially if mills reconsider their stand in the light of the prevailing conditions.

On the export front, conditions are quietly steady with shippers reporting moderate business. Shippers are eagerly awaiting the issue of import licences by Indonesia. There are some enquiries for bleached long cloth, voiles and grey sheeting on the belief that the licences will be issued shortly.

South Indian Notes

Second Plan for Andhra

Speaking at Hyderabad, Mr V. T. Krishnamachari, Vice Chairman of the Planning Commission, set at rest the talk about pruning the State's Plan at least for the current year. This view was expressed not in a casual way but after having been apprised of the resources of the States to meet the Plan expenditure, their small savings drive and their budgetary and other proposals. In the course of giving his view about the need for pruning the Plan, Mr Krishnamachari also said that it was far from true that the schemes under the Plan pertaining to the provision of amenities would be dropped. Though agriculture had been given top priority other needs like schools, hospitals etc., it was pointed out, would not be neglected.

Mr Krishnamachari, expressing satisfaction at the sincerity and earnestness, with which the Andhra Pradesh Government were going about the implementation of the Plan, and said that he was particularly pleased with their efforts to achieve the small savings target of Rs 9 crores. For this purpose the various districts of the State had been earmarked for ministers for intensive work on small savings.

The Second Five Year Plan for Andhra Pradesh envisages a total outlay of Rs 174.48 crores. The budget estimate for the current year includes a provision of Rs 34.15 crores for Plan schemes. The Centre is expected to assist the State in financing the current year's Plan programme by giving over Rs 19 crores by way of loans and over Rs 5 crores as matching grants. The State has to find the remaining amount of Rs 10 crores. In this connection Mr Krishnamachari assured the State Government that provided the Andhra Pradesh Government were able to find their resources, to bear their portion of the Plan, the Centre's contribution would be forthcoming. The State Government had given top priority to short-term agricultural production schemes including well sinking and tank repairs.

Mr Krishnamachari also assured sympathetic consideration of the request for help for the Nagarjunasagar Project by way of increased loans made by the State Government. He also dispelled the fear of the Centre taking over the project as a national project. It was further stated that the expansion of the Singareni Collieries and the Praga Tools Corporation had been given top priority and that they would be pushed through according to schedule. The foreign exchange shortage would not affect them since imports of materials needed for

schemes claiming high priority will not be interfered with.

It is to be noted that the Andhra Pradesh Govt. do not propose to raise any loan from the public for the purpose of financing its Plan, and would be concentrating on small savings drive. Thus the success of the plan in the State would depend mainly on the assistance rendered by the Centre.

★ Industries in Andhra Pradesh

The working of the industries in Andhra Pradesh had disclosed glaring organisational deficiencies and this came up for severe criticism at the hands of the Opposition in the State Legislature sometime back. That the views of the Opposition were not in the traditional lines of being just exaggerations or fabrications with which to run down the Government were evidenced by the readiness shown by the Government in meeting the demands of the Opposition for taking measures to improve the working of the various units.

Since then the question of improving the organisational efficiency of the industrial undertakings in the State has been exercising the mind of the Chief Minister. The necessity for a close scrutiny of the major industries in the State has been recognised and according to Mr Sanjiva Reddi the Chief Minister of the State this could be done if a responsible officer of the Government could look into the affairs of the industries. He further disclosed in the course of a Press Conference that his Govern-

ment were considering a proposal by which the Secretary, Industries Department could be relieved of his routine duties to enable him to look to the development of major industries in the State.

Inefficiency had not stopped short of industrial undertakings alone but had seeped into the working of agricultural cooperatives also. The Hyderabad Agricultural Cooperative Association's record of working in the recent past had been one of continuous loss. Even the Chief Minister seemed at a loss to explain how the loss occurred. He could not even say whether the loss was real or fictitious. Though such a state of affairs would have demanded the liquidation of the Association, in view of the feeling in Telengana that there was scope for remedying the present situation the Government had taken the decision to supersede the Association without cancelling its registration and a fresh investigation had been ordered so as to bring to light the exact defects in its working and to find out the scope for improvement.

The Chief Minister also referred to the working of the Praga Tools Corporation Factory and said that the factory was a fine one and was picking up well. Though the Centre had not sunk any money into it, it would seem to need Central assistance if it is to be enabled to stand on its feet. The target of production in the factory was about Rs 60 lakhs worth of machine tools a year. Even in this factory Mr Sanjiva Reddi admitted, there was room for improving organisational control. Since the need has been recognised there could not be undue delay in taking the necessary action.

SOUTH INDIAN MARKETS

Rubber Replanting Scheme

THE implementation of the 10-year Rubber Replanting Scheme, for increasing the production of natural rubber in India, has begun. Against the target of 7,000 acres to be replanted in 1957, the Rubber Board planted in 1957, the Rubber Board has already sanctioned subsidy for 6,185 acres. Under the scheme, expected to cost about Rs 2 crores, 70,000 acres of worn-out rubber lands are to be replanted with high-yielding strains over a period of 10 years. Subsidy ranging from Rs 250 to Rs 400 per acre is being paid to the growers to encourage replanting. The higher rate of subsidy is for the small growers.

The production of rubber in India in 1956 was about 23,450 tons, while the production has been steadily increasing—from about 17,150

tons in 1951 to 23,450 tons in 1956—consumption has also been rising. In 1956, over 6,500 tons of rubber had to be imported to meet the internal demand.

Applications for the grant of subsidy for 1958 and 1959 have also been invited by the Rubber Board, so that subsidy can be granted well ahead of the period of replanting. Of 359 applications received for 1958, subsidy permits have been issued to 29 small growers and three large growers. Against 90 applications for 1959, subsidy permits have already been issued in a few cases.

★
Pepper
Pepper markets have continued to rule steady, thanks to some en-

quiries from New York. In the Kozhikode market, Wynaad quality is quoted at Rs 630 and the Country variety at Rs 610, per candy. It is reported that a few parcels are already sold for shipment to New York, while dealers are also in the market for September shipment at 2½ cent per pound.

Reports from Bombay state that the stock position of Sarawak, black and white, is tight and there is no pressure from that source. Some of the US dealers are buying Malabar black for long forward shipment, as they are bullish inclined in view of the smaller Sarawak crop this year. Indian exporters are also offering sparingly as they expect higher price before the arrival of Malabar new crop since Sarawak is not competing as the case before.

At Singapore, Sarawak black is ruling fairly steady at Str. \$75—the highest and the lowest being Str. \$76 and Str. \$74 respectively. Although there is pressure of arrivals in Singapore, most of the Chinese dealers, being bullish, are resisting any fall in prices in anticipation of good demand from Europe and New York in the near future.

The future position of the market looks uncertain in view of the possibility of fresh pressure from Lampong shippers, who are negotiating barter with Singapore and owing to the approaching harvesting season in India.

★
Hides and Skins
In the Madras Tanned Hides market, arrivals of Cow hides continued to be moderate; but clearances were brisk at 6 to 12 nP advance in light weights and 3 to 6 nP per pound advance in other weights. The market for Buff hides ruled steady with moderate clearances. Arrivals of Cow Calf and Buff Calf were restricted.

The Indian Iron & Steel Company Limited

1953 Extensions to be Completed Next Year

Expansion Programmes Proceeding to Schedule

The Uncertain Factor of Lack of Discipline

Sir Biren Mookerjee, the Chairman, Foresees Bright Prospects Conditional Upon Satisfactory Labour Situation

The following is the speech delivered by Sir Biren Mookerjee, Chairman of The Indian Iron & Steel Company Ltd at the Annual General meeting of the shareholders, held on 11th September, 1957.

Gentlemen,

It is my privilege to address you this year as Chairman of the Board of Directors in the absence on very well-earned leave of Mr. Leslie Martin. It is, however, the intention of the Managing Agents that on his return to India, Mr. Martin should resume his former position as Chairmen, and to this end I commend to you the resolution that will be proposed at a later stage of this Meeting to provide for his reappointment.

PRODUCTION AND DESPATCHES

The total production of iron at 695,156 tons showed a decrease of 11,830 tons from that of the previous year due to the reduced output of the Blast Furnaces at Kulti. These Furnaces with their ancillary plant are now very old and uneconomical and subject to frequent shut-downs for repairs. Under the 1953 Extensions Programme it had originally been the intention that heavy capital expenditure should be incurred in effecting their complete modernisation and rehabilitation, but on a later examination of the position in connection with the Company's 1955 Extensions Programme and the overall Second Five Year Plan of Government, the conclusion was reached with the concurrence both of Government and the World Bank that such expenditure would not now be warranted having regard (a) to the surplus pig iron that would be available from the new Blast Furnaces at Burnpur and from the other new or expanded plants and (b) to the inevitable higher cost of production at Kulti owing to inherent operational difficulties. It was accordingly decided that the Kulti iron plant should be closed down when the new Blast Furnaces at Burnpur came into operation.

In consequence of this decision, Government withdrew as from the 1st January 1956 the special depreciation element of Rs. 6/8/- per ton included in the sale retention price of iron to the Company

despite protest that the resultant price was quite uneconomical. Possibly in view of feared delay in the bringing into operation of the new plants, Government have recently requested that the Company should examine the possibility of the Kulti Blast Furnaces being maintained in production for a period of about four years. This position would be capable of achievement only by the incurring of considerable expenditure on the plant and our Consulting Engineers are now examining the matter. In the meantime it has been indicated to Government that the Company would expect all such emergent expenditure to be met by Government and the retention price of iron to be adjusted in relation to the actual cost of production.

Production of the Burnpur Blast Furnaces was 476,336 tons against 473,172 tons for the previous year, the slight increase being due to the fact that the relining of No. 1 Furnace during 1956-57 was effected in a still shorter period than that of No. 2 Furnace in 1955-56, thus constituting a fresh record for the Company.

As regards the out-turn and despatches of steel, you will have realised from the particulars given in your Directors' Report that a number of special factors operated to inflate the position for the year 1955-56. These factors did not recur during the year under review which accounts for the decrease shown.

PROFIT

In view of the reduction of 31,114 tons in the despatches of steel there is naturally a fall to a more normal level in the gross profit earned for the year under review and the effect on net profits of this fall has been greatly accentuated by the severe increase in the rates of corporate taxation imposed under the Finance Act 1957. The severity of this increase will be realised when I tell you that had the Reserve for Taxation been calculated at the rates previously prevailing, the charge would have amounted to Rs. 269 lakhs as compared with the sum of Rs. 319 lakhs that has had to be provided to cover liability at the new rates. The incidence of the increase of taxation on the

profits of the year under review accordingly amounts to no less a sum than Rs. 50 lakhs.

In face of this position it was decided that the time had now come to commence adjustment of the large balance standing on the Reserve for Taxation Contingencies and an initial write back to Profit & Loss Account of a sum of Rs. 47 lakhs has accordingly been made in the Accounts now before you. The Reserve in question is maintained to offset the increased incidence of taxation in subsequent years as a result of the special depreciation allowances granted in earlier years in the case of plant and buildings. The major part of the Reserve is attributable to the initial depreciation granted in previous years which has the effect of cutting off any further depreciation allowance for taxation purposes once the value of the asset has been written down to a certain level, and write back from the Reserve on this account will, in consequence, operate only as and when that level is reached. In addition, further special depreciation is allowable on plant and buildings during the first five years of their life which has the effect of reducing the allowance for each subsequent year with a consequent increase in the liability for taxation. It is to offset the position in this latter respect that the write back of Rs. 47 lakhs, which is not an arbitrary figure, but a calculated amount covering the position up to the 31st March 1957, has now been made. It is the intention periodically to examine the position so that the balance of the Reserve may gradually be adjusted.

Initial depreciation now no longer applies having been replaced in the case of plant and machinery by the grant of Development Rebate giving an outright exemption from taxation of 25% of the cost of new plant and machinery installed. The approximate tax saving on this account for the year under review amounts to Rs. 9.50,000 which sum has accordingly been transferred to General Development Reserve raising the balance of this Reserve to Rs. 16,50,000. As and when the major items of the extensions plant are commissioned the Deve-

lopment Rebate and the consequent saving in taxation will be substantial and, as was explained last year, we count to a large extent on the continuance of the Rebate for finance of the 1953 and 1955 Extensions Programmes, which apart from the pure capital cost of the added plant will involve a very considerable increase in the working capital requirements of the Company for the finance of rolls, spare parts, stores, raw materials stocks and the generally increased financial requirements of the expanded undertaking.

DIVIDEND

The fullest representation was again made to Government for admission of the Ordinary shareholders to some added participation for the year under review in the continuing prosperity of the Company, it being urged that with the limitation of dividend imposed in the past, the financial position of the Company had been strengthened to such an extent that the stage had now been passed where it could be validly contended that a small increase in the dividend distribution would in any way prejudice the finance of the cost of the Expansion Programmes or the due repayment of the indebtedness that is being incurred. It is a matter of regret to your Directors that Government have been unable to accept the views of the Board in this matter and in their letter dated the 29th July, 1957, a copy of which has been appended to the Directors' Report, have notified that restriction of the dividend must continue until the Expansion Programmes have been completed. This reply is a slight improvement on the earlier attitude of the Government. As the 1953 Extensions are expected to be completed next year, whilst one of the two batteries of coke ovens and one of the two blast furnaces will be ready for commissioning this year, I trust it may be possible for the Government to relax their control in the near future. In the meanwhile, your Directors would again point out that the decision of Government cannot be challenged without serious detriment to the interests of the Company and would urge that the position be accepted with good grace in the hope and ex-

pectation that the justness of the claim of the shareholders to a reasonable participation in the improved and continuing prosperity of the Company must ultimately be recognised.

FUTURE PROSPECTS

I should perhaps sound a note of warning as regards the present year. We are now feeling the full effect of the disruption of current operations that is inescapable when a plant is being expanded and constructional and operational work has to go on side by side. In these circumstances there has inevitably been a drop in production and whether this can be made up will depend entirely upon the date when it will be possible to bring into operation the first of the new blast furnaces at Burnpur, a matter with which I will deal in more detail at a later stage.

As to the future in general, I have no hesitation in saying that if it depended entirely on the efficiency, diligence and enthusiasm of all of us alone, your prospects would appear to be bright. However, in the day to day changing moods of the workers, not only in the industries but in all those departments whether in the Government or outside, who have to make their contribution towards the national effort, nothing can be said even with reasonable certainty as to what we may expect in future. Extreme lack of discipline has manifested itself particularly during the last few months amongst all classes of workers, in many essential Government or other services, the Ports, etc., accompanied by actual or threatened strikes and by violence. Political agitation, sometimes accompanied by violence, has also played its part in interrupting industrial production and disturbing the public peace. This state of affairs may, if it continues, entirely upset not only our own expectations as regards the future operations of our plants, but the entire economy of the country. I would, therefore, with all the emphasis I can command, urge upon Government the vital necessity that violence be severely dealt with and punishment meted out with promptitude not only to those by whom the overt act is committed but also to those to whose subversive background activities this violence is directly attributable.

In our own works, in spite of an almost continuous improvement during the last few years in the conditions of service and emoluments, to which I shall refer later, it is regrettable that the workers allow themselves to be influenced by a minority affiliated to a certain political party and activated by the motive of supplanting the recognised Labour Union. This unfortunate position has been evidenced during the year by sporadic illegal strikes of short duration in the essential services sections, which have been particularly serious in the case of the Gua Ore Mines where even murder has been resorted to in an endeavour to ter-

rorise workers belonging to the recognised Union and to disrupt normal operations. I cannot too strongly condemn this manifestation of an influence which for the gaining of its own party ends can contemplate with equanimity the disruption of all planned progress towards the achievement of the country's social advancement and industrial self-sufficiency. As you must have noticed, similar troubles have been reported also from Jamshedpur in the speeches of the Chairman of the Tata Locomotive and Engineering Co. Ltd., and the Tata Iron & Steel Co. Ltd., at their recent annual meetings.

Mere condemnation, however, is of little use unless it is coupled with some suggestion as to how the position may be met. My personal opinion, based on a study of similar situations in other industrial countries, is that the evil can best be countered by the building up of really strong and representative labour unions having the full support of the workers and capable of restraining the subversive influence of those few who for their own ends attempt to cause disruption to the detriment of the general welfare and that no other unions should merit Government's recognition. I would in fact go further and say that what affects one section of an industry must have repercussions upon the whole of that industry and therefore the ultimate solution may lie in the building up on an industry-wide or craft-wise basis, of unions under the leadership of responsible bodies of men who have the interest of the country and the workers genuinely at heart and who are not swayed by political influences or the desire for self-aggrandisement.

We have progressed a long way since the days when an employer could contemplate with equanimity, as reducing the bargaining power of the workers, dissension within a single union or the formation of a number of rival unions. It is now the desire, I am inclined to believe, of all enlightened employers that they should be able to deal with one strong labour union enjoying the support and truly representing the interest of its members. Given such strong and representative unions, employers and workers could readily resolve the difficulties that must from time to time arise between them and could act together in full co-operation and mutual trust, thereby enabling the country to advance to new fields of prosperity and social security.

There are, however, other difficulties which will discourage any prudent man from trying to peep into the future. The solution of these difficulties almost exclusively depends upon the success of the more than Herculean tasks to be performed by the Government according to schedule for the implementation of what has been lately described as the "hard core" of the Second Five Year Plan, particularly in respect of the supply of good quality coking coal and the trans-

port of this and all other raw materials and ultimately the finished products. This "core" consists of the development of iron and steel, coal, transport and ancillary power and necessarily includes the two major units in the private sector of the steel industry. I shall try and explain to you briefly how the success or the failure of the Government's efforts in this respect is likely to affect the operations of our extensions with which your future is naturally linked up.

EXPANSION SCHEMES

In your Directors' Report and in the report by our Consulting Engineers that was issued therewith, a full description has been given of the stage which the schemes have already reached. We have, as you are aware, two programmes of expansion in hand, the earlier of which is described as the 1953 Extensions and the later one as the 1955 Extensions. The latter scheme was undertaken by us at the request of Government to form part of the Second Five Year Plan. It is intended to enable us to produce more finished and expensive products by reducing the excessive output of the semi-finished ones and of the saleable pig iron contemplated in the 1953 Extensions. The total production after the completion of the 1955 scheme will be 1,000,000 tons of ingot steel or 890,000 tons of saleable steel instead of 700,000 tons of saleable steel as planned under the 1953 Extensions.

The 1953 Extensions, which you may remember suffered an initial delay of nineteen months, are expected to be completed by the end of 1958 if no unforeseen difficulties arise in the meanwhile, in which case we shall have made up seven months of the delay. Towards the end of the current year we expect to bring into operation one of the two batteries of coke ovens and one of the two blast furnaces included in the scheme, and the conversion of the old 600 ton active mixer into a 300 ton steel-making furnace, whilst the second coke oven battery and blast furnace are expected to be completed and function towards the end of 1958 along with the completion of the new Open Hearth melting shop.

In order to work the first battery of coke ovens we shall require an extra 54,000 tons of coking coal per month. This will bring the total monthly requirements of coking coal for Burnpur to 146,000 tons and we have been advised, and very rightly, by our Consulting Engineers and by the plant manufacturers that the new coke oven battery should not be lighted unless we have built up and can expect to maintain a stock of at least 100,000 tons in our works.

At the moment I can only say that the attainment of this stock position by the time the new coke oven battery is ready appears to be remote and in fact even the maintenance of supplies of coal for existing operations causes no little

concern. As an indication of the seriousness of the position I would say that during the current year we have literally been living from hand to mouth and that recently orders had to be given to reduce the throughput of the coke ovens owing to the dangerously low level of the coal stocks which in turn has meant a reduction in the production of steel. The fullest representation has all along been made in official quarters and it has been somewhat disheartening to be referred from one department to another, each in turn refusing to acknowledge responsibility for this sad state of affairs. I am hopeful, however, that as a result of intervention at ministerial level lately, the position may improve.

Similarly, we shall require a further 60,000 tons of iron ore per month to work the first new blast furnace. Owing to the late delivery of mining plant and machinery, caused by the strikes in America and the closing of the Suez Canal, the full mechanisation of our Gua Ore Mines will be delayed by about five to six months. For this reason, we have been advised by our Consultants to stock pile about 225,000 tons of iron ore at Burnpur. Although the target has not been reached yet, we have every hope that this position will be achieved by the end of November next.

Each of the new blast furnaces is designed to produce about 1,200 tons of pig iron per day which can be converted into about 1,000 tons of steel. Taking the present average import price of foreign steel at Rs. 700 per ton, which is perhaps Rs. 150 per ton lower than the price at which steel is being imported at present, the bringing into operation of the first blast furnace will mean a saving in foreign exchange to the country of more than Rs. 2 crores per month. The completion of the second blast furnace will double this advantage.

The second battery of coke ovens and the second blast furnace will also need about 54,000 tons more of coking coal and about 60,000 tons more of iron ore per month. Our total requirements including our present consumption will, when the 1953 Extensions are completed, be about 200,000 tons of coking coal and about 185,000 tons of iron ore per month, which means the transport of more than 4 million tons per annum in addition to considerable quantities of limestone, stores and other essential materials of our Burnpur Works equal to another one and a half million tons. In addition there will be 800,000 tons of saleable steel per annum to be moved. Allowing only four days turn round for the wagons, the Railways will have to provide for us carrying capacity for about 24 million tons or so per annum, about one third of which will have to consist of specially built hopper wagons for iron ore. These, I would emphasise, are the transport requirements for Burnpur only and take no account of the requirements of your Kulti Works.

In this connection it may not be out of place for me to observe that when the three Government plants and the extensions of the Tata Iron & Steel Co. Ltd., come into operation, the problem of transport may prove to be very difficult as most of the steel works will have to draw their principal raw materials from more or less the same area or neighbourhood which will cause a considerable amount of congestion on the railway lines and consequential delay. In such circumstances it is natural on the part of the private sector to apprehend that in the distribution of the transport facilities some discrimination may be made between it and the public sector. We are quite certain that at the ministerial level any discrimination between the private and the public sectors is unthinkable. We cannot, however, be certain that unless strict control is observed at the ministerial level or by some other high authorities, the administrative staff in charge of the transport or supply of the raw materials, particularly coking coal, may not exercise some discrimination between the two sectors. They may naturally imagine that their primary duty is to enable the Government projects to function before those in the private sector. Some public assurance, therefore, that continuous priority will be given in respect of this matter to meet regularly the requirements of the private sector, both for stock piling and normal use, is highly desirable if the two producers in the private sector are to meet punctually their obligations in respect of the heavy foreign loans contracted by them to finance their extensions.

EMPLOYEES WELFARE AND EMOLUMENTS

In previous years we did not think it necessary to give an account of the wages and other emoluments of our employees and of the many amenities provided by us. But all those employed in industries in whatever capacity have in recent years attained what is now described as the status of partners in the fortunes of the industry concerned. It is desirable, therefore, that I should place before you briefly what we have so far done and plan to do in the future, as well as give you some idea of their wages and other emoluments and the amenities provided for them.

From past experience and statistics it is found that whenever an increase in wages has been given, the prices of food and other commodities have moved up almost simultaneously to the extent of 80 per cent of the rise and in order to combat this evil we firmly believe in providing permanent benefit by increasing amenities for employees. It will perhaps be of interest if I give an indication of the lines on which we are progressing. We have always taken pride in the medical facilities that are made available free of cost to our entire staff and workers and to

their families. These facilities are now being enlarged by the considerable extensions that are being made to the hospitals at Burnpur and Gua where an augmented staff of medical specialists and general practitioners are equipped to give the fullest and most careful attention to all cases that may arise.

With the expansion of the Gua Ore Mines we have been able to plan on up-to-date and enlightened lines a model township which will provide an improved standard of living accommodation for all classes of workers. This position applies equally in the case of Burnpur where a large area of land adjacent to the steel works has been acquired for construction of a new township of the most modern design to provide more accommodation and amenities for our workers.

At Burnpur also, enlarged training facilities are being provided which will include four hostels for the accommodation of those undergoing instruction for their future positions as artisans and supervisors; a new cinema has been built to provide film shows at concessional rates and plans have been drawn up for the construction of a building to form the headquarters of a social and welfare centre called the Mahila Mangal Sabha for all the womenfolk of the station. We are now building a large and modern canteen in the works for the workers in place of the older ones and at Kulti have a large construction programme for additional housing for the workers, of which much has already been completed.

We have up to March 1957 already spent large sums on the town including housing and the provision of many amenities. Our present programme which I have just explained involves an immediate expenditure in the region of one and a half crores of rupees and will be followed by further developments and expenditure in accordance with our plans for the progressive improvement of the standard of living of all employees. This is a matter to which I personally attach great importance. In order that shareholders may have knowledge of what is being done, I have had a small booklet prepared showing the designs of some of the amenities for issue to shareholders with the print of this speech.

EMOLUMENTS

We have given a great deal of thought to building up the structure of the wages and other emoluments of our employees on lines which on the whole have been generally acceptable to them. The total emoluments take the form of monthly cash payments or deferred payments and the provision of various kinds of amenities. The principal items constituting the total earnings or emoluments include a basic daily or monthly wage, a dearness allowance, free housing or grant of rent allowance in lieu thereof, a production or incentive bonus, a profit sharing

bonus, Provident Fund benefits, leave allowances of various kinds, free medical service for all employees and their families and free or aided educational and training facilities.

It is not possible for me in a speech such as this to enter into any great detail, and I must therefore restrict myself to giving you in outline the position for the year 1956-57 in regard to remuneration as it concerns our entire Burnpur staff who are members of the Labour Union. Our First Staff, who form but a small percentage of the total number of employees and occupy the higher technical managerial and administrative jobs, are not members of the Labour Union and therefore nothing that I say now will have any application to them.

The largest proportion of our employees are unskilled or semi-skilled workers on daily wages as distinct from the monthly paid workers who are mostly skilled men employed in the productive departments. The wages rates in both cases vary from department to department according to the nature of the work done and the ability of the worker. The semi-skilled and skilled workers naturally get higher wages and have higher earnings than the unskilled. The minimum daily wage varies between Rs. 1.00 and Rs. 1.94 per day according to the department concerned. At the former figure the total earnings, comprising basic wages, dearness allowance, quarters allowance and production bonus only, ranged between Rs. 73 and Rs. 90 per month again according to the department concerned. At the latter figure of Rs. 1.94 per day, the total earnings were Rs. 132 per month. The maximum departmental daily wage varies between Rs. 2.87 and Rs. 7.37 per day, the total monthly earnings aggregating Rs. 176 and Rs. 463 respectively, which latter amount was the maximum a daily rated worker in the Melting Shop earned.

In the case of the monthly paid workers the basic salaries vary similarly from department to department. The minimum basic salary is Rs. 60 per month, the total earnings in such case ranging between Rs. 144 and Rs. 183 per month, while the maximum basic salary is Rs. 460 per month resulting in total earnings of Rs. 1,042 per month.

In the case of most of the employees in question there is provision for the granting of annual increments.

Taking all the factors into account, I think you will agree that we are giving our employees emoluments, amenities and opportunities for advancement that compare favourably with other similar major organisations. Under the guidance of honest and competent Labour Union leaders powerful enough to eliminate those who, having infiltrated themselves into the Union or otherwise, are bent on causing disruption by fermenting sporadic strikes or go-

slow methods, the Company as well as the employees can ensure for themselves a better and more stable future.

DOMESTIC DEMAND AND EXPORT

Before concluding I would like to give you my views on the form the operation of the iron and steel industry may take after all the three Government plants and the Extensions of the two major producers have not only begun to function, but reached their rated productive capacity. For this purpose an important assumption will have to be made to the effect that this event will happen as scheduled by 1959-1960. To my mind this is an optimistic assumption as regards the three Government plants, though no one will be happier than I myself if it proves to be well-founded. Grave delay in the erection of the plants is likely to be caused by the admitted shortage of domestic civil engineering capacity.

The operation of the plants at their rated capacity implies not only their complete construction, but also the availability of ample traffic facilities, supply of electric power and of all the principal raw materials of good quality, particularly coking coal and limestone, and such auxiliary materials as refractories, ferro-alloys etc., without prejudicing in any way the provision of similar advantages for the private sector. It has also to be assumed that the necessary technical, skilled, semi-skilled and administrative personnel will have been trained and made available to meet their own requirements as well as those of the three Government townships.

Taking only the present demand into account, the output of the two major producers after their extensions have come into full operation may just be adequate, if the steel is carefully used, for domestic consumers including the Government. But as the Government plants begin to operate, there may be some exportable surplus. I am not prepared to make any forecasts as to what this surplus may be or when it may arise. But if the output upto the rated capacity does not materialise until 1959-1960, most of what may be produced may be required for the complete implementation of the re-phased Second Five Year Plan particularly relating to the projects for the manufacture of heavy castings, machinery, etc.

I am, however, prepared to assume that some surplus iron and steel may be available for export. The next question that requires consideration is the C.I.F. duty paid price at which it can be supplied to the export markets. In this connection it must be borne in mind that the entire iron and steel industry, particularly in Europe, including the Soviet block, may be competing in the same markets, for they are fast expanding the industry for this very purpose as well as for domestic use.

As regards the selling price, we have to take into account first of all the works costs, of which no accurate estimate can be made. The estimates previously made must have already gone out of date for the reason that the prices of all the raw materials and of labour and the cost of transport have considerably increased since they were made. To the uncertain works costs will have to be added the overheads, including depreciation, interest on capital including provision for repayment of borrowed money and perhaps a return on investment and such taxation as the Hindusthan Steel Company may be subjected to. On these points we have no reliable information.

In the first place we are not told, and I am rather inclined to think that the Government themselves do not know, what the ultimate capital costs not only of the erection of the plants, but of the ancillary services which I have mentioned earlier, would amount to. We have been told from time to time that the capital costs have increased, but no reliable final figure has been or can be ascertained yet. But this I would say, that in view of the persistent rise in foreign and domestic prices and wages of labour, the capital costs and the overheads would in every case be very much higher than those, not only of the two major producers, but of the foreign competing producers who build their own plants, and competition thereby may be made much more difficult than people seem to believe at present.

I do not propose to go into the theoretical economic aspect of the matter, but to a layman like me it seems that it may not be possible for the countries in the East, who may be our principal customers, to afford to import iron and steel unless they are able to pay the price by the export of their own products. The foreign exchange that we need is mainly from the sterling or hard currency areas where it is doubtful whether they would require the imports of our iron or steel at a price which would prove to be remunerative for us.

Finally, there is one more point in connection with this matter which has received less attention than it has deserved on its merits. The manning lists of the three Government plants in so far as they have been made available to the public, have assumed the employment of far fewer men than have to be employed by the two major producers for historical reasons. It is not beyond the bounds of probability that the employees under any labour union which may be established in the Government plants may compel the Government, which has promised to create more jobs through industrialisation, to employ a higher number of men than necessary and to bring them into line with those almost compulsorily employed by the present major producers. Also, hundreds of

Indians have been sent abroad for training, but from our own experience we know it is possible that when they return they may not be satisfied with the scale of wages that are prevalent for similar jobs, and Government may be compelled to accept their claims for higher wages. Then again, scores of foreign technical personnel are being imported at very high salaries and with many amenities and enjoying exemption from Indian income tax. This is bound to have its repercussions on the permanent employees in the private sector. It is plain that as a result of the operation of all these factors, the labour costs may rise to so high a level, as indeed they have been already doing throughout our economy, that our C.I.F. duty paid export prices may not be below the domestic prices prevalent in the competing countries and our own domestic prices may get beyond the means of our consumers.

ACKNOWLEDGMENTS

In conclusion, I should like to express on behalf of all of us our appreciation of the services rendered by the General Manager, Mr. McCracken, and his staff throughout the year. Conditions are not easy when production and construction works have to proceed together and the fact that until

GILLANDERS ARBUTHNOT & COMPANY, LIMITED.

NOTICE is hereby given that the Preference Share Register of Members of the Company will be closed from the 24th September to the 28th September, 1957 both days inclusive, for payment on the 4th October, 1957 of an Interim Dividend on the Preference Shares of the Company at Rs. 2.50 per Share, less Income Tax, on account of the year ending the 31st March, 1958.

Dividend Warrants will be sent only to Registered Shareholders or to their Mandatees.

By Order of the Board,
P. E. G. W. PARISH,
Managing Director.

Gillander House,
Netaji Subhas Road,
Calcutta.
4th September, 1957.

MACNEILL & BARRY, LIMITED.

Notice is hereby given that payment of the Half-yearly Interest on the 5% Debenture Stock 1966-71 of the Company will be made on 4th October, 1957 to those stockholders whose names appear on the Company's Register on that date or in accordance with their instructions.

MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary.

2, Fairlie Place,
Calcutta-1, 10th September, 1957.

TEZPORE TEA COMPANY, LIMITED

NOTICE

Notice is hereby given that the Thirty-ninth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Monday, the 7th October, 1957, at 12 noon for the following purposes:—

- (1) To receive and adopt the Director's Report and the Audited Accounts for the year ended 31st December, 1956.
- (2) To declare a Dividend on the Ordinary Shares.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their Remuneration.

The Transfer Register will be closed from the 1st October, 1957 to 7th October, 1957, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.

Calcutta,
13th September, 1957.

KYANG TEA SEED COMPANY LIMITED

NOTICE

Notice is hereby given that the Twenty-ninth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Monday, the 7th October, 1957, at 12-30 P.M. for the following purposes:—

- (1) To receive and adopt the Director's Report and the Audited Accounts for the year ended 31st December, 1956.
- (2) To declare a Dividend.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their Remuneration.

The Transfer Register will be closed from the 1st October, 1957 to 7th October, 1957, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.
Calcutta,
13th September, 1957.

such a late stage of the construction period the disruption of normal production has been held at such a low level speaks very highly for the careful and painstaking planning of Mr. S. L. Bengtson the head of our Consulting Engineers, the International Construction Company Limited, and for the spirit of mutual co-operation that exists on all sides. I would particularly mention the staff of the Gua Ore Mines who, in the circumstances I have earlier described, have most loyally carried out their duties under difficult conditions and at times even under threat of personal violence.

I should also like to express my great appreciation of the consideration shown by the World Bank during the recent negotiations in connection with the further loan of \$ 20,000,000 for finance of the foreign expenditure on the 1955 Extensions which enabled the negotiations to be concluded in such a short period and the loan consequently to be made available at a very favourable rate of interest.

NOTE: This does not purport to be a report of the proceedings of the Annual General Meeting, which will be sent to shareholders in due course.

MARTIN BURN LIMITED

Convertible Notes

NOTICE is hereby given that interest for the half-year ending 30th September, 1957, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 30th September, 1957 or in accordance with their instructions.

A. G. GIDLEY,
Secretary.

12, Mission Row,
Calcutta,
10th September, 1957.

MARTIN BURN LIMITED

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 30th September, 1957. The Preference Share Registers will be closed from the 24th September to the 30th September, 1957, both days inclusive. Payment will be made on or after 12th October, 1957, to those Preference Shareholders whose names appear on the Company's Registers on the 30th September, 1957, or in accordance with their instructions.

By Order of the Board,
A. G. GIDLEY
Secretary.

SOVIET AND US GOVERNMENT BONDS AND SAVINGS

(Continued from page 514)

Hamilton ignored this advice and paid off at face value every bond sold to finance the fight for independence. As a result, the credit of the new nation remained unimpaired and the principle of bond redemption in full was established, once and for all.

In addition to defence bond issues, the US Government has financed vast projects through bond sales to the people. When President Jefferson arranged with the French Government for the purchase of the huge Louisiana Territory in 1803 for \$ 15 million, he went directly to the people for the required cash outlay. A total of \$ 11,250,000 in 15-year bonds paying 6 per cent was quickly subscribed. The balance of the sale price was obtained by other means.

In 1848 the area that now includes California, Nevada, Utah, and western Colorado was acquired from Mexico for \$ 16,800,000—a sum raised by the sale of government bonds

Capital:—Authorised and Subscribed Rs 16,00,000 in 2,000—61 per cent cum. pref. shares and 14,000—ordinary shares both of Rs 100 each fully paid.

At the start, this was a mail-order campaign designed to reach the public outside the regular market for securities. Series ABC, and D. with 10-year maturity values ranging from \$ 25 to \$ 1,000, eventually paid their owners \$ 5 billion. The last of this type of bonds matured in April 1951.

Another series in larger denominations was intended for banks and certain institutions. Series E and H savings bonds for individuals followed the initial "baby bond" issues. As of April 30, 1957, \$ 41.5 billion in Series E and H were held by individual purchasers. At present, some eight and one-half million people are buying savings bonds through voluntary payroll deductions. Employers handle these operations as a public service without charge.

On April 20, 1957, President Eisenhower signed a law permitting the US Treasury to increase the 3 per cent interest rate to 3 1/4 per cent on current and future purchases of E and H savings bonds.

Although the volume of government savings bonds is large, it is only one of many savings media used by the American people. For example, in 1956 some \$ 45 billion in savings was held in commercial banks; \$ 28.5 billion was in mutual savings institutions; \$ 34 billion was in institutions which lend money on mortgages; and many more billions of dollars were represented by life insurance policies, retirement annuities, and the like. Additional billions are invested by American citizens through purchase of stock in US business and industrial enterprises.

As an inducement for young people to save, the Treasury encourages the sale of savings stamps to school children. Last year alone, almost 100 million separate US savings stamps were sold—most of them through weekly stamp days in the schools.

In the United States, where consumer goods are available in great abundance and there is every inducement to buy them, the individual's income is spread roughly between consumption items and savings, after taxes. The competition for the "savings dollar" therefore is very keen.

In a non-competitive social order, such as under Communism, the state determines the volume of "savings" as part of its overall budget plan. Throughout the entire Soviet orbit, the national budgets severely limit the production of consumer goods and at the same time restrict the purchasing ability or all but a small class of more affluent citizens.

Although the sale by the US Treasury of savings bonds provides an important source of revenue, other objectives served by this policy were outlined by President Eisenhower on April 20, when he said: "In a comparatively short span of years, the United States Savings Bonds program has become an integral part of the American way of life. It has taught countless Americans how to save. It has enabled young men and women to enjoy higher education. It has furnished the down payment for new homes and new businesses. For many persons, it has made possible a more comfortable and secure retirement. It has provided protection against unexpected adversity for millions of our citizens."

"Today, 40 million Americans own over \$ 41 billion in Series E and H bonds. We want to see more people continually buying bonds, so that savings bonds may provide even greater financial protection for our people in the years ahead and, at the same time, help assure the economic stability of our country."

In thus stressing the advantages of bond buying in helping to maintain living standards in the United States, the President again affirmed the fiscal integrity of this form of US Government obligations.

A matter of confidence

'CONFIDENCE' is essential in all human affairs. An advanced economy depends on confidence because of the interdependence of its members.

Confidence is the real backing for all forms of currency and credit, and for the reputation of business houses. For instance, people talk of having confidence in Binny's because they know from the experience of three generations that Binny's fabrics are dependable for their good quality.

For the Investor

Lombard Street's Shadow on Lyons Range

Investment Gossip:

Up with the British Bank Rate to 7 per cent—the highest level in 37 years. Down with prices on the Calcutta Stock Exchange—the lowest level in 1 do not know how long a time.

What matters the rise in the Bank of England Rate? And how does it affect the Indian economy or Lyons Range or Dalal Street? Is there any justification for prices breaking more sharply on the Calcutta Stock Exchange than even on the London Stock Exchange?

The first point to note is that the Reserve Bank Rate has long since stopped being linked with Bank of England Rate; an increase in the latter by no means postulates a corresponding stepping up in the former. This may be said to be due partly to the fact that the Indian money market is, in an important sense, insulated, and partly due to the fact that the Indian monetary authorities have time and again made it clear that our economic policy is not tied to the apron strings of Britain or the Bank of England.

True, the first time that such an assertion was made, it seemed an empty claim since—by a remarkable coincidence—the Reserve Bank Rate was raised on the same day as in the UK, in November 1951.

Thereafter, however, while there has been an element of juggling in the United Kingdom, there has been only one change in the Reserve Bank Rate. So, it is possible to assert that, by and large, the Indian monetary authorities do pursue a policy that is independent of decisions taken in other world monetary capitals.

The insularity of India stems from the fact that short-term funds have not, at least in recent years, been flowing into India in any considerable proportions. The main source of such short-term funds was, we may here recall, the money that was brought in by the exchange banks for their activities here. But, since the widening of the disparity between the British and the Indian Bank Rates some years ago, the

exchange banks have found it economically impracticable to borrow in London in order to lend in India. So, a further increase in the British Bank Rate is of limited significance in the sense that we were already attracting a meagre flow of short-term foreign funds, and there is very little scope for any further diminution.

There is, however, the consideration about the future of sterling as sharply brought into the spotlight by the steep rise of 2 per cent in the Bank of England Rate.

In this the last ditch stand for preserving sterling against devaluation? Or is the exceptional increase in the Bank Rate a forerunner of devaluation to be announced, perhaps, at the meeting of the IMF next week?

In these two questions, India is more immediately interested. For, it has happened in the past that devaluation of sterling has generally tended to be followed by similar adjustments in the values of currencies in the sterling area.

In this context, we may also note that it has generally happened that devaluation, when it has occurred, has tended to be accompanied by a sharp upward adjustment in Bank Rate. Therefore, the fact that the Bank Rate has been raised sharply, with a simultaneous statement to the effect that there will be no devaluation, can be accepted at face value: that is to say, devaluation would appear to be ruled out.

It is only in the contingency of devaluation that there may be said to be a significance for India in the monetary upheaval in the United Kingdom. On the assumption that there is to be no devaluation, Indian interest is limited to one factor alone.

That factor concerns, firstly, as to the prospect of India obtaining medium term credits from Britain and, secondly, as to the cost of such aid as we might obtain.

Under the first head, it is doubtless a bear factor that the British Chancellor of the Exchequer has announced that banks will be called upon to hold down the level of their advances. This may conceiv-

Investment Notes:

It is learnt that the High Court in England has confirmed the reduction of capital of the British Burmah Petroleum Co., Ltd. The repayment of 1sh per share on the Ordinary share of 4sh each will be made to shareholders, who were registered as on the 31st August, 1957, on and after the 14th September.

The Bombay State Finance Corporation, which has practically exhausted its subscribed capital, proposes to raise another crore of rupees shortly through the issue of Debentures. The Debentures will be guaranteed by the Government of Bombay.

A new Rayon factory with a capacity to produce 10 tons of Art Silk Yarn per day, on the basis of 100 deniers, is likely to be set up. A company known as "The Baroda Rayon Corporation Limited", is expected to be registered in Bombay. The authorised capital of the company will be Rs 10 crores and the issued capital Rs 3 crores. A licence is yet to be obtained from the Government for setting up this factory.

Orissa Minerals Development Company has announced an interim dividend of 10 per cent for the year ended 30th June, 1957, payable on or after 11th October, 1957.

funnelled into gilt-edged. Surely, the State Bank's is the proper example.

Instead, the other Scheduled Banks put together subscribed Rs 9 crores to the New Loan.

But the effective new cash is only Rs 4 crores, since the other Scheduled Banks have received cash repayment to the tune of Rs 5 crores in respect of their holdings of the maturing 3 per cent Victory loan.

Why such a state of affairs? Read World of Finance.

HIGHLIGHTS

The net new investment in gilt-edged by the Scheduled Banks other than the State Bank, since the 1957 New Loan, is—a figure that we feel ashamed to mention, because it is so small.

New cash in gilt-edged, as far as the State Bank is concerned, is to the tune of a round Rs 40 crores—working out to an increase of nearly 45 per cent on the gilt-edged portfolio on the eve of the New Loan.

We will doubtless be told that special circumstances helped the State Bank.

Agreed: windfall Deposits did accrue; but it will scarcely be denied that the State Bank will have participated, also, in the general increase in Deposits that is being experienced by the banking system.

So, even if we disregard the windfall Deposits, there has still been a giant sized accretion to the Deposit resources of Scheduled Banks.

Surely, a moiety of this could have been

Macneill & Barry Coal Group Results

Balance-Sheet Reviews :

WORKING results for 1956, released by Coal companies so far, are rather disappointing. This is mainly attributed to the fact that the award of the All-India Industrial Tribunal (Colliery Disputes), effective from May 26, 1956, was dully implemented at all collieries; and workers went on strike in most collieries on the ground that they were not satisfied with the award. As a result of the strike being continued from September 17 to October 14, 1956, production was adversely affected. These facts are fully reflected in the working of the Macneill & Barry group of companies.

In the case of the Equitable Coal, the company has been able to increase its raisings from most of its collieries, as the railways' existing plots and depots, which serve these collieries, were already inadequate for current production. Despite a decline in earnings, the company has maintained the dividend at 15 per cent for the year.

Dhemo Main has, however, again passed over the dividend. Under-ground conditions at the colliery continued to be difficult although some improvement has been noticeable during the year. Results would have been better if production had not suffered as a result of the strike. Colliery costs are also high due to output from the Dishergarh Seam being dependent upon sandstowing, for which inadequate assistance is received from the Coal Board.

Hurriadih Coal has reduced the dividend from 25 to 15 per cent for the year. Working in 16 Seam continued throughout the year until the seam was completely extracted by 1st July, 1957. Sinking to 15A seam has since been completed and raisings from the new seam are likely to commence during September, 1957.

West Jamuria has again passed over the dividend. Working results at Ackhaipuri Colliery continued to be satisfactory. The company has shown a profit, before providing for Depreciation for the first time for some years; and the working results have continued to improve throughout the current year.

Following table gives other particulars relating to these companies:

More Tea Results

Three more Tea companies in Duncan Brothers group and two companies in Kettlewell Bullen group have presented their reports and accounts for 1955. In common with other companies, whose accounts have been published recently in these columns, the working results of these companies are encouraging.

In Duncan Brothers group, Ellenbarrie has recommended a dividend of 5 per cent and Phaskowa 7½ per cent as against nil in the previous year, but New Cinnatollah has again passed over the dividend. In the other group, Mothola has raised the dividend from 50 to 60 per cent and Joonktollie from 100 to 115 per cent. Following are other particulars:

CROP (In Maunds).			
Duncan Brothers:			
Ellenbarrie	5,611	4,803	
New Cinnatollah	5,930	4,701	
Phaskowa	3,021	2,987	

Kettlewell Bullen:			
Mothola	7,402	6,996	
Joonktollie	9,976	10,400

The Bank of England Rate

EXCEPTIONAL circumstances have compelled the British monetary authorities to take the exceptional step of raising the Bank of England Rate by 2 per cent to 7 per cent, which is the highest level since 1920. Mr Peter Thorneycroft, the Chancellor of the Exchequer, has besides indicated that other measures will be taken, and stated that "Government are determined to maintain the internal and external value of the pound".

The British decision has caught the monetary world unawares, and while it might curb speculative pressure against sterling, it has nevertheless been responsible for renewed conjecture about the multibillion dollar question that has been agitating the minds of monetary authorities the world over: How is inflation to be tackled?

On the face of it, the British action, occurring as it does on the eve of the annual meeting of the International Monetary Fund, would seem to be a confession that the only answer to inflation lies in tightening the screws of an already tight money policy.

But such a conclusion can spring only from a rather naive analysis. The fact is, that all the strenuous and energetic efforts at curbing inflation by orthodox measures have so far been largely fruitless. In America, we have

the spectacle of a number of Congressional committees busy examining economic policy and discussing what has been termed the "new inflation". While there has been a conspicuous lack of success in the USA, the sentiment seems to be that dear money policy must continue until there is a perceptible sign of recession.

Moreover, Germany's problem, of a recurring and embarrassingly large balance of payments surplus, has also exerted inflationary pressures. So, the Federal Republic of Germany has, coinciding with the raising of British Bank Rate, announced that its Bank Rate is to be reduced by half per cent to 4 per cent.

In this background, while it is arguable that the Indian money market is largely "insulated", this country finds that world inflationary forces are playing havoc with the Second Plan; the cost of projects goes up, because plant and machinery, which we need to import, have become more expensive; medium term credits are dearer, because interest rates in the countries from which we buy have risen.

Thus, it is a puzzled brotherhood of Finance Ministers who will be meeting at Washington

and at Ottawa soon thereafter. The only things they will be able to agree upon are, firstly, that their countries are experiencing inflation and, secondly, that the orthodox measures seem to be futile.

What, then, is the solution? Will the industrially advanced countries need continually to be afeared of prosperity?

The answer seems to be that, ultimately, there will be a call for the exercise of greater selective monetary control. The British directive to "freeze" advances of banks may be a step in the correct direction; and, in the circumstances of an unsure and unsatisfactory increase in productivity, the UK Government have also decided to prune sharply expenditures by departments and nationalised industries.

We may presume to suggest that India's experiments with selective monetary control will command the interest of those that foregather at Washington and Ottawa. The orthodox notions of how inflation should be tackled are by and large discredited; it is to be hoped that the IMF meeting will provide an auspicious and timely forum for the evolution of an enlightened solution for the problem of inflation.

Factors Governing British Investment in Commonwealth

By A London Correspondent

THROUGHOUT the world as a whole, the opportunities for productive investment are far greater than can be met by the resources available. This is as true of the Commonwealth, including the United Kingdom, as of other countries.

Within the Commonwealth, the United Kingdom has special responsibilities for furthering the economic welfare of all the member-States. It has these responsibilities not merely because of tradition, but because it has the largest technical resources of any member country, because of its experience of overseas investment, and because it is the only Commonwealth country which can provide any appreciable amount either of long-term financial capital or of capital goods and equipment of all sorts for the use of its fellow members.

At the present time the most effective measures which the United Kingdom can take in this direction are for it to strengthen sterling and to develop its own economy. In the words of the recent White Paper *The United Kingdom's Role in Commonwealth Development*: "Since the strength of sterling is the basis of the prosperity of their trade and is also the foundation of their development, members of the sterling Commonwealth all have a vital interest in sustaining policies which will strengthen it."

Therefore the primary duty of the United Kingdom to the Commonwealth is to increase its exports to the dollar area as much as possible, and to expand as greatly as possible its own productive capacity. In the short run these two duties are not completely compatible, as they can both claim the same resources. In the long run they both equally depend on the rate of the United Kingdom's home investment.

In recent years the United Kingdom has, in fact, been devoting a considerably larger proportion of its resources to home investment than before the war. In 1938 gross fixed investment comprised 12 per cent of the gross national product. In 1952 it comprised 14 per cent, and in 1956 it was 16 per cent of the gross national product. It is expected that this year total home investment will be slightly larger than last year. In money terms, gross fixed investment took £3,000 million out of a gross national product of £18,000 million in 1956.

Of the £3,000 million spent last year on domestic fixed capital formation, nearly £900 million was invested in manufacturing industry, more than £300 million was required to finance improved supplies of water and power, and a similar sum was spent on transport and communications; housing accounted for almost £600 million.

As a result of this expenditure, and without allowing for depreciation and replacements, the economy of the United Kingdom was strengthened by the addition of new plant and machinery valued at more than £1,100 million, new buildings and works—exclusive of housing—valued at £875 million, and additional vehicles, ships and aircraft worth more than £450 million.

This rate of investment will have to be maintained, if not increased, in the future if only to keep Britain abreast of modern technological development. The harnessing of atomic energy to generate power is an inescapable, and very expensive, commitment. Britain's road and rail systems are inadequate to meet the ever-increasing volume of business. More steel works have to be built, and most industries will have to spend large sums simply to remain competitive with the industries of the other exporting countries of the world.

The claims of investment have, however, to be weighed against those of exports, and in conjunction with the watch which still has to be kept on the import bill. The only way in which more can both be exported and invested is if consumption in Britain does not expand too rapidly and if savings rise. The United Kingdom Government is actively pursuing a policy of encouraging savings, and last year the total of personal savings rose appreciably. Disposable income increased by about £1,100 million, but spending on consumption rose by only £600 million, the balance of £500 million being saved.

It is against the background of the need for domestic saving and investment, and the necessity for increased exports—particularly to the dollar area—that the ability of the Commonwealth has to be considered. If the United Kingdom has provided a much smaller contribution than has been sought, in the economic circumstances of the day its contribution has been considerable.

In spite of competing claims, British private investment and loans from the Exchequer to the sterling Commonwealth have averaged £125 million a year in recent years. Exchequer grants have added almost another £30 million a year, and in addition special assistance has been provided for the colonies, and investment in Canada has averaged £30 million a year. In all, this total comes very near to £200 million a year.

As the White Paper on Commonwealth development points out, it has been unofficially estimated that of all the external capital invested in the sterling Commonwealth (excluding the United Kingdom), 15 per cent has come from the United States, and 10 per cent from the World Bank, but by far the greatest contributor has been the United Kingdom, with 70 per cent.

"The Wise Man in His Attitude, towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

it all starts here, Bhai Sahib...

We need hardly tell you that this is a tea garden, Bhai Sahib. The tall trees provide shade for the bushes and that building in the background is a tea garden factory. Here is where the story of tea begins.

In the garden nurseries, tea seed is planted in special beds, is carefully nurtured and then the seedlings are transplanted. A period of between 5 and 7 years must elapse before the pluckers can

pick off the topmost tenderest shoots—"the two leaves and a bud"—from each bush.

The picked leaf is dried and processed in the factory and then sent to tea auctions, where traders and merchants bid for the various "lots" or consignments to use in their own particular blends, or for export.

So, the leaf has started on its way to your tea pot, Bhai Sahib. It is the first step in a long and interesting journey.

HERE ARE SOME FACTS ABOUT TEA GARDENS, BHAI SAHIB:

Number of Tea Gardens:	6,840 in 1955/56
Assam and North	
East India ...	1,149
U. P. and Kangra ...	1,426
South India ...	4,265
Total Acreage in 1955/56 ...	7,91,202 acres

The Nagas' Future

Sometimes, a problem assumes its toughest phase when the basis for a solution is in sight. At a fairly representative Conference, the Nagas have demonstrated their desire for a peaceful and conciliatory settlement of their political future and affirmed their anxiety to continue as citizens of the Indian Union. Violence was condemned. The one condition that the Nagas insist is that they should secure an autonomous political unit administered by the Ministry of External Affairs through the Governor of Assam. The sum and substance of the Naga demand lies in the rejection of the authority of the Assam State Government.

This week the Assam Chief Minister had been to Delhi with a set of proposals carrying the blessings of his Ministry, on the basis of which preliminary discussions were conducted between himself and the Prime Minister. In a few days, there is going to be a fresh round of talks with the Naga delegation thrown in. For the State Government in Assam, the Nagas as long as they remain discontented, are not an asset. Always a thorn, in times of crisis, they can turn out to be a heavy liability.

If their discontent could be met by a measure of territorial separation with the Centre taking direct charge, Assam's political and financial stability stands to gain thereby. But no political issue lends itself to a brutally rational solution. Sentiment in Assam is strongly against the separation of the Naga territory. It is reported that the Assam Government would be found willing to concede the demand for separation on condition that some of the existing administrative links between Assam and the Naga territory are kept in-

tact; a common cadre of services, the continued representation of the Nagas in the Assam legislature and the functioning of the Assam Governor in consultation with the State Ministry for purposes of the governance of the territory would satisfy the State Government. These modifications seem to represent a reasonable via-media and can heal the wounds of recent inflection between the Nagas and the plains' people. With a little give and take, these should provide the foundation for a lasting settlement.

Large Holdings Tax

The Uttar Pradesh Government have proposed the introduction of a new tax entitled the Large Land Holdings Tax. In effect, this levy is an extension of the wealth tax on land. During the discussion on the Bill embodying the measure, the Revenue Minister explained that it was designed to liquidate large holdings in the State through the easier process of taxation instead of the more difficult one of land redistribution.

Thus conceived, the new tax gives the finishing touch to a process which zamindari abolition had already carried far. In 1945-46, i.e. before the abolition of zamindaries, the number of farmers holding more than 25 acres each totalled 1,14,700; the latest estimate of such holdings is only about 30,000. Land holders having more than 50 acres each are not more than 10,000, including 2,200 mechanised farms.

Whether it is wise to penalise comparatively large land holdings is a matter on which we do not have conclusive data. Though land for the tiller is the accepted policy of the State, the consistent advocacy of co-operative farming implies emphasis on the merits of large as against small farms. A tax on large farms irrespective of income will surely have one good result. It will stimulate the full utilisation of the land, failing which the uncultivated portion would willy nilly pass into the hands of those who could put them to the best use.

A tax of this character becomes automatically defunct when a suitable ceiling comes into force. In Uttar Pradesh, there is a ceiling on future acquisitions, but not on existing holdings. If it is thought that the large holdings tax is good enough, to the extent that it will ensure the best utilisation of land, a blatant inter State disparity will be perpetuated. In a State, where the Socialists are powerful, the demand for around ceilings on land is bound to become insistent. The present tax may come up against criticism, on that score too.

Editorial Notes

Middle East Tangle

US arms shipments to Jordan conceived as a counterblast to the concentration of heavy Russian armaments in Syria appear to have hit friends and foes alike. While reports from Cairo mention border skirmishes between Israeli and Syrian troops, the Israel ambassador in Washington entered a humble plea to the US State Department against the US entering into a competitive race for piling up armaments in the Middle East.

Israel's fears are understandable. A clash between pro-Western and pro-Russian potentates in the Middle East could surely be the most fearful outcome of the present race. It can also lead to a diversion, not necessarily united on the part of the Arab powers against Israel, which under the latest conditions is comparatively much weaker. Israel is disturbed over this prospect and behind its agonising demand for US assurances that nothing untoward would happen, there lies the apprehension that no undertaking, from howsoever powerful a quarter, could prevent a sudden explosion when the whole area was getting choked with arms of every description.

To the Western Powers, appeals from Israel would surely be far less impressive than the threats held out by the Russian leaders who have already condemned the inflow of US arms as aggravating the chances of a world conflict. The Eisenhower Doctrine and Mr Dulles' elaboration of it rest on the assumption that the presence of Western arms in friendly Middle East territories could always be depended on for an effective deterrent against further communist 'infection' and that no undesirable consequences would follow the attempt to maintain a rough parity in armed strength between the two Middle East blocs. The US Administration is convinced that Russian arms supply to Syria could not be justified purely by defensive aims. Israel's importunities on behalf of economic as against military aid to the Middle East countries are, therefore, not likely to fall on responsive ears.

Surface Treatment

In Mysore, the Government are considering a scheme of small scale industries in all the important towns for the purpose of absorbing the entire body of beggars in the State. The scheme is indeed well motivated. Any civilised Government would like to see an end of beggary. But beggary itself is not the root but the product of an evil which invariably is nothing

else than poverty and unemployment. Mysore is not free from unemployment, though the problem does appear to be as acute as in most other States.

The small industries going to be established in Mysore must tackle the problem at the root, which would be possible only if the growth of unemployment is prevented. While beggars are undoubtedly eligible for the State's sympathy and relief, the only method of ensuring that their ranks are not replenished is through the provision of work for the unemployed. With the resources available in Mysore, the State Government can enlarge or divert the contemplated scheme to such dimensions as would achieve the wider purpose.

A narrow sectional view of economic problems is evident in schemes and ideas elsewhere too. Mr C. Rajagopalachari has again returned to his theme of reservation of dhooties and saris for handloom. His economic knowledge is too incisive not to perceive the fact that what is implied is not so much a conflict between the handloom weaver and the mill owner as one between the weaver and the mill worker. Eventually when society gets nearer and nearer to a state of equality of income, the displacement of human by mechanical labour will surely appear more humane than it probably does to many persons in India now. Even the training schemes for artisans, otherwise an extremely useful endeavour, sometimes has the effect of unsettling employment for the traditional workers. Frequently, the lack of a sufficiently comprehensive approach to problems reduces the benefits from well conceived efforts.

Four Special Developments In 1957 Slack Season

THE current month should, in the midst of the slack season, be involving a considerable strain for the money market for a number of reasons, the latest of which is the disruption caused among the Calcutta banks by the strike of employees as a protest against high foodgrain prices. Thus, in assessing the progress of the 1957 slack season, regard must be had for the special developments during September which would have exerted contra-seasonal pressure upon the economy. In the first place, the 3 per cent Victory 1957 Loan became due for redemption on September 1, 1957. While the total outstanding, at Budget time, in the 1957 Loan was Rs 31.50 crores, we must remember that, for the New Loan this year, subscriptions were accepted in the form of the maturing loan. Though the monetary authorities have not given out any facts about the amount of 3 per cent 1957 tendered for conversion, there is evidence to show, as we shall see later in a different context, that there was an element of over Rs 5 crores at least, which had to be redeemed in cash. This meant, of course, that the Central Government were called upon to meet a commitment relating to the maturing loan, the total amount involved being beyond our ability at present to assess. In the second place, the borrowing programme of the two State Governments which decided not to deviate from their original intention of approaching the market with a loan, even after the Finance

Minister's suggestion to the contrary, postulated cash subscriptions totalling Rs 11 crores, although the total amount sought was only Rs 9 crores and cash subscriptions receiving an allotment were placed at Rs 7.7 crores. There is good reason to believe that bank subscriptions as such were concentrated upon the Mysore Loan; that is to say, the Bombay loan would appear to have attracted public cash subscriptions. So, it may be said that the impact of the two State Government Loans would have accounted for a drain upon the Deposit resources of the banking system for an amount upwards of Rs 5 crores. In the third place, with the intransigence of bank employees in Calcutta, disruption in the banking services became unavoidable. This overhanging threat, coupled with the occurrence of a holiday in the last week, would doubtless have aggravated the drawing of funds by business houses and other entities in the Calcutta region. The extent of this pressure, however, is difficult to gauge, and we would be able to guess at it only when the return of Scheduled Banks for the relevant week is released. In the fourth place, the Pujas are this year occurring at the beginning of the month, so that, in addition to the month early disbursements in respect of wages and salaries, the banks will be called upon to finance demands for funds on account of advances against salaries, Pujā bonus, etc. We may consequently expect the phenomena normally to be noted in the first week of a month to be largely registered in the return of the member banks for September 27.

We trust that it will be clear that the magnitude of strain upon the money market as a result of four special considerations will prove to be quite considerable. However, in spite of such extra seasonal pressures, the 1957 slack season is proving to witness markedly easier conditions. The call money rate has declined to 2½ per cent, though house money and term money continue to be at high levels. This is a welcome development and augurs for a much more healthy starting point for the 1957-58 busy season than were the conditions obtaining on the eve of the 1956-57 busy season. We need scarcely point out, since we have emphasised this point recurrently in this journal, that the primary reason for the much more comfortable position of the banking system lies in the giant sized accretions to the Deposit resources of the Scheduled Banks.

The slack season as reflected in

the latest bank returns is evidenced in a fall of Rs 5.55 crores to Rs 1480.31 crores in Active Note circulation in the week ended September 13. Rupee Coin returned from circulation for Rs 0.73 crores, and this resulted in raising the Reserve Bank's cash in the till by Rs 6.28 crores to Rs 33.05 crores. Rupee Securities and Foreign Securities are both unchanged; and, with Investments also showing no change, the unambiguous conclusion must be that there has been no deficit financing during the week.

In the Banking Department, the Centre's balances have improved by Rs 0.90 crores to Rs 52.86 crores. Deposits of State Governments are lower at Rs 6.16 crores against Rs 6.88 crores, in spite of an increase of Rs 3.39 crores to Rs 44.50 crores in borrowings from the Reserve Bank. Thus, it would seem that, while the State Governments have felt some pressure upon their balances, the Central Government have been quite comfortably placed.

Banks' Deposits are more or less unchanged at Rs 104.60 crores; the Other Loans and Advances of the Reserve Bank have declined by Rs 1.31 crores to Rs 63.74 crores; and advances against usance bills are placed Rs 2.07 crores lower at Rs 26.78 crores. The inference, apparently, is that the Scheduled Banks have not been able, as they have done in recent weeks, to report a considerable improvement in their cash position.

The last point to note in the Reserve Bank returns is that the decline in foreign balances has tended perceptibly to be smaller since, for the second week in succession, the drain is less than Rs 5 crores. The decline in Balances Held Abroad is only Rs 3.56 crores to Rs 28.23 crores.

The return of the State Bank for September 13 shows that two of the conclusions, arrived at on the basis of the Reserve Bank figures alone, may require modification. Apart from a rise of Rs 2.93 crores to Rs 343.09 crores in Deposits, the most important change in the State Bank figures is a sharp rise of Rs 9.92 crores to Rs 134.51 crores in Investments in gilt-edged. Clearly—or at least apparently—the Reserve Bank has not sold any securities to the State Bank during the week. But it is doubtful in the extreme whether the State Bank could have laid its hands upon Rs 10 crores of gilt-edged in the open market. There is always the possibility that the securities were made available from the cash balances investment accounts; but, also in this respect, we think that this is a doubtful occurrence. What seems much more possible is that, in fact, the State Bank got the securities from the Reserve Bank. But, then, the Reserve Bank's holdings of Rupee Securities should have declined by Rs 10 crores. Since the Rupee Securities are unchanged, we may presume that there has been deficit financing for Rs 10 crores during the week; this would ex-

plain both the source of the State Bank's increase in Investments as well as the maintenance of the Reserve Bank's holding of Rupee Securities at the previous week's figure. Moreover, it also tallies with the generally held view that deficit financing on the part of the Central Government during 1957-58 is tending to be more or less uninterrupted, and is taking place, without break, almost in every week. We would suggest, thus, that a study of the State Bank return would indicate the possibility of deficit financing during the week for an amount around Rs 10 crores.

The new investment of the State Bank has naturally been reflected in a decline in cash balances to Rs 54.94 crores from Rs 62.75 crores. The bulk of this—Rs 6.74 crores—is under the head of "Cash in hand and with the Reserve Bank". If the State Bank ran down its balances with the Reserve Bank by, say, Rs 7 crores, member banks' Reserve Balances should also have shown a fall of this magnitude. But, as we have seen, Deposits of Scheduled Banks with the Reserve Bank were maintained during the week at Rs 104.60 crores. It is clear, consequently, that the decline in the balances of the State Bank has been offset by an increase in the Reserve Balances of the other Scheduled Banks. We would suggest, consequently, that the trend of a week by week improvement in the position of Scheduled Banks continues uninterrupted. Finally, in respect of the State Bank return, Advances are more or less unchanged at Rs 158.10 crores against Rs 158.42 crores.

According to the return of Scheduled Banks for September 6, Deposits show a further rise of Rs 5.35 crores to Rs 1316.21 crores, with Time Liabilities passing the Rs 600 crore mark to be placed at Rs 601.66 crores. We may recall that, in the relevant week, Deposits of the State Bank actually showed a decline of Rs 0.91 crores. Thus, the accretions to the other Scheduled Banks have exceeded Rs 6 crores. At the same time, the total of Advances of the Scheduled Banks has fallen below the Rs 850 crores level, with a drop of Rs 7.82 crores to Rs 847.07 crores. Here, too, it is the other Scheduled Banks which largely account for the decline.

Member banks have taken advantage of this two-fold improvement to effect a sharp reduction in their borrowings from the Reserve Bank, which have fallen by Rs 9.76 crores to Rs 30.51 crores. In spite of this, they have added to their cash balances by Rs 3.41 crores to Rs 181.89 crores. How member banks were enabled so to augment their cash balances, in spite of liquidating a substantial amount of debt to the Reserve Bank, is to be gathered from a study of the figures relating to Investments. It will be seen that Investments of Scheduled Banks have gone down, quite surprisingly, by Rs 5.34 crores to Rs 365.90 crores. How-

How much Inflation is Acceptable?

By PAUL EINZIG

THERE is a growing feeling of fatalism in Britain about the inevitability of continuous inflation. The number of those who believe in the possibility of reversing or even halting the upward trend of prices—apart from temporary reactions—is now negligible. Most politicians, economists and businessmen consider a virtually non-stop secular rise in prices inevitable. What is more, many of them are actually in favour of a slowly rising price level. In some cases this simply means making virtue of necessity, but a growing number of people now believe that moderate inflation is a necessary evil, because it insures against immoderate deflation. The formula that slow inflation is an insurance premium which the community should willingly pay as the price of being safeguarded against slumps is becoming increasingly popular. Indeed it seems that, apart from a few diehard economists, and from recipients of fixed incomes who are doomed to be the main victims of chronic inflation, the inevitability of, or the need for, a slowly rising price level has come to be generally accepted.

Most of those to pronounce themselves in favour of continuous moderate inflation do not dare to commit themselves to a definition of their meaning of "moderate". During the late 'thirties, when the declining trend of the price level was the economists' chief concern, a steady rise at the rate of 3 per cent per annum was looked upon as the ideal state of affairs. The actual rise was much steeper in most countries in the post-war period, and there are indications that the wages spiral is gathering momentum. Few people, even among pensioners and other owners of fixed incomes, would be unwilling today to compromise on the basis of an annual decline of the purchasing power of their incomes by 3 per cent.

Economists who are opposed to inflation would be prepared to accept an annual price increase of 5 per cent as tolerable. Yet it would mean that in 20 years prices would double. The widespread realisation of such prospects would effectively discourage saving. Few people would be keen on abstaining from spending today on the understanding that, as a "reward" of their self-denial, in 20 years' time they would be able to buy half as much as today. Saving would have to assume a form that would protect the savers from the depreciation of the monetary unit. This end could be achieved through the acquisition of goods, but holders would receive no yield and might even have to pay for storage and insurance. Most forms of goods tend to deteriorate, moreover. The alternative would be the acquisition of equities. Not many small savers favour that form of saving, but its popularity is liable to increase in the course of time, though sharp setbacks on the Stock Exchange,

which are bound to occur from time to time, are liable to deter many people.

It seems that a non-stop inflation at the "moderate" rate of 5 per cent would give rise to some very difficult problems, both to investors and to Governments. In reality the assumption that inflation will proceed at no higher rate implies an unwarranted degree of optimism. Judging by the increasing frequency and extent of wages demands, the

chances are that in a few years' time we shall have to look back upon the 'fifties as a period of stability.

The danger of accelerating inflation is duly realised among Socialist politicians in Britain. In public they wholeheartedly support all demands. But in private conversation they share the anxiety of their political opponents about the rising trend of prices, and they fully realise that the rise is due almost entirely to the excessive wages demands of the trade unions. This does not prevent them from opposing any measure that would prevent

or moderate the rise in wages. But off the record they willingly admit that they hope the Conservative Government would break the wages spiral. For if it does not do so, the Socialist Government which is expected to assume office after the next general election will have to assume unpopularity by taking the necessary measures. By that time the annual rise is likely to be well over ten per cent. And while a 5 per cent rise may be regarded as tolerable, a rise of between 10 and 15 per cent would be an intolerable runaway inflation.

World of Business

Investment Pattern of LIC

Mr T. T. Krishnamachari's assertion some weeks ago that he was contemplating inauguration of a statutory investment body to look after and regulate investments of the Life Insurance Corporation took shape with the introduction of a Bill in the Lok Sabha seeking to entrust the work of investment of the Life Insurance Corporation's funds to an investment board.

The Governor of the Reserve Bank will be the Chairman of the Board.

The Bill also provides for the formation of advisory committees in Bombay, Calcutta and Madras to advise the Board on investment problems.

It is freely aired in knowledgeable circles that Mr T. T. Krishnamachari in his last visit to Bombay had the occasion to go into the details of investments of the life fund of the Corporation. For many reasons, he was not entirely satisfied and he felt that the interests of the policyholders will be

best served if a statutory board is formed for purposes of investment leaving, as the statement of objects and reasons of the Bill puts it, the Life Insurance Corporation free "to devote greater attention to its primary task of acquiring new business".

The interim report of the Life Insurance Corporation contains an exposition of the pattern of investment under Government management. The first year could not obviously be a year of any radical departure and hence generally the pattern of company regime was more or less followed. As on 30th June 1957, the total investments of the Corporation aggregated Rs 361.03 crores as against Rs 341.40 crores, as on 31st August 1956, the date prior to the establishment of the Corporation. The following figures in percentages give the investment pattern as on 30th June

1957, the figures in brackets indicating the corresponding percentages as on 31st August 1956:

Government of India securities 47.5 (50.1); foreign Government securities 3.2 (3.3); Indian State Government securities 12.2 (10.2); foreign Provincial Government securities 0.2 (0.2); Government guaranteed and other approved securities 9.0 (9.3); debentures 6.0 (6.0); preference shares 4.1 (3.9); ordinary shares 8.0 (6.9); loans on mortgages of properties 4.0* (4.4); other loans 0.2 (0.2); land and house properties 5.6* (5.5).

It will be noticed from a perusal of the above figures that investments in Central Government securities have declined from 50.1 per cent to 47.5 per cent on 30th June 1957. Investments in State Government securities however, have gone up from 10.2 per cent to 12.2 per cent. The most significant increase was, however, in the sector of ordinary shares where from 6.9 per cent on 31st August 1956 investment has gone up to 8.0 per cent on 30th June 1957. That shows that the Corporation is entering more vigorously the equity market and is possibly breaking new ground by writing new issues.

During the period 1st September 1956 to 30th June 1957 the Corporation has bought Rs 4.16 crores worth of Central Government securities. It bought Rs 9.19 crores worth of State Government securities but sold none. The most noteworthy purchase during the period was Rs 5.67 crores and 6 lakhs worth of ordinary shares underlining the support the Corporation rendered to share market in a particularly difficult period following the Government's fiscal policy.

The present pattern, as already stated, marks no wide deviation from the mode of investment in the company regime.

What shape investments will take under the statutory Investment Board cannot now be said, but it will be worthwhile if attention is drawn to a few fundamentals which guide investment of life fund world over. Since the fund is made of savings of policyholders, it should be treated more than anything as a trust fund. Interest of policyholders will be best served if investment is conditioned by yield and security. Investments thus should earn the maximum consistent with security and whilst fund in the hands of the Government or the Board may be considered secure, ends of justice will not be served if policyholders' money is locked in long term projects in the public sector. In other words, the Board should have the power to resist political pressures and should thus be able under the guidance of zonal Advisory Committees to invest only in shares and projects where safety is combined with quick and maximum return.

*(As on 30th April, 1957).

Electricity is one of the modern marvels we have come to take much for granted. **Electric power** lights our streets, brightens our homes, provides us with transport, and enables us to read, write and work with less strain.

The tiny radio, the swirling fan, **and** giant factories as well—all derive their motivating power from electricity. Power from **Hydel and Thermal** stations turn the wheels of industry faster and faster, producing more goods and creating more employment.

Life Insurance

savings of millions of people are being channelized towards industries vital to the development of the country. The growth of these industries will in turn create a better life not only for the policy-holder but for the country at large. This is the chain reaction of progress; a chain in which the Life Insurance Corporation is proving an important link.

Life Insurance Corporation of India

World of Jute

Squeeze in Sacking

Firm conditions have prevailed in the jute goods market during the past week. It would appear that much of the advance in the price levels has been brought about by speculation. From the smart rise in B Twills (at one time during the week B Twills Ready Rs 119.75) it is clear that there is a squeeze in heavy goods, especially for ready delivery. The sharp decline in stocks of heavy goods with IJMA mills as at the end of August has been mainly responsible for the special attention bestowed by marketmen in this category of goods. Production of sackings during August has been lower at 43,100 tons and in view of the forthcoming holidays output in the current month and the next month is unlikely to show any improvement. It is also evident that despatches of sackings in August has been substantially higher than in July. The trend of shipments so far in the current month is also quite encouraging.

A contributory factor has been the steadiness of the raw jute section, where, in earlier dealings, mills have evinced interest at hardening prices. Presumably, raw jute holders are reluctant to discount rates in view of the smaller arrivals of raw jute during the last month. As against 334,000 bales in July, arrivals in August have amounted to only 304,000 bales. The drop is mainly shared by jute of Indian origin which is placed at 252,000 bales. In the past two months of the new jute year, total arrivals have amounted to 638,000 bales as compared with 729,000 bales in the corresponding period of last year. The decline is due to the smaller arrivals of jute of Indian origin which amounted to only 531,000 bales against 649,000 bales in July-August 1956. A significant development is the increase in the arrivals of Pakistani jute which in July-August 1957 totalled 107,000 bales as compared with 80,000 bales in July-August 1956. It may, however, be noted that the increased arrival of raw jute from Pakistan is presumably due to the attractive low price levels obtaining during the period, especially for cuttings in that country. The decline in the arrivals of jute of Indian origin is to be attributed partly to the delayed harvest and transport difficulties that are usual during this time of the year.

While it is true that the outlook for Sackings has become better than for some considerable time, it is not to be forgotten that unwarrantedly high price levels will invariably result in a renewed bid by substitute packaging materials to make fresh inroads into the natural markets of sacking.

Hessian has also made some headway during the past week along with sackings. In earlier dealings this section ruled quiet as it was reported that burlap consumption in US in August had been disappointingly low. Senti-

ment however considerably revived in later dealings on the report that a sizable business materialised on Russian account. Toward the close of the week prices were fully steady as it was reported that shipping orders so far in the current month had been good.

The jute goods market opened the week on a quiet note in the absence of fresh business. Sentiment had also been depressed by the disappointing burlap consumption figure from US. Hessian 40" x 10 oz opened at Rs 42.20 while the Oct-Dec and Jan-March

positions were placed at Rs 42.37 and Rs 42.00 respectively. In the Sacking section B Twills Ready was quietly steady at Rs 116.75 while Oct-Dec and Jan-March were placed at Rs 115.00 and Rs 113.50 respectively.

Reports of business in hessian with Russia and bear covering pushed up prices on Monday especially in the hessian section where Hessian 40" x 10 oz Ready gained 90 nP to be finally placed at Rs 43.10. B Twills also gained two points to be done at Rs 118.75. Elsewhere Hessian 40" x 10 oz and (Continued on page 582)

[September 21, 1957]

World of Tea

Production and Shipments

DESPITE lower output in North India and Pakistan, the world tea crop, during the current year, is running ahead of last year. In the first seven months of the year, output in North India amounted to only 189.6 million pounds as compared to 207.6 million pounds in the corresponding period of 1956, showing a shortfall of 18 million pounds. The prospects are, that the shortfall may persist in September also in spite of it being a heavy cropping month.

Pakistan's total output at 15.1 million pounds has also disclosed a fall of 5.5 million pounds. But, the total shortfall of 23.5 million pounds in North India and Pakistan is more than offset by the in-

creased production in Ceylon, which has produced a crop of 257.6 million pounds during the period under review as compared to 228.4 million pounds in January/July last year.

The South Indian tea crop, in the first seven months of the current year, at 82.1 million pounds has also shown a rise of 9.4 million pounds. Tea crop in Indonesia, in the first half of 1957, was also higher at 51.6 million pounds as compared to 46.1 million pounds in the corresponding period of 1956.

The trends in the shipment figures have been disturbing due to the fact that exports of India's

principal competitors, notably Ceylon and Indonesia, have been increasing. Shipments of North-East Indian tea, so far this season, are still lagging behind last year. The need to concentrate on regaining the lost markets and creating new ones will, therefore, be obvious.

In this respect, it is encouraging to note that Egypt will import 1,700 tons of Indian tea in the next few weeks to meet the country's immediate demands. Letters of credit have already been opened and arrangements are being made to expedite shipments. The Egyptian Government has now authorised immediate payment to the Indian exporters, who last year had brought into the country one and a half crore rupees worth tea without import licences. After talks between the Indian Embassy at Cairo and the Egyptian Ministry of Supplies, it is agreed that 75 per cent of the price of tea be immediately remitted to India and the remainder be paid after the Ministry has verified the imports.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 63,856 packages. There was a better general demand and more support was forthcoming from internal buyers. "Teas for price" met with fair support and black Fannings in this category were from 2 to 4 nP per pound dearer. Clean Common and Medium descriptions declined by 4 to 6 nP, while Low Mediums with indifferent leaf and ordinary liquors were up to 10 nP easier. CTC Assams were in more demand this week, but at prices which were generally easier by 20 nP. Non-wither Dooars showed a decline of about 10 nP except for the brighter sorts which were steady.

Stylish BPSs were again a strong feature, while Whole Leaf grades were easier by 5 to 10 nP. Tippy sorts were sold well, apart from the OFs which were often 30 to 40 nP easier. Darjeeling teas received fair support, but at prices which tended to be easier. Following rates were quoted:—Clean Black Pekoe Rs 2.16; Plain Broken Pekoe Rs 1.60 to Rs 1.62; Plain Fannings Rs 1.64 to Rs 1.68; Medium BP Rs 1.70; Medium Fannings Rs 1.74; Best Assam CTC BP Rs 3.10 to Rs 3.20 and Best Assam CTC Fannings Rs 3.50 to Rs 4.00.

In the Internal Sale, offerings consisted of 19,511 packages. There was a good general demand, but prices for most descriptions again showed a decline. Commons and Dooars were generally 2 and sometimes 4 nP per pound easier, while Medium Assams of orthodox manufacture declined by 4 and sometimes 6 nP. The best bright liquoring CTC Assams received keen competition and were sold at dearer rates; but the remaining offerings generally declined by 10 nP. Darjeeling teas received good support and were sold well. Following rates were quoted:—Medium Dooars Dust Rs 1.50 to Rs 1.56; Medium Assam Grany Dust Rs 1.54 to Rs 1.58; Medium Assam CTC Dust Rs 2.00 to Rs 2.10 and Best Assam CTC Dust Rs 2.20 to Rs 2.80.

Also, 2,585 packages of Leaf grades were offered for internal consumption. These met with an irregular demand.

In the Export Quota section, rates moved narrowly between 21 and 22 nP per pound and business was reported at these levels. At the close, there were sellers at only 22 nP.

In the Cochin market, offerings were 860,000 pounds. Quality from the Nilgiris showed little change; but, from the lower elevations, an improvement was noticeable. The market opened to a good demand which strengthened as the sale progressed. Enquiry was strong for best Nilgiri teas which were sold at dearer rates, while the lesser sorts were about steady on last levels. Good

CLOSE on the heels of Mr J. R. D. Tata's address to the shareholders of the Tata Iron and Steel Company comes Sir Biren Mookerjee's address to the shareholders of the Indian Iron and Steel Company Limited. Between them, they cover the entire field of problems connected with the production of what is perhaps the core of the Plan. As is well known, the Second Plan's determined bid to lay down the foundations of rapid industrialisation of the country has taken principally the form of attempting a sizeable increase in steel production. This has meant, naturally, the creation of new steel plants in the public sector, plans for which are proceeding apace. There is to be the Rourekela plant with German help, the Bhilai plant with Russian help and Durgapur with the help of the British. In the private sector, the two existing steel producing companies have had a record of such unimpeachable competence that it would have been folly not to have used them to assist Government in their Plans. And, whatever else may be one's grouse about Government's attitude to the so called private sector, Government have shown a commendable freedom from doctrinaire commitments of any sort and have done everything in their power to assist the companies in such matters as underwriting the heavy finance required from international agencies and so on. We thus see the concept of mixed economy working in the sphere of steel production not only in the willingness to let the two sectors have similar and even competitive endeavours but also in the active assistance given by the Government to enable the private sector to do its allotted task fully. This readiness on the part of the Government has been handsomely acknowledged both by Mr Tata and Sir Biren.

And, lastly, in a highly technical and expensive endeavour like that of the production of steel, there cannot be any difference in the modes of production of the public and private sectors. This makes for cooperation rather than conflict between the two sectors in two ways. In the first place, technical processes being alike, and technical expertise being scarce, interchangeability is at once a technical compulsion and advantage. In the second place, this technological identity makes nonsense of petty squabbles over the rival sectors. At that level, it is the cost factor, the efficiency quotient and so forth that form the basis for comparison. Indeed, this technological neutrality, if one may so call it, has already provided instances of cooperation between the private and public sectors in steel production. Readers will be aware of the facilities for preliminary and other training for

steel mill, as the shareholders of TISCO have been told year after year, involves financial commitments of staggering proportions. Moreover, the high degree of foreign exchange content of such financial commitments makes the problem even more difficult especially in the context of the present foreign exchange position. And, as for technical resources, they are scarce even when you reckon it on a world basis. There are only a few countries who have the men competent to deal with the job, and all these countries have their own plans for expansion and are not willing to spare the necessary technical assistance. Here, again, competitive bidding would be ruinous. Thus, what circumscribes the private sector in the matter of further expansion is not Government's desire to curb enterprise, but the inherent limitation of finance and technical resources in endeavours of this magnitude. Thirdly, from the point of view of our needs of steel, there is no point of time in the foreseeable future when there can be, other things permitting it, too much of a competition between the private and public sectors in the production or supply of steel. I do not propose to weary you with the production figures of various countries, but it is well known that our present production of steel is a long way from our increasing needs.

Already, there is a certain friendly rivalry between the two existing companies producing steel and the newer endeavours under Government auspices. Present indications are that the right schedules that both have charted for themselves are better kept by the private sector than by the public sector. Of course, some allowance must be made for the difficulties arising out of starting from scratch, and, in any case, the time to judge finally the performance of the two sectors is yet to come. Meantime, there is considerable thinking by both sectors on the subject of relative cost and so forth, and Sir Biren has some things to say about this aspect of the matter in his address. Such constant comparisons between oneself and the other fellow is of great value in making production more and more efficient.

Bhilai and Rourekela technicians at Jamshedpur. There is also other evidence of the existence of some spirit of technical camaraderie between those who are responsible for Bhilai and Rourekela, on the one hand, and TISCO and IISCO, on the other. A time may come when the "steel interests" may "gang up" together and ask for privileges that other industries in the public and private sectors may resent giving them! In a society bent on industrialisation, it is just possible that steel may sniff at, say, lead, as the base metal! It may not thus be a wholly imaginary fear to think that steel production as such, both in the public and private sectors, may in course of time develop into compact and close knit "vested interest", pitting itself against other productive endeavours. Such a development may not be wholly unwelcome, since it will reduce to absurdity all this talk of private and public sectors and mixed economy will have the chance to establish itself to the advantage of every one in the country. The only factor that will then determine the acceptability of any particular mode of production will be its efficiency; and, from this point of view, the present arrangement of having steel production both in the private and public sectors is an advantage, for, each is keeping the other on its mettle. Already, there is a certain friendly rivalry between the two existing companies producing steel and the newer endeavours under Government auspices. Present indications are that the right schedules that both have charted for themselves are better kept by the private sector than by the public sector. Of course, some allowance must be made for the difficulties arising out of starting from scratch, and, in any case, the time to judge finally the performance of the two sectors is yet to come. Meantime, there is considerable thinking by both sectors on the subject of relative cost and so forth, and Sir Biren has some things to say about this aspect of the matter in his address. Such constant comparisons between oneself and the other fellow is of great value in making production more and more efficient.

If my theory of the likely development of a new "vested interest"

in steel production such as to cut across the sectors is correct, then certain consequential changes in the industrial policy may become inevitable. I touched on this aspect of the matter in my celebrations on Mr Tata's speech two weeks ago. I suggested that there should be interchange of managerial skill and that Government steel mills may with advantage be managed by interests in the private sector. In one sense, in view of the present scarcity of technical skill, a certain amount of living on each other's washing will in any case be inevitable. Thus, it would be sensible to make a virtue of necessity and make the two-way traffic between both easy and, therefore, mutually advantageous.

All this, of course, about the future. But the IISCO shareholder whom Sir Biren addressed the other day was, not unnaturally wholly interested in the immediate question of a return on his investment. Doubtless, his eyes can, in a fine frenzy, roll at the prospect of a bright future for steel in this country and, therefore, for the company. And he may, if he were a wise investor, consider such prospects not wholly unrelated to his self interest, since

Appearances...and a pair of pears

Pears, like appearances, are deceptive. You can't tell their quality by gazing at them. Moral: If you're buying pears, taste them first.

But testing by tasting gets you nowhere if, for instance, you are buying soap. For that (and most packaged goods, too), sensible shoppers have a surer guide to quality: they go by a name they can trust, a brand they have used and found reliable.

For nearly 70 years, people have trusted Hindustan Lever products because their high quality has been unvarying. And they trust because we test.

At Hindustan Lever, we examine all our products at every stage of manufacture. We make sure that they stand up to storage: we 'create climate' in a laboratory to observe them under all weather conditions. We check their performance by using them as you do in the home.

All this means 4,200 tests a week on products like Lifebuoy Soap, Dalta Vanaspati and Gibbs SR Toothpaste—familiar products because they are so widely trusted, and trusted because they are tested.

Hindustan Lever serves the home

HLL 5-X52

possession of a share in such a company is as near a provision against a rainy day as one can think of. But he would be a monster of disinterestedness and foresight, if he did not ask himself the question, when he was going to share a little more of the prosperity the company is currently

enjoying. To those that urge long term considerations on him, in extenuation of his present deprivation, he will legitimately quote Keynes' famous quip about all of us being dead in the long run. On this hardy annual of a question, that is, of dividend, Sir Biren had only the most

exiguous of hopes to offer. It is true that Sir Biren said that the financial position of the company has been "strengthened to such an extent that the stage has now been passed where it could be validly contended that a small increase in the dividend distribution would in any way prejudice

the finance of the cost of the expansion programme or the due repayment of the indebtedness that is being incurred". But these views have not found favour with authority, though there is some room for hope in the way in which its present refusal to countenance higher dividend has been indicated. Government desire that the present restriction should continue till the expansion programmes have been completed. And, though there are two such programmes, one the 1953 Extensions and the other the 1955 Extensions, it is to be hoped that what Government refer to is the first of these, which is expected to be completed in the current year. In that event, there is some room for hope that, with further representation before this year comes to an end, there will be an increase in the return on the investment to the shareholder.

★

One other aspect of the working of IISCO dealt with by Sir Biren needs to be discussed, especially in view of the fact that the identical problem had exercised Mr Tata also. I am referring to the labour problem. It cannot be denied that Mr Tata's revelations about the nefarious activities of Communists at Jamshedpur came as an unpleasant shock to many among the general public. It has been assumed automatically by the public, on the basis of reports of instances of concrete benefits conferred on labour by the cooperation of a responsible labour leadership and a responsive management, that there was no chance of any subversive elements succeeding in upsetting the present cordial relationship. But, apparently, the wiles of Communist subversion are practically endless. Sir Biren also refers to the activities at the IISCO works of a "minority affiliated to a certain political party and activated by the motive of supplanting the recognised labour Union". The technique is too well known to be dealt with at length: illegal strikes, intimidation of peaceful workers and other forms of terrorism, which, in one case, extended, according to Sir Biren, to murder. All this, of course, is of grave import, and authority should take note of the situation and deal with it on the basis of its being the law and order problem number one. It is all very well to talk of coexistence of rival ideologies. It is also a matter for some pride that we are not unduly alarmed by the existence of a Communist government in one of the States. But here is a situation which has all too evidently the hall mark of Communist tactics elsewhere and in other contexts. What is at stake is the whole productive apparatus of one of the commodities considered the core of the Plan. Apart from other considerations, this aspect of the matter should make the Government give the subject the most urgent consideration.

Put **SPEED** in your accounting!

INCREASING business volume and growing competition call for rapid methods of accounting. Today's transactions can't wait till tomorrow to be recorded. Put speed in your accounting! Put COMPTOMETER on the job. This super-fast machine that adds, subtracts, multiplies and divides is designed for accurate, easy, efficient operation.

GREATER SPEED:

Light weight, yet durable metals used in its construction give the lightest, floating touch for super-fast calculation. There are no keys to set, no cranks to turn, no handles to pull and no carriage to shift. Press the keys—and the answer is there!

100% ACCURACY:

To err is human, but the Comptometer is infallible! The Comptometer has a control key which locks the key-board at the point of error... a perfect safeguard for cent percent accuracy!

COMPLETE COMPTOMETER SERVICE

P. N. Ganesan & Sons are equipped to offer you quick, efficient repair and maintenance service. You'll get a spare machine when yours is taken for repairs. They'll train your staff free of charge to become skilled Comptometer operators. Every Comptometer you buy carries with it a guarantee, against any manufacturing defect, for one year.

Write today to any of our following offices:

Gateway Gossip

High Strategy

BOMBAY'S financial circles, particularly those connected with the Stock Exchange, are puzzled, confused, and if that were feasible, more depression minded than ever before, by the spate of pronouncements flowing from New Delhi with respect to the resources—rather, the inadequacy of resources—needed for the fulfilment of the Second Plan. It has been known, for over a year, that considerable strain will be imposed on this country to find the internal, and the external, financial requirements on the needed scale and at the needed time; but, while it was realised that the situation in the next three or four years would be very difficult, it was generally believed that it was by no means desperate. Do the pronouncements of the last few weeks add up to an official estimation of the emergence of a desperate plight?

In the framing and executing of a Plan under democratic auspices and through democratic processes, the Government must needs take the public along with them. Which means a measure of public, and necessarily controversial, discussion of the pros and cons of the projects embraced in the Plan. But, the current uneasiness arises from overdone reiteration which has had the effect of foisting popular attention exclusively on the obstacles in the way. Forgotten is the First Plan's accomplishment. The same amount of reassurance is no longer provided by the proud record that, in most respects, the First Plan's targets have not only been attained, but surpassed. The confidence which was thus evoked among the population and the courage which was thus inspired among the authorities charged with the Plan's destiny appear to be but a dim memory.

There is, therefore, need to recapture the courage and reestablish the confidence. With the Parliament in recess, and with the Finance Minister expected to be away till the end of October, it may be hoped that speeches and statements calculated to dampen, instead of warming, spirits will be few and far between.

The interregnum should also be utilised in freeing the fundamental issues from the mass of irrelevant details, and thereby to evolve a pattern of public opinion which, while avoiding an ostrich-like attitude, will also reflect the nation's resolve to meet this challenge to its character, confidence and courage. The Plan's success depends to a little, though a vital, extent

on foreign help, and to an overwhelming extent on self-help.

It is in this context that we have to set in its proper perspective the mission on which Mr T. T. Krishnamachari has embarked. It is strangely paradoxical that the Birla Delegation, which has chronologically started discussions in America in advance of the forthcoming visit of the Finance Minister, should have been pressing a point of view that is somewhat at variance from what would appear to be the official sentiment in this matter. What time Mr Birla was saying in New York that the Second Plan faced failure, unless India obtained a loan of half a billion dollars from America, TTK has been displaying by no means the same defeatist or mendicant attitude. Indeed, while the Finance Minister put down the maximum amount of foreign exchange necessary to see through the Second Plan at Rs 700 crores, he also mentioned that India's minimum requirements were nil. On the

face of it, this would indicate that Mr Birla is speaking off his own bat, and that he most certainly does not represent the Indian Government viewpoint. For, it seems to me that we would be quite unable to reconcile the two statements.

But it is known that the Birla Delegation has ventured out with the full blessings of the Indian Government; and it can be taken as certain that the Delegation will have been briefed as to the official Indian attitude. So, we have to see whether there could have been a particular reason for the diffidence that has coloured Mr Birla's remarks.

I am disposed to think that high strategy is involved in a number of seemingly unconnected developments, some of which indeed appear to be contradictory. For example, the Reserve Bank Rate was raised earlier this year, and the Centre's New Loan conformed with such higher Bank Rate; but Mr Krishnamachari, scarcely a month ago, said in Parliament that he did not believe high Bank Rate to be a weapon that could be successfully

utilised in combating inflation, adding that the investor might even be harmed by such successive increase in interest offered on loans.

Secondly, for the first time as I remember it, the Reserve Bank has, with an ostensible show of independence, proceeded to criticise, although gently, the magnitude of the endeavours envisaged in the Second Plan; and, concurrently, New Delhi was talking in terms of an improvement in Indian economic conditions. Thirdly, as I have already reported, the picture painted by Mr Birla is woefully bleak, and an improvement in prospects is tied up by him with a flow of US aid; across the world, both the Prime Minister and the Finance Minister were decrying defeatism of this nature and, both explicitly and implicitly, iterated their confidence in India's ability, if it came to that, to do without foreign aid.

I should say that all these represent strategy on the part of the Indian Government to make out a case, on the one hand, for the quite

Bombay Review

Role of UNO

Speaking in Bombay last week, Mr V. K. Krishna Menon, Union Minister for Defence, said that the fact that the ideals of the UNO had neither been cherished nor implemented so far should not make people pessimistic about the future of the world. Sooner or later, facts would compel attention and once the world had fully awakened to the realities of the situation, the UNO would find many obstacles in its way toward the establishment of peace in the world.

By far the most powerful deterrent to another world conflagration is the realisation among the major powers that an armed conflict now would result in the total disappearance of civilisation. The paradox of the continuance of production of deadly weapons while the big Powers are quite eager to discuss about ways and means of stopping war will become intelligible when the situation obtaining in the world at the present juncture is clearly understood. There is every reason to think that a large majority of the world's population abhors war. But the powers-that-be in the big countries, for want of mutual confidence have deemed it necessary to ensure that they are not caught napping should there be a war. Such fears and the consequent armaments race are extremely unfortunate for the world at large. The war-like preparations in this nuclear age should not be allowed to continue any longer. The stoppage of production of the horrible weapons is primarily in the interests of the people who are now in the forefront in the race.

Mr Menon has pointed out that the feverish armaments race should not blind one to the fact that the disarmament talks are quite sincere. By the same token it will be folly to dub this or that country as a war-monger. Under the circumstances, the UNO is the only available and capable agency which can help bring about mutual understanding among the big powers. Once the UNO succeeds in establishing this unity, it will be comparatively a simple matter to create conditions which will lead to disarmament.

Apart from endeavouring to bring about greater cooperation among nations, the UNO has also to bestow its serious and urgent attention on the emancipation of the people of Africa. This objective will be largely fulfilled if the remaining African nations are also allowed to take part in the deliberations of the UNO. The third task to be tackled is the poverty in the midst of plenty as far as

food is concerned. Strictly speaking the solution for this problem will automatically follow the establishment of close cooperation between the various nations.

Co-operative Farming

ONE of the factors that govern agricultural productivity is the organisational and institutional set up that surround the various operations and activities connected with agriculture. In India, where agriculture still runs in the old ruts of unorganised individualistic endeavour, on absolutely uneconomic and small pieces of land, the whole question of improving agricultural productivity can be identified with that of introducing a new norm on the basis of which a new organisational structure can be erected. The cooperative principle has been held up as the point towards which the anarchist elements of our agriculture could be made to gravitate and merge themselves so as to supply the vitalities needed for rejuvenating agriculture. The cooperative movement had made its start in India since decades back. But the movement towards organising the peasants on this basis has made only little headway. It has been practically confined to credit. And even in the restricted field, the movement has only touched a tiny portion of the peasant community and has to accomplish much.

Though attempts have been made to extend the cooperative form of organisation to cover other fields of agricultural activities, the experience has been by no means

encouraging. But this does not argue for scraping the very principle of cooperation, but only to spread it in a process which would be gradual so that the minds of the cultivators would have been in the meantime prepared to receive it voluntarily.

The difference in the agricultural productivity of India and other countries of the west, is, in a sense a question of the relative successes of the cooperative movement in the two areas. And if this difference is to be made up, we have to proceed the same path trodden elsewhere in the world. It was this point, which Mr P. M. Chengappa, Principal of the Co-operative Training College Poona, tried to bring home, when he addressed a meeting in Poona.

Mr Chegappa, who had just returned after a study tour of the farming conditions in USA and other countries of Western Europe, said that there were huge co-operatives in USA to look to the credit needs, both short-term and long term of farmers. It was further pointed out that the cooperatives which are now farmer-owned were started with the capital subscribed by the Government. And if they are now farmer-owned, it speaks volumes for the potentialities of cooperative movement. In other countries which he visited the progress of the cooperative movement has been no less remarkable.

The experience of these countries should inspire us to greater efforts in the direction of cooperation. The movement is by no means lacking in official encouragement. The National Development Council which met last week in Delhi has endorsed the principle of cooperative farming on a voluntary basis.

GATEWAY MARKETS

Silver Firm: Gold Subdued

THE Silver section of the Bombay Bullion market has presented a firm front. The general feeling in this section is, that the pace of demand will continue to be good during the current fortnight in line with the last year's experience and that the pull of pre-Diwali demand will be felt thereafter. The upward trend in prices is also helped by rumours that Tibet is likely to impose an excise duty on silver coins. The latest Syrian situation has also lent some strength to the market.

Although price movements are rather erratic, the silver section, on the whole, has scored substan-

tial gains on balance following the uncertain political situation in the Middle East. Asho delivery changed hands at Rs 184-14 to Rs 186, while Kartak delivery was negotiated at Rs 185-44 to Rs 186-81. Ready was done at Rs 185 to Rs 185-19.

In contrast to the sharp rise in silver, Gold has remained subdued with the market lacking support at higher levels. While the recent demand for spot gold has been relatively small, there are hopes that the pre-Puja buying by Calcutta will help the situation. But, traders are reluctant to go long only on the strength of this

factor in view of the increase in the inflow of the smuggled metal. Asho delivery moved between Rs 107-87 and Rs 108-37. Spot delivery changed hands at Rs 107-25 to Rs 107-75. Sovereign ruled quiet at Rs 70.25.

Oils & Oilseeds

Trading in the Oilseeds section was dominated by weather reports with Castorseeds leading the upward movement. In line with the usual experience, Castorseed futures continued to provide a visible indication of the market sentiment. Early in the week, the section encountered heavy short-covering; but failed to hold top marks on appearance of profit-taking following talks of Brazilian offerings at comparatively lower rates on the American market. Castor May delivery opened at Rs 149.50 and, after touching a high of Rs 150.75, receded to Rs 148.50, to improve again at the close to Rs 151. Ready was quoted at Rs 33.50 and Castor Oil, commercial quality, at Rs 19.62.

Groundnuts continued to be supported by upcountry reports of dry weather conditions in the producing tracts. February delivery opened at Rs 147.25 and, after touching a high of Rs 147.62, receded to Rs 147.12, to improve again at the close to Rs 148.25. Ready Bold was quoted at Rs 31.82 and Groundnut Oil at Rs 18.50 per quarter.

Trading in the Linseed section was influenced more by the export prospects for linseed oil than by weather reports from growing areas. The rally in the UK rate for oil from £96 to £103 per ton induced hopes that Indian oil might attract overseas demand. September delivery started at Rs 28.37 and, after touching a high of Rs 28.56, finished the week at Rs 28.44. In the ready section, the rate was quoted at Rs 28.25 and Linseed Oil at Rs 15.00.

Metals

The market for Non-Ferrous Metals, which had been ruling weak during the past three weeks, took a slight turn for the better, thanks to higher overseas advices and the uncertain political situation. Copper ready was quoted at Rs 165 per cwt as against Rs 155 in the previous week. The main factor, that helped the improvement in prices, was the continuous buying by consumers. There was good demand for Zinc, which ruled steady at Rs 68. It was reported that the present holdings of the metal by traders were of a higher price. Trading in the Lead section was dull and featureless, the rate

(Continued on page 582)

World of Cotton

Irregular Trend in Prices

PRICE movements in the Cotton futures market were rather irregular and the close for the week indicated mild losses on balance due to the predominance of sellers. Sentiment was mainly influenced by mills' anxiety over growing accumulation of cloth and the changes in weather reports.

The damage to the crop, if any, will be known after some days. Reports from upcountry indicate that the fears of damage are rather exaggerated. A good crop is now expected from every State although the marketing season will be delayed by about three weeks. Arrivals are reported to have already begun in the Punjab, while sowings of Luxmi and Jaydhar varieties have commenced in Karnatak and Andhra.

With about six weeks left for the movement of the new crop, mills and traders are naturally busy with the preliminary arrangements; but they are all handicapped by the financial stringency. The accumulation of cloth stocks and the refusal of the Commerce Minister to reduce the excise duty on cloth have also compelled the industry to take a cautious view of its purchases of the raw material.

According to official statistics, Indian mills have consumed 42.89 lakh bales of Indian cotton and 5.21 lakh bales of imported growths during the eleven months ending 31st July, 1957. During the same period last year, consumption was 39.35 lakhs bales of Indian cotton and 5.54 lakh bales of foreign cotton. The total consumption for the 1956-57 season is estimated at over 52 lakh bales.

FUTURES MARKET:

As mentioned earlier, the cotton futures market fluctuated irregularly. After a higher opening reflecting the strength of oilseeds, values declined following rumours that a few mills were inclined to dispose of accumulated stocks at reduced prices. The turnover was 15,000 bales. ICC Jharilla opened at Rs 681 and, after touching a high of Rs 682, receded gradually to Rs 668.50, to improve towards the close to Rs 674.75.

SOUTH EASTERN RAILWAY

Extension of Opening Date of Tender

The opening date of Tender No. S-236(S)3 for sale of packing and scrap wood at Wagon Erection Plant, Waltair is changed from 12 noon on 20-9-57 to 12 noon on 11-10-57.

S69 GENERAL MANAGER

SPOT MARKET:

The Spot market was quieter although the price pattern remained unchanged. The accumulation of stocks with the mills continued to act as a restraining influence. Some business was reported done in the Punjab cotton at lower prices.

In the foreign section, Ahmedabad mills were interested in spot lots of Americans at 50 points below the replacement cost. Spot lots of East African varieties and Karnak were also sought after.

For administrative reasons, the Government of India have decided to extend issuance of import licences for US cotton against trade notice 48-57, covered by US Public Law 665, by three months to the end of December. Meanwhile, revision of the estimate of the statistical position of United States cotton is more than likely in view of the upward revision of the crop.

According to the Bureau of Agricultural Economics, the total supply in the United States, this season, amounts to some 24.1 million bales as compared with 27.8 million bales in 1956-57. This reduction is smaller than was considered probable two or three months ago. There may be, at the end of this season, some further reduction in the carry-over. But, on present indications, it can be only slight—perhaps one million bales or so—whereas during 1956-57 the carry-over was reduced by some 3.1 million bales.

STATISTICS:

Exports of cotton by rail from 1st to 12th September 1957 were 14.138 lakh bales. Estimated mill consumption in Bombay, during the same period, was 43,992 bales as compared to 43,500 bales in the corresponding period last year. Estimated stock of raw cotton, held by exporters, dealers and mills, in Bombay on the 12th September was 4.11 lakh bales as against 5.90 lakh bales on the corresponding date last year.

NEW YORK COTTON MARKET:

Initially, values on the New York cotton futures market edged higher as scattered trade and commission house buying along with some short-covering found little hedge offerings. Part of the demand was evidently prompted by showery conditions over the eastern half of the main cotton belt, which are considered unfavourable for cotton at present. Gains in nearby October delivery were, however, held in check by light liquidation prior to the first notice day—September 24. Middling Spot was quoted at 34.65 cents per pound.

LIVERPOOL COTTON MARKET:

On the Liverpool cotton futures market, the near positions of both

contracts showed further improvement with renewed covering by shorts and some trade buying. Selling and buying orders were about balanced and the market closed steady.

CLOTH AND PIECEGOODS:

The market for Cotton Piecegoods presented a better front. Dealers reported a larger turnover, particularly in fine and superfine varieties. The price trends, however, remained unchanged. Hopes were entertained that the offtake would broaden further in the coming weeks.

Although conditions have been better than what they were some time ago, yet they were much below the expectation of the pre-festive season. This is largely attributed to

the disappointment over the scaling down of the excise duties which trade hoped for and also the postponement of introduction of legislation for the amalgamation of Sales Tax on cloth with excise duty. On balance, the price structure of cloth is still well maintained on hopes of a better turnover in the near future and the unwillingness on the part of the industry to book business at lower prices. Consuming centres are, on the other hand, are still in a "wait and watch" attitude.

Conditions on the export front are also slightly better. Sudan is reported to have evinced interest, while fair business is reported to have been done with Indonesia. Inquiries from Burma are likely to broaden in the near future.

Reshaping the Plan

INITIATING the discussion on the Plan in the Lok Sabha last week, Mr Gulzarilal Nanda gave some indication of the way the mind of authority was working on the subject of the prospects of the Second Plan. Later in the week, at the meeting of the Standing Committee of the National Development Council, further elucidation on the subject was available from the speeches of the Prime Minister and the Finance Minister. It is now clear that Government have decided to make suitable modifications of the tasks planned for originally and that the precise shape of the changes was being studied at the moment. But what constitutes the "core of the Plan", which will have to be carried out in any event, and in what directions the rephasing and reordering of priorities will be attempted, will have to await the Finance Minister's return from his tour abroad. Meantime, the only thing that seems to be clear is that this rephasing does not mean any possibility of relaxation of effort in mobilising either internal or external resources. For, it has been

made clear that, even after pruning some portions of the Plan and postponing certain projects originally provided for, the financial outlay will still remain what was planned for originally. Thus, owing to circumstances over which we have not wholly had control, the cost of the Plan has gone up by about Rs 600 crores to Rs 700 crores. So, the original effort planned for a larger number of physical targets has now, heart-breakingly, to be made for a less number of things.

Mr Nanda gave detailed reasons for this state of affairs. Dealing with the relative difficulties encountered by the First and the Second Plans, Mr Nanda made the point that the tasks of the First Plan were comparatively unambitious, that fortuitous circumstances like good monsoons and large unused idle capacity brought into work and relatively small consumption made it possible for us not to feel strain. The Second Plan, on the other hand, as originally conceived, attempted to stretch the economy to a length that will bear some relation to the

crying need of development of our resources for the provisions of the simplest needs of our people. But, almost as soon it started, it has had to weather various difficulties. Some, like the Suez crisis and a steadily increasing pressure of world inflationary forces, has pushed up the cost of the Plan, especially of its foreign exchange component. Internally, the steadily worsening inflationary pressure on the economy has been mainly due to inadequacy of domestic agricultural production. Though the production of foodgrains in 1956-57 has shown an increase over that of the preceding year, it has just caught up with the record year of 1953-54 and is nowhere near the optimum needed for putting down prices in a period of mounting investment. Since, even after rephasing, the Plan will have to sustain an investment in financial terms of the same order as originally planned, the principal task of the strategists of the Plan will still be to increase food production on a really massive scale.

Discussing the outlay on the Plan as revised, Mr Nanda said that, on the basis of the Budget figures for 1956-57 and 1957-58, the total investment for the first two years of the Plan will be of the order of Rs 1,580 crores. Taking into account the taxation proposals for 1957-58, which are expected to yield in a full year an additional Rs 100 crores, deficit financing in the year 1957-58 will be Rs 275 crores. (Mr Nanda thinks that the budgeted figures, both of the States and of the Centre, of both investment and deficit financing—Rs 965 crores and Rs 400 crores respectively—will turn out to be over-estimates). Mr Nanda's estimate of the investment in the remaining three years is Rs 3,300 crores, which makes the total investment in the Plan slightly over the original figure of Rs 4,800 crores. As stated earlier, this will produce physical results of an order much less impressive than was originally hoped for.

But, according to Mr Nanda, even this outlay will be feasible only on certain assumptions. And these are "that States will make a substantial tax effort; that the receipts from loans and small savings would, in spite of present unfavourable trends, come up more or less to the initial expectations; that deficit financing of the order of Rs 1,000 crores (as compared to that of Rs 1,200 crores in the Plan) would be feasible; and, finally, that external assistance for the Plan in the public sector would be available to the extent of Rs 1,000 crores (as compared to Rs 800 crores in the Plan)".

One need not seriously quarrel with Mr Nanda's listing of the conditions for achieving the financial targets of the Plan. But one may like to ask him whether Government have seriously considered the details of the strategy that will make possible the realisation of the conditions he lists. Take the question of tax effort. It is a fact that, except for the Centre, which alone does not seem to be afraid of courting unpopularity, none has made the necessary effort to raise further resources by way of taxes, and the States are still budgeting for deficits. As for the Centre, it must be admitted that its record in this regard is quite commensurate with its earnestness about the Plan. Parliament has just completed putting its seal of approval on Expenditure Tax and Wealth Tax and increased levy of income tax and a wide variety of excise levies. The only suggestion that one can offer the Centre in the matter of tax effort is that it should tackle the question of evasion with greater resoluteness and greater ruthlessness.

But, on the question of borrowing, on the dismal record of which Mr Nanda spoke so lugubriously, it is time that Government gave the most serious consideration to strategy. This journal has not made a secret of the fact that it considers the borrowing policy of the last six years as one least designed to achieve what the Plan requires of it. Year after year, Government have gone to the market with great trepidation and asked for loans on the assumption

University Education

THE financial difficulties that are being experienced at present in the execution of the Second Five Year Plan have underlined the necessity to view the Plan in terms of a proper system of priorities. This can be overlooked only at the cost of lop-sidedness and at the sacrifice of certain aspects of development which have a long term significance. Education, especially university education is one such. Since the fruits of education might be ready for reaping only after the lapse of a comparatively longer time than is true in certain other fields of productive activity, the temptation might become irresistible to put the axe on this.

Naturally the financial difficulties have posed a problem to Mr C. D. Deshmukh, Chairman of the University Grants Commission. Speaking at Delhi Mr Deshmukh pointed to the financial "rough weather" into which the Second Plan has run and saw in this signs that herald the scaling down of the Plan allocations from the original level. The statements occasionally made in high quarters about cutting marginal frills of expenditure have gone to confirm such expectations. This has left Mr Deshmukh a bit uncertain about the likely allocations that would be made for developing university education. All the same he hoped that education would be spared the prospects of having to go without the full funds already earmarked for it.

The provision for education in the Second Five Year Plan comes to about Rs 57 crores and this no doubt compares favourably with that made in the First Plan which amounted to only Rs 27 crores. But in terms of what the Education Commission hoped for, even the increased provision made under the Second Plan is absolutely insufficient. The Education Commission recommended an amount of expenditure is Rs 10 crores per annum for a number of students which was one-third of what it is to-day. This means that the education authorities would have to shift themselves with the same amount of money but with a student population whose number has been steeply on the ascendant. Thus there is not only no reason for cutting expenditure on education but more justification for raising it.

How meagre even the existing allocations are, would be evident from a comparison of the expenditure on university education per student in India and England. While in U.K. the expenditure per student per annum is about Rs

5000 in India the figure is only Rs 500. Any pruning of expenditure on education would certainly widen this gap.

The exact impact of the present shortage of resources, would be on improvement of student accommodation as well as teachers' salaries in the affiliated colleges attached to the various universities. There is also a latent danger of the study of humanities and pure and applied sciences being neglected in the process of meeting the clamant needs of higher scientific and technological personnel.

Progress of P & T

The last year of the First Plan has witnessed considerable expansion in the activities of the Post and Telegraphs Department. During 1955-56, all branches, postal, telegraph, telephone and wireless services have recorded around increase in the volume of traffic. The number of post offices has risen from 49,790 at the beginning of the year to 55,042, thus exceeding the target set for the Department under the First Plan. The number of telephone exchanges is placed at 5,830 as against 5,049 at the beginning of the year. The increase in the number of telegraph offices has been quite impressive having been placed at the end of the year at 9,893 against 8,792 at the beginning.

A significant development during the year is the increased postal

facilities made available to the rural areas. It is in the fitness of things that every Government department connected with expansion and development work should bestow more and more attention on the needs of the rural population. It is gratifying to note, therefore, that out of the total of 5,795 new post offices opened during the year, as many as 5,472 or 94.4 per cent have been located in the rural areas. The need for speeding up the transmission of mails in the urban areas has also received due attention as is evident from the fact that airmail routes have been increased by more than 1700 miles. The total number of telephones in the country has increased from 2,47,000 to 2,78,000. A 9.5 per cent rise is recorded by radio receiver licences which are placed at 10,95,571 as against 10,00,880 in 1954-55.

The Annual Report of the P & T Department for 1955-56 just released points out that for the first time in eight years, the Postal branch has recorded a surplus. While the telephone branch has substantially increased its profits to Rs 410 lakhs, the Telegraph side has further increased its loss to Rs 62 lakhs. The increasing efficiency of the telegraph service, however, is evident from the continued downward trend in the percentage of express telegrams booked. The report points out that copper wire thefts have continued to be a major obstruction in further speeding up telegraph and telephone services.

NORTH INDIAN MARKETS

Sugar Depressed

THANKS to the easy supply position following the recent release of 1.70 lakh tons for free sale and the bleak prospects for exports, Sugar markets have continued to remain depressed. Many mills are now reported to have turned sellers. These mills have been holding substantial quantities of unsold released quotas. Consequently, the ex-mill quotation have declined by a rupee per bag, with buyers hesitant to enter into substantial commitments. Weak advices from other commodity markets and reports of the banks having advised their clients in the mofussil to tighten advances against sugar stocks by the end of this month, have also acted as dampers.

Following mill-delivery rates (per maund) are quoted in the Hapur market:—Meerut (D/28) Rs 33.44; Simbhauli (E/29) Rs 33.62; Daurala (B/29) Rs 34.62; Shamil

(C/29) Rs 33.75; Amroha (D/29) Rs 32.50; Bijnore (E/29) Rs 32.50 and Mansoorpur (B/29) Rs 34.37.

In the Kanpur market, prices have shown a persistently downward trend, thanks to heavy arrivals and traders' anxiety to dispose of their stocks.

In the Meerut market, sentiment continues to remain depressed. Demand is negligible. Prices of each grade has softened fractionally; but the undertone remains firm in anticipation of good demand after the rainy season. Bold quality is quoted at Rs 35; Medium at Rs 34.25 and small again at Rs 33.25.

The Khandsari market, however, rules quietly steady due to good demand. Production in some centres still continues from gur. Prevailing rates are Rs 29 to Rs 32.50 per maund, according to quality.

Meanwhile, production of indigenous sugar amounts to 20.21 lakh

tons up to August 21, 1957 in the current season as against 18.56 lakh tons in the corresponding period of last season. Total offtake, including quantities despatched for exports, is 18 lakh tons. Stocks with the factories, as on the 31st August 1957, stood at 7.54 lakh tons.

Gur

The Hapur Gur market ruled quiet. Stocks were put at 27,500 maunds. Demand from the consuming centres of the South was slack as arrivals of new gur are increasing in some of the producing centres in the South. Prevailing prices are Rs 11.25 to Rs 12.37 per maund, according to quality.

Arrivals of gur in Meerut are negligible due to widespread rains in the district. Stocks with the traders are depleted.

Foodgrains

Grain prices have tended to remain low in North India and elsewhere under the impact of credit squeeze and other Government measures like requisitioning of stocks. But, there is a definite shift in sentiment from cheerful optimism, which marked the trading in recent weeks, to one of caution. Whether there will be a recovery at this level, however, remains to be seen.

The recent spell of heavy rains and consequent floods in some rivers have led to fears of a substantial damage to the standing "kharif" crops in North India. According to reports, maize, jowar and bajra crops have been damaged to the extent of 10 per cent and 15 per cent in the Punjab and Uttar Pradesh. Prospects for the Guwar crop in Rajasthan are not considered bright on account of the dry weather, while the crop in Bihar has been damaged due to hail-storm.

In the Hapur market, Wheat prices remain mostly unchanged. Consumers' demand is mostly met from stocks. Rice prices have ruled quiet; and the standing paddy crops are reported to have improved much due to good rains in the last fortnight. The market for Gram rules quiet following heavy arrivals from the Punjab. Arrivals of the new maize have been delayed due to rains. Barely and Bejher prices remain unchanged.

Due to slight fall in prices in the consuming centres of Madras, Bihar and East Uttar Pradesh and loading restrictions to some areas, Peas prices have declined fractionally. The market for Arhar continues to remain depressed as outside demand is dormant, while stocks in all centres are reported to be heavy. Urad and Moong have lost Re 1 per maund due to increased arrivals of the new crop.

The Peninsula

Land Reform in Mysore

THE Mysore Tenancy and Agricultural Land Laws Committee in its report just submitted to the State Government has closely followed the main lines delineated by the Planning Commission. The committee has addressed itself to the twin objective of elimination of landlord-tenant relationship and redistribution, as far as practicable, of land to landless agricultural labourers. A number of recommendations have been made with regard to the determination of the exact relationship between existing tenants and landlords, ceilings on holdings, quantum of rent and allotment of surplus lands. The term "personal cultivation", the ambiguity about which, according to the Planning Commission, has been mainly responsible for the slow progress of land reform in the country, has been clearly defined. Suitable measures have been suggested for dealing effectively with all possible difficulties which may arise in implementing the recommendations. The most important of these is the suggestion regarding the setting up of a commission to be called the "Land Commission" which will deal with all outstanding problems that may be encountered from time to time. Land Tribunals and a full time appellate authority have been envisaged to

ensure expeditious disposal of tenancy disputes.

The urgent need for land reform in the country has been emphasised in the First Plan itself, but progress in this direction in the last five, six years has been largely confined to adjustments in the relations between landowners and tenants. Transfer of rights of ownership of land to the actual tillers of the soil is still moving at a snail's pace. Again, the economic position of landless labourers continues to be as uncertain as heretofore. Cooperative farming and cooperative village management, the bulwarks of village reorganisation, are yet to be attempted on a measurable scale.

It has been found that the main deterrent to the rapid progress toward the objective of a rural structure based on peasant owners is the absence of a clear-cut definition of the term "personal cultivation". The Second Plan has, therefore, suggested that in legislation relating to tenancy reform, this expression should be defined so as to provide for the entire risk of cultivation borne by the owner and personal supervision must be made to include supervision by the owner or by a member of his family, provided it is accompanied by residence in the village or in a

nearby village during the greater part of the agricultural season. The Plan has made it clear that it is necessary to insist on personal labour in the main agricultural operations. The limit of the area that can be resumed for personal cultivation and ceilings on holdings have also been indicated.

The task of the Mysore Tenancy and Agricultural Land Laws Committee has been very much simplified by the fact that Mysore is one of the few States in the country where the agricultural economy already "largely approaches the ideal of peasant proprietorships". Nearly 72 per cent of the people working on lands own their lands while the landless labourers account for only 28 per cent. About 99.44 per cent of the holdings comprising 89.80 per cent of the area do not exceed 100 acres. The total number comprising the rentier class and persons with large holdings is only 3.4 per cent of the population with the tenant class accounting for 9.3 per cent.

On the question of definition of the term "personal cultivation", the Committee has deemed it unnecessary to insist on personal labour so long as the entire risk of cultivation is borne by the owner and personal supervision is exercised by the owner or by a member of the family residing within the greater part of the cultivating season in the village where the

land is situated or in a nearby place. It is stipulated that the place of residence should not be more than 10 miles distant from the land. In case there is no inhabited village within this distance, the place of residence should be in the nearest habitated village.

The next point to be settled is the extent of the land that can be allowed to be owned by each cultivator. Two categories, basic and family holdings, are mentioned. A basic holding is defined as an extent of land giving a net income of Rs 400 per year to its owner-cultivator and a family holding is an extent of land giving a net income of Rs 1,200 per annum. This is in accordance with the Second Plan definition of a family holding. The exact areas of these two categories of holdings are to be determined by the proposed Land Commission.

The committee has recommended the adoption of the limits laid down by the First Five Year Plan in regard to the quantum of rent. The maximum rent is to be a fourth of the produce in the case of land having assured irrigation facilities and a fifth of the produce in other cases, the assessment and other Government dues being paid by the landlord.

As regards ceilings on agricultural holdings, the Committee has recommended that the Hyderabad pattern may be followed. Accord-

September 21, 1957]

INDIAN FINANCE

569

ingly, the ceiling on existing holdings under personal cultivation may be 4½ family holdings (Rs 5,400 in terms of agricultural income) as against three family holdings for future acquisition. The ceiling is allowed to be doubled where a family consists of more than five members. The Second Plan has suggested that where the number of members in a family exceeds five, the ceiling may extend to a maximum of six family holdings. As regards the categories of cultivation which should be exempted from ceiling, the Committee's recommendations are identical with those of the Second Plan except in regard to plantations. The Committee has recommended that existing coffee and tea estates as on January 1957, may be exempted from the operation of the ceiling. The estates actually come under the purview of the last of the three exempted categories which refers to efficiently managed farms which consist of compact blocks on which heavy investment or permanent structural improvements have been made and whose break-up is likely to lead to fall in production. The work of determining the estates coming under this category has been left to the Land Commission. Whereas the Second Plan has not made any specific recommendations as regards the farms owned by sugar factories, the Committee has expressed the opinion that no sugar factory should own more than a sixth of the area required to feed it. Cooperative sugar factories which take land from members on lease, are however, exempted from the ceiling.

In the matter of determining the status of the tenant after and in the settlement of lands acquired in consequence of, the application of ceilings, the Committee has made a departure from the suggestions of Second Plan. It is not in favour of the non-land-owning agricultural labourers becoming tenants of Government. In view of the urgent need for terminating the tenant-landlord relationship it has been suggested that the tenants should be given encouragement to acquire ownership rights as quickly as possible. The tenants may have the option to pay this to the Government either in one lump sum or in equated instalments over a period of 20 years at interest at 4½ per cent. The compensation to be given to landowners for the lands acquired from them is to be computed on the basis of the rent the landlord would get. The committee has rightly pointed out that this is the most satisfactory basis and suggests that the compensation shall be equal to 15 times the fair rent less land revenue. It is pointed out that such an arrangement has the advantage of not placing a heavy burden on the new owners who will have to pay the money ultimately. It is calculated that the annual instalment together with the land revenue will be only 8½ per cent more than the fair rent. This, in the opinion of the

Committee, will not be unduly onerous for the tenant. A distinction is made in the case of permanent tenants under any law in force on November 1, 1956. In their case ownership of their lands can be acquired by paying only 8 times the fair rent. As for payment of compensation to owners, the Committee has suggested two categories. Where the extent taken is within the basic holding, compensation should be paid immediately. In other cases, payment is to be made by instalments not exceeding 20 with interest, if the owner agrees to receive in instalments; otherwise the compensation should be in the shape of

negotiable bonds carrying interest at 4½ per cent which will be redeemable over a period of 20 years. In the case of personally cultivated land, the compensation is to be computed taking net income as half the average produce for lands with assured irrigation and one-third the average gross produce for other lands. For grazing lands or uncultivated lands the compensation is to be 25 times the assessment. It has been recommended that the allottees of the acquired land may be allowed to pay the cost of the land and interest to Government in annual instalments not exceeding 15 or in a lump.

★

WORLD OF TEA

(Continued from page 560)

Mediums were well supported, Broken selling at fully firm rates. Medium, Low Medium and Low-grown Broken advanced by 5 to 8 nP and their Fannings by 8 to 12 nP.

Black Leaf BOP's again met with keen competition and advanced up to 5 nP, while similar Fannings were sold at around last levels. High-grown Whole Leaf grades were generally sold well,

but all others eased up to 5 nP. Following rates were quoted:— Plain BP Rs 1.40; Low Medium BOP Rs 1.60; Medium BOP Rs 1.75; Good BOP Rs 2.00 and well-made OP Rs 2.45.

In the Colombo market, offerings totalled 6,467,827 pounds. Good general demand prevailed with the UK buyers active. Best Uvas were fully firm to dearer, while others were irregular following quality. Teas up to and including good mediums continued to serve well and advanced by 10 to 15 cents per pound. Prices of Dimbula/Dickoya types were generally easier; but black-leaved low-grown were slightly easier by about 10 cents per pound.

Tea stocks in London, as on the 6th September, were 125.63 million pounds as against 126.03 million pounds in the previous week and 111.80 million pounds a year ago. Landed between 31st August and 6th September 1957 were 10.36 million pounds, while deliveries were 10.76 million pounds.

From a Neighbour

If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city.

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers

Good Wishes

Role of Private Sector

There is universal recognition in the country that the two vital factors, which condition the success of the Second Plan are co-operation of private sector and enthusiastic participation of labour. Even the communists of whom a nonconformist attitude in this question, of the usefulness of the private sector, in economic development, would have been expected, have taken their stand in favour of such a view.

Speaking at the inaugural session of the Indian Chamber of Commerce, Mr E. M. S. Sankaran Nambudiripad Chief Minister of Kerala said that a rapid development of industries, both heavy and small scale, could be realised and the dream of developing India on the lines of industrial-cum-agricultural economic unit envisaged in the Second Plan, could be realised only if they could unite the forces of the business community and the working class together with the Government and the public.

He seems to realise that in the present state of the Second Plan in Kerala, such participation of private capital is very essential. The Second Plan, it was pointed out, envisaged little of industrialisation, by means of Government participation, for Kerala, all the big projects being assigned to States other than Kerala. The Chief Minister has therefore made it

plain that it is to the private sector that the Government look forward to, to develop the resources of the State.

The Chief Minister has coupled this appeal with a proposal to convene a tripartite conference at the State level to discuss the problem of industry and labour, so as to prepare a proper industrial climate, wherein private sector might not feel inhibited in functioning. Mr Nambudiripad expressed the hope that with goodwill on all sides and with goodwill on the part of businessmen and of trade unions, this could be done, and assured the business community of his Government's cooperation in preparing such a climate for industrialisation.

As Mr Nambudiripad sees it, the chief element in such a climate is a long term industrial truce on the basis of reasonable rates of wages and peaceful atmosphere wherein both strikes and lock-out would be avoided. This is absolutely essential not only for the starting of new industries but also for the efficient functioning of industries already existing.

Mr L. D. Kilkar, President of the Chamber in his speech made up for what the Chief Minister omitted to mention in his appeal for the cooperation of the private sector. Mr Kilkar pointed out that reasonable freedom of operation and adequate reward for its tasks should be ensured for the growth of the proper economic climate. He argued for positive fiscal incentives to the private sector, and for lightening the burden of taxation on the business community, if economic development is not to become difficult of achievement.

Life Insurance Business

The immediate post-nationalisation period saw a slump in the life insurance business done in India. For while the total business done in India during 1955 was to the tune of Rs 238 crores approximately, the figure dropped down to a lower level at Rs 200 crores in 1956. But it was the administrative and organisational problems, which came in the wake of nationalisation that led to the set back in the life insurance business. The transition to the new administrative set up seems to have been completed and, the fact that the Life Insurance Corporation has launched new projects to increase business, bears testimony to the stabilized situation with regard to the functioning of insurance business.

Normalcy had been attained as early as the latter half of 1956 when insurance business flowed in at a fast pace. Since then, insurance

business has been picking up and till the end of June 1957, the insurance business done amounted to Rs 75 crores, all over India. In the months of July and August a further business to the tune of Rs 40 crores had been added bringing the total to about Rs 115 crores.

There seems to exist regional variation in the trend of insurance business done in the country. For example in the South Zone, the tendency is for people to go in for lower amounts than in the North, the average insured policy in the former varying between Rs 2500 to Rs 3000. This was brought to light by Mr G. R. Kamath, Chairman of the Corporation when he addressed a Press Conference in Bangalore. Even so, the South Zone has according to Mr Kamath done comparatively larger insurance business. It would be a safe conclusion to say that the people in the South are more insurance minded and that insurance had touched more people in the South than in the North.

The insurance habit is yet undeveloped in rural areas and small towns. It is to this task that the Life Insurance Corporation has to address itself. The Corporation is alive to this field and Mr Kamath

disclosed that they have plans to take insurance to more prosperous villages and small towns. The administrative apparatus for this purpose is also being built by training field workers and agents and branch managers.

Possibilities for expanding insurance business also lie in intensifying business in certain section in the urban areas, which have been shying investment in life insurance. In this connection Mr Kamath pointed out that insurance had not spread so much among businessmen, traders and speculators as among the middle classes. Finally the insurance scheme of the Government of India for their own employees when it comes into operation will add to the life insurance business in India.

There is an aspect of insurance business which has to be tackled if insurance habit is to spread quickly. This has reference to the speedy settlement of claims. In the period immediately following nationalisation there seems to have been undue delay in this matter. Mr Kamath has pointed out, that this is a thing of the past and has further assured that no effort would be spared to meet this difficulty.

SOUTH INDIAN MARKETS

Releases from Coffee Pool

THE Marketing Committee of the Indian Coffee Board has decided that the present Pool release price, based on Rs 2.12 per point, be continued for another six months from October 1, 1957. The Pool has received, so far, 41,400 tons up to August 31. The estimate of the 1957-58 crop has been revised to 37,150 tons. Some improvements have been decided upon in regard to the method of crop forecasting, which will be tried out in this season.

The Coffee Board has provided for sale, in the home market for the calendar year 1957, as much as 28,180 tons—a figure based on last year's actuals plus 10 per cent extra. On that basis, for the eight months ending August, the estimated consumption was Plantation 7,562 tons; Cherry 2,520 tons and Robusta 7,136 tons. The actual off-take for that period was Plantation 7,280 tons; Cherry 2,508 tons and Robusta 7,130 tons, showing that the estimates and the actual off-take had been pretty close and the releases had also been very steady. In spite of this, prices had still been on the higher side.

Out of the total export allocation of 15,155 tons from the 1956-57 crop, 10,347 tons were sold up-to-date.

Out of this quantity, 2,680 tons are yet to be shipped. The 725 tons sold to Russia was shipped from Madras on August 25. With regard to the 500 tons of Robusta set apart for the USA, arrangements about the mode of release have not yet been finalised. The coffee, earmarked for Bulgaria, Hungary and Finland, has to be diverted to the general export Pool as no subsequent interest was shown by the former two countries and as there were serious import restrictions in regard to the latter.

Meanwhile, prices of coffee have gone up by about Rs 10 per cwt as compared to last month as the results of the monthly auction, held in Tiruchirappalli, have shown. There was good demand for Robusta with the entire stock of 280 cwt, offered for sale, having been sold out. In the case of Arabica Cherry, even the small quantity of 20 cwt had to be withdrawn for want of bidders. In the case of Plantation, about 296 cwt were sold out of 388 cwt offered. Following prices were realised (per cwt):—Plantation PB Rs 228.10 to Rs 232; Plantation "A" Rs 217 to Rs 222.30; Robusta PB Rs 163 to Rs 169.80 and Flats Rs 159.50 to Rs 164.

Pepper

Pepper prices have recorded a sharp decline during the week under review, mainly due to the anxiety to get rid of the old stock before the arrival of the new crop. In the Cochin market, the rate, which was quoted at Rs 587 on September 7, has declined to Rs 557 per candy. In the Alleppey market, the rate is quoted at Rs 587.50 for superior

Palai variety. In Kozhikode, Wynaad quality is quoted at Rs 620 and the Country variety at Rs 610.

Crop reports from Alleppey and Tellicherry are good and trade estimates vary from 24,000 to 28,000 tons. In spite of Sarawak crop being small and export from India fairly large, values in world pepper market have failed to lift themselves; because New York market,

which is considered a barometer, remains unresponsive in view of the greater number of dealers' sidelining.

Groundnuts

Conditions in the Madras market remained steady. Arrivals last week averaged 25 tons a day. Business was restricted, small crushers being the main buyers. The rate

for superior oil-quality seeds was quoted at Rs 165 per candy and the bold variety at Rs 161.

Arrivals of summer crop are dwindling in the South Arcot district centres. Reports from Pollachi show that the crop position in that area is somewhat discouraging.

In the Groundnut Oil section, business was small. Vanaspathi interests were reported to have taken only small quantities for nearby positions. The rate for the ready position was quoted at Rs 320 per candy as against Rs 325 in the previous week. Sellers seemed to be reserved due to higher prices for seeds and weak advices from Bombay.

Hides and Skins

In the Madras Tanned Hides market, both arrivals and clearances of hides showed no change last week. On the export front, trading was somewhat restricted as shippers continued to quote firm prices for all weights of cow hides. Some business was reported done in single tonnages cow hides of 5½ lbs on the basis of 65d. Inferior fifties remained steady. In the Caif section, supplies of better qualities were restricted.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were mostly unchanged to a shade easier. The market for Raw Hides ruled steady.

In the Raw Skins section, prices were quoted Rs 10 to Rs 15 per 100 skins lower as compared to the previous week.

WORLD OF FINANCE

(Continued from page 556)

ever, it should not be assumed that this is indicative of sales by the member banks. If it is borne in mind that the 3 per cent 1957 Loan came up for redemption on September 1, it will be realised that the decline, as registered in the Scheduled Banks return, would refer to the receipt from Government of the sums due against the maturing loan. That the Scheduled Banks' holdings in the maturing loan, which they did not tender for conversion, exceeded Rs 5 crores, leads to another intriguing point. Investments of the Scheduled Banks in the 1957 New Loan have amounted to roughly Rs 39 crores. Of this, the lion's share—or Rs 30 crores—is on the account of the State Bank of India. The other Scheduled Banks put together would appear to have put in only Rs 9 crores. Against this, their investment portfolio has been reduced by something over Rs 5 crores as a result of the redemption of the 3 per cent 1957 Loan. Thus, the net new cash put in by the other Scheduled Banks is for a sum around Rs 4 crores. The monetary authorities in this country would doubtless be asking themselves the question: When the Deposit resources of Scheduled Banks have gone up so sharply in the last 17 months, why is it that the Scheduled Banks continue to be allergic to gilt-edged investments?

NEW INDIA INVESTMENT CORPORATION LTD.

NOTICE is hereby given that the twentieth Ordinary General Meeting of the share-holders of New India Investment Corp. Ltd. will be held at the registered office of the Company at 9, Bra-bourne Road, Calcutta, at 4 P.M. on Monday the 28th October, 1957 to transact the following business:—

- (1) To receive and adopt the Directors' Report and audited Profit & Loss Account and Balance sheet for the year ended 31-12-56.
- (2) To declare dividends recommended by the Directors.
- (3) To consider and if thought fit to pass the following (as an ordinary Resolution):—

That as from the 16th day of January 1957, Messrs. Ramdutt Ramkissendass be and hereby re-appointed the Secretaries & Treasurers of the Company upon the terms and subject to the conditions contained in the draft Agreement submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that accordingly the Directors be and they are hereby authorised to enter into an Agreement with Ramdutt Ramkissendass in terms of the said draft which has been approved by the Central. in conformity with the provisions of Section 329 of the Companies Act, 1956.

- (4) (As a special Resolution)—That the regulations contained in the draft Articles of Association submitted to this meeting and for the purposes of identification subscribed by the Chairman thereof, be and they are hereby adopted as the Articles of Association of the Company in substitution for and to the exclusion of all its existing Articles of Association.

- (5) (As an Ordinary Resolution) That, as provided in clause of the said draft Agreement referred to in the foregoing resolution No. 1, Messrs. Ramdutt Ramkissendass and any associate or associates of theirs (as defined in subsection (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commis-

sion or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries & Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance and booking of passages with shipping, air lines or Railway Companies for employees of the Company, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable.

- (6) (As a Special Resolution)—That Messrs. Ramdutt Ramkissendass be and they are hereby authorised to provide the Company with suitable office accommodation at Calcutta together with such office equipment as may be necessary for the business of the Company and is otherwise reasonable and the Company shall pay to Ramdutt Ramkissendass such portion of the rent & outgoings including depreciation & repairs paid or suffered by Ramdutt Ramkissendass as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation and office equipment so provided.

- (7) To appoint a Director in place of Sir Badridas Goenka, who ceased to be a Director under Articles 382 of the Companies Act, 1956, and if thought fit to pass the following resolution of which a special notice as required by Section 261 & 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act.

"Resolved that pursuant to provisions of Section 261 &

281 of the Companies Act, 1956, Sir Badridas Goenka, who ceases to be a Director under Articles 382 of the Companies Act and who has attained the age of 74 years, be and is hereby re-appointed a Director of the Company with effect from 14-1-57 and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

- (8) To appoint Directors in place of Mr. W.H.S. Michelmore and Mr. J. L. Esplen who retire by rotation and have offered themselves for re-election.
- (9) To appoint Auditors and fix their remuneration.

By Order of the Board,
RAMDUTT RAMKISSENDASS
Secretaries.

Calcutta,
18th September, 1957.

Note:—(a) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

- (b) The transfer books of the Company will remain closed from Friday the 18th October, 1957 to 28th October, 1957, both days inclusive.

ANNEXURE TO THE NOTICE
Explanatory statement as required by Section 173 of the Companies Act, 1956.

In respect of item No. 7 of the notice of the Annual General meeting it is notified that Sir Badridas Goenka ceases to be an Ex-officio Director and is eligible for re-appointment, has attained the age of 74 years—hence he cannot be appointed as a Director of the Company except by a special resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190, 261 & 281 of the Companies Act, 1956. The Company has received such a special notice from a member notifying his intention to move the resolution as set out in the said item. Sir Badridas Goenka has been a Director of the Company since its very inception and it is most desirable that the Company should continue to avail of his experienced guidance.

By Order of the Board,
RAMDUTT RAMKISSENDASS
Secretaries.

GATEWAY GOSSIP

(Continued from page 563)

vital need that India has for foreign aid, while, at the same time, trying their bravest to instil and foster confidence within the country in the Indian economy. The record of America's foreign aid policy is such that, unfortunately, a prerequisite seems to be the crying of "wolf" by the country that seeks the foreign aid. America seems to be able to respond only in times of crisis. So, Mr Birla might have chosen to stress that India was engaged in a race with China—something that it may not have been permissible for a Government official to put down in as many words. That is to say, the approach through Mr Birla is to sentiment. He has to prepare the ground—a job which, I may add, he seems to be going ahead with with zestful success—for the American people to be favourably disposed to the authorisation by the US Administration of a large sized loan to India. This, in brief, explains the line that has been taken by Mr Birla.

We come, next, to the raising of Bank Rate and the independent assertion of its views by the Reserve Bank. Both these, I should say, are calculated to impress upon the international financial institutions the fact that India is not shirking any of the measures, unpopular though they might be, to curb inflationary tendencies. In this regard, Mr Iengar and the Finance Minister will besides be able to report at the annual general meeting of the IMF that the orthodox measures have, in India, been reinforced by an enlightened policy of selective monetary control. What is more, they will be in a position to claim that Indian monetary policy has been more efficacious than have been the so called vigorous tight money policies pursued elsewhere in the world. Fact number one is that the advances of the Scheduled Banks have, by directive order, been brought down substantially—by nearly Rs 100 crores from the peak achieved during the 1956-57 busy season. Fact number two is that the speculative pressure on many commodities apparently in short supply has been eased. Fact number three, which is most important of all, is that the price situation has, in response to official measures, improved: the wholesale price index has shown a decline for four consecutive weeks. Thus, the second objective of recent Indian policy has been, while tackling the internal price situation, to impress upon the world the high efficiency of India's central banking institution.

However, it has become all too apparent that, if the internal resources of the Second Plan are to be raised in full, market borrowings must command the immediate attention of Government. At the one end, the tax effort has been completed, at the other end, the dependence on deficit financing has of necessity to be reduced. Consequently, it is clear that the target

for borrowings, both by way of loans and small savings, has to be raised considerably. Already, in the sphere of small savings, the marking up of interest rates has imbued the small saving campaign with greater attractiveness. But, it is incontrovertible that Government's borrowing programme for the Second Plan has yet to start. In the current year, because of the need to show the world that the orthodox steps are also being taken to hold inflation at bay, a sound borrowing policy could not be evolved. I trust I am not being over optimistic in reading in the Finance Minister's statement on the efficacy of bank rate, the prospect that, perhaps, in the next year, the structure of interest rates will be rationalised, thus enabling a gildedged market in which the response to new loans will show a remarkable improvement.

Action on the three lines that I have already indicated could not but lead to the erosion of confidence internally. We have already seen that Mr G. D. Birla has, in stating that a US dollar loan is a matter of life and death to India's Second Plan, somewhat inflamed the sense of disquietude in this country. It consequently has become the set purpose of our Government to dispel such disquietude for which, perhaps, they themselves are partly responsible.

It is folly to underrate difficulties; but it is no part of wisdom to magnify them. Suppose we fail to get foreign aid in the measure now envisaged? Is the Second Plan to be given up as beyond the aspiration and capacity of this country? Nothing of that kind, assures the Prime Minister, whose speech to a closed session of the Congress Party has been opportunely released in the columns of the weekly economic organ of the Congress. This address of Mr Nehru merits special attention and close study. The tempest-tossed ship is being piloted by a Captain who can be trusted to bring it safely to harbour. A planner for a partly developed country, who is crushed and paralysed by obstacles is like an admiral who suffers from sea-sickness. Thank God, we have a leader who has his feet planted on firm ground and whose head soars to the heavens. This is his confidence arousing message:

"We are not hiding our position, nor trying to appear as something that we are not. We are a poor country and I am never ashamed to say that. We go in a friendly way and ask for help, but, at the back of our mind and heart, there must be the firm resolution that whether there is any help from outside or not, we are going to face our difficulties, come what may. Naturally, if help is lacking, our difficulties will be infinitely greater and we shall have to cut down the Plan here and there, but we shall have the enormous satisfaction of doing it ourselves, whatever it is."

HOW MUCH INFLATION IS ACCEPTABLE

(Continued from page 557)

Whichever political Party will be in office, it would have to resort to drastic disinflation to check the rise. A Socialist Government would hate to direct such measures against its own supporters, and would apply instead advanced physical controls which would bring back much-hated rationing and food queues. So it is no wonder that in secret most Socialists are hoping (and some of them are praying) that the Conservative Government will resort to drastic disinflationary measures, even if that would mean unemployment. If and when such measures are taken, the Labour Party and the trade unions would attack them violently in public, but in private they would feel greatly relieved.

There are no indications that the Government contemplates any disinflationary drive that would check the wages spiral. Complacency continues to prevail and even he disastrous decline of Conservative vote at recent by-elections is unable to make the Government see the writing on the wall. The great majority of Government supporters feel utterly disappointed and disillusioned about the Government's unwillingness or inability to take the necessary drastic measures. Not for the first time, the British public is much more willing than its Government to make sacrifices. During the early stages of the second World War, the Government was utterly reluctant to adopt drastic measures, and was lagging behind public opinion in this respect. History seems to repeat itself. The British public—at any rate that section which is normally inclined to support a Conservative Government—is prepared to face a moderate business recession as a result of disinflationary measures. But the Government of its choice is not prepared to face it and is marking time. It is no wonder the Conservative electorate shows half-heartedness in its support of the Government at by-elections. And unless the Government shows more firmness its majority is doomed to be wiped out at the next general election. (Copyright).

GATEWAY MARKETS

(Continued from page 564)

quoting around Rs 80 per cwt. The Tin section continued to rule steady with the rate quoted at Rs 134 per quarter.

On the London Metal Exchange, Copper spot was quoted at £194½ per ton as against £182 quoted in the previous week. Informed circles are of the opinion that £190 can be considered as the "floor" price in copper in the existing circumstances. It is also reported that America has entered the market for her purchases. It is, however, felt that a substantial cut in production alone can stabilise the market.

Zinc spot was quoted at £75 per ton. The continued steadiness

CLIVE STREET GOSSIP

(Continued from page 562)

No one, at this time of day, quarrels with the right of workers to form themselves into unions and protect their interests. Indeed, one would wish that the workers do speak with one voice and not a hundred different voices. The time is long past when management thought it advantageous to play one set of workers against another and get away with it by lack of unity among workers. More than even the workers, management would be happy to deal with a strong and united union. Such a union will have both strength and responsibility and the management knows, firstly, that it cannot thwart its wishes and, secondly, that it can rest assured that agreed settlement will be honoured by the workers. It is, therefore, of utmost importance that Trade Union leadership persuades the workers at Jamshedpur, Burnpur and elsewhere to accept a leadership of their choice, but a leadership that is both responsible and strong.

EAVESDROPPER.

WORLD OF JUTE

(Continued from page 559)

B Twills Oct-Dec closed at 43.12 and Rs 116, and Jan-March Hessian 40" x 10 oz and B Twills changed hands at Rs 42.75 and Rs 114.50.

Trading on Tuesday was dominated by speculators who, in earlier dealings, further pushed up prices. Toward close profit taking pared off extreme gains and the market closed quietly steady as follows. Hessian 40" x 10 oz Ready Rs 42.93, and B Twills Ready Rs 118.12.

Sacking met with good speculative support on Wednesday on reports of good shipping orders and with mills evincing no keen interest at prevailing rates, prices were pushed up. B Twills Ready moved up to Rs 119.75 while the Oct-Dec and Jan-March positions also higher at Rs 117.25 and Rs 114.50 respectively. The hessian section also recorded moderate gain in sympathy with sackings. Hessian 40" x 10 oz Ready was done at Rs 42.90.

*

in this metal gives the impression that this metal has already reached the bottom, although world production still exceeds the current demand.

Lead was quoted at £90½ per ton. There is nothing at the moment to suggest a major swing in prices either way. In America, the expectation, that fresh import duties are likely to be levied on lead before the year is out, has infused some cheerfulness in the USA.

Tin ruled very steady at £741 per ton. The operations of the Buffer Stock Pool appears to be the dominant factor in the present steadiness in this material.

For the Investor

Lethargic, Listless, Lifeless

Investment Gossip:

NEVER a dull moment, once wrote a mystery writer called Peter Cheyney; and he was writing about his creation, a detective.

Never a bright moment, I may now be allowed to say, in respect of the life and times of the Calcutta Stock Exchange.

If it is not one thing, it is another. If not a Budget replete with taxes, then, a paralytic suspension of clearing arrangements, because of the strike among the Calcutta banks.

Prices are lethargic; activity is listless; and operators are lifeless.

So, the Calcutta Stock Exchange authorities have had to do what they can to prevent any aggravation of the traditionally bear attitudes of Lyons Range.

For a start, they have decreed that, at the last settlement, all transactions were to be compul-

Owing to the Pujā Holidays, there will be no issue of Indian Finance dated 5th October 1957. The next issue will appear on 12th October.

Manager.

soresly carried over; and the badla charges were also indicated.

In Bombay, things are no better, though there is the fortuitous circumstance of sporadic purchases by the Life Insurance Corporation.

On, thus, to the Pujās. Thankfully, until the tenth of October, the Calcutta Stock Exchange is officially closed.

For this small respite, from what it is a misnomer to call stock market activity, much thanks.

What though the bank situation may have reduced funds available for festivities, here's wishing the investor that he is enabled to celebrate the Pujās appositely.

ER

Investment Notes:

Scindia Steams are quoted around Rs 18.52. This company is reported to have received the sanction from the Government for the issue of Bonus share in the ratio of 1:5 by capitalising the requisite amount from the Share Premium Account.

HIGHLIGHTS

It is being widely touted that we should have great expectations from the Finance Minister's visit to Washington.

In coffee clubs, and in clubs where the beverage is not quite coffee, TTK's visit is expected to have magical results.

At first glance, it would seem that Indian

Finance has also succumbed to the popular pastime of discussing TTK's prospects.

However, the purpose behind our treatment of the subject in different sections is to the contrary.

For instance, Olympus seeks to point out that it would be folly to expect quick results.

Eavesdropper has done some research to

show why we may anticipate a sympathetic consideration of our case by America.

The Leading Article touches on the prerequisite for development—what President Eisenhower has called the "homespun product".

Finally, the Second Article treats with the responsibility of the international financial institutions in fostering development.

It is learnt that the shareholders of the Colaba Land & Mill Company, Bombay, have approved a proposal to dispose of the mill as the working of the company has not been remunerative.

The Thackersey group of mills has obtained the permission for the issue of Bonus shares. The matter is now under reconsideration in the light of the steep rise in the tax on bonus issues. The proposal is likely to be placed before the shareholders in due course.

Investment Briefs:

National Carbon Company has recommended an interim dividend of 75 p per share for 1957.

India Jute and Megna Jute have declared interim dividends of Rs 3.75 and Rs 5 per share respectively for the year ended 31-3-1957.

Ouchterlony Valley Estates have recommended an interim dividend of 20 per cent for the year ended 31-10-1957.

Rajapalayam Mills have raised the dividend from 10 to 12 per cent for the year ended 31-3-1957.

ER

Balance-Sheet Reviews:

THANKS to increased earnings, Balmer Lawrie & Company Limited has been able to raise the dividend for the year ended 31st December, 1956. Import and distribution of engineering products and steel continued at a high level. Teas also had a satisfactory year and the value of exports was the highest on record.

The output of railway wagons by Bridge & Roof rose from 639 to 1,030. Among other activities, this company was engaged in the fabrication of Blast Furnaces and other heavy plant for the Steel industry.

The Bengal Flour Mills Company had a very successful year and the efficiency of the mill continues to improve.

The British India Electric Construction Company further increased its production, which included 3,200 Electric Motors totalling 20,400 HP.

Tribeni Tissues Private Limited had also a good year and production of Cigarette and Commercial

Tissue is now in excess of the rated capacity of the machines.

In the case of the Indian Galvanizing Company, however, the improvement recorded in 1955 was not maintained.

There was a substantial change in the ownership of the Bengal Paper Mill Company during 1956 and as a result of opposition by the new shareholders, the managing agency agreement, which expired in January, 1957, was not renewed. At the time of reporting, no alternate managing agent has been appointed. Pending a settlement, the company has conducted affairs of the Bengal Paper Mill as appointees of the Directors. The plans for plant replacement and expansion are in abeyance for the time being.

Sales of Balmer Lawrie for the year have recorded a rise to Rs 14.42 crores from Rs 10.85 crores, while the net profit, before providing for Depreciation and Taxation, amounts to Rs 36,86,893 as against Rs 35,33,169 in the previous year. The Depreciation amount is raised to

FOREIGN TRADE ...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

United Bank of India Ltd.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

Balmer Lawrie Pays More

Rs 3.48 lakhs from Rs 3.21 lakhs and Taxation provision to Rs 17.36 lakhs from Rs 12.35 lakhs. After transferring a sum of Rs 6.00 lakhs from Taxation Reserve, no longer required, the directors have provided Rs 10.00 lakhs (Rs 10.24 lakhs) for General Reserve and raised the dividend to 15 from 12½ per cent.

The directors have, in their report, stated that foreign exchange shortages and the consequent reduction in imports, particularly of steel, have an adverse effect on the interests of the group, both as importers and manufacturers, though this may not become apparent in the current year. Subject to the effect of import restrictions and raw material shortages, the future prospects of the company and others in the group are good. Though there is a small decline in the level of order bookings, demand for all products continues to be satisfactory.

the year, the demand for both Steel Castings and Fabricated Steelwork continued to be satisfactory. The order book remained full although there was a certain amount of difficulty in obtaining adequate supplies of steel scrap for the foundry and steel sections for fabrication. The completion of the Structural Fabrication Shop assisted in increasing the output of fabricated steelwork.

Sales have risen to Rs 1.52 crores from Rs 1.03 crores, while the net profit, before Depreciation and Taxation, amounts to as much as Rs 18,55,300 as against only Rs 8,83,181 in the previous year. Apart from setting aside a sum of Rs 2.75 lakhs for Plant Renovation Reserve, Taxation provision is raised to Rs 7.26 lakhs from Rs 2.01 lakhs; Taxation Contingency Reserve to Rs 88,000 from Rs 67,500 and Development Rebate Reserve to Rs 57,000 from Rs 24,500. The Depreciation amount is slightly lower at Rs 2.60 lakhs against Rs 2.62 lakhs, while General Reserve is reduced to Rs 4,888 from Rs 25,000. The dividend on the Ordinary shares is, however, raised to 62 NP from 50 NP per share.

According to the directors' report, proposals for modernising the Steel Foundry, including the installation of a 5-ton Electric Furnace, are now well advanced. The plants include alterations to provide additional foundry floor space, which will enable the Steel Foundry to take better advantage of the increasing demand for a wider range of miscellaneous steel castings.

2 R\$

Hooghly Docking

Thanks to the completion of the construction of three new river tugs, the Hooghly Docking & Engineering Company has been able to report a substantial increase in profits for the year ended 31st December, 1956. The value of work, billed during the year, amounts to as much as Rs 1.25 crores as against only Rs 68.57 lakhs in the previous year. Net profit amounts to Rs 6,18,411 as against Rs 2,20,445. The directors have, after providing Rs 1.20 lakhs (Rs 1.08 lakhs) for Depreciation; Rs 2.30 lakhs (Rs 60,000) for Taxation and Rs 1.00 lakh (nil) for Development Reserve, maintained the dividend at 12½ per cent.

Dehri-Rohtas Light Railway

This company's workshop is maintaining progress in the construction of wagons. The programme of making 90 wagons has been completed. Work in connection with the further programme of making 157 four-wheeled open trucks and 139 six-wheeled covered wagons is also in progress.

Meanwhile, the net profit for the year, before providing for Depreciation and Taxation, is higher at Rs 11,66,289 as against Rs 9,60,862 in the previous year. The directors have set apart Rs 3.05 lakhs (Rs 3.19 lakhs) for Depreciation and Rs 5.82 lakhs (Rs 3.00 lakhs) for Taxation. No provision is, however, made for General Reserve as against Rs 50,000. The dividend is maintained at 12½ per cent.

The directors have stated that, with the increase in production of cement factories served by the company's railway, there will be a further rise in the volume of traffic during the current year.

2 R\$

Textile Results

That conditions in the textile market have not been generally favourable is a known fact. Although the offtake of cloth is better, this is offset by higher prices ruling for cotton.

Cawnpore Textiles Limited has maintained the dividend at 25 NP for the year ended 31st March 1957. Although sales have shown a substantial rise to Rs 1.25 crores from Rs 83.58 lakhs, the net profit, before allowing for Depreciation and Taxation, is only slightly higher at Rs 10,07,088 as against Rs 9,73,253 in the previous year, mainly due to the rise in working expenses. The directors have allocated Rs 3.00 lakhs (same) to Depreciation; Rs 2.70 lakhs (Rs 1.40 lakhs) to Taxation and Rs 2.75 lakhs (Rs 3.50 lakhs) to Rshabilitation Reserve.

The next accounts of the company will be issued for the nine months ended 31st December, 1957.

The Mohini Mills Limited has reported a net profit of only Rs 30,51,920 for 1956 as against as much as Rs 45,01,785 in the previous year despite a rise in sales from Rs 2.26 crores to Rs 2.30 crores. The directors have, after providing a sum of Rs 5.53 lakhs for Depreciation; Rs 18.00 lakhs for Taxation and

"Homespun Product"

WHILE it should have been anticipated that the annual meetings of the two international financial institutions, the International Monetary Fund and the World Bank, would have as the major item on their agenda the problems posed by the world-wide inflationary trends, President Eisenhower has, in inaugurating the deliberations among the chief financial authorities of the member countries, very correctly given a significant lead by pinpointing the need for the swifter economic growth of the so-called underdeveloped countries. In stating that the central concern of Governments everywhere is to foster living standards, Mr Eisenhower has remarked that stability should not be endangered in working for growth, but adds that stability itself is futile if it throttles growth. This, in a nutshell, is the task before the underdeveloped countries.

It is wrong, we suggest, to imagine that, in a developing economy, an increase in purchasing power can always be simultaneously matched by an improvement in production. Especially is this so in the case of the underdeveloped countries, since the capital intensive nature of the projects that will undoubtedly receive priority is likely to inject fresh purchasing power ahead of any increase in production. It seems, therefore, that, in such conditions, shortages in particular sectors are inescapable. To that extent, price stability in certain fields of the economy would, perhaps temporarily, be jolted from its equilibrium. On the other hand, if we were to have our eye on stability alone, economic growth would be impossible. How, then, can we reconcile the seemingly opposing influences of stability and growth?

The answer lies partly in the stuff of which we are made. It is national character, rather than any enforced controls or systems of rationing, that can help tide over periods of temporary shortages; and the lack of it can only lead to an intensification of shortages and the emergence of black markets, with their proclivity for aggravating inflationary pressures.

Partly, the answer lies in increased production. In this respect, it is a question of the provision in adequacy of consumers goods to take care of the additional purchasing power.

Partly, the answer lies in fiscal measures. During times when production falls short of demand, it will become necessary for Government to discourage consumption, if necessary, by penal excise duties.

Finally, the maintenance of a successful balance between stability and growth will depend upon the ability of the central banking institution to keep a careful watch over the economy so that, whenever there are signs of shortages, the availability of bank finance for activities that may be speculative in character may be minimised.

In the final analysis, however, the reconciliation of growth and stability is to be found in Mr Eisenhower's remark that "economic development is a home-spun product". This is a view-point that has been iterated time and again by this journal. No stream of dollars could prevent China from falling under the domination of Communist elements. No stream of dollars, by itself, can enable India

to succeed in its Second Plan. The original impetus must come from within the country, from what Mr Eisenhower has termed "the people's own work and determination".

Thus, energy, determination and hard work; internal resources by way of men, materials and money; projects which unambiguously indicate that we shall shape our own destiny—these are the prerequisites. If, on top of this, an apposite helping hand from abroad is available, development would be fostered.

Stability with Growth

THE annual meetings of the International Monetary Fund and International Bank for Reconstruction and Development together provide an occasion for an assessment of world economic and financial trends by the most authoritative and responsible spokesmen of the participating nations. That this year, the focus is directed primarily to development amidst inflation is in no way surprising. The IBRD Annual Report refers to an increase of 5 per cent in industrial and mining output for 1956-57, to the remarkable upswing in world trade which brought total exports to the record value of more than \$95,000 million and to a more than 20 per cent gross fixed investment rate in many of the industrialised countries in relation to their national output. The Bank itself was enabled to disburse \$332 million against 20 loans equivalent to \$338 million sanctioned during the year. Its borrowings at \$322 million represented a record figure.

With evident satisfaction, the Report records that in most of the Bank's debtor countries the rise in total production and income has been not only sufficient to cover the higher level of debt services payments but to leave increasing amounts available for domestic consumption and investment. Their foreign exchange earnings have grown almost as fast as that of service obligations on public external debt.

Thus, generally speaking, the world picture is sound. The only unedifying spot lies in the circumstance of a more or less universal inflationary tendency caused by the pressure of heavy investment demand on inadequate savings. In particular countries, increasing indebtedness and meagre or unsure exports have aggravated this trend. President Eisenhower, when he addressed the annual meeting of the IMF and IBRD was keen on emphasising this problem of inflation, which he described as a world wide phenomenon. To him, the most important task ahead was to combine stability with growth and the strengthening of those policies which would have that effect. He warned that the world should not put a continued overload on its resources. He had a word or two on national self-help for economic development, particularly in those countries which looked for help from abroad.

Where does the Indian Union stand in this picture, where inflation is accepted as a world wide phenomenon and self-help preached by individuals who are in a position to influence foreign investment on a colossal scale? The simultaneous Report of the International Monetary Fund which compliments the Indian Union on its conspicuous success in combining strength and stability in its First

"The Wise Man in his Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius

In a word, as Mr Eisenhower puts it, we look to the IMF and the World Bank "to give encouragement and assistance to the efforts of their member countries to achieve a better life for their peoples".

It remains to be seen whether the deliberations in Washington will be productive of no more than pedantic discussion of the problem of inflation, or whether it will have opened up the way for a proper development of the countries that are, today, the have nots.

Plan is more critical of the fortunes of the Second Plan. The IMF Report acknowledges India's quickened industrial expansion but at the same time does not omit to notice the drop in foreign exchange reserves and the increase in consumer prices.

This testimony is not as damaging as it appears to be on the surface. The First Plan ended only in March 1956, till which time the economy had no imbalance at all, of a kind attracting unfavourable international comment. All the difficulties now complained of are of very short duration, the pains of growth, as Mr T. T. Krishnamachari has more than once explained. Once it is accepted that the pace of growth could be slackened only at the risk of unpredictable consequences to the country and to the world, the only relevant question is how the present temporary imbalance could be rectified. There is an infallible clue in President Eisenhower's speech, where he says that the world has shrunk and "our sense of inter-dependence is keen".

The answer is simple and takes the form of a corrective to the international mal-distribution of resources. The IBRD Report recalls how the post-war decade has been one of the most active periods of international investment of recent times. It is not within the purview of the Bank to examine whether national investment in different countries or the broad proportions of international investment have assisted a healthy evolution of multilateral trade, which alone will lead to what the US President feelingfully calls the day when all men can live and work in a neighbourhood of nations. In some of the industrialised countries the rate of investment is well over 20 per cent of the national output. In the more underdeveloped countries even with extreme strain on their resources, this rate does not climb to more than 6 or 7 per cent.

What looks like a domestic dilemma for such countries is really a call on the superior resources of the more advanced countries, far or near. The IBRD has lately begun to function as a substantial contributing factor in the supply of finance for the undeveloped economies. Government-to-Government assistance is also far from negligible. In spite of these, wide gaps continue to exist. It would be profitable if, at this stage, the financial needs of under-developed economies is examined from the wider standpoint of balanced international investment and international trade. Whatever be the approach, if economic progress and political stability in a large part of the world have to be secured and sustained, a considerably larger flow of finance from other regions will have to be stimulated.

Gramdan Conference

The Prime Minister claims that the Mysore Gramdan Conference is a big success. Even those who have not been admitted into the details of the proceedings can agree, to the extent that the leaders of most of the political parties, the Union President, the Prime Minister and many other individuals prominent in the public life of the country took part for the first time in deliberations solely concerned with Gramdan.

Though the movement had already secured the approval and blessing of all these gentlemen and the parties they represent, the Conference is memorable as having provided occasion for a joint reaffirmation of the national interest in and support for Gramdan. Why the proceedings were conducted behind closed doors is not intelligible, especially when there is scarcely any matter involving high politics which could properly enter into discussion. Acharya Vinoba Bhave himself is opposed to secrecy of any kind.

The lay man is interested in having an idea of the problems confronting the movement, the extent of coordination between the leaders of the movement and those in authority and the faith which this unorthodox method has instilled in the minds of the people as an effective alternative to other methods of land reform. When the Chief Minister of Kerala says that he and his party recognise in the Gramdan movement an alternative to its own policy in regard to land problem and rural reorganisation, he is not merely paying a compliment to the leaders who are in charge of the movement. The political implications of Mr Nambudiripad's observations are clear. If people do not give up

surplus property voluntarily, they will be forced to, not necessarily through methods wholly non-violent.

Land reform pursued by the Congress Governments is wedded mainly to ceilings and share-cropping. Gramdan, though egalitarian in its direction may not meet either of these requirements. Viewed in the light of the national problem of land redistribution, the gifts which have been made by land-owners in response to Vinoba Bhave's appeal are not spectacular. If the purpose of Gramdan movement is the complete abolition of private property, which the Bhoodan of the earlier stage did not envisage, surely the progress is far from impressive. The Conference could have attempted a bolder and more detailed assessment of the true place and prospect of Gramdan in the evolution of the national economy.

In the absence of such an assessment, the conclusion that the Conference has done its best becomes rather untenable. Nor does the Conference seem to have examined the value of Gramdan from the standpoint of production. It would be a wonderful achievement if Gramdan can solve India's land problems at least in a substantial measure. Whether and how it can was also not an inquiry which the Conference pursued.

The Agricultural Producer

The latest Annual Report on the "State of Food and Agriculture", presented by the United Nations Food and Agricultural Organisation, points to the comparative decline in the economic status of agricultural producers in the world as a whole. The reason is to be found in the unfriendly movement of prices between agricultural produce and consumer goods.

In many countries, Governments have been keeping agricultural prices at artificially higher levels than the world market prices. But even with this element of extraneous support thrown in, the farmers could not reach to the level of the producers of consumer goods. In 1956-57, the year under review, the volume of international agricultural sales did go up by nearly 13 per cent over that of the two previous years. Prices, however, rose by a much smaller margin.

Even in the United States where parity between production and sales prices was sought to be maintained over this period, farm income was keeping behind the income for other occupations and professions. In Europe, the diversity in pace was aggravated by slowing down of sales or lowering of production. In India, the posi-

tion seems to be happier from the standpoint of the farmer. But a stable relation has yet to be achieved between price levels in the agricultural and industrial sectors. Countries which form exceptions do not vitiate the general conclusion recognising the persistence of a problem of imbalance to which no secure answer has yet been found.

Port and Shipping Development

The mid-year port congestion appears to have awakened a lively measure of interest in expediting the augmentation of facilities for shipping transport. The Union Minister for Transport is now in a position to say that the Government will be setting apart Rs 50 crores for a shipping development fund. Referring to the apprehension voiced in certain quarters that a separate fund by itself will practically be futile unless accompanied by the availability of foreign exchange, Mr Lal Bahadur Sastri affirms that if this apprehension turns true, the foreign exchange will also be forthcoming.

There may or may not be difficulties in the way of increasing India's shipping tonnage at a brisk pace. What is heartening is that the authorities are moving quickly, with the full realisation drawn of most unpleasant experience, that inadequacy of indigenous shipping and port facilities will have a throttling effect on the economic development of the country. In his address to the Directors of the Eastern Shipping Corporation at Bombay, Mr Sastri even went to the extent of saying that they should be asking for more and more money for shipping and that there would be no difficulty in their getting it.

As was done in the case of the Railways, a special mission would shortly be leaving for the US and some other countries for purchasing equipment for the ports. A similar briskness is evident in the progress of work in the development of ports. A Committee appointed by the National Harbour Board to examine scope and methods has been asked to report within six months. In Bombay, Orissa, Andhra, Madras and Kerala the development of minor ports has been taken up as a top priority job. The Bombay Government, it is understood, have already finalised proposals to develop intermediate and minor ports all along the coast with a view to augment the total capacity from 2.7 million tons to 4 million tons a year.

After a Two Million Target

Under sustained protection India's cycle industry has expanded magnificently over the last

ten years. In 1947, only 40,000 machines were produced; in 1956, the production figure was 690,000. The difference is also a measure of the growing popularity of home-made cycles in the domestic market which alone is open to it.

The prejudice against the domestically manufactured machines has nearly died out in the course of this comparatively short period. To some extent the valuable association of reputed foreign firms is also responsible for this happy trend. But the Indian element in the industry does not accept this kind of dependence as a long term feature; financially and technologically the industry can become more and more self-reliant. The raising of the Second Plan target from 1.5 million cycles to 2 million and the extension of protection to 1960 bespeak the Government's confidence and faith in the future of this industry.

Mr S. K. Sen, who addressed the Cycles Manufacturers Association of India at its annual general meeting in Calcutta this week seems on the whole satisfied with the recent past and the immediate prospect for the industry. There are, however, a few things which he wants the Government to attend to. The import policy with regard to tools should be realistically modified, if production is to be maintained and increased at a pace conforming to the Plan target. A more workable procedure is also asked for in respect of checking components for purposes of customs duty draw-backs. That the list of demands is not longer is itself indication of the extent of coordination which already obtains between the Government and the industry.

World of Finance

More Giltedged Purchases by State Bank

THE even tenor of the slack season has, as foreseen in this column last week, received a rude interruption in the form of the strain upon the banking system at Calcutta owing to the continuance of the protest strike by employees. Banks in Calcutta, while being unable to accept Deposits, have, at the same time, been called upon inescapably to provide the finance in response to Puja demands. It has thus happened that, at a time when the scheduled banking system is generally experiencing conditions of relative ease, funds are scarce at the eastern money market capital. So much so, the call money rate, which had ephe-merally risen to 2½ per cent in Bombay in reaction to the raising of Bank Rate in the United Kingdom, quickly levelled down once again to 2¼ per cent in the Gateway City. In Calcutta, on the other hand, the call money rate, hovering around 4 per cent, is reminiscent of the severely tight money conditions of the 1956-57 busy season.

While on this subject, we may state that bank employees in the City have not only courted but also won for themselves public unpopularity. Leaving apart the question of the factors which influenced the strike decision, the public reaction is a resentment at the denial of resources for a Puja that has always been festive. The decision of the Central Government to refer the dispute to adjudication has not really helped solve the problem, since all that has happened is that the strike can now be termed illegal. Though, consequently, it is open to the Calcutta banks, after due notice, to appoint new employees in place of those who do not return to work, the banks clearly cannot adopt such a course of action without serious risk of further aggravating the position. That an industrial centre like Calcutta should be allowed to be disrupted and nearly paralysed is indicative of the harsh lengths to which trade union tyranny in public utilities can go. The only solution is for Government to recognise the need for swiftness and expedition in disposing of any matter falling under this head. For instance, it should have been possible for the Calcutta bank dispute to have been referred at a much earlier stage to adjudication; and the tribunal constituted for the purpose could have been asked to bear in mind the necessity for an expeditious arrival at its findings.

Otherwise, the slack season continues to make progress. Active note circulation is lower by nearly Rs 7 crores at Rs 1473.36 crores against 1480.31 crores. Rupee coin has returned from circulation for Rs 1.49 crores and, resultantly, notes held by the Reserve Bank are marked higher by Rs 8.44 crores at Rs 41.49 crores.

Although the contraction in currency circulation is fully reflected in an increase in notes held, adjustments were necessary on the other side of the ledger in the Issue Department. There has been a transfer of Rs 9.06 crores from Foreign Securities to Balances Held Abroad in the Banking Department. This has been offset by a transfer for a similar amount from Investments to Rupee Securities in the Issue Department.

Even after the transfer from the Issue Department, Balances Held Abroad have shown a decline of nearly Rs 5 crores. Indeed, the

net fall in Foreign Securities during the week is for an amount of Rs 13.91 crores. Following as it does upon the heels of two weeks in which the foreign exchange drain was for small amounts, the large size of the depletion during the week ended September 20 would evoke conjecture as to whether there were special reasons to account for such a steep fall. As we see it, there are two possible causes which might have exaggerated the size of the depletion in foreign exchange reserves. Firstly, the sharp rise in the Bank of England rate may have persuaded Exchange Banks to repatriate some of the funds borrowed in London. Secondly, as pointed out in the interim Report of the Life Insurance Corporation, excess assets of non-Indian insurers and assets and liabilities in respect of policies of non-Indian citizens, have been permitted by the Central Government to be repatriated. The amount involved under these two heads exceeds Rs 10 crores. We may wonder whether any transaction in respect of such repatriation has taken place during the week. While the hypothesis in respect of the exchange banks can be confirmed in due course, when the Reserve Bank Bulletin for the relevant month is published, it is impossible to state with any certainty that any repatriation in respect of insurance assets has actually taken place.

Another puzzling change that is to be noticed in the Reserve Bank returns relates to Investments. As we have seen, there was a transfer of Rs 9.06 crores to Rupee securities in the Issue Department. But the decline in Investments, in the Banking Department, amounts to Rs 26.43 crores. So, we are left with an element of roughly Rs 17 crores, for which an explanation is necessary. Part of this is easy enough to explain. The return of the State Bank for the same week shows an increase in giltedged investments of, roughly, Rs 6½ crores. We may add, here, that the purchase of securities by the State Bank would have involved a decline in its balances with the Reserve Bank. Remains, therefore, a decline of Rs 10 crores in Investments to be accounted for. It would seem to us that this may be linked up with the sharp increase of Rs 9.03 crores to Rs 17.49 crores in Other Assets. We suggest that the Reserve Bank has contracted to sell further securities,

say, to the State Bank for Rs 10 crores. Since the State Bank has not taken delivery thereof, the Reserve Bank may be keeping the securities in this behalf under suspense, that is, under the head of Other Assets. If this thesis is correct, confirmation should be available in the next return of the State Bank, which, in that event, would show a further rise of Rs 10 crores in giltedged investments.

The Centre's balances have been marked down by Rs 3.81 crores to Rs 49.05 crores. On the other hand, Deposits of State Governments show an improvement of Rs 5.12 crores to Rs 11.28 crores, though their borrowings from the Reserve Bank are more or less unchanged at Rs 44.21 crores. Possibly, inter-governmental transactions are responsible.

The one important feature in the return of the State Bank for September 20 is the sharp rise of Rs 6.84 crores to Rs 141.35 crores in giltedged investments. Thus, the new money invested, in the current year, in Government securities by the State Bank is for an amount totalling Rs 47 crores. The other features of the return include an improvement of Rs 4.57 crores to Rs 347.66 crores in Deposits. The total of Advances is slightly lower at Rs 157.72 crores against Rs 158.10 crores. The fresh investment in giltedged has caused cash balances to be run down by Rs 4.08 crores to Rs 50.86 crores.

The return of the Scheduled Banks for September 20 reveals another increase of Rs 13.73 crores to Rs 1329.94 crores in Deposits. The bulk of this has benefited the other Scheduled Banks, since the State Bank, in the relevant week, reported an increase in Deposits of only Rs 2.93 crores. This has been accompanied by a further fall of Rs 4.30 crores to Rs 842.77 crores in the total of Advances—again, mainly in respect of the other Scheduled Banks. Investments are marked higher by Rs 9.60 crores, and reflect the giltedged purchased in that week by the State Bank. Cash balances are marked up by Rs 3.17 crores at Rs 185.06 crores. As the State Bank showed a drop of Rs 7.81 crores in its cash balances in the relevant week, it is clear that the improvement in this portfolio of the other Scheduled Banks has been for an amount just under Rs 11 crores.

Britain Defends the Pound

By PAUL EINZIG

ON September 19th when the increase of the Bank rate to 7 per cent was announced one of the most disgraceful chapters in British financial history came to an end. That measure, or some equivalent firm action in some other direction, was long overdue. Month after month the only resistance the Government was prepared to offer to the internal and external attacks on the stability of sterling was outworn platitudes, the appointment of another and yet another committee to inquire into generally known facts, and optimistic pronouncements about the prosperous conditions of the country, ignoring that

prosperity was simply another name for inflation. The official policy was cowardly and incompetent.

However, it was better late than never, and the Government deserves credit for its courageous action, belated as it was. Although the increase of the Bank rate by full 2 per cent came as a shock to the City, all right-thinking people wholeheartedly welcomed it as indicating the end of the period of complacent inertia.

Admittedly the immediate effects of the higher Bank rate and of the accompanying measures—the fixing of rigid ceiling for the volume

of bank credits and for capital expenditure by both the public and private sectors of the community—were disappointing. Speculators all over the world have come to take it for granted that the Government has not the courage to hit back, and they viewed the sudden display of firmness with much skepticism. They are still inclined to believe that, should unemployment result from the tough measures they would be toned down.

Above all, the main reason why speculators and business firms short of sterling have adopted a "wait and see" attitude is that the success of the new measures depends on the response of the trade unions. If they should persist in their determination of plundering the community, the outcome would be

either the accentuation of the wages inflation or a series of major strikes paralysing the economy of the country. The decisive importance of labour's attitude is fully realised by foreign speculators and others interested in the fate of sterling. London correspondents of overseas banks have been requested to report any advance information they can obtain about wages claims and industrial relations.

If organised labour should refuse to co-operate in the effort to maintain the stability of sterling, the Government would have to reinforce further its defensive measures. It may have to raise the Bank rate further; it may have to instruct the banks to lower the ceiling for the volume of their credits; it may have to reduce the limit for capital investment instead of merely preventing it from increasing. The result would be large-scale unemployment. There is reason to believe that, after a much too long period of hesitation, the Government is at last prepared to face up to this.

Possibly once the trade unions realise that this time they will encounter real resistance they will abstain from pressing excessive demands. It was admittedly difficult for them to exercise any self-restraint during the "ask and ye shall be given" period. If they realise that the Government means business, and that it will encourage employers to say "no" rather than press them to settle all demands, they will be inclined to be more moderate. Moreover, the present measures are certain to produce some unemployment, and will therefore reduce the scarcity value of labour. It is deplorable that it has become necessary to abandon the policy of full employment, but labour has only itself to blame for having forced the Government to do so.

There has so far been no clear indication of the attitude of the political and industrial sectors of the labour movement to the Government's new measures. The pronouncements made by some of the Socialist leaders welcoming resistance to devaluation were unusually statesmanlike, even though they were inclined to secure political advantages from the Government's action. It remains to be seen whether the trade unions will follow a sensible attitude. If they should be prepared to defer for, say, six months, all wage demands and demands for shorter hours, speculators would have to abandon hope and cover their short positions in sterling.

It is now quite certain that sterling will not be devalued this year, and that the limits of its fluctuations will remain unchanged. It is not expected in London that anything sensational would emerge from the meeting of the International Monetary Fund. More importance is attached to the forthcoming Paris meeting of the O.E.E.C. Ministerial Council. But the question of tampering with the parities of sterling does not arise.

The slump on the Stock Exchange caused by the Bank rate

World of Jute

Jute Production in India

REMARKABLE progress has been made in India in the last decade in the production of jute. Whereas in 1947, our jute mills had been virtually dependent on Pakistan for the supply of their raw materials, today the position is one of near-sufficiency in raw jute. India produced in 1956 a total of 57 lakh bales and its jute mills have imported only about 6.5 lakh bales of raw jute from Pakistan. Despite unfavourable weather conditions during the sowing period, the output in the current jute season is expected to be the same as in the past year because of higher yield, resulting from favourable weather during the period of the growth of the plant and the beneficial effect of extensive distribution of fertilizers.

It is evident that the progress of the programme of jute production has been so impressive in the past two years that Government spokesmen are now quite confident that self-sufficiency can be attained during the Second Plan period itself. In this connection it may be noted that the Planning Commission have, even after reconsideration, set the target for jute pro-

duction under the Second Plan at only 50 lakh bales.

Speaking at the annual meeting of the Indian Central Jute Committee in Calcutta last week, Dr M. S. Randhawa said that if a concerted drive to increase production and improve quality was made it would not be difficult to reach the goal of self-sufficiency in raw jute at the end of the Second Plan. The Jute Enquiry Committee in its report just submitted to Government goes a step further and says that India is quite capable of attaining self-sufficiency in her raw jute requirements both for internal consumption and export, by the end of the second Plan period. According to the Committee, India can produce the entire quantity of about 80 lakh bales that will be required by 1960-61 within her own borders. Her dependence on Pakistan will be confined only to a small quantity of superior "jat" variety.

★

The jute goods market opened steady but soon developed a sagging tendency on speculative manipulations. Lack of fresh business coupled with the news of the raising of the UK bank rate induced a

depressed feeling in midweek. Toward close, prices especially in the sacking section rallied on speculative support for B Twills.

Due date considerations imparted a quiet tendency to the market when it opened for the week. Hessian 40"×10 oz Ready closed at Rs 42.70 with Oct-Dec and Jan-March deliveries marked at Rs 42.75 and Rs 42.30 respectively. In the sacking section B Twills Ready was placed at Rs 119.00, Oct-Dec at Rs 115.50 and Jan-March at Rs 113.50.

Conditions continued to be depressed on Friday in sympathy with the quietness in the raw jute section. A contributory factor had been the increase in the UK Bank rate. Hessian 40"×10oz Ready was quiet at Rs 42.30 with Oct-Dec and Jan-March similarly lower at Rs 42.40 and Rs 42.00. Elsewhere B Twills Ready reacted sharply to Rs 115.75. Oct-Dec and Jan-March were also easier at Rs 114.75 and Rs 113.00 respectively.

Narrow price movements characterised trading on Saturday in the absence of foreign enquiry. The undertone was quiet. Hessian 40"×10 oz Ready shaded to Rs 42.25, Oct-Dec to Rs 42.25 and Jan-March to Rs 42.20. In the sacking section also closing levels were lower on balance. B Twills Ready was placed at Rs 117.50, Oct-Dec at Rs 114.75 and Jan-March at Rs 113.00.

Presumably due to the squeeze in sacking goods in the ready position, the heavy goods section ruled steadier on Tuesday this week.

Rumour had it that September-end stocks would again show a decline over those at the end of August. There had been some bear covering in B Twills with the result ready delivery B Twills was pushed up to Rs 118.00. Oct-Dec and Jan-March B Twills were also higher at Rs 115.25 and Rs 113.25 respectively. The hessian section was also steadier in sympathy with sacking as follows: Hessian 40"×10 oz Ready Rs 42.40, Oct-Dec Rs 42.45 and Jan-March Rs 42.10.

B Twills Ready continued to forge ahead on Wednesday on continued speculative support and bear covering in the Fatka. B Twills Ready advanced to close at Rs 119.24 while Oct-Dec and Jan-Mar. were placed at Rs 117.50 and Rs 114.25 respectively. In the Hessian section Hessian 40"×10 oz Ready was done at Rs 42.40 with Oct-Dec at Rs 42.50 and Jan-March Rs 42.25.

The following table shows price trends during the week:

	Week's Opening	Week's Closing
Hessian:		
40" × 10 oz.		
Ready	42.90	42.40
Jan-March	42.56	42.25
Sackings:		
B Twills:		
Ready	119.75	119.25
Jan-March	114.50	114.25
Heavy Cees Green	117.00	116.50
Cornsacks	119.50	119.25
Cubans	140.00	140.50
A Twills	142.00	143.00
L Twills	131.00	131.00
D. W. Flour	135.75	136.00
Sugar Bags	133.00	133.00

Rs 3.10 and Best Assam CTC Fannings Rs 3.30 to Rs 3.50.

In the Internal Sale, offerings consisted of 19,629 packages of Dusts. There was a good general demand. Clean Black Dusts were firm to dearer, but the poor orthodox teas from the Doars and Assam were easier. The best CTC teas were steady, but there was less demand for those with fibrous leaf and plain liquors and these were often 15 nP per pound easier. Following rates were quoted:—Medium Doars Dust Rs 1.54 to Rs 1.58; Medium Assam Grainy Dust Rs 1.58 to Rs 1.62; Medium Assam CTC Dust Rs 2.00 to Rs 2.10 and Best Assam CTC Dust Rs 2.50 to Rs 2.90. Also, 1,410 packages of Leaf grades were offered and these met with a fair demand at irregular rates.

In the Export Quota section, rates moved narrowly between 20 and 20½ nP and business was reported done at these levels.

Due to intervening holidays, the next Export and Internal Sales will be held on the 14th and 15th October respectively.

In the Cochin market, offerings were about 725,000 pounds. There was a strong and active demand with prices advancing by 10 to 20 nP in the opening stages; but the closing was only 5 to 10 nP dearer. Best high-grown came to an irregular market. Strong support was given to Good Mediums which advanced up to 15 nP per pound. Mediums from Travancore found ready buyers at 5 to 15 nP above

last prices, while Wynaad descriptions were fully 15 to 20 nP dearer. Milled and Residual sorts were keenly competed for at higher levels. Black grainy descriptions followed the upward trend of the market.

In the Colombo market, offerings totalled 6,606,917 pounds. Although South African demand improved, the UK buying was restrained with other centres operating quietly. Low and Low Mediums were generally easier; but Dimbula types were inclined to be dearer. Uva teas declined although quality was maintained. Persian Gulf teas were easier, while Middle Eastern sorts were firmer.

Sale No. 8 was held in Chittagong towards the end of last week. Total offerings amounted to 12,867 chests of Leaf grades and 3,016 chests of Dusts. Whole Leaf grades were As 2 to As 3 per pound dearer, while all other grades were half to one anna dearer. High prices were paid for the few lots of useful Tippy teas. Fannings met with less demand, but sold readily at valuation or occasionally at slightly more. Following rates were quoted:—Pekoe Rs 2.8.6; BOP Rs 2.2.0; BP Rs 2.0.0; BPS Rs 2.1.0; OF Rs 2-2-0 and PF Rs 1-15-6. Dusts met with a good demand and were one to two annas per pound dearer. One particular line was sold at Rs 2-10-9 per pound. Plain Sylhet Dust was quoted at Rs 2-1-0.

In Mincing Lane, bidding was again selective in view of the larger

(Continued on page 611)

World of Tea

Fair General Demand

ALTHOUGH a fair general demand was noticed at the Export Sale held in Calcutta this week, price trends were rather mixed indicating anxiety about the outlook for Common teas. The anxiety seems to centre mainly on the slowness of buying from UK—the main customer. Over all demand from this country has generally been less active than of late, presumably because of buyers' increasing recognition that supplies will increase at this time of the year. But the fair demand noticed this week is mainly due to the activity on the part of internal buyers to augment their stocks in view of the fact that there will be no auctions for the next two weeks owing to Puja holidays.

Moreover, arrivals of tea in Calcutta have been less during the current season. Total arrivals from April to August 1957 amount to only 1,301,376 chests as compared to as much as 1,355,113 chests in the corresponding period last year. This decline is attributed to lower output, which has shown an approximate fall of 28 million pounds upto the end of August. The fall in arrivals coupled with larger sales in auctions have reduced the

stocks in Calcutta warehouses to 331,577 chests at August-end as compared to 410,155 chests a year ago. During the current season up to the end of August 1957, altogether 518,790 chests of tea were sold in Calcutta auctions at an average price of Rs 2.41 per pound as compared to 456,765 chests sold in the corresponding period of last year at an average price of Rs 2.50.

Meanwhile, in the Export Sale in Calcutta this week, offerings were 59,776 chests. Medium Assams with useful liquors and Assam BOPs were well supported. Black Leaf Clean Common teas were 2 to 6 nP per pound dearer. Tippy sorts and stylish BPSs were again sold well. The remainder of the offerings were easier, although there was a fair demand for "Teas for price".

CTC sorts met with a restricted enquiry and sold at prices which were 20 to 30 nP lower than valuations. Non-wither Doars were a weak feature of the sale. Following rates were quoted:—Clean Black Pekoe Rs 2.10 Plain BC 1.60 to Rs 1.64; Plain Fannings Rs 1.66 to Rs 1.68; Medium BP 1.66 to Rs 1.68; Medium Fannings Rs 1.70; to Rs 1.74 Best Assam CTC BP Rs 3.00 to

a pilfer-proof package for every product !

The manufacture of Metal Box's range of pilfer-proof containers and closures is backed by an active Research Organisation. The Central Laboratory in Calcutta assists suppliers in developing improved printing inks, surface finishes and protective lacquers, and maintains strict routine tests for all incoming raw materials to the Metal Box factories; on the spot control of operations is carried out by Branch Laboratories. This ensures pilfer-proof containers and closures of the highest quality, superbly printed and finished. Expert scientific advice from Associates throughout the world is available to assist in solving customers' packaging problems.

CESC Forges Ahead

If there is one category of enterprises in the country whose future prospects can be predicted without the fear being proved wrong later, it is the electric supply industry. For, in a rapidly developing economy electricity gets the pride of place. Enterprises, big and small, depend on electricity for their smooth functioning. Under the impetus of the development programmes of the First and Second Five Year Plans, the number of industrial units of various sizes and types has gone up by leaps and bounds in the country and consequently the demand for electricity has become almost insatiable. Besides the ever increasing demand from industry, electricity has to cater to the growing needs of the population due to the energetic attention now focussed on agricultural production, housing and other social welfare schemes.

It will not be a matter for surprise, therefore, to be told that a mammoth electricity supply company like the Calcutta Electricity Supply Corporation has completed another successful period of working during the past year. Catering as it does to such an important commercial and industrial sector as the Calcutta area, CESC has naturally been called upon to meet the increasing demand for power from industrial and domestic consumers. Three major industries—jute, engineering and paper, are among its vast clientele. There are innumerable medium scale and small scale industrial units and their number is daily growing. The rapid pace of industrial expansion is brought out by the sizable increase recorded by the sale of electricity by the Corporation during the past fifteen months. Sales in 1956-57 (fifteen month period) totalled 1710 million units, an increase of 152 million units over the sales in the corresponding period of 1955-56. Sales for power purposes were 1029 million units against 942 million units.

Addressing the annual general meeting of the Corporation in London on Thursday this week, Sir Harry Burn, Chairman of CESC, revealed that the jute mills, paper mills, steel works and rolling mills, engineering workshops and chemical works accounted for the major part of the increase in the demand for high tension power. Jute mills accounted for a rise of 32 million units with engineering workshops accounting for an increase of another 24 million units. The quickening tempo of industrial activity is borne out by the fact that as against an increase of 3 in 1955, industrial units increased by 26 during 1956. The area of supply of the Corporation is about 200 square miles comprising a population of nearly 8 million.

A significant development during the year for the Corporation has

been its inter-connection with the DVC. The new Grid Substation in this regard was opened on the 9th June 1957. It is estimated that as a result of this inter-connection there will be available within a period of less than three years, 100,000 KV of power.

Consequent upon the passing into law of the Electricity (Supply) Amendment Act 1956, the Standard Rate of Return for the Corporation has been increased to 5½ per cent from 5 per cent. It has also obtained a reasonable degree of freedom to adjust its rates within the framework of the Act including where necessary, an enhancement of rates.

On the expenditure side, two items have been mainly responsible for the increase recorded. Due to the increase in coal prices and railway freight, during 1956, the average cost of coal per ton delivered increased by approximately 10 per cent. Wages have also absorbed a larger amount. As a result of the Finance Act 1957, the Corporation is now classified as an Overseas Trade Corporation for purposes of income tax and profit-tax. Consequently its trading income will be exempt from income tax. The profits will not attract tax because the Act exempts profits of an Overseas Trade Corporation from Profits tax.

Sir Harry Burn has expressed the hope that the company will be able to effect a small increase in dividend next year as the current year will secure a "benefit from the increase in the rate of Reasonable Return".

Export Risk Insurance Corporation

The biggest headache this year and for many years to come for the Government of India will be foreign exchange earnings. Any measure, therefore, which will reduce the imbalance between exports and imports and narrow the gap of depletion of foreign exchange resources will be welcome. Export Credit Guarantee Insurance is considered in advanced Western countries as a measure stimulating exports. The subject has been under consideration by the Government of India for some time. The Export Promotion Committee set up in 1949 was assigned to consider the question in all its bearings. The Committee, however, did not favour export credit guarantee. It held that the nature of India's exports, the traditional ties between the exporter and the importer, and the absence of political interference with import trade in most of the countries to which India exported made such a scheme unnecessary.

The composition, pattern, and nature of India's exports and im-

ports, however, soon began to change rapidly. The post-war economy soon converted markets from buyers' to sellers'. India's demands on foreign exchange partly from food and partly from developmental projects in the private and public sectors began to constitute a challenge to India's export resources. It was then felt that to broaden the scope of India's exports and to promote the stimulation thereof, a further re-examination of export credit guarantee was necessary. That will instil necessary confidence in the minds of exporters and will thus promote stimulation of exports

and accordingly a further committee was appointed in January 1956, with Mr T. C. Kapur as Chairman.

After elaborate examination, the Kapur Committee suggested the establishment of a Corporation on the lines of Export Credit Guarantee institutions in U.K., Canada and other foreign countries. Acting on the recommendations of the Committee, Government of India has established a Corporation on 30th July 1957 called "Export Risk Insurance Corporation of India (Private) Ltd" with headquarters at Bombay. It will have an author-

US Notes

THE belief that private capital from the United States can often be used more effectively to stimulate economic development abroad was reaffirmed in a basic policy statement issued here (Thursday) by the US International Cooperation Administration (ICA).

This statement notes that ICA, the agency in charge of the US mutual assistance programme, "will normally not be prepared to finance publicly-owned industrial and extractive enterprises" in other countries.

ICA officials point out that this fundamentally is neither a new nor a restrictive policy. It has been the underlying policy of ICA for some time and more importantly perhaps. It actually widens the scope of economic aid emanating from the United States by enlarging the flow of US capital going into development projects abroad.

Here, in essence, is the way ICA officials explain the situation: the demand for capital around the world is so great that it could not be met completely in all cases. Funds supplied by the US Government for development purposes abroad, while large, are nevertheless limited and can go only so far. Therefore, it is desirable to use private capital wherever feasible, and reserve the public funds for those essential projects which private funds cannot effectively handle.

This means that ICA would continue to concentrate on financing so-called "basic" development projects, mainly in such fields as transportation, communication, power and health and welfare—including highways, railroads harbours hydroelectric plants and hospitals. Projects like these are not always attractive to private investors, and in many cases are best handled through public funds. There are several basic advantages to this approach. There is a larger pool of private than of public capital available in the United States and other free countries for foreign investment. And private investors can bring with them that accumulated managerial and technical know-how that is so vital, but not always sufficiently available, to countries in the early stages of economic development. This is especially true in the industrial and extractive fields—principally manufacturing and mining.

As the ICA statement observes, experience shows that in these fields "private ownership and operation contributes more effectively than public ownership and operation to the general improvement of the economy of a country through better management, research, quality con-

trol, lower prices, increased employment and capital growth."

It is recognized, of course, that exceptions to this general policy may be necessary in the future, as they have been in the past. In some cases, it will be in the interest of both the United States and the recipient government to finance certain industrial and mining projects with public rather than private funds. The likelihood is that, as a matter of practice, a country that wants ICA financing for a government-owned industry of this type will form now or have to show that it cannot get private enterprise to do the job and that the project is of vital importance to its development programme.

Also as a matter of practice, ICA officials would like to see local private capital, wherever feasible, play an increasingly important part in financing worthwhile development projects, on its own or in association with U.S. private capital. They think it possible, too, that investors from advanced countries other than the United States also may want to join in this effort. And just as ICA experts are prepared to help other countries draw up economic development plans when requested, they will try to help them find suitable sources of private capital where necessary.

In line with long-standing US policy, there is no intent in all this to interfere in any way with the development planning or the economic and social philosophies of other countries. Least of all is there any intent to try to "make over" other countries in the US image.

At the same time, the record shows that the United States and many other advanced countries have benefited to a remarkable degree from the use of private development capital both from internal and external sources. It is hoped that this week's reaffirmation of ICA policy will help make clear this US confidence in the lasting contributions individual initiative and private enterprise, both domestic and foreign, can make to rapid and efficient industrial development and to economic progress around the world.

Britain

NUCLEAR-POWER stations operating in the United Kingdom by 1965 will do the work of 18,000,000 tons of coal a year, reducing the country's fuel imports correspondingly. This was stated by Sir John Cockcroft, Director of the United Kingdom Atomic Energy Research Establishment, in Paris on September 19, when he addressed the UNESCO conference on radioisotopes in scientific research.

Discussing the growing energy requirements of the countries of

Western Europe, Sir John pointed out that if nuclear energy were not developed, they foresaw their fuel import bill rising by several billion dollars by 1975. In Asia, Japan was in a position similar to that of Western Europe, whereas India—like the United States and the Soviet Union—had great resources of hydroelectric power and would require nuclear energy only in regions remote from hydro-power.

After 15 months' experience of operating the Calder Hall (Cumberland) nuclear-power station, Sir John said, it had been found "better than most conventional power stations". There was little to go wrong in the nuclear parts of such a power station except the uranium fuel elements. Each Calder Hall reactor contained 10,000 of these elements and, so far, only three had developed faults. "So far as it goes", he added, "the Calder Hall experience is favourable for the future of nuclear-power development and translates dreams into realities".

"We can also foresee the possibility of steadily improving this type of nuclear-power station", Sir John continued. The increase in output from the 70 megawatts of Calder Hall to the 500 MW of the Somerset station planned for 1962 was an example of this process. Major improvements in performance were also foreseen through the change from metallic to ceramic fuels (which can withstand higher temperatures and have better resistance to radiation damage).

Sir John said that through the Dounreay (Scotland) experimental reactor (expected to be commissioned next year), British scientists would accumulate experience in the formidable technological problem of highly-enriched-fuel 'breeder' reactors. If the problems could be solved, it was expected that plutonium from thermal-reactor power stations would begin to be used as fuel for breeder power stations by the 1970s.

The application of nuclear power to ship propulsion was also making progress and, in Sir John's view, a tanker in the 40,000-to-60,000-ton class was the "most likely candidate for quasi-economic nuclear propulsion, since it has a high load factor". Sir John in a later part of his address ranged over the wide field of use of radioisotopes, discussing the applications of radiation to food preservation, insect control, treatment of antibiotics, plant breeding, and so on, laying particular stress on the production of new strains of staple crops by means of irradiation.

The uses of radioisotopes for everyday purposes had been discussed at the conference the previous day by Dr. Henry Seligman, head of the isotopes division of the Atomic Energy Research Establishment at Harwell, Berkshire. Industry was, he said, clearly making wide use of radioactivity, and already one could hardly buy any finished product that had not been treated with radioisotopes in some form of process control.

Britain's Central Electricity Authority has placed a contract for another nuclear power station whose total cost, covering ancillary works, is estimated in the region of £60,000,000. It will be at Hinkley Point, Somerset.

Subject to clearance of outstanding technical and contractual matters, the contract has been placed with the English Electric Co. in association with Babcock & Wilcox Ltd. and Taylor Woodrow Ltd.

The Central Electricity Authority says the station is scheduled to go into operation by 1962.

The Financial Times (September 13) in an editorial says: "Although Hinkley Point is the largest nuclear power station so far ordered, it is not likely to retain this distinction for long. It can be expected that when contracts for the next two nuclear power stations are awarded next March they will be even larger and may have generating capacities of up to 800 megawatts.

"The improvement of Hinkley Point over the Berkeley, Bradwell and Hunterston stations, for which contracts were awarded last December, is a reflection of the trend that has to be expected and should continue. Hinkley Point has a markedly lower capital cost per kilowatt of installed electrical generating capacity than either of the three previous stations. It will also have a lower operating cost, and indeed should be the first nuclear power station in the world to rival coal and oil fuelled power stations in its cost of operation.

"The fact that the designing of a power station of this size and relatively low capital cost and operating cost and operating cost could not have been undertaken even so recently as 18 months ago is both a measure of Britain's progress in the field of nuclear power and a reflection of the continued success of collaboration between United Kingdom industry and the United Kingdom Atomic Energy Authority."

Australia

The senior general manager of the Broken Hill Pty. Co. Ltd., Mr Ian McLennan, told the recent annual conference of the Australasian Institute of Mining and Metallurgy, that there was "no end in sight" to the Australian steel industry's expansion programme. The industry would soon have an output capacity of 3,000,000 ingot tons a year.

Mr. McLennan said that in 1951 Australia could produce only 1,400,000 tons of steel because of labour and material shortages. Last year, however, with a capacity of 2,400,000 tons a year, the industry produced 2,300,000 tons, and in the latest three-months period production had reached a rate of 2,800,000 tons a year.

Referring to expansion possibilities, he said that new ships would (Continued on page 625).

If one were to judge by general comment of the lay public, it would look as though the present attempts of India to obtain foreign assistance in the implementation of its Plans was a sudden and unexpected last minute desperate solution to save the Plan from going to pieces. And yet, nothing could be farther from the truth. In the first place, one has only to look at the draft papers of the Plan to realise that, from the beginning, the Plan has been framed on the assumption that we must strive to obtain sizable assistance from foreign countries. In the second place, even the First Plan has had its measure of assistance from friendly foreign countries. Thirdly, going back a little further in time, the whole concept of foreign aid has had a life of at least a decade. The famous Harvard speech of Mr Marshall, then the US Secretary of State, outlining a scheme of aid to war-torn Europe to allow it to rehabilitate its ravaged economy is now a document of history. Since then, the Marshall Aid and the Organisation of European Economic Co-operation and other institutional agencies have siphoned into Europe resources from the US which have made possible the recovery of many of the European countries. The experience gained in this mutually advantageous experiment and much hard thinking on the subject of economic imbalance caused by a war led to further consideration of the more permanent imbalance in the world. If, so the argument ran, something could be done to redress the sharp economic inequality between Europe and the US temporarily caused by the war, why should not something be done to put right the even more grave and even more chronic inequality between the underdeveloped countries of Asia, Africa and Latin America, on the one hand, and the comparatively well off Europe and the superlatively well off United States? These thought processes were considerably assisted by the fortuitous circumstance of the cold war between the US and the Soviet Union. What was at first humanitarian impulse and economic self interest, became in some sense an expedient of foreign policy. From considerations of this sort, the famous Point Four programme emerged and has, within the limits set for it from time to time by the US Congress, been doing good work.

All these institutional and other endeavours in practical economical co-operation have had their theoretical pundits, and an impressive body of literature on the development of the comparatively poor parts of the world has grown up. A study of this branch of economics is fast developing into a separate discipline of its own, and it is no longer possible for one to treat the matter as of mere marginal interest to some other kind or some other branch of economic scholarship. It has its own expertise, and perhaps its own jargon, but there can hardly be any doubt that it has come into its own.

For us, in the underdeveloped countries, the subject is of absorbing interest. Its ramifications are at the moment almost endless and no serious student of economics setting out to carve for himself a serious area of research need be embarrassed by lack of subject matter. At the moment, however, I am concerned with the theoretical basis of this particular discipline. Let me put it this way. The ultimate political aim of all right thinking persons is to have a world in which the various parts of the world will live in reasonable harmony without seriously

Side by side, a good deal of theoretical elaboration of the economic

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

and political implications of the notions of foreign aid to underdeveloped countries has been going on. In the UN and elsewhere, much of the discussion has taken place on the theory of economic development of comparatively backward areas and the institutional agencies that should make co-operation between developed and undeveloped countries possible. Various United Nations agencies are at work, and from time to time attempts have been made to create a special agency like the Special United Nations Fund for Economic Development (SUNFED) with not much conspicuous success. The World Bank, within the limits allowed it by its somewhat severe standards of creditworthiness and other qualifications of being its beneficiary, has been rendering useful service. In its latest report, it has referred with justifiable pride to the fact that it has advanced a total of over three billion dollars. Then, regional and other agencies like the Colombo Plan have played their small but significant part. And, lastly, unilateral arrangements between sovereign powers, with mostly the US at the giving end, have become a conspicuous feature of the postwar world.

All these institutional and other endeavours in practical economical co-operation have had their theoretical pundits, and an impressive body of literature on the development of the comparatively poor parts of the world has grown up. A study of this branch of economics is fast developing into a separate discipline of its own, and it is no longer possible for one to treat the matter as of mere marginal interest to some other kind or some other branch of economic scholarship. It has its own expertise, and perhaps its own jargon, but there can hardly be any doubt that it has come into its own.

For us, in the underdeveloped countries, the subject is of absorbing interest. Its ramifications are at the moment almost endless and no serious student of economics setting out to carve for himself a serious area of research need be embarrassed by lack of subject matter. At the moment, however, I am concerned with the theoretical basis of this particular discipline. Let me put it this way. The ultimate political aim of all right thinking persons is to have a world in which the various parts of the world will live in reasonable harmony without seriously

treading on each other's corns, so to speak. I put the ultimate aim deliberately so low, for the simple reason that more attractive notions, like One World and Universal Citizenship, appear to me to be beyond the pale of immediate practicality. Even the modest aim I have postulated requires a degree of optimism and faith in the power of our rulers to face reality that might be considered somewhat naive by the more hard boiled. But, unless some such assumption is made, there is no possibility of talking sensibly of the future of the human race.

Having made the assumption that the multiplicity of centres of political power will not necessarily mean pulls in different directions the economic task becomes one of what might be called a more closely integrated world economy. The implications of this concept have been explored with great insight by Mr Gunnar Myrdal, in a contribution he made to a Columbia University symposium in 1954. In discussing the chances of such an integrated economy, Mr Myrdal makes pointed reference to obstacles created by the existence of large areas which are poor and underdeveloped and the progressive disparity between the developed and underdeveloped countries. The greatest enemy of integration, after narrow national self interest, is this disparity. It is, therefore, necessary to allow these areas to develop to a reasonable level of prosperity even if such a process involves, in each case, policies that are apparently inimical to the general idea of integrated world economy. A certain degree of abnegation of the free trade idea is necessary for development and, as Professor Robbins points out in his contribution to the discussion, even classical economists concede this by implication by their adherence to 'the infant industry' theory. So, the development of the underdeveloped countries is the first step in integration.

This point is even more forcibly brought out by Mr Richard M. Bissell in his comment on Mr Myrdal's contribution. I should like to quote what he has to say at some length, as it puts the case admirably: "The enormous urgency

of initiating and maintaining a rate of economic progress in the underdeveloped areas is not only felt as a deep aspiration by most of their people, but understood with increasing sympathy in the richer countries. Nothing less is at stake than the future shape of society in what are today for the most part the weak uncommitted nations. Whether they succeed, as most of their leaders and peoples seem to desire, in remaining neutral or even neutralist in the short run, their allegiance in the long run will largely depend on whether they succeed in achieving economic progress without resort to totalitarianism."

Besides the rather negative step of not minding the somewhat "sutrakic" policies of less fortunate countries, the more developed countries should make the positive contribution of allowing capital and technical skill to undeveloped countries. And this can be done in any massive scale only by Governments. Mr Myrdal is quite categorical on this point: "As to the flow of fresh capital to the underdeveloped countries, it is beyond dispute that both creditor and debtor countries should do what is within their power to enlarge it. It is, however, becoming apparent, that in the foreseeable circumstances, little private capital will be available for the flow in this direction." In this respect, the situation now is radically different from what it was in the nineteenth century. In those days, private capital investment abroad was in enterprises that would these days be automatically considered the preserve of the public sector—railways, public utilities and so forth. Private capital flowing into underdeveloped countries would naturally want a reasonably quick return and would not, unless they were giant combines like the oil companies, wish to participate in endeavours that have no potentiality of immediate benefits for the investor. These are mainly enterprises that produce consumer goods. An underdeveloped country out to create fresh capital—indeed, the very raison d'être of foreign aid is to augment its scanty capital resources—would not wish to encourage consumption, since that would cut into savings. So, the inflow of private capital into underdeveloped countries, unless it is channelled by institutions like the World Bank, will not solve the

[September 28, 1957]

problem of capital requirement of a nation bent on development. On this point, too, Mr Bissell has some pertinent things to say: (A mere recital of the sort of purposes for which capital is especially needed in the undeveloped areas supports Myrdal's judgment that no amount of effort applied to promotion of private foreign investment is likely to make more than a minor contribution toward meeting the need). "It is time to face the fact that traditionally public facilities (like ports, highways, and major irrigation works) and regulated enterprises (like railroads and public

utilities) and most of all, undertakings like the Indian community development programme cannot and will not attract capital. Moreover, in addition to the kind of investment that has always mainly been carried out by public instrumentalities, a great deal of what in earlier and happier times could have been private investment is today frustrated by risks that it is beyond the power of any single borrowing or lending government to remove. . . . Accordingly, progress cannot be maintained in large parts of the world without a sizable international flow of capital through what will

have to be public channels. One of the major tasks of practical statesmanship in the field of economic policy in this decade is to design public instrumentalities and public policies whereby such a flow can be maintained."

My only comment on this admirable account is that, speaking for India, we shall try to do everything that would remove the fears of expropriation of foreign private capital and we have the resources in political maturity to frustrate any attempts at such expropriation by subversion or national xeno-

phobia. For the rest, I would agree with every word of Mr Bissell's statement.

In this context, the controversial policy statement of the International Co-operation Administration of the US Government assumes a sterile aspect. If, by definition, what an underdeveloped country needs is basic industries, and investment in such enterprises is beyond the capacity of private citizens either of the country in question or of any other country, then, making available capital only to private interests would direct investment in channels that will not help produce capital. The reason would be that the investment would be in secondary and tertiary sectors of the economy which will encourage consumption, unless, of course, the production is entirely earmarked for export. Therefore, if the help that foreign countries give should make any impact on strengthening the base of the economy of the country in question, the aid should be to the Government which will invest it in enterprises of lasting benefit to the economy.

So, the theoretical basis of the foreign aid from developed countries rests on the long-term needs of an integrated world economy, the alternative to which is the intensification of national rivalries and ultimate chaos. And, in practical terms, development of underdeveloped countries means simply the provision of capital. No one can say that India has not done its best to raise internal capital to the maximum extent. Indeed, if the complaints we have been hearing in the last few months of crushing taxation are any indication, we have been straining the economy to the breaking point by our effort to squeeze the last ounce of savings from the community. So, if any country can be said to be trying to pull itself up by the boot straps, it is India. And yet, there is a limit beyond which you simply cannot go. As stated by Mr Bissell, again, "The decisive function of foreign capital, in political terms, is to relieve the state from the necessity of exacting from the people of a poor country the sizable amounts of forced savings that would be required to meet these otherwise neglected needs wholly out of domestic resources. To lay such a burden on even a stable and efficient government as that of India would be to subject the society to an additional strain and to push the government in the direction of greater reliance upon force or else into acceptance of continued economic stagnation."

This is precisely the point made by Mr Krishnamachari in his speech at the joint meeting of the International Monetary Fund and World Bank this week: "Countries like India which are trying to break through the initial barrier of low savings, low investment and extreme poverty could not afford to curtail demand by cutting back

Public Service no less than Business

THE Interim Report published by the Life Insurance Corporation has provoked, in many quarters, a fresh assault on Government's ability successfully to run an enterprise which, critics maintained, essentially requires the personal touch. The published figures are cited with triumphant glee to prove that life insurance under State auspices contrasts very unfavourably with the results that had been obtained when the private insurers were in the field. At the outset, it may be stated that the figures do offer up a sorry tale, and that there has been a perceptible, even a sharp, falling off in new business generally. Where, however, these critics have been less than kind to Government is in their failure to take account of the extremely complicated situation in which the insurance industry has been functioning ever since it was nationalised in January 1956. What is more, such public criticism as I have seen and heard totally disregards the commendable energy and success with which the Life Insurance Corporation has been setting about putting its house in order. While by no means intending to be an apologist for the LIC—I may, in this context, point out that Indian Finance was not in favour of an immediate nationalisation of life insurance when the controversy, in 1955, had reached a boiling point—I am impelled to draw attention to those features in the interim report which have escaped notice but deserve praise. Moreover, Mr G. R. Kamat, who has succeeded Mr H. M. Patel as the Chairman of the Life Insurance Corporation, has early this month made a critical appraisal of the activities of the Corporation since its inception.

Public interest has so far been concentrated on the fact that new business written in during 1956, in India, fell sharply to Rs 187.69 crores from Rs 238.30 crores in 1955. Much has also been made of the fact that, in the first six months of 1957, no improvement has been registered since the sum assured has totalled merely Rs 73.54 crores. Such a fall in new business, it has been suggested, is of calamitous import to the Indian economy; and, besides, there is the insinuation that there is less of saving by the individual. The interim report, however, points out that the volume of new business in 1954 and in 1955 was exceptionally large because of three special considerations. Firstly, the pre-

mium rate reductions in 1954 were responsible for policyholders taking advantage of them, with the intention of substituting new policies for the existing ones, which would be paid up. According to the interim report, this might have inflated new business in those two years by roughly Rs 35 crores a year. Secondly, the Staff Insurance scheme was introduced during 1954 and the leading private insurers successfully exploited the market for the scheme. It has been estimated that business written in during 1955 under the scheme was for roughly Rs 18 crores. Thirdly, the promulgation of the Estate Duty Act had resulted in the emergence of demand for this new type of insurance. That is to say, the new business under this head added to the life insurance business "pool" to the tune of Rs 7 crores. These three special heads, thus, accounted for as much as Rs 50 crores. So, the falling off during 1956 from the level attained in 1955 is indicative of no more than the tapering off or cessation of demand in respect of these three heads.

As to the extent of the difficulties faced by the Corporation, suffice it to say that, upon nationalisation, the number of units whose business vested in the Life Insurance Corporation amounted to 243. These units, the report points out, "differed widely in age, size, pattern of organisation, in fact in every aspect of working." The total number of policies exceeded 50 lakhs. The number of employees that the LIC was heir to was some 27,000. Then, there was the complication resulting from the fact that insurance companies in the Western Zone had done a substantial amount of business outside the zone. Indeed, as a table in the report indicates, the Western Zone is the only region from which, in order to achieve decentralisation, there will need to be a net transfer of policy records from the zone.

A further difficulty arose because, of 200,000 persons whose names were enrolled as Agents, only 88,000 cared to reply to a circular addressed by the Corporation in which they were asked whether they were willing to continue their agency on the uniform terms and conditions offered by the LIC. Another instance in which the LIC has faced an embarrassing de riches is in respect of medical examiners. In each of these instances, the Corporation has had a herculean task of rationalisation.

It speaks well for the Corporation that, in spite of having to tackle such organisational tasks, it has been able to record a satisfactory improvement in the writing of new business. Appendices to the Report give a breakdown of new business in each of the 5 zones and the figures are in respect, firstly, of the last four months of 1956 and, secondly, of the first half of 1957. This shows that the only two laggards are the Northern and Central Zones; in the other three cases, the improvement has been most heartening. The Eastern Zone, for example, reported Rs 8.73 crores as the sum assured during September-December 1956. In January-June 1957, the figure is more than proportionately higher at Rs 16.05 crores. Similarly, the Southern Zone has reported figures of Rs 13.34 crores and Rs 21.34 crores, with the Western Zone almost as well placed, reporting a sum assured of Rs 11.96 crores in September-December 1956 and Rs 16.39 crores in January-June 1957.

We now come to the new developments—strangely, not widely reported—where the Life Insurance Corporation has displayed a forward looking attitude. In the first place, "the premium rates are low as compared to the rates offered earlier by all leading private insurers". Secondly, no extra premium for covering war risks is required from persons serving in certain categories of Defence Forces. Thirdly, an extra premium on account of sex is no longer required from women. Fourthly, branch offices have been opened in places "where no insurance office existed before". Fifthly, the LIC has waived its right to reduce the size of policies in respect of private insurance companies in which there has been a shortfall of assets; and the Central Government have accepted the Life Insurance Corporation's recommendation. Sixthly, insurance benefits are now available to persons having impairments which, in the old days, had rendered them ineligible; diabetics are an instance in point. Seventhly, group insurance and superannuation schemes have, on the lines of a similar class of business in Western countries, been made available. Finally, in order to reach out the masses of the Indian population, the Janata policy has been introduced, which has as its highlight the innovation of collection of premium at the doorstep of the policyholder.

As if all this were not enough, the Life Insurance Corporation has allayed what was perhaps the most anxious apprehension of the private sector; namely, that the Corporation would not, as hereto-

fore, continue to make its fund available for investment in share in the private sector. Quite to the contrary, investments in ordinary shares have been stepped up by the Corporation. On 31st August 1956 when the LIC came into being ordinary shares accounted for 6.1 per cent of total investments. At the end of June 1957, ordinary shares worked out to 8 per cent of total investments. Lastly, I should like to point out that the premium income of the Corporation has not been ruinously affected, as it was once made out by some critics, by falling off in new business. The premium income during 1956 is shown to be Rs 57.93 crores against Rs 58.67 crores. So, it cannot be charged that, except for the admittedly lower volume of new business written in during 1956, the Life Insurance Corporation had failed totally to improve its position. On the contrary, there is an impressive list of new developments which redound to the credit of the LIC.

We may now briefly study what Mr Kamat said at the eleventh meeting of the Corporation early (Continued on page 601)

Gateway Notes

Development of Shipping

Despite serious obstacles in the way, the Transport Ministry is striving hard to obtain a high priority for the shipping industry under the Second Plan. Unlike the railways, the shipping industry is handicapped by the absence of any assistance from the World Bank. It has also not met with much encouragement from abroad and, according to Mr Lal Bahadur Shastri, even the Government of India are not showing much enthusiasm toward the expansion plans of the industry.

Even so, significant steps have been taken to help the industry make steady progress. The Government of India have recently decided to set apart a sum of Rs 50 crores to be spent over a period of five years for the development of shipping. Speaking in Bombay early this week, Mr Lal Bahadur Shastri revealed that the Finance Minister had also come to the conclusion that a "Shipping Development Fund should be set up and funds should be kept apart for it". The apprehension that the Fund will be of no avail in the present context of the acute shortage of foreign exchange has been allayed by pointing out that if after some time it is found that the Fund has remained unutilised, the Finance Minister "will naturally think of providing foreign exchange also".

In the Lok Sabha recently Mr Raj Bahadur, Union Minister for Shipping had said that in view of the acute shortage of foreign exchange Government would welcome co-operative ventures between Indian and foreign shipping companies on a 51-49 basis for the development of Indian shipping industry. This suggestion has not found favour with the Indian ship owners who point out that Indian shipping can prosper only if it is "owned, controlled and managed by Indian nationals".

Plans for the development of major ports have, however, been given top priority and Mr Shastri revealed that the Planning Commission had given the assurance that the requisite funds including the foreign exchange part of them would be made available without difficulty. Accordingly Government had decided to send a special mission to the United States and a few other countries in order to purchase the necessary equipment for the ports.

Importers and New Import Policy

Speaking at the six-monthly general meeting of the All India

Importers Association, Mr R. C. Shah, vice-president, pointed out that if anyone expected to find a sharp fall in our imports as a result of the implementation of the new import policy, he would be sorely disappointed. For, the import trade in our country had already reached a stage wherein the bulk of it comprised orders for capital goods, industrial raw materials, tools etc which were essential for the smooth functioning of indigenous industry. As increased industrial production has been given a high priority in the scheme of things under the Second Plan, it follows that the import restrictions cannot and should not interfere with the flow of essential imports. Mr Shah thinks that despite drastic cuts in imports and various curbs, the new import policy is not likely to have any appreciable effect on the rate of our foreign exchange withdrawals.

It would appear, therefore, that the difficult position on the foreign

exchange front has to be tackled by other methods. As far as the importers are concerned they have endorsed the new import policy but will be happy if Government design their rules and regulations in such a manner as to ensure the full participation of the trade in what little import that is allowed. This will be found to be to the advantage of the country as the import trade with its long experience in this line will be able to obtain industries' requirements at competitive prices.

Mr Shah has referred to an important point when he dealt with the distribution of indigenous products. According to him both the import trade and the distribution service may conveniently be left to the established channels of import trade and the vast network of dealers. Mr Morarji Desai, Union Minister for Commerce has also exhorted manufacturers in the country to utilise the present established importers for the distribution of their goods.

exchange front has to be tackled by other methods. As far as the importers are concerned they have endorsed the new import policy but will be happy if Government design their rules and regulations in such a manner as to ensure the full participation of the trade in what little import that is allowed. This will be found to be to the advantage of the country as the import trade with its long experience in this line will be able to obtain industries' requirements at competitive prices.

Metals

Conditions in the Non-Ferrous Metal market continued to remain quiet. Copper ready was quoted at Rs 165 per cwt. Large number of conversion licences were reported to have changed hands and imports against these, specially of copper and zinc, were of a high order. Zinc was also quiet at Rs 66 on reports of fresh arrivals. Trading in the Lead market was featureless with the rate hovering idly around Rs 80 per cwt. Tin remained unchanged at Rs 134 per quarter.

On the London Metal Exchange, Copper was marked back to £192 from £196 per ton quoted in the previous week, mainly due to the obscure outlook for this metal. The market is still suffering from over-production and no reports are yet available that any substantial cut in production is under contemplation. Zinc was quoted at £71½ per ton. The present price level is considered to be steady with no new factors.

Lead was quoted £88½. The demand for the metal is reported to be reasonably satisfactory.

Tin remained very steady at £741. The pressure on this metal, at the moment, is not very high. The future trend of price will, however, depend to a great extent on the consumer demand.

Yarn

A sharp break in Staple-Fibre Yarn, following the Government's decision to remove excise duty on it, provided the main feature of trading in the yarn market. The spot market also saw prices declining by about As 2 per pound. Buying by handloom and powerloom factories almost came to an end as it was feared that prices might decline further in the coming week.

Art Silk Yarn, however, continued to rule firm and prices would have moved up further from last levels, but for the downward trend in staple-fibre yarn prices.

Prices in the Cotton Yarn section showed a further recession losses being more pronounced in fine and superfine counts. The easy trend was attributed to falling internal as well as export demand and to reports of a cut in prices by a leading mill in South India.

Gold & Silver

After a lower opening, the Silver section on the Bombay Bullion Exchange staged a rally on short-covering, mainly induced by unfavourable carry-forward charges. Also, hopes were entertained that the demand for spot silver would broaden in the next few days with Calcutta emerging as the chief buyer of its pre-Pusa requirements. Traders believe that the offtake by other parts of the country will also increase and remain encouraging, at least till Diwali. Forward rates

World of Cotton

Piecegoods Market Sluggish

THE Bombay Cotton piecegoods market has presented a mixed front. Though demand from the consuming centres is reported steady, some dealers are said to have effected sales at slightly lower rates in a bid to reduce stocks lying with them. The drop in prices is said to be more pronounced in respect of superfine qualities of dhories and mulls. Several items in the coarse and medium categories, such as grey and bleached long cloth, coatings etc., are also reported to be quoted lower by about 3 per cent. The reduction in prices, however, does not appear to pertain to the products of popular mills.

The quantity of unsold stocks with the mills is estimated to be equivalent to just over a month's production, and the goods sold but not lifted by the trade are placed at around three weeks' output. The future price trend of cloth is expected to be governed by the nature of demand emanating from upcountry markets in the next few weeks. Hopes are, however, entertained by the trade that the offtake will improve in the near future since upcountry demand usually assumes larger proportion as soon as the monsoon is over.

Shippers have reported a revival of enquiries from some of the important overseas destinations. Indonesia is reported to have booked moderate quantities of medium grey sheetings, bleached long cloth in addition to the fairly large quantities of cloth purchased during the last month. Africa is also said to have booked some business. Prospects of a larger business with Burma also appear to be good. There is a revival of demand from Sudan, while some business is reported for Hong Kong.

Meanwhile, conditions in the cotton market have turned better, thanks to sustained short-covering on reports of insufficient rains from some of the producing areas. According to the trade estimates, stocks of cotton with the trade and the in-

dustries, at the commencement of the 1957-58 season, are placed at 18.57 lakh bales comprising 15.82 lakh bales of Indian cotton and 2.75 lakh bales of foreign growths. The total supply during the 1956-57 season is placed at 77.33 lakh bales, Indian cotton accounting for 68.83 lakh bales and foreign 8.50 lakh bales.

The output of commercial crop during the preceding season, is placed at 47 lakh bales and actual imports totalled 6.07 lakh bales. With the opening stocks amounting to 21.56 lakh bales, the overall supply is reckoned at 77.33 lakh bales. The mill consumption, during the season, is estimated at 52.55 lakh bales, comprising 46.80 lakh bales of Indian cotton and 5.75 lakh bales of foreign cotton. After allowing for an estimated village consumption of 2.70 lakh bales and 3.01 lakh bales of exports, the carry-over stocks are reckoned at 18.75 lakh bales as against 21.56 lakh bales last year, thus showing a reduction of about 3 lakh bales.

Prospects for the new crop are generally good except in Gujarat and Saurashtra where moisture is badly needed. Fears of damage to the crop in the Punjab have receded. In Khandesh, Berar and Madhya Pradesh, rainfall has proved very beneficial to plants. The Vijay, Surti, Dhollera and Mathia areas, however, need more showers for crop development. It is hoped that the new crop will record a substantial increase to over 47 lakh bales, harvested last season.

The future market, after remaining depressed early in the week on reports of cloudy weather, recovered

towards the close on sustained short-covering. ICC Moglai Jharilla opened at Rs 667 and, after touching a low of Rs 664.25 on long liquidation, advanced steadily to Rs 679.75, to finish the week at Rs 678.

In the Spot section, activity continued to be fair, with mills evincing interest in new crop Berar, Punjab and Khandesh styles. Spot lots of Surti, Kalyan and Jayadhar were also in demand.

In the foreign section, business in Zoda and Yellow pickings was negligible in view of the prevailing high prices ever after the abolition of the export duty. Ahmedabad mills were reported to have bought limited quantity of East African cotton, while local and Southern mills were interested in American and Egyptian spot lots.

It is reported that Sudan is finding it hard to dispose of the bulk of its record cotton crop of 6 lakh bales. Negotiations with France and Britain have, so far, yielded no tangible results. This country is trying to dispose of a part of her stocks to France even at a 10 per cent reduction in prices.

LIVERPOOL COTTON MARKET: Trading in the Liverpool cotton market was dull. Further liquidation checked improvement in the near deliveries; but the far distant month in both contracts appreciated with commission house support. Trading in the Sudan contract remained inactive.

NEW YORK COTTON MARKET: Price movements on the New York cotton futures market were confined to a narrow range as traders were awaiting further crop developments. Scattered hedging was noted in near-by December with liquidation ab-

sorbed through trade buying and short-covering with a leading Memphis firm buying 3,000 bales of March, May and July combined. The Census Bureau has combined mestic consumption during August at 667,000 bales. Meanwhile Spot was quoted at 34.50 cents per pound.

GATEWAY GOSSIP

(Continued from page 599)

this month in this Gateway City. In stating that the interim report has provoked certain adverse comments, the LIC Chairman points out that "persons who continue to criticise us in this way have not appreciated what a revolutionary change this nationalisation had brought about in the structure of the life insurance industry". Mr Kamat makes the fine point that some criticism as regards inadequacy in service may have its source in the "very legitimate expectation that, as a public institution, our performance should be not only as good as that of the private companies, but it should be actually better than the best of these companies". It is, indeed, to this end that Mr Kamat is working. It is, he mentions, "our aim to expand our business as rapidly as possible and amongst all sectors of the population and to offer insurance facilities to all those who stand in need of the insurance protection".

The note that Mr Kamat ends on should, I suppose, be the motto for life insurance. He says, "more particularly after nationalisation, life insurance is now become both a business as well as public service". To the LIC, I say, more strength to your elbow.

Madras Review

A Poisoned Social Climate

HERE is a vague feeling in other parts of India that Madras is a bed of casteism and that many evils which had grown as vocative encrustations on Indian society are even now surviving with some strength. This feeling may or may not be corroborated facts. One does find a remarkably quick adjustment in the outlook of the Caste Hindus in respect of social practices which have been politically and constitutionally anachronistic. The Harijans of South India perhaps may even be regarded as having come to

occupy a status which their counterparts in many other parts of India have yet to attain, both economically and in terms of the social esteem they receive at the hands of other Hindu groups.

At least over the last fifty years, one fails to recall a single instance of organised violence or bloodshed between any two castes. The bulk of this period belongs to an age when untouchability was in existence, political parties organised on the basis of caste functioned and agitations were being carried on, of course, within the confines of the law against this or that caste.

When Mahatma Gandhi came out with his gospel of non-violence, it was something which the people of Madras could accept as a matter of course, the emotional background having been prepared by a long and unbroken tradition. While in North India, communal violence occurred frequently at first through the instigation or connivance of the British authority and subsequently with a larger element of spontaneity about them, South India, somehow or other did not respond that way.

A great deal has been said about the Mopla rebellion in Malabar, even this was the offshoot of national and international developments reinforced by the studied apathy of the authorities concerned. The comparatively trivial number of casualties during the rebellion from among the community which happened to be the victim showed that the motives behind the outbursts were more economic and political than communal. At any rate that was not an affair of caste.
